

Oracle® GoldenGate

Licensing Information

11g Release 1 (11.1.1)

E18310-01

August 2010

This document describes the licensing terms for the Oracle GoldenGate family of products. The following licensable products are addressed in this document.

- [Oracle GoldenGate](#)
- [Oracle GoldenGate for Non Oracle Database](#)
- [Oracle GoldenGate for Mainframe](#)
- [Oracle GoldenGate Application Adapters](#)

1 Oracle GoldenGate

Oracle GoldenGate is a log-based, real-time change data capture (CDC) software platform that moves high volumes of transactional data between databases with very low latency, and allows logical data replication. A typical environment includes a capture, pump and delivery process. Each of these processes can run on most of the popular operating systems. You can replicate all or a portion of your data, and you can even manipulate the data within any of these processes not only for heterogeneous environments but also different database schemas.

The Oracle GoldenGate product can be used in conjunction with Oracle GoldenGate for Non Oracle Database and/or with Oracle GoldenGate for Mainframe in order to achieve heterogeneous replication to an Oracle database from another third party database or from an Oracle database to another third party database.

The license for Oracle GoldenGate includes the ability to capture database transactions from Oracle Database and deliver database transactions to Oracle Database. It also includes a full use license for Oracle Active Data Guard, and a full use license for XStream. Note that the capture and deliver features of Oracle GoldenGate work with any edition of the Oracle Database, while Active Data Guard and XStream require Oracle Database Enterprise Edition.

When Oracle GoldenGate is used in an Oracle to Oracle environment, it includes the following components:

- **XStream**, which is built on the infrastructure of Oracle Streams, provides application programming interfaces (APIs) that enable client applications to receive real-time data changes from an Oracle database (using XStream Out APIs) and to send real-time data changes to an Oracle database (using XStream In APIs). These data changes can be shared between Oracle databases and other systems, such as file systems and non-Oracle databases.
- **Oracle Active Data Guard** enables a physical standby database to be opened as read-only while changes are applied to it from the primary database, enabling read-only reporting on the physical standby with minimal latency between

reporting and production data. Oracle Active Data Guard also allows backup operations to be off-loaded to the standby database using fast incremental backups. Oracle Active Data Guard provides the additional benefit of high availability and disaster protection by quickly failing over to the standby database in the event of a planned or an unplanned outage at the production site.

2 Oracle GoldenGate for Non Oracle Database

Oracle GoldenGate is a log-based, real-time change data capture (CDC) software platform that moves high volumes of transactional data between databases with very low latency, and allows logical data replication. A typical environment includes a capture, pump and delivery process. Each of these processes can run on most of the popular operating systems. You can replicate all or a portion of your data, and you can even manipulate the data within any of these processes not only for heterogeneous environments but also different database schemas.

The **Oracle GoldenGate for Non Oracle Database** product can be used in conjunction with Oracle GoldenGate, which supports Oracle Databases, and/or with Oracle GoldenGate for Mainframe in order to achieve heterogeneous replication. For example, it is possible to use Oracle GoldenGate for Non Oracle Database to capture from a third party database and use Oracle GoldenGate to deliver to an Oracle database, or any other heterogeneous combination.

The license for Oracle GoldenGate for Non Oracle Database includes the ability to capture database transactions from supported non-Oracle open systems databases and deliver database transactions to supported non-Oracle open systems databases.

Oracle GoldenGate for Non Oracle Database 11g Release 1 is currently available for the following database platforms. Detailed certification matrix is available from Oracle Support Services.

- IBM DB2 database platform on Windows, UNIX, and Linux
- Microsoft SQL Server 2000, 2005, 2008

3 Oracle GoldenGate for Mainframe

Oracle GoldenGate is a log-based, real-time change data capture (CDC) software platform running on HP NonStop databases (Enscribe, SQL/MX, and SQL/MP) and DB2 running on z/OS that replicates high volumes of transactional data between homogeneous and heterogeneous database environments. All of the data or a portion of the data can be replicated, and you can even manipulate the data for not only heterogeneous environments but also unequal database schemas too.

The **Oracle GoldenGate for Mainframe** product can be used in conjunction with Oracle GoldenGate, which supports Oracle Databases, and/or with Oracle GoldenGate for Non Oracle Database in order to achieve heterogeneous replication. For example, it is possible to use Oracle GoldenGate for Non Oracle Database to capture from a third party database and use Oracle GoldenGate to deliver to an Oracle database, or any other heterogeneous combination.

The license for Oracle GoldenGate for Mainframe includes the ability to capture database transactions from supported non-mainframe platforms and deliver database transactions to supported non-mainframe platforms.

When Oracle GoldenGate for Mainframe is used in an HP NonStop environment for products that run on the Guardian operating system (Enscribe and SQL/MP), it includes the following additional component:

- **SyncFile** manages non-database file duplication. For example, you may want to replicate configuration files, which are small and change infrequently. This is used for maintaining a secondary system that may see frequent database changes, but infrequent configuration file changes.

Oracle GoldenGate for Mainframe 11g Release 1 is currently available for the following database platforms. Detailed certification matrix is available from Oracle Support Services.

- IBM DB2 database platform on z/OS

4 Oracle GoldenGate Application Adapters

The following components are licensed together as part of the Oracle GoldenGate Application Adapter for JMS and Flat File:

- **Oracle GoldenGate for Flat File** is used for file integration, predominantly for ETL, proprietary, or legacy applications. Oracle GoldenGate can write micro batches to disk to be consumed by tools that expect batch/file input. The data is formatted by Oracle GoldenGate to the specifications of the target application, for example, delimiter separated values, length delimited values, binary, etc. Near real-time feeds to these systems are accomplished by decreasing the time window for batch file rollover to minutes or even seconds.
- **Oracle GoldenGate for Java** allows customers to execute custom event handlers written in Java to process the transaction operations and metadata changes captured by Oracle GoldenGate on the source system. These custom Java handlers can apply these changes to a third-party Java API exposed by the target system.

5 Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at <http://www.oracle.com/accessibility/>.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services

To reach Oracle Support Services, use a telecommunications relay service (TRS) to call Oracle Support at 1.800.223.1711. An Oracle Support Services engineer will handle technical issues and provide customer support according to the Oracle service request process. Information about TRS is available at

<http://www.fcc.gov/cgb/consumerfacts/trs.html>, and a list of phone numbers is available at <http://www.fcc.gov/cgb/dro/trsphonebk.html>.
