Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.
Overview of Planning

Oracle Hyperion Planning is a web-based budgeting and planning solution, driving collaborative, event-based operational planning processes throughout the organization for a wide range of financial and operational needs. It gives web users the ability to enter, analyze, and report on data, manage the planning process, and personalize data entry forms.

Planning is a comprehensive approach for the complete and closed-loop planning process that drives continuous business improvement. With Planning, all decision makers and front-line managers can communicate which course of action to take and get budget holders to collaborate so that the planning process is optimized and efficient. When a material event occurs that causes a change in direction, planners have the flexibility to adapt rapidly, ensuring that plans are relevant and useful.

Planning benefits:
- Facilitates collaboration, communication, and control across multidivisional global enterprises
- Provides a framework for perpetual planning, with attention to managing volatility and frequent planning cycles
- Provides ease of use and deployment through the web or Oracle Hyperion Smart View for Office
- Lowers the total cost of ownership through a shorter roll out and implementation phase, and easier applications maintenance
- Enhances decision-making with reporting, analysis, and planning
Promotes modeling by including complex business rules and allocations

Integrates with Smart View so you can design worksheets in Microsoft Excel to enter, format, analyze, and report on data in a Planning application. Using ad hoc grids—focused data slices—in Smart View, you can also perform ad hoc analysis. See the Oracle Hyperion Smart View for Office User’s Guide for information on all Smart View functionality.

Enables you to enter and analyze data using Offline Planning when you are disconnected from the Internet—for example, on airplanes or in hotel rooms—and later save the data back to the Planning server. (The administrator must enable this feature for the application.)

Integrates with other systems to load data

Logging on to EPM Workspace

You work with Planning in Oracle Hyperion Enterprise Performance Management Workspace environment. You can access EPM Workspace through a URL that your administrator provides or through an Oracle application link.

Note: Access through Oracle product links requires that single sign-on be enabled.

To start an EPM Workspace session:

1. In your web browser, go to the EPM Workspace web page.
2. Enter your user name and password, which are case-sensitive.
3. Click Log On.
4. To work with a Planning application, in EPM Workspace, select Navigate, then Applications, then Planning, and then select your Planning application.

Note: You can select multiple Planning applications and navigate among them by clicking the application name on the tab at the top of the EPM Workspace window.

Working With Multiple Applications

You can simultaneously open several Planning applications—or the same application multiple times—and navigate among them by clicking their names on the tabs at the top of the EPM Workspace window. If you want to open two or more instances of the browser to log on to EPM Workspace, you must append the EPM Workspace URL as described in the Oracle Hyperion Enterprise Performance Management Workspace User’s Guide.

Navigating in Planning

After you select a Planning application, use the view pane on the page's left side to view folders and forms. To open a form, double-click a folder name, and click a form's name. The form opens
in the content area on the page’s right side. You can select commands from menus, and right-click to select context-sensitive menus as described in the following table.

To make more room for your work:

- To hide or show the view pane at the page’s left side, select View, and then View Pane.
- Click the View Pane or Content Area Adjuster (see the Oracle Hyperion Enterprise Performance Management Workspace User’s Guide).
- Drag the view pane to resize it.
- Click on the upper-right corner to maximize or minimize the content area.

The following table lists getting started tasks and their corresponding procedures.

<table>
<thead>
<tr>
<th>Task</th>

</tr>
<tr>
<td>Perform administrative tasks</td>
<td>If you log on as an administrator, the Administration menu is enabled, from which you can create forms, tasks lists, and so on. See the Oracle Hyperion Planning Administrator's Guide.</td>
</tr>
</tbody>
</table>

**Searching for Forms**

You can search for forms.

➢ To search for forms:

1. Enter part or all of the search criteria in the text box on the page's lower-right corner.

2. To search up or down, click 📚 or 💿.

**Using Online Help**

➢ To view context-sensitive help, select Help, and then Help on This Topic, or click the Help button in dialog boxes.

➢ To browse the help system, select Help, and then Contents.

**Using Oracle User Productivity Kit**

If the Oracle User Productivity Kit (UPK) is deployed and EPM Workspace is configured by an Administrator with a valid URL for the UPK Player package, users can access UPK content for Oracle Enterprise Performance Management System. For more information on configuring UPK, see the “Workspace Server Settings” section in the Oracle Hyperion Enterprise Performance Management Workspace Administrator's Guide and the “Oracle User Productivity Kit” section in the Application Support Guide.
Note: There are pre built UPK content modules available. See the data sheets that include UPK for Oracle Enterprise Performance Management System available on Oracle.com, http://www.oracle.com/us/products/applications/tutor-upk/064788.html. Oracle Hyperion Financial Management and Planning modules include appropriate content for Smart View and Oracle Hyperion Financial Reporting Studio. Oracle Hyperion Financial Management and Planning support invoking UPK content in a context sensitive manner. UPK content launched from Smart View or Reporting Studio launches the full player package outline unfiltered for context. Reporting Studio and Smart View users can utilize a roles filter to see only the Smart View or Oracle Hyperion Financial Reporting Studio content.

To open UPK Help:
1 Take one action:
   - Select the Help menu, and then select Oracle User Productivity Kit.
   - From the Help tool bar, click UPK.
   - From a dialog box, click Help, and then from the Help toolbar, click UPK.
2 Optional: If you opened a dialog box, close the dialog box when done.

About Task Lists
Administrators and interactive users can set up task lists that guide you through the steps—including their due dates—to complete a budget cycle. For example, a task might help you enter data, run a business rule, and submit numbers for approval. Your administrator can also include tasks that link to other applications. See Chapter 2, “Working with Task Lists.”

Logging Off
You can quit the current session or exit Planning entirely.

To log off the current session:
1 Select File, and then Logout.
2 When prompted, click Yes.

The Log On screen is displayed for your next session.

Note: If you log on and do not use the application for awhile, you are automatically logged off at the interval your administrator set.
About Task Lists and Tasks

Administrators can set up task lists to help with budget cycles. For example, a task might help you complete forms, launch business rules, or promote planning units. Tasks can display instructions, due dates, completed dates, and alerts. Tasks can include Web pages, forms, approvals, business rules, or descriptions.

Task lists can also provide validation reports for promotional path rules. For information on viewing validation reports and resolving errors, see “Viewing and Resolving Data Validation Errors” on page 45.

Working With Task Lists and Tasks

To view your task lists:

1. In EPM Workspace, open a Planning application and perform one of the following actions:
   - Select View, then Task List, and then Task List.
   - Expand My Task List in the left pane.

2. In Task List Status, review the status of your tasks lists.

   Task List Status initially displays the status of all your tasks. To change the display to show information for a specific task list, select the desired task list under My Task List in the left pane.

   You can choose to display the status as a Pie Chart or a Project Gantt Chart. To select how to display the task status, select the desired option from the View drop-down menu at the top right of the screen.
Pie Chart — The pie chart graphically shows the percentage of tasks that are complete, incomplete, or overdue. Click on a section of the pie chart to display details about a specific task status. For example, clicking Incomplete on the pie chart displays details about the tasks that are incomplete.

Project Gantt Chart — If you choose to display task list status as a Project Gantt Chart, you can customize the display with the following options:
  - **View** — Customize how the Project Gantt Chart is displayed:
    - **List Pane** — Select which columns to display in the Gantt Chart, and how to expand or collapse the task list information.
    - **Go to Date** — Go to a specific date on the Gantt Chart.
    - **Time Scale** — Select the time scale to display on the Major Axis and Minor Axis. For example, years, half years, quarters, half quarters, months, weeks, days, or hours.
  - **Filter** — Select All Tasks to view the status of all outstanding tasks.
  - **Zoom In/Zoom Out** — Show more or less detail in the data that is displayed. For example, if you are showing data for 2012, clicking Zoom In would change the display to the first half and second half of 2012, clicking Zoom In again would show the data for the months, and you could continue to zoom in to show the days in the month.
  - **Zoom To** — Zoom to a specific time frame. You can select 1 week, 2 weeks, 1 month, 3 months, 6 months, 1 year, or show the entire project.

3 Review information about each task.

For each task, you can view the following information:

- **Type** — The type of task. Tasks can include Web pages, forms, approvals, business rules, or descriptions.

- **Status** — The current status of the task.
  - **Complete** — Indicates that the task is complete. If a task has dependent tasks, these tasks must be completed before **Complete** is displayed for primary tasks.
  - **Incomplete** — Indicates that the task is incomplete.
  - **Overdue** — Indicates that the task is overdue.

- **Due Date** — The date that the task must be completed.

Due dates are set when you create a task list. See “Managing Task Lists” in the Oracle Hyperion Planning Administrator’s Guide.

- **Alert** — Visual clues about your progress.
  - Green: On schedule
  - Yellow: Approaching the due date
  - Red: Overdue; the due date has passed and the task is incomplete
Alerts are set to display when you create a task list. See “Managing Task Lists” in the Oracle Hyperion Planning Administrator’s Guide.

- **Completed Date**—The date the task was completed.

- **Instructions**—Click to access information about how to complete tasks.

- **Action**—Click to launch the Tasklist Wizard where you can enter detailed information about task.

Once in the Task Wizard, you can navigate using the options that are appropriate for the selected task list or task. For example, depending on the task list, task, and status, you can select: Next, Previous, Next Incomplete, or Previous Incomplete. See “Completing Tasks” on page 19.

## Completing Tasks

The way you complete tasks depends on the task type. For example, a task can require you to enter data or launch a business rule. Tasks can also display read-only information, such as reminders or instructions.

After completing task requirements, mark the task as complete. If a task has dependent tasks, you must complete those tasks before completing the primary task.

To complete a task:

1. **Select a task**, as described in “Working With Task Lists and Tasks” on page 17.
   
   Depending on the type of task, it displays as a Web page, form, approval, business rule, or description.

2. **Complete the task activity.**
   
   For example, depending on the task, you can view a Web page, enter data, complete an Approvals task, launch a business rule, or read a description. See “Entering Data” on page 39, “Managing Planning Units” on page 83, and “About Launching Business Rules” on page 57.

3. **Complete associated dependent tasks.**
   
   Click to view subordinate tasks, also called child tasks.

4. **After completing the activities for the task, select Complete.**
   
   If the check box is not selectable, you must complete dependent tasks before completing the task.

   After you select Complete, the task is marked as complete and is displayed next to the task in the view pane.
Viewing Email Alerts

If your administrator sets email alerts, you can receive email reminders about tasks that are approaching or are past their due date. The timing and frequency of alerts depends on how your administrator sets up this feature.

➢ To view an email alert, open and read the received email message.

Reporting on Task List Status

To review the status of the planning process, use the Task List Report page to view task list reports as PDF files or Excel worksheets.

The status report displays the task lists, task list owners, due dates, completion dates, and status of the task.

➢ To view status reports:

1. **Select View, then Task List, and then Report.**
   The task lists assigned to you are displayed.

2. **In Select Task Lists, move the desired tasks from Available Task Lists to Selected Task Lists, and click Next.**

3. **In Select User, move the users whose status to wish to view from Available Users to Selected Users, and click Next.**
   The users displayed are those users who have access to the task lists.

4. **Set the desired report options.**
   - **Group Results By**—Task List or Users
   - **Display Options of Task List Columns in Report**—The options to display in the report
   - **Show Detailed Task Columns in Report**—Whether to display detailed task columns in the report
     If you select this option, the available detailed task columns (due date, alert date, instructions, completed date, and dependency) are automatically selected to display. You can clear individual task columns if desired.
   - **Report Type**—PDF Format or Export to Excel

5. **Select Create Report.**
   Select whether to save the report to your computer or to open the report.

6. **If you selected:**
   - **PDF Format**—Open the .pdf file and use the Acrobat toolbar for viewing and saving options.
   - **Export To Excel**—Open the .xls file to view the report.
Selecting and Opening Forms

Subtopics

- Opening Forms
- Searching for Forms

Use forms to enter, update, analyze, print, and report on data. If you close a form without saving changes, a message displays. To proceed, respond to the message and save or refresh the data.

Note: If the members in the form you open have no data, this message (or one that your administrator has created) displays: There are no valid rows for this form.

Opening Forms

You can select forms on the page's left side.
To open forms:

1. In the left pane, display folders by clicking next to **Forms**.
   
The folders available to you display in the view pane. If a folder contains additional folders, 
 displays to the left of the folder name.

2. Under **Forms**, click a folder name to display the form to open.

3. Click the form name in the right pane.
   
The form is displayed in the content area.

**Searching for Forms**

If you know the form’s name, you can search for it in the view pane.

To search for forms:

1. In a form, click in the view pane.
   
   See “Selecting and Opening Forms” on page 21.

2. In the menu bar, enter search criteria in the text box.

3. Click or to search up or down.
   
   Forms that match your search criteria display in the content area.

**Expanding Forms and the Data Entry Area**

You can expand forms and the data entry area—including the view pane—in several ways.

To expand forms and the data entry area:

1. Open a form.

2. Take an action:
   
   - Expand: Double-click the thick black line between the row heading and the data cells. 
     The row heading expands to accommodate the row heading.
   
   - Resize: Click the view pane’s right border, and then drag to resize it.
   
   - Expand or collapse the view pane: Select **View**, then the **View** pane, click the **Toggle View** pane button in the toolbar, or drag the view pane to resize it.

   - Click Hide or Show the view pane.
   
   - Click Maximize or Restore in the screen’s upper-right corner.
   
   - View the form: Use the scroll bars.
Setting Column Width

Administrators can set column width using settings on the Layout tab for forms. Column width settings apply to each form page:

- **Small**: Displays columns 50 pixels wide, enough for approximately seven decimal places.
- **Medium**: Displays columns 75 pixels wide, enough for approximately ten decimal places.
- **Large**: Displays columns 100 pixels wide, enough for approximately thirteen decimal places.
- **Size-to-Fit**: Automatically sizes the column width to fit the widest content in a heading or data cell.
- **Custom**: You can enter a pixel width value of up to 999.
- **Default**: The column width is defined at the grid level.

If a column width is selected that is less than the width of the column contents, the excess data is hidden until the column is widened. While the data is hidden, it is stored and calculated in the same way as displayed data.

You can adjust column width while viewing a form, regardless of the column width setting in the form properties. To save the adjusted column width for the remainder of your session, save or refresh the form.

When you print from the data entry page, the columns print at the width defined in preferences. See “Setting Preferences for Printing Options” on page 109.

In forms, you can perform the tasks in the following table:

<table>
<thead>
<tr>
<th>Task</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Resize column width</td>
<td>Drag the column heading to the desired width.</td>
</tr>
<tr>
<td>Minimize column width</td>
<td>Right-click a column heading, and then select <strong>Minimize</strong>, or double-click a column heading.</td>
</tr>
<tr>
<td>Restore a minimized column</td>
<td>Right-click a minimized column heading, and then select <strong>Restore</strong>, or double-click a column heading.</td>
</tr>
<tr>
<td>Restore all minimized columns</td>
<td>Right-click a column heading, and then select <strong>Restore All</strong>.</td>
</tr>
<tr>
<td>Reset column width to the default setting</td>
<td>Right-click a column heading, and then select <strong>Reset All to Default</strong>.</td>
</tr>
</tbody>
</table>

Adjusting Row Height

Administrators can set row height using settings on the Layout tab for form properties. Row height settings apply to each form page:

- **Size-to-Fit**: Row headings fit in the displayed space
- **Custom**: Select a custom size in pixels for the row height
- **Medium**: Rows are displayed at a medium height.
- **Default**: Row height is defined at the grid level
If a row height is selected that is less than the height of the row contents, the excess data is hidden until the row is adjusted. While the data is hidden, it is stored and calculated in the same way as displayed data.

You can drag row headings to adjust row height while viewing a form, regardless of the row height setting in the form properties. After you adjust the row, you can add a new line of text to the row. To save the adjusted row height for the remainder of your session, save or refresh the form.

When you print from the data entry page, the rows print at the height defined in preferences. See “Setting Preferences for Printing Options” on page 109.

### Hiding Rows or Columns Having No Data or Zeros

1. To hide rows having no data or containing zeros:
   1. Right-click a row member name, and then select **Filter**.
   2. Then select:
      - **Hide rows with no data**: to toggle between hiding and showing rows having no data (displayed as #MISSING or blank, depending on how your administrator set this form property). This option does not display if your administrator has set the form's property to Suppress Missing Data.
      - **Hide rows with zeros**: to toggle between hiding and showing rows having zeros for values.
      - **Hide rows with zeros and no data**: to toggle between hiding and showing rows having either no data or zeros, or both.
   3. To switch between showing and hiding rows, select the option again.

2. To hide columns having no data or containing zeros:
   1. Right-click column member name, and then select **Filter**.
   2. Then select:
      - **Hide columns with no data**: to toggle between hiding and showing columns having no data (displayed as #MISSING or blank, depending on how your administrator set this form property). This option does not display if your administrator has set the form's property to Suppress Missing Data.
      - **Hide columns with zeros and no data**: to toggle between hiding and showing columns having either no data or zeros, or both.
   3. To switch between showing and hiding columns, select the option again.

### Searching in Forms

To navigate to a data cell or member name on a form, use the browser’s Find feature. Find does not search minimized columns. For example, if Qtr 1 is minimized, it does not find Feb. Find
To find and select a data value or member in forms:

1. Open a form.
2. From the web browser, select Edit, and then Find on This Page, or press Ctrl+F.
3. In Find What, enter the value or part of the value to find.

   Use the web browser’s Find feature to set the direction of the search, whole word match, or capitalization match.

### Sorting Rows and Columns

You can sort rows and columns to view data in ascending or descending order. You can sort within the hierarchy or across data.

To sort rows and columns:

1. Right-click a row or column member, select Sort, and then select an option:
   - Sort Ascending: View information in ascending order, from lowest to highest.
   - Sort Descending: View information in descending order, from highest to lowest.
   - Honor Hierarchy: Sort within the hierarchy. If this option is not selected, sort works across data.
2. To stop any sort operations in the form, click Cancel Sort.

### Filtering Rows and Columns

You can filter rows and columns to select which rows or columns to display in the form. Filters can keep or exclude members using simple functions that compare against a specified value.

To filter rows and columns:

1. Right-click a row or column member, select Filter, and then Filter.
2. In the left-most field in the Filter dialog box, select the filter type:
   - Keep: to include rows or columns that meet the filter criteria
   - Exclude: to exclude rows or columns that meet the filter criteria
3. In the middle field, select an option to set which values to keep or exclude:
   - Equals
   - Greater Than
   - Greater Than or Equal To
   - Less Than
Less Than or Equal To

In the right-most field, enter the value to use for the filter.

Click Filter Row or Filter Column.

The form displays only those rows or columns that meet the filter criteria.

To cancel the filter, right-click a row or column member, and then select Cancel Filter.

Showing Members in the Outline

When you want more information about dimension members in a form, you can view members in the outline.

To show members in the outline:

1. Right-click a row or column member, and then select Show member in outline.

2. To review more member properties, click Edit.

For detailed information about working with dimension members, see the Oracle Hyperion Planning Administrator’s Guide.

Viewing Instructions for Forms

The administrator can include instructions to guide you in preparing budget data. If instructions are available, a View link displays in the form’s Instructions column.

To view instructions for a form:

1. Open a form that includes instructions.

2. Complete one of these tasks:

   - Click View.
   - Select View from the menu, and then Instructions.

3. Click Close.

Displaying Dimension Names on the Page

You may it helpful to display dimension names in front of Page drop-down lists.

To display dimension names in front of their members on Page drop-down lists:

1. From View, select Show Dimension Names on Page.

2. Because this menu item is a toggle, to turn off the display of dimension names on the page, select View, and then select Show Dimension Names on Page again.
Viewing a Cell's Data History

If an administrator has turned on auditing for **Data** (see the *Oracle Hyperion Planning Administrator’s Guide*), you can view the data history of any numeric, date, or text cell to which you have at least Read access.

To view a cell’s data history:

1. In the cell, right-click.
2. Select **Show Change History**.

A read-only screen displays which users changed the cell’s value, when, its previous value, and new value. You can sort the list by ascending or descending order.

**Note:** Planning does not display data values that are changed by executing business rules; instead, the executed business rule name is displayed.

Navigating Among Forms

Your administrator can set up forms so that you can invoke them from right-click (shortcut) menus. If you invoke such forms using right-click menus, you can navigate among them by:

- Clicking the hyperlinked form names at the top of the page:

  ![Diagram](image.png)

  The links reflect your navigation flow (also called “breadcrumbs”).
- Clicking the tab named for the form.
- Right-clicking and then selecting the form to move to.

These “breadcrumb” features enable you to easily navigate from a source form to target forms and then back again, with their context intact. If you navigate to a form without using a right-click menu, the breadcrumbs flow is not displayed.

Copying Versions

Use the **Copy Version** page to copy data from one bottom-up or target version of a selected scenario to another bottom-up or target version within the same scenario. For example, you can create a Best Case version, and copy some or all the data in that version to a Worst Case version to quickly create a starting point for the new version.
You can copy between bottom-up and target versions. Consider:

- When you copy to a bottom-up version, only the selected level 0 members are copied.
- When you copy to a target version, all selected members are copied.
- To protect data in approved planning units, copying a version does not copy to approved planning units.

**Note:** To successfully copy data, when specifying the copy data criteria, you must select at least one member for the Scenario, Account, Entity, Period, and Version dimensions.

➢ To copy a version:

1. In a form, select **Tools**, and then **Copy Version**.
2. In the **Scenario** list, select the scenario to copy.
3. In the **Copy From** list, select the version from which to copy data.
4. In the **Copy To** list, select the version to which to copy data.
5. Click **Go**.

The entities for the selected version display in **Available Entities**.

6. In **Available Entities**, select the entities to which to copy data.

   **Available Entities** displays the entities (planning units) to which you have write access and that belong to you. You can copy entities with a **Process Status** of **Not Started** or **First Pass**.

7. Click **Add** to add the entity to **Selected Entities**, or click **Add All** to add all entities. Click **Move** or **Move All** to move entities from **Selected Entities**.

8. **Optional:** To copy annotations that are associated with accounts, select **Copy Account Annotations**.

   Only annotations for selected entities are copied. If you are copying to a bottom-up version, only level 0 entities (and their annotations) are copied.

9. **Optional:** To copy associated comments, select **Copy Comments**.

10. **Optional:** To copy associated supporting detail, select **Copy Supporting Details**.

11. Click **Copy Data**.

   **Note:** Wait for the Copy Version completion message before loading another web page.

### Launching Smart View from Planning

➢ To launch Smart View from a form in Planning, select **File**, and then **Open in Smart View**.

Excel is launched, you are automatically logged into Smart View in Excel, and the form displays in the Data Source Manager. Right-click on the form in the Data Source Manager. You can then open it as an ad hoc grid or perform any other Smart View operations on that form. See the *Oracle Hyperion Smart View for Office User’s Guide*.
Using Predictive Planning

When Predictive Planning is installed and a valid form (not an ad hoc grid) is loaded into Smart View, you can use the Predict item on the Planning menu or ribbon to predict performance based on historical data. To use this feature, administrators must design forms as described in the “Oracle Hyperion Planning Predictive Planning User’s Guide”.

About Ad Hoc Analysis

Subtopics

- Using Ad Hoc Grids
- Ad Hoc Roles
- Ad Hoc Grids in Smart View

Using Ad Hoc Grids

With ad hoc grids, users can create and personalize focused data slices that they frequently access or that others can use. Users with access permissions, who are granted the Ad Hoc User role, can open ad hoc grids and dynamically change the data slice. If they have the Ad Hoc Grid Creator role, users can save the ad hoc grid for their own or others’ use (see “Ad Hoc Roles” on page 32). Ad hoc grids can be created and accessed in a similar ways from Planning and Smart View.

At their onset, ad hoc grids reflect the root dimensional layout of the form from which they are created. However, users are not confined by the form definition and can completely change the data intersection and layout of ad hoc grids (assuming that they have access to the members).

Examples:

- Save a set of products that you work with during spring promotions so you can easily access their data
- Quickly review profit margins in your regions by customizing a grid to look the way you want it to look
- Open an ad hoc grid that someone else created and change its definition: its members, which axis they display on, and so on
Ad hoc actions can also be performed from the root dimensions of the selected plan type, both from the top menu or by right-clicking in forms. This flexibility enables users to start at the plan type's root level and then navigate to any location. Starting from a form enables users to start from the form's boundaries and navigate beyond or within its boundaries.

Notes:

- Access permissions to ad hoc grids and their dimension members are honored, so users can view only grids and members to which they are granted Read or Write access.
- If the form from which the ad hoc grid is launched has row or column groupings, the members are assumed in the ad hoc grid, but the groupings themselves are not.

For a description of ad hoc actions, see “Performing Ad Hoc Actions” on page 34.

Ad Hoc Roles

Ad hoc roles, set for Planning users in Oracle Hyperion Shared Services:

- Ad hoc User: Can open and personalize ad hoc grids but cannot save them. Ad hoc icons and functionality are visible only to users with this role.
- Ad hoc Grid Creator: Can create and save ad hoc grids for their own and others' use. Users with this role can also save over existing grids to which they have access.

Note: The form folders to which the ad hoc grids are saved can be assigned permissions that enable others to use them.

Ad Hoc Grids in Smart View

In Smart View, users can analyze data using ad hoc grids that are created in Planning. For information on using Smart View, see the Oracle Hyperion Smart View for Office User's Guide.

Creating and Working With Ad Hoc Grids

To complete ad hoc tasks:

1. Create an ad hoc grid, as described in “Creating Ad Hoc Grids” on page 33, or start ad hoc analysis, as described in “Starting Ad Hoc Analysis” on page 34.
2. Perform ad hoc actions, as described in “Performing Ad Hoc Actions” on page 34.
3. Save ad hoc grids, as described in “Saving Ad Hoc Grids” on page 35.
4. Exit ad hoc analysis, as described in “Exiting Ad Hoc Analysis” on page 35.
Creating Ad Hoc Grids

If you were provisioned one of the ad hoc roles (assigned in Shared Services), you can create an ad hoc grid.

To create an ad hoc grid:

1. Select an action:
   - Select Tools, then Ad hoc, and then New Ad Hoc Grid.
   - Click New Ad Hoc Grid.
   - Within a form, right-click, and then select New Ad Hoc Grid.
   - In the view pane, select an existing ad hoc grid and then click Save.

   In the view pane listing, ad hoc grids are denoted by 🟢.

2. In New Ad Hoc Grid, select a Plan Type, and then click Go.
   The ad hoc grid is displayed in a new tab in the content area.

3. Perform ad hoc actions.
   See “Performing Ad Hoc Actions” on page 34.

Note:  Ad hoc grids are saved in form folders and display in the list of forms with the following icon: 🟢.

Default Properties of New Ad Hoc Grids

Ad hoc grids start with the following properties:
- Dimension root members are selected.
- Account is on the row axis.
- Period and Year are on the column axis.
- Other dimensions in the application are on the page axis, where they are selectable from a drop-down list. (Ad hoc grids have no POV axis.)
- Dimension and member properties (for example, Data Type) are retained.
- Rows and column groupings are retained.

After opening an ad hoc grid, you can then change which members display, pivot the axis, and analyze the data using ad hoc features (see “Performing Ad Hoc Actions” on page 34).

Note:
- Properties that users set are in effect only for the current session.
- The properties of the form from which the ad hoc grid is originally invoked are not retained.
Starting Ad Hoc Analysis

If you were provisioned one of the ad hoc roles (assigned in Shared Services), you can start ad hoc analysis.

To start ad hoc analysis:
1. Select a form.
   See “Selecting and Opening Forms” on page 21.
2. Select from the following:
   - Select Tools, then Ad hoc, and then Analyze.
   - Click Analyze.
   - Within a form, right-click, and then select Analyze.

The ad hoc grid is displayed in a new tab in the content area.

3. Perform ad hoc actions.
   See “Performing Ad Hoc Actions” on page 34.

Performing Ad Hoc Actions

If you were provisioned one of the ad hoc roles (assigned in Shared Services), you can perform actions on ad hoc grids.

To perform ad hoc actions:
1. Create an ad hoc grid, as described in “Creating Ad Hoc Grids” on page 33, or start ad hoc analysis, as described in “Starting Ad Hoc Analysis” on page 34.
2. Right-click a page or a row or column heading, select Ad hoc, and then select an ad hoc action:
   - Pivot To: Moves a dimension to another area. For example, if you select this option within a row, you can move it to the Page axis or Column. You cannot pivot the last dimension in a row or column.
   - Move: Select an option to move a dimension Left, Right, Up, or Down. If an area has only one dimension, this option is unavailable.
   - Zoom In: Select an option to display the levels below a member of a hierarchy. For example, you can select to display the Next level, All levels, or Bottom level children.
   - Zoom Out: Displays the levels above a member of a hierarchy. For example, click a member and select Zoom Out to view the member’s parents.
   - Remove Only: Removes the selected dimension or members from the ad hoc grid. More than one member of the dimension must be present on the grid.
   - Keep Only: Keeps only the selected members, and removes all other members from the dimension.
Select Members: Launches the Member Selection dialog box to select members. See the Oracle Hyperion Planning Administrator’s Guide.

Change Alias: Displays a list of alias tables from which to select.

Note: You can control, at a global level, how ad hoc actions are performed or how the ad hoc grids are displayed. See “Ad Hoc Grid Options” on page 36.

3 Optional: Save the ad hoc grid.
See “Saving Ad Hoc Grids” on page 35.

4 Exit ad hoc analysis.
See “Exiting Ad Hoc Analysis” on page 35.

Saving Ad Hoc Grids

If you have the Ad hoc Grid Creator role (assigned in Shared Services), you can save ad hoc grids.

To save an ad hoc grid:

1 Create an ad hoc grid, as described in “Creating Ad Hoc Grids” on page 33, or start ad hoc analysis, as described in “Starting Ad Hoc Analysis” on page 34.

2 Perform ad hoc actions, as described in “Performing Ad Hoc Actions” on page 34.

3 Take an action:
   ● Select Tools, then Ad hoc, and then Save Ad Hoc Grid.
   ● Click Save Ad Hoc Grid.
   ● Click Save in the screen’s lower-right corner.

4 Enter a Name and Description for the grid.
   If saving for the first time, you are prompted to select the Form folder in which to save the grid.

Saved ad hoc grids are displayed in the view pane as a sibling of the forms. In the view pane listing, ad hoc grids are denoted by .

Exiting Ad Hoc Analysis

To exit ad hoc analysis:

1 Create an ad hoc grid, as described in “Creating Ad Hoc Grids” on page 33, or start ad hoc analysis, as described in “Starting Ad Hoc Analysis” on page 34.

2 Perform ad hoc actions, as described in “Performing Ad Hoc Actions” on page 34.

3 Optional: Save the ad hoc grid as described in “Saving Ad Hoc Grids” on page 35.
Ad Hoc Grid Options

Subtopics

- Ad Hoc Options
- Suppress Options
- Precision Options
- Replacement Options

Ad Hoc Options

The ad hoc grid options enable you to control, at a global level, how ad hoc actions are performed or how the ad hoc grids are displayed. Ad hoc grid options are not persisted as a property of the ad hoc grid itself.

Table 1  Ad Hoc Options

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Member inclusion</strong></td>
<td><strong>Include selection</strong> <em>(default)</em>: Displays the selected member with the members retrieved after the zoom operation. The parent member from where the zoom operation is invoked is retained during <strong>Zoom In</strong> operations. For example, drilling on Q1 results in Q1, Jan, Feb, Mar being kept. If this option is not selected, Q1 is excluded. <strong>Within selected group</strong>: Performs <strong>Zoom In</strong> and <strong>Zoom Out</strong> operations and <strong>Keep Only</strong> and <strong>Remove Only</strong> operations only on the selected parent group in an asymmetric grouping of rows or columns. Members within other groups remain the same as they were before zoom was performed.</td>
</tr>
<tr>
<td><strong>Display</strong></td>
<td><strong>Member name</strong> <em>(default)</em>: Displays the member name only</td>
</tr>
<tr>
<td></td>
<td><strong>Member name and alias</strong>: Displays both the member name and alias with a colon, just as in forms</td>
</tr>
<tr>
<td></td>
<td><strong>Alias</strong>: Displays the alias only</td>
</tr>
<tr>
<td></td>
<td><strong>Alias Table</strong>: Select an alias table from the drop-down list</td>
</tr>
<tr>
<td><strong>Zoom in levels</strong></td>
<td><strong>Next level</strong> <em>(default)</em>: Displays the next level only</td>
</tr>
<tr>
<td></td>
<td><strong>All levels</strong>: Displays all levels</td>
</tr>
<tr>
<td></td>
<td><strong>Bottom level</strong>: Displays the bottom level members only <em>(if the <strong>Include selection</strong> option is enabled, it includes the member from which the zoom action was invoked)</em></td>
</tr>
<tr>
<td><strong>Indentation</strong></td>
<td><strong>None</strong>: Indents none of the members</td>
</tr>
<tr>
<td></td>
<td><strong>Subitem</strong> <em>(default)</em>: Indents all subitems and totals one level down</td>
</tr>
<tr>
<td></td>
<td><strong>Totals</strong>: Indents the totals only</td>
</tr>
<tr>
<td><strong>Ancestor Position</strong></td>
<td><strong>Top</strong>: Displays the parent members at the top of the dimension hierarchy during <strong>Zoom In</strong> operations that are inclusive</td>
</tr>
<tr>
<td></td>
<td><strong>Bottom</strong> <em>(default)</em>: Displays the parent members at the bottom of the dimension hierarchy during <strong>Zoom In</strong> operations that are inclusive</td>
</tr>
<tr>
<td><strong>Navigate without refreshing data</strong></td>
<td><strong>Yes</strong>: You can perform ad hoc actions without refreshing data</td>
</tr>
<tr>
<td></td>
<td><strong>No</strong>: Data is refreshed as you perform ad hoc actions <em>(the default)</em></td>
</tr>
</tbody>
</table>
Option | Description
--- | ---
**Suppress options** | See “Suppress Options” on page 37.

**Precision options** | See “Precision Options” on page 37.

**Replacement options** | See "Replacement Options" on page 38.

**Note:** The option settings that Ad Hoc Grid Creators select for an ad hoc grid become defaults when other users open the grid. Users can then change the settings for the current session only.

### Suppress Options

To streamline the grid, you can suppress rows or columns that contain one or more types of data that you do not need to view.

**Table 2  Suppress Options**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Missing Data</td>
<td>Hides rows or columns without data; if this option is cleared, empty cells display the text #MISSING</td>
</tr>
<tr>
<td>Zeros</td>
<td>Hides rows or columns containing zeros</td>
</tr>
<tr>
<td>Repeat Members</td>
<td>Hides repeating members and shows only the first instance of the member</td>
</tr>
<tr>
<td>Missing Blocks on Rows</td>
<td>Hides missing blocks on rows</td>
</tr>
</tbody>
</table>

### Precision Options

In **Precision options**, select options to set the number of decimal positions displayed in a cell for **Currency Values**, **Non-Currency Values**, and **Percentage Values**.

Specify minimum values to add zeros to numbers with few decimal places. Specify maximum values to truncate and round the decimal portion of longer numbers. For example:

**Table 3  Data Precision Examples**

<table>
<thead>
<tr>
<th>Value</th>
<th>Minimum Precision</th>
<th>Maximum Precision</th>
<th>Displayed Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>100</td>
<td>0</td>
<td>Any</td>
<td>100</td>
</tr>
<tr>
<td>100</td>
<td>3</td>
<td>Any number greater than or equal to 3 or None</td>
<td>100.000</td>
</tr>
<tr>
<td>100.12345</td>
<td>Any number less than or equal to 5</td>
<td>None</td>
<td>100.12345</td>
</tr>
<tr>
<td>100.12345</td>
<td>7</td>
<td>None</td>
<td>100.1234500</td>
</tr>
<tr>
<td>Value</td>
<td>Minimum Precision</td>
<td>Maximum Precision</td>
<td>Displayed Value</td>
</tr>
<tr>
<td>------------</td>
<td>-------------------------</td>
<td>-------------------</td>
<td>-----------------</td>
</tr>
<tr>
<td>100.12345</td>
<td>Any number less than or equal to 3</td>
<td>3</td>
<td>100.123</td>
</tr>
<tr>
<td>100.12345</td>
<td>0</td>
<td>0</td>
<td>100</td>
</tr>
<tr>
<td>100.12345</td>
<td>2</td>
<td>4</td>
<td>100.1234</td>
</tr>
<tr>
<td>100</td>
<td>2</td>
<td>4</td>
<td>100.00</td>
</tr>
</tbody>
</table>

### Replacement Options

Data cells in ad hoc grids may contain missing data or data that you do not have permission to view. In such cells, ad hoc by default displays `$MISSING$` or `$#NoAccess$`, but you can change these labels.

**Table 4   Replacement Options**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>$#MISSING/$NoData$</td>
<td>Replaces, in data cells missing data, a user-defined option. The default value is $#MISSING$.</td>
</tr>
<tr>
<td>$#NoAccess$</td>
<td>Replaces, in data cells in which you do not have access permissions, a user-defined option. The default value is $#NoAccess$.</td>
</tr>
<tr>
<td>Submit Zeros</td>
<td>If selected, specifies a zero (0) as a replacement value instead of $#MISSING$.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> This occurs only for cells in which you manually changed the value to $#MISSING$.</td>
</tr>
</tbody>
</table>
5

About Entering Data

Subtopics

- Colors in Forms
- Aspects of Forms
- Entering Data with Smart Lists
- Entering Data with Shortcut Menus
- Entering Percentage Values
- Entering Date Values
- Entering Text Values
- Dynamically Setting User Variables

Your administrator sets up forms to show certain dimensions and members, reflected by the row and column headings. Cells display the data for the selected members.

Colors in Forms

Background colors indicate:

- White: default
- Yellow: “dirty” cells, whose values changed but are not yet saved
- Grayish blue: read-only cells
- Tan: locked cells (see “Locking Cells” on page 70)
- Teal: cells having supporting detail

If the administrator sets up data validation rules, cells in forms can be displayed in different colors when specified conditions are met. See “Viewing and Resolving Data Validation Errors” on page 45.

Aspects of Forms

Forms can include:

- **Point of View (POV)**: Shows information about other members that are valid for the defined row and column members. POVs identify the database members that populate a form, and define data intersections. Members on the rows, columns, and POV axes are constant (except when they have dynamic user variables).

- **Page axis**: At the top of the form, displays different views (pages) of selected member combinations that can span dimensions, enabling you to work with various member combinations.

- **Segments**: Can include read-only or hidden areas and borders on rows and columns. The hierarchy can be suppressed for rows or columns, so that rows are not indented and columns exclude line breaks.
- **Smart Lists**: Lists from which you can select text options, such as locations or descriptions. See “Entering Data with Smart Lists” on page 41.

- **Menus**: Shortcut menus accessed by right-clicking that can open URLs, forms, Approvals, or business rules. See “Entering Data with Shortcut Menus” on page 41.

- **User variables**: Selectable members on the row, column, page axis, or POV. Before you can open a form having a user variable, you must select a value in preferences. After that, you can change the variable on the form or in preferences. See “Dynamically Setting User Variables” on page 43.

- **Rolling forecast**: If the administrator has designed a form for a rolling forecast, right-click on the column to change substitution variables for the rolling forecast.

- **Data validation rules**: If the administrator sets up data validation rules, a Data Validation Messages pane displays information to help resolve data entry issues. See “Viewing and Resolving Data Validation Errors” on page 45.

- **Composite forms**: Display members from several forms simultaneously so you can, for example, enter data into one grid and see the results—such as Total Revenue—aggregated in another.

### Entering Data with Smart Lists

Your administrator can set up forms with Smart Lists that help you enter data in cells. If a cell contains a dimension that is linked to a Smart List, ☑ is displayed when you click in the cell.

1. **To enter data with Smart Lists:**
   
   1. **Open a form containing Smart Lists.**
   2. **Click ☑ in a cell.**
      
      The displayed list of text values depends on how your administrator sets up the list. For example, the list could include expense justifications.
   3. **Select a value from the list.**

   **Note:** You can skip to a value by typing its first one or two letters. For example, in a list of months, skip to June by typing ju.

   After you select a value, the information in the cell is updated. Your administrator determines what is displayed when the cell contains no data: no value, #MISSING, None, or another value.

### Entering Data with Shortcut Menus

Your administrator can set up forms that include shortcut menus. With shortcut menus, you right-click a member and select a menu item to open a URL, form, Approvals, or business rule.
For example, a menu item can open another form to get more information about the data, go to another scenario and version in the planning unit, or launch a calculation.

To enter data with shortcut menus:

1. Open a form containing a shortcut menu.
2. Right-click a row or column member, the page axis or point of view, and then select a menu option from the list.

The values in the list depend on how your administrator sets up this feature. If the menu includes submenus, you can select a value from the submenu.

Depending on the action that was performed by the menu item, you can continue your work on the web page, form, or Approvals.

If a business rule was launched that includes a runtime prompt, enter the required information. See “Entering Runtime Prompts” on page 58.

### Entering Percentage Values

If your administrator sets up members as percentages, those members display with a percent sign (%) in the cell. You can enter a percentage value as a decimal, such as .6, or as a percentage, such as 60%.

The following table shows examples of entered values and their displayed result.

<table>
<thead>
<tr>
<th>Entry</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>.25</td>
<td>25% is displayed. Planning multiplies .25 by 100, adds a percent sign, and saves .25.</td>
</tr>
<tr>
<td>25%</td>
<td>25% is displayed. Planning divides the number by 100 and saves .25.</td>
</tr>
<tr>
<td>25</td>
<td>2500% is displayed. Planning multiplies 25 by 100, adds a percent sign, and saves 25.</td>
</tr>
<tr>
<td>.25%</td>
<td>.25% is displayed. Planning divides the number by 100 and saves .0025.</td>
</tr>
</tbody>
</table>

### Entering Date Values

Your administrator may set up certain cells to contain date values. When you click into such a cell, a month calendar displays, from which you select a date. The date value then displays in the format set in preferences. For example, if the date format is MM/DD/YYYY and you select February 7 (in the year 2011), the date is processed as 02/07/2011. See “Setting the Date Format” on page 108.

### Entering Text Values

You can enter text directly into cells whose data type is set to text by your administrator. You can hover the mouse over a cell to view a tooltip that displays the text. You can also view the text in the form.
Note: When you enter text in cells whose data type is text, do not use angle brackets < or >.

**Dynamically Setting User Variables**

If the administrator defined a form with at least one user variable and enabled dynamic user variables, you can dynamically select and change user variable values directly in the form. For example, for a variable called Department, you can select Sales members to plan sales expenses and then select Marketing members to plan marketing expenses. You can also set values for user variables in user preferences (see “Setting Preferences for User Variables” on page 110).

If the form was defined with the **Use Context** option, user variables can be used in the POV. With this setting, the value of the user variable changes dynamically based on the context of the form.

Note: You must select a value for user variables before working in the form.

 altijd To dynamically change values for user variables in forms:

1. Open a form containing a user variable and for which dynamic user variables are enabled.
2. Click the text that displays the user variable.
   The variable and its currently selected value display under the POV. If the form was defined with the **Use Context** option, the variable displays above the form.
3. Select members:
   - To select, click .
   - To remove, click .
   - To remove all, click .
   - To move a member in the list, click  or  .
4. Click **Submit**.
   The form displays the selected members.

**About Entering Data with Shortcut Menus**

When entering data in forms, you can right-click to use context-sensitive shortcut menus.

- For information about using shortcut menus, see “Navigating in Planning” on page 12 and “About Entering Data with Shortcut Menus” on page 43
- For information about the tasks you can complete with shortcut menus, see Chapter 3, “Working with Forms”
Navigating in Forms

How you navigate depends on whether you have just clicked in a cell or are editing cell data. For example, when you click in a cell, you can press the Right Arrow to move to the next cell in the row. When you are editing data in a cell, you must press Tab to move to the next cell.

When clicking in a cell and not entering or editing cell data, to move:
- Forward, backward, up, or down, press the Right Arrow, Left Arrow, Up Arrow, or Down Arrow key.
- To the next cell in the column, press Enter.
- To the previous cell in the column, press Shift + Enter.

When entering or editing data in cells, to move:
- Forward or backward within the cell data, press the Left Arrow key or the Right Arrow key.
- To the next cell in the row, press Tab or click in the next cell.
- To the previous cell in the row, press Shift + Tab.
- To the next cell in the column, press Enter.
- To the previous cell in the column, press Shift + Enter.

See also “Navigating Among Forms” on page 27.

Selecting Members Using Pages

If the administrator sets up multiple page axes, you can select from among pages to select the data with which to work. The form designer can create up to 18 page drop-down lists.

Use the page axis to work with different views (pages) of selected member combinations that can span dimensions. The members defined on the rows, columns, and POV axes are constant (except when they have dynamic user variables). You see only the members to which you are assigned access.

With some forms, you can also select a user variable to determine which data is displayed. See “Dynamically Setting User Variables” on page 43.

To work with other page members:

1. Open a form containing multiple page axes.
2. From the Page drop-down list, select a page.
   - indicates that the search facility is available. See “Enabling Search with a Large Number of Pages” on page 106.
3. Click Go.
Tip: From the Preferences page, select the Display Options tab to select Remember Selected Page Members. When you select this, Planning remembers the last page or POV member selection, so the information is available when you return to the current form.

Searching for Members

If you select the display preference option Allow Search When Number of Pages Exceeds ___ and the number of members on the open form exceeds the number you set, then the Search icon is enabled. (See “Enabling Search with a Large Number of Pages” on page 106.)

To search for a member in a form:

1. Open a form, and then click at the top of the form.
2. In Search, enter part or all of the member name.
   You can search by member name or alias. If the selected member in the drop-down list is the first member of the hierarchy and you search up, the search starts from the last member of the hierarchy. Similarly, if the selected member is the last member in the hierarchy, the search starts with the first member.
3. Click or to search up or down the hierarchy.
4. When the member name displays in the drop-down list, click Go.

Viewing Member Formulas

If a member has a formula, and if the administrator selected the display option Member Formula (for rows, columns, page, or POV) for the form, you can view the formula.

To view a member’s formula:

1. In the form, click the formula icon to the right of the member name.
2. View the read-only member formula, and then click Close.
   You are returned to the form.

Viewing and Resolving Data Validation Errors

For forms that include data validation, your administrator can include data validation messages that display in tooltips, and can specify colors that display in cells when data validation errors occur. For example, a tooltip can instruct you to enter data that meets certain criteria or data that fits within a specific range.

If forms contain data validation errors, a Data Validation Messages pane displays on the right side of the form. You can expand the pane to view messages specified by your administrator,
and click links to correct errors. For detailed information on how rules are set up and processed, see the *Oracle Hyperion Planning Administrator’s Guide*.

> To view and resolve data validation errors:

1. **In a form that contains data validation errors, click on the right side of the form.**

2. **In the Data Validation Messages pane, view any informational messages and error messages provided by your administrator.**

   For composite forms, select a form from the drop-down list.

   Informational messages are displayed as hyperlinks. You can click the message to go to the appropriate location in the form.

   Error messages are displayed with a bracketed number showing the number of errors, and hyperlinked numbers that go to the cells with errors. For example, if an error message displays [5], there are five errors related to this issue, and the following hyperlinks 1, 2, 3, 4, 5 go to the errors.

3. **For each error, click the hyperlink to go to the cell that needs to be corrected.**

   If the administrator provided a data validation message, you can hover the mouse over cells to view information to assist with resolving the error.

4. **Update the form as necessary to resolve the errors, and then save the form.**

   After an error is resolved, it no longer displays in the Data Validation Messages pane. When all errors are resolved, the Data Validation Messages pane is not displayed in the form.

### Selecting Cell Ranges

You can select and work with multiple cells if the selection is rectangular and contiguous.

> To select a cell range, a row, or a column:

1. **Open a form.**

2. **Take an action:**
   - To select a cell range, click in the range’s upper-left cell, press Shift, and then click in the range’s lower-right cell.
   - To select a row or column, click in its heading.

After you select a group of cells, you can copy and paste them or adjust the data values. See:

- “Copying and Pasting Cells” on page 47
- “Adjusting Cell Values” on page 63
Copying and Pasting Cells

You can copy data values within a form, from one form to another, or from another application, such as Microsoft Excel. In one copy and paste operation, you can copy from one cell to another cell, from one cell to many cells, or from many cells to many cells.

Note: Because Planning applies spreading logic to pasted values, understand how data values are spread before you paste values into time periods. See "How Spreading Data Works" on page 66.

To copy and paste data:

1. Select the cells that contain the data to copy.
   See “Selecting Cell Ranges” on page 46.

2. Right-click, select Edit, and then select an option:
   - Cut to remove the cell values
   - Copy to copy the cell values. Select the cells to which to paste the data. Right-click, and then select Paste.
     Paste inserts the Clipboard contents at the insertion point, replacing any selection.
   - Clear to clear the cell values

About copying and pasting data:

- If the destination selected area is an exact multiple of the size and shape of the copied selected area, the data is repeatedly pasted into the destination area. For example, if you copy the contents of two rows, and select six rows to paste the data into, Planning copies the contents of the two rows three times, to fill the six destination rows.

- Planning does not paste data into read-only cells.

- When you copy within or among forms, Planning copies and pastes the cells’ stored values, not the values that are displayed based on the precision setting.

- Data that is copied and pasted from Microsoft Excel to Planning reflects the formatting that is set up in Microsoft Excel. For example, if the number of decimal places in Microsoft Excel is set to zero, when you enter the value 459.123 in Microsoft Excel, the value is displayed as 459. If you copy this value into a Planning form, the value 459 is pasted.

- When pasting data to time periods, Planning applies the spreading rules for each cell in succession, starting from left to right and top to bottom. The resulting data from a paste operation may not match the original copied data. For information on how pasting data may affect cells’ values, see “How Spreading Data Works” on page 66.

- When you copy data, a message might display if you disabled Internet Explorer’s setting for Allow Paste Operations via Script.

- Copying and pasting data from a text editor (for example, TextPad, Notepad, or WordPad) fails if the data is space delimited. Use Tab-delimited values instead.
About Cell Comments

Users with write access permissions to cells can add comments to cells, for example, explanations of variances or rolling forecasts. Multiple users can add comments to the same cells and (for cells to which they have read access permissions) and can view the cell’s comments history, including:

- All the comments
- Who entered each comment
- The date each comment was made

You can add comments:

- To a range of cells
- To cells at any level, including summary periods and non-level 0 members (bottom-up versions)
- Across multiple dimensions
- To calculated cells (dynamic calc) and read-only cells

You can also:

- Sort comments by user or date.
- View comments in a PDF file or a printed report. See “Printing Comments” on page 49.
- Delete your own comments, but you cannot change already-submitted comments, nor can you change others’ comments.

You can also:

- Use supporting detail to build and communicate bottom-up values such as travel, where you calculate aggregate values. See “Working with Supporting Detail” on page 75.
- Add account annotations to comment on account data. You can annotate different combinations of scenarios, versions, and entities. See “Using Account Annotations and Custom Links” on page 50.
- Enter text directly into cells whose data type is set to text (see “Entering Text Values” on page 42).
- Add multiple cell-level document attachments (see “Adding, Editing, and Viewing Cell-Level Documents” on page 50.

See also “Working with Comments” on page 48.

Working with Comments

See also “About Cell Comments” on page 48.
To add, view, or delete comments:

1 Open the form to which you want to add or view comments.

2 Click a cell or select a range of contiguous cells.

   A small red square in the cell’s upper-right corner indicates that it contains comments. Hovering over the red square displays the cell’s intersecting members and whether the cell(s) contains comments (or drill-through data or document attachments).

3 Right-click, and then select Comments.

   The top of the Comments dialog box displays the POV and the cell member intersection. The selected cells are displayed in the drop-down list. If you selected a range, from the drop-down list, select one cell. Alternately, to apply the comment to the range of cells from Step 2, select the Apply to all selected cells check box.

4 To add a comment:
   a. Expand the Insert Comments pane by clicking to the left of the Insert Comments heading.
   b. Enter your comment.
      By default, you can enter up to 1,500 characters. If you selected a cell range, you can enter comments for each cell.
   c. Click Add.
      You may need to scroll down to see the Add button.

5 To edit a comment:
   a. Expand the Existing Comments pane.
   b. Select the comment to edit.
   c. Expand the Insert Comments pane.
   d. Add to or edit the comment text and click Add.
      In the comment table, you now see the modified comment with your name and a new date stamp.

6 To delete one of your previously-submitted comments, select the row from the table, and then click Delete.

7 Click OK.

Printing Comments

You can print comments—notes that are associated with individual or groups of cells—to a PDF file. When you print forms with the Show Comments option selected in the Printing Options page, comments are displayed to the dimension’s right, on the same row as the dimension. See “Printing Data” on page 55.
To print comments:

1. Open a form containing comments.
2. Select File, and then Print.
   
   Planning displays the printing options for generating the PDF file.
3. Select the Show Comments option, and then click Print Preview.
4. In the PDF file, select File, and then Print.
5. In Print, select a printer and then click OK.

Using Account Annotations and Custom Links

If your administrator has enabled this feature, you can add annotations to accounts. Annotations can be plain text, or can include custom links to, for example, a project website, a spreadsheet, or PDF file on a server.

To add or view account annotations:

1. In a form, select View, and then either View Account Annotations or Edit Account Annotations.
2. In account rows, in the column to the right of account member names, enter a comment or URL of up to 1,500 characters.
   
   You can include custom links to these file types on a server or FTP site: .TXT, .DOC, .XLS (Microsoft Office Suite), and .PDF. For example, to create a link to a spreadsheet on a shared server, you might enter: file://C:/BudgetDocs/Timeline.xls where C represents the server drive.
3. When you are finished, click View Account Annotation.

To view account comments or to access associated custom links on the page, read the comments or click the URL to the right of the account member’s name. If you click a URL, your web browser displays the source information in a new window.

Adding, Editing, and Viewing Cell-Level Documents

If your administrator selects the Enable Cell-Level Document property for the form, from form cells, you can add, delete, and view multiple EPM Workspace documents, even in a single cell. These documents can be a website or any file type (for example, an .XLS or .PDF file). For example, you could associate a cell with several documents with updated assumptions behind the cell’s sales data. The 📝 icon in a cell indicates that it is associated with a document.

Note: Before you add a cell-level document, the document must be added to the EPM Workspace repository. See Oracle Hyperion Enterprise Performance Management Workspace User’s Guide.
To add cell-level documents:

1. Open the form to which you want to add or view comments.

2. Select the cell or range of cells.
   A small red square in the cell’s upper-right corner indicates that it contains cell-level documents (or drill-through data or comments). Hovering over the red square displays the cell’s intersecting members.

3. Right-click, and then select Document Attachments.
   The top of the Document Attachments dialog box displays the POV and the cell member intersection. The selected cells are displayed in the drop-down list. If you selected a range, from the drop-down list, select one cell. Alternately, to apply the document attachment to the range of cells from Step 2, select the Apply to all selected cells check box.

4. Click the Document Attachments icon.

5. In the Document Attachments dialog box, enter the Description and the Reference.
   Either:
   - In the Reference text box, enter the URL to the document (for example, http://mymachine:19000/workspace/browse/get/Sales.doc).
   - Click to browse to the file's location.

6. To edit a document attachment, select the row in the table, and then click the Edit icon.
   To delete a document attachment, select the row in the table, and then click the Delete icon.
   Tip: To learn how to filter a column list, see the Oracle Hyperion Planning Readme.

7. Click OK.
   A small red square in the cell indicates that a document is attached.

To view documents associated with a cell:

1. Select a cell or range of cells.

2. Click near the lower-right corner of the cell.
   The website or file is launched.

Writing #MISSING Values

#MISSING in a cell indicates the cell contains no data, whereas zero in a cell is a data value. #MISSING decreases the database size and improves performance.
You can replace #MISSING by selecting the cell and typing a value. You can also replace irrelevant data in a cell and save the cell as #MISSING, which writes #MISSING to the database.

To write #MISSING to cells:

1 **Select the cells to change.**

You can select a range of contiguous cells by clicking in the upper-left cell in the range, and then pressing Shift + click to select the lower-right cell in the range. You can select rows and columns by clicking row and column headings. Select a range of rows or columns by using Shift + click.

If the designer sets a form to suppress missing data, and an entire row contains #MISSING (no data), that row does not display on the form.

2 **Take an action:**
   - Press Delete.
   - Enter #missing.

You can also enter #MISSING using Smart Lists. See “Entering Data with Smart Lists” on page 41.

3 **Click Save.**

The cells are set to #MISSING when you save the form.

**Subtotaling Values**

How values are subtotalled and totalled in forms:

- Member subtotals are calculated based on factors set by your administrator, such as the hierarchies and logic of the outline, and member properties.
- To recalculate subtotals on the page, click Save. If the Calculate Form calc script is selected to launch during Save, all subtotals in the form are recalculated based on their members’ aggregation properties and the form’s design and layout.
- Saving data automatically calculates members that are set to dynamically calculate, excluding level 0 members. The form does not require a calc script to calculate these members.
- Calculations are based on the stored (not the displayed) values. Displayed values might be based on scaling or precision settings.
- Only displayed members are calculated. If you have read but not write access to some members, subtotals correctly include their values even if they are read-only.

See also “Adjusting Cell Values” on page 63 and “How Spreading Data Works” on page 66.
Getting the Latest Data

To ensure that you are working with the latest data, especially if other people are working on the same budget, refresh data.

➢ To retrieve the latest values from the database:

1. Open a form.
2. To save your current work, click Save before refreshing the data.
3. Select View, and then Refresh.

Exporting Data to Microsoft Excel

Exporting data from the form to Microsoft Excel lets you explore “what-if” scenarios in Excel before copying and pasting values back to Planning. It also provides an alternative to PDF printing.

About exporting data:

➢ Planning does not export to Excel: numerical formatting, the application name, user, form folder, attributes, currency tags, or percentages.
➢ Member names are indented based on their level in the hierarchy. They are also indented if you print the form to a PDF file.
➢ Supporting detail is printed.
➢ Account annotations are printed if your administrator selected the Enable Account Annotations setting on the form’s Display Options tab.
➢ Aliases are displayed on the rows, columns, page, and POV if they are present for a member, if your administrator selected the Display Alias option.
➢ Values pasted back to Planning from Excel must be non-formatted data.

➢ To export data from forms to Microsoft Excel:

1. Open a form.
2. Select Tools, and then Export as Spreadsheet.
3. Depending on how you want to export the data, take an action:
   - Select Save, and then save the file.
   - Select Open, and then work with the data in the browser instance of Microsoft Excel that displays.

   Use standard Excel procedures to make and save your changes.
Drilling Through to Source Data

Data is loaded from a source using Oracle Hyperion Financial Data Quality Management or Oracle Hyperion Financial Data Quality Management Enterprise Edition. You can drill through to view details of the data source.

When working with forms that contain drill-through information, keep in mind that for multicurrency applications, all currencies for an entity in the source system can be loaded. Exchange rate conversions are done within Planning.

➢ To drill through to source data:

1. Open a form containing source data loaded using FDM or FDMEE.
   - A triangle in the cell’s upper-right corner indicates that it contains drillable data (or comments or cell-level documents).

2. Click once in a cell that contains drill-through data. Click one more time.
   - A drill-through icon is displayed above and to the right of the cell.

3. Click the icon.

4. When you finish viewing the source, you can return to the form by closing the EPM Workspace tab or browser window.

Saving Data

In a form, you can save data values you entered, changed, or calculated. Saving also runs business rules that are designed to launch when the form is saved.

➢ To save data:

1. Open a form.

2. In the form, make your changes.

3. Select File, and then Save.

If you close a form without saving changes, a message prompts you to save or refresh the data.

After Entering Data

After you enter data, annotate your assumptions, and are satisfied with your plan’s data, you can promote your numbers (as a planning unit) to another user, typically for review or approval. To do this, go to the Manage Approvals page, and start or promote the planning unit. After you promote a planning unit, its new owner can write to it (assuming the owner has write access),
but you can no longer write to the planning unit. See “Managing Planning Units” on page 83.

**Printing Data**

You can print data in forms as PDF files (including supporting detail, comments, and account annotations) if Adobe Acrobat Reader 5.0 or later is installed on your computer. Your administrator can also set up reports with custom shading, page size, orientation, font, font size, headers, percentage of page used for headers, number of data columns per page, and precision. See “Printing Comments” on page 49 and “Printing Planning Unit Annotations” on page 99.

To print data to a PDF file:

1. With a form open, select **File**, and then **Print**.
2. **Optional**: To reset the printing options to the settings that were assigned to the form when it was created, click **Restore Form Settings**.
3. **Optional**: Set your preferences, as described in the following table.

<table>
<thead>
<tr>
<th>Option</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Format data</td>
<td>Apply number format settings from the form.</td>
</tr>
<tr>
<td>Apply precision</td>
<td>Apply the form’s precision settings to the displayed data. If the form displays high precision numbers (numbers with many digits to the right of the decimal point), consider limiting precision in the PDF file.</td>
</tr>
<tr>
<td>Include supporting detail</td>
<td>Include supporting detail in extra rows. Select either:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Normal Order</strong>: inserts the supporting detail in the same order in which it displays in the Supporting Detail page, after the member that it is associated with.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Reverse Order</strong>: inserts the supporting detail before the member it is associated with, and the supporting detail entries are reversed. Supporting detail for children displays above their parents, and the order of siblings is preserved.</td>
</tr>
<tr>
<td>Show account annotations</td>
<td>If the form designer enables account annotations, show annotations that are assigned to the form.</td>
</tr>
<tr>
<td>Show comments</td>
<td>Show comments that are associated with cells.</td>
</tr>
<tr>
<td>Show attribute members</td>
<td>Show attribute members assigned to the form.</td>
</tr>
<tr>
<td>Show currency codes</td>
<td>Show currency codes if the form supports multiple currencies per entity.</td>
</tr>
</tbody>
</table>

4. **Optional**: To save your settings for subsequent PDF files, select **Remember my changes**. Your settings override the default options assigned to all forms.

5. **Optional**: To display the PDF file onscreen, click **Print Preview**.

6. Select **File**, and then **Print**.

7. Set print options, and then click **OK**.
About Launching Business Rules

You can use business rules to calculate data. Some business rules prompt you to enter information, called a runtime prompt. After you enter required information and launch a business rule, the data is updated.

Your administrator can set up forms to automatically launch business rules when you open or save forms. You can also launch business rules from several contexts.

1. Depending on where you are working:
   - When a form is open, its associated business rules are listed in the left bottom pane. Double-click any business rule.
   - With a form open, from the top menu, select Tools, and then Business Rules. Select the business rules to launch, and then click Launch.
   - If menus are set up in a form, right-click a row or column member in the form, and then select a business rule from the shortcut menu. See “Entering Data with Shortcut Menus” on page 41.
   - From a task list, see Chapter 2, “Working with Task Lists.”
   - Outside of forms, from the menu, select Tools, and then Business Rules.
     See “Launching Business Rules” on page 58.

2. If the business rule includes runtime prompts, enter the required information, launch the business rule, and then click Close (see “Entering Runtime Prompts” on page 58).

   If the calculation is successful, the values in the database reflect the calculation results.
3 Click **Refresh** to see the updated values in the form.

## Launching Business Rules

To launch business rules from the **Tools** menu:

1 **Select Tools**, and then **Business Rules**.

2 **On the Business Rules** page, select the plan types for which you want to display the associated business rules.

3 **From Rule Type**, select whether to display rules, rulesets, calc scripts, or all calculation types.

   To view the business rules in rulesets, expand the hierarchy. Business rules are displayed in this format:

   ```
   rule_name application_name plan_type
   ```

   where `application_name plan_type` indicate the application and the plan type to which the business rule is deployed and will be launched against.

   Red Flags indicate an error in loading children members of the ruleset. One possible cause for the error is that the ruleset calculates across applications, and the child members reside on another server that is not running.

4 **Optional**: By default, only calculations to which you have access are displayed. To display all calculations associated with the selected plan type, clear the option **Display only launchable rules, rulesets, and calc scripts**.

5 **Click the Launch link** for the business rule, ruleset, or calculation script you want to launch.

   *None* indicates that you do not have access to a business rule.

   The launched calculation may include runtime prompts. See “Entering Runtime Prompts” on page 58.

See also “About Launching Business Rules” on page 57.

## Entering Runtime Prompts

When launched, a business rule can prompt you to enter variable information, called a **runtime prompt**. The business rule designer sets up runtime prompts. To learn how the display and values of runtime prompts are affected by certain settings and conditions, see “Understanding Runtime Prompts” in the *Oracle Hyperion Planning Administrator's Guide*.

**Notes:**

- If a business rule has a runtime prompt and **Use Members on Forms** is selected, the default member on the runtime prompt window matches the current member in the page or POV axes of the open form.
Members and substitution variables on the Member Selection page are filtered by your access permissions and limitations set for the runtime prompt (for example, only Descendants of Q1). You cannot select a shared member in a runtime prompt.

- If multiple business rules having runtime prompts are launched when saving the form, enter values for each one successively, using the Next button.

To enter a runtime prompt:

1. **Launch a business rule having a runtime prompt.**
   
   See “About Launching Business Rules” on page 57.

2. **Enter or select the input type specified by the runtime prompt, summarized in the following table:**

<table>
<thead>
<tr>
<th>Icon</th>
<th>Expected Input Type</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="One member selection" /></td>
<td>One member selection</td>
</tr>
<tr>
<td><img src="image" alt="Multiple member selections" /></td>
<td>Multiple member selections</td>
</tr>
<tr>
<td><img src="image" alt="Numeric value" /></td>
<td>Numeric value</td>
</tr>
<tr>
<td><img src="image" alt="Smart List value—select an item from the list" /></td>
<td>Smart List value—select an item from the list</td>
</tr>
<tr>
<td><img src="image" alt="Text value—use only with enhanced calc scripts, not with graphical scripts" /></td>
<td>Text value—use only with enhanced calc scripts, not with graphical scripts</td>
</tr>
<tr>
<td><img src="image" alt="Dimension from the database—use only with enhanced calc scripts, not with graphical scripts" /></td>
<td>Dimension from the database—use only with enhanced calc scripts, not with graphical scripts</td>
</tr>
<tr>
<td><img src="image" alt="Cross Dimension—a member combination that includes only one member from each dimension the designer has set for this runtime prompt (for example: Sales -&gt; Actual -&gt; Jan refers to the member intersection of Sales, Actual, and January)" /></td>
<td>Cross Dimension—a member combination that includes only one member from each dimension the designer has set for this runtime prompt (for example: Sales -&gt; Actual -&gt; Jan refers to the member intersection of Sales, Actual, and January)</td>
</tr>
<tr>
<td><img src="image" alt="Member range—a range of members, selectable from each dimension the designer has set for this runtime prompt (for example: iDescendants(&quot;Marketing&quot;),FY11)" /></td>
<td>Member range—a range of members, selectable from each dimension the designer has set for this runtime prompt (for example: iDescendants(&quot;Marketing&quot;),FY11)</td>
</tr>
</tbody>
</table>

**Note:** Icons display only in Classic view, not in streamlined view. Your administrator determines your view.

3. **If any runtime prompt values are not valid, correct them.**

Symbols indicate whether the values in runtime prompts are valid:

- ✔️ —the runtime prompt values are valid.

- ❌ —the runtime prompt values are not valid (for example, the entry does not exist in the dimension hierarchy). You cannot launch a business rule until all runtime prompt values are valid.

4. **Optional:** To generate a file containing the runtime prompt values, select Create runtime prompt values file.
The file is saved as \textit{rule_name.XML}, in the \texttt{EPM\_ORACLE\_INSTANCE/planning/Planning1/RTP/user_name} folder. Administrators specify this generated file when launching business rules with the \texttt{CalcMgrCmdLineLauncher.cmd} utility (see the \textit{Oracle Hyperion Planning Administrator's Guide}).

5 \textbf{Click Launch.}

If the calculation is successful, the values in the database reflect the calculation results. See also “Checking Job Status” on page 61.

If you are using an Oracle Essbase substitution variable as the runtime prompt value and the value of that substitution variable is outside of the variable limits, the limits are ignored, and the rule launches successfully.

\section*{Runtime Prompts and Approvals}

Depending on how the administrator has designed a business rule, to be able to execute a business rule, planners must have write access to all members selected in runtime prompts and own the affected planning units members. For example, a business rule can be designed such that if you have already promoted a planning unit containing entity Product A, you cannot change the data for Product A using a runtime prompt. Runtime prompts display only members to which you have access.

\section*{Using Business Rules}

You can work with business rules if your task includes them.

- To launch a business rule when tasks include forms:
  1. In a task that includes a form, open the form.
     
     See Chapter 2, “Working with Task Lists.”
  2. Select Tools, and then Business Rules.
  3. In Launch Business Rules, select a business rule, and then click Launch.
     
     If the calculation is successful, the database values reflect the calculation results. See also “Checking Job Status” on page 61.
  4. After a confirmation message displays in Launch Business Rules, click Close.

- To launch a business rule when tasks include business rules:
  1. Open a task list that includes a business rule.
     
     If more than one task list is assigned to you, you can select the task list from the quick-launch list. If the task includes a business rule, the business rule page opens in a browser window.
  2. In the Business Rules area, select a business rule, and then click Launch.
     
     If the calculation is successful, the values in the database reflect the calculation results.
3 After a message confirms that the rule launched successfully, close the browser window.

Checking Job Status

On the Job Console page, you can check the status (processing, completed, or error) of these job types: Business Rules, Clear Cell Details, Copy Data, and Push Data.

Notes:

- You can be notified by email when a launched job is completed or generates an error (see “Setting Up Email” on page 102).
- You cannot cancel or start a job from the Job Console page.
- Administrators can view all jobs and their status. All other users can view only their own jobs and their status.

➢ To check the execution status of jobs:

1 Select Tools, and then Job Console.

By default, all jobs are displayed.

For each job, this information is displayed:

- **Job ID**: The sequential number that the database generates for each started job.
- **Job Type**: Business Rule, Ruleset, Clear Cell Details, Copy Data, or Push Data.
- **Job Name**: The business rule, sequence, or ruleset's name. To expand rulesets to see the business rules and rulesets they include, click . Planning automatically assigns a name to Clear Cell Details and Copy Data operations.
- **User Name**: The name of the user who launched the job.
- **Start Time**: When the job was started.
- **End Time**: If the job was completed or ended in an error, the time the job ended.
- **Run Status**: Processing, Completed, or Error.

2 To filter which jobs are displayed, from Filter Criteria, select which jobs to view.

To display jobs:

- Executed by a specified user: Select **User**, and then enter the user's name in the **User Name** text box.
- By their type: Select **Job Type**. Then from Select Job Type, select Business Rule, Ruleset or Sequence, Clear Cell Details, Copy Data, or Push Data.
- By their status: Select **Run Status**. Then from Select Run Status, select Status Processing, Status Completed, or Status Error.
- Executed since a specified day and time: Select **Start Time**. Then click and, from the calendar, select the job's start time, and then click OK.
That completed executing before or by a specified day and time: Select **End Time**. Then click 🔄 and, from the calendar, select the job's end time, and then click **OK**.

By their name: Select **Job Name**, and then in the **Job Name** text box, enter its name.

To again display all jobs, select **None**, the default.

3 Click **Go**.

The **Job Console** displays the jobs matching your selection criteria.

4 **Optional:** Use the navigation aids at the page bottom to move around a long list of jobs.

5 To view this job information, under **Run Status**, click the links to the log files:
   - For Clear Comments: the dimensional intersection of the cleared details
   - For Copy Data: the dimensional intersection for the copied data
   - Cell-level Document: the dimensional intersection for the cleared documents
   - For business rules and rulesets: the application, plan type, and runtime values. If the rule generated an error, a text box displays the error.

   **Note:** Information on rulesets display as expandable hierarchies, and status is displayed individually for each embedded rule and ruleset as they are processed.

   **Tip:** For administrators only: Because checking for runtime values for many users consumes system resources, to improve performance, you can turn off this function by selecting **Administration**, then **Application**, then **Properties**, then **Application Properties** tab, adding the property `CAPTURE_RTP_ON_JOB_CONSOLE`, and then setting its value to `FALSE`. See the *Oracle Hyperion Planning Administrator's Guide*.

6 **Optional:** For administrators only: To remove selected jobs from the list and to remove their job records from the database, click **Delete**.

   You cannot delete jobs that are processing, only jobs that are completed or have errors.

   To remove all jobs from the list and remove their job records from the database, select the check box left of the header Job ID.

Adjusting Cell Values

Subtopics

- Adjusting Values
- Performing “What If” Analysis

You can increase or decrease values by a specific amount or by a percentage. You can also enter operators in a cell (see “Adjusting Values” on page 63 and “Performing “What If” Analysis” on page 64).

Adjusting Values

To increase or decrease data values:

1. Select the cells to adjust.
   
   You can adjust data for multiple cells simultaneously, if the writable cells are at the same level. For example, you can adjust the data for February and March simultaneously, but not for March and Q1. See “Selecting Cell Ranges” on page 46.

2. Select Edit, and then Adjust.

3. Perform an action:
   
   - To increase or decrease values by a specified amount, from Adjust Data, select By Value, select Increase by or Decrease by, and then enter the value to spread.
   
   - To increase or decrease values by a percentage, from Adjust Data, select By Percentage, select Increase by or Decrease by, and then enter the percent value.

You must enter a numeric value.
4 Click **Adjust Data**.

The values are displayed, with the number of decimal places that was set for the form.

5 Click **Save**.

You cannot adjust a data value if a member is read-only or null, that is, it is missing information.

**Tip:** For information on how adjusting data may affect other cells, see “How Spreading Data Works” on page 66.

### Performing “What If” Analysis

Before you commit data by saving it, you can perform various “what if” calculations and visually review the changes. Experimenting with data enables you to see the impact of various scenarios before saving the data—useful for manipulating values to produce desired results.

You can manipulate data values by:

- Typing values (see Chapter 5, “Entering Data”)
- Locking a value during spreading (see “Locking Cells” on page 70)
- Changing values by typing an operator, followed by a number, described here
- Using the ad hoc functionality in Planning and Oracle Hyperion Smart View for Office (see Chapter 4, “Working with Ad Hoc Grids”)

To perform ad hoc calculations on a value:

1 Select the cell on which to perform a calculation.

2 Enter an operator (+, +–, *, /, or %), and then enter a value.

The following table provides examples of using operators and values to produce results:

<table>
<thead>
<tr>
<th>Operation</th>
<th>Initial Value</th>
<th>Input Text</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add +</td>
<td>100</td>
<td>+50</td>
<td>150</td>
</tr>
<tr>
<td>Subtract + -</td>
<td>100</td>
<td>+ - 50</td>
<td>50</td>
</tr>
<tr>
<td>Multiply *</td>
<td>100</td>
<td>*5</td>
<td>500</td>
</tr>
<tr>
<td>Divide /</td>
<td>100</td>
<td>/5</td>
<td>20</td>
</tr>
<tr>
<td>Percentage</td>
<td>100</td>
<td>%25</td>
<td>25</td>
</tr>
</tbody>
</table>

3 Move the cursor from the cell.

A change in color indicates the modified cell.
Spreading Data for Time Periods

Subtopics

- How Spreading Data Works
- Spreading with Multiple Currencies
- Locking Cells
- Examples of Spreading Data with Cell Locking

While working in the Enter Data page, you can spread, or distribute, values by:

- Spreading the value in a summary time period back to its base time periods, or to the first parent or first child of its parent time period.
- Spreading values among children and parents proportionally, based on existing distribution.
- Spreading values based on a calendar’s weekly distribution in a quarter, which could be 4-4-5, 5-4-4, 4-5-4, or None (as set up by the administrator).
- Filling the parent’s value to all its descendants
- Temporarily locking certain cell values while spreading data over time periods. (See “Locking Cells” on page 70).

You can select, copy, paste, or adjust multiple values. If you paste data to time periods, Planning applies the spreading rules for each cell in succession, starting from left to right and top to bottom. The data resulting from a paste operation may not match the original copied data. See “How Spreading Data Works” on page 66.

**Note:** You cannot spread data in a summary time period that includes members with mixed currencies.

**Note:** Values for summary time periods are automatically spread, even if the form uses an alternate hierarchy for Period, so make sure the spread results are correct. Oracle recommends against entering data into alternate hierarchy members, because the values could spread incorrectly.

To spread data for time periods:

1. In a form, put the cursor in the cell with the value to spread.
2. Enter the value.
   
   The value is distributed according to the rules described in “How Spreading Data Works” on page 66.
3. Click Save.

See also “Spreading Values Using Grid Spread” on page 71 and “Spreading Values Using Mass Allocations” on page 72.
How Spreading Data Works

Factors such as account type, the **Time Balance** property, existing distribution, member hierarchies, and data type affect how values are distributed, assuming that no data cells are locked (see “Locking Cells” on page 70).

**Note:** Date and text values are excluded when spreading data.

The following table shows examples of the effect on data of entering or changing a currency or non-currency value:

<table>
<thead>
<tr>
<th>Time Balance Property of the Account</th>
<th>New Value Distribution</th>
<th>Examples</th>
</tr>
</thead>
</table>
| **FLOW**                             | To all its children and its parents proportionally, based on the existing distribution. The value affects the entire Summary Period Rollups hierarchy so that the parent time period is the sum of its children. If no distribution exists (that is, the values for all the children are zeros or are missing), and the changed value is a Quarter, the value spreads down proportionally, based on the weekly distribution (which can be 4-4-5, 4-5-4, 5-4-4, or evenly distributed if the account’s spreading is set to **None**). If the changed parent is a **Year Total** or some other kind of summary time period, the value is spread evenly. | **Example 1**
You change Qtr 1 from 250 to 500, with these current values for its months:
- Jan = 100
- Feb = 50
- Mar = 100
**Result:** 500 is distributed to its children proportionally, replacing their previous values with:
- Jan = 200
- Feb = 100
- Mar = 200
The increment of 250 is aggregated to the parents of Qtr 1. If Year Total was 1000, its new value is 1250. **Example 2**
You change March from 100 to 200. **Result:** March, Qtr 1, and Year Total all increment by 100. Jan and Feb remain unchanged. |
| **Revenue, Expense, Saved Assumption** (where the **Time Balance** property is set to **Flow**) | **Example 1**
You change Qtr 1 from 250 to 500, with these current values for its months:
- Jan = 100
- Feb = 50
- Mar = 100
**Result:** 500 is distributed to its children proportionally, replacing their previous values with:
- Jan = 200
- Feb = 100
- Mar = 200
The increment of 250 is aggregated to the parents of Qtr 1. If Year Total was 1000, its new value is 1250. **Example 2**
You change March from 100 to 200. **Result:** March, Qtr 1, and Year Total all increment by 100. Jan and Feb remain unchanged. |
<table>
<thead>
<tr>
<th>Time Balance Property of the Account</th>
<th>New Value Distribution</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>FIRST</td>
<td>Upward to its first parent and downward to its child only if the changed cell is the first child of its parent time period. The summary time period equals the first of its child time periods. If no distribution exists (that is, values for all children are zeros or are missing), the value is copied to each of the children.</td>
<td><strong>Example 1</strong>&lt;br&gt;You change Qtr 1 from 20 to 40, with these current values for its months:&lt;br&gt;- Jan = 20&lt;br&gt;- Feb = 15&lt;br&gt;- Mar = 05&lt;br&gt;- Q1 = 20&lt;br&gt;<strong>Result:</strong> 40 is distributed to its children, replacing their previous values with:&lt;br&gt;- Jan = 40&lt;br&gt;- Feb = 15&lt;br&gt;- Mar = 05&lt;br&gt;- Q1 = 40</td>
</tr>
<tr>
<td>BALANCE</td>
<td>Downward to its last child and upward to its parent only if the changed cell is the last child of its parent time period. The summary time period equals the last of its child time periods. If no distribution exists (that is, the values for all children are zeros or are missing), the value is spread across its children.</td>
<td><strong>Example 1</strong>&lt;br&gt;You change Qtr 1 from 30 to 50.&lt;br&gt;<strong>Result:</strong> March also changes to 50. Jan and Feb don't change. Year Total does not change because Qtr 1 is not its last child. <strong>Example 2</strong>&lt;br&gt;You change Qtr 4 from 100 to 50.&lt;br&gt;<strong>Result:</strong> Dec changes to 50 because it is Qtr 4's last child. Oct and Nov remain unchanged, as do Qtrs 1, 2, and 3. Year Total changes to 50 because Qtr 4 is its last child. <strong>Example 3</strong>&lt;br&gt;You change Qtr 2 to 100 with these current values:&lt;br&gt;- Apr = 0&lt;br&gt;- May = 0&lt;br&gt;- June = 0&lt;br&gt;<strong>Result:</strong>&lt;br&gt;- Apr = 100&lt;br&gt;- May = 100&lt;br&gt;- June = 100&lt;br&gt;Year Total is unchanged.</td>
</tr>
</tbody>
</table>

**Spreading Data for Time Periods**
<table>
<thead>
<tr>
<th>Time Balance Property of the Account</th>
<th>New Value Distribution</th>
<th>Examples</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>AVERAGE</strong> Revenue, Expense, Saved Assumption, (where the Time Balance property is set to Average)**</td>
<td>To all its children and its parents proportionally, based on the existing distribution. The value affects the entire Summary Time Period Rollups hierarchy so that the parent is the average of its children. Assumes an equal number of days in each period, such as 30 days for each month.</td>
<td><strong>Example 1</strong> You change Qtr 1 from 5 to 10 with these current values: Jan = 05 Feb = 10 Mar = 00 Q1 = 05 <strong>Result:</strong> Jan = 10 Feb = 20 Mar = 00 Q1 = 10</td>
</tr>
<tr>
<td><strong>FILL</strong> All types of Accounts</td>
<td>The value set at the parent is filled into all its descendants.</td>
<td><strong>Example 1</strong> You change YearTotal from 100 to 200. <strong>Result:</strong> Values for Q1, Q2, Q3, Q4 and all months are changed to 200 <strong>Note:</strong> Consolidation operators and member formulas overwrite FILL values when the members are recalculated.</td>
</tr>
<tr>
<td>Weighted Average - Actual_365 Revenue, Expense, Saved Assumption, (where the Time Balance property is set to Average)**</td>
<td>Weighted daily average based on 365 days in a year, assuming that February has 28 days. This does not account for leap years. About Weighted Average - Actual_365: ● You cannot customize month labels, although you can use aliases. ● Years must have twelve months, and quarters must be the sum of three base months. ● You cannot change the fiscal start month after the application is set up. ● All months are included in the calculation. #MISSING is treated as 0 in the numerator, and all the days are included in missing months in the denominator. This means, for example, that QTR means three months, not QTD, and Total Year means all twelve months, not YTD.</td>
<td><strong>Example 1</strong> You enter values for Jan, Feb, and Mar. For any year, including leap years, February is assumed to have 28 days, and Q1 is assumed to have 90 days. <strong>Value Entered</strong> and <strong>Number of Days</strong> Jan = 9,000 31 days Feb = 8,000 28 days Mar = 8,000 31 days Q1 = 90 days (the total days for Jan, Feb, and Mar) <strong>Result:</strong> Q1 = 8,344 The average for Q1 is calculated thus: (1) Multiply the value for each month in Q1 by the number of days in that month, (2) Sum these values, and (3) Divide the total by the number of days in Q1. Using 28 for the number of days in Feb, and 90 for the number of days in Q1, the result is: (9,000 times 31 plus 8,000 times 28 plus 8,000 times 31) divided by 90 = 8,344</td>
</tr>
</tbody>
</table>
### Time Balance Property of the Account

</thead>
<tbody>
<tr>
<td>Weighted Average - Actual_Actual</td>
<td><strong>Example 1</strong></td>
</tr>
<tr>
<td>Revenue, Expense, Saved Assumption (where the Time Balance property is set to Average)</td>
<td>For a leap year, you enter values for Jan, Feb, and Mar. February is assumed to have 29 days, and Q1 is assumed to have 91 days.</td>
</tr>
<tr>
<td>Weighted daily average based on the actual number of days in a year. This accounts for leap years, in which February has 29 days. About Weighted Average - Actual_Actual:</td>
<td><strong>Value Entered and Number of Days</strong></td>
</tr>
<tr>
<td>● You cannot customize month labels, although you can use aliases.</td>
<td>Jan = 9,000 31 days</td>
</tr>
<tr>
<td>● Years must have twelve months, and quarters must be the sum of three base months.</td>
<td>Feb = 8,000 29 days</td>
</tr>
<tr>
<td>● You cannot change the fiscal start month after the application is set up.</td>
<td>Mar = 8,000 31 days</td>
</tr>
<tr>
<td>● All months are included in the calculation. #MISSING is treated as 0 in the numerator, and all the days are included in missing months in the denominator. This means, for example, that QTR means three months, not QTD, and Total Year means all twelve months, not YTD.</td>
<td>Q1 = 91 days (the total days for Jan, Feb, and Mar)</td>
</tr>
<tr>
<td><strong>Result:</strong></td>
<td>Q1 = 8,341</td>
</tr>
<tr>
<td></td>
<td>The average for Q1 is calculated thus: (1) Multiply the value for each month in Q1 by the number of days in that month, (2) Sum these values, and (3) Divide the total by the number of days in Q1. Using 29 for the number of days in Feb, and 91 for the number of days in Q1, the result is: (9,000 times 31 plus 8,000 times 29 plus 8,000 times 31) divided by 91 = 8,341</td>
</tr>
<tr>
<td><strong>Example 2</strong></td>
<td>For a non-leap year, you enter values for Jan, Feb, and Mar. February is assumed to have 28 days, and Q1 is assumed to have 90 days.</td>
</tr>
<tr>
<td></td>
<td><strong>Value Entered and Number of Days</strong></td>
</tr>
<tr>
<td></td>
<td>Jan = 9,000 31 days</td>
</tr>
<tr>
<td></td>
<td>Feb = 8,000 28 days</td>
</tr>
<tr>
<td></td>
<td>Mar = 8,300 31 days</td>
</tr>
<tr>
<td></td>
<td>Q1 = 90 days (the total days for Jan, Feb, and Mar)</td>
</tr>
<tr>
<td><strong>Result:</strong></td>
<td>Q1 = 8,344</td>
</tr>
<tr>
<td></td>
<td>Using 28 for the number of days in Feb, and 90 for the number of days in Q1, the result is: (9,000 times 31 plus 8,000 times 28 plus 8,000 times 31) divided by 90 = 8,344</td>
</tr>
</tbody>
</table>

Note: The **Skip** option does not apply to data spreading but affects only the calculation of the member hierarchy.

If you change a percentage:

Regardless of account type, existing distribution, or 4-4-5 setting, the value is spread evenly across its children. If the changed cell is the last child of its parent time period, the value is copied upwards to its parent.
Example 1

You change Qtr 1 from 10 to 20.

Result: Jan, Feb, and Mar also change to 20. However, Year Total does not change because Qtr 1 is not its last child.

Example 2

You change Feb from 10 to 20.

Result: Jan and Mar do not change because neither one is a child or parent of Feb. Qtr 1 (and therefore Year Total) does not change because Feb is not its last child.

Example 3

You change Qtr 4 from 30 to 20.

Result: Oct, Nov, and Dec also change to 20 because the value is copied to Qtr 4’s children. Year Total also changes to 20 because Qtr 4 is its last child.

Note: See “Adjusting Cell Values” on page 63 and “Spreading with Multiple Currencies” on page 70.

Spreading with Multiple Currencies

When data is spread from a parent member to children of mixed currencies, the children assume the currency type of the parent time period, and data is spread as described in “How Spreading Data Works” on page 66.

When currencies are mixed and a child time period is changed, the currency of the parent time period assumes the currency type of the child only if that time period does not have children with multiple currencies.

Locking Cells

When spreading or manipulating data, you can temporarily lock cells while Planning calculates and fills in other values. You can visually review the changes before saving them. See “Examples of Spreading Data with Cell Locking” on page 71.

To temporarily lock values:

1. Select the cells to lock.
2. Select Edit, and then Lock/Unlock Cells.
   A tan background indicates that a cell is locked. If you lock multiple cells, some of which are already locked, all the unlocked cells become locked.
   You can now spread or manipulate the other data. (See “Spreading Data for Time Periods” on page 65 and “How Spreading Data Works” on page 66.)
3. To unlock cells, select Edit, and then Lock/Unlock Cells or enter !.
Typing ! or selecting **Lock/Unlock Cells** unlocks all cells in a group only if they are all locked (or were read-only for another reason). When you save the data, locked cells become unlocked.

### Examples of Spreading Data with Cell Locking

**Example 1**

Before locking and spreading, Account A has the values described in the following table:

<table>
<thead>
<tr>
<th></th>
<th>Jan</th>
<th>Feb</th>
<th>Mar</th>
<th>Q1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account A</td>
<td>100</td>
<td>100</td>
<td>100</td>
<td>300</td>
</tr>
</tbody>
</table>

You then lock the Feb and Mar values at 100 and change Q1 from 300 to 600. Because Jan, Feb, and Mar must now total 600, and Feb and Mar are locked at 100 each, Planning calculates Jan to be 400 and fills in that value.

After locking and spreading, the data displays as shown in the following table:

<table>
<thead>
<tr>
<th></th>
<th>Jan</th>
<th>Feb</th>
<th>Mar</th>
<th>Q1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account A</td>
<td>400</td>
<td>100</td>
<td>100</td>
<td>600</td>
</tr>
</tbody>
</table>

**Example 2**

Before locking and spreading, Account B has the values described in the following table:

<table>
<thead>
<tr>
<th>Q1</th>
<th>Q2</th>
<th>Q3</th>
<th>Q4</th>
<th>YearTotal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account B</td>
<td>100</td>
<td>100</td>
<td>100</td>
<td>100</td>
</tr>
</tbody>
</table>

You then lock Q1 and Q2 values at 100 each and change Year Total from 400 to 800. Because the yearly total must equal 800, and Q1 and Q2 are locked at 100 each, Planning calculates Q3 and Q4 to be 300 each and fills in those values.

After locking and spreading, the data displays as shown in the following table:

<table>
<thead>
<tr>
<th>Q1</th>
<th>Q2</th>
<th>Q3</th>
<th>Q4</th>
<th>YearTotal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account B</td>
<td>100</td>
<td>100</td>
<td>300</td>
<td>300</td>
</tr>
</tbody>
</table>

### Spreading Values Using Grid Spread

If your administrator has enabled **Grid Spread** as a form property, you can specify an amount or percentage by which Planning increases or decreases values across multiple dimensions on the form, based on the existing values in the target cells. You immediately see the result in the form and can save the new data or discard it. When calculating the spread data, Planning ignores read-
only and locked cells and cells having supporting detail. Data integrity is ensured by spreading values only to cells to which you have access.

**Note:** The Time Balance property setting affects how data is spread with the Fill option. See “How Spreading Data Works” on page 66.

To spread values using Grid Spread:

1. Put the cursor in the Subtotal or Total source cell whose value you want to spread to target cells.
2. Select Edit, and then Grid Spread.
3. Perform an action:
   - To increase or decrease values by a specified amount, from Adjust Data, select By Value, select Increase by or Decrease by, and then enter the value to spread.
   - To increase or decrease values by a percentage, from Adjust Data, select By Percentage, select Increase by or Decrease by, and then enter the percent value.
   - To replace values with a new value, enter it in the Spread Value text box.
4. Select a spreading pattern, as described in the following table:

<table>
<thead>
<tr>
<th>Spread Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Proportional Spread</td>
<td>Spreads the value proportionally, based on the existing values in the target cells (the default)</td>
</tr>
<tr>
<td>Evenly Split</td>
<td>Spreads the value evenly among the target cells</td>
</tr>
<tr>
<td>Fill</td>
<td>Replaces the value in all target cells</td>
</tr>
</tbody>
</table>

Your administrator can add other spreading patterns (described in the Oracle Hyperion Planning Administrator’s Guide).

5. Click Spread.

The specified value or percentage is spread across the target cells, replacing former values with new ones.

6. To save the new values, click Save.

### Spreading Values Using Mass Allocations

If you have the Mass Allocate role (assigned in Oracle Hyperion Shared Services) and an administrator has enabled Mass Allocate as the form property, you can spread data using the powerful feature, Mass Allocate, which:

- Allocates data to all the source cell’s descendants
- Allocates across multiple dimensions
- Spreads data even to cells not displayed on the form
- Does not require that you have access to the target cells
Cannot be undone after you mass allocate values
Is processed with dynamically-created calc scripts
Executes the calc scripts against the Essbase server, against all dimension combinations
Can use customized spreading patterns, created by an administrator (see the Oracle Hyperion Planning Administrator’s Guide)

Note: The Time Balance property setting affects how data is spread with the Fill option. See “How Spreading Data Works” on page 66.

To spread values using Mass Allocate:

1. Put the cursor in the Subtotal or Total cell whose value you want to spread.
2. Select Edit, and then Mass Allocate.
3. Perform an action:
   - To increase or decrease values by a specified amount, from the Adjust Data drop-down list, select By Value, select Increase by or Decrease by, and then enter the value to spread.
   - To increase or decrease values by a percentage, from the Adjust Data drop-down list, select By Percentage, select Increase by or Decrease by, and then enter the percent value.
   - To replace values with a new value, enter it in the Spread Value text box.
4. Select the Spread Type for allocating the specified value or percentage across the target cells, as described in the following table.

<table>
<thead>
<tr>
<th>Spread Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Proportional Spread</td>
<td>Spreads the value proportionally, based on the existing values in the target cells (the default)</td>
</tr>
<tr>
<td>Relational Spread</td>
<td>Spreads into the selected cells, based on values that exist in a different source location. Selecting this option displays the currently selected members for each dimension in the Selected column. Under Relative, select the members you select that identify the base values to be spread, creating a pattern based on the existing values in the relative cells. To select members, click , and, on the Member Selection page, select members for the dimension, either directly or based on relationships (see the Oracle Hyperion Planning Administrator’s Guide).</td>
</tr>
<tr>
<td>Evenly Split</td>
<td>Spreads the value evenly among the target cells</td>
</tr>
<tr>
<td>Fill</td>
<td>Replaces the value in all target cells</td>
</tr>
</tbody>
</table>

Your administrator can add other spreading patterns, described in the Oracle Hyperion Planning Administrator’s Guide.

5. Click Spread.

The new values are automatically saved in Essbase.
Working with Supporting Detail

Supporting detail serves as a built-in calculator for developing data that is not in the member outline. It also provides a way to better understand the basis of the data. For example, if the bottom-level member in your outline is pens, you can add line items in supporting detail for ballpoint, fountain, marker, and so on. Then you can aggregate their values to the pen member.

Supporting detail helps you build and communicate bottom-up values when planning such corporate expenses as travel and projects, where you must calculate aggregate values. Supporting detail can include text, values, and operators that define how data aggregates.

About supporting detail:

- Supporting detail does not change members in the outline.
- To create, change, or delete supporting detail, you must have write access to cells. You must have read access to view supporting detail.
- To protect values, you cannot enter, adjust, spread, and save data into aggregate values that have supporting detail. The aggregate values are read-only.
- You can add supporting detail to target and bottom-up versions.
- You cannot add supporting detail to Summary Time Periods—such as Quarters—but only to base time periods (level 0 members).
- Number and precision formatting is not reflected in the Supporting Detail window.
- The sequence of operators follows the same logic as is used to process multiple operators in a complex calculation.
- You can print supporting detail.
- When using Copy Versions, you can copy supporting detail from one version to another.
Your administrator can copy data, including supporting detail, from one dimensional intersection to another. For example, administrators can copy Budget, FY10, Final to Forecast, FY11, First Draft. They can also copy data from one business unit to another, or from FY10 to FY11 to prepare a budget.

See “Adding Supporting Detail” on page 76.

### Adding Supporting Detail

**Subtopics**
- Example of Supporting Detail
- Totaling When Supporting Detail Cells are Blank
- Working with the Supporting Detail Hierarchy

Use the Supporting Detail window to set how detail items aggregate to cell values in a form.

1. **Open a form, and then select the cells.**
   
   You can select one cell or a range of contiguous cells in a row or column. The section cannot include a combination of rows and columns. Select cells that are in the local currency so that you can write to them.

2. **Select Edit, and then Supporting Detail.**
   
   The Supporting Detail window reflects your cell selection.

3. **Use the buttons to create or change the indented hierarchy to reflect the desired structure and calculations.**

   For example, click Add Child to add a line item directly below the selected item. See “Working with the Supporting Detail Hierarchy” on page 78.

4. **In the Label column, enter a description.**

   The text and its associated operator must be unique among children of the same parent. By default, you can enter up to 1,500 characters.

5. **Set the mathematical relationships among the line items by selecting an operator for each of them.**

   Select from these operators: + (add), - (subtract), * (multiply), / (divide), and ~ (ignore).

6. **Enter data to set or calculate.**

   Enter numbers using the same scaling that was set up for the form.

7. **Click Save.**

   Values are dynamically calculated and aggregated before the data is saved. Data on the form is also saved.
Example of Supporting Detail

This example shows how the first quarter’s travel budget for a department is calculated using supporting detail. These supporting detail Total values aggregate to the Q1 Travel cell in the form.

<table>
<thead>
<tr>
<th>All</th>

Totaling When Supporting Detail Cells are Blank

If a data cell in supporting detail is blank, Planning ignores it when aggregating values (instead of assuming that a blank cell means zero).

For example, you might define supporting detail to calculate the daily rate of hiring an instructor ($250) times the number of days per month for which you plan to retain an instructor (4 in January, but none in February). The Instructor total for Feb is 250, even though you do not intend to hire an instructor in Feb, as shown in the following table:

<table>
<thead>
<tr>
<th></th>
<th>Jan</th>
<th>Feb</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instructor</td>
<td>1000</td>
<td>250</td>
</tr>
<tr>
<td>Rate +</td>
<td>250</td>
<td>250</td>
</tr>
<tr>
<td>Days</td>
<td>4</td>
<td></td>
</tr>
</tbody>
</table>

To correctly total values that are aggregated by the * multiplier when some cells are blank, you can leave the Rate cell blank, or enter a zero in the Days data cell, instead of leaving it blank, as shown in the following table:

<table>
<thead>
<tr>
<th></th>
<th>Jan</th>
<th>Feb</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instructor</td>
<td>1000</td>
<td>0</td>
</tr>
<tr>
<td>Rate +</td>
<td>250</td>
<td>250</td>
</tr>
<tr>
<td>Days</td>
<td>4</td>
<td>0</td>
</tr>
</tbody>
</table>

This causes the rate (250) to be multiplied by 0 (zero), resulting in a value of zero.

Order of Supporting Detail

The supporting detail order affects the resulting value that is saved to Essbase. Understanding the calculation order helps you correctly enter supporting detail. Supporting detail leverages the
calculation order of + (addition), - (subtraction), * (multiplication), and / (division). A simple Unit times Rates example demonstrates how to correctly enter supporting detail.

**Incorrectly Entering Supporting Detail**
Because Rate in this following table is set to the unary operator +, the calculation order first adds the Rate and then multiplies by the Unit, resulting in incorrect data being saved.

<table>
<thead>
<tr>
<th></th>
<th>Jan</th>
<th>Feb</th>
<th>Mar</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rate</td>
<td>250</td>
<td>250</td>
<td>250</td>
</tr>
<tr>
<td>Unit</td>
<td>10</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Total</td>
<td>2500</td>
<td>250</td>
<td>250</td>
</tr>
</tbody>
</table>

**Correctly Entering Supporting Detail**
This following table demonstrates the correct order of the Units times Rates calculation, with correct values saved.

<table>
<thead>
<tr>
<th></th>
<th>Jan</th>
<th>Feb</th>
<th>Mar</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unit</td>
<td>10.0</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Rate</td>
<td>250.0</td>
<td>250.0</td>
<td>250.0</td>
</tr>
<tr>
<td>Total</td>
<td>2500</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Verify the supporting detail order, ensuring that correct values are calculated and saved.

**Working with the Supporting Detail Hierarchy**
The supporting detail hierarchy should reflect the type of information that supports the cell values and the mathematical operators that create the relationships.

- To create or change the supporting detail hierarchy:
  1. In a form, select the cells with supporting detail.
  2. Select Edit, and then Supporting Detail.
  3. Create or change the rows in the hierarchy that provide the detail for the data values by putting the cursor on an item and clicking the options in this table:

<table>
<thead>
<tr>
<th>Option</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add Child</td>
<td>Adds an item one level below the selected cell. You can add an unlimited number of children, but consider its potential performance impact.</td>
</tr>
<tr>
<td>Option</td>
<td>Result</td>
</tr>
<tr>
<td>---------------</td>
<td>------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Add Sibling</td>
<td>Adds an item at the same level as the selected cell. You can add an unlimited number of siblings, but consider its potential performance impact.</td>
</tr>
<tr>
<td>Delete</td>
<td>Removes the selected item</td>
</tr>
<tr>
<td>Delete All</td>
<td>Simultaneously removes all supporting detail</td>
</tr>
<tr>
<td>Promote</td>
<td>Moves the selected item to the next-higher level</td>
</tr>
<tr>
<td>Demote</td>
<td>Moves the selected item to the next-lower level</td>
</tr>
<tr>
<td>Move Up</td>
<td>Moves the selected item before its sibling predecessor</td>
</tr>
<tr>
<td>Move Down</td>
<td>Moves the selected item after its sibling successor</td>
</tr>
<tr>
<td>Duplicate Row</td>
<td>Adds a row below the selected item, duplicating its structure (text, operator, and values)</td>
</tr>
<tr>
<td>Refresh</td>
<td>Gets the latest stored database values, restoring the previously-saved values, and possibly overwriting changes you just made.</td>
</tr>
</tbody>
</table>

4 Click **Save**.

The save operation stores the detail text, values, and aggregate values.

### Viewing or Changing Supporting Detail

In forms, cells with supporting detail have a light green background.

- To view or change calculations or supporting data:
  1. **Open a form, and then select the cells for which to view or add detail.**

     You can select one cell or a range of contiguous cells in a row or column. The section cannot include a combination of rows and columns. Select cells that are in the local currency so that you can write to them.

  2. **Select Edit, and then Supporting Detail.**

  3. **View or change the line items or calculations that aggregate the data in the selected cells.**

### Synchronizing Supporting Detail with Essbase

When you delete supporting detail, you can specify how to handle the value for the supporting detail total that is stored in Essbase. You can set the value in Essbase to #MISSING or leave it as it was before the supporting detail was deleted—in effect, using supporting detail as a scratch pad or calculator.

- To synchronize supporting detail with Essbase:
  1. **Click in the cell with supporting detail.**
Select Edit, and then Supporting Detail.

In Supporting Detail, delete the information, and then click Save.

In the displayed message, specify how Essbase handles the changes:

- To delete the supporting detail in Essbase, click Yes, set the value(s) to #MISSING.
- To leave the data in Essbase as it was before you deleted the supporting detail, click No, leave the value(s) as is.

Pasting Multiple Cells into the Supporting Detail Window

You can copy supporting detail from multiple cells in Microsoft Excel or another application and paste it into the Supporting Detail window. For example, you can export forms to Excel spreadsheets, work on supporting detail in spreadsheets, and copy it back to Planning.

About copying and pasting supporting detail:

- The cell range of the data that you paste must exist in the Supporting Detail window.
- You can copy and paste cell labels and cell data.
- The pasted data does not retain the original formatting.

To copy supporting detail from Microsoft Excel spreadsheets:

1. Open a Planning form.
2. In Planning, select a cell or range of cells, and then click Supporting Detail.
3. In Supporting Detail, note the range of cells with supporting detail, or add cells with supporting detail, and then click OK.
4. Select Tools, and then Export as Spreadsheet.
   A browser instance of Microsoft Excel is displayed with the exported information, and you can modify the supporting detail.
5. In Excel, select the range of cells containing supporting detail, and then press Ctrl+C to copy the data.
6. In Planning, open the form to which to add supporting detail.
7. Select the cell with the details to modify, and then click Supporting Detail.
8. In Supporting Detail, click in the range's upper-left cell for which to paste supporting detail, and then press Ctrl+V.
9. Click Save.
Working with Multiple Currencies

You can plan and analyze your financial information in one currency or in multiple currencies, if certain conditions are met.

If multiple currencies are enabled, cells show the currency code. You can:

- Enter data in local currencies
- View or report on data in reporting currencies

On forms where the *Allow multiple currencies per entity* option is enabled, no currency codes are displayed for parent entities, even if they have single- or multiple-currency children.

When you run a currency conversion calc script, all currencies on the page are converted. For example, you can select local, USD, and EUR currency members on the page axis and enter data in the local currency. The currency conversion calc script dynamically calculates the entered data for all currencies selected for that page. In this example, the script converts local currency to USD and to EUR.

Currency conversion converts all levels except the Time Period dimension, where it converts only level 0 time periods and then aggregates the summary displayed time periods.

See:

- The *Oracle Hyperion Planning Administrator’s Guide* to set up currencies.
- “Changing the Currency for a Data Cell” on page 82.
- “Reporting on Data in Multiple Currencies” on page 82.
- “Spreading with Multiple Currencies” on page 70.
Changing the Currency for a Data Cell

If an administrator has enabled the functionality, you can enter data into cells in a currency other than the base currency of the cells. Currencies listed in the Available Currencies list can be used for input as a local currency.

**Note:** To override the base currency for an entity, the cell must be displayed in the local currency, and its version must be bottom-up.

To enter data in a local currency other than the cell’s base currency:

1. In a form, select a local currency member for the cell.
2. Optional: To look up the currency's code, select View, then Currency.
   
   Available Currencies shows the application’s currencies. Note the Currency Code for the currency you want to work with, and close the window. If you cannot select View, then Currency, multiple currencies are not enabled for this application or form.
3. In the right part of a data cell, enter the Currency Code for the cell’s currency.
   
   Doing this overrides the entity’s base currency. The left part of the cell is for the value itself.
4. Enter or view the data in the left part of the cell.
5. Select File, and then Save to calculate and save the value.

   If the Calculate Currencies calc script is set to run when the form is saved, and the form is enabled for multiple currencies, the data value is displayed in the currency you selected.

Reporting on Data in Multiple Currencies

If an administrator has enabled the functionality, you can view data in a reporting currency.

To see data values in a reporting currency other than the base currency, in a form, select another reporting currency.

You can look up the currency code for a currency by selecting View, then Currency.

The Available Currencies list shows which currencies are set up for the application. Note the Currency Code for the currency you want to work with, and close the window. (If you cannot select View, then Currency, multiple currencies are not enabled for this application or form.)

**Note:** You cannot enter data into a reporting currency. You can enter data only into a local currency.
Overview of the Review Process

Planning tracks budgets by *planning units*—a slice of data at the intersection of a scenario, a version, and an entity or part of an entity. It is the basic unit for preparing, annotating, reviewing, and approving plan data.

The following sections discuss:

- Planning Unit States
- Planning Unit Actions

Planning Unit States

Planning units are in one of the following states:

- **Not Started**—Initial state of all planning units. An administrator begins the review process by starting a planning unit using the `Start` action, which changes a planning unit's state. In FreeForm, the Start action changes the planning unit state to First Pass. In Bottom Up, the Start action changes the planning unit state to “Under Review” and it goes to first in promotion path. In Distribute, the Start action changes the planning unit state to “Under Review” and it goes to last in promotion path.
**Note:** First and Last in the promotion path are not states but locations of where and who owns the planning unit.

- **First Pass**—Beginning state of planning units selected for the budgeting process. Planning units have no owners during **First Pass**. Users having access can enter data and promote planning units during the **First Pass** state. During this state, administrators may exclude some or all members from planning units.

  When a planning unit is ready for review, users select one of several actions, changing planning unit status and passing ownership. To be notified by email if you become the owner of a planning unit, see “Setting Up Email” on page 102.

**Note:** When using the Free Form template for approvals, ownership does not automatically pass to another user. Users must assign the next owner.

- **Under Review**—Occurs after a **Promote** or **Submit** action, and signifies that someone is reviewing the planning unit. Only the current owner or administrators can modify data on planning units whose state is **Under Review**. While **Under Review**, planning units may undergo iterations of promotions, submissions, signoffs, and rejections until they are finally approved.

- **Frozen**—All related data in descendant planning units is locked (read only). The owner who froze the planning units, or an owner above that user, selects **Unfreeze** to reverse this action.

- **Distributed**—Multiple users are reviewing the budget. The reviewers are filtered by permissions and specified reviewers for the distribute action selected (**Distribute**, **Distribute Children**, or **Distribute Owner**, see “Changing Planning Unit Status” on page 96).

- **Signed Off**—Occurs when **Sign Off** is selected. Only the current owner or administrator can modify data or perform an action on planning units whose state is **Signed Off**. Ownership does not change when a planning unit is signed off.

- **Not Signed Off**—Occurs when **Reject** is selected. Only the current owner or administrator can modify data or perform an action on a planning unit whose state is **Not Signed Off**.

- **Approved**—Occurs when **Approve** is selected. The last user in the promotional path (the owner of the planning unit) becomes the owner, regardless of whether they are an owner or a reviewer. Owners can edit the data if they have write access to the member combination that defines the planning unit, and can perform the **Approve** action. Reviewers who are the last user in the promotional path cannot edit the data in the planning unit, but can perform the **Approve** action. After all planning units are approved, the budgeting cycle is complete.

**Notes:**

- In all states except the **Not Started** state, users with read access can view data, view the approval state, view the history, and read and enter annotations.

- A planning unit may skip approval states. For example, an administrator may approve a started planning unit from any state.

- The review process can be managed at a higher level with parent planning units.
Planning unit owners and reviewers can be individual users, or they can be a group. For information about assigning a group as the owner or the reviewer, see “About Group-based Approvals” in the Oracle Hyperion Planning Administrator’s Guide.

**Note:** The actions available when changing planning unit status depend on which Approvals template is selected. For example, when using the Distribute template, users can select **Submit** to pass ownership to the next user in the promotional path. When using the Bottom Up template, however, **Submit** is not available. Instead, users select **Promote** to pass ownership to the next user in the promotional path. The **Freeze** and **Unfreeze** actions are only available for the Bottom-up template and **Distribute**.

**Note:** **Optional for budget administrators:** The **Entities** list can be displayed as a tree or flat view. If the display is a tree view, expand the hierarchy until you see the entity or members you want to work with. In a flat view, you can sort the list by any of the columns.

### Planning Unit Actions

There are several actions that can be performed in a planning unit. The available actions vary depending on what state the planning unit is in.

- **Start**—Starts the planning unit  
  New planning unit state: First Pass for FreeForm, Under Review for Bottom Up, Distributed
- **Exclude**—Stops the planning unit and deletes all its history  
  New planning unit state: Not Started
- **Originate: Bottom Up**—Moves the planning unit to first in the promotion path  
  New planning unit state: Under Review
- **Promote**—FreeForm moves the planning unit to anyone in the list. Bottom Up moves the planning unit to the next position in the promotion path.  
  New planning unit state: Under Review
- **Reject**—FreeForm moves the planning unit to anyone in the list list. Bottom Up, Distributed moves the planning unit to anyone previous in the promotion path  
  New planning unit state: Not Signed Off
- **Sign Off**—Moves the planning unit to the Signed Off state
- **Delegate**—Delegates the planning unit to a newly-selected owner  
  New planning unit state: Under Review
- **Take Ownership**—Takes ownership away from the current owner. For Groups, claims ownership of the planning unit from the group.  
  New planning unit state: Under Review
- **Return**—Returns ownership to Group
New planning unit state: Under Review

- **Pass**—When in a group, passes ownership to another user in the group
  
  New planning unit state: Under Review

- **Freeze**—Freezes the planning unit from data entry
  
  New planning unit state: Frozen

- **Unfreeze**—Unfreezes the planning unit and allows data entry again
  
  New planning unit state: Under Review

- **Distribute**—Moves the planning unit to previous in the promotion path
  
  New planning unit state: Distributed

- **Distribute Children**—Moves the planning unit to previous in the promotion path. Applied to children of the selected planning unit.
  
  New planning unit state: Distributed

- **Distribute Owner**—Moves the planning unit to first in the promotion path
  
  New planning unit state: Distributed

- **Submit**—Moves the planning unit to next in the promotion path
  
  New planning unit state: Under Review

- **Submit to Top**—Moves the planning unit to last in the promotion path
  
  New planning unit state: Under Review

- **Approve**—Approves the planning unit. This completes the approval process, and planners cannot perform any additional actions.
  
  New planning unit state: Approved

- **Reopen**—Reopens an approved planning unit. Reopen is available to planners or interactive users who are last in the promotion path.
  
  New planning unit state: Under Review

---

**Using the Approvals Dashboard to View Planning Unit Status**

You can use the approvals dashboard to view a graphical representation of approvals. This lets you better visualize approvals status information. Using a view selection option, you can easily switch between four different views (Process Status view, Level Status view, Group Status view, and Tree view). Clicking on a section of the chart displays detailed information about that chart section in the grid displayed below the chart.

To use the approvals dashboard to view planning unit status:

1. Select Tools, and then Manage Approvals.
2 From Scenario, select a valid scenario, and then from Version, select a valid version.

3 Click Go.

The list of planning units to which you have access is displayed.

4 From the View drop-down menu at the top right of the screen, select how to display the information about the planning unit.

The following views are available:

- **Process Status**—Shows the percentage of planning units that are under various statuses, such as under review or approved. You can customize the following information:
  - **Chart Type**—Select Pie or Bar.
  - **Group By**—Select to further define the criteria by which to group the information. If you choose to group by approvals status, select whether to display planning units that are under review and whether to list the information by owner or by location.

  Click on a section of the pie chart or bar chart to display specific details about that chart section in the grid below the chart. For example, clicking Under Review on the chart displays details about the planning units that are under review.

- **Level Status**—Shows the percentage of planning units that are pending or complete by level. You can customize the following information:
  - **Level Reached**—Select My Level or the number of levels below my level.
  - **Group By**—Select to further define the criteria by which to group the information. If you choose to group by status, select whether to display pending or complete planning units and whether to list the information by owner or by location.

  Click on a section of the pie chart to display specific details about that chart section in the grid below the chart. For example, clicking pending planning units in Administration and Finance on the chart displays specific details about those planning units.

- **Group Status**—Shows the percentage of planning units that are pending or complete grouped by levels. You can customize the following information:
  - **Level Reached**—Select My Level or the number of levels below my level.
  - **Group By**—Select My Level or the number of levels below my level.
  - **List By**—Select whether to group the information by owner or by location.

  Click on a section of the bar chart to display specific details about that chart section in the grid below the chart. For example, clicking complete planning units in Education on the chart displays specific details about those planning units.

- **Tree View**—Displays planning units as a hierarchy. You can search for a specific planning unit by name, by alias, or both.
Note: The Tree View is only visible to the administrator and to users provisioned with roles to manage tree views.

The grid below the chart in the Process Status, Level Status, and Group Status views displays columns for Planning Unit, Approvals Status, Sub-Status, Current Owner, Location, Path, and other Details. Above the grid, you can select an option from the Actions menu or click an icon to perform the following actions:

- Display My Planning Units—Display only the planning units for which you are the owner.
- Clear All Filters—Clear all the filters that you have set.
- Default Sort—Sort alphabetically in the default hierarchical sort order.
- Validate—Validate data for the selected planning unit against any existing validation rules.
- Change Status—Change the status of the planning unit.
- Refresh—Refresh the screen to ensure that all the change you have made are displayed.

In addition to the above actions, you can use the View menu to select which columns to display or to reorder the columns, and click (or select Detach from the View menu) to detach the panel collection and render the table over the page that contains it.

For the Tree View, the grid displays columns for Planning Unit, Plan Cycle (where you can start or exclude a planning unit), Approvals Status, Sub-Status, Current Owner, Location, Path, and other Details. Above the grid, use the menus and icons to perform the following actions:

- Actions—Select Refresh to ensure that all the change you have made are displayed. You can also click (or select Detach from the View menu) to detach the panel collection and render the table over the page that contains it.
- View—Customize the Tree View. You can select the columns to display, detach columns, collapse the view, show the selected column as the top column, go to the top column, scroll to the first column, scroll to the last column, and reorder the columns.
- Search—Search for a specific planning unit by name, by alias, or both. Click to search up or to search down.
- Detach—Detach the panel collection and render the table over the page that contains it.
- Go one level up from the current column.
5 **Non-administrators only:** Right-click the column heading in any column containing  to order the planning unit list by the column contents.

The ordering options are:

- **Sort Ascending**, sorts alphabetically in ascending order
- **Sort Descending**, sorts alphabetically in descending order
- **Default Sort**, sorts alphabetically in the default order
- **Filter**, enter column-member criteria in the Filter dialog box to determine the planning units displayed, as described in the following step
- **Clear Filter**, clears the filter on the selected column
- **Clear All Filters**, clears all filters set for the display columns

6 **Optional:** Double-click  in a column heading to open the Filter dialog box, and then select options appropriate for the column:

- **Planning Unit**:
  a. Enter the **Planning Unit Name**.
  b. **Optional**: Click , make a selection, and then click **OK**.
  c. Enter the **Planning Unit Generation**. You can enter generation numbers and ranges. If you include both numbers and ranges, use commas as separators, such as 1, 3, 5-7.
  d. Click **OK**.
- **Sub-Status**: Select a **Validation Status** option, and then click **OK**.
- **Approval Status**: Select an **Approval Status** option, and then click **OK**.
- **Current Owner**:
  a. Enter the **User Name**.
  b. **Optional**: Click , select an option in the Select and Assign Reviewers dialog box, and then click **OK**.
  c. Click **OK**.
- **Location**:
  a. Enter the **Location Name**.
  b. **Optional**: Click , make a selection, and then click **OK**.
  c. Enter the **Location Generation**. You can enter generation numbers and ranges. If you include both numbers and ranges, use commas as separators, such as 1, 3, 5-7.
  d. Click **OK**.
7 Optional: Click the icon in the Path field to view the planning unit promotional path.

8 Optional: Click Details in the Action column to view planning unit history, and then click Done. See “Viewing Planning Unit Details” on page 99.

Example: Approvals Dashboard and Level Status

This example uses a hierarchy in which Sr_VP has write access to entity Senior VP and all of its descendants, user VP has access to entity VP and all of its descendants, and so on.

As shown in the following figure, My Level refers to the Location of the planning unit owned by the logged in user. If the user does not own any planning units (for example, if the user is a reviewer), My Level refers to the highest level (such as the highest Entity level) to which the user has read/write access. The dashboard status, Complete or Pending, denotes whether or not the planning unit has reached the level selected in the Level Reached drop-down list. If the planning unit is at the selected level or at a higher level, its status displays as Complete. If the planning unit has not yet reached the selected level or above, its status displays as Pending.

Assume that the logged-in user, Sr_Dir_Zone1, owns a planning unit at level (or Location) Senior Director Zone1. As shown in the following figure, the Location column shows that
all planning units are below, and none are at or above level Senior Director Zone1. The status shows that, for the planning units to which this user has access, 100% are Pending.

In this example, the logged-on user, Sr_Dir_Zone1, selects 1 Level Below in the Level Reached field. Planning units owned by directors of individual products are one level below the logged-on user, Sr_Dir_Zone1. Because all planning units are at the director level, the dashboard shows 100% of planning units as Complete, as shown in the following figure.

**Note:** Complete and Pending status are not related to Approvals Status or Sub-Status of the actual planning unit.

The user can click the graph to refresh the corresponding information listed at the bottom of the Manage Approvals page.

In this example, assume that another user logs on as Dir_prodD and promotes Director Zone1 Product D Planning Unit so that Senior Director Zone1 becomes the owner of this planning unit. Then user Dir_prodD logs on, selects Tools, then Manage Approvals. Then the user selects Scen1 and Ver1, clicks Go, and then selects View, then Level Status. User Dir_ProdA has read access to IDescendants (Director Zone1) and write access to entity Director Product A. Due to this access, user Dir_ProdA sees two options in the Level Reached drop-down list: My Level and 1 Level above.

When this user selects My Level in the drop-down list, all the planning units to which user Dir_ProdA has access have reached the level of Dir_ProdA or above. If the user clicks the dashboard graph to refresh the table at the bottom of the screen, the Location column shows that all planning units are at or above level Director Zone1 ProductA. The status shows that, for the planning units to which this user has access, 100% are Complete.
If this user then selects **1 Level Above** in the **Level Reached** drop-down list and clicks the **Complete, 25%** portion of the graph, the graph shows that, for the planning units to which Dir_ProdA has access, one out of four have reached **1 Level Above** or Senior Director Zone 1 Location. The Director Zone1 Product D planning unit that had been promoted earlier is now at Location Senior Director Zone1. Clicking the **Pending, 75%** portion of the graph shows the three out of four planning units to which Dir_ProdA has access that have not reached the **1 Level Above Location**. These planning units are appropriately shown as **Pending**.

---

**Example: Approvals Dashboard and Group Status**

**Group Status** is a different way of visualizing the information shown by the **Level Status** option. As with the previous example, this example uses a hierarchy in which user Sr_VP has write access to entity Senior VP and all of its descendants, user VP has access to entity VP and all of its descendants, and so on.

In this example, consider that a user logs on as Dir_prodA, selects **Tools**, then **Manage Approvals**, then selects Scen1 and Ver1, and then clicks **Go**. The user then selects **View**, then **Group Status**. As shown in “Example: Approvals Dashboard and **Level Status**” on page 90, when user Dir_ProdA selects **My Level**, all planning units to which this user has access have reached this level or a higher level, so all planning units are shown as complete. As shown in following figure, four planning units at **My Level** are also displayed as **Complete**.
Assume that Dir_ProdA then selects **1 Level Above** in the **Level Reached** drop-down list, selects **My Level** in the **Group By** drop-down list, and then selects **Location** from the **List By** drop-down list. As shown in the following figure, the graph shows that **1 Level Above** is associated with Location **Senior Director Zone1**. One planning unit, **Director Zone 1 Product D**, has reached this level. The other three planning units have not yet reached this level. Three planning units are displayed as **Pending**, and one planning unit is displayed as **Complete**.

In this example, assume that the user selects **1 Level Above** in the **Group By** drop-down list. The user can then click portions of the graph to view the details displayed in the table at the bottom of the screen. Note that the **Group By** and **List By** selections do not change the content of the information shown for the **Level Reached** option. Selecting different options in the **Group By** drop-down list changes the visual representation of the information displayed by the option.
selected in the Level Reached drop-down list. Selecting different options from the List By drop-down list changes the label on the horizontal axis of the graph.

Validating Planning Units

The planning unit moves from one reviewer to another until the budget process is complete. Each reviewer must validate the planning unit before sending the budget to the next reviewer. The validation runs all data validation rules defined for the planning unit with which the reviewer is working, and reports any data errors or changes in the planning unit promotional path.

The selected Approvals template determines the first user to review the budget. The first user completes the assigned tasks, then promotes (Bottom Up template) or submits (Distribute template) the budget. If approvals notifications are set in preferences, the next owner is alerted that the budget requires attention. Other users may also be notified when the budget passes from one user to another.

The review process follows the promotional path unless an event triggers a change. Events that affect the promotional path include:

- Exceeding or not reaching expense boundaries for budget items such as salaries, new hires or capital equipment
- The current owner returning the budget to the previous owner for additional information
- The current owner requesting help from an authorized user who is not necessarily on the promotional path

To validate planning units:

1. Select Tools, and then Manage Approvals.
2. For Scenario, select a scenario.
3. For Version, select a version.
4 Click Go to display the planning units associated with the selected scenario and version combination. The planning units listed are enabled for approvals. You can display planning unit members as a tree or a flat list, expand the hierarchy, and click a column header to sort the list.

5 Order the planning unit list by its contents by right-clicking the column heading in any column containing 📊. Filter the list by double-clicking in a column heading to open the Filter dialog box, and then selecting options appropriate for the column.

For detailed information on ordering and filtering planning units, see steps 5 and 6 in “Using the Approvals Dashboard to View Planning Unit Status” on page 86.

6 Select Flat View, select the planning unit, and then click Validate to run all data validation rules associated with the planning unit.

If the conditions in all associated data validation rules are met, the message No Additional Approval Needed is displayed in Sub-Status. This indicates that the planning unit can be promoted.

7 If any other message is displayed, review the data validation report, and then take any necessary actions. See “Viewing and Resolving Planning Unit Validation Problems” on page 95.

Note: You cannot validate a planning unit that has not been started.

Note: Selecting Promote also runs the validation rules defined for the planning unit. If the conditions in all associated data validation rules are met, the planning unit is promoted to the next owner defined in the planning unit promotional path.

---

## Viewing and Resolving Planning Unit Validation Problems

When planning unit validation returns a message indicating a problem, review the validation report, correct any data errors found, and take any other necessary actions. For example, the next reviewer you specified may not be the next reviewer in the promotional path, and you would need to select the correct reviewer.

To view and resolve validation problems:

1 Check the message in Sub-Status for the planning unit, and then make the necessary changes to fix the problem.

For example, if the message is “Failed: Unauthorized New Owner,” specify an authorized owner as the next reviewer. The possible problem messages in Sub-Status are:

- Failed: Unexpected error
- Failed: Not Enough Access
- Failed: No Rule Defined For Action
- Failed: Unauthorized New Owner
- Failed: Incorrect Owner Specified
- Failed: Invalid Data
- Failed: Additional Approval Required
- Failed: Ambiguous Automatic User
- Failed: Circular Out of Office
- Failed: No Essbase Connection

2. If the message is “Failed: Invalid Data,” or “Failed: Additional Approval Required,” click the message to view the validation report, and then find and resolve the problems as follows:

   a. Review the validation report messages.

   Note: Depending on whether you are working in EPM Workspace or Standalone Planning, the validation report opens in a new tab or a new browser window.

   b. In the left pane, click each page name to view the forms containing the error or message, and then click each page combination to open the form and display its validation errors and messages.

   c. Resolve any data errors and take any necessary actions for each page, and then click Save to save the changes.

   d. Close the tab or browser to close the validation report, and then select the Approvals page.

   e. Click Validate again to ensure that the planning unit no longer has any validation problems.

If problems exist, fix them, and then revalidate until all problems are resolved.

### Changing Planning Unit Status

Planning units change status each time reviewers pass the budget to another reviewer. Planning units are assigned a status based on what action a reviewer takes to send the budget to another reviewer.

Note: If the status of a parent planning unit changes, all its children change too, unless they were excluded during the First Pass state or were approved.

To change planning unit status:

1. Select Tools, and then Manage Approvals.
2. From Scenario, select a valid scenario, and then from Version, select a valid version.
3. Click Go.
4. Select Flat View, and then click Change Status.
5. Click Details for the appropriate planning unit.
6 From Select Action, select:

- **Originate**: Changes the ownership of all selected planning units (including all descendants) to the first owner defined for that planning unit in the planning unit hierarchy.

  **Note**: The planning unit first owner differs between the Distribute and Bottom Up templates. With the Distribute template, the first owner is the owner at the top of the planning unit hierarchy. With the Bottom Up template, the first owner is an owner at the bottom of the planning unit hierarchy.

- **Start**: Begins the budget process, and changes the planning unit status to **First Pass**. This action is available in **Tree View**.

- **Promote**: Passes the planning unit to another user to review. This action assigns ownership of a planning unit the first time, and thereafter transfers ownership of a planning unit from one reviewer to another. **Promote** causes an implicit sign-off by the current owner and changes the planning unit status to **Under Review**.

- **Exclude**: Excludes a planning unit from the budget process. This action is available in **Tree View**.

- **Reject**: Indicates the planning unit requires more work from the previous owner. Reject typically requires the previous owner to create another iteration. By default, **Reject** returns planning unit ownership to the previous owner, but you may select the next owner. Reject changes the planning unit status to **Not Signed Off**.

- **Approve**: Approves the planning unit and changes its status to **Approved**. With the Distribute or Bottom Up templates, only the last owner in the promotional path can approve the planning unit. With the Free Form template, a user can approve planning units from any status except **Not Started**. Only an administrator can approve from a **Not Signed Off** or **First Pass** status.

  Approving a planning unit is an implicit reviewer sign-off. Typically, a planning unit is approved only once. However, an administrator can reject an approved planning unit, requiring a second approval.

- **Delegate**: Passes ownership to a user not on the promotional path. Select a user from **Select Next Owner** to pass ownership to that user. The specified user selects **Promote** when done to return the budget to the user who selected **Delegate**. This action is available with the Bottom Up and Distribute templates.

- **Take Ownership**: Become the owner of the planning unit and any level 0 planning units under a selected parent planning unit. Available to the current user and users above the current planning unit owner in the planning unit hierarchy.

- **Freeze**: Locks all related data in descendant planning units. This action makes all related data read only, but does not change ownership of any planning unit. The owner who selects this status or an administrator sets the planning unit status to **Unfreeze** to reverse this action.

- **Distribute**, **Distribute Children**, or **Distribute Owner**: Passes planning unit ownership to multiple users. Distribute actions work differently, depending on the current location
of the budget in the planning unit hierarchy. These actions are for a planning unit hierarchy using the Distribute template.

**Distribute** assigns ownership to the members at the current level of the planning unit hierarchy. **Distribute Children** assigns planning unit ownership to the children of the current owner. **Distribute Owner** assigns planning unit ownership to the level 0 owner defined during planning unit hierarchy creation.

- **Sign Off**: Signs off on a planning unit. **Sign Off** does not transfer ownership of the planning unit, but changes its state to **Signed Off**.
- **Submit**: Submit the planning unit to the next level.
- **Submit to Top**: Give ownership to the top user defined in the hierarchy.
- **Reopen**: Reopen an approved planning unit.

7 **Optional**: Click **Add Annotation** to enter comments.

See “Adding or Viewing Planning Unit Annotations” on page 98.

8 Click **Done**.

### Adding or Viewing Planning Unit Annotations

Annotations are comments about the data in a started planning unit. You must have at least read access to the planning unit to view or add an annotation. Annotations can vary by combinations of scenario, version, and planning unit members.

▶ To add a planning unit annotation:

1 Select **Tools**, and then **Manage Approvals**.

2 From **Scenario**, select a valid scenario, and then from **Version**, select a valid version.

3 Click **Go**.

4 Click **Details** for the appropriate planning unit.

5 Click **Add Annotation**.

6 In **Enter Title**, enter an annotation title.

7 In **Enter Annotation**, enter your comments (up to 1500 characters; however, on multibyte systems, Oracle recommends limiting annotations to 750 characters).

**Note**: You can enter a URL that will display as a hyperlink when the annotation is viewed.

8 Click **Submit**.

**Note**: You can also add annotations to planning units from the **Enter Data** page. To display this page, select a planning unit, click **Edit**, and then click **Annotate Planning Units**.
To view annotations for a planning unit:

1. Select Tools, and then Manage Approvals.
2. From Scenario, select a valid scenario, and then from Version, select a valid version.
3. Click Go.
4. Click Details for the planning unit to view.
5. Under Existing Annotations, read the planning unit's comments.
6. Click Done.

**Printing Planning Unit Annotations**

Administrators can print planning unit annotation reports (see the Oracle Hyperion Planning Administrator’s Guide).

**Viewing Planning Unit Details**

You can view historic information for planning units if you have at least read access. Information includes approval status, current owner, last action taken, and the date and time planning unit status last changed. You can also change planning unit status from this page.

To view planning unit details:

1. Select Tools, and then Manage Approvals.
2. From Scenario, select a valid scenario, and, from Version, select a valid version.
3. Click Go.
4. Click Details to display planning unit history, and then click Done.
5. Optional: Select Change Status to change the status of the planning unit (for example, promote the planning unit).

   If you select Change Status, you can also click Promotional Path or Add Annotations. See “Changing Planning Unit Status” on page 96.

6. Click Done.

**Selecting an Alternate Reviewer**

When a reviewer is out of the office during the budget review process, you can select an alternate reviewer to handle review responsibilities while the user is away. Use the Out of Office Assistant to return review responsibilities to users when they return.

To select an alternate reviewer:

1. Select Tools, and then Manage Approvals.
Click the link for **Out of Office Assistant**.

Select **I am currently out of the office**.

From **Select Action**, select an action:
- Promote
- Reject
- Delegate
- Submit

Select an alternate reviewer from **Select Next Owner**.

**Optional**: Enter an annotation.

When the user returns, clear **I am currently out of the office**.

Click **Save**.

To return review responsibilities when users return:

1. Select **Tools**, and then **Manage Approvals**.
2. Click the link for the **Out of Office Assistant**.
3. In the **Out of Office Assistant** dialog box, clear **I am currently out of the office**.
4. Click **Save**.
Setting User Preferences

Setting Preferences for Printing Options ............................................................... 109
Setting Preferences for User Variables ................................................................. 110

Setting Preferences for Application Settings

Subtopics

- Setting Up Email
- Selecting the Alias Setting
- Setting Approvals Options

In the Preferences page, use the Application Settings tab to set preferences:

- Set up email for Approvals and job notifications. See “Setting Up Email” on page 102.
- Select a set of alias names for displaying dimension and member names. See “Selecting the Alias Setting” on page 102.
- Set Approvals options and out of office settings. See “Setting Approvals Options” on page 102 and “Selecting an Alternate Reviewer” on page 99.

Note: To reset an option to the value set by an administrator, select Use Application Default.

Set other preferences on these tabs:

- Display Options: See “Setting Preferences for Display Options” on page 103
- Printing Options: See “Setting Preferences for Printing Options” on page 109
- User Variable Options: See “Setting Preferences for User Variables” on page 110
Setting Up Email

When email is set up and notification is enabled, Planning notifies users when they become the planning unit’s owner or are named as a user to notify for a specific budget action. The Application Settings tab displays differently for the application owner than for others because the application owner must set up the application’s email server before others can enable email notification.

➤ To set up and enable email notification for yourself:

1. Select File, and then Preferences.
2. Click the Planning icon, and then select Application Settings.
3. In Email Address, enter your email address.
4. From Task List Notification and Approvals Options, select Yes or No.
5. Optional: For the owner of the application to receive a copy of your email notifications, from Copy the Application Owner, select Yes.
6. From Job Console Notification, select Yes if you want to be notified by email when a job that you launch (for example, a business rule) is completed or generates an error.
7. Click OK.

You now receive email notifications when you become a planning unit’s owner or a user to notify. The Subject line is formatted as: NEW OWNER: Abc Plan (Scenario, Version, Entity).
8. Repeat these steps for each application for which you want email notification enabled.

Selecting the Alias Setting

Administrators can assign alternate names, or aliases, to Account, Entity, and user-defined dimensions and members. If they do, you can select which set of aliases to use for displaying dimension and member names. For example, one alias table could display members in French, and another could display members in German.

➤ To select the alias table for displaying names:

1. Select File, and then Preferences.
2. Click the Planning icon, and then select Application Settings.
3. From Alias Table in the Alias Setting area, select an alias table.
4. Click OK.

Setting Approvals Options

For Approvals tasks, you can specify a reviewer to replace a reviewer who is out of the office. You can also set these display options:

- Members’ names (which may be cryptic) or their aliases, if they have them
- Planning units that are not started with those that are started
To set Approvals options

1. Select File, and then Preferences.
2. Click the Planning icon, and then select Application Settings.
3. Under Approvals Options, select Yes to set these display preferences:
   - **Show Planning Units As Aliases**: Displays members’ aliases instead of their names on Approvals pages
   - **Show Planning Units That Are Not Started**: Displays planning units that are started and not started. (This option affects only the flat list view, not the tree list view.)
4. Optional: Click the link for the Out of Office Assistant to set up an alternate budget reviewer while the current reviewer is out of the office, or to reset reviewer responsibilities when the reviewer returns. See “Selecting an Alternate Reviewer” on page 99.
5. Click OK.

### Setting Preferences for Display Options

Subtopics
- Changing the Formatting of Numbers
- Remembering the Last Page Selected
- Indenting Members on the Page Drop-Down List
- Enabling Search with a Large Number of Pages
- Remembering the Most Recent Page Visited
- Showing Consolidation Operators
- Enabling Warnings for Large Forms
- Showing Records on the Dimensions and Assign Access Pages
- Viewing the Interface in Higher Contrast
- Setting Text Size
- Setting the Date Format

In the Preferences page, use the Display Options tab to:
- Change how numbers display in forms. See “Changing the Formatting of Numbers” on page 104.
- Set aspects of page display. See “Remembering the Last Page Selected” on page 105, “Enabling Search with a Large Number of Pages” on page 106, and “Indenting Members on the Page Drop-Down List” on page 106.
- Remember the most recent page visited. See “Remembering the Most Recent Page Visited” on page 106.
- Control the display of consolidation operators in forms. See “Showing Consolidation Operators” on page 107.
- Enable warning for large forms.
- **For administrators only**: Set how many members to display on each page of the **Dimensions** page. See “Showing Records on the Dimensions and Assign Access Pages” on page 107.

- **For administrators only**: Set how many users and groups display on each **Assign Access** page.

- Increase the Planning interface contrast. See “Viewing the Interface in Higher Contrast” on page 108.

- Enlarge the screen text size. See “Setting Text Size” on page 108.

- Set the display of dates. See “Setting the Date Format” on page 108.

**Note:** To reset an option to the value set by an administrator, select **Use Application Default**.

### Changing the Formatting of Numbers

On the **User Preferences** page, you can change the formatting of numbers in the **Display Options** tab. Your selections apply to all currencies, in all forms that you have access to in the current application. These choices override the settings for individual currencies set by your administrator.

If you select **Currency Setting**, the currency values in the form are displayed using the formatting initially set for individual currencies. If you select another option, your selection applies to all currencies, in all forms to which you have access in the current application.

You can control the display of:

- The thousands separator (none, comma, dot, or space)
- The decimal separator (dot or comma)
- The display of negative numbers (a minus sign before or after the number, or the number surrounded by parentheses)
- The displayed color for negative numbers (black or red)

To change the formatting of displayed numbers:

1. Select **File**, and then **Preferences**.
2. Click the Planning icon, and then select **Display Options**.
3. Under **Number Formatting**, select options, as summarized in this table:

<table>
<thead>
<tr>
<th>Option</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thousands Separator</td>
<td>None: 1000</td>
</tr>
<tr>
<td></td>
<td>Comma: 1,000</td>
</tr>
<tr>
<td></td>
<td>Dot: 1.000</td>
</tr>
<tr>
<td></td>
<td>Space: 1 000</td>
</tr>
<tr>
<td></td>
<td>You can enter values with or without a thousands separator.</td>
</tr>
<tr>
<td>Option</td>
<td>Example</td>
</tr>
<tr>
<td>------------------------</td>
<td>----------------------------------------------</td>
</tr>
<tr>
<td>Decimal Separator</td>
<td><strong>Dot</strong>: 1000.00</td>
</tr>
<tr>
<td></td>
<td><strong>Comma</strong>: 1000,00</td>
</tr>
<tr>
<td></td>
<td>You can enter values with or without a decimal separator.</td>
</tr>
<tr>
<td>Negative Sign</td>
<td><strong>Prefixed Minus</strong>: -1000</td>
</tr>
<tr>
<td></td>
<td><strong>Suffixed Minus</strong>: 1000-</td>
</tr>
<tr>
<td></td>
<td><strong>Parentheses</strong>: (1000)</td>
</tr>
<tr>
<td>Negative Color</td>
<td><strong>Black</strong>: Negative numbers are black</td>
</tr>
<tr>
<td></td>
<td><strong>Red</strong>: Negative numbers are red</td>
</tr>
</tbody>
</table>

**Note:** Select the **Currency Setting** option to apply the formatting that the administrator set as the Currency dimension property.

4 Click **OK**.

**Note:** Formatting selections take effect when you click outside the cell. If you select a setting other than **Use Application Default** for the thousands separator or the decimal separator, you must change both separators with the **Use Application Default** option. You cannot select the same option for the thousands and decimal separators. See also “Entering Percentage Values” on page 42.

### Remembering the Last Page Selected

This option sets members from the page of one form to that of other forms. The most recently used members of the last form you use are compared to that of the next form you select. Where members match, their names display in the next selected form.

➤ To remember the last page selected:

1 Select **File**, and then **Preferences**.
2 Click the Planning icon, and then select **Display Options**.
3 Under **Page Options**, select an option:
   - **Yes**: Remember selected page members
   - **No**: Disable this option
   - **Use Application Default**: Use the application’s default setting
4 Click **OK**.

This setting also applies to future sessions for the current application.

If a business rule has runtime prompts and **Use Members on Forms** is selected, the default member on the runtime prompt window matches the current member in the page and the POV axes of
the open form. **Use Members on Forms** does not work unless **Remember selected page members** is checked. See “About Launching Business Rules” on page 57.

**Indenting Members on the Page Drop-Down List**

- To set how displayed members are indented on the **Page** drop-down list:
  1. Select **File**, and then **Preferences**.
  2. Click the Planning icon, and then select **Display Options**.
  3. Under **Page Options**, for **Indentation of Members on Page**, select an option listed in this table:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indent level 0 members only</td>
<td>Indent only the bottom-most members (the default)</td>
</tr>
<tr>
<td>Indent based on hierarchy</td>
<td>Indent members based on their hierarchy level</td>
</tr>
<tr>
<td>Do not indent</td>
<td>Display members as a flat, sequential list</td>
</tr>
</tbody>
</table>

4. Click **OK**.

**Enabling Search with a Large Number of Pages**

When working with multiple pages, you can select among them easily with **Search**. Planning adds a drop-down list to the form when the number of pages exceeds a specified value.

- To set the number of members that activate a search list on the form:
  1. Select **File**, and then **Preferences**.
  2. Click the Planning icon, and then select **Display Options**.
  3. Under **Page Options**, enter a value in **Allow Search When Number of Pages Exceeds**.

When the number of pages reaches the specified value, a drop-down list and ![search icon] displays in the form, indicating that you can search. See “Navigating in Forms” on page 44.

4. Click **OK**.

**Remembering the Most Recent Page Visited**

You can have Planning remember the last page you viewed before logging out. The next time you log in, you go to that page.

- To remember the most recent page visited:
  1. Select **File**, and then **Preferences**.
  2. Click the Planning icon, and then select **Display Options**.
3 In Other Options, select Yes for Remember most recent page visited.
4 Click OK.

**Showing Consolidation Operators**

Your administrator can set up forms to display the consolidation operator associated with a member together with the member name, such as Sales (+). You can set a preference to control the display of consolidation operators in the data entry form.

To show consolidation operators:
1 Select File, and then Preferences.
2 Click the Planning icon, and then select Display Options.
3 In Other Options, select an option for Show consolidation operators.
4 Click OK.

**Enabling Warnings for Large Forms**

Because unusually large forms may require significant time to open, you can choose to display a warning when opening forms that are larger than a specified number of cells. When you try to open a form that is beyond the specified size limit, Planning displays a warning about the time needed to open the form. You can choose whether to open it.

To specify the number of cells at which the warning displays:
1 Select File, and then Preferences.
2 Click the Planning icon, and then select Display Options.
3 In Other Options, enter a number in Warn If Form Larger Than Cells Specified.
4 Click OK.

If the administrator has assigned a value, this value displays in the text box.

**Showing Records on the Dimensions and Assign Access Pages**

Administrators can set how many records display on each page of the Dimensions and Assign Access pages.

To set the number of records displayed:
1 Select File, and then Preferences.
2 Click the Planning icon, and then select Display Options.
3 In Other Options:
To set the number of members displayed on the Dimensions page: Enter a number in Show the Specified Members on Each Dimensions Page.

To set the number of users or groups displayed on the Assign Access page: Enter a number in Show the Specified Records on Each Assign Access Page.

4. Click OK.

Viewing the Interface in Higher Contrast

For better accessibility, you can view the Planning interface in higher contrast. The higher contrast lasts only for the current session.

➢ To set higher contrast for the interface:
  1. Select File, and then Preferences.
  2. Click the Planning icon, and then select Display Options.
  3. For UI Theme, select the high-contrast option, High Contrast.
  4. Click OK.

To restore the previous setting, change the UI Theme setting to Normal.

Setting Text Size

The Text Size option lets you enlarge the screen text size for the current session. When you log off, the font size returns to Normal.

➢ To set text size:
  1. Select File, and then Preferences.
  2. Click the Planning icon, and then select Display Options.
  3. For Text Size, select Normal, Large, Larger, or Largest.
  4. Click OK.

Setting the Date Format

Date Format sets how dates display in Planning. Administrators can set the date format, and users can change the setting to determine how dates display when they work in forms and task lists.

➢ To set the date format:
  1. Select File, and then Preferences.
  2. Click the Planning icon, and then select Display Options.
  3. For Date Format, select MM-DD-YYYY, DD-MM-YYYY, YYYY-MM-DD, or Automatically Detect (to use your system’s locale settings).
Setting Preferences for Printing Options

The form designer sets forms’ printing options. You can accept the default settings or set your own options for creating PDF files. To print to a PDF file, you must have Adobe Acrobat Reader installed on your computer.

You set printing options directly from the form when you are ready to print. Or, you can use Preferences to set printing options, which apply to all forms to which you have access permissions.

Note: To reset an option to the value your administrator set, select Use Application Default.

To apply print options for printing a form to a PDF file:

1 Select File, and then Preferences.
2 Click the Planning icon, and then select Printing Options.
   See “Printing Data ” on page 55.
3 Set PDF options, summarized in this table:

<table>
<thead>
<tr>
<th>Option</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Format data</td>
<td>Applies number format settings from the form.</td>
</tr>
<tr>
<td>Apply precision</td>
<td>Applies the form’s precision settings to the displayed data. If the form displays high precision numbers (numbers with many digits to the right of the decimal point), consider limiting precision in the PDF file.</td>
</tr>
<tr>
<td>Include supporting detail</td>
<td>Includes supporting detail in extra rows:</td>
</tr>
<tr>
<td></td>
<td>● Normal Order: inserts the Supporting Detail in the same order in which it displays in the Supporting Detail page, after the member that it is associated with.</td>
</tr>
<tr>
<td></td>
<td>● Reverse Order: inserts the Supporting Detail before the member it is associated with, and the Supporting Detail entries are reversed. Supporting Detail for children is displayed above their parents, and the order of siblings is preserved.</td>
</tr>
<tr>
<td>Show account annotations</td>
<td>Shows the form annotations. If the form designer enables account annotations, this option displays the annotations.</td>
</tr>
<tr>
<td>Show comments</td>
<td>Shows associated text notes.</td>
</tr>
<tr>
<td>Show attribute members</td>
<td>Shows attribute members that are assigned to the form.</td>
</tr>
<tr>
<td>Show currency codes</td>
<td>If the form supports multiple currencies per entity, shows currency codes.</td>
</tr>
</tbody>
</table>

4 Click OK.

The settings are saved and applied to all forms that you can access.
Setting Preferences for User Variables

Administrators can set up user variables, which help you navigate large forms. User variables filter the members displayed on forms, letting you focus on those members you are interested in, such as your own department’s expenses.

For example, your administrator can create a form with entities on the rows and a user variable called Department. You can limit the number of rows displayed on the form by selecting a member for the Department user variable, such as Sales. Later, you can select another value for Department, such as Marketing.

You can set variables in preferences or directly in forms. See “Dynamically Setting User Variables” on page 43.

To set preferences for user variables:

1. Select File, and then Preferences.
2. Click the Planning icon, and then select User Variable Options.
   
   If a user variable is set, an entry displays in Selected Member.
3. To select members, click .
4. Select members from the left.
   
   If you cannot access an entity, the check box does not display.
   
   Click or to expand or collapse the list. To select all members, select the check box in front of Members In.
5. In Member Selection, select a member:
   
   - To select, click .
   - To remove, click .
   - To remove all members, click .
6. Click OK.
7. In User Variable Options, click OK.
This topic provides answers to common questions about using Planning.

**How can I change from one application to another?**
Simply select another application. See “Logging on to EPM Workspace” on page 12.

**What audit capabilities does the system provide?**
When you change the state of a planning unit, add an annotation that explains what you changed and why. You can use annotations to create a written history or audit trail of a plan’s evolution. Administrators can also set up audit trails for certain application changes.

**How can I design a form?**
Administrators or form designers can design a variety of forms that let users work with their planning data. Users see only the forms and the data to which they have access.

**Can I change how my form displays?**
Yes. Select **File**, then **Preferences**, click the Planning icon, and then select **Display Options** to set options for number formatting, page selection, printing, and other options. To make ad hoc changes, see Chapter 4, “Working with Ad Hoc Grids.”

**In a large hierarchy, how can I find specific members?**
You can set the number of members that enable a search and find feature, and search up or down the hierarchy by member name or alias to find members. See “Enabling Search with a Large Number of Pages” on page 106 and “Navigating in Forms” on page 44.

**Can I cut, copy, paste, and delete data while I’m entering data?**
Yes, you can use the Copy and Paste shortcuts, or right-click in a cell, and then select **Cut**, **Copy, Paste**, or **Delete**. To adjust data, select **Edit**, then **Adjust**. You can work with multiple cells simultaneously.

**How can I easily enter values across multiple cells?**
Planning can allocate values across cells. For example, select multiple cells and select **Adjust Data** to increase or decrease their values by a certain percentage. See Chapter 7, “Adjusting and Spreading Data.”
How can I add a text note or custom link to data?

You can add comments or a custom link to accounts if the feature is enabled and you have write access to the members (account, entity, scenario, and version). For example, to create a link to a spreadsheet file on a shared server, you might enter: \file://C:/BudgetDocs/Timeline.xls where C represents the server’s drive.

If your administrator selected the **Enable Cell Level Document** property for the form, you can link a cell to an Oracle Hyperion Enterprise Performance Management Workspace document. See “Adding, Editing, and Viewing Cell-Level Documents ” on page 50.

How can I set up calculations for cells?

Select cells, and then click **Supporting Detail** to add text, values, and operators that define how data aggregates.

See “Working with Supporting Detail” on page 75.

Can I select the language or terminology in which the members display?

Yes, if an administrator sets up multiple alias tables, you can select from among them. The selected alias table determines how members are displayed in the form. For example, each alias table might display members in another language.

The display of aliases in a form must be enabled as a property.

Select the alias table to use by selecting **File**, and then **Preferences**. Click the Planning icon, select the **Application Settings** tab, and then select the alias table under **Alias Setting**. Planning retains this setting for subsequent sessions.

How can I replace irrelevant data with no data value?

In a form, select the cell or range of cells you want to change. Enter #missing, then and save the form. The cells are saved to the database at the next Refresh.

How can I associate a business rule to a form?

Only administrators and interactive users can associate business rules to forms. This enables others to launch those business rules.

When should I launch business rules?

Your administrator can set up forms to automatically launch business rules when you open the form. If so, you can skip steps 1 and 2.

Before you begin entering data:

1. Select **View**, and then **Refresh** so you get the latest values from Oracle Essbase.
2. Select **Tools**, and then **Business Rules** to start a prepared calculation script.
3. Enter your data into the form.
4. Select **Tools**, and then **Business Rules** again before you promote the planning unit (in case the database values were updated in the meantime).
How can I see the business rules associated with my page?
Open the form, and review the Business Rules list in the lower-left corner of the form.

What is a planning unit?
A planning unit is a slice of data at the intersection of a scenario, a version, and an entity. In addition, an administrator can create more granular planning units within an entity by adding members from another dimension. See Chapter 10, “Managing Planning Units”

How do I promote a planning unit so that it can be reviewed?
Change the planning unit status to a status that sends the budget to the appropriate reviewer. For details, see “Changing Planning Unit Status” on page 96.

How can I automatically get notified by email when I become the owner of a planning unit?
Set up Planning to notify you by email when you become the owner of a planning unit. See “Setting Up Email” on page 102.

How can I track the approval process of my planning units?
From the Process Definition page, you can view the status of a planning unit, including its history, the last action taken, and the dates and times the status changed. See “Viewing Planning Unit Details” on page 99.

Can I promote an entire area (region, business unit, and so on)?
Areas of an organization—divisions, regions, business units, and products—are represented as entities in Planning. You can promote an entire entity or portions of it.

Can I change my plan after I have promoted it to a reviewer?
After you promote a planning unit, you are no longer its owner, and only the current owner or the budget administrator can change the plan. To make changes, ask the current owner or budget administrator to reject the planning unit back to you.

Can I create a copy of my plan for myself so that I can compare it to the approved version?
To create a copy of the plan, ask the administrator to set up a “personal” bottom up version for you. Before you promote your data, copy it (using Copy Versions) to a personal version, giving you a record of the data before you promote it.

Can I read all reviewers’ comments?
You can read all annotations for planning units to which you have access.

Who can review my plan?
Others having access to your portions of the planning unit can view and, depending on their access level, change your sections.
When should I use the Copy Versions option?

Use **Copy Versions** to:

- Create a copy of the data for your records. For example, use the copy as a baseline to compare against future versions of data.
- Create a starting point for subsequent bottom up versions. For example, copy your First Pass version to a Second Pass version, and then make your changes to it.

What should I do when I cannot run a currency conversion calc script because the error message tells me the FIX statement cannot contain a dynamic calc member?

Contact your Oracle Hyperion Planning administrator if you get this error message. It means that the calc script you are trying to run contains a scenario, version, or currency that is a dynamic calc member, or that all account members are dynamic for this view.
