This document contains important information that was not included in the
documentation for this release of Oracle Healthcare Data Model.

This document may be updated after it is released. To check for updates to this
document and to view other Oracle documentation, refer to the Documentation
section on the Oracle Technology Network (OTN) Web site:

http://www.oracle.com/technology/documentation/index.html

This document contains the following topics:

- Section 1, "Installation"
- Section 2, "Deinstallation"
- Section 3, "First Time Run of Intra-ETL for Oracle Healthcare Data Model"
- Section 4, "Documentation Accessibility"

1 Installation

This section includes information on important Oracle Healthcare Data Model
installation and configuration details.

1.1 Obtain and Apply IP Patch

After you run Oracle Universal Installer to install Oracle Healthcare Data Model, you
must obtain the IP Patch (p10203148_112300_generic.zip) and apply the patch to
complete the Oracle Healthcare Data Model installation. The IP Patch includes a
configuration script you run to complete the installation. The IP Patch also includes
additional documentation. To obtain the IP Patch and for the latest information about
Oracle Healthcare Data Model patch sets, go to My Oracle Support at
https://support.oracle.com

1.2 IP Patch Configuration Script Order of Installation

When you run Oracle Universal Installer to install Oracle Healthcare Data Model you
can select the install type Healthcare Data Model or Sample Reports and you can
install either of these two types in either order.

When you run Oracle Universal Installer to install Healthcare Data Model component
and then install Sample Reports, you need to run the configuration script again (or if
you install Sample Reports and then Healthcare Data Model). After running Oracle
Universal Installer to install Sample Reports, perform the following steps a second
time:
1. Navigate to the $ORACLE_HOME/ohdm/bin directory.
2. Run the command invokepatch.sh:
   
   `* ./invokepatch.sh`

   Input the password for the DBA account "SYSTEM" when you see the prompt:
   
   `Enter SYSTEM password:`

After your run the IP Patch configuration script the first time, when you rerun the script you will see certain errors that you can ignore, such as the following:

- ORA-01543: tablespace 'TBS_HDMF' already exists
- ORA-01543: tablespace 'TBS_HDM_ANL' already exists
- ORA-01543: tablespace 'TBS_HDMF_INDEX' already exists
- ORA-01543: tablespace 'TBS_HDM_ANL_INDEX' already exists

The script reports these errors when tablespaces are already found to exist in the database. This occurs when you attempt to configure Sample Reports after performing Healthcare Data Model configuration or vice-versa. Such errors are expected and can be ignored.

# 2 Deinstallation

This section includes information on important Oracle Healthcare Data Model deinstallation details.

## 2.1 Deinstallation in an Oracle Real Application Clusters Environment

When deinstallation is performed in an Oracle Real Application Clusters (Oracle RAC) environment, the Oracle Healthcare Data Model component entries are not removed from the respective inventories of the remote node(s).

In an Oracle RAC environment the deinstallation may report a message similar to the following warning message:

```
Deinstall successful
WARNING: Error while copying directory
path/product/11.2.0/dbhome_1/inventory with exclude file list
```

This issue does not affect reinstallation, as Oracle Healthcare Data Model can be reinstalled with the existing inventory entries. However, the deinstallation is not complete in an Oracle RAC environment without the removal of the component entries from the Oracle Inventory on the remote nodes of a cluster.

For more information, see bug 10118968.

Workaround: You may manually remove the Oracle Healthcare Data Model component entries from the Oracle Inventory on the remote nodes of a cluster.

## 2.2 Deinstallation with Oracle Home Environment Variable Not Set

When you run the deinstallation script, if the environment variable Oracle Home is not set then Oracle Healthcare Data Model deinstallation may produce errors.

Workaround: To deinstall Oracle Healthcare Data Model you must perform the following initial step:
- Set the ORACLE_HOME environment variable to the location of the Database where you want to deinstall Oracle Healthcare Data Model.

For example, suppose that Oracle Home is in the directory
/loc/app/oracle/product/11.2.0/

In a Bourne, Bash, or Korn shell, use these commands to set ORACLE_HOME:

$ ORACLE_HOME=/loc/app/oracle/product/11.2.0/
$ export ORACLE_HOME

In a C shell, use this command to set ORACLE_HOME

% setenv ORACLE_HOME /loc/app/oracle/product/11.2.0/

For more information, see bug 10100400.

3 First Time Run of Intra-ETL for Oracle Healthcare Data Model

The INTRA_ETL_FLW is a complete Intra-ETL process composed of subprocess flows to populate the dimensions, derived tables, and KPI fact tables along with two other subprocess flows for Oracle OLAP and Data Mining. This process flow respects the dependency of each individual program and executes the programs in the proper order.

The INTRA_ETL_FLW is the complete Intra ETL process designed using process flow of Oracle Warehouse Builder.

You can install Oracle Healthcare Data Model Intra-ETL as a project in Oracle Warehouse Builder as described in Oracle Healthcare Data Model Installation Guide. Once installed, you can execute the intra-ETL from Oracle Warehouse Builder.

Note: The explicit statistics collection needs to be done twice, once after the initial data is loaded and for a second time after Intra-ETL. If you do not perform the explicit statistics collection a second time after Intra-ETL, the queries and packages will not return.

For a first time run of the INTRA_ETL_FLW, perform the following steps:

1. EXEC DBMS_STATS.gather_schema_stats(ownname => 'OHDM_SYS', estimate_percent=>30);
2. DIM_FLW - This subprocess flow triggers the ETLs for populating dimension tables
3. EXEC DBMS_STATS.gather_schema_stats(ownname => 'OHDM_SYS', estimate_percent=>30);
4. DRVD_FLW - This subprocess flow triggers the ETLs for populating derived fact tables based on the content of the 3NF HDM tables.
5. EXEC DBMS_STATS.gather_schema_stats(ownname => 'OHDM_SYS', estimate_percent=>30);
6. KPI_FLW - This subprocess flow triggers the ETLs for populating the fact tables based on the content of the 3NF HDM tables, dimension table and derived fact tables.
7. EXEC DBMS_STATS.gather_schema_stats(ownname => 'OHDM_SYS', estimate_percent => 30);

8. OLAP_FLW - This subprocess flow triggers the execution of the OLAP package which loads data from data warehouse to Oracle Healthcare Data Model analytic workspace and prepares the analytic workspace for reporting. This flow reads ETL parameters from DWC_ETL_PARAM and DWC OLAP_ETL_PARAM tables which are documented in Oracle Healthcare Data Model Reference.

9. EXEC DBMS_STATS.gather_schema_stats(ownname => 'OHDM_SYS', estimate_percent => 30);

10. MINING_FLW - This subprocess flow triggers the data mining model.
For more information, see Oracle Healthcare Data Model Operations Guide.

4 Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at http://www.oracle.com/accessibility/.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/support/contact.html or visit http://www.oracle.com/accessibility/support.html if you are hearing impaired.
