Chapter 1

Introduction

This manual describes the data model entities of the Published Model of Agile PLM Business Intelligence Multi-Dimensional Schema (MDS). This document addresses advanced database developers who extend and customize the MDS data model to build custom solutions based on the pre-packaged dashboards and reports within PLM Business Intelligence application.

Note The schema reference provided with product may change in future releases. Any customized solution provided on the basis of this reference manual is not supported and you may need to make appropriate changes in future releases.

MFR_PART_	Conforming dimension FKs within Manufacturer Part Subject Area.
ITEM_	Foreign Keys within Item Subject Area

Suffix	Value
_ID	Primary Key or Foreign Key (FK) that maps to Dimension tables. For a column with a Dynamic List whose values are not stored in List Entry table, you can consider this column as a 'Normal' FK to an Agile table.
_TIME_ID	Date columns that store date values in Julian format - FK to Time Dimension
_FLAG	This column contains a numeric value to represent Boolean Value; 1 indicates 'True' or 'Yes' and 0 indicates 'False' or 'No'.
_NAME	Name of dimension member or object name

Dimension Entities

The Dimensions in the MDS have multiple levels of attributes or a 'Hierarchy'. This section describes the method in which the hierarchical attributes in the MDS database are stored and lists the various cascaded dimension entities.

Consider the following Hierarchy of Attributes specific to the 'Location' Dimension.

- Level 0 - Continent
- Level 1 - Region
- Level 2 - Country
- Level 3 - States
- Level 4 - Cities

All these attributes are stored in the Database table have unique identification.

For example:

ID	Name	Level0	Level1	Level2	Level3	Level4
123	Continent	123	-124	-125	-126	-127
234	Continent Region	123	234	-235	-236	-237
345	Continent Region Country	123	234	345	-346	-347
456	Continent Region Country States	123	234	345	456	-457
567	Continent Region Country States Cities	123	234	345	456	567

All cascaded attributes do not have the same number of levels. The non-existent levels are identified by negative valued identifiers. The following table displays the level names corresponding to each level:

ID	Level0_Name	Level1_Name	Level2_Name	Level3_Name	Level4_Name
123	Continent	UNDEFINED	UNDEFINED	UNDEFINED	UNDEFINED
234	Continent	Region	UNDEFINED	UNDEFINED	UNDEFINED
345	Continent	Region	Country	UNDEFINED	UNDEFINED
456	Continent	Region	Country	States	UNDEFINED
567	Continent	Region	Country	States	Cities

The level name corresponding to the negative valued identifiers is 'UNDEFINED'.

The following table lists all the dimension entities in PLM BI MDS schema.
