This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

## Preface

## 1 Organization Structures

**Organization Structures Overview** ..... 1-1
**Organization Structures** ..... 1-3
**Organizations** ..... 1-6
Key Concepts for Representing Enterprises ..... 1-6
Configuration Models for Your Enterprise Framework ..... 1-8
Extending the Enterprise Framework ..... 1-13
Organization Classifications ..... 1-17
Defaults for the Business Group ..... 1-28
Generic Hierarchies Overview ..... 1-28
Creating an Organization ..... 1-31
Entering Organization Classifications ..... 1-33
Entering Additional Information ..... 1-33
Finding an Organization ..... 1-41
Removing and Deleting Organizations ..... 1-42
Entering Business Group Information ..... 1-43
Business Groups: Entering Benefit Element Details ..... 1-45
Business Groups: Entering Bills Declaration Information ..... 1-45
Business Groups: Entering Budget Value Defaults ..... 1-46
Business Groups: Selecting a PTO Balance Type ..... 1-47
Business Groups and HR Organizations: Entering Work Day Defaults ..... 1-47
Defining Benefits Defaults for a Business Group ..... 1-48
Business Group: Setting Up Public Sector-type Functionality ..... 1-49

Entering Password Setup for Reports..... 1-50
Business Groups: Entering Recruitment Information..... 1-51
Entering Payslip Information..... 1-53
Entering Self-Service Preference Information..... 1-54
Identifying Balances for the Payslip..... 1-56
Identifying Elements for the Payslip..... 1-57
HR Organizations: Entering Costing Information..... 1-57
Entering Reporting Information for an HR Organization or a Company Cost Center..... 1-58
HR Organizations: Entering Parent Organizations..... 1-58
Entering GL Company Cost Center Information for a Company Cost Center..... 1-59
Entering Representative Body Information..... 1-60
Entering Constituency Information for a Representative Body..... 1-60
Entering Location Information for Constituencies..... 1-61
Entering Organization Hierarchy Information for Constituencies..... 1-61
Entering Organization Information for Constituencies..... 1-62
Entering Grade Information for Constituencies..... 1-62
Entering Bargaining Unit Information for Constituencies..... 1-62
Entering Job Information for Constituencies..... 1-62
Entering Collective Agreement Grade Information for Constituencies..... 1-63
Entering Trade Union Information for a Bargaining Association..... 1-63
Entering Additional Information for a Professional Body..... 1-64
Entering Representative Details..... 1-64
Entering Statutory Setup Information..... 1-65
Entering Professional Tax Exemptions Information..... 1-66
Entering Professional Tax Frequencies Information..... 1-67
Entering Labor Welfare Fund State Rules Information..... 1-67
Entering Notice Period Details Information..... 1-68
Entering Printed Payslip Information ..... 1-69
GRE/Legal Entity: Entering Income Tax Details..... 1-69
Entering Override Information..... 1-71
Entering Tax Declaration Information..... 1-71
Entering Income Tax Challan Information..... 1-72
Entering the 24Q Receipts Mapping Information..... 1-73
Entering Challan Bank Details..... 1-74
Entering Contractor Information..... 1-75
Entering Employer Representative for Contractor..... 1-75
Entering Work Details for Contractor..... 1-76
Entering ESI Organization Information..... 1-77
Entering ESI Challan Information..... 1-77
Entering PF Challan for 14B Information..... 1-78
Entering PF Challan for 7Q Information..... 1-79

Entering PF Challan for Miscellaneous Payments Information..... 1-79
Entering Provident Fund Information..... 1-80
Entering PF Challan Information..... 1-81
Entering Company Information..... 1-82
Entering PF Bank Details..... 1-83
Entering PF Filer Information..... 1-83
Entering PF Receipt Mapping..... 1-84
Entering Factory Information..... 1-85
Entering Shops/Establishment Information..... 1-85
Entering LWF Challan Information..... 1-86
Entering Professional Tax Information..... 1-87
Entering Professional Tax Challan Information..... 1-88
Entering NPS Account Setup Information..... 1-88
Entering Related Organizations Information for an HR Organization..... 1-89
Running the Change Person Numbering to Automatic Process..... 1-90
Running the Global Sequencing for Person Number Generation Process..... 1-90
Selecting and Viewing Managers for Organizations..... 1-91
**Locations**..... 1-93
Locations..... 1-93
Location Extra Information Types..... 1-94
Setting Up Locations..... 1-95
**Auto Orgs**..... 1-98
Internal Organizations and Cost Centers..... 1-98
Implementing Automatic Company Cost Center Creation..... 1-99
Upgrading to Automatic Company Cost Center Creation..... 1-101
Defining the Name Format of Company Cost Centers..... 1-104
Running the Export GL Company Cost Centers Process..... 1-105
Running the Upload GL Company Cost Center Information Request Set..... 1-106
Running the Synchronize GL Company Cost Centers with HR Request Set..... 1-107
Running the Create and Maintain Company Cost Center Organizations Process..... 1-108
Running the Synchronize GL Company Cost Centers with Existing Organizations Process ..... 1-109
**Organization Hierarchies**..... 1-111
Organization Hierarchies..... 1-111
Creating Organization Hierarchies..... 1-113
Changing Organization Hierarchies..... 1-116
Deleting Organization Hierarchies..... 1-117
Running the Organization Hierarchy Report..... 1-117
Launching a Hierarchy Diagrammer..... 1-118
Finding an Organization or Position in the Hierarchy Diagrammers..... 1-119
Changing the Appearance of a Hierarchy Diagram..... 1-120

Displaying Information about Organizations or Positions..... 1-121
Setting Up a New Hierarchy..... 1-122
Creating a New Version of an Existing Hierarchy..... 1-123
Copying an Existing Hierarchy..... 1-124
Adding Organizations or Positions to a Hierarchy..... 1-125
Removing Organizations or Positions From a Hierarchy..... 1-126
Moving Organizations or Positions in a Hierarchy..... 1-126
Menu and Toolbar Commands..... 1-127

## 2 Jobs and Positions

**Jobs and Positions Overview**..... 2-1
**Jobs and Positions**..... 2-4
**Jobs and Positions**..... 2-7
Jobs and Positions..... 2-7
Job and Position Names..... 2-9
Project Based Enterprises Example..... 2-10
Rule Based Enterprises Example..... 2-13
Hybrid Enterprise Structures Example..... 2-16
**Job Management**..... 2-18
Job Management..... 2-18
Job Extra Information Types..... 2-19
Creating a Job Group..... 2-19
Defining a Job..... 2-20
Entering Additional Information About Jobs and Positions..... 2-23
Entering Valid Grades for Jobs or Positions..... 2-24
Entering Job and Position Requirements..... 2-24
Entering Work Choices for a Job or Position..... 2-25
Changing a Job or Position's End Date..... 2-26
**Position Management**..... 2-28
Position Control..... 2-28
Position Control Decisions..... 2-32
Position Hiring Status..... 2-33
Position Extra Information Types..... 2-34
Defining a Position..... 2-35
Copying a Position..... 2-41
Finding a Position..... 2-46
Updating Positions..... 2-47
Changing a Position..... 2-51
Recording Proposed Layoff for a Position..... 2-52
Viewing Position Occupancy..... 2-52

Defining Position Hiring Statuses ... 2-53
Purging Transaction Data ... 2-53
**Transaction Templates** ... 2-55
Transaction Type Wizard ... 2-55
Routing and Approval Rules Reference ... 2-58
Business Rules ... 2-63
Process Rules Reference ... 2-66
Workflow for Position Control and Budgeting ... 2-73
Transaction Templates ... 2-76
Defining HRMS Roles for Transactions ... 2-79
Associating HRMS Roles with Users ... 2-80
Associating HRMS Roles with Positions ... 2-81
Associating HRMS Roles with Role Templates ... 2-82
Deleting or Changing HRMS Roles ... 2-83
Defining Routing Lists For Transactions ... 2-85
Defining Transaction Templates ... 2-86
Defining a Position with a Position Transaction ... 2-88
Routing Budget Worksheets and Position Transactions ... 2-91
Viewing Transaction History ... 2-93
**Job and Position Evaluation** ... 2-96
Jobs and Position Evaluation ... 2-96
Creating an Evaluation System ... 2-96
Entering Evaluation Information ... 2-97
**Position Hierarchies** ... 2-98
Position Hierarchires ... 2-98
Creating a Position Hierarchy ... 2-99
Creating a New Version of a Position Hierarchy ... 2-100
Copying an Existing Hierarchy ... 2-101
Deleting a Position Hierarchy ... 2-101
Changing a Position Hierarchy ... 2-102
Running the Position Hierarchy Report ... 2-103
**Reorganizing your Workforce** ... 2-104
Business Group Reorganization ... 2-104
Reorganize your Business Group ... 2-105
Describing Your Mass Move ... 2-106
Identifying Your Source Positions ... 2-106
Identifying Your Target Positions ... 2-108
Verifying the Transfer of Assignments for Each Source Position ... 2-109
Verifying or Adding Valid Grades for Each Target Position ... 2-110
Executing the Mass Move ... 2-111
Reviewing the Mass Move ... 2-111

Re-executing a Mass Move....2-112
**Workforce Intelligence for Jobs and Positions**....2-114
Employee Job and Position Detail Workbook....2-114

## 3 People Budgets and Costing

**People Budgets and Costing Overview**....3-1
**People Budgets and Costing**....3-6
**Budgeting**....3-9
Using HRMS Budgeting....3-9
Under Budgeted Entity Reporting....3-12
Defining Budgetary Calendars....3-14
Renaming Period Types....3-15
Defining Budget Sets....3-15
Entering Assignment Budget Values....3-16
Recalculating Assignment Budget Values....3-17
Setting Up Default Assignment Costing for Budgets....3-18
Defining Budget Characteristics....3-19
Entering Non-Approved Budgets....3-24
Setting up an Oracle HRMS Budget for Transfer to Oracle General Ledger....3-25
Setting Up Budget Worksheets....3-26
Completing a Budget Worksheet....3-27
Delegating Budget Worksheets....3-32
Posting Completed Budgets....3-33
Migrating a Budget to Oracle HRMS....3-34
Posting a Budget to Oracle General Ledger as a Batch Process....3-35
Calculating Budget Commitments....3-35
Posting Budget Commitments to Oracle General Ledger....3-36
Running the Relieve Commitments Request Set Process....3-37
Reallocating and Reserving Budget Resources....3-38
Running the Calculate Assignment Budget Values Process....3-41
Using the Process Log....3-42
**Budget Reporting**....3-44
Control Budget Reports....3-44
Running Report Under Budgeted Entities....3-46
Running the Position Element Summary Report....3-47
Running the Position Element Detail Report....3-48
Running the Position Summary Report....3-48
Running the Budget Period Position Detail Report....3-49
Running the Staffing Budget Details Report....3-50
Running the Salary Review Report....3-50

Running the Organizational Position Summary Report ... 3-51
Running the Entity Element Summary Report ... 3-52
**Costing** ... 3-54
Labor Costs in Oracle HRMS ... 3-54
Labor Cost Allocation Example ... 3-55
Data Costed at the Payroll Level ... 3-57
Data Costed at the Element Link Level ... 3-57
Employer Charge Distribution Example ... 3-60
Data Costed at the Organization and Assignment Levels ... 3-62
Data Costed at the Element Entry Level ... 3-63
The Cost Allocation Key Flexfield ... 3-63
Setup of the Cost Allocation Key Flexfield ... 3-65
Oracle HRMS Cost Allocation Key Flexfield Example ... 3-67
Subledger Accounting (SLA) ... 3-69
Allocating Costing Percentages at Assignment Level ... 3-71
Previewing Cost Allocations ... 3-71
Running the Costing Process ... 3-72
Running the Costing Summary Report ... 3-73
Running the Cost Breakdown Report ... 3-74
Running the Costing Detail Report (generic) ... 3-75
Mapping Cost Allocation to the Accounting Flexfield ... 3-78
Running the Partial Period Accrual Calculation Process ... 3-78
Running the Transfer to GL Process ... 3-79
Running the Upgrade Historical Payroll Data to SLA Process ... 3-80
Running the Transfer to SLA Process ... 3-81
Running the Costing of Payment Process ... 3-81
Running the Costing of Payment Summary Report ... 3-83
Running the Costing of Payment Breakdown Report ... 3-83
Running the Costing of Payment Detail Report ... 3-84
**RetroCosting** ... 3-86
RetroCosting ... 3-86
Running the RetroCosting Process ... 3-86
**Workforce Intelligence Key Concepts for People Budgets and Costing** ... 3-88
Key Concepts for People Budgets and Costing Intelligence ... 3-88

## 4 People Types and Employment Groups

**People Types and Employment Groups Overview** ... 4-1
**People Types and Employment Groups** ... 4-2
**People and Person Types** ... 4-4
Person Types ... 4-4

Other Employee Groups.... 4-8
Defining Person Types.... 4-9
Changing Person Type Usage and Deleting OAB Person Type Usage.... 4-10
Entering OAB Person Type Usage.... 4-11
**Workers' Representation and Supplementary Roles**.... 4-12
Workers' Representation and Supplementary Roles.... 4-12
Entering Supplementary Role Information.... 4-14
Entering Election Information.... 4-15

## 5 Employment Agreements and Legal Compliance

**Employment Agreements and Legal Compliance Overview**.... 5-1
**Employment Agreements and Legal Compliance**.... 5-3
**Collective Agreement Setup**.... 5-5
Collective Agreements.... 5-5
Value Sets for Collective Agreements.... 5-7
Setting Up a Collective Agreement.... 5-12
Defining an Entitlement Item for a Collective Agreement.... 5-12
Defining an Eligibility Profile.... 5-14
Defining Derived Factors: Compensation Level.... 5-17
Defining Derived Factors: Percent of Full Time Employment.... 5-18
Defining Derived Factors: Hours Worked In Period.... 5-19
Defining Derived Factors: Age.... 5-20
Defining Derived Factors: Length of Service.... 5-22
Defining Derived Factors: Combination Age and Length of Service.... 5-23
Entering a Collective Agreement.... 5-23
Defining Collective Agreement Entitlements.... 5-24
Setting up Collective Agreement Grades.... 5-29
Entering Collective Agreement Grades.... 5-29
**Collective Agreement Administration**.... 5-31
Collective Agreement Administration.... 5-31
Selecting and Applying Collective Agreement Entitlement Values.... 5-32
Defining Retained Rights.... 5-35
Running the Collective Agreement Entitlement Evaluation Process.... 5-35
**Occupational Health**.... 5-38
Occupational Health: Medical Assessments, Disabilities and Work Incidents.... 5-38
Entering Work Incident Information.... 5-41
Entering Medical Assessments.... 5-45
Entering Disability Information.... 5-46

## 6 Checklists

**Checklists Overview** ..... 6-1
**Setting Up Checklists** ..... 6-4
**Identifying Performers for Checklist Tasks** ..... 6-6
**Running the Allocate Checklists Process** ..... 6-10

## HRMS Glossary

## Index

# Send Us Your Comments

**Oracle Human Resources Management Systems Enterprise and Workforce Management Guide (India), Release 12.1**

**Part No. E13561-16**

Oracle welcomes customers' comments and suggestions on the quality and usefulness of this document. Your feedback is important, and helps us to best meet your needs as a user of our products. For example:

- Are the implementation steps correct and complete?
- Did you understand the context of the procedures?
- Did you find any errors in the information?
- Does the structure of the information help you with your tasks?
- Do you need different information or graphics? If so, where, and in what format?
- Are the examples correct? Do you need more examples?

If you find any errors or have any other suggestions for improvement, then please tell us your name, the name of the company who has licensed our products, the title and part number of the documentation and the chapter, section, and page number (if available).

Note: Before sending us your comments, you might like to check that you have the latest version of the document and if any concerns are already addressed. To do this, access the new Oracle E-Business Suite Release Online Documentation CD available on My Oracle Support and www.oracle.com. It contains the most current Documentation Library plus all documents revised or released recently.

Send your comments to us using the electronic mail address: appsdoc_us@oracle.com

Please give your name, address, electronic mail address, and telephone number (optional).

If you need assistance with Oracle software, then please contact your support representative or Oracle Support Services.

If you require training or instruction in using Oracle software, then please contact your Oracle local office and inquire about our Oracle University offerings. A list of Oracle offices is available on our Web site at www.oracle.com.

# Preface

## Intended Audience

Welcome to Release 12.1 of the *Oracle Human Resources Management Systems Enterprise and Workforce Management Guide (India).*

This guide assumes you have a working knowledge of the following:

- The principles and customary practices of your business area.
- Oracle HRMS.

  If you have never used Oracle HRMS, Oracle suggests you attend one or more of the Oracle HRMS training classes available through Oracle University
- Oracle Self-Service Web Applications.
- The Oracle Applications graphical user interface.

  To learn more about the Oracle Applications graphical user interface, read the *Oracle E-Business Suite User's Guide*.

See Related Information Sources on page xvi for more Oracle E-Business Suite product information.

## Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

### Access to Oracle Support

Oracle customers that have purchased support have access to electronic support

through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

## Structure

**1 Organization Structures**
**2 Jobs and Positions**
**3 People Budgets and Costing**
**4 People Types and Employment Groups**
**5 Employment Agreements and Legal Compliance**
**6 Checklists**
**HRMS Glossary**

## Related Information Sources

Oracle HRMS shares business and setup information with other Oracle Applications products. Therefore, you may want to refer to other user guides when you set up and use Oracle HRMS.

You can read the guides online by choosing Library from the expandable menu on your HTML help window, by reading from the Oracle Applications Document Library CD included in your media pack, or by using a Web browser with a URL that your system administrator provides.

If you require printed guides, you can purchase them from the Oracle store at http://oraclestore.oracle.com.

**Guides Related to All Products**

Oracle E-Business Suite User's Guide

This guide explains how to navigate, enter data, query, and run reports using the user interface (UI) of Oracle E-Business Suite. This guide also includes information on setting user profiles, as well as running and reviewing concurrent requests.

**Guides Related to This Product**

Oracle Daily Business Intelligence for HRMS User Guide

This guide describes the dashboards and reports available for HR Line Managers, Chief HR Officer, Budget Managers, and Benefits Managers using Daily Business Intelligence for HRMS. It includes information on using parameters, how DBI for HRMS derives values, and how to troubleshoot dashboards and reports.

Oracle Daily Business Intelligence for HRMS Implementation Guide

This guide provides basic setup procedures for implementing and maintaining HRMS-related dashboards.

Oracle Daily Business Intelligence Implementation Guide

This guide describes the common concepts for Daily Business Intelligence. It describes

the product architecture and provides information on the common dimensions, security considerations, and data summarization flow. It includes a consolidated setup checklist by page and provides detailed information on how to set up, maintain, and troubleshoot Daily Business Intelligence pages and reports for the following functional areas: Financials, Interaction Center, iStore, Marketing, Product Lifecycle Management, Projects, Procurement, Sales, Service, Service Contracts, and Supply Chain.

Oracle Daily Business Intelligence User Guide

This guide describes the common concepts for Daily Business Intelligence. It describes the product architecture and provides information on the common dimensions, security considerations, and data summarization flow. It includes a consolidated setup checklist by page and provides detailed information on how to set up, maintain, and troubleshoot Daily Business Intelligence pages and reports for the following functional areas: Financials, Interaction Center, iStore, Marketing, Product Lifecycle Management, Projects, Procurement, Sales, Service, Service Contracts, and Supply Chain.

Oracle Application Framework Personalization Guide

Learn about the capabilities of the OA Framework technologies.

Oracle Human Resources Management Systems Enterprise and Workforce Management Guide

Learn how to use Oracle HRMS to represent your enterprise. This includes setting up your organization hierarchy, recording details about jobs and positions within your enterprise, defining person types to represent your workforce, and also how to manage your budgets and costs.

Oracle Human Resources Management Systems Workforce Sourcing, Deployment, and Talent Management Guide

Learn how to use Oracle HRMS to represent your workforce. This includes recruiting new workers, developing their careers, managing contingent workers, and reporting on your workforce.

Oracle Human Resources Management Systems Payroll Processing Management Guide

Learn about wage attachments, taxes and social insurance, the payroll run, and other processes.

Oracle Human Resources Management Systems Compensation and Benefits Management Guide

Learn how to use Oracle HRMS to manage your total compensation package. For example, read how to administer salaries and benefits, set up automated grade/step progression, and allocate salary budgets. You can also learn about setting up earnings and deductions for payroll processing, managing leave and absences, and reporting on compensation across your enterprise.

Oracle Human Resources Management Systems Configuring, Reporting, and System Administration Guide

Learn about extending and configuring Oracle HRMS, managing security, auditing,

information access, and letter generation.

Oracle Human Resources Management Systems Implementation Guide

Learn about the setup procedures you need to carry out in order to implement Oracle HRMS successfully in your enterprise.

Oracle Human Resources Management Systems FastFormula User Guide

Learn about the different uses of Oracle FastFormula, and understand the rules and techniques you should employ when defining and amending formulas for use with Oracle applications.

Oracle Self-Service Human Resources Deploy Self-Service Capability Guide

Set up and use self-service human resources (SSHR) functions for managers, HR Professionals, and employees.

Oracle Performance Management Implementation and User Guide

Learn how to set up and use performance management functions. This includes setting objectives, defining performance management plans, managing appraisals, and administering questionnaires.

Oracle Succession Planning Implementation and User Guide

Learn how to set up and use Succession Planning functions. This includes identifying succession-planning requirements, using talent profile, suitability analyzer, and performance matrices.

Oracle Human Resources Management Systems Deploy Strategic Reporting (HRMSi)

Implement and administer Oracle Human Resources Management Systems Intelligence (HRMSi) in your environment.

Oracle Human Resources Management Systems Strategic Reporting (HRMSi) User Guide

Learn about the workforce intelligence reports included in the HRMSi product, including Daily Business Intelligence reports, Discoverer workbooks, and Performance Management Framework reports.

Oracle Human Resources Management Systems Approvals Management Implementation Guide

Use Oracle Approvals Management (AME) to define the approval rules that determine the approval processes for Oracle applications.

Oracle Human Resources Management Systems Window Navigation and Reports Guide

This guide lists the default navigation paths for all windows and the default reports and processes as they are supplied in Oracle HRMS.

Oracle iRecruitment Implementation and User Guide

Set up and use Oracle *i*Recruitment to manage all of your enterprise's recruitment

needs.

Oracle Learning Management User Guide

Use Oracle Learning Management to accomplish your online and offline learning goals.

Oracle Learning Management Implementation Guide

Implement Oracle Learning Management to accommodate your specific business practices.

Oracle Time and Labor Implementation and User Guide

Learn how to capture work patterns, such as shift hours, so that this information can be used by other applications, such as General Ledger.

Oracle Labor Distribution User Guide

Learn how to maintain employee labor distribution schedules, distribute pay amounts, encumber (commit) labor expenses, distribute labor costs, adjust posted labor distribution, route distribution adjustment for approval, and manage error recovery processes. You also learn how to set up effort reporting for Office of Management and Budget (OMB) compliance.

**Other Implementation Documentation**

Oracle Workflow Administrator's Guide

This guide explains how to complete the setup steps necessary for any product that includes workflow-enabled processes. It also describes how to manage workflow processes and business events using Oracle Applications Manager, how to monitor the progress of runtime workflow processes, and how to administer notifications sent to workflow users.

Oracle Workflow Developer's Guide

This guide explains how to define new workflow business processes and customize existing Oracle E-Business Suite-embedded workflow processes. It also describes how to define and customize business events and event subscriptions.

Oracle Workflow User's Guide

This guide describes how users can view and respond to workflow notifications and monitor the progress of their workflow processes.

Oracle Workflow API Reference

This guide describes the APIs provided for developers and administrators to access Oracle Workflow.

Oracle E-Business Suite Flexfields Guide

This guide provides flexfields planning, setup, and reference information for the Oracle E-Business Suite implementation team, as well as for users responsible for the ongoing maintenance of Oracle E-Business Suite product data. This guide also provides information on creating custom reports on flexfields data.

Oracle eTechnical Reference Manuals

Each eTechnical Reference Manual (eTRM) contains database diagrams and a detailed description of database tables, forms, reports, and programs for a specific Oracle Applications product. This information helps you convert data from your existing applications, integrate Oracle Applications data with non-Oracle applications, and write custom reports for Oracle Applications products. Oracle eTRM is available on My Oracle Support.

### Integration Repository

The Oracle Integration Repository is a compilation of information about the service endpoints exposed by the Oracle E-Business Suite of applications. It provides a complete catalog of Oracle E-Business Suite's business service interfaces. The tool lets users easily discover and deploy the appropriate business service interface for integration with any system, application, or business partner.

The Oracle Integration Repository is shipped as part of the Oracle E-Business Suite. As your instance is patched, the repository is automatically updated with content appropriate for the precise revisions of interfaces in your environment.

## Do Not Use Database Tools to Modify Oracle E-Business Suite Data

Oracle STRONGLY RECOMMENDS that you never use SQL*Plus, Oracle Data Browser, database triggers, or any other tool to modify Oracle E-Business Suite data unless otherwise instructed.

Oracle provides powerful tools you can use to create, store, change, retrieve, and maintain information in an Oracle database. But if you use Oracle tools such as SQL*Plus to modify Oracle E-Business Suite data, you risk destroying the integrity of your data and you lose the ability to audit changes to your data.

Because Oracle E-Business Suite tables are interrelated, any change you make using an Oracle E-Business Suite form can update many tables at once. But when you modify Oracle E-Business Suite data using anything other than Oracle E-Business Suite, you may change a row in one table without making corresponding changes in related tables. If your tables get out of synchronization with each other, you risk retrieving erroneous information and you risk unpredictable results throughout Oracle E-Business Suite.

When you use Oracle E-Business Suite to modify your data, Oracle E-Business Suite automatically checks that your changes are valid. Oracle E-Business Suite also keeps track of who changes information. If you enter information into database tables using database tools, you may store invalid information. You also lose the ability to track who has changed your information because SQL*Plus and other database tools do not keep a record of changes.

# 1

# Organization Structures

## Organization Structures Overview

Oracle HRMS provides you with organization management functionality to represent the operating structures of your enterprise.

### Representing Organization Structures Using Oracle HRMS

Using the Configuration Workbench for your implementation, you can configure the Oracle eBusiness Suite of applications to represent the management and operating structures of your enterprise.

The Configuration Workbench delivers an integrated configuration management toolset for HR systems and assists in the evaluation, configuration, deployment, and maintenance of HR applications. The workbench uses a configuration interview, to review the decisions and operational questions you make about setting up your enterprise using Oracle HRMS.

The Configuration Workbench configuration process suggests a combination of business groups and organizations to satisfy your integrated legal, financial, organization and employee management needs using Oracle HRMS. The suggested combination of business groups and organizations uses one of the following configuration models:

- A single operating company working within the legislative rules of a single country.
- A single operating company working within the legislative rules of multiple countries.
- Multiple operating companies working within the legislative rules of a single country.
- Multiple operating companies working within the legislative rules of multiple

countries.

These configuration models define the basic information model to represent any enterprise. You can add other location and internal work structures that represent your internal organization or reporting structures for specific legal, personnel, and financial management requirements.

## Managing your Work Structures Using Graphical Charting Capabilities

You can plan and implement new working structures ahead of time using graphical charts. The hierarchy diagrammer enables you to create organization and position hierarchies to reflect reporting lines and control access to information in your enterprise. See:

- Organization Hierarchies, page 1-111
- Position Hierarchies, page 2-1

The hierarchy diagrammers use the same security model as the other windows in Oracle HRMS and access to them is restricted by your responsibility.

## Reporting on Organization Structures

Oracle HRMS and Oracle HRMSi enable you to produce several reports to satisfy the statutory requirements for your legislation and meet your business analysis needs. For example:

- Oracle HRMS enables employers in the U.S. to generate reports to comply with the VETS-100 government reporting requirements. The report lists the number of special disabled and Vietnam era veterans a U.S. enterprise employs in each of the nine job categories.
- Oracle HRMS provides you with a standard organization hierarchy report to view the relationships between organizations and their managers within a hierarchy.
- Oracle HRMSi offers the Organization Separation Report to investigate the performance of your best and worst organizations based on the workforce changes in an organization.

## Reporting Costs for Your Organization Structures

With the Oracle eBusiness suite of applications, you can automatically create HR organizations to corresponding company cost center combinations that exist in your GL account combinations. You can use the management reporting functionality in Daily Business Intelligence (DBI) to report on financials information, such as the costs, revenues, and expenses for your organization structures.

### Key Concepts

To effectively use Oracle HRMS for organization management, see:

Key Concepts for Representing Enterprises, page 1-6

Organization Classifications, page 1-17

Extending the Enterprise Framework, page 1-13

Configuration Models for Your Enterprise Framework, page 1-8

Locations, page 1-93

Organization Hierarchies, page 1-111

Defaults for the Business Group, page 1-28

Internal Organizations and Cost Centers, page 1-98

## Organization Structures

Oracle HRMS can represent all the components of your enterprise. You can record the physical locations where your employees work and all the different departments and sections that make up your enterprise. You can even record information about other organizations you work with, such as recruitment agencies or tax authorities.

See: Extending the Enterprise Framework, page 1-13

You can view and edit hierarchy diagrams for organizations and positions using:

- The Organization Hierarchy Diagrammer
- The Position Hierarchy Diagrammer

### How do you represent your enterprise as an employer?

You can use the GRE/Legal Entity and Employer organization classifications to represent the employer in each country you do business. If you use the Configuration Workbench to set up your organization structures, then an employer organization is set up in each country your enterprise operates.

### In US and Canada, how do you manage government reporting?

Oracle HRMS enables you to set up one or more Government Reporting Entities (GREs) within each of your Business Groups. GREs represent an employer the government recognizes as being responsible for paying employees and for filing a variety of reports that government agencies require. If your enterprise has a single Employer Identification Number from the Internal Revenue Service, your Business Group and GRE are the same organization.

For Canada, you also need to set up Provincial Reporting Establishments (PREs). GREs and PREs represent an employer the governments recognise as being responsible for paying employees and for filing a variety of reports. There must be a GRE for each Business Number that the Canada Revenue Agency (CRA) assigns to an employer. There must be a PRE for each Quebec Identification Number that the Ministere du Revenu assigns to an employer. If your enterprise has a single Business Number from the CRA and a single Quebec Identification Number, your Business Group, GRE and PRE are the same organization.

## How do you represent the structure of an enterprise?

Oracle HRMS enables you to build a model of your enterprise showing all the reporting lines and other hierarchical relationships. You can set up reporting hierarchies reflecting all the reporting lines in your enterprise, as established in organization charts.

The Configuration Workbench creates an enterprise structure that suits your operational (management and reporting), and geographical requirements. You can use the enterprise structure the workbench sets up as the basic infrastructure of your company. Once the basic structure is set up, you can define further locations and organizations and add them to your organization hierarchy.

## Do I need to run a separate program to create hierarchy diagrams?

No. The hierarchy diagrammers are standard Oracle HRMS windows, with the addition of a graphical area. They work together with the Organization Hierarchy window and Position Hierarchy window so you can create basic hierarchies using these windows and then make intuitive drag-and-drop changes using the diagrammers.

Any changes made using the hierarchy diagrammers are reflected in the hierarchy windows, and are saved in your database.

## Can I create multiple versions of a hierarchy, and model different business scenarios?

Yes. You can use the diagrammers together with the organization and position hierarchy windows to:

- Create new versions of existing hierarchies
- Create copies of existing hierarchies
- Create future-dated hierarchies to prepare for reorganizations in advance

## Can I print the graphical versions of the hierarchies?

Yes. You can print pictorial representations of organization and position hierarchies.

### Can I create hierarchies that contain organizations from multiple business groups?

Yes. If you have the appropriate security access to more than one business group, you can include organizations from more than one business group in your hierarchy.

# Organizations

## Key Concepts for Representing Enterprises

You represent your enterprise using key organization structures in Oracle HRMS. These structures provide the framework so you can perform legal reporting, financial control, and management reporting. You can set up these organization structures yourself, or use the Configuration Workbench.

The Configuration Workbench delivers an integrated configuration management toolset for HR systems and assists in the evaluation, configuration, deployment, and maintenance of HR applications. The workbench suggests a basic structure of organizations for your enterprise based on configuration models.

See: Configuration Models for Your Enterprise Framework, page 1-8

Once the basic enterprise structure is set up, you add the additional organizations and locations that exist in your enterprise. You define the internal organizations that represent your internal divisions and departments, and you define the external organizations that represent the organizations outside of your enterprise. For example, you can set up an external organization to represent the tax office for which your enterprise uses for reporting purposes.

You can use organizations to represent many levels of your enterprise, from the highest level of organization that represents the whole enterprise, to the lowest level of organization that represents a section or department.

See: Extending the Enterprise Framework, page 1-13

See: Organization Classifications, page 1-17

See: Setting Up Organizations, *Oracle HRMS Enterprise and Workforce Management Guide*

### Business Group

The business group represents a country in which your enterprise operates. You create it as an organization in Oracle HRMS, but it does not represent a specific organization within your enterprise structure, and you do not include it in your organization hierarchies. A business group enables you to group and manage data in accordance with the rules and reporting requirements of each country, and to control access to data.

The critical factors for deciding when to use a separate business group, or an international business group, are based on the following factors:

- If you use Oracle Payroll
- The number of people you employ in a country

- If you require legislative support for Oracle HR

Generally the laws are so different in each country that to be compliant, there must be a different business group for each country in which an enterprise has employees.

## Operating Company

An operating company represents a division or line of business within your enterprise that is legally registered for reporting in at least one country. An operating company is a holding company, a company within a company.

## Ultimate Legal Entity

The ultimate legal entity represents the enterprise, and typically, the enterprise is the highest (global) level of a business organization. The ultimate legal entity is the parent company or organization for all its subsidiaries and divisions. Oracle HRMS represents the ultimate legal entity with the GRE/Legal Entity organization classification.

## Legal Entity/Employer

A legal entity represents the designated legal employer for all employment-related activities. The legal authorities in a country recognize this organization as a separate employer. In an organization hierarchy, a legal entity may report to an operating company or to the ultimate legal entity.

A legal employer is a legal entity that is responsible for employing people in a particular country. Therefore, if you employ people in a country, then you must have at least one organization classified as a legal entity and a legal employer.

The Configuration Workbench classifies an organization as a GRE/Legal Entity where your enterprise operates in a country, and classifies it as an Employer if you employ people in that country also. For example, you can have a legal entity in a country where you do business, but do not employ people in that country.

## Consolidated Legal Entity

A consolidated legal entity acts on behalf of multiple operating companies that are not legally registered, or simply on behalf of the enterprise in a country. You typically use the consolidated legal entity for when you have multiple operating companies in your enterprise, but for the purposes of consolidation, you group the information into one organization. For management reporting purposes, the organizations below the consolidated legal entity in an organization hierarchy, such as, your departments and sections, can report to any organization in the enterprise. However, for legal reporting purposes, they report up to the consolidated legal entity.

For information on how to model your enterprise using the key organization structures, see: Configuration Models for Your Enterprise Framework, page 1-8

## Configuration Models for Your Enterprise Framework

The first step in any configuration is to decide what organization structures your enterprise requires. To help you decide, you can use the following best practice configuration models:

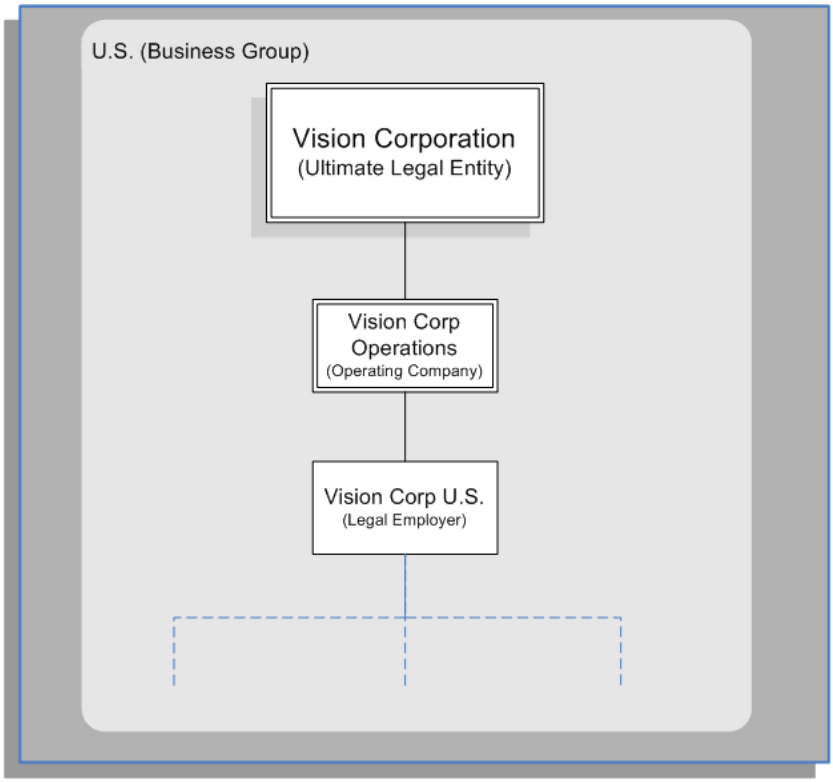
- Model 1: A single operating company in one country
- Model 2: A single operating company in multiple countries
- Model 3: Multiple operating companies in one country
- Model 4: Multiple operating companies in multiple countries

These models deal with integration points between the different applications and the requirements of different industries and geographies. They can help you choose the right organization structures to meet your management and reporting requirements.

The Configuration Workbench uses the models as templates to generate the organization framework of business groups, operating companies, legal entities, and employers for any enterprise. Through an interview process, the Configuration Workbench gathers the detailed information it requires to generate an actual configuration of your enterprise using the appropriate configuration model.

**Mexico only**: You cannot use the Configuration Workbench to create the hierarchy. You must use the Generic Hierarchy functionality.

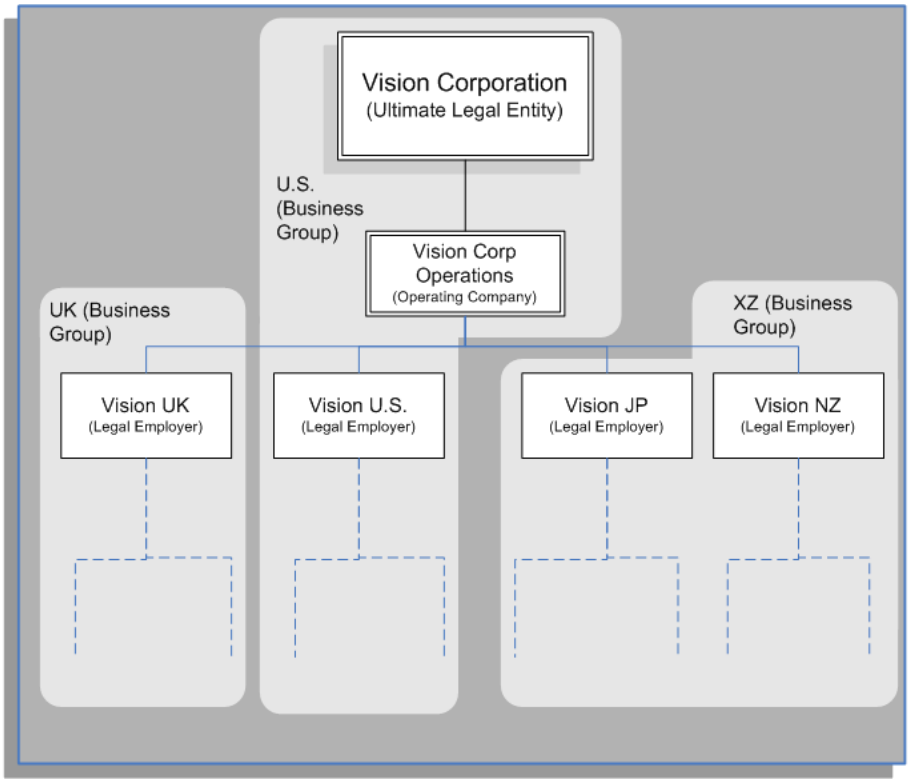
## Single Operating Company in One Country



The preceding diagram shows the basic configuration for a small or medium sized enterprise with little or no complexity in operating structures. Vision Corporation is the ultimate legal entity, and for reporting purposes, this organization holds any data associated with the enterprise. Every enterprise has one ultimate legal entity.

This simple enterprise structure is based on the best practice configuration model. Creating the key enterprise structures as separate organizations enables your enterprise to expand and acquire new companies whilst reducing the cost of re-implementation.

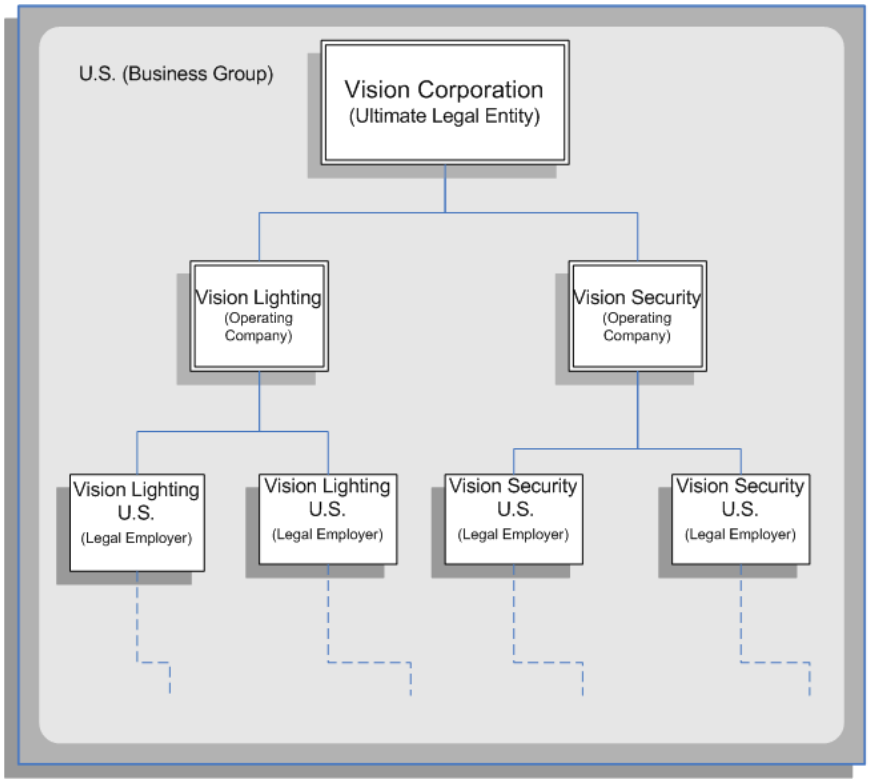
## Single Operating Company in Multiple Countries



The preceding diagram shows a configuration for a medium or large enterprise with some international operations introducing a degree of complexity. It also shows that operations and people in some countries are held within an international business group (XZ). You can see that the business groups represent countries, and do not appear in the organization hierarchy. This is based on the best practice configuration model.

For more information on the key organization structures, see: Key Concepts for Representing Enterprises, page 1-6

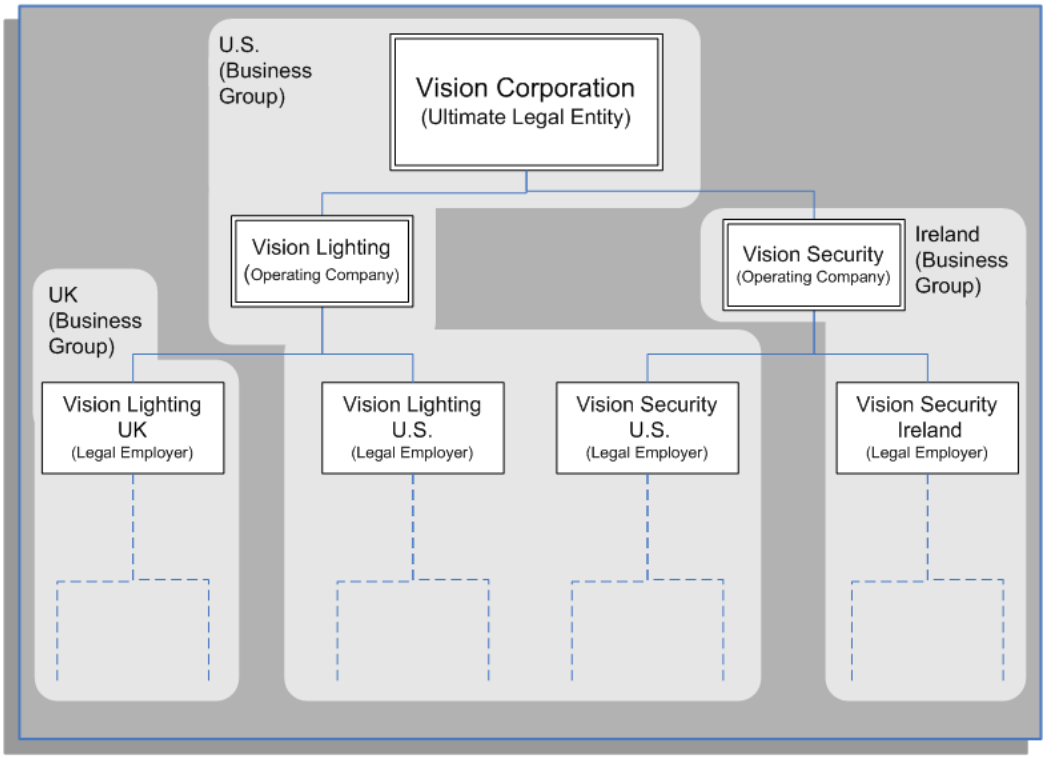
## Multiple Operating Companies in One Country



The preceding diagram shows a configuration for a multi-company enterprise operating in a single country. This type of complexity can exist in any size of enterprise. Vision Lighting and Vision Security in the diagram are represented as operating companies. Every enterprise has at least one operating company. This may be a division, or a subsidiary within the enterprise which is legally registered in at least one country.

The Configuration Workbench creates at least one operating company organization as best practice. This reduces the cost of any re-implementation as a result of expansion due to acquisition or diversification within the enterprise.

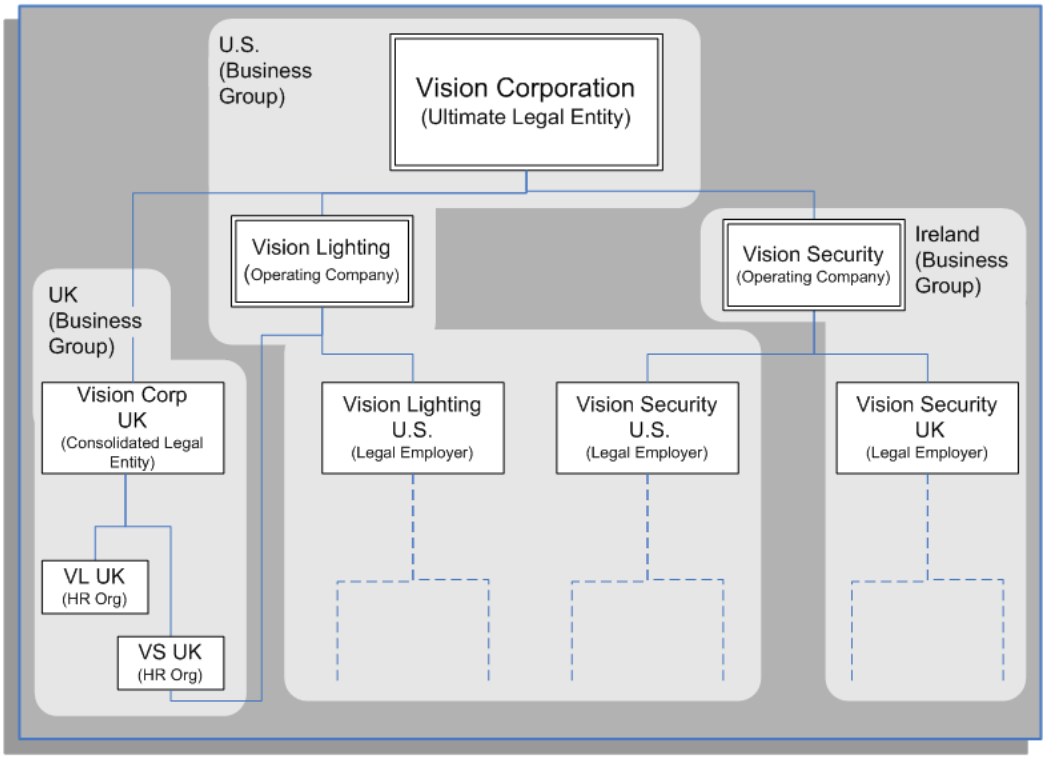
## Multiple Operating Companies in Multiple Countries



The preceding diagram demonstrates a multi-company enterprise operating in multiple countries. Every enterprise has at least one legal entity that is the designated legal employer for all employment related activities. In the diagram, the Vision Security operating company operates and employs people in the U.S. and Ireland. The Vision Security U.S. and the Vision Security Ireland organizations represent the designated legal entities/employers in those countries.

The Configuration Workbench classifies an organization as a GRE/Legal Entity where your enterprise operates in a country, and classifies it as an Employer if you employ people in that country also. For example, you can have a legal entity in a country where you do business, but do not employ people in that country.

### Multiple Operating Companies in Multiple Countries with a Consolidated Legal Entity



The preceding diagram shows an alternative configuration for a multi-national and multi-company enterprise with the addition of a consolidated legal entity. A consolidated legal entity acts on behalf of several operating companies or the enterprise, and is the legal employer in the country. Using the preceding diagram as an example, Vision Corp UK is the consolidated legal entity for Vision Corporation in the UK. For management reporting, VL UK and VS UK report to Vision Lighting, and for legal reporting, they report to Vision Corp UK.

For more information on the key organization structures, see: Key Concepts for Representing Enterprises, page 1-6

## Extending the Enterprise Framework

After you or the Configuration Workbench has set up your basic enterprise framework, you can extend it by setting up the additional organization structures that exist for your enterprise. You use internal organizations to represent the internal divisions or departments, and external organizations to represent the organizations outside of your enterprise for reporting or third-party payment purposes. External organizations can appear in your organization hierarchies together with internal organizations, and are defined in the same way.

See: Key Concepts for Representing Enterprises, page 1-6

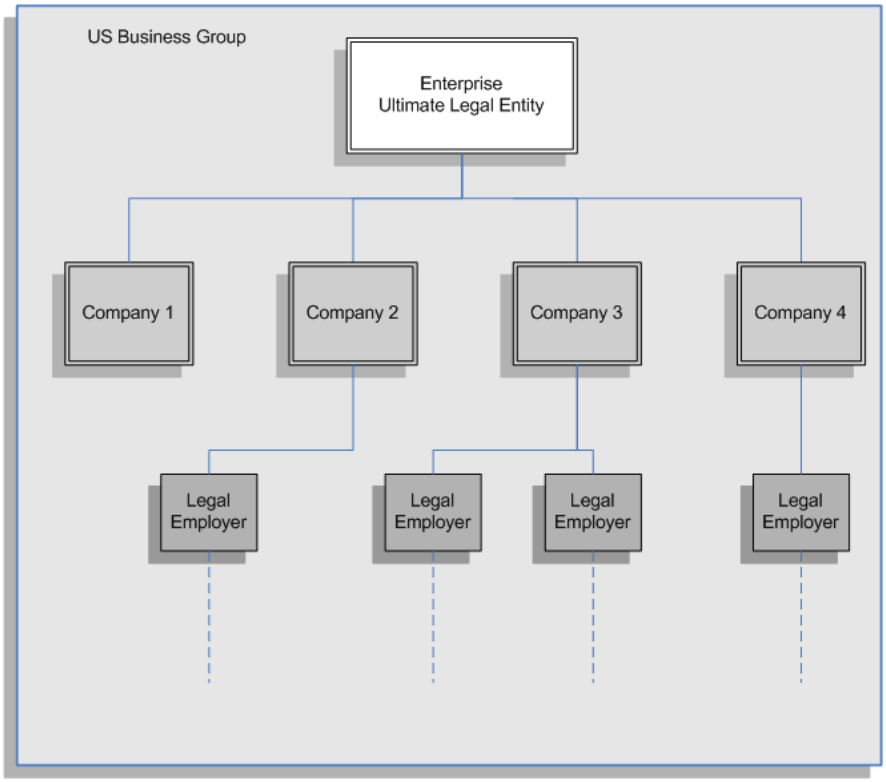
You use classifications to define the purpose of an organization, see: Organization Classifications, page 1-17

## Basic Enterprise Structure

The following diagram demonstrates a basic enterprise structure, based on the multiple operating companies in one country configuration model. You generate the essential framework of your enterprise using the configuration model that suits your enterprise. The Configuration Workbench defines the basic structure of organizations in your enterprise and places them in an organization hierarchy.

See: Key Concepts for Representing Enterprises, page 1-6

***Basic Enterprise Structure***

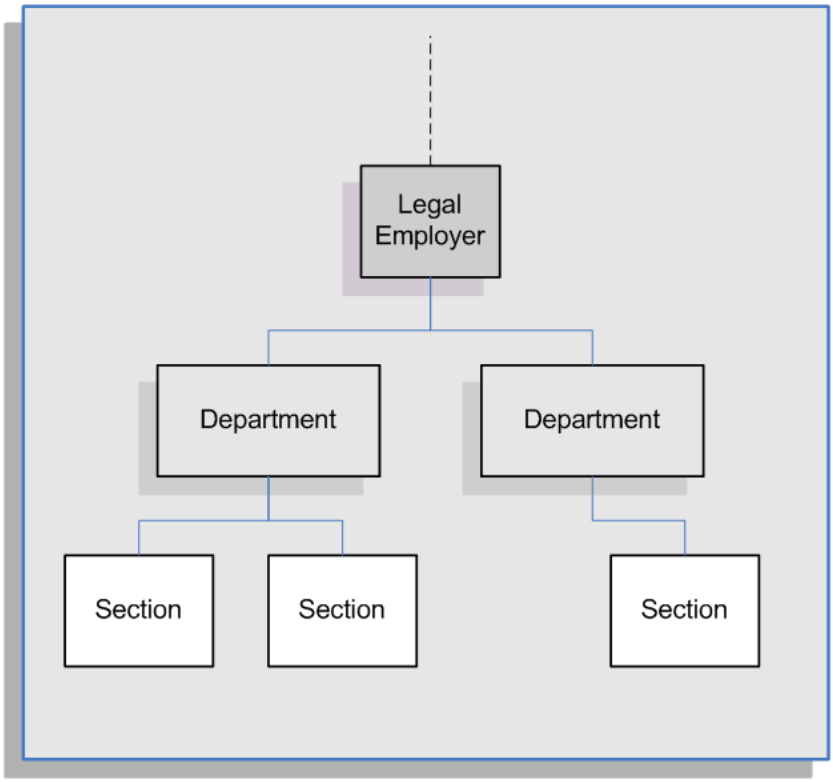


The preceding diagram displays an enterprise based in the U.S. with four separate divisions represented by Companies 1 - 4. The Legal Employers are responsible for employing people and represent the designated employers for all employment-related activities.

The following diagrams are examples of how you can set up and include additional internal and external organizations in your organization hierarchy. Each diagram uses a separate legal employer to explain how you can set up different organizations for

different purposes. You can, however, use the same legal employer for each type of setup. You will probably use a combination of the following examples.

## Reporting Structures Organization Setup



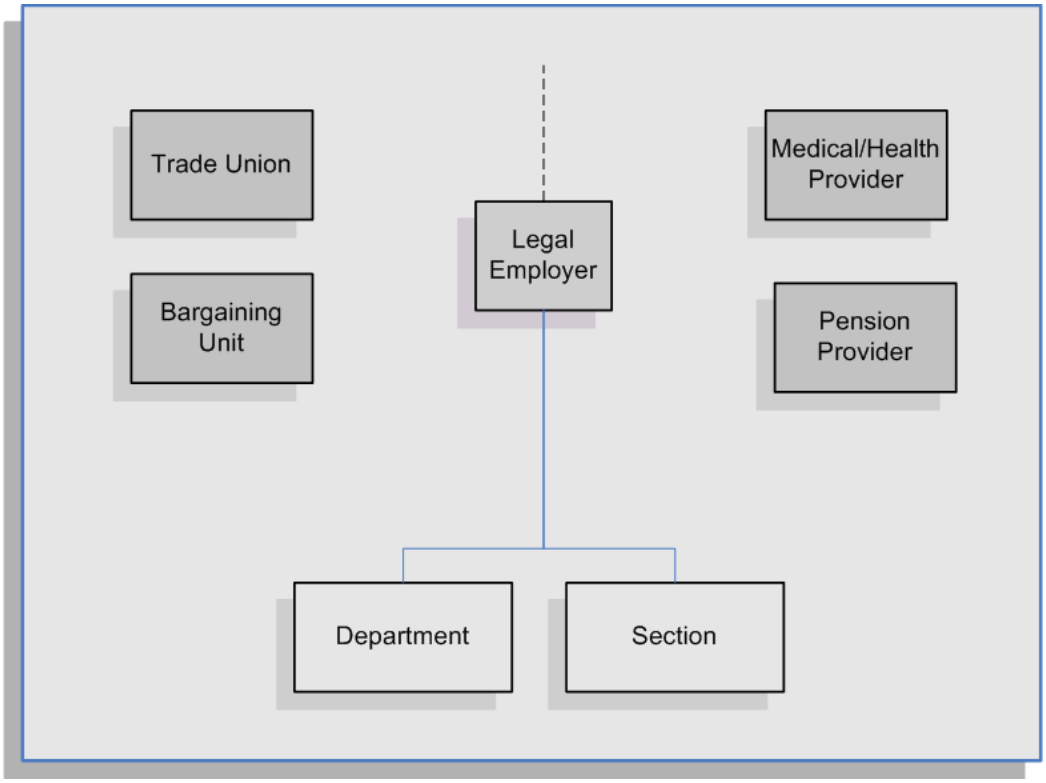
The organization setup in the preceding diagram represents a simplified structure of the different levels of management reporting. If your management reporting structures and your enterprise's costs are the same, then you can use roll-up reporting capabilities. For example, if you associate a cost center to an HR organization, you can record the payroll costs of the employees assigned to that organization, and the organizations below it in the hierarchy.

See: Internal Organizations and Cost Centers, page 1-98

You can also represent multiple or matrix reporting relationships by setting up one of more organization hierarchies. The organizations you set up can appear in one or several different hierarchies. The Configuration Workbench enables you to add new organizations on top of the basic enterprise structure using worksheets. You can then use the hierarchy diagrammers in Oracle HR to add or change the reporting lines.

See: Moving Organizations or Positions in a Hierarchy, page 1-126

## Benefit Providers and Workers Representation Organization Setup

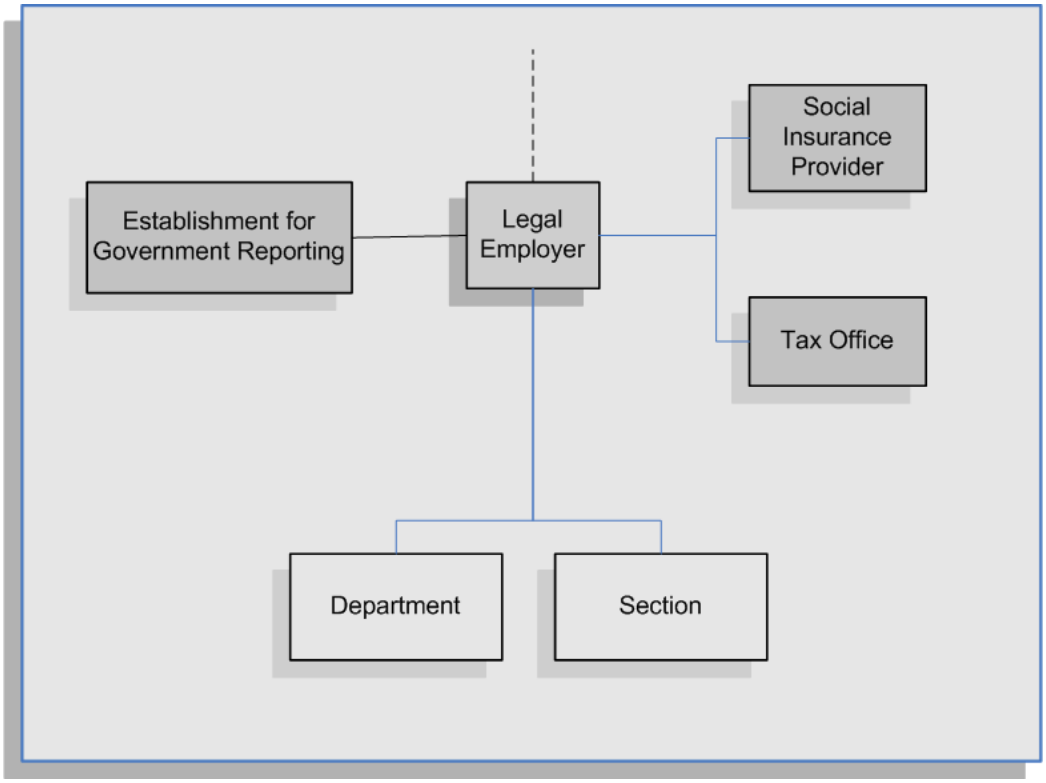


You can set up organizations to represent the benefit providers that supply benefits to the people in your enterprise. For example, in the preceding diagram, a pension provider and a medical/health provider are set up as external organizations in the business group. This set up provides your workforce in the Department and Section organizations with the opportunity to make pension contributions and receive medical cover from the benefit providers.

A trade union and bargaining unit are also set up as external organizations in the business group. These organizations represent the workers' representative bodies.

For more information on the classifications you can choose for your organizations, see: Organization Classifications, page 1-17

### Government Reporting Organization Setup



Using the preceding diagram as an example, you use external organizations to represent the government reporting offices outside of your enterprise, such as social insurance providers, tax offices, and establishments. Linking the external organizations to your internal organizations enables:

- Your workforce to inherit the information that the external organizations provide.
- You to efficiently record all of the government reporting details at the legal employer level, rather than at the person level.
- You to meet statutory reporting requirements.

## Organization Classifications

Organization classifications define the purpose of an organization and its functionality within Oracle HRMS. The classifications you assign to an organization control the additional information you can set up at the organization level. The Configuration Workbench automatically assigns the appropriate classifications to the organizations it creates.

For more information on the key organization structures you use to represent your

enterprise, see: Key Concepts for Representing Enterprises, page 1-6

You can define one organization with multiple classifications or you can define separate organizations to represent different types of entity. For example, you can classify an organization as a legal entity as well as an HR organization if it's the same organization. If they are different, then you create two organizations.

> **Note:** Oracle HRMS enables you to install your own additional information types for classifications.

You can select the following classifications in the Organization window, depending on your legislation:

## All Legislations

All legislations can use the following classifications:

- **Business Group**: Use this classification to group, manage, and control access to data in accordance with the rules and reporting requirements of a country.

- **Operating Company**: An operating company represents a division or line of business within your enterprise that is legally registered for reporting in at least one country.

- **GRE/Legal Entity**: Use this classification to represent the following organizations:

  - **Ultimate Legal Entity**: this represents the enterprise, and typically, the enterprise is the highest (global) level of a business organization.

  - **Legal Entity**: this represents the designated legal employer for all employment-related activities. The legal authorities in a country recognize this organization as a separate employer. In an organization hierarchy, a legal entity may report to an operating company or to the ultimate legal entity.

  - **Consolidated Legal Entity**: this organization acts on behalf of multiple operating companies that are not legally registered, or simply on behalf of the enterprise in a country.

    **For Chinese users only**: Your organization hierarchy must contain at least one GRE with corporate and employer information. Statutory reporting requires this information.

- **Employer:** Use this along with the GRE/Legal Entity classification to define an organization as a legal entity that is responsible for employing people in a particular country.

  **For Indian users only**: Your organization hierarchy must contain at least one GRE with income tax, challan bank, tax declaration and representative details. This

information is used for statutory reporting.

- **HR Organization**: Use this classification for all organizations to which you want to assign employees and contingent workers.

- **Payee Organization**: Use this when defining an external organization that is the recipient of a third party payment from an employee, for example a court-ordered payment. You can then select this organization on the Personal Payment Method window when entering a third party payment method.

- **Bargaining Association**: Use this when defining an organization that is involved in negotiating a collective agreement. A bargaining association could be any organization representing the employees in negotiations, for example a trade union. The UK legislation also enables you to select a bargaining association in the Union Processing window to set up a union element.

- **Representative Body**: Use this when defining a representative body. This may be a body defined in legislation, such as a European Works Council, or may be defined by the employer, such as a Sports and Social Club.

- **Disability Organization**: Use this when defining an external organization with which employee disabilities are registered.

- **Medical Service Provider**: Use this when defining an organization that provides any medical services, such as medical assessments, to the people in your enterprise.

- **Constituency**: Use this to define a constituency to group together workers eligible to vote for particular elections.

- **Company Cost Center**: Use this to define organizations in Oracle HRMS that map to cost centers in Oracle GL. You can set up your application so that whenever a cost center is defined in GL, a corresponding organization with this classification is defined automatically.

- **Professional Body Information**: Use this to define an organization that is a professional body. Organizations with this classification are available to assign to people in the Qualifications window.

- **Operating Unit** : Use the operating unit organization classification if you also use Multi-Org applications. You can associate an operating unit with an HR Organization. The application uses the HR Organization to find the operating unit to which a person belongs.

## US Legislation

The US legislation can use the following classifications:

- **Reporting Establishment**, **Corporate Headquarters**, or **AAP Organization**: Use these when defining reporting organizations, that is, organizations required for the production of certain reports for government agencies.

- **Parent Entity**: Use this when defining an organization to be included at the top level of an establishment hierarchy. You can then use the hierarchy when producing certain reports for government agencies.

  If you are assigning this classification to a Business Group, you must assign it to your default Business Group, that is the one defined in your security profile. If you do not, then your data will not be visible when you attempt to create your hierarchy in the Generic Hierarchy window.

- **Benefits Carrier**, **Workers' Compensation Carrier**, or **Beneficiary Organization**: Use these when defining an external organization belonging in one of these classifications. You can then select the organization when defining a benefit, entering information for Workers' Compensation calculations, or recording beneficiaries employees have named for certain benefits.

  The Federal legislation can also use the **Beneficiary Organization** classification.

## UK Legislation

The UK legislation can use the **Education Authority** classification to define a Local Education Authority (LEA) that is responsible for education within that council's jurisdiction.

## Canadian Legislation

The Canadian legislation can use the following classifications:

- **Provincial Medical Carrier**: Use this to define a medical carrier for a province.

- **Provincial Reporting Establishment**: Use this to represent employees in the province of Quebec.

## French Legislation

The French legislation can use the following classifications:

- **Company**: records one or more companies in your business group. A company is a legal entity registered to "Registre du Commerce et des Societes". You must have at least one company.

- **Establishment**: identifies the organization that serves as the legal point of contact for settling any disputes and manages the personal details of the workforce.

**Note:** Do not classify an organization as both a company and an establishment; create two separate organizations.

- **URSSAF Center** or **ASSEDIC Center**: specifies an external organization that is a Social Security organization. You can select the organization when entering additional organization information for an establishment. You can also select URSSAF organizations when entering additional organization information for a company.
- **Insurance Provider** or **Pension Provider**: defines an external organization that provides insurance or pensions. You can select the organization when entering additional organization information for a company or an establishment.
- **OPACIF** or **OPCA**: specifies an external organization that collects the company's yearly training contribution.
- **CPAM**: identifies an external organization as a CPAM office. You can select the organization when entering employment information in the People window.
- **Public Sector Other External Organization**: records details of the various types of external organizations with whom public-sector companies deal. Be sure to create organizations with this classification as external organizations.
- **Grouping of Employers**: identifies the employers (normally establishments) who have decided to group together to make it easier to lend each other workforce and also to list the employees, contingent workers, and employees on loan for an establishment from that grouping in the Personnel Registry report.
- **Tax Group**: defines an external tax office.

## Dutch Legislation

The Dutch legislation can use the following classifications:

- **Dutch UWV Organization**: Use this to indicate if your organization is a social insurance provider. If you enable this classification, you can enter additional information such as the type of provider in the Dutch UWV Organization window.
- **Dutch Tax Office**: Use this to define an external tax office.
- **Dutch Private Health Insurance**: Use this to define an external organization that provides private health insurance.
- **Pension Provider**: Use this to define an external organization that provides pensions to your employees.

## German Legislation

The German legislation can use the following classifications:

- **Budget Plan Unit**: Use this to define internal organizations for which you can use for the budget plan structure. The budget plan structure defines the different levels of positions in your enterprise, and the budget plan units represent the different levels as organizations. You select which budget plan unit the position belongs to in the Position window.

- **German Additional Second Pension Insurance**: Use this to record information about the contributions an organization makes to a second pension.

- **German Capitalized Life Insurance Provider**: Use this to indicate if your organization is a provider of German capitalized life insurance.

- **German Mandatory Health/Special Care Insurance Provider**: Use this to indicate if your organization is a provider of German mandatory health or special care insurance. If you enable this classification, you can enter additional information using the German Social Insurance Providers window.

- **German Mandatory Pension Insurance Provider**: Use this to indicate if your organization is a provider of German mandatory pension insurance. If you enable this classification, you can enter additional information using the German Social Insurance Providers window.

- **German Private Health/Special Care Insurance Provider**: Use this to indicate if your organization is a provider of German private health or special care insurance. If you enable this classification, you can enter additional information using the German Social Insurance Providers window.

- **German Public Sector**: Use this to indicate if your organization is a public sector organization. If you set this to yes then certain public sector specific windows and fields are made available to you.

- **German Tax Office**: Use this to indicate if your organization is a tax office. If you set this to yes then you can enter additional tax office information using the Others button.

- **German Unemployment Insurance Provider**: Use this to indicate if your organization is a provider of German unemployment insurance. If you enable this classification, you can enter additional information using the German Social Insurance Providers window.

- **German Voluntary Pension Provider**: Use this to indicator if your organization is a provider of German voluntary pensions.

- **German Work Incident Supervising Office**: Use this to indicate if your organization is a work incident supervising office.

- **German Workers' Liability Insurance Providers**: Use this to indicate if your organization is a provider of German workers' liability insurance.

## Hong Kong Legislation

The Hong Kong legislation can use the **MPF Trustee Organization** classification to set up and enrol employees in an MPF Trustee. This classification allows you to record details of the trustee and details of the scheme provided by the trustee.

## Mexico Legislation

The Mexico legislation must use the **legal employer** classification to define the legal entity. You can add additional organization information for your legal employer, if needed.

Use the **GRE/Legal Entity** classification to define an organization that is recognized as a separate employer by Social Security or other legal authorities. When you assign a location to a GRE, and you have not already associated them with each other in the generic hierarchy, HRMS will make the association for you.

## Saudi Legislation

The Saudi legislation can use the following classifications:

- **Saudi GOSI Office**: Use this to represent the General Office of Social Insurance (GOSI) which the employer is registered. The GOSI office requires employers to make deductions for eligible employees and send all payments and reports to this office.

- **Saudi Employment Office**: Use this to represent an office to which the employer reports the status of its disabled employees.

## Hungary Legislation

The Hungary legislation can use the following classifications:

- **Draft Agency**: Use this to represent an external defense organization to which you send employee military service details.

- **Company Information**: Use this to represent the organization which is legally entitled to hire employees.

- **Pension Provider**: Use this to indicate an external organization that provides pensions to your employees.

## Spanish Legislation

The Spanish legislation can use the following classifications:

- **Work Center**: Use this to define an internal organization that represents a facility within your enterprise. You use these organizations for statutory reporting purposes.
- **Section**: Use this to define an internal organization that represents the place where people work. You use these organizations for internal reporting purposes only.
- **Tax Office**: Use this to indicate if the organization is an external tax office.
- **Tax Administration Office**: Use this to indicate if the organization is an external tax administration office.
- **Social Security Office**: Use this to define a social security office as an external organization. If you enable this classification, you can record the social security office details.
- **Social Security Province Office**: Use this to define an organization as an external social security office. If you enable this classification, you can enter the social security province office details.
- **Health Care Organization**: Use this to define an organization as an external health care organization. If you enable this classification, you can enter the insurance company details.

## Korea Legislation

The Korean legislation can use the following classification:

- **Business Place**: Use this classification to define an organization as an employer to which you assign employees. You set up information such as the registration number, representative information, and the health insurance number for the National Tax Service (NTS).

## Indian Legislation

Your organization hierarchy should contain at least one GRE/Legal Entity (Tax Organization) and Registered Company.

The Indian legislation can use the following classifications:

- **Registered Company**: Records your company's Legal Name, Registration Number, Corporate Identity Number, Permanent Account Number (PAN) of the company and company's representative details.

- **Factory**: Records your factory's Registration Number, License Number, National Industrial Code, Production Commencement Date and factory's representative details.

- **Shops/Establishment**: Records your shops/establishment's registration number and representative details.

- **Contractor Details**: Records a contractor's details, work details, and representative details. A contractor supplies contingent workers to an enterprise and can be either an individual or an external organization.

- **ESI Organization**: Use this to define an external organization that provides Employee State Insurance (ESI) to your employees. Records your Employee State Insurance (ESI) organization's Challan Information, General Information and Representative Details. You can have multiple ESI organizations and select an employee's ESI organization in the Assignment window.

- **Provident Fund Organization**: Records your PF organization's PF challan information, PF information, and PF representative details. You can have multiple PF organizations and select an employee's PF organization in the Assignment window.

- **Professional Tax Organization**: Records your Professional Tax organization's information, Professional Tax Challan information, and Representative Details information. You can have multiple professional tax organizations and select an employee's professional tax organization in the Assignment window.

- **Income Tax Office**: Records your income tax organization's information. You can enter the location details of the income tax office. You can select the income tax organization in the GRE/Legal Entity: Income Tax Details window.

- **National Pension Scheme:** Records the National Pension office information. You can enter the corporate registration account number and the corporate branch account number in the NPS Account Set Up window.

## Polish Legislation

The Polish legislation can use the following classifications:

- **PL SII Branch**: Use this classification to represent a local branch of the Social Insurance Institute (SII), a public organization that deals with the social insurance benefits, such as sickness allowance, maternity allowance, and rehabilitation benefits. You use the SII branch information for social insurance reporting.

- **PL Statistic Office**: Use this to represent a local statistic office. You use this information in reports sent to the statistic office.

- **PL Tax Office**: Use this to define the tax office bank accounts for the employer and for the tax collected from the employees. You use this information in statutory reports.

## Norwegian Legislation

The Norwegian legislation can use the following classifications:

- **Local Unit**: Use this classification to identify and report on the different work centers, within your enterprise, to which you assign employees.
- **Payee Organization**: Use this classification to define an external organization which receives third party payment from an employee
- **Social Security Office**: Use this to define external social security office organizations.
- **Pension Provider**: Use this classification to define an external organization that provides pensions to your employees.
- **Statement Provider**: Use this classification to define an external organization that provides reports on behalf of the legal employer.
- **Tax Office**: Use this classification to define an external tax organization.

## Finnish Legislation

The Finnish legislation can use the following classifications:

- **Local Unit**: Use this classification to identify and report on the different work centers, within your enterprise, to which you assign employees.
- **External Company**: Use this to record details of the various types of external organizations with whom your organization deals. Ensure to create organizations with this classification as external organizations.
- **Pension Provider**: Use this to record the basic information about pension insurance providers to which you transfer the appropriate pension insurance deductions.
- **Accident Insurance Provider**: Use this to identify organizations that provide accident insurance coverage, group life insurance, and unemployment insurance.
- **Finnish Magistrate Office**: Use this for identifying the authority responsible for processing the employee court orders.
- **Finnish Trade Union**: Use this to record the basic information about the employees' trade unions to process employee deductions.

- **Provincial Tax Office**: Use this to identify the legal employer's tax office.

## Danish Legislation

The Danish legislation can use the following classifications:

- **Service Provider**: Use this classification to record details of the various types of external service providers with whom your organization deals.
- **Pension Provider**: Use this classification to define external pension providers.

## Swedish Legislation

The Swedish legislation can use the following classifications:

- **Local Unit**: Use this classification to identify and report on the different work centers, within your enterprise, to which you assign employees.
- **Social Security Office**: Use this to define external social security office organizations with which you coordinate medical reimbursements for the employees.
- **Swedish Enforcement Office**: Use this to define external enforcement office organizations with which you coordinate the attachment of earnings deductions for the employees.

## South African Legislation

The South African legislation can use the following classification:

- **Training Provider**: Use this to indicate if an organization is a training provider.

## UAE Legislation

The UAE legislation can use the **Legal Employer** classification to define and enter additional organization information for your legal employer.

## Irish Legislation

The Irish legislation can use the following classifications:

- **Legal Employer**: Use this classification to define and enter additional organization information for your legal employer.
- **Pension Provider**: Use this classification to define external pension provider.

## Defaults for the Business Group

You can enter certain types of information for the Business Group to appear as defaults throughout your enterprise structures:

- You can select a default currency.
- You can enter a default for the value each assignment contributes towards each staffing budget that you define. For example, by default an assignment may count as *one* for a headcount budget.
- You can enter default working hours for all the employees in the Business Group. You can override these defaults at organization, position, and assignment levels.

### If you are using HRMS in the US, you have additional defaults:

- For HR reporting purposes you can register *Reporting Categories* and*Reporting Statuses*for the Business Group. These include employment categories such as Full Time or Part Time that cover employees who are not temporary workers, and assignment statuses such as Active or Paid Leave that cover employees who have not left your enterprise.
- You can register for the Business Group the names of the segments of its Cost Allocation key flexfield that hold cost center and labor distribution codes. This customizes the names that appear as field prompts in your BEE Windows.

### Employee and Applicant Identification Numbers

When defining a Business Group, you choose a method of creating identifying numbers for its employees and applicants. The choices are:

- Automatic number generation
- Manual entry
- For employees only, automatic use of a national identifier, such as the US social security number, Canadian social insurance number or the UK National Insurance number

## Generic Hierarchies Overview

Generic hierarchies group and correlate information about your business into an ordered structure of parent-child relationships that implementation teams can use as input parameters to reports and concurrent processes. One standard purpose for a generic hierarchy is to supply input parameters to a generic purge process you perform

on temporary tables. With appropriate access rights, you can also design your own generic hierarchies from scratch. You can extend predefined hierarchy and node types, using any combination of HRMS data.

You can use the flexibility of generic hierarchies to correlate information across business groups, specifying combinations of people, jobs, competencies, grades, locations, training, or other structures, with precise scope. You can reuse hierarchies, delivering comparable and consistent information limited only by your maintenance of the hierarchies. You can process specific groupings of workers, process flexfield data, or trigger Oracle Alerts or Workflow. Here are some examples of business questions you can address using generic hierarchies:

- What is the competency hierarchy for a given job?
- Who is qualified for which job?
- Who can take leave on a given date?
- What training is available in which location, for which jobs?
- What objectives apply to which job?

## Defining and Maintaining Generic Hierarchies

### Defining a New Hierarchy

You create or maintain generic hierarchies in the Generic Hierarchies pages. You define a new hierarchy in three stages:

1. Create a hierarchy based on a predefined or user-defined hierarchy type.
2. Enter information about the initial version of the hierarchy and specify effective dates.

   **Note:** Some government-mandated reports, such as Multiple Work Site in the US, require that you submit the report within a specified date range. When you create the hierarchy, enter an effective date and end date to match or encompass that range.

   You cannot create a hierarchy version with an effective date range that overlaps another version.

3. Enter node information, based on predefined or user-defined node types.

### Hierarchy Types and Node Types

The top node is the hierarchy type itself you create in the Generic Hierarchies pages, bearing a user-defined name, such as Competencies or Job Objectives. You define node types and add them to your hierarchy structure as child nodes, to specify the kind of

information you want to include on each level. You can group related categories of nodes on the same level. For example, you can define Personal, Programming, and Communication node types, and include them on the same level in a competencies hierarchy. Validation is optional, but you must link a value set to a node type if you want to validate the data. Contact your system administrator to obtain access to the Maintain Hierarchy Types module by attaching the self-service menu PQH_GHR_MENU to your responsibility.

For example, the structure of the predefined Establishment Hierarchy type ("VETS, EEO, AAP, OSHA, Multi Work Sites") specifies that the top node must be a Parent Entity. The value set for a Parent Entity node type contains organizations with the classification of Parent Entity. Subordinate nodes must be an Establishment or a Location. The value set for the Location node type contains locations that store report information in a Location EIT.

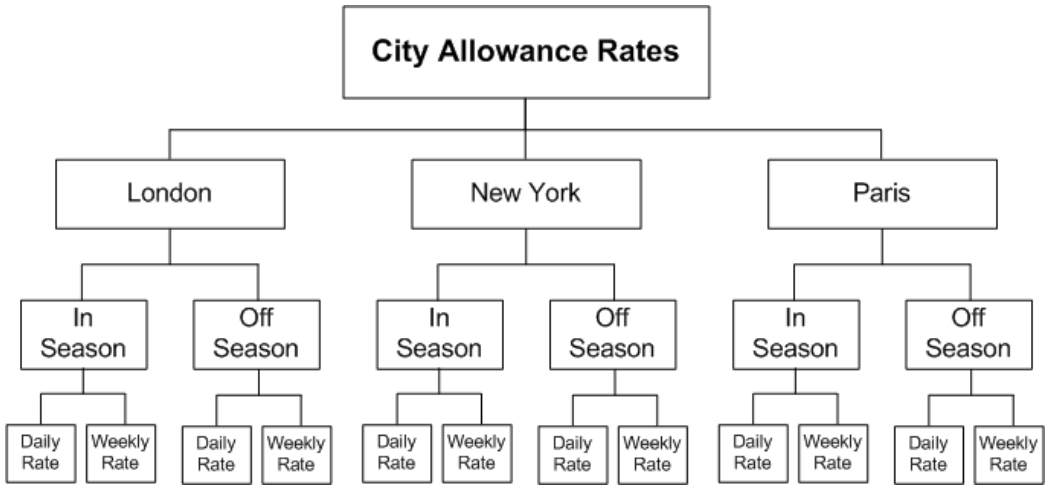
**Hierarchy Versions**

You can specify a status of Active or Inactive for your hierarchy version. You can create a new version of an existing hierarchy, preserving only its structure. Or you can duplicate an existing version, preserving both its structure and data.

> **Note:** If you change a hierarchy after using it for government-mandated reports, create and save a new version. This enables you to use the old version to recreate old reports retrospectively, in compliance with applicable laws.

**Example: City Allowance Rates Hierarchy**

The figure below is an example of a hierarchy that provides input data for travel expense reports, correlating allowance rates with cities. Because it is unlikely that travel destinations always correspond with organization locations, this example uses no validation or value sets.



## Creating an Organization

Use the Organization window to create:

- Business groups
- External organizations (for example, tax offices, pension providers, insurance carriers, disability organizations, benefit carriers, or recruitment agencies)
- Internal organizations (for example, departments, sections or cost centers)
- GREs/Legal Entities

If you use the Configuration Workbench to configure your enterprise structure, then you only need to create the additional internal and external organizations you require. For example, you can set up additional organizations to represent the internal divisions or departments, and external organizations for reporting or third party payments.

See: Extending the Enterprise Framework, page 1-13

### To create an organization:

1. Navigate to the Organization window and click New to create a new organization.

   **Note:** For information about querying existing organizations, see: Finding an Organization, page 1-41

2. Enter a name for your organization in the Name field. A check is performed to see if organizations with the same name already exist.

   All Oracle applications you install share the information entered in the Organization window. Therefore organization names must be unique within a

business group, and business group names must be unique across your applications network.

You can create two organizations with the same name in different business groups but this can cause confusion later, if the HR: Cross business group profile option is set to Yes and you decide to share certain information across all business groups. If you decide to create two organizations with the same name, be sure that this will not cause you problems in the future.

3. Optionally, select an organization type in the Type field.

   Organization types do not classify your organization, you use them for reporting purposes only. The type may identify the function an organization performs, such as Administration or Service, or the level of each organization in your enterprise, such as Division, Department or Cost Center. You create the organization types you require by entering values for the Lookup Type ORG_TYPE.

4. Enter a start date in the From field. This should be early enough to include any historical information you need to enter.

   > **Note:** You cannot assign an employee to an organization before the start date of the organization.

5. Enter a location, if one exists. You can also enter an internal address to add more details such as floor or office number.

   **Dutch only**: If you are setting up external organizations for a tax office, a social insurance provider or a private health insurance provider, you must enter the postal address and contact details using the NL_POSTAL_ADDRESS Location EIT.

   **Mexico only**: When defining a GRE/Legal Entity, if you select a location here, HRMS automatically associates it with this GRE in the Generic Hierarchy.

   **US only**: If you are using Oracle Payroll in the US, every organization to which employees can have assignments, including business groups, must have on record a location with a complete address. This is because the system uses the location of the organization of the employee's primary assignment to determine employee work locations for tax purposes. This does not apply to GREs, because the assignment to a GRE exists in addition to the assignment to an organization.

   **India only**: You can define an income tax organization and enter its location details. You can then select this organization at the GRE/Legal Entity Income Tax Office.

   > **Note:** If you are an Oracle Inventory user, then you must not assign a location to more than one organization classified as an Inventory Organization.

6. Enter internal or external in the Internal or External field. You cannot assign people

to an external organization.

Examples of external organizations that may require entry are disability organizations, benefits carriers, insurance carriers, organizations that employees name as beneficiaries of certain employee benefits, and organizations that are recipients of third party payments from employees' pay.

7. Save the basic organization details.

## Entering Organization Classifications

To determine the purpose and use of each organization you create, you give it one or more classifications. The setup information you enter for an organization depends in large part on its classification.

See: Organization Classifications, page 1-17

> **Note:** If you classify an organization as a business group, it is not reversible.

### To enter organization classifications:

1. Enter the classification for your organization in the Name field.
2. Enable the classification by checking the Enable box. This allows you to use and enter the essential additional information for your organization.
3. Save the classification details.
4. You can either enter additional information for the classification type or enter another classification.

> **Note:** Save each classification after entering and enabling it.

## Entering Additional Information

For each classification you set up you can enter additional information. This information can be different for each classification.

For business group see: Business Group, page 1-34

For HR organization see: HR Organization, page 1-35

For representative body see: Representative Body, page 1-36

For constituency see: Constituency, page 1-36

For bargaining association see: Bargaining Association, page 1-37

For company cost center see: Company Cost Center, page 1-37

For professional body information see: Professional Body Information, page 1-38

For GRE/Legal Entity information see: GRE/Legal Entity, page 1-38

For company registration information see: Registered Company, page 1-38

For factory information see: Factory, page 1-39

For Shops/Establishment registration information see: Shops/Establishment information, page 1-39

For contractor information see: Contractor information, page 1-40

For ESI information see: ESI Organization, page 1-40

For PF information see: Provident Fund Organization, page 1-40

For professional tax information see: Professional Tax Organization, page 1-41

See Classification and Additional Information Types, page 1-17 if you need to check which classification to select.

### To enter Business Group additional information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select one of the following:
   - Business Group Information, see: Entering Business Group Information, *Oracle HRMS Enterprise and Workforce Management Guide*
   - Benefit Element Details, see Business Groups: Entering Benefit Element Details, page 1-45
   - Bills Declaration Information, see: Business Groups: Entering Bills Declaration Information, page 1-45
   - Budget Value Defaults, see: Business Groups: Entering Budget Value Defaults, page 1-46
   - LWF State Rules, see: Business Group: Entering Labor Welfare Fund State Rules, page 1-67
   - Work Day Information, see: Business Groups and HR Organizations: Work Day Defaults, page 1-47

- Benefits Defaults, see: Business Groups: Defining a Default Monthly Payroll, page 1-48
- PTO Balance Type, see Business Groups: Selecting a PTO Balance Type, page 1-47
- Password Setup for Reports, see: Entering Password Setup for Reports, page 1-50
- Recruitment Information, see: Business Groups: Entering Recruitment Information, page 1-51
- Payslip Information, see: Entering Payslip Information, page 1-53
- Self Service Preference Information, see: Entering Self-Service Preference Information, page 1-54
- Statutory Setup, see: Entering Statutory Setup Information, page 1-65.
- Printed Payslip, see: Entering Printed Payslip Information , page 1-69
- Professional Tax Exemptions, see: Entering Professional Tax Exemptions Information, page 1-66.
- Professional Tax Frequencies, see: Entering Professional Tax Frequencies Information, page 1-67.
- Notice Period Details, see: Entering Notice Period Details Information, page 1-68.

4. Repeat these steps to enter further information.

### To enter HR organization additional information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select one of the following:
   - Reporting Information, see: Entering Reporting Information for an HR Organization or a Company Cost Center., page 1-58
   - Costing Information, see: HR Organizations: Entering Costing Information, page 1-57

- Parent Organization, see: HR Organizations: Entering Parent Organizations, page 1-58
- Work Day Information, see: Business Groups and HR Organizations: Entering Work Day Defaults:, page 1-47
- Payslip Information, see Entering Payslip Information, page 1-53
- Self Service Preference Information, see Entering Self-Service Preference Information, page 1-54
- Related Organizations Information, see: Entering Related Organizations Information for an HR Organization, page 1-89

4. Repeat these steps to enter further information.

### To enter representative body additional information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select one of the following:
   - Representative Body Information, see: Entering Representative Body Information, page 1-60
   - Constituency information, see: Entering Constituency Information for a Representative Body, page 1-60
4. Repeat these steps to enter further information.

### To enter constituency additional information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select one of the following:
   - Location, see Entering Location Information for Constituencies, page 1-61
   - Organization, see Entering Organization Information for Constituencies, page

1-62

- Organization Hierarchy, see Entering Organization Hierarchy information for Constituencies, page 1-61
- Grade, see Entering Grade information for Constituencies, page 1-62
- Bargaining Unit, see Entering Bargaining Unit information for Constituencies, page 1-62
- Job, see Entering Job information for Constituencies, page 1-62
- Collective Agreement Grade, see Entering Collective Agreement Grade information for Constituencies, page 1-63

4. Repeat these steps to enter further information.

### To enter bargaining association information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select Trade Union Information, see: Entering Trade Union Information for a Bargaining Association, page 1-63
4. Repeat these steps to enter further information.

### To enter company cost center information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select one of the following:
   - GL Company Cost Center, see: Entering GL Company Cost Center Information for a Company Cost Center, page 1-59
   - Reporting Information, see: Entering Reporting Information for an HR Organization or a Company Cost Center., page 1-58
4. Repeat these steps to enter further information.

### To enter professional body information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select Professional Body Info, see: Entering Additional Information for a Professional Body, page 1-64.
4. Repeat these steps to enter further information.

### To enter GRE/Legal entity information:

You must create a registered company before entering GRE/Legal entity information.

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select one of the following:
   - 24Q Receipt Mappings, see: Entering 24Q Receipt Mapping Information, page 1-73
   - Challan Bank, see: Entering Challan Bank details, page 1-74
   - Income Tax Challan, see: Entering Income Tax Challan Information, page 1-72
   - Income Tax Information, see: Entering Income Tax Details, page 1-69
   - Override Information, see: Entering Override Information, page 1-71
   - Representative Details, see: Entering Representative Details, page 1-64
   - Tax Declaration Information, see: Entering Tax Declaration Information, page 1-71
4. Repeat these steps to enter further information.

### To enter Registered Company information:

1. Click the organization classification for which you want to enter additional information.

2. Choose the Others button to open the Additional Organization Information window.

3. Select one of the following:

   - Company Information, see: Entering Company Information, page 1-82
   - PF Bank Details, see: Entering PF Bank Details, page 1-83
   - PF Filer Info, see: Entering PF Filer Info, page 1-83
   - PF Receipt Mapping, see: Entering PF Receipt Mapping, page 1-84
   - Representative Details, see: Entering Representative Details, page 1-64

4. Repeat these steps to enter further information.

### To enter factory information:

1. Click the organization classification for which you want to enter additional information.

2. Choose the Others button to open the Additional Organization Information window.

3. Select one of the following:

   - Challan Bank, see: Entering Challan Bank, page 1-74
   - Factory Information, see: Entering Factory Information, page 1-85
   - LWF Challan Info, see: Entering LWF Challan Information, page 1-86
   - Representative Details, see: Entering Representative Details, page 1-64

4. Repeat these steps to enter further information.

### To enter Shops/Establishment information:

1. Click the organization classification for which you want to enter additional information.

2. Choose the Others button to open the Additional Organization Information window.

3. Select one of the following:

   - Establishment Information, see: Entering Establishment Information, page 1-85

- Representative Details, see: Entering Representative Details, page 1-64

4. Repeat these steps to enter further information.

### To enter contractor information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select one of the following:
   - Contractor Information, see: Entering Contractor Information, page 1-75
   - Employer Representative, see: Entering Employer Representative Details, page 1-75
   - Work Information, see: Entering Work Information, page 1-76
4. Repeat these steps to enter further information.

### To enter ESI Organization information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select one of the following:
   - ESI Challan, see: Entering ESI Challan, page 1-77
   - ESI Information, see: Entering ESI Information, page 1-77
   - Representative Details, see: Entering Representative Details, page 1-64
4. Repeat these steps to enter further information.

### To enter Provident Fund information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information

window.

3. Select one of the following:
   - Challan Bank Details, see: Entering Challan Bank Details, page 1-74
   - PF Challan for 14B, see: Entering PF Challan for 14B Information, page 1-78
   - PF Challan for 7Q, see: Entering PF Challan for 7Q Information, page 1-79
   - PF Challan for Miscellaneous Payments, see: Entering PF Challan for Miscellaneous Payments, page 1-79
   - Provident Fund Challan, see: Entering Provident Fund Challan Information, page 1-81
   - Provident Fund Information, see: Entering Provident Fund Information, page 1-80
   - Representative Details, see: Entering Representative Details, page 1-64
4. Repeat these steps to enter further information.

### To enter Professional Tax Organization information:

1. Click the organization classification for which you want to enter additional information.
2. Choose the Others button to open the Additional Organization Information window.
3. Select one of the following:
   - Professional Tax Information, see: Entering Professional Tax Information, page 1-87
   - Professional Tax Challan Information, see: Entering Professional Tax Challan Information, page 1-88.
   - Representative Details, see: Entering Representative Details, page 1-64
4. Repeat these steps to enter further information.

## Finding an Organization

Use the Find Organization window to find the organizations you want to review or amend. If you want to set up a new organization, rather than querying an existing

organization, select the New button. For more information about creating a new organization, see Creating an Organization, page 1-31.

> **Note:** When you navigate to the Organization window, the Find Organization window automatically displays.

### To query an organization using the Find Organization window:

1. Do one, a selection, or all of the following:
   - Enter a full or partial query on the organization's name. If more than one name matches the selection criteria, select one of the names.
   - Enter a full or partial query on the organization type and/or location. If more than one organization type or location matches the selection criteria, select the type and/or location to query.
   - Enter a full or partial query on the classification name. If more than one classification name matches the selection criteria, select the name to query.

     For the classification you have selected indicate whether you want to query on:
     - **Enabledclassifications**: This only returns those organizations that match your selection criteria and have your selected classification enabled.
     - **Disabled classification**: This only returns those organizations that match your selection criteria and have your selected classification disabled.
     - **Both:** This returns organizations that match your selection criteria and have your selected classification, regardless of whether the classification is enabled or disabled.
2. Choose the:
   - **Find** button to run the query.

     The organization or organizations found by the query display in the Organization window. If the query finds more than one organization, you can use the [Down Arrow] key or choose Next Record from the Go menu to display the next organization.
   - **Clear** buttonto remove the existing selection criteria. You can then enter new information on which to perform a query.

## Removing and Deleting Organizations

Remove an organization if you want to prevent it being available for employee

assignments. This still leaves a history of the organization. Only delete an organization if you want to completely remove it from your system.

### To remove an organization:

1. Select the organization you want to remove.
2. Enter an end date (Date To) on the organization record.

### To delete an organization:

1. Remove any employee assignments to the organization.
2. Remove the organization from any hierarchies.
3. Disable its organization classifications in the Organization window.
4. Delete the organization in the Organization window.

## Entering Business Group Information

### To enter Business Group information:

1. In the Organization window, query the Business Group if it does not already appear there. In the Organization Classifications region, select Business Group, choose the Others button, and select Business Group Information.
2. Click in a field of the Additional Organization Information window to open the Business Group Information window.
3. You can enter a short name for the Business Group. This name is no longer used in Oracle HRMS it is provided for compatibility with earlier releases, where it appeared in the header line of each form.
4. Select the method of creating identifying numbers for employees, applicants, and contingent workers. The choices are:
   - Automatic number generation.

     If you choose the automatic entry method of number generation you can at a later date decide to switch to global sequencing. Global sequencing enables you to use a single sequence of person numbers for applicants, employees or contingent workers across multiple business groups.

     See: Running the Global Sequencing for Person Number Generation Process, page 1-90

     You can switch from local automatic numbering to manual numbering for a

person type by editing the business group information and selecting Manual.

> **Note:** If you are using Oracle iRecruitment, ensure to set the applicant numbering to Automatic.

- Manual entry.

  If you choose the manual entry method of number generation, but at a later date decide to change to the Automatic method of number generation, you can run the Change Person Numbering to Automatic process.

  See: Running the Change Person Numbering to Automatic Process, page 1-90

- Automatic use of the national identifier (for example, the social security number in the US, and the NI number in the UK). If you choose this option you must ensure that a national identifier is entered for each new person. This option is not available for applicants.

  > **Note:** For whichever method of number generation you choose, it is important to be aware that the number is displayed in various windows and reports. Therefore, if you choose the national identifier method, the person's national identifier is displayed.

- Employee numbering for contingent worker. This option allows you to use the same sequence of numbers for contingent workers as you use for your employees. For example, you enter an employee and the application gives the employee number 101. If the next person entered is a contingent worker they receive the number 102.

5. Select the names of the key flexfield structuresyou want to use in this Business Group.

6. Select the appropriate Legislation Code and default currency. The Legislation Code determines the startup data you can access and the contents of some legislation-specific windows.

   **Mexico only**: Specify MXN as the currency. Do not select MXP.

   > **Important:** Selecting the correct legislation code is essential for the correct functioning of Oracle HRMS. You cannot change the legislation code after entering employees against the Business Group.

7. **US users:** To maintain fiscal year balances in Oracle Payroll if your fiscal year is

different from the calendar year, enter the fiscal year start date.

The application does not provide a connection between the fiscal year functionality in Oracle General Ledger and in Oracle HRMS. In Oracle General Ledger you specify how the fiscal calendar is broken down in the Accounting Calendar view. Oracle HRMS calculates a fiscal quarter as a three month period. The application calculates four equal three month periods beginning from the fiscal year start date.

**South African users:** You must enter the fiscal year start date for your Business Group, or you will not be able to define payrolls later.

8. You can enter a Minimum and Maximum Working Age for the Business Group. When you enter or hire employees, you receive a warning if the person's age is outside this range.

9. Save your work.

## Business Groups: Entering Benefit Element Details

Use this window to select the elements created for approved medical and LTC bills. Oracle HRMS creates element entries only for the bills entered at the organization level information.

### To enter benefit element details:

1. In the Organization window, query the business group if it does not already appear there. In the Organization Classifications region, select Business Group, choose the Others button, and select Benefit Element Details.

2. Click in the field in the Additional Organization Information window to open the Benefit Element Details window.

3. Select the medical bills element.

4. Select the medical payment element.

5. Select the LTC element.

6. Click OK.

7. Save your work.

## Business Groups: Entering Bills Declaration Information

Use the Bills Declaration Information window to enter the lock period details for medical and LTC declaration.

### To enter bills declaration information:

1. From the Organization window, query the organization if it is not already displayed and select the Business Group in the Organization Classifications region. Click Others button to display additional information.

2. From the Additional Organization Information window, select Bills Declaration Information. The Additional Organization Information window appears.

3. Click in the field to display the Bills Declaration Information window.

4. Select Yes in the LTC Lock Declaration to restrict employees from making changes to their LTC declaration.

5. Select Yes in the Medical Lock Declaration to restrict employees from making changes to their medical declaration.

6. Employees cannot update their declarations during the lock period. Reviewers can review and approve declarations during the lock period.

7. Click OK.

8. Save you work.

## Business Groups: Entering Budget Value Defaults

You can set up budgets for non-monetary measures such as headcount or full-time equivalent. When you enter employee assignments to define the work an employee does for your enterprise, you can specify the value of the assignment towards these budgets. For example, all assignments typically count as *one* for headcount budgets, but may count as less than one for full-time equivalent budgets.

To remove the requirement to enter these values for every assignment, you can enter defaults for the whole Business Group. You can override the defaults for individual assignments.

### To define budget value defaults:

1. In the Organization window, query the Business Group if it does not already appear there. In the Organization Classifications region, select Business Group, choose the Others button, and select Budget Value Defaults.

2. Click in a field of the Additional Organization Information window to open the Budget Value Defaults window.

3. In the Units field, select a measurement type, such as Full Time Equivalent or Headcount.

4. Enter a default value in the Value field.

   You can enter a default value for as many budgetary units as you plan to use for the Business Group.

   To find out more about budgets see: Budgeting Overview, page 3-1

## Business Groups: Selecting a PTO Balance Type

If you use Oracle Payroll, you can choose to use a payroll balance to store gross accruals for an accrual plan. The payroll balance is maintained by the payroll run. It calculates accruals from the day after either the Date Earned *or* the Date Paid of the last payroll period in which the assignment was processed

To specify whether to use Date Earned or Date Paid for all your accrual plans, select a PTO Balance Type for your business group. The default is Date Paid.

### To select a PTO balance type:

1. In the Organization window, query the business group if it does not already appear there. In the Organization Classifications region, select Business Group, choose Others, and select PTO Balance Type.

2. Click in the field on the Additional Organization Information window to open the PTO Balance Type window.

3. Select Date Paid or Date Earned in the PTO Balance Type field.

4. Save your work.

## Business Groups and HR Organizations: Entering Work Day Defaults

To enter schedule information for a person, you can:

- Set up extensive availability information such as, shifts, schedules, and calendar events using integrated features from HRMS and Common Application Components (CAC).

  See: Setting Up Availability, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

- Set up holiday calendars, shifts, and work plans in OTL.

  See: Time Management Structures, *Oracle Time and Labor Implementation and User Guide*

Alternatively, you can enter basic schedule information in various areas of Oracle HRMS, such as here in the Organization window. You can set up default working hours for all employees in the Business Group or in an HR Organization, saving data entry at

lower levels. When necessary, you can override the defaults at lower levels, for example, for individual positions or employee assignments.

> **Important:** The application does not use the schedule information that you can enter here to determine a worker's availability. This is for information purposes only.

The decision for which method to set up is based on knowledge of which applications use which information.

The Salary Administration process uses working hours information to prorate the salary values against which it validates any salary proposals.

### To define work day defaults:

1. In the Organization window, query the Business Group or HR Organization if it does not already appear there. In the Organization Classifications region, select Business Group or HR Organization, choose the Others button, and select Work Day Information.

2. Click in the field of the Additional Organization Information window to open the Work Day Information window.

3. Enter the normal start and end times in 24 hour format. For example, for 5.30 p.m., enter 17:30.

4. Enter a number in the Working Hours field, and select the corresponding period of time in the Frequency field. For example, enter 40 and select Week.

   You can add to the list of available frequencies by making entries for the Lookup Type FREQUENCY, using the Application Utilities Lookups window.

## Defining Benefits Defaults for a Business Group

Follow this procedure to define a default payroll for benefits administration and to configure the use of benefits assignments.

You use both the Payroll Description window and the Organization window to assign a default payroll to a business group.

When a benefits assignment is created for an employee, due to their termination or other qualifying event, the benefits assignment must have a default payroll. US and Canadian customers should define a default payroll with a periodicity of monthly.

You can indicate if you want the application to auto-generate benefits assignments for qualifying events. For US and Canadian customers, the application creates benefits assignments by default.

### To define benefits defaults for a business group:

1. For monthly payrolls, create a payroll with a period type of Calendar Month using the Payroll Description window.
2. Save your work and exit the Payroll Description window.
3. Select the business group for which you want to define a default payroll using the Find Organization window.
4. Place the cursor in the Organization classifications block on the Business Group field and choose the Others button.
5. Select Benefits Defaults from the Additional Organization Information lookups.
6. Choose the Next button to display the Benefits Defaults window.
7. Select a default payroll for this business group.
8. In the Benefits Assignment field, select Yes if you want to record benefits assignments for continuing benefits eligibility.

   If your enterprise uses Oracle HRMS solely for compensation management--or if you do not want the application to automatically create benefits assignments--select No.

   See: Continuing Eligibility: Benefits Assignments, *Oracle HRMS Compensation and Benefits Management Guide*
9. Save your work.

## Business Group: Setting Up Public Sector-type Functionality

Oracle HR enables you to set up a particular business group for Commercial or Public Sector-type functionality.

### To set up public sector-type functionality:

1. In the organization window, query the Business Group if it does not already appear there. In the Organization Classifications region, select Business Group, choose the Others button, and select Public Sector Details.
2. Click in a field of the Additional Organization information window to open the Public Sector Details window.
3. In the Installed field, select Yes or No.

   The default value is No, hence there is no impact on existing business groups. Select

Yes if you want to use the public sector-type functionality of Oracle HR. You need to manually change this value for each business group.

4. Save your work.

## Entering Password Setup for Reports

You can set up the password to ensure security and prevent unauthorized access for the Form 16 & 12BA, the Form 12BB, and the payslip when these reports are accessed using the self-service interface or the email.

### To enter password setup for reports:

1. In the Organization window, query the business group. In the Organization Classifications region, select Business Group, click Others.

2. Click in a field of the Additional Organization Information window to open the Password Setup for Reports window.

3. Select the report for which you want to set the password. From the list of values, select:

   - Form 12BB - Available from Employee and Professional User Self Service
   - Form 16 & 12BA - Available from Employee Self Service and Email
   - Payslip - Available from Employee Self Service and Email.

4. Specify the password structure. You can specify the order in which you want to display the fields to appear as the combination for the password. For example, if you specify the sequence as Date of Birth, employee number, PAN, and last name, then application displays as DOB.ST1.EMPNO.ST2.PAN.LNAME.

5. From the list of values, select the date format to display the date of birth. The application will use this format in the password. For example, if you specify the date format as DDMMYYY, the password will contain this format

6. Enter the number of characters from the employee number to use in the password.

7. Enter the number of characters from the PAN to use in the password.

8. Enter the number of characters from the last name you want to use in the password. For example, if the last name is SMITH and you specify 4 characters, the application uses SMIT in the password.

9. Specify the separators to include between the password.

10. If you want to use your own password structure, then you can create a function. Select this function in the Custom Function field to specify the password.

11. In the Letter Case for Password field, specify how you want to include the characters in the password, whether to include the characters as actual case, lower case, or upper case.

12. Save your work.

## Business Groups: Entering Recruitment Information

You enter recruitment information at the business group level to define various default values for iRecruitment.

You enter additional information for iRecruitment in the Organization window of Oracle HRMS.

### To enter Recruitment information:

1. In the Organization window, query the business group. In the Organization Classifications region, select Business Group, choose the Others button, and select Recruitment.

2. Click in a field of the Additional Organization Information window to open the Recruitment information window.

3. Specify how the vacancy code is allocated. The choices are:

   - Manual - the Vacancy Name field is displayed when you create a vacancy. You must manually enter a name for the vacancy.

   - Automatic - the application assigns a unique vacancy name automatically. The Vacancy Name field is not displayed when you create a vacancy.

4. Enter the default number of openings for a vacancy. The default number is displayed in the Total Openings field when you create a vacancy. You can overwrite the default value if required.

5. You can specify the organization defaulting method. The choices are:

   - Creator - The default organization for a vacancy is the organization for the person who has created the vacancy (employee who has logged in).

   - Manager - The default organization for a vacancy is the organization for the manager of the vacancy.

   You can overwrite these defaults when you create a vacancy. Both methods use the

primary assignment.

6. Specify the location defaulting method. The choices are:

   - Manager - The default location for the vacancy is the same location as the manager for the vacancy.

   - Position - The default location for the vacancy is the same location as the position for the vacancy.

7. You can select a default budget measurement type, for example, FTE or headcount.

   To find out more about budgets, see Budgeting Overview, page 3-1

8. Select a default status which is assigned to a candidate when a candidate withdraws an application. If you do not specify a particular status here, the candidate receives the Terminate status.

9. Specify a user-defined person type as a default for candidates who register in iRecruitment. Oracle HRMS creates a record with this default person type when a candidate registers in iRecruitment. If you do not specify a value, the default person type is Candidate.

   **Note:** The user person type that you define here is associated with the External system person type. The internal code for this system person type is OTHER.

10. Select Yes if you want to exclude this business group from the list of business groups available on the Create Vacancy page. You should do this if you do not want managers or recruiters to be able to create vacancies for this business group.

11. Select a default resume template that iRecruitment can use to create resumes for candidates. When candidates register, they can use the default template or select a template of their choice in the Create Resume page.

12. Select Yes to record and track applicant data for compliance purposes. When you enable the applicant tracking functionality, Oracle iRecruitment creates snapshots of applicants who apply for vacancies in that business group. The snapshots include personal information, skills, qualifications, and work preferences.

13. Save your work.

## Entering Payslip Information

### To enter payslip information:

1. In the Organization window, query the Business Group if it does not already appear there. In the Organization Classifications region, select either Business Group or HR Organization, choose Others, and select Payslip Information.

2. Click in a field of the Additional Organization Information window to open the Payslip Information window.

3. Select the type of extra information to be displayed on the payslip. The choices are:

   - Balance
   - Element
   - Message

   Your selection determines which other fields you must complete in this window.

### To enter Balance extra information:

1. Select a balance name.

2. Select a dimension.

3. Optionally, enter a display name for the balance.

4. Optionally, enter a message text.

5. Save your work.

### To enter Element extra information:

1. Select the element you want to display.

2. Select the input value for the element.

3. Optionally, enter a display name for the element.

4. Optionally, enter a message text.

5. Save your work.

### To enter Message extra information:

1. Enter a display name for the message.
2. Enter a message text. This message will be displayed on the employees' online payslip.
3. Save your work.

## Entering Self-Service Preference Information

You enter self-service preference information to define whether documents such as the online payslip or tax form are available in an online and/or paper version.

> **Note:** You can also enter this information at the Person or Location level.
>
> See: Person Extra Information Types, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide* and Location Extra Information Types, page 1-94
>
> These information levels are arranged in a hierarchy; if you define self-service preferences at the person level, the settings will override any other settings made at the location, business group, or HR organization level. Similarly, if you define self-service preferences at the location level, the settings override any settings at the business group or HR organization level. Settings at the HR organization level will override settings at the business group level.

### To enter Self-Service Preference information:

1. In the Organization window, query the Business Group or HR Organization if it does not already appear there.
2. In the Organization Classifications region, select Business Group or HR Organization, choose Others, and select Self Service Preference.
3. Click in a field of the Additional Organization Information window to open the Self Service Preference window.
4. Select the document type for which you want to define preferences.
5. Select whether you want the document to be available online.
6. Select whether you want the document to be available on paper.

7. For online payslips if you are providing payslips in PDF format, specify:

   - The payslip template you wish to use.
   - If you wish to append custom data to the generated XML, specify the custom package/procedure in the XML Code field as follows: <custom package>.<custom procedure>.
   - The date these changes are to take effect.

     **Note:** Template, XML Code and Effective Date fields in Self-Service Preference can be configured at the Business Group, HR Organization and Location levels.

   The application generates either an Oracle Applications Framework (OAF)-based payslip or PDF payslip depending on the values entered in the Template and Effective Date fields:

   - If both the fields are left blank, the application generates an OAF payslip.
   - If you select a template and enter an effective date later than payment date, the application generates an OAF payslip.
   - If you select the template and enter an effective date earlier than or equal to payment date, the application generates a PDF payslip.
   - If you do not select a template and enter any date within the Effective Date, the application generates an OAF payslip.
   - If you select the template but do not enter an effective date, the application generates a PDF payslip.

8. **Payslip Employer Address** – Select either GRE/Legal Entity Address or HR Organization Address (default) for display on the payslip.

   **Note:** You can configure this segment only at Business Group level.

   **For Canada only** – Both the OAF and PDF payslips display the HR Organization as the Employer Address.

9. **Display Payslip GRE Addr From** – If you selected GRE/Legal Entity Address for the Payslip Employer Address field, select the effective date after which the GRE address displays on the payslip.

   **Note:** You can configure this segment only at Business Group level.

**For Canada only** – This field is not applicable.

10. **Specify the Offset Criteria** – Select either Payslip View Date or Date Paid to configure the date to be used for displaying Online Payslips.. If this field is left blank or Payslip View Date is selected then the online payslip will be displayed based on the Payslip View Date defined for the payroll period. If Date Paid is selected then the payslip will be displayed based on the Date Paid of the payroll run.

    **Note:** By default, Payslip View Date – Check Date for any period will be equal to the Payslip offset defined for the payroll. However, if the user manually changes these dates for any period, then the Payslip Offset for that period will be considered as the Payslip View Date – Check Date and not the Offset defined for the Payroll.

    Further, if the Payslip View Date and/or the Payslip Offset is set to null, then all payslips (prior, current and future) will be available to the employee. (By default, the Payslip Offset is set to zero when creating the Payroll definition.)

11. Save your work.

## Identifying Balances for the Payslip

You enter payslip balances information to determine the balances you want to archive and display on the payslip. You can define multiple balances for archive.

Enter the payslip balances information using the Organization window.

### To identify balances for the payslip:

1. In the Organization window, query the Business Group if it does not already appear there. In the Organization Classifications region, select Business Group, choose the Others button, and select Payslip Balances.

2. Click in the Additional Organization Information window to open the Payslip Balances window.

3. Select the Balance Name and Balance Dimension. In the Balance Narrative field enter a description of the balance information. This appears on the payslip. The order you define the balances determines the sequence the application picks them up and displays on the payslip.

    **Note:** Netherlands users: You can select the Social Insurance Type from the list of values, but only if you have selected entries for both

the Balance Name and Balance Dimension fields.

4. Save your work.

## Identifying Elements for the Payslip

You enter payslip elements information to determine the elements you want to archive and appear on the payslip. You can define multiple element input values for archive.

Enter the payslip elements information using the Organization window.

### To identify elements for the payslip:

1. In the Organization window, query the Business Group if it does not already appear there. In the Organization Classifications region, select Business Group, choose the Others button, and select Payslip Elements.

2. Click in the Additional Organization Information window to open the Payslip Elements window.

3. Select the Element Name and Input Value. In the Narrative field enter a description of the element information. This appears on the payslip. The order you define the elements, determines the sequence the application picks them up and displays them on the payslip.

   **Note:** Netherlands users: You can select the Social Insurance Type from the list of values, but only if you have selected entries for both the Balance Name and Balance Dimension fields.

4. Save your work.

## HR Organizations: Entering Costing Information

### To enter costing information:

1. In the Organization window, query the HR Organization if it does not already appear there. In the Organization Classifications region, select HR Organizations, choose Others, and select Costing Information.

2. Click in the Additional Information window to display the segments of the Cost Allocation flexfield set up with the qualifier of Organization.

3. Select the appropriate cost code in each segment.

For individual employees, you can override these organization-level codes by entering costing information on their assignments.

## Entering Reporting Information for an HR Organization or a Company Cost Center

Use the Reporting Information window to enter information that can be used when reporting on the organization.

If you want to enter managers for a number of organizations, or want to see an historical record of the managers for an organization, then you can use the Organization Manager Relationship window. See: Selecting and Viewing Managers for Organizations, page 1-91

### To enter reporting information:

1. Query the Company Cost Center in the Organization window, if it does not already appear there. In the Organization Classifications region, select Company Cost Center, choose the Others button, and select GL Company Cost Center Information.

2. Click in the field of the Additional Organization Information window to open the GL Company Cost Center Information window.

3. Enter a reporting name. This could be a short name that enables you to easily identify the organization in a report.

4. Select the manager of the cost center. The list of people consists of all active employees from your business group. If the HR: Cross Business Group profile option is set to yes, then it includes employees from all your business groups.

   **Note:** If you are using management reporting in DBI, then you must enter a manager.

5. Enter a start date for the relationship, and an end date if required.

## HR Organizations: Entering Parent Organizations

After you set up organization hierarchies, use the Parent Organization window to place a subordinate organization in hierarchies by naming its immediate parent in each hierarchy.

### To enter a parent organization:

1. In the Organization window, query the HR Organization if it does not already

appear there. In the Organization Classifications region, select HR Organization, choose Others, and select Parent Organization to open the Parent Organization window.

2. Select the hierarchy name.

3. Select the name of the parent organization to which the HR Organization is subordinate in this hierarchy.

4. To enter the HR Organization in another hierarchy, repeat steps 2 and 3.

## Entering GL Company Cost Center Information for a Company Cost Center

Use the GL Company Cost Center window to enter information about the company or cost center in Oracle General Ledger that the organization represents. Liaise with your Financials implementation team to get this information.

Oracle HRMS may default this information automatically if it is set up to generate organizations in HRMS whenever a cost center is defined in GL.

Once your company cost center information has been set up then you must not change it.

### To define GL Company Cost Center Information:

1. Query the company cost center in the Organization window, if it does not already appear there. In the Organization Classifications region, select Company Cost Center, choose the Others button, and select GL Company Cost Center Information.

2. Click in the field of the Additional Organization Information window to open the GL Company Cost Center Information window.

3. Select the company value set that validates the company segment in your GL flexfield and the GL company name for the organization.

   **Note:** If you are defining an organization that represents a company in GL do not complete any further fields and save your work.

4. Select the cost center value set that validates the cost center segment in your GL flexfield and the GL cost center name for the organization.

5. Save your work.

## Entering Representative Body Information

You use the Representative Body Information window to record details about organizations classified as a representative body; for example, jurisdiction and duration of mandate.

### To enter Representative Body Information:

1. Select the Job Group associated with the representative body.

   **Note:** You cannot associate a representative body with the default HR Job Group.

2. Select the body's jurisdiction; for example, fire wardens or health and safety issues. This list is maintained using the JURISDICTION lookup type

3. Enter the duration of the body's mandate and select the units (for example, years).

4. Select the body's method of funding; for example, employer funded, employee funded, or joint funded. This list is maintained using the FUNDING_METHOD lookup type.

5. Enter the maximum number of seats.

   **Note:** The maximum number of seats for a constituency must not exceed the total number of seats available for the representative body.

6. Save your work.

   **Warning:** Once you have attached roles to a representative body, you must *not* change the Job Group associated with the representative body, as this may lead to errors in the operating of the system.

## Entering Constituency Information for a Representative Body

You can assign constituencies to a representative body in the Constituency window.

### To enter constituency information for a representative body:

1. Select a constituency.

2. Enter the number of seats.

   **Note:** The number of seats allocated to a constituency must not exceed the maximum number of seats for its representative body.

3. Select a voting method.

4. Save your work.

## Entering Location Information for Constituencies

Enter a location for the constituency from the Organization window.

### To enter a location:

1. Select Location from the Others window.

2. Select a valid location.

3. Include or exclude the location from the constituency in the selection field.

4. Save your work.

## Entering Organization Hierarchy Information for Constituencies

Enter organization hierarchy information for the constituency in the Organization window. You can control which people to include or exclude in the constituency by indicating a starting node.

### To enter organization hierarchy information:

1. Select organization hierarchy from the Others window.

2. Select the organization hierarchy.

3. Enter the hierarchy starting node.

4. Include or exclude the organization hierarchy from the constituency in the selection field.

5. Save your work

## Entering Organization Information for Constituencies

Enter an organization for the constituency from the Organization window.

### To enter an organization:

1. Select organization from the Others window.
2. Select the organization.
3. Include or exclude the organization from the constituency in the selection field.
4. Save your work.

## Entering Grade Information for Constituencies

Enter a grade for the constituency in the Organization window.

### To enter additional grade information:

1. Select grade from the Others window.
2. Select the grade.
3. Include or exclude the grade from the constituency in the selection field.
4. Save your work.

## Entering Bargaining Unit Information for Constituencies

Enter a bargaining unit for the constituency from the Organization window.

### To enter additional bargaining unit information:

1. Select bargaining unit from the Others window.
2. Select the bargaining unit.
3. Include or exclude the bargaining unit from the constituency in the selection field.
4. Save your work.

## Entering Job Information for Constituencies

Enter job information for the constituency from the Organization window.

### To enter additional job information:

1. Select job from the Others window.
2. Select the job.
3. Include or exclude the job from the constituency in the selection field.
4. Save your work.

## Entering Collective Agreement Grade Information for Constituencies

Enter a collective agreement grade for the constituency from the Organization window.

### To enter additional collective agreement grade information:

1. Select collective agreement grades from the Others window.
2. Select the grade.
3. Include or exclude the grade from the constituency in the selection field.
4. Save your work.

## Entering Trade Union Information for a Bargaining Association

Use the Trade Union Information window to record further information about your bargaining association if it is a trade union.

### To enter trade union information for a bargaining association:

1. Query the bargaining association in the organizations window if it does not already appear there. In the Organization Classifications region, select Bargaining Association, choose the Others button.
2. Click in a field of the Additional Organization Information window to open the Trade Union Information window.
3. Enter an employer reference and a trade union reference. These could be numbers to be used in an Electronic Data Interchange.
4. Save your work

## Entering Additional Information for a Professional Body

Use the Professional Body Info window to define details for a professional body.

### To define professional body information:

1. Query the professional body in the Organization window, if it does not already appear there. In the Organization Classifications region, select Professional Body Information and choose the Others button.

2. Click in the field of the Additional Organization Information window to open the Professional Body Info. window.

3. Select the user defined table that should be used when calculating subscription rates for this professional body.

4. Enter the date upon which subscriptions to this body are to be reviewed.

5. Save your work.

## Entering Representative Details

You can select an active employee to represent each of your organization, such as ESI Organization. A contingent worker cannot be a representative of an organization. You can use the Representative Details Information window to record the representative details of organizations.

You can enter representative details for the following organization classifications:

- GRE/Legal Entity – Income tax representative
- Contractor Details
- ESI Organization
- Provident Fund Organization
- Registered Company
- Factory
- Professional Tax Organization
- Shops/Establishment

### To enter representative details:

1. From the Organization window, query the organization if it is not already displayed and select the organization classification in the Organization Classifications region. Click on the Others button to display Additional Organization Information window.

2. From the Additional Organization Information window, select Representative Details. The Additional Organization Information window appears.

3. Click in the field to display the Representative Details window.

4. Select the representative name from the list of employees.

5. Enter the date on which the employee became a representative. Optionally, enter the end date if you want to end the representative's role.

6. Click OK.

7. Save your work.

## Entering Statutory Setup Information

Use the Statutory Setup window to enter the statutory information that is required for Gratuity and Professional Tax calculation.

### To enter Statutory Setup information:

1. From the Organization window, query the organization if it is not already displayed and select the Business Group in the Organization Classifications region. Then choose the Others button to display additional information.

2. From the Additional Organization Information window, select Statutory Setup. The Additional Organization Information window appears.

3. Click in the field to display the Statutory Setup window.

4. Select Yes in the Use State Level Balance field, to calculate Professional Tax has for more than one state.

5. Select Yes in the Covered under Gratuity Act, 1972 field, to calculate gratuity for your organization.

   **Note:** Changing Covered under Gratuity Act, 1972 would not effect the existing employees. To change the value for existing employees,

see: Entering Additional Assignment Details (Assignment Window), *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

6. Select Yes if you want to check for uniqueness of the identifiers such as Provident Fund, PAN numbers entered at person level.
7. Click OK.
8. Save your work.

## Entering Professional Tax Exemptions Information

Use the Professional Tax Exemptions window to enter professional tax exemptions information, for each state.

### To enter Professional Tax Exemptions information:

1. From the Organization window, query the organization if it is not already displayed and select the Business Group in the Organization Classifications region. Then choose the Others button to display additional information.
2. From the Additional Organization Information window, select Professional Tax Exemptions. The Additional Organization Information window appears.
3. Click in the field to display the Professional Tax Exemptions window.
4. Select the state for exemption and the exemption category in the appropriate fields.
5. Enter the category in the Exemption Category field.

   **Note:** The exemption categories you enter are displayed in the Exemption Reason input value of the Professional Tax Information element. You can select an employee's exemption reason from the list of reason's available. See: Making Manual Element Entries, *Oracle HRMS Compensation and Benefits Management Guide*

6. Click OK.
7. Save your work.

## Entering Professional Tax Frequencies Information

In the Professional Tax Frequencies window, enter frequencies to calculate professional tax, for each state.

### To enter Professional Tax Frequencies information:

1. From the Organization window, query the organization if it is not already displayed and select the Business Group in the Organization Classifications region. Then choose the Others button to display additional information.

2. From the Additional Organization Information window, select Professional Tax Frequencies. The Additional Organization Information window is appears.

3. Click in the field to display the Professional Tax Frequencies window.

4. Select the state, frequency, start and end date in the appropriate fields.

   The frequencies for the following states are predefined:

   - Andhra Pradesh
   - Gujarat
   - Karnataka
   - Kerala
   - Maharashtra
   - Madya Pradesh
   - Tamil Nadu

   **Note:** The frequency for Tamil Nadu and Kerala is 6 months.

5. Click OK.

6. Save your work.

## Entering Labor Welfare Fund State Rules Information

Use the Labor Welfare Fund (LWF) State Rules window to map a state and frequency towards LWF contribution for a business group. You record this information to determine the employee and employer LWF contribution.

### To enter Labor Welfare State Rules information:

1. From the Organization window, query the organization if it is not already displayed and select the Business Group in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select LWF State Rules. The Additional Organization Information window appears.

3. Click in the field to display the LWF State Rules window.

4. Select the state to which your organization belongs.

5. Select the frequency of deduction for your state, such as yearly or quarterly.

   You can define your own states and their frequencies using the table IN_LWF_CONTRIBUTION_AMOUNT. See: Setting Up User Tables, Columns and Rows, *Oracle Configuring, Reporting, and System Administration Guide*

6. Select Yes in the Compute LWF for Terminated Employees field, if you want to deduct the Labour Welfare Fund contribution for a terminated employee.

   **Note:** LWF deduction for an employee depends on the employment status as on the last date of the contribution period and the state the employee belongs to.

7. Enter the effective start and end dates from when you want to compute the LWF deduction.

8. Click OK and save your work.

## Entering Notice Period Details Information

Employers and employees are entitled to a minimum period of notice of termination of employment. The number of days of notice depends on the organization policies and employee's category. Use the Notice Period Details window to enter the notice period information. The information is used to calculate the payments during termination settlement.

### To enter Notice Period Details:

1. From the Organization window, query the organization if it is not already displayed and select the Business Group in the Organization Classifications region. Then choose the Others button to display additional information.

2. From the Additional Organization Information window, select Notice Period

Details. The Additional Organization Information window appears.

3. Click in the field to display the Notice Period Details window.

4. Select the employee category and the notice period, in the appropriate fields.

   **Note:** Select Default to apply the notice period details for all employee categories.

5. In the Notice Period in Days field, enter the number of notice days for the employee category.

6. Click OK.

7. Save your work.

## Entering Printed Payslip Information

Use the Printed Payslip window to your printed payslip template details.

### To enter printed payslip information:

1. From the Organization window, query the organization if it is not already displayed and select the Business Group in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select Printed Payslip. The Additional Organization Information window appears.

3. Click in the field to display the Printed Payslip window.

4. Select the template that you would like to use for printing payslips.

5. Select the number of employees you would like to print in each file, in Number of Employees Per File field.

6. Click OK.

7. Save your work.

## GRE/Legal Entity: Entering Income Tax Details

The income tax details are captured as a part of the GRE/Legal Entity and are used for statutory reporting purposes and filing your tax returns.

### To enter income tax details:

1. From the Organization window, query the organization if it is not already displayed and select the GRE/Legal Entity in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select Income Tax Information. The Additional Organization Information window appears.

3. Click in the field to display the Income Tax Information window.

4. Enter your organization's Tax Deduction Account Number that is provided by the Department of Income Tax.

5. Enter your organization's TAN registration number.

6. Enter the Ward/Circle/Range where the income tax return is filed.

7. Enter the employer, deductor, branch or division to which these tax details apply. You record these details here to ensure that they also appear on Form 24Q.

8. Select the relevant employer classification and registered company for your organization.

9. Enter the following details, as applicable:
   - State
   - PAO Code
   - DDO Code
   - Ministry name
   - Other ministry name
   - PAO registration no and DDO registration no

10. Select the income tax organization where you will submit tax details.

11. Enter the account office identification number.

12. Enter the name along with the absolute path of the digital signature configuration file for Form 16.

13. Specify the filename that contains the scanned signature of the authorized person responsible for tax deduction for your organization.

14. Click OK.

15. Save your work.

    You must also enter details for your income tax representative.

    Entering Representative Details, page 1-75

## Entering Override Information

Use the Override Information window to if you want to override the default values for the dates, employer and employee contribution percentages that are used to calculate the provident fund. The application will use these values to calculate provident fund instead of the default values if the date earned of the payroll period falls within the date range specified here.

You must setup a record individually for all or applicable GREs if there are multiple GREs in the system.

### To enter Override Information:

1. From the Organization window, query the organization if it is not already displayed and select the GRE/Legal Entity in the Organization Classifications region. Then choose the Others button to display additional information.

2. Click in the field to display the Override Information window.

3. Select the start date and an end date to calculate the provident fund.

4. Enter a percentage value for employer PF contribution, if you do not want the application to use the default value of 12% towards employer contribution.

5. Enter a percentage for employee PF contribution, if you do not want the application to use the default value of 12% towards employee contribution.

6. Click OK.

7. Save your work.

## Entering Tax Declaration Information

Use the Tax Declaration Information window to enter the lock period details and new employee's window period details, for tax declaration.

### To enter Tax Declaration information:

1. From the Organization window, query the organization if it is not already

displayed and select the GRE/Legal Entity in the Organization Classifications region. Then choose the Others button to display additional information.

2. From the Additional Organization Information window, select Tax Declaration Information. The Additional Organization Information window appears.

3. Click in the field to display the Tax Declaration Information window.

4. Select Yes in the Lock Tax Declaration and enter the lock period start date, to restrict employees from making changes to their tax declaration.

   Employees cannot update their declarations during the lock period. Reviewers can review and approve declarations during the lock period.

5. Enter the window period (in number of days) to be given to a new employee to make tax declarations in the New Joinee Window Period field.

6. Enter the window period (in number of days) to be given to a new employee to make tax declarations in the New Joinee Tax Declaration Open Period field.

7. Select Yes to lock the Income Tax Calculation Method when the tax declaration is unlocked.

8. Enter the period start date to lock the Income tax Calculation Method page when the tax declaration is unlocked.

9. In the New Joinee Income Tax Calculation Method Open Period field, specify the number of days the Income Tax Calculation Method page must be open from the hire date for new employees only. The Income Tax Calculation Method page is locked for existing employees.

10. Click OK.

11. Save your work.

## Entering Income Tax Challan Information

Use the Income Tax Challan window to record income tax challan details. This information is used to pay the Tax Deducted at Source (TDS) to the Income Tax Department and appears in the Form 16 Form 24Q reports.

### To enter income tax challan information:

1. From the Organization window, query the organization if it is not already displayed and select the GRE/Legal Entity in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select Income Tax Challan. The Additional Organization Information window appears.

3. Click in the field to display the Income Tax Challan window.

4. Select the tax year relevant to the challan.

5. Enter the quarter for which the organization has made the payment through the challan.

6. Enter the voucher date and number, TDS, surcharge, education cess, interest, penalty, and other charges paid to the bank.

7. Enter the amount for late fees, if applicable. This is required for reporting purposes.

8. Select the bank in which the challan was deposited. To configure challan bank details, see: Entering Challan Bank Details, page 1-74

9. Enter the cheque or demand draft number if income tax was paid through cheque or DD.

10. Select the applicable section code where the payments are made.

11. Select the applicable value for the minor head of challan.

12. Select Yes in the Book Entry field if the income tax was paid by book entry.

13. Click OK.

14. Save your work.

## Entering the 24Q Receipts Mapping Information

Use the 24Q Receipt Mappings window to record receipt number provided by the TIN authorities after submission of the original or corrected 24Q eTDS. This application uses this information while running the 24Q Corrections archival process and generating the 24Q Corrections report.

### To enter 24Q Receipt Mapping information:

1. From the Organization window, query the organization if it is not already displayed and select the GRE/Legal Entity in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select 24Q Receipt Mappings. The Additional Organization Information window appears.

3. Click in the field to display 24Q Receipt window.

4. Select the assessment year and quarter for when you want to submit the 24Q report.

5. Select the return type as Original if you have submitted the income tax returns for the first time. If you have made any changes to the employee or employer information and have submitted the 24Q Corrections Report to the tax authorities, then select Correction.

6. Select the archival reference number of the 24Q Archival process. The application uses this number to identify the correct archival process to submit the 24Q report or 24Q Corrections report.

7. Enter the receipt number that you receive from the TIN authorities after submission of the income tax returns.

8. Enter the token number of the previous regular quarter that you receive from the TIN authorities.

9. Select the status as Active or Cancelled. Select Active to submit the original tax statement or corrected statement. To cancel the original statement of income tax submitted to the tax authorities, select Cancelled (when the correction type is Y).

10. Save your changes.

## Entering Challan Bank Details

Use the Challan Bank Details Information window to record the details of the bank, in which your organization deposits the various challans such as income tax challan, LWF challan.

You can record the challan bank details for the following organization classifications

- GRE/Legal Entity
- Factory
- Shops/Establishment

You require the bank information while entering the challan information.

### To enter Challan Bank Details information:

1. From the Organization window, query the organization if it is not already displayed and select the appropriate classification in the Organization Classifications region.
    - GRE/Legal Entity - to enter the bank details for Income Tax Challan

- Factory - to enter bank details for LWF Challan
- Shops/Establishments - to enter details for LWF Challan

Click Others to display additional information.

2. From the Additional Organization Information window, select Challan Bank. The Additional Organization Information window appears.
3. Click in the field to display the Challan Bank window.
4. Select the bank name and provide branch details.
5. Click OK.
6. Save your work.

## Entering Contractor Information

It is legally mandatory to record details of the contractor supplying contingent workers to your enterprise. You can use this organization information type to record the contractor's statutory and contact information.

### To enter Contractor information:

1. From the Organization window, query the organization if it is not already displayed and select the Contractor in the Organization Classifications region. Click Others to display additional information.
2. From the Additional Organization Information window, select Contractor Information. The Additional Organization Information window appears.
3. Click in the field to display the Contractor Information window.
4. Enter the contractor's registration certificate number, license number (provided by the Labour commissioner), PF number, ESI number and PAN.
5. Enter the contact person's name and phone number.
6. Click OK.
7. Save your work.

## Entering Employer Representative for Contractor

You can use this organization information type to record your representative's details.

The representative must be an employee and is responsible for communications with the contractor.

### To enter employee's representative information:

1. From the Organization window, query the organization if it is not already displayed and select Contractor in the Organization Classifications region. Click Others to display additional information.
2. From the Additional Organization Information window, select Employer Representative. The Additional Organization Information window appears.
3. Click in the field to display the Employer Representative window.
4. Select the employer's representative name.
5. Enter the start date of the employee's role as a representative. Optionally, enter the end date if you want to end the representative's role.
6. Click OK.
7. Save your work.

## Entering Work Details for Contractor

You can use this organization information type to record the nature of the contractor's work. It is legally mandatory to record the contractor's nature of work.

### To enter contractor's work information:

1. From the Organization window, query the organization if it is not already displayed and select the Contractor in the Organization Classifications region. Click Others to display additional information.
2. From the Additional Organization Information window, select Work Information. The Additional Organization Information window appears.
3. Click in the field to display the Work Information window.
4. Enter the nature of contractor's work e.g. supplying contingent workers.
5. Enter the start date for the work. Optionally, enter the end date of the work.
6. Click OK.
7. Save your work.

## Entering ESI Organization Information

Use this organization information type to record the employer code of your Employee State Insurance (ESI) organization. The employer code is used for reporting to the ESI and during transfer of the employee. You can select the ESI organization against an employee's assignment.

### To enter ESI information:

1. From the Organization window, query the organization if it is not already displayed and select the ESI Organization in the Organization Classifications region. Click Others to display additional information.
2. From the Additional Organization Information window, select ESI Information. The Additional Organization Information window appears.
3. Click in the field to display the ESI Information window.
4. Enter the employer code provided by the ESI Corporation.
5. Select your ESI organization's registered company. The registered company is displayed in the ESI Form 6 report.
6. Click OK.
7. Save your work.

   You must also enter details for the representative for ESI organization.

   See: Entering Representative Details, page 1-75

## Entering ESI Challan Information

Use this organization information type to record the ESI challan information.

### To enter ESI Challan information:

1. From the Organization window, query the organization if it is not already displayed and select the ESI Organization in the Organization Classifications region. Click Others to display additional information.
2. From the Additional Organization Information window, select ESI Challan. The Additional Organization Information window appears.
3. Click in the field to display the ESI Challan window.
4. Select the relevant six-month contribution period for the challan.

5. Enter the deposit date and amount of the challan.
6. Optionally, enter any comments.
7. Click OK.
8. Save your work.

## Entering PF Challan for 14B Information

Use the PF Challan for 14B window to record amounts paid for damages under section 14B. You require this information while reporting the PF returns.

### To enter PF Challan for 14B information:

1. From the Organization window, query the organization if it is not already displayed and select the Provident Fund Organization in the Organization Classifications region. Click Others to display additional information.
2. From the Additional Organization Information window, select PF Challan for 14B. The Additional Organization Information window appears.
3. Click in the field to display the PF Challan for 14B window.
4. Select the currency period and the month when you remitted the dues for Damages Under Section 14B.
5. Select the challan reference number.
6. If you have any dues payable for Damages under Section 14B, enter the amount under the appropriate accounts:
   - Employee PF
   - Employer PF
   - Pension
   - EDLI Payments
   - EDLI Admin Charges
7. Click OK and save your work.

## Entering PF Challan for 7Q Information

Use the PF Challan for 7Q window to record the details of interest paid under section 7Q for any PF deductions within stipulated period. You require this information for reporting your PF returns.

### To enter PF Challan for 7Q information:

1. From the Organization window, query the organization if it is not already displayed and select the Provident Fund Organization in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select PF Challan for 7Q. The Additional Organization Information window appears.

3. Click in the field to display the PF Challan for 7Q window.

4. Select the currency period and the month when you remitted the dues for Interest Under Section 7Q.

5. Select the challan reference number provided by the bank when you remitted the PF returns.

6. If you have any interest payable, enter the amount under the appropriate accounts:
   - Employee PF
   - Employer PF
   - Pension
   - EDLI Payments
   - EDLI Admin Charges

7. Click OK and Save your work.

## Entering PF Challan for Miscellaneous Payments Information

Use the PF Challan for Miscellaneous Payments window to record the details of any payments other than those specifically provided in the challan such as legal charges, recovery charges, payments on account of cancellation of exemption. You report these payments within the challan and the PF returns.

### To enter PF Challan for Miscellaneous Payments information:

1. From the Organization window, query the organization if it is not already displayed and select the Provident Fund Organization in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select PF Challan for Misc Pay. The Additional Organization Information window appears.

3. Click in the field to display the PF Challan for Miscellaneous Payments window.

4. Select the challan reference number provided by the bank where your organization remitted the PF amount. Your organization uses it as an acknowledgement of depositing the money through challan.

5. If you any have miscellaneous payments, enter the amounts under the appropriate accounts:
   - Employee PF
   - Employer PF
   - Pension
   - EDLI Payments
   - EDLI Admin Payments

6. Enter any comments for these payments for future reference.

7. Click OK and Save your work.

## Entering Provident Fund Information

Use the Provident Fund Info window to record the details about your provident fund organization. The information is used for reporting to the Regional Provident Fund Commissioner.

### To enter Provident Fund information:

1. From the Organization window, query the organization if it is not already displayed and select the Provident Fund Organization in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select Provident Fund Info. The Additional Organization Information window appears.

3. Click in the field to display the Provident Fund Info window.

4. Enter the PF establishment code provided by the regional PF office.

5. Select the office type to which you submit your PF returns.

6. Select your PF trust classification, depending on your organization's policy.

7. Select your PF organization's registered company. The registered company is displayed in the PF Form 7 report, PF Form 8 report, PF Form 3A report, and PF Form 6A report.

8. Select the industry to which your organization belongs.

9. Select the base business number and business number that identifies your PF organization with the regional PF office. You use this number for correspondence with the PF authorities.

10. If your PF organization is recognized, select Yes in the Recognized Provident Fund field.

11. If your PF organization provides Employee Deposit Linked Insurance (EDLI), select Yes in the EDLI Coverage field. The EDLI charges are then calculated during the payroll run.

12. Enter the nature of your organization's business.

13. Click OK.

14. Save your work.

    You must also enter the details of the representative for the providend fund organization.

    See: Entering Representative Details, page 1-75

## Entering PF Challan Information

Use the Provident Fund Challan window to record your PF challan information. You must enter your PF organization details before entering the challan information. See: Entering Provident Fund Information, page 1-80

### To enter PF Challan information:

1. From the Organization window, query the organization if it is not already displayed and select the Provident Fund Organization in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select Provident Fund Challan. The Additional Organization Information window appears.

3. Click in the field to display the Provident Fund Challan window.

4. Select the currency period and the month when your organization remitted the PF amounts.

5. Enter the amounts in the appropriate accounts:
   - Employee PF
   - Employer PF
   - Pension
   - EDLI Payments

6. Enter EDLI and PF admin charges. The application calculates EDLI deductions only if you set EDLI coverage to Yes, in the Provident Fund Info window.

7. If your organization has remitted the PF amount under protest, select Yes in the Paid Under the Protest field. You record this value for reporting purposes.

8. Enter the challan reference number provided by the bank.

9. Enter the date on which the challan was remitted.

10. If you paid any legal charges, interest on securities, or penalty amount, then enter the appropriate values.

11. Optionally, enter any comments for the challan.

12. Click OK.

13. Save your work.

## Entering Company Information

Use the Company information window to record the registration information of your enterprise. It is mandatory that your enterprise needs to be registered with the Office of the Registrar of Companies, and this information needs to be recorded.

### To enter Company information:

1. From the Organization window, query the organization if it is not already displayed and select the Registered Company in the Organization Classifications

region. Click Others to display additional information.

2. From the Additional Organization Information window, select Company Information. The Additional Organization Information window appears

3. Click in the field to display the Company Information window.

4. Enter the legal name of your company.

5. Enter the registration number and corporate identification number allotted by the Registrar of Companies.

6. Enter your company's PAN, provided by the Department of Income Tax.

7. Enter your company's base business number that identifies with the regional Provident Fund authorities.

8. Click OK.

9. Save your work.

## Entering PF Bank Details

Enter the details of the bank, in which your organization deposits the PF challans, in the PF Bank Details window. You use this information while entering the PF challan information.

### To enter the PF Bank Details information:

1. From the Organization window, query the organization if it is not already displayed and select the Registered Company in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select PF Bank Details. The Additional Organization Information window appears.

3. Click in the field to display the PF Bank Details window.

4. Select the bank name and provide branch details.

5. Click OK and save your work.

## Entering PF Filer Information

Use the PF Filer Info window to record the PF consultant's filer details, if your organization engages an external consultant to file PF monthly returns.

### To enter PF Filer information:

1. From the Organization window, query the organization if it is not already displayed and select the Registered Company in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select PF Filer Info. The Additional Organization Information window appears.

3. Click in the field to display the PF Filer Info window.

4. Select the filer identification number and license number that identifies the external consultant with the regional PF office.

5. Click OK and save your work.

## Entering PF Receipt Mapping

Use the PF Receipt Mappings window to record the reference number provided by the Regional Provident Fund Commissioner after submission of the original provident fund returns. The application uses this information while running the archival process and generating the corrected, revised, or supplement returns.

### To enter the PF Receipt Mapping information:

1. From the Organization window, query the organization if it is not already displayed and select the Registered Company in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select PF Receipt Mapping. The Additional Organization Information window appears.

3. Click in the field to display the PF Receipt Mapping window.

4. Select the currency period and the month when you have remitted the PF returns.

5. Select the business number that identifies your PF organization with the regional PF office.

6. Select the return type that you have remitted.

7. Enter the date the return was remitted.

8. Enter the filer license number of the consultant if you have engaged an external consultant to file PF monthly returns for your organization.

9. If you have previously run the PF archive process, enter the reference number.

10. Optionally, enter any comments for the provident fund.

11. Click OK and save your work

## Entering Factory Information

A factory is premise where a manufacturing process is carried out, and it is mandatory to register a factory with the Chief Inspector of Factories. Use the Factory information window to record the registration information of your factories.

### To enter Factory information:

1. From the Organization window, query the organization if it is not already displayed and select the Factory in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select Factory Information. The Additional Organization Information window appears.

3. Click in the field to display the Factory Information window.

4. Enter the registration number and license number allotted to your factory by the Chief Inspector of Factories.

5. Enter the national industrial code allotted to your factory.

6. Enter the date on which the factory started production.

7. Click OK.

8. Save your work.

## Entering Shops/Establishment Information

Your shops/establishments have to be registered with the respective Chief Inspector of Shops and Establishment. Use the Establishment Info window to record the registration number of your shop/establishment.

### To enter Shops/Establishment information:

1. From the Organization window, query the organization if it is not already displayed and select the Shops/Establishment in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select Establishment Information. The Additional Organization Information window appears.

3. Click in the field to display the Establishment Info window.

4. Enter the registration number assigned to your establishment by the Chief Inspector of Shops and Establishments.

5. Click OK.

6. Save your work.

## Entering LWF Challan Information

Use the LWF Challan Information window to record your organization's labor welfare fund contributions. You can record these contributions for the following organization classifications:

- Factory
- Shops/Establishment

### To enter LWF Challan information:

1. From the Organization window, query the organization if it is not already displayed and select the Factory or Shops/Establishment in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select LWF Challan Information. The Additional Organization Information window appears.

3. Click in the field to display the LWF Challan Information window.

4. Select the period and month for which you made the contributions.

5. Enter the sum of contributions collected from employees.

6. Enter the sum of contribution your organization paid for employees at the end of contribution period

7. Enter the interest, if paid towards failure of contribution payment on time at the end of contribution period

8. Enter unpaid accumulated amounts in the contribution period, if applicable.

9. Select the date when you paid the contribution amount.

10. Enter the bank details where your organization deposited the amount.

11. Enter the cheque or demand draft number if the LWF contribution was paid through cheque or demand draft.

12. Click OK and save your work.

## Entering Professional Tax Information

Employers should register with the Department of Commerce for paying professional tax. Use the Professional Tax Info window to record the registration number of your professional tax organization.

### To enter professional tax information:

1. From the Organization window, query the organization if it is not already displayed and select the Professional Tax in the Organization Classifications region. Click Others to display additional information.

2. From the Additional Organization Information window, select Professional Tax Info. The Additional Organization Information window appears.

3. Click in the field to display the Professional Tax Info window.

4. Select the state for your professional tax organization.

   By default, the state lookup displays the following:

   - Predefined states
   - Chennai and Coimbatore corporations for Tamil Nadu
   - Panchayats, corporations, and municipalities for Kerala

   You can define your panchayat, corporation, and municipality for Tamil Nadu as a separate state in the state code lookup.

   See: Adding Lookup Types and Values, *Oracle Configuring, Reporting, and System Administration Guide*

5. Enter the registration number allotted by the Department of commercial tax.

6. Select your PT organization's registered name. You can select from the list of organizations of type Registered Company, Shops/Establishment, and Factory.

7. Enter your PT organization's sales tax registration number. It is mandatory to enter the sales tax registration number if your PF organization's state is Maharastra.

8. Click OK.

9. Save your work.

   You must also enter details of the representative for the professional tax organization.

   See: Entering Representative Details, page 1-75

## Entering Professional Tax Challan Information

Use the Professional Tax Challan Information window to enter information about a professional tax challan.

### To enter Professional Tax Challan Information:

1. From the Organization window, query the organization if it is not already displayed and select the Professional Tax in the Organization Classifications region. Then choose the Others button to display additional information.

2. From the Additional Organization Information window, select Professional Tax Challan Information. The Additional Organization Information window is displayed.

3. Click in the field to display the Professional Tax Challan Information window.

4. Select the financial year, remittance month, date, payment mode, voucher number, and amount for the challan.

5. Optionally, enter the interest or penalty amount in the Interest or Penalty Paid field.

6. Optionally, enter any additional tax paid in the Excess Tax Paid field and comments in the Comments field.

7. Click OK.

8. Save your work.

## Entering NPS Account Setup Information

Use the NPS Account Setup Information window to enter the corporate registration account number and the employee and employer contribution rates towards National Pension Scheme.

### To enter NPS Account Setup information:

1. From the Organization window, query the organization if it is not already

displayed and select the National Pension Scheme in the Organization Classifications region. Then click Others to display additional information.

2. From the Additional Organization Information window, select NPS Account Setup. The Additional Organization Information window appears.

3. Click in the field to display the NPS Account Setup window.

4. Select the employer classification to which the employee belongs – whether corporate or government.

5. Enter the 7 digit corporate registration number allotted by CRA to a corporate head office at the time of registration.

6. Enter the 7 digit corporate branch office number allotted by CRA to a corporate branch office.

7. Enter the employer contribution percent for corporate sector.

8. Enter the employee contribution percent for the Corporate sector.

9. Click OK.

10. Save your work.

## Entering Related Organizations Information for an HR Organization

Use the Related Organizations information type to associate an operating unit to an HR organization. If you use a multi-org application, then the operating unit you select here becomes the operating unit for workers assigned to the HR organization.

> **Tip:** If you use the Multi-Org Access Control (MOAC) feature for a product that integrates with Oracle HRMS, then you can associate an operating unit to every HR organization in your enterprise using Web ADI. MOAC is a key feature in Oracle Applications that enables you to access multiple operating units from a single application responsibility. For more information on MOAC, see: Multiple Organizations Overview, *Oracle HRMS Implementation Guide*
>
> See: Data Download and Upload Using Web ADI Overview, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

### To enter related organizations information:

1. Query the HR Organization in the Organization window if it does not already appear there. In the Organization Classifications region, select HR Organizations,

choose Others, and select Related Organizations.

2. Click in the Additional Information window to open the Related Organizations Information window.

3. Select an operating unit to associate to the HR organization.

## Running the Change Person Numbering to Automatic Process

Use this process to change the method of number generation for your employees, applicants or contingent workers from manual to automatic. This process applies to your current business group.

Run the Change Person Numbering to Automatic process from the Submit Request window.

### To run the change person numbering to automatic process:

1. Select the Change Person Numbering to Automatic process in the Request Name field.

2. Click in the Parameters field if it does not automatically open.

3. Select the person type that you want the method to change from manual number generation to automatic.

4. Choose OK and then Submit.

   After the process has run, the first automatic number assigned to a person is one higher than the maximum number already in use.

## Running the Global Sequencing for Person Number Generation Process

You use this process to change the method of number generation for your employees, applicants, or contingent workers from automatic to global sequencing.

Run the Global Sequencing for Person Number Generation Process from the Submit Request window.

### To run the global sequencing for person number generation process:

1. Select the Change automatic person number generation to global sequencing process in the Request Name field.

2. Click in the parameters field if it does not automatically open.

3. Select the person type that you want the method to change from automatic to global

sequencing.

4. Choose OK and then Submit.

   After the process has run, the first number assigned to a person is part of a global sequence across multiple business groups.

## Selecting and Viewing Managers for Organizations

Use the Organization Manager Relationship window to assign managers to organizations. The primary reason for doing this is for reporting purposes, for example, if you are using management reporting in DBI.

You can only assign managers to organizations that have a classification that uses the Reporting Information information type, for example HR Organizations.

You can also use this window to view a history of managers for an organization.

> **Note:** The list of organizations and employees you can select is dependant on the HR: Cross Business Group profile option

### To select managers for an organization:

1. Select the organization for which you want to enter a manager in the Organization Manager Details region.

2. Select the manager for the organization and enter start and end dates, if appropriate.

   Note that you can have only one current manager for an organization.

3. Save your work.

### To view managers for an organization:

1. Select the organization or the manager that you want to query.

2. If you have selected a manager and want to show all the organizations to which that person *and* all his direct reports are managers, then select the Show the manager and direct reports check box. If you do not select the check box, then the query returns only the organizations to which the person you have selected is a manager.

3. Indicate the timeframe for which you want to view the results and choose the Find button. The results of your query are displayed in the Organization Manager Details region.

   If your security profile allows you to see the manager but not the organization, or

the organization but not the manager, you are able to view the organization manager record but not update it.

# Locations

## Locations

In Oracle HRMS, you set up each physical site where your employees work as a separate *location*. If you use the Configuration Workbench to configure your basic enterprise structure, then you only need to create locations for the additional organizations you require.

See: Key Concepts for Representing Enterprises, page 1-6

You can set up:

- **Global locations:** These are available in all Business Groups.
- **Business Group locations**: These can only be used in one Business Group.
- **Business Place locations (Korea only)**: These can only be used in one Business Place.

Similarly, you enter the addresses of external organizations that you want to maintain in your system, such as employment agencies, tax authorities, and insurance or benefits carriers. When setting up internal or external organizations, you select from a list of these locations.

This approach has these advantages:

- You enter information about each location only once, thereby saving data entry time.
- Central maintenance of locations ensures consistency of address standards.
- Your work sites exist as separate structures identifiable for reporting purposes, and for use in the rules that determine employee eligibility for various types of compensation and benefits.

### Mexico Only

Oracle HRMS uses the location associated with an assignment to determine its social security affiliation. It is recommended that you associate all locations with one or more appropriate GRE using the Mexico HRMS Statutory Reporting Hierarchy. Oracle HRMS determines the GRE of an assignment based on the hierarchy you have associated the location with.

See: Government Reporting Entities (GREs), *Oracle HRMS Enterprise and Workforce Management Guide*

See: Mexico HRMS Statutory Reporting Generic Hierarchy Type, *Oracle HRMS*

*Enterprise and Workforce Management Guide*

See: Entering an Assignment (Assignment Window), *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

## Location Extra Information Types

You can define as many Extra Information Types as you require to hold information about locations. There are also some predefined person EITs.

> **Note:** To be able to access the predefined EITs, you must link the EIT to your responsibility.
>
> See: Setting Up Extra Information Types For a Responsibility, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

The predefined location EITs are:

- Self Service Preference for Location: Information on preferences for online documents such as the online payslip or online tax forms at the location level. The EIT determines whether the documents are available online or in a printed format, what template you are using for XML Publisher, the stored procedure you want to use, and the date when you want to implement these changes.

  > **Note:** You can also enter this information at the person, business group, or HR organization level.
  >
  > See: Person Extra Information Types, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide* and Entering Self-Service Preference Information, page 1-54
  >
  > These information levels are arranged in a hierarchy; if you define self-service preferences at the person level, the settings will override any other settings made at the location, business group, or HR organization level. Similarly, if you define self-service preferences at the location level, the settings override any settings at the business group or HR organization level. Settings at the HR organization level will override settings at the business group level.

- Geographic Hierarchy Node Map: Use this EIT with the calendar events you set up to identify a different geographical entity in the geographic hierarchy. If the calendar event includes the node you select, and then the worker becomes applicable for the event. The node you select here overrides the information at the business group level.

  See: Geographical Precedence, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

If you want to override this node for a specific worker, then you can define the assignment EIT to identify a different geographical entity in the hierarchy.

See: Setting Up Calendar Events, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

## Setting Up Locations

You can enter addresses in the Location window.

Locations are shared across Business Groups in HRMS and with two other Oracle applications: Inventory and Purchasing. HRMS does not use some of the fields in the Location window. These fields are disabled for HRMS users. For example, the Legal Address check box is read-only and supports future functionality in Oracle Financials.

For information about Oracle Purchasing locations, see: Defining Locations, *Oracle Purchasing User's Guide*.

### To enter a work location and its address:

1. Enter the name of the location, and a description if required.

2. Uncheck the Global check box if you want the location to only be available within the default Business Group of your current responsibility. Accept the default if you want the location to be a global location and therefore available to all Business Groups.

   If you are setting up a global location, the location name must be unique across all Business Groups.

   If you are setting up a location for one Business Group, the location name must be unique within that Business Group and all global locations, but does not have to be unique across all Business Groups.

   > **Note:** You cannot amend the Global check box once you have set up your location.

3. Select a national address style from the list. If a local address style exists for your country, it is displayed as the default. Otherwise, the international style is displayed.

   **US and Canadian users**: The local style is only displayed if you have Vertex geocode data installed.

   > **Note:** You can change existing address styles or create new ones if required.

See: Changing Default National Address Styles, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

4. Enter address information in this window.

   **US Payroll users**: If you change a location address, you need to update the location in the State Tax Rules window for each assignment at that location.

   **US Users**: In the EEO Exception Report, location addresses are truncated to 115 characters if the combined length of the location code and address lines 1,2, and 3 is greater than 115 characters.

   **Canadian Payroll users**: You enter Census Metropolitan Area codes here in the Location Address flexfield.

   **Dutch users**: Ensure you enter house number information for the Notification Social Insurance (NSI) reports. Use the House Number Addition field if your house number contains an alpha value. For example, if your house number is 5a, you enter 5 in the House Number field, and a in the House Number Addition field. See the following topic for information on the NSI reports.

   See: Social Insurance Reporting, *Oracle HRMS Payroll Processing Management Guide*

   **Note:** You must enter the postal code in the following format NNNNAA, for example, 1234AB.

   **Irish users**: You enter the employer's address here and attach it to the legal employer.

5. If the mailing address of the location differs from the payroll taxation address, you need to enter an overriding address into the Payroll Tax fields.

6. Select a time zone if you want to associate a time zone with the location.

   **Note:** When you select a time zone, ensure that it corresponds to the location's address.

7. Choose OK, and then choose the Extra Information button to enter any additional information required by your enterprise.

   See: Entering Extra Information, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

8. Save your location.

### To make locations inactive:

Making a location inactive prevents users from selecting it.

### To remove an address from the Location list:

1. Enter an inactive date when the location is no longer in use in your enterprise, and save your changes.

### To delete a location:

You can delete locations that have not been used.

> **Note:** If a location is still in use, but you do not want it to be selected today or in the future, enter an inactive date.

1. Query the location you want to delete.
2. Delete the location.
3. Save the changes.

# Auto Orgs

## Internal Organizations and Cost Centers

With the Oracle eBusiness suite of applications you can enable the automatic creation of HR organizations using the Auto Orgs functionality. If your enterprise has a close relationship between its financial structure and line management hierarchy, then this means you only have to maintain your financial structure in GL and the corresponding organizations that you need to create your line manager hierarchy are automatically generated. The application creates HR organizations corresponding to company cost center combinations that exist in your GL account combinations.

Alternatively, if your financial cost centers are different to your HR organizations, but you still want to represent your cost centers as organizations, you can enable the application to automatically create company cost center organizations. These also correspond to company cost center combinations that exist in your GL account combinations.

This functionality provides a foundation for the management reporting functionality in Daily Business Intelligence (DBI) . It enables you to take financials information, such as costs, revenues, and expenses, and consolidate it by cost center manager.

### Cost Allocation Key Flexfield

When defining an HR organization, you can identify one cost center against which the payroll costs of the employees assigned to the organization should be collected. You simply select the cost center from a list in a segment of the Cost Allocation key flexfield.

For example, suppose you are defining in Oracle HRMS the organization Product Assembly, whose employee payroll costs go to the cost center Production. When entering the organization Product Assembly, you select Production from the list of cost centers in the Cost Allocation flexfield:

**Cost Allocation Key Flexfield**

*Segment 1: Cost Center*

410-Accounting

425-Production

503-Public Relations

> **Note:** If employees' costs are charged to cost centers other than those of their organizations, or if they work in an organization only part time, you can enter other cost centers, and the percentage of time to be charged to each, on their *employee assignments*. Costing information

entered for employee assignments overrides that entered for organizations.

For more information about the cost allocation key flexfield see: The Cost Allocation Key Flexfield, page 3-63

## Implementing Automatic Company Cost Center Creation

Follow these steps to set up automatic creation of organizations in HRMS corresponding to company cost center combinations that exist in your GL account combinations.

See: Internal Organizations and Cost Centers, page 1-98 for more information about the relationship between GL cost centers and HR organizations.

### To implement automatic company cost center creation:

You must perform these steps after you have defined your business groups but before you create any HR organizations.

1. Ensure that your GL account combinations have been set up in Oracle GL. This should have been done as part of your Oracle Financials implementation.

2. Work with your Financials implementation team to decide how your financial companies relate to your business groups. Also, you need to discuss how financial companies and cost centers relate to the internal organizations. For example, do your financial companies map to GREs? Do your cost centers map to HR organizations, and so on.

3. Define an organization for each of the companies that exist in your business group. These companies should have been set up during your Financials implementation. You can apply a classification of company cost center to either an existing, or new organization.

   See:Entering Organization Classifications, page 1-33

   Select the value set that validates the company segment in your GL accounting flexfield and select the company name for each of the company cost center organizations.

   If you are defining an organization that represents a company in GL, then do not complete the cost center fields.

   See: Entering GL Company Cost Center Information for a Company Cost Center, page 1-59

   **Note:** You must take care when defining your company

organizations as it influences the cost center organizations that are available to your business group.

4. Set the HR: GL Cost Center Org Classifications profile option to one of the following to define what organization classifications are created in HRMS:

   - If your financials cost centers are the same as your HR organizations, then set the profile option to HR Organizations and Company Cost Centers.

   - If your financials cost centers are different but you still want to represent your cost centers as organizations, then set the profile option to Company Cost Centers. You need to do this if you intend to use the management reporting functionality in DBI and your HR organizations are not cost centers.

   For more information on profile options see: User Profiles, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

5. Set the GL Organization Name Format profile option. This defines the format of the names for the organizations created automatically. If you do not want to use the predefined formats you can add your own using the HR_GL_ORG_NAME_FORMAT lookup type.

   See: Defining the Name Format of Company Cost Centers, page 1-104

6. Run the one of the following:

   - If you use DBI management reporting to consolidate financials information by cost center manager, then run the Synchronize GL Company Cost Centers with HR request set.

   - If you want to generate your organizations in HRMS based on your GL structure but do not use DBI, then run the Create and Maintain Company Cost Center Organizations process.

     **Note:** Run the Synchronize GL Company Cost Centers with HR request set or the Create and Maintain Company Cost Center Organizations process only after you have created an organization to represent each of the financials companies that relate to your business group.

   See: Running the Synchronize GL Company Cost Centers with HR Request Set, page 1-107 and Create and Maintain Company Cost Center Organizations, page 1-108

7. Select a manager for each of the company cost centers, once you have entered the details of your workforce into your application. You must perform this step if you

are using management reporting in DBI. You can do this in one of the following ways:

- If you want to select a manager for each company cost center individually, see: Entering Reporting Information for an HR Organization or a Company Cost Center, page 1-58

- If you want to select managers for multiple company cost centers, see: Selecting and Viewing Managers for Organizations, page 1-91

8. Set the HR: Automatically Synchronize Single GL Company Cost Centers with HR profile option to Yes or No. You use this profile to indicate if new GL account code combinations are automatically reflected in HR, or whether you want to control this by running the required processes manually.

   Set the profile to Yes if you want Oracle HRMS to automatically create an organization whenever any new GL account code combinations are subsequently created in Oracle Financials. Oracle HRMS will submit the Synchronize Single GL Company Cost Center with HR process automatically for every new account code combination. You define the classifications for the organizations created by this process by setting the HR: GL Cost Center Org Classifications profile option.

   Set the profile to No if you do not want the Synchronize Single GL Company Cost Center with HR process to run automatically, but perhaps want to create all the required organizations at once. You can then run the Create and Maintain Company Cost Center Organizations and the Synchronize GL Company Cost Centers with Existing Organizations processes, or the Synchronize GL Company Cost Centers with HR request set as often as you need.

   > **Note:** If the Concurrent: Hold Requests profile option is set to Yes for your GL responsibility, then the process that creates organizations in HRMS automatically will remain on hold until you restart it.

## Upgrading to Automatic Company Cost Center Creation

Follow these steps to upgrade your existing application to automatic creation of organizations in HRMS corresponding to company cost center combinations that exist in your GL account combinations.

See: Internal Organizations and Cost Centers, page 1-98 for more information about the relationship between GL cost centers and HR organizations.

### To upgrade to automatic company cost center creation:

You must perform these steps after you have defined your business groups but before you create any HR organizations.

1. Ensure that your GL account combinations have been set up in Oracle GL. This should have been done as part of your Oracle Financials implementation.

2. Work with your Financials implementation team to decide how your financial companies relate to your business groups. Also, you need to discuss how financial companies and cost centers relate to the internal organizations. For example, do your financial companies map to GREs? Do your cost centers map to HR organizations, and so on.

3. Define an organization for each of the companies that exist in your business group. These companies should have been set up during your Financials implementation. You can either apply a classification of company cost center to an existing, or new organization.

   See: Entering Organization Classifications, page 1-33

   Select the value set that validates the company segment in your GL accounting flexfield and select the company name for each of the company cost center organizations.

   If you are defining an organization that represents a company in GL, then do not complete the cost center fields.

   See: Entering GL Company Cost Center Information for a Company Cost Center, page 1-59

   > **Note:** You must take care when defining your company organizations as it influences the cost center organizations that are available to your business group.

4. Ensure that the HR: Data Exchange Directory profile option has been set. This defines the directory into which the Export GL Organizations process writes tab delimited files. These files are subsequently read by the Upload GL Company Cost Center Information request set.

5. Ensure that your database administrator has added the directory path defined in the previous step to the init.ora file, using the utl_file_dir parameter.

6. Set the GL Organization Name Format profile option. This defines the format of the names for the organizations created automatically. If you do not want to use the predefined formats you can add your own using the HR_GL_ORG_NAME_FORMAT lookup type.

   See: Defining the Name Format of Company Cost Centers, page 1-104

7. Run the Export GL Company Cost Centers process.

**Note:** Run the Export GL Company Cost Centers process only after you have created an organization to represent each of the financials companies that relate to your business group.

See: Running the Export GL Company Cost Centers Process, page 1-105

8. Amend the tab delimited file produced by the Export GL Company Cost Centers process to map your cost centers to existing organizations.

   See: Running the Export GL Company Cost Centers Process, page 1-105

9. Upload the amended tab delimited file using the Upload Company Cost Center Information request set.

   See: Running the Upload Company Cost Center Information Request Set, page 1-106

10. Check the Exception Report generated by the Upload Company Cost Center Information request set to ensure that all company cost centers classifications have been created successfully.

    See: Running the Upload Company Cost Center Information Request Set, page 1-106

11. Set the HR: GL Cost Center Org Classifications profile option to one of the following to define what organization classifications are created in HRMS:

    - If your financials cost centers are the same as your HR organizations, then set the profile option to HR Organization and Company Cost Center.

    - If your financials cost centers are different but you still want to represent your cost centers as organizations, then set the profile option to Company Cost Center. You need to do this if you intend to use the management reporting functionality in DBI and your HR organizations are not cost centers.

    For more information on profile options see: User Profiles, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

12. Run the Synchronize GL Company Cost Centers with Existing Organizations process.

    See: Running the Synchronize GL Company Cost Centers with Existing Organizations Process, page 1-108

13. Set the HR: Automatically Synchronize Single GL Company Cost Centers with HR profile option to Yes or No. You use this profile to indicate if new GL account code combinations are automatically reflected in HR, or whether you want to control this by running the required processes manually.

    Set the profile to Yes if you want Oracle HRMS to automatically create an organization whenever any new GL account code combinations are subsequently

created in Oracle Financials. Oracle HRMS will submit the Synchronize Single GL Company Cost Center with HR process automatically for every new account code combination. You define the classifications for the organizations created by this process by setting the HR: GL Cost Center Org Classifications profile option.

Set the profile to No if you do not want the Synchronize Single GL Company Cost Center with HR process to run automatically, but perhaps want to create all the required organizations at once. You can then run the Create and Maintain Company Cost Center Organizations and the Synchronize GL Company Cost Centers with Existing Organizations processes, or the Synchronize GL Company Cost Centers with HR request set as often as you need.

> **Note:** If the Concurrent: Hold Requests profile option is set to Yes for your GL responsibility, then the process that creates organizations in HRMS automatically will remain on hold until you restart it.

## Defining the Name Format of Company Cost Centers

You must set up the HR: GL Organization Name Format profile option if you want your application to create organizations in HRMS based on cost centers in GL automatically. This profile defines how the name of the organization in HRMS is generated.

The options available in this profile option are held in the HR_GL_ORG_NAME_FORMAT lookup type. You can add your own formats to this lookup if required.

Use the Application Utilities Lookups window to define organization name formats.

### To define the company cost center name format:

1. Query the HR_GL_ORG_NAME_FORMAT lookup type.
2. Add a new record.
3. Construct a name format in the Code column using the following codes:
   - $COC - Company Code
   - $CCC - Cost Center Code
   - $CON - Company Name
   - $CCN - Cost Center Name

   Any other characters included in the code are used as delimiters. For example, if you want your organization names to be constructed using the cost center name

followed by the company code and separated with a hyphen, then you would enter $CCN-$COC.

4. Enter a meaning and, optionally, a description for the lookup code.

5. Save your work.

#### What Next?

You can now set the HR: GL Organization Name Format profile option at Site level in the System Profile Values window.

## Running the Export GL Company Cost Centers Process

Run this process if you are converting your existing setup to use automatic cost center creation.

> **Note:** You can only use the export functionality if you have the full version of Oracle HRMS installed.

The process is run for your current business group and writes information about GL company cost center combinations for companies that you have previously defined for your business group to a tab delimited file. It creates a record in the file for each unique company cost center combination that has been defined in GL.

To identify the company and cost center segments, the process looks to see which segments have had certain qualifiers applied. The company segment is identified by the Balancing Segment qualifier, and the cost center is identified by the Cost Center Segment qualifier.

> **Note:** You need to ensure that your Financials implementation team has set both of these qualifiers for the GL account combinations that are being mapped to organizations in HR.

The process only includes company and cost center combinations that have not already been linked to an organization.

Run the Export GL Company Cost Centers process in the Submit requests window. You can only have one version of this process running at any one time.

### To run the Export GL Company Cost Centers process:

1. Select Export GL Company Cost Centers in the Name field.

2. Select the chart of accounts for which you want to run the process.

3. Choose the Submit button to run the process.

The process produces two files and puts them in the directory defined by the HR: Data Exchange Directory profile option. The files produced are:

- GLCC_*business group name_business group id*.hdr

  This header file defines the upload parameters used by the upload process. Do not edit this file.

- GLCC_*business group name._business group id*.txt

  This file contains the organization information that you can edit.

**What Next?**

You can use a spreadsheet or text editor to amend the GLCC_*business group name_ business group id*.txt file to map company and cost center combinations to existing organizations in HRMS. To do this, replace the suggested organization name with the exact name of the existing organization in the organization_name column. Do not make any amendments to any other columns.

> **Note:** If you are using Microsoft Excel to edit the tab delimited file you must make sure the settings are correct when importing the file using the Text Import wizard. Select Tab as the delimiter and ensure that each column that contains IDs or Dates is given a Column Data Format of Text. This is to ensure that numbers that begin with zeros are imported correctly and that dates are imported with the correct format. The columns you need to set are:
>
> - costcenter_id
> - company_id
> - effective_date

## Running the Upload GL Company Cost Center Information Request Set

Run the Upload GL Company Cost Center Information request set to upload the amended version of the exported file created using the Export GL Company Cost Centers process.

> **Note:** You can only use the Upload functionality if you have the full version of Oracle HRMS installed.

By uploading the file you map company and cost center combinations to existing organizations. A classification of company cost center is added to the each existing organization.

**Note:** Ensure that the .txt filename you have amended is exactly the same, including case, as that entered in the header file.

Run the Upload GL Company Cost Center Information request set in the Submit Request Set window.

### To run the Upload GL Company Cost Center Information request set:

1. Select Upload GL Company Cost Center Information in the Request Set field.
2. Click in the Parameters field to display the Parameters window.
3. Enter the path for the header file created during the export procedure.
4. Choose the submit button to run the request set.

   The processes that make up the request set are now run in turn.

#### What Next?

Once the DataPump Exceptions Report process has completed you should check the output. This details any organizations that have not been uploaded correctly, for example if the organization name entered into the spreadsheet does not exist, or if an organization specified already has a company cost center classification.

If the process has produced some exceptions, then you must do the following:

- Correct the errors
- Delete the rows that have uploaded successfully from the GLCC_*business group name_business group id*.txt file
- Run the Upload GL Company Cost Center Information request set again

## Running the Synchronize GL Company Cost Centers with HR Request Set

Run the Synchronize GL Company Cost Centers with HR request set when setting up your enterprise to create organizations that correspond to your cost centers in GL automatically if you use DBI to report on financials information.

The request set contains the following concurrent processes:

- Create and Maintain Company Cost Center Organizations, page 1-108
- Synchronize GL Company Cost Centers with Existing Organizations, page 1-109

If you have set the HR: Automatically Synchronize Single GL Company Cost Centers with HR profile option to No run this request set, or its constituent parts, periodically.

- If you create new GL account code combinations often and use DBI management reporting to consolidate financials information by cost center manager, then run this request set regularly. Alternatively, if your cost center structure is quite static, then to keep your processing time to a minimum you can run the Synchronize GL Company Cost Centers with Existing Organizations process regularly, and run the Synchronize GL Company Cost Centers with HR request set less frequently. How often you run these processes depends on how often you create new cost center codes.

- If you want to generate your organizations in HRMS based on your GL structure but do not use DBI, then you only need to run the Create and Maintain Company Cost Center Organizations process as often as you required.

Run the Synchronize GL Company Cost Centers with HR request set in the Submit Request Set window. You can only run one version of these processes at a time.

### To run the Synchronize GL Company Cost Centers with HR request set:

1. Select Synchronize GL Company Cost Centers with HR in the Name field.

2. Select the chart of accounts for which you want to run the request set.

3. Click Submit to run the request set.

## Running the Create and Maintain Company Cost Center Organizations Process

This process creates company cost center organizations for the companies in your business group. It creates an organization for each unique GL account code combination that is defined in GL, if an organization does not already exist with the same company code, company value set, cost center code, and cost center value set. You define which classifications to assign to the organization using the HR: GL Cost Center Org Classifications profile option.

The process sets the start date of the new organization to the start date of the company or cost center value set, whichever is earlier.

The process sets the end date of the new organization to the end date of the company or cost center value set, whichever is later. If no end date has been entered for either value set, then the process does not define an end date for the new organization.

Secondly the process checks for a match on organization names. If a name matches the format defined in the HR: GL Organization Name Format profile option, then the process adds any missing classifications to the organization.

**Note:** Run the Create and Maintain Company Cost Center

Organizations process only after you create an organization to represent each of the financial companies that relate to your business group.

Additionally, you can use the Create and Maintain Company Cost Center Organizations process to update the names, and start and end dates of existing organizations created using Auto Orgs to reflect changes in the company or cost center value set.

Run the Create and Maintain Company Cost Center Organizations process in the Submit Request window. You can only run one version of this process at a time.

**Note:** This process is also included in the Synchronize GL Company Cost Centers with HR request set. See:Running the Synchronize GL Company Cost Centers with HR request set., page 1-107

### To run the Create and Maintain Company Cost Center Organizations process:

1. Select Create and Maintain Company Cost Center Organizations in the name field.
2. Select the chart of accounts for which you want to run the process.
3. Select a company if you want to run the process for one company only. If you do not specify a company the process generates company cost center organizations for each company organization in your business group that has the same company value set as that which is used to validate the balancing segment value in the chosen chart of accounts.
4. Indicate whether you want to synchronize existing organization names. Select Yes and the process updates organization names to reflect any changes to the company description or cost center description in the company or cost center value sets, or to the HR: GL Organization Name Format profile option.
5. Indicate whether you want to synchronize start and end dates for existing organizations. Select Yes and the process updates the start and end dates of organizations to reflect any changes to the values in the company or cost center value sets.
6. Click Submit to run the process.

## Running the Synchronize GL Company Cost Centers with Existing Organizations Process

This process links existing company cost center organizations to GL account

combinations. The process checks for a match on company code, company value set, cost center code, and cost center value set.

To identify the company and cost center segments, the process looks to see which segments have had certain qualifiers applied. The Balancing Segment qualifier identifies the company segment, and the Cost Center Segment qualifier identifies the cost center, in the GL Accounting flexfield.

> **Note:** Ensure that your Financials implementation team has set both of these qualifiers for the GL account combinations that are being mapped to organizations in HR.

The process only includes company and cost center combinations that are not already linked to an organization. Once you link an organization to a GL account combination, then you cannot link the GL account to a different organization, and you cannot update the link.

Run the Synchronize GL Company Cost Centers with existing Organizations process in the Submit Request window. You can only run one version of this process at a time.

> **Note:** This process is also included in the Synchronize GL Company Cost Centers with HR request set. See: Running the Synchronize GL Company Cost Centers with HR request set., page 1-107

### To run the Synchronize GL Company Cost Centers with Existing Organizations process:

1. Select Synchronize GL Company Cost Centers with Existing Organizations in the name field.
2. Select the chart of accounts for which you want to run the process.
3. Click Submit to run the process.

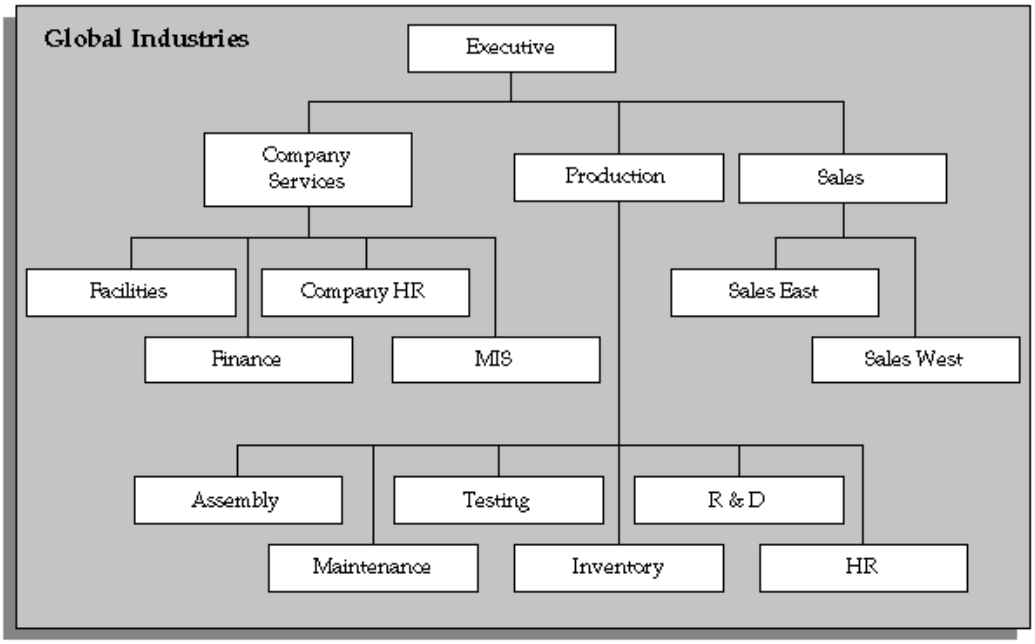
# Organization Hierarchies

## Organization Hierarchies

Organization hierarchies show reporting lines and other hierarchical relationships between organizations in your enterprise.

You set up a *primary reporting hierarchy* reflecting the main reporting lines, as established in the organization chart of your enterprise. Below is an example of an organization chart showing the reporting lines of a single-company enterprise.

***Chart Showing Primary Reporting Lines***



### Multiple Hierarchies

In addition to the primary reporting hierarchy, you can set up as many other organization hierarchies as you need.

### Hierarchies for Matrix Management

Your enterprise may have a matrix management structure in which organizations have more than one reporting line. For example, looking at the organization chart for Global Industries, the HR organization under Production might have another reporting relationship to the organization Company HR. You can set up additional hierarchies to reflect secondary reporting relationships within your enterprise.

## Security Hierarchies

As well as constructing hierarchies to reflect reporting lines, you can also use hierarchies to control access to information. For example, in a decentralized enterprise you might want to give each regional manager access to the records of the employees in the organizations in their region.

Looking again at the organization chart for Global Industries, you want managers in the Sales East office to have access to the records of all employees in the eastern region sales groups. You can do this by building a geographical hierarchy of your regions and the organizations in each.

You can also give managers in the Sales East office access to records in other organizations by creating a global organization hierarchy structure.

## Hierarchies for Reporting

When you run some of the Oracle HRMS standard reports, you can specify an organization hierarchy to determine which organizations and employees the report covers. You can also use this approach in your own standard or ad hoc reports. You can create additional organization hierarchies just for analysis and inquiry purposes.

In the US, to produce reporting for government authorities, for example EEO-1 and VETS-100 reports, you build special *establishment hierarchies* to obtain the correct coverage of employees.

## Organizational Change and Version Control

Changing your hierarchies to reflect simple changes in reporting lines is easy. You create a new *version* of your existing hierarchy and modify parts of its structure. Oracle HRMS retains earlier versions of hierarchies for historical information.

However, when you experience a major restructuring, it is often best to create new work structures, including new organizations and reporting lines.

> **Tip:** You can create future-dated versions of your organization structures and use these to prepare for reorganization in advance. You retain previous versions of your hierarchies for historical information.

If you want to read more information about dated information and hierarchy versions, see Managing Change Over Time, *Oracle HRMS Enterprise and Workforce Management Guide*

## Global Organization Hierarchies

Global organization hierarchies enable you to work on organizations in multiple business groups and provide standard functionality for global reporting. In a

multinational enterprise with organizations in multiple business groups, for example, global hierarchies enable you to set up a single global reporting hierarchy for management or approvals. In other words, you maintain only one hierarchy instead of several.

A global hierarchy can contain organizations from any business group on your database. By associating a global organization hierarchy with a global security profile you can create a security hierarchy that gives users access to organizations across business groups.

For more information about security profiles, see Security Profiles, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

If you use the Oracle HRMS forms interface, then you cannot access data across business groups using one responsibility, even if you associate a global security profile to your responsibility. Your access is limited to organizations in the business group defined in the HR:Business Group profile option.

## Creating Organization Hierarchies

Create organization hierarchies to show reporting lines and other hierarchical relationships. If you want to include organizations from a single Business Group, use the Organization Hierarchy window, alternatively, use the Global Organization Hierarchy window to include organizations from any Business Group. Always define hierarchies from the top organization down.

You must define the top organization in the hierarchy, and at least one organization subordinate to it.

> **Note:** To access the Global Organizations Hierarchy window you must have a global security profile associated with your responsibility and your System Administrator must add the window to the menu.

### To set up a new organization hierarchy:

1. Enter a unique name for the hierarchy, and check Primary if it is your main reporting hierarchy.
2. Save your work.
3. Enter the version number and start date for the hierarchy.

   You can copy an existing hierarchy. See: To copy an existing hierarchy, page 1-116, below.
4. Save your work.
5. Query the top organization name in the Organization block.

6. In the Subordinates block, select the immediate subordinates for the top organization.

   If you are using the Global Organization Hierarchy window, the lookup displays which Business Group each organization belongs to as organizations from different Business Groups can have the same name.

7. To add organizations below one of these immediate subordinates choose the Down Arrow button for the organization.

   The Organization block now displays the organization you selected. You can add subordinates to *this* organization. To return to the previous level, choose the Up Arrow button.

   > **Note:** The list of organizations from which you can select in the Subordinates block includes organizations that are already in the hierarchy. If you select such an organization, you will move it and all its subordinates within the hierarchy.
   >
   > See: Changing Organization Hierarchies, page 1-116

### To enable position control:

1. Query the organization hierarchy in the Name field.

2. Check the Top Node Position Control Enabled checkbox to select this hierarchy as the one that operates under the position control business rules.

   You can designate only one hierarchy for position control. Any versions you create of this hierarchy are also position controlled.

3. Determine the top node for position control (the level at which position control begins):

   - To set the level at the highest organization so that position control is enabled for all organizations, it is sufficient to check the Top Node Position Control Enabled check box as in the previous step.

   - To set the level so that position control begins at a subordinate level, choose the organization in the Subordinate block and select Yes from the LOV in the Position Control Enabled field.

4. To exclude an organization that shouldn't operate under position control rules, choose the organization in the Subordinates block and select No from the LOV in the Position Control Enabled field.

   Excluding the organization automatically excludes its subordinates.

**Note:** If you are converting positions from a legacy system, use HR_POSITION_API before enabling position control. You do not have to approve legacy positions you create before defining position control organizations.

### To change the top node for position control:

1. Query the organization hierarchy version that's position controlled.
2. Query the organization that was the previous top node in the Organization Name field.
3. Click the Up button to move the organization into the Subordinates block and select No from the LOV in the Position Control Enabled field. Excluding the organization automatically excludes its subordinates, but if subordinate organizations have a Yes value in the Position Control Enabled field, you must change them manually to No or to a blank.
4. Query the organization that will become the new top node in the Organization block.
5. Click the Up button to move the organization into the Subordinates block and select Yes from the LOV in the Position Control Enabled field.
6. Exclude subordinate organizations from position control as desired by choosing the organization in the Subordinates block and selecting No from the LOV in the Position Control Enabled field.

### To create a new version of an existing hierarchy:

1. Query the name of the hierarchy.
2. In the Version field, use the Down Arrow to move through existing versions of the hierarchy until you reach a version number for which no other data appears. Enter the start datefor the new version.

   **Note:** Overlapping versions of a hierarchy cannot exist. Whenever you enter a new version of a hierarchy, the system automatically gives an end date to the existing version. Oracle HRMS retains the records of obsolete hierarchies, so you do not lose any historical information.

You can copy an existing hierarchy. See: To copy an existing hierarchy, page 1-116, below.

3. Query the top organization name in the Organization block.

4. In the Subordinates block, select the immediate subordinates for the top organization.

5. To add organizations below one of these immediate subordinates, choose the Down Arrow button for the organization.

   The Organization block now displays the organization you selected. You can add subordinates to *this* organization. To return to the previous level, choose the Up Arrow button.

### To copy an existing hierarchy:

1. Enter or query the name and number of your new hierarchy version and choose the Copy Hierarchy button.

2. Select the name and version number of the hierarchy you want to copy.

   Details of this hierarchy then appear in the Organization and Subordinates blocks. You can change these.

## Changing Organization Hierarchies

### To view which organizations are in a hierarchy:

1. Query the hierarchy and version you want to view.

2. In the Organization region, enter a query on the Name field.

3. Check the Exists in Hierarchy check box and run the query. You can now scroll through the organizations currently in the hierarchy in the Name field.

### To add a new organization to an existing hierarchy:

1. Query the hierarchy and version you want to change.

2. Query the parent organization for the one you are adding.

3. Select the new organization in the Subordinates block.

   **Important:** The list of organizations from which you can select in the Subordinates block includes organizations that are already in the hierarchy. If you select such an organization, you will move it and all its subordinates within the hierarchy.

### To change the top organization of an existing hierarchy:

1. Query the hierarchy and version you want to change.
2. Query the new top organization.
3. Select the previous top organization in the Subordinates block.

### To move an organization and all its subordinates:

1. Query the hierarchy and version you want to change.
2. Query the new parent organization for the one you want to move.
3. Select the organization to move in the Subordinates block. All the organization's subordinates are moved.

## Deleting Organization Hierarchies

You cannot delete an organization hierarchy if other versions exist, or a security profile uses it.

### To delete an organization hierarchy:

1. Remove all the subordinate organizations from the hierarchy, starting at the lowest level.
2. Delete the organization hierarchy.

## Running the Organization Hierarchy Report

Oracle HRMS includes a standard Organization Hierarchy Report to display the relationships between organizations in a hierarchy.

You run reports from the Submit Requests window.

### To run the Organization Hierarchy Report:

1. In the Name field, select Organization Hierarchy.
2. Enter the Parameters field to open the Parameters window.
3. Enter the effective date for which you want to see the report.
4. In the Organization Structure field, select the hierarchy. If there are multiple versions, select a version.

If the effective date lies between the version's start and end dates, the report shows information for the effective date. If it lies outside these dates, the report shows information for the start date of the version.

5. In the Parent Organization field, select the highest organization in the hierarchy that you want to see on the report.

6. Enter Yes in the Managers Shown field to see managers' names. The report includes all assignments that have a manager status in the Assignment window, at the time the report is run.

   If there are more than ten managers, you see the number of managers only.

7. Choose the Submit button.

## Launching a Hierarchy Diagrammer

You edit organization or position hierarchies in the Organization Hierarchy Diagrammer window or the Position Hierarchy Diagrammer window.

> **Note:** Before you can access the hierarchy diagrammers, a TCF SocketServer must be running. Your system administrator can set this up for you.

### To launch a hierarchy diagrammer:

1. Open the Organization or Position Hierarchy window using the Diagrammer menu option. This displays a cut-down version of the Hierarchy window.

   > **Note:** To create hierarchies containing organizations from only one business group, choose the Diagrammer Local option. To include hierarchies from more than one business group, choose the Diagrammer Global option.

2. Query the hierarchy you want to edit. If it does not yet exist, you can create a new hierarchy by:

   - Setting Up a New Hierarchy, page 1-122
   - Creating a New Version of an Existing Hierarchy, page 1-123
   - Copying an Existing Hierarchy, page 1-124

3. Choose the Open Editor button to open the Hierarchy Diagrammer window. The selected organization or position hierarchy is displayed.

The hierarchy diagrammer is divided into three regions:

- The hierarchy diagram region. This displays a diagrammatic representation of an organization or position hierarchy. You use the hierarchy diagram region to graphically view, create or modify an organization or position hierarchy.

- The node list region. This displays a Find block and a list of organizations or positions that you have located using the Find feature and have not yet attached to a hierarchy.

- The node properties region. This displays details of the selected organization or position. Use the buttons to display further position and assignment details for the selected organization or position.

## Finding an Organization or Position in the Hierarchy Diagrammers

You can display a list of unattached organizations or positions so that you can view additional information about them or add them to your hierarchy. You do this using the node list region of the Hierarchy Diagrammer windows.

### To find an organization or position:

1. In the Name field, enter the name of the organization or position.

   - To broaden the search, you can use the percent (%) symbol to replace one or more letters; for example, enter Sales% to find Sales North, Sales South, Sales Central and so on.

   - To narrow the search, you can enter different criteria in the other fields next to the Find button; for example, to find all Sales organizations with Senior Sales Executive jobs, you could enter:

     - **Sales%** in the Name field

     - **Senior Sales Executive** in the Job field

     - **Active** in the Hiring Status field

2. Choose the Find button.

   All matches for the criteria you entered are listed below the Find area.

3. To remove the search results and start a new query, choose the Clear button.

## Changing the Appearance of a Hierarchy Diagram

You can change the appearance of a hierarchy diagram including:

- The levels displayed in the hierarchy
- The style of the hierarchy diagram
- The text style, size and color, and the background and line colors
- The area of the screen used to display the diagram

The changes you make affect the appearance of the diagram both on screen and when you print it out.

#### Expanding and Collapsing Diagrams

Organizations and positions with subordinate levels in a hierarchy diagram include buttons for expanding or collapsing diagrams:

- Expand button: indicates an expandable parent organization or position with hidden subordinate levels. Click Expand to display subordinate organizations or positions within the parent.
- Collapse button: indicates a collapsible parent organization or position with subordinate levels. Click the Collapse button to collapse subordinate organizations or positions.

#### Changing the Style of a Diagram

You can choose from three styles of hierarchy diagram:

- Vertical style: displays the hierarchy diagram in a stacked hierarchical layout
- Interleaved style: displays the hierarchy diagram in an expanded stacked hierarchical layout
- Org chart style: displays the hierarchy diagram in an organization chart style layout.

Choose a style from the View menu or choose the appropriate toolbar button to change the style.

#### Changing the Font and Colors in a Diagram

You can change the colors of the following elements of a hierarchy diagram:

- Background

- Lines and boxes
- Nodes (organizations or positions)
- Node text

### To change the font and colors in a diagram:

1. Launch a hierarchy diagrammer, page 1-118.
2. Choose Edit, Preferences from the menu to display the Preferences window.
3. Choose the Choose Color... button for the diagram element you want to change.
4. Select a color from the Color Picker dialog.

   You can also change the style and size of the text by selecting from the Font Name and Font Size poplists in the Preferences window.

#### Changing the Display Area of a Diagram

You can increase the area of the screen available for the hierarchy diagram by hiding unwanted regions of the window using the following options on the View menu:

- Node Properties
- Node List
- Toolbar
- Status Bar

> **Tip:** If you still want to see the properties for organizations or positions, you can display a floating properties sheet. Click the Properties button on the Node Properties region before you hide the region, or choose Properties from the Edit menu.

You can also resize the amount of space available to each region of the window, to make the best use of the display space, by dragging the edge of the region.

## Displaying Information about Organizations or Positions

You can display additional information about organizations or positions in the hierarchy diagrammers, to assist you in creating or editing hierarchies.

### To display additional information for an organization or position:

1. Launch a hierarchy diagrammer, page 1-118.

2. Either:

   - Select an organization or position in the hierarchy diagram region of the window.

   or:

   - Use the Find feature to display an unattached organization or position in the node list region of the window and then select it.

3. Choose one of the following buttons:

   - Organizations or Positions
   - Assignments
   - Organization Holders or Position Holders

   A floating window appears displaying additional details for the selected organization or position.

4. To search further on the selected organization or position, you can filter your search using search criteria. For example, if you select an organization and choose the Position button, you can search using the following criteria: Position Name, Hiring Status, and Job. The results will appear in a separate page. The navigation buttons appear if the search retrieves more than one page of data

## Setting Up a New Hierarchy

Use the hierarchy diagrammers to graphically set up a new organization or position hierarchy. You must first use the Organization or Position window to specify:

- The top organization or position in the hierarchy
- All the subordinate organizations or positions for the hierarchy.

See: Creating an Organization, page 1-31

See: Defining a Position, page 2-35

### To set up a new organization or position hierarchy:

1. Open the Organization or Position Hierarchy window using the Diagrammer menu option. This displays a cut-down version of the Hierarchy window.

**Note:** To create hierarchies containing organizations from only one business group, choose the Diagrammer Local option. To include hierarchies from more than one business group, choose the Diagrammer Global option. The availability of these options depends on whether your system administrator has granted you access to the local or global versions of the windows using function security. See Menu Structure, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

2. Enter a unique name for your new hierarchy, and check Primary if it is your main reporting hierarchy.

3. Enter the version number and start date for the hierarchy.

4. Save your work.

5. Choose the Open Editor button to open the hierarchy diagrammer.

6. In the node list region of the window, query the organization or position that represents the top level in the hierarchy and drag it to the hierarchy diagram region of the window.

7. Build the hierarchy by adding organizations or positions, working from the top level down.

   - To add an organization or position, drag it from the node list region to the organization or position that will be its parent and drop it on top to add it to the hierarchy. The cursor displays a small rectangle when you are on top of the parent value.

   - You can move and remove organizations or positions to modify the hierarchy until you have the correct structure.

8. Save your hierarchy. The hierarchy diagrammer commits the changes to your database to create the new hierarchy.

## Creating a New Version of an Existing Hierarchy

Use the hierarchy diagrammers to create a new version of an existing organization or position hierarchy.

### To create a new version of an existing hierarchy:

1. Open the Organization or Position Hierarchy window using the Diagrammer menu option. This displays a cut-down version of the Hierarchy window.

**Note:** To create hierarchies containing organizations from only one business group, choose the Diagrammer Local option. To include hierarchies from more than one business group, choose the Diagrammer Global option. The availability of these options depends on whether your system administrator has granted you access to the local or global versions of the windows using function security

See Menu Structure, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

2. Query the name of the hierarchy.

3. In the Version field, use the Down Arrow to move through existing versions of the hierarchy until you reach a version number for which no other data appears. Enter the start date for the new version.

   Overlapping versions of a hierarchy cannot exist. When you create a new version of an existing hierarchy, the system automatically gives an end date to the existing version. Oracle HRMS retains all previous versions of hierarchies for historical information.

4. Save your work.

5. Choose the Open Editor button to open the Hierarchy Diagrammer window. The new version of the organization or position hierarchy is displayed.

6. Modify the hierarchy to add, move or remove organizations or positions to create the new hierarchy.

7. . Save your hierarchy. The hierarchy diagrammer commits the changes to your database to create the new hierarchy.

   You can also create a new hierarchy by copying an existing hierarchy, page 1-124 and modifying it.

## Copying an Existing Hierarchy

Use the hierarchy diagrammers to create a new organization or position hierarchy by copying an existing one.

### To copy an existing hierarchy:

1. Open the Organization or Position Hierarchy window using the Diagrammer menu option. This displays a cut-down version of the Hierarchy window.

**Note:** To create hierarchies containing organizations from only one business group, choose the Diagrammer Local option. To include hierarchies from more than one business group, choose the Diagrammer Global option. The availability of these options depends on whether your system administrator has granted you access to the local or global versions of the windows using function security.

See Menu Structure, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

2. Choose New from the File menu, enter a name for your new hierarchy and save your work.

3. Enter a start date for your new hierarchy and choose the Copy Hierarchy button (do not save first).

4. Select the name and version of the hierarchy you want to copy, and choose Copy.

5. Choose the Open Editor button to open the Hierarchy Diagrammer window. The copied organization or position hierarchy is displayed.

6. Modify the hierarchy to add, move or remove organizations or positions to create the new hierarchy.

7. Save your hierarchy. The hierarchy diagrammer commits the changes to your database to create the new hierarchy.

## Adding Organizations or Positions to a Hierarchy

Use the hierarchy diagrammers to add organizations or positions to an organization or position hierarchy.

### To add organizations or positions to a hierarchy:

1. Launch a hierarchy diagrammer, page 1-118.

2. In the node list region of the window, query the organization or position you want to add to your hierarchy.

3. Select the organization or position name in the node list, and drag it to the organization or position that will be its parent, then drop it on top to add it to the hierarchy.

   The cursor displays a small rectangle when you are on top of the parent value.

4. Save your changes to the hierarchy. The hierarchy diagrammer commits the changes to your database.

## Removing Organizations or Positions From a Hierarchy

Use the hierarchy diagrammers to remove organizations or positions from an organization or position hierarchy.

### To remove organizations or positions from a hierarchy:

1. Launch a hierarchy diagrammer, page 1-118.

2. Select the organization or position you want to delete from your hierarchy, and drag and drop it into the node list region of the window, or choose Cut to remove it and all its descendants.

   You are not deleting the organization or position from your database; you are just removing it from the hierarchy.

3. Save your changes to the hierarchy. The hierarchy diagrammer commits the changes to your database.

## Moving Organizations or Positions in a Hierarchy

Use the hierarchy diagrammers to move organizations or positions in an organization or position hierarchy.

### To move organizations or positions in a hierarchy (drag and drop):

1. Launch a hierarchy diagrammer, page 1-118.

2. Select the organization or position you want to move in your hierarchy, drag it to the organization or position that will be its parent and drop it on top to add it to the hierarchy.

   The cursor displays a small rectangle when you are on top of the parent value.

3. Save your changes to the hierarchy. The hierarchy diagrammer commits the changes to your database.

### To move organizations or positions in a hierarchy (cut and paste):

1. Launch a hierarchy diagrammer, page 1-118.

2. Select the organization or position you want to move in your hierarchy, and choose Cut from the Edit menu or choose the Cut button on the toolbar.

3. Move the cursor over an organization or position that you want to move it beneath, or next to.

   The cursor displays a small rectangle when you are on top of the parent value.

4. Choose:

   - Paste, to move the organization or position to be a subordinate of the one selected

   or:

   - Paste Next to, to move the organization or position to the same level as the one selected.

5. Save your changes to the hierarchy. The hierarchy diagrammer commits the changes to your database.

## Menu and Toolbar Commands

You can access the following commands from the hierarchy diagrammer menus. Use them to create, edit, save and print hierarchy diagrams and control the display of hierarchy diagrams on your desktop.

Some of these commands are also available from the toolbar, which provides quick access to commands you use often.

### File Menu

**Save**

Saves changes made to the hierarchy to your database.

**Refresh**

Refreshes the screen to show the latest changes to the hierarchy diagram.

**Print**

Prints the hierarchy diagram as it is displayed in the window.

**Close Hierarchy Editor**

Exits the hierarchy diagrammer and prompts you to save any changes.

**Cut**

Removes the selected organization or position and any subordinate organizations or positions from the current hierarchy, and places it on the clipboard. Use with Paste or Paste next to, to move the organization or position.

**Copy**

Copies the selected organization or position and any subordinate organizations or positions in the current hierarchy to the clipboard. Use with Paste or Paste next to, to move the organization or position. When you paste the copied organization or position, it is removed from its original place in the hierarchy and replaced at the new location, thus having the same effect as the Cut option.

**Paste**

Pastes an organization or position into the hierarchy at the level below the selected organization or position.

**Paste next to**

Pastes an organization or position into the hierarchy at the same level as the selected organization or position.

**Delete**

Removes an organization or position from the hierarchy diagram. Unlike Cut and Copy, this option does not place the organization or position on the clipboard. Only removes organizations and positions from the hierarchy and does not delete them from your database.

**Properties** (on-screen button)

Displays a floating window showing the properties of the selected organization or position. You can use this instead of the node properties region of the window.

**Preferences**

Displays the Preferences window, which you can use to change the text style and size,

and the colors of the text, lines, nodes and background of the hierarchy diagram.

### View Menu

**Vertical Style**

Changes the view of the current hierarchy diagram to a stacked hierarchical layout.

**Interleaved Style**

Changes the view of the current hierarchy diagram to an expanded, stacked hierarchical layout.

**Org Chart Style**

Changes the view of the current hierarchy diagram to an organization chart style layout.

**Node Properties**

Toggles on or off the region of the windowcontaining the properties of the selected organization or position, enabling you to display more of the hierarchy diagram.

**Node List**

Toggles on or off the region of the window containing the Find blockand the list of organizations or positions that are not part of the hierarchy, enabling you to display more of the hierarchy diagram.

**Toolbar**

Toggles the toolbar on and off.

**Status Bar**

Toggles the status bar at the bottom of the main hierarchy diagrammer window on and off.

### Help Menu

**About**

Displays information about the hierarchy diagrammer.

**Library**

Displays help for using any Oracle applications you have installed.

# 2

# Jobs and Positions

## Jobs and Positions Overview

Oracle HRMS provides flexible work structures to represent the ongoing responsibilities and functions that an organization must carry out in order to meet its goals. Jobs and positions are placeholders in your enterprise model representing *roles*, which enable you to distinguish between tasks and the individuals who perform those tasks. Oracle HRMS uses *jobs* to represent the duties people perform and the required skills, for example:

- Professor
- Developer
- Accountant

*Positions* represent a specific instance of a job, such as:

- Assistant Professor of Sociology
- Senior Software Developer
- Payroll Accountant

A clear conceptual model of your enterprise helps you to optimize your workforce. Jobs and positions are key components of that model. The flexibility of jobs and positions enables you to model your enterprise accurately. Use jobs or positions (in combination with organizations, assignments, grades, salaries, and other HR structures) to manage your workforce in a manner consistent with the way you do business.

### Using Oracle HRMS to Manage Jobs and Positions

As you implement your enterprise model, one of the earliest decisions you face is whether to use jobs, positions, or a combination of both. You can use Oracle HRMS to

define required skills and valid grades for either one. Enterprises fall into one of three general categories:

- Rule-based
- Project-based
- Hybrid

If your organization is a rule-based enterprise, you regulate employment, roles, and compensation according to strict policies and procedures. Fixed roles tend to endure over time, surviving multiple incumbents. You manage roles rather than individuals. Examples include government, higher education, and health care. Rule-based industries, where roles continue to exist after individuals leave, typically model the enterprise using positions.

If your organization is a project-based enterprise, such as a construction or software company, you require the flexibility to assign people to new projects or organizations on a regular basis. You manage people and their skill sets, rather than fixed roles. This requires the flexibility to match competencies to tasks quickly and easily. Project-based organizations, where roles end when individuals complete a project, typically model the enterprise using jobs.

If your organization is a hybrid enterprise, you assign some individuals to fixed roles, and others to multiple projects. This is typical of large manufacturing or corporate enterprises. Hybrid enterprises such as these model the enterprise using both jobs and positions.

See: Defining a Job, page 2-20

See: Defining a Position, page 2-35

## Roles

HRMS provides two key contexts for a role: the primary role and the HRMS role.

- **Primary role**. You set up primary roles using jobs and positions, as described above, to define the key tasks the enterprise employs people to perform.
- **HRMS role**. You set up HRMS roles to grant permission to authorize or approve HR actions, such as creating new positions, recruitment, hiring, or managing expenses. Roles also specify destinations in a routing and approval sequence, such as initiator, classifier, reviewer, or approver. You can associate multiple users with the same role, allowing anyone occupying the role to process a position or budget transaction, or approve other changes, such as promotions or transfers. See Defining HRMS Roles for Transactions, page 2-79

## Position Control

If your organization is a rules-based enterprise (such as a public sector organization), you typically exercise strict control over positions, adhere to budgets, engage in approval processes, or comply with stringent reporting requirements. HRMS position control, budgeting, and workflow features provide many configurable tools to help you address these needs. These tools enable you to:

- Maintain strict control over the creation or modification of positions
- Keep position-related costs in line with available funds
- Meet legislation-mandated funding and reporting requirements
- Route business transactions for approval automatically

If you implement control budgeting, the application triggers warnings or errors when entering an assignment that would put you over budget. You can also report on budget statuses and under budgeted line items at any time in the budget cycle. See: People Budgets and Costing Overview, page 3-1

## Job and Position Evaluation

Position and job evaluation features enable you to assess how your employees, contingent workers, and contractors are aligning with the goals of the organization. An evaluation system enables you to define grades and set appropriate compensation levels. See: Creating an Evaluation System, page 2-96

## Reorganizing Your Workforce

Using Mass Move features, you can reorganize your workforce in a single step. You can transfer a group of employee assignments to another organization, or to new positions within the same organization. See: Reorganize Your Business Group, page 2-105

## Position Hierarchies

You can also build hierarchies to model reporting lines and other relationships. If you use positions to define primary roles, you can add positions to a position hierarchy to provide a view of line management reporting across your organization or business group, reorganize your workforce, or route HR actions for approval. You create and maintain hierarchies using the Position Hierarchy window or the Position Hierarchy Diagrammer. See: Creating a Position Hierarchy, page 2-99

## Jobs and Positions Using SSHR

Self Service Human Resources (SSHR), available under separate license, provides

functions for making changes to roles, assignments, and terms of work. Available features provide user-friendly access to HR actions known as Manage Employment Events in SSHR, and *personnel actions* in the public sector. See: Overview of Self-Service Actions, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

### Key Concepts

To broaden your understanding of Oracle HRMS jobs and positions, see:

Project Based Enterprises Example, page 2-10

Rule Based Enterprises Example, page 2-13

Hybrid Enterprise Structures Example, page 2-16

Job Management, page 2-18

Jobs and Position Evaluation, page 2-96

Business Group Reorganization, page 2-104

Position Control, page 2-28

People Budgets and Costing Overview, page 3-1

Workflow for Position Control and Budgeting, page 2-73

Transaction Type Wizard, page 2-55

Business Rules, page 2-63

## Jobs and Positions

Each enterprise has its own unique culture, which is reflected in the organization of work and in the management of people within the enterprise. The enterprise culture also affects the reward systems in operation and the control systems that are required.

The range of enterprise modeling is very wide. However, it is possible to identify some common types of enterprise, and we suggest how you might implement Oracle HRMS for three typical enterprise models. These are:

- Project based enterprises
- Rule based enterprises
- Hybrid enterprise structures

### How closely should you follow one or other of these models?

These suggestions are not intended to provide a blueprint for your own implementation. They should help you to see the possibilities - how you can implement and use different combinations of organizations and jobs, or positions in your own situation.

## What is the role of jobs and positions in enterprise modeling?

Jobs and positions play a key role in the modeling of work structures in your enterprise. Jobs and positions can represent the roles of your employees in different ways.

## What is the role of position hierarchies?

Position hierarchies show the detailed line management reporting in each organization throughout the enterprise. You can set up a primary hierarchy and multiple secondary hierarchies to show reporting lines, including "dotted line" reporting. You can also use position hierarchies to control access to information.

## Can I reorganize my Business Group?

Yes. By using Mass Move you can move a group of assignments to different positions either within an organization or between organizations. You can move assignments to existing positions or create new positions for them. You can also change the grade, location, and standard conditions of an assignment.

## How do you manage positions?

Position management is a flexible system that offers standard and advanced levels of control. Standard controls allow organizations to define positions, route and approve budgets. Advanced controls allow organizations to route and approve position definitions and budgets, and to ensure that positions and related costs are kept in line with available funds in accordance with policy. Configurable business rules perform validations, and interfaces from payroll, budgeting, and commitments to General Ledger ensure accurate and current information.

Management reports provide data and analysis necessary to stay within budget and to adjust expenditures or budgets in response to permanent changes, such as reclassification of a position, authorization of new positions, or temporary changes such as temporarily freezing a position.

You can choose whether to apply position control to organizations, to an entire organizational hierarchy or selected organizations within it.

## How do you ensure that actions are in keeping with policy?

Using Oracle Workflow, you can route position transactions and budget worksheets to gather the necessary approvals and authorizations to ensure that decisions are in keeping with current policy. You can route transactions based on routing list, position hierarchy, or supervisory hierarchy (the application extrapolates the hierarchy based on the supervisor entered on the user's primary assignment).

When you route a transaction, the application automatically identifies the next authorized user. You can send the transaction to that user or skip that person and send

it to the next person.

You can easily view the routing history for current and past transactions, including details about the actions taken, and for each action, the prior and subsequent destinations.

The application maintains an historical record of information about a position using date tracking. Date tracking allows the user to view position data and gather information that can be used to address complaints or other actions brought by employees or bargaining units.

## Is there a simple way to create new positions?

Yes, position copy allows you to duplicate position data and easily define new positions.

# Jobs and Positions

## Jobs and Positions

You define roles to represent the ways that different groups of employees work. In Oracle HRMS you can use *jobs* or *positions*, or a combination, to define roles.

**Job:** A job is a generic role within a Business Group, which is independent of any single organization. For example, the jobs Manager and Consultant can occur in many organizations. You can also use jobs to set up supplementary roles that an employee might hold, for example, fire warden, or health and safety officer. You can distinguish these supplementary roles from other jobs by using Job Groups.

**Position:** A position is a specific occurrence of one job, fixed within one organization. For example, the position Finance Manager would be an instance of the job of Manager in the Finance organization. The position belongs to the organization. There may be one, many, or no holders of a position at any time.

### Example

In a large structured organization, you may have a permanent establishment of positions for most of your employees.

However, you may also have groups of employees hired to perform specific tasks. This can be on a temporary or a permanent basis. Staff in this category can include agency workers, consultants and contractors. For these staff, you can define the role more flexibly as a job.

### Model Your Organization and Roles

When you plan how to model your organizations and roles, consider the following points:

- Positions are normally used in role-based enterprise structures where clearly defined rules largely determine the ways employees work, and the compensation and benefits they receive.

- To manage fixed establishments of posts that exist independently of the employee assignment, it is best to use positions.

If you decide to use positions to represent your enterprise structures you need to consider carefully how to use organizations.

Positions provide you with a finer degree of structural definition and control than organizations on their own. You can use both organizations and positions to represent your reporting structures. However, if you define both, you must also maintain both over time. This may lead you into duplication of effort and information.

**Tip:** If you decide to use positions to represent how people work in your enterprise, it is best to define most of the detail at the level of the position. Do not duplicate this detail in organization structures.

Use organizations to show your highest level of departments or divisions. Use positions and position hierarchies to show the reporting groups existing in your enterprise.

If you use positions to define roles, you can use Oracle's position and budget functionality to stay within budget and adjust position expenditures or budgets in response to changes in organizations, personnel, and funding sources. You can also use Oracle Workflow for routing position definitions and budgets for approval, and configure predefined business rules that perform necessary validations. See: Position Control, page 2-28.

## Additional Information About Roles

As you define roles in your enterprise you can describe their responsibilities, requirements, and working conditions. This can be done in a number of ways:

- For positions you can enter the location, probation period and working hours in the standard fields. Entering location and working hours for an organization provides a default for all positions within that organization.

- You can attach documents, for example, text describing the objectives and tasks of the job or position, to each record.

- You can add up to twenty additional fields to each window in a descriptive flexfield. These fields can be global (they always appear) or context-sensitive (they appear only when triggered by another piece of information). For example, you could set up fields to record the health and safety requirements of a position, or its suitability for job share.

- You can add any number of Extra Information Types (EITs). This would enable you to set up fields to hold information to which only users with certain responsibilities would have access. For example, you could set up fields only to be used by managers.

- You can enter competencies against both jobs and positions. Then, using the suitability matching tool, you can match employees' competencies to those required by a job or position. This enables you to identify training needs or rank potential successors. You can also enter which position is the planned successor for each position in your enterprise.

## Job Groups

Each job is held in a job group. The job group is used to store jobs of a similar type

together in one group. All standard jobs created in Oracle HRMS, that is, those jobs that define the role the person is employed to fulfil,must be stored in the Default HR Job Group. This job group is automatically created for your business group is given the same display name as the business group. The internal name for the job group is of the format HR_<Business_Group_ID>, for example HR_2273.

Only jobs entered in the Default HR Job Group will be available in other windows in Oracle HRMS such as Position, Competencies, or Assignment. The only windows within Oracle HRMS that can access jobs outside of the Default HR Job Group are the Supplementary Roles window and the Elections window.

You can set up additional job groups to store supplementary roles that your employees might fulfil. These would be performed in addition to the roles described above and could be as a result of company defined initiatives like fire warden, or defined by legislation such as health and safety representative.

See: Workers' Representation and Supplementary Roles, page 4-12

You can also set up job groups to be used by Oracle Projects.

The way in which your enterprise uses job groups will depend on the setting of the HR: Cross Business Group profile option. If this is set to Y then you can create global job groups that can be accessed by all business groups on your system. If it is set to N then you can only create job groups for use within your business group.

> **Note:** The HR Default Job Group is business group specific and therefore all jobs held within it are only available within your business group. Global job groups only apply to supplementary roles within Oracle HRMS, and Oracle Projects.

## Job and Position Names

Before you define your jobs and positions, decide whether you want to use simple names and codes, or multi-segment job and position names to hold more information.

The name can be a title only, as for example:

- Director
- Analyst
- Training Manager

You can add another segment to categorize the jobs or positions. In this way, you can use segments to identify subgroups of employees within your enterprise. For example, a job name can comprise a title and a job type, such as:

- Director of Finance.Director

- Assistant Director of Finance.Director
- Finance Officer.Professional

Similarly, a position name can comprise a title, a position number, and an indicator showing whether the position is part-time. For example:

- Training Manager.020001.F/T
- Secretary to the Training Manager.020013.P/T

You define the segments of the job and position names and their valid values by setting up the *Job Name key flexfield* and the *Position Name key flexfield*. Normally your system administrator does this.

## Project Based Enterprises Example

Project based enterprises are often service based industries where flexibility and organizational change are key features. Examples are consultancy or construction companies, or small manufacturing or software companies.

### Single Projects

In these enterprises, employees are assigned to work on single projects for a given period of time. For example, an engineer working on a large scale construction project might be assigned to the project for a period of six months. All their work and costs are associated with this one project. When this is complete the employee moves on to perform a similar role on another project. In this example you would expect the employee to have a single assignment, with 100% of the assignment costs allocated to a single project. The employee assignment might also contain project specific information, such as location or group information.

### Multiple Projects

In a different situation, an employee might be assigned to a number of projects at the same time. For example, consider an Applications Consultant working for Oracle. This person is employed as a consultant by a specific organization within Oracle but the project work is undertaken outside Oracle. The consultant performs similar tasks in different implementation projects, and costs are allocated on the basis of actual time spent working on each project. In this example you would expect the consultant to have a single assignment in Oracle HRMS and the project allocation and costs to be entered as timecard information.

In both of these examples, employees perform specific roles, but they work on different tasks or projects at different times. Project based enterprises normally have a fluid organization structure with regularly changing reporting and management lines. This fluidity provides the flexibility required to compete in rapidly changing markets.

Organizations can be formed or transformed at short notice as different projects or

management groups are formed. Employees can be assigned and reassigned to these organizations, also at short notice, although they normally retain their basic role, or job.

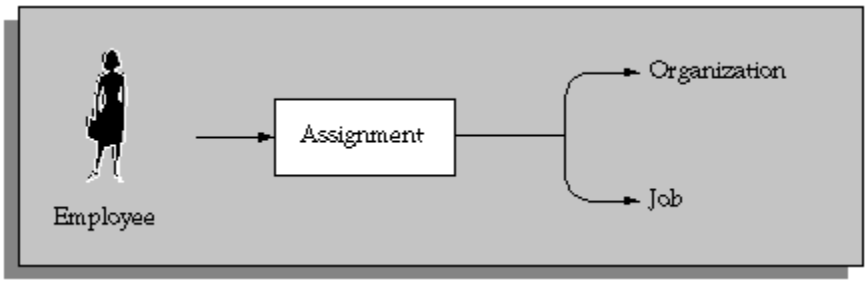
#### Representing Organizations and Jobs

To represent both single and multiple projects, you need the ability to define and change organization structures quickly and easily. You must also be able to move employees between organizations while keeping the same job. For both of these reasons, you would probably use organizations and jobs to show how people are assigned and managed.

### Jobs

Jobs are independent of organizations. In the Assignment window, you can change the assignment organization or job independently.

### Project Based Assignments



Typically, you would not define Positions to show this type of working. Positions require additional definition and maintenance, and do not reflect the sort of flexible working environment found in this type of enterprise.

### Organizations

Working with organizations and jobs as the basis of the employee assignment, you can also consider how you would reflect the assignment of the employee to individual projects. There are a number of possible options to consider.

- Use organizations to show actual projects, and assign employees to projects.
    - Useful for single projects. For multiple project assignments you would need to use multiple assignments.

- Use a People Group flexfield segment to hold the project code.
    - An alternative for single projects, where you want to use the organization to show internal management structures. However, for multiple project assignments you would still need to use multiple assignments.

- Use a Cost Allocation flexfield segment to hold the project code.
  - Useful for both single and multiple project assignments. You can collect project cost information at the work assignment or the timecard entry level.

#### Organization Structures

You should define organizations down to the level of individual managers, and use the manager flag on the Assignment window to identify the manager of each organization. Also, define your primary organization hierarchy to show the detailed management reporting lines among organizations and managers. In this way you can show that employees assigned to an organization are managed by the organization's manager.

> **Important:** It is best not to use the *Supervisor* field of the assignment window to identify managers for individual employees. This field is used to identify a personal supervisor for an employee and is not updated if the supervisor moves to another job or organization.

#### Job Structures

In this type of environment, jobs show the specific roles employees perform. Therefore, you are likely to have multi-segment job names to distinguish different types and different levels of jobs in the enterprise. For example, you might define a three segment job name with *Department*, *Title*, and *Job Level*. An actual job combination might then be 'Applications.Consultant.Senior'.

#### Project Allocation and Costing

With this type of implementation, you would probably use the assignment to identify management type reporting. You would identify project-working using a segment of the Cost Allocation flexfield to show *Project Code* for each assignment.

If you set the qualifier Assignment to Yes for this segment, you could enter percentage costs for the assignment to different project codes. If you set the qualifier Element Entry to Yes, you could use a timecard element to record and cost the actual hours worked on each project.

See: Data Costed at the Organization and Assignment Levels, page 3-62

#### Other Management Issues

When you consider this environment there are other areas your decisions may affect:

**Remuneration Policies:** Individual compensation and benefits are often based on personal negotiation, or performance reviews. Therefore you will probably have fewer rules to determine policy and more consideration of the actual values entered for an employee.

**Grades and Jobs:** Typically grades and jobs are very closely linked. For example, the name Senior Consultant may identify both the role of an employee and his or her

relative status and eligibility for compensation and benefits.

You may decide to set up the same structures for both the job and the grade. This will be true if you want to set up rates of pay with minimum and maximum values associated with your grades.

**Budgets:** Headcount budgets are usually allocated at the level of the organization, or the combination of organization and job.

You can calculate your salary budgets from the definition of organization and job headcount budgets, combined with valid grades and grade rate information.

Actual salary costs in an HR environment can be calculated from the actual salaries of assigned employees.

Actual salary costs in an environment including Oracle Payroll can be calculated directly from payroll results.

See: People Budgets and Costing Overview, page 3-1

**Vacancies and Recruitment:** Vacancies are not created by default whenever an employee leaves. Managers often have the freedom to decide if they want to replace an employee, or to recruit to a different role.

The recruitment process is often informal and allows for recruitment by resume (or CV). Individual managers are usually responsible for interviewing and selecting candidates. This may be on a one-to-one basis.

**Career Planning and Development** The need for individual career planning and development is matched by the need to identify skilled employees for specific projects, jobs, and positions.

Using a competence-based approach, you can identify, and measure the competencies held by your employees and match them to work opportunities. Depending on the structure of your enterprise, you can model career and succession plans using either career paths or position hierarchies. This enables you to both continue to develop your employees, whilst ensuring that you have potential successors for all your positions.

## Rule Based Enterprises Example

The rule-based enterprise is often a highly structured environment in which all aspects of work and remuneration are well organized and regulated. Common examples of this type of enterprise are found in government, education, health and other public sector industries. A key feature of this type of enterprise is the concern with managing positions, or posts. Positions exist, and are managed independently of people in post.

You can picture the role type organization as a 'Greek temple', whose strength is in its pillars. These pillars are the specialist functions or departments that exist within the enterprise. They are strong and almost independent organizations. For example, the Finance department would have very little involvement in the working of the HR department.

Coordination between the groups takes place at the top of the structure by a narrow band of senior management - the pediment. In this environment it is assumed that this should be the only personal coordination needed. If the separate pillars do their job, as laid down by the rules and procedures, the ultimate result will be predictable.

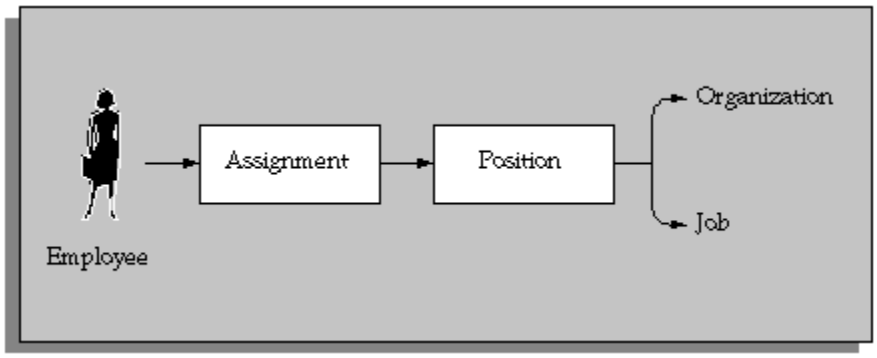
Roles are usually more important than individuals. People are selected for satisfactory performance of a role, which is described so that a range of individuals could fill it. Reward systems are likely to be role or rule-based.

Often, clearly defined procedures exist for every task and process within the enterprise. For example, job descriptions and job evaluation procedures define individual roles and positions of authority. Also, it is common to find that procedures exist to govern communications, such as colored and numbered forms, committee reports, and so forth.

### Representing Positions

Positions are most appropriate for this type of enterprise and provide the finer detail on work structure and line management that is needed in a fixed establishment. Employees are assigned to a position, and by definition to the organization and job for that position.

**Position Based Assignments**



Because you focus on the use of positions and position hierarchies in this model you define organizations to show only the major divisions in your enterprise. You can model the details of these departments and sections using your position hierarchies. (If you also define detailed organizations and hierarchies, you are defining the same structural information twice.)

In this situation, jobs provide an additional level of information for positions, which is independent of any specific organization. For example, you may want to define *job types* of Managerial, Executive or Clerical so that you can identify skill requirements and levels of benefits for each job.

### Position Name

In this environment you should consider using the segments of the position name to hold other key information about the position. For example you may want to consider using the following as segment values:

- Cost Code

  To show the cost center, or a cost code for each position in your establishment, you could use the same list of cost codes as your general ledger.

- Funding Organization

  To show funding for a position from an external source. For example, government funding.

- Multiple assignments allowed - Y/N?

  In Oracle HRMS a position can have any number of holders. You can set headcount budget values to track any variance on budget, or you could use this type of segment to prompt users.

- Current status

  As part of your position control procedures you may need to mark the status of a position for reporting or management purposes. For example, you can label a position as Frozen, Vacant or Active.

  > **Note:** You can use the Additional Position Details descriptive flexfield to hold this type of information about positions if you do not want the information to be visible to all users.

#### Management Reporting Lines

You can define a primary position hierarchy to show the management reporting lines for all your positions. You should find that most of your security and reporting needs are based on this primary hierarchy. Groups are identified by selecting a manager and all the positions that report to that manager in this hierarchy.

#### Other Management Issues

When you consider this environment there are other areas your decisions may affect:

**Remuneration Policies:** Individual compensation and benefits are often regulated, or based on union negotiated agreements.

Reward systems are usually based on the role performed rather than on personal or performance assessment. This may mean that you have to define detailed eligibility rules for compensation and benefits.

**Comparative Grades and Positions :** Valid grades are defined for positions and it is common to use grade steps and progression points.

National or union pay scales establish actual rates of pay for a grade and this is independent of performance. An employee is paid the rate for his or her grade and step. Incrementing rules, which determine progression to the next step, are usually part of the plan and are often time-based.

Job evaluation methods exist to compare roles across the industry with agreed grading structures and rates of pay.

**Budgeting**Headcount or full-time equivalent budgets are usually set for each position. You can calculate your Salary budgets from the position budgets, combined with valid grades and progression point information.

In an HR environment you would calculate actual salary costs, at any time, from the current salaries of assigned employees.

In an environment including Oracle Payroll, you would calculate actual salary costs directly from payroll run results.

**Vacancies and Recruitment** There is an automatic vacancy when an employee terminates employment. The position exists even when there are no holders.

The stages of the recruitment process and the procedures surrounding these are probably well defined and regulated.

Standard letters for each stage of the process are also likely to be well established.

In this environment people are recruited for their ability to perform a role. You would hold job descriptions and skill requirements for each position using attachments for text and the Special Information Type for structured data.

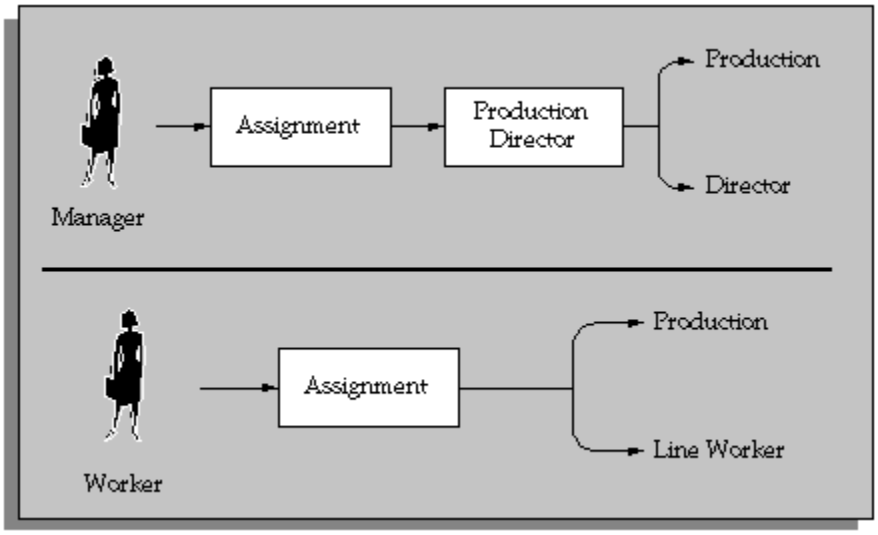
**Standard Reports** Typically there is a well defined set of standard reports needed in this environment. Often these are required by government.

## Hybrid Enterprise Structures Example

Many enterprises combine different types of structure for different groups of employees. Typical of these hybrid types are large manufacturing or corporate enterprises where management and administrative roles are fixed into specific organizations, but other roles are managed in a more flexible manner.

In Oracle HRMS you would set up this type of hybrid enterprise using positions for some groups of employees, and organization and jobs for others. For example, in one factory organization you might define a position for the Production Manager, and one job for all production line workers.

**Hybrid Enterprise Assignments**



### Employee Assignments

In this type of enterprise most of your workers would be assigned to an organization and a job. However you would define management positions because they have the characteristics of fixed roles within specific organizations, including the idea of automatic vacancy on termination of the assignment. In each organization you would have only one position. This would be the manager, and by default, any other employee who works in the organization would report to the manager.

### Other Management Issues

Other issues for managing groups of employees by position, or by organization and job are the same as for Project Based Enterprises, page 2-10 and Rule Based Enterprises, page 2-13.

**Remuneration Policy:** Employees working in unionized jobs participate in negotiated rates of pay and conditions. You would define grade rates or progression points to deal with negotiated pay rates for workers in jobs.

**Salary Administration** Employees in management positions are more likely to have their salary administered personally and be reviewed on their performance. You define grade rates and salary bases to deal with salary administration for employees in positions.

# Job Management

## Job Management

Oracle HRMS's job definition functions can contribute to the efficient management of your business and, where required, help you satisfy statutory reporting requirements. A fully specified job enables you to:

- Select the best candidate for a role.
- Position the job within your industry using standard job evaluation schemes and industry salary surveys.
- Specify privileges or authorities attached to the role.

### Candidate Selection

When you define a job in Oracle HRMS, you can specify:

- The competencies the worker must have. You can copy into the job definition competencies you defined as essential for your enterprise, and you can copy the competencies required for a job to the competence profile of the worker. Thus, you can describe competencies consistently at the business, job, and person levels.
- The grades of potential workers.
- Work choices, such as work locations and work schedules, that are suitable or acceptable for the job.

Having specified the job requirements (and also recorded the competencies and work preferences of individual applicants and employees), you can use Oracle HRMS's suitability matching functions to identify candidates for roles and roles for candidates.

### Industry Positioning

Enterprises usually need to assess key activities of their organization, such as job evaluation and salary setting, in relation to industry standards. Accordingly, Oracle HRMS enables you to:

- Record job evaluation scores. For a particular job, you select an appropriate job evaluation system and record the job's score.
- Compare the salary for a particular job in your enterprise with those for comparable roles in the industry.

- Specify whether a job is a benchmark job or relates to one. A benchmark job is one that represents multiple similar jobs in reports and salary surveys.

### Job Groups

You can define all roles in an enterprise as jobs. Such roles include those associated with the main business of the enterprise, such as sales manager or clerk, as well as those considered supplementary, such as fire warden or safety representative.

Oracle HRMS organizes jobs into job groups. (Some statutory reports require job group as an input value.) For each business group, there is a default job group to which standard HRMS jobs must belong. Supplementary roles, however, must not belong to the default job group. You can define additional job groups for these supplementary roles and for use in Oracle Projects. Job groups you define can apply globally or within a single business group.

## Job Extra Information Types

You can define as many Extra Information Types as you require to hold additional information about jobs.

> **Note:** To be able to access the predefined EITs, you must link the EIT to your responsibility.
>
> See: Setting Up Extra Information Types Against a Responsibility, *Oracle Human Resources Information Systems*

#### Predefined Extra Information Types

Job Career Management Information - Records job tracking information required for succession planning. You can identify whether the job is a key role in your enterprise and the turnover rate of the job.

## Creating a Job Group

You create job groups in the Job Groups window.

### To create a job group:

1. Enter a name for the job group. If the HR:Cross Business Group profile option is set to Y then this name must be unique across the system. If it is set to N then it must be unique within the business group.

2. Select the required flexfield structure. This will determine the fields that are displayed in the Job window when this job group is chosen.

3. Select a business group if required. If the HR:Cross Business Group profile option is set to N, then your business group will be displayed and you will not be able to amend it. If the profile option is set to Y then you can either select your business group, or leave the field blank to create a global job group.

   **Note:** The HR Default Job Group that contains all the standard HRMS jobs is business group specific and therefore all jobs held within it are only available within your business group. Global job groups only apply to supplementary roles within Oracle HRMS, and Oracle Projects.

4. Check the Master Job Group check box if this is to be the master job group. The jobs within the master job group can have jobs from other job groups mapped onto them using Oracle Projects.

   If the HR:Cross Business Group profile option is set to Y then you may only have one master job group across the system. If it is set to N then you can have one for each of your business groups.

5. Save your changes.

## Defining a Job

You use the Job window to define jobs, the skills that workers require, and the grades to which they can be assigned. You can also enter job evaluation scores, if you have set up a job evaluation system.

You can also enter supplementary roles in the Job window. You can record information about any roles an employee holds which are not part of the employee's contract; for example, fire warden or health and safety representative.

If you intend loading historic assignment details into Oracle HRMS, ensure you enter valid start dates for your jobs. You cannot assign an employee to a job before the start date of the job.

**Tip:** Consider using a fixed date as a default for your initial setup, for example, 01-JAN-1901. This simplifies your data entry.

### To define a job:

1. Enter a start date early enough to handle any historical information you want to enter.

2. Select the required job group. This defaults to the Default HR Job Group for your Business Group and should not be changed unless you want to enter a job that

describes a supplementary role to a person's normal employment, such as a fire warden or health and safety representative, or you are setting up a job to be used in Oracle Projects.

Only jobs entered in the Default HR Job Group will be available in other windows in Oracle HRMS such as Position, Competencies, or Assignment. The only windows within Oracle HRMS that can access jobs outside of the Default HR Job Group are the Supplementary Roles window and the Elections window.

3. Enter a unique name for the job. If there is at least one enabled segment in the Job Name flexfield, a window opens when you enter the Name field. You must enter a unique combination of segments in this window.

   The flexfield that opens is dependent on the Job Group you have selected.

4. Enter a numerical approval authority value to define an approval level for incumbents of this job. This value is used by Oracle Approvals Management to determine whether a person has sufficient authority to approve a transaction.

5. Indicate whether the job carries any additional employment rights or is a benchmark job. A benchmark job is one that can be used to represent a number of jobs in reports such as salary surveys.

   Save your work and do not complete any further steps, if you are entering a supplementary role.

6. Select a benchmark job, if required.

   **Note: For Indian users only**: In the Further Job Information field, select the classification of the job, such as highly skilled or skilled. This is used for information purposes only.

7. Save the job. You can now enter further information for the job you have defined. Note that you can only enter some types of further information, such as valid grades or work choices, for jobs defined in the Default HR Job Group.

8. Choose Evaluation to enter evaluation information and an overall evaluation score for the job.

   See: Entering Evaluation Information, page 2-97

   If you are using suitability matching, then enter your competencies using the Competence Requirements window.

   See: Defining Competency Requirements, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

### Defining Job Requirements

9. Choose Requirements to enter job requirements, such as required qualifications or valid experience, to help you match people to roles.

   See: Entering Job and Position Requirements, page 2-24

### Other Information

10. Choose Valid Grades to enter the grades to which workers can be assigned.

    See: Entering Valid Grades for Jobs or Positions, page 2-24

11. Choose Work Choices to enter work choices relevant to the job.

    See: Entering Work Choices for a Job or Position, page 2-25

12. Choose Survey Mapping to link salary survey lines to your job.

    See: Mapping Salary Survey Lines, *Oracle HRMS Compensation and Benefits Management Guide*

13. Choose Extra Information to enter job categories for the job. You can link as many categories as you need to a job.

    **Mexico only:** You must click this button and specify a Social Security Salary Type for this job.

    > **Note:** If you have Oracle Projects installed, you can enter further information in the Extra Job Information flexfield.

    See: Implementing Resource Utilization, *Oracle Project Resource Management Implementation and Administration Guide.*

    You can investigate the job categories in your enterprise using HRMS Intelligence.

14. Enter any additional types of job information for your enterprise.

    > **Note:** You can only access job categories and other types of Extra Information if your system administrator has set them up for your

responsibility.

## Entering Additional Information About Jobs and Positions

As you define roles in your enterprise, you can describe their responsibilities, requirements, and working conditions. There are a number of ways to enter additional information about a role:

1. For positions, you can enter the location, probation period and working hours in the standard fields.

   See: Defining a Position, page 2-35

2. You can attach documents to each job or position record.

   See: Using Attachments, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

3. You can add up to twenty additional fields to the Job window, and up to thirty to the Position window using a descriptive flexfield.

   See: User Definable Descriptive Flexfields, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

4. You can add any number of Extra Information Types (EITs) to each window.

   See: Setting Up Extra Information Types (Excluding Organization EITs), *Oracle HRMS Configuring, Reporting, and System Administration Guide*

5. You may need to add other information, such as required qualifications or valid experience. You do this by entering competencies against jobs and positions.

   See: Defining Competence Requirements - No Core Competencies, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

6. **Comparing and Relating Roles**

   You may also want to relate roles to each other and define the relative grading of the roles. You can relate roles in the following ways:

   - By forming multiple hierarchies of positions to show reporting relationships or career paths.

     See: Creating a Position Hierarchy, page 2-99

   - By linking jobs into multiple career paths to show suggested progression paths.

     See: Defining Career Paths, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

- By recording successor positions and relief positions (to cover in the case of absence) against each position.

  See: Defining a Position, page 2-35

- By recording the grades that are valid for each job and position.

  See: Entering Valid Grades for Jobs or Positions, page 2-24

- If you use an evaluation system (such as the Hay Evaluation System) to compare roles, you can set up fields to hold evaluation information and an overall score for each job and position.

  See: Job and Position Evaluation, page 2-96

## Entering Valid Grades for Jobs or Positions

When you have evaluated the relative status of your roles (using an evaluation system or some other approach), you can associate valid grades with each role. You may choose to define valid grades for a few key roles and then use these as benchmarks for all other roles.

When you assign an employee to a grade, the list of grades you select from indicates which grades are valid for the employee's job or position.

You enter valid grades in the Valid Grades window for a job or position.

### To enter valid grades:

1. Query the job or position and select the Valid Grades button.

2. Enter and save the valid grades for each job. You can enter a single grade, or a set of grades.

   Select as many valid grades as you require.

   > **Note:** The Date From defaults to the date the job or position becomes active, or the date the grade becomes active, if this is later. You can change this date.

## Entering Job and Position Requirements

Using the Job Requirements window and Position Requirements window, you can store any personal attributes or experience required by a job or position. You can then use this information to list employees or applicants who might be suitable to hold the job or position.

**Note:** If you are following the competence approach for suitability matching, enter competence requirements for jobs and positions in the Competence Requirements window.

### To enter job or position requirements:

1. Select the name of a special information type.
2. Enter the Requirements field to open the window corresponding to this special information type.
3. In this window, enter the precise requirement of the job or position and choose OK.
4. If the requirement is essential to the job or position, check the Essential check box. This information is used in the Skills Matching Report.
5. Save the requirements.

## Entering Work Choices for a Job or Position

You can enter work choices that can affect the capacity of workers and applicants to be deployed in your enterprise. Work Choices include willingness to travel, willingness to relocate, and preferred working hours and work schedule. You can enter work choices for a job or position, and compare these with the personal work choices entered for people.

To enter schedule information for a person, you can:

- Set up extensive availability information such as shifts, schedules, and calendar events using integrated features from HRMS and Common Application Components (CAC).

  See: Setting Up Availability, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

- Set up holiday calendars, shifts, and work plans in OTL.

  See: Time Management Structures, *Oracle Time and Labor Implementation and User Guide*

Alternatively, you can enter basic schedule information in various areas of Oracle HRMS, such as here in the Job or Position window.

**Important:** The application does not use the schedule information that you can enter here to determine a worker's availability. This is for information purposes only.

The decision for which method to set up is based on knowledge of which applications use which information.

You enter this information in the Work Choices window, accessed from the Job or Position window.

### To enter work choices for a job or position:

1. Check the relevant work requirements boxes if the job or position requires the holder to:
   - Work in all locations
   - Relocate
   - Be willing to relocate
   - Travel
   - Hold a passport
2. Enter the length of time the worker must perform the job or position, for example, indefinitely or two years.
3. Enter the normal working hours (for example, 9.00 to 5.30), the work schedule (the working days in the week or pattern of shifts), the proportion of full time hours required, and the minimum length of service required.
4. Check the relevant international deployment boxes if the job or position requires the worker to:
   - Work in all countries
   - Be willing to relocate
5. Select the countries to which the worker might be relocated.
6. Select the locations to which the worker might be relocated.
7. Enter any further job or position requirements, if required.

## Changing a Job or Position's End Date

If you no longer want users to be able to select a job you can enter an end date beyond which the job will be unavailable.

To achieve the same effect for a position you must select the hiring status of either Frozen or Eliminated. See: Position Hiring Status, page 2-33

If you have set up a position in error and want to delete it from the system, you can do this providing that you have placed no incumbents in it.

### To change a job's end date:

1. Edit the To field in the Dates region.

   If you amend the end date for a job to which grades are attached, Oracle HRMS checks if any of the valid grade end dates are later than the end date of the job. If they are, it amends the 'valid' grade end date so that it matches the job end date. For example, if the grade is valid from the 01-JAN-1900 until 01-JAN-2000 and you amend the job end date to 01-JAN-1999, the end date of the grade for that job is re-set to 01-JAN-1999.

   If you remove the end date of a job, Oracle HRMS finds the valid grades for that job with the same original end dates and removes these dates as well.

# Position Management

## Position Control

Oracle's position, budget, and workflow functionality supports business processes that many organizations refer to as position control, especially in the public sector. For example, using these business processes, private and public sector organizations alike can:

- Define or Update Positions, page 2-29
- Prepare budgets and transfer them to Oracle General Ledger, page 3-25
- Control Access to Data, page 2-29
- Route and Approve Data, page 2-29
- Validate Data Against Configurable Business Rules, page 2-30
- Budget and Control Positions Using FTE, page 2-30
- Capture Historical Data, page 2-31
- Plan Using Control Budget Reports, page 2-31

Organizations require different levels of control when managing positions. For example, a standard level of control might typically involve position definition, management planning, reporting against budgets, and cost tracking. Organizations fitting this description generally base their budgets on positions, jobs, or organizations. Enterprises using this approach do not generally require rules to control positions and budgets, or to ensure that costs correspond to available funds in a fiscal period.

More advanced control typically might involve complex approval processes, encumbrance accounting and commitment of funds, budget reallocation, and reporting requirements based on external funding authorities. Organizations fitting this description base their budgets on positions, and use these budgets to keep positions and related costs in line with available funds in a fiscal period.

If your organization requires a standard level of control, you:

- define positions and enter budget data using the position description window
- prepare budgets using the budget detail window, if you do not require workflow or if you base your budgets on other criteria than positions, jobs, or organizations

If your organization requires a more advanced level of control, you:

- define positions and enter budget data using routed position transactions
- prepare and approve budgets using the budget worksheet, to manage costs associated with positions
- validate data using configurable business rules to perform necessary validations
- control access to position transactions using templates

Regardless of the degree of position control you choose to implement, you can plan based on control budget reports, control access to data using Oracle's standard security, post commitments to General Ledger for budgeted entities (positions, jobs, grades, organizations), and capture historical data using datetracking.

## Define or Update Positions

If you designate an organization as a position control organization, you define and maintain positions for that organization using position transactions. Otherwise, use the existing position definition window. If you are converting positions from a legacy system, use HR_POSITION_API first, then enable position control.

See: Creating Organization Hierarchies, page 1-113.

Using Oracle Workflow, you can route and approve the data in the transaction prior to updating that information to the database. Upon update to the database, you can update position data.

## Control Access to Data

In addition to standard security, you can control access to position definition and budgeting in several ways. You can:

- Specify which workflow roles, users, or positions can approve routed position transactions or budget worksheets
- Define rules that route transactions to the appropriate parties automatically
- Use templates for position transactions that specify the position or budget data that users can access, edit, and approve

You can grant or deny position user access to budget data. You can use the supplied task and workflow role templates, or create new ones to suit your requirements.

## Route and Approve Data

The process of establishing and maintaining positions and budgets involves appropriate approvals and reviews. Using Oracle Workflow, you can route transactions and obtain necessary approvals.

You can base routing on user-defined routing lists, position hierarchies, or supervisory hierarchies. The approval mechanism gives you control over who approves transactions and under what circumstances. You restrict which users process transactions by defining routing and approval rules.

When routing a transaction, you can specify who receives a notification when a given event occurs, such as successful posting to the database. You can also expedite routing by skipping people in the routing sequence, or by sending the transaction directly to an override approver.

After approving a transaction, the approver can apply the transaction to the database or have another user apply it (that user doesn't have to have approver status).

To ensure that transactions are processed in a timely manner, you can set a response time (in days) that returns a notification to the sender if there is no response when the interval elapses.

## Validate Data Against Configurable Business Rules

Configurable business rules provide the greatest degree of control in managing positions and budgets. They perform necessary validations to assure that money is available to compensate incumbents.

The business rules automatically run checks against actions on budgeted positions, such as hiring applicants, changing assignments, changing position definitions, and modifying budgets.

For example, the business rules prevent the incumbents' annual salaries from exceeding the position's budgeted amounts. Business rules enable you to advertise a position and process applicants without hiring anyone until the funding is approved.

You can configure business rules to ignore validation failures, halt processing, or issue a warning (the typical default).

## Budget and Control Positions Using FTE

Use business rules in combination with position FTE or budgeted FTE to ensure that position control issues a warning or halts processing when hiring or promoting a person would put you over allotted FTE.

Create positions with a Position Type of Shared or Single Incumbent, and enter FTE for each position. If you are using an HRMS control budget, enter an FTE value against the position in your budget. (Position control checks budgeted FTE first, giving it precedence over position FTE.)

When you assign a person to a controlled position using position FTE, the application checks the sum of Assignment Budgeted FTE for all assignments to that position. If that sum exceeds position FTE, the application displays a warning or halts processing.

When you assign a person to a controlled position using a control budget, the application checks the sum of Assignment Budgeted FTE as before. If that sum exceeds

the position's budgeted FTE for the budget period in force on the assignment's effective date, the application displays a warning or halts processing.

You can also configure the application to recalculate and update Assignment Budget Values for FTE automatically when determining factors change, such as working hours or frequency.

See: Recalculating Assignment Budget Values, page 3-17

You can define an overlap period for a position, specifying a duration of time during which you suspend FTE checking. This enables an incumbent to train a successor. You can reserve a position for any person you specify, effectively reserving the FTE for that person as well.

When you perform a Delete Future Changes operation on an assignment, the application validates and displays a message to ensure that the position attached to the assignment is active.

For example, consider that a Position A is attached to an assignment on 01-Jan-2000. When you perform a future dated update on 01-Jan-2003 on this assignment, the Position A gets replaced by the Position B. When you change the status of the Position A as Eliminated and use the Delete Future Changes option to perform an update on the assignment between the period 01-Jan-2000 to 01-Jan-2003, then the Position A becomes valid from Jan 2001 to end of time for that assignment. The application displays a message to ensure that the previous position attached to the assignment is active (Position A, in this case), whenever you perform a Delete Future Changes operation on the assignment.

## Capture Historical Data

Changing the Action Date in the Position Transaction window generates historical data. The Action Date also enables you to process future-dated transactions and perform retroactive changes. A transaction status window captures a complete routing history of pending and applied transactions. A history window captures position records that have a status of applied or submitted.

## Plan Using Control Budget Reports

Control budget reports provide data and analysis to help you stay within budget. You can make adjustments in response to temporary or permanent changes to organizations, personnel, and funding sources.

Management reports and process logs inform you of potential problems, and provide the data you need to analyze and solve them.

The process log is a key problem-solving tool. If there are any errors encountered in processing an action, such as failure to update the database, the application enters information about the error in the Process Log and changes the status of the transaction to show the error.

## Position Control Decisions

You can determine the extent to which you manage positions and position-related costs. The key question is, do you base your budgets on positions and do you use business rules to manage and validate position actions and their related costs?

If you choose to manage positions using business rules:

- Decide which organization hierarchy and organizations in that hierarchy should have position control.
- Decide which budget should manage expenditures on positions, jobs, grades, or organizations.
- Review the business rules and decide which business rules to ignore or to enforce as errors.
- Make the necessary workflow decisions described below.

If you choose to manage positions without using business rules:

- Decide if you want to route budgets for data entry and approval

  If you choose to route budgets, make the necessary workflow decisions described below.

For background information about position control refer to Position Control, page 2-28, Transaction Templates, page 2-76, and Workflow for Position Control and Budgeting, page 2-73.

For information about making budget decisions, refer to Budgeting Overview, page 3-1.

### Workflow

If you route transactions, make the following decisions.

#### Roles

- Identify the workflow roles that typify your enterprise and decide whether to add additional roles and lookups based on the predefined role types.

#### Routing and approvals

- Decide what routing style to use for each transaction type (position transaction and budget worksheets).

  The three routing styles are routing list, position hierarchy, or supervisory hierarchy.

- Based on the selected routing style, decide which users or positions have the authority to approve transactions.
- Decide whether to set up routing and approval rules to route transactions to the appropriate parties.

  The application automatically selects a routing sequence and qualifies users based on the values entered in the transaction.
- Decide when to update current and retroactive transactions (immediately or later).
- Decide when to update future-dated transactions (immediately or on effective date).

### Templates (position transaction)

- Decide whether to configure role and task templates.

  Review the supplied Basic Role and Create and Update position transaction task templates. Base your decision to define new templates on the type of work users perform, and on the view and edit permissions they require.

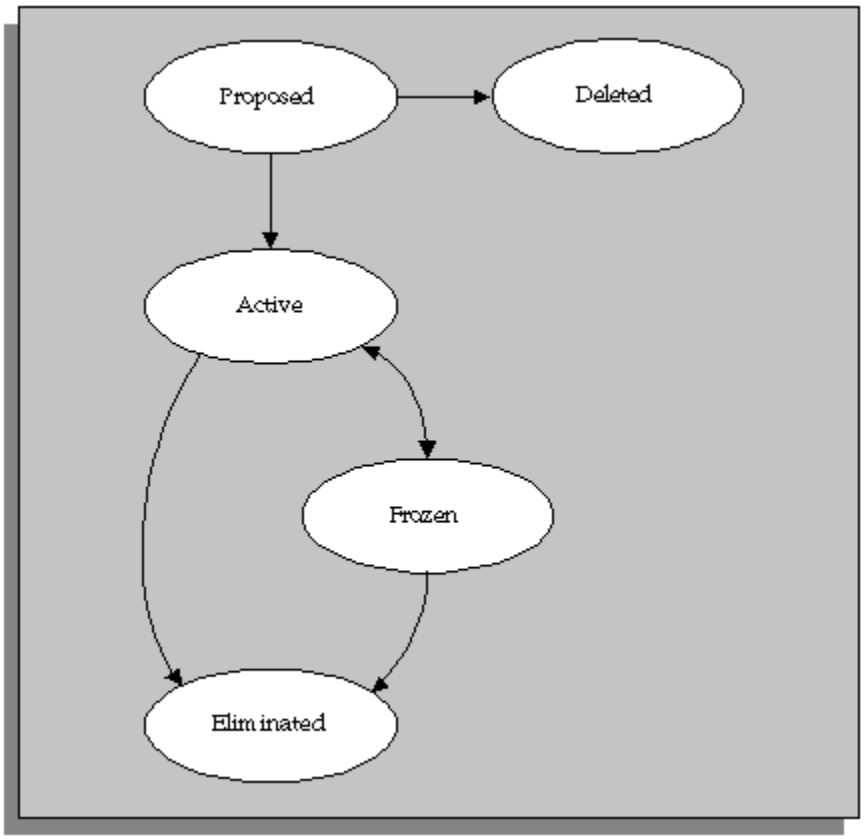
## Position Hiring Status

Every position must have a hiring status. The system statuses provided with Oracle HRMS are as follows. You can provide user names for these system statuses and map more than one user name onto each system status, if required.

- Proposed - For modeling or planning.
- Active - Available for use.
- Frozen - Position can continue to be used with current incumbents but no new incumbents can be placed in it.
- Eliminated - Position is no longer in use and will not be required in the future. A position cannot be reactivated when it has been eliminated.
- Deleted - Position was set up by mistake, or never approved. A position can only be deleted before its Start Date (that is, the date on which it was approved for use). A position cannot be reactivated when it has been deleted.

  **Important:** Positions have a Valid/Invalid status as well as a hiring status. You cannot assign an employee to an Active position if its status is Invalid (or a user defined status). You can only assign to a position with an Active hiring status *and* a Valid (or blank) main status.

**Valid Changes to Position Hiring Status**



## Position Extra Information Types

You can define as many Extra Information Types as you require to hold additional information about positions.

> **Note:** To be able to access the predefined EITs, you must link the EIT to your responsibility.
>
> See: Setting Up Extra Information Types Against a Responsibility, *Oracle Human Resources Information Systems*

The following is a list of predefined Extra Information Types.

- Seasonal Information - the estimated start and end dates for the season relevant to a seasonal position. You can enter a day and month without a year so that the information does not need to be updated each year.
- Reservation Information - the reason for reserving a position (or part of its FTE), the person it is reserved for, and the start and end dates of the reservation.

For example, the reservation status could be New Hire, in which case the start date would be the date the offer is made or accepted.

You can add your own reservation statuses using the Lookup Type POSITION_RESERVED_STATUS. Two values are seeded: Management Discretion and New Hire.

- Overlap Information - the proposed start and end dates of the period of overlap between one incumbent leaving and a new incumbent starting work in the position.
- Position Family - one or more classifications for the position.

  You create your own position families using the Lookup Type POSITION_FAMILY.
- Position Career Management Information - Records position tracking information required for succession planning. You can identify whether a position is a key role in your enterprise and the turnover rate of the position.

## Defining a Position

You use the Position window to define positions within your organizations and to add them to position hierarchies. You can add a position to an existing control budget and enter budget data to the period level, using the Budgets tab. You can also enter the skills that position holders require and the grades to which they can be assigned. You can enter position evaluation scores, if you have set up a position evaluation system.

> **Note:** Use the datetracked Position window if you are using any of the Oracle HRMS applications. If you do not use Oracle HRMS at your site, use the non-datetracked version of the Position window.
>
> Use the Position Transaction window for positions that belong to organizations that you have selected for position control.
>
> See: Creating Organization Hierarchies, page 1-113

#### Position Management Check Boxes

The check boxes at the top of the window are for information purposes only. They are checked if the position belongs to an organization selected for position control. The check boxes indicate whether the position is:

- Open: unfilled
- Under Review: changes to the position definition are in process using a position transaction
- Approved Future Actions: the position or changes to it are approved for a future effective date

See: Defining a Position with a Position Transaction , page 2-88 and Setting up Transaction Templates, page 2-86

### To define a position:

1. Set your effective date early enough to handle any historical information about the position that you want to enter.

   **Note:** Consider using a fixed date as a default for your initial setup, for example, 01-JAN-1901. This will simplify your data-entry.

2. If you are selecting the Active hiring status for the first time (see step 9, page 2-37), enter a Start Date. This is the earliest date on which a person can be hired into this position.

3. Enter a unique name for the position in the Date Effective Name field in the Position Details tabbed region.

   **Note:** The Name field at the top of the window displays the latest name on record for the position, irrespective of your effective date. This name is used on all other windows, such as assignment.

   If there is more than one segment in the Position Name flexfield, a window opens when you enter the Name field. You must enter a unique combination of segments in this window.

4. Select the position type. The choices are:

   - Single Incumbent, meaning that only one employee is allowed to hold the position at any time
   - Shared, meaning there can be several incumbents, up to the value of the FTE field
   - Pooled (Public Sector only), meaning the position is loosely defined so rules about FTE and hours are not enforced by the system
   - None, which you can select if you do not need to record position types

5. If the position is permanent and budgeted every year, select the Permanent check box.

6. If the position is only used in one season each year (such as a summer teacher), select the Seasonal check box. You can enter the season dates in the Seasonal Information extra information type.

7. Select the organization and job for this position. They must have a start date on or before the start date of this position.

   **Note:** You cannot change the organization or job once you have saved the definition.

   You can set up several positions that have the same job in the same organization. Each position name must be unique.

8. If you know that the position will be transferred to another organization or job in the future, enter the proposed end dates now, for information.

9. Select a hiring status. See: Position Hiring Status, page 2-33

   The Start Date field indicates when the current hiring status came into effect.

10. If the status is Frozen, you must enter a proposed end date for the status. Optionally, you can enter a proposed end date for Proposed or Active statuses, for information.

11. Select a location for the position, or leave the default, which is the location of the organization.

12. Optionally, select a status for the position.

    Selecting Valid or leaving the Status field blank enables employees to be assigned to the position, provided other conditions (such as an Active hiring status) are met. If the status is Invalid or any other status defined at your site, employees cannot be assigned to the position.

### Entering Hiring Information

13. Enter the number of Full Time Equivalents to be assigned to this position. If the Position Type is Single Incumbent, FTE must be 1.0 or less.

14. You can enter the number of incumbents that are planned for the position in the Headcount field.

15. If appropriate, select a bargaining unit code for the position. This is usually the legally recognized collective negotiating organization.

    **Note:** You set up your different bargaining units as values for the Lookup type BARGAINING_UNIT_CODE.

16. If required, enter the earliest date at which incumbents can be hired into this position. If you have created a requisition and vacancy for this position, the earliest hire date must be within the vacancy dates.

17. Enter the date by which the position should be filled. This date must be on or after the Earliest Hire Date.

18. Use the Permit Recruiting check box to identify, for your own information, a position that is frozen but due to become active in the near future.

    **Note:** The Permit Recruiting check box is for information purposes only.

### Proposed Entry Salary

19. Select the payroll to which the position's incumbents are normally assigned. This payroll's calendar can be used for calculations of budgeted amounts and commitments.

20. Select the salary basis to which the position's incumbents are normally assigned.

21. Select the default grade to be used to determine the entry salary of position incumbents.

    **Note:** If you maintain information about valid grades for the position or the position's job, this grade must be one of the valid grades. See: Entering Valid Grades, page 2-24.

22. Do **one** of the following, or leave these fields blank:

    - If the position is paid from a pay scale, select the grade step and scale rate that represent the entry level salary for this position. The system displays the value of the step on the scale rate you selected.

    - If you maintain a grade rate to hold entry salary for this position, select the appropriate grade rate. The value or range (minimum, maximum and midpoint values) for this grade rate are displayed.

### Probation

23. If there is a probation period for this position, you can enter its length in the Probation region.

### Overlap

24. Select the length of time a new incumbent can overlap with a leaving incumbent for transfer of skills.

    **Note:** You can enter proposed start and end dates for particular

periods of overlap using the Extra Information Types window.

### Entering Work Terms

**Note:** The Working Hours and Normal Start and End Times default from the organization, but you can override them.

25. Enter a number in the Working Hours field, and select the corresponding period of time in the Frequency field. For example, enter 40 and select Week.

26. Enter the normal start and end times in 24 hour format. For example, for 5.30 p.m., enter 17:30.

    **Note:** If this position operates within a shift system or has an unusual work schedule, you can record the shift pattern or days worked in the Work Choices window. See: Entering Work Choices for a Job or Position, page 2-25.

27. Select the name of a person who supervises this position. See also the Supervisor field in the Related Positions region if the position is supervised by the holder of a specified position rather than a named person.

28. Select the Replacement Required field if you want users to be warned that they should enter the name of a replacement when they enter an absence for a holder of this position. You might do this for positions where it is essential that a person is in charge at all times. See also step 31, page 2-39

29. **European users**: Select the Works Council Approval check box if the position falls under the jurisdiction of a Works Council.

### Related Positions

30. Select the position held by the supervisor or manager of this position.

31. In the Relief field, you can select the position that should be held by people who cover this position when the incumbent is absent.

32. Select the position from which a successor will to move to fill this position.

### Extended Pay Term

33. If required, enter comments, a posting description for recruitment purposes, and any special confidentiality or security requirements, such as a clearance level.

34. Save your position.

### Entering Budget Information

35. You can add your position to an existing control budget using the Budgets tab. In the Budgets region, in the Budget Name field, select a control budget from the list. The budget must be in force on your effective date. The application displays budget information you defined in Budget Characteristics, such as version, effective dates, and default budget set.

36. In the Budget Detail region, the application displays the measurement units the budget is tracking. You can enter total allocations for each measurement unit in the Allocated fields.

37. In the Periods region, you can also enter date ranges in the Start Date and End Date fields to identify budget periods you defined in your budget version. Here you can enter allocations at the period level.

    When you update a position, you can edit allocations on the Budgets tab to the period level.

    If you attached a default budget set in Budget Characteristics, the budget set provides the element and funding source information found in the budget set. Use the Budget Set and Budget Characteristics windows to make changes.

    See: Defining Budget Sets, page 3-15

    See: Defining Budget Characteristics, page 3-19

### Entering Additional Details

38. If required, enter comments, a posting description for recruitment purposes, and any special confidentiality or security requirements, such as a clearance level.

39. Save your position.

40. If you want to add the position to one or more position hierarchies, choose the Reporting To button. Select a hierarchy and the name of the position to which this position reports.

41. Choose the Evaluation button to enter evaluation information and an overall evaluation score for the position.

    See: Entering Evaluation Information, page 2-97.

42. Choose the Valid Grades button to enter the grades to which position holders can be assigned.

    See: Entering Valid Grades for Jobs or Positions, page 2-24

43. Choose the Others button to enter Requirements, Occupancy, Extra Information, Work Choices and Define Survey Mapping.

44. Choose Requirements to enter position requirements, such as required qualifications or valid experience, to help you match people to roles.

    See: Entering Job and Position Requirements, page 2-24

    **Note:** Check with your HR manager or system administrator whether this is the right window for entering position requirements. You use this window if requirements were defined using Special Information Types. Use the Competence Requirements window if you are following the competence approach.

45. Choose Occupancy to view all those people who have held a selected position or who are applying for it, and the dates of their occupancy. This information could be relevant for selecting people with the necessary skills for similar positions.

    See: Viewing Position Occupancy, page 2-52

46. Choose Work Choices to enter work choices that can affect an employee's, applicant's, contractor's, or ex-employee's capacity to be deployed within your enterprise (or a customer's).

    See: Entering Work Choices for a Job or Position, page 2-25

47. Choose Define Survey Mapping to link salary survey lines to your position.

    See: Mapping Salary Survey Lines, *Oracle HRMS Compensation and Benefits Management Guide*

48. Choose Extra Information to enter any additional information required by your enterprise.

    See: Position Extra Information Types, page 2-34

    See: Entering Extra Information, *Oracle HRMS Configuring, Reporting, and System Administration Guide*.

## Copying a Position

Position Copy reduces the time and effort required to create positions and ensures that position data is uniform and accurate across positions. You can use it when creating positions in anticipation of a change in organization, budget, or workplans.

When you use Position Copy, you have the flexibility to:

- Specify criteria for finding and selection position(s)
- Use existing positions and create new ones making minor or major changes to the position definition

- Preview the results before creating the final copies
- Save the set of positions and continue working on it at another time, for example when you have received all the information required to complete the position definitions

The Contexts window specifies the information (columns) you can view and change, based on Responsibility, Application, and Legislation.

See: Defining a Context for Mass Actions, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

In addition, your system administrator can restrict the positions that appear in the window to those falling within your security profile.

Use the Position Copy window.

### To copy a position:

1. In the Name field, enter a name that to identify the set of positions to be copied. (Enter a name even if you are going to copy only one position.)
2. In the Effective Date field, enter a date that corresponds to the position data you want copied.

   The Effective Date applies to all the positions that you query. If you do not enter a date, the system uses the current date.

   #### Entering Selection Criteria

3. Choose the Original tab and enter the Selection Criteria. You can copy a specific position or retrieve all positions that correspond to the criteria.
   - To copy a *specific* position, enter the Position Name and enter the position key flexfield information. Skip the Other Criteria field.

     **Note:** If you don't know the information to enter in each position key flexfield, choose the Combinations button and use the Position find dialog.

   - To retrieve *all* positions that correspond to a job, organization, hiring status, position type, or location, skip the Position Name field and enter Other Criteria.

     When you click the Other Criteria field, the system displays a dialog where you can choose a Job, Organization, Hiring Status, Position Type, and/or Location from the supplied List of Values.

4. Enter the number of copies for each retrieved position.

5. Choose Query to display the positions that match the Selection Criteria.

6. If necessary, change the number of default copies.

   - To have the system enter the default number of copies, choose All from the Selection pop-up list.

   - To have the system ignore positions you don't want copied, choose None from the Selection pop-up list.

   - To have the system copy a few positions from the list of retrieved positions, locate the positions you want to copy. Enter a zero (0) in the Copies column next to each position. Choose Invert from the Selection pop-up list. The system changes the zeroes to the Default Copies number and deselects the remaining positions.

   - To enter a greater or lesser number of copies than the default amount, manually change the number of copies in the Copies column.

### Entering Changes for New Information

7. Choose the New tab.

8. Click the Change List field to display the Change List's supplied values. Enter information that you want applied to the new positions.

   The information you enter in the Change List applies to all the positions; however, after you create your new positions, you can override the contents of individual fields.

9. In the Position Name field (optionally), enter a value for one of the position key flexfield segments that you want to change on all the newly created position names.

10. In the Column field, choose a Position key flexfield segment (denoted by an asterisk).

    The system changes this segment in each new position name based on the information you supply in the following steps.

    > **Note:** If you choose a different Column identifer, you must manually change the new position names to make each one unique before submitting the positions for update.

11. Choose an Operation. Use this field to specify how you want the Column item changed:

    - Choose Replace to substitute the data with data you enter in the With and/or Increment fields.

- Choose Suffix or Prefix to append the information in the With and/or Increment fields.

- Choose None to skip the Operation field.

  Choose this option when you want to change the data manually on the new positions rather than automatically apply an identifier.

12. In the With field, enter alphabetical and/or numeric information that replaces the Column item, or serves as a suffix or prefix.

13. In the Increment field, enter an amount by which to increase or decrease the Column item.

    The identifier for the first new position has an increment of zero. Subsequent positions increase or decrease this number based on the amount entered in the Increment field.

    For example, if you create five positions for Manager and enter II as a suffix in the With field, the new positions become ManagerII0, ManagerII1, ManagerII2, and so on. If you skip the With field and enter an increment of 1, the new positions become Manager0, Manager1, Manager2, and so on.

14. Choose the Other Info button for a list of additional position data to copy. Check the boxes that correspond to the data you want copied.

    **Note:** Position Extra Information includes all the Extra Information types associated with this position.

15. Choose the Create New button.

    When you choose the Create New button, the system creates a set of positions based on your selection and change criteria.

16. Deselect those positions that you don't want to copy.

    - To have the system skip positions you don't want copied, choose None from the Selection pop-up list.

    - To have the system copy a few positions from a longer list, deselect the positions you want to copy. Choose Invert from the Selection pop-up list. The application selects the formerly deselected positions and visa versa.

17. Make any necessary changes to the position data, replacing the displayed data by entering new data or choosing the appropriate data from the supplied List of Values.

    For example, you might change the Status, to change an existing status from Frozen

to Proposed.

18. Choose Other Info to select or deselect Position Extra Information or Work Choices for a specific position.

    After the system creates the new position(s), you can use the Position form to change the data contained in Position Extra Information or Work Choices.

#### Making Further Changes to Selection criteria

If you change the Selection Criteria after you create new positions, and then rechoose Create New, a dialog appears asking if you want to replace the positions and overwrite any manual changes you've made. Choose No to keep your changes and Yes to replace the positions.

> **Note:** If you are changing the Selection Criteria to model different results, you might create two Position Copy sets, submit the set you want and delete the other.

#### Making the Final Copies

19. Choose the Submit button to create the new position(s) and to update the database.

    When the set of positions is submitted, the system refreshes the position data with the exception of the Change List items and any manual changes you've made. It refreshes the data based on the Effective Date.

    The system validates the position(s) using the same validation process it does when you create a position with the Position form. You can query the new position in the Position form and continue making further changes, for example, to Position Extra Information.

#### Correcting Errors

If you copied more than one position, the successfully updated positions display a Status of Complete. You can take no further action on these positions.

If the system encounters an error when you submit the set, for example, a duplicate position name, the Status changes to Error New Record(s).

### To correct an Error:

1. Locate the position on the Original tab that has a status of Error New Record(s).

2. Choose the New tab to view the corresponding positions. Locate the positions that have a status of Error New Record(s).

   If you have many positions, you can sort the New folder by the Status column so that all Error New Record(s) are grouped together.

3. Review the change list items and make any necessary corrections.

   You might have an error, for example, if information that's required to complete a position is missing.

4. After correcting the information, resubmit the set of positions.

### To correct a Dependent Error:

If the system encounters an error when validating the Other Info (Position Extra Information and Work Choices), it generates the new positions and records a Error Dependent Record(s) status.

1. Locate the positions marked as Error Dependent Record(s) on the New tabbed region.

2. Query these positions on the Position form.

3. Make any necessary corrections to the position information.

#### Submitting Copies at Different Times

When you're copying many positions, you may not have the information on hand that you need to create and submit all the positions. You can process the information at different times by:

- Setting up different sets of positions based on which ones require further data entry

- Including all the positions in the same batch, but deselecting positions on the New tab

You can deselect a position and submit the other positions. The deselected ones display a Pending New Record(s) status. Complete the information, select the positions, and choose the Submit button.

If you have many positions, you can sort the New folder by the Status column so that all Pending New Record(s) positions are grouped together.

## Finding a Position

Use the Find window to display a single position or a set of positions that correspond to specific criteria.

### To query a position using the Find Position window:

1. Click the Name field, and enter the Position Name information.

   The Position name is composed of the segments of the position key flexfield. If you don't know what the segments are, you can query the information:

- Choose the Combinations button.
- Enter the query criteria in the Enter Reduction Criteria dialog, and choose the OK button.

  If you recall part of the search word(s), use the percent (%) symbol as a wildcard to retrieve all matches that contain the search word(s) or to replace letters whose case you don't know (the search is case sensitive).

  If one position is found, it's displayed immediately in the Position window. If more than one Position is found, the results are displayed in a separate window. Choose the appropriate Position Name.

2. Choose the appropriate Position Type in the Type field.
3. Choose a job in the Job field.
4. Choose an Organization in the Organization field.
5. Choose a Location in the Location field.
6. Choose a Hiring Status in the Hiring Status field.
7. Choose the Find button to find a position that corresponds to the criteria you've entered.

   **Note:** If you choose Find without entering any search criteria, the system displays the first position record in the Position window. You can use the [Down Arrow] key to display the next position.

## Updating Positions

Mass Position Update reduces the time and effort required to update positions and ensures uniform and accurate data across positions. You can use it to modify positions in anticipation of a change in organization, budget, or workplans.

When you use Mass Position Update, you can:

- Specify criteria for finding and selecting position(s)
- Change the position definition
- Preview the results before creating the final changes
- Save the set of positions and continue working on it at another time, such as when you have received all the information required to complete the position definitions

The information that you can select and change when updating positions depends on your Responsibility defined in the User Profile. The Contexts window controls what information you can view and change based on Responsibility, Application, and Legislation. In addition, your system administrator can restrict the positions that appear in the window to those falling within your security profile.

### To update a position:

1. Open the Mass Position Update window.

2. In the Name field, enter a name to identify the set of positions to be updated. (Enter a name even if you are going to modify only one position.)

3. In the Effective Date field, enter the date that you want the positions to change.

   The Effective Date applies to all the positions that you query. If you do not enter a date, the system uses the current date.

#### Entering Selection Criteria

4. Choose the Original tab and enter the Selection Criteria. You can change a specific position or retrieve all positions that correspond to the criteria.

   - To update a *specific* position, enter the Position Name and enter the position key flexfield information. Skip the Other Criteria field.

     **Note:** If you don't know the information to enter in each position key flexfield, choose the Combinations button and use the Position find dialog.

   - To retrieve *all* positions that correspond to a job, organization, hiring status, position type, or location, skip the Position Name field and enter Other Criteria.

     When you click the Other Criteria field, the system displays a dialog where you can choose a Job, Organization, Hiring Status, Position Type, and/or Location from the supplied Lists of Values.

5. Choose Query to display the positions that match the Selection Criteria.

6. If necessary, deselect all the positions you do not want to update. You can manually deselect positions, or you can use the Selection pop-up list to select None, then manually select the positions you want to update. Alternatively, you can deselect the positions you want to modify, then choose Invert. If you change your mind and want to update all the queried positions, you can choose All.

#### Entering Changes

7. Choose the New tab.

8. Click the Change List field to display the Change List's supplied values. Enter information that you want applied to the positions.

   The information you enter in the Change List applies to all the positions; however, after you modify your positions, you can override the contents of individual fields.

   > **Note:** In the Change List items, the Start Date is the updated position's Start Date at the top of the Position form, and the Effective date, the new "From" Effective Date. If you don't enter dates in these fields, the system uses the existing position dates.

9. Choose the Create New button.

   When you choose the Create New button, the system creates a set of positions based on your selection and change criteria.

10. Deselect those positions that you don't want to change.

    - To have the system skip positions you don't want changed, choose None from the Selection pop-up list.
    - To have the system change a few positions from a longer list, deselect the positions you want to update. Choose Invert from the Selection pop-up list. The application selects the formerly deselected positions and visa versa.

11. Make any necessary changes to the position data, replacing the displayed data by entering new data or choosing the appropriate data from the supplied List of Values. You can adjust data for individual positions.

    For example, you might change the Status, to change an existing status from Frozen to Proposed.

#### Making Further Changes to Selection Criteria

If you change the Selection Criteria after you update positions, and then again choose Create New, a dialog appears asking if you want to replace the positions and overwrite any manual changes you've made. Choose No to keep your changes and Yes to replace the positions.

> **Note:** If you are changing the Selection Criteria to model different results, you might create two Position Update sets, submit the set you want and delete the other.

#### Making the Final Changes

12. Before submitting your update, you must choose a Datetrack Mode, which determines how the application records the update.

- **Correction** replaces all information for the position(s) you are updating
- **Update** end-dates the original position record, creating a new record to hold your changes and thus preserving the history of the changes to the position
- **Update-Insert** creates a new record inbetween two existing records (for instance, a past version and a current or future version of the position), likewise preserving the position's entire history
- **Update-Override** behaves like a Correction, but replaces only an update rather than the entire history of the position

13. Choose the Submit button to update the position(s) and to update the database.

    When you submit the set of positions, the system refreshes the position data with the exception of the Change List items and any manual changes you've made. It refreshes the data based on the Effective Date.

    The system validates the position(s) using the same validation process it does when you create a position with the Position form. You can query the new position in the Position form and continue making further changes, for example, to Position Extra Information.

#### Correcting Errors

If you updated more than one position, the successfully updated positions display a Status of Complete. You can take no further action on these positions.

If the system encounters an error--such as a duplicate position name--when you submit the set, the Status changes to Error New Record(s).

The Process Log lists the errors.

### To correct an Error:

1. Locate the position on the Original tab that has a status of Error New Record(s).
2. Choose the New tab to view the corresponding positions. Locate the positions that have a status of Error New Record(s).

   If you have updated many positions, you can sort the New folder by the Status column so that all Error New Record(s) are grouped together.
3. Review the change list items and make any necessary corrections.

   You might see an error, for example, if information that's required to complete a position is missing.
4. After correcting the information, resubmit the set of positions.

#### Submitting Updates at Different Times

When you're updating many positions, you may not have the information on hand that you need to create and submit all the positions. You can process the information at different times by:

- Setting up different sets of positions based on which ones require further data entry
- Including all the positions in the same batch, but deselecting positions on the New tab

You can deselect a position and submit the other positions. The deselected ones display a Pending New Record(s) status. Complete the information, select the positions, and choose the Submit button.

If your set includes many positions, you can sort the New folder by the Status column so that all Pending New Record(s) positions are grouped together.

## Changing a Position

You can update the definition of a position at any time, and the system maintains a complete record of your changes using DateTrack.

You cannot change a position's hiring status if it is Eliminated or Deleted. For a description of valid changes to hiring status, see: Position Hiring Status, page 2-33

If a position's hiring status is proposed, you can change its start date. However, if the position's hiring status is Active, you can only change the start date before you make any other updates to the position. If you have made other updates, you must set your effective date before these updates. (Use DateTrack History to see when the updates were made.) Then you can change the start date. This change is always a correction, not a datetracked update.

If you want to record the source of changes, such as formal amendments from a governing body, use the Amendment Information fields.

### To change a position:

1. Set your effective date to the day the changes come into effect.
2. Update the position definition as required.
3. To record amendment information, choose the Additional Detail tab.
4. Enter a reference number, details of the recommended amendment, and the date on which the amendment takes effect in the Amendment Information region.
5. Save your changes.

## Recording Proposed Layoff for a Position

For planning purposes, you can record information about a proposed layoff. When the layoff actually occurs, you terminate the employees, reduce the position's FTE, and change its hiring status to Frozen.

### To record a proposed layoff:

1. Choose the Hiring Information tab.
2. Enter the amount by which the position's FTE is to be reduced and the date on which the layoff is expected to take effect.
3. Save your changes.

## Viewing Position Occupancy

The Position Occupancy folder lists all those people who have held a selected position or who are applying for it, and the dates of their occupancy. This information could be relevant for selecting people with the necessary skills for similar positions.

> **Note:** As supplied, this folder displays employees who have held the selected position or who are scheduled to hold it. Your system administrator can create a customized version of the form to display applicants who are currently applying for the position.
>
> The supplied folder also contains a button to open the People window to see further details of an occupant. Your system administrator can change the buttons displayed on this window.

### To view occupants of a position:

1. In the Position window, query a position and choose the Occupancy button.

   Occupants are listed in reverse date order. Where a person has occupied the same position at different times, a separate record is created for each occupancy.

#### Viewing Further Details of Occupants or Applicants

### To see further details of occupants or applicants:

1. Select the person's record in the Position Occupancy folder and choose the Person button.

**Note:** There is no restriction on the assignments you can view in the Position Occupancy folder. However, you cannot view further details if you do not have clearance to view that person's records.

## Defining Position Hiring Statuses

Several system hiring statuses are provided with Oracle HRMS. You can provide user names for these system statuses and map more than one user name onto each system status, if required. Use the User Types and Statuses window.

**Note:** You can view any lookup type in this window. However, in the current release, you can only define user names for position hiring statuses.

### To define user hiring statuses:

1. Select the entity for which you are defining user types. For hiring statuses, this is POSITION_AVAILABILITY_STATUS.
2. Select a Business Group or leave this field blank if you want your hiring statuses to apply in all Business Groups.
3. To see the user statuses already defined for the Business Group (or across all Business Groups), choose Find All from the View menu.

   You can overwrite the displayed user types if you want users at your site to see a different status name.

   If you want more that one user status for a system status:
4. Choose New Record from the Edit Menu.
5. Select the system status and enter your new user status.
6. Save your work.

## Purging Transaction Data

Transactions such as mass updates, position transactions, and budget worksheets all store temporary data in transactions tables in your database. Once the transaction has been completed, the data in these tables is applied to permanent tables. However, a duplicate version of this data also remains in the temporary tables, taking up unnecessary space.

To clear this data once a transaction is completed, you can use one of the purge

processes, depending on the type of transaction you have completed.

> **Note:** These processes do not affect any applied data. All applied information is still available to edit in the normal windows.

Use the Submit Request window.

### To run the Purge Budget Worksheets, Purge Position Transaction, or the Purge Mass Processes process:

1. Select either Purge Budget Worksheets, Purge Position Transaction, or Purge Mass Processes in the Name field.
2. Click in the Parameters field to display the Parameters window, if it does not open automatically.
3. If you are running the Purge Mass Processes process, select the type of transaction you want to purge, for example, Mass Applicant Assignment Update, or Position Copy.
4. Select the status of the transactions you want to purge. This limits the transactions purged to only those with the selected status.
5. Enter the dates between which you want transactions cleared.
6. Click OK. You can view a log file containing details of the purge from the Requests window.

# Transaction Templates

## Transaction Type Wizard

The Transaction Type Wizard guides you step by step through the process of configuring the posting and routing behavior for a selected Transaction Type. A Transaction Type is a group of like transactions (position transaction, budget worksheet, reallocation transaction) that you route and approve in the same manner.

The Transaction Type Wizard is divided into two separate setups, Standard and Advanced.

**Standard Setup**

Standard Setup is where you create the minimum information required for routing transactions. You define the default routing style and default approvers the application will use when routing and approval rules do not exist, or do not apply to the values in the current transaction.

On page 1, *Select a Transaction Type*:

- Select the transaction type you want to configure.
- Select your business group or choose Global, in which case your setup affects all business groups.
- Use the Action field to view, edit, enable, or disable workflow configurations for the selected transaction type.

On page 2, *Select Posting Preferences*:

If you are submitting future-dated actions, user access to the new records depends on whether you choose Today or On Effective Date. If you choose:

- **Today**, the application applies and validates the transaction immediately. Users can then access, edit, and use the new record to prepare other future-dated transactions. The application validates transactions posted in the interim against the data posted today.
- **On Effective Date**, the application applies the transaction immediately, but waits until the effective date to validate it. On the Effective Date, users can access, edit, and use the records. The application validates the transaction on the future date against data posted in the interim.

  For example, if you set the option to post today and process an action on January 15 that eliminates a position on February 15, and a few days later process an action that freezes the position on February 1, the application displays an error, because you cannot freeze a position that you are eliminating. If you set the option to On

Effective Date and process the same actions, you freeze the position on February 1, and on February 15 the application displays an error, because you cannot eliminate a frozen position.

- Specify how the application processes current and retroactive actions.

**Process Immediately** posts data as soon as you submit it, but you may have to suspend work during processing.

**Defer Processing** the Background Workflow Engine posts the data, freeing you to work during processing.

- Specify how many days the application will wait for a user to take action on a transaction before returning it back to the initiator.

On page 3, *Select a Routing Method*:

- Specify the routing style the application will use for this transaction type (Position Hierarchy, Routing List, Supervisory Hierarchy).

On page 4, *Select a [Position Hierarchy] [Routing List] [Supervisory Hierarchy]*:

- Specify the default list/hierarchy the application will use when routing and approval rules do not select a list/hierarchy.

- Designate an Override Approver.

Users can bypass routing and send a transaction to the Override Approver at any time for approval.

On page 5, *Select Default Approvers*:

- Specify and enable/disable default approvers that the application will use when routing and approval rules do not select approvers.

See: Defining Routing Lists for Transactions, page 2-85

**Advanced Setup**

Advanced Setup refines transaction routing by defining rules based upon data in the transaction.

Using Advanced Setup, you can:

- Select attributes for defining routing and approval rules

  Related screens:

  - Select Routing Attributes

- Define rules that select a list/hierarchy or Override Approver

  Related screens:

- Choose a Routing Rule Name
- Define [rule name] for [list/hierarchy name]

- Select approvers

  Related screens:

  - Select Approver(s) from [list/hierarchy name]
  - Define Approval Rules for [role/user name]
  - Define [rule name] Rule for [role/user name]

Here are some key principles to keep in mind:

- Define routing rules to select a list/hierarchy when conditions you specify are true
- Define approval rules to choose approvers when conditions you specify are true
- You link approval rules to a related routing rule that selects a List/Hierarchy

> **Note:** Avoid overlapping rules, which generate errors that prevent you from choosing the list/hierarchy or approver you want and completing Advanced Setup. For example, if one routing rule specifies that Grade must be within a range of 100 to 300, and another routing rule (for another list/hierarchy) specifies a range of 200 to 400, the application cannot choose to enforce one rule or the other where values are between 200 and 300. Related to this, entering blank values (nulls) specifies "any value". The application evaluates "Grade = 100 to 300" as overlapping "Grade = <*Null*>" (all values).

When you route a transaction, the application compares the values entered in the transaction with the attribute values you defined in the routing and approval rules. The application identifies the appropriate routing list or hierarchy, and the next qualified user in the routing sequence.

Advanced Setup allows you to define any number of rules to select multiple list/hierarchies or approvers. Using the set of attributes you have chosen, define routing and approval rules for each list/hierarchy in turn. After choosing a list/hierarchy, define rules that select it, and (optionally) rules that select approvers associated with that list/hierarchy. After you define a rule or approver you can go back and add a new rule, a new approver, or begin the process again with a new list/hierarchy. The flexibility is as great as your capacity to imagine and create routing and approval scenarios.

The approval rules you define must fall within the ranges of values specified in the routing rules. The application does not check for this -- it will ignore out-of-range values and will not select the approver. For example, say you define a routing rule

specifying that Grade equals 100 to 200, and another specifying that Grade equals 301 to 400. If either of these rules is true, the application uses Routing List X. If you add an approval rule to select Approver A when Grade equals 201 to 300 or 401 to 500, the application will not select Approver A -- moreover, it will not notify you of the logical error in the setup.

> **Note:** The rules you create use the OR operator. Only one rule needs to be true in order to select a list/hierarchy or approver(s). Within a single rule, the AND operator is in effect All values must be true in order for the rule to be true.

Some additional guidelines:

- Entering no value (null) in the From field of a range selects all values equal to or lower than the value in the To field. For example, "From <*Null*> To 100" specifies all values 100 or below.

- The application does not validate the contents of the To field, unless the attribute uses a value set. It is up to you to see to it that values you enter are valid, according to your organization's unique implementation.

- Entering no value (null) in the To field of a range selects all values equal to or higher than the value in the From field. For example, "From 101 To <*Null*>specifies all values greater than 100.

  > **Note:** With strings, situations may exist where the values do not follow an alphanumeric sequence, as they do with "Pay.1, Pay.2, Pay.3" (though this note illustrates why it may be a good idea to set things up that way). Nevertheless, you can select a list/hierarchy or approver by specifying a single string value instead of a range, repeating the same value in the "From" and "To" fields. For example, specifying "From Hourly To Hourly" for Salary Basis selects a given list/hierarchy or approver(s) when the Salary Basis is Hourly. With strings, the application sorts in ASCII order. For example, "Pay" comes before "pay" and "101" comes before "50". Add leading zeros to get the desired result ("050" comes before "101").

For examples and reference information about attributes available for defining routing and approval rules, see Routing and Approval Rules Reference, page 2-58.

## Routing and Approval Rules Reference

The tables below provide the information you need to define routing and approval rules, including attribute names, sample values, and the data type the application expects. You define routing and approval rules in the Transaction Type Wizard.

*Routing rules* automatically choose a routing list, position hierarchy, or supervisory hierarchy. The list or hierarchy specifies who will receive your business transaction. *Approval rules* automatically choose the HRMS roles and users you want to designate as approvers from the recipients found on the list or hierarchy.

You can route and approve three transaction types:

- Position Transaction
- Budget Worksheet
- Budget Reallocation Transaction

Each transaction type has its own unique set of *attributes* available for defining routing and approval rules, based on field values found on the forms you use to define a position, budget, or reallocation. For example, if FTE is greater than 50, you may want a different manager to review or approve the proposed actions in a position transaction.

For information about configuring workflow routing and approvals, see Transaction Type Wizard, page 2-55.

## Position Transaction Routing and Approval Attributes

The following table describes the attributes you can use to define position transaction routing and approval rules:

***Position Transaction Routing and Approval Attributes***

| Attribute | Sample Values | Type |
|---|---|---|
| Bargaining Unit | American Meat Cutters; International Ladies Garment Workers; Teamster Local 439 | String |
| Frequency | @Hour; Day; Week; Year | String |
| FTE | 5; 10; 137 | Number |
| Grade | 100.1.West; 200.2.West; 200.2.East | String |
| Grade/Scale Rate | Associate Professor; Scale Rate; AF Sales Clerk Rate; Nursing Supervisor Grade Rate | String |
| Hiring Status | Active; Deleted; Eliminated; Frozen; Proposed | String |
| Job Description | 100000.PRESIDENT; 100015.BUYER; SALES. DIRECTOR | String |

| Attribute | Sample Values | Type |
|---|---|---|
| Location Description | Boston; CA-Workers Comp; HR-San Francisco | String |
| Normal Finish Time | 16:00; 17:00; 18:00 | Time (HH:MM) |
| Normal Start Time | 07:00; 08:00; 09:00 | Time (HH:MM) |
| Organization Description | Vision University; Campus Police; Nursing | String |
| Payroll Description | Weekly; Biweekly; Monthly | String |
| Permanent | Y/N | Y/N |
| Position Type Description | None; Pooled; Shared; Single Incumbent | String |
| Salary Basis | Hourly; Monthly; Per Annum | String |
| Seasonal | Y/N | Y/N |
| Step Description | Point 1; Point 2; Point 3 | String |
| Working Hours | 20; 30; 40 | Number |

## Budget Worksheet Routing and Approval Attributes

The following table describes the attributes you can use to define budget worksheet routing and approval rules:

***Budget Worksheet Routing and Approval Attributes***

| Budget Worksheet Attribute | Sample Values | Type |
|---|---|---|
| Budget Measurement Unit1 Available | 125,000; 580,585 | Number |

| Budget Worksheet Attribute | Sample Values | Type |
|---|---|---|
| Budget Measurement Unit1 Description [any user-defined Share Type] | Money; Dollars; FTE; Headcount | String |
| Budget Measurement Unit1 Percent | 45; 78; 100 | Number |
| Budget Measurement Unit1 Value | 50,000; 137,137 | Number |
| Budget Measurement Unit2 Available | 125,000; 580,248 | Number |
| Budget Measurement Unit2 Description [any user-defined Share Type] | Money; Dollars; FTE; Headcount | String |
| Budget Measurement Unit2 Percent | 45; 78; 100 | Number |
| Budget Measurement Unit2 Value | 50,000; 137,137 | Number |
| Budget Measurement Unit3 Available | 125,000; 580,248 | Number |
| Budget Measurement Unit3 Description [any user-defined Share Type] | Money: Dollars; FTE; Headcount | String |

| Budget Worksheet Attribute | Sample Values | Type |
|---|---|---|
| Budget Measurement Unit3 Percent | 45; 78; 100 | Number |
| Budget Measurement Unit3 Value | 50,000; 137,137 | Number |
| Budget Style | Top Down; Bottom Up | String |
| Budgeted Organization | Manufacturing; Port Authority; Sociology | String |
| Delegated Manager | DMYTELS; PBENNETT; TBURKE | String |
| Organization Hierarchy | Vision University; Manufacturing | String |
| Primary Entity | Position; Job; Organization; Grade | String |
| Ledger | Vision University Ledger; Southwind Publishing | String |
| Starting Organization | Manufacturing; Port Authority; Sociology | String |
| Worksheet Action Date | 01-JAN-1999; 30-SEP-2004 | Date (DD-MMM-YYYY) |
| Worksheet End Date | 01-JAN-1999; 30-SEP-2004 | Date (DD-MMM-YYYY) |
| Worksheet Mode | Correct Old Version; Edit & Make a New Version; Start From Scratch | String |
| Worksheet Start Date | 01-JAN-1999; 30-SEP-2004 | Date (DD-MMM-YYYY) |

## Budget Reallocation Transaction Routing and Approval Attributes

The following table describes the attributes you can use to define budget reallocation

transaction routing and approval rules:

***Budget Reallocation Transaction Routing and Approval Attributes***

| Attribute | Sample Values | Type |
|---|---|---|
| Budget Version | 1; 2; 3 | Number |
| **Entity Type** | Position; Job; Organization; Grade | String |
| Folder Budget Version | 1; 2; 3 | Number |
| Folder Amount | 78,000; 2; 50000 | Number |
| **Folder Unit** [value of share_type_id in PER_SHARED_TYPES] | 1; 2; 3 | Number |

# Business Rules

## Overview

Predefined configurable business rules (also known as *process rules*) validate proposed changes to positions, budgets, or assignments. You configure business rules by changing their default status level (typically Warning) to Warning, Ignore, or Error.

When you apply a business transaction (position transaction, budget worksheet, or budget reallocation) to the database, the application validates it by comparing its values with criteria found in the business rule. For example, business rules confirm that an assignment's budgeted FTE or grade level is consistent with policy, or that the proposed action stays within budgeted amounts. If the validation fails, the application considers the rule's status level. If the status is:

- **Warning**: the application displays a message, but continues processing.
- **Ignore**: the application continues processing without displaying a message.
- **Error**: the application displays a message and halts processing.

In order to validate and apply a position transaction, budget worksheet, or budget reallocation transaction, you must approve it using Oracle Workflow. Routing and approval rules you define in the Transaction Type Wizard specify the recipients of the

routed transaction.

For information about configuring workflow routing and approvals, see The Transaction Type Wizard, page 2-55.

## Business Rule Characteristics

You define the following characteristics (properties) of a business rule:

- Process Rule Name
- Short Name
- Description
- Rule Category
  - Assignment Modification
  - Position Modification
  - Budget Preparation
  - Budget Reallocation

Oracle delivers predefined rules in the Assignment Modification, Position Modification, and Budget Preparation, categories. You can use a rule in any of these categories as a Reference Rule, providing the basis for a new rule. You specify the business group or organizations where the new rule applies, and configure its status level to Warning, Error, or Ignore.

You can create user-defined rules in the Budget Reallocation category. In addition to specifying scope and status level as described previously, you can define the conditions that trigger a validation failure, and create your own message text.

You can search for both predefined and user-defined rules using Rule Category, Business Rule Name, Reference Rule, or Business Group as search criteria. You can delete user-defined rules from search results.

### Assignment Modification

Rules in the Assignment Modification category monitor assignment actions, such as entering new assignments, grades, or Assignment Budgeted Values.

> **Note:** With Position Transactions, the application enforces business rules only for Shared and Single Incumbent position types.

For more information about assignment actions, see:

Entering an Assignment (Assignment Window), *Oracle HRMS Workforce Sourcing*,

*Deployment, and Talent Management Guide*

Entering Assignment Budget Values, page 3-16

### Position Modification

The Position Modification category is similar to Assignment Modification, except a rule in this category monitors position actions, such as eliminating a position.

See: Position Hiring Status, page 2-33

### Budget Preparation

Rules in the Budget Preparation category monitor HR budget actions, such as entering budget period data or preparing budget sets.

For information about budget preparation, see:

Completing a Budget Worksheet, page 3-27

Defining Budget Sets, page 3-15

### Budget Reallocation

Rules in the Budget Reallocation category validate virtual folders containing reallocation transactions. Reallocation transactions transfer resources from one budget entity (such as a position or organization) to another, reallocating from over-budgeted entities (Donors) to under-budgeted entities (Receivers). When you apply to the database, business rules validate each transaction within the folder. You specify a reallocation rule's *Applicability*, restricting its effects to Donors only or Receivers only.

On the search page, an Applicability column indicates whether the rule affects Donors or Receivers. A Status column alerts you if you have not finished your reallocation rule setup. Three scenarios can result in a Status of Incomplete:

1. You have not yet defined rule conditions.
2. You change the business group. You must revisit the Conditions page and redefine the rule conditions, using attributes found in the new business group.
3. You change a rule's Category to Budget Reallocation.

## Scope

Configurable Business Rules have four levels of scope, in descending order of precedence:

- Global (predefined rules)
- Business group

- Organization Hierarchy/Starting Organization
- Organization

A Scope column in search results displays the business group, hierarchy, or organizations affected by the rule.

Business rules you configure at the organization level take precedence over those you configure at the organization hierarchy/starting organization level. If the application finds no configured rule for the organization or its organization hierarchy, the application uses the rule associated with the business group. Finding no configured rule there, the application uses the global default status level (typically Warning).

For information about predefined business rules and their related events, contexts, and warning messages, see Process Rules Reference, page 2-66

## Process Rules Reference

Process rules (also known as business rules) help you ensure that business activities reflect the policies of your enterprise by validating business transactions (such as position transactions, budget worksheets, and reallocation transactions) when you apply them to the database. You manage process rules using the web-based Configurable Business Rules function available from the Navigator.

For more information about process rules, see Business Rules, page 2-63.

> **Note:** When you add or update rule conditions in the Configurable Business Rules function, the application does not validate the conditions you enter in the Value field, except to ask for a number or string. It is up to you to see to it that values you enter are valid, as defined by your organization's unique implementation.

### Predefined Process Rules and Messages

The following table describes the process rules and messages Oracle HRMS delivers. Predefined process rules fall into the categories of Assignment Modification, Position Modification, or Budget Preparation.

***Predefined Process Rules and Messages***

| Rule Name | Category | Decision Context: Warning, Error, Ignore? | Message |
|---|---|---|---|
| Assignment Grade Ladder Rule | Assignment Modification | You are entering a new assignment without providing grade ladder information. (Default = Ignore) | "You have not entered a grade ladder. The grade/step progression process cannot consider this assignment." |
| Assignment Grade Rule | Assignment Modification | You are entering a grade for this assignment that differs from the entry grade of the position. | "The grade you're entering for this assignment is different from the entry grade of the position." |
| Assignment Hire Date Rule | Assignment Modification | You are entering an assignment for a position before its Earliest Hire Date. | "The Assignment Effective Date must begin on or after the position's Earliest Hire Date." |
| Assignments/Positions Budget(s) Rule | Assignment Modification | You are entering an assignment for a position that will put the position over budget. | "The new assignment exceeds budgeted amount for the position." |
| Budget Set Rule | Budget Preparation | You have not defined a budget set, or you have not filled in values for element percentages. | "The sum of the Budget Sets for a period must be greater than zero." |
| FTE Rule | Assignment Modification | You enter a greater number of Assigned Budgeted FTEs than those budgeted or defined for the position. | "The number of assigned budgeted FTEs exceeds the number of FTEs budgeted for that position." "The number of assigned budgeted FTEs exceeds the number of FTEs defined for that position." |

| Rule Name | Category | Decision Context: Warning, Error, Ignore? | Message |
|---|---|---|---|
| Element Sum less than 100 | Budget Preparation | You are attaching a budget set where the sum of percentages is less than 100%. (If the sum is greater than 100%, you receive a posting error.) | "The total percentage for a Budget Set is less then 100." |
| Funding Source less than 100 | Budget Preparation | You have entered funding sources where the sum of percentages is less than 100%. (If the sum is greater than 100%, you receive a posting error.) | "The Budget funding source total is less than 100." |
| Missing Commitment Element Rule | Assignment Modification | You are entering an assignment to a controlled and budgeted position, where the assignment's salary basis includes an element you have not defined as a commitment element in the control budget. | "Salary element not defined as commitment element." |
| Position Elimination Rule | Position Modification | You are eliminating a position that has active assignments on or after the proposed date of elimination. | "This position has active assignments on or after your proposed date of elimination." |
| Position FTE Capacity Rule | Assignment Modification | Position FTE Capacity is not equal to Assigned Budgeted FTEs. (Position FTE Capacity is the result of FTE divided by Headcount.) | "Assignment Budgeted FTE is not equal to position FTE Capacity." |

| Rule Name | Category | Decision Context: Warning, Error, Ignore? | Message |
|---|---|---|---|
| Position Layoff Date Rule | Assignment Modification | You are entering an assignment for a position that has a Proposed Layoff Date prior to the assignment Effective Date. | "The Assignment Effective Date occurs after the Proposed Layoff Date for this position." |
| Position Reservation Rule | Assignment Modification | You are entering an assignment for a position you have reserved for another person. | "You cannot assign this position to this person because you have reserved it for someone else." |
| Seasonal Dates Rule | Assignment Modification | You are entering an assignment for a Seasonal Position with an Effective Date outside the date range specified in the position's Seasonal Information. | "You are assigning a Seasonal Position. The assignment effective dates must fall within the seasonal dates defined for the position's Seasonal Information (Position Extra Information)." |
| Under Budgeted Positions Rule | Budget Preparation | You are running Report Under Budgeted Entities. (Setting this rule to Error does not halt report processing, but displays an error in the Process Log for Under Budgeted Entities.) | "The value of <*budget measurement unit*> for the current <*primary budget entity*> is Under Budgeted." (For example: "The value of Money for the current Position is Under Budgeted.") |

## Attributes That Define Process Rules for Budget Reallocation

In the Budget Reallocation category, you can define conditions under which a validation succeeds or fails by defining process rules of your own, using selected attribute values in a reallocation transaction, such as Organization Description or FTE. The table below provides information about transaction attributes available in the budget reallocation category.

***Attributes That Define Process Rules for Budget Reallocation***

| Attribute | Entity Type | Applicability | Sample Values | Type |
|---|---|---|---|---|
| Actual Value | All | Donor/Receiver | 27,500; 87,421 | Number |
| Budgeted Value | All | Donor/Receiver | 50,000; 137,137 | Number |
| Committed Value | All | Donor/Receiver | 60,248; 48,739 | Number |
| Donated Value | All | Donor/Receiver | 25,000; 78,265 | Number |
| FTE | Position | Donor/Receiver | 1; 28; 137 | Number |
| Head Count | Position | Donor/Receiver | 10; 20; 137 | Number |
| **Job** [Value of job_id in PER_JOBS] | Position | Donor/Receiver | 1; 2; 3 | Number |
| Job Description | Position | Donor/Receiver | 200.GRAPHIC DESIGNER; Graduate Assistant; 128.8.Programmer | String |
| **Organization** [Value of organization_id in HR_ALL_ORGANIZATION_UNITS] | Position | Donor/Receiver | 1; 2; 3 | Number |
| Organization Description | Position | Donor/Receiver | Manufacturing; Port Authority; Sociology | String |
| **Organization Location** [Value of location_id in HR_LOCATIONS] | Organization | Donor/Receiver | 1; 2; 3 | Number |

| Attribute | Entity Type | Applicability | Sample Values | Type |
|---|---|---|---|---|
| **Organization Type** [User-definable lookup: ORG_TYPE] | Organization | Donor/Receiver | Company; Department; Enterprise | String |
| Pending Donation Value | All | Donor/Receiver | 65,000; 78,845 | Number |
| Permanent | Position | Donor/Receiver | Yes, No | (Y/N) |
| **Position Location** [Value of location_id in HR_LOCATIONS] | Position | Donor/Receiver | 1; 2; 3 | Number |
| Position Location Description | Position | Donor/Receiver | Redwood Shores; Sheboygan; Boston | String |
| **Position Status** [US Federal only] | Position | Donor/Receiver | Valid, Invalid | String |
| Position Type | Position | Donor/Receiver | NONE; POOLED; SHARED; SINGLE | String |
| Received Value | All | Donor/Receiver | 15,137; 80,000 | Number |
| Reserved Value | All | Donor/Receiver | 20,000; 45,000 | Number |
| Seasonal | Position | Donor/Receiver | Yes, No | (Y/N) |

## Examples: How Routing/Approval Rules and Process Rules Use Transaction Values

In the following table, for each transaction type, column two displays sample values in a hypothetical transaction. You can use transaction attribute values in two ways:

1. To define routing and approval rules that select workflow routing options and approvers for the transaction;

2. To define process rules that validate a budget reallocation transaction when you apply it to the database.

Column three provides examples of conditions in routing and approval rules that match the transaction, thereby selecting routing destinations or approvers. Column four displays a user-defined status and message that appears if transaction values cause the validation to fail.

Observe that with predefined process rule categories, the application displays fixed messages. (The first two rows show process rules in the Assignment Modification category.) With process rules in the Budget Reallocation category, you can define your own messages, as shown in row three.

In the final cell, the process rule conditions are:

- Donated Value Greater than 25,000 (Error)
- Position Location Description Equals "Brockton" (Warning)

***How Routing/Approval Rules and Process Rules Use Transaction Values***

| Transaction Type | Transaction Values | Routing/Approval Conditions | Process Rule Message |
|---|---|---|---|
| Position Transaction | Grade = 200.2.East; FTE = 4 | Grade From 200 To 300; FTE From <*null*> To 5 | **WARNING**: The number of assigned budgeted FTEs exceeds the number of FTEs budgeted for that position. [Predefined] |
| Budget Worksheet | Budget Measurement Unit 1 = $100,000; Primary Entity = "Position" | Budget Measurement Unit 1 From 80,000 To 150,000; Primary Entity From "Position" To "Position" | **ERROR**: New assignment exceeds budgeted amount for position. [Predefined] |
| Budget Reallocation Transaction | Budgeted Entity = "Position"; Folder Amount = 55,000; Position Location Description = "Brockton" | Budgeted Entity From "Position" To "Position"; Folder Amount From 50,000 To 100,000 | **ERROR**: You cannot donate more than $25,000; **WARNING**: You are donating funds from an entity in a location that may impose unique restrictions. [Both messages user-defined] |

For information about configuring workflow routing and approvals, see Transaction Type Wizard, page 2-55.

Transaction attributes available to define routing and approval rules may differ from those available to define process rules. For information about available routing and approval rules attributes, see Routing and Approval Rules Reference, page 2-58.

## Workflow for Position Control and Budgeting

You use Oracle Workflow to route and approve position transactions, budget worksheets, and budget reallocation transactions. For non-position control organizations, you route only budget worksheets. If you do not wish to route budgets, you can use the Budget Detail window.

For information about selecting organizations for position control, refer to Creating Organization Hierarchies , page 1-113 .

### Types of Routing

Your organization may route transactions for data entry and approval using different chains of authority. When using workflow for routing transactions, you have a choice of defining a routing sequence based on routing lists, supervisory hierarchy, or position hierarchy.

- When routing by *routing list*, the application determines the next destination on the routing list.

  A routing list is a sequence of destinations that you define. A destination is an HRMS role, or a specific user linked to that role.

- When routing by *position hierarchy*, the application determines the occupant of the next position in the position hierarchy, using the current user's position (primary assignment) as the starting point.

- When routing by *supervisory hierarchy,* the application determines the current user's supervisor (the supervisor listed on the user's primary assignment) and routes to that person.

You can choose a different type of routing for each transaction type (position transaction, budget worksheet, budget realloction transaction). The application routes all transactions that belong to a given transaction type the same way. For example, if you choose routing list as the routing style for the budget worksheet transaction type, the application routes all budget worksheets using routing lists.

If you decide to change the routing style later, you can make that change after the application updates any pending transactions. The Transaction Status window shows you which transactions are pending.

You can accommodate the different approval schemes in your organization by defining

multiple routing types, such as several routing lists, and then defining routing and approval rules that instruct the application on what basis to select a routing list or an approver.

When a user initiates a transaction, such as a budget worksheet, the application compares the values contained in the transaction with the routing and approval rules to determine which user can next receive and/or approve the transaction. The application performs this step at each routing destination.

For information about setting up workflow routing and approvals, see The Transaction Type Wizard, page 2-55

## HRMS Roles

HRMS roles reflect the different types of responsibilities users perform in the routing sequence, such as Initiator, Reviewer, or Approver.

If you are setting up routing based onrouting lists, you assign HRMS roles to users, specifying one role as each user's default role. When initiating transactions, the default role applies. Otherwise, when opening a routed transaction, the routing list role applies.

If you are setting up routing based on position hierarchy or supervisory hierarchy, the application looks for the role linked to the primary assignment position first. If not found, the default role applies.

You assign each HRMS role a role template, assigning the basic role template supplied with the product or one that you define. When initiating or opening a routed position transaction, the application automatically applies the role template.

## Applicable Roles

The following table describes the HRMS roles applicable while initiating and opening a transaction:

***Applicable Roles***

| Action | Routing List | Position Hierarchy | Supervisor Hierarchy |
|---|---|---|---|
| When initiating a transaction | Default user role | Role linked to position | Primary position first. If not found, default role. |
| When opening a transaction | Routing list role | Role linked to position | Primary position first. If not found, default role. |

### Global and Business Group Roles

You can assign HRMS roles as global or business group roles. Business group roles apply to only one business group, while global roles enable HRMS roles to extend into all business groups. A user assigned to a global role may view, approve, or forward transactions created in another business group. Those assigned to business group roles can view and act upon transactions only within their own business group.

> **Note:** You can use global roles with routing lists and supervisory hierarchies, but not with position hierarchies.

## Forwarding Transactions

During the routing process, you have a choice of actions that you can take on the transaction:

- Save and Continue - Saves the transaction information while you continue working on it
- Save - Saves and stores the transaction in your inbox
- Forward - Sends the transaction to another user for further action
- Send Back - Returns the transaction to a previous destination
- Reject - Sends the transaction back to the initiator, who can then close it

  Any recipient (initiator, reviewer, approver) can reject a transaction. Rejected transactions go back to the initiator, but the Send Back option routes the transaction to any previous destination you specify.
- Override Approver - Sends the notification directly to a user previously designated as override approver for approval.

  At any point in the routing sequence, you can expedite the approval process by routing the transaction directly to the override approver.

The application automatically determines the next destination on the routing sequence. However, you can skip a destination and send the transaction to someone else in the routing sequence.

You can also make sure that the transaction does not sit in someone's inbox unattended by setting a response time (in days). If the interval elapses with no response, the application returns the transaction to the initiator.

## Routing Notifications

During the routing process, you can choose to notify yourself or other users when a

specific event occurs, such as a successful update to the database. You can also have the notification sent to someone else in the routing sequence. For example, when the application updates a future-effective position, you can have a notification sent to a manager to alert the manager that the position is now updated and available.

The application stores a history of all the actions taken in routing a transaction in the Transaction Status window. You can view the routing history to determine the chain of events--what action a user took and when, as well as prior and subsequent routing destinations.

### Approvals and Updates

The first approver who receives the transaction can approve and apply it to the HR database. For example, in a position hierarchy several positions might be listed as approvers, but the first approver on the routing sequence to receive the transaction can approve it. When a position has multiple incumbents, the first incumbent to act on the transaction does so on behalf of all incumbents of the position.

The person who updates the transaction does not have to be an approver. The approver can forward the notification to someone else for update to the database.

You can apply and post transactions immediately or later. If you areupdating current and retroactive actions, immediate posting updates the data as soon as you submit it, but you may have to suspend work for a moment while the update is performed. Posting later frees you to continue working while the Background Workflow Engine performs the update.

## Transaction Templates

Transaction templates serve as filters that overlay a window, applying access permissions that you define in your workflow setup. Task and role templates ensure that workflow recipients can view and edit only those fields appropriate to the task and their HRMS role.

> **Note:** Templates are available for position transactions only, not for budget worksheets or budget reallocation transactions.

The product provides two task templates (Create and Update) and a role template (Basic Role). These predefined templates grant maximum permissions, allowing users to view and edit transaction attributes.

Most organizations can use the predefined templates that come with the application. If your organization needs to restrict the fields that users can view and edit, you can copy the predefined templates and make the necessary changes.

## Task Templates

You set up task templates to enable users to view and edit the attributes required to accomplish a specific task, such as update the Full Time Equivalent (FTE) for an existing position.

You can set up as many task templates as your enterprise requires to represent the tasks involved in creating and updating position definitions.

For example, you might define three task templates, one for proposing a position, one for classifying it, and one for approving it. As initiator, you can select one or more templates. Users later in the routing sequence can apply additional ones. The combined permissions established by the role and applied task templates define your access.

To prevent users from processing simultaneous transactions against the same position, you can mark an update template as under review. When a user initiates a position transaction with a Mark Under Review template, the application does not allow further updates to the position until someone approves the pending transaction.

## Role Templates

Role templates establish your view and edit permissions based on your HRMS role.

- If the routing style is position hierarchy, the application applies the role template associated with your position (primary assignment).

- If the routing style is supervisory hierarchy, the application applies the role template associated with your default role.

- If the routing style is routing list and you initiate a transaction, the application applies the role template associated with your default role. If you open a routed transaction, the application applies the role template associated with the routing list role.

  For example, if your default role is Line Manager and you initiate a transaction, the application applies the role template your implementation linked to the Line Manager role. If you open a routed transaction and your assigned role in the routing list is Reviewer, the application applies the role template linked to the Reviewer role.

The predefined role template supplied with the product (Basic Role template) grants the maximum set of permissions. If your organization's roles permit different levels of access, you can define role templates to restrict access accordingly. In the example above, you can assign the Line Manager role view and edit access, but restrict the Reviewer role to view access.

## Applicable Roles

The following table describes the criteria the application uses to apply the appropriate

role template:

***Applicable Roles***

| Action | Routing List | Position Hierarchy | Supervisory Hierarchy |
|---|---|---|---|
| When *initiating* a transaction | Default user role | Role linked to position | Primary position first. If not found, default role. |
| When *opening* a transaction | Routing list role | Role linked to position | Primary position first. If not found, default role. |

## Copied Templates

You can create your own templates by copying the predefined ones. For example, you can create a task template to simplify freezing a position, by copying the Update template and restricting the fields that the user does not need to act upon.

Similarly, you can create a role template to grant access permissions appropriate to a given HRMS role by copying the Basic Role template and specifying view and edit permissions. For example, you might define a role template for reviewers where all fields are view only.

## Permissions

The overlay of role and task templates may produce conflicting attributes. When task and role template permissions do not match, the application enforces the more restrictive permission.

The following table describes how the application resolves conflicting permissions between role and task templates by applying the more restrictive permission.

***Permissions***

| Role Template | Task Template | Permissions |
|---|---|---|
| View | Edit | View |
| View | View | View |
| None | View/Edit/None | None |
| Edit | Edit | Edit |

| Role Template | Task Template | Permissions |
|---|---|---|
| Edit | View | View |
| View/Edit/None | None | None |

If users apply more than one task template, the application enforces the most relaxed task template permission, then determines the net task and role template permissions.

For example, say you apply two task templates for updating a position's work schedule. The application compares and resolves the permissions between the two task templates by applying the more relaxed permission, applies the appropriate role template, and resolves conflicts that remain between the role and task templates by applying the more restrictive permission.

## Defining HRMS Roles for Transactions

HRMS roles determine who can enter and approve data for a given transaction type, such as a position transaction, budget worksheet, or budget reallocation. A user must have an HRMS role in order to work on a transaction. You can assign HRMS roles to users, positions, or transaction templates. You assign roles based on the routing style you define for each transaction type. If the routing style is:

- Routing list or supervisory hierarchy, you assign roles to users
- Position hierarchy, you assign roles to a user's primary position

You can also define HRMS roles as access roles that grant or deny permission to update self-service actions. See Access Roles for Self-Service Actions, *Oracle SSHR Deploy Self-Service Capability Guide*.

See: Associating HRMS Roles with Users, page 2-80

See: Associating HRMS Roles with Positions, page 2-81

See: Associating HRMS Roles with Role Templates, page 2-82

See: Transaction Type Wizard, page 2-55

### Business Group Roles and Global Roles

You can create either business group roles (interacting with one business group) or global roles (interacting with multiple business groups). *Once you have saved a role as business group or global, you cannot change it to the other option.*

> **Note:** You can use global roles with routing lists and supervisory hierarchies, but not with position hierarchies.

See Global and Business Group Roles, page 2-75

Use the Maintain Roles window to define business group roles.

Use the Maintain Global Roles window to define global roles.

### To define HRMS roles:

1. To define a business group role, choose Roles under Transaction Maintenance in the Navigator.

   To define a global role, choose Global Roles under Transaction Maintenance in the Navigator.

2. Enter a Role Name.

3. Select a Role Type.

   **Note:** Your implementation can add Role Types for your organization by extending the predefined types of Budget Manager, HR Manager, Line Manager, SSHR Edit Allowed, and SSHR Edit Not Allowed. Using an Application Developer responsibility, in the Lookups window, query PQH_ROLE_TYPE.

   The application automatically enables this HRMS role so that you can begin using it.

4. Save your work.

## Associating HRMS Roles with Users

You can assign a user more than one HRMS role to accommodate the different types of roles a user may have when processing transactions, such as initiator, reviewer, and approver. You associate roles with users if you route transactions using a routing list or supervisory hierarchy.

**Note:** You can create either business group roles (interacting with one business group) or global roles (interacting with multiple business groups). *Once you have saved a role as business group or global, you cannot change it to the other option.*

See Global and Business Group Roles, page 2-75

Use the Maintain Roles window to assign users business group roles.

Use the Maintain Global Roles window to assign users global roles.

### To link an HRMS role to a user:

1. Select an existing role or define a new one.

   For information on defining a new role, see Define HRMS Roles for Transactions, page 2-79

2. Choose the Users tab.

3. In the Person field, select a person's name.

   The application automatically enters his or her user name. The application also selects the Enabled check box so that you can include this person when defining routing list destinations, override approvers, or approval rules.

4. Optionally, select the Default Role check box to specify this role as the person's default role (one default role per user).

5. Select the Benefits Role check box to indicate that you want to use this role to filter benefits plans based on the role of the self-service user.

6. Repeat the above steps until you have linked all users appropriate to the role.

7. Save your work.

## Associating HRMS Roles with Positions

You need to associate HRMS roles with positions when the transaction routing type is position hierarchy. You cannot assign a position to multiple workflow roles. Once you assign a position to a workflow role, the position is no longer available to other roles.

> **Note:** You cannot assign positions to global roles. See Global and Business Group Roles, page 2-75

Use the Maintain Roles window to assign positions to roles.

### To link an HRMS role to a position:

1. Select an existing HRMS role or define a new one.

   To define a new role, see Defining HRMS Roles for Transactions, page 2-79

2. Choose the Positions tab.

3. With the HRMS role selected, select a position from the LOV.

   As you route a transaction through a position hierarchy, only users having this position as their primary assignment position will receive the transaction.

The list of positions consists of all positions in the current business group, minus those you have already assigned to another HRMS role.

4. Save your work.

## Associating HRMS Roles with Role Templates

To route and approve position transactions, you define role templates that grant permissions appropriate to each role, linking each template to its respective roles in the Maintain Roles window. Once you complete this setup, the application automatically applies the desired role template when users initiate a transaction or open a routed transaction.

### Global and Business Group Roles

You can create either business group roles (associated with one business group) or global roles (effective across all business groups). *Once you have saved a role as business group or global, you cannot change it to the other option.*

See Global and Business Group Roles, page 2-75

From the Maintain Global Roles window, you can update or create only global roles. From the Maintain Roles window, you can update or create only business group roles.

### To link an HRMS role to a role template:

1. Select an existing HRMS role or define a new one.

   To define a new role, enter a Role Name, choose a Role Type, and activate the Enabled check box to use this role.

2. Choose the Templates tab.

3. With the HRMS role selected, select Position Transaction in the Transaction Type field (the only available choice). Currently, only position transactions use template-based permissions.

4. In the Template field, select a role template from the list of values.

   The application automatically selects the Enabled check box to make this template available.

5. For each HRMS role, repeat the above steps until you have assigned one or more templates to each role that requires them.

6. Save your work.

**Note:** If you assign multiple role templates to a single role, the

application will combine the attribute settings, resolving conflicting permissions in favor of the more relaxed permission.

## Deleting or Changing HRMS Roles

As your organization changes, you may find that your HRMS roles have also changed. You can reflect those changes in your setup.

#### Deleting or Disabling HRMS Roles

If you have routed a transaction based on an HRMS role, the application captures the history of the transaction, therefore you can only disable the role and not delete it.

Use the Maintain Roles window to delete and disable business group roles (choose Roles under Transaction Maintenance in the Navigator).

Use the Maintain Global Roles window to delete and disable global roles (choose Global Roles under Transaction Maintenance in the Navigator).

Disabling or deleting an HRMS role affects the following associated components:

- **links**: You remove the role's links to users, positions, and role templates, but other roles may still refer to them
- **routing list destinations**: you remove references to the role in routing lists, though the routing lists continue to use other specified roles
- **approval rules**: you remove references to the role in approval rules

> **Note:** If you wish to retain a routing and approval rule and change the role assigned to it, use the Transaction Type Wizard, page 2-55.

### To disable a role:

1. Select the role that you wish to disable.
2. Deselect the Enabled check box.
3. Save your work.

### To delete a role:

1. Select the role that you wish to delete.

   You can delete a role only if you have not routed a transaction that includes the role.

2. Choose the delete icon from the toolbar.

3. Save your work.

### To rename a role:

1. Select the role that you wish to rename.

2. Place your cursor in the field, backspace to delete the current role name, and enter a different one.

3. Save your work.

   Changing the role name changes all its occurrences in routing lists and approval rules, including routing history in the transaction status window.

#### Changing User and Position Information Associated to a Role

You can change the role and the user information to reflect changes in your enterprise.

For example, if you need to add a user to a role because its occupant left the organization, you can disable the previous user, enable the new user, and then change the role and the user information.

Use the Maintain Roles window to change user and position information about a business group role (choose Roles under Transaction Maintenance in the Navigator).

Use the Maintain Global Roles window to change user and position information about a global role (choose Global Roles under Transaction Maintenance in the Navigator).

### To add a user or position associated to a role:

1. Select the role.

2. Select the user or position from the User or Position tab.

3. Insert a new row and add the new user or position.

4. Save your work.

### To disable a user or position associated to a role:

1. Select the role.

2. Select the user or position from the User or Position tab.

3. Deselect the Enabled check box.

   The application warns you if there are any pending transactions or routing and approval rules that include this user or position.

4. Save your work.

### To delete a user or position associated to a role:

1. Select the role.
2. Select the user or position from the User or Position tab.
3. Delete this user or position from the list.

   You can delete this user or position from the list only if you have not processed a transaction that includes that person or position.
4. Save your work.

## Defining Routing Lists For Transactions

A routing list establishes the sequence of destinations for routing a transaction. You can specify a group of people or a specific person as a routing destination. If you choose:

- An HRMS role, all users linked to the role receive the routed transaction

  For example, if you define an HRMS role HR-Compensation, then assign it to users in the Finances department, anyone assigned the HR-Compensation role can process a transaction you route to HR-Compensation.
- An HRMS role and a user name, only the designated user receives the routed transaction

See: Transaction Type Wizard, page 2-55

Use the Routing Lists window to set up routing lists.

### To define a routing list:

1. In the Routing List field, enter a name for the routing list.

   The application automatically checks the Enabled check box so that you can choose this routing list when setting up workflow routing in the Transaction Type Wizard.
2. Select a Role from the list of values. The list includes global roles and local roles attached to your business group. If you have set the HR: Cross Business Group profile to Yes, the list displays all of your business group's roles, all global roles, and all roles across all business groups.

   The application automatically enters a routing sequence number.
3. Several users may be assigned to the same HRMS role. To identify a specific person, select a user name from the User list of values.

The application automatically enables the Enabled check box to include this role and user combination.

4. Select the Approver check box to give this role and user approval rights.

   The role/user can approve any transaction unless you restrict the role/user's approval rights with routing and approval rules.

5. Repeat these steps to complete the list of destinations for the routing list.

6. Save your work.

#### Changing Routing List Destinations

You can change a routing list, for example, by adding or changing a destination.

Use the Routing List window to change routing destinations.

### To change routing destinations:

1. Query the routing list.

2. In the Routing List window, query the routing list you wish to change.

3. Select the destination that you wish to change.

4. Select a different role and user from the list of values.

5. Save your work.

#### Disabling Routing Lists and Routing List Destinations

If you make a change in policy that results in a different routing sequence, you can disable the unnecessary destinations and add new ones. If you make extensive changes, you might disable the routing list and define a new one.

You cannot disable a routing list or a destination on it until you update pending transactions you have routed using that list. Use the Transactions Status window to confirm that you have no pending or approved transactions routed using the list.

See: Viewing Transaction History, page 2-93

Use the Transaction Type Wizard and the Routing List window to disable routing lists and routing list destinations.

## Defining Transaction Templates

Transaction templates overlay a transaction window, and define the permissions that apply to tasks and roles. Templates govern both the fields on the form you can view and change (View/Edit), and the fields you must complete (Required).

You can define a new template, basing it on existing templates, or combine multiple templates into one. You do this by changing attribute settings.

Use the Template window to define transaction templates.

### To define a template:

1. Name your template as you want the name to appear in the Apply Templates window.

   The application automatically selects the Enabled check box to make this template available for use.

2. Enter a Short Name (the application uses the Short Name as a database key).

3. Select a Template Type:

   - Task templates define the view and edit permissions that you grant for a specific task.

   - Role templates define the view and edit permissions that accompany a role.

4. For task templates, select a Type in the Task Template region:

   - Create to initiate tasks, such as defining positions

   - Update to change data for existing records

     For Update task templates, optionally choose Mark Under Review to require users to update this pending transaction before starting a new one.

5. In the Transaction Type field, choose Position Transaction (the only available choice). Currently, only position transactions use template-based permissions.

6. If you wish to base the new template on an existing one:

   - Choose the Copied Templates tab.

   - In the Templates field, choose a template from the list of values. Repeat this step to add as many templates as you wish to copy.

   - Choose Apply Copy to copy the attributes from the template(s) to the Templates Attribute tab.

7. Choose the Template Attributes tab to review or edit the attributes and their permissions.

   **Note:** You can choose to hide entire tabbed regions on a transaction

as well as individual fields. If you hide a tab, you hide the fields on the tab as well, even if you mark the individual fields as View. For example, you can show or hide the Hiring Information tab or the Budgets tab. If you disable the View check box for Hiring Information, you also hide the fields on the Hiring Information tab, such as FTE or Grade, regardless of their individual settings on the Template Attributes tab. You can also display a tab as read only by enabling the View check box and disabling Edit.

8. Choose Freeze Template to prevent further changes.

9. Save your work.

#### Making Changes to Templates

You can continue editing your template definition until you process a transaction that uses the template. From then on, the only permitted changes to template definitions are:

- Changing its attributes
- Marking it as an Under Review template (if it is an Update task template)
- Disabling the template

## Defining a Position with a Position Transaction

Use the Position Transaction window to define and maintain position definitions for organizations that you have selected as position-control organizations.

For information about selecting organizations for position control, refer to Creating Organization Hierarchies, page 1-113

Use the Position Transaction window to create or change a position definition. To view position history prior to updating, choose Position Transaction History from the Tools menu.

### To create or change a position:

1. In the Apply Template dialog, select task template(s) from the list of values. Select the Enabled check box to use the template(s).

   The Apply Template dialog is available only to the initiator. If you receive a routed transaction and wish to apply an additional task template, choose Apply Template from the Tools menu.

   The application automatically applies your role template to the task template(s).

2. Enter a position name.

- To create a position definition, complete the fields in the Position Flexfield dialog and choose OK.

- To update a position definition, select the position name from the list of values.

  **Note:** When entering data in the window, you must enter the mandatory fields (shown in yellow) before saving or routing the transaction. You must complete the required fields (shown in blue) prior to applying the transaction.

3. In the Action Date field, enter the position's effective date.

   The checkmarks in the Open, Under Review, and Approved Future Actions check boxes indicate the status of the transaction:

   - *Open*: You can fill the position. The hiring status is active and the FTE is still available.

   - *Under Review*: A pending transaction for the position has an Under Review template applied. No one can process a transaction for that position until a user updates the current transaction.

   - *Approved Future Actions*: There is at least one pending transaction with a future effective date.

4. Complete the fields for the Position Details, Hiring Information, Work Terms, and Additional Details as covered in Defining a Position, page 2-35. Begin with step 4 that describes selecting the position type.

5. Choose the Work Choices tab and select the relevant domestic deployment boxes if the position requires the holder to:

   - Work in all locations

   - Relocate

   - Travel

6. Select the relevant international deployment boxes if the position requires the holder to:

   - Work in all countries

   - Relocate

   - Hold a passport

7. Choose the Extra Information tab to define additional information about positions such as:

   - Overlap Information
   - Seasonal Information
   - Reserved Information
   - Position Family Information

   See: Position Extra Information Types, page 2-34

8. Click on the grey arrow to the right of the Extra Information tab.

9. Choose Requirements from the list to enter position requirements such as ADA Disability Accom's and OSHA - reportable incident

### Entering Budget Information

10. You can add your position to an existing control budget using the Budgets tab. In the Budgets region, in the Budget Name field, select a control budget from the list. The budget must be in force on your effective date. The application displays budget information you defined in Budget Characteristics, such as version, effective dates, and default budget set.

11. In the Budget Detail region, the application displays the measurement units the budget is tracking. You can enter total allocations for each measurement unit in the Allocated fields.

12. In the Periods region, you can also enter date ranges in the Start Date and End Date fields to identify budget periods you defined in your budget version. Here you can enter allocations at the period level.

    When you update a position, you can edit allocations on the Budgets tab to the period level.

    If you attached a default budget set in Budget Characteristics, the budget set provides the element and funding source information found in the budget set. Use the Budget Set and Budget Characteristics windows to make changes.

    See: Defining Budget Sets, page 3-15

    See: Defining Budget Characteristics, page 3-19

13. Save your work. Route the transaction to gather the necessary approvals, and then apply and update the transaction when you have completed it.

    See: Routing Budget Worksheets and Position Transactions, page 2-91

14. After you approve and update the data to the database, choose Position Transaction

History from the Tools menu.

You can view all changes made to the currently selected position. These include changes made using the Position window and those that have a transaction status of Submitted or Applied.

## Routing Budget Worksheets and Position Transactions

When you save Position Transactions and Budget Worksheets, the application displays a routing window. Use this window to route, approve, and apply transactions as well as request notification for yourself or someone else when an event (such as updating the transaction to the database) occurs.

If you want to review or take action on notifications that others have routed to you, use the Workflow Notifications window. Open the position transaction or budget worksheet notification from the list, and choose the Open Transaction icon to open the Position Transaction or Budget Worksheet window.

If you are using Self Service HR, use the Worklist page available from the Universal Inbox. You must have an HRMS Manager responsibility that includes access to the Position Transaction window. For more information on Workflow Notifications, see Overview of Notification Handling , *Oracle Workflow User's Guide*

Use the Routing window for routing transactions.

### To route a transaction:

1. Save the current transaction.

#### Routing Choices

2. On the Routing To tab, choose an action:

   - To save your transaction without routing it:

     Choose Save in Inbox to save the transaction and wait until later to resume work on it.

     Choose Save and Continue to save your work and continue entering data in the transaction.

   - To route the action to other users for further action, choose Forward.

     The application displays the next qualified destination, but you can choose a different one from the list of values.

   - To skip the next destination in the routing sequence, choose the arrow button. Continue choosing this button until you see the desired destination.

   - To return the transaction to a previous destination, choose Send Back and select

the destination.

- To refuse the transaction, choose Reject to send it back to the initiator.

  If you are the initiator, choosing Reject terminates the transaction.

- To expedite the approval process, choose Override Approver to send the transaction directly to that user.

#### FYI Notifications

3. To have a notification sent to yourself or someone else, choose the FYI Notification tab.

4. Choose an Event to specify events that trigger the notification. Choose:

   - Approval to notify user(s) when an approver approves the transaction
   - Completion to notify when the application applies the transaction or a user terminates the transaction
   - Database Failure to notify when an Apply action fails due to an error
   - Database Success when an Apply action succeeds
   - Immediate to send a notification to the selected user when someone routes the transaction by forwarding it or sending it back
   - Override to send a notification when an override approver approves the transaction
   - Rejection to send a notification when the initiator rejects (terminates) the transaction

5. Choose Type to identify the user(s) to notify. Choose:

   - Approver to send a notification to the last person who approved the transaction
   - Last User to send a notification to the last person who worked on the transaction
   - Others to select a position, user, or HRMS role that is not part of the routing sequence

     In the dialog, enter the user name of the person to receive the notification. The application displays the user name in the Notify column.

   - Requestor to send a notification to the person who initiated the transaction

6. Choose OK.

**Approvals and Updates to the Database**

7. To approve the transaction, select the Approver check box.

   When using position and supervisory hierarchies, if the transaction reaches the top of the hierarchy without anyone approving it, you can route the transaction to a subordinate for approval and update to the database.

8. To update the transaction to the database, choose Apply Transaction.

   If someone else in your organization updates transactions, you can route the transaction to that person after you approve it.

### Terminate a Transaction After Approval:

If you have approved a transaction and wish to terminate it, you can reject the transaction if you have not yet updated it to the database. Rejecting the transaction returns it to the Initiator who can then reject and thus terminate it. Alternatively, you can terminate the transaction from the Transaction Status window.

See: Viewing Transaction History, page 2-93

## Viewing Transaction History

You can refer to the Transaction Status window for information about the status and ownership of a transaction, and to end or route a transaction.

The Transaction Status window can show you a transaction's:

- Current status (pending, approved, applied to the database, rejected, terminated, or submitted to the database for future update)
- Name of the user who currently possesses the transaction
- Routing history, including the actions taken on the transaction, the user who took the action, and the person to whom the transaction was routed
- Attributes and transaction values that determine the routing category and routing destinations

> **Note:** If you do not see a routing history, a user has initiated but not routed the transaction.

You can route transactions from the Transaction Status window, which you may need when, for instance, someone is on vacation. You can also use the window to take action on future-dated transactions that the application has received for posting but not yet applied.

Use the Transaction Status window to view the status and history of a transaction. The window is a folder, so you can choose the order of the transactions and perform all other standard folder actions.

### To determine the status of a transaction:

1. Choose Transaction Status from the Navigator menu.

   The Find Transactions dialog appears.

2. Choose a transaction type, specify your business group or Global and whether you want to include delegated transactions.

3. You can specify the owner of the transaction: a particular user, a particular role, or a combination of the two; you can also look at all transactions available to you, all belonging to any owner, or all belonging to no owner.

   You can also choose a range of statuses: transactions of a particular status, all open transactions, all completed transactions, or those of any status.

   Choose Find, and the Transaction Status window appears.

4. Select the transaction whose history you wish to view.

   The Routing History for that transaction is displayed.

5. Choose the General tab to display the date, action taken (such as initiated, rejected, or sent back), approval status, and comments entered on the routing notification.

   The approval column records who approved the transaction, an approver or the override approver.

6. Choose the Forwarded By tab to find out who took the action and routed the transaction, and Forwarded To, to determine its next destination.

7. Under Rule Attributes, choose the Current Approver tab to view the approver attribute, value or range of values, and the transaction value that determined the basis for routing the transaction to the current person.

8. Choose the Next Approver tab to view the approver attribute, value or range of values, and the transaction value that determined the basis for routing the transaction to the next person.

9. Choose the Routing tab to view the rule attribute, value or range of values, and the transaction value that determined the routing category.

   For example, if you route budget worksheets to one of two routing lists based on the budget amount, you can see the transaction value that determined the selection of the routing list.

10. To route the transaction, choose the Route button to bring up the Routing window.

### Terminating a Transaction:

During routing, you terminate transactions by rejecting the transaction in the Routing window. The application returns the transaction to the initiator who can then reject and thus terminate it.

Use the Transaction Status window to terminate a transaction

- if the initiator is no longer a valid user and cannot reject the transaction, or
- if you want to terminate an approved and submitted future-dated transaction. Terminating a transaction removes it from the workflow process.

Use the Transaction Status window to terminate a transaction.

### To terminate a transaction:

1. In the Transactions block, select the transaction to terminate.
2. Choose the Terminate button.
3. Save your work.

# Job and Position Evaluation

## Jobs and Position Evaluation

Evaluation systems, which compare the responsibilities of roles to help in the definition of grades, are common in large enterprises. The Hay Evaluation System, which is used internationally, is an example. Directly or indirectly, the evaluation can also contribute to setting compensation levels.

Evaluation systems normally use a set of formal and systematic procedures to perform a comparison of roles. As such, evaluationis primarily concerned with the definition of the relative status of a role, and not with a set of absolutes. The objective of all evaluation systems is to place a role in a grading or salary structure.

There are two main types of evaluation system:

**Factor**Key roles are examined factor by factor and a rank comparison order produced for each factor. A complex comparison of weighted factors then follows.

**Points**A wider range of factors is used.

**Rating**Each factor is weighted and has a numerical scoring system. The total points scored determines the placement of the role in a grade or salary structure.

These systems might incorporate benchmarking, where a few key roles determine the rank of all the others. Grades and compensation levels are determined after the evaluation and ranking of the jobs.

In Oracle HRMS, you can set up one or more evaluation systems for jobs or positions. You use a descriptive flexfield to hold the evaluation information, which provides the flexibility for you to use the evaluation system of your choice.

## Creating an Evaluation System

### To create an evaluation system:

1. Decide whether to hold the evaluation information for jobs or for positions, depending on your own definitions of employees' roles within the enterprise model.

2. Define values for the Lookups Types EVAL_SYSTEM (evaluation system name) and EVAL_SYSTEM_MEAS (the units in which to measure the evaluation). If you use more than one system, you can define multiple values to provide a list of values in the Job Evaluation and Position Evaluation windows.

3. Define the structure and segments of the Additional Evaluation Details descriptive flexfield, which holds the evaluation information. This descriptive flexfield displays

on the Job Evaluation and Position Evaluation windows.

For example, you could define the following segments:

- Responsibility
- Problem Solving
- Know How
- Related Grade

If you are using more than one evaluation system in your enterprise, you should make the flexfield segments *context sensitive* to the evaluation system. Context sensitive segments ensure that each system has its own distinct set of evaluation information.

Your system administrator usually carries out this task as it requires access to parts of the system that control how Oracle Human Resources works.

## Entering Evaluation Information

Enter evaluation scores and details in the Job Evaluation or Position Evaluation window.

### To enter a job or position evaluation:

1. Select the evaluation system used to evaluate this job or position.
2. Enter the overall score and select the units of measurement.
3. Enter the date of the evaluation.
4. Open the descriptive flexfield window, and enter the information it prompts you for.

# Position Hierarchies

## Position Hierarchires

If you use positions to define roles, you can define *position hierarchies* to show the detailed line management reporting in each organization or throughout the enterprise.

You can create and maintain your reporting structures in two ways:

- Using the Position Hierarchy window
- Using the Position Hierarchy Diagrammer

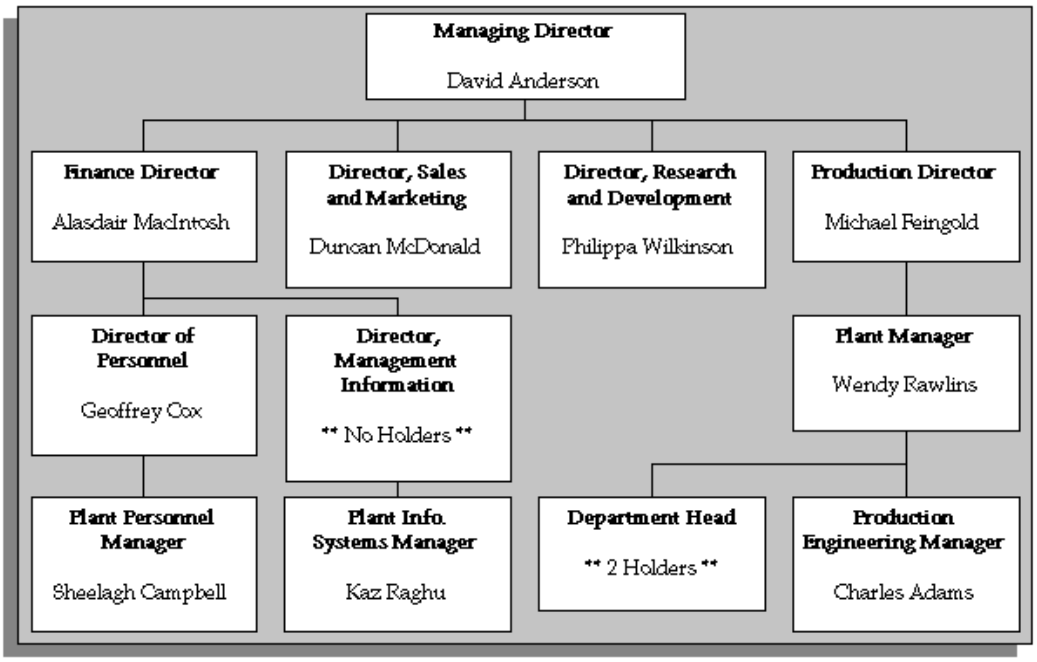
The Hierarchy Diagrammer, included with Oracle HRMS, enables you to create your position hierarchies graphically, and make intuitive drag-and-drop changes to them.

See: Launching a Hierarchy Diagrammer, page 1-118

Position hierarchies are very like organization hierarchies. You can set up a primary hierarchy and multiple secondary hierarchies to show reporting lines, including 'dotted line' reporting, and to control access to information.

Position hierarchies are dated, so you can create future-dated versions to prepare for reorganization in advance, and can retain previous versions for historical information.

**Position Hierarchies**



### Change and Delete Positions

You can add new positions to an existing hierarchy, or change positions in a hierarchy. You can also delete a position hierarchy, but you must check that it is not tied in to other working areas of the system.

## Creating a Position Hierarchy

Use the Position Hierarchy window to create position hierarchies. Always define hierarchies from the top position down.

> **Note:** You can use the Hierarchy Diagrammer to create your position hierarchy graphically.
>
> See:Introduction to Hierarchy Diagrams, page 1-118

Each position can belong to any number of hierarchies at the same time, but can only appear once in any hierarchy.

You should define the primary reporting hierarchy as part of your implementation of positions. The first version of your hierarchy should show your reporting structures when you implement Oracle HR.

> **Tip:** You may find it easier to define the Hierarchy using the top position and one other. Then you can add other positions into the

hierarchy when you make your definitions in the Position window.

### To create a position hierarchy:

1. Enter a unique name, and check Primary if it is your main reporting hierarchy.
2. Enter the version number and start date for the hierarchy.

   You can copy an existing hierarchy. See: Copying an Existing Hierarchy, page 2-101
3. Query the top position name into the Position block.

   The Holder field displays the name of the person who holds this position. If there is more than one holder, this field displays the number of holders. You can choose the List icon from the toolbar to display the list of holders.

   The Worker Type field displays the worker type of the person who holds this position. The worker type is similar to person type, except that the worker type only displays the person's active worker type. For example, the worker type for an *Employee.ex-applicant* person type is *Employee*.
4. In the Subordinates block, select the immediate subordinates for the top position.
5. To add organizations below one of these immediate subordinates, check the Down check box for the position.

   The Position block now displays the position you selected. You can add subordinates to *this* position. To return to the previous level, check the Up check box.

   > **Important:** The list of positions from which you can select in the Subordinates block includes positions that are already in the hierarchy. If you select such a position, you will move it and all its subordinates within the hierarchy.

## Creating a New Version of a Position Hierarchy

### To create a new version of an existing hierarchy:

1. Query the name of the hierarchy.
2. In the Version field, use the Down Arrow to move through existing versions of the hierarchy until you reach a version number for which no other data appears. Enter the start datefor the new version.

**Note:** Overlapping versions of a hierarchy cannot exist. Whenever you enter a new version of a hierarchy, the system automatically gives an end date to the existing version. Oracle HRMS retains the records of obsolete hierarchies so you do not lose any historical information.

You can copy an existing hierarchy. See: Copying an Existing Hierarchy, page 2-101

3. Query the top position name into the Position block.
4. In the Subordinates block, select the immediate subordinates for the top position.
5. To add positions below one of these immediate subordinates, check the Down check box for the position.

   The Position block now displays the position you selected. You can add subordinates to *this* position. To return to the previous level, check the Up check box.

## Copying an Existing Hierarchy

Use the Position Hierarchy window to copy an existing hierarchy.

### To copy an existing hierarchy:

1. Enter or query the name and number of your new hierarchy version and choose the Copy Hierarchy button.
2. Select the name and version number of the hierarchy you want to copy.

   Details of this hierarchy then appear in the Position and Subordinates blocks. You can change these.

## Deleting a Position Hierarchy

Use the Position Hierarchy window to delete a position hierarchy. You must check that the hierarchy is not tied in to other working areas of the system before you try to delete it.

### To delete a position hierarchy:

1. Remove any subordinate positions from the hierarchy, starting at the lowest level.
2. Check whether other versions of the hierarchy exist. If they do, you must delete these other versions first.

3. Check whether the position hierarchy is referenced by a security profile. If it is, you must first delete this link.

4. Query the position hierarchy in the Position Hierarchy window and choose Delete.

## Changing a Position Hierarchy

Use the Position Hierarchy window to change a hierarchy. You can change position hierarchies in three different ways.

### To view which positions are in a hierarchy:

1. Query the hierarchy and version you want to view.

2. In the Position region, enter a query on the Name field.

3. Check the Exists in Hierarchy check box and run the query. You can now scroll through the positions currently in the hierarchy in the Name field.

### To add new positions to an existing hierarchy:

1. Query the hierarchy and version you want to change.

2. Query the parent position for the one you want to add.

3. Select the new position in the Subordinates block.

> **Important:** The list of positions from which you can select in the Subordinates block includes positions that are already in the hierarchy. If you select such a position, you will move it and all its subordinates within the hierarchy.

### To change the top position in an existing hierarchy:

1. Query the hierarchy and version you want to change.

2. Query the new top position.

3. Select the previous top position in the Subordinates block.

### To move a position and all its subordinates within a hierarchy:

1. Query the hierarchy and version you want to change.

2. Query the new parent position for the one you want to move.

3. Select the position to move in the Subordinates block.

## Running the Position Hierarchy Report

Oracle HRMS includes a standard Position Hierarchy Report to display the relationship between the positions in a hierarchy. The report also lists the current holders of each position in the hierarchy.

You run reports in the Submit Requests window.

### To run the Position Hierarchy Report:

1. In the Name field, select Position Hierarchy.
2. Enter the Parameters field to open the Parameters window.
3. Enter the effective date for which you want to see the report.

   If the effective date lies between the version's start and end dates, the report shows information for the effective date. If it lies outside these dates, the report shows information for the start date of the version.
4. In the Position Structure field, select the hierarchy. If there are multiple versions, select a version.
5. In the Parent Position field, select the highest position in the hierarchy that you want to see on the report.
6. Enter Yes in the Holders Shown field to see holders' names.

   If there are more than ten holders, you see the number of holders only.
7. Choose the Submit button.

# Reorganizing your Workforce

## Business Group Reorganization

Business Group reorganizations often entail changing many employee records in the same way. Because Mass Move allows you to modify multiple employee records at once, you can make such changes conveniently.

You can move a group of assignments to different positions either within an organization or between organizations. You can move assignments to existing positions or create new positions for them. You can also change the grade, location, and standard conditions of an assignment. US and Canadian users can also change the GRE/Legal Entity of an assignment.

### Preparing for Your Reorganization

To prepare for your mass move, you must make certain decisions and ensure that certain prerequisites are in place.

The following checklist takes you through the main decision areas.

- What is my source organization? (The mass move transfers assignments from the source organization.)
- What is my target organization? (The mass move transfers assignments to the target organization. The target organization can differ from or be the same as the source organization.)
- What is the effective date for the mass move?
- What are the source position(s)? (The mass move transfers assignments from the source position(s) within the source organization).
- Do I want to deactivate the source position?
- What are my target position(s)?
- If my target position(s) are new, will their location and standard conditions be copied from the source position, target organization, or Business Group?
- What grades are valid for the target position(s)?
- Which assignment(s) will transfer from my source position(s) to my target position (s).
- Will the grade of any transferring assignment change during the mass move?

- (US and Canadian users) Will the GRE/Legal Entity of any transferring assignment change during the mass move?
- Will the location and standard conditions of any transferring assignment change during the mass move?

### Historical Information

As you reorganize your Business Group over time, you will develop an historical archive of mass moves. This archive consists of:

- All executed mass moves for which Status=Complete
- Any executed mass moves for which Status=Complete with Warnings
- Any saved but unexecuted mass moves (Status=Unprocessed or Status=In Error) that you have not deleted

Because it is important to maintain an historical record of Business Group reorganizations, you cannot delete a mass move when its status is Complete or Complete with Warnings. However, you can delete any unexecuted mass moves you chose to save but which have a status of Unprocessed or In Error.

Re-executing a mass move overwrites its original contents. Thus, only the latest re-execution of that mass move would appear in the historical archive.

## Reorganize your Business Group

Use the Mass Moves feature to reorganize positions, and the people assigned to them. You can also identify source and target positions for your mass move.

#### To reorganize your business group:

1. Ensure you have access to a responsibility linked to the Business Group within which the mass move will take place. See: Entering Business Group Information, page 1-43
2. Check that the source and target *organizations* for your mass move already exist in the HRMS database. See: Creating an Organization, page 1-31
3. Describe Your Mass Move., page 2-106
4. Identify Your Source Positions, page 2-106
5. Identify Your Target Positions, page 2-108
6. Verify the Transfer of Assignments for each Source Position, page 2-109

7. Verify or Add Valid Grades for each Target Position, page 2-110
8. Execute the Mass Move, page 2-111
9. Review the Mass Move, page 2-111
10. Re-Execute a Mass Move, page 2-112

## Describing Your Mass Move

To describe your mass move, enter a description, determining the source and target organizations for the mass move, and specifying the date on which the mass move will take effect.

### To describe your mass move:

1. Navigate to the Mass Move window.
2. Enter a description of the mass move you want to perform.

   You can change this description at any time before the mass move is processed.
3. Select the source and target organizations for the mass move.

   The source and target organizations can differ or be the same. The lists includes organizations that have been defined for the Business Group.

   **Note:** You cannot create a target organization "on the fly."

   You can change the source and target organizations for this mass move at any time until you choose the Find button on the Find Positions window. These definitions then become part of the permanent definition of the mass move and cannot be changed.
4. If necessary, adjust the effective date of the mass move.

   You can adjust the effective date at any time before the mass move is processed.
5. Save your work.

## Identifying Your Source Positions

After describing your mass move, you must identify source positions to be moved.

### To identify your source positions:

1. In the Mass Move window, choose the Positions button.

2. In the resulting Find Positions window, select source jobs and the source positions associated with those jobs.

   You can select from a list of existing jobs and positions in the source organization, or you can use generic search criteria (wildcards) to identify a pool of source jobs and source positions from which you will select your source positions in Step 3.

3. Choose the Find button.

   When the Mass Move - Positions window is populated with information, the source and target organizations you defined in the Mass Move window appear in display fields.

4. If you used search criteria to identify a pool of source jobs and positions, make sure that the list includes all of the source jobs and positions you want to include in this mass move.

   **Important:** If you want to add source jobs or positions to this list, you must delete this mass move and define a new mass move; source jobs and positions cannot be added to this list.

5. In the Move check boxes, check each of the source positions you want to move.

   Assignments associated with unchecked source positions will not be affected by the mass move in any way.

6. If you want to deactivate any source position on the effective date for the mass move, check the Deactivate Old Position check box when that position is selected.

   **Selected**: Deactivating a source position does not delete it from the HRMS database, but enters the mass move effective date as the end date for the position.

   **Note:** If you decide to deactivate source positions, check the level of the Position Elimination Rule for your organization. HRMS delivers this business rule with a default level of Error, which causes your mass move to fail for positions with active assignments subsequent to your proposed elimination date. If the Level of this rule is Error in your source organization, use the Configurable Business Rules function to create a new business rule within the scope of that organization. Use Position Elimination Rule as the Reference Rule, and set the level to Warning or Ignore. You can then run your mass move.

   See Business Rules, page 2-63

   See Process Rules Reference, page 2-66

   **Unselected**: Leaving this check box unchecked enables you to enter assignments to

the source position after the effective date of the mass move, even though the source position may have no assignments immediately following the mass move.

> **Important:** Unchecking the Move check box for a record restores the original values for that record.

## Identifying Your Target Positions

Now that you have identified the source positions for your mass move, you are ready to identify its target positions. For *each* of the target positions you will define, perform the following steps:

### To identify your target positions:

1. On the Mass Move - Positions window, select one source position for your mass move.

2. Select a target job to correspond with that source position.

   The list includes existing jobs within the Business Group.

   > **Note:** You cannot create a target job "on the fly."

3. Choose Edit Field to enter a new target position, or select a target position.

   The list includes existing positions in the target organization.

   > **Note:** Each source position can have only one target position. However you can use the same target position for multiple source positions.

4. Select the location and standard conditions for this target position.

5. If this target position is a new position, you can enter location and standard conditions as follows:

   **Source Position**: Indicates that the location and standard conditions of the source position will be applied to the new target position when the mass move takes effect.

   **Target Organization**: Indicates that the location and standard conditions of the target organization will be applied to the new target position when the mass move takes effect.

   **Business Group**: Indicates that the location and standard conditions of the Business Group will be applied to the new target position when the mass move takes effect.

**Important:** Unchecking the Move check box for a record restores the original values for that record.

6. When you have identified each of your source and target positions, choose the Assignments button.

## Verifying the Transfer of Assignments for Each Source Position

The content of the Mass Move - Assignments window depends on the source position you last selected in the Mass Move - Positions window. The Mass Move - Assignments window displays that selected source position, and its corresponding source organization and source job. It also displays the target position you have entered for this selected source position, and the target organization and job associated with this target position.

All applicant and employee assignments associated with the source position you selected in the Mass Move - Positions window are also displayed.

As the Move check boxes show, by default all assignments associated with this source position are selected to move to the target position. The Mass Move - Assignments window allows you to verify these assignments and to indicate which ones, if any, will not be moving to the target position. It also enables you to change the grade, location and standard conditions for any of the assignments to be moved. US and Canadian users can also change GRE/Legal Entity conditions.

### To verify the transfer of assignments for each source position:

1. If you want to prevent any of these assignments from moving to the target position, uncheck the appropriate Move check boxes.

2. If you want to change the grade for any transferring assignment, select the assignment, and then select another grade for that assignment.

3. (US and Canadian users only) If you want to change the GRE/Legal Entity for any transferring assignment, select the assignment, and then select another GRE/Legal Entity for that assignment.

4. If you want to copy location and standard conditions for a transferring assignment from an entity other than the current assignment (default), select the assignment, and then select the new location and standard conditions for that assignment. Options are as follows:

   **Current Assignment**: Indicates that the transferring assignment will maintain its current location and standard conditions when the mass move takes effect.

   **Source Position**: Indicates that the location and standard conditions of the source

position will be applied to the transferring assignment when the mass move takes effect.

**Target Organization**: Indicates that the location and standard conditions of the target organization will be applied to the transferring assignment when the mass move takes effect.

**Business Group**: Indicates that the location and standard conditions of the Business Group will be applied to the transferring assignment when the mass move takes effect.

> **Important:** Unchecking the Move check box for a record restores the original values for that record.

5. To save your work and then return to the Mass Move - Positions window, close the Mass Move - Assignment window.

   When the Mass Move - Positions window reappears, you can repeat the above steps for any other source positions whose transferring assignments you choose to verify. Otherwise, you are ready to verify or add valid grades for any targets jobs and/or positions.

## Verifying or Adding Valid Grades for Each Target Position

Because it is possible for the grade of a transferring assignment to be outside the bounds of the valid grades for the target job or target position, you can use Mass Move to add valid grades to the target position.

### To verify or add valid grades for each target position:

1. On the Mass Move - Positions window, choose the Valid Grades button.

   The Valid Grades window displays the valid grades for the target position:

   - A newly-created target position has the same valid grades as the source position.
   - An existing target position retains its existing valid grades, and Mass Move adds any other grades that are valid for the source position.

   You cannot delete any of the valid grades.

2. Optionally, select additional valid grades for the target position.

3. Close the Mass Move - Valid Grade window to save your work and return to the Mass Move - Positions window.

   When the Mass Move - Positions window reappears, you can select any other

records, to verify or add valid grades for that target position.

## Executing the Mass Move

Use the Mass Move window to execute the mass move.

### To execute the mass move:

1. Close the Mass Move - Positions window.
2. Save your work when prompted to do so.
3. On the Mass Move window, choose the Execute button.

   If the number of changes being made is large, executing the mass move may take some time.

## Reviewing the Mass Move

After you have chosen the Execute button on the Mass Move window, you are ready to review the results.

### To review the mass move:

1. On the Mass Move window, review the contents of the Status field.

   **Unprocessed**: Indicates that you have not yet executed the mass move.

   **Complete**: Indicates that the mass move completed successfully without errors. For historical purposes, completed mass moves are automatically archived and cannot be modified.

   **Complete with Warnings**: Indicates that the mass move completed successfully. Nevertheless, you should still review any warning messages the mass move generates. It is possible for a mass move to execute with Status=Complete with Warnings, yet without all assignments moving as you intended.

   **In Error**: Indicates that the mass move did not complete successfully and that no changes took effect. You must first resolve the offending conditions before you can successfully re-execute the mass move.

   > **Important:** If the Status field shows In Error or Complete with Warnings, the Message button appears next to the Positions button.

2. If the Message button is displayed, review the messages.

   The Message window that appears includes the following fields:

**Type**: This displays the type of message; Warning or Error.

**Row Information**: If this field displays a position name, the message applies to a source position. If this field displays the name of a person, this field applies to the assignment associated with that person.

**Message**: This displays the text of the message.

> **Note:** The Explain button on the Message window is disabled if no additional information is available.

3. If the Status field shows Complete or Complete with Warnings, navigate to the Mass Move - Assignments window and verify that the mass move changes you wanted to make did in fact take effect. Then navigate back to the Mass Move window.

## Re-executing a Mass Move

If the Status field on the Mass Move window shows In Error, you need to resolve the problems and re-execute the mass move until the Status field shows Complete or Complete with Warnings.

If the Status field shows Complete with Warnings, you should investigate those Warnings to determine whether you want to resolve the warning conditions and re-execute the mass move to eliminate the warnings.

> **Note:** The *mass move* feature displays warnings even when it has executed successfully.

Resolving problems may require that you exit Mass Move. For example, an applicant assignment associated with a vacancy will not move during a mass move. To move that assignment to the target position, you would need to use the Assignment window to disassociate this applicant assignment from the source position, and then assign this applicant to a target position.

### To re-execute a mass move:

1. Navigate to the Mass Move window.
2. Query the mass move that you previously saved and want to re-execute.
3. After the Mass Move window is populated with data, make whatever changes you need to make to correct the mass move definition.

> **Important:** Since assignments are datetracked, you may only

update a given assignment once a day. To bypass this rule, you can alter the mass move effective date.

If you query a previously saved mass move and then choose the Positions button, the Find Positions window is not displayed. Instead, the Mass Move - Assignments window immediately appears and is populated with data.

4. Choose the Re-execute button.

5. Review your mass move in the standard manner.

# Workforce Intelligence for Jobs and Positions

## Employee Job and Position Detail Workbook

This workbook allows you to analyze aspects associated with jobs and positions within your organization. It allows you to:

- Compare requirements for positions across Business Groups.
- Analyze requirements for positions against those held by employees or applicants.

### Parameters

This workbook has no parameters.

### Worksheets

This workbook has the following worksheets:

- Workforce by Job and Position
- Work Choices by Job
- Work Choices by Position
- Job and Position Special Information

### Workforce by Job and Position Worksheet

This worksheet enables you to analyze assignment details for employees within an organization by job and position.

#### Business Questions

*Who in my workforce occupies a particular job or position?*

### Work Choices by Job Worksheet

This worksheet enables you to analyze deployment factors for jobs, people in specific jobs, and job applicants.

#### Business Questions

*What are the working preferences of my employees?*

### Headings and Calculations

This worksheet uses the following calculations:

- **Calc Job**

  Populates the Calc Job page item in the worksheet. It returns the Deployment Factors Job name, but if that is not present, it returns Employee Assignments Job Name.

## Work Choices by Position Worksheet

This worksheet enables you to analyze deployment factors for positions, people in specific positions, and position applicants.

### Business Questions

*What are the working preferences of my employees?*

### Headings and Calculations

This worksheet uses the following calculations:

- **Calc Job**

  Populates the Calc Job page item in the worksheet. It returns the Deployment Factors Job name, but if that is not present, it returns Employee Assignments Job Name.

## Job and Position Special Information Worksheet

This worksheet enables you to analyze special information types associated with jobs and positions.

### Business Questions

*What other information is relevant to a particular job or position?*

# 3

# People Budgets and Costing

## People Budgets and Costing Overview

### HRMS Budgeting Overview

Human Resource budgets enable you to manage personnel costs efficiently. Using Oracle HRMS, you can create and approve budgets that help you:

- Manage expenditures on HRMS entities
- Adjust forecasts
- Plan for future costs

You can estimate expenditures for the following HRMS entities:

- Job
- Position
- Grade
- Organization
- Open

> **Note:** The Open budget entity allows you to create a budget for any combination of job, position, grade, or organization. You cannot use control budget features with the Open entity.

You set up your budget based on your organizational culture and business requirements. For commercial enterprises, the fiscal budget is typically based on company revenues, and can change during the fiscal year. For public sector enterprises,

such as city governments and educational institutions, budgets must comply with legislation-mandated funding requirements. See the following section, Control Budgeting.

You can correct your budget as funding or expenditures change. You can create a new version of a budget based on an existing version at any time. You can enter budgets directly into the database, or route budget worksheets for approval online. You can monitor money, FTE, headcount, and hours (up to three in a single budget). You can enter fixed amounts for each line item, or calculate the value of each entry as a percentage of the total allocation.

You can specify any date range you want for your budget's fiscal period, and use currency values of any length, with variable decimal point placement. If you budget by position or organization, you can use an organization hierarchy to delegate your budget among organization managers.

## HRMS Cost Analysis Overview

Oracle products installed in your organization determine how you can use costing information.

See: Labor Costs in Oracle HRMS, page 3-54

Entries you make in cost allocation flexfield segments enable you to map costing data to general ledger account codes and distribute costs across your enterprise.

See: The Cost Allocation Key Flexfield, page 3-63

HRMS allows you to override default cost allocations on five levels, to account for exceptions and temporary costing arrangements:

- Payroll
- Element link
- Organization
- Assignment
- Element entry

Cost data at the payroll level when you always charge your costs to the same company or the same ledger.

See: Data Costed at the Payroll Level, page 3-57

Cost data at the element link level when you define costed, fixed costed, or distributed costing types for earnings and deductions.

See: Data Costed at the Element Link Level, page 3-57

Cost data at the organization and assignment levels when costs are typically allocated to the same cost center.

See: Data Costed at the Organization and Assignment Levels, page 3-62

Cost data at the element entry level when you want costs for an individual element entry, such as a timecard entry, to override costs entered at any other level.

See: Data Costed at the Element Entry Level, page 3-63

RetroCosting ensures that costing information you processed in payroll runs is correct, identifying discrepancies attributable to processing errors or changes to your implementation structure.

## Reporting on Cost Analysis

Once you have completed the costing process, you can run the Cost Breakdown report to see the distribution of payroll calculation results, with corresponding General Ledger and labor cost details. You can run two versions of this report:

- **Cost Breakdown Report for Costing Run**: shows summarized costing totals for a specified costing process
- **Cost Breakdown Report for Date Range**: shows summarized costing totals for a particular consolidation set, payroll set, or payroll over a specified interval

See: Run the Cost Breakdown Report, page 3-74

## Control Budgeting

If you mark your budget as a control budget, you can:

- Integrate your budgeting process with accounting by posting your budget to Oracle General Ledger and/or Grants Management
- Run reports to compare budget estimates with actual expenditures or get a snapshot of under budgeted line items, at any stage of the budget cycle
- Enforce business rules that reflect the policies of your enterprise, such as ensuring that funding is available before entering assignments or approving budget reallocations

A successful HRMS Control Budgeting implementation typically requires consultation and coordination with professionals working in other modules:

- General Ledger (for chart of accounts code combinations)
- Payroll (for costing structures that generate actuals)
- Grants Accounting and Labor Distribution (optionally, if your enterprise performs grants accounting)

### Budgeted Amounts

You can distribute estimated costs to Oracle General Ledger by linking budget elements to their corresponding chart of accounts codes. Using budget sets, you can parse a budget element and link it with multiple codes, enabling you to account for all funding sources that pay for a given cost. You post your budget to GL by mapping HRMS costing flexfield segments to general ledger account code segments.

See: Defining Budget Characteristics, page 3-19

**Budget Sets**: In the real world, employee packages consist of many elements, for example, earnings, supplemental earnings, taxable benefits, direct payments, and employer liabilities. You can create as many budget sets as you need to reflect this structure and represent your employee packages, then attach them to the positions in your budget to provide data links to elements and the accounts that pay for them.

See: Defining Budget Sets, page 3-15

**Budgeting FTE and Headcount**: You can create budgets that monitor or control FTE or Headcount. Use business rules in combination with position FTE or budgeted FTE to ensure that position control issues a warning or halts processing if hiring or promoting a person would put you over allotted FTE. You can also configure the application to recalculate and update Assignment Budget Values for FTE automatically when determining factors change, such as working hours or frequency.

See: Budget and Control Positions Using FTE in Position Control, page 2-28

See: Recalculating Assignment Budget Values, page 3-17

**Budgeting Positions**: Once you post a position control budget, you can add a position to it and enter budget allocations to the level of the budget period when you define or update the position. Using a default budget set you link to budget characteristics, you can also provide default element and funding source information.

See: Entering Budget Values by Calendar Period in Completing a Budget Worksheet, page 3-27

### Actuals and Commitments

HRMS costing and budgeting features work together to enable you to compare budgeted amounts with actuals. When you run Oracle Payroll, HRMS costing processes allocate personnel expenditures to cost centers, general ledger codes, and/or labor distribution codes. HRMS accumulates the balances using pay elements you can also specify in your budget for tracking actuals. You track budget commitments in a similar way, earmarking budget elements for commitment tracking. You can then compare your actual costs to budgeted amounts, commitments, and projections. See the following section, Reporting on Control Budgets.

### Integration Considerations

Your implementation team is responsible for planning the required correspondence

between budgeted and costed elements. Organizations frequently account for the cost of positions by placing people in multiple assignments, especially organizations that must meet the stringent requirements of grants accounting. Multiple assignments enable you to specify costing percentages in a different way for each assignment.

Here are some of the questions your implementation must address:

- Which General Ledger Chart of Accounts code combinations are available for your use?
- Which accounts fund the positions, jobs, organizations, or grades in your enterprise?
- How do you plan to distribute costs so that actuals generated by payroll runs correspond to budgeted amounts?
- Does your enterprise use Grants Accounting?
- Do you need to create multiple assignments and specify costing proportions at the assignment level, in order to meet regulations or reporting requirements?
- Are you using HRMS costing or Labor Distribution?
- Is Labor Distribution processing commitments, or is HRMS?
- Which combination of Payroll-, Link-, Organization-, Assignment-, and Element Entry-level costing best fits the way your enterprise tracks costs?

## Reporting on Control Budgets

Oracle HRMS provides reports to enable you to monitor the status of active control budgets. Control budget reports are especially useful during the analysis and adjustment stages of the budget cycle. Run *Report Under Budgeted Entities* to flag line items whose projected costs exceed budgeted amounts. You can then reallocate resources from over budgeted entities.

Status reports display information about the primary entity (typically positions) for specified time periods, enabling you to analyze budgeted, actual, committed, projected, and balance amounts. You can also view differences between budgeted and actual amounts expressed as a percentage.

For a high level budget summary, run the *Position Summary* report to display the status of all positions within an organization. If you need to focus on a specific pay element, run the *Entity Element Summary* report. To view specific positions within an organization, broken out by pay element, run the *Position Element Detail* report. If you work in a position control organization, run the *Organizational Position Summary* report based on an organization hierarchy.

**Note:** You can restrict the scope of most reports to specific types (over budgeted, under budgeted, or both).

See: Control Budget Reports, page 3-44

### Key Concepts

To broaden your understanding of HRMS Budgeting and Costing, see:

Using Oracle HRMS Budgeting, page 3-9

Migrating a Budget to Oracle HRMS, page 3-34

Completing a Budget Worksheet, page 3-27

Entering Non-Approved Budgets, page 3-24

Routing Budget Worksheets and Position Transactions, page 2-91

Reallocating and Reserving Budget Resources, page 3-38

Business Rules, page 2-63

Transaction Type Wizard, page 2-55

Process Rules Reference, page 2-66

Routing and Approval Rules Reference, page 2-58

## People Budgets and Costing

Oracle HRMS provides all the features you need to manage your human resource position budgets. You can create a budget for a variety of HR expenditures, from monetary expenditures, such as salary and benefits, to headcount and full-time equivalency, all within the same budget.

### Can I maintain budgets for all my Oracle HRMS work structures?

Oracle HRMS enables you to define a budget for jobs, positions, grades, and organizations; you can also define a budget using any combination of these work structures.

### Can I manage salary budgets using Oracle HRMS?

Yes. using Oracle HRMS you can add salary estimates to the work structures in your budget. Using *budget sets*, you can link budget values to the elements you use to record pay values. Management reports enable you to compare actual expenditures against budget.

## How do I enter a budget into the application?

You use a *budget worksheet* to enter budget data into the application. You express this data as an amount or as a percentage of the total allocated amount for the budget. You can also add a position to an existing budget and enter budget data to the period level when you create or update the position.

## Can I delegate a budget worksheet to a manager in my organization?

Yes, provided that you budget for positions or organizations, since these work structures enable the use of organization hierarchies. You can start a budget worksheet, then delegate the worksheet to a manager in your organization hierarchy.

## Can I route a budget for approval?

Using Oracle Workflow, you can route a budget for approval. You decide your list of approvals based on routing lists, a supervisory hierarchy, or a position hierarchy.

When an approver approves a budget worksheet, you apply the budget worksheet to the database for the budget to become an active budget. Management reports track the difference between actual expenditures and an active budget.

You can also work in non-approval mode if your organization does not require online approval of budgets.

## How can I migrate legacy budgets to Oracle HRMS?

Using the Oracle HRMS Concurrent Manager, a system administrator can schedule a batch process to migrate a budget from previous releases of Oracle HRMS to the new budget function. The budget you migrate is pre-approved and does not need to be routed for approval.

## Can I reallocate control budget resources from one line item to another?

Oracle HRMS enables you to reallocate excess resources to positions, jobs, grades, or organizations that need them. A web-based interface displays information about budgeted, actual, committed, and available amounts per budget period, enabling you to reallocate budgeted amounts using automatic workflow routing and approval.

## How do I validate budgets or reallocations against my organization's business practices?

When you apply your approved budget worksheet or reallocation transaction to the HR database, the application uses business rules you configure or define to compare the values in the transaction with data you provide about positions, budgets, or assignments. You configure each rule to display a warning, halt processing, or ignore

the validation failure.

## How can you use cost analysis to support your business activities?

You can use Oracle HRMS to:

- Estimate labor costs from current compensation definitions
- Project future labor costs by modelling organizational change and salary reviews

You can also use Oracle Payroll to accumulate actual payroll costs for transfer to Oracle General Ledger. When you run a payroll, Oracle Payroll calculates any prorated results if the cost center changed during the payroll period. You can set a dynamic trigger to create prorated cost results that reflect cost center changes.

# Budgeting

## Using HRMS Budgeting

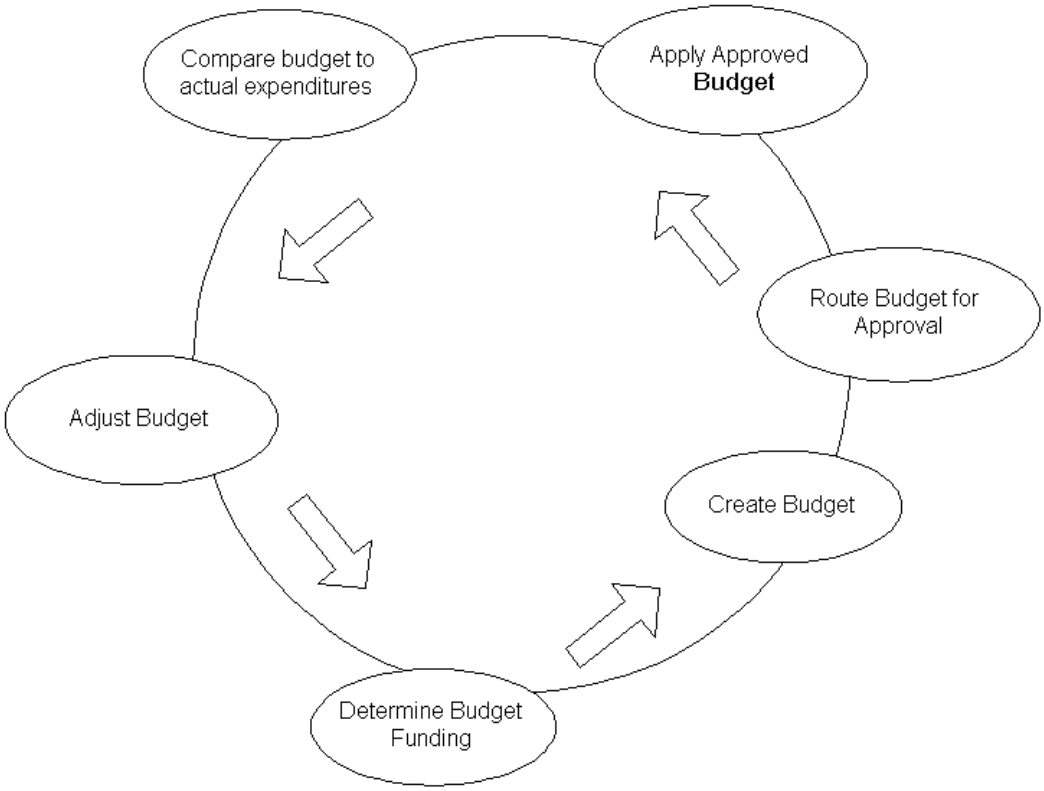
The following sections provide an overview of how to use Oracle HRMS budgeting features and integrate your budgeting process with Oracle General Ledger, Oracle Grants Accounting, and Oracle Labor Distribution:

- The Budget Cycle
- Migrating an Existing Budget to Oracle HRMS
- Creating and Approving Budgets
- Reallocating and Reserving Budget Resources
- Enforcing Policy with Business Rules
- Control Budgeting in a Grants Environment

### The Budget Cycle

For many enterprises, the budgeting process is a time-consuming, cyclical venture. Oracle HRMS provides support for all phases of the budget cycle:

***Stages of the Budget Cycle***



For each stage, Oracle HRMS features are available to help you manage your budget.

- **Budget Funding**: Use Oracle General Ledger to report on available funds based on revenue or legislated funding. Run Oracle HRMS control budget reports to determine budget excesses and deficits for the fiscal year.
- **Budget Entry**: Use HRMS Budgeting to define the properties of your budget and enter values.
- **Budget Approval**: Route budget worksheets for approval using Oracle Workflow. On approval, apply the budget to the database.
- **Budget Analysis**: Schedule HRMS control budget reports to compare budgeted amounts with actual expenditures, commitments, and projections.
- **Budget Adjustments**: You can correct an active budget during the fiscal year, reallocating resources to other line items as needed, or reserving resources so that you cannot use them.

## Migrating an Existing Budget to Oracle HRMS

If your enterprise implemented Oracle HRMS prior to Release 11*i*, you can migrate legacy budgets to the current version of HRMS. You can use the migrated budget as the basis for a new budget. See Migrating a Budget to Oracle HRMS, page 3-34.

## Creating and Approving Budgets

If your enterprise operates in an environment where budgets are subject to an approval process, you can route a budget online through a hierarchy of approvers. On approval, you apply the budget to the database to activate it. See Completing a Budget Worksheet, page 3-27.

In enterprises without a formal approval process, you can enter budget values directly. See Entering Non-Approved Budgets, page 3-24.

Post a control budget to Oracle General Ledger to make it available to your financial organization, or integrate HRMS budgeting with Oracle Grants Accounting.

See Posting a Budget to Oracle General Ledger as a Batch Process, page 3-35.

## Reallocating and Reserving Budget Resources

In organizations that maintain strict control over the creation or modification of positions, managers cannot exceed budgeted amounts. Budget reallocation (the ability to transfer available resources from one control budget line item to another during a given budget period) provides some flexibility to an otherwise strict system of controls. When excess money, FTE, hours, or headcount is available, such as when a position becomes vacant or goes unfilled, you can reallocate resources from over-budgeted positions, organizations, grades, or jobs to under-budgeted entities.

You can also reserve resources so you cannot use them, and reallocate resources to non-budgeted entities. See Reallocating and Reserving Budget Resources, page 3-38.

## Enforcing Policy with Business Rules

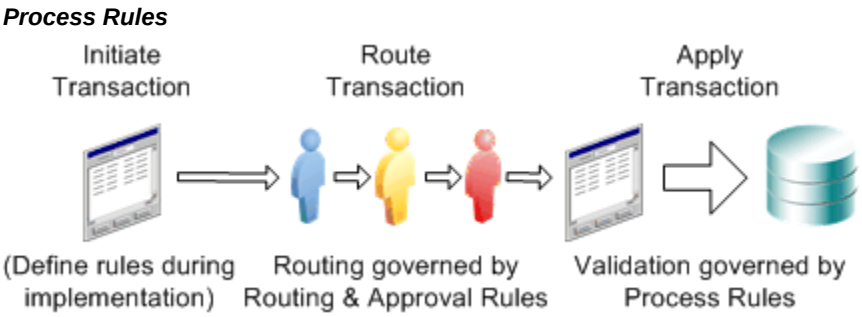
Configurable business rules (also called *process* rules) enable you to validate position transactions, budget worksheets, and reallocation transactions on approval, ensuring that the proposed actions adhere to organization policy.

The life cycle of a transaction consists of three stages:

- Initiate
- Route and Approve
- Apply to the database

As you see in the figure below, the application invokes process rules when you apply

your transaction to the database.



When you apply a business transaction to the database, process rules check the values in the transaction. The rules trigger a warning or error if, for example, budgeted amounts are insufficient to fund a new position, the donated amount in a reallocation is above a specified threshold, or if donated FTE exceeds a specified limit.

See Business Rules, page 2-63.

### Control Budgeting in a Grants Environment

Oracle HRMS works with Oracle Grants Accounting to create reservations when you approve and post your budget (funds checking). When you assign a person to a budgeted position and calculate commitments, you automatically relieve reservations and create encumbrances in grants. As payroll runs generate actuals, Grants Accounting records the expenditures against award budgets.

> **Note:** Commitments in HRMS are similar to encumbrances in grants accounting.

## Under Budgeted Entity Reporting

For controlled budgets, you can run a report to identify the entities (positions, organizations, jobs, or grades) that the application projects to be under budgeted. The way in which the application calculates whether an entity is under budgeted depends on the budget measurement unit.

The budget measurement units fall into two categories:

- **Cumulative:** Money and hours
- **Non-cumulative:** All other units such as FTE, headcount, and all user defined budget units.

## Calculations for Cumulative Budget Units

If the budget measurement unit is Money then an entity is under budgeted if:

**(Budgeted Salary + Reallocated Salary) < (Actual Salary + Commitment Salary)**

If the budget measurement unit is 'Hours' then an entity is under budgeted if:

**(Budgeted Hours + Reallocated Hours) < (Actual Hours)**

> **Note:** Budgeted Amount, Reallocation Amount, Actual Amount and Commitment Amount of the Cumulative Units is calculated by a cumulative process (summation) for a given date range.

When a date range is given with a cumulative unit, the above calculation is run only once for the given date range to find the under budgeted entities

## Calculations for Non-cumulative Budget Units

If the budget measurement unit is FTE, Headcount or any other non-cumulative unit, then an entity is under budgeted if:

**(Budgeted Amount + Reallocated Amount) < (Actual Amount)**

> **Note:** Budgeted Amount, Reallocation Amount, Actual Amount of the Non-Cumulative Units is calculated as the amount defined as of the given date.

When a date range is given with a Non-Cumulative Unit, the above calculation will be run for all possible dates with in the date range to find the Under Budgeted Entities.

## Items for Under Budgeted Calculations

Items that are used in the above calculation are explained in detail below:

- **Budgeted Salary** is the sum of the values of individual elements for the budget sets defined for the each budget detail and the corresponding controlled budget. The values are prorated if input start date or end date is between the budget elements start and end dates.

- **Reallocated Salary** is the value obtained after the funds are reallocated using the budget pool. If the budget unit is Money or Hours or Aggregate then the reallocated amount is prorated.

- **Actual Salary** is the sum of each element type for all the assignment actions that lie within the supplied period.

- **Commitment Salary** is the sum of the commitment amounts for each assignment and the element type.

- **Budgeted Hours** is the sum of the budget values for all the budget periods, for all the budgets falling within the date range you specify. The values are prorated if input start date or end date is between the budget elements start and end dates

- **Reallocated Hours** is the value obtained after the funds are reallocated using the budget pool. If the budget unit is Money or Hours or Aggregate then the reallocated amount is prorated.

- **Actual Hours** is the sum of the normal hours taking into consideration the frequency for all the assignments.

- **Budgeted Amount** is the sum of the budget values for all the budget periods, for all the budgets falling within the date range you specify.

- **Reallocated Amount** is the value obtained after the funds are reallocated using the budget pool.

- **Actual Amount** is the sum of assignment budget values for all the assignments that coincide with the effective date.

## Defining Budgetary Calendars

You define calendars for human resource budgets in the Budgetary Calendar window.

Once you define the calendar you cannot:

- Change the start date. Set the start date to let you enter any budget history information you want to enter.

- Define years with an earlier start date than the start of the calendar.

In each calendar you define as many years as you require. You do not create a new calendar for each year. You just add new periods to the calendar.

### To define a budgetary calendar:

1. Enter the name, and start date for your calendar.

   Check that the start date year is early enough to cope with your historic data. Once you define the calendar, you cannot change the start date.

2. Select a period type. If you select Semi-monthly, enter a value between 1 and 28 in the Midpoint Offset field to determine the start date of the second time period each month. For example, if you enter the value 15, the second time period each month begins on the 16th.

3. Save the calendar.

   The system automatically creates the time period details. You can alter the default names for each time period.

4. If you want to add years to, or delete years from, the end of the calendar, choose the Change Calendar button.

5. When you have defined your calendars, you are ready to define your budgets.

## Renaming Period Types

Budgetary calendars and payroll calendars are based on a period, such as a Quarter or a Year. Standard period types are predefined with the system. If you want to use a different name for a period type, enter the name in the Period Types window.

You cannot remove the names that are already defined, but you can insert a new record and select the appropriate Number Per Year.

### To rename a period type:

1. Insert a new record.

2. Enter the new name for the period type.

3. Enter the number of time periods to occur per year.

4. Save your new period type.

## Defining Budget Sets

Using budget sets, you can link budget entries you record in a budget worksheet to the pay elements you use to record compensation and other values. You can run Oracle HRMS reports to compare a budgeted value for an element to the run result recorded for that element.

You also use budget sets when you migrate a budget from releases of Oracle HRMS prior to Release 11*i*.

See: Migrating a Budget to Oracle HRMS, page 3-34

Use the Budget Set window to define a default budget set. You can add or delete elements to a set in the budget worksheet.

### To define a budget set:

1. Enter or query a Budget Set.

2. Choose the Elements tab.

3. Select an Element you want to include in the budget set.

4. Enter the Default Percentage of the budget entry value that is distributed to the element.

5. Repeat steps 3 and 4 for each element in the budget set.

6. Choose the Funding Sources tab.

7. Choose the left or right arrow button to select an element in the budget set.

8. Do one of the following:

   - If this element is funded from your GL, then click in the Cost Allocation field to open the Cost Allocation Flexfield window and enter the cost allocation code combination by selecting a value for each applicable field

   - If this element is funded by a grant, then enter the Project, Task, Award, Expense, Organization (PTAEO) combination by selecting a value for each applicable field. In future releases of Oracle HRMS, this combination will be validated against your Oracle Grants setup.

     **Note:** The PTAEO fields are only displayed if Oracle Grants is installed.

9. Enter a distribution percentage for each funding source record.

10. Save your work.

## Entering Assignment Budget Values

At the Business Groups level, you can enter the default value of an assignment for each type of budget you have defined. For particular assignments, you override this default value in the Assignment Budget Values window.

If you have not entered a default value at the Business Group level, you must be careful to enter a value for every assignment. If there is no value entered in the Assignment Budget Values window, that assignment is not counted when calculating actual values for the budget.

**Note:** If you are using Workforce Intelligence or Oracle HRMS Intelligence, assignments without budget values are included when calculating actual values for the budget.

See: Workforce Intelligence in the *Oracle HRMS Configuring, Reporting, and System Administration Guide.*

### To enter an assignment budget value:

1. If necessary, use the DateTrack facility to set the effective date for the assignment budget values. You must re-query the assignment budget values into the window if you change the effective date.

2. Select a budget type in the Units field and enter the value of the assignment for this budget in the Value field. Oracle HRMS displays the effective dates of the assignment budget value in the Effective Dates From and To fields.

## Recalculating Assignment Budget Values

When data changes occur that can impact Assignment Budget Values (ABV), such as changes to working hours, frequency, or other terms of work, you can configure the application to update ABV automatically using the Configuration Values function.

For example, if standard working hours are 40 per week, and you enter an assignment with 40 hours per week, FTE is 1. If the worker's hours change to 30 per week, recalculating the budget value changes FTE to 0.75.

Organization policy or legislative requirements can dictate a unique implementation. Company rules or contract terms may calculate FTE in prescribed ways. Some locations may add overtime to standard working hours, or deduct unpaid sick time. The flexibility and scalability of the configuration process enables you to meet business requirements. You decide which ABV to maintain (typically a derived value, such as Full Time Equivalent or Percent Full Time), and how to calculate the value.

A concurrent process (Calculate Assignment Budget Values) also enables you to manually update ABV after performing batch changes, such as mass assignment updates or initializing assignment data during implementation.

See: Running the Calculate Assignment Budget Values Process, page 3-41

Perform three configuration steps for each budget measurement unit you want to maintain automatically:

1. **Enable an Assignment Budget Value**: Activate maintenance for the budget measurement unit of your choice.

2. **Configure Date Collection**: Specify the events group and/or custom function you have created to log system events, such as changes to assignment records.

3. **Specify a Recalculation Formula**: Select a FastFormula you write to calculate the specified ABV.

You can override predefined configurations at the business group level. In Configuration Values, query the module Assignment Budget Value Maintenance.

1. **Enabling an Assignment Budget Value**

   The module uses the configuration type Maintenance Configuration to enable and disable maintenance for a specified budget value unit of measurement.

2. **Configuring Date Collection**

   The module uses the configuration type Process Definition Configuration to collect a list of event dates for processing, using an events date source you specify. The list of dates enables the process to recalculate and update ABV for the triggering record as of the effective date, including future changes that impact the budget value.

   On the Add Configuration Value page, configure your process definition by specifying:

   - Configuration Name
   - Budget Value Unit Of Measurement
   - Event Dates Source (Event Group and/or Custom Function)

   If you have implemented Oracle Payroll, you can define a payroll event group of the type Retro to log system events.

   See: Defining Event Groups, *Oracle HRMS Payroll Processing Management Guide*

   For information on defining a custom function, see the PL/SQL User's Guide and Reference.

3. **Specifying a Recalculation Formula**

   On the Add Configuration Value page, specify the budget value formula (QuickPaint FastFormula) you created to calculate the specified ABV.

   See: Oracle FastFormula Overview, *Oracle HRMS FastFormula User Guide*

## Setting Up Default Assignment Costing for Budgets

Follow the process below to set up default assignment costing for budgets.

> **Note:** If you write a FastFormula to select default assignment costing accounts and proportions, the formula overrides the default assignment costing for the budget.

See: Writing Formulas for Default Assignment Costing, *Oracle HRMS FastFormula User Guide*

### To set up default assignment costing for budgets:

1. Set the following profile option to Yes:

   - HR: Default Assignment Costing

   See: User Profiles, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

2. Define a position control budget.

   See: Defining Budget Characteristics, page 3-19

3. Set up funding sources for the positions in your position control budget.

   See: Completing a Budget Worksheet, page 3-27

   When you link a position to an assignment, the default assignment costing accounts and proportions are calculated from the position control budget.

## Defining Budget Characteristics

You use the Budget Characteristics window to define the properties of a budget. Once you define the properties, use the Budget Worksheet or Budget Details window to make budget entries.

Use the Budget Characteristics window to:

- Select the primary budget entity. You can choose job, position, grade, organization or a combination of these work structures.
- Select the budget measurement units, for example money or headcount.
- Define the fiscal period of the budget.
- Indicate which budget elements you want to use for tracking actuals and commitments.
- Map Cost Allocation flexfields to Oracle General Ledger account codes if you post the budget to Oracle General Ledger.

> **Note:** The application freezes the budget characteristics once you create a budget worksheet or budget version for that budget.

### To define budget characteristics:

1. Enter the budget name and select a budget calendar.

2. Check the Control Budget check box if this budget is for control purposes, for example, position control.

   **Note:** You can define only one control budget per budget measurement unit type within a period for a business group.

3. If this is a controlled budget, check the Transfer to Grants check box if you want to transfer budget information to the Oracle Grants management system.

   **Note:** This check box is only displayed if you have Oracle Grants installed.

4. Choose the Budget Characteristics tab.

5. Enter the Fiscal Period for this budget in the From and To fields.

   **Note:** You can enter allocations for budget periods within the fiscal period when you complete the budget worksheet.

6. Select the Currency of the budget. If you do not select a currency the default currency for your business group is used.

7. Optionally, select a default budget set from the list. Position users can use the information in the budget set to provide budget data at the element and funding source level when they create or update positions.

8. Select the Primary Entity of this budget, such as Position.

   Select Open to use a combination of Job, Position, Grade, or Organization. You choose the Open entity more infrequently, typically for budgets migrated from earlier versions of Oracle HRMS (11.0 and later). If you choose the Open entity, you need to enter all line items manually (Populate All does not work). You cannot create a control budget using the Open entity, and Report Under Budgeted Entities will not work.

   **Note:** The list of primary entities is seeded with the product and you cannot extend this list.

   You must enter budget values in the worksheet for the primary entity. If you select position as the primary entity, you can limit the position to a position in a grade using the budget worksheet.

9. Select the Budget Style.

- Select **Top Down** if you enter the total Allocated amount for each budget measurement unit when you complete the budget worksheet. You can distribute the Allocated amount between the line items in the budget version.

- Select **Bottom Up** if you do not enter the total Allocated amount for each budget measurement when you complete the budget worksheet. In this case, the application rolls up the value for all the budgeted line items to create the total Allocated amount for the budget version.

10. Select an Organization hierarchy if your primary entity is position or organization and you want to delegate the budget to managers in a organization hierarchy.

    - The application displays the version of the organization hierarchy in the Version field.

    - When creating a control budget you must mark the organization hierarchy for position control.

      **Note:** If you do not select an organization hierarchy, the budget worksheet displays all positions and organizations in the business group.

11. Select the highest organization for which you are budgeting in the Starting Organization field if you select an organization hierarchy.

    **Note:** You cannot enter budget values for any organizations in the organization hierarchy above the starting organization.

12. If you want to limit the grades that can be selected for budgeting to only those marked as valid for the associated position or job, then check the Valid Grade Required check box.

    See: Entering Valid Grades for a Job or Position, page 2-24

    **Note:** If you save a budget as valid grade required, you cannot change it back to an all grade budget.

13. Select the first Budget Measurement Unit for which you are budgeting, such as money or headcount.

    - Oracle HRMS delivers the following seeded measurement units: Money, Hours, Headcount, Full Time Equivalent, and Percent Full Time Equivalent. You cannot extend these units, but you can use the User Types and Statuses window to copy and rename a unit by selecting the BUDGET_MEASUREMENT_TYPE

lookup value.

> **Important:** Although it is theoretically possible to set up budgets that measure money, hours, headcount, and FTE for many combinations of entities, fiscal periods, and budget calendars, this approach does not reflect best practice. To achieve meaningful results in reports, Oracle recommends using a given measurement unit with a single entity, fiscal period, and budget calendar. This alignment is essential when you implement Workforce Intelligence reporting, such as Workforce Budget Management.

14. Select an aggregation method in the Aggregate field to control how the application rolls up budget totals by budget period for each budget measurement unit.
    - **Accumulate** defines the total as the value accumulated in the budget period. If you select Money as a budgeting unit, you must select Accumulate as the aggregation method.
    - **Average** defines the total as the average value for the budget period. You typically use this method for non-monetary units such as FTE or Headcount, where allocations can fluctuate widely from one period to the next.
    - **Maximum** defines the total as the maximum value for the budget period.
15. Save your work.

### Defining Budget Elements to Track Actuals and Commitments

You can compare your budgeted amounts to actual expenditures and projected commitments for any fiscal period. In order to track actuals or commitments, you must specify a method as part of your setup:

- You must specify an Input Value to track actuals.
- You can choose to calculate commitments based on Input Value, Salary Basis, or a FastFormula rule you define.

> **Note:** If you define a budget element to track both actuals and commitments (Type = "Both"), you must specify Input Value as the method. You can define the same element twice (once for each Type) to specify a different method for calculating commitments.

You calculate commitments from the Concurrent Manager by running the Calculate Commitment batch process.

### To define budget elements:

1. Enter or query a budget in the Budget Characteristics window.
2. Choose the Elements tabbed region.
3. In the Type field, specify whether you want to use the element to track Actuals, Commitments, or Both.
4. In the Classification field, optionally select a payment classification from the list, such as Earnings, Supplemental Earnings, or Employer Liabilities.

   **Note:** This field filters the Element list to display only those elements matching the selected classification. Since budgets track payments, do not select a deduction classification here.

5. In the Element field, select the element you want to use to track actuals and/or commitments.
6. If you selected Actuals or Both in the Type field, specify an Input Value to track the element.
7. If you selected Commitments or Both in the Type field, do one of the following to specify a calculation method:
   - Select an Input Value to the element, such as Amount or Pay Value.
   - Activate the Salary Basis check box.
   - Select a FastFormula.
8. Select a Default Frequency to specify the default unit of time for which you calculate commitments (day, week, month).
9. Optionally, enter an Overhead % to add a percentage of the commitment calculation result to the total commitment amount.
10. Save your work.

#### Mapping Cost Allocation Flexfields to Oracle General Ledger Accounts

You can transfer a completed budget to Oracle General Ledger. To enable the transfer, map Oracle HRMS cost allocation flexfields to general ledger account codes.

**Note:** Budget sets enable you to link each budget element to multiple GL account codes. To account for multiple funding sources, attach

budget sets to line items in your budget.

You transfer budget worksheets marked for transfer to GL automatically, when you apply the budget to the database. If you use Direct Budgeting (without routing), run the concurrent process Budget GL Posting.

See Posting a Budget to Oracle General Ledger as a Batch Process, page 3-35.

### To map cost allocation flexfields to Oracle General Ledger Accounts:

1. .Enter or query a budget in the Budget Characteristics window.
2. .Select a GL budget in the GL Budget field.

   **Note:** The application activates the Transfer to GL check box automatically.

   You must select a GL budget in the GL Budget field to enable the GL Segment Map tabbed region. The GL budget is empty, ready to receive budget data, because a counterpart with a GL Manager responsibility creates the budget for you.

3. If your budget originates in Oracle Public Sector Budgeting, then Public Sector Budgeting transfers the budget to GL and HRMS Control Budgeting transfers only commitments to GL. If this is the case, activate the Transfer only commitments to GL check box.
4. Choose the GL Segment Map tabbed region.
5. Select an HRMS Costing Segment for each corresponding GL Chart of Accounts segment.

   When you post your budget, the funding source distribution percentages you specify per element in your budget sets enable the appropriate allocation amounts to display in GL, broken down by GL account codes.

   See Setting Up an Oracle HRMS Budget for Transfer to Oracle General Ledger, page 3-25.

6. .Save your work.

## Entering Non-Approved Budgets

If your enterprise does not approve budgets online, you use the Budgets window to define versions of a budget that you created using the Budget Characteristics window.

**Note:** You enter budgets that are approved online through Oracle Workflow in the Worksheet window.

### To enter non-approved budgets:

1. Select a Budget Name in the Find Budgets window. Or, find the budget by selecting the fiscal period of the budget in the From Date and To Date fields.
2. Choose the Find button to open the Budgets window.
3. Enter the date range for which you are allocating an amount to a budget measurement unit in the From and To fields.
4. Enter the amount allocated for each budget measurement unit in the budget.
5. Choose the Open button to open the Budget window where you can enter budget values for each line item in the budget.

   See: Completing a Budget Worksheet, page 3-27

   If a budget is marked as transfer to GL or transfer to Grants, and has not yet been transferred, then the Transfer to GL, or, if Oracle Grants is installed, Transfer to GL/Grants button is enabled.

   **Note:** When you create or update a position, you can add it to a control budget version and enter budget data to the period level on the Budgets tab.

## Setting up an Oracle HRMS Budget for Transfer to Oracle General Ledger

You can transfer an active HR budget to Oracle General Ledger so that funds can be reserved in the General Ledger for the HR budget.

As a prerequisite, you must define the GL budget before you define the corresponding HR budget.

Contact your finance department to have a user with a General Ledger responsibility set up the GL budget.

### To set up an HR Budget for transfer to Oracle General Ledger:

1. Define the budget in Oracle General Ledger.
   - Open the Define Budget window.
   - Enter a budget name.

- Select a Status of Open to indicate the budget is available for update and entry.
- Enter the budget period.
- Choose the Open Next Year button.
- Save your work and close the Define Budget window.

2. Define the budget in Oracle HRMS.
   - Open the Budget Characteristics window.
   - Enter a budget name.
   - Select the GL budget name you set up earlier in the GL Budget field.
   - Complete the budget definition.
   - Map Cost Allocation flexfields to GL account codes
   - Save your work and close the Budget Characteristics window.

   See: Defining Budget Characteristics, page 3-19

3. Complete the budget worksheet.
4. Route the budget for approval, if required.
5. Apply the completed budget to the application.

   **Note:** If you enable budgetary control for the GL Ledger associated with this budget, the application automatically posts the budget to the GL if there are no errors. If you do not enable budgetary control, a budgeting user must manually post the data.

6. Review any budget posting errors in the Process Log Navigator window.

## Setting Up Budget Worksheets

Use the Worksheet Characteristics window to define the properties of a budget worksheet.

### To set up the budget worksheet:

1. Enter the Name of the budget worksheet.

2. Select a worksheet Mode. Choose:

   - **Edit & Make a New Version** to copy an existing budget version to a new version that you can edit.

   - **Correct Old Version** to correct an existing version of a budget.

   - **Start from Scratch** to start a new budget worksheet.

3. Select a Propagate Method to control how the application re-calculates budget entries if you update the total amount allocated to a budget measurement unit. Choose:

   - **Retain Value** to leave the budget entry value unchanged when you update the allocated amount.

   - **Maintain Percentage** to update the budget entry value as a percentage of the allocated amount. For example, if you increase the allocated amount by 10%, the value for each budget entry also increases by 10%.

   - **User Preference** retains the budget entry value (either an amount or a percentage) and re-calculates the derived value. For example, let's say you budget 500,000 for the positions in an organization. For position 1, the budget is 50,000. If you increase the total allocated amount for the organization to 550,000, the budgeted amount for the position remains 50,000 but the percentage changes from 10% to 9%.

4. Select the Budget Name of the budget you are editing.

5. Select the budget Version if you are correcting or copying an existing budget version.

6. Choose the Create Worksheet button to open the Worksheet window and close the Worksheet Characteristics window.

   **Note:** You complete the budget worksheet by entering values or percentages for each line item in the budget. You can save the worksheet to your workflow inbox, route the worksheet for approval, or delegate the budget to another manager in an organization hierarchy.

See: Completing a Budget Worksheet, page 3-27

## Completing a Budget Worksheet

Enter budget details for the line items in your budget using the Worksheet window. Or,

delegate the budget worksheet to another manager in your organization hierarchy.

See: Delegating Budget Worksheets, page 3-32

### To complete a budget worksheet:

1. Define the properties of a budget worksheet in the Worksheet Characteristics window or open an existing worksheet from your inbox.

2. Edit the name of the Worksheet, if necessary.

3. Enter the date you will post the budget to the application in the Action Date field.

4. Enter the Start Date and End Date of this budget version.

5. Choose the Worksheet Characteristics button to review the properties of the budget worksheet in view-only mode.

   - Choose OK to dismiss the Worksheet Characteristics window.

6. Enter the Allocated amount for each budget measurement unit. As you allocate resources to budget line items, the application calculates the amount available for allocation.

   **Note:** You can enter budget values without first entering the total allocated amount.

7. Choose the Budget tab.

8. Choose the Populate All button to load all line items into the worksheet for the primary budget entity.

   - Choosing Populate All does not load position transactions into the worksheet. You can add position transactions to the worksheet by selecting the position transaction from the list of values. If the application has not updated the position transaction to the application when you apply the budget worksheet, the Apply Budgets process writes an error to the Process Log Navigator.

   - For budgets with a primary entity of job or grade, the Populate All button loads all entities of the selected type in the Business Group.

   - Line items for which you can budget are limited by organization hierarchy if you select an organization hierarchy when defining the characteristics of the budget.

     **Note:** If the worksheet mode is Edit and Make a New Version or

Correct Old Version, the Populate All button loads the line items from the selected budget version into the worksheet. Choose the Populate All button before selecting any line items into the worksheet.

9. Use the Folder Tool to change the order and width of the columns in the worksheet, hide fields, or rename prompts.

   **Note:** You can use the same folder for multiple worksheets if the budget is of the same primary entity, measurement unit, and budget style.

10. Select one or more line items to include in your budget.

    **Note:** For example, select a position if you are budgeting by position.

11. Enter a budget amount for each line item, or enter a percentage of the total amount allocated for the budget measurement unit.

    The application supports the entry of currency values of any length with variable decimal point placement.

    **Note:** You can divide the budget amount for the line item by budget periods in the Budget Details window.

    You cannot budget for the same line item twice. Selecting a line item into the worksheet removes the item from the list of available entities.

12. Choose the Apply button to propagate any changes to the total allocated amount throughout the worksheet based on the propagation method you select.

    **Note:** If you change the allocated amount, but do not apply the changes, the application automatically calculates the new totals the next time you open the worksheet after saving it to your inbox, or when you post the completed budget to the application.

### Entering Budget Values by Calendar Period

You can divide entries in the budget worksheet into periods. For example, you could divide a position budget of 40,000 into 10,000 per fiscal quarter.

You define budget periods when you set up your budget calendar.

### To enter budget values by period:

1. Enter a value for each budget line item in the Worksheet window.
2. Choose the Periods button to open the Budget Details window.
3. Choose the Periods tab.
4. De-select the coordination check box if you do not want this window to query the detail records for the budget period when you open the window.
5. Select the Start Date and End Date of the budget period.
6. Enter the budget amount or percentage of the allocated amount for each period.
7. Choose the Next Budget Unit or Previous Budget Unit button to move between budget line items.

   **Important:** While it is theoretically possible to define budget periods, commitment calculations, and payroll periods independently, without considering the relative sizes of the date ranges, this approach does not reflect best practice. Oracle recommends sizing the date ranges to one another proportionaltely. Define the budget period as the largest, then commitment calculation and payroll frequency in decreasing order of size.

   For example, you can set up quarterly budget periods of three months in length, calculate commitments on a monthly schedule, and set up a bimonthly payroll frequency. This approach avoids rounding errors, yields the most meaningful results in reports, and is essential when you implement Workforce Intelligence reporting, such as Workforce Budget Management.

   See Calculating Budget Commitments, page 3-35

   See: Defining a Payroll, *Oracle HRMS Payroll Processing Management Guide*

8. Save your work.

#### Entering Budget Values by Budget Set

You can link budget entries for a period to budget sets. Within a budget set, you can distribute budget values by element and by cost allocation flexfield.

### To enter budget values by budget set:

1. Enter a value for each budget line item in the Worksheet window.
2. Choose the Periods button to open the Budget Details window.
3. Enter the budget amount or percentage of the allocated amount for each period.
4. Choose the Budget Sets tab.
5. Select a Budget Set.
6. Enter the budget amount or percentage of the allocated amount for each budget measurement unit in the budget set.
7. Choose the Budget Set Distribution button to open the Funding Distribution window where you can enter the percentage of the budget measurement unit amount that is distributed to an element in the budget set.
8. Choose the Elements tab.
9. Select an Element Set and Distribution percentage for the element.
10. Choose the Next Budget Set and Previous Budget Set buttons to move between budget sets.
11. Choose the Funding Source tab.
12. Do one of the following:
    - If this element is funded from your GL, then click in the Cost Allocation field to open the Cost Allocation Flexfield window and enter the cost allocation code combination by selecting a value for each applicable field

    See: Writing Formulas for Default Assignment Costing, *Oracle HRMS FastFormula User Guide*

    - If this element is funded by a grant, then enter the Project, Task, Award, Expense, Organization (PTAEO) combination by selecting a value for each applicable field. In future releases of Oracle HRMS, this combination will be validated against your Oracle Grants setup.

      **Note:** The PTAEO fields are only displayed if Oracle Grants is installed.

13. Enter a distribution percentage for each funding source record.

14. Choose the Next Element and Previous Element buttons to move between elements in the budget set.

15. Save your work.

> **Note:** When you create or update a position, you can add it to a control budget version and enter budget data to the period level on the Budgets tab.

## Delegating Budget Worksheets

You can delegate a budget worksheet to a manager using the Worksheet window if you budget by position or organization.

### To delegate a budget worksheet:

1. Start a new worksheet or edit an existing worksheet from your workflow inbox.

2. Choose the Delegate tab in the Worksheet window.

3. Select the Organization of the delegate manager.

   - The application displays the first level of organizations in the organization hierarchy beneath the current organization.

   > **Note:** You cannot delegate a budget worksheet if the primary budget entity is job, grade, or open because these entities are not linked to organization hierarchies.

4. Select the name of the delegate in the Manager field.

   > **Note:** You can only delegate a budget worksheet to one person. This person must be identified as a manager in this organization in the Manager field of the Miscellaneous tabbed region in the Assignment window. If the delegated manager does not have a workflow role, the application automatically defers sending a notification.

5. Check the Defer field to delegate the worksheet to a manager without sending a workflow notification.

6. Enter the amount or the percentage of the amount allocated for the budget measurement unit which you are delegating to this manager.

7. Use the following buttons to navigate between organizations. Choose:

   - **Populate All** to select all organizations beneath the current organization. You can delete organizations from this list without effecting the organization hierarchy.

   - **Details** to navigate one level below the current organization. Choose Details to see which organizations report to the current organization.

   - **Parent** to navigate one level above the current organization.

   - **Root** to navigate back to the starting organization.

8. Save your work.

   **Note:** The delegate manager receives a workflow notification and can open the worksheet from the workflow inbox. The delegate manager can edit any line item that has been delegated, including items which have already received a budget entry. Or, the manager can further delegate the worksheet to a subordinate manager.

## Posting Completed Budgets

You post a budget to transfer a complete and approved budget worksheet from the HRMS worksheet tables to the HRMS budget tables. After you post a budget, you can begin to run variance reports that track actual expenditures and commitments against budget.

**Note:** If you enter budgets using the Budgets window instead of the Worksheet window, this indicates that your enterprise does not approve budgets online in Oracle HRMS using workflow. In this case, you do not need to post a completed budget because budget data is entered directly into the budget tables.

### To post a completed budget using the Workflow Inbox:

1. Open the Routing window.

2. Choose the Apply Transaction field.

3. Choose OK.

4. Open the Process Log Navigator window to view any posting errors.

## Migrating a Budget to Oracle HRMS

If your enterprise maintained budgets in Oracle HRMS prior to Release 11*i* you can migrate existing budgets to the new budget tables. Migrating an existing budget saves you data entry time when the components of a budget vary little from year to year.

As a prerequisite to migrating a budget, you must define the default budget set that you want to associate with this budget. Budget sets let you map a budget by fiscal period to HRMS elements and cost allocation flexfields.

See: Defining Budget Sets, page 3-15

Once you migrate a budget, you use the Budget Worksheet to copy and edit a new version of the budget.

You run the Migrate Budget Data process from the Submit Requests window. Alternatively, you can migrate budgets using the Budget Migration module available from the Navigator.

### To migrate a budget to Oracle HRMS:

1. Select the Migrate Budget Data batch process in the Name field.
2. Click in the Parameters field to open the Parameters window.
3. Optional: select the Budget Name of the budget you are migrating.

   **Note:** The budget migration process migrates all legacy budgets if you do not select a specific budget name.

4. Select the default budget set associated with this budget in the Budget Set Name field.
5. Choose OK.
6. Complete the batch process request and choose Submit.

   **Note:** You can view any errors encountered during the batch process in the Process Log Navigator window.

7. Query the budget by name in the Budget Characteristics window.

   You can now modify the properties of the migrated budget and create a new budget worksheet based on the values in the old budget.

   **Note:** The application treats migrated budget data as pre-approved.

You cannot route a migrated budget for workflow approval. Since migrated budgets have a primary entity of *Open*, you cannot use a migrated budget for purposes of position control.

See: Completing a Budget Worksheet, page 3-27

## Posting a Budget to Oracle General Ledger as a Batch Process

You run the Budget GL Posting batch process to transfer budget worksheet data from Oracle HRMS to Oracle General Ledger.

**Note:** If you apply the budget worksheet to the database from your workflow inbox, Oracle HRMS automatically transfers the data to the General Ledger and you do not need to run the Budget GL Posting process.

You run reports from the Submit Requests window.

### To post a budget to Oracle General Ledger as a batch process:

1. Select the Budget GL Posting process in the Name field.
2. Click in the Parameters field to open the Parameters window.
3. Select the Budget Version you are posting to the General Ledger.
4. Select a Validate Mode--either Yes or No--to indicate if you want the application to post the budget to the GL or to validate the budget without posting the data.
   - Select Yes to validate the budget without posting the data to the GL.
   - Select No to post the data to the GL. The application writes any errors encountered during posting to the Process Log Navigator window.
5. Choose the OK button.
6. Complete the batch process request and choose Submit.

## Calculating Budget Commitments

You run the Calculate Commitment batch process to calculate the projected expenditures for a budget over a budget period.

You run reports from the Submit Requests window.

### To calculate budget commitments:

1. Select the Calculate Commitment report in the Name field.
2. Click in the Parameters field to open the Parameters window.
3. Select the name of the Budget Version for which you are calculating commitments.
4. Optional: select a position in the budget version for which you are calculating commitments. If you do not select a position, the process calculates commitments for all positions in the budget version.
5. Enter the date range for which you are calculating commitments in the Commitment Start Date and End Date fields.
6. Optional: select the Frequency for which you are calculating commitments, such as weekly or quarterly. If you do not select a frequency, the Calculate Commitment process uses the frequency of the budget calendar you attach to the budget.
7. Choose the OK button.
8. Complete the batch process request and choose Submit.

## Posting Budget Commitments to Oracle General Ledger

You run the Commitment GL Posting batch process to transfer budget commitments from Oracle HRMS to Oracle General Ledger.

You run reports from the Submit Requests window.

### To post budget commitments to Oracle General Ledger:

1. Select the Commitment GL Posting process in the Name field.
2. Click in the Parameters field to open the Parameters window.
3. Select the Budget Version you are posting to the General Ledger.
4. Select a Validate Mode--either Yes or No--to indicate if you want the application to post the budget commitments to the GL or to validate the commitments without posting the data.
   - Select Yes to validate the budget commitments without posting the data to the GL.
   - Select No to post the commitments to the GL. The application writes any errors encountered during posting to the Process Log Navigator window.

5. Choose the OK button.

6. Complete the batch process request and choose Submit.

## Running the Relieve Commitments Request Set Process

You run the Relieve Commitments concurrent request set process to recalculate commitments and post the results to Oracle General Ledger. The request set combines the Calculate Commitments process and the Commitment GL Posting process.

You should run the Relieve Commitments request set periodically after certain events--such as salary payments, or the hiring or termination of employees--post revised actuals to the General Ledger.

You run this process from the Submit Request Set window.

### To run the Relieve Commitments request set:

1. Select the Relieve Commitments process in the Request Set field.

2. Click in the Parameters field to open the Parameters window.

3. Select the name of the Budget Version for which you are calculating commitments.

4. Optional: select a position in the budget version if you want to calculate commitments for a single position.

   **Note:** If you do not select a position, the process calculates commitments for all positions in the budget version.

5. Enter the date range for which you are calculating commitments in the Commitment Start Date and End Date fields.

6. Optional: select the Frequency for which you are calculating commitments, such as weekly or quarterly.

   **Note:** If you do not select a frequency, the Relieve Commitment process uses the frequency of the budget calendar you attach to the budget.

7. Choose the OK button.

8. Complete the batch process request and choose Submit.

# Reallocating and Reserving Budget Resources

**Overview**

Oracle HR Budgeting enables you to reallocate control budget resources from one line item to another, as you identify excess and deficit amounts. You can also reserve amounts by line item, so you cannot use them. You do this using a web-based interface, available from the Navigator by selecting Budget Reallocation. The following sections describe the steps in the process:

1. Find a Control Budget
2. Create a Reallocation Folder
3. Create a Transaction
4. Identify Donors/Periods/Receivers
5. Route the Folder for Approval

The remaining sections provide information about related activities, including viewing or acting upon pending and approved transactions, configurable business rules, migrating pre-existing reallocations, and troubleshooting in the Process Log.

### Find a Control Budget

On the Find Budget page, you search for control budgets that are in effect on a date you specify. You can further restrict the search by specifying an entity (Position, Job, Grade, Organization) or budget measurement unit (Money, FTE, Headcount, Hours, or user-defined Share Type).

Only one control budget can be in effect on a given date for each entity/unit combination, and each budget can allocate up to three units. The application displays the search results in rows, each row displaying information about a budget, entity, and unit.

### Create a Reallocation Folder

After selecting a search result row, you can create a new folder to hold transactions relating to the selected budget and entity/unit combination. A folder is a virtual container for your transactions. When you approve a folder, you approve all transactions within it (partial approval is not possible).

### Create a Transaction

The Add Transactions, Donors, and Receivers page displays your folder, where you can create a new transaction. The page displays information about Donor and Receiver entities, Unit, Reserved Amount, Transaction Amount, and Transaction Balance.

- **Unit**: the budget measurement unit, such as Money or FTE.
- **Reserved Amount**: the portion of this line item's allocation that you cannot use, even for the line item itself.
- **Transaction Amount**: the total number of units you are transferring.
- **Transaction Balance**: the difference between the Donor and Receiver amounts. If a positive number, you have not yet assigned all donated units to Receivers. If a negative number, you have assigned more units to Receivers than you have donated. The transaction balance must be zero before routing or approving the folder.

#### Identify Donors/Periods/Receivers

Next you select line items with excess resources to donate. In addition to displaying amounts available for donation, the page displays information about the organization, location, and job, as well as budgeted, actual, committed, donated, and received amounts.

You can also view unapproved pending donation amounts. The application does not subtract Unapproved Donation amounts from Available amounts. Nevertheless, future-approved transactions can reduce available amounts before you approve your folder, causing your transaction to fail.

On the Donor Periods page, you can donate amounts at the budget period level. Here you can specify both Reserved and Donated amounts.

> **Note:** Within one transaction, a single donor can transfer to one or more receivers, and multiple donors can transfer to one receiver. Many donors cannot transfer to many receivers.

On the Add Receivers page, you can select entities from a list to receive your donation. Here you also specify the Start and End Dates of the transfer (both of which must fall within the date range of the budget's Fiscal Period), and the amount of the transfer. Receiver entities do not have to be in the selected budget, though they must have the same entity as that of the Donor.

#### Route the Folder for Approval

The Routing Options page appears when you submit your transaction for approval. There you can save the folder to your Inbox, reject it, forward it to a qualified recipient, or (if you are a designated approver) apply the folder to the database. You configure default routing options and approvers for budget reallocation in Standard Setup, and routing and approval rules for automated workflow in Advanced Setup.

For information about Standard and Advanced Setup in the Transaction Type

Wizard, see Transaction Type Wizard, page 2-55.

### View Pending Reallocations

Each Search Results row on the Find Budget page gives you the option to view all unapproved transactions relating to the entity/unit combination. Here you can search for reallocation folders by name, or display them all. The application displays information about the transaction amounts and current owners of each folder. You can select one or more folders, and perform the following actions on them:

- **Notify Budget Manager**: sends an FYI Notification to all budget managers in your business group. Using the Notify Self option below, any budget manager can take ownership of the folder and work on it.
- **Notify Self**: sends the selected folders to yourself. This action always takes ownership of the folder.
- **Delete**: removes the selected folders from the system, canceling the transactions.

Notification recipients can link to the folder and work on it.

> **Note:** Though budget reallocation notifications do appear in the Workflow Notifications Inbox, they do not contain links to the folder. To link to the folder, workflow recipients must navigate to the Advanced Worklist, using a Workflow User Web Interface responsibility via Self Service.

### View Approved Allocations

In each Search Results row of the Find Budget page, choosing a View Approved Reallocations icon takes you to a page where you can view all approved transactions relating to the entity/unit combination. Here you can view transaction amounts and balances.

> **Note:** One caveat when you work with the Oracle web-based interface: the Select All option selects only those rows on the current page. If your list is too large to display on a single page, Select All will not affect rows on other pages.

### Configurable Business Rules

You can define process rules to ensure that budget reallocations adhere to the business practices of your organization. The application invokes process rules and validates reallocation transactions when you apply folders to the database.

For information about configurable business rules, see Business Rules, page 2-63.

For information about available reallocation transaction attributes and their related categories, contexts, and warning messages, see Process Rules Reference, page 2-66.

#### Migrating Pre-Existing Reallocations

The application migrates any pre-existing budget reallocations automatically, when you install a patch containing the budget reallocation function for the first time. You can review the migrated folders on the View Pending Reallocations page, and notify budget managers, notify yourself, or delete, as described above. Migrated transactions have no owner, but anyone can use the Notify Self option to take ownership.

> **Caution:** The application deletes any pre-existing non-control budget reallocations on installation. If you have reallocated or reserved budget amounts for non-control budgets, make notes of these transfers before installation.

#### Troubleshooting in the Process Log

Budget Reallocation is available as a View option in the Process Log. Here you can troubleshoot failures to apply reallocation transactions by reviewing error messages and details relating to folders, transactions, donors, and receivers.

For information about troubleshooting in the Process Log, see Using the Process Log, page 3-42.

## Running the Calculate Assignment Budget Values Process

You run the Calculate Assignment Budget Values process to update budget values you enter against assignments. The process is useful for manually updating derived budget values when you have executed a mass assignment update, or initialized assignment data on implementation. You can restrict the scope of the updates to a given employee, assignment, assignment set, payroll, or contract. The process calculates or recalculates future changes to the budget value as of your specified effective date, using your implementation's prescribed formula.

You might recalculate a derived budget value (FTE or Percent Full Time) because of data changes that affect it (such as working hours, frequency, or other terms of work). You can also configure the application to update budget values automatically, based on system events such as changes to assignment or person records.

See: Recalculating Assignment Budget Values, page 3-17

You run concurrent processes from the Submit Request window.

To update budget values:

1. Select Calculate Assignment Budget Values in the Name field. The Parameters window appears.
2. Select the assignment budget value unit of measure you want to update.
3. Enter the effective date on which you want to begin updating future changes.
4. Specify a Run Type mode of Normal or Verify.

   Each mode generates an output file displaying calculation results for each processed date, with error messages.

   - **Normal**: Calculates and updates.
   - **Verify**: Calculates, but does not update.

5. Optional: specify a parameter to restrict the scope of the update by:
   - employee
   - assignment
   - assignment set
   - payroll
   - contract
6. Click OK.
7. Complete the batch process request and choose Submit.

## Using the Process Log

The process log displays information that can help you correct errors. For example, you can refer to the log for errors encountered when:

- Applying a budget from a worksheet
- Applying budget data to General Ledger
- Reallocating budget resources
- Migrating budget data
- Identifying entities that are under budget
- Applying a position transaction

- Copying or updating positions
- Posting commitments to GL

Use the Process Log window to learn more about an error.

### To display error information:

1. From the View list, select a data set (such as Position Update).
2. Locate and expand the folder in the left pane for the records you want to view.

   A Summary View describes the status of the records listed in the containing folder.
3. If necessary, continue navigating the records to the one that contains the error (designated by a red stop light icon).

   If the window where you originally entered the data contained tabbed regions, a separate entry shows the status of the records contained in each tabbed region.

   The Detail View helps you further identify a record and correct the error contained in it. For example, if the system validates data for a newly copied position and encounters invalid data in Work Choices, the Detail View displays the Work Choices flexfield so that you can review the data and then correct it.
4. If necessary, return to the window where you originally entered the data and correct the error. After correcting the error, you can apply the data or resubmit the process.

# Budget Reporting

## Control Budget Reports

You run control budget reports as part of the management stage of the budget cycle, enabling you to compare your estimates with actuals and commitments. With the information that reports provide, you can prepare for the next cycle, adjusting budgets where appropriate.

### Summary of Available Reports

HRMS provides the following control budget reports:

***Control Budget Reports***

| Concurrent Process Name | Results |
|---|---|
| **Budget Period Position Detail** | Reports on a budget you specify.<br><br>Includes budgeted, actual, committed, projected, and balance amounts for each position, per measurement unit and budget period. |
| **Entity Element Summary** | Reports on an element and entity you specify.<br><br>Includes budgeted, actual, committed, projected, and balance amounts, per measurement unit, in a given time period.<br><br>You can filter the results to display all, over budgeted, over and under budgeted, or under budgeted entities (entity type). |
| **Position Element Detail** | Reports on an organization and/or position you specify.<br><br>Includes budgeted, actual, committed, projected, and balance amounts by position, per measurement unit and pay element, in a given time period.<br><br>You can filter the results to display all, over budgeted, over and under budgeted, or under budgeted entities (position type). |

| | |
|---|---|
| **Position Summary** | Reports on an organization you specify.<br><br>Includes budgeted, actual, committed, projected, and balance amounts by position, per measurement unit, in a given time period.<br><br>You can filter the results to display all, over budgeted, over and under budgeted, or under budgeted entities (position type). |
| **Organizational Position Summary** | Reports on all organizations in the business group.<br><br>Includes budgeted, actual, committed, projected, and balance amounts by position, per measurement unit, in a given time period.<br><br>You can filter the results to display all, over budgeted, over and under budgeted, or under budgeted entities (position type). |
| **Report Under Budgeted Entities** | Reports all entities lacking sufficient budget for the budget period containing the effective date.<br><br>Includes budgeted, reallocated, actual, committed, and under budgeted amounts for each under budgeted entity.<br><br>You can restrict the scope to display a specific organization hierarchy and starting organization. |

## Terminology

Most reports are in status report format. Status reports enable you to review budgeted, actual, committed, and projected amounts. Report Under Budgeted Entities, on the other hand, identifies line items in your budget where projected costs exceed budgeted amounts. Status reports tell you the amount of money, FTE, grades, or hours you have allocated and spent per entity, within a given budget *version*. Report Under Budgeted Entities tells you which entities lack sufficient budget within a given budget *period*.

**Budgeted**: The amount you allocated to the line item, derived from the budget itself.

**Actual**: The amount already paid during the fiscal period as of the effective date, derived from past payroll runs.

**Committed**: The amount your enterprise obligates itself to pay for the remainder of the fiscal period (subsequent to the effective date). The application calculates commitments by considering assignments, salaries, element entries, commitment elements you have specified, and future payroll runs.

**Projected**: The total amount you expect to pay to the entity for the entire duration of the budget, derived by adding Actual and Committed amounts.

**Variance**: The difference between the amount you budgeted and the projected amount, derived by subtracting Projected from Budgeted amounts.

> **Note:** HRMS Budgeting allows you to create multiple budgets that are in effect at the same time. The sole restriction is that only one control budget per budget measurement unit can exist in the same business group on the same date. Therefore, avoid budgeting for the same entities in more than one budget. Control budget reports display rolled-up sums from all budgets in effect, which could result in misleading data.

## Running Report Under Budgeted Entities

For control budgets, you can identify the entities that the application projects to be under budgeted by running Report Under Budgeted Entities.

For details of how the report calculates which entities are under budgeted, see: Under Budgeted Entity Reporting, page 3-12

After you run the report, the application lists the under budgeted entities in the Process Log Navigator window. A notification is sent to the manager of each under budgeted entity. The manager, in turn, can correct the budget or reallocate amounts, if necessary.

You run reports from the Submit Requests window.

### To report on under budgeted entities:

1. Select Report Under Budgeted Entities in the Name field.
2. Click in the Parameters field to open the Parameters window.
3. Enter a Batch Name for this under budgeted positions report.
4. Enter the Effective Date for which you want to see the report.
5. Select the Start and End Date of the period on which you want to report.
6. Select the primary entity on which to report. The Open option indicates a budget that uses more than one type of entity.

   If you do not select a primary entity, the report includes all entities: Position, Job, Grade, Organization.
7. Select the budget measurement unit.
8. If your primary entity is position or organization, you can select the organization hierarchy and the starting organization for the report.

The report determines the under budgeted entities for all positions or organizations beneath this organization in the hierarchy.

9. Choose the OK button.

10. Complete the batch process request and choose Submit.

## Running the Position Element Summary Report

The Position Element Summary Report lists the budget status for an element, in a specified time period, for all positions in the Business Group.

You run reports from the Submit Requests window. After you run the report, the application displays the report in the View Output page accessible from the View Requests window.

### To run the Position Element Summary Report:

1. In the Name field, select Position Element Summary Report from the list.

2. Click in the Parameters field to open the Parameters window.

3. Specify the Effective Date and Element Name for which you want to review status information.

4. Select the Position Type for which you want to see the report.

   - You can select Over Budgeted Positions, Under Budgeted Positions, Over or Under Budgeted Positions, or All Positions.

5. Optionally, enter a Variance Percent.

   - The report displays balances for those positions where the variance percent is equal to or greater than the percent you enter.

   - Variance Percent is not applicable when you select All Positions as the Position Type.

6. Enter the Start Date and End Date of the time interval you want to review.

7. Enter a unit of currency for the report.

8. Click OK.

9. Click Submit to complete the batch process request.

## Running the Position Element Detail Report

The Position Element Detail Report lists the budget status for all budgeted elements, in a specified time period, for a specific position and organization.

Use the Submit Requests window.

### To run the Position Element Detail Report:

1. Select the Position Element Detail Report in the Name field.
2. Click in the Parameters field to open the Parameters window.
3. Enter the Effective Date for which you want to report.
4. Enter the Organization Name for which you want the current status.
5. Enter the Position Name for which you want to see the report.
6. Select the Position Type for which you want to see the report.
   - Selections include Over Budgeted Positions, Under Budgeted Positions, Over or Under Budgeted Positions, or All Positions.
7. Enter the Variance Percent.
   - The report displays balances for those positions where the variance percent is equal to or greater than the percent you enter.
   - The variance percent is not applicable when you select All Positions as the Position Type.
8. Adjust the Start and End Date periods to be included in the report.
9. Enter a unit of currency for the report.
10. Choose the OK button.
11. Complete the batch process request and choose Submit.

## Running the Position Summary Report

The Position Summary Report lists the budget status, for a specified time period, of all positions in a specific Organization.

You run reports from the Submit Requests window.

### To run the Position Summary Report:

1. Select the Position Summary Report in the Name field.
2. Click in the Parameters field to open the Parameters window.
3. Specify the Effective Date on which you want status data.
4. Enter the Organization Name for which you want status.
5. Select the Position Type for which you want to see the report.
   - Selections include Over Budgeted Positions, Under Budgeted Positions, Over or Under Budgeted Positions, or All Positions.
6. Enter the Variance Percent.
   - The report displays balances for those positions where the variance percent is equal to or greater than the percent you enter.
   - The variance percent is not applicable when you select All Positions as the Position Type.
7. Adjust the Start and End Date periods to be included in the report.
8. Enter a unit of currency for the report.
9. Choose the OK button.
10. Complete the batch process request and choose Submit.

## Running the Budget Period Position Detail Report

The Budget Period Position Detail Report lists the status of all Positions that are part of a specific Budget for a specified time period.

You run reports from the Submit Requests window.

### To run the Budget Position Detail Report:

1. Select the Budget Period Position Detail Report in the Name field.
2. Click in the Parameters field to open the Parameters window.
3. Select the Budget Name for which you want the current status.
4. Choose the OK button.

5. Complete the batch process request and choose Submit.

## Running the Staffing Budget Details Report

You can run the Staffing Budget Details report in versions of Oracle HRMS prior to 11.5.1 to compare your actual staffing levels with budgeted levels for a specified range of periods.

> **Note:** Use this report if you do not migrate an existing Oracle HRMS budget to the new budget function. For new budgets, run other reports such as the Budget Period Position Detail report.

You run reports in the Submit Requests window.

### To run the Staffing Budget Details report:

1. In the Name field, select Staffing Budget Details report.
2. Click in the Parameters field to open the Parameters window.
3. Enter the effective date for which you want to see the report.
4. Select the budget and version.
5. Select the start and end periods to include in the report.
6. Choose the Submit button.

## Running the Salary Review Report

Use this report to see current and past salaries, and salary proposals, for some or all of your employees. You can restrict the employees to those assigned to a selected organization, job, position, or grade. You can also restrict the report to showing only employees receiving the maximum salary for their grade (defined by the grade rate). You can use the report to show all salaries (approved and proposed) or to show unapproved salary proposals only.

> **Note:** Use this report if you do not migrate an existing Oracle HRMS budget to the new budget function. For new budgets, run other reports such as the Entity Element Summary report.

You run reports from the Submit Requests window.

### To run the Salary Review Report:

1. In the Name field, select Salary Review Report.
2. Click in the Parameters field to open the Parameters window.
3. Enter the effective date for which you want to see the report.
4. Optionally select an organization, job, position, and/or grade to restrict the scope of the report to employees assigned to these components.
5. If you want to restrict the report to showing salary proposals, select Yes in the Unapproved Proposals Only field.
6. If you want to restrict the report to showing employees receiving the maximum salary for their grade (defined by the grade rate), or a higher salary, select Yes in the Grade Rate Maximum Only field.
7. Choose the Submit button.

## Running the Organizational Position Summary Report

The Organizational Position Summary report provides summary budget information for a specified time interval, for each position-controlled organization in your business group. The application groups the results by budget measurement unit.

You run reports from the Submit Requests window. After you run the report, the application displays the report in the View Output page accessible from the View Requests window.

### To run the Organizational Position Summary Report:

1. Select the Organizational Position Summary Report in the Name field.
2. Enter the Parameters field to open the Parameters window.
3. Enter the Effective Date for which you want to report.
4. Select a Position Type for which you want to see a report.
   - Selections include All Positions, Over Budgeted Positions, Under Budgeted Positions, and Over or Under Budgeted Positions.
5. Optionally, enter a Variance Percent.
   - The report displays those positions where the variance percent is equal to or greater than the percent you enter.

- The variance percent is not applicable when you select All Positions as the Position Type.

6. Enter the Start Date and End Date of the time interval for which you want to view summary information.

7. Choose the OK button.

8. Complete the batch process request and choose Submit.

## Running the Entity Element Summary Report

The Entity Element Summary report lists the budget status for a specified pay element and entity in a given period. The application groups the results by entity.

You run reports from the Submit Requests window. After you run the report, the application displays the report in the View Output page accessible from the View Requests window.

### To run the Entity Element Summary report:

1. In the Name field, select Entity Element Summary Report from the list.

2. Click in the Parameters field to open the Parameters window.

3. Specify the Effective Date, Element Name, and Entity for which you want to review status information.

4. Select an Entity Type from the list.

   - You can select All Entities, Over Budgeted Entities, Over and Under Budgeted Entities, or Under Budgeted Entities.

5. Optionally, enter a Variance Percent.

   - The report displays summary information for those entities where the variance percent is equal to or greater than the percent you enter.

   - Variance Percent is not applicable when you select All Entities as the Entity Type.

6. Enter the Start Date and End Date of the time interval you want to review.

7. Enter a unit of currency for the report.

8. Click OK.

9. Click Submit to complete the batch process request.

# Costing

## Labor Costs in Oracle HRMS

At all installations of Oracle HR, you can allocate employee costs to cost centers, GL codes and labor distribution codes. You do this by setting up segments of the Cost Allocation key flexfield to determine the windows in which users can select cost codes.

If your installation does not include Oracle Payroll or Oracle General Ledger, you must consider how to relate information on labor costs entered in Oracle Human Resources to your payroll and financial systems.

If your installation includes Oracle Payroll, you use a post-payroll run process to accumulate payroll costs by cost center, GL account code, and the labor distribution codes in use at your enterprise. For installations that also include Oracle General Ledger you can map the segments of the Cost Allocation key flexfield to the corresponding segments of the General Ledger Accounting flexfield. Another post-payroll run process is available to facilitate the transfer of information on payroll transactions to Oracle General Ledger.

### Labor Cost Allocation Example

The Sample Payroll Results table below is based on the flexfield setup described in the previous topic. It displays payroll run results for four employees, using accounts and work structures identified using the Cost Allocation key flexfield. The Example Costing Process Results table shows how the Costing process allocates these payroll results:

- to accounts and cost centers, for the general ledger
- to accounts for cost centers and product lines within cost centers, for labor distribution purposes.

#### Sample Payroll Results table

This table displays sample payroll results for four employees:

| Employee | Cost Center | Product Line | Salary | Wages | Overtime | Union Dues |
|---|---|---|---|---|---|---|
| Employee 1 | Production | H201 100% | | 1,000 | 400 | 20 |
| Employee 2 | Sales | H305 100% | 1,500 | | | |

| Employee | Cost Center | Product Line | Salary | Wages | Overtime | Union Dues |
|---|---|---|---|---|---|---|
| Employee 3 | Production | H201 50%<br>H202 50% | | 2,000 | 600 | 30 |
| Employee 4 | Sales | H305 20% | 1,000 | | | |
| | | H307 40% | | | | |
| | | H310 40% | | | | |

**Sample costing results table:**

This table shows the allocation of costs from the sample run results:

| Account Code | Production | Sales | H201 | H202 | H305 | H307 | H310 |
|---|---|---|---|---|---|---|---|
| Salaries | | 2,500 | | | 1,700 | 400 | 400 |
| Wages | 3,000 | | 2,000 | 1,000 | | | |
| Overtime | 1,000 | | 700 | 300 | | | |
| Union Dues Liability | 50 | | | | | | |
| Clearing (see note below) | | | | | | | |

**Note:** Clearing account contains balancing credits for earnings Salary, Wages and Over-time, and balancing debit for deduction Union Dues.

# Labor Cost Allocation Example

## Labor Cost Allocation Example

The Sample Payroll Results table below is based on the flexfield setup described in the

previous topic. It displays payroll run results for four employees, using accounts and work structures identified using the Cost Allocation key flexfield. The Example Costing Process Results table shows how the Costing process allocates these payroll results:

- to accounts and cost centers, for the general ledger
- to accounts for cost centers and product lines within cost centers, for labor distribution purposes.

**Sample Payroll Results table**

This table displays sample payroll results for four employees:

| Employee | Cost Center | Product Line | Salary | Wages | Overtime | Union Dues |
|---|---|---|---|---|---|---|
| Employee 1 | Production | H201 100% | | 1,000 | 400 | 20 |
| Employee 2 | Sales | H305 100% | 1,500 | | | |
| Employee 3 | Production | H201 50%<br>H202 50% | | 2,000 | 600 | 30 |
| Employee 4 | Sales | H305 20% | 1,000 | | | |
| | | H307 40% | | | | |
| | | H310 40% | | | | |

**Sample costing results table:**

This table shows the allocation of costs from the sample run results:

| Account Code | Production | Sales | H201 | H202 | H305 | H307 | H310 |
|---|---|---|---|---|---|---|---|
| Salaries | | 2,500 | | | 1,700 | 400 | 400 |

| Account Code | Production | Sales | H201 | H202 | H305 | H307 | H310 |
|---|---|---|---|---|---|---|---|
| Wages | 3,000 | | 2,000 | 1,000 | | | |
| Overtime | 1,000 | | 700 | 300 | | | |
| Union Dues Liability | 50 | | | | | | |
| Clearing (see note below) | | | | | | | |

**Note:** Clearing account contains balancing credits for earnings Salary, Wages and Over-time, and balancing debit for deduction Union Dues.

## Data Costed at the Payroll Level

Sometimes the labor costs from a payroll should all be charged to a particular company within your enterprise, or all be entered in a particular ledger. In this case, you select the code for the company or ledger from the appropriate segment of the Cost Allocation flexfield when defining the payroll.

Also at the payroll level, you can select codes for *suspense accounts.* A suspense account is one that collects costs from the payroll if segment entries at lower levels are missing. For example, if an employee receives a Special Production Bonus but there is no GL code for this earnings type to debit in the Cost Allocation flexfield, the cost of the bonus goes into the suspense account.

Entries of sums in a suspense account alert you to missing codes, and provide a way to hold unallocated costs until you can make manual journal entries to the correct accounts. Since codes entered in the Cost Allocation flexfield at levels below the payroll level override any entered at the payroll level, costs go to a suspense account only when the correct account codes are not entered at the element link level.

## Data Costed at the Element Link Level

You enter the important costing information for an element on its links. This means that

*all elements for which you must maintain costing information must have at least one link*, even those that receive entries during the payroll run as indirect results of the processing of other elements.

When defining a link for an element, you select a *costable type* that determines whether the payroll run should collect the results of this link for costing purposes. By default, a link's costable type is *Not Costed*. For the results of elements that process in payroll runs to be collected for accumulation and transfer, you must change this default to a costable type of either *Costed*, *Fixed Costed* or *Distributed.*

## Costable Type: Costed

When processing an element for an employee with a link marked Costed, the payroll run checks for Cost Allocation flexfield entries affecting the employee at every level - payroll, element link, organization, assignment, and element entry. Since earnings types may well receive override entries of information for labor distribution purposes at the lower levels of assignment or element entry, the costable type Costed is likely to be best for the links of elements representing earnings.

## Costable Type: Fixed Costed

When processing elements marked for Fixed Costing, the system looks for costing information at the payroll, element link and element entry levels only, not the assignment or organization levels. You can, in fact, override the account code at element entry level. This is because the order of priorities for Fixed Costing is Payroll (highest priority), Element Link and finally Element Entry (lowest priority).

> **Tip:** Deduction amounts are usually irrelevant to labor distribution analyses, so elements representing deductions seldom receive lower level entries of costing information. The costable type Fixed Costing may be best for these elements' links. However, this is optional.

## Costable Type: Distributed

For labor distribution analysis, you can distribute employer charges, such as employer payments for social security or employee benefits, as overhead costs to be added to employees' earnings. The links of elements representing employer charges you want to distribute in this way require the costing type Distributed.

For each employee, Oracle Payroll distributes the run results of elements with this costable type proportionally over a set of earnings types you specify. This *distribution set* of earnings types could include, for example, Wages, Overtime and Shift Pay. When you select Distributed as the costable type of a link, you must also enter the name of the distribution set of earnings over which the run results of the link are to be distributed.

See: Defining an Element or Distribution Set, *Oracle HRMS Compensation and Benefits Management Guide*

## Costing and Balancing GL Accounts

For element links whose run results should go to the General Ledger, you enter in the Costing field of the link, the GL account to debit or credit, and in the Balancing field, the account to correspondingly credit or debit.

For earnings types and non-payroll payments, the GL account to debit (for example, *Salaries)* goes in the Costing field, and the account to credit (for example, *Clearing*) goes in the Balancing field. For deductions, the account to credit (for example, *Union Dues Liabilities*) goes in the Costing field, and the account to debit (for example, *Clearing)* goes in the Balancing field.

## Employer Charge Distribution Example

When you give links for elements representing employer charges the costable type Distributed, the Costing process distributes the employer charges as overhead for each employee, over a set of employees' earnings.

See: Data Costed at the Element Link Level, page 3-57

This example shows how employer payments totalling $100 are distributed over a set of earnings including wages and overtime, for the cost center Production and the product lines H201 and H202. The table below shows the distribution of overhead over costs and product line totals.

#### Overhead Distribution for the Production Cost Center

```
Total paid to Production Cost Center as Wages run result: $3,000.0
Total paid to Production Cost Center as Overtime run result: $1,000.00
 Total for Earnings types specified for distribution: $4,000.00
Ratio for Wages distribution, Production Cost Center = 3000/4000 = .75
Wages overhead = Pension Charge $100 x .75 = $75.00
Ratio for Overtime distribution, Production Cost Center = 1000/4000 = .
25
Overtime overhead = Pension Charge $100 x .25 = $25.00
```

#### Overhead Distribution for Product Lines H210 and H202

```
Total paid for Product Line H201 as Wages run result: $2,000.00
Total paid for Product Line H202 as Wages run result: $1,000.00
Total paid for Product Lines 201 and 202 for Wages: $3,000.00
Ratio for Wages distribution, Product Line H201 = 2000/3000 = 0.6667
Product Line H201 overhead = Total Wages overhead $75 x .6667 = $50.00
Ratio for Wages distribution, Product Line H202 = 1000/3000 = .3334
Product Line H202 overhead = Total Wages overhead $75 x .3334 = $25.00
Total paid for Product Line H201 as Overtime run result: $700.00
Total paid for Product Line H202 as Overtime run result: $300.00
```

```
Total paid for Product Lines H201 and H202 as Overtime: $1,000.00
Ratio for Overhead distribution, Product Line H201 = 700/1000 = .7
Product Line H201 overhead = Total Overtime overhead $25 x .7 = $17.50
Ratio for Overhead distribution, Product Line H202 = 300/1000 = .3
Product Line H202 overhead = Total Overtime overhead $25 x .3 = $7.50
```

#### Distribution of overhead over cost center and product line totals table

The following table describes the distribution of overhead over cost center and product line totals:

| Account Code | Cost Center | Product Line | Product Line |
|---|---|---|---|
| | **Production** | **H201** | **H202** |
| Wages | 3,000 | 2,000 | 1,000 |
| Employer Liability Distribution | 75 | 50 | 25 |
| Overtime | 1,000 | 700 | 200 |
| Employer Liability Distribution | 25 | 17.50 | 7.50 |

# Employer Charge Distribution Example

## Employer Charge Distribution Example

When you give links for elements representing employer charges the costable type Distributed, the Costing process distributes the employer charges as overhead for each employee, over a set of employees' earnings.

See: Data Costed at the Element Link Level, page 3-57

This example shows how employer payments totalling $100 are distributed over a set of earnings including wages and overtime, for the cost center Production and the product lines H201 and H202. The table below shows the distribution of overhead over costs and product line totals.

#### Overhead Distribution for the Production Cost Center

```
Total paid to Production Cost Center as Wages run result: $3,000.0
Total paid to Production Cost Center as Overtime run result: $1,000.00
 Total for Earnings types specified for distribution: $4,000.00
Ratio for Wages distribution, Production Cost Center = 3000/4000 = .75
Wages overhead = Pension Charge $100 x .75 = $75.00
Ratio for Overtime distribution, Production Cost Center = 1000/4000 = .
25
Overtime overhead = Pension Charge $100 x .25 = $25.00
```

#### Overhead Distribution for Product Lines H210 and H202

```
Total paid for Product Line H201 as Wages run result: $2,000.00
Total paid for Product Line H202 as Wages run result: $1,000.00
Total paid for Product Lines 201 and 202 for Wages: $3,000.00
Ratio for Wages distribution, Product Line H201 = 2000/3000 = 0.6667
Product Line H201 overhead = Total Wages overhead $75 x .6667 = $50.00
Ratio for Wages distribution, Product Line H202 = 1000/3000 = .3334
Product Line H202 overhead = Total Wages overhead $75 x .3334 = $25.00
Total paid for Product Line H201 as Overtime run result: $700.00
Total paid for Product Line H202 as Overtime run result: $300.00
Total paid for Product Lines H201 and H202 as Overtime: $1,000.00
Ratio for Overhead distribution, Product Line H201 = 700/1000 = .7
Product Line H201 overhead = Total Overtime overhead $25 x .7 = $17.50
Ratio for Overhead distribution, Product Line H202 = 300/1000 = .3
Product Line H202 overhead = Total Overtime overhead $25 x .3 = $7.50
```

#### Distribution of overhead over cost center and product line totals table

The following table describes the distribution of overhead over cost center and product line totals:

| Account Code | Cost Center | Product Line | Product Line |
|---|---|---|---|
| | **Production** | **H201** | **H202** |
| Wages | 3,000 | 2,000 | 1,000 |
| Employer Liability Distribution | 75 | 50 | 25 |

| Account Code | Cost Center | Product Line | Product Line |
|---|---|---|---|
| Overtime | 1,000 | 700 | 200 |
| Employer Liability Distribution | 25 | 17.50 | 7.50 |

## Data Costed at the Organization and Assignment Levels

When setting up an internal organization for which most or all labor costs go to the same cost center, select that cost center from the appropriate segment of the Cost Allocation flexfield when defining the organization.

For example, if the labor costs of most of the employees in the Commercial Sales Group go against the cost center Sales, select Sales from the list of cost centers when defining the organization Commercial Sales Group. This means that by default, the system accumulates labor costs for each employee assigned to the Commercial Sales Group for the cost center Sales.

Perhaps the costs of some employees assigned to this group should exceptionally be charged to a different cost center. For these employees, you can enter the correct costing information on their assignments. Entries at the assignment level override entries at the organization level.

There may also be employees regularly assigned to work in this group only part time, who work elsewhere the rest of the time. In cases like these, it is not necessary to give employees two assignments. You can enter a number of cost centers for one assignment, specifying the percentage of labor costs to charge to each:

### Cost centers with specified labor costs table

The following table describes cost centers with specified labor costs:

| Proportion | Seg. 1 Cost Center |
|---|---|
| 50% | Sales |
| 50% | Public Relations |

You can also enter other types of costing information at the assignment level. For example, if a Production Department employee regularly works 80% of the time on one

product line and 20% on another, you can enter this on the assignment.

### Employee labor distribution table

The following table describes the employee labor distribution:

| Proportion | Seg. 3 Labor Dist. Code |
|---|---|
| 80% | H201 |
| 20% | H202 |

Notice that assignment level entries are datetracked, so you can enter changes ahead of time.

## Data Costed at the Element Entry Level

When you make entries to elements with links marked as Costed for individual employees using the Element Entries window, or for many employees at once using the BEE windows, you can at the same time supply costing information.

Information entered at this level overrides any information entered at other levels. For example, if an employee has costing information on record in a Cost Allocation flexfield segment at the organization or assignment level, an entry of timecard information in this segment at the element entry level overrides the organization or assignment-level information.

## The Cost Allocation Key Flexfield

When implementing and using Oracle HRMS, you make selections from the lists in the Cost Allocation flexfield segments as follows:

- When *defining a payroll,* you can select a code for the company or ledger holding the labor costs from the payroll.
- When *linking an element* representing an earnings type such as Regular Salary, a deduction such as Union Dues, or an employer charge such as a benefit plan contribution, you select a GL code that the element's results should debit or credit, and a code for the balancing GL account to credit or debit.

  **Note:** As well as making entries to the Cost Allocation flexfield at the element link level, you also enter on each link, essential information

about the *type* of costing the system should do for the link. Available types include *Costed*, *Fixed Costed*, and *Distributed*.

See: Data Costed at the Element Link Level, page 3-57

- When *defining an internal organization* or *entering an employee assignment*, you can select codes for the cost centers, product lines, or other structures for which to collect the labor costs of the organization or assignment.
- When *entering timecard data* in Oracle Payroll, you can select codes for accounts, cost centers, product lines, and other items listed in the flexfield segments to show how to collect labor costs for particular hours worked.

The different points at which you can make entries to segments of the Cost Allocation flexfield exist as related *entry levels*. Ranging from top to bottom, the five entry levels are shown in the table below.

See: Oracle HRMS Cost Allocation Key Flexfield Example, page 3-67

## The Cost Allocation Entry Level Table

The following table describes the cost allocation entry levels:

| Entry Level | Windows | Purpose of Entry |
|---|---|---|
| Payroll | Payroll | Identifies company or ledger to which all costs from this payroll should go. |
| Link | Element Link | Identifies a GL account to debit and a balancing account to credit, or for deductions, an account to credit and a balancing account to debit. Other entries can identify any other accounts into which run results of the element should go. |
| Organization | Organization | Identifies structures such as cost centers against which to charge the payroll costs of employees in the organization. |

| Entry Level | Windows | Purpose of Entry |
|---|---|---|
| Assignment | Assignment Costing | Identifies structures such as cost centers and product lines against which to regularly charge payroll costs of this assignment. |
| Element Entry | Element Entries Batch Lines | Identifies structures such as cost centers and product lines against which to charge payroll costs of an employee assignment for a period. Entries often taken from timecards. |

**Important:** You enable a *qualifier* for each segment of your Cost Allocation flexfield to control whether it appears at a given entry level. For example, for the Cost Center segment of your flexfield, which receives entries only at the organization, assignment and element entry levels, you enable the Organization, Assignment and Element Entry qualifiers. This segment then appears only at these levels.

### Overrides for the Cost Allocation Flexfield

A key feature of the Cost Allocation flexfield is that entries made to its segments at lower levels override any entries at higher levels. Thus, entries from timecards made in a particular segment at the Element Entry level override any entries to this segment made at the employee assignment, organization, link and payroll levels.

This helps to keep your costing information accurate. For example, if employees temporarily work at cost centers or on product lines different from those entered for their organizations or assignments, they can enter the cost center or product line codes together with their time worked on their timecards. On receipt of this costing information at the element entry level, the system correctly charges their time for the period, using this information rather than any entered at the organization or assignment levels.

## Setup of the Cost Allocation Key Flexfield

You must define at least one segment of the Cost Allocation key flexfield; you may define as many as 30 segments. To set up this flexfield, consult the explanations and procedures given in the *Oracle E-Business Suite Flexfields Guide*.

You can control which segments of the Cost Allocation flexfield appear in each of the windows from which users can make entries to this flexfield.

## Display of Flexfield Segments

Oracle HRMS implementors and users make selections from the lists in the Cost Allocation flexfield's segments at different levels, that is, in several different Oracle HRMS windows. However, in a particular window, they usually need to access only certain segments of the flexfield.

### Example

When defining a payroll you need only the segment containing the companies or ledgers to which a payroll's labor costs should go. When defining a link for an earnings or deduction element, you may need only the segment containing the list of the costing and balancing GL codes. You are likely need the segment containing the list of cost centers only when defining an organization or employee assignment, or making an element entry.

You control the appearance of a Cost Allocation flexfield segment in a particular window by enabling qualifiers for the segment. When you enable a particular qualifier for a segment, this causes the segment to appear and be available for entry in a particular window, as follows:

***Cost Allocation enabing segments and qualifier's table***

| Qualifier | Enables Segment's Appearance in |
|---|---|
| Payroll | Payroll window |
| Element Link | Element Link window |
| Organization | Organization window |
| Assignment | Assignment Costing window |
| Element Entry | Element Entries window |

The following table lists the five levels, and the correct order of processing priority.

***Cost Allocation qualifiers level table***

| Level | Qualifiers for this Level | Typical Segments Displayed at this Level |
|---|---|---|
| Payroll | Payroll | Company code, ledger |
| Element Link | Element, Balancing | GL account codes for costing and balancing |
| Organization | Organization | Cost centers |
| Assignment | Assignment | Project or product codes, or cost centers that do not map onto organizations |
| Element Entry | Element Entry | Project or product codes (for employees who submit timesheets) |

A code entered at a lower level can override a code entered at a higher level. This means that if a segment is populated at element entry level, it overrides all other levels. You can enable as many qualifiers as necessary for a particular segment.

# Oracle HRMS Cost Allocation Key Flexfield Example

## The Oracle HRMS Cost Allocation Key Flexfield Example

To construct a simple example of a Cost Allocation flexfield, suppose that the departments of an enterprise each constitute a cost center. Suppose also that the general ledger accounts receiving labor costs are *Salaries, Wages, Overtime,Bonuses, Union Dues Liability* and *Clearing*.

The Clearing account in this example represents a single account set up for entry of:

- Credits, in order to balance debits to accounts for earnings types, for example *Salaries*, *Wages, Overtime* and *Bonuses*
    - Debits, in order to balance credits to accounts for deductions, for example *Union Dues Liability.*

    After running the Payroll and Costing processes, you can make journal entries to credit or debit each individual balancing account, making corresponding debits or credits to the Clearing account.

Information to be transferred to the General Ledger includes:

- The totals of salaries and wages paid in departments and cost centers are entered as debits to the *Salaries* and *Wages* accounts, and as balancing credits to the *Clearing* account.
- The total of bonuses paid to employees is entered as a debit to the account *Bonuses*, and as a balancing credit to the *Clearing* account.
- The total deducted from employees in Production and Quality Control to pay their union dues is entered as a credit to the *Dues Liability* account, and as a balancing debit to the *Clearing* account.

To collect information for transfer to the general ledger, this enterprise can construct a Cost Allocation flexfield with two segments, one for identifying cost centers and one for GL costing and balancing codes, as shown in the table below:

**The Cost Allocation two segments table**

| Seg. 1 Cost Center | Seg. 2 GL Code |
|---|---|
| Accounting | Salaries |
| Production | Wages |
| Public Relations | Overtime |
| Quality Control | Bonuses |
| Sales | Dues Liability |
| | Clearing |

Now suppose that for labor distribution purposes, this enterprise accumulates labor costs not just by cost center and GL account, but also by its product lines, represented by the labor distribution codes H201, H202, H305, H307 and H310. The enterprise requires product line costing information such as the following:

- Total wages paid to produce product line H201, and to check its quality
- Total paid for overtime to produce product line H201
- Total paid for salaries and bonuses to sell product line H201

Since this enterprise uses its GL codes for labor distribution, it does not need another segment to hold a separate list of codes. However, it must add another segment to hold

product line codes, as the table below shows:

**Cost Allocation product line codes table**

| Seg. 1 Cost Center | Seg. 2 GL Code | Seg. 3 Labor Dist. Code |
|---|---|---|
| Accounting | Salaries | H201 |
| Production | Wages | H202 |
| Public Relations | Overtime | H305 |
| Quality Control | Bonuses | H307 |
| Sales | Dues Liability | H310 |
| | Clearing | |

Similarly, if this enterprise needed to identify for each of its payrolls a particular company or ledger to which all the information on labor costs should go, it could define another segment of the Cost Allocation flexfield such as Company or Ledger, to contain a list of the appropriate codes.

> **Note:** Installations including both Oracle HRMS and Oracle General Ledger should take the GL codes for the Oracle HRMS Cost Allocation flexfield and for the Oracle General Ledger Accounting flexfield from the same table. Installations without Oracle GL can set up their own tables of GL codes, possibly populating these tables from their existing financial systems.
>
> See: User-Defined Tables, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

## Subledger Accounting (SLA)

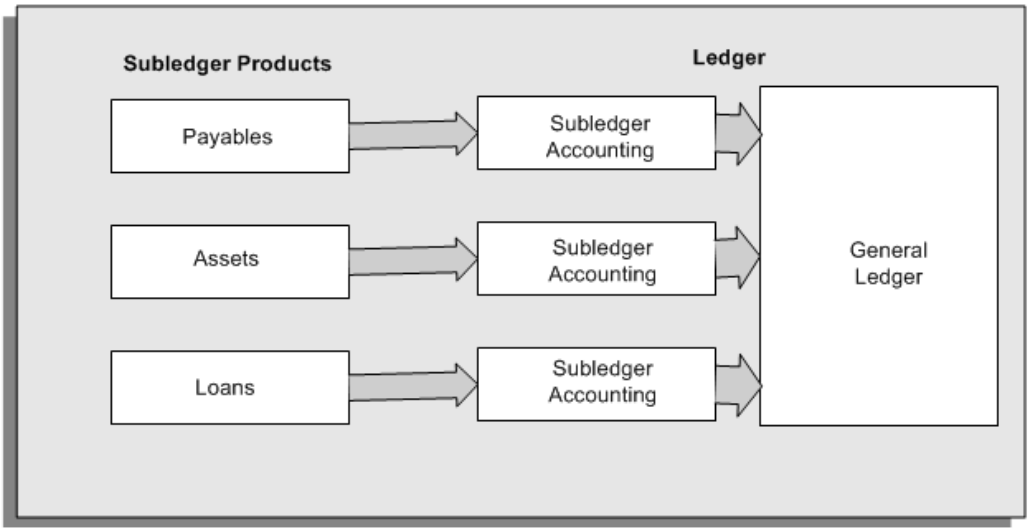
Oracle Payroll now supports subledger accounting. You can continue to transfer your costs to General Ledger (GL) but you have the additional option of transferring costs to subledgers rather than to General Ledger.

The advantages of using subledger accounting are:

- You can have multiple accounting representations for a single business event so that you can handle the difference between corporate and local audit requirements more easily.

- You can take advantage of the added level of precision that subledger accounting provides, but you can still view aggregated results at General Ledger level.

## Outline of Subledger Accounting



The outline shows that subledger accounting provides an intermediate step between subledger products, and the general ledger. Subledger accounting also:

- Creates subledger journal entries and subledger journal balances for each payroll cost
- Holds each journal entry separately rather than summing together costs that have identical cost codes.

## Access to Subledger Accounting from Oracle Payroll

The Subledger Accounting menus are accessible from Oracle Payroll:

- For SLA setup features, navigate to the Subledger Accounting Setups menu (available on the Payroll menu).

  See Subledger Accounting Options Setup Overview, *Oracle Subledger Accounting Implementation Guide*

  See Accounting Methods Builder Overview, *Oracle Subledger Accounting Implementation Guide*

  See Post-Accounting Programs, *Oracle Subledger Accounting Implementation Guide*

  See Transaction Account Builder Overview, *Oracle Subledger Accounting Implementation Guide*

- For SLA processing, navigate to the User Main menu

  (available on the View menu).

## Allocating Costing Percentages at Assignment Level

Use the Assignment Costing window to specify a percentage allocation of costs for an employee assignment.

You allocate costing percentages from the Assignment Costing window in Oracle Self-Service HRMS.

### To allocate costing percentages at assignment level:

1. View the people in your hierarchy and select the Action icon for the employee and assignment combination that you want to cost.

2. Choose the date on which you want your changes to take effect. Select either Changes should take effect on the effective date, or Changes should take effect as soon as final approval is made. Click Continue.

3. View the existing assignment costing information for the employee. You can amend the existing percentages or Add Another Row so that you can enter additional costing information.

   You can also remove an existing row by setting an end date for it, or purging the data. If you choose to purge the data, remember that records can have multiple start dates. Make sure that you select the earliest available start date for the record as your start date for the purge. Remember that if you remove a row, you must also adjust the percentage allocations in the remaining rows so that they still total 100.

   You can also update or correct a record. If you make a correction, your effective date for the correction must be the start date of the record. However, this effective date can correspond to any of the multiple start dates that exist for this record.

   You can search for existing cost code combinations based on Fund, Organization, Object, Activity. Alternatively, click Create to create a new cost code combination.

4. When you have completed your changes, click Next to move to the Summary window. Click Submit to save your changes.

## Previewing Cost Allocations

When you are making a series of cost allocations in preparation for running the Costing process, you can preview the overall effect of your changes before you run the Costing process. You can also see a graphical display of the costing allocations. The preview helps you to:

- See how separate costing entries at different levels combine to give a consolidated costing allocation.
- Detect potential errors, correct them at an early stage, and complete the Costing process quickly and efficiently when you do run it.

You preview the effect of your changes from the View Cost Allocations window.

### To preview cost allocations and identify incorrect costings:

1. Select the assignment that you want to cost.
2. Choose the Others button.
3. Select View Cost Allocations

   You can now see each of the costed elements for the assignment and their derived values.
4. Choose the Validate button to display any costings that are invalid. If any costings are invalid, the entry in the Cost Allocations column is marked by an **X.**
5. If you want to see further details about any costing, choose the Details icon. This identifies the segment of the Cost Allocation field on which the error occurred.
6. Correct the invalid entry by navigating to the form containing the invalid segment. Then, preview cost allocations again to confirm that all cost allocations are now valid.

### To display a graphical analysis of cost allocations:

1. Select the assignment that you want to cost.
2. Choose the Others button.
3. Select View Cost Allocations.
4. Choose the Graphical Analysis tab.
5. Select the segment that you want to view.
6. Choose the Go button to see a pie chart display of the cost allocations for the segment.

## Running the Costing Process

The Costing process generates journal entries for your ledgers and costing information relating to labor costs. You can enter start and end dates of the period over which you

want to cost payroll runs in order to cost all your runs in one process. Alternatively, you may want to produce a costing run for each payroll run

The Costing process includes all employees with active assignments on the payroll that you specify. This means that you can get accurate costings for those employees who have moved to a different payroll by the time you run the Costing process.

You run the Costing process from the Submit Requests window. You should run Costing before the Transfer to GL process.

### To run the Costing process:

1. In the Name field, select Costing.
2. In the Parameters window, select the name of the payroll or consolidation set to run the process for. When you select a payroll, its default consolidation set displays.
3. Enter the start and end dates of the time span for the Costing process to cover.
4. Choose the Submit button.

## Running the Costing Summary Report

Use the Costing Summary report to report the summary of:

- The results of Costing processes within a selected date range
- Results of a particular Costing process

This report displays the individual Costing Flex segments you defined. It breaks down the cost information based on the unit of measure, displays them for each code you defined, and also includes the partial period accruals.

### To run the Costing Summary Report:

1. In the Name field, select "Costing Summary Report".
2. Select the Parameters field to open the Parameters window.
3. Specify the begin and end dates for this costing period.

   Alternately, you can select a Costing Process you have run previously.
4. Specify the name of the payroll for which the costing summary is required.
5. Select a consolidation set.
6. **(US and Canada only)** Select a GRE.

7. In the Include Accruals field, specify the Partial Period Accrual Type you want included in the report spreadsheet.

8. **(US and Canada only)** Indicate either GRE or Payroll Name as the primary sort criteria for this report.

   The parameter you do not choose automatically becomes the secondary sort criteria.

9. Specify an file format for this report's output file. You can choose between CSV or HTML formats.

10. If you want to produce this report in Portable Document Format, (PDF), select a template.

11. Choose OK and then Submit.

## Running the Cost Breakdown Report

There are two versions of the Cost Breakdown report:

- The Cost Breakdown Report for Costing Run shows summarized costing totals for a specified costing process.

- The Cost Breakdown Report for Date Range shows summarized costing totals for a particular consolidation set or payroll over a specified interval.

Both versions show the distribution of payroll calculation results plus corresponding General Ledger and labor cost details.

You run both versions in the Submit Requests window.

### To run the report for a Costing Run:

1. In the Name field, select the report name. Then enter the Parameters field to open the Parameters window.

2. Enter the costing process for which you want to generate the report.

3. Choose whether you want to include partial period accruals on your report, by making one of the following selections in the Include Estimate Costing field:

   - Accruals - to display accrued amounts.

   - Accruals and Reversals - to displays accrued amounts and reversals.

   - Neither - to display neither accruals nor reversals.

4. If you want to produce this report in Portable Document Format, (PDF), select a

template.

5. Choose OK

6. Choose the Submit button.

### To run the report for a Date Range:

1. In the Name field, select the report name. Then enter the Parameters field to open the Parameters window.

2. Enter the start and end dates for which you want to generate the report.

3. Select the name of either the payroll or the consolidation set for which you want to see information. Additionally, if your legislation allows costing by reporting entities, you can specify whether this costing run should apply to all reporting entities, or to a single reporting entity that you select in the reporting entity field.

4. Choose whether you want to include partial period accruals on your report, by making one of the following selections in the Include Estimate Costing field:

   - Accruals - to display accrued amounts.
   - Accruals and Reversals - to displays accrued amounts and reversals.
   - Neither - to display neither accruals nor reversals.

5. If you want to produce this report in Portable Document Format, (PDF), select a template.

6. Choose OK

7. Choose the Submit button

## Running the Costing Detail Report (generic)

The Costing Detail report provides pertinent costing allocation details at the element and employee level. This report is capable of providing a complete representation of the entries transferred to Oracle General Ledger. **US/Canada users only** : You can collapse this data to look at the total credit and debit values at the GRE or Payroll level. Select the Costing Detail Report from the Submit Processes and Reports window.

You run this report from the Submit Processes and Reports window.

### To run the Costing Detail (generic) report:

1. Select Costing Detail report in the Name field.

2. If the parameters window does not open automatically, click in the Parameters field to open it.

3. Select the Parameters for the report. See the Costing Detail Report Parameters section below for more information.

4. Select OK and Submit.

### Costing Detail Report Parameters

The following parameters exist for the Costing Detail Report:

| | |
|---|---|
| **Costing Effective Date Begin** (required) | Enter the start date for the report. Any records processed by costing on or after this date can be picked up for the report. |
| **Costing Effective Date End** (required) | Enter an end date for the report. Any records processed by costing after this date will not be picked up by the report. |
| **Selection Criterion** | Use this field to restrict the output of the Costing Detail report. Select either Element Classification, Element Name, or Element Set. The corresponding field in the Parameters window becomes mandatory. If you leave this field blank, the report includes costing information on all three parameters for all elements. |
| **Element Set** | If this is the Selection Criterion for the report, select one element set. If you make a selection in this field, the report only includes costing information for the element set you select. |
| **Element Classification** | If this is the Selection Criterion for the report, select one element classification. If you make a selection in this field, the report only includes costing information for the element classification you select. |
| **Element** | If this is the Selection Criterion for the report, select one element. If you make a selection in this field, the report only includes costing information for the element you select. |

| | |
|---|---|
| **Costing Process** | Select the costing process from the list of values to report only the costing information for that run. This is a mandatory field. |
| **Payroll** | Select a Payroll. If you make a selection in this field, the report only includes costing information for the payroll you select; otherwise, all payrolls are included in the report. |
| **Consolidation Set** | Select a consolidation set. If you make a selection in this field, the report only includes costing information for the consolidation set you select; otherwise, all consolidation sets are included in the report. |
| **Government Reporting Entity (US/Canada only)** | Select a GRE. If you make a selection in this field, the report only includes costing information for the GRE you select; otherwise, all GREs are included in the report. |
| **Organization** | Select an organization. If you make a selection in this field, the report will only include costing information for the Organization you select, otherwise all Organizations are included in the report. |
| **Location** | Select a location. If you make a selection in this field, the report only includes costing information for the Location you select; otherwise, all Locations are included in the report. |
| **Employee** | Select an employee. If you make a selection in this field, the report only includes costing information for the employee you select; otherwise, all employees are included in the report. |
| **Assignment Set** | Select an assignment set. If you make a selection in this field, the report only includes costing information for the assignment set you select; otherwise, all employees are included in the report. |

| | |
|---|---|
| **Accruals** | Select either Accrual & Reverse Accrual or Accruals in the Include Accruals field. |
| **Output File Type** (required) | Select either HTML or Comma Delimited format. If you select HTML, the output file is displayed in a web browser when opened from the View Requests window. If you select Comma Delimited, the output file is in .CSV format and can be saved and viewed in a third party application. |

## Mapping Cost Allocation to the Accounting Flexfield

If your installation includes Oracle Payroll and Oracle General Ledger, you can run the Transfer to GL process in each payroll period after you have run the Costing process. The Transfer to GL process transfers costing results to the GL Accounting flexfield. Before running this process, you must map segments of the Cost Allocation flexfield to the corresponding segment of the Accounting flexfield for each payroll. To do this, use the GL Map window.

### To map Cost Allocation to Accounting flexfield segments:

1. Set your effective date to the date from which this mapping should take effect.
2. Query the payroll for which you are performing the mapping. Its period type appears in the Period field.
3. Select the ledger for whose Accounting flexfield you are performing the mapping. Costing information from a payroll can go to only one ledger.
4. Select the name of a Cost Allocation flexfield segment in the Payroll Costing Segment field for which a corresponding segment exists in the Accounting flexfield. Select the name of the corresponding segment in the GL Chart of Accounts Segment field. Repeat this process for all the Cost Allocation flexfield segments for which there is a corresponding segment in the Accounting flexfield.
5. Save your entries.

## Running the Partial Period Accrual Calculation Process

If the end of your accounting period occurs before the end of your current payroll period, you may have outstanding costs that have accrued since the end of your last complete payroll period. You can incorporate these accrued costs in your end of period accounting by:

- Posting estimated costs for the accrued period
- Reversing these estimated costs when the actual costs become available

You do this by:

- Running the Partial Period Accrual process on the last day of the accounting period
- Running the Transfer to GL process, also on the last day of the accounting period.
- Running the Transfer to GL process again when the actual costs become available at the end of the current payroll period. This cancels your estimates and replaces them with the actual costs.

### To run the Partial Period Accrual Calculation Process:

1. Enter the name of the payroll for which you want to calculate partial period accruals.
2. Enter the consolidation set name.
3. Enter the period date.

   The period date specifies the payroll period that you want to use as a basis for the accruals. The process bases its estimates on runs whose effective date (check date) lies in the payroll period containing the period date you specify here. If you offset your check date (say, a week after the period end date), offset the period date as well. Specify a period date within the pay period containing the check date.
4. Confirm that the accounting date is correct.

   This is the effective date (the date on which you will post your estimates to the general ledger), typically the last date of the accounting period.
5. Choose OK.
6. Choose Submit

   You have now calculated the estimated costs, and you can transfer them to General Ledger. You have also automatically stored a negation of these estimates and this is used to cancel the estimates and replace them with the actuals when you next run the Transfer to GL process.

   See Running the Transfer to GL Process, page 3-79

## Running the Transfer to GL Process

If your installation includes Oracle General Ledger, you can run the Transfer to GL process. This transfers the results of the Costing process for a payroll to the Accounting

flexfield of Oracle General Ledger.

It is not necessary for your payroll to use the same currency as your general ledger.

The Transfer to GL process includes all employees with active assignments on the payroll that you specify. This means that you can get an accurate transfer of costs for those employees who have moved to a different payroll by the time you run the Transfer to GL process.

You run the Transfer to GL process from the Submit Requests window.

### To run the Transfer to GL process:

1. In the Name field, select Transfer to GL.
2. In the Parameters window, select the payroll or consolidation set for which you are running the process. When you select a payroll, its default consolidation set displays.
3. If you want to set the accounting date for the transfer to date earned, then change the TGL_DATE_USED pay action parameter to "E". If you do not do this then the accounting date of the transfer defaults to the check/cheque date of the originating payroll
4. Enter the start and end dates of the period for which you want to transfer Costing process results.
5. Choose the Submit button.

## Running the Upgrade Historical Payroll Data to SLA Process

Run this process to migrate any historical costing data to Sub Ledger Accounting (SLA). The application migrates the payroll data from General Ledger (GL) to SLA for all the closed or non adjustable periods of the selected ledger.

> **Note:** You run this process to migrate payroll costing details that have been posted already to General Ledger prior to R12's Sub-Ledger Accounting.

Oracle recommends you to run the concurrent program in a logical sequence for easy reconciliation. For example, upload GL data of 2006 periods to payroll after 2005.

You run this process in the Submit Requests window.

### To run the Upgrade Historical Payroll Data to SLA Process:

1. In the Name field, select Upgrade Historical Payroll Data to SLA.

2. Select the Parameters field to open the Parameters window.

3. In the Parameters window, select Ledger to indicate the ledger to use to migrate the costing data.

4. Enter the start date and end date for which you want to migrate the historical payroll data.

5. Click OK and then Submit

## Running the Transfer to SLA Process

If you use Subledger Accounting, use the Transfer to SLA process to pass your payroll costs to General Ledger. The Transfer to SLA process creates an SLA accounting event for each of your payroll assignment actions. The Subledger Accounting application then notifies you when it has intercepted your accounting events. The notification indicates that you can use the Subledger Accounting application to process your costs and report on them.

Note that you cannot roll back transfers to SLA once SLA has finalized the journal entries.

You run the Transfer to SLA process from the Submit Requests window.

### To run the Transfer to SLA process:

1. Select your payroll.

2. Select a consolidation set.

3. Select the start date.

4. Select the end date.

5. Choose the Submit button

## Running the Costing of Payment Process

Use the Costing of Payment process to provide automatic accounting entries that reduce your dependence on manual journal entries. By default, the Costing of Payment process always costs all payments regardless of whether they are cleared or uncleared. However, the process parameters enable you to override the default so that you can also cost:

- Uncleared payments only

- Cleared payments only

You have the flexibility to schedule your costing of payments as follows:

- Several separate operations: You cost uncleared payments during the payroll cycle and then cost cleared payments separately during the reconciliation cycle.
- A single operation: You wait until the reconciliation cycle has completed and then cost cleared and uncleared payments in one consolidated operation.

You run the Costing of Payment process from the Submit Requests window.

### To run the Costing of Payment process:

1. If you want to cost payments for a single payroll, select the payroll name.
2. If you want to cost payments for a consolidation set, select the consolidation set name.

   You must choose either a payroll or a consolidation set.
3. Enter the start date and end date to specify the period for which you want to cost payments.
4. Select a payment type. Your selection determines what type of payments get costed when you run the Costing of Payments process.
   - Uncleared payments: Select to cost uncleared payments within the payroll cycle
   - Cleared payments: Select to cost cleared payments within the reconciliation cycle
   - Uncleared and cleared payments: Select to cost uncleared and cleared payments within the reconciliation cycle
5. Click OK to confirm that your parameters are correct.
6. Click Submit to run the Costing of Payment process.

   When the Costing of Payment process has completed, you can see the results either in the Payroll Process Results window or in the Assignment Process Results window. In either case, results appear as follows:
   - The Costing Breakdown window shows the overall number of costed payments for a payroll and indicates whether the status is complete or pending.
   - The Costing window shows the individual costed values for a payment method.

## Running the Costing of Payment Summary Report

Run the Costing of Payment Summary report to display the summary of costing data at the selected payroll or GRE level within a selected date range

You can sort summary data either by Payroll or GRE name. The report also display sum of credit and debit values of all payrolls or GREs.

You run the Costing of Payment Summary Report from the Submit Requests window.

### To run the Costing of Payment Summary Report:

1. In the Name field, select Costing of Payment Summary Report.
2. If the parameters window does not open automatically, select the Parameters field to open the Parameters window.
3. Enter the begin and end dates for the costing period.
4. You must select the costing process that you have run previously.

   **Note:** You can either specify the dates or select the costing process but not both.

5. Specify the name of the payroll for which the costing summary is required, otherwise, all payrolls are included in the report.
6. Select a consolidation set to restrict the report otherwise, all consolidation sets are included in the report.
7. Select a GRE, if applicable.
8. Indicate either GRE or Payroll Name as the primary sort criteria for this report. The parameter you do not choose automatically becomes the secondary sort criteria.
9. Specify a file format for this report's output file. You can choose between CSV or HTML formats. If you select HTML, the output file is displayed in a web browser when opened from the View Requests window. If you select Comma Delimited, the output file is in .CSV format and can be saved and viewed in a third party application.
10. Click OK and then click Submit.

## Running the Costing of Payment Breakdown Report

You run the Costing of Payment Breakdown Report to view the costing results

consolidated at ledger and account type level. This report displays the costed value for each cost segments for ledger or account type combination. You can view data by currency code and the complete costing of payment values

You run the report in the Submit Requests window.

### To run the Costing of Payment Breakdown Report :

1. In the Name field, select the report name.
2. If the parameters window does not open automatically, select the Parameters field to open the Parameters window.
3. Specify the start and end dates for the costing period. Any records processed by costing before or after this date will not be picked up for the report.
4. Enter the costing process for which you want to generate the report.

   **Note:** You can either specify the dates or select the costing process but not both.

5. Specify the name of the payroll for which the breakdown of costing information is required, otherwise, all payrolls are included in the report.
6. Select a consolidation set to restrict the information within the report, otherwise, all consolidation sets are included in the report.
7. Select a payment method to report the costing information. When you select the payment method, the payment type ID automatically displays for the selected payment method.
8. Specify a file format for this report's output file. You can choose between CSV or HTML formats. If you select HTML, the output file is displayed in a web browser when opened from the View Requests window. If you select Comma Delimited, the output file is in .CSV format and can be saved and viewed in a third party application.
9. Click OK and then click Submit.

## Running the Costing of Payment Detail Report

You run the Costing of Payment Detail report to validate costing of payment results at an assignment or payment level.

You run this report from the Submit Requests window.

### To run the Costing of Payment Detail report:

1. Select Costing of Payment Detail report in the Name field.

2. If the parameters window does not open automatically, click in the Parameters field to open it.

3. Enter the start date for the report. Any records processed by costing on or after this date can be picked up for the report.

4. Enter an end date for the report. Any records processed by costing after this date will not be picked up by the report.

5. Select a payroll to restrict the costing information for this payroll only, otherwise, all payrolls are included in the report.

6. Select a consolidation set to report the costing information for the consolidation set you select; otherwise, all consolidation sets are included in the report.

7. Select a payment method to report the costing information.

8. When you select the payment method, the payment type ID automatically displays for the selected payment method.

9. Select an employee to the report only costing information for the employee you select; otherwise, all employees are included in the report.

10. Select an assignment set to the report only costing information for the assignment set you select; otherwise, all assignments sets are included in the report.

11. Select either HTML or Comma Delimited format. If you select HTML, the output file is displayed in a web browser when opened from the View Requests window. If you select Comma Delimited, the output file is in .CSV format and can be saved and viewed in a third party application.

12. Click OK and Submit.

# RetroCosting

## RetroCosting

The RetroCosting process ensures that the costing information entered for payroll processing is correct. It does this by recalculating all costing records using current costing information and then comparing these results with the existing costing information. This identifies any discrepancies between current costing information and existing costing records. Such discrepancies may arise when:

- The definition of the Costing key flexfield segments has been changed at any level, for example payroll, organization, assignment, element link or element entry.
- The following changes have been made at element link level:
  - Correction of the costable type of a link from Costed to Not Costed, or from Not Costed to Costed.
  - Corrections to the values of costed links, such as Costed, Fixed Costed and Distributed.
  - Corrections of balancing account codes.
  - Corrections of distribution sets for element links marked as distributed.
- The codes of distribution set member elements have been changed
- Costing records do not exist because the costing process did not run successfully.

## Running the RetroCosting Process

You can use the RetroCosting process to make retrospective costing corrections. This applies where the correct costing amounts have been entered but assigned to the wrong costing code. The need for RetroCosting arises if the original costing code has been incorrectly entered, or if there has been a late change to the costing code. In each instance RetroCosting enables you reassign costs to the correct costing code.

The RetroCosting process does not involve any change to the way in which you transfer costs to GL. After you have applied the RetroCosting process you can transfer costs to GL as you would for non-retroactive costs.

**To run the RetroCosting process:**

1. Enter retroactive costing changes using DateTrack.

2. If the process is to run for several assignments, create the assignment set.

3. Navigate to the Submit Processes and Reports window and select RetroCosting. Enter the following as process parameters:

   - Payroll Name (optional)
   - Consolidation Set (mandatory)
   - Start Date (mandatory). This is start of the period over which the RetroCosting is to be applied.
   - End Date (mandatory). This is the date on which the retroactive costing data takes effect. The process will include all historic costing from the start date through to the end date.
   - Assignment Set (optional)

4. View Process Results

   There is an assignment action with the type RetroCosting for each assignment in which there has been a change of costing information.

   You can view the retroactive costing records from the Payroll Process Results window:

   - Select the RetroCosting action for the assignment and period.
   - Click on Costing

   You can also see RetroCosting process results on the Costing Breakdown Summary Report

# Workforce Intelligence Key Concepts for People Budgets and Costing

## Key Concepts for People Budgets and Costing Intelligence

The following concepts enable you to accurately interpret the results of the People Budgets and Costing intelligence reports:

- Workforce Count, page 3-88
- Control Budgets, page 3-88

### Workforce Count

One of the most powerful features of the People Budgets and Costing reports is that you can define how the reports count workforce.

Workforce does not necessarily have to be a count of the number of people in your enterprise; it can instead be a count of the assignments, or a budget measurement unit you have set up. For example, you can count workforce using the budget measurement units of FTE or Headcount.

Additionally, by writing your own formula, using Oracle FastFormula, or the provided formula, you can instruct the report to count workforce exactly how you want to.

See: Workforce Calculation, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

### Control Budgets

HRMSi provides budget trend and budget status reports for control budgets. You can review differences between your budgeted workforce and the actual number of employees for specific budgets, organizations, jobs, grades, or positions.

See: Position Control, page 2-28

See: People Budgets and Costing Overview, page 3-1

# 4

# People Types and Employment Groups

## People Types and Employment Groups Overview

As an enterprise, you define different groups of people to:

- Store information about different groups of people.
- Control access to records of different groups of people.
- Report and enquire on different groups of people.
- Grant eligibility to certain benefits, such as a pension plan.

### Managing People Types and Employment Groups Using Oracle HRMS

Oracle HRMS provides you with the following ways to group people in your enterprise:

- **Work Structures**

  The structures in which a person works provide you with ways of defining groups of people in your enterprise. For example, groups working at a particular location, or on a certain grade (for employees only), or in a department. You create different groups by assigning people to the work structures in their assignment.

- **Person Types**

  Person types enable you to group people together based on the role they perform in your enterprise. Use person types to recognize different groups of people for reporting purposes, and to control access to information.

- **People Group Key Flexfield**

  The People Group key flexfield enables you to create a structure to hold information that you use to identify different groups of people in your enterprise. For example, you can define the People Group key flexfield to hold information on

pension plans. When you enter assignment information for a person, you can assign them to a special pension plan group.

### Managing People Types and Employment Groups Using Oracle Self-Service Human Resources (SSHR)

Oracle Self-Service Human Resources (SSHR) enables different groups of people to access HR information through personalized interfaces for their roles, and information needs. Using SSHR, you can configure HR business processes for different user groups based on their specific requirements. You can hide or show different regions of the application and fields of a transaction based on the category of user. For example, you can grant access for all employees to maintain their own benefit options and personal information.

Oracle Self-Service Human Resources (SSHR) is a separately licensed product. Contact your Oracle sales representative for more information on licenses.

### Reporting on People Types and Employment Groups

Oracle HRMS and Oracle HRMS Intelligence (HRMSi) enable you to produce a range of reports that you can run for different groups of people. For example:

- Oracle HRMS enables you to run the Headcount Detail report for different groups of people to investigate the number of people in a selected organization.
- Oracle HRMSi provides you with the Employee Salary by Group Workbook to investigate the average salaries of different groups of employees in your enterprise.

### Key Concepts

To get the most of your people types and employment groups functionality, you need to understand the following concepts:

- Person Types, page 4-4
- Employee Groups and the People Group Flexfield, page 4-8

## People Types and Employment Groups

Oracle HRMS enables you to represent and organize your workforce to meet the requirements of your enterprise.

### How can I represent different groups of people in my enterprise?

Oracle HRMS provides you with the following ways to group people in your enterprise:

- Work Structures: you can define groups based on the structure in which people work in your enterprise.

- Person Types: You can define different groups of people based on the role they perform in your enterprise. Oracle HRMS provides you with a number of predefined person types such as, employees, applicants, and contingent workers. If you want to identify different types of employee, for example to identify employees who are on a student placement, then you can define a subgroup of the employee person type called Student Placement.

- People Group Flexfield: You can use this flexfield to hold information for different groups of people in your enterprise.

## Can I identify and group together all the people who are members of a union?

Yes. Oracle HRMS provides you with the People Group key flexfield to hold specific information you want to record for the people in your enterprise. For example, you can use the People Group key flexfield to capture the people in your enterprise who are members of a union. The people you identify as being a union member create a special group of people.

## I need to report on all the employees at one location to meet statutory reporting requirements. Is this possible?

You can group people together using the structures in which they work and the roles they perform so that you can report on all the employees from a specific location to meet certain reporting requirements.

## Can I record details of additional roles the people in my enterprise perform?

Yes. Oracle HRMS enables you to record details of additional roles a person has in your enterprise. As a result of performing an additional role, the person can be a member of a representative body, typically a committee or organization with joint employer and employee representation.

# People and Person Types

## Person Types

In any enterprise there is a need to identify different groups of people. For each group that exists in your enterprise there may be different types of information you need to keep. You may also want to control access to the records of different groups of people.

There are four basic types of people for whom you maintain information in your human resource system. These are:

- Employees, both current and ex-employees
- Applicants, both current and ex-applicants
- Contingent workers, both current and ex-contingent workers
- External people

A special category of the External type is *contact*. A contact can be associated with an employee, contingent worker, or an applicant.

Contacts can include the following types of people: people who are dependents of employees, people whom employees name as beneficiaries of certain benefits, and people whom employees list as their contacts in case of emergency.

## System and User Person Types

Oracle HRMS comes with a set of seven person types recognized by the application, and identified by a system name. These are shown in the table below. Note that the system person type of External is supplied with two user names.

### Person Types and System Names Table

The following table describes the person names and system types:

***Person Types and System Names***

| User Name | System Name | Default |
|---|---|---|
| Employee | Employee | Yes |
| Applicant | Applicant | Yes |

| User Name | System Name | Default |
|---|---|---|
| Contingent Worker | Contingent Worker | Yes |
| Ex-employee | Ex-employee | Yes |
| Ex-applicant | Ex-applicant | Yes |
| Ex-contingent Worker | Ex-contingent Worker | Yes |
| Contact | External | Yes |
| External | External | No |

Each person type has a predefined user name, or user person type, that you can change when you install the system. To more accurately represent the people of your enterprise, you can then extend this further by adding subgroups to each system person type. For example, Oracle HRMS is installed with the system person type of employee, you might have two types of employee in your enterprise:

- Regular employee
- Fixed term employee

You can define these as subgroups of the Employee person type to:

- Enable fast identification of these groups
- Manage different kinds of personal information for each group
- Change employees from Fixed Term to Regular Employee, without changing current work information

> **Note:** Each employee's assignment can be described by an *assignment category* such as Full Time - Regular or Part Time - Temporary. So you do not use person types to distinguish the category of assignment.

In another example, you might want to distinguish between internal and external applicants for vacancies. You may also be involved in a redundancy program or a program of staff layoffs, and need to identify employees as preferred candidates for any vacancies. You can do this with the following subgroups of applicant:

- Internal Candidate
- External Candidate

- Preferred

In these examples you are able to extend system person types by defining your own user person types to accurately represent the people of your enterprise.

When you create people in Oracle HRMS, you assign them a person type to represent them in your enterprise. The user person type you select for them is known as their person type usage.

If subsequently you apply further person types to a person, for example if an employee applies for another job in your enterprise, then this is displayed as a concatenation of all the applicable person types, in this example, *employee.applicant.*

> **Note:** A person cannot be an employee and a contingent worker at the same time.

## OAB Person Types

In addition to system and user person types there are also OAB person types. These are predefined in Oracle HRMS and automatically created when certain actions occur in Standard or Advanced benefits. For example, when an employee dies, a user type of surviving family member could be created or when the leaving reason of retiree is entered for an employee, the user person type of retiree is created.

The eight predefined person types are shown in the table below.

### OAB Person Types Table:

The following table describes the OAB person types:

***OAB Person Types***

| User Name | System Name |
|---|---|
| Retiree | Retiree |
| Former Spouse | Former Spouse |
| Surviving Family Member | Surviving Family Member |
| Surviving Spouse | Surviving Spouse |
| Former Family Member | Former Family Member |
| Beneficiary | Beneficiary |

| User Name | System Name |
|---|---|
| Dependent | Dependent |
| Participant | Participant |
| Surviving Domestic Partner | Surviving Domestic Partner |
| Surviving Domestic Partner Family Member | Surviving Domestic Partner Family Member |

Although these are usually created automatically as part of your benefits administration, you can add and delete these person types manually using the Person Type Usage window. This enables you to correct any special circumstances and also assign people to OAB person types for which they would otherwise not be eligible.

> **Note:** You can not add or amend the person type of Retiree as this is maintained by the application.

You can also change the user name of any person type usage to another user name defined for the same system person type in this window.

OAB system person types co-exist with the HR system person types. This means that a person can be recorded as an Applicant for HR purposes and a Beneficiary for OAB purposes simultaneously.

## Person Types and Information Management

You can use person types to control the type of information you can enter. For example, you cannot enter earnings or deductions for an applicant. You can use person types in the following ways:

- To control access to peoples' records on the application. For example, you may give all managers in a department access to employee records, but only give recruitment officers access to records of applicants and ex-employees.

  Your system administrator can achieve this by creating configured versions of the People window.

  See: CustomForm, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

- When you set up your own fields to hold additional information, you can tie them to particular person types. For example, you may want a user-defined field holding visa information for foreign workers to appear for employees and applicants, but not for other people.

You can do this by setting up the descriptive flexfield on the People window.

See: User Definable Descriptive Flexfields, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

**Tip:** If you want to define rules of eligibility for a compensation or benefits element based on the type of employee, you cannot use the person type directly. However, you can use person type in a *formula* to validatethe values entered for an employee.

Also, consider whether you can meet your needs using the assignment status and employment category to control eligibility for compensation and benefits.

## Other Employee Groups

All the work structures provide ways of defining groups of employees in your enterprise, such as groups working at a particular location, or on a certain grade, or in a department. You create the groups by assigning employees to the work structures in the Assignment window.

You can also assign people to:

- An employment category: full-time - regular, full-time - temporary, part time - regular, or part time - temporary
- A salary basis, such as weekly or annual, which defines the duration for which the employee's salary is quoted

See: Components of the Assignment, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

Oracle HRMS provides a special structure you can use to define any other special groupings of employees your enterprise requires. This structure is called the people group. Just as with payrolls and other work structures, you can assign employees to people groups, and use them to define employee eligibility for compensation and benefits elements.

### The People Group Flexfield

People Group is a key flexfield, like Job Name, Position Name, and Grade Name. As with these other key flexfields, you can define up to 30 segments to hold information you use to identify employee groups in your enterprise.

Using the People Group key flexfield to define your groups is a powerful mechanism because you can:

- Link elements to Group flexfield segments so that only employees within the group

are eligible for the elements

- Inquire and report on individual segments in Inquiry windows and in reports
- Use DateTrack to build up a history of the group information

If your enterprise uses pay scales to relate compensation levels to grades indirectly, you can use a People Group segment to specify which employees are processed by the Increment Progression Points process.

Once you decide how to define the Group key flexfield structure and segments, it is the responsibility of the system administrator to set the flexfield up. At least one segment of this flexfield must be set up before you can begin entering employee assignments.

### Making People Group Segments Required

If you make any of the People Group segments required, this will apply to both the Element Link window and the Assignment window. This means that you may have to create multiple element links if you want to use a People Group segment in the eligibility criteria for a link.

For example, suppose you have defined two segments: a Yes/No segment called Fast Track, which is required, and a segment called Pension Plan, which is not required. You want to make an element available only to members of a certain pension plan. However, you must create two element links: one for members of the pension plan who are on the Fast Track, and another for members who are not on the Fast Track.

> **Important:** If there are many possible values for the required segment, the maintenance of multiple links can become a burden so be cautious in making segments of this flexfield required.

## Defining Person Types

You can define your own names to identify the groups of people. These include groups of employees, applicants, contingent workers, and contacts, as well as current and 'ex-' types.

You can change these default names or define any number of subgroups to help to more accurately represent the people in your enterprise. For example, you might want to use Person Type to identify internal and external applicants for vacancies. You can do this by using the person type of applicant and defining subgroups of *internal* and *external*.

When you enter a person in the application you assign them a person type. The person type you select for the person is known as their person type usage. If you subsequently assign a further person type to the person this is displayed as a concatenation of the two person types. For example, if you enter a person as an employee and then later assign the person type of applicant this displays as *employee.applicant*.

You enter user names for person types in the Person Types window.

### To change a user name for a person type:

1. Delete the contents of the User Name field and type in your preferred name.

### To map other user names to a person-type system name:

1. Insert a new record.

2. Enter a unique user name, and select the system name you want to map on to.

#### Deactivating User Names

You cannot delete user names the application uses, but you can deactivate them by unchecking the Active check box. Deactivating a person type prevents you from selecting it in the People window. Notice that you cannot deactivate a default User Name. You must first select another user name as the default.

## Changing Person Type Usage and Deleting OAB Person Type Usage

Use the Person Type Usage window to manually change person type usage. You do this when you want to change someone's person type to another user person type for the same system person type.

For example, you may have two user person types for the system person type of employee. These could be Student Placement, and Permanent Employee. If you wanted to change one of your employees from a Student Placement to a Permanent Employee, you would use this window. This change is datetracked for HR person types.

See: Person Types, page 4-4

The user person types shown on the Person Type Usage window are displayed in the Type field on the People window. OAB person types are usually automatically linked to a person when an event occurs in benefits administration, however there may be special occasions where you would want to amend them manually.

### To change a person type usage:

1. Select the new user person type and choose Correction or Update in the displayed dialogue box. For an OAB person type you have the Correction option only.

2. Save you work.

### To delete an OAB person type usage:

1. Set the effective date to the date on which you want the usage to end.

2. Select the user person type you want to delete and select Delete.

**Note:** You can delete all records that use OAB person types except for those that use the person type Retiree, as this can only be maintained by the system.

3. Choose the End date or Purge button and save your work.

   If the amendments you have made mean that changes must be made to any benefit assignments, you must make these manually.

## Entering OAB Person Type Usage

Use the Person Type Usage window to manually assign a person an OAB user person type that was not automatically created.

The OAB user person types shown on the Person Type Usage window are in addition to the type selected in the Type field on the People window. Apart from employee and applicant, they are usually automatically linked to a person when an event occurs in benefits administration, however there may be special occasions where you would want to assign a person type to a person manually.

### To enter OAB person types:

1. Set the effective date to the date on which the person type usage must begin.
2. Query the person to whom you are assigning a person type.
3. Insert a new record in the Person Type Usage window.
4. Select the OAB user person type you want to associate with this person.

   **Note:** You can only have one active instance of any OAB system person type existing for a person at any one time. That means that if you already have a record of an OAB system person type, you cannot add another record for the same OAB system person type until after the end date of the existing record.

5. Save your work. If the amendments you have made mean that changes must be made to a person's benefits assignments, you must make these manually.

# Workers' Representation and Supplementary Roles

## Workers' Representation and Supplementary Roles

Oracle HRMS enables you to record information about constituencies, representative bodies, supplementary roles and elections. Within your enterprise you can perform a number of different roles. These roles range from company defined initiatives such as Fire Warden to legislative defined roles awarded as a result of an election.

### Constituency

Constituencies are made up of components, such as, organization, location, and grade. You select components to define which people are part of the constituency. For example, if you include a grade in the constituency, all the people of that grade are included in the constituency. The people within the constituency are those eligible to vote in an election.

You can select the components to include in the constituency by using existing organization hierarchies. You use the Organization window to define the components of the constituency.

### Representative Body

As a result of performing a role, an employee can be a member of a representative body. Representative bodies are typically committees or organizations with joint employer and employee representation.

Where these bodies are established by legislation, there are rules concerning the election process and you, or your enterprise, are responsible for recording the results of that election process.

The Organization window enables you to enter information about a representative body. By assigning constituencies to a representative body, you define which people make up that body.

### Supplementary Roles

Supplementary roles are additional tasks that an employee performs in addition to being an employee. You can elect a person to a role, such as Union Representative, or a non-elected role, such as Fire Warden.

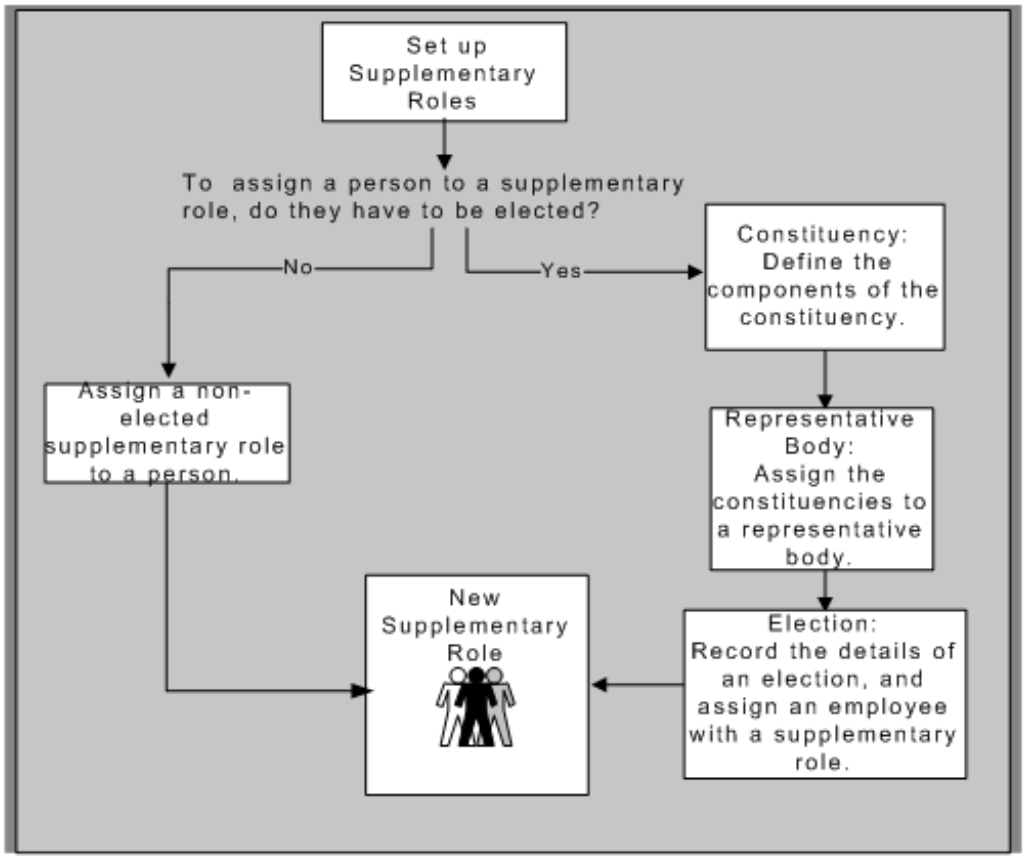
If a person needs to be elected to the role, you enter the election details and assign the person to the role using the elections window, but if they do not need to be elected, you can assign the person to the role through the Supplementary Roles window. You do not need to create any supplementary roles using the Job window before you can assign a person to that role.

## Election

You can record election information, results and the role being undertaken by the person following an election, using the Elections window.

The following graphic illustrates the two processes of assigning supplementary roles:

*Assigning Supplementary Roles*



## Entering Supplementary Role Information

You can record information about any roles an employee or contingent worker holds which are not part of their contract; for example, Fire Warden or member of a workers' representative council.

You enter information about supplementary roles in the Supplementary Roles window.

### To enter a supplementary role for an employee in Oracle HRMS:

1. In the Supplementary Roles window, select the Job Group to which the role belongs. You cannot select the default HR Job Group here. If you select a Job Group first, the list of roles is filtered to show only those roles attached to that Job Group.

2. Select the role (only roles attached to Job Groups other than the default HR Job Group are available for selection in this window). If you select a role first, the Job Group is automatically selected.

   You can save your work and close the window at this stage, or fill in the remaining optional fields in the window to record:

   - The representative body associated with the role, if applicable (you can only select representative bodies associated with the Job Group you have selected).

   - Whether the employee or contingent worker is a primary contact for the representative body.

   - The date on which the employee or contingent worker begins the role (this defaults to the effective date) and the end date.

   - The start date of any confidentiality agreement associated with the role.

   - Whether the role carries any additional rights, and if so, the date on which these rights will end.

     **Note:** The additional rights setting is defaulted from the value entered when you defined the role in the Job window. You can change this.

## Entering Election Information

Use the Elections window to record information about an election, or to assign a candidate to a supplementary role.

### To enter election details:

1. Select the name of the representative body.

   When you select the name of the representative body, the previous election date displays automatically if there has been a previous election.

2. Enter the date and description of the election.

3. Enter the previous election date if there has been a previous election, otherwise

leave the Previous Election Date field blank.

4. Enter the next election date if there is to be a future election, otherwise leave the Next Election Date field blank.

5. Enter the date the results are published in the Results Date field, otherwise you cannot enter a place attained by each candidate later.

### Constituency Details:

1. Select the constituencies that are taking part in the election in the Constituency Details block.

### Candidates and Election Results:

1. Select candidates for the election in the Candidates block.

2. Enter the place attained by each candidate in the Rank field.

3. Select a supplementary role for elected candidates if required.

   You can only select a supplementary role, that is part of the job group selected for the representative body, you are entering election results for.

4. Check the Primary Contact check box if the elected person is a primary contact for this representative body.

5. Enter a start date and end date for the supplementary role.

   If you enter a results date this defaults into the Start Date field. If you enter a next election date, this defaults into the End Date field.

6. Save your work.

   You can maintain supplementary role information in the Supplementary Role window. If you assign a supplementary role to a candidate and save it, you are only able to delete the supplementary role from the person's record in the Supplementary Roles window. You can then return to the Elections window and delete the candidate record, if required.

# 5

# Employment Agreements and Legal Compliance

## Employment Agreements and Legal Compliance Overview

In your enterprise, you may have employment agreements that govern employment terms and conditions. These agreements may cover a few, many, or all of your workforce and the terms that they define could vary, depending on the particular situation of an employee. For example, the employment terms and conditions such as pay, work schedules, vacations, termination notice, maternity leave, and deductions from wages may vary for an employee or groups of employees. The employer and the representatives of the employees, for example union representatives, negotiate the working terms and conditions specified in the employment agreements.

Apart from adhering to the employment agreements, an employer has to submit several reports to government authorities to ensure legal compliance. These reports measure the extent the employer complies with legal requirements such as employment standards, pay equity, labor relations (for unionized employees), health and safety protection at work for the employees.

Oracle HRMS enables you to represent the employment agreements with your employees and fulfill your statutory reporting requirements.

### Representing Employment Agreements Using Oracle HRMS

In Oracle HRMS, you represent an employment agreement as a *collective agreement*. Using Oracle HRMS, you can:

- Set up the collective agreement to contain the employment terms and conditions that apply to everyone covered by it
- Specify the values your workforce receives for performing specific roles or at specific locations

- Define the rules which ensure eligible workforce receive specific values such as one month of annual vacation that an employee completing minimum six months of employment in your enterprise receives

- Automatically assign values to your eligible workforce, when they are eligible for multiple values, by calculating the most beneficial value for them

For more information about representing employment agreements using Oracle HRMS, see: Collective Agreements, page 5-5

## Recording Occupational Health and Safety Details Using Oracle HRMS

Using Oracle HRMS, you can:

- Record occupational health and safety measures such as medical assessments, disability information, and injuries at work (work incidents) for the people in your enterprise

- specify the disability concessions such as tax reduction and special consideration in work schedules such as part-time work

- record multiple medical assessments such as recruitment medical assessment or annual medical assessment

Oracle HRMS enables you to link this information together. For example, if a medical assessment is required as the result of a work accident, and that assessment then diagnoses a disability in the person, you can connect these records to one another.

## Reporting for Legal Compliance

Oracle HRMS and Oracle HRMSi provide support for several countries to enable employers to fulfill their statutory reporting requirements. For example, Oracle HRMS enables:

- US users to generate ADA, IPEDS, OSHA, VETs, and EEO reports.

- French users to generate the Bilan Social report.

- Saudi users to generate the Saudi Disabled Employee report.

- German users to generate the Work Incidents report.

- South African users to generate the Employment Equity Workforce Profile report.

Oracle HRMSi offers, for example, the establishment and organization worksheets to report about employee equal opportunities by job. To work with Oracle HRMSi reports, you must purchase the appropriate license from Oracle. For information on licenses, contact your Oracle sales representative.

For more information, see Employee Agreements and Legal Compliance Reports, *Oracle HRMS Window Navigation and Reports Guide*

### Key Concepts

To effectively use Oracle HRMS for employee agreements and legal compliance, see:

- Collective Agreements, page 5-5
- Value Sets for Collective Agreements, page 5-7
- Collective Agreements Administration, page 5-31
- Occupational Health, page 5-38

## Employment Agreements and Legal Compliance

Oracle HRMS enables you to record employment agreements and details of occupational health and safety measures at work for your employees.

### Can I have selected employees covered by an employment agreement in my enterprise?

Oracle HRMS enables you to have some employees covered by an employment agreement and few others not covered by any employment agreement. For the employees covered by an employment agreement, you record the collective agreement details.

### In an enterprise, can different employment agreements cover different employees?

Oracle HRMS provides the flexibility to maintain multiple employment agreements to cover different groups of people in an enterprise. For example, if you have officer workers and factory workers in your enterprise, you can maintain two different employment agreements to suit the groups.

### How do I represent employment agreements in Oracle HRMS?

You represent an employment agreement in Oracle HRMS as a collective agreement. You represent the terms and conditions, as entitlement items that employees covered by the employment agreement will receive.

### Can I specify which employees can receive specific terms of employment, for example the vehicle allowance?

You can define eligibility profiles (rules) that ensure that only employees who meet the eligibility rules receive the specific terms of employment, in this case the vehicle allowance.

## Can an employee continue to receive a specific employment term after an event makes the employee ineligible for it?

Yes, an employee can still receive an employment term even if they are no longer eligible for them. For example, if by transferring from a location an employee becomes ineligible for a location allowance, you can define it as a retained right if you still want them to receive it. The employee will continue to receive the allowance for the period you define in this window.

## What are the terms of employment that I can represent in a collective agreement?

Oracle HRMS enables you to represent the terms of employment based on your business requirements. Some of the terms of employment you can represent are pay, work schedules, vacations, termination notice, maternity leave, and deductions from wages.

## Which occupational health and safety details can I maintain in Oracle HRMS?

You can record occupational health and safety details such as medical assessments of your employees, any injuries caused during work, and employee disabilities. You can also specify if the disability is the result of an injury at work.

## What types of work injuries can I record?

Oracle HRMS enables you to record work injuries that occur at work, on the way to or from work, and in other circumstances that your enterprise defines as work-related.

## Can I link the medical assessments, disability information, and work incident details?

You link these occupational health and safety details by relating one to the other. For example, if you do a medical assessment because of a work incident, which in turn results in a disability, then you mention them in the medical assessments, disability information and work incidents records.

## Can I generate government-mandated reports covering disabilities, occupational health, and safety details?

Oracle HRMS enables you to generate government-mandated reports concerned with employment opportunities for people with various types of disabilities (Americans with Disabilities Act reports) and reports about the extent and severity of work-related injuries and illnesses affecting employees (Occupational Safety and Health Administration reports).

# Collective Agreement Setup

## Collective Agreements

A collective agreement is an agreement that defines the terms and conditions of employment for all employees that are covered by its terms. Agreements are typically negotiated and agreed by external bodies such as Trade Unions and Representatives of Employers.

The following sections describe the components you can use to represent the terms of a collective agreement in Oracle HRMS and to apply the correct entitlements to the primary assignments of eligible employees.

### Entitlement Items

An entitlement item forms the basis for any entitlement that can be given to an employee as part of a collective agreement. For example, probation period, annual holiday, and car allowance are all entitlement items. For any entitlement you need to provide as part of a collective agreement, you must create an entitlement item.

You can create two types of entitlement item. These are:

- An entitlement item that produces a value that is written to an employee's record.
- An entitlement item that produces a value that is not written to an employee's record, but is held as part of the collective agreement results for that person. You could set up other areas of the application to reference this information if required.

  For example, you could set up an item type called Paternity Leave Allowed that indicated whether an employee is eligible to take paternity leave. This would not be written to the employee's record, but could be seen in the collective agreement results for that person.

### Eligibility Profiles

Use eligibility profiles to define the criteria that an employee must meet in order to receive a particular entitlement. The criteria that you can include in an eligibility profile are grouped into five factors:

- Personal Factors
- Employment Factors
- Derived Factors
- Related Coverages

- Other Factors

Each factor contains a variety of criteria from which you select one or more criteria values.

For example, if a collective agreement states that people working in California should receive an extra allowance, you could define an eligibility profile using the Employment Factor criteria of Work Location. The value for the Work Location criterion would be California, (You need to define this work location using the Locations window). A person must meet this criterion in order to be given the associated allowance.

Eligibility profiles can be used in benefits plans, collective agreements, or both. The information you can enter against a profile differs slightly depending on whether you have accessed this window from the total compensation or collective agreements area of the application.

In addition to the eligibility profiles you define, there is a Default profile that you can select when defining entitlement values. You can use this to define a value to apply to everyone not eligible to receive something more beneficial.

**Derived Factors**

As part of the criteria for an eligibility profile you can set up derived factors. These are eligibility factors that are calculated by the application and can change over time. See: Derived Factors, *Oracle HRMS Compensation and Benefits Management Guide* for more information.

## Collective Agreement Details

For each collective agreement recognized by your enterprise you can record information such as a name, number, and whether it is active. You can also indicate the parties by whom it has been agreed. You set these parties up using the organization classifications Employer and Bargaining Association.

## Collective Agreement Entitlement Values

For each entitlement item to be included in a collective agreement you must select which eligibility profiles to use, and enter the values that employees who satisfy the criteria receive.

For some example setups of entitlements see: Example Entitlement Setups, page 5-9

## Evaluation and Application of Collective Agreement Entitlement Values

To indicate which people are covered by the terms of a collective agreement you select the agreement as part of their primary assignment.

**Note:** You can select collective agreements as part of other assignments,

but the evaluate and apply processes only calculate values for the primary assignment.

Once this has been done the application has to calculate what values the employee is eligible for and apply them to their record. How this is done depends on the settings of the following user profiles:

- HR:Auto Apply Entitlements
- HR:Auto Evaluate Entitlements

If the HR:Auto Evaluate Entitlements profile is set to Yes, then the values that an employee is entitled to are calculated as soon as the collective agreement is saved to their assignment. If it is set to No then you must run the evaluation process manually from the Collective Agreement Results window.

**Note:** If the HR:Auto Evaluate Entitlements profile is set to No, then the apply process will not run automatically, even if the HR:Auto Apply Entitlements is set to Yes

If the HR:Auto Apply Entitlements is set to Yes, then the values calculated for a person during the evaluation process are automatically applied to an employee's record. For any entitlements where the employee is entitled to more than one value but the application cannot determine which is most beneficial to the employee, you have to make a choice manually. If it is set to No you have to select and apply all values manually in the Collective Agreement Results window.

There is also a concurrent process called Collective Agreement Entitlement Evaluation that you can run from the Submit Request window to evaluate and apply an employee's entitlement values.

## Value Sets for Collective Agreements

As part of the setup of your collective agreement entitlement items you may need to use value sets in order for your entitlement items to perform correctly.

### Item Value Sets

If you are creating an entitlement item that populates one of the fields on the assignment included in the table below you need to select the corresponding item value set. This is so that when the entitlement item is selected in the Collective Agreement Entitlements window the values field displays a drop-down list of valid values.

The following table describes the fields on the assignment and the corresponding item value set:

***Item Value Sets***

| Field | Value Set |
|---|---|
| Bargaining Unit | CAGR_BARGAINING_UNIT |
| Employee Category | CAGR_EMPLOYEE_CATEGORY |
| Employment Category | CAGR_EMPLOYMENT_CATEGORY |
| Grade | CAGR_GRADES |
| Job | CAGR_JOBS |
| Organization | CAGR_ORGANIZATIONS |
| Payroll | CAGR_PAYROLL |
| Salary Basis | CAGR_SALARY_BASIS |

In addition to these a CAGR_YES_NO value set is provided to be used where the valid value for a field is Yes or No, or the field uses a check box, for example Union Member.

You can also use these supplied value sets as examples to set up your own should you need to. For example, if you want to create a value set to write a value to a descriptive flexfield column, you can define a value set that enforces the same validation that is used by the descriptive flexfield.

## Beneficial Rule Value Sets

For entitlement items where the most beneficial value cannot be determined from the value itself, but can be determined from some other value associated with it, you can define a value set to enable the application to do this. An example of this would be grades where you can use the sequence number associated with a grade to determine which is most beneficial. This is presuming that you have set up your grades so that the higher the sequence number, the better the grade.

An example value set, CAGR_BR_GRADE has been supplied for you to use as a template for creating your own value sets.

## Setups for Collective Agreement Value Sets

In order for the value set to work correctly with the collective agreement, it must conform to the following rules:

- The item value set name must begin with CAGR_
- The beneficial rule value set name must begin with CAGR_BR
- The value set must be defined with a validation type of Table.
- The value set must return two values, one ID and one value or description.
- The following syntax is to be used if business_group_id is required in the sql. This example is for grades:

  ```
  Where business_group_id =  $PROFILES$.PER_BUSINESS_GROUP_ID AND
  GRADE_ID in ()
  ```

  The important part of this syntax is that the ID column is restricted to a set of values that are inserted within the brackets. If the brackets are not there, the value set will not work.

## Example Entitlement Setups

The following give an example setup for each of the categories supported in Oracle HRMS.

### Assignment Category Example

Imagine that the notice period for employees is based on their employee category as shown in the following table:

***Assignment Category***

| Employee Category | Notice Period |
|---|---|
| Default | 1 month |
| Blue Collar | 2 months |
| White Collar | 3 months |

To represent these collective agreement terms in Oracle HRMS you must complete the following steps:

1. Create an entitlement item called Notice Period and associate it with the Notice Period field.

2. Create two eligibility profiles based on the employment factor of Employee Category. In one select the employee category of Blue Collar and in the other select the employee category of White Collar.

3. Assuming you have already created your collective agreement, select the Notice Period entitlement item in the Collective Agreement Entitlements window and define the values for each of the eligibility profiles. Against White Collar, enter 3, and against Blue Collar, enter 2. Use the Default profile name to define the notice period of one month for all other employees.

### Pay Scales Example

Imagine your enterprise uses the salary scale shown in the following table where employees' salary is based on their job and grade:

***Pay Scales***

| Job | Grade | Point | Salary |
|---|---|---|---|
| Manager | M1 | 1.1 | 40000 |
| Manager | M1 | 1.2 | 45000 |
| Manager | M1 | 1.3 | 47500 |
| Manager | M2 | 2.1 | 50000 |
| Manager | M2 | 2.2 | 55000 |
| Executive | E1 | 3.1 | 65000 |
| Executive | E1 | 3.2 | 75000 |

To represent these collective agreement terms in Oracle HRMS you must complete the following steps:

1. Define jobs called Manager and Executive.

2. Define the grades M1, M2 and E2

3. Define a pay scale with points 1.1 through to 3.2.

4. Define a scale rate to associate the correct salary value with each point for the pay scale.

5. Define a grade scale to associate each grade to the correct points.

6. Create an entitlement item called Pay Scale and associate it with the Spinal Point field.

7. Create two eligibility profiles based on the employment factor of Job. In one select the job of Manager and in the other select the job of Executive.

8. Assuming you have already created your collective agreement, select the Pay Scale entitlement item in the Collective Agreement Entitlements window.

For each of the rows in the table you define a row in the Pay Scales tab. For the first row you would select the Manager eligibility profile, the grade M1, and the step 1.1.

### Payroll Example

Imagine your enterprise uses the hourly rates shown in the following table where employees' rates are based on their grade:

***Payroll***

| Grade | Standard Hourly Rate | Overtime Hourly Rate |
|---|---|---|
| A1 | 7.50 | 9.00 |
| A2 | 8.20 | 9.90 |
| A3 | 9.60 | 11.00 |

To represent these collective agreement terms in Oracle HRMS you must complete the following steps:

1. Define the grades A1 through to A3

2. Ensure the input values, element links and element entries have been defined for the Basic Salary Rate and Overtime elements.

3. Create two entitlement items, one called Standard Hourly Rate associated with the Basic Salary Rate element, and another called Overtime Hourly Rate associated with the Overtime element.

4. Create three eligibility profiles based on the employment factor of Grade. Select A1 in the first, A2 in the second, and A3 in the third.

5. Assuming you have already created your collective agreement, select the Standard Hourly Rate entitlement item in the Collective Agreement Entitlements window.

For each of the rows in the table you define a row in the values tabbed region. For the first row you would select the A1 Grade eligibility profile and enter the value of 7.50.

6. Select the Overtime Hourly Rate entitlement item in the Collective Agreement Entitlements window.

For each of the rows in the table you define a row in the values tabbed region. For the first row you would select the A1 Grade eligibility profile and enter the value of 9.00.

## Setting Up a Collective Agreement

Follow these steps to enter a collective agreement, set up the eligibility criteria for the agreement, and to apply the values defined in the agreement to the eligible employees.

> **Note:** Not all legislations utilise all the collective agreements functionality.

### To set up a collective agreement:

1. Define the entitlement items for your agreement.

   See: Defining an Entitlement Item for a Collective Agreement, page 5-12

2. Define the eligibility profiles to be used with your collective agreement.

   See: Defining an Eligibility Profile, page 5-14

3. Create organizations to represent the two parties who have negotiated the agreement if required. Use the Employer and Bargaining Association organization classifications.

   See: Entering Organization Classifications, page 1-33

4. Create the collective agreement.

   See: Entering a Collective Agreement, page 5-23

5. Define the entitlements for your collective agreement.

   See: Defining Collective Agreement Entitlements, page 5-24

6. Assign the collective agreement to all employees who are covered by its terms.

   See: Entering an Assignment, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

7. Select and apply the entitlement values to be applied to an employee.

   See: Selecting and Applying Collective Agreement Entitlement Values, page 5-32

## Defining an Entitlement Item for a Collective Agreement

You create entitlement items using the Entitlement Item Definition window.

### To define an entitlement item to generate values to be written to an employee's record:

1. Enter a name for your entitlement item. This must be unique within the category.

2. Select the category for your entitlement item. The category you select here determines the values you see in the Field Name field. For example, if you select a category of Assignment, you will only be able to select field names that relate to assignments.

   If you select the Payroll category, then you can select an element name, rather than a field, to associate with the entitlement item.

   > **Note:** The category of Absence does not have any field names associated with it in the current release so therefore does not have any effect on current absence processing.

3. If you have selected the Payroll category, then you must select the element to which the entitlement item is associated. For example, if this item is to generate values for a person's salary you should select the Regular Salary element.

   If the element has been defined to allow multiple entries, then you must indicate whether the value calculated using this item should be applied to all entries within the pay period or not. If you do not select this check box and there are multiple entries for the element then the collective agreement apply process will error.

   If there are no element entries for an assignment to which the entitlement item applies, then select the Automatically Create Entries check box. This enables the Collective Agreement Entitlement Evaluation process to create the required element entries while processing and applying collective agreement entitlement results.

   > **Note:** You must select the Automatically Create Entries check box while defining new entitlement items as you cannot update this information for existing entitlement items.

   You must also select an input value for the element. Once an element and input value combination has been associated with an entitlement item, it cannot be used again.

4. If you have selected any other entitlement category then you must select a field name and, if the field you select requires it, a unit of measure. This defines which field in the application will be populated with the value generated by this entitlement item. You can only associate each field with one entitlement item.

#### Defining a Beneficial Rule

5. Select the rule that defines which value is most beneficial for this entitlement item.

For example, if the item was Holiday Allowance, then the beneficial rule should be Highest. The application will use this rule when an entitlement item produces multiple valid values for an employee.

If it is not possible for you to define a beneficial rule or the application cannot determine what is the most beneficial value then you are required to manually select a value if multiple values are returned.

6. Select an item value set for your entitlement item, if required.

   For information on which entitlement items require item values sets see: Value Sets for Collective Agreements, page 5-7

7. Select a beneficial value set if your entitlement item requires a value set to determine the most beneficial value.

   For information on setting up value sets for collective agreements see: Value Sets for Collective Agreements, page 5-7

8. Save your work.

### To define an entitlement item to generate values held in the collective agreement results for an employee:

1. Enter a name for your entitlement item. This must be unique within the category.
2. Select a beneficial rule and value set if required.
3. Select a category and unit of measure for your entitlement item.
4. Save your work.

## Defining an Eligibility Profile

You use the Participation Eligibility Profiles window to define an eligibility profile with an effective start date of your choice. Before defining the profile, define any derived factors (such as length of service or compensation level), or your own eligibility criteria, that you plan to use as eligibility criteria.

If you want to create your own criteria to include in the eligibility profile, click User Defined Eligibility Criteria and create new criteria, see: Creating your own Eligibility Criteria., *Oracle HRMS Compensation and Benefits Management Guide* To access these criteria, choose the Other tabbed region, and select User Defined Criteria from the list

You can use eligibility profiles to determine:

- employee eligibility for compensation and benefits plans
- entitlements in collective agreements

- eligibility for grade/step progression
- eligibility for various work schedules, and so on

The information you can enter differs slightly depending on whether you have accessed this window from the Total Compensation or Collective Agreements area of the application.

> **Note:** If you use the Total Compensation Setup Wizard to set up grade ladders, programs and plans, and Total Compensation Statements, you can create or update eligibility profiles while you are working in the Wizard.

### To define an eligibility profile:

1. Enter the Name of the eligibility profile you are defining.
2. Enter a Description of this eligibility profile.
3. Select an Assignment Type to which this eligibility profile applies.

   For example, you can define an eligibility profile for employee assignments if this profile is only used for employees.

   > **Note:** You can only select Employee Assignment Only for profiles to be used with collective agreements.

4. Select the profile Status.

   **Pending:** This eligibility profile is currently proposed, but not active.

   **Active:** This eligibility profile is in use.

   **Inactive:** This eligibility profile is in use but cannot be associated with any new programs, plans, or options.

   **Closed:** This eligibility profile was once Active or Pending, but is no longer in use.

5. Select whether this eligibility profile applies to benefits or collective agreements. If you are defining an eligibility profile for work schedules or grade step progression, then select benefits.
6. Choose the tabbed region that contains a criteria element that you want to include in your eligibility profile. Choose from:
   - Personal
   - Employment

- Derived Factors
- Related Coverages (Not applicable to collective agreements)
- Other

7. Select a criteria element.

   For example, you could choose Person Type as one of several eligibility criteria of the Personal type.

   > **Note:** When you define more than one value for a criterion, at least one of the values must be present in the person's record for them to be eligible. However, when you use multiple criteria in an eligibility profile (for example, a Work Location and an Organization), the person must meet at least one value for *each* criterion.

   If you use a FastFormula eligibility rule as part of your eligibility profile, the participant must meet the criteria of the rule and one value from any other criteria that you include in the eligibility profile. If you use more than one FastFormula rule, by default the participant must meet the criteria of all the rules. If you change the user profile option BEN:Eligible Profile Rule from AND to OR, the participant need only meet the criteria of one rule.

8. Enter a Seq (sequence) number specifying the order the system processes this criteria element relative to any other criteria in this eligibility profile.

   > **Note:** You must assign a sequence number of a higher priority to all criteria that are used to exclude eligibility.

9. Select one or more values for the criteria element you have selected.

10. Check the Exclude field if a person becomes ineligible to participate in the compensation object, or to receive the collective agreement entitlement you associate with this eligibility profile if they meet this criterion.

    You typically check the Exclude field when it is easier or faster to define which persons are excluded from eligibility, as opposed to defining which person are eligible.

11. If you are defining an eligibility profile for a grade ladder, and you want to rank your employees to determine the most eligible person to progress, enter an eligibility Score for this criteria.

    The application calculates the eligibility rank based on the total score for all criteria

that the person satisfies.

12. For grade ladders, you can also enter an eligibility Weight for a criteria.

    The application multiplies the weight by the criteria value. You can only use weights with criteria that contain numeric values. If you enter a score and a weight for a criteria, the application adds the person's score to the weight to arrive at the final number.

13. Repeat steps 6, page 5-15 to 12, page 5-16 for each criteria element that you include in your eligibility profile.

14. Choose the Display All tabbed region to view the criteria elements in this eligibility profile.

15. Save your work.

## Defining Derived Factors: Compensation Level

You can define a compensation level factor as part of an eligibility profile (to be used in determining benefits participation or collective agreement entitlements) or a variable rate profile. A compensation level factor can be based on either stated salary, balance type, or benefits balance type.

You define compensation level factors in the Derived Factors window. The values you can select in some of the fields depend on whether you have accessed the Derived Factors window from the Total Compensation or Collective Agreements area of the application.

### To define a compensation level factor:

1. Enter a Name for this compensation level factor.

2. Select the Unit Of Measure for this compensation level factor.

3. Select the Source of the compensation level factor.

   - Select the Defined Balance for this compensation level factor if you selected a source of balance type.

   - Select a Benefits Balance Type if you selected a source of benefits balance type.

   - Select the compensation periodicity in the Stated Comp Periodicity field if you selected a source of stated compensation.

     **Note:** If you have installed the Oracle Incentive Compensation

patch 4409180 you can select either Oracle Incentive Compensation - Amount Earned or Oracle Incentive Compensation - Amount Paid as the source. If you select any of these sources, then the Incentive Compensation Information region displays, where you can enter the Start and End Dates, and select the Prorate if date range differs from OIC range check box

In the Values block:

4. Enter the Minimum amount under which the system does not calculate this compensation level factor.
   - Check the No Minimum field if there is no minimum compensation amount under which the system excludes participants when determining participation eligibility and activity rates.

5. Enter the Maximum amount above which the system does not calculate this compensation level factor.
   - Check the No Maximum Compensation field if there is no maximum compensation amount above which the system excludes participants when determining participation eligibility and activity rates.

6. Select a Determination Code or Rule to define when the system determines a participant's compensation level.

7. Choose a Rounding Code or Rounding Rule to specify the level to which the system rounds the results of this compensation level factor.

8. Save your work.

## Defining Derived Factors: Percent of Full Time Employment

A percent full time factor derives an employee's percent of full time employment. The application uses this information to calculate activity rates, coverage amounts, or to determine participation eligibility for either benefits or collective agreement entitlements.

For example, you could define the 100% percent full-time factor to identify those employees who work 100% full-time (40 hours per week) and thus qualify for most benefits or entitlements.

You define percent full time factors in the Derived Factors window. The values you can select in some of the fields depend on whether you have accessed the Derived Factors window from the Total Compensation or Collective Agreements area of the application.

### To define a percent full time factor:

1. Enter a Name for this percent full time factor.

2. Check the No Minimum field if there is no minimum percentage of full-time employment under which the application excludes employees when determining participation eligibility and activity rates.

   - Or, enter a Minimum Percent Value to define the minimum percentage of full-time employment to be used in this calculation.

3. Check the No Maximum field if there is no maximum percent of full-time employment beyond which the application excludes employees when determining participation eligibility and activity rates.

   - Or, enter a Maximum Percent Value to define the maximum percent of full-time employment to be used in this calculation.

4. Check the Use Primary Assignment Only field to specify that the application considers only an employee's primary assignment when determining percent of full time employment.

5. Check the Use Sum of All Assignments field to specify that the application considers all active assignments when determining percent of full-time employment.

6. Select a Rounding Code or Rule to specify the level to which the application rounds the results of this calculation.

7. Save your work.

## Defining Derived Factors: Hours Worked In Period

An hours worked in period factor derives the number of hours a given employee has worked over a given period of time. The application uses this information to determine participation eligibility for either benefits or collective agreement entitlements, activity rates, and coverage amounts.

You define hours worked in period factors in the Derived Factors window. The values you can select in some of the fields depend on whether you have accessed the Derived Factors window from the Total Compensation or Collective Agreements area of the application.

### To define an hours worked in period factor:

1. Enter a Name for this hours worked in period factor.

2. Select the calculation source for this hours worked in period factor in the Source field.

   **Balance Type:** The application retrieves hours worked information from a balance.

   **Benefits Balance Type:** The application retrieves hours worked information from a benefits balance.

3. Specify when the application calculates this hours worked in period factor in the Once or Continuing field.

   **Once:** The application only calculates this hours worked in period factor following a life event or for open enrollment.

   **Continuing:** The application calculates this hours worked in period factor each time you run the Participation batch process.

4. Select the Defined Balance for this compensation level factor if you selected a calculation source of balance type.

5. Select a Benefits Balance Type if you selected a calculation source of benefits balance type.

6. Check the No Minimum field if there is no minimum number of hours worked in period under which the application excludes employees when determining participation eligibility and activity rates.

   - Or, enter the Minimum hours worked in period under which the application does not calculate this hours worked in period factor.

7. Check the No Maximum field if there is no maximum hours worked in period above which the application excludes employees when determining participation eligibility and activity rates.

   - Or, enter the Maximum hours worked in period beyond which the application does not calculate this hours worked in period factor.

8. Select an hours worked Determination Code or Rule that defines how to calculate the hours worked in period.

9. Select a Rounding Code or Rule to specify the level to which the application rounds the results of this hours worked in period factor.

10. Save your work.

## Defining Derived Factors: Age

An age factor derives a person's age in order to determine participation eligibility for either benefits or collective agreement entitlements, activity rates, and coverage

amounts.

For example, you could define the Retire 65 age factor to identify those employees who are at least 65 years of age and thus qualify for a maximum benefit under your corporation's retirement plan. For collective agreements you could define the Age Less Than 21 age factor to identify those employees who are less than 21 and thus should be placed on a particular grade.

You define age factors in the Derived Factors window. The values you can select in some of the fields depend on whether you have accessed the Derived Factors window from the Total Compensation or Collective Agreements area of the application.

### To define an age factor:

1. Enter a Name for this age factor.

2. Select the UOM to specify the unit of measure for this age factor.

3. Select an Age to Use code to indicate the kind of person, such as the participant or the participant's child, for whom you are defining a derived age factor.

   **Note:** Derived factors to be used with collective agreements can only use the employee's age.

4. Select an Age Determination Code or Rule to specify the date the application uses to calculate age.

5. Check the No Minimum Age field if there is no minimum age under which the application excludes employees when determining participation eligibility and activity rates.

   - Or, enter the Minimum age beyond which the application does not calculate this age factor.

6. Check the No Maximum Age field if there is no maximum age beyond which the application excludes employees when determining participation eligibility and activity rates.

   - Or, enter the Maximum age beyond which the application does not calculate this age factor.

7. Select a Rounding Code or Rule to specify the level to which the application rounds the results of this age factor calculation.

8. Save your work.

## Defining Derived Factors: Length of Service

A length of service factor derives the length of service for a given worker in order to determine participation eligibility for either benefits or collective agreement entitlements, activity rates, and coverage amounts.

You define length of service factors in the Derived Factors window. The values you can select in some of the fields depend on whether you have accessed the Derived Factors window from the Total Compensation or Collective Agreements area of the application.

### To define a length of service factor:

1. Enter a Name for this length of service factor.

2. Select the unit of measure in the UOM field by which you are defining the length of service factor.

3. Select a Determination Code or Rule that defines how the system calculates an employee's length of service.

4. Check the No Minimum Applies field if there is no minimum length of service under which the system excludes employees when determining participation eligibility and activity rates.

   - Or, enter the Minimum length of service under which the system does not calculate this length of service factor.

5. Check the No Maximum Applies field if there is no maximum length of service above which the system excludes employees when determining participation eligibility and activity rates.

   - Or, enter the Maximum length of service beyond which the system does not calculate this length of service factor.

6. Select a length of service Date to Use Code or Rule to specify the date from which the system calculates the employee's length of service.

   **Hire Date:** The system always uses the employee's hire date as the start date when calculating length of service.

   **Adjusted Service Date:** The system first uses the employee's adjusted service date if one exists. If there is no adjusted service date, the system uses the employee's hire date.

7. Check the Use Override Service Date field to indicate that the system should override the person's service date when determining eligibility.

**Note:** You enter the Override Service Date for a person in the Participation Overrides window.

8. Select a Rounding Code or Rule to specify the level to which the system rounds the results of this length of service factor.

9. Save your work.

## Defining Derived Factors: Combination Age and Length of Service

A combination age and length of service factor associates two factors you have already defined: an age factor and a length of service factor.

You define combination age and length of service factors in the Derived Factors window. The values you can select in some of the fields depend on whether you have accessed the Derived Factors window from the Total Compensation or Collective Agreements area of the application.

### To define a combination age and length of service factor:

1. Enter a Name for the combination age and length of service factor you are defining.

2. Select an Age Factor.

3. Select a Length of Service Factor.

4. Enter the Minimum value for the combination of age and length of service that qualifies a person as eligible for the benefit, collective agreement entitlement, or activity rate with which this factor is associated.

5. Enter the Maximum value for the combination of age and length of service that qualifies a person as eligible for the benefit, collective agreement entitlement, or activity rate with which this factor is associated.

6. Enter an Order Number to specify the order in which the application processes and displays combined age and length of service records.

7. Save your work.

## Entering a Collective Agreement

Use the Collective Agreements window to enter information about collective agreements used by your enterprise.

### To enter a collective agreement:

1. Enter the name of the collective agreement. This must be unique to allow a collective agreement to be referenced across your business group.

2. Select a status for the collective agreement. Although you can still apply inactive collective agreements to employees, no values are calculated for it until you set it to Active.

3. Enter the number of the collective agreement.

4. Enter the start date of the collective agreement and enter its jurisdiction.

   **Note:** An end date should only be entered once the collective agreement is no longer applicable to your enterprise. After the end date the collective agreement can no longer be applied to an assignment.

5. Select the employer and bargaining unit who have negotiated the collective agreement. These are defined using the employer classification and bargaining association classification in the Organization window. Enter the name of the signatory for each party.

6. Enter the name of the authorizing body and the date on which the collective agreement was authorized.

7. Save your changes.

#### What Next?

You can now define the entitlement values for the collective agreement using the entitlement items and eligibility profiles you have created. You do this in the Collective Agreement Entitlements window.

## Defining Collective Agreement Entitlements

Use the Collective Agreement Entitlements window to define the values associated with all the entitlement items in your collective agreement. These are the values that employees covered by the terms of the collective agreement receive if they meet the criteria defined by the eligibility profile. Each value is held in an entitlement line.

**Note:** The Message Level, Range To, Range From, Non-Updateable, From Step, and To Step fields are to be used in future releases and are not currently active.

### Example Entitlement Setups

The following give an example setup for each of the categories supported in Oracle HRMS.

### Assignment Category Example

Imagine that the notice period for employees is based on their employee category as shown in the following table:

| Employee Category | Notice Period |
|---|---|
| Default | 1 month |
| Blue Collar | 2 months |
| White Collar | 3 months |

To represent these collective agreement terms in Oracle HRMS you must complete the following steps:

1. Create an entitlement item called Notice Period and associate it with the Notice Period field.
2. Create two eligibility profiles based on the employment factor of Employee Category. In one select the employee category of Blue Collar and in the other select the employee category of White Collar.
3. Assuming you have already created your collective agreement, select the Notice Period entitlement item in the Collective Agreement Entitlements window and define the values for each of the eligibility profiles. Against White Collar, enter 3, and against Blue Collar, enter 2. Use the Default profile name to define the notice period of one month for all other employees.

### Pay Scales Example

Imagine your enterprise uses the salary scale shown in the following table where employees' salary is based on their job and grade:

| Job | Grade | Point | Salary |
|---|---|---|---|
| Manager | M1 | 1.1 | 40000 |
| Manager | M1 | 1.2 | 45000 |
| Manager | M1 | 1.3 | 47500 |

| Job | Grade | Point | Salary |
|---|---|---|---|
| Manager | M2 | 2.1 | 50000 |
| Manager | M2 | 2.2 | 55000 |
| Executive | E1 | 3.1 | 65000 |
| Executive | E1 | 3.2 | 75000 |

To represent these collective agreement terms in Oracle HRMS you must complete the following steps:

1. Define jobs called Manager and Executive.
2. Define the grades M1, M2 and E2.
3. Define a pay scale with points 1.1 through to 3.2.
4. Define a scale rate to associate the correct salary value with each point for the pay scale.
5. Define a grade scale to associate each grade to the correct points.
6. Create an entitlement item called Pay Scale and associate it with the Spinal Point field.
7. Create two eligibility profiles based on the employment factor of Job. In one select the job of Manager and in the other select the job of Executive.
8. Assuming you have already created your collective agreement, select the Pay Scale entitlement item in the Collective Agreement Entitlements window.

For each of the rows in the table you define a row in the Pay Scales tab. For the first row you would select the Manager eligibility profile, the grade M1, and the step 1.1.

### Payroll Example

Imagine your enterprise uses the hourly rates shown in the following table where employees' rates are based on their grade:

| Grade | Standard Hourly Rate | Overtime Hourly Rate |
|---|---|---|
| A1 | 7.50 | 9.00 |

| Grade | Standard Hourly Rate | Overtime Hourly Rate |
|---|---|---|
| A2 | 8.20 | 9.90 |
| A3 | 9.60 | 11.00 |

To represent these collective agreement terms in Oracle HRMS you must complete the following steps:

1. Define the grades A1 through to A3.
2. Ensure the input values, element links and element entries have been defined for the Basic Salary Rate and Overtime elements.
3. Create two entitlement items, one called Standard Hourly Rate associated with the Basic Salary Rate element, and another called Overtime Hourly Rate associated with the Overtime element.
4. Create three eligibility profiles based on the employment factor of Grade. Select A1 in the first, A2 in the second, and A3 in the third.
5. Assuming you have already created your collective agreement, select the Standard Hourly Rate entitlement item in the Collective Agreement Entitlements window.

   For each of the rows in the table you define a row in the values tabbed region. For the first row you would select the A1 Grade eligibility profile and enter the value of 7.50.
6. Select the Overtime Hourly Rate entitlement item in the Collective Agreement Entitlements window.

   For each of the rows in the table you define a row in the values tabbed region. For the first row you would select the A1 Grade eligibility profile and enter the value of 9.00.

### To define entitlements for a collective agreement:

1. Select the category for the entitlement you are creating. Only entitlement items with this category can be selected in the Entitlement region.

   **Note:** If you are defining entitlements for a payroll item type, then check that the following definitions have been entered:

   - The element and its input values

- The element links
- The element entries for all eligible employees

2. Select the entitlement item for which you want to create values. The remaining fields display the entries defined for the entitlement item in the Collective Agreement Entitlement Items window.

3. If you want to use a formula to calculate the value for this entitlement, then choose the Formula radio button and select the formula. If you want to define criteria to calculate the value, then ensure the Criteria radio button is selected.

### Defining Entitlement Lines:

1. Select the eligibility profile for which you want to define a value.

   **Note:** In addition to the eligibility profiles you have created there is a DEFAULT profile. If you set up a value using this profile, then it is applied to all employees on the collective agreement, unless they are eligible for a more beneficial value.

2. Select whether this value is active. Inactive lines are ignored when calculating collective agreement values for an employee.

3. Do one of the following:

   - If you are entering values for a pay scale, then select the grade, and the step to be applied to employees that satisfy the criteria for this line. The pay scale for the grade is displayed automatically. The grade is used in association with the eligibility profile to determine the eligibility for pay scale entitlement items. To be eligible to be placed on the specified step, an employee must satisfy both the eligibility profile and be on the selected grade.

     For example, if your eligibility profile is Age Less than 21, and you have selected grade SE01, then an employee must be less than 21 and be on grade SE01 to be placed on the step defined by this line.

   - Otherwise, enter the value to be applied to employees that satisfy this eligibility profile.

4. Add further entitlement lines until you have created all the required values for this entitlement, then save your work.

## Setting up Collective Agreement Grades

Collective agreement grades enable you to define how an employee is graded or ranked in a collective agreement. A collective agreement grade is defined by a combination of values that you enter using *grade factors*. A grade factor is a user-defined field that you set up as part of the grade structure in the Collective Agreement Grades (CAGR) key flexfield. The grades that you predefine for a collective agreement are known as *reference grades*. To set up collective agreement grades:

### To setup collective agreement grades:

1. Set up the Collective Agreement Grades key flexfield to define a grade structure and grade factors.

   See: User-Definable Key Flexfields , *Oracle HRMS Configuring, Reporting, and System Administration Guide*

   > **Note:** If you are in Italy, do not set up this flexfield. You must use the predefined IT_CAGR flexfield structure.

2. Enter a collective agreement, page 5-23

3. Enter collective agreement grades, page 5-29. to link a grade structure to a collective agreement, and to define a set of reference grades.

   **What Next?**

   You can now define a collective agreement grade for an assignment using the Employment Terms tabbed region on the Assignment form.

   See: Entering Additional Assignment Details, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

## Entering Collective Agreement Grades

You enter collective agreement grades to link a collective agreement to a grade structure and to define a set of reference grades that can be used in that collective agreement.

You enter this information using the Agreement Grades window.

### To enter a collective agreement grade:

1. Query the collective agreement and select the grade structure. The reference grades entered will be recorded against the combination of collective agreement and grade structure selected.

2. Check the Override Allowed check box if you want to enable users to enter any

combination of values for the selected grade structure in the Assignment window. If you leave the check box unchecked users will be forced to select a predefined reference grade.

3. Insert a sequence number and click the Name field. Enter values for the grade factors that are displayed. Each combination of values represents a reference grade.

4. Enter as many reference grades as required.

5. Save your changes.

   You can now use the Assignment window to define the assignment's collective agreement grade.

   See: Entering Additional Assignment Details, *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

# Collective Agreement Administration

## Collective Agreement Administration

After you set up the collective agreements in your enterprise, you need to evaluate and apply it for your required employees. Oracle HRMS provides you the evaluate and apply processes to enable your employees to receive the entitlements specified in the collective agreement.

To evaluate and apply, you must:

- Indicate the people covered by a collective agreement by selecting the agreement as part of their primary assignment.
- Set the HR:Auto Apply Entitlements and HR:Auto Evaluate Entitlements user profiles to calculate what values the employee is eligible for and apply them to their record.

If you set the HR:Auto Evaluate Entitlements profile to Yes, then the application calculates the values that an employee is entitled to as soon as the collective agreement is saved to their assignment. If you set it to No, then you must run the evaluation process manually from the Collective Agreement Results window.

> **Note:** If you set the HR:Auto Evaluate Entitlements profile to No, then the apply process will not run automatically, even if you set the HR: Auto Apply Entitlements to Yes.

If you set the HR:Auto Apply Entitlements to Yes, then the application applies the values calculated for a person during the evaluation process automatically to the employee's record. For any entitlements where the employee is entitled to more than one value but the application cannot determine which is most beneficial to the employee, you have to make a choice manually. If you set it to No, then you have to select and apply all values manually in the Collective Agreement Results window.

There is also a concurrent process called Collective Agreement Entitlement Evaluation that you can run from the Submit Request window to evaluate and apply an employee's entitlement values.

**Administering Retained Rights**

Oracle HRMS enables an employee to continue to receive a specific entitlement item after an event makes the employee ineligible for the entitlement item. For example, if by changing the role an employee plays in your enterprise, the employee becomes ineligible for an education allowance, you can define it as a retained right if you still want them to receive it. The employee will continue to receive the allowance for the period you define in this window.

## Selecting and Applying Collective Agreement Entitlement Values

How you use the Collective Agreement Results window depends on the settings of the profile options associated with collective agreements:

- **Setup A:** If both HR: Auto Evaluate Entitlements and HR: Auto Apply Entitlements are set to No, then you use the Collective Agreement Results window to evaluate and manually select which of the generated values to apply to the employee.

- **Setup B**: If HR: Auto Evaluate Entitlements is set to Yes, but HR: Auto Apply Entitlements is set to No, then the evaluation is done automatically once a collective agreement is selected for an employee. In this instance, you use the Collective Agreement Results window to manually select which of the generated values to apply to the employee.

  If you set up your application like this you may experience a slight delay when saving an assignment record after selecting a collective agreement.

- **Setup C**: If both profiles are set to Yes, then you use the Collective Agreement Results window to check that the application has applied the correct values, and also to manually select a value where the application cannot determine which is the most beneficial for the employee.

  If you set up your application like this you may experience a delay when saving an assignment record after selecting a collective agreement.

  > **Warning:** Ensure that you have set up your collective agreement and associated information correctly before using this setup. Oracle recommends applying values generated by your collective agreements manually until you are sure that your setup works correctly.

The following procedures describe the behavior of the application following the selection of a collective agreement for the first time.

### To select and apply entitlement values for setups A and B:

1. If your setup corresponds to Setup A, then in the Collective Agreement Results window, choose the Refresh Entitlements button. The Collective Agreement Evaluation process is run and the results are displayed.

   If your setup corresponds to Setup B, then this evaluation will have been done automatically once you saved the collective agreement against the employee.

2. Choose the View Log button to look at the log file and ensure that the evaluation process has run correctly.

3. Use the category field to limit the entitlement items displayed in the Name fields by category if required. The results for the selected item are shown in the Entitlement Results region.

4. Choose which value to apply to the employee for each item by checking the Chosen check box. You must still check the Chosen check box even if only one value is displayed.

   Where no values are displayed for an item then the employee is not eligible for that item.

   Where the application has been able to calculate which of the values for an item is most beneficial to the employee, the Suggested check box is checked to show this. You must still check the Chosen check box for these values in order for them to be applied to the employee.

   Any values that are included because they are retained rights are shown by a check in the Retained check box.

5. Save your work once you have chosen the value you want to apply to the employee for a particular item.

6. Repeat steps 3 to 5 until you have chosen values for all the entitlement items for which the employee is eligible.

7. Choose the Apply button to apply the values to the employee's record.

8. Choose the View Log button to look at the log and ensure that the values have been applied successfully. Any errors or warnings are shown in the Apply Process Log section.

   **Note:** Every time you run the Apply process, a new Apply Process Log section is added to the end of the log, so ensure you are looking at the correct section.

9. Close the Collective Agreement Results window and requery the assignment in the Assignment window. The values applied from the collective agreement are displayed.

### To select and apply entitlement values for setup C:

1. Choose the View Log button in the Collective Agreement Results window to look at the log file and ensure that the evaluation and apply processes have been run correctly.

2. Do one of the following to identify for which of the entitlement items the application has not been able to determine the most beneficial value for the

employee:

- Look through the log and check that the entry for each entitlement item that satisfies more than one eligibility profile contains the line **Beneficial value is:** You will have to choose a value manually for each of those that do not.

- Navigate through the entitlement items in the Name fields. You will need to choose a value manually for each entitlement item that does not have the Suggested check box checked for one of its values.

3. Choose which value to apply to the employee for each item that has not been processed automatically by checking the Chosen check box. You must still check the Chosen check box even if only one value is displayed.

   **Note:** If you want to override any of the values the application has applied, then you can still check the Chosen check box for items that have a suggested value.

4. Once you have chosen all the required values, then choose the Apply button to apply the values to the employee's record.

5. Choose the View Log button to look at the log and ensure that the values have been applied successfully. Any errors or warnings are shown in the Apply Process Log section.

   **Note:** Every time you run the Apply process, a new Apply Process Log section is added to the end of the log, so ensure you are looking at the correct section.

6. Close the Collective Agreement Results window and requery the assignment in the Assignment window. The values applied from the collective agreement are displayed.

### What Next?

If you make any changes to a person's employment record that may impact their entitlements, or you make changes to a collective agreement that may impact the entitlements of the employees covered by its terms, you must do one of the following:

- Use the Collective Agreement Entitlement Evaluation process to re-evaluate and reapply the required values to each affected employee:

  See: Running the Collective Agreement Entitlement Evaluation Process, page 5-35

- Use the Collective Agreements Results window to re-evaluate and reapply the required values for each employee effected. Choose the Refresh Entitlements button

to re-evaluate the entitlements the employee should receive and proceed as described in the procedure for setups A and B above.

## Defining Retained Rights

Use the Collective Agreement Retained Rights window to define rights that an employee can still receive, even if they are no longer eligible for them. For example, if by transferring from a location an employee becomes ineligible for a location allowance, you can define it as a retained right if you still want them to receive it. The employee will continue to receive the allowance for the period you define in this window.

### To define a retained right:

1. Use the Category and Name fields to select the entitlement item that you want to retain for the employee.

2. Check the Retained check box for the value you want to retain.

3. Check the Freeze check box if you want to freeze the value of the entitlement. This means that even if the value of the entitlement item changes in the future due to a change in the collective agreement, the employee will still receive the value as it is now.

   For example, if an employee receives a retained location allowance of $2000 that is frozen, even if the terms of the collective agreement increase the location allowance to $3000, then employee still receives $2000.

4. Enter the date from which the entitlement item is retained, and if required, enter the date when the item is no longer retained.

5. Save your work.

## Running the Collective Agreement Entitlement Evaluation Process

The Collective Agreement Entitlement Evaluation process enables you to evaluate and apply collective agreement entitlements for an employee using the Submit Request window.

### To run the Collective Agreement Entitlement Evaluation process:

1. Select the Collective Agreement Entitlement Evaluation process in the name field.

2. Click in the Parameters field to display the Parameters window, if it does not automatically open.

3. Select the date on which you want to run the process. This defaults to the system

date.

4. Select the process mode. The options are:

   - **Evaluate Only:** Only the evaluation of possible results is performed.

   - **Evaluate and Apply:** Evaluate the possible results and apply them to the employee's record.

   - **Apply Only:** Apply the results already generated by the previous evaluation.

5. Select the processing level. The options are:

   - **Single Assignment:** Run the process for a single person.

   - **Single Collective Agreement:** Run the process for all people on a single collective agreement.

   - **Single Entitlement:** Run the process for a single entitlement item across all collective agreements.

6. Select the validation mode. The options are:

   - **No Commit - Database Not Updated:** The selected process runs and produces a log file indicating any errors that have occurred but does not save any information on the database. This enables you to run the Apply process without actually applying the results to your employee's record. This means you can correct any problems that may occur prior to amending any values.

   - **Commit - Database Updated:** The selected process runs and saves the information on the database.

7. Do one of the following:

   - If you have selected a processing level of Single Assignment, then select the person for whom you want to run the process.

   - If you have selected a processing level of Single Collective Agreement, then select the agreement for which you want to run the process.

   - If you have selected a processing level of Single Entitlement, then select the entitlement item for which you want to run the process.

   Any changes that are made as a result of this process are made to the person's primary assignment.

8. Choose OK to return to the Submit Request window and choose Submit to run the report. You can view the log file generated from the Requests window. Use this file

to identify any problems that have occurred during the running of the process.

# Occupational Health

## Occupational Health: Medical Assessments, Disabilities and Work Incidents

Oracle HRMS enables you to record medical assessments, disability information, and work incidents for the people in your enterprise. It also enables you to link this information together. For example, if a medical assessment is required as the result of a work accident, and that assessment then diagnoses a disability in the person, you could relate these records to one another.

> **Note:** The Medical assessments, disabilities and work incidents functionality may not be used by your localization.

### Medical Assessments

The Medical Assessment window enables you to enter information about the medical assessments (consultations) provided to the people in your enterprise. For example, you can record:

- When the assessment took place, and the organization and person who performed it.
- The result of the assessment, for example, if a disability was identified.
- If the purpose of the assessment is to evaluate a particular disability, whether the person is considered fit for work.
- Any work incident that was the reason for this assessment.

A person can have multiple medical assessment records. For example, a person may have a recruitment medical and several annual medicals.

### Disabilities

Using the datetracked Disabilities window, you can enter information about a person's disabilities. For example, you can record:

- The nature and severity of the disability
- The full-time equivalent that this person represents towards your enterprise's quota of disabled employees
- The details of the registration of this disability with an official organization

- Any work incident that was the cause of this disability
- The medical assessment that first identified this disability.

A person can have multiple disability records. Each disability can be linked to one work incident and to one medical assessment that diagnosed (or identified) the condition. Once a disability has been diagnosed and recorded, you can link it to multiple assessments that evaluate the disability.

## Work Incidents

Oracle HRMS enables you to record work incidents, for example, accidents, that involve the people in your enterprise. Work incidents are incidents that occur:

- at work
- on the way to or from work
- in other circumstances that are defined as work-related by your enterprise.

Using the Work Incidents window, you can record:

- The details of the incident, for example, when and where it occurred.
- The health and safety official and/or representative body that were notified of the incident
- Medical details, such as any injury occurred, treatment given, and medical organizations involved
- Whether any compensation was paid
- Whether this person was absent as a result of the incident
- The job the person was doing when the incident occurred

A person can have multiple work incident records.

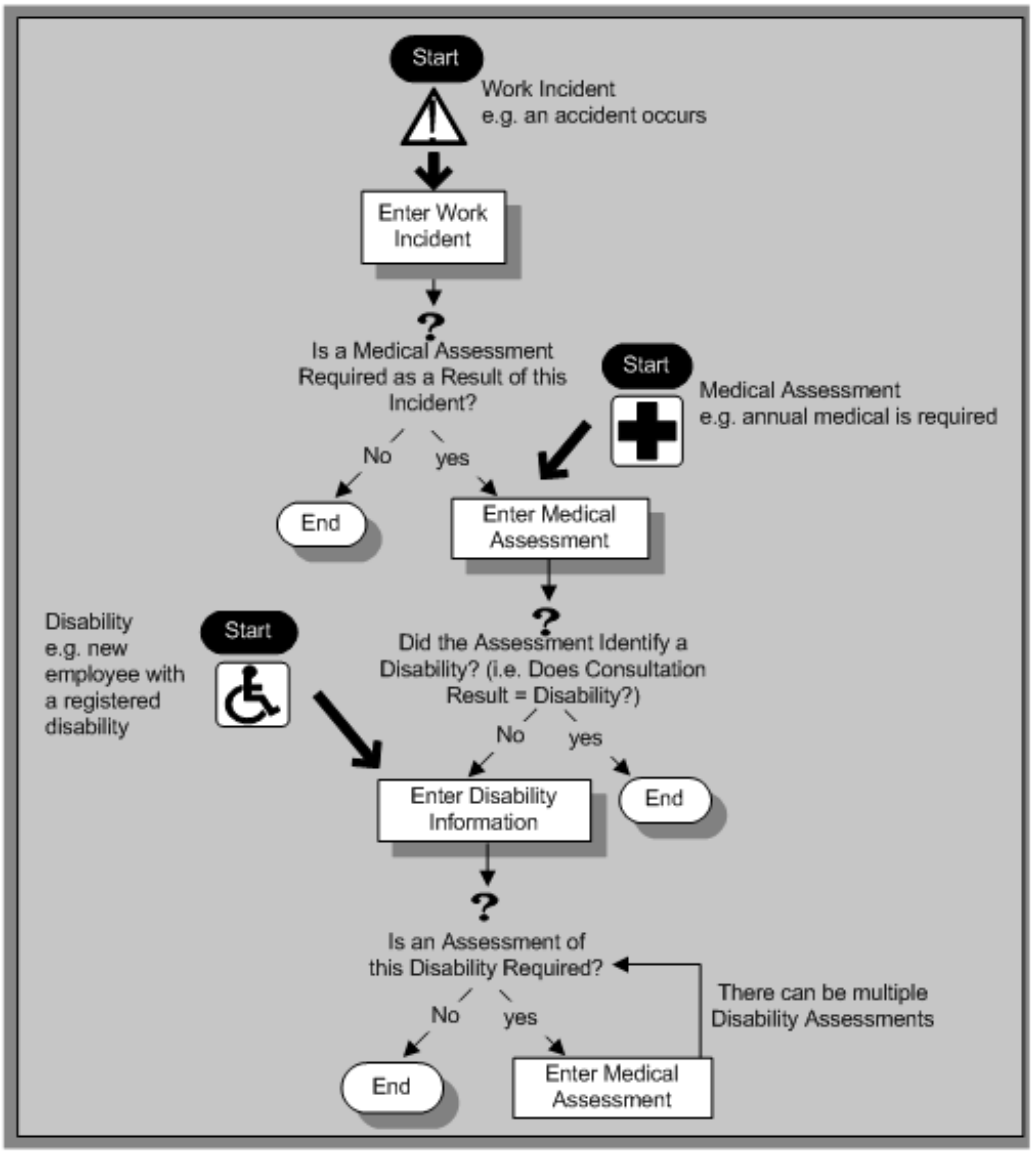
The graphic illustrates the relationship between the medical assessment, disability and work incident tasks. It shows the full process that you could follow if you wanted to record:

- A work incident that occurred
- The medical assessment that was required as a result of the work incident
- The disability record that was required as a result of a "Disability" result in the medical assessment

- The subsequent "Disability type" medical assessments that were required to evaluate the disability on a regular basis

The "Start" boxes show the points at which you can start the process, depending on the task you need to perform.

***Recording a Disability***



## Entering Work Incident Information

You use the Work Incidents window to enter information about the work incident in which a person was involved.

### To enter work incident information:

1. Enter information about the incident:

- Enter a unique reference number for this incident.
- Enter the date on which the incident occurred.
- If the incident occurred over time, enter the date on which the incident was identified or reported.
- Select the type of incident that occurred.
- Enter the time at which the incident occurred, if known.
- Check the check box if the incident occurred over a period of time. For example, check this box if the incident was a gas leak.
- Select the circumstances of the incident in the Activity field. For example, you can specify if the incident occurred en route to work.

  **For Russian users only**: Activity is not required in Russia, so this field is not available to Russian users. Select the primary and secondary reasons for the incident. For example, you can select violation of industrial discipline as the primary reason and extreme temperatures as the secondary reason.
- Enter the date on which the incident was reported.
- Enter the reference number for a related work incident. The list is limited to incidents that involved this person and that occurred on or before the date of this incident.

### Incident Description:

1. Choose the Incident Description tab.
2. Enter more detail about the incident:
   - Select the main cause of the incident in the Hazard field.
   - Enter the location of this incident, for example, if the incident occurred in the workplace, identify the room and building.
   - Enter a further description of the incident, if required.

### Incident Reporting:

1. Choose the Incident Reporting tab.
2. Enter the reporting details:

- Select the name of the person who reported this incident. You can only select a person who is on the system and who is in the same Business Group.
- Select the method used to report this incident, for example, a voicemail.
- Enter the date and time when the incident was reported. This cannot be earlier than the date and time recorded for the incident.

  **Note:** You must select the name of the person who reported this incident before you can enter the date and time.

- Enter the organization to whom the incident was reported, for example, the local fire station or police.
- Enter contact details for anyone who witnessed the incident.

  **Note: For Russian users:**The Incident Reporting tab is not applicable.

### Official Notifications:

1. Choose the Official Notifications tab.
2. Enter the official notification details:
   - Select the name of your organization's health and safety representative and enter the date on which they were notified of the incident
   - Describe any remedial action that was taken (or is planned) as a result of this incident.
   - Select the organization and person that are the representative body for this person and enter the date on which they were notified of the incident

     **Note:** You must select the representative body organization before you can enter the person and reporting date.

See: Entering Representative Body Information, page 1-60

### Medical Details:

1. Choose the Medical Details tab.
2. Enter any medical details:

- Select the type of injury and/or disease caused by the incident.
- Enter any further description of the injury or disease.
- Check the box if the person received medical attention as a result of this incident. Then enter the name of the physician and/or the contact details for the hospital that was consulted or that provided treatment.

  **Note:** If treatment was provided by an internal organization or person, for example, an occupational health organization or a first-aid officer, enter the details into the Hospital Details field.

  **Note: For Russian users:**The Medical Details tab is not applicable.

### Other Information:

1. Choose the Other tab.
2. Enter other information about this incident:
   - If compensation was awarded for this incident, enter the amount. Then select the currency for the compensation amount. The Business Group's currency is shown as the default.

     **Note:** If you enter a compensation amount, the Currency field cannot be left blank.

   - Enter the date on which the compensation was given.
   - Enter the job the person was doing at the time of the incident. The list is limited to jobs with effective start dates before the incident and effective end dates, if any, after the incident.
   - Enter the time the worker began work on the day of the incident.

   See:Defining a Job, page 2-20

     **Note:** If the person was involved in this incident prior to joining your enterprise, leave the Job field blank.

   - Check the Resulted in Absence? check box if the person was absent from work as a result of this incident.

3. Enter further information about this work incident in the Further Information field if it has been set up by your Oracle localization team.

   **For Russian users only**, see: Entering Work Incident Information, page 5-41

   **For Mexican users only**: Select the type of risk from the available list-of-values.

4. Save your changes.

#### What Next?

If a medical assessment is required as a result of this incident, you can choose the Medical Assessment button to open the Medical Assessment window and to enter the details of the assessment. If you enter a medical assessment in this way, its type is Occupational Assessment and it is automatically linked to this incident.

## Entering Medical Assessments

Use the Medical Assessments window to record information about the medical examinations performed for the people in your enterprise.

### To enter a medical assessment:

1. Enter the date on which the medical assessment was held.

2. Select the type of assessment, for example, Annual Medical Assessment.

   - If you opened the Medical Assessment window via the Disability window, the assessment type is Disability and cannot be changed.

   - If you opened the Medical Assessment window via the Work Incidents window, the assessment type is Occupational Assessment and cannot be changed.

3. Select the result of the assessment.

   **Note:** If the assessment type is Disability Assessment, you can only select Unfit for Work or Fit for Work. You cannot select a Disability result for a Disability Assessment.

4. Select the name of the examiner and the name of the organization that performed the assessment.

   If the organization is not listed, create the organization and select the Medical Service Provider classification.

   See: Entering Organizations, page 1-31 and Entering Organization Classifications, page 1-33.

5. Enter the date on which the next assessment is planned.

6. Select the work incident to which this assessment is related, if any. After you choose an incident, the date on which it occurred is automatically displayed.

   You can only link an assessment to an incident if the assessment type is Occupational Assessment.

   > **Note:** If you have saved the assessment date, the list of incidents is limited to those that occurred before the assessment date. Otherwise, all incidents for that person are listed.

   To enter a work incident for this person, see Entering Work Incidents, page 5-41.

7. Enter a description of the assessment.

8. Enter further details in the Further Information field if it has been set up by your Oracle localization team.

9. Save your work.

#### What Next?

If, as a result of this assessment, a disability was identified, you can enter the details of that disability and link it to this assessment.

See: Entering Disability Information, page 5-46

> **Note:** Once a medical assessment is referenced in a disability record, you cannot change its result from Disability.

## Entering Disability Information

HRMS enables you to enter detailed disability information for the people in your enterprise.

You use the Disability window to enter this information.

> **Note:** If you want to record that a person is registered as disabled, but you do not need to hold information about that disability, you can just check the Registered Disabled check box on the Personal tab in the Person window.

See: Entering a New Person (People Window), *Oracle HRMS Workforce Sourcing, Deployment, and Talent Management Guide*

### To enter disability information:

1. Set your effective date early enough to handle any historical disability information that you want to enter.

   **Note:** If you want to associate this disability record with an existing medical assessment or work incident, your current effective date must be later than the assessment and incident dates. Ask your system administrator to enable the Work Incidents and Medical Assessments windows if they are not available.

2. Select the category of disability, for example, Severely Disabled.

3. Enter into the FTE field the full-time equivalent that this person represents towards your enterprise's quota of disabled employees. If no quota scheme exists, then leave the default value as 1.00.

   **Note:** You can enter a number that is greater than 1.00, depending on the level of disability.

   The actual figure will normally be provided by the official disability organization.

4. Select the status of this disability information.

   - Active: This information will be included in reports. You cannot enter an Active status if the record has an end date.
   - Inactive: This information will not be included in reports.
   - Pending: This information is not yet complete because you entered it before you entered the medical assessment confirming this disability (where the consultation result was Disability.)
   - Closed: This information has an end date because the person no longer has this disability.

   **For Russian users only**: Disability status is not applicable in Russia, so the Status field is not available to Russian users. Instead, select the type of disability. You can find this information in the disability certificate provided by the Office of Medical Examination. The application uses this information to calculate any tax benefits and deductions for the employee.

5. Select the reason for the disability, for example, Occupational Incident. If the disability was diagnosed as the result of a medical assessment, select Occupational Assessment.

6. Enter the percentage of disability as determined by the official assessment of this disability.

   **For Hungarian and Spanish users only**: The degree of disability depends on the category of disability. For example, if the person's disability category states that the disability decreases the work capacity by 50%, enter 50 as the percentage.

7. Select the incident that is related to, or caused, this disability. The list of incidents is limited to incidents that occurred before the current effective date of this disability. When you select an incident, its date is displayed automatically.

8. Select the medical assessment that recorded this disability.

   The list of assessments is limited to assessments that:

   - have a result of Disability
   - have a consultation date that is earlier than the current effective date of the disability
   - are not already linked to a disability record for this person
   - were linked to any incident that you selected in the previous step

   To link an incident to an assessment, see: Entering Medical Assessments, page 5-45

   This field is not datetracked.

### Entering Disability Registration Information:

1. Choose the Registration tabbed region to enter the disability registration details.

2. Enter into the ID field the registration number assigned by the disability organization.

3. Select the name of the official disability organization with whom the person's disability is registered.

   You create disability organizations in the Organization window, selecting the Disability Organization classification.

   See: Creating an Organization, page 1-31

4. Enter the date on which the employee was registered as disabled with the disability organization and the date on which this registration expires.

### Entering Additional Disability Information:

1. Choose the Other tabbed region to enter additional details about this disability.

2. Enter a description of the disability.

   **For Russian users only**: Disability description is not applicable in Russia. Instead, enter the job conditions under which the disabled employee can work. You can find this information in the disability certificate provided by the Office of Medical Examination. You can use this information to identify suitable assignments for the disabled employee.

3. Enter information about the work restrictions that the employee is subject to as a result of their disability.

4. Enter further information about this disability if the Further Information field has been set up by your Oracle localization team.

   **For Hungarian users only**: Record if the employee is blind. The application uses this information to calculate any additional holiday or tax benefit for the employee.

   **For Indian users only**: Indicate if the employee has provided proof of disability, for claiming disability benefits.

   **For Mexican users only**: Specify the following:

   - Disability ID of any related disabilities

     The list-of-values displays all previous disabilities for your employee.

   - Number of disability days subsidized by the social security agencies

   - Type of disability

     Valid values are:

     - General Disease
     - Maternity
     - Risk Incident

   - Result of the disability

     The Consequence field provides the following options:

     - None
     - Temporary Disability
     - Provisional Initial Assessment
     - Definitive Initial Assessment
     - Death

- Relapse
- Assessment after start date
- Provisional re-assessment
- Relapse without medical discharge
- Definitive re-assessment

- Disability control

**For Spanish users only**: Record if the employee or dependent contact has a condition with reduced mobility. This information affects the employee's tax withholding rate.

**For UAE users only**: Indicate if the employee's disability will impact their social insurance contribution. Only one disability can be considered for calculating the social insurance contribution.

5. Save your work.

### What Next?

To set up an assessment to evaluate this disability, choose the Medical Asse. (Assessment) button.

See: Entering a Medical Assessment, page 5-45 for more information.

### Maintaining Disability Information

You can make changes to the disability information that you saved previously, but if your disability record includes either incident or medical assessment information, you cannot change or delete this information once you have saved it.

# 6

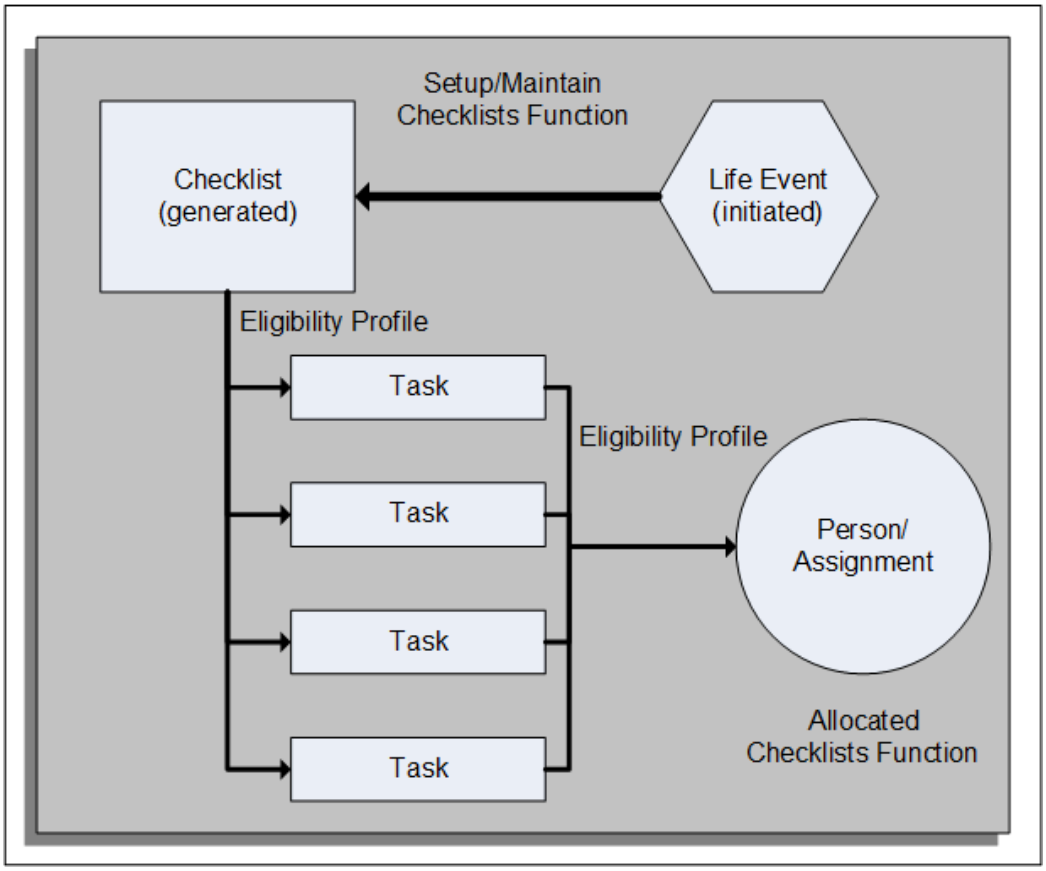
# Checklists

## Checklists Overview

Some HR actions, such as employee hiring, transfer, or termination, require the completion of standard tasks, for example, printing contracts, reassigning resources, and creating users. The Checklists functionality in Oracle HRMS enables you to link the HR action to a life event and generate checklists when the life event is initiated. The application then allocates the checklists to a person or assignment. Each allocated checklist contains the tasks relevant to an individual or assignment. The relevance of the tasks to the person or assignment is determined using eligibility profiles.You can assign each task to a performer either automatically using Oracle Approvals Management (AME), or manually.

After creating a checklist, you can use the Allocated Checklists functionality in Oracle Self-Service Human Resources (SSHR) to display and update the allocated checklists for your direct reports.

***Overview of Checklist Functionality***



The graphic shows the relationships between checklist components. You can link the checklist to a life event, for example, a New Hire life event, and link each task to an eligibility profile. The tasks that appear on the Allocated Checklists page for each person or assignment depend on the life event and the person's or assignment's eligibility for the task. For example, if you create a location-based eligibility profile for a task, that task appears in the Allocated Checklists page only if the person or assignment meets the eligibility criteria.

## Creating Checklist Templates

You create and maintain checklist templates from the Setup/Maintain Checklists menu option using an HRMS Manager responsibility. Using the Create Checklist page, define the checklist and its behavior, for example, you enter the checklist name and category.

> **Note:** Oracle provides selected checklist categories; however, you can create additional categories if required.

See: Setting Up Checklists, page 6-4

When you create a checklist template, you can link the template to a life event to ensure that the checklist allocated to a person or assignment is appropriate to the HR action being performed.

## Creating Checklist Tasks

You create and maintain checklist tasks from the Setup/Maintain Checklists menu option when you create a checklist template. You enter attributes to define the task and its behavior, for example, you enter the task name and specify whether the task is mandatory. If you define a task as mandatory, the self-service manager cannot delete it from an allocated checklist.

You can enter a task duration. When the task appears in an allocated checklist, the date in the Target End Date column reflects this duration.

When you create a checklist task, you can link an eligibility profile to the task. The application allocates tasks to persons or assignments based on these eligibility criteria.

You can use Oracle Approvals Management (AME) to generate a list of performers for the task. To activate AME, you select a value in the Approvals Identifier field of the Checklist Tasks page. The application retrieves the values available for selection from the values you have defined in AME and used in the AME conditions. You can create approval rules based on the task and person's details such as business group, organization name, job, position, or supervisor name.

See: Identifying Performers for Checklist Tasks, page 6-6

## Assigning Tasks to Performers

If you are using Oracle Approvals Management (AME) to identify performers for a checklist task, the performers automatically receive notification of the task from Oracle Workflow when the task appears in an allocated checklist.

See: Identifying Performers for Checklist Tasks, page 6-6

Alternatively, you can manually assign a performer for a task, either when you create the task or when the task appears in an allocated checklist. If you designate a manager as the performer for a task, the manager can reassign the task from the Allocated Checklists > Update Checklist Task page.

## Allocating Checklists to People and Assignments

When you invoke the Allocated Checklists function in Oracle Self-Service Human Resources, the application automatically runs the Allocated Checklists concurrent process for the relevant person or assignment. This process identifies whether any life event has occurred for the person or assignment since the last process run and allocates the appropriate checklist. When a manager uses SSHR to view the allocated checklists for a person or assignment, the application displays all allocated checklists.

**Note:** You should also run the Allocated Checklists concurrent process frequently to keep the allocations up-to-date.

See: Running the Allocate Checklists Process, page 6-10

### Managing Tasks and Checklists

You create tasks using the Setup/Maintain Checklists function, however, you can also maintain tasks and checklists from the Allocated Checklists function. You can maintain the attributes for tasks and checklists, for example, the task or checklist name. From the Allocated Checklists page, you can also delete tasks and checklists.

**Note:** When you delete an allocated checklist or task from the Allocated Checklists page, you do not delete the corresponding checklist template and task from the database. To delete a checklist template or task from the database, you must use the Setup/Maintain Checklists function. In addition, tasks do not disappear from the allocated checklist automatically when complete; you must delete them yourself if required.

When you display an allocated checklist for a worker on the Allocated Checklists page, you can perform the associated task actions yourself or update the task to assign an alternative performer. When you have processed a task, you can change the task status as appropriate (for example, Completed, Rejected, Outstanding, Suspended).

If necessary, you can change the task duration to generate a new end date for the task.

See: Allocated Checklists, *Oracle HRMS Deploy Self-Service Capability Guide*

## Setting Up Checklists

The following process describes how to set up your checklist templates and tasks.

For information on checklists, see: Checklists Overview, page 6-1

1. Create checklist life events. You use life events to process major changes in a person's life, for example, marriage, new employment, or the birth of a child. When a checklist life event occurs, the application initiates the appropriate checklist for the life event.

   **Additional Information:** If you omit this step, the checklist is available for all persons and assignments, irrespective of the HR action being performed.

   See: Defining General Characteristics of Life Event Reasons, *Oracle HRMS Compensation and Benefits Management Guide*

2. Create eligibility profiles.

   You use eligibility profiles to tailor the list of tasks to a person or assignment. For example, using a location-based eligibility profile, you can define one version of a checklist for a new hire in the U.K. and a different version for a new hire in Japan.

   > **Additional Information:** If tasks do not have eligibility profiles attached, the application assigns them to all persons and assignments with that checklist.

   See: Defining an Eligibility Profile, page 5-14

3. Create flexfield segments to provide additional context information for the checklist or task, if required. The flexfield names are Additional Allocated Checklist Details (PER_ALLOCATED_CHECKLISTS) and Additional Allocated Task Details (PER_ALLOCATED_TASKS).

   For example, you could create a location-based context to provide additional information on a U.S. New Hire checklist.

   See: Defining Descriptive Flexfields, *Oracle E-Business Suite Flexfields Guide*

4. Create your checklist categories. Oracle provides the following predefined checklist categories:

   - On-Boarding

     Covers all HR processes and procedures involved in hiring and integrating a worker in your organization. This category includes recruitment, hiring, and orientation.

   - Off-Boarding

     Covers all HR processes and procedures involved in removing a worker from your organization. This category includes termination, relocation, and long-term sickness.

   You can create additional categories by creating new lookup values for the CHECKLIST_CATEGORY (Checklist Category) lookup type.

   See: Adding Lookup Types and Values, *Oracle HRMS Configuring, Reporting, and System Administration Guide*

5. Define Oracle Approvals Management (AME) processes to generate lists of performers for checklist tasks. Performers are the people who carry out the tasks.

   > **Note:** In the context of the checklist functionality, AME generates a list of **performers**; however, the equivalent terminology in AME is a list of **approvers**.

Oracle HRMS provides the transaction type CHECKLIST; however, you must set up all required approval groups, rules, and conditions.

See: Identifying Performers for Checklist Tasks, page 6-6

If you prefer to assign performers manually, omit this step.

6. Create your checklist templates using the Setup/Maintain Checklists function.

   See: Checklists Overview, page 6-1

7. Create your checklist tasks using the Setup/Maintain Checklists function.

   See: Checklists Overview, page 6-1

8. Schedule the Allocate Checklists process to allocate checklists and associated tasks to people and assignments.

   See: Running the Allocate Checklists Process, page 6-10

## Identifying Performers for Checklist Tasks

You can use Oracle Approvals Management (AME) in conjunction with the Checklists function to designate a task performer automatically. When you create a task, you can assign an Approval Identifier. The application passes this value to AME and generates the list of approvers for each task using attributes, rules, and approval groups.

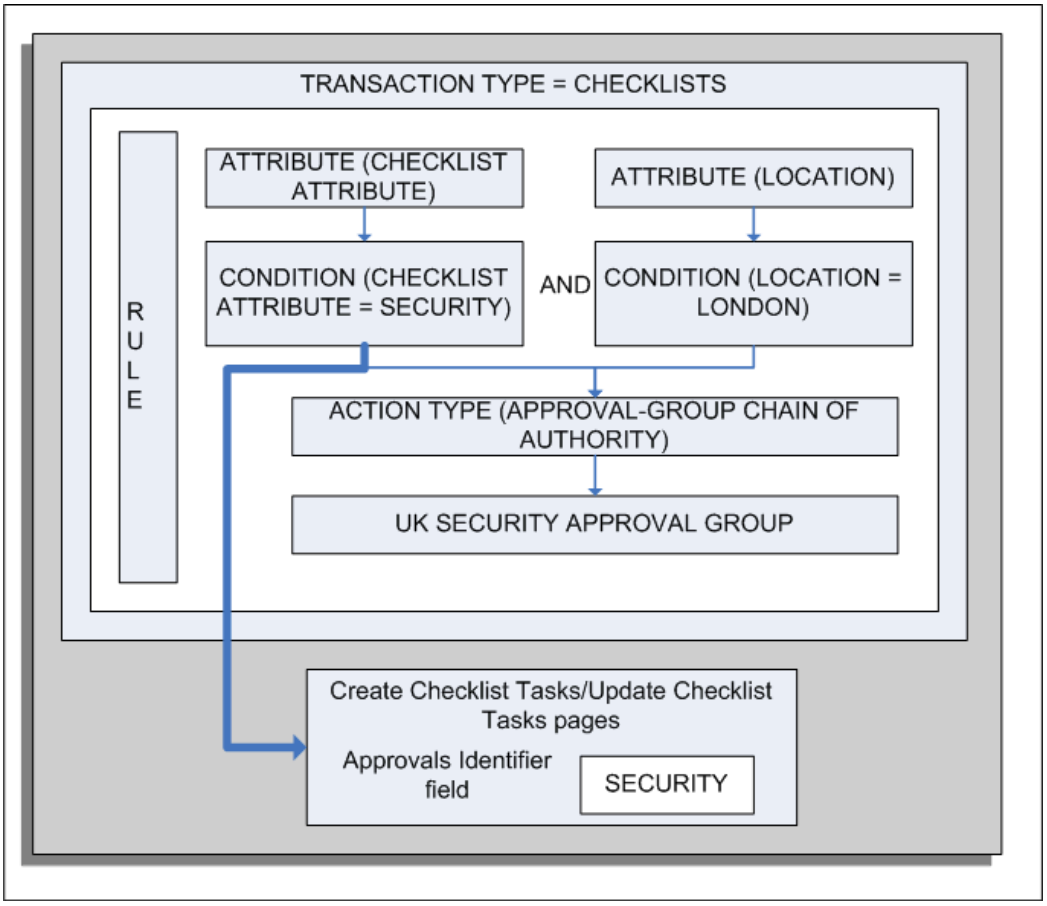
For general information on AME, see: Overview of Oracle Approvals Management, *Oracle Approvals Management Implementation Guide*

Oracle provides the transaction type CHECKLIST and the approvals attribute CHECKLIST_ATTRIBUTE. The CHECKLIST transaction type enables you to create approval rules based on the task and person's details such as business group, organization name, job, position, or supervisor name.

Before attempting to set up AME, you should plan your approval requirements. For information on designing approvals processes in AME, see: Planning your Organization's Approval Processes, *Oracle Approvals Management Implementation Guide*.

The following figures show an example use of AME components for checklists.

***Using AME for Checklists - Example 1***

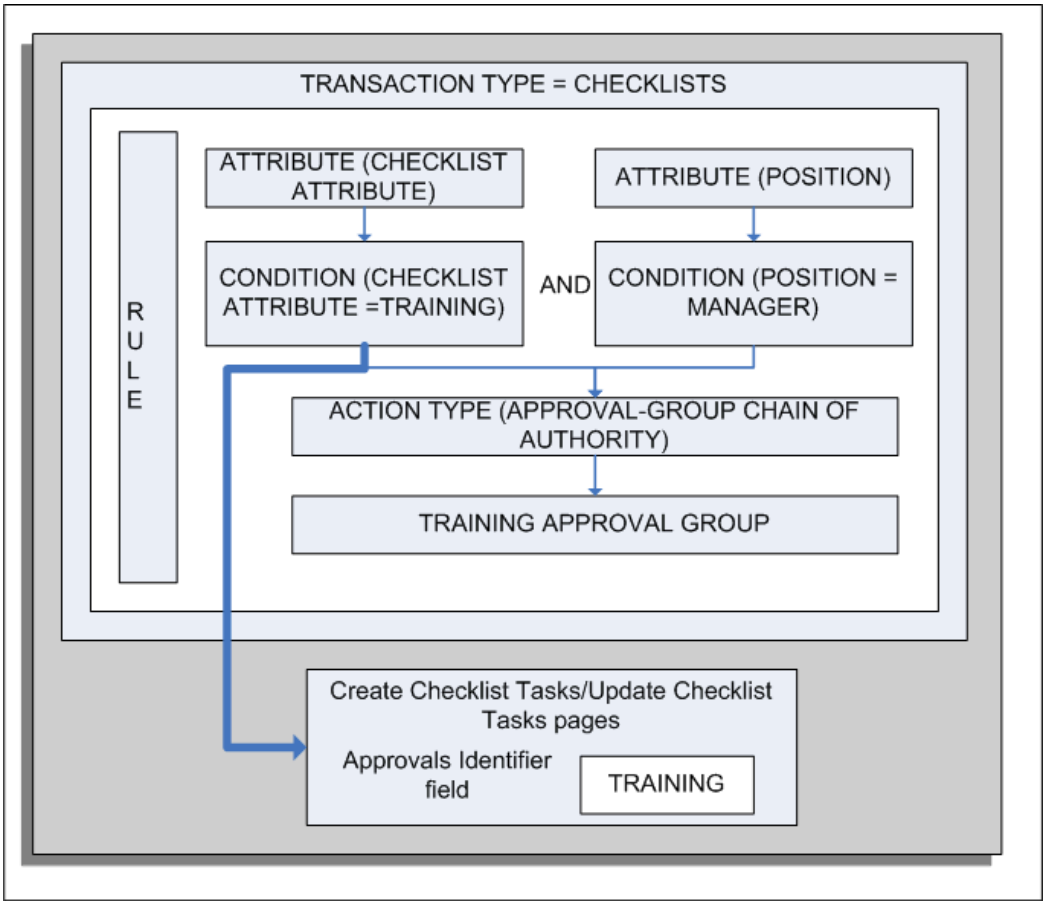


This figure shows the standard AME components and their use in the Checklists functionality. The approval rule shown has the following outcome:

- If the Checklist attribute is SECURITY and the Location attribute is London, then AME uses the UK SECURITY approval group to identify the task performers.

  The SECURITY attribute value appears n the list of values for the Approvals Identifier field in the Create Task and Update Task pages.

*Using AME for Checklists - Example 2*



This example shows an approval rule that is designed to inform the training department about training sessions for new hires to the manager position in an enterprise. In this example:

- If the Checklist attribute is TRAINING and the POSITION attribute is Manager, who is a new hire, then AME uses the TRAINING approval group to identify the task performers.
- The TRAINING attribute value appears in the list of values for the Approvals Identifier field in the Create Task and Update Task pages.

You define AME components using the Approvals Management Business Analyst responsibility.

### To set up AME for checklists:

1. From the Business Analyst Dashboard, query the CHECKLIST transaction type (Transaction Type Key = CHECKLISTID) in the Approval Process Setup region.

This region contains links to the setup pages for the AME components.

> **Note:** For more information about the Approvals Management Business Analyst responsibility, see: AME Roles and Responsibilities, *Oracle Approvals Management Implementation Guide*.

2. Select an AME component to define. For example, select the Attributes link to display the delivered attribute CHECKLIST_ATTRIBUTE. If required, add additional attributes to your transaction type.

3. Select the Conditions subtab to define the conditions for your transaction type. You must define regular conditions for every possible value for the Checklist attribute, for example:

   - CHECKLIST_ATTRIBUTE is SECURITY
   - CHECKLIST_ATTRIBUTE is RESOURCES
   - CHECKLIST_ATTRIBUTE is REFERENCES

   > **Additional Information:** The condition values you define here are passed to the Create Checklist Tasks and Update Checklist Tasks pages and appear in the list of values (LOV) for the Approvals Identifier field (see figure). The values relate to the type of task, for example, a security task, resource allocation task, or reference check task.

4. If required, create List Modification conditions. For example, you can create a Final Approver condition and identify the approver.

5. Select the Approval Groups subtab to define the approval groups for your transaction type.

   For example, you could create an approval group called UK Security to contain the list of performers who would carry out the task in question.

   > **Note:** Oracle recommends that you select the "First responder wins" voting regime for your approval groups. This ensures that only one performer carries out the task. When the performer completes the task and updates the notification, the associated workflow process automatically updates the task status to Completed or Rejected.

6. Select the Rules tab to define your rules by combining your attributes, conditions, action types, and approval groups. Each rule can contain multiple conditions.

7. Select the Test Workbench tab to create a test transaction for your rule.

   See: Overview of Testing, *Oracle Approvals Management Implementation Guide*.

## Running the Allocate Checklists Process

You run the Allocate Checklists concurrent process to identify any checklist life events that have not yet been processed. For each life event, the process allocates the checklist to the person or assignment and builds the list of checklist tasks based on the eligibility profiles.

You should schedule the Allocate Checklists process to run regularly, depending on the number of employees and the frequency with which life events occur. For example, you could schedule the process to run once a day since life events occur within a date context.

> **Note:** When you select the Allocated Checklists function, the application runs the Allocate Checklist process automatically for that person or assignment. This ensures the checklists displayed from the Allocated Checklists function always display current data. However, it is important to run the Allocate Checklists process regularly to minimize processing effort and load times at logon.

You run the Allocate Checklists process from the Submit Requests window.

### To run the Allocate Checklists process:

1. In the Name field, select Allocated Checklists and Task Process.
2. Submit the process.
3. Close the window.

# Glossary

### 360-Degree Appraisal

Part of the Performance Management Appraisal function and also known as a Group Appraisal. This is an employee appraisal undertaken by managers with participation by reviewers.

### Absence

A period of time in which an employee performs no work for the assigned organization.

### Absence Case

Two or more absences for the same person that you associate manually because they share a common factor, such as the same underlying cause.

### Absence Type

Category of absence, such as medical leave or vacation leave, that you define for use in absence windows.

### Accrual

The recognized amount of leave credited to an employee which is accumulated for a particular period.

### Accrual Band

A range of values that determines how much paid time off an employee accrues. The values may be years of service, grades, hours worked, or any other factor.

### Accrual Period

The unit of time, within an accrual term, in which PTO is accrued. In many plans, the same amount of time is accrued in each accrual period, such as two days per month. In other plans, the amount accrued varies from period to period, or the entitlement for the full accrual term is given as an up front amount at the beginning of the accrual term.

### Accrual Plan

See: *PTO Accrual Plan*, page Glossary-32

### Accrual Term

The period, such as one year, for which accruals are calculated. In most accrual plans, unused PTO accruals must be carried over or lost at the end of the accrual term. Other plans have a rolling accrual term which is of a certain duration but has no fixed start and end dates.

### Action

In AME, an Action is the *Then* part of an Approval Rule that specifies how the application must progress a transaction's approval process in a particular way depending on the conditions met.

See: Approval Rule., page Glossary-5

### Action Type

In AME, an action type is the generic container for specific actions. It enables you to specify the action to take if a transaction meets the condition of an approval rule. The action type, thus, generates the appropriate approvers for a transaction. As an AME administrator you can make particular action types available for specified transaction types. See: Transaction Types., page Glossary-42

### Active Employee

DBI for HRMS counts an employee, page Glossary-17 as active if they have a current period of service, page Glossary-13 at the effective date, page Glossary-16

If an employee is suspended, DBI for HRMS still counts them as active.

DBI for HRMS also uses the term Incumbent to refer to an active employee.

### Active Contingent Worker

DBI for HRMS counts a contingent worker, page Glossary-11 as active if they have a current period of placement , page Glossary-13 at the effective date, page Glossary-16.

If a contingent worker is suspended, DBI for HRMS still counts them as active. DBI for HRMS also uses the term Incumbent to refer to an active contingent worker.

### Activity Rate

The monetary amount or percentage associated with an activity, such as $12.35 per pay period as an employee payroll contribution for medical coverage. Activity rates can apply to participation, eligibility, coverages, contributions, and distributions.

### Actual Premium

The per-participant premium an insurance carrier charges the plan sponsor for a given benefit.

### Administrative Enrollment

A type of scheduled enrollment caused by a change in plan terms or conditions and resulting in a re-enrollment.

### AdvancePay

A process that recalculates the amount to pay an employee in the current period, to make an authorized early payment of amounts that would normally be paid in future payroll periods.

### Agency

An external organization that assists an enterprise in their recruitment process. Agencies act on behalf of the candidates to help them search and apply for jobs. They provide candidates to the fill up job openings in an enterprise or sometimes handle the complete placement process for a vacancy.

### Agency Candidate

An agency candidate is a person whose profile is created in iRecruitment by a recruiting agency. This profile includes personal and professional information.

### Agency User

An external person who belongs to a recruiting agency and accesses iRecruitment to conduct recruiting activities such as creating candidates and applying on behalf of the candidates.

### Alert

An email notification that you can set up and define to send a recipient or group of recipients a reminder or warning to perform a certain task or simply a notification to inform the recipient of any important information.

### Align

To define a relationship between objectives. Workers can align their own objectives with objectives that other workers have shared with them. Aligned objectives are also known as *supporting objectives*.

### AME

Oracle Approvals Management Engine. A highly extensible approvals rules engine that enables organizations implementing Oracle Applications to simply and effectively define business rules that determine who must approve a transaction originating within an application. You can devise simple or complex rules, as your organization requires, which then form part of your overall business flow. A central repository holds all the rules to facilitate management and sharing between business processes.

### API

Application Programmatic Interfaces, used to upload data to the Oracle Applications database. APIs handle error checking and ensure that invalid data is not uploaded to the database.

### Applicant

An applicant is a person who submits an application for employment to an organization.

### Applicability

In HRMS budgeting, a term describing whether a budget reallocation rule pertains to donors or receivers.

### Applicant/Candidate Matching Criteria

Matching functionality in the iRecruitment system that systematically identifies which candidates and applicants possess the skills, knowledge and abilities to be considered for a specific vacancy. The following columns are used for matching:

- Skills
- FT/PT
- Contractor/Employee
- Work at Home
- Job Category
- Distance to Location
- Key Words
- Salary

### Apply for a Job

An SSHR function that enables an employee to, apply, search and prepare applications for an internally advertised vacancy.

### Appraisal

An appraisal is a process where an employee's work performance is rated and future objectives set.

See also: *Assessment*, page Glossary-5.

### Appraisee

The person who is the subject of an appraisal.

### Appraiser

A person, usually a manager, who appraises an employee.

### Appraising Manager

The person who initiates and performs an Employee-Manager or 360 Degree Appraisal. An appraising manager can create appraisal objectives.

### Approval Rule

In AME, a business rule that determines a transaction's approval process. You construct rules using *conditions* and *actions*. For example, you can write a business rule with the conditions that if the total cost of a transaction is less than 1000 USD, and the transaction is for travel expenses, then the action must be to obtain approval from the immediate supervisor of the person triggering the transaction.

See also Conditions, page Glossary-11, Actions, page Glossary-2.

### Approver Groups

In AME, an approver group is a collection of approvers you define, which you can include as part of actions when you set up your approval rules.

### Arrestment

Scottish court order made out for unpaid debts or maintenance payments.

See also: *Court Order* , page Glossary-12

### Assessment

An information gathering exercise, from one or many sources, to evaluate a person's ability to do a job.

See also: *Appraisal*, page Glossary-4.

### Assignment

A worker's assignment identifies their role within a business group. The assignment is made up of a number of assignment components. Of these, organization is mandatory, and payroll is required (for employees only) for payment purposes.

### Assignment Number

A number that uniquely identifies a worker's assignment. A worker with multiple assignments has multiple assignment numbers.

### Assignment Rate

A monetary value paid to a contingent worker for a specified period of time. For example, an assignment rate could be an hourly overtime rate of $10.50.

### Assignment Set

A grouping of employees and applicants that you define for running QuickPaint reports and processing payrolls.

See also: *QuickPaint Report*, page Glossary-33

### Assignment Status

For workers, used to track their permanent or temporary departures from your enterprise and, for employees only, to control the remuneration they receive. For applicants, used to track the progress of their applications.

### Attribute

In AME, attributes are the business facts of a transaction, such as the total amount of a transaction, percentage of a discount, an item's category, or a person's salary and so on. These business variables form part of the conditions of an approval rule, and determine how the transaction must progress for approvals.

### Authoria

A provider of health insurance and compensation information, that provides additional information about benefits choices.

### BACS

Banks Automated Clearing System. This is the UK system for making direct deposit payments to employees.

### Balance Adjustment

A correction you make to a balance. You can adjust user balances and assignment level predefined balances only.

### Balance Dimension

The period for which a balance sums its balance feeds, or the set of assignments/transactions for which it sums them. There are five time dimensions: Run, Period, Quarter, Year and User. You can choose any reset point for user balances.

### Balance Feeds

These are the input values of matching units of measure of any elements defined to feed the balance.

### Balances

Positive or negative accumulations of values over periods of time normally generated by payroll runs. A balance can sum pay values, time periods or numbers.

See also: *Predefined Components* , page Glossary-31

### Bargaining Unit

A bargaining unit is a legally organized group of people which have the right to negotiate on all aspects of terms and conditions with employers or employer federations. A bargaining unit is generally a trade union or a branch of a trade union.

### Base Summary

A database table that holds the lowest level of summary. Summary tables are populated and maintained by user-written concurrent programs.

### Beneficiary

A person or organization designated to receive the benefits from a benefit plan upon the death of the insured.

### Benefit

Any part of an employee's remuneration package that is not pay. Vacation time, employer-paid medical insurance and stock options are all examples of benefits.

See also: *Elements*, page Glossary-16

### Block

The largest subordinate unit of a window, containing information for a specific business function or entity. Every window consists of at least one block. Blocks contain fields and, optionally, regions. They are delineated by a bevelled edge. You must save your entries in one block before navigating to the next.

See also: *Region*, page Glossary-35, *Field*, page Glossary-18

### Budget Measurement Type (BMT)

A subset of Workforce Measurement Type. It consists of a number of different units used to measure the workforce. The most common units are headcount and full time equivalent.

### Budget Value

In Oracle Human Resources you can enter staffing budget values and actual values for each assignment to measure variances between actual and planned staffing levels in an organization or hierarchy.

### Business Group

The business group represents a country in which your enterprise operates. It enables

you to group and manage data in accordance with the rules and reporting requirements of each country, and to control access to data.

### Business Group Currency

The currency in which Oracle Payroll performs all payroll calculations for your Business Group. If you pay employees in different currencies to this, Oracle Payroll calculates the amounts based on exchange rates defined in the system.

### Business Number (BN)

In Canada, this is the employer's account number with Revenue Canada. Consisting of 15 digits, the first 9 identify the employer, the next 2 identify the type of tax account involved (payroll vs. corporate tax), and the last 4 identify the particular account for that tax.

### Business Rule

See Configurable Business Rules, page Glossary-11

### Cafeteria Benefits Plan

See: *Flexible Benefits Program*, page Glossary-19

### Calendar Exceptions

If you are using the Statutory Absence Payments (UK) feature, you define calendar exceptions for an SSP qualifying pattern, to override the pattern on given days. Each calendar exception is another pattern which overrides the usual pattern.

### Calendars

In Oracle Human Resources you define calendars that determine the start and end dates for budgetary years, quarters and periods. For each calendar you select a basic period type. If you are using the Statutory Absence Payments (UK) feature, you define calendars to determine the start date and time for SSP qualifying patterns.

### Canada/Quebec Pension Plan (CPP/QPP) Contributions

Contributions paid by employers and employees to each of these plans provide income benefits upon retirement.

### Candidate

(iRecruitment) A candidate is a person who has either directly provided their personal and professional information to a company's job site or provided their resume and details to a manager or recruiter for entering in the iRecruitment system.

### Candidate Offers

An SSHR function used by a line manager to offer a job to a candidate. This function is supplied with its own responsibility.

### Career Path

This shows a possible progression from one job or position from any number of other jobs or positions within the Business Group. A career path must be based on either job progression or position progression; you cannot mix the two.

### Carry Over

The amount of unused paid time off entitlement an employee brings forward from one accrual term to the next. It may be subject to an expiry date i.e. a date by which it must be used or lost.

See also: *Residual*, page Glossary-35

### Cascade

A process managers at each level in a hierarchy use to allocate their own objectives to workers who report directly to them. This technique enables the allocation of enterprise objectives in some form to all workers.

### Cash Analysis

A specification of the different currency denominations required for paying your employees in cash. Union contracts may require you to follow certain cash analysis rules.

### Ceiling

The maximum amount of unused paid time off an employee can have in an accrual plan. When an employee reaches this maximum, he or she must use some accrued time before any more time will accrue.

### Certification

Documentation required to enroll or change elections in a benefits plan as the result of a life event, to waive participation in a plan, to designate dependents for coverage, or to receive reimbursement for goods or services under an FSA.

### Chief HR Officer

In DBI for HRMS the Chief HR Officer is the chief executive of the enterprise who can view the HR data at an enterprise-level.

### Child/Family Support Payments

In Canada, these are payments withheld from an employee's compensation to satisfy a child or family support order from a Provincial Court. The employer is responsible for withholding and remitting the payments to the court named in the order.

### Collective Agreement

A collective agreement is a form of contract between an employer or employer

representative, for example, an employer federation, and a bargaining unit for example, a union or a union branch.

### Collective Agreement Grade

Combination of information that allows you to determine how an employee is ranked or graded in a collective agreement.

### Communications

Benefits plan information that is presented in some form to participants. Examples include a pre-enrollment package, an enrollment confirmation statement, or a notice of default enrollment.

### Compensation

The pay you give to employees, including wages or salary, and bonuses.

See also: *Elements*, page Glossary-16

### Compensation Category

A group of compensation items. Compensation Categories determine the type of compensation that you award under a plan.

### Compensation Object

For Standard and Advanced Benefits, compensation objects define, categorize, and help to manage the benefit plans that are offered to eligible participants. Compensation objects include programs, plan types, plans, options, and combinations of these entities.

### Competency

Any measurable behavior required by an organization, job or position that a person may demonstrate in the work context. A competency can be a piece of knowledge, a skill, an attitude, or an attribute.

See also: *Unit Standard Competency*, page Glossary-42

### Competency Assessment Template

The entity that configures the Competencies section of an appraisal.

See also: *Objective Assessment Template*, page Glossary-27

### Competency Evaluation

A method used to measure an employees ability to do a defined job.

### Competency Profile

Where you record applicant and employee accomplishments, for example, proficiency in a competency.

### Competency Requirements

Competencies required by an organization, job or position.

See also: *Competency*, page Glossary-10, *Core Competencies*, page Glossary-12

### Competency Type

A group of related competencies.

### Condition

In AME, a Condition is the *If* part of an Approval Rule that specifies the conditions a transaction must meet to trigger an approval action. A condition consists of an attribute, which is a business variable, and a set of attribute values that you can define. When a transaction meets the specified attribute values, then the application triggers the appropriate action.

See: Approval Rule., page Glossary-5

### Configurable Business Rule

In HRMS position control and budgeting, predefined routines (also called process rules) that run when you apply an online transaction, and validate proposed changes to positions, budgets, or assignments. You set their default status level (typically Warning) to Warning, Ignore, or Error.

### Configurable Forms

Forms that your system administrator can modify for ease of use or security purposes by means of Custom Form restrictions. The Form Customization window lists the forms and their methods of configuration.

### Consideration

(iRecruitment) Consideration means that a decision is registered about a person in relation to a vacancy so that the person can be contacted.

### Consolidation Set

A grouping of payroll runs within the same time period for which you can schedule reporting, costing, and post-run processing.

### Contact

A person who has a relationship to an employee that you want to record. Contacts can be dependents, relatives, partners or persons to contact in an emergency.

### Content

When you create a spreadsheet or word processing document using Web ADI, the content identifies the data in the document. Content is usually downloaded from the Oracle application database.

### Contingent Worker

A worker who does not have a direct employment relationship with an enterprise and is typically a self-employed individual or an agency-supplied worker. The contingent worker is not paid via Oracle Payroll.

### Contract

A contract of employment is an agreement between an employer and employee or potential employee that defines the fundamental legal relationship between an employing organization and a person who offers his or her services for hire. The employment contract defines the terms and conditions to which both parties agree and those that are covered by local laws.

### Contribution

An employer's or employee's monetary or other contribution to a benefits plan.

### Core Competencies

Also known as *Leadership Competencies* or *Management Competencies*. The competencies required by every person to enable the enterprise to meet its goals.

See also: *Competency*, page Glossary-10

### Costable Type

A feature that determines the processing an element receives for accounting and costing purposes. There are four costable types in Oracle HRMS: costed, distributed costing, fixed costing, and not costed.

### Costing

Recording the costs of an assignment for accounting or reporting purposes. Using Oracle Payroll, you can calculate and transfer costing information to your general ledger and into systems for project management or labor distribution.

### Court Order

A ruling from a court that requires an employer to make deductions from an employee's salary for maintenance payments or debts, and to pay the sums deducted to a court or local authority.

See also: *Arrestment*, page Glossary-5

### Credit

A part of the Qualifications Framework. The value a national qualifications authority assigns to a unit standard competence or a qualification. For example, one credit may represent 10 hours of study, a unit standard competence may equate to 5 credits, and a qualification may equate to 30 credits.

### Criteria Salary Rate

Variable rate of pay for a grade, or grade step. Used by Grade/Step Progression.

### Current Period of Service

An employee's period of service is current if their most recent hire date is on or before the effective date, and either the employee does not have a termination date for their latest employment, or their termination date is later than the effective date.

The table below provides an example using an effective date of 12 October 2004:

| Effective Date | Hire Date | Termination Date | Current Period of Service? |
|---|---|---|---|
| 12 Oct 2004 | 23 Jan 1994 | 16 Aug 2003 | No |
| 12 Oct 2004 | 14 Oct 2004 | ANY | No |
| 12 Oct 2004 | 14 Mar 2000 | NONE | Yes |
| 12 Oct 2004 | 11 Sep 2001 | 15 Oct 2004 | Yes |

**Additional Information:** In Oracle HRMS an employee cannot transfer from one business group to another. To move from one business group to another, the business group they are leaving must terminate the employee, and the business group they are joining must re-hire the employee. Therefore the definition of period of service, above, does not take account of any service prior to the most recent business group transfer.

### Current Period of Placement

A contingent worker's period of placement, page Glossary-30 is current if their most recent placement start date is on or before the effective date, and either the contingent worker does not have a placement end date for their latest placement or their placement end date is later than the effective date.

| Effective Date | Place Date | End Placement Date | Current Period of Placement? |
|---|---|---|---|
| 12 Oct 2004 | 23 Jan 1994 | 16 Aug 2003 | No |

| Effective Date | Place Date | End Placement Date | Current Period of Placement? |
|---|---|---|---|
| 12 Oct 2004 | 14 Oct 2004 | ANY | No |
| 12 Oct 2004 | 14 Mar 2000 | NONE | Yes |
| 12 Oct 2004 | 11 Sep 2001 | 15 Oct 2004 | Yes |

### Database Item

An item of information in Oracle HRMS that has special programming attached, enabling Oracle FastFormula to locate and retrieve it for use in formulas.

### Date Earned

The date the payroll run uses to determine which element entries to process. In North America (and typically elsewhere too) it is the last day of the payroll period being processed.

### Date Paid

The effective date of a payroll run. Date paid dictates which tax rules apply and which tax period or tax year deductions are reported.

### Date To and Date From

These fields are used in windows not subject to DateTrack. The period you enter in these fields remains fixed until you change the values in either field.

See also: *DateTrack*, page Glossary-14, *Effective Date*, page Glossary-16

### DateTrack

When you change your effective date (either to past or future), DateTrack enables you to enter information that takes effect on your new effective date, and to review information as of the new date.

See also: *Effective Date*, page Glossary-16

### Default Postings

(iRecruitment) Default text stored against business groups, organizations, jobs, and/or positions. The default postings are used to create job postings for a vacancy.

### Department

In DBI for HRMS, the term Department has the same meaning as Organization.

### Dependent

In a benefit plan, a person with a proven relationship to the primary participant whom the participant designates to receive coverage based on the terms of the plan.

### Deployment

The temporary or permanent employment of an employee in a business group.

See also: *Secondment*, page Glossary-37

### Deployment Factors

See: *Work Choices*, page Glossary-43

### Deployment Proposal

The entity that controls the permanent transfer or temporary secondment of an employee from a source business group to a destination business group. The HR Professional in the destination business group creates the deployment proposal using the Global Deployments function.

### Derived Factor

A factor (such as age, percent of fulltime employment, length of service, compensation level, or the number of hours worked per period) that is used in calculations to determine Participation Eligibility or Activity Rates for one or more benefits.

### Descriptive Flexfield

A field that your organization can configure to capture additional information required by your business but not otherwise tracked by Oracle Applications.

See also: *Key Flexfield* , page Glossary-23

### Deviation

A change to the standard approver list is a deviation.

### Developer Descriptive Flexfield

A flexfield defined by your localization team to meet the specific legislative and reporting needs of your country.

See also: *Extra Information Types*, page Glossary-18

### Direct Deposit

The electronic transfer of an employee's net pay directly into the account(s) designated by the employee.

### Discoverer Workbook

A grouping of worksheets. Each worksheet is one report.

### Discoverer Worksheet

A single report within a workbook. A report displays the values of predefined criteria for analysis.

### Distribution

Monetary payments made from, or hours off from work as allowed by, a compensation or benefits plan.

### Download

The process of transferring data from the Oracle HRMS application to your desktop (the original data remains in the application database).

### Effective Date

The date for which you are entering and viewing information. You set your effective date in the Alter Effective Date window.

See also: *DateTrack*, page Glossary-14

### EIT

See: *Extra Information Type*, page Glossary-18

### Electability

The process which determines whether a potential benefits participant, who has satisfied the eligibility rules governing a program, plan, or option in a plan, is able to elect benefits. Participants who are *eligible* for benefits do not always have *electable* benefit choices based on the rules established in a benefit plan design.

### Element Classifications

These control the order in which elements are processed and the balances they feed. Primary element classifications and some secondary classifications are predefined by Oracle Payroll. Other secondary classifications can be created by users.

### Element Entry

The record controlling an employee's receipt of an element, including the period of time for which the employee receives the element and its value.

See also: *Recurring Elements*, page Glossary-34, *Nonrecurring Elements*, page Glossary-26

### Element Link

The association of an element to one or more components of an employee assignment. The link establishes employee eligibility for that element. Employees whose assignment components match the components of the link are eligible for the element.

See also: *Standard Link*, page Glossary-39

### Elements

Components in the calculation of employee pay. Each element represents a compensation or benefit type, such as salary, wages, stock purchase plans, and pension contributions.

### Element Set

A group of elements that you define to process in a payroll run, or to control access to compensation information from a configured form, or for distributing costs.

### Eligibility

The process by which a potential benefits participant satisfies the rules governing whether a person can ever enroll in a program, plan, or option in a plan. A participant who is *eligible* for benefits must also satisfy *electability* requirements.

### Eligibility Profile

A set of eligibility criteria grouped together. Eligibility profiles help determine eligibility for compensation and benefits and are re-usable. Eligibility profiles can be linked to a compensation object (such as a program, plan, or option), a collective agreement, a grade ladder, or a work schedule to restrict eligibility for these.

### Employee

A worker who has a direct employment relationship with the employer. Employees are typically paid compensation and benefits via the employer's payroll application.

Employees have a system person type of Employee and one or more assignments with an assignment type of Employee.

### Employee Histories

An SSHR function for an employee to view their Learning History, Job Application History, Employment History, Absence History, or Salary History. A manager can also use this function to view information on their direct reports.

### Employment Category

A component of the employee assignment. Four categories are defined: Full Time - Regular, Full Time - Temporary, Part Time - Regular, and Part Time - Temporary.

### Employment Equity Occupational Groups (EEOG)

In Canada, the Employment Equity Occupational Groups (EEOG) consist of 14 classifications of work used in the Employment Equity Report. The EEOGs were derived from the National Occupational Classification system.

### Employment Insurance (EI)

Benefit plan run by the federal government to which the majority of Canadian

employers and employees must contribute.

### End Placement Date

DBI for HRMS uses this term to specifically refer to the contingent worker's most recent placement end date prior to the effective date.

### Employment Insurance Rate

In Canada, this is the rate at which the employer contributes to the EI fund. The rate is expressed as a percentage of the employee's contribution. If the employer maintains an approved wage loss replacement program, they can reduce their share of EI premiums by obtaining a reduced contribution rate. Employers would remit payroll deductions under a different employer account number for employees covered by the plan.

### Enrollment Action Type

Any action required to complete enrollment or de-enrollment in a benefit.

### Entitlement

In Australia, this is all unused leave from the previous year that remains to the credit of the employee.

### ESS

Employee Self Service. A predefined SSHR responsibility.

### Event

An activity such as a training day, review, or meeting, for employees or applicants. Known as *class* in OLM.

### Ex-Applicant

Someone who has previously applied for a vacancy or multiple vacancies, but all applications have ended, either because the applicant has withdrawn interest or they have been rejected. Ex-Applicants can still be registered users.

### Expected Week of Childbirth (EWC)

In the UK, this is the week in which an employee's baby is due. The Sunday of the expected week of childbirth is used in the calculations for Statutory Maternity Pay (SMP).

### Extra Information Type (EIT)

A type of developer descriptive flexfield that enables you to create an unlimited number of information types for six key areas in Oracle HRMS. Localization teams may also predefine some EITs to meet the specific legislative requirements of your country.

See also: *Developer Descriptive Flexfield*, page Glossary-15

### Field

A view or entry area in a window where you enter, view, update, or delete information.

See also: *Block*, page Glossary-7, *Region*, page Glossary-35

### Flex Credit

A unit of "purchasing power" in a flexible benefits program. An employee uses flex credits, typically expressed in monetary terms, to "purchase" benefits plans and/or levels of coverage within these plans.

### Flexible Benefits Program

A benefits program that offers employees choices among benefits plans and/or levels of coverage. Typically, employees are given a certain amount of flex credits or moneys with which to "purchase" these benefits plans and/or coverage levels.

### Flexible Spending Account

(FSA) Under US Internal Revenue Code Section 125, employees can set aside money on a pretax basis to pay for eligible unreimbursed health and dependent care expenses. Annual monetary limits and use-it-or-lose it provisions exist. Accounts are subject to annual maximums and forfeiture rules.

### Form

A predefined grouping of functions, called from a menu and displayed, if necessary, on several windows. Forms have blocks, regions and fields as their components.

See also: *Block*, page Glossary-7, *Region*, page Glossary-35, *Field*, page Glossary-18

### Format Mask

A definition of a person-name format. The format mask comprises standard name components, such as title, first name, and last name, in an order appropriate to its purpose and legislation.

### Format Type

A format-mask classification that identifies the mask's purpose. Oracle HRMS defines the Full Name, Display Name, List Name, and Order Name format types. You can also define your own format types for use in custom code.

### Full Time Equivalent (FTE)

A Workforce Measurement Type (WMT) that measures full time equivalent. Although the actual value and calculation may vary, this value is taken from the Assignment Budget Value (ABV) in Oracle HRMS. If the Assignment Budget Value in Oracle HRMS is not set up then a FastFormula is used to determine the value to be calculated.

### Global Value

A value you define for any formula to use. Global values can be dates, numbers or text.

### Goods or Service Type

A list of goods or services a benefit plan sponsor has approved for reimbursement.

### Grade

A component of an employee's assignment that defines their level and can be used to control the value of their salary and other compensation elements.

### Grade Comparatio

A comparison of the amount of compensation an employee receives with the mid-point of the valid values defined for his or her grade.

### Grade Ladder

The key component of Grade/Step Progression. You use a grade ladder to categorize grades, to determine the rules for how an employee progresses from one grade (or step) to the next, and to record the salary rates associated with each grade or step on the ladder.

### Grade Rate

A value or range of values defined as valid for a given grade. Used for validating employee compensation entries.

### Grade Scale

A sequence of steps valid for a grade, where each step corresponds to one point on a pay scale. You can place each employee on a point of their grade scale and automatically increment all placements each year, or as required.

See also: *Pay Scale*, page Glossary-29

### Grade Step

An increment on a grade scale. Each grade step corresponds to one point on a pay scale.

See also: *Grade Scale*, page Glossary-20

### Grandfathered

A term used in Benefits Administration. A person's benefits are said to be grandfathered when a plan changes but they retain the benefits accrued.

### Group

A component that you define, using the People Group key flexfield, to assign employees to special groups such as pension plans or unions. You can use groups to

determine employees' eligibility for certain elements, and to regulate access to payrolls.

### Group Certificate

In Australia, this is a statement from a legal employer showing employment income of an employee for the financial year..

### Headcount(HEAD)

A Workforce Measurement Type (WMT) that measures headcount. Although the actual value and calculation may vary, this value is taken from the Assignment Budget Value (ABV) in Oracle HRMS. If the Assignment Budget Value in Oracle HRMS is not set up then a FastFormula is used to determine the value to be calculated.

### HR Staff

In DBI for HRMS the HR Staff are people who work in the Human Resources role. Chief HR Officers can track the ratio of HR professionals to the number of workers in their enterprise.

DBI for HRMS uses the HRI_MAP_JOB_JOB_ROLE formula to categorize workers into HR staff and non-HR staff.

### Headcount Activity

DBI for HRMS uses this term to mean all the gains and losses occurring in a manager's hierarchy during a reporting period.

### Hierarchy

An organization or position structure showing reporting lines or other relationships. You can use hierarchies for reporting and for controlling access to Oracle HRMS information.

### High Availability

iRecruitment functionality that enables enterprises to switch between two instances to continuously support the candidate job site.

### Hire Date

In DBI for HRMS Hire Date is the employee's most recent hire date.

### Imputed Income

Certain forms of indirect compensation that US Internal Revenue Service Section 79 defines as fringe benefits and taxes the recipient accordingly. Examples include employer payment of group term life insurance premiums over a certain monetary amount, personal use of a company car, and other non-cash awards.

### Incumbent

In Oracle HRMS and DBI for HRMS, the term Incumbent refers to an active worker (employee or contingent worker).

See also: *Active Employee*, page Glossary-2

### Individual Compensation Distribution

A tool that enables managers assign one-time or recurring awards, bonuses, and allowances to qualified employees such as housing allowances, spot bonuses, and company cars. Also enables employees to enter voluntary contributions, such as savings plans, charitable organizations, and company perquisites.

### Info Online

A generic framework to integrate Oracle applications with partner applications, enabling users to access information from third-party providers, My Oracle Support (formerly MetaLink) and Learning Management.

### Initiator

A person who starts a 360 Degree appraisal (Employee or Self) on an individual. An initiator and the appraisee are the only people who can see all appraisal information.

### Input Values

Values you define to hold information about elements. In Oracle Payroll, input values are processed by formulas to calculate the element's run result. You can define up to fifteen input values for an element.

### Instructions

An SSHR user assistance component displayed on a web page to describe page functionality.

### Integrating Application

In AME, an application that uses Oracle Approvals Management Engine to manage the approval processes of its transactions.

See: Oracle Approvals Management Engine (AME), page Glossary-3

### Integrator

Defines all the information that you need to download or upload from a particular window or database view using Web ADI.

### Interface

A Web ADI term for the item that specifies the columns to be transferred from the Oracle applications database to your desktop or vice versa.

### Involuntary

Used in turnover to describe employees who have ceased employment with the enterprise not of their own accord, for example, through redundancy.

### Job

A job is a generic role within a business group, which is independent of any single organization. For example, the jobs "Manager" and "Consultant" can occur in many organizations.

### Job Posting

An advertisement for a specific vacancy. This is the public side of the vacancy for which a candidate would apply.

### Key Flexfield

A flexible data field made up of segments. Each segment has a name you define and a set of valid values you specify. Used as the key to uniquely identify an entity, such as jobs, positions, grades, cost codes, and employee groups.

See also: *Descriptive Flexfield*, page Glossary-15

### Key Performance Indicator (KPI)

Target values that you set for the performance of your enterprise. This value comes from the corresponding KPI Portlet/Report. You can configure the Performance Management Framework to send a notification when actual performance falls short of, or exceeds, the target value. For example, you may configure the Performance Management Framework to send you a notification when workforce variance is greater than 10 percent, or when training success is below 50 percent.

### Key Performance Indicator (KPI) Portlet/Report

Displays the executive summary of key measures such as total headcount and total salary.

### Layout

Indicates the columns to be displayed in a spreadsheet or Word document created using Web ADI.

### Learning Management

Oracle's enterprise learning management system that administers online and offline educational content.

### Leave Loading

In Australia, an additional percentage amount of the annual leave paid that is paid to

the employee.

### Leaver's Statement

In the UK, this Records details of Statutory Sick Pay (SSP) paid during a previous employment (issued as form SSP1L) which is used to calculate a new employee's entitlement to SSP. If a new employee falls sick, and the last date that SSP was paid for under the previous employment is less than eight calendar weeks before the first day of the PIW for the current sickness, the maximum liability for SSP is reduced by the number of weeks of SSP shown on the statement.

### Legal Employer

A business in Australia that employs people and has registered with the Australian Tax Office as a Group Employer.

### Legal Entity

A legal entity represents the designated legal employer for all employment-related activities. The legal authorities in a country recognize this organization as a separate employer.

### Life Event

A significant change in a person's life that results in a change in eligibility or ineligibility for a benefit.

### Life Event Collision

A situation in which the impacts from multiple life events on participation eligibility, enrollability, level of coverage or activity rates conflict with each other.

### Life Event Enrollment

A benefits plan enrollment that is prompted by a life event occurring at any time during the plan year.

### Linked PIWs

In the UK, these are linked periods of incapacity for work that are treated as one to calculate an employee's entitlement to Statutory Sick Pay (SSP). A period of incapacity for work (PIW) links to an earlier PIW if it is separated by less than the linking interval. A linked PIW can be up to three years long.

### Linking Interval

In the UK, this is the number of days that separate two periods of incapacity for work. If a period of incapacity for work (PIW) is separated from a previous PIW by less than the linking interval, they are treated as one PIW according to the legislation for entitlement to Statutory Sick Pay (SSP). An employee can only receive SSP for the maximum number of weeks defined in the legislation for one PIW.

### LMSS

Line Manager Self Service. A predefined SSHR responsibility.

### Long Service Leave

Leave with pay granted to employees of a particular employer after a prescribed period of service or employment with that employer.

### Lookup Types

Categories of information, such as nationality, address type and tax type, that have a limited list of valid values. You can define your own Lookup Types, and you can add values to some predefined Lookup Types.

### Lower Earnings Limit (LEL)

In the UK, this is the minimum average weekly amount an employee must earn to pay National Insurance contributions. Employees who do not earn enough to pay National Insurance cannot receive Statutory Sick Pay (SSP) or Statutory Maternity Pay (SMP).

### Manager

(iRecruitment) A manager accesses the iRecruitment system to document their hiring needs and conduct their recruiting activities online. Specifically, these activities include vacancy definition, searching for candidates, and processing applicants through the vacancy process.

DBI for HRMS counts a person as a manager if they supervise assignments (directly or through subordinates) for which the total headcount value is greater than zero at the effective date.

### Manager-Employee Appraisal

Part of the Appraisal function. A manager appraisal of an employee. However, an appraising manager does not have to be a manager.

### Mapping

If you are bringing in data from a text file to Oracle HRMS using a spreadsheet created in Web ADI, you need to map the columns in the text file to the application's tables and columns.

### Maternity Pay Period

In the UK, this is the period for which Statutory Maternity Pay (SMP) is paid. It may start at any time from the start of the 11th week before the expected week of confinement and can continue for up to 18 weeks. The start date is usually agreed with the employee, but can start at any time up to the birth. An employee is not eligible to SMP for any week in which she works or for any other reason for ineligibility, defined by the legislation for SMP.

### Medicare Levy

An amount payable by most taxpayers in Australia to cover some of the cost of the public health system.

### Menus

You set up your own navigation menus, to suit the needs of different users.

### My Account

(iRecruitment) My Account is the total of either a candidate or applicant's personal and vacancy-specific information including the information needed to manage their progress through the recruitment process.

### NACHA

National Automated Clearing House Association. This is the US system for making direct deposit payments to employees.

### National Identifier

This is the alphanumeric code that is used to uniquely identify a person within their country. It is often used for taxation purposes. For example, in the US it is the Social Security Number, in Italy it is the Fiscal Code, and in New Zealand it is the IRD Number.

### National Occupational Classification (NOC) code

In Canada, the National Occupational Classification (NOC) System was developed to best reflect the type of work performed by employees. Occupations are grouped in terms of particular tasks, duties and responsibilities. The use of this standardized system ensures consistency of data from year to year within the same company as well as between companies. These codes are used in the Employment Equity Report.

### Net Accrual Calculation

The rule that defines which element entries add to or subtract from a plan's accrual amount to give net entitlement.

### Net Entitlement

The amount of unused paid time off an employee has available in an accrual plan at any given point in time.

### Nonrecurring Elements

Elements that process for one payroll period only unless you make a new entry for an employee.

See also: *Recurring Elements*, page Glossary-34

### North American Industrial Classification (NAIC) code

The North American Industrial Classification system (NAICs) was developed jointly by the US, Canada and Mexico to provide comparability in statistics regarding business activity across North America. The NAIC replaces the US Standard Industrial Classification (SIC) system, and is used in the Employment Equity Report.

### Not in Program Plan

A benefit plan that you define outside of a program.

### Objective Assessment Template

The entity that configures the Objectives section of the appraisal.

See also: **Competency Assessment Template**, page Glossary-10

### Objectives Library

A collection of reusable objectives. HR Professionals can either create individual objectives in the Objectives Library or import them from an external source.

### Off-Boarding

Descriptive term covering all HR processes and procedures involved in removing a worker from your organization, including termination, relocation, and long-term sickness.

### OLM

Oracle Learning Management.

### On-Boarding

Descriptive term covering all HR processes and procedures involved in hiring and integrating a worker in your organization, including recruitment, hiring, and orientation.

### Online Analytical Processing (OLAP)

Analysis of data that reveals business trends and statistics that are not immediately visible in operational data.

### Online Transactional Processing (OLTP)

The storage of data from day-to-day business transactions into the database that contains operational data.

### Open Enrollment

A type of scheduled enrollment in which participants can enroll in or alter elections in one or more benefits plans.

### Options

A level of coverage for a participant's election, such as Employee Only for a medical plan, or 2x Salary for a life insurance plan.

### Oracle FastFormula

Formulas are generic expressions of calculations or comparisons you want to repeat with different input values. With Oracle FastFormula you can write formulas using English words and basic mathematical functions. The output of FastFormulas is fed back into reports.

### Organization

A required component of employee assignments. You can define as many organizations as you want within your Business Group. Organizations can be internal, such as departments, or external, such as recruitment agencies. You can structure your organizations into organizational hierarchies for reporting purposes and for system access control.

### Organization Manager Hierarchy

An HRMS structure that contains supervisors and subordinates on a reporting chain who also own organizations. HRMS uses this hierarchy to filter the information you display in report modules, such as the Daily Business Intelligence Workforce Budget Management dashboard, to include only managers who own organizations.

### OSSWA

Oracle Self Service Web Applications.

### Outcome

For a unit standard competence, a behavior or performance standard associated with one or more assessment criteria. A worker achieves a unit standard competence when they achieve all outcomes for that competence.

### Overrides

You can enter overrides for an element's pay or input values for a single payroll period. This is useful, for example, when you want to correct errors in data entry for a nonrecurring element before a payroll run.

### Parameter Portlet

A portlet in which you select a number of parameters that may affect all your portlets on your page. These may include an effective date, the reporting period, the comparison type, the reporting manager, and the output currency for your reports. The parameter portlet is usually available at the top of the portal page.

### Pattern

A pattern comprises a sequence of time units that are repeated at a specified frequency. The Statutory Absence Payments (UK) feature, uses SSP qualifying patterns to determine employees entitlement to Statutory Sick Pay (SSP).

### Pattern Time Units

A sequence of time units specifies a repeating pattern. Each time unit specifies a time period of hours, days or weeks.

### Pay Scale

A set of progression points that can be related to one or more rates of pay. Employee's are placed on a particular point on the scale according to their grade and, usually, work experience.

See also: *Grade Scale*, page Glossary-20

### Pay Value

An amount you enter for an element that becomes its run item without formula calculations.

See also: *Input Values*, page Glossary-22

### Payment Type

There are three standard payment types for paying employees: check, cash and direct deposit. You can define your own payment methods corresponding to these types.

### Payroll

A group of employees that Oracle Payroll processes together with the same processing frequency, for example, weekly, monthly or bimonthly. Within a Business Group, you can set up as many payrolls as you need.

### Payroll Reversal

A payroll reversal occurs when you reverse a payroll run for a single employee, in effect cancelling the run for this employee.

### Payroll Rollback

You can schedule a payroll rollback when you want to reverse an entire payroll run, cancelling out all information processed in that run. To preserve data integrity, you can roll back only one payroll at a time, starting with the one most recently run.

### Payroll Run

The process that performs all the payroll calculations. You can set payrolls to run at any interval you want.

**People List**

An SSHR line manager utility used to locate an employee.

**Performance Management Framework (PMF)**

A business intelligence tool used to alert users to exceptional circumstances, as defined by KPIs. When a particular factor measured by HRMSi goes beyond a threshold chosen by the user, the system sends the user a workflow notification.

**Performance Management Plan**

The entity that defines the performance-management process for a specified period. A component of the Workforce Performance Management function.

**Performance Management Viewer (PMV)**

A reporting tool that displays the report that corresponds to one or more PMF targets.

**Period of Incapacity for Work (PIW)**

In the UK, this is a period of sickness that lasts four or more days in a row, and is the minimum amount of sickness for which Statutory Sick Pay can be paid. If a PIW is separated by less then the linking interval, a linked PIW is formed and the two PIWs are treated as one.

**Period of Placement**

The period of time a contingent worker spends working for an enterprise. A contingent worker can have only one period of placement at a time; however, a contingent worker can have multiple assignments during a single period of placement.

**Period Type**

A time division in a budgetary calendar, such as week, month, or quarter.

**Personal Public Service Number (PPS)**

The Irish equivalent to National Insurance number in the UK, or the Social Security number in the US.

**Personal Tax Credits Return (TD1)**

A Revenue Canada form which each employee must complete. Used by the employee to reduce his or her taxable income at source by claiming eligible credits and also provides payroll with such important information as current address, birth date, and SIN. These credits determine the amount to withhold from the employee's wages for federal/provincial taxes.

**Person Search**

An SSHR function which enables a manager to search for a person. There are two types

of search, Simple and Advanced.

### Person Type

There are eight system person types in Oracle HRMS. Seven of these are combinations of employees, ex-employees, applicants, and ex-applicants. The eighth category is 'External'. You can create your own user person types based on the eight system types.

### Personal Scorecard

A collection of objectives for a single worker arising from a single Performance Management Plan.

### Personnel Actions

*Personnel actions* is a public sector term describing business processes that define and document the status and conditions of employment. Examples include hiring, training, placement, discipline, promotion, transfer, compensation, or termination. Oracle HRMS uses the term *self-service actions* synonymously with this public sector term. Oracle Self Service Human Resources (SSHR) provides a configurable set of tools and web flows for initiating, updating, and approving self-service actions.

### Plan Design

The functional area that allows you to set up your benefits programs and plans. This process involves defining the rules which govern eligibility, available options, pricing, plan years, third party administrators, tax impacts, plan assets, distribution options, required reporting, and communications.

### Plan Sponsor

The legal entity or business responsible for funding and administering a benefits plan. Generally synonymous with employer.

### Placement Start Date

In DBI for HRMS Placement Date is the contingent worker's most recent start date prior to the effective date.

### Position

A specific role within the Business Group derived from an organization and a job. For example, you may have a position of Shipping Clerk associated with the organization Shipping and the job Clerk.

### Predefined Components

Some elements and balances, all primary element classifications and some secondary classifications are defined by Oracle Payroll to meet legislative requirements, and are supplied to users with the product. You cannot delete these predefined components.

### Process Rule

See Configurable Business Rules, page Glossary-11

### Professional Information

An SSHR function which allows an employee to maintain their own professional details or a line manager to maintain their direct reports professional details.

### Proficiency

A worker's perceived level of expertise in a competency, in the opinion of an assessor, over a given period. For example, a worker may demonstrate the communication competency at Novice or Expert level.

### Progression Point

A pay scale is calibrated in progression points, which form a sequence for the progression of employees up the pay scale.

See also: *Pay Scale*, page Glossary-29

### Prospect Pool

(iRecruitment) The prospect pool contains all registered users who have given permission for their information to be published.

### Provincial/Territorial Employment Standards Acts

In Canada, these are laws covering minimum wages, hours of work, overtime, child labour, maternity, vacation, public/general holidays, parental and adoption leave, etc., for employees regulated by provincial/territorial legislation.

### Provincial Health Number

In Canada, this is the account number of the provincially administered health care plan that the employer would use to make remittances. There would be a unique number for each of the provincially controlled plans i.e. EHT, Quebec HSF, etc.

### PTO Accrual Plan

A benefit in which employees enroll to entitle them to accrue and take paid time off (PTO). The purpose of absences allowed under the plan, who can enroll, how much time accrues, when the time must be used, and other rules are defined for the plan.

### QPP

(See Canada/Quebec Pension Plan)

### QA Organization

Quality Assurance Organization. Providers of training that leads to Qualifications

Framework qualifications register with a QA Organization. The QA Organization is responsible for monitoring training standards.

### Qualification Type

An identified qualification method of achieving proficiency in a competence, such as an award, educational qualification, a license or a test.

See also: *Competence*, page Glossary-10

### Qualifications Framework

A national structure for the registration and definition of formal qualifications. It identifies the unit standard competencies that lead to a particular qualification, the awarding body, and the field of learning to which the qualification belongs, for example.

### Qualifying Days

In the UK, these are days on which Statutory Sick Pay (SSP) can be paid, and the only days that count as waiting days. Qualifying days are normally work days, but other days may be agreed.

### Qualifying Pattern

See: *SSP Qualifying Pattern*, page Glossary-39

### Qualifying Week

In the UK, this is the week during pregnancy that is used as the basis for the qualifying rules for Statutory Maternity Pay (SMP). The date of the qualifying week is fifteen weeks before the expected week of confinement and an employee must have been continuously employed for at least 26 weeks continuing into the qualifying week to be entitled to SMP.

### Quebec Business Number

In Canada, this is the employer's account number with the Ministere du Revenu du Quebec, also known as the Quebec Identification number. It consists of 15 digits, the first 9 identify the employer, the next 2 identify the type of tax account involved (payroll vs. corporate tax), and the last 4 identify the particular account for that tax.

### Questionnaire

A function which records the results of an appraisal.

### QuickPaint Report

A method of reporting on employee and applicant assignment information. You can select items of information, paint them on a report layout, add explanatory text, and save the report definition to run whenever you want.

See also: *Assignment Set*, page Glossary-6

### QuickPay

QuickPay allows you to run payroll processing for one employee in a few minutes' time. It is useful for calculating pay while someone waits, or for testing payroll formulas.

### Ranking

(iRecruitment) A manually entered value to indicate the quality of the applicant against other applicants for a specific vacancy.

### Rates

A set of values for employee grades or progression points. For example, you can define salary rates and overtime rates.

### Rate By Criteria

A function that enables the calculation of pay from different rates for each role a worker performs in a time period.

### Rating Scale

Used to describe an enterprise's competencies in a general way. You do not hold the proficiency level at the competence level.

### Record of Employment (ROE)

A Human Resources Development Canada form that must be completed by an employer whenever an interruption of earnings occurs for any employee. This form is necessary to claim Employment Insurance benefits.

### Recruitment Activity

An event or program to attract applications for employment. Newspaper advertisements, career fairs and recruitment evenings are all examples of recruitment activities. You can group several recruitment activities together within an overall activity.

### Recurring Elements

Elements that process regularly at a predefined frequency. Recurring element entries exist from the time you create them until you delete them, or the employee ceases to be eligible for the element. Recurring elements can have standard links.

See also: *Nonrecurring Elements*, page Glossary-26, *Standard Link*, page Glossary-39

### Referenced Rule

In HRMS budgeting, any predefined configurable business rule in the Assignment Modification, Position Modification, or Budget Preparation Categories you use as the basis for defining a new rule.

See Configurable Business Rules, page Glossary-11

### Region

A collection of logically related fields in a window, set apart from other fields by a rectangular box or a horizontal line across the window.

See also: *Block*, page Glossary-7, *Field*, page Glossary-18

### Registered Pension Plan (RPP)

This is a pension plan that has been registered with Revenue Canada. It is a plan where funds are set aside by an employer, an employee, or both to provide a pension to employees when they retire. Employee contributions are generally exempt from tax.

### Registered Retirement Savings Plan (RRSP)

This is an individual retirement savings plan that has been registered with Revenue Canada. Usually, contributions to the RRSP, and any income earned within the RRSP, is exempt from tax.

### Registered User

(iRecruitment) A person who has registered with the iRecruitment site by entering an e-mail address and password. A registered user does not necessarily have to apply for jobs.

### Reporting Group

A collection of programs and plans that you group together for reporting purposes, such as for administrative use or to meet regulatory requirements.

### Report Parameters

Inputs you make when submitting a report to control the sorting, formatting, selection, and summarizing of information in the report.

### Report Set

A group of reports and concurrent processes that you specify to run together.

### Requisition

The statement of a requirement for a vacancy or group of vacancies.

### Request Groups

A list of reports and processes that can be submitted by holders of a particular responsibility.

See also: *Responsibility*, page Glossary-36

### Residual

The amount of unused paid time off entitlement an employee loses at the end of an accrual term. Typically employees can carry over unused time, up to a maximum, but they lose any residual time that exceeds this limit.

See also: *Carry Over*, page Glossary-9

### Responsibility

A level of authority in an application. Each responsibility lets you access a specific set of Oracle Applications forms, menus, reports, and data to fulfill your business role. Several users can share a responsibility, and a single user can have multiple responsibilities.

See also: *Security Profile*, page Glossary-38, *User Profile Options*, page Glossary-42, *Request Groups*, page Glossary-35, *Security Groups*, page Glossary-35

### Resume

A document that describes the experience and qualifications of a candidate.

### RetroPay

A process that recalculates the amount to pay an employee in the current period to account for retrospective changes that occurred in previous payroll periods.

### Retry

Method of correcting a payroll run or other process *before* any post-run processing takes place. The original run results are deleted and the process is run again.

### Revenue Canada

Department of the Government of Canada which, amongst other responsibilities, administers, adjudicates, and receives remittances for all taxation in Canada including income tax, Employment Insurance premiums, Canada Pension Plan contributions, and the Goods and Services Tax (legislation is currently proposed to revise the name to the Canada Customs and Revenue Agency). In the province of Quebec the equivalent is the Ministere du Revenu du Quebec.

### Reversal

Method of correcting payroll runs or QuickPay runs *after* post-run processing has taken place. The system replaces positive run result values with negative ones, and negative run result values with positive ones. Both old and new values remain on the database.

### Reviewer (SSHR)

A person invited by an appraising manager to add review comments to an appraisal.

### RIA

Research Institute of America (RIA), a provider of tax research, practice materials, and compliance tools for professionals, that provides U.S. users with tax information.

### Rollback

Method of removing a payroll run or other process *before* any post-run processing takes place. All assignments and run results are deleted.

### Rollup

An aggregate of data that includes subsidiary totals.

### Run Item

The amount an element contributes to pay or to a balance resulting from its processing during the payroll run. The Run Item is also known as calculated pay.

### Salary Basis

The period of time for which an employee's salary is quoted, such as hourly or annually. Defines a group of employees assigned to the same salary basis and receiving the same salary element.

### Salary Rate

The rate of pay associated with a grade or step. Used by Grade/Step Progression.

### Scheduled Enrollment

A benefits plan enrollment that takes place during a predefined enrollment period. Scheduled enrollments can be administrative, or open.

### Search by Date

An SSHR sub-function used to search for a Person by Hire date, Application date, Job posting date or search by a Training event date.

### Secondment

The temporary transfer of an employee to a different business group.

### Security Group

Security groupsenable HRMS users to partition data by Business Group. Only used for Security Groups Enabled security.

See also: *Responsibility*, page Glossary-36, *Security Profile*, page Glossary-38, *User Profile Options*, page Glossary-42

### Security Groups Enabled

Formerly known as Cross Business Group Responsibility security. This security model uses security groups and enables you to link one responsibility to many Business Groups.

### Security Profile

Security profiles control access to organizations, positions and employee and applicant records within the Business Group. System administrators use them in defining users' responsibilities.

See also: *Responsibility*, page Glossary-36

### Self Appraisal

Part of the Appraisal function. This is an appraisal undertaken by an employee to rate their own performance and competencies.

### Separation Category

Separation category groups the leaving reasons. HRMS*i* refers to Termination Category as Separation Category.

See also: *termination category*, page Glossary-41

### Site Visitor

(iRecruitment) A person who navigates to the iRecruitment web site and may view job postings. This person has not yet registered or logged in to the iRecruitment system. This individual may search for postings on the web site and also has the ability to log in or register with the iRecruitment site.

### SMP

See: *Statutory Maternity Pay*, page Glossary-40

### Social Insurance Number (SIN)

A unique number provided by Human Resources Development Canada (HRDC) to each person commencing employment in Canada. The number consists of 9 digits in the following format (###-###-###).

### Source Deductions Return (TP 1015.3)

A Ministere du Revenu du Quebec form which each employee must complete. This form is used by the employee to reduce his or her taxable income at source by claiming eligible credits and also provides payroll with such important information as current address, birth date, and SIN. These credits determine the amount of provincial tax to withhold from the employee's wages.

### Special Information Types

Categories of personal information, such as skills, that you define in the Personal

Analysis key flexfield.

### Special Run

The first run of a recurring element in a payroll period is its normal run. Subsequent runs in the same period are called special runs. When you define recurring elements you specify Yes or No for special run processing.

### SSHR

Oracle Self-Service Human Resources. An HR management system using an intranet and web browser to deliver functionality to employees and their managers.

### SSP

See: *Statutory Sick Pay*, page Glossary-40

### SSP Qualifying Pattern

In the UK, an SSP qualifying pattern is a series of qualifying days that may be repeated weekly, monthly or some other frequency. Each week in a pattern must include at least one qualifying day. Qualifying days are the only days for which Statutory Sick Pay (SSP) can be paid, and you define SSP qualifying patterns for all the employees in your organization so that their entitlement to SSP can be calculated.

### Standard HRMS Security

The standard security model. Using this security model you must log on as a different user to see a different Business Group.

### Standard Link

Recurring elements with standard links have their element entries automatically created for all employees whose assignment components match the link.

See also: *Element Link*, page Glossary-16, *Recurring Elements*, page Glossary-34

### Statement of Commissions and Expenses for Source Deduction Purposes (TP 1015.R.13.1)

A Ministere du Revenu du Quebec form which allows an employee who is paid partly or entirely by commissions to pay a constant percentage of income tax based on his or her estimated commissions for the year, less allowable business expenses.

### Statement of Earnings (SOE)

A summary of the calculated earnings and deductions for an assignment in a payroll period.

### Statement of Remuneration and Expenses (TD1X)

In Canada, the Statement of Remuneration and Expenses allows an employee who is paid partly or entirely by commission to pay a constant percentage of income tax, based

on his or her estimated income for the year, less business-related expenses.

### Statutory Adoption Pay

In the UK, Statutory Adoption Pay (SAP) is payable to a person of either sex with whom a child is, or is expected to be, placed for adoption under UK law.

### Statutory Maternity Pay

In the UK, you pay Statutory Maternity Pay (SMP) to female employees who take time off work to have a baby, providing they meet the statutory requirements set out in the legislation for SMP.

### Statutory Sick Pay

In the UK, you pay Statutory Sick Pay (SSP) to employees who are off work for four or more days because they are sick, providing they meet the statutory requirements set out in the legislation for SSP.

### Statutory Paternity Pay

In the UK, Statutory Paternity Pay Birth (SPPB) is payable to a person supporting the mother at the time of birth. In cases of adoption, the primary carer receives Statutory Adoption Pay, while the secondary carer receives Statutory Paternity Pay Adoption (SPPA).

### Student Employee

A student who is following a work-study program. Student employees have HRMS person records (of system type Employee) so that you can include them in your payroll.

### Succession Planning

An SSHR function which enables a manager to prepare a succession plan.

### Suitability Matching

An SSHR function which enables a manager to compare and rank a persons competencies.

### Superannuation Guarantee

An Australian system whereby employers are required to contribute a percentage of an eligible employee's earnings to a superannuation fund to provide for their retirement.

### Supplier

An internal or external organization providing contingent workers for an organization. Typically suppliers are employment or recruitment agencies.

### Supporting Objective

An objective aligned with another objective. Supporting objectives contribute to the achievement of the objectives they support.

### Tabbed Regions

Parts of a window that appear in a stack so that only one is visible at any time. You click on the tab of the required region to bring it to the top of the stack.

### Task Flows

A sequence of windows linked by buttons to take you through the steps required to complete a task, such as hiring a new recruit. System administrators can create task flows to meet the needs of groups of users.

### Tax Point

The date from which tax becomes payable.

### Template Letter

Form letter or skeleton letter that acts as the basis for creating mail merge letters. The template letter contains the standard text, and also contains field codes, which are replaced by data from the application during the mail merge process.

### Terminating Employees

You terminate an employee when he or she leaves your organization. Information about the employee remains on the system but all current assignments are ended.

### Termination Category

When employees leave an enterprise, the decision is either made by the employee or by the enterprise. When the decision is made by the employee the termination is Voluntary. When the decision is made by the enterprise, the termination is Involuntary.

DBI for HRMS uses a formula to determine which category each termination belongs to, based on the associated leaving reason.

HRMSi elsewhere refers to Termination Category as Separation Category.

### Termination Date

DBI for HRMS uses this term to specifically refer to the employee's most recent termination date prior to the effective date.

### Termination Rule

Specifies when entries of an element should close down for an employee who leaves your enterprise. You can define that entries end on the employee's actual termination date or remain open until a final processing date.

### Tips

An SSHR user assistance component that provides information about a field.

### Total Compensation Statement

A module to communicate compensations, rewards, and benefits to employees and contingent workers.

### Transaction Type

In AME, an integrating application may divide its transactions into several categories, where each category requires a distinct set of approval rules. Each set of rules is a transaction type. Different transaction types can use the same attribute name to represent values that the application fetches from different places. This enables several transaction types to share approval rules, thus facilitating a uniform approval policy across multiple transaction types.

### Transcentive

A third-party compensation management solutions provider, that provides additional information about benefits choices.

### Unit Standard

A nationally registered document that describes a standard of performance. The standard is typically defined and maintained by industry representatives.

### Unit Standard Competency

A competency that is defined in a Unit Standard and linked to a Qualifications Framework qualification.

### Upload

The process of transferring the data from a spreadsheet on your desktop, created using Web ADI, back to the Oracle HRMS application.

### User Assistance Components

SSHR online help comprising tips and instructions.

### User Balances

Users can create, update and delete their own balances, including dimensions and balance feeds.

See also: *Balances*, page Glossary-6

### User Profile Options

Features that allow system administrators and users to tailor Oracle HRMS to their

exact requirements.

See also: *Responsibility*, page Glossary-36, *Security Profile*, page Glossary-38

### User-based Security

With this type of security, the application generates the security permissions for a current user when that user logs on to a system. The system uses the security profile (can be position, supervisor, or organization-based, for example) to generate security permissions for the current user, for example, based on the user's position. An alternative to user-based security is a security profile with defined security rules, for example, to specify that the top-level position for a position-based security profile is Position A, irrespective of the current user's position.

### View

An example of an interface that you can use to download data from the Oracle HRMS application to a spreadsheet using Web ADI.

### Viewer (SSHR)

A person with view only access to an appraisal. An appraising manager or an employee in a 360 Degree Self appraisal can appoint view only access to an appraisal.

### Viewer (Web ADI)

A desktop application, such as a spreadsheet or word processing tool, that you use to view the data downloaded from Oracle HRMS via Web ADI.

### Voluntary

Term used in turnover to describe employees who have ceased employment with the enterprise of their own accord, for example, by resigning.

### Waiting Days

In the UK, statutory Sick Pay is not payable for the first three qualifying days in period of incapacity for work (PIW), which are called waiting days. They are not necessarily the same as the first three days of sickness, as waiting days can be carried forward from a previous PIW if the linking interval between the two PIWs is less than 56 days.

### WCB Account Number

In Canada, this is the account number of the provincially administered Workers' Compensation Board that the employer would use to make remittances. There would be a unique number for each of the provincially controlled boards i.e. Workplace Safety & Insurance Board of Ontario, CSST, etc.

### Work Choices

Also known as Work Preferences, Deployment Factors, or Work Factors. These can

affect a person's capacity to be deployed within an enterprise, such willingness to travel or relocate. You can hold work choices at both job and position level, or at person level.

### Worker

An employee, page Glossary-17 or a contingent worker, page Glossary-11

In DBI for HRMS workers are employees and contingent workers who report to the selected manager.

### Workers' Compensation Board

In Canada, this is a provincially governed legislative body which provides benefits to employees upon injury, disability, or death while performing the duties of the employer. Workers' Compensation Board premiums are paid entirely by the employer.

### Workflow

An Oracle application which uses charts to manage approval processes and in addition is used in SSHR to configure display values of sections within a web page and instructions.

### Workforce Measurement Type (WMT)

Groups of different units combined to measure the workforce. The most common units are headcount and full time equivalent.

### Workforce Measurement Value (WMV)

A WMT value, for example, headcount or FTE.

### Workforce Performance Management

The Oracle HRMS functions that support enterprise-directed objective setting, management, and assessment.

### Work Structures

The fundamental definitions of organizations, jobs, positions, grades, payrolls and other employee groups within your enterprise that provide the framework for defining the work assignments of your employees.
