ESSO-LM

ORACLE

Version 11.1.1.2.0

Getting Started with ESSO-LM

This guide gets you started with a base configuration for Oracle Enterprise Single Sign-on (ESSO-LM).

Product Overview

ESSO-LM enables users to log onto all of their applications with a single password. ESSO-LM supports any type of user authentication from passwords to smart cards, and can store user credentials and its own system settings and policies in any LDAP directory or one of several SQL databases. The administrative console simplifies administration by automatically recognizing and configuring applications for sign-on with minimal effort by the administrator. Enterprise users gain sub-second single sign-on while connected or disconnected to the corporate network, while roaming between computers, or while sharing a kiosk with multiple users.

Step 1: Access ESSO-LM documentation

For complete documentation, including installation instructions, see the Oracle ESSO-LM document center at:

http://download.oracle.com/docs/cd/E15624_01/index.htm

Step 2: Evaluate your hardware and software requirements and system configuration

See information about the hardware and software requirements, supported applications, and supported operating systems in the *ESSO-LM Release Notes*.

Step 3: Review the base architecture

The ESSO-LM installation process involves several products as shown in this diagram:
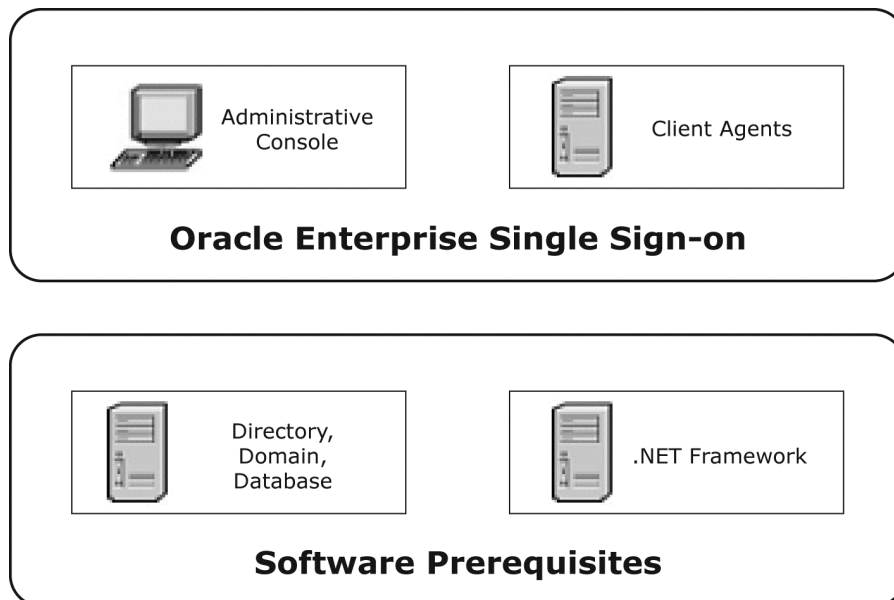

Step 4: Install ESSO-LM

Install ESSO-LM version 11.1.1.2.0. For assistance, see the *ESSO-LM Installation and Setup Guide*.
