Using the GlassFish ESB Installation CLI

This topic provides instructions that lead you through the procedures to successfully install GlassFish ESB using a command-line interface (CLI). This interface allows you to interact with software or an operating system using a terminal, remote shell, or command prompt.

Prior to attempting an installation, read *Planning for GlassFish ESB Installation*. It provides pertinent information such as supported platforms, operating system limitations, and parameter definitions. If you have any questions or problems, go to the GlassFish ESB web site at <http://www.glassfish-esb.org>.

To access all the GlassFish ESB documentation in HTML format, go to the GlassFish ESB web site at <http://wiki.open-esb.java.net/Wiki.jsp?page=GlassFishESBDocs>.

What You Need to Know

This topic contains conceptual information about the installation.

- “Overview of CLI Installations” on page 6

What You Need to Do

These topics contain the procedures for installing a Java Development Kit (JDK) and GlassFish ESB.

- “Installing the JDK Software and Setting JAVA_HOME” on page 7
- “Generating the State File for Silent Installations” on page 9
- “Installing GlassFish ESB Silently Using CLI” on page 11
- “Starting NetBeans” on page 12

Overview of CLI Installations

Before beginning the installation, read *Planning for GlassFish ESB Installation*, which contains information that is necessary for you to complete a successful install of GlassFish ESB such as supported platforms, operating system limitations, and parameter definitions. You can use a command-line installation script on any of the supported operating systems by first generating the .xml state file and then invoking the installation script. The command-line installation performs a complete installation of GlassFish ESB.

Complete Command Line Interface Installation

The following software is installed:

- NetBeans™ IDE 6.1 ML

Note – IDE is an acronym for an integrated development environment. It consists of a number of components, such as a compiler, source code editor, build tools, debugger, browser, object inspector, class hierarchy diagram, and so on. These components can be used when performing object-oriented software development. The integrated tools can also be used to build a graphical user interface (GUI).

- GlassFish v2 Update Release 2 (UR2)
- Open ESB core components
- Java Business Integration (JBI) service engines
- Java Business Integration (JBI) binding components
- Java Business Integration (JBI) component tooling

The process also installs the Sun Uninstallation software.

Caution – GlassFish ESB does not support spaces in the installation directory path.

Note – You must have the JDK™ (Java Development Kit) software installed and JAVA_HOME set prior to installing GlassFish ESB or the Installer will halt the installation. See [“Installing the JDK Software and Setting JAVA_HOME” on page 7](#) for details.

Installing the JDK Software and Setting JAVA_HOME

If you do not already have the JDK software installed or if JAVA_HOME is not set, the GlassFish ESB installation will not be successful. The following tasks provide the information you need to install the JDK software and set JAVA_HOME on UNIX or Windows systems.

The following list provides the GlassFish ESB JDK requirements by platform.

Solaris	JDK5: At least release 1.5.0_14
	JDK6: At least release 1.6.0_03
Linux (Red Hat and SUSE)	JDK5: At least release 1.5.0_14
	JDK6: At least release 1.6.0_03
Macintosh	JDK5: The latest 1.5 release supported by Apple
Microsoft Windows	JDK5: At least release 1.5.0_14
	JDK6: At least release 1.6.0_03

Caution – The GlassFish ESB Installer does not support JDK release 1.6.0_04 in the 64-bit version on the Solaris SPARC or AMD 64-bit environments.

▼ To Install the JDK Software and Set JAVA_HOME on a UNIX System

1 Install the JDK software.

a. Go to <http://java.sun.com/javase/downloads/index.jsp>.

b. Select the appropriate JDK version and click Download.

The JDK software is installed on your computer, for example, at /usr/jdk/jdk1.6.0_02. You can change this location.

2 Set JAVA_HOME.

■ Korn and bash shells:

```
export JAVA_HOME=jdk-install-dir
```

```
export PATH=$JAVA_HOME/bin:$PATH
```

- **Bourne shell:**

```
JAVA_HOME=jdk-install-dir
```

```
export JAVA_HOME
```

```
PATH=$JAVA_HOME/bin:$PATH
```

```
export PATH
```

- **C shell:**

```
setenv JAVA_HOME jdk-install-dir
```

```
setenv PATH $JAVA_HOME/bin:$PATH
```

```
export PATH=$JAVA_HOME/bin:$PATH
```

- 3 **Change the permissions to enable you to run the GlassFish ESB Installer.**

```
chmod 755 JavaCAPS.bin
```

▼ **To Install the JDK Software and Set JAVA_HOME on a Windows System**

- 1 **Install the JDK software.**

- a. Go to <http://java.sun.com/javase/downloads/index.jsp>.

- b. Select the appropriate JDK software and click Download.

The JDK software is installed on your computer, for example, at C:\Program Files\Java\jdk1.6.0_02. You can move the JDK software to another location if desired.

- 2 **Set JAVA_HOME:**

- a. Right click My Computer and select Properties.

- b. On the Advanced tab, select Environment Variables, and then edit JAVA_HOME to point to where the JDK software is located, for example, C:\Program Files\Java\jdk1.6.0_02.

Generating the State File for Silent Installations

In order to run a silent command line installation, you must first do a full GUI installation. The GUI installer generates a *state* file that provides all of the user-entered parameters that the installer requires. This section provides a procedure for generating the state file for silent installation. After you generate the silent installation state file, note its location so that you can reference it when you launch the silent installation.

After creating a configuration properties file, you are ready to perform a silent CLI installation. For more information, see [“Installing GlassFish ESB Silently Using CLI” on page 11.](#)

▼ To Generate the State File for Silent Installations

- 1 From the command line, run the GlassFish ESB GUI installer with the `--record` option, specifying where you want to save the state file. For example:

```
glassfishesb-full-installer.sh --record /home/jdoe/glassfishesb-state.xml
```

Note – For detailed information about running the GUI installer, see [Using the GlassFish ESB Installation GUI.](#)

- 2 When the GUI installer is finished, run the GlassFish ESB uninstaller and remove the GUI installation.

Note – For detailed information about running the GlassFish ESB uninstaller, see [Uninstalling GlassFish ESB.](#)

- 3 Using a text editor or XML editor, open the state file and verify that the installation properties correspond to those that you entered during the GUI installation. Here is an example of the .xml state file:
- 4 Ensure that items such as usernames, passwords, filepaths, and so on are correct, save any changes, and close the state file.

Example 1 Excerpt from the .xml State File Generated by the GlassFish ESB GUI Installer

```
<?xml version="1.0" encoding="UTF-8"?>
<state xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:noNamespaceSchemaLocation="state-file.xsd">
  <properties>
    <property name="street.address.windows-x86.en_US"/>
    <property name="country.windows-x86.en_US">United States</property>
```

```
<property name="company.windows-x86.en_US"/>

Installing GlassFish ESB Silently Using CLI

You can use the GlassFish ESB command-line installation script to perform a complete installation silently. A silent installation means that you will not interact with the Installer, nor will you see the process unless you open the directory to which you are installing.

In order to perform a silent installation, you must first generate the .xml state file. For more information, see [“Generating the State File for Silent Installations” on page 9](#).

Note – GlassFish ESB does not support spaces in the installation directory path.

▼ To Install GlassFish ESB Silently Using CLI

- Before You Begin**
- Plan your installation by reading [Planning for GlassFish ESB Installation](#), which contains information necessary for you to complete a successful installation of GlassFish ESB such as supported platforms, operating system limitations, and parameter definitions.
 - Install the JDK software and set JAVA_HOME. For more information, see [“Installing the JDK Software and Setting JAVA_HOME” on page 7](#)
 - Generate the .xml state file. For more information, see [“Generating the State File for Silent Installations” on page 9](#).

- 1 **Download the installation executable file from the GlassFish ESB Downloads page:**
<https://open-esb.dev.java.net/Downloads.html>
- 2 **If you have not done so already, copy the .xml state file to the directory where you are going to install GlassFish ESB.**

For more information, see [“Generating the State File for Silent Installations” on page 9](#).

3 Extract the installation executable file to the directory where you are going to install GlassFish ESB.

- **Windows:** glassfishesb-full-installer-windows-yyyyddd.exe
- **Solaris Sparc** glassfishesb-full-installer-solaris-sparc-yyyyddd.sh
- **Solaris —X86** glassfishesb-full-installer-solaris-x86-yyyyddd.sh
- **Linux** glassfishesb-full-installer-linux-yyyyddd.sh
- **Mac OSX X86** glassfishesb-full-installer-macosx-x86-yyyyddd.command
- **Mac OSX PPC** glassfishesb-full-installer-macosx-ppc-yyyyddd.command

4 Go to the installation directory where you copied the configuration properties file and the installation executable file and execute the file.

- **Windows:** glassfish-full-installer-windows-yyyddd.exe --silent --state \filepath\state_file_name.xml
- **Solaris and Linux:** glassfish-full-installer-platform-yyyddd.sh --silent --state /filepath/state_file_name.xml
- **Mac OSX:** glassfish-full-installer-macosx-cpu_type-yyyddd.command --silent --state /filepath/state_file_name.xml

GlassFish ESB is installed in the directory you specified.

Starting NetBeans

To start NetBeans, after the initial installation, navigate to the GlassFish ESB install directory or to the directory where the component is installed that you want to start. Run the appropriate command.

Component	From GlassFish ESB Installation Directory
NetBeans IDE	Windows GUI: Double-click the NetBeans desktop icon or select NetBeans from the Start menu Mac OSX GUI: Select the NetBeans icon in the Dock or double-click NetBeans.app in the Applications directory Windows CLI directory: <i>install-directory\netbeans.exe</i> Solaris and Linux directory: <i>install-directory/netbeans/bin</i>
