Sun Microsystems, Inc. has intellectual property rights relating to technology embodied in the product that is described in this document. In particular, and without limitation, these intellectual property rights may include one or more of the U.S. patents listed at <http://www.sun.com/patents> and one or more additional patents or pending patent applications in the U.S. and in other countries.

This document and the product to which it pertains are distributed under licenses restricting their use, copying, distribution, and decompilation. No part of the product or of this document may be reproduced in any form by any means without prior written authorization of Sun and its licensors, if any.

Third-party software, including font technology, is copyrighted and licensed from Sun suppliers.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and in other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, docs.sun.com, Java, OpenBoot, Sun Fire, SunStorEdge, and Solaris, are trademarks or registered trademarks of Sun Microsystems, Inc. in the U.S. and in other countries.

All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and in other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc.

The OPEN LOOK and Sun™ Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

U.S. Government Rights—Commercial use. Government users are subject to the Sun Microsystems, Inc. standard license agreement and applicable provisions of the FAR and its supplements.

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Copyright 2006 Sun Microsystems, Inc., 4150 Network Circle, Santa Clara, California 95054, Etats-Unis. Tous droits réservés.

Sun Microsystems, Inc. a les droits de propriété intellectuels relatifs à la technologie incorporée dans le produit qui est décrit dans ce document. En particulier, et sans la limitation, ces droits de propriété intellectuels peuvent inclure un ou plus des brevets américains énumérés à <http://www.sun.com/patents> et un ou les brevets plus supplémentaires ou les applications de brevet en attente dans les Etats-Unis et dans les autres pays.

Ce produit ou document est protégé par un copyright et distribué avec des licences qui en restreignent l'utilisation, la copie, la distribution, et la décompilation. Aucune partie de ce produit ou document ne peut être reproduite sous aucune forme, par quelque moyen que ce soit, sans l'autorisation préalable et écrite de Sun et de ses bailleurs de licence, s'il y ena.

Le logiciel détenu par des tiers, et qui comprend la technologie relative aux polices de caractères, est protégé par un copyright et licencié par des fournisseurs de Sun.

Des parties de ce produit pourront être dérivées des systèmes Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays et licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, docs.sun.com, Java, OpenBoot, Sun Fire, SunStorEdge, et Solaris sont des marques de fabrique ou des marques déposées de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays.

Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

L'interface d'utilisation graphique OPEN LOOK et Sun™ a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciées de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui en outre se conforment aux licences écrites de Sun.

Sun Fire Entry-Level Midrange Systems Firmware 5.20.0 Release Notes

This document provides information on new and revised features, as well as late-breaking news, for firmware release 5.20.0 on Sun Fire E2900 Sun Fire V1280, Netra 1280, and Netra 1290 systems.

This document contains the following topics:

- [Firmware Documentation for Sun Fire Entry-Level Midrange \(E2900/V1280/Netra 1280/Netra 1290\) Systems](#)
 - [Features Introduced in the 5.20.0 Release](#)
 - [General Information](#)
 - [Known Limitations for Sun Fire Entry-Level Midrange Systems](#)
-

- *Sun Fire Entry-Level Midrange System Firmware 5.20.0 Release Notes*
(part number 819-5084-10)

Features Introduced in the 5.20.0 Release

This section provides a brief description of the new features in 5.20.0 for Sun Fire entry-level midrange systems.

Supported Systems

The 5.20.0 release supports the new Netra 1290 systems. The minimum firmware release for Netra 1290 systems is 5.20.0.

Supported Board Types

The 5.20.0 release supports UltraSPARC IV+ CPU/Memory boards – For information on upgrading systems with UltraSPARC IV+ CPU/Memory boards, refer to the *Sun Fire E2900/V1280 1.8GHz CPU/Memory Board Upgrade Requirements* (819-3242-10) and the *Sun Fire E2900 System Service Manual* (817-4054) or *Sun Fire V1280/Netra 1280 Systems Service Manual* (817-0510).

Availability Features Receive Further Enhancements in 5.20.0

The 5.20.0 firmware release, when used on systems with domains running the Solaris 10 Operating System, provides information on Solaris-detected hardware fault events. This information is captured by Solaris software and then communicated to the system controller. The system controller reports this information through automatic diagnosis (AD) and domain (DOM) event messages.

Commands Added or Changed for 5.20.0

The following SC command was modified in 5.20.0:

- `setupsc` – Added Log Reset and Verbose Data Reset options.

For details on this command, refer to its description in the *Sun Fire Entry-Level Midrange System Controller Command Reference Manual*.

General Information

Requirements for Entry-Level Midrange Systems

Sun Fire E2900 systems require 5.17.0 firmware or greater and the Solaris 8 2/04 or Solaris 9 4/04 operating environments as the minimum Solaris releases. Sun Fire E2900 systems and Sun Fire V1280 systems with UltraSPARC IV+ CPU/Memory boards or PCI-X I/O boards (or both) require a minimum release of 5.19.0 firmware and compatible releases of the Solaris 10 or Solaris 9 operating system (when available) as the minimum Solaris releases.

TABLE 1 Minimum Firmware and Software Versions Supported on Entry-Level Midrange Systems

Systems	Minimum Firmware Release	Minimum Solaris 8 Operating System	Minimum Solaris 9 Operating System	Minimum Solaris 10 Operating System
Sun Fire E2900 Systems	5.17.0 firmware	Solaris 8 2/04	Solaris 9 4/04	Solaris 10
Sun Fire V1280/Netra 1280 Systems	5.13.001x firmware 5.17.0 firmware	Solaris 8 2/02 Solaris 8 2/04	Solaris 9 4/03 Solaris 9 4/04	Solaris 10
Netra 1290 Systems	5.2.0.0 firmware		Solaris 9 9/05	Solaris 10 1/06

Certain hardware components require minimum firmware revisions in midrange entry-level systems, as follows:

- UltraSPARC IV CPU/Memory boards require 5.17.0 firmware or greater.
- UltraSPARC IV+ CPU/Memory boards require 5.19.0 firmware or greater.

Note – Entry-Level midrange systems with SC V2s (but without UltraSPARC IV CPU/Memory boards) can be downgraded from 5.17.0 (or greater) to 5.13.001x firmware releases, but note that those earlier releases will not support features introduced in 5.17.0, 5.18.0, 5.19.0, or 5.20.0.

Sun Fire Link Interconnect Supported On Solaris 8 and Solaris 9 Operating Systems Only

In order to use the Sun Fire Link interconnect with 5.20.0 firmware, you must use either Solaris 8 or Solaris 9 operating systems.

Firmware Upgrade and Downgrade

Instructions for updating firmware (upgrade and downgrade) are provided in the *Sun Fire Entry-Level Midrange System Administration Guide*.

Known Limitations for Sun Fire Entry-Level Midrange Systems

This section describes only those bugs with potentially significant impact. The README file lists all bugs, including those seen only internally at Sun.

Change POSIX Time Zones 2007 Transition Dates – U.S. Energy Policy Act of 2005 (BugID 6369788)

New Daylight Saving Time (DST) rules come into effect (depending upon time zone) on Sunday March 11, 2007. For example, In 2006 Pacific Standard Daylight Saving Time (PDT) starts on Sunday April 2, and ends on Sunday October 29. In 2007 PDT starts on Sunday March 11, and ends on Sunday November 4.

The DST rules have changed due to the U.S. Energy Policy Act of 2005 with changes beginning in 2007. A subset of these changes were instituted in 2006 in conjunction with the Australian Commonwealth Games.

As a reminder, the system controller (SC) will issue reboot warning messages on SC consoles, printing once a day starting on January 1, 2007. For example,

WARNING: SC was booted in year 2006, and SC current year is 2007. Please reboot the SC to get the current Daylight Saving Time rules.

To load the new DST rules, reboot the SC between January 1, 2007 and Sunday March 11, 2007.

OBP show-post-results and ScApp showboards Output for I/O Type Do Not Match (BugID 6305912)

The I/O type of some boards in entry-level midrange systems can be reported differently by OBP and ScApp. For example,

POST shows the I/O board as PCI+ :

```
...
/N0/IB6 On PCI+ I/O Board      Active  Passed
...
```

The ScApp showboards command shows the same I/O board as PCIX:

```
...
Board 6, Type: PCIX IO
port 24 - Status = Pass, Type: PCIX IO
port 25 - Status = Pass, Type: PCIX IO
...
```

When in doubt, rely on the board type reported by ScApp.

Upgrade of Firmware Changes Connection Type (BugID 5060748, 6255332)

If you change the connection type after updating firmware on entry-level midrange systems from 5.17.x, 5.18.x, 5.19.x, or 5.20.x to 5.13.x, then the new connection type (selected in 5.13.x) is not guaranteed once you update firmware back to 5.17.x, 5.18.x, 5.19.x, or 5.20.x. If you subsequently update the firmware to 5.17.x, 5.18.x, 5.19.x, or 5.20.x from 5.13.x, the original connection type that you had in 5.17.x, 5.18.x, 5.19.x, or 5.20.x before the change to 5.13.x will be restored.

Workaround: Set the connection type explicitly (using the `setupnetwork` command) to ensure system security.

`sgcn_output_line(): OBP console
blocked; message data lost (BugID
4939206)`

A message indicating that there are dropped console messages is displayed when data is being provided by Solaris software or by the OpenBoot PROM faster than the system controller can write it to the console.

Workaround: None.

Power Failure May Corrupt SEEPROM Contents (BugID 5093450)

If a power failure and SC reboot occurs during an add segment operation, one or more SEEPROM segments may become corrupted upon a reboot. However, even though these error messages display, the availability of the domains is not affected.

Workaround: None.

prtdiag Still Shows the Previous USIV+ Processor Speed After DR In USIV+ Board With Different Speed (BugID 6372446)

On Sun Fire E2900 systems containing UltraSPARC IV+ CPU/memory boards, the `prtdiag` command can report an incorrect speed if the command is executed after a DR operation that includes a change of processor speeds.

Workaround: Kill and then restart the `picld` daemon. For example,

```
# pkill picld
# /usr/lib/picl/picld
```

`panic:recursive mutex_enter, Then
panic:panic sync timeout After cfgadm
unconfigure N0.SB0::mem (BugID 6379866)`

In some systems using UltraSPARC IV+ CPU/memory boards, the use of this command,

```
# cfgadm -c unconfigure N0.SB0::memory
```

can lead to system panics.

Workaround: Apply the appropriate patches to your Solaris OS.

**SBBC Reset Reason(s) : Peer Reset,
Watchdog Reset (BugID 6412546)**

Opening multiple remote connections (such as SSH) to the SC can cause the SC to reset. Crashes appear to be more likely when multiple remote connections are running at the same time as performing domain reconfiguration (DR) operations.

Workaround: Limit the number of remote connections to the SC, especially during DR operations.
