
The Ultra Enterprise 3000 Floor Brackets consist of two brackets to attach your system to the floor. Properly installed brackets can help prevent the system from toppling over in case of extreme movement.

Installation

The brackets must be placed through the opening between the bottom of the chassis and the bottom of the system cabinet.

Brackets are designed to straddle the system from side to side, not from front to rear.

- 1. Insert one bracket in front of the baffle, as far to the front of the system as possible.**
- 2. Insert the other bracket behind the baffle, as far to the rear as possible.**
- 3. Using the brackets as templates, mark the floor to indicate the location of four mounting holes, and drill the holes.**

Note – Bracket slots are sized for M6 to M8 (1/4- to 5/16-inch) bolts. Bolts are not included since floor material and construction vary, and the type and length of the bolts will depend on the application. A civil engineering professional can help determine specific hardware requirements for your floor and mounting location.

- 4. Insert and tighten the bolts through the holes on both ends of the brackets into the holes in the floor on each side of the system.**

Ordering Sun Documents

SunDocs is a distribution program for Sun Microsystems technical documentation. You can order SunDocs documentation from SunExpress, which accepts all major credit cards and company purchase orders, in the following ways:

Telephone: 1-800-873-7869 (North America only)

Fax: 1-800-944-0661 (North America only)

World Wide Web: <http://www.sun.com/sunexpress/>
