Part No: 819-4688
July 2006

Copyright 2006 Sun Microsystems, Inc. 4150 Network Circle, Santa Clara, CA 95054 U.S.A. All rights reserved.

Sun Microsystems, Inc. has intellectual property rights relating to technology embodied in the product that is described in this document. In particular, and without limitation, these intellectual property rights may include one or more U.S. patents or pending patent applications in the U.S. and in other countries.

U.S. Government Rights – Commercial software. Government users are subject to the Sun Microsystems, Inc. standard license agreement and applicable provisions of the FAR and its supplements.

This distribution may include materials developed by third parties.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, the Solaris logo, the Java Coffee Cup logo, docs.sun.com, Java, and Solaris are trademarks or registered trademarks of Sun Microsystems, Inc. in the U.S. and other countries. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc. Mozilla is a trademark or registered trademark of Netscape Communications Corporation in the United States and other countries.

The OPEN LOOK and Sun Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

Products covered by and information contained in this publication are controlled by U.S. Export Control laws and may be subject to the export or import laws in other countries. Nuclear, missile, chemical or biological weapons or nuclear maritime end uses or end users, whether direct or indirect, are strictly prohibited. Export or reexport to countries subject to U.S. embargo or to entities identified on U.S. export exclusion lists, including, but not limited to, the denied persons and specially designated nationals lists is strictly prohibited.

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Copyright 2006 Sun Microsystems, Inc. 4150 Network Circle, Santa Clara, CA 95054 U.S.A. Tous droits réservés.

Sun Microsystems, Inc. détient les droits de propriété intellectuelle relatifs à la technologie incorporée dans le produit qui est décrit dans ce document. En particulier, et ce sans limitation, ces droits de propriété intellectuelle peuvent inclure un ou plusieurs brevets américains ou des applications de brevet en attente aux Etats-Unis et dans d'autres pays.

Cette distribution peut comprendre des composants développés par des tierces personnes.

Certaines composants de ce produit peuvent être dérivées du logiciel Berkeley BSD, licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays; elle est licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, le logo Solaris, le logo Java Coffee Cup, docs.sun.com, Java et Solaris sont des marques de fabrique ou des marques déposées de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays. Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc. Mozilla est une marque de Netscape Communications Corporation aux Etats-Unis et à d'autres pays.

L'interface d'utilisation graphique OPEN LOOK et Sun a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciés de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui, en outre, se conforment aux licences écrites de Sun.

Les produits qui font l'objet de cette publication et les informations qu'il contient sont régis par la législation américaine en matière de contrôle des exportations et peuvent être soumis au droit d'autres pays dans le domaine des exportations et importations. Les utilisations finales, ou utilisateurs finaux, pour des armes nucléaires, des missiles, des armes chimiques ou biologiques ou pour le nucléaire maritime, directement ou indirectement, sont strictement interdites. Les exportations ou réexportations vers des pays sous embargo des Etats-Unis, ou vers des entités figurant sur les listes d'exclusion d'exportation américaines, y compris, mais de manière non exclusive, la liste de personnes qui font objet d'un ordre de ne pas participer, d'une façon directe ou indirecte, aux exportations des produits ou des services qui sont régis par la législation américaine en matière de contrôle des exportations et la liste de ressortissants spécifiquement désignés, sont rigoureusement interdites.

LA DOCUMENTATION EST FOURNIE "EN L'ETAT" ET TOUTES AUTRES CONDITIONS, DECLARATIONS ET GARANTIES EXPRESSES OU TACITES SONT FORMELLEMENT EXCLUES, DANS LA MESURE AUTORISEE PAR LA LOI APPLICABLE, Y COMPRIS NOTAMMENT TOUTE GARANTIE IMPLICITE RELATIVE A LA QUALITE MARCHANDE, A L'APTITUDE A UNE UTILISATION PARTICULIERE OU A L'ABSENCE DE CONTREFACON.

Preface

This document describes the bugs and issues you might encounter when you use the Sun™ Update Manager application and the Sun Update Connection Hosted web application to manage updates on your Solaris™ 10 operating system. The Sun Update Manager application and the Sun Update Connection Hosted web application are part of the Sun™ Update Connection System 1.0.8 product. This book consists of one chapter.

Related Books

The *Solaris 10 Reference Manual* includes information about the `smpatch` command, the `sconadm` command, and the `patchsvr` command. See the `smpatch(1M)` man page, the `sconadm(1M)` man page, and the `patchsvr(1M)` man page in this manual.

Documentation, Support, and Training

The Sun web site provides information about the following additional resources:

- [Documentation \(`http://www.sun.com/documentation/`\)](http://www.sun.com/documentation/)
- [Support \(`http://www.sun.com/support/`\)](http://www.sun.com/support/)
- [Training \(`http://www.sun.com/training/`\)](http://www.sun.com/training/)

Typographic Conventions

The following table describes the typographic conventions that are used in this book.

TABLE P-1 Typographic Conventions

Typeface	Meaning	Example
AaBbCc123	The names of commands, files, and directories, and onscreen computer output	Edit your <code>.login</code> file. Use <code>ls -a</code> to list all files. <code>machine_name% you have mail.</code>

TABLE P-1 Typographic Conventions *(Continued)*

Typeface	Meaning	Example
AaBbCc123	What you type, contrasted with onscreen computer output	<code>machine_name% su</code> <code>Password:</code>
<i>aabbcc123</i>	Placeholder: replace with a real name or value	The command to remove a file is <code>rm filename</code> .
<i>AaBbCc123</i>	Book titles, new terms, and terms to be emphasized	Read Chapter 6 in the <i>User's Guide</i> . A <i>cache</i> is a copy that is stored locally. Do <i>not</i> save the file.
		Note: Some emphasized items appear bold online.

Shell Prompts in Command Examples

The following table shows the default UNIX® system prompt and superuser prompt for the C shell, Bourne shell, and Korn shell.

TABLE P-2 Shell Prompts

Shell	Prompt
C shell	<code>machine_name%</code>
C shell for superuser	<code>machine_name#</code>
Bourne shell and Korn shell	<code>\$</code>
Bourne shell and Korn shell for superuser	<code>#</code>

Sun Update Connection System 1.0.8 Release Notes

This document describes the bugs and issues you might encounter when you use the Sun™ Update Manager application and the Sun Update Connection Hosted web application to manage updates on your Solaris™ 10 operating system. The Sun Update Manager application and the Sun Update Connection Hosted web application are part of the Sun™ Update Connection System 1.0.8 product, previously referred to as the Sun Update Connection, System Edition 1.0.x product.

These release notes have been updated with Sun Update Connection System 1.0.8 information and supplement the detailed product information in the *Sun Update Connection System 1.0.8 Administration Guide*, available at <http://docs.sun.com/app/docs/coll/1320.1>.

Required Updates

You can install the upgrade for Sun Update Connection System 1.0.8 directly. Upgrade to release 1.0.8 by installing the appropriate update on your system:

- SPARC: 121118-07
- x86: 121119-07

Requirements and Limitations

The Sun Update Connection includes the following limitations:

- **Solaris Support.** Sun Update Connection 1.0.x is designed for Solaris 10 systems. Continue to use Sun Patch Manager 2.0 to perform update management tasks on your Solaris 8 systems and on your Solaris 9 systems.
- **Solaris 10 Zones Support.** Starting with Sun Update Connection 1.0.4, the Sun Update Manager application and the `smpatch` command support the default `pkgadd` behavior from a global zone on a system where one or more local zones are installed. This default behavior enables you to use the Update Manager GUI or the `smpatch` command options from the global zone to analyze, download, install, and uninstall updates in all the zones on the system. Update Manager does not

support requests for specific updates to be installed or removed from specified zones. Instead, the application uses the default process to install or uninstall updates in all applicable zones.

- **Sun Online Account Issues.** Note these suggestions while using the Sun Update Connection suite of products.

Supply a valid email address when you register for a Sun Online Account. All email is sent to the address you supplied during registration. For example, if you forget your password and have Sun send you a new one, the password is reset and then sent to the email address you supplied.

Without a Sun Online Account, you cannot access the Update Connection web application. Save your language preference during registration. A language preference saved in the Sun Update Connection web browser application is not retained.

- **Sun Subscription Key.** Sun Update Connection 1.0.8 uses the term *subscription key* to mean the alphanumeric identification (ID) string of your Sun service contract that includes software support. Other terms that refer to this same ID include *Sun services plan ID*, *token*, and *service contract number*. Your Sun Services representative can help you to purchase a support contract that includes software support, and provide you with your current contract ID.

Known Problems and Workarounds

Bugs and issues are grouped in the following categories:

- “Sun Update Connection System Update Manager Bugs” on page 8
- “Sun Update Connection Hosted Web Application Bugs” on page 9
- “`smpatch` Bugs” on page 10

Sun Update Connection System Update Manager Bugs

The following section describes an issue that might arise when you use the Sun Update Manager application:

The selected options in the Notification dialog box of the Preferences window are not saved.
(6437063)

Description: When you select Preferences from the File menu, and click the Notifications tab, the Display Notification Icon and Menu should be selected by default. When you change this selection and choose not to Display the Notification Icon and Menu click Apply and then click OK, the change is not saved.

Cause: The `swupnot` script that starts the Notification application tries to determine if the user is running the GNOME desktop before launching (it is not CDE compatible) by checking if the `gnome-netstatus-applet` is running. If the script finds that the applet is not running, it terminates.

Workaround: To save your selection in the Notification dialog box, you must start the `gnome-netstatus-applet`. Right-click the GNOME desktop panel and select Add to Panel from the menu that appears. Select Internet from the next menu that appears and then select Network

Monitor. Now launch Update Manager, select Preferences from the File menu, and select the Notifications tab. Make your selections, click Apply and then click OK to close the Preferences window. Your selection is now saved.

Note – This workaround only applies to sessions that are running the GNOME panel. It does not apply to users running CDE or those displaying the Update Manager remotely.

Sun Update Connection Hosted Web Application Bugs

The following section lists the issues that might arise when you use the Sun Update Connection Hosted Web Application:

- The Sun Update Connection Hosted Web Browser Application starts a new default browser instead of using the one that is already open. (6263022)

Description: When you click the Manage at Sun Update Connection button, Update Manager opens a new window in your Mozilla™ 1.7 browser. Your existing browser window is not used. If you are working in Firefox, when you click the Manage at Sun Update Connection button, a new instance of Mozilla 1.7 is opened, instead of the browser you have open.

Cause: Instead of using your existing web browser window, Update Manager starts a new instance of the web browser specified as the default in the /usr/dt/bin/sdtwebclient file.

Workaround: To make Firefox the default browser on your system, edit the /usr/dt/bin/sdtwebclient file. Add the path to firefox in the line that begins with: DEFAULT_BROWSER_LIST. DEFAULT_BROWSER_LIST="location-of-firefox/firefox mozilla netscape sun_netscape netscape6." Replace location-of-firefox with the firefox command.

- Warning: Page has Expired Error Occurs When Using the Internet Explorer Back Button. (6321525)

Description: When you click the browser Back button, you might see the following error: "Warning: Page has Expired The page you requested was created using information you submitted in a form. This page is no longer available. As a security precaution, Internet Explorer does not automatically resubmit your information for you. To resubmit your information and view this Web page, click the Refresh button."

Workaround: To clear the error, follow the instructions to refresh the page. Note that you might not be able to return to the page that you requested and the tab might not be correctly aligned with the page content. Instead of using browser navigation, use the navigational tabs, buttons, and links provided by the web browser application to navigate between pages.

smpatch Bugs

This section lists issues specific to the **smpatch** command:

- Rebooting the system fails to install pending updates. (6260402)

Description: If you run the **smpatch update** command, updates that require special handling are installed at the next system restart. If you use the **reboot** command or use the Sun Java™ Desktop System reboot mechanism as superuser (log out, and choose Restart from the Logout dialog box), the pending updates are not installed. These updates are still pending installation.

Workaround: Use the **init 6** command or the **shutdown -i 6** command to restart the system and install the pending updates.

- The **smpatch (IM)** man page should be modified to remove the **JAVA_HOME** comment. (6426291)

Description: The man page instructs you to modify the **JAVA_HOME** field if you want to use the **smpatch** command with any version of Java. Solaris 10 is compatible with Java 1.5.x . The **usr/java** link should point to Java 1.5.x . so that the **smpatch** command works.
