Version 11.1.1.2.0

Getting Started with ESSO-AM

This guide gets you started preparing to create a deployment package for distribution to your enterprise using Oracle Enterprise Single Sign-on Authentication Manager (ESSO-AM).

Product Overview

ESSO-AM integrates with most authentication methods and provides support for both primary logon and re-authentication requests (i.e., forced re-authentication, session timeout, or application-specific authentication request) for both connected and disconnected use.

Step 1: Access ESSO-AM documentation

For complete documentation, including installation instructions, see the ESSO-AM document center at:

http://download.oracle.com/docs/cd/E15624_01/index.htm.

Step 2: Evaluate your hardware and software requirements and system configuration

See information about the hardware and software requirements, supported authenticators, and supported operating systems in the *ESSO-AM Release Notes.*

Step 3: Review the base architecture

The ESSO-AM installation process requires several products as shown in this diagram:
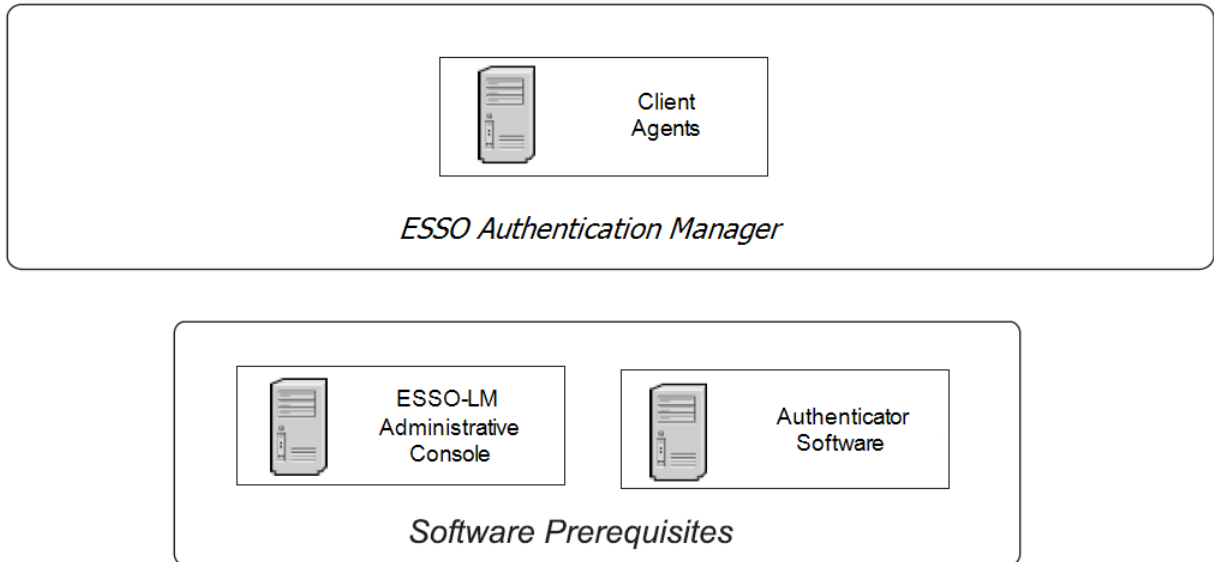

Step 4: Install ESSO-AM

Install ESSO-AM version 11.1.1.2.0. For instructions, see the *ESSO-AM Installation and Setup Guide.*
