Index
Preface

This document describes the Identity Management integration options in Oracle Fusion Middleware 11g Release 1 (11.1.1).

Audience

This document is intended for system administrators responsible for integrating identity management components and related third-party products for Oracle Fusion Middleware 11g Release 1 (11.1.1).

For specific interoperability details about the products mentioned in this guide, consult the certification matrix for Oracle Fusion Middleware 11g Release 1 (11.1.1.x), which is located at:

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at http://www.oracle.com/accessibility/.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.
Access to Oracle Support
Oracle customers have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/support/contact.html or visit http://www.oracle.com/accessibility/support.html if you are hearing impaired.

Introduction

This chapter introduces basic Oracle Fusion Middleware integration concepts. It contains these topics:

- About Oracle Identity Management
- Objectives of Integration
- Types of Integration
- Key Integration Scenarios
- How to Use this Book

1.1 About Oracle Identity Management

Oracle Identity Management provides customers with a path to meet compliance efficiently, secure critical applications and sensitive data, and lower operational costs. Using the most complete and best-in-class suite of IdM solutions, enterprises can manage the end-to-end lifecycle of user identities across all enterprise resources both within and beyond the firewall.

Through its foundation for service-oriented security, Oracle Identity Management 11g delivers enhanced security by automating provisioning of user accounts, dramatically reducing help desk calls, streamlining compliance audit and reporting, consolidating identity silos, enabling rapid integration with enterprise applications, and more.

Successful integration with identity management technologies is key to the secure operation of today’s enterprise applications. This document will enable you to assess the tools and techniques that Oracle IdM provides to enable you to run secure enterprise operations.

1.2 Objectives of Integration

Components of Oracle Identity Management typically integrate with the existing infrastructure and applications in the enterprise. Some examples:

- A directory service may provide a centralized user store for existing applications that are LDAP-enabled.
- An access management solution may provide single sign-on and web authorization for existing Web applications in concert with the application servers deployed in the enterprise.
- A provisioning solution may streamline the onboarding procedure by orchestrating the various entities and accounts that need to be created across multiple systems when a new employee is hired.
A role management solution may provide the necessary scoping to enforce audit rules.

Designed to help you respond and adapt to the needs of your enterprise, Oracle Identity Management presents a highly heterogeneous solution that gives you many different options to enhance security in your existing environment. Understanding the business requirements and implementing the right level of integration is the key to a successful identity management deployment.

Based on functional areas, this document provides a high-level guide to the types of integration available in each Oracle Identity Management product. Its objective is to enable you to easily identify the capabilities and integrations available for your current enterprise deployment and to plan its future road map.

1.3 Types of Integration

This section explains the different types of possible IdM integrations:

- Integration Among Oracle Identity Management Components
- Integration for other Oracle products
- Integration for Third-Party products

1.3.1 Integration Among Oracle Identity Management Components

Many Oracle Identity Management components can integrate and interoperate with each other. For example, Oracle Access Manager can provide single sign-on for products such as Oracle Identity Manager and Oracle Identity Analytics.

This book covers the range of Oracle Identity Management component integrations.

1.3.2 Integration for other Oracle products

Oracle products cover a large spectrum of the technology stack, with products in all of these areas:

- operating systems
- virtual machines
- databases
- middleware
- applications

Oracle Identity Management is well equipped to handle many of the security requirements in each of these areas. Depending on your requirements, Oracle Identity Management can integrate with many products from the rest of the Oracle technology stack to provide additional security and identity management-related features to these products.

For example, Oracle Identity Manager provides user account management and provisioning support for Oracle E-Business Suite and Oracle PeopleSoft. This book will also cover those integration scenarios.
1.3.3 Integration for Third-Party products

For customers with non-Oracle products in their enterprise deployment, Oracle Identity Management can also integrate with many third-party products to strengthen and satisfy your business requirements.

For example, many of our LDAP-enabled products can be readily integrated with Microsoft Active Directory. You can use Oracle Access Manager, for example, to support Windows Native Authentication for web applications by integrating with a Microsoft Windows domain.

Where relevant, this book covers security integration scenarios between Oracle Identity Management and third-party products.

1.4 Key Integration Scenarios

Table 1–1 lists some key areas of integration in the identity management suite, and the components/products involved in each area.

<table>
<thead>
<tr>
<th>Objective</th>
<th>Description</th>
<th>Components</th>
</tr>
</thead>
<tbody>
<tr>
<td>Web Access Management</td>
<td>Centralized access management, single sign-on, fine-grained authentication and entitlement control.</td>
<td>Oracle Access Manager&lt;br&gt;Oracle Identity Manager&lt;br&gt;Oracle Adaptive Access Manager&lt;br&gt;Oracle Entitlements Server</td>
</tr>
<tr>
<td>Federation</td>
<td>Authentication and single sign-on across security domains.</td>
<td>Oracle Identity Federation&lt;br&gt;Oracle HTTP Server&lt;br&gt;Oracle Access Manager&lt;br&gt;Oracle Internet Directory&lt;br&gt;Oracle Directory Server Enterprise Edition&lt;br&gt;Third-party Directories</td>

<td>Options for integrating password management solutions into the enterprise.</td>
<td>Oracle Access Manager&lt;br&gt;Oracle Adaptive Access Manager&lt;br&gt;Oracle Identity Manager</td>
</tr>
</tbody>
</table>
1.5 How to Use this Book

Use this book to understand the major integration options available to meet your site’s requirements. Use the references provided with each topic to learn more about each option, including specific prerequisites, installation, and post-install configuration.

The book contains a comprehensive cross-product index that you can use to quickly locate a topic of interest. Each integration topic is indexed twice, once for each component/product in the integration. For example, the Oracle Identity Manager connector for Microsoft Exchange is indexed under both Microsoft Exchange and Oracle Identity Manager. This allows you to see what types of integration are available for any particular Oracle Identity Management component. It also allows you to see all the relevant integration options Oracle Identity Management supports for a particular Oracle product or third-party product from the reverse angle, that is, from the latter perspective.

### Table 1–1 (Cont.) Key Integration Scenarios

<table>

</table>
Oracle Access Manager provides Web single sign-on to enable secure access to multiple applications with one authentication step. It also provides flexible support for all popular authentication methods, including login forms, digital certificates, and smart cards.

This chapter explains how you can integrate Oracle Access Manager with other components to enable Web access management for your enterprise applications. It contains these sections:

- Oracle Access Manager for Oracle Identity Management
- Oracle Access Manager for Oracle Fusion Middleware
- Oracle Access Manager for Other Oracle Applications
- Oracle Access Manager for Third-Party Applications

### 2.1 Oracle Access Manager for Oracle Identity Management

Oracle Access Manager provides single sign-on support for many Oracle Identity Management components. It also integrates with some Oracle Identity Management components to support more advanced features for those components. Table 2–1 shows the supported integrations:

<table>
<thead>
<tr>
<th>Oracle Access Manager Integrated with</th>

</tr>
<tr>
<td>Windows Native Authentication</td>
<td>Configuring Oracle Access Manager to use Windows Native Authentication in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager</td>
</tr>
</tbody>
</table>
Oracle Enterprise Single Sign-On Suite provides users with unified sign-on and authentication across all their enterprise resources. Unlike Oracle Access Manager that focuses on web access management, Oracle Enterprise Single Sign-On Suite covers also desktops, client-server, custom and host-based mainframe applications. Even if users travel or share workstations, they can enjoy the flexibility of a single log-on that eliminates the need for multiple user names and passwords and helps enforce strong password and authentication policies.

This chapter contains topics related to enterprise single sign-on:

- Enterprise Single Sign-On Synchronization
- Enterprise Single Sign-On Provisioning Gateway
- Enterprise Single Sign-On Authentication Manager

### 3.1 Enterprise Single Sign-On Synchronization

ESSO Synchronization is a component of Oracle Enterprise Single Sign-On Suite Logon Manager, which handles storage and retrieval of credentials and settings from an external repository such as an LDAP or RDBMS store. This feature lets you synchronize credentials between an end user's local store (on a workstation) and a store in a remote SSO repository (file system share, relational database, or directory server). You configure synchronization through the ESSO-LM administration console.

Table 3–1 shows the supported integrations:

<table>
<thead>
<tr>
<th>ESSO Synchronization Manager Integrated with</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Microsoft Active Directory Application Mode (ADAM)</td>
<td><a href="http://download.oracle.com/docs/cd/E15624_01/logon.11111/SSOAdmin.chm">http://download.oracle.com/docs/cd/E15624_01/logon.11111/SSOAdmin.chm</a></td>
</tr>
<tr>
<td>Database</td>
<td><a href="http://download.oracle.com/docs/cd/E15624_01/logon.11111/SSOAdmin.chm">http://download.oracle.com/docs/cd/E15624_01/logon.11111/SSOAdmin.chm</a></td>
</tr>
</tbody>
</table>
3.2 Enterprise Single Sign-On Provisioning Gateway

Oracle Enterprise Single Sign-On Suite Provisioning Gateway (ESSO-PG) enables system administrators to directly distribute, reset, remove, or delete user credentials to an Enterprise Single Sign-On solution without the need for any user involvement.

Here are some examples:

- An administrator can inject a new user's credentials directly into the user's ESSO-LM account.
- The administrator can update ESSO-LM simultaneously to reset a password and prevent an application from falling out of synchronization with ESSO-LM.
- When a user's access to an application is terminated, the administrator can use ESSO-PG to quickly remove the corresponding credentials from the user's ESSO-LM account.
- When a user leaves the company, the administrator can instantly delete all the user's credentials.

All these operations can be automatically initiated and controlled by industry-leading provisioning systems. ESSO-PG provides an open interface to integrate with other industry-standard or internally-developed provisioning systems, and also provides an interactive interface for administrators to manually provision credentials.

Table 3–2 shows the supported integrations:

<table>
<thead>
<tr>
<th>ESSO-PG Integrated with</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Identity Manager</td>
<td><a href="http://download.oracle.com/docs/cd/E12472_01/provisioning_gateway/PGWOC.pdf">http://download.oracle.com/docs/cd/E12472_01/provisioning_gateway/PGWOC.pdf</a></td>
</tr>
<tr>

</tr>
<tr>
<td>Novell Identity Manager</td>
<td><a href="http://download.oracle.com/docs/cd/E15624_01/provisioning.11111/NIMIG.pdf">http://download.oracle.com/docs/cd/E15624_01/provisioning.11111/NIMIG.pdf</a></td>
</tr>
</tbody>
</table>

3.3 Enterprise Single Sign-On Authentication Manager

Oracle Enterprise Single Sign-On Suite Authentication Manager (ESSO-AM), an add-on module to Oracle Enterprise Single Sign-on Logon Manager (ESSO-LM), enables an organization to seamlessly provide a strong authentication bridge to all its applications, including smart cards and Entrust authenticators.

Users can employ different authenticators at different times, and application access can be controlled based upon the authenticator used for all authentication events: initial authentication, re-authentication, and forced authentication.

Table 3–3 shows the supported integrations:
<table>
<thead>
<tr>
<th>ESSO-AM Integrated with</th>
<th>Additional Information</th>
</tr>
</thead>
</table>
Oracle Identity Federation provides a comprehensive implementation of federation standards delivered via Oracle Universal Federation Framework - the unified, extensible and customizable architecture for rapid deployment in any multi-vendor environment.

Oracle Identity Federation allows customers to quickly achieve cross-domain SSO by providing a complete end-to-end federation deployment package, including a simple and lightweight deployment option for Service Providers.

This chapter introduces the integrations for Oracle Identity Federation:

- Oracle Identity Federation for Oracle Identity Management
- Oracle Identity Federation for Oracle Fusion Middleware
- Oracle Identity Federation Authentication Engines
- Oracle Identity Federation Service Provider Integration Modules

### 4.1 Oracle Identity Federation for Oracle Identity Management

Oracle Identity Federation integrates with several Oracle Identity Management products to provide integrated federation solutions. Table 4–1 shows the supported integrations:

<table>
<thead>
<tr>
<th>Oracle Identity Federation Integrated with</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Access Manager</td>
<td>For 11g webgates, see Integrating Oracle Access Manager with Oracle Identity Federation in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager. For 10g webgates, see Oracle Access Manager in the Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Federation.</td>
</tr>
</tbody>
</table>

### 4.2 Oracle Identity Federation for Oracle Fusion Middleware

Oracle Identity Federation integrates with Oracle Fusion Middleware products supporting a variety of federation use cases. Table 4–2 shows the supported integrations:
4.3 Oracle Identity Federation Authentication Engines

In Oracle Identity Federation, an authentication mechanism defines a method or policy for verifying an entity’s claimed identity using submitted credentials. An authentication engine is a module implementing a particular authentication method. Oracle Identity Federation provides several out-of-the-box authentication engines and supports custom authentication engines. Table 4–3 shows the supported integrations:

<table>
<thead>
<tr>
<th>Authentication Engine for</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Access Manager</td>

<td>Authentication Engines - JAAS in the Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Federation</td>
</tr>
<tr>
<td>Custom authentication engine</td>
<td>Authentication Engines - Custom in the Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Federation</td>
</tr>
</tbody>
</table>

4.4 Oracle Identity Federation Service Provider Integration Modules

A service provider (SP) integration module creates a user authenticated session at an identity and access management (IAM) system like Oracle Access Manager.

Oracle Identity Federation provides several out-of-the-box SP integration modules, and also supports custom service provider integration modules. Table 4–4 shows the supported integrations:
<table>
<thead>
<tr>
<th>Oracle Identity Federation SP Integration Module for</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Access Manager</td>
<td>SP Integration module - Oracle Access Manager in the Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Federation</td>
</tr>
<tr>
<td>Custom SP Integration Module for third-party IAM system</td>
<td>SP Integration Module - Custom in the Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Federation</td>
</tr>
</tbody>
</table>
Oracle Adaptive Access Manager supports companies by protecting their exposed Web applications, services, and end-users from online threats and insider fraud. Oracle Adaptive Access Manager features include:

- risk-aware authentication,
- real-time behavior profiling,
- transaction and event risk analysis.

Oracle Adaptive Access Manager provides real-time or offline risk analysis by calculating the risk of an access request, an event or a transaction and determining proper outcomes to prevent fraud and misuse. A portion of the risk evaluation is dedicated to verifying a user’s identity and determining if the activity is suspicious.

Oracle Adaptive Access Manager provides end-user-facing functionality to prevent fraud through its Virtual Authentication Devices to secure credential data at the entry point.

Oracle Adaptive Access Manager also provides interdiction methods including risk-based authentication, blocking, and configurable actions to interdict in other systems.

This chapter explains how you can integrate Oracle Adaptive Access Manager with other components to provide risk management for your enterprise applications. It contains these sections:

- Oracle Adaptive Access Manager for Oracle Identity Management
- Oracle Adaptive Access Manager for Custom Applications

### 5.1 Oracle Adaptive Access Manager for Oracle Identity Management

Oracle Adaptive Access Manager integrates with other Oracle Identity Management components to provide additional risk management support.

Table 5–1 shows the supported integrations:
Oracle Adaptive Access Manager provides a variety of mechanisms to integrate with custom applications. Applications can integrate natively with Oracle Adaptive Access Manager using APIs. The Universal Installer reverse proxy deployment option offers login risk-based, multi-factor authentication to web applications without requiring any change to the application code.

Table 5–2 shows the supported integrations:

User, Account, and Entitlement Provisioning

Oracle Identity Manager provides a comprehensive provisioning solution for many enterprise resources. Predefined connectors and a flexible Adaptor Factory enable customers to easily establish connectivity with well-known targets and custom systems.

This connectivity forms the basis of Oracle Identity Manager, enabling you to provide support for self-service and delegated administration, password management, provisioning, and request and approval workflow across many enterprise targets.

This chapter explains how you can integrate Oracle Identity Manager with other components to provision users, accounts, and entitlements for your enterprise applications. It contains these sections:

- Oracle Identity Manager Connectors for Oracle Identity Management
- Oracle Identity Manager Connectors for Databases
- Oracle Identity Manager Connectors for Oracle Applications
- Oracle Identity Manager Connectors for Third-Party Applications

6.1 Oracle Identity Manager Connectors for Oracle Identity Management

Table 6–1 shows the Oracle Identity Manager connectors for Oracle Identity Management components:

<table>
<thead>
<tr>
<th>Oracle Identity Manager Connector for</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Under the “Oracle” connector group, select the Oracle Internet Directory document.</td>
</tr>
</tbody>
</table>

|                                          | Under the “Sun” connector group, select the Sun Java System Directory document. |

1 formerly Sun Java System Directory Server

6.2 Oracle Identity Manager Connectors for Databases

Table 6–2 shows the Oracle Identity Manager connectors for databases:
Table 6–2 Oracle Identity Manager Connectors for Databases

<table>
<thead>
<tr>
<th>Oracle Identity Manager Connector for</th>
<th>Additional Information</th>

| Custom Connector with Generic Technology Connectors | Creating and Managing Generic Technology Connectors in the Oracle Fusion Middleware Developer’s Guide for Oracle Identity Manager |
Oracle Identity Analytics (formerly Sun Role Manager) provides enterprises with the ability to engineer and manage roles and automate critical identity-based controls.

By integrating with the various enterprise systems including applications, operating systems, LDAP directories, and custom applications, Oracle Identity Analytics provides a complete view of access-related data that includes:

- the user's access,
- the why and how of that access, and
- whether the access violates policies.

Oracle Identity Analytics enables you to automate the access certification process and removes inappropriate access by integrating with a provisioning solution. It also provides evidence that the access complies with established policies.

Sections include:

- Oracle Identity Analytics for Oracle Identity Management
- Oracle Identity Analytics for Third-Party Products

7.1 Oracle Identity Analytics for Oracle Identity Management

Oracle Identity Analytics integrates with Oracle Identity Management components to pull in user, account and entitlement data, and to provide closed-loop remediation.

Table 7–1 shows the Oracle Identity Analytics integrations supported for Oracle Identity Management components:

---

**Note:** Oracle Waveset was formerly known as Sun Identity Manager.

Table 7–1  Oracle Identity Analytics Integration for Oracle Identity Management

<table>
<thead>
<tr>
<th>Oracle Identity Analytics Integration for</th>
<th>Additional Information</th>
</tr>
</thead>
</table>
| Oracle Identity Manager                 | Integrating with Oracle Identity Manager in the Sun Role Manager 5.0.3 System Integrator's Guide at:  
http://wikis.sun.com/display/Srm503Docs/System+Integrator%27s+Guide |
| Oracle WaveSet                           | Integrating with Sun Identity Manager in the Sun Role Manager 5.0.3 System Integrator's Guide at:  
http://wikis.sun.com/display/Srm503Docs/System+Integrator%27s+Guide |
To integrate with Oracle Identity Manager and Oracle Waveset, Oracle Identity Analytics leverages the connectors in those components, thus indirectly integrating with the target systems supported by those components.

### 7.2 Oracle Identity Analytics for Third-Party Products

Oracle Identity Analytics integrates with third-party products to pull in user, account and entitlement data, and to provide closed-loop remediation.

*Table 7–2* shows the Oracle Identity Analytics integrations supported for third-party products:

<table>
<thead>
<tr>
<th>Oracle Identity Analytics Integration for third-party provisioning servers</th>
<th>Additional Information</th>
</tr>
</thead>
</table>

This chapter explains how you can integrate with Oracle Identity Manager for centralized password management features. Topics include:

- Oracle Identity Manager Password Management Support for Oracle Identity Management
- Oracle Identity Manager Password Management through Connectors
- Oracle Enterprise Single Sign-On Suite ESSO-PR for Password Reset

### 8.1 Oracle Identity Manager Password Management Support for Oracle Identity Management

Oracle Identity Manager’s password management feature includes password policy support and self-service administration for password reset and password change. Oracle Identity Manager provides centralized password management for other Oracle Identity Management components where password management is needed.

Table 8–1 shows the supported integrations:

<table>
<thead>
<tr>
<th>Oracle Identity Manager Integration with</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Access Manager</td>
<td>Deployment Options for Password Management in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager.</td>
</tr>
<tr>
<td>Oracle Adaptive Access Manager</td>
<td>Deployment Options for Password Management in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager.</td>
</tr>
<tr>
<td>Oracle Access Manager and Oracle Adaptive Access Manager combined</td>
<td>Deployment Options for Password Management in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager.</td>
</tr>
</tbody>
</table>

### 8.2 Oracle Identity Manager Password Management through Connectors

Oracle Identity Manager provides centralized password management for enterprise applications, a feature that you can leverage by provisioning through its connectors. In this way, you can configure a centralized password policy for the enterprise, allowing your users to specify a single password which can then be provisioned to the various targets where passwords are required.

Password reset, password change, and expiration can all be handled through Oracle Identity Manager’s self-service support.

See Chapter 6, "User, Account, and Entitlement Provisioning” for more information on supported connectors.
8.3 Oracle Enterprise Single Sign-On Suite ESSO-PR for Password Reset

Oracle Enterprise Single Sign-on Password Reset (ESSO-PR) allows users to access their Windows user accounts in case they lose or forget their password, without requiring help desk or technical support, improving the operational efficiency of the enterprise.

For details, see the Oracle Enterprise Single Sign-on documentation library at:
http://download.oracle.com/docs/cd/E12472_01/index.htm

ESSO-PR documents are located in the Password Reset Documentation section.
This chapter describes integrations that support database security. Topics include:

- Oracle Database Net Services LDAP Naming
- Oracle Database Enterprise User Security with LDAP

See Also:

Note: DB aliases are not supported.

9.1 Oracle Database Net Services LDAP Naming

To manage large networking environments, administrators must be able to easily access a centralized repository to specify and modify the network configuration. To support this requirement, the Oracle Net Services configuration can be stored in an LDAP-compliant directory server.

Supporting LDAP-compliant directory servers provides the enterprise with a vehicle for centrally managing and configuring a distributed Oracle network. The directory can act as a central repository of information about database network components, user and corporate policies, and user authentication and security, thus replacing localized client-side and server-side configuration files.

Table 9–1 shows the supported integrations:
Table 9–1  Oracle Database Net Services LDAP Naming

<table>
<thead>
<tr>
<th>Oracle Database Net Services for</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Directory Naming with Oracle Internet Directory</td>
<td>Centralized Configuration and Management in the Oracle Database Net Services Administrator’s Guide.</td>
</tr>
</tbody>
</table>

9.2 Oracle Database Enterprise User Security with LDAP

Enterprise User Security (EUS), a feature of Oracle Database Enterprise Edition, leverages Oracle Directory Services (ODS) to centrally manage database users and role memberships in an enterprise LDAP directory. This provides a way to address the security and management problems posed by maintaining database users and privileges in individual databases.

Table 9–2 shows the supported integrations:

Table 9–2  Oracle Database Enterprise User Security with LDAP

<table>
<thead>
<tr>
<th>Enterprise User Security Integration for</th>
<th>Additional Information</th>
</tr>
</thead>
</table>
Oracle Entitlements Server provides a fine-grained entitlement management solution that secures critical applications with uncompromised performance and reliability. By combining centralized policy management with distributed policy decision-making and enforcement, it enables you to rapidly adapt to changing business requirements.

This chapter includes these topics:

- Oracle Entitlements Server for Oracle Identity Management
- Oracle Entitlements Server for Oracle Fusion Middleware and Oracle SOA
- Oracle Entitlements Server for Third-Party products

## 10.1 Oracle Entitlements Server for Oracle Identity Management

You can integrate Oracle Entitlements Server with Oracle Identity Management components. Table 10–1 shows the supported integrations:

<table>
<thead>
<tr>
<th>Oracle Entitlements Server Integrated with</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Identity Manager</td>
<td>LDAPAuthenticator at:</td>

and Oracle Identity Federation for access management, 4-2
as proxy for Oracle Identity Federation, 4-2
Oracle HTTP Server 10g
and Oracle Access Manager, 2-2
Oracle HTTP Server 11g
and Oracle Access Manager, 2-2
Oracle Identity Analytics, 7-1
and ETL process, 7-2
and Oracle Identity Manager, 7-1
and Oracle Waveset, 7-1
and third-party provisioning servers, 7-2
for Oracle Identity Management, 7-1
for third-party products, 7-2
Oracle Identity Federation, 4-1
and Oracle Access Manager, 2-1, 4-1
and Oracle Entitlements Server, 10-2
and Oracle Fusion Middleware, 4-1
and Oracle HTTP Server for access management, 4-2
and Oracle Identity Management, 4-1
and Oracle Single Sign-On 10g, 4-1
Authentication Engines, 4-2
authentication mechanisms, 4-2
SP Integration
Oracle Access Manager, 4-3
Oracle Single Sign-On 10g, 4-3
Third-party IAM, 4-3
SP Integration Modules, 4-2
with Oracle HTTP Server as proxy, 4-2
Oracle Identity Management
and Oracle Access Manager, 2-1
and Oracle Adaptive Access Manager, 5-1
and Oracle Entitlements Server, 10-1
and Oracle Identity Analytics, 7-1
and Oracle Identity Federation, 4-1
integration objectives, 1-1
Oracle Identity Manager Connectors, 6-1
Oracle Identity Manager for password management, 8-1
Oracle Identity Manager
Adapter Factory Connectors, 6-5
and ESSO Provisioning Gateway, 3-2
and Oracle Access Manager, 2-1, 8-1
and Oracle Adaptive Access Manager, 5-2, 8-1
and Oracle Entitlements Server, 10-1
and Oracle Identity Analytics, 7-1
Connector for AD Password Synchronization, 6-4
Connector for AD User Management, 6-3
Connector for BMC Remedy Ticket Management, 6-3
Connector for BMC Remedy User Management, 6-3
Connector for CA ACF2 Advanced, 6-3
Connector for CA Top Secret Advanced, 6-3
Connector for Database Application Tables, 6-2, 6-3
Connector for Database User Management, 6-2, 6-3
Connector for IBM Lotus Notes and Domino, 6-3
Connector for IBM OS/400 Advanced, 6-3
Connector for IBM RACF Advanced, 6-3
Connector for IBM RACF Standard, 6-3
Connector for JD Edwards EnterpriseOne User Management, 6-2
Connector for Microsoft Exchange, 6-4
Connector for Microsoft Windows, 6-4
Connector for Novell eDirectory, 6-4
Connector for Novell GroupWise, 6-4
Connector for Oracle Directory Server Enterprise Edition, 6-1
Connector for Oracle E-Business Employee Reconciliation, 6-2
Connector for Oracle E-Business User Management, 6-2
Connector for Oracle Internet Directory, 6-1
Connector for Oracle Retail Warehouse Management System, 6-2
Connector for PeopleSoft Employee Reconciliation, 6-2
Connector for PeopleSoft User Management, 6-2
Connector for RSA Authentication Manager, 6-4
Connector for RSA ClearTrust, 6-4
Connector for SAP Employee Reconciliation, 6-4
Connector for SAP Enterprise Portal, 6-4
Connector for SAP User Management, 6-4
Connector for Siebel User Management, 6-2
Connector for Unix SSH, 6-4
Connector for Unix Telnet, 6-5
Custom Connector with GTC, 6-5
for password flow, 5-2
for password management, 8-1
for provisioning, 8-1
Password Management for Oracle Identity Management, 8-1
password management with Connectors, 8-1
with Oracle Access Manager and Oracle Adaptive Access Manager, 8-1
Oracle Identity Manager Connectors for Databases, 6-1
for Oracle Applications, 6-2
for Oracle Identity Management, 6-1
Third-Party Applications, 6-3
Oracle Identity Navigator
and Oracle Access Manager, 2-1
Oracle Internet Directory
and Enterprise User Security, 9-2
and Oracle Adaptive Access Manager, 5-2
and Oracle Database Net Services, 9-2
as authentication provider, 5-2
Oracle Identity Manager Connector, 6-1
Oracle Retail Warehouse Management System
Oracle Identity Manager Connector, 6-2
Oracle Service Bus
and Oracle Entitlements Server, 10-2
Oracle Single Sign-On 10g
and Oracle Identity Federation, 4-1
SP Integration with Oracle Identity Federation, 4-3
Oracle Virtual Directory
and Oracle Adaptive Access Manager, 5-2
and Oracle Database Net Services, 9-2
and Oracle Entitlements Server, 10-2
as authentication provider, 5-2
Enterprise User Security with Microsoft Active Directory, 9-2
Oracle Waveset
and ESSO Provisioning Gateway, 3-2
and Oracle Identity Analytics, 7-1
Oracle WebCache
and Oracle Access Manager, 2-2
Oracle WebLogic Server
and Oracle Access Manager, 2-2
and Oracle Entitlements Server, 10-2
SSO for applications, 2-2

P
Password Management, 8-1
password management, 1-3
with Oracle Identity Manager, 8-1
with Oracle Identity Manager connectors, 8-1
Password Reset
with Oracle Enterprise Single Sign-On Suite, 8-2
password reset with ESSO-PR, 8-2
PeopleSoft Employee Reconciliation
Oracle Identity Manager Connector, 6-2
PeopleSoft Enterprise
and Oracle Access Manager, 2-2
PeopleSoft User Management
Oracle Identity Manager Connector, 6-2
Provisioning, 6-1
Proximity cards
and ESSO Authentication Manager, 3-3

R
Risk Management, 5-1
RSA Authentication Manager
Oracle Identity Manager Connector, 6-4
RSA ClearTrust
Oracle Identity Manager Connector, 6-4
RSA SecurID
and ESSO Authentication Manager, 3-3

S
SAP Employee Reconciliation
Oracle Identity Manager Connector, 6-4
SAP Enterprise Portal
Oracle Identity Manager Connector, 6-4
SAP mySAP
Oracle Identity Manager Connector, 6-4
and Oracle Access Manager, 2-3
SAP User Management
Oracle Identity Manager Connector, 6-4
Siebel
Oracle Identity Manager Connector, 6-4
and Oracle Access Manager, 2-2
Siebel User Manager
Oracle Identity Manager Connector, 6-2
smart cards
and ESSO Authentication Manager, 3-3

T
Third-Party Applications
Oracle Identity Manager Connectors, 6-3
third-party applications
Oracle Identity Manager Connectors, 6-4
and Oracle Access Manager, 2-3
Third-party IAM
SP Integration with Oracle Identity Federation, 4-3
third-party products
Oracle Identity Manager Connectors, 6-4
and Oracle Entitlements Server, 10-3
and Oracle Identity Analytics, 7-2
third-party provisioning servers
Oracle Identity Manager Connectors, 6-4
and Oracle Identity Analytics, 7-2
types of integration, 1-2

U
Unix SSH
Oracle Identity Manager Connector, 6-4
Unix Telnet
Oracle Identity Manager Connector, 6-5

W
Web Access Management, 2-1
Web access management, 1-3
Web Services and SOAP API
Oracle Adaptive Access Manager, 5-2
Web single sign-on, 2-1
Websphere Application Server 6.1
Oracle Identity Manager Connectors, 6-4
and Oracle Entitlements Server, 10-3
Windows Native Authentication
Oracle Identity Manager Connectors, 6-4
and Oracle Access Manager, 2-3
