Sun Fire V890 Supplemental
Product Note

This system is configured with a new CPU/Memory module. The speed of the CPU module is visible through a clear window on the edge of the board. It is listed in GHz. For example: 1.35 GHz.

For the latest information about configurations supported with this module, see the Sun Fire V490/V890 CPU/Memory Module Configuration Guide, found at:

http://www.sun.com/documentation

Note – The product notes shipped with the system may state that the system requires a particular version of OpenBoot™ Prom (OBP). That version may be out of date, depending on the type of CPU/Memory module(s) installed on your system. For the latest OBP requirements, see the configuration guide mentioned above.
