BPEL Service Engine Alert Codes

The following table lists each alert code generated by the BPEL Service Engine and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
BPCOR-5005	Info	Engine {0} status changed to {1} at {2}.
BPCOR-5008	Info	SU {1} on Engine {0} changed status to {2} at {3}.
BPCOR-5006	Info	Business process instance variable changed by API at {4}. Engine \: {0}, process\: {1}, instance\: {2}, variable\: {3}.
BPCOR-5007	Info	Business process instance {3} by API at {4} . Engine \: {0}, process\: {1}, instance\: {2}.
BPCOR-6142	Major	Business process instance terminated on unhandled fault at {4}. Engine \: {0}, process\: {1}, instance\: {2}. Cause \:
BPCOR-6144	Major	Unable to connect to database at {2}. Engine \: {0}, Cause \: {1}.
BPCOR-6146	Major	DB connection restored at {1}. Engine \: {0}.
BPCOR-7010	Critical	Engine {0} unable to create process instance for \: {1} at {3}. Cause \: {2}.

Intelligent Event Processor Service Engine Alert Codes

The following table lists each alert code generated by the Intelligent Event Processor (IEP) Service Engine and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
IEPSEaka00000	Info	Engine {0} status changed to {1} at {2}.
IEPSEaka00002	Major	Unable to connect to database at {2}. Engine : {0}, Cause : {1}.
IEPSEaka00005	Major	DB connection restored at {1}. Engine : {0}.
IEPSEaka00007	Info	SU {1} on Engine {0} changed status to {2} at {3}.

Java EE Service Engine Alert Codes

The following table lists each alert code generated by the Java EE Service Engine and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
JBISE6001		JavaEEServiceEngine: Registering End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1.
JBISE6002		JavaEEServiceEngine: End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1 registered successfully.
JBISE6003		JavaEEServiceEngine: Error occurred during registration of End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1.
JBISE6004		JavaEEServiceEngine: Web Service End point configuration not found in domain.xml.
JBISE6005		JavaEEServiceEngine: End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1 enabled successfully.
JBISE6006		JavaEEServiceEngine: End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1 disabled successfully.
JBISE6007		JavaEEServiceEngine: End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1 removed successfully.
JBISE6008		JavaEEServiceEngine: Error occurred during enabling of End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1.
JBISE6009		JavaEEServiceEngine: Error occurred during disabling of End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1.
JBISE6010		JavaEEServiceEngine: Processing incoming request for End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1.
JBISE6011		JavaEEServiceEngine: Processed incoming request for End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1 successfully.

Alert Code	Severity	Alert Text, Cause, and Action
JBISE6012		JavaEEServiceEngine: Error occurred while processing request for End Point : Service Name: Plugin insertion failed: Could not find plugin 0 , Endpoint Name: Plugin insertion failed: Could not find plugin 1.
JBISE6013		JavaEEServiceEngine : Java EE Service Engine started successfully.
JBISE6014		JavaEEServiceEngine : Error occurred during startup of Java EE Service Engine Plugin insertion failed: Could not find plugin 0.
JBISE6015		JavaEEServiceEngine : Java EE Service Engine stopped successfully. ./appserv-commons/src/java/com/sun/logging/enterprise/system/container/appclient/LogStrings.properties.

XSLT Service Engine Alert Codes

The following table lists each alert code generated by the XSLT Service Engine and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
XSLTSE-5001	Info	Initialized XSLT service engine successfully! Cause: The initialization phase for the XSLT SE completed successfully. Action: None.
XSLTSE-5002	Info	Started XSLT service engine successfully! Cause: The start phase for the XSLT SE completed successfully. Action: None.
XSLTSE-5003	Info	Stopped XSLT service engine successfully! Cause: The stop phase for the XSLT SE completed successfully. Action: None.
XSLTSE-5004	Info	Shut down XSLT service engine successfully! Cause: The shutdown phase for the XSLT SE completed successfully. Action: None.

The following table lists the Component Toolkit alert codes that are relevant to the XSLT Service Engine.

Alert Code	Severity	Alert Text, Cause, and Action
COMP TK-5001	Info	Initialized component successfully! Cause: The component's initialization phase completed successfully. Action: None.
COMP TK-5002	Info	Started component successfully! Cause: The component's start phase completed successfully. Action: None.
COMP TK-5003	Info	Stopped component successfully! Cause: The component's stop phase completed successfully. Action: None.
COMP TK-5004	Info	Shut down component successfully! Cause: The component's shutdown phase completed successfully. Action: None.
COMP TK-6012	Critical	{0} failed to close DeliveryChannel: {0} Cause: An error occurred closing the component's delivery channel, which might prevent the component from restarting. Action: Review the server log for more information as to the cause of the error.

Database Binding Component Alert Codes

The following table lists each alert code generated by the Database Binding Component and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
DBBC-E00215	Critical	Failed to deploy service unit due to\: {0}.
DBBC_E00204	Critical	Failed to initialize service unit due to\: {0}.
DBBC_E00212	Critical	Error shutting down service unit due to\: {0}.
DBBC_E00103	Critical	Failed to register status provider MBean.
DBBC_E00105	Critical	Failed to register configuration MBean.
DBBC_E00107	Critical	Failed to start the outbound receiver\: {0}.
DBBC_E00108	Critical	Failed to start the inbound receiver\: {0}.

Alert Code	Severity	Alert Text, Cause, and Action
DBBC_E01121	Critical	Failed to activate the endpoint.
DBBC_E00607	Warning	Unexpected exception\': {0}.
DBBC-E01036	Warning	An exception occurred while attempting to redeliver a message exchange with message group ID: {0}, message ID: {1}.
DBBC-E00720	Warning	Provider for service Plugin insertion failed: Could not find plugin 0 endpoint Plugin insertion failed: Could not find plugin 1 responded with an error status. Error detail is: {2}.
DBBC-E00721	Warning	Provider for service Plugin insertion failed: Could not find plugin 0 endpoint Plugin insertion failed: Could not find plugin 1 responded with an error status. No detail was provided.
DBBC-E00759	Warning	An exception occurred while processing a reply message. {0}.
DBBC_E00627	Warning	Error occurred while looking up jndi resource with jndi name.
DBBC_E00706	Warning	Failed to denormalize message. {0}.
DBBC_E00702	Warning	Failed to normalize message.
DBBC_E00622	Warning	Failed to write message.

File Binding Component Alert Codes

The following table lists each alert code generated by the File Binding Component and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00201	Critical	<p data-bbox="709 210 1239 236">Service unit {0} failed to deploy, an exception was raised. {1}</p> <p data-bbox="709 253 1256 279">Cause: Exception caught during deployment of a service unit.</p> <p data-bbox="709 296 1196 322">Action: The action to take depends on the type of alert:</p> <ol data-bbox="709 331 1330 1121" style="list-style-type: none"> <li data-bbox="709 331 1330 713">1. Endpoint lock registration error: <ul style="list-style-type: none"> <li data-bbox="746 374 1330 522">■ Persistence base directory exists but not a directory (FILEBC-E00211). Remove the non-directory entry that conflicts with the configured persistence base location or set the PersistenceBaseLoc to other path. <li data-bbox="746 539 1330 661">■ mkdir failed for the persistence base directory (FILEBC-E00212). Check the file system for permission, entry name conflict, and so on. <li data-bbox="746 678 1330 713">■ Failed to register per endpoint lock (FILEBC-E00210). <li data-bbox="709 722 1330 1121">2. Service unit deployment throws an exception: <ul style="list-style-type: none"> <li data-bbox="746 765 1330 1017">■ Application variable or application configuration resolution error. Check the corresponding application variable definitions and application configuration definitions on the target application server, as well as the tokens in related WSDL files, for any undefined application variables, application configurations, and so on. Also check for any mismatch of references and their definitions. <li data-bbox="746 1034 1330 1121">■ For other exceptions, analyze further depending on the exception message and other related messages in the server log.

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00202	Critical	<p data-bbox="646 213 1193 236">Service unit {0} failed to initialize, an exception was raised. {1}</p> <p data-bbox="646 256 1165 279">Cause: Exception caught when initializing the service unit.</p> <p data-bbox="646 300 1132 322">Action: The action to take depends on the type of alert:</p> <ol data-bbox="646 331 1268 1338" style="list-style-type: none"> <li data-bbox="646 331 1268 720">1. Endpoint lock registration error: <ul style="list-style-type: none"> <li data-bbox="682 374 1268 526">■ Persistence base directory exists but not a directory (FILEBC-E00211). Remove the non-directory entry that conflicts with the configured persistence base location or set the PersistenceBaseLoc to other path. <li data-bbox="682 543 1268 661">■ mkdir failed for the persistence base directory (FILEBC-E00212). Check the file system for permission, entry name conflict, and so on. <li data-bbox="682 678 1268 720">■ Failed to register per endpoint lock (FILEBC-E00210). <li data-bbox="646 730 1268 782">2. Endpoint validation error or endpoint uniqueness checking: Reconfigure endpoint accordingly if validation error occurs <li data-bbox="646 800 1268 1338">3. Service unit deployment throws an exception: <ul style="list-style-type: none"> <li data-bbox="682 843 1268 1090">■ Application variable or application configuration resolution error. Check the corresponding application variable definitions and application configuration definitions on the target application server, as well as the tokens in related WSDL files, for any undefined application variables, application configurations, and so on. Also check for any mismatch of references and their definitions. <li data-bbox="682 1107 1268 1225">■ Encoder reference error. Check message encoded settings for the endpoint (operation) and the availability of the corresponding encoder library. <li data-bbox="682 1242 1268 1338">■ For other exceptions, analyze further depending on the exception message and other related messages in the server log.

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00203	Critical	<p>Service unit {0} failed pre-processing (inbound endpoint locks registration), an exception was raised. {1}</p> <p>Cause: An exception caught during register per endpoint lock before starting the service unit.</p> <p>Action: Check the exception details in server log and correct the error as described below.</p> <ul style="list-style-type: none"> ■ The persistence base directory exists but not a directory (FILEBC-E00211). Remove the non-directory entry that conflicts with the configured persistence base location or set the PersistenceBaseLoc to another path. ■ mkdir failed for the persistence base directory (FILEBC-E00212). Check the file system for permission, entry name conflict, and so on. ■ Failed to register per endpoint lock (FILEBC-E00210).
FILEBC-E00204	Critical	<p>Service unit {0} failed to start, an exception was raised. {1}</p> <p>Cause: An exception was caught while starting the service unit.</p> <p>Action: Check the exception details and related error messages in the server log to correct the error.</p>
FILEBC-E00205	Critical	<p>Service unit {0} failed to stop, an exception was raised. {1}</p> <p>Cause: An exception was caught while stopping the service unit.</p> <p>Action: Check the exception details and related error messages in the server log to correct the error.</p>
FILEBC-E00206	Critical	<p>Service unit {0} failed post-processing after stop, an exception was raised. {1}</p> <p>Cause: An exception was caught while cleaning up registered locks for the endpoints in the service unit.</p> <p>Action: Cleanup includes de-registering lock entries and destination entries associated with endpoints in the service unit, and closing the IO channels for the lock files. Take the appropriate action according to the details of the error.</p>
FILEBC-E00207	Critical	<p>Service unit {0} failed to shut down, an exception was raised. {1}</p> <p>Cause: An exception was caught while shutting down the service unit.</p> <p>Action: Check the exception details and related error messages in the server log to correct the error.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00208	Critical	<p>Service unit {0} failed shutdown postprocessing, an exception was raised. {1}</p> <p>Cause: An exception was caught while cleaning up registered locks for the endpoints in the service unit.</p> <p>Action: Cleanup includes de-registering lock entries and destination entries associated with endpoints in the service units, and closing the IO channels for the lock files. Take the appropriate action according to the detail of the error.</p>
FILEBC-E00102	Critical	<p>Status provider MBean registration failed, an exception was raised. {0}</p> <p>Cause: An error occurred while registering the MBean for collecting message exchange statistics. Component initialization failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
FILEBC-E00103	Critical	<p>Configuration MBean registration failed, an exception was raised. {0}</p> <p>Cause: An error occurred while registering the MBean for runtime configuration. Component initialization failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
FILEBC-W00126	Critical	<p>An exception occurred while attempting to register the management MBean: {0}</p> <p>Cause: An error occurred while registering the MBean for component administration (list endpoints, suspend, resume endpoints, and so on). Component initialization failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
FILEBC-E00104	Critical	<p>Unable to obtain the delivery channel. {0}</p> <p>Cause: An error occurred while obtaining a delivery channel for the component.</p> <p>Action: Check the server log for related errors and details to correct the error, and then redeploy or restart the component.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00105	Critical	<p>Outbound message receiver failed to start, an exception was raised. {0}</p> <p>Cause: An error occurred when the component life cycle start() was called and the JBI container was starting outbound message receivers. The component startup failed.</p> <p>Action: Check the server log for related errors and details to determine how to correct the error, and then redeploy or restart the component.</p>
FILEBC-E00107	Critical	<p>Inbound message receiver failed to start, an exception was raised. {0}</p> <p>Cause: An error occurred when the component life cycle start() was called and the JBI container was starting inbound message receivers, The component startup failed.</p> <p>Action: Check the server log for related errors and details to determine how to correct the error, and then redeploy or restart the component</p>
FILEBC-E00108	Warning	<p>Outbound receiver failed to stop, an exception was raised. {0}</p> <p>Cause: An error occurred when the component life cycle stop() was called and the JBI container was stopping outbound message receivers. The component stop failed.</p> <p>Action: Check the server log for related errors and details to correct the error. You might need to further shutdown the component, and then restart the component to bring the component to a consistent state.</p>
FILEBC-E00109	Warning	<p>Status provider MBean deregistration failed, an exception was raised. {0}</p> <p>Cause: An error occurred when the component life cycle shutdown() was called and while the JBI container was deregistering the administration Messages Bean (collecting message exchange statistics) associated with the component. The component shutdown failed.</p> <p>Action: Check the server log for related errors and details to determine how to correct the error. You might need to restart and then shutdown the component, or uninstall and install the component to bring it to a consistent state.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00110	Warning	<p>Configuration MBean deregistration failed, an exception was raised. {0}</p> <p>Cause: An error occurred when component life cycle shutdown () was called and while the JBI container was deregistering the runtime configuration MBean associated with the component. The component shutdown failed.</p> <p>Action: Check the server log for related errors and details to determine how to correct the error. You might need to restart and then shutdown the component, or uninstall and install the component to bring the component to a consistent state.</p>
FILEBC-W00127	Warning	<p>An exception occurred while attempting to unregister the management MBean: {0}</p> <p>Cause: An error occurred when the component life cycle shutdown() was called and while the JBI container was deregistering the component management MBean (list endpoints, suspend and resume component outbound processors) associated with the component. The component shutdown failed.</p> <p>Action: Check the server log for related errors and details to determine how to correct the error. You might need to restart and then shutdown the component, or uninstall and install the component to bring the component to a consistent state.</p>
FILEBC-R00110	Warning	<p>Parsing the JBI descriptor ({0}) failed. Version information for this component is not available. An exception was raised: {1}</p> <p>Cause: A SAXException was caught when parsing descriptive info from /META-INF/jbi.xml of the component. This occurs at the end of the component life cycle start().</p> <p>Action: This warning alone does not affect the healthiness of the component life cycle since the descriptive information dumping is for information only, but check the component status and server log for other fatal error info to make sure the component is started and running.</p>
FILEBC-E00715	Critical	<p>Read error: Input file {0} does not exist or may be empty.</p> <p>Cause: The staged inbound message no longer exists or the content is empty.</p> <p>Action: For inbound processors, this error is further handled as FILEBC-E00717.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00716	Critical	<p>Input file {0} failed processing, an exception was raised: {1}</p> <p>Cause: An error occurred while the inbound worker was processing a staged inbound message. This causes the message being processed to be moved to the error message area (optionally after redelivery attempts are exhausted) along with a file containing detailed error information.</p> <p>Action: The inbound processor continues processing, but the message saved in the error message area needs manual intervention to be consumed again. For example, the message processing might fail the normalization due to malformed content. The error is further handled as FILEBC-E00717.</p>
FILEBC-E00717	Critical	<p>Input file {0} failed processing, has been moved to: {1}. Error details have been written to: {2}.</p> <p>Cause: An error occurred during inbound message processing (file read, normalization, message send, and so on).</p> <p>Action: Administrative intervention is needed to examine the error detail and other related error information in the server log to take corrective action.</p>
FILEBC-E00718	Critical	<p>Attempting to flag input file {0} for error resulted in an exception. {1}</p> <p>Cause: An error occurred when moving a staged inbound message into the error message area.</p> <p>Action: Check the server log for more details regarding the failure of error handling of the concerned inbound message. Administrative intervention of the inbound message might needed</p>
FILEBC-W00807	Warning	<p>The {0} redelivery on-failure option is not supported for InOut exchanges. The redelivery configuration will be ignored and the message exchange processing will proceed without redelivery attempts.</p> <p>Cause: On-Failure is configured for an IN-OUT exchange.</p> <p>Action: None, the redelivery setting will be ignored.</p>
FILEBC-E00720	Critical	<p>{0} message for operation {1} failed processing, an exception was raised. {2}</p> <p>Cause: This is an exception caught at the inbound processor thread level, and indicates that a severe error occurred at one polling for inbound messages. This does not terminate the poller thread, and the poller will execute next poll after the fixed polling interval.</p> <p>Action: Check the server log for error details and other related error messages to determine how to correct the error.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00724	Critical	<p>Message exchange reply status specifies an unsupported message exchange pattern of {0}</p> <p>Cause: The File BC supports InOnly and InOut message exchanges. When processing ACK/NACK responses for an inbound message routing, the reply message exchange pattern is checked. Anything other than InOnly or InOut is an indication of a software error, and the message exchange is incomplete. For example, inbound message archiving is not performed even if it is configured, the inbound message concerned remains in inbound staging area (which might be subject to recovery when the service unit restarted).</p> <p>Action: If the cause is not permanent, then the incomplete inbound message delivery might be recovered by restarting the service unit; otherwise, administrative intervention might be required to analyze the root cause and take corrective actions, and then feed the inbound message again.</p>
FILEBC-E00727	Critical	<p>Archiving processed file {0} failed, renaming it to {1} failed.</p> <p>Cause: An error occurred during post processing of inbound message routing or of outbound on-demand read, where the renaming of the staged inbound file failed. Most likely, the message remains in the staging area. For an inbound message, it might be recovered if the service unit is restarted.</p> <p>Action: Check the server log for more information on the root cause of the rename failure. Administrative intervention might be needed to correct the error, such as archiving the inbound message in the staging area to prevent it from being recovered upon service unit restart.</p>
FILEBC-E00771	Critical	<p>Failed to send InOut message</p> <p>Cause: The exception <code>javax.jbi.messaging.MessagingException</code> was caught when delivering an inbound message on message channel. The messaging exception will be rethrown, and higher level error handling of the inbound worker will eventually archive the concerned message in the error message area.</p> <p>Action: Check the server log for detailed information and the root cause of the error. Also check the error information file associated with the archived message in the error message area to help determine the action to take.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00739	Warning	<p>Robust in-only message exchanges are not supported. Message ID: {0}.</p> <p>Cause: An unsupported message exchange pattern was encountered in the outbound processor thread, the message exchange was ignored, and the outbound thread was put back to the NMR queue.</p> <p>Action: None, or change the service definition so that the unsupported exchange pattern is not used.</p>
FILEBC-E00740	Warning	<p>In-out message exchanges are not supported. Message ID: {0}</p> <p>Cause: An unsupported message exchange pattern was encountered in the outbound processor thread, the message exchange was ignored, and the outbound thread was put back to the NMR queue.</p> <p>Action: None, or change the service definition so that the unsupported exchange pattern is not used.</p>
FILEBC-E00742	Critical	<p>Message processing loop terminated, an exception was raised: {0}</p> <p>Cause: A runtime exception was thrown in the outbound processor thread main loop, an indication of a fatal software error.</p> <p>Action: Check the server log for detailed error information and the root cause if there is any. Contact support for additional assistance.</p>
FILEBC-E00741	Critical	<p>Invalid exchange pattern encountered. Message ID: {0}</p> <p>Cause: An invalid or unrecognizable exchange pattern was encountered in the outbound processor thread main loop, an indication of fatal software error. The outbound processor thread exits.</p> <p>Action: Check the server log for detailed error information and the root cause if there is any. Contact support for additional assistance.</p>
FILEBC-E00791	Critical	<p>Solicited Read Failed. service: {0}, endpoint: {1}, operation: {2}. Error was: {3}.</p> <p>Cause: An exception was caught when performing an on-demand read. A fault is generated and send to the upstream component</p> <p>Action: The fault can be handled by the application logic; that is, in the upstream component (such as the BPEL SE). Alternatively, check the server log for detailed information and the root cause of the error to determine the action to take.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00792	Critical	<p>Solicited Read Failed. But error message could not be sent to the invoking service due to: {0}.</p> <p>Cause: An exception was caught when handling error FILEBC-E00791, either from fault generation, send fault, or updating exchange error status.</p> <p>Action: Check the server log for detailed information and the root cause of the exception. Contact support for assistance.</p>
FILEBC-W00701	Warning	<p>Attempt to write a message for service: {0}, endpoint: {1}, operation: {2}, failed. Error was: {4}</p> <p>Cause: An exception was caught when the outbound processor was processing a one-way outbound write operation. There are numerous possible root causes: an IO error in file write, a file manipulation error during post operation, or an error when sending a response through message exchange, and so on.</p> <p>Action: Check the server log for detailed information and the root cause to determine the action to take.</p>
FILEBC-W00702	Warning	<p>An request-reply inbound message exchange failed to process. An exception was raised when perform the file write. {0}</p> <p>Cause: An exception was caught when performing the file write during request-reply inbound processing. There are numerous possible root causes: a file IO error, a file renaming error when moving the file from the staging area to the target, and so on.</p> <p>Action: Check the server log for detailed error information and the root cause to determine the action to take.</p>
FILEBC-W00703	Warning	<p>An inbound request-reply message failed to process. An exception was raised. {0}</p> <p>Cause: An exception was caught when processing a request-reply inbound message exchange. There are numerous possible root causes: set or send message exchange status, update endpoint status, and so on.</p> <p>Action: Check the server log for detailed information and the root cause to determine the action to take.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-W00704	Warning	<p>An outbound one-way message failed to process. An exception was raised. {0}</p> <p>Cause: An exception was caught when performing one-way outbound message routing. There are numerous possible root causes: set or send message exchange status, update endpoint status, and so on.</p> <p>Action: Check the server log for detailed information and the root cause to determine the action to take.</p>
FILEBC-E00765	Warning	<p>Maximum redelivery attempts has been exhausted, endpoint with service name {0} and endpoint name {1} will be suspended as per the configured Re-delivery on-failure option...</p> <p>Cause: The redelivery maximum is exhausted and the inbound processor thread is suspended.</p> <p>Action: Check the server log for detailed information and the root cause of the inbound messaging failure, take corrective actions, and then resume the suspended inbound processor thread with a JMX client, such as jconsole.</p>
FILEBC-E00766	Warning	<p>Failed to process the 'suspend' redelivery on-failure option for endpoint with service name {0}, endpoint name {1}: {2}</p> <p>Cause: An <code>MBeanException</code> was caught when invoking <code>suspend()</code> on the FileBC management <code>MBean</code></p> <p>Action: Check the server log for detailed error information and the root cause of the failure to determine the action to take.</p>
FILEBC-E00767	Warning	<p>Provider for service {0} endpoint {1} responded with an error status. Error detail is: {2}</p> <p>Cause: The message exchange status has been set to <code>ExchangeStatus.ERROR</code>. Redelivery might occur if it is enabled</p> <p>Action: None if the error status is transient and message exchange succeeds before redelivery is exhausted. Otherwise, the corresponding inbound message routing will fail and administrative intervention might be required to resolve the problem.</p>
FILEBC-E00768	Warning	<p>Provider for service {0} endpoint {1} responded with an error status. No detail was provided.</p> <p>Cause: Same as FILEBC-E00767 above, but without the error details from the message exchange.</p> <p>Action: Same actions as as FILEBC-E00767 above.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00769	Warning	<p>An exception occurred while attempting to redeliver a message exchange with message group ID: {0}, message ID: {1}.</p> <p>Cause: An exception was caught during an attempt to redeliver. Most likely the exception is <code>javax.jbi.messaging.MessagingException</code>, indicating an error on the messaging channel.</p> <p>Action: Check the server log for detailed information and the root cause for the redelivery failure, and then take appropriate corrective actions.</p>
FILEBC-E00301	Critical	<p>Service unit {0} deployment failed, an exception was raised. {1}</p> <p>Cause: An exception was caught when <code>deploy()</code> was called for a service unit. The root cause is most likely one of the following: service unit descriptor parsing error (corrupted service unit descriptor) or application variable loading error.</p> <p>Action: Check the server log for detailed error information to determine the action to take. This error is handled by higher level error handling as FILEBC-E00201.</p>
FILEBC-W00306	Warning	<p>There are no endpoints to create. None are listed in the <code>jbi.xml</code> for the {0} service unit {1}.</p> <p>Cause: No endpoints are found in the service unit.</p> <p>Action: None</p>
FILEBC-W00307	Warning	<p>No {0} web service definition exists for Service Unit {1} to handle.</p> <p>Cause: The WSDL document does not contain a service definition.</p> <p>Action: Check the corresponding WSDL file.</p>
FILEBC-E00304	Critical	<p>Service unit {0} initialization failed for service endpoint {1}/{2}, an exception was raised. {3}</p> <p>Cause: An exception was caught when <code>init()</code> was called for a service unit.</p> <p>Action: Check the server log for detailed error information and the root cause, and take appropriate corrective actions. Note that this error is handled as a sub-case by higher level error handling as FILEBC-E00202.</p>
FILEBC-E00308	Critical	<p>Service unit {0} initialization failed, an exception was raised. {1}</p> <p>Cause: Same as FILEBC-E00304 above, but without current endpoint information.</p> <p>Action: Same as FILEBC-E00304 above.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FILEBC-E00305	Critical	<p>Service unit {0} start failed for service endpoint {1}/{2}, an exception was raised. {3}</p> <p>Cause: An exception was caught when start() was called for a service unit.</p> <p>Action: Check the server log for detailed error information and the root cause, and take appropriate corrective actions. Note that this error is handled as a sub-case by higher level error handling as FILEBC-E00204.</p>
FILEBC-E00306	Critical	<p>Service unit {0} start failed, an exception was raised. {1}</p> <p>Cause: Same as FILEBC-E00305 above, but endpoint information is not available.</p> <p>Action: Same as FILEBC-E00305 above.</p>
FILEBC-E00307	Critical	<p>Inbound message processor start failed, an exception was raised. {0}</p> <p>Cause: An exception was caught when starting inbound processors for a service unit. This is a sub-process when a service unit start() is called.</p> <p>Action: Check the server log for detailed error information and the root cause to determine the action to take. Note that this error is handled by higher level error handling as a sub-case of FILEBC-E00305 or FILEBC-E00306.</p>

FTP Binding Component Alert Codes

The following table lists each alert code generated by the FTP Binding Component and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
FTPBC-E001036	Severe	<p>Cannot get Delivery Channel from context: {0}</p> <p>Cause: The exception <code>javax.jbi.messaging.MessagingException</code> was caught when initializing and setting the messaging channel during component startup. The component is not started.</p> <p>Action: Check the server log for details and the root cause to determine the action to take.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FTPBC-E001037	Severe	<p>Failed to start the outbound receiver: {0}</p> <p>Cause: The exception <code>java.lang.Exception</code> was caught when starting outbound receivers during component startup. The component was not started.</p> <p>Action: Check the server log for details and the root cause to determine the action to take.</p>
FTPBC-E001038	Severe	<p>Failed to start the inbound receiver: {0}</p> <p>Cause: The exception <code>java.lang.Exception</code> was caught when starting inbound receivers during component startup. The component was not started.</p> <p>Action: Check the server log for details and the root cause to determine the action to take.</p>

Alert Code	Severity	Alert Text, Cause, and Action
FTPBC-E002001	Severe	<p data-bbox="711 210 1053 236">Failed to deploy service unit due to: {0}</p> <p data-bbox="711 253 1268 305">Cause: The exception <code>java.lang.Exception</code> was caught when deploying the service unit, and deployment failed.</p> <p data-bbox="711 322 1139 348">Action: The action to take depends on the error:</p> <ol data-bbox="711 357 1328 1203" style="list-style-type: none"> <li data-bbox="711 357 1328 826">1. Per endpoint persist store creation error: <ul data-bbox="746 401 1328 826" style="list-style-type: none"> <li data-bbox="746 401 1328 652">■ The FTP BC uses a local file system directory as the persistence location for saving operational data, such as recovery logs, persisted sequence files, and so on. Subdirectories are created per Service Assembly, per service unit, per endpoint, and per operation. If anything goes wrong due to permission, name conflict, and so on, this exception will be thrown. Check the file system for permission, entry name conflict, and correct the error. <li data-bbox="746 670 1328 826">■ Failed to register per operation composite lock: The lock is a concurrent control mechanism for clustering support (FTPBC-E002010). FTPBC-W004013	Warning	Can not locate recovery log for message ID = {0}, path= {1}, serviceName={2}, endpointName={3}.

HL7 Binding Component Alert Codes

The following table lists each alert code generated by the HL7 Binding Component and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
HL7BC-E0152	Critical	<p>Cannot get Delivery Channel from context \: {0}</p> <p>Cause: An error occurred while obtaining a delivery channel for the component.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HL7BC-E0153	Critical	<p>Failed to start the outbound receiver \: {0}</p> <p>Cause: An error occurred when component life cycle start() was called and the JBI container was starting outbound receivers. Starting the component failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
HL7BC-E0154	Critical	<p>Failed to start the inbound receiver \: {0}</p> <p>Cause: An error occurred when the component life cycle start() was called and the JBI container was starting inbound receivers. Starting the component failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
HL7BC-W0107	Warning	<p>Failed to stop the inbound receiver \: {0}</p> <p>Cause: An error occurred when the component life cycle stop() was called and the JBI container was stopping inbound receivers. Stopping the component failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
HL7BC-W0108	Warning	<p>Failed to stop the outbound receiver \: {0}</p> <p>Cause: An error occurred when the component life cycle stop() was called and the JBI container was stopping outbound receivers. Stopping the component failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
HL7BC-E0155	Critical	<p>Failed to register status provider MBean. An exception was raised \:{0v}</p> <p>Cause: An error occurred while registering an MBean for collecting message exchange statistics, and component initialization failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
HL7BC-E0156	Critical	<p>Failed to register configuration MBean. An exception was raised\:{0}</p> <p>Cause: An error occurred while registering an MBean for runtime configuration, and component initialization failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HL7BC-E0157	Critical	<p>Failed to register Administration MBean. An exception was raised\: {0}</p> <p>Cause: An error occurred while registering an MBean for component administration (list endpoints, suspend, resume endpoints, and so on). Component initialization failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
HL7BC-W0109	Warning	<p>Failed to un-register status provider MBean for {0}. An exception was raised\: {1}</p> <p>Cause: An error occurred when component life cycle shutdown() was called and while the JBI container was unregistering a status provider MBean (collecting message exchange statistics) associated with the component. Shutting down the component failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component. You may need to uninstall and install the component to bring the it to a consistent state.</p>
HL7BC-W0110	Warning	<p>Failed to un-register runtime configuration MBean for {0}. An exception was raised\: {1}</p> <p>Cause: An error occurred when component life cycle shutdown() was called and while the JBI container was unregistering a runtime configuration MBean associated with the component. Shutting down the component failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component. You may need to uninstall and install the component to bring the it to a consistent state.</p>
HL7BC-W0111	Warning	<p>Failed to un-register Administration MBean for {0}. An exception was raised\: {1}</p> <p>Cause: An error occurred when component life cycle shutdown() was called and while the JBI container was unregistering a component management MBean (list endpoints, suspend, and resume component outbound processors) associated with the component. Shutting down the component failed.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component. You may need to uninstall and install the component to bring the it to a consistent state.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HL7BC-W0112	Warning	<p>Parsing the JBI descriptor ({0}) failed. Version information for this component is not available. An exception was raised. {1}</p> <p>Cause: A SAXException was caught when parsing descriptive information from /META-INF/jbi.xml of the component. This occurs at the end of the component lifecycle start().</p> <p>Action: This warning alone does not affect the component lifecycle since the descriptive information dumping is for information only, but check the component status and server log for other fatal errors to make sure the component is started and running.</p>
HL7BC-E0158		<p>Service unit {0} failed to deploy, an exception was raised. {1}</p> <p>Cause: An exception was caught during service unit deployment.</p> <p>Action: Take one of the following actions, depending on the error: (1) (1.1) (1.2)</p> <ul style="list-style-type: none"> ■ If there is an Application Variable or Application Configuration resolution error, check the corresponding application variable definitions and application configuration definitions on the target application server. Also check the tokens in related WSDL documents for any undefined application variables or application configurations, or for any mismatch of references and their definitions. ■ For other exceptions, check the error details in the server log to determine how to correct the error.
HL7BC-E0159	Critical	<p>Failed to initialize service unit {0} due to \</p> <p>Cause: An exception was caught during service unit initialization.</p> <p>Action: Take one of the following actions, depending on the error:</p> <ul style="list-style-type: none"> ■ For an endpoint validation error, such as endpoint uniqueness checking, reconfigure the endpoint accordingly. ■ If service unit initialization throws the exception: <ul style="list-style-type: none"> ■ For an Application Configuration resolution error, check the application configuration definition on the target application server and corresponding references. ■ For an encoder reference error, check the message encoded settings for the endpoint (operation) and the availability of the corresponding encoder library. ■ For other exceptions, check the error details in the server log to determine how to correct the error.

Alert Code	Severity	Alert Text, Cause, and Action
HL7BC-E0160	Critical	<p>Service unit {0} failed to shut down, an exception was raised. {1}</p> <p>Cause: An exception was caught while shutting down the service unit.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
HL7BC-E0161	Critical	<p>Service unit {0} failed to start, an exception was raised. {1}</p> <p>Cause: An exception was caught while starting the service unit.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component. For a port already in use error, make sure the configured port used for the inbound service unit does not conflict with the ports that are already in use.</p>
HL7BC-E0162	Critical	<p>Service unit {0} failed to stop, an exception was raised. {1}</p> <p>Cause: An exception was caught while stopping the service unit.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component.</p>
HL7BC-E0179	Critical	<p>Failed to deploy service unit {0} due to \: {1}</p> <p>Cause: An exception was caught when deploy() was called for the service unit. The root cause is most likely either a service unit descriptor parsing error (corrupted descriptor) or an application variable loading error.</p> <p>Action: Check the error details in the server log to determine how to correct the error, and then redeploy or restart the component. This error is handled by higher-level error handling than HL7BC-E0158.</p>
HL7BC-W0116	Warning	<p>The service unit {0} does not contain any WSDL(s) for which the HL7 Binding Component is responsible</p> <p>Cause: The WSDL document in use does not contain a service definition.</p> <p>Action: Verify the service in the corresponding HL7 service WSDL document.</p>
HL7BC-E0180	Critical	<p>Failed to Initialize the end point with service name {0} and endpoint name {1} \: {2}</p> <p>Cause:</p> <p>Action:</p>

Alert Code	Severity	Alert Text, Cause, and Action
HL7BC-E0181	Critical	Failed to Initialize the null end point with service name {0} and exception is \= {1} Cause: Action:
HL7BC-E0182	Critical	Failed to start the end point with service name {0} and endpoint name {1} \: {2} Cause: Action:
HL7BC-E0183	Critical	Failed to start the null end point with service name {0} and exception is {1} Cause: Action:
HL7BC-E0184	Critical	Failed to start inbound message processor for endpoint \: {0} Cause: Action:
HL7BC-E0325	Critical	Failed to register Connection Monitor MBean. An exception was raised \:{0} Cause: Action:
HL7BC-W0130	Warning	Failed to un-register Connection Monitor MBean for {0}. An exception was raised\: {1} Cause: Action:
HL7BC-W0106	Warning	Failed to obtain state of service endpoint {0},{1} during attempted enumeration of inactive endpoints Cause: Action:
HL7BC-W0105	Warning	Failed to obtain state of service endpoint {0},{1} during attempted enumeration of active endpoints Cause: Action:

Alert Code	Severity	Alert Text, Cause, and Action
HL7BC-W0005	Warning	About to suspend endpoint\: serviceName\= {0}, endpointName\={1}. Cause: Action:
HL7BC-E0190	Critical	MBeanException caught when try to suspend endpoint (redelivery)\: serviceName\= {0}, endpointName\= {1}, error message\={2}. Cause: Action:
HL7BC-E0016	Critical	Failed to create HL7 Normalizer due to error\={0} Cause: Action:
HL7BC-E0194	Critical	Unable to locate a {0} endpoint with name {1} of service {2}; fail on processing message exchange with ID {3} Cause: Action:
HL7BC-E0195	Critical	Fail to process message exchange with ID {0} as the endpoint with name {1} of service {2} is in suspended state Cause: Action:
HL7BC-E0201	Critical	Failed to set the status on the message exchange with ID {0} and pattern {1} due to error\: {2} Cause: Action:
HL7BC-E0202	Critical	Failed to send the message exchange with ID {0} and pattern {1} on the delivery channel due to error\: {2} Cause: Action:
HL7BC-E0203	Critical	Received the following error on the message exchange with ID {0} and pattern {1}\: {2} Cause: Action:

HTTP Binding Component Alert Codes

The following table lists each alert code generated by the HTTP Binding Component and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-S00800	critical	Failed to process message exchange. Cause: A generic exception was thrown for problems encountered when processing message exchanges from the NMR. In most cases, nested exceptions will point to the specific problems. Action: Depending on the nested exception, different recourse actions may be needed. Check the server log for additional information.

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-S00801	critical	<p>Failed to accept message exchange from the NMR. This is not a recoverable error. HTTP Binding Component will stop accepting from NMR.</p> <p>Cause: Something is seriously wrong in the NMR. Messages cannot be delivered to the HTTP Binding Component properly.</p> <p>Action: Report the issue immediately.</p>
HTTPBC-E00720	warning	<p>Provider for service Plugin insertion failed: Could not find plugin 0 endpoint Plugin insertion failed: Could not find plugin 1 responded with an error status. Error detail is: {2}</p> <p>Cause: The HTTP Binding Component got an ERROR status when processing a message exchange from the NMR. The cause of the error will be captured in the exception message.</p> <p>Action: Depending on the error itself, it is best to examine the error message detail before taking any actions.</p>
HTTPBC-E00721	warning	<p>Provider for service Plugin insertion failed: Could not find plugin 0 endpoint Plugin insertion failed: Could not find plugin 1 responded with an error status. No detail was provided.</p> <p>Cause: The HTTP Binding Component got an ERROR status when processing a message exchange from the NMR, but there is no error detail given by the component that set the ERROR status.</p> <p>Action: Report the issue.</p>
HTTPBC-E00751	warning	<p>Message exchange {0} cannot be processed because its exchange pattern, robust in-only, is not supported</p> <p>Cause: Robust in-only is not a supported exchange pattern.</p> <p>Action: Make sure the HTTP/SOAP WSDL has either an in-only or in-out exchange pattern. See JBI 1.1 specification or WSDL 1.1 specification for details on exchange patterns.</p>
HTTPBC-W00758	warning	<p>An exception occurred while processing a request message. {0}</p> <p>Cause: Encountered an issue when trying to prepare the SOAP request, or when invoking an external webservice using the SOAP request. There can be a number of possible causes: denormalization problem, network issues, external service availability issues, and so forth.</p> <p>Action: Check the server log to determine the actual cause before taking any recourse actions.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-E00759	warning	<p>An exception occurred while processing a reply message. {0}</p> <p>Cause: Encountered an issue when preparing or sending a SOAP response back to the webservice client. There can be a number of problems: message denormalization error, transport/network issues, and so forth.</p> <p>Action: Check the server log to determine the actual cause before taking any recourse actions.</p>
HTTPBC-E00775	warning	<p>An exception occurred while processing message exchange {0}</p> <p>Cause: Setting an unsupported exchange pattern on the message exchange.</p> <p>Action: Nothing can be done to recover from this error, but make sure that only in-only or in-out exchanges are used.</p>
HTTPBC-E00776	critical	<p>Failed to create SOAP normalize/denormalizer. {0}</p> <p>Cause: Internal error. HTTP Binding Component is not able to instantiate the SOAP message normalization or denormalizer.</p> <p>Action: Report the issue.</p>
HTTPBC-E00777	warning	<p>Failed to create HTTP normalizer. {0}</p> <p>Cause: The HTTP Binding Component is not able to instantiate the HTTP binding message normalizer or denormalizer.</p> <p>Action: Report the issue.</p>
HTTPBC-E00778	warning	<p>Failed to create OutboundMessageProcessor. {0}</p> <p>Cause: Internal error. HTTP Binding Component is not able to set up the required environment to process message exchanges.</p> <p>Action: Report the issue.</p>
HTTPBC-E00779	warning	<p>An exception occurred while attempting to sending a reply</p> <p>Cause: The HTTP Binding Component is not able to send an ACK message through the NMR.</p> <p>Action: Nothing can be done, unrecoverable error. Report the issue.</p>
HTTPBC-E00780	warning	<p>An exception occurred while attempting to set the status of a message exchange</p> <p>Cause: The HTTP Binding Component is not able to set a message exchange status. This can be caused by an illegal state change or NMR issues.</p> <p>Action: Nothing can be done, report the issue.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-E00805	warning	<p>Failed to process the 'suspend' redelivery on-failure option for endpoint with service name Plugin insertion failed: Could not find plugin 0, endpoint name Plugin insertion failed: Could not find plugin 1: {2}</p> <p>Cause: The HTTP Binding Component found a "suspend" on-failure option configured for an in-out exchange. This is not supported.</p> <p>Action: Do not use a "suspend" on-failure option on in-out exchanges.</p>
HTTPBC-E00806	warning	<p>Maximum redelivery attempts have been exhausted, endpoint with service name Plugin insertion failed: Could not find plugin 0 and endpoint name Plugin insertion failed: Could not find plugin 1 will be suspended per the configured redelivery on-failure option.</p> <p>Cause: Informational warning message. HTTP Binding Component is about to suspend the endpoint when all retries are exhausted.</p> <p>Action: Nothing needs to be done. This is a warning message just to let the user know the endpoint is about to be suspended.</p>
HTTPBC-E01036	warning	<p>An exception occurred while attempting to redeliver a message exchange with message group ID: {0}, message ID: {1}.</p> <p>Cause: Found an error trying to redeliver a message exchange.</p> <p>Action: Check the server log and report the issue.</p>
HTTPBC-E01050	warning	<p>Received an invalid address URL {0} value on the org.glassfish.openesb.address.url normalized message property. Will proceed with normal service invocation using the default configured address URL.</p> <p>Cause: The org.glassfish.openesb.address.url NM property is used to overwrite the soap:address that is used to invoke an external service, but the NM property doesn't have a valid URL value.</p> <p>Action: Make sure a valid URL is assigned to the NM property.</p>
HTTPBC-E01051	warning	<p>Failed to create a javax.xml.ws.Dispatch object required to invoke a (external) service for endpoint {0} defined in WSDL {1} in composite application {2}.</p> <p>Cause: The HTTP Binding Component is not able to instantiate the JAX-WS Dispatch client. There can be issues in the Metro layer.</p> <p>Action: Check the server log and report an issue.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-E01052	warning	<p>The value set on the org.glassfish.openesb.address.url normalized message property is invalid. This property is expected to be of String type only.</p> <p>Cause: Found a non-String type value for the org.glassfish.openesb.address.url NM property.</p> <p>Action: Make sure that a string representing a valid URL is assigned to the NM property.</p>
HTTPBC-E00151	warning	<p>Unable to find component that provisions endpoint {0}. Ensure that the service unit for the provisioning component has been deployed.</p> <p>Cause: The HTTP Binding Component is not able to locate the provider for the service endpoint to which it is about to send the message exchange through the NMR.</p> <p>Action: Make sure that the SA is deployed and started properly. If everything looks correct but the error persists, report the issue.</p>
HTTPBC-E00701	warning	<p>Failed to locate the operation in the requested endpoint {0} that matches the message signature</p> <p>Cause: the HTTP Binding Component is not able to find an operation name or information in the SOAP/HTTP request to match the WSDL definition.</p> <p>Action: Double check the request message to make sure it matches the service definition.</p>
HTTPBC-E00741	critical	<p>SOAP message validator error: {0}</p> <p>Cause: The SOAP request has a critical problem that can keep the message from being processed properly.</p> <p>Action: Check the nested validation error in the server log and fix the validation error accordingly. Note: the HTTP Binding Component is WS-I basic profile compliant, but it also allows for legacy SOAP message exchanges, such as RPC-encoded, doc-literal with complex type messages.</p>
HTTPBC-E00748	warning	<p>An exception occurred while processing message exchange {0} for {1}</p> <p>Cause: Problems were encountered while processing the SOAP request. This can be a number of issues including a SOAP message validation error, JBI normalization error, and so forth.</p> <p>Action: Check the nested exception that has the detailed description of the specific problem.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-E00749	warning	<p>Invalid/unsupported HTTP verb encountered: {0}</p> <p>Cause: Encountered an unsupported HTTP operation. The supported requests are: POST and GET.</p> <p>Action: Make sure the HTTP client sends either a GET or POST request. For any other operation mode, use the REST binding component instead.</p>
HTTPBC-E00750	warning	<p>Unsupported message type: {0}</p> <p>Cause: Got a request message that is neither SOAP nor a valid text/xml message.</p> <p>Action: Check the request client to make sure that any request coming to the ESB conforms to the corresponding WSDL definition.</p>
HTTPBC-E00751	warning	<p>Message exchange {0} cannot be processed because its exchange pattern, robust in-only, is not supported</p> <p>Cause: Unsupported message exchange pattern: robust in-only.</p> <p>Action: Modify the WSDL definition to make sure that only in-only or in-out exchanges are used</p>
HTTPBC-E00771	warning	<p>Failed to send InOnly message</p> <p>Cause: The HTTP Binding Component failed to send the in-only message exchange to the downstream component through the NMR.</p> <p>Action: Report the issue.</p>
HTTPBC-E00772	warning	<p>Failed to send InOut message</p> <p>Cause: The HTTP Binding Component failed to send the in-out message exchange to the downstream component through the NMR.</p> <p>Action: Report the issue.</p>
HTTPBC-E00773	warning	<p>The requested endpoint {0} does not have any defined operations</p> <p>Cause: The HTTP Binding Component couldn't locate the operation name associated with the SOAP or HTTP message.</p> <p>Action: Double check the WSDL definition to make sure a valid operation name is specified.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-E00774	warning	<p>Message Exchange Pattern {0} is invalid for endpoint {1}</p> <p>Cause: Found an invalid message exchange pattern used in the service WSDL. Supported ones are: in-out and in-only.</p> <p>Action: Double check the service WSDL to make sure that only only in-out and in-only exchange patterns are used.</p>
HTTPBC-E00805	warning	<p>Failed to process the 'suspend' redelivery on-failure option for endpoint with service name Plugin insertion failed: Could not find plugin 0, endpoint name Plugin insertion failed: Could not find plugin 1: {2}</p> <p>Cause: The HTTP Binding Component failed to perform the "suspend" operation on the named endpoint. This is for the endpoint which has the "suspend" redelivery on-failure option configured.</p> <p>Action: Report the issue.</p>
HTTPBC-E00101	critical	<p>{0} failed to start. {1}</p> <p>Cause: The HTTP Binding Component cannot be started.</p> <p>Action: Check the server log for the reason why the component cannot be started, and report the issue.</p>
HTTPBC-E00141	critical	<p>Cannot obtain binding channel from context. {0}</p> <p>Cause: The HTTP Binding Component is not able to obtain the service delivery channel (NMR).</p> <p>Action: Nothing can be done on the application side. Report the issue.</p>
HTTPBC-E00152	warning	<p>Failed to parse the descriptor file for identity information; file descriptor file is {0}</p> <p>Cause: The HTTP Binding Component failed to parse the component identification portion of the component descriptor file.</p> <p>Action: Report the issue.</p>
HTTPBC-E00153	warning	<p>Failed to read the descriptor file for identity information; descriptor file is {0}</p> <p>Cause: The HTTP Binding Component is not able to locate the component descriptor file in order to perform the component startup operation.</p> <p>Action: Report the issue.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-E00154	warning	<p>Failed to create a Document Builder to parse the descriptor file for identity information; descriptor file is {0}</p> <p>Cause: Internal error. HTTP Binding Component is not able to instantiate the DOM parser to parse the component descriptor file.</p> <p>Action: Report the issue.</p>
HTTPBC-R00101	info	<p>{0} started with the following configuration:</p> <p>Cause: Normal informational message. This captures all of the HTTP Binding Component configurations and default values, if applicable, in the server log.</p> <p>Action: Nothing.</p>
HTTPBC-R00103	info	<p>{0} shut down</p> <p>Cause: Normal lifecycle informational message to indicate that the component is shutting down.</p> <p>Action: Nothing.</p>
HTTPBC-R00105	info	<p>{0} stopped</p> <p>Cause: Normal lifecycle informational message to indicate that the component is being stopped.</p> <p>Action: Nothing.</p>
HTTPBC-E00104	critical	<p>Failed to stop {0}. {1}</p> <p>Cause: The HTTP Binding Component failed to stop. This can be caused by a number of issues.</p> <p>Action: Report an issue.</p>
HTTPBC-W00120	critical	<p>An exception occurred while attempting to register the status provider MBean: {0}</p> <p>Cause: The HTTP Binding Component is not able to register the Statistics MBean.</p> <p>Action: Report the issue.</p>
HTTPBC-W00121	critical	<p>An exception occurred while attempting to register the extension MBean: {0}</p> <p>Cause: The HTTP Binding Component is not able to register the required extension MBean.</p> <p>Action: Report the issue.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-W00122	critical	<p>An exception occurred while attempting to register the runtime configuration MBean: {0}</p> <p>Cause: The HTTP Binding Component is not able to register the runtime configuration MBean.</p> <p>Action: Report the issue.</p>
HTTPBC-W00123	critical	<p>An exception occurred while attempting to deregister the status provider MBean: {0}</p> <p>Cause: The HTTP Binding Component is not able to unregister the Statistics MBean when it is shutting down.</p> <p>Action: Report the issue.</p>
HTTPBC-W00124	warning	<p>An exception occurred while attempting to unregister the extension MBean: {0}</p> <p>Cause: The HTTP Binding Component is not able to unregister the extension MBean when it is shutting down.</p> <p>Action: Report the issue.</p>
HTTPBC-W00125	critical	<p>An exception occurred while attempting to unregister the runtime configuration MBean: {0}</p> <p>Cause: The HTTP Binding Component is not able to unregister the runtime configuration MBean when it is shutting down.</p> <p>Action: Report the issue.</p>
HTTPBC-W00126	critical	<p>An exception occurred while attempting to register the management MBean: {0}</p> <p>Cause: The HTTP Binding Component is not able to register the endpoint monitoring/management MBean.</p> <p>Action: Report the issue.</p>
HTTPBC-W00127	critical	<p>An exception occurred while attempting to unregister the management MBean: {0}</p> <p>Cause: The HTTP Binding Component is not able to unregister the endpoint monitoring/management MBean when it is shutting down.</p> <p>Action: Report the issue.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-W01303	info	<p>sun-http-binding is unable to locate an inbound (consuming) endpoint for endpoint ID Plugin insertion failed: Could not find plugin 0. The endpoint ID is either invalid or it does not represent a valid inbound (consuming) endpoint targeted for this binding. The current resume() call will be ignored.</p> <p>Cause: The HTTP Binding Component is not able to locate the endpoint name specified for the "resume" operation.</p> <p>Action: Double check the endpoint name to ensure that it is a valid endpoint name that the HTTP Binding Component provides services for before passing it as an argument to the "resume" operation.</p>
HTTPBC-W01304	critical	<p>sun-http-binding is unable to locate an inbound (consuming) endpoint for endpoint ID Plugin insertion failed: Could not find plugin 0. The endpoint ID is either invalid or it does not represent a valid inbound (consuming) endpoint targeted for this binding. The current suspend() call will be ignored.</p> <p>Cause: The HTTP Binding Component is not able to locate the endpoint name specified for the "suspend" operation.</p> <p>Action: Double check the endpoint name to ensure that it is a valid endpoint name that the HTTP Binding Component provides services for before passing it as an argument to the "suspend" operation.</p>
HTTPBC-W01305	info	<p>sun-http-binding is unable to locate an inbound (consuming) endpoint for endpoint ID Plugin insertion failed: Could not find plugin 0. The endpoint ID is either invalid or it does not represent a valid inbound (consuming) endpoint targeted for this binding. The current isEndpointActive() call returns 'false' by default.</p> <p>Cause: The HTTP Binding Component is not able to locate the endpoint name specified for the "isEndpointActive" operation.</p> <p>Action: Double check the endpoint name to ensure that it is a valid endpoint name that the HTTP Binding Component provides services for before passing it as an argument to the "isEndpointActive" operation.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-W01306	info	<p>resume() operation only applies to inbound(consuming) endpoints. Ignoring current resume() request because endpoint with the ID of Plugin insertion failed: Could not find plugin 0 is not a consumer endpoint.</p> <p>Cause: The endpoint name passed to the "resume" operation does not apply to an endpoint for which the HTTP Binding Component provides service.</p> <p>Action: Double check the endpoint name to ensure that it is a valid endpoint name that the HTTP Binding Component provides services for before passing it as an argument to the "resume" operation.</p>
HTTPBC-W01307	info	<p>suspend() operation only applies to inbound(consuming) endpoints. Ignoring current suspend() request because endpoint with the ID of Plugin insertion failed: Could not find plugin 0 is not a consumer endpoint.</p> <p>Cause: The endpoint name passed to the "suspend" operation does not apply to an endpoint for which the HTTP Binding Component provides service.</p> <p>Action: Double check the endpoint name to ensure that it is a valid endpoint name that the HTTP Binding Component provides services for before passing it as an argument to the "suspend" operation.</p>
HTTPBC-E00201	critical	<p>Deployment failed. {0}</p> <p>Cause: The HTTP Binding Component failed to deploy the application. There can be a number of reasons for the failure.</p> <p>Action: Check the nested exception message in the server log. If it is an application error, fix it according to the exception message and redeploy the application again. If it is an HTTP Binding Component issue, report the problem.</p>
HTTPBC-E00203	critical	<p>Initialization failed. {0}</p> <p>Cause: The HTTP Binding Component failed to perform the init() lifecycle call on the application. There can be a number of reasons for the failure.</p> <p>Action: Check the nested exception message in the server log. If it is an application error, fix it according to the exception message and redeploy or restart the application again. If it is an HTTP Binding Component issue, report the problem.</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-E00205	critical	<p>Start failed. {0}</p> <p>Cause: The HTTP Binding Component failed to perform the start() lifecycle call on the application. There can be a number of reasons for the failure.</p> <p>Action: Check the nested exception message in the server log. If it is an application error, fix it according to the exception message and redeploy or restart the application again. If it is an HTTP Binding Component issue, report the problem.</p>
HTTPBC-E00206	critical	<p>Stop failed</p> <p>Cause: The HTTP Binding Component failed to stop the application. There can be a number of reasons for the failure.</p> <p>Action: Check the nested exception message in the server log. If it is an application error, fix it according to the exception message and try to stop the application again. If it is an HTTP Binding Component issue, report the problem.</p>
HTTPBC-E00210	critical	<p>Shutdown failed</p> <p>Cause: The HTTP Binding Component failed to shut down the application. There can be a number of reasons for the failure.</p> <p>Action: Check the nested exception message in the server log. If it is an application error, fix it according to the exception message and try to shut down the application again. If it is an HTTP Binding Component issue, report the problem.</p>
HTTPBC-W00671	warning	<p>An exception occurred while attempting to resolve endpoint reference.</p> <p>Cause: The HTTP Binding Component failed to resolve the addressing document and retrieve the endpoint reference information in order to perform the dynamic EPR callback.</p> <p>Action: Double check the addressing document to ensure that it is valid and that the format is supported (based on WS-Addressing Member Submission version).</p>
HTTPBC-E01028	warning	<p>Failed to load Sun Access Manager configuration properties file {0}: {1}</p> <p>Cause: The HTTP Binding Component is not able to read the Access Manager configuration file.</p> <p>Action: Make sure the Access Manager configuration file is at the configured location, and it contains the proper AM configurations used in the properties (i.e. name=value).</p>

Alert Code	Severity	Alert Text, Cause, and Action
HTTPBC-E01041	warning	<p>Unable to find the Access Manager configuration properties file {0} in directory {1}</p> <p>Cause: The HTTP Binding Component is not able to find the Access Manager configuration file</p> <p>Action: Make sure the Access Manager configuration file is at the configured location . If it is and the same error persists, report an issue.</p>

JMS Binding Component Alert Codes

The following table lists each alert code generated by the JMS Binding Component and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-W0502	Warning	<p>Failed to close the file-based connection information persister with directory {0} and filename {1}: {2}.</p> <p>Cause: An IOException or IO error occurred while writing the connection properties file.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0703	warning	<p>Failed to initiate XA recovery; recovery will be attempted again the next time the component will be initialized (init): {0}.</p> <p>Cause: The MQ Broker might not be running.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0205	warning	<p>Failed to delete temporary {0} with name {1}: {2}.</p> <p>Cause: A JMS Exception is thrown if it is still in use by existing subscribers.</p> <p>Action: No action required.</p>
JMSBC-E0757	critical	<p>Failed to prepare the channel(s) for endpoint {0} of service {1}.</p> <p>Cause: MQ Broker might not be running.</p> <p>Action: Check to see if the MQBroker is running, or check that the connection parameters are correct.</p>

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-E0726	critical	<p>Failed to deploy the service unit {0} from service unit path {1}: {2}.</p> <p>Cause: There could be various reasons why a service unit is not deployed. In most cases this occurs because the JBI runtime is not able to deploy.</p> <p>Action: Check the server log for details and take corrective action based on the same.</p>
JMSBC-E0731	critical	<p>The JMS message property {0} is of an unknown type {1}.</p> <p>Cause: The JMS message property may contain an invalid value. The correct types are Boolean, short, int, long, float, double, and String.</p> <p>Action: Ensure that the JMS message contains a valid value.</p>
JMSBC-W0720	warning	<p>Some other thread is running the shutdown for endpoint {0}</p> <p>Cause: The current thread checks the state of a given endpoint. An exception is thrown if another thread has already initiated the shutdown.</p> <p>Action: No action required.</p>
JMSBC-W0206	warning	<p>Failed to close MessageConsumer which is receiving on temporary {0} with name {1}: {2}.</p> <p>Cause: An internal has prevented the JMS provider to close the consumer.</p> <p>Action: Check the MQ Broker log corresponding to this event for more information.</p>
JMSBC-W0724	warning	<p>Failed to retrieve QOS from service unit root path {0}.</p> <p>Cause: A QOS Configuration property contains an incorrect value.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0708	warning	<p>The message part {0} did not get added as a JMS MapMessage property with name {1} as type {2}; there is no such WSDL message part with the name {0}.</p> <p>Cause: In most cases this is due to invalid WSDL binding.</p> <p>Action: Rectify the WSDL binding with the correct message part.</p>
JMSBC-W0716	warning	<p>Error occurred while deactivating endpoint {0} of service {1} for service unit {2}: {3}</p> <p>Cause: JBI runtime is not able to deactivate an endpoint.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-W0732	warning	<p>Suspended endpoint {0}.</p> <p>Cause: An endpoint has been suspended by admin or a user using JMX.</p> <p>Action: Restart the endpoint.</p>
JMSBC-W0730	warning	<p>Unable to denormalize reply from internal service engine/binding component for message exchange {0}, end point {1} and operation {2}.</p> <p>Cause: An invalid normalized message which came as response from the partner component.</p> <p>Action: Check the response or normalized message.</p>
JMSBC-W0709	warning	<p>The message part {0} did not get added as JMS TextMessage text; there is no such WSDL message part with the name {0}.</p> <p>Cause: An invalid WSDL binding.</p> <p>Action: Make sure the message part exists as specified in the binding section.</p>
JMSBC-W0501	warning	<p>Found an unexpected connection value {0} in a connection record in directory {1}, filename {2}.</p> <p>Cause: Persisted connection info/record has invalid parameters.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0309	critical	<p>Failed to load application configuration from {0} got error {1}.</p> <p>Cause: Unable to read the persisted file.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0761	critical	<p>Transaction rollback failed for transaction {0} , endpoint {1} of service {2}. The current status of transaction is {4}.</p> <p>Cause: The transaction manager encountered an unexpected error condition.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0714	critical	<p>Failed to set the {0} property to true on the JMS message Plugin insertion failed: Could not find plugin 1: {2}.</p> <p>Cause: Might be due to jmsjca internal errors.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-E0762	critical	<p>Could not register management MBean for component {0}.</p> <p>Cause: Check the JMX documentation for MBeanServer.registerMBean.</p> <p>Action: Take appropriate action based on the server log.</p>
JMSBC-W0002	warning	<p>Found an unexpected attribute {0} for element {1} in service definition {2}; this attribute will be ignored.</p> <p>Cause: Invalid attribute in the WSDL service definition.</p> <p>Action: Check the WSDL.</p>
JMSBC-E0308	critical	<p>Failed to load application variable {0} got error {1}.</p> <p>Cause: Unable to Load the persisted configuration.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0710	warning	<p>The mapping of TextMessage text to WSDL message part is not defined, by using the attribute {0}, in the JMS binding operation's input/output binding.</p> <p>Cause: May be caused by a invalid normalized message.</p> <p>Action: Increase logging verbosity and check to ensure that the normalized message is valid.</p>
JMSBC-E0752	critical	<p>Received the following error on the message exchange with ID {0} and pattern {1}: {2}.</p> <p>Cause: May be caused by an internal error or partner component error.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0708	critical	<p>Failed to commit XA transaction Plugin insertion failed: Could not find plugin 0: {1}.</p> <p>Cause: A transaction rolled back or a transaction manager error occurred.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0717	warning	<p>Error occurred while removing channel(s) for endpoint {0} of service {1} for service unit {2}: {3}.</p> <p>Cause: A error occurred while closing the connection to the JMS Server.</p> <p>Action: Check the GlassFish and JMS Server log for more details.</p>

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-W0102	warning	Failed to find a matching ManagedConnectionFactory with connectionURL {0}, merged options {1}. Cause: The managed connection factory may already be released. Action: If this problem occurs consistently, contact Sun for support.
JMSBC-W0728	warning	Unable to send message to JMS provider, message exchange {0}, end point {1} and operation {2}. Cause: The JMS Server may be down. Action: If this problem occurs consistently, contact Sun for support.
JMSBC-W0504	warning	Failed to register XAResource (registerXAResource) to connection {0} for transaction recovery; will try again on next JMS Binding Component initialization Cause: The JBI component context could not register the XA Resource . Action: If this problem occurs consistently, contact Sun for support.
JMSBC-W0101	warning	Failed to find a matching ResourceAdapter with connectionURL {0}, merged options {1}. Cause: The Resource Adapter may be already released. Action: If this problem occurs consistently, contact Sun for support.
JMSBC-W0712	warning	Failed to call setRollbackOnly on XA transaction Plugin insertion failed: Could not find plugin 0 for processing message exchange with ID {1} and exchange pattern {2} due to error: {3}. Cause: The transaction manager encountered an unexpected error condition. Action: If this problem occurs consistently, contact Sun for support.
JMSBC-W0715	warning	The service unit {0} does not contain any WSDL(s) for which the JMS Binding Component is responsible Cause: No corresponding JMS WSDL is found based on the endpoint definition . Action: Recreate the application, If this problem occurs consistently, contact Sun for support.
JMSBC-W0704	warning	Failed to parse the component JBI descriptor {0}; component identity information (version, build number, etc.) is not be available: {1}. Cause: The installer JAR might not have the required information. Action: If this problem occurs consistently, contact Sun for support.

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-W0204	warning	<p>Timed out waiting for JMS reply message on temporary {0} with name {1} after {2} milliseconds.</p> <p>Cause: The application responsible for sending the reply has not replied within the specified time.</p> <p>Action: Modify the timeout period or make sure the reply is sent within the specified time.</p>
JMSBC-E0728	critical	<p>Failed to start the service unit {0}: {1}.</p> <p>Cause: There could be various reason, such as a duplicate endpoint or invalid artifacts.</p> <p>Action: Check the server log and take corrective action. If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0743	critical	<p>An error occurred while attempting to receive a message exchange from the delivery channel or while processing a message exchange: {0}.</p> <p>Cause: An error occurred. Check the server log for more information.</p> <p>Action: Check the server log for details. If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0709	critical	<p>Failed to rollback XA transaction Plugin insertion failed: Could not find plugin 0: {1}.</p> <p>Cause: The transaction manager encountered an unexpected error condition.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0733	warning	<p>Resumed endpoint {0}.</p> <p>Cause: Endpoint is being resumed by the admin tool or JMX.</p> <p>Action: No action required.</p>
JMSBC-E0727	critical	<p>Failed to shut down the service unit {0}: {1}.</p> <p>Cause: An internal error occurred. Check the server log for more information.</p> <p>Action: Check the server log for details. If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0706	warning	<p>The content of message part {0} is null for the WSDL message {1}.</p> <p>Cause: Invalid normalized message.</p> <p>Action: Increase logging verbosity to see the normalized message, and take corrective action.</p>

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-W0719	warning	<p>One or more operation(s) were marked for XA transaction for service {0}, endpoint {1}, connection {2}; but unable to persist connection information due to error, no recovery for this connection on restart: {3}.</p> <p>Cause: Cannot write the information into the persistent store.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0701	warning	<p>Failed to close the JMS Message reply sender: {0}.</p> <p>Cause: Failed to close the JMS sender channel.</p> <p>Action: Check the server log and the JMS server log, If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0730	critical	<p>The JMS message property {0} is of an unsupported type {1}.</p> <p>Cause: The JMS message property contains an invalid type. The correct values are Boolean, short, int, long, float, double, and String.</p> <p>Action: Ensure that the JMS message configuration property value is a valid type.</p>
JMSBC-E0764	critical	<p>Could not suspend endpoint {0}.</p> <p>Cause: Not able to stop all channels for the endpoint.</p> <p>Action: Check the server log, If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0749	critical	<p>Failed to send the message exchange with ID {0} and pattern {1} on the delivery channel due to error: {2}.</p> <p>Cause: Might be due to some internal error.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0713	critical	<p>Failed to process JMS message Plugin insertion failed: Could not find plugin 0 in onMessage: {1}.</p> <p>Cause: An error occurred. Check the server log for more information.</p> <p>Action: Check the server log, and take corrective action , If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0729	critical	<p>Failed to stop the service unit {0}: {1}.</p> <p>Cause: An error occurred. Check the server log for more information.</p> <p>Action: Check the server log for details. If this problem occurs consistently, contact Sun for support.</p>

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-W0201	warning	<p>Timed out waiting for dispatched threads to complete after {0} seconds, connection is {1}, destination is {2}.</p> <p>Cause: The work manager is unable to shutdown. Some of the worker threads might not have completed operation within the specified time.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-I0701	info	<p>Unsupported onfailure option {0}. Only "suspend" and "error" can be applied for (IN-OUT message exchange) service {1} , endpoint {2} and operation {3}.</p> <p>Cause: Invalid QOS property configuration.</p> <p>Action: Check the server log and rectify the QOS property configuration.</p>
JMSBC-E0707	critical	<p>Failed to set rollback XA transaction Plugin insertion failed: Could not find plugin 0: {1}.</p> <p>Cause: The transaction manager encountered an unexpected error condition.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0747	critical	<p>Failed to process the message exchange with ID {0} and exchange pattern {1} due to error: {2}.</p> <p>Cause: An error occurred. Check the server log for more information.</p> <p>Action: Check the server log and take corrective action.</p>
JMSBC-E0755	critical	<p>Failed to stop endpoint {0} of service {1} for service unit {2}: {3}.</p> <p>Cause: An error occurred. Check the server log for more information.</p> <p>Action: Check the server log for details. If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0318	critical	<p>Failed to persist application configuration {0} got error {1}.</p> <p>Cause: Not able to persist configuration info in the persistent store.</p> <p>Action: Check the server log for details. If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0721	critical	<p>Failed to register status MBean for component {0}.</p> <p>Cause: An error occurred with MBeanServer.registerMBean.</p> <p>Action: Check the JMX documentation for MBeanServer.registerMBean. Take appropriate action based on the server log.</p>

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-W0503	warning	<p>Recovery of transactions is not supported by the JBI runtime in which the JMS Binding Component is running.</p> <p>Cause: Transaction recovery is not supported by the JBI runtime.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0001	warning	<p>Found an environment variable {0} for attribute {1} in service definition {2} but there is no value assigned for it; it will be ignored.</p> <p>Cause: Undefined environment variable.</p> <p>Action: Check the server log and take corrective action.</p>
JMSBC-W0707	warning	<p>No mapping is defined between the WSDL message part(s) and the the JMS MapMessage property(ies) in the JMS binding operation's input/output binding.</p> <p>Cause: Invalid WSDL binding or no correspond message part.</p> <p>Action: Check the WSDL.</p>
JMSBC-W0718	warning	<p>Failed to open outbound channel but will proceed with SU deployment and attempt to connect later during message processing; service unit {0}, service {1}, endpoint {2}, operation {3}; {4}.</p> <p>Cause: The JMS server might not be running.</p> <p>Action: Check the server log and take corrective action.</p>
JMSBC-W0727	warning	<p>Unable to process message exchange {0}, end point {1} and operation {2}.</p> <p>Cause: Unable to process the message exchange from the partner.</p> <p>Action: Check the server log and take corrective action.</p>
JMSBC-W0203	warning	<p>Failed to close connection to {0}; {1}.</p> <p>Cause: The JMS provider failed to close the connection due to some internal error. For example, a failure to release resources or to close a socket connection.</p> <p>Action: Check the server log for details. If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0731	warning	<p>The provider is not able to process the message. The error is in the the data format. If dead letter queue is specified in the redelivery handling then the message would be copied to the dead letter queue after making specified number of attempts. The message exchange.</p> <p>Cause: Invalid message format send by the client.</p> <p>Action: Check the server log and rectify.</p>

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-E0701	critical	<p>Failed to create a MessageEndpoint.</p> <p>Cause: Failed to create an inbound JMS message endpoint.</p> <p>Action: Check the server log for details and take corrective action.</p>
JMSBC-W0705	warning	<p>Failed to read the component JBI descriptor {0} due to an I/O error; component identity information (version, build number, etc.) is not available: {1}</p> <p>Cause: The component installer might be invalid.</p> <p>Action: Contact Sun for support</p>
JMSBC-W0721	warning	<p>Waited long enough for in process messages to complete. Shutting down the endpoint {0}</p> <p>Cause: An endpoint has been shutdown before it has completely processed a message.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0748	critical	<p>Failed to set the status on the message exchange with ID {0} and pattern {1} due to error: {2}</p> <p>Cause: Invalid state transition of the message exchange.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>
JMSBC-E0772	critical	<p>Unable to decode the message and in jmsOperation redelivery is set to {0}. Either it is not specified or specified with no Dead-letter-queue/delete action is not specified. This message would continue to be re delivered and would never be processed.</p> <p>Cause: Not able to normalize the JMS message.</p> <p>Action: Check that the message is valid based on the WSDL binding, the message parts, and the properties.</p>
JMSBC-E0317	critical	<p>Failed to persist application variable {0} got error {1}</p> <p>Cause: Not able to persist configuration information in the persistent store.</p> <p>Action: Check the server log for details. If this problem occurs consistently, contact Sun for support.</p>
JMSBC-W0505	warning	<p>Failed to determine whether transaction recovery is supported by the JBI runtime due to error: {0}</p> <p>Cause: The JBI runtime does not support transaction recovery.</p> <p>Action: Contact Sun Support.</p>

Alert Code	Severity	Alert Text, Cause, and Action
JMSBC-E0725	critical	Failed to initialize the service unit {0} from service unit path {1}: {2}. Cause: Various reasons, such as duplicate endpoints or invalid artifacts. Action: Check the server log for details and take corrective action.
JMSBC-E0750	critical	Failed in reply listener while processing message exchange with ID {0} and exchange pattern {1} due to error: {2} Cause: Message acknowledgement failed or the endpoint is already shutdown. Action: Check the server log for details. If this problem occurs consistently, contact Sun for support.

LDAP Binding Component Alert Codes

The following table lists each alert code generated by the LDAP Binding Component and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
LDAPBC-R00213	Warning	Resumed endpoint {0}.
LDAPBC-R00212	Warning	Suspended endpoint {0}.
LDAPBC-R00252	Critical	Registration of registration mBean failed for {0}.
LDAPBC-E00212	Warning	Status provider MBean registration failed, an exception was raised. {0}.
LDAPBC-E00405	Critical	Exception in LDAP Outbound receiver.

Scheduler Binding Component Alert Codes

The following table lists each alert code generated by the Scheduler Binding Component and describes the cause of the alert along with the recommended action for you to take.

Alert Code	Severity	Alert Text, Cause, and Action
SCHEDBC-5001	Info	Start Scheduler consumer endpoints. Cause: Informational message. Action: None required.

Alert Code	Severity	Alert Text, Cause, and Action
SCHEDBC-5002	Info	Stopped Scheduler consumer endpoints. Cause: Informational detail. Action: None required.
SCHEDBC-5003	Info	Shut down Scheduler consumer endpoints. Cause: Informational detail. Action: None required.
SCHEDBC-5004	Info	Creating endpoint for {0}. Cause: Informational detail. Action: None required.
SCHEDBC-5005	Info	Quartz Scheduler has been started. Cause: Informational detail. Action: None required.
SCHEDBC-5006	Info	Quartz Scheduler has been shut down. Cause: Informational detail. Action: None required.
SCHEDBC-5007	Info	Quartz Scheduler has been suspended. Cause: Informational detail. Action: None required.
SCHEDBC-5008	Info	{0} trigger {1}.{2} will fire first at: {3}. Cause: Informational detail. Action: None required.
SCHEDBC-6001	Warning	SchedulerBootstrap installation MBean failed to initialize: {0}. Cause: [Rare] A deleted or corrupted Component Descriptor file (for example, C:\JavaCAPS6U2\glassfish\domains\domain1\jbi\components\sun-scheduler-binding\install_root\META-INF\jbi.xml). Action: Reinstall the Scheduler Binding Component.
SCHEDBC-6003	Warning	Cannot shutdown Quartz Scheduler. Cause: OpenSymphony Quartz Scheduler cannot be shut down. Action: Try cycling (shut down then restart) GlassFish Application Server.

Alert Code	Severity	Alert Text, Cause, and Action
SCHEDBC-6004	Warning	<p>Cannot start Quartz Scheduler.</p> <p>Cause: OpenSymphony Quartz Scheduler cannot be started or resumed.</p> <p>Action: Try cycling GlassFish Application Server.</p>
SCHEDBC-6005	Warning	<p>Cannot suspend Quartz Scheduler.</p> <p>Cause: OpenSymphony Quartz Scheduler cannot be suspended.</p> <p>Action: Try cycling GlassFish Application Server.</p>
SCHEDBC-6006	Warning	<p>Consumer endpoint {0} cannot send to (consume) provider endpoint.</p> <p>Cause: Provider endpoint is down or unresponsive.</p> <p>Action: Try cycling the provider endpoint component, or try resuming it if it has been suspended by its QoS configuration.</p>
SCHEDBC-6007	Warning	<p>Cannot find Scheduler consumer endpoint {0} from Component context.</p> <p>Cause: [Rare] JBI framework malfunctioning.</p> <p>Action: Try cycling GlassFish Application Server.</p>
SCHEDBC-6008	Warning	<p>Application variable {0} is undefined.</p> <p>Cause: The above mentioned Application variable is referenced in the trigger message but has not been defined.</p> <p>Action: Define it and redeploy the respective Composite Application project.</p>
SCHEDBC-6009	Warning	<p>Invalid timezone ID ({0}) specified; using default instead.</p> <p>Cause: An invalid timezone ID was specified manually.</p> <p>Action: Use the WSDL editor to select one of the valid IDs from the drop-down list.</p>
SCHEDBC-6010	Warning	<p>Got SchedulerException in {0}.</p> <p>Cause: [Rare] Cannot find the Quartz API Version from the quartz-all.jar.</p> <p>Action: Try reinstalling Scheduler Binding Component.</p>

Alert Code	Severity	Alert Text, Cause, and Action
SCHEDBC-6011	Warning	<p>Interrupted, so abort waiting for Message Exchange ACK/NACK.</p> <p>Cause: Java VM was interrupted while waiting on the disposition of a Message Exchange.</p> <p>Action: None, GlassFish Application Server is probably being aborted.</p>
SCHEDBC-6012	Warning	<p>Failed {0} attempt(s) to consume provider endpoint, disposing this trigger message instance "{1}".</p> <p>Cause: QoS configured to Delete this triggering message when specified attempts to retry have been exhausted.</p> <p>Action: Verify that the provider endpoint is functioning properly, or re-adjust the QoS configuration appropriately.</p>
SCHEDBC-6013	Warning	<p>Failed {0} attempt(s) to consume provider endpoint, flagging this trigger message instance "{1}" as FAILED in Quartz.</p> <p>Cause: The QoS property is configured to error out this triggering message when specified attempts to retry have been exhausted.</p> <p>Action: Verify that the provider endpoint is functioning properly, or re-adjust the QoS configuration appropriately.</p>
SCHEDBC-6014	Warning	<p>Failed {0} attempt(s) to consume provider endpoint with this trigger message "{1}"; SUSPEND is NOT however supported by this component .</p> <p>Cause: The QoS property is configured to Suspend this endpoint when specified attempts to resend the trigger message have been exhausted.</p> <p>Action: Suspend is not supported so the Scheduler Binding Component consumer endpoint remains active. Verify that the provider endpoint is functioning properly, or re-adjust the QoS configuration as appropriate.</p>
SCHEDBC-6015	Warning	<p>Failed to consume provider endpoint with this trigger message "{0}" .</p> <p>Cause: QoS Redelivery has not been configured for this Scheduler Binding Component endpoint and it cannot send the message on to the provider.</p> <p>Action: Verify that the provider endpoint is functioning properly, or re-adjust the QoS configuration as appropriate.</p>

Alert Code	Severity	Alert Text, Cause, and Action
SCHEDBC-6016	Warning	<p>Failed {0} attempt(s) to consume intended provider with this trigger message "{1}"; redirected to {2}-{3}.</p> <p>Cause: The QoS property is configured to Redirect this trigger message to another provider endpoint when specified attempts to resend it have been exhausted.</p> <p>Action: Verify that the provider endpoint is functioning properly, or re-adjust the QoS configuration as appropriate.</p>
SCHEDBC-6017	Warning	<p>Interrupted, so abort waiting in throttling queue.</p> <p>Cause: Java VM has been interrupted while waiting to send a trigger message.</p> <p>Action: None, GlassFish Application Server is probably being aborted.</p>
SCHEDBC-7001	Critical	<p>Cannot create Quartz Scheduler for Service Assembly {0}.</p> <p>Cause: Problems have been encountered creating an OpenSymphony Quartz Scheduler.</p> <p>Action: Try cycling the GlassFish Application Server and the Scheduler Binding Component.</p>
SCHEDBC-7002	Critical	<p>Cannot find respective Scheduler endpoint.</p> <p>Cause: [Rare] JBI framework is probably malfunctioning.</p> <p>Action: Try cycling GlassFish Application Server.</p>
SCHEDBC-7003	Critical	<p>WSDL for Endpoint {0} does not represent a valid Scheduler binding.</p> <p>Cause: No appropriate Scheduler Binding Component binding WSDL has been found in the Service Unit.</p> <p>Action: Ensure that the respective project involving the Scheduler Binding Component has an appropriate binding WSDL specified and re-deploy the Composite Application project.</p>
SCHEDBC-7004	Critical	<p>Cannot initialize Scheduler for endpoint {0}.</p> <p>Cause: Cannot initialize the Scheduler for non-specific reasons.</p> <p>Action: Verify the Scheduler Binding Component binding WSDL is correct and re-deploy the Composite Application project.</p>

XSLT Service Engine Logging Codes

The following table lists each logging code generated by the XSLT Service Engine and describes the cause of the log message along with the recommended action for you to take.

Logging Code	Severity	Message Text, Cause, and Action
XSLTSE-4003	Config	Starting XsltSE with transformation engine: {0}. Cause: XsltSE supports either Xslt 1.0 or 2.0. Action: None required.
XSLTSE-5001	Info	Initialized XSLT service engine successfully! Cause: The component initialized. Action: None.
XSLTSE-5002	Info	Started XSLT service engine successfully! Cause: The component started. Action: None.
XSLTSE-5003	Info	Stopped XSLT service engine successfully! Cause: The component stopped. Action: None.
XSLTSE-5004	Info	Shut down XSLT service engine successfully! Cause: The component shut down. Action: None.
XSLTSE-6001	Warning	Failed to load Xslt Engine {0}: {1}. Cause: The configuration is invalid. Action: Verify the configuration value is either "XSLT_1_0" or "XSLT_2_0" and review the server log for more information as to the cause of the error.
XSLTSE-6002	Warning	Failed to load Xslt Engine {0} as the class {1} could not be loaded! Cause: The underlying XSLT processor class could not be loaded (occurs more often with Xslt 2.0 support). Action: Review the Xslt 2.0 Support wiki and the server log for more information as to the cause of the error.

Logging Code	Severity	Message Text, Cause, and Action
XSLTSE-6003	Warning	XsltSEBootstrap installation MBean failed to initialize: {0}. Cause: The XSLT Service Engine configuration MBean failed to initialize, possibly due to invalid configuration values. Action: Review the server log for more information as to the cause of the error.
XSLTSE-6004	Warning	Invalid Transform Engine value: {0}. Cause: The configuration is invalid. Action: Verify the configuration value is either "XSLT_1_0" or "XSLT_2_0" and review the server log for more information as to the cause of the error.

The following table lists each logging code generated by the Transform Shared Library, a framework used by the XSLT Service Engine. Log descriptions and causes, along with the recommended action for you to take, are also provided.

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-5001	Info	The process definition for operation {0} has been overwritten! Cause: Multiple operations with the same name were defined, only the last will be activated. Action: Rename one or more operations in the transformmap file and the corresponding WSDL document.
TRANSL-5002	Info	{0} cannot run completed process srcv={1},op={2} Cause: Component attempted to execute a transformation process that has already completed. Action: None, execution will abort. Review the server log for more information as to why process was re-executed.
TRANSL-5003	Info	Please define a transformation process for operation "{0}". Cause: Action: None.
TRANSL-5004	Info	Please review logs for cause of propagated fault. Cause: A received fault was propagated as an error. Action: Review the server log for fault content.

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-6001	Warning	Failed to parse transformmap descriptor: {0} Cause: Component encountered error parsing transformmap configuration file. Action: Review the server log for more information as to the cause of the error.
TRANSL-6002	Warning	Failed to import WSDL({0}) from: {1} Cause: An error occurred importing WSDL document. Action: Review the server log for more information as to the cause of the error.
TRANSL-6003	Warning	Failed to parse literal param content: {0} Cause: An error occurred parsing literal xml content in transformmap. Action: Review and correct the parameter definition in transformmap.xml.
TRANSL-6004	Warning	Must specify transformation input part for multi-part message in operation {0} Cause: The 'source' attribute did not specify a message part. Action: Add the message part name to the 'source' attribute to indicate the part to transform.
TRANSL-6005	Warning	Must specify transformation output part in operation {0} Cause: The 'result' attribute did not specify a message part. Action: Add the message part name to the 'result' attribute to indicate the part to which transformation output is assigned.
TRANSL-6006	Warning	Missing required param type for stylesheet: {0} Cause: Param element in transformmap is missing required attribute 'type'. Action: Configure the type of the parameter.
TRANSL-6007	Warning	Transform param content file "{0}" not found in {1}: {2} Cause: Parameter content file could not be located. Action: Verify parameter content is at specified location and redeploy.

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-6008	Warning	Failed to parse XML content in file "{0}" in {1}: {2} Cause: An error occurred reading xml parameter content from a file. Action: Review the server log for more information as to the cause of the error.
TRANSL-6009	Warning	Imported WSDL document does not exist at: {0} Cause: The WSDL could not be located at the specified location. Action: Verify location of WSDL and correct Import element as needed.
TRANSL-6010	Warning	Imported WSDL namespace conflict, document namespace must match configured namespace! Cause: An imported WSDL has a different namespace than configured in the Import element. Action: Change the namespace in the WSDL or the Import element.
TRANSL-6011	Warning	Imported WSDL namespace conflicts with previously imported WSDL: {0} Cause: Two or more imported wsdl's share the same namespace. Action: Modify namespaces to eliminate duplication.
TRANSL-6012	Warning	Undefined portType: {0} Cause: The specified PortType is not defined in any imported wsdl's. Action: Verify PortType definitions and that correct wsdl's are imported.
TRANSL-6013	Warning	Failed to locate WSDL with targetNamespace: {0} Cause: PortType definition could not be resolved because WSDL could not be located. Action: Review the server log for more information as to the cause of the error and verify correctness of Import elements.
TRANSL-6014	Warning	Failed to distinguish between multiple operations "{0}" in portType: {1} Cause: Two or more operations have same input and/or output types and component cannot determine which should process message exchange. Action: Review the wsdl's and correct the input/output for uniqueness across operations.

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-6015	Warning	<p>Undefined operation "{0}" in portType: {1}</p> <p>Cause: The PortType definition could not be located in imported wsdl.</p> <p>Action: Review imported wsdl and configured PortType.</p>
TRANSL-6016	Warning	<p>{0} is a required attribute for Import element!</p> <p>Cause: Import element is missing a required attribute.</p> <p>Action: Add the missing attribute to the Import element in transformmap.</p>
TRANSL-6017	Warning	<p>Transform descriptor is invalid - missing required 'targetNamespace' attribute!</p> <p>Cause: Transformmap configuration file is missing the required 'targetNamespace' attribute.</p> <p>Action: Add a 'targetNamespace' to transformmap configuration file.</p>
TRANSL-6018	Warning	<p>Transform descriptor is invalid - missing required 'name' attribute in element: {0}</p> <p>Cause: Transformmap activity is missing the required 'name' attribute.</p> <p>Action: Verify 'name' attribute is defined on all activities in transformmap configuration file.</p>
TRANSL-6019	Warning	<p>Misconfigured Transform descriptor - unqualified QName: {0}</p> <p>Cause: A QName attribute was not configured with a namespace.</p> <p>Action: Correct the misconfigured attribute in transformmap.</p>
TRANSL-6020	Warning	<p>Cannot locate XSL stylesheet: {0}</p> <p>Cause: Component failed to locate XSL stylesheet at specified location.</p> <p>Action: Review the transformmap and verify stylesheet paths and names.</p>
TRANSL-6021	Warning	<p>Failed to create exchange - unsupported pattern: {0}</p> <p>Cause: Transformation process aborted due to unsupported exchange pattern.</p> <p>Action: Review the server log for more information as to the cause of the error and only use supported patterns InOut and InOnly.</p>

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-6022	Warning	<p>Cannot locate transformation descriptor file: {0}</p> <p>Cause: Component failed to locate transformmap configuration file.</p> <p>Action: Verify the correctness of the deployed service unit and redeploy.</p>
TRANSL-6023	Warning	<p>Illegal arguments passed to InvokeFunction.{0}(Object, String{1}): {2}, {3}, {4}</p> <p>Cause: Usage of the 'invoke' function in stylesheet is misconfigured.</p> <p>Action: Review the Invoke function wiki and correct the function invocation.</p>
TRANSL-6024	Warning	<p>Engine context parameter is the wrong type: {0}</p> <p>Cause: Usage of the 'invoke' function in stylesheet is misconfigured.</p> <p>Action: Review the Invoke function wiki and correct the function invocation.</p>
TRANSL-6025	Warning	<p>Missing invoke configuration: {0}</p> <p>Cause: Usage of the 'invoke' function requires Invoke activity definitions, which are absent.</p> <p>Action: Review the Invoke function wiki and correct the transformmap configuration file.</p>
TRANSL-6026	Warning	<p>A processing error occurred in {0}: {1}</p> <p>Cause: Transformation process encountered an error during processing.</p> <p>Action: Review the server log for more information as to the cause of the error.</p>
TRANSL-6027	Warning	<p>An unexpected error occurred in {0}: {1}</p> <p>Cause: Transformation process encountered an unexpected error.</p> <p>Action: Review the server log for more information as to the cause of the error.</p>
TRANSL-6028	Warning	<p>{0} failed to register invocation variables: {1}</p> <p>Cause: Transformation process failed to resolve input and/or output variables for an activity.</p> <p>Action: Review the server log for more information as to the cause of the error.</p>

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-6029	Warning	An {0} message exchange (id={1}) is missing normalized content! Cause: Component accepted message exchange with no payload content. Action: Review the server log for more information as to the cause of the error.
TRANSL-6030	Warning	Unable to create invocable exchange: {0} Cause: Transformation process failed to create a message to send. Action: Review the server log for more information as to the cause of the error.
TRANSL-6031	Warning	Invocation failed: {0} Cause: Transformation process encountered error while invoking a service. Action: Review the server log for more information as to the cause of the error.
TRANSL-6032	Warning	An unexpected error occurred during invoke: {0} Cause: Transformation process encountered unexpected error while executing Invoke activity. Action: Review the server log for more information as to the cause of the error.
TRANSL-6033	Warning	Unsupported exchange pattern: {0} Cause: Transformation process attempted to reply with an unsupported message exchange pattern. Action: Review the server log for more information as to the cause of the error.
TRANSL-6034	Warning	{0} failed to reply to ME (id={1}): {2} Cause: Invoked message exchange could not be completed by sending DONE status. Action: Review the server log for more information as to the cause of the error.
TRANSL-6035	Warning	{0} failed to send ERROR status on ME (id={1}): {2} Cause: Invoked message exchange could not be completed by sending ERROR status. Action: Review the server log for more information as to the cause of the error.

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-6036	Warning	Failed to identify ME pattern for operation: {0} Cause: Component could not determine message exchange pattern for an operation. Action: Review the server log for more information as to the cause of the error.
TRANSL-6037	Warning	{0} skipped processing non-XSLT transform activity: {1} Cause: A non-Transform activity was processed as a Transform activity. Action: Review the server log for more information as to the cause of the error and file a defect against the component.
TRANSL-6038	Warning	Xslt transformation failed: {0} Cause: An XSL transformation failed. Action: Review the server log for more information as to the cause of the error.
TRANSL-6039	Warning	An error occurred processing transform activity: {0} Cause: Transformation process encountered error executing Transform activity. Action: Review the server log for more information as to the cause of the error.
TRANSL-6040	Warning	The requested operation "{0}" is not provisioned on EndpointPlugin insertion failed: Could not find plugin 1 Cause: The operation is not defined in the transformmap configuration file. Action: Define an Operation in the transformmap.
TRANSL-6041	Warning	A processing error occurred provisioning a {0} service: {1} Cause: Transformation process encountered an error during execution. Action: Review the server log for more information as to the cause of the error.
TRANSL-6042	Warning	Failed to load transformation engine: {0} Cause: Component encountered error loading pluggable Xslt support module. Action: Review the server log for more information as to the cause of the error.

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-6043	Warning	<p>Exchange({0}) terminated with ERROR status by {1}.</p> <p>Service: {2}, Endpoint: {3}, Operation: {4}</p> <p>Cause: {5} - {6}</p> <p>Actor: {7}, Detail: {8}</p> <p>Cause: A message exchange could not be successfully processed and has been aborted.</p> <p>Action: Review the server log for more information as to the cause of the error.</p>
TRANSL-6044	Warning	<p>Propagating fault as ERROR, received from service "{0}-{1}"</p> <p>Cause: Transformation process received a fault from invoked service and is propagating it as a fault.</p> <p>Action: Review the server log for more information on the received fault and consider adding fault handling to the transformation process.</p>
TRANSL-6045	Warning	<p>{0} failed reply to complete process, ME (id={1}): {2}</p> <p>Cause: An error occurred sending a reply message exchange.</p> <p>Action: Review the server log for more information as to the cause of the error.</p>
TRANSL-6046	Warning	<p>Must specify 'source' and 'result' for fault handler transform activities!</p> <p>Cause: A fault-handling Transform activity was defined without 'source' and/or 'result' attribute(s).</p> <p>Action: Define the missing attribute(s) in the Transform activity.</p>
TRANSL-6047	Warning	<p>Failed to compile stylesheet - {0}: {1}</p> <p>Cause: The XSL stylesheet is invalid and failed compilation.</p> <p>Action: Review the server log for more information as to the cause of the error, fix the stylesheet, and redeploy.</p>
TRANSL-6048	Warning	<p>InvokeFunction.{0} failed: {1}</p> <p>Cause: An error occurred executing function.</p> <p>Action: Review the server log for more information as to the cause of the error.</p>

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-6049	Warning	Failed to create new Transformer: {0} Cause: Component was unable to create an instance of javax.xml.Transformer. Action: Review the server log for more information as to the cause of the error.
TRANSL-6050	Warning	Compilation not supported by this activity! Cause: Component failed to load pluggable Xslt support module. Action: Review the server log for more information as to the cause of the error.
TRANSL-6051	Warning	newTransformer not supported by this activity! Cause: Component failed to load pluggable Xslt support module. Action: Review the server log for more information as to the cause of the error.
TRANSL-6052	Warning	{0} endpoint creation failed, no descriptor found for service unit: {1} Cause: Component could not locate a transformation process definition for the specified endpoint. Action: Review the server log for more information as to the cause of the error, fix the transformmap, and redeploy.
TRANSL-6053	Warning	{0} {1} is missing from descriptor in service unit: {2} Cause: An endpoint definition in the transformmap was absent in the service unit descriptor. Action: Review the server log for more information as to the cause of the error.
TRANSL-6054	Warning	Failed to initialize {0} service unit {1} - targetNamespace conflict: {2} Cause: A transformation process namespace conflicts with a previously deployed transformation process. Action: Change the 'targetNamespace' attribute of the transformmap being deployed.
TRANSL-6055	Warning	{0} Service unit "{1}" init failed: {2} Cause: An error occurred during service unit initialization. Action: Review the server log for more information as to the cause of the error.

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-6056	Warning	Send failed for {0}, exchange id: {1} Cause: The synchronous send executed by 'invoke' function failed. Action: Review the server log for more information as to the cause of the error.
TRANSL-6057	Warning	{0} failed retry attempt for {1}-{2}: {3} Cause: Component encountered error while attempting redelivery. Action: Review the server log for more information as to the cause of the error.
TRANSL-6058	Warning	Received ERROR status from ServiceEndpointPlugin insertion failed: Could not find plugin 0 Cause: Transformation process received a fault from invoked service. Action: Review the server log for more information as to the cause of the error.
TRANSL-6060	Warning	Failed to handle fault for message exchange {0}: {1} Cause: Transformation process encountered error handling fault. Action: Review the server log for more information as to the cause of the error.
TRANSL-6061	Warning	Failed to extract fault parts during propagation for {0}: {1} Cause: Transformation process was unable to parse fault message. Action: Review the server log for more information as to the cause of the error.
TRANSL-7001	Severe	{0} does not support {1} exchange pattern. Cause: Component accepted a message exchange with an unsupported pattern. Action: Only InOnly and InOut message exchange patterns are supported, update WSDL operations accordingly.
TRANSL-7002	Severe	Failed to complete exchange({0}) for endpoint({1}-{2}): {3} Cause: Component encountered an unrecoverable error while executing transformation process. Action: Review the server log for more information as to the cause of the error.

Logging Code	Severity	Message Text, Cause, and Action
TRANSL-7003	Severe	<p>Failure to respond to invoke error, transformation process aborted: {0}</p> <p>Cause: Component was unable to send ERROR response.</p> <p>Action: Review the server log for more information as to the cause of the error.</p>
TRAPI-6001	Warning	<p>Failed to create {0} instance: {1}</p> <p>Cause: Component could not create instance for Xslt 2.0 support.</p> <p>Action: Review the server log for more information as to the cause of the error.</p>

Email Binding Component Logging Codes

The following table lists each logging code generated by the Email Binding Component and describes the cause of the log message along with the recommended action for you to take.

Logging Code	Severity	Message Text, Cause, and Action
EMAILBC-4001	Config	<p>PollerCount Value : [New='{0}', Old='{1}']</p> <p>Cause:</p> <p>Action:</p>
EMAILBC-4002	Config	<p>ExchangeThreading Value : [New={0}, Old={1}]</p> <p>Cause:</p> <p>Action:</p>
EMAILBC-6001	Warning	<p>The WSDL message does not define corresponding part for input attribute {0}. An empty value is assumed.</p> <p>Cause:</p> <p>Action:</p>
EMAILBC-6002	Warning	<p>No "Subject" is specified.</p> <p>Cause:</p> <p>Action:</p>
EMAILBC-6003	Warning	<p>No "From" address is specified.</p> <p>Cause:</p> <p>Action:</p>

Logging Code	Severity	Message Text, Cause, and Action
EMAILBC-6004	Warning	Header "From" is not added because the value [{0}] does not represent valid address(es) Cause: Action:
EMAILBC-6005	Warning	No "To" address is specified. Cause: Action:
EMAILBC-6006	Warning	Recipient(s) is not added to "To" because the value [{0}] does not represent valid address(es) Cause: Action:
EMAILBC-6007	Warning	Recipient(s) is not added to "Cc" because the value [{0}] does not represent valid address(es) Cause: Action:
EMAILBC-6008	Warning	Recipient(s) is not added to "Bcc" because the value [{0}] does not represent valid address(es) Cause: Action:
EMAILBC-6009	Warning	Recipient(s) is not added to "newsgroups" because the value [{0}] does not represent valid address(es) Cause: Action:
EMAILBC-6010	Warning	The WSDL message does not define part: {0}. An empty value is assumed. Cause: Action:
EMAILBC-6011	Warning	No "Message body" is specified. Cause: Action:

Logging Code	Severity	Message Text, Cause, and Action
EMAILBC-6012	Warning	Failed to embed/resolve src {0} image {1} Cause: Action:
EMAILBC-6013	Warning	The WSDL message does not define corresponding part for input attachment attribute {0}. An empty value is assumed. Cause: Action:
EMAILBC-6014	Warning	Redelivery option 'suspend' is not supported, if enabled, this will be handled like 'error' option Cause: Action:
EMAILBC-7001	Severe	EmailBCBootstrap installation MBean failed to initialize: {0} Cause: Action:
EMAILBC-7002	Severe	{0} does not support {1} exchange pattern Cause: Action:
EMAILBC-7003	Severe	Failed to complete exchange({0}) for endpoint({1}-{2}): {3} Cause: Action:
EMAILBC-7004	Severe	Error sending the message to the channel Cause: Action:
EMAILBC-7005	Severe	No folder with name "{0}" exists on the server Cause: Action:
EMAILBC-7006	Severe	Error retrieving emails Cause: Action:

Logging Code	Severity	Message Text, Cause, and Action
EMAILBC-7007	Severe	Error while closing connection to the email folder/store Cause: Action:
EMAILBC-7008	Severe	Error marking message "{0}" as DONE Cause: Action:
EMAILBC-7009	Severe	Error marking message "{0}" as ERROR Cause: Action:
EMAILBC-7010	Severe	Failed to handle NM attachment [{0}]: {1} Cause: Action:
EMAILBC-7011	Severe	Attachment content is not specified. You can specify it by use of attribute {0} or {1}. Cause: Action:
EMAILBC-7012	Severe	Application Variables {0} are not defined but they are used in value [{1}]. Cause: Action:
EMAILBC-7013	Severe	Failed to create endpoint from EndpointInfo: {0}, and ServiceUnit: {1} Cause: Action:
EMAILBC-7014	Severe	Required field "{0}" is not specified, please specify value Cause: Action:
EMAILBC-7015	Severe	Invalid operation input definition in WSDL: {0}. It must be IMAPOperationInput or POP3OperationInput. Cause: Action:

Logging Code	Severity	Message Text, Cause, and Action
EMAILBC-7016	Severe	Invalid attachment definition in WSDL: {0}. It must be IMAPAttachment or POP3Attachment. Cause: Action:
EMAILBC-7017	Severe	Invalid operation name: {0} for endpoint: {1} Cause: Action:
EMAILBC-7018	Severe	No binding input for operation: {0} Cause: Action:
EMAILBC-7019	Severe	No valid recipient address is specified for this email message. Cause: Action:
EMAILBC-7020	Severe	Invalid encoding style: [{0}] Cause: Action:
EMAILBC-7021	Severe	Invalid scheme "{0}": expected scheme is "{1}" Cause: Action:
EMAILBC-7022	Severe	IMAP address is missing, please specify the address in the wsdl. Service name: '{0}', Endpoint name: '{1}' Cause: Action:
EMAILBC-7023	Severe	IMAP Operation extensibility element is missing, please specify the imapoperation in the wsdl. Service name: '{0}', Endpoint name: '{1}' Cause: Action:
EMAILBC-7024	Severe	POP3 address is missing, please specify the address in the wsdl. Service name: '{0}', Endpoint name: '{1}' Cause: Action:

Logging Code	Severity	Message Text, Cause, and Action
EMAILBC-7025	Severe	POP3 Operation extensibility element is missing, please specify the imapoperation in the wsdl. Service name: '{0}', Endpoint name : '{1}' Cause: Action:
EMAILBC-7026	Severe	SMTP address is missing, please specify the address in the wsdl. Service name: '{0}', Endpoint name : '{1}' Cause: Action:
EMAILBC-7027	Severe	SMTP Operation extensibility element is missing, please specify the imap operation in the wsdl. Service name: '{0}', Endpoint name : '{1}' Cause: Action:
EMAILBC-7028	Severe	Redelivery failed, DONE acknowledged: Message ID: {0} Cause: Action:
EMAILBC-7029	Severe	Redelivery failed, ERROR acknowledged: Message ID: {0} Cause: Action:
EMAILBC-7031	Severe	Cannot create the directory structure "{0}". Cause: Action:

HL7 Encoder Logging Codes

The following table lists each logging code generated by the HL7 Encoder and describes the cause of the log message along with the recommended action for you to take.

Logging Code	Severity	Message Text, Cause, and Action
HL7ENC-E0001	Critical	Global Element is Null Cause: Action:

Logging Code	Severity	Message Text, Cause, and Action
HL7ENC-E0002	Critical	Output Stream is Null Cause: Action:
HL7ENC-E0003	Critical	Output Writer is Null Cause: Action:
HL7ENC-E0004	Critical	Unexpected Element: Expecting {0}, found '{{1}}{2}' Cause: Action:
HL7ENC-E0005	Critical	Unexpected Element: Expecting /{0}, found /'{{1}}{2}' Cause: Action:
HL7ENC-E0006	Critical	Unexpected Element: Expecting '/escape', found /'{{0}}{1}' Cause: Action:
HL7ENC-E0007	Critical	Missing end tag for element {0} Cause: Action:
HL7ENC-E0008	Critical	Illegal particle type: {0} Cause: Action:
HL7ENC-E0009	Critical	Failed handling repetitive component: Don't know how to handle repetitive component with name '{{0}}{1}' Cause: Action:
HL7ENC-E0010	Critical	Failed handling repetitive subcomponent: Don't know how to handle repetitive subcomponent with name '{{0}}{1}' Cause: Action:

Logging Code	Severity	Message Text, Cause, and Action
HL7ENC-E0011	Critical	Element must be simple content type: Element '{{0}}{1}' must match simple content type, but found complex content type Cause: Action:
HL7ENC-E0012	Critical	Wildcard goes too deep. It cannot be deeper than sub-component level. Level: {0} Name: '{{1}}{2}' Cause: Action:
HL7ENC-E0013	Critical	Illegal level: {0}, name: '{{1}}{2}' Cause: Action:
HL7ENC-E0014	Critical	No matching start tag for '{{0}}{1}' Cause: Action:
HL7ENC-E0015	Critical	Unexpected Element: Expecting {0}, found /'{{1}}{2}' Cause: Action:
HL7ENC-E0016	Critical	Choice group with no child: Expecting at least one child in the choice group, found /'{{1}}{2}' Cause: Action:
HL7ENC-E0017	Critical	Exceeding end of a sequence group. No matching particle found for '{{0}}{1}' Cause: Action:
HL7ENC-E0018	Critical	Unexpected Element: Expecting element {0}, found element '{{1}}{2}' Cause: Action:

Logging Code	Severity	Message Text, Cause, and Action
HL7ENC-E0019	Critical	Unexpected Element: Expecting element within {0}, found element '{1}'{2} Cause: Action:
HL7ENC-E0020	Critical	No matching particle found for '{0}'{1} Cause: Action:
HL7ENC-E0021	Critical	Too many elements '{0}'{1} Cause: Action:
HL7ENC-E0022	Critical	Element does not match wildcard: A wildcard has been matched for the choice group. Putting an element '{0}'{1} that does not match the wildcard is not allowed Cause: Action:
HL7ENC-E0023	Critical	This element is not allowed in choice group: An element with name {0} already occurred in the choice group. Putting an element with a different name '{1}'{2} is not allowed Cause: Action:
HL7ENC-E0024	Critical	Feature {0} with value {1} is not supported. Cause: Action:
HL7ENC-E0025	Critical	Missing content handler Cause: Action:
HL7ENC-E0026	Critical	Consecutively no data is read. Cause: Action:

Logging Code	Severity	Message Text, Cause, and Action
HL7ENC-E0027	Critical	Element: {0} must occur at least {1} time(s) Cause: Action:
HL7ENC-E0028	Critical	Sub component must have simple content Cause: Action:
HL7ENC-E0030	Critical	Segment: {0} must occur at least {1} time(s) Cause: Action:
HL7ENC-E0031	Critical	Illegal semantic level: {0} Cause: Action:
HL7ENC-E0032	Critical	Token is not expected Cause: Action:
HL7ENC-E0033	Critical	Expected particle is missing Cause: Action:
HL7ENC-E0034	Critical	Failed to read segment name Cause: Action:
HL7ENC-E0035	Critical	Unable to construct a qualified name for: {0} Cause: Action:
HL7ENC-E0036	Critical	Wildcard segment must occur at least {0} time(s) Cause: Action:

Logging Code	Severity	Message Text, Cause, and Action
HL7ENC-E0037	Critical	Invalid buffer capacity: Buffer capacity must be in range of Plugin insertion failed: Could not find plugin 0 bytes Cause: Action:
HL7ENC-E0038	Critical	No Reader OR InputSteram: Both the Input Stream and Reader are null Cause: Action:
HL7ENC-E0039	Critical	Field separator is missing Cause: Action:
HL7ENC-E0040	Critical	Segment name cannot be more than 3 characters Cause: Action:
HL7ENC-E0041	Critical	Incomplete segment name: {0} Cause: Action:
HL7ENC-E0042	Critical	Illegal State = {0} Cause: Action:
HL7ENC-E2001	Critical	Root element name cannot be null. path={0} Cause: Action:
HL7ENC-E2002	Critical	Unable to find global element {0} Cause: Action:
HL7ENC-E2003	Critical	No metadata references Cause: Action:

POJO Service Engine Logging Codes

The following table lists each logging code generated by the POJO Service Engine and describes the cause of the log message along with the recommended action for you to take.

Logging Code	Severity	Message Text, Cause, and Action
POJOSE-4503	Info	<p>InitIALIZED SU {0}.</p> <p>Cause: Service Unit is initialized.</p> <p>Action: None required.</p>
POJOSE-4513	Info	<p>Activated Provisioning endpoint: {0}.</p> <p>Cause: POJO provisioning endpoint is activated NMR/Delivery channel.</p> <p>Action: None required.</p>
POJOSE-4518	Info	<p>Found activated consuming endpoint: {0}.</p> <p>Cause:</p> <p>Action: None required.</p>
POJOSE-5001	Info	<p>Operation QName was not specified on the Endpoint {0}, not setting it on MessageExchange.</p> <p>Cause:</p> <p>Action: This may be intentional. If the consuming service expects an operation name, make sure the @ConsumerEndpoint property operationQN has the appropriate value.</p>
POJOSE-5501	Info	<p>Initialized {0} successfully!</p> <p>Cause: The specified component was initialized.</p> <p>Action: None required.</p>
POJOSE-5502	Info	<p>Started {0} successfully!</p> <p>Cause: The specified component was started.</p> <p>Action: None required.</p>
POJOSE-5503	Info	<p>Stopped {0} successfully!</p> <p>Cause: The specified component was stopped.</p> <p>Action: None required.</p>

Logging Code	Severity	Message Text, Cause, and Action
POJOSE-5504	Info	Shut down {0} successfully! Cause: The specified component was shut down. Action: None required.
POJOSE-5505	Info	POJO SE Component started. Cause: The POJO Service Engine was started. Action: None required.
POJOSE-5506	Info	POJOSE Component stopped. Cause: The POJO Service Engine was stopped. Action: None required.
POJOSE-5507	Info	Deployed SU {0}. Cause: The specified Service Unit was deployed. Action: None required.
POJOSE-5508	Info	Started SU {0} Cause: The specified Service Unit was started. Action: None required.
POJOSE-5509	Info	Sopped SU {0} Cause: The specified Service Unit was stopped. Action: None required.
POJOSE-5510	Info	Shut down SU {0} Cause: The specified Service Unit was shut down. Action: None required.
POJOSE-5511	Info	Undeployed SU {0} Cause: The specified Service Unit was undeployed. Action: None required.
POJOSE-6002	Warning	Asynchronous consumer has non void return type for Operation method in class {0}, return type will be ignored. Only return type of OnDone method is considered. Cause: Class with @Provider annotation does not have a void return type for the Operation method. Action: None required, but changing the return type to void will avoid this warning message.

Logging Code	Severity	Message Text, Cause, and Action
POJOSE-6003	Warning	<p>Asynchronous consumer has non void return type for OnReply method in class {0}, return type will be ignored. Only return type of OnDone method is considered.</p> <p>Cause: Class with @Provider annotation does not have a void return type for the OnReply method.</p> <p>Action: None required, but changing the return type to void will avoid this warning message.</p>
POJOSE-6500	Warning	<p>Provisioning service ended in error before the response message from consumed service {0}, received.</p> <p>Cause: See the exception stack trace for the cause.</p> <p>Action: This may be expected behavior. If it is not, check for the cause of the error in the Provisioning service.</p>
POJOSE-6501	Warning	<p>{0} failed to close DeliveryChannel during shutdown: {1}</p> <p>Cause: See the exception stack trace for the cause.</p> <p>Action: Check the cause in the exception stack trace and take appropriate actions to fix the error.</p>
POJOSE-6502	Warning	<p>Exception while handling configuration change in one of the listener.</p> <p>Cause: See the exception stack trace for the cause.</p> <p>Action: Check the cause in the exception stack trace and take appropriate actions to fix the error.</p>
POJOSE-6503	Warning	<p>Got ERROR ME status from consuming Endpoint:{0}</p> <p>Cause: See the exception stack trace for the cause.</p> <p>Action: Check the cause in the exception stack trace and take appropriate actions to fix the error.</p>
POJOSE-7001	Severe	<p>Error {0} injecting field {1}.</p> <p>Cause:</p> <p>Action: Make sure the type of field matches with the object being injected.</p>
POJOSE-7003	Severe	<p>Error, ServiceEndpoint got is null, not injecting field {1}.</p> <p>Cause:</p> <p>Action: Check all the necessary annotation property values that are required to search ServiceEndpoint to be sure the correct values are entered.</p>

Logging Code	Severity	Message Text, Cause, and Action
POJOSE-7004	Severe	No public method with Operation annotation found in class {0}, ignoring this class. Cause: The class with the @Provider annotation is missing a public method with the @Operation annotation. Action:
POJOSE-7005	Severe	Error loading class {0} Cause: A required Java class could not be loaded. Action: Make sure all the dependent classes are available for the POJO SE.
POJOSE-7100	Severe	At least one public method should be present in class {0} with @Operation annotation. Cause: The class with the @Provider annotation is missing a public method with the @Operation annotation. Action: Annotate a public method with @Operation so the POJO SE can invoke with the message for the Endpoint.
POJOSE-7101	Severe	Operation method {0} should be public in class {1}. Cause: Action:
POJOSE-7102	Severe	Operation method {0} should not be static in class {1}. Cause: Action:
POJOSE-7106	Severe	OnDone annotated method {0} should be public in class {1}. Cause: Action:
POJOSE-7107	Severe	OnReply method {0} should be public in class {1}. Cause: Action:
POJOSE-7108	Severe	More than one method is annotated with @Operation in class {0}. Cause: Action: Make sure only one method is annotated with @Operation.

Logging Code	Severity	Message Text, Cause, and Action
POJOSE-7109	Severe	More than one method is annotated with @OnDone in class {0}. Cause: Action: Make sure only one method is annotated with @OnDone.
POJOSE-7110	Severe	OnReply annotated method {0} should not be static in class {1}. Cause: Action:
POJOSE-7111	Severe	Method annotated with @OnDone is required when asynch call is used in class {0}. Cause: Action:
POJOSE-7112	Severe	OnDone annotated method {0} should not be static in class {1}. Cause: Action:
POJOSE-7113	Severe	Method annotated with @OnReply found in class {0} without a public method annotated with @Operation. Cause: The class with @Provider annotation is missing a public method with the @Operation annotation. Action: Annotate a public method with @Operation so the POJO SE can invoke with the message for the Endpoint.
POJOSE-7201	Severe	ServiceEndpoint object can not be null. Cause: The service endpoint passed directly or set through the @ConsumerEndpoint annotation property is null. Action: Make sure the ServiceEndpoint object passed is valid and is not null.
POJOSE-7301	Severe	Delivery Channel failed to deliver the message to the endpoint. Cause: Action: Check the cause in the exception stack trace and take appropriate actions to fix the error.
POJOSE-7302	Severe	Exception while transforming and sending In message. Cause: Action: Check the cause in the exception stack trace and take appropriate actions to fix the error.

Logging Code	Severity	Message Text, Cause, and Action
POJOSE-7303	Severe	Exception while transforming Out message. Cause: Action: Check the cause in the exception stack trace and take appropriate actions to fix the error.
POJOSE-7304	Severe	Error while sending a message to the endpoint. Cause: Action: Check the cause in the exception stack trace and take appropriate actions to fix the error.
POJOSE-7305	Severe	Node is not of type org.w3c.dom.Element, org.w3c.dom.Text or org.w3c.dom.DocumentFragment Cause: Action:
POJOSE-7306	Severe	ServiceEndpoint not set, set ServiceEndpoint or Service on Consumer. Cause: The ServiceEndpoint object passed directly or set through the @ConsumerEndpoint annotation property is null. Action: Make sure a valid, non-null ServiceEndpoint object instance is passed or correct values for the @ConsumerEndpoint property are set.
POJOSE-7307	Severe	Sever internal error: Provider "in" MessageExchange is null in ConsumerImpl. Cause: Action: Contact Sun support.
POJOSE-7308	Severe	No ServiceEndpoint found for the Service set on Consumer {0}. Cause: Action: Make sure a valid, non-null ServiceEndpoint object instance is passed or correct values for the @ConsumerEndpoint property are set.
POJOSE-7309	Severe	Severe internal error while creating Fault instance. Cause: Internal error. Action: Check the cause in the exception stack trace and take appropriate actions to fix the error, or contact Sun support.

Logging Code	Severity	Message Text, Cause, and Action
POJOSE-7310	Severe	<p>Error while converting payload (String or Node or Source) to JBI elements wrapped Source.</p> <p>Cause: The payload (String, Node, Source) passed by the user might be invalid.</p> <p>Action: Make sure the payload (String, Node or Source) passed to construct the FaultMessage object is valid XML.</p>
POJOSE-7500	Severe	<p>Exception while sending error status {0}.</p> <p>Cause:</p> <p>Action: Check the cause in the exception stack trace and take appropriate actions to fix the error, or contact Sun support.</p>
POJOSE-7501	Severe	<p>Exception while propagating SU status. {0}</p> <p>Cause:</p> <p>Action: Check the cause in the exception stack trace and take appropriate actions to fix the error, or contact Sun support.</p>
POJOSE-7502	Severe	<p>Exception while activating endpoint {0}.</p> <p>Cause:</p> <p>Action: Check the cause in the exception stack trace and take appropriate actions to fix the error, or contact Sun support.</p>
POJOSE-7503	Severe	<p>Error deactivating Provisioning endpoint: {0}.</p> <p>Cause:</p> <p>Action: Check the cause in the exception stack trace and take appropriate actions to fix the error, or contact Sun support.</p>
POJOSE-7504	Severe	<p>Can not deploy SU {0} with below errors.</p> <p>Cause: The cause is in the error message.</p> <p>Action: Correct the errors and redeploy.</p>
POJOSE-7505	Severe	<p>Activated consuming endpoint: {0} not found.</p> <p>Cause:</p> <p>Action: Make sure the consuming service is deployed and active.</p>
POJOSE-7506	Severe	<p>Endpoint attribute for ConsumerEndpoint annotation can not be empty: {0}.</p> <p>Cause:</p> <p>Action: Enter the required property value.</p>

Logging Code	Severity	Message Text, Cause, and Action
POJOSE-7507	Severe	Failed to parse component descriptor: {0} Cause: Action: Contact Sun support.
POJOSE-7508	Severe	Failed to initialize component bootstrap: {0} Cause: Action: Contact Sun support.
POJOSE-7509	Severe	Failed to register component bootstrap: {0} Cause: Action: Contact Sun support.
POJOSE-7510	Severe	Error while stopping the component. {0} Cause: Action: Check the cause in the exception stack trace and take appropriate actions to fix the error.
POJOSE-7511	Severe	Got ERROR ME status for Endpoint:{0} Cause: Action:
POJOSE-7512	Severe	Did not get the expected InOnly ME, got {0} Cause: The POJO SE Service expects an InOnly MessageExchange but instead received an InOut exchange. Action: If InOut is expected, make sure the POJO service method annotated with @Operation returns a type other than void.
POJOSE-7513	Severe	Did not get the expected InOut ME, got {0} Cause: POJO SE Service is expecting InOut MessageExchange but got InOnly. Action: If InOnly ME is expected make sure POJO service method annotated with @Operation returns void.
POJOSE-7514	Severe	Got exception while sending error MessageExchange. {0} Cause: Action:

Logging Code	Severity	Message Text, Cause, and Action
POJOSE-7515	Severe	Internal Error. ProviderTracker not found for Endpoint {0}. Cause: Action: Contact Sun support.
POJOSE-7516	Severe	POJO Service ended with exception before response message recieved. Cause: Provisioning service ended in an error before the response from the asynchronously consumed service was received. Action: This may be expected behavior. If it is not, check for the cause of the Provisioning service error.
POJOSE-7517	Severe	Allocated threads and blocking queue are full. Please configure to allocate higher resources: Core and Max pool size and blocking queue size of ThreadPoolExecutor. Cause: Action:
POJOSE-7518	Severe	Internal error. POJO Metadata not found for endpoint {0}. Cause: Action: Contact Sun support.
POJOSE-7519	Severe	Could not find appropriate method with Operation annotation in class {0}. Cause: Action: Make sure a public method to call with incoming message is annotated with @Operation.
POJOSE-7520	Severe	Exception while accepting ME from delivery channel. {0} Cause: Action:
POJOSE-7521	Severe	Exception while persisting configuration changes. {0} Cause: Action:

Scheduler Binding Component Logging Codes

The following table lists each logging code generated by the Scheduler Binding Component and describes the cause of the log message along with the recommended action for you to take.

Logging Code	Severity	Message Text, Cause, and Action
SCHEDBC-4001	Config	Set Component Configuration {0}: {1} Cause: Component configuration has been changed. Action: None required.
SCHEDBC-4002	Config	Set Application Configuration {0}: {1} Cause: Application configuration has been changed. Action: None required.
SCHEDBC-4003	Config	Set Application Variable {0}: {1} Cause: Application variable has been changed. Action: None required.
SCHEDBC-4004	Config	Using Application Configuration {0} for endpoint {1} Cause: Initialization information. Action: None required.
SCHEDBC-4005	Config	Scheduler Group via WSDL Configuration: {0} Cause: Initialization information. Action: None required.
SCHEDBC-4006	Config	Scheduler Date Format via WSDL Configuration: {0} Cause: Initialization information. Action: None required.
SCHEDBC-4007	Config	Scheduler Mode via WSDL Configuration: {0} Cause: Initialization information. Action: None required.
SCHEDBC-4008	Config	Scheduler Start date via WSDL Configuration: {0} Cause: Initialization information. Action: None required.

Logging Code	Severity	Message Text, Cause, and Action
SCHEDBC-4009	Config	Scheduler End date via WSDL Configuration: {0} Cause: Initialization information. Action: None required.
SCHEDBC-4010	Config	Scheduler Time Zone via WSDL Configuration: {0} Cause: Initialization information. Action: None required.
SCHEDBC-4011	Config	Scheduler Start date overridden by Application Configuration: {0} Cause: The WSDL configuration was overridden by the application during initialization. Action: None required.
SCHEDBC-4012	Config	Scheduler End date overridden by Application Configuration: {0} Cause: The WSDL configuration was overridden by the application during initialization. Action: None required.
SCHEDBC-4013	Config	Scheduler Time Zone overridden by Application Configuration: {0} Cause: The WSDL configuration was overridden by the application during initialization. Action: None required.
SCHEDBC-4014	Config	Scheduler trigger {0}.{1} not enabled and thus bypassed Cause: Initialization information. Action: Enable trigger in WSDL if not intentional.
SCHEDBC-4015	Config	Quartz Scheduler job name {0} will be scheduled Cause: Initialization information. Action: None required.
SCHEDBC-4016	Config	Quartz Scheduler job descripton: {0} Cause: Initialization information. Action: None required.
SCHEDBC-4017	Config	Scheduling {0} trigger {1}.{2} to fire {3} times, every {4} milliseconds Cause: Initialization information. Action: None required.

Logging Code	Severity	Message Text, Cause, and Action
SCHEDBC-4018	Config	Scheduling {0} trigger {1},{2} to fire for condition: {3} Cause: Initialization information. Action: None required.
SCHEDBC-4019	Config	Obfuscated Password Application Variable {0} Cause: Initialization information. Action: None required.
SCHEDBC-4020	Config	Created Quartz Scheduler {0} with {1} worker threads Cause: Initialization information. Action: None required.
SCHEDBC-4021	Config	Scheduling {0} trigger {1},{2} to fire for condition: {3} to last {4} millisecs, repeating {5} times at {6} millisecs interval Cause: Initialization information. Action: None required.
SCHEDBC-5001	Info	Start Scheduler consumer endpoints... Cause: Information details. Action: None required.
SCHEDBC-5002	Info	Stopped Scheduler consumer endpoints Cause: Information details. Action: None required.
SCHEDBC-5003	Info	Shut down Scheduler consumer endpoints... Cause: Information details. Action: None required.
SCHEDBC-5004	Info	Creating endpoint for {0} Cause: Information details. Action: None required.
SCHEDBC-5005	Info	Quartz Scheduler has been started Cause: Information details. Action: None required.

Logging Code	Severity	Message Text, Cause, and Action
SCHEDBC-5006	Info	Quartz Scheduler has been shut down Cause: Information details. Action: None required.
SCHEDBC-5007	Info	Quartz Scheduler has been suspended Cause: Information details. Action: None required.
SCHEDBC-5008	Info	{0} trigger {1}.{2} will fire first at: {3} Cause: Information details. Action: None required.
SCHEDBC-6001	Warning	SchedulerBootstrap installation MBean failed to initialize: {0} Cause: [Rare] A deleted or corrupted component descriptor file (for example, <i>JavaCAPSHome\glassfish\domains\domain1\jbi\components\sun-scheduler-binding\install_root\META-INF\jbi.xml</i>). Action: Reinstall the Scheduler BC.
SCHEDBC-6003	Warning	Cannot shutdown Quartz Scheduler Cause: OpenSymphony Quartz Scheduler cannot be shut down. Action: Try shutting down and then restarting the application server.
SCHEDBC-6004	Warning	Cannot start Quartz Scheduler Cause: OpenSymphony Quartz Scheduler cannot be started or resumed. Action: Try shutting down and then restarting the application server.
SCHEDBC-6005	Warning	Cannot suspend Quartz Scheduler Cause: OpenSymphony Quartz Scheduler cannot be suspended. Action: Try shutting down and then restarting the application server.
SCHEDBC-6006	Warning	Consumer endpoint {0} cannot send to (consume) provider endpoint Cause: Provider endpoint is failing to respond. Action: Try stopping and restarting the provider endpoint component or resuming it if it has been suspended by its QoS configuration.

Logging Code	Severity	Message Text, Cause, and Action
SCHEDBC-6007	Warning	<p>Cannot find Scheduler consumer endpoint {0} from Component context</p> <p>Cause: [Rare] The JBI framework is malfunctioning.</p> <p>Action: Try shutting down and then restarting the application server.</p>
SCHEDBC-6008	Warning	<p>Application variable {0} is undefined</p> <p>Cause: The application variable noted in the error message is referenced in the trigger message but it has not been defined.</p> <p>Action: Define the application variable and then redeploy the respective Composite Application project .</p>
SCHEDBC-6009	Warning	<p>Invalid timezone ID ({0}) specified; using default instead</p> <p>Cause: An invalid timezone ID was manually specified.</p> <p>Action: Use the WSDL editor to select one of the valid IDs from the drop-down list.</p>
SCHEDBC-6010	Warning	<p>Got SchedulerException in {0}:</p> <p>Cause: [Rare] Cannot find the Quartz API Version from the quartz-all.jar file.</p> <p>Action: Try reinstalling the Scheduler BC.</p>
SCHEDBC-6011	Warning	<p>Interrupted, so abort waiting for Message Exchange ACK/NACK</p> <p>Cause: The Java VM was interrupted while waiting on the disposition of a Message Exchange.</p> <p>Action: None required. The GlassFish application server is probably shutting down.</p>
SCHEDBC-6012	Warning	<p>Failed {0} attempt(s) to consume provider endpoint, disposing this trigger message instance "{1}"</p> <p>Cause: The QoS is configured to delete this triggering message when the number of allowed attempts to retry have been exhausted.</p> <p>Action: Verify that the provider endpoint is functioning properly or readjust the QoS configuration as needed.</p>
SCHEDBC-6013	Warning	<p>Failed {0} attempt(s) to consume provider endpoint, flagging this trigger message instance "{1}" as FAILED in Quartz</p> <p>Cause: The QoS is configured to error out this triggering message when the number of allowed attempts to retry have been exhausted.</p> <p>Action: Verify that the provider endpoint is functioning properly or readjust the QoS configuration as needed.</p>

Logging Code	Severity	Message Text, Cause, and Action
SCHEDBC-6014	Warning	<p>Failed {0} attempt(s) to consume provider endpoint with this trigger message "{1}"; SUSPEND is NOT however supported by this component</p> <p>Cause: The QoS is configured to suspend this endpoint when the number of allowed attempts to resend the trigger message have been exhausted.</p> <p>Action: Suspend is not supported, so the Scheduler BC consumer endpoint remains active. Verify that the provider endpoint is functioning properly or readjust the QoS configuration as needed.</p>
SCHEDBC-6015	Warning	<p>Failed to consume provider endpoint with this trigger message "{0}"</p> <p>Cause: QoS redelivery has not been configured for this Scheduler BC endpoint and it cannot send the message to the provider .</p> <p>Action: Verify that the provider endpoint is functioning properly or readjust the QoS configuration as needed.</p>
SCHEDBC-6016	Warning	<p>Failed {0} attempt(s) to consume intended provider with this trigger message "{1}"; redirected to {2}-{3}</p> <p>Cause: The QoS is configured to redirect this trigger message to another provider endpoint when the number of allowed attempts to resend it have been exhausted.</p> <p>Action: Verify that the provider endpoint is functioning properly or readjust the QoS configuration as needed.</p>
SCHEDBC-6017	Warning	<p>Interrupted, so abort waiting in throttling queue</p> <p>Cause: The Java VM was interrupted while waiting to send a trigger message.</p> <p>Action: None required. The GlassFish application server is probably shutting down.</p>
SCHEDBC-7001	Severe	<p>Cannot create Quartz Scheduler for Service Assembly {0}</p> <p>Cause: Problems were encountered while creating an OpenSymphony Quartz Scheduler.</p> <p>Action: Try shutting down and restarting the Scheduler BC or the GlassFish application server.</p>
SCHEDBC-7002	Severe	<p>Cannot find respective Scheduler endpoint</p> <p>Cause: [Rare] The JBI framework is likely malfunctioning.</p> <p>Action: Try shutting down and restarting the GlassFish application server.</p>

Logging Code	Severity	Message Text, Cause, and Action
SCHEDBC-7003	Severe	WSDL for Endpoint {0} does not represent a valid Scheduler binding Cause: No appropriate Scheduler BC binding WSDL was found in the service unit. Action: Ensure that the respective project involving the Scheduler BC has an appropriate binding WSDL specified and redeploy the Composite Application.
SCHEDBC-7004	Severe	Cannot initialize Scheduler for endpoint {0} Cause: Cannot initialize the Scheduler for non-specific reasons. Action: Verify that the Scheduler BC binding WSDL is correct and redeploy the Composite Application.

Component Toolkit Logging Codes

The following table lists each logging code generated by the Component Toolkit, which is a runtime library for JBI components. This table also describes the cause of the log message and provides a recommended action for you to take.

Logging Code	Severity	Message Text, Cause, and Action
COMPTK-4001	Config	No exchange thread pools created, {0} is synchronous. Cause: The component has been configured to run in a single thread. Action: Monitor component performance, as most require multithreading to process message exchanges with efficiency.
COMPTK-4002	Config	Created {0} exchange thread pool(s) - {1} Cause: The component threading initialization is complete. Action: None required.
COMPTK-4003	Config	Started {0} core threads in {1} pool. Cause: The component worker threads were started. Action: None required.
COMPTK-4004	Config	{0} started {1} NMR poller threads. Cause: The component started threads listening on the NMR for message exchanges. Action: None required.

Logging Code	Severity	Message Text, Cause, and Action
COMPTK-4005	Config	<p>{0} stopped {1} NMR poller threads.</p> <p>Cause: The component stopped threads on the NMR for message exchanges.</p> <p>Action: None required.</p>
COMPTK-5001	Info	<p>Initialized {0} successfully!</p> <p>The JBI component was initialized successfully.</p> <p>Action: None required.</p>
COMPTK-5002	Info	<p>Started {0} successfully!</p> <p>Cause: The JBI component was started successfully.</p> <p>Action: None required.</p>
COMPTK-5003	Info	<p>Stopped {0} successfully!</p> <p>Cause: The JBI component was stopped successfully.</p> <p>Action: None required.</p>
COMPTK-5004	Info	<p>Shut down {0} successfully!</p> <p>Cause: The JBI component was shut down successfully.</p> <p>Action: None required.</p>
COMPTK-5005	Info	<p>{0} created NULL endpoint (info={1}) for service unit: {2}</p> <p>Cause: The component's EndpointManager was unable to resolve the endpoint during service unit startup.</p> <p>Action: Validate the endpoint definitions in the component's service unit descriptor.</p>
COMPTK-5006	Info	<p>Failed to acquire delivery channel - may be closed!</p> <p>Cause: The delivery channel is probably closed.</p> <p>Action: None required, the channel-listening thread will stop gracefully.</p>
COMPTK-5007	Info	<p>{0} was misconfigured with {1} poller threads - {2} poller threads will be running!</p> <p>Cause: The poller count configuration value is invalid</p> <p>Action: Either fix the configuration value or accept the number of threads indicated in the message.</p>

Logging Code	Severity	Message Text, Cause, and Action
COMPTK-6001	Warning	Failed to parse component descriptor\: {0} Cause: The component's JBI descriptor is invalid. Action: Review the server log for more information about the cause of the error and fix the component descriptor.
COMPTK-6002	Warning	Failed to initialize component bootstrap\: {0} Cause: An error occurred during component initialization. Action: Review the server log for more information about the cause of the error.
COMPTK-6003	Warning	Failed to register component bootstrap\: {0} Cause: An error occurred while registering the component with the JBI framework. Action: Review the server log for more information about the cause of the error.
COMPTK-6004	Warning	Service unit "{0}" failed to start consumer endpoints\: {1} Cause: An error occurred while starting consuming endpoint(s). Action: Review the server log for more information about the cause of the error.
COMPTK-6005	Warning	Duplicate endpoint ({0}) in component\: {1} Cause: Another service unit has already declared the endpoint. Action: Undeploy the existing endpoint or rename the endpoint identified as a duplicate.
COMPTK-6006	Warning	Duplicate endpoint ({0}) in service unit\: {1} Cause: This service unit has declared duplicate endpoints. Action: Rename one or both of the duplicate endpoints.
COMPTK-6007	Warning	Service unit "{0}" failed to start provider endpoints\: {1} Cause: An error occurred starting provisioning endpoint(s). Action: Review the server log for more information about the cause of the error.
COMPTK-6008	Warning	Failed to deactivate endpoint\: {0} Cause: An endpoint which failed activation was unable to be deactivated. Action: None required; this is for diagnostic purposes only.

Logging Code	Severity	Message Text, Cause, and Action
COMPTK-6009	Warning	Endpoint "{0}" deactivation failed\:\ {1} Cause: An error occurred during endpoint activation. Action: Review the server log for more information about the cause of the error.
COMPTK-6010	Warning	Service unit "{0}" failed to stop provisioning endpoints\:\ {1} Cause: An error occurred stopping provisioning endpoint(s). Action: Review the server log for more information about the cause of the error.
COMPTK-6011	Warning	Service unit "{0}" failed to stop consumer endpoints\:\ {1} Cause: An error occurred stopping consumer endpoint(s). Action: Review the server log for more information about the cause of the error.
COMPTK-6012	Warning	{0} failed to close DeliveryChannel\:\ {0} Cause: An error occurred closing the delivery channel during component shutdown. Action: Review the server log for more information about the cause of the error.
COMPTK-6013	Warning	Failed to start "{0}" NMR pollers\:\ {1} Cause: An error occurred while starting threads accepting message exchanges from the NMR. Action: Review the server log for more information about the cause of the error.
COMPTK-6014	Warning	Failed to stop "{0}" NMR poller\:\ {1} Cause: An error occurred while stopping threads accepting message exchanges from the NMR. Action: Review the server log for more information about the cause of the error.
COMPTK-6015	Warning	An exception interrupted "{1}" NMR poller\:\ {0} Cause: The thread accepting message exchanges from the NMR was interrupted, likely due to component shutdown. Action: Review the server log for more information about the cause of the error. Note – This message can be ignored if logged at INFO level.

Logging Code	Severity	Message Text, Cause, and Action
COMPTK-6016	Warning	<p>"{0}" NMR poller encountered error\: {1}</p> <p>Cause: An exception was not handled by the component and caught by the thread accepting message exchange.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
COMPTK-6017	Warning	<p>Service unit already deployed\: {0}</p> <p>Cause: A service unit with the same name is already deployed.</p> <p>Action: Rename the duplicate service unit or undeploy the original service unit.</p>
COMPTK-6018	Warning	<p>Failed to deploy SU "{0}": {1}</p> <p>Cause: An unexpected error occurred during deployment.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
COMPTK-6019	Warning	<p>shutDown failed for undeployed service unit "{0}"</p> <p>Cause: Shutdown was initiated for a service unit that is not currently deployed.</p> <p>Action: Verify the service unit is deployed before shutting down.</p>
COMPTK-6020	Warning	<p>start failed for undeployed service unit "{0}"</p> <p>Cause: The service unit failed to start because it is not currently deployed.</p> <p>Action: Verify the service unit is deployed before starting.</p>
COMPTK-6021	Warning	<p>Service unit "{0}" start failed\: {1}</p> <p>Cause: An unexpected error occurred while starting a service unit.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
COMPTK-6022	Warning	<p>stop failed for undeployed service unit "{0}"</p> <p>Cause: The service unit failed to start because it is not currently deployed.</p> <p>Action: Verify the service unit is deployed before stopping.</p>
COMPTK-6023	Warning	<p>Service unit "{0}" stop failed\: {1}</p> <p>Cause: An unexpected error occurred while stopping a service unit.</p> <p>Action: Review the server log for more information about the cause of the error.</p>

Logging Code	Severity	Message Text, Cause, and Action
COMPTK-6024	Warning	Failed to undeploy service unit "{0}": {1} Cause: An unexpected error occurred while undeploying a service unit. Action: Review the server log for more information about the cause of the error.
COMPTK-6025	Warning	Event Management mbean "{0}" not found ({1})\! Please verify appropriate RAR is installed and started. Cause: The Event Management API is not available. Action: Please verify that the appropriate RAR is installed and started.
COMPTK-6026	Warning	Sending {0} Alert failed\: {1} Cause: An error occurred sending an alert. Action: Review the server log for more information about the cause of the error.
COMPTK-6027	Warning	Invalid EventForwarder MBean name\: {0} Cause: The format of the EventForwarder name is not a valid JMX ObjectName. Action: Verify you have correct version of product installed and review the server log for more information about the cause of the error.
COMPTK-6028	Warning	Failed to send message exchange (id\={0})\: {1} Cause: The component failed to send a message exchange to the NMR. Action: Review the server log for more information about the cause of the error.
COMPTK-6029	Warning	Failed to create exchange - unsupported pattern\: {0} Cause: The message exchange is not InOut or InOnly. Action: Modify deployed application to use InOut or InOnly.
COMPTK-6030	Warning	{0} cannot find provisioning endpoint (name\={1},svc\={2}) for message (id\={3}) Cause: The component failed to identify the endpoint responsible for handling a message exchange from the NMR. Action: Review the server log for more information about the cause of the error.

Logging Code	Severity	Message Text, Cause, and Action
COMPTK-6031	Warning	<p>Error occurred shutting down exchange handling thread pool: {0}</p> <p>Cause: The component failed to identify the endpoint responsible for handling a message exchange from the NMR.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
COMPTK-7001	Severe	<p>Failed handling exchange-{0}: {1}</p> <p>Cause: The component failed to handle errors related to a message exchange such that processing of that exchange has been aborted.</p> <p>Action: Review the server log for more information about the cause of the error.</p>

Common Utility Logging Codes

The following table lists each logging code generated by the Common Utility library and describes the cause of the log message as well as providing a recommended action for you to take.

Logging Code	Severity	Message Text, Cause, and Action
UTIL-4001	Config	<p>Resizing pool: new size={0}</p> <p>Cause: The Service Assembly descriptor could not be parsed.</p> <p>Action: Review the server log for more information about the cause of the error and correct the descriptor.</p>
UTIL-6001	Warning	<p>Failed to parse Service Assembly descriptor: {0}</p> <p>Cause: The Service Assembly descriptor could not be parsed.</p> <p>Action: Review the server log for more information about the cause of the error and correct the descriptor.</p>
UTIL-6002	Warning	<p>Failed to parse service unit descriptor: {0}</p> <p>Cause: The service unit descriptor could not be parsed.</p> <p>Action: Review the server log for more information about the cause of the error and correct the descriptor.</p>

Logging Code	Severity	Message Text, Cause, and Action
UTIL-6003	Warning	Failed to parse Service Assembly connections: {0} Cause: The connections in the Service Assembly descriptor are invalid. Action: Review the server log for more information about the cause of the error, fix the assembly descriptor, and redeploy.
UTIL-6004	Warning	Descriptor file does not exist: {0} Cause: The service descriptor file is not present at the specified location. Action: Verify that the service descriptor is packaged with the deployment artifacts.
UTIL-6005	Warning	Failed to parse Identification element: {0} Cause: The service descriptor identification configuration is invalid. Action: Review the server log for more information about the cause of the error.
UTIL-6006	Warning	Invalid context, may not be NULL or zero length! Cause: The component did not provide a correct diagnostic logging context. Action: File a defect ticket against the component.
UTIL-6007	Warning	Invalid context, must be in key-value pairs! Cause: The component did not provide a correct diagnostic logging context. Action: File a defect ticket against the component.
UTIL-6008	Warning	XmlResource failed to create DocumentBuilder: {0} Cause: A pooled XML resource could not instantiate a DocumentBuilder. Action: Review the server log for more information about the cause of the error.
UTIL-6009	Warning	XmlResource failed to create Transformer: {0} Cause: A pooled XML resource could not create a transformer. Action: Review the server log for more information about the cause of the error.

Logging Code	Severity	Message Text, Cause, and Action
UTIL-6010	Warning	Failed to convert to DOMSource: {0} Cause: An XML Source could not be converted to a DOM Document. Action: Verify the data is correct, and review the server log for more information about the cause of the error.
UTIL-6011	Warning	Failed to reset StreamSource: {0} Cause: A component was unable to reuse a streamed XML source. Action: Review the server log for more information about the cause of the error.
UTIL-6012	Warning	Unable to register MBean, forced unregister failed for: {0} Cause: The MBean was previously registered and failed to unregister. Action: Uninstall the stale MBean interfering with the current one.
UTIL-6013	Warning	Failed to register MBean {0}: {1} Cause: An error occurred registering MBean. Action: Review the server log for more information about the cause of the error.
UTIL-6014	Warning	Failed to unregister MBean {0}: {1} Cause: An error occurred unregistering MBean. Action: Review the server log for more information about the cause of the error.
UTIL-6015	Warning	Catalog file not found at {0}! Cause: Resolver catalog file could not be found in the service unit. Action: Verify presence of catalog.xml in deployment artifacts and review the server log for more information about the cause of the error.
UTIL-6016	Warning	Failed to resolve catalog base {0} (original base = {1}) Cause: The resolver catalog may be invalid. Action: Review the server log for more information about the cause of the error.

Quality of Service Logging Codes

The following table lists each logging code generated by the Quality of Service library and describes the cause of the log message as well as providing a recommended action for you to take.

Logging Code	Severity	Message Text, Cause, and Action
QOS-4001	Config	Successfully added new Application Configuration: {0} Cause: A new application configuration was added. Action: None required.
QOS-4002	Config	Successfully added new Application Variable: {0} - Value = {1} Cause: A new application variable was added. Action: None required.
QOS-4003	Config	Successfully deleted Application Configuration: {0} Cause: An application configuration was deleted. Action: None required.
QOS-4004	Config	Successfully deleted Application Variable: {0} Cause: An application variable was deleted. Action: None.
QOS-4005	Config	Successfully set Application Configuration: {0} Cause: An application configuration was modified. Action: None required.
QOS-4006	Config	Successfully set Application Variable: {0} - Value = {1} Cause: An application variable was modified. Action: None required.
QOS-5001	Info	Unable to dynamically invoke {0} on mbean {1} Cause: A deployment lookup optimization was unavailable. Action: None, the lookup will continue.
QOS-6001	Warning	Redelivery to error endpoint aborted, endpoint not active. Cause: Redelivery on-failure execution failed because the redirect endpoint is not active. Action: Verify the endpoint is deployed and active; review the server log for more information about the cause of the error.

Logging Code	Severity	Message Text, Cause, and Action
QOS-6002	Warning	Redelivery to error endpoint aborted, no configured endpoint. Cause: Redelivery redirect configuration is missing or invalid. Action: Correct redirect configuration and redeploy.
QOS-6003	Warning	Failed to parse QoS configuration: {0} Cause: An error occurred while parsing the service quality configuration. Action: Review the server log for more information about the cause of the error, fix the configuration, and redeploy.
QOS-6004	Warning	Descriptor file does not exist: {0} Cause: Service unit descriptor is not at the expected location. Action: Verify that the deployment is correct, specifically the expansion of the deployed service unit.
QOS-6005	Warning	Failed to parse component configuration: {0} Cause: An error occurred while parsing the component configuration. Action: Review the server log for more information about the cause of the error.
QOS-6006	Warning	Failed to activate redelivery endpoint: {0} Cause: Component was unable to activate the internal redelivery endpoint. Action: Review the server log for more information about the cause of the error, Redelivery will not function correctly once this error occurs.
QOS-6007	Warning	Unsupported failure option {0} for exchange: {1} Cause: Redelivery was configured with an invalid on-failure option. Action: Fix the QoS redelivery configuration and redeploy.
QOS-6008	Warning	Redelivery attempts exhausted, suspend message: {0} Cause: Message exchange is suspended because retry attempts are exhausted. Action: Review the server log for more information about the cause of the suspend and use monitoring to resume.

Logging Code	Severity	Message Text, Cause, and Action
QOS-6009	Warning	Redelivery attempts exhausted, delete message: {0} Cause: Message exchange is deleted because retry attempts are exhausted. Action: Review the server log for more information about the cause of the error.
QOS-6010	Warning	Invalid redelivery configuration: {0} not supported for {1}! Cause: Redelivery configuration is invalid. Action: Reconfigure redelivery against an InOnly or InOut message exchange.
QOS-6011	Warning	{0} does not support Application Variables! Cause: The component does not support application variables. Action: Forgo using application variables for the component, or file an enhancement request against the component.
QOS-6012	Warning	Component's JBI descriptor not found: Cause: The component descriptor is not at the expected location. Action: Verify the location of the component descriptor.
QOS-6013	Warning	Failed to set error data - 'error' and 'actor' cannot be empty! Cause: The component did not supply valid error information. Action: Review the server log for more information about the cause of the error and file a defect against the component.
QOS-6014	Warning	Failed to parse systemic message tracking configuration: {0} Cause: The Service Assembly descriptor contained an invalid message tracking configuration. Action: Review the QoS configuration in the Service Assembly descriptor for any errors.
QOS-6015	Warning	Exchange({0}) terminated. Please review logs for details. Cause: This is the default message for failed redelivery. Action: Review the server log for more information about the cause of the failed redelivery.
QOS-6016	Warning	Failed to load configuration {0}: {1} Cause: The component was unable to load its configuration. Action: Review the server log for more information about the cause of the error.

Logging Code	Severity	Message Text, Cause, and Action
QOS-6017	Warning	Failed to persist configuration settings to file {0}; {1} Cause: The component was unable to persist its configuration. Action: Review the server log for more information about the cause of the error.
QOS-6018	Warning	Provider endpoint cannot be NULL! Cause: The component attempted to lookup consumers for a NULL provider. Action: Review the server log for more information about why the provider endpoint is missing.
QOS-6019	Warning	Redelivery attempts exhausted, send aborted for message exchange: {0} Cause: The component is replying with an error because the number of retry attempts is exhausted. Action: Review the server log for more information about the cause of the failed delivery.
QOS-6020	Warning	Attempting redelivery for {0}, send failed: {1} Cause: A retry attempt failed. Action: Review the server log for more information about the cause of the error.
QOS-6021	Warning	Invalid Application Variable Item Size: {0} Cause: The application variable is configured incorrectly. Action: Correct the application variable definition.
QOS-6022	Warning	Invalid Application Variable - Missing Name Field: {0} Cause: The application variable is missing the required Name field. Action: Correct the application variable definition.
QOS-6023	Warning	Invalid Application Variable - Missing Value Field: {0} Cause: The application variable is missing the required Value field. Action: Correct the application variable definition.
QOS-6024	Warning	Invalid Application Variable - Missing Type Field: {0} Cause: The application variable is missing the required Type field. Action: Correct the application variable definition.

Logging Code	Severity	Message Text, Cause, and Action
QOS-6025	Warning	<p>Application Configuration is missing field: {0}</p> <p>Cause: The application configuration is missing a required field.</p> <p>Action: Review the application configuration and add the missing field.</p>
QOS-6026	Warning	<p>Application Configuration is missing value for field: {0}</p> <p>Cause: The application configuration is missing a value for a field.</p> <p>Action: Review the application configuration and add the missing field value.</p>
QOS-6027	Warning	<p>Failed to persist {0} application configuration: {1}</p> <p>Cause: The application configuration could not be persisted.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
QOS-6028	Warning	<p>Failed to persist {0} component configuration: {1}</p> <p>Cause: The component configuration could not be persisted.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
QOS-6029	Warning	<p>Component Configuration file {0} does not exist!</p> <p>Cause: The component's configuration file is missing.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
QOS-6030	Warning	<p>Add Application Configuration Failed: Configuration {0} already exists!</p> <p>Cause: The application configuration could not be added because a configuration with the same name already exists.</p> <p>Action: Rename one of the application configurations.</p>
QOS-6031	Warning	<p>Add Application Configuration Failed: Configuration should have {0} fields, not {1}!</p> <p>Cause: The application configuration could not be added because it has the wrong number of fields.</p> <p>Action: Correct the number of fields or add an application configuration with the correct number of fields.</p>

Logging Code	Severity	Message Text, Cause, and Action
QOS-6032	Warning	<p>Add Application Configuration Failed: Configuration missing {0} key!</p> <p>Cause: The application configuration could not be added because it is missing its name key field.</p> <p>Action: Name the application configurations.</p>
QOS-6033	Warning	<p>Add Application Configuration Failed: {0} value is invalid!</p> <p>Cause: The application configuration could not be added because its value is invalid.</p> <p>Action: Correct the application configuration value.</p>
QOS-6034	Warning	<p>Add Application Variable Failed: Variable {0} already exists!</p> <p>Cause: The application variable could not be added because a variable with the same name already exists.</p> <p>Action: Rename one of the duplicate application variables.</p>
QOS-6035	Warning	<p>Add Application Variable Failed: {0} value is invalid!</p> <p>Cause: The application variable could not be added because its value is invalid.</p> <p>Action: Correct the application variable value.</p>
QOS-6036	Warning	<p>Delete Application Configuration Failed: Configuration {0} does not exist!</p> <p>Cause: The application configuration could not be deleted because it does not exist.</p> <p>Action: Choose an existing configuration to delete.</p>
QOS-6037	Warning	<p>Application Variable Delete Failed: Variable {0} does not exist!</p> <p>Cause: The application variable could not be deleted because it does not exist.</p> <p>Action: Choose an existing variable to delete.</p>
QOS-6038	Warning	<p>Set Application Configuration Failed: Configuration {0} does not exist!</p> <p>Cause: The application configuration could not be set because it does not exist.</p> <p>Action: Choose an existing configuration to set.</p>

Logging Code	Severity	Message Text, Cause, and Action
QOS-6039	Warning	<p>Set Application Configuration Failed: Configuration should have {0} fields, not {1}!</p> <p>Cause: The application configuration could not be set because it has the wrong number of fields.</p> <p>Action: Set the application configuration with correct number of fields.</p>
QOS-6040	Warning	<p>Set Application Configuration Failed: Configuration missing {0} key!</p> <p>Cause: The application configuration could not be set because it is missing its name key field.</p> <p>Action: Name the application configuration.</p>
QOS-6041	Warning	<p>Set Application Configuration Failed: {0} value is invalid!</p> <p>Cause: The application configuration could not be set because its value is invalid.</p> <p>Action: Correct the application configuration value.</p>
QOS-6042	Warning	<p>Set Application Variable Failed: Variable {0} does not exist!</p> <p>Cause: The application variable could not be set because it does not exist.</p> <p>Action: Choose an existing variable to set.</p>
QOS-6043	Warning	<p>Set Application Variable Failed: {0} value is invalid!</p> <p>Cause: The application variable could not be set because its value is invalid.</p> <p>Action: Correct the application variable value.</p>
QOS-6044	Warning	<p>Application Configuration {0} - Value Invalid: {1}</p> <p>Cause: The application configuration could not be set because its value is invalid.</p> <p>Action: Correct the application configuration value.</p>
QOS-6045	Warning	<p>Failed to convert NULL Property type!</p> <p>Cause: The configuration property type is NULL or missing.</p> <p>Action: Fix the component configuration or file a defect against the component.</p>

Logging Code	Severity	Message Text, Cause, and Action
QOS-6046	Warning	<p>Component Configuration does not support the type: {0}</p> <p>Cause: The configuration property is defined with an unsupported type.</p> <p>Action: Fix the component configuration or file a defect against the component.</p>
QOS-6047	Warning	<p>Failed to initialize Application Configuration: {0}</p> <p>Cause: An error occurred while initializing application configuration.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
QOS-6048	Warning	<p>Failed to initialize Application Variables: {0}</p> <p>Cause: An error occurred while initializing application variables.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
QOS-6049	Warning	<p>Failed to create DeploymentServiceMBean for {0}: {1}</p> <p>Cause: The component could not load DeploymentService.</p> <p>Action: Review the server log for more information about the cause of the error and, if not running on GlassFish, verify the DeploymentService name and file a defect against QoS.</p>
QOS-6050	Warning	<p>Failed to lookup {0} Service Qualities: {1}</p> <p>Cause: An error occurred looking up the configured service qualities.</p> <p>Action: Review the server log for more information about the cause of the error, fix it, and redeploy.</p>
QOS-6051	Warning	<p>Failed to acquire Consumers for {0} Provider {1}: {2}</p> <p>Cause: An error occurred looking up connection consumers.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
QOS-6052	Warning	<p>Failed to acquire Service Assembly for Service Unit {0}: {1}</p> <p>Cause: The component was unable to lookup the Service Assembly.</p> <p>Action: Review the server log for more information about the cause of the error.</p>

Logging Code	Severity	Message Text, Cause, and Action
QOS-6053	Warning	<p>Component Application Configuration file {0} does not exist!</p> <p>Cause: The file to which the application configuration is persisted is missing.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
QOS-6054	Warning	<p>Failed to load application configuration {0}: {1}</p> <p>Cause: An error occurred while loading the application configuration.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
QOS-6055	Warning	<p>Failed to persist application configuration settings to file {0}: {1}</p> <p>Cause: The component was unable to persist the application configuration to file.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
QOS-6056	Warning	<p>Message Exchange {0} has been sent unsuccessfully {1} times; resetting redelivery counter.</p> <p>Cause: The exchange has failed delivery too many times.</p> <p>Action: Review the server log for more information about the cause of the error and consider lowering the number of retry attempts.</p>
QOS-6057	Warning	<p>{0} does not support Application Configurations!</p> <p>Cause: The component does not support application configurations.</p> <p>Action: Forgo using application configurations for the component or file an enhancement request against the component.</p>
QOS-6058	Warning	<p>Failed to dynamically invoke {0} on mbean {1}</p> <p>Cause: The component encountered an error while invoking method on DeploymentService.</p> <p>Action: Review the server log for more information about the cause of the error.</p>
QOS-6061	Warning	<p>Failed to parse systemic redelivery configuration: {0}</p> <p>Cause: The Service Assembly descriptor contained an invalid redelivery configuration.</p> <p>Action: Review the QoS configuration in the Service Assembly descriptor for any errors.</p>

Logging Code	Severity	Message Text, Cause, and Action
QOS-6062	Warning	Failed to parse systemic throttling configuration: {0} Cause: The Service Assembly descriptor contained an invalid throttling configuration. Action: Review the QoS configuration in the Service Assembly descriptor for any errors.
QOS-6063	Warning	Failed to install service qualities for service unit "{0}": {1} Cause: An error occurred while installing service qualities. Action: Review the server log for more information about the cause of the error, fix the error, and redeploy.
QOS-6064	Warning	Property name is required! Cause: A component configuration property is missing its name. Action: Correct the component configuration property.
QOS-6065	Warning	Property type {0} not supported! Cause: A component has configured properties with unsupported data types. Action: Fix the component configuration or file a defect against the component.
QOS-6066	Warning	Constraint {0} is missing required attribute: {1} Cause: A property constraint is missing the specified required attribute. Action: Correct the component configuration property.
QOS-6067	Warning	Undefined Facet: {0} Cause: A property constraint is configured with an invalid facet. Action: Fix the component configuration or file a defect against the component.
QOS-6068	Warning	Duplicate Constraint: {0} Cause: The component configured the same constraint more than once. Action: Fix the component configuration or file a defect against the component.

Logging Code	Severity	Message Text, Cause, and Action
QOS-6069	Warning	Numeric value is required for type: {0} Cause: The component configured a nonnumeric value for a numeric property. Action: Fix the component configuration or file a defect against the component.
QOS-6070	Warning	Positive value is required for type: {0} Cause: The component configured a negative value for a positive numeric property. Action: Fix the component configuration or file a defect against the component.
QOS-6071	Warning	Unsupported Facet: {0} Cause: The component has configured a property with an inappropriate or invalid constraint facet. Action: Fix the component configuration or file a defect against the component.
QOS-6072	Warning	{0} may not be combined with {1} Cause: Configuration property constraints conflict with each other. Action: Fix the component configuration or file a defect against the component.
QOS-6073	Warning	{0} value ({1}) must be greater than or equal to {2} value ({3}) Cause: Minimum and maximum In/Exclusive constraints have conflicting values. Action: Fix the component configuration or file a defect against the component.
QOS-6074	Warning	{0} value ({1}) must be less than or equal to {2} value ({3}) Cause: Minimum and maximum In/Exclusive constraints have conflicting values. Action: Fix the component configuration or file a defect against the component.
QOS-6075	Warning	Invalid Constraints on Property {0} were specified: {1} Cause: Configuration property constraints conflict with the property type or each other. Action: Fix the component configuration or file a defect against the component.

Logging Code	Severity	Message Text, Cause, and Action
QOS-6076	Warning	{0} failed to close: {1} Cause: A service quality filter could not be closed. Action: Review the server log for more information about the cause of the error.
QOS-6077	Warning	Constraint {0} does not apply to type {1} Cause: The component configured a constraint for a property that does not apply to that property type. Action: Fix the component configuration or file a defect against the component.
QOS-6078	Warning	Failed to modify configuration property {0} with new value {1}: {2} Cause: The configuration property could not be set to the given value. Action: Verify the component configuration and review the server log for more information about the cause of the error.
QOS-6079	Warning	Invalid value {0} for property {1} Cause: The value is invalid for the configuration property type. Action: Verify the component configuration and review the server log for more information about the cause of the error.
QOS-6080	Warning	Failed to acquire Deployment Service: {0} Cause: The component could not retrieve the deployment service. Action: Review the server log for more information about the cause of the error.

Runtime Framework Error Messages

The following table lists each error message generated by the JBI runtime framework and describes the cause of the log message as well as providing a recommended action for you to take.

Message ID	Severity	Message Text, Cause, and Action
JBIFW0003	Severe	<p>Unable to initialize {0} due to an exception: {1}({2}). Stack trace follows.</p> <p>Cause: A required runtime service failed to initialize. The service name, exception name, and exception message are provided, and a stack trace is also logged.</p> <p>Action: Try restarting the runtime. If this fails to solve the problem, contact Sun for support.</p>
JBIFW0004	Severe	<p>JBI framework initialization failed; one or more services failed to initialize.</p> <p>Cause: Some runtime services failed to initialize.</p> <p>Action: See the preceding JBIFW0003 message(s) for further details.</p>
JBIFW0010	INFO	<p>JBI framework ready to accept requests.</p> <p>Cause: The JBI runtime has initialized and can accept requests from admin clients. At this point, no components or Service Assemblies have been started.</p> <p>Action: None required, informational message only.</p>
JBIFW0012	INFO	<p>JBI framework startup complete.</p> <p>Cause: The JBI runtime has started and all components and Service Assemblies have been brought to their previous states.</p> <p>Action: None required, informational message only.</p>
JBIFW0013	SEVERE	<p>Unable to start {0} due to an exception: {1} ({2}). Stack trace follows.</p> <p>Cause: A required runtime service failed to start. The service name, exception class, and exception message are provided, and a stack trace is also logged.</p> <p>Action: Try restarting the runtime. If this fails to solve the problem, contact Sun for support.</p>
JBIFW0014	SEVERE	<p>JBI framework startup failed; one or more services failed to start.</p> <p>Cause: Some runtime services failed to start.</p> <p>Action: See the preceding JBIFW0013 message(s) for further details.</p>
JBIFW0033	SEVERE	<p>Unable to stop {0} due to an exception: {1} ({2}). Stack trace follows.</p> <p>Cause: A runtime service failed to stop. The service name, exception class, and exception message are provided, and a stack trace is also logged.</p> <p>Action: If this problem occurs consistently, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW0034	WARNING	<p>JBIFramework shutdown had errors; one or more services failed to stop successfully.</p> <p>Cause: Some runtime services failed to stop.</p> <p>Action: See the preceding JBIFW0033 message(s) for further details.</p>
JBIFW0042	INFO	<p>JBIFramework termination complete.</p> <p>Cause: The JBIFramework runtime has successfully terminated.</p> <p>Action: None required, informational message only.</p>
JBIFW0053	WARNING	<p>{0} already initialized.</p> <p>Cause: An attempt was made to initialize a runtime service that was already initialized.</p> <p>Action: This is an internal error that should not occur. Report this error to Sun.</p>
JBIFW0054	WARNING	<p>{0} already started.</p> <p>Cause: An attempt was made to start a runtime service that was already started.</p> <p>Action: This is an internal error that should not occur. Report this error to Sun.</p>
JBIFW0055	WARNING	<p>{0} already stopped.</p> <p>Cause: An attempt was made to stop a runtime service that was already stopped.</p> <p>Action: This is an internal error that should not occur. Report this error to Sun.</p>
JBIFW0060	SEVERE	<p>Internal error: Empty list argument received for {0}.</p> <p>Cause: An List argument to an internal method call was empty when a non-empty List is required.</p> <p>Action: This is an internal error that should not occur. Report this error to Sun.</p>
JBIFW0061	SEVERE	<p>Internal error: Empty string argument received for {0}.</p> <p>Cause: A String argument to an internal method call was empty when a non-empty String is required.</p> <p>Action: This is an internal error that should not occur. Report this error to Sun.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW0062	SEVERE	<p>Internal error: Invalid argument received for {0}; the value {1} is unrecognized.</p> <p>Cause: The value of an argument to an internal method call was invalid.</p> <p>Action: This is an internal error that should not occur. Report this error to Sun.</p>
JBIFW0063	SEVERE	<p>Null argument received for {0}.</p> <p>Cause: An argument to an internal method call was null when a non-null value is required.</p> <p>Action: This is an internal error that should not occur. Report this error to Sun.</p>
JBIFW0102	WARNING	<p>Implementation of javax.transaction.TransactionManager not found. Lookup failed with {0}, stack trace follows.</p> <p>Cause: An exception occurred while the runtime was looking up the implementation of the Java Transaction Manager.</p> <p>Action: The stack trace following this message should pinpoint the problem. This is usually an environmental or configuration problem.</p>
JBIFW0103	WARNING	<p>Unable to create a LoggerMBean for the framework logger. No JMX control of the framework logger will be available.</p> <p>Cause: The runtime was unable to create an MBean for controlling the framework logger. This could be due to a temporary JMX issue.</p> <p>Action: There should be a message logged before this message that provides the exact cause of the problem. If you cannot correct the problem, contact Sun for support.</p>
JBIFW0104	WARNING	<p>invalid log level {0} specified. Using default log level {1}.</p> <p>Cause: The log level specified was not a valid level. The default value is being used instead.</p> <p>Action: Correct the log level in your properties settings for the JBI runtime.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW0105	WARNING	<p>Unable to create the event notifier MBean for the framework. No runtime event notifications will be available.</p> <p>Cause: The runtime was unable to create an MBean for generating event notifications. Without this MBean, no event notifications can be emitted by the runtime.</p> <p>Action: There should be a message logged before this message that provides the exact cause of the problem. If you cannot correct the problem, contact Sun for support.</p>
JBIFW0106	WARNING	<p>Cannot obtain classloader for component {0}, using default classloader for loading resource bundle for package {1}. The error is: {2}</p> <p>Cause: There was a problem obtaining the class loader for the named component when attempting to load the resource bundle for the component. The default runtime class loader will be used to load the resource bundle.</p> <p>Action: There should be further diagnostic messages logged after this one that will pinpoint the cause of the problem.</p>
JBIFW0109	WARNING	<p>Failed to create MBean due to an exception: {0}.</p> <p>Cause: An MBean could not be created by the runtime. This message is accompanied by a message that specifies which MBean was being processed.</p> <p>Action: The exception logged should show exactly what the problem is. If the problem persists, contact Sun for support.</p>
JBIFW0110	WARNING	<p>Failed to create MBean ObjectName for {0}, {1}.</p> <p>Cause: An MBean name could not be created by the runtime. This message is accompanied by a message that specifies which MBean was being processed.</p> <p>Action: The exception logged should show exactly what the problem is. If the problem persists, contact Sun for support.</p>
JBIFW0111	WARNING	<p>Failed to register MBean due to an exception: {0}.</p> <p>Cause: An MBean could not be registered by the runtime. This message is accompanied by a message that specifies which MBean was being processed.</p> <p>Action: The exception logged should show exactly what the problem is. If the problem persists, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW0115	WARNING	<p>Failure unregistering framework MBean: {0}, due to a {1}.</p> <p>Cause: An MBean could not be unregistered by the runtime. This message is accompanied by a message that specifies which MBean was being processed.</p> <p>Action: The exception logged should show exactly what the problem is. If the problem persists, contact Sun for support.</p>
JBIFW0116	WARNING	<p>Unable to create a Statistics MBean for the framework. No JMX access to the framework statistics will be available.</p> <p>Cause: The statistics MBean for the framework could not be created. This message is accompanied by a message that provides details about the failure.</p> <p>Action: The accompanying message should show exactly what the problem is. If the problem persists, contact Sun for support.</p>
JBIFW0117	WARNING	<p>Failed to initialize the jbi registry. {0}.</p> <p>Cause: The JBI registry failed to initialize properly. The exact cause is provided in the message.</p> <p>Action: If the cause is an I/O error or a corrupted file, try restarting. If the problem persists it could be a disk problem.</p>
JBIFW0200	WARNING	<p>Could not create bootstrap classloader due to an exception: {0}</p> <p>Cause: The bootstrap class loader for the component could not be created. The exception in the message provides the exact reason.</p> <p>Action: Usually this is due to an incorrectly packaged component. If this is occurring with a user-written component, make sure that the bootstrap-class-path entries in jbi.xml are correct. Otherwise, contact Sun for support.</p>
JBIFW0201	WARNING	<p>Could not create component classloader due to an exception: {0}</p> <p>Cause: The component/life cycle class loader for the component could not be created. The exception in the message provides the exact reason.</p> <p>Action: Usually this is due to an incorrectly packaged component. If this is occurring with a user-written component, make sure that the component-class-path entries in jbi.xml are correct. Otherwise, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW0202	WARNING	<p>No component classloader found for {0}.</p> <p>Cause: A request for a component class loader failed to locate the class loader for the specified component.</p> <p>Action: This is an internal error that should not occur. Contact Sun for support.</p>
JBIFW0204	WARNING	<p>No shared classloader found for {0}.</p> <p>Cause: A request for a shared library class loader failed to locate the class loader for the specified shared library.</p> <p>Action: This is an internal error that should not occur. Contact Sun for support.</p>
JBIFW0205	WARNING	<p>Could not create shared classloader due to an exception: {0}</p> <p>Cause: An exception occurred while creating the class loader for a shared library. The exception in the message provides the exact reason.</p> <p>Action: Usually this is due to an incorrectly packaged shared library. If this is occurring with a user-written shared library, make sure that the shared-library-class-path entries in jbi.xml are correct. Otherwise, contact Sun for support.</p>
JBIFW1002	WARNING	<p>The timed wait for components to stop was interrupted. Shutdown continuing without stopping components.</p> <p>Cause: During a shutdown of the runtime, one or more components failed to stop before the timeout period specified by the componentTimeout runtime configuration parameter expired.</p> <p>Action: Try increasing the time interval specified by the componentTimeout runtime configuration parameter, or specifying a value of 0 for no timeout. The presence of a large number of deployed Service Assemblies can cause the stopping of a component to take more time. If the component fails to stop even with the timeout value set to 0, there may be a problem with the component.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW1003	WARNING	<p>The timed wait for components to start was interrupted. Some components may not be started.</p> <p>Cause: During a startup of the runtime, one or more components failed to start before the timeout period specified by the componentTimeout runtime configuration parameter expired.</p> <p>Action: Try increasing the time interval specified by the componentTimeout runtime configuration parameter, or specifying a value of 0 for no timeout. The presence of a large number of deployed Service Assemblies can cause the startup of a component to take more time. If the component fails to start even with the timeout value set to 0, there may be a problem with the component.</p>
JBIFW1011	WARNING	<p>Component {0} has an unrecognized type {1} and has been ignored.</p> <p>Cause: An invalid component type was encountered while processing a request.</p> <p>Action: This is an internal error that should not occur. Contact Sun for support.</p>
JBIFW1012	WARNING	<p>The requested component {0} was not found.</p> <p>Cause: A request for an extension MBean name for the component failed because the component is not registered.</p> <p>Action: This is an internal error that should not occur. Contact Sun for support.</p>
JBIFW1106	INFO	<p>{0} {1} has been installed.</p> <p>Cause: The specified component has been successfully installed into the runtime.</p> <p>Action: None required, informational message only.</p>
JBIFW1107	WARNING	<p>Installation of {0} {1} failed.</p> <p>Root Cause: Installation of the specified component failed. One of the explanations below will be appended to this message.</p> <p>It has already been installed.</p> <p>Cause: This component is already installed.</p> <p>Action: If you are trying to update the component, you should use the asadmin upgrade-jbi-component command, the ant jbi-upgrade-component task, the admin console upgrade component action, or the NetBeans IDE upgrade component action.</p>

Message ID	Severity	Message Text, Cause, and Action
		<p>A(n) {0} with the same name is already registered.</p> <p>Cause: Another component with the same name is already installed. For example, if you are trying to install a binding component by this name, and there is already a service engine installed by this name, you will encounter this error.</p> <p>Action: Only one component by any name can be installed. Change the name of the component so that there are no name conflicts.</p> <p>It has not yet been loaded.</p> <p>Cause: This error cannot occur with any of the admin clients (asadmin, ant, admin console, NetBeans IDE). It can occur only when using the JMX interface directly to install a component, and the loadNewInstaller operation has not been invoked prior to invoking the install operation.</p> <p>Action: Change the JMX client to invoke the loadNewInstaller operation first, or use one of the standard admin clients instead.</p> <p>The bootstrap onInstall() method threw a {0} exception. The exception message is: {1}</p> <p>Cause: The component's installation processing encountered an error.</p> <p>Action: The exception class and the exception message should provide information about why the error occurred. Correct the problem and retry the installation.</p> <p>The bootstrap init() method threw a {0} exception. The exception message is: {1}</p> <p>Cause: The component's installer bootstrap failed to initialize during an attempt to install the component.</p> <p>Action: The exception class and the exception message should provide information about why the error occurred. Correct the problem and retry the installation.</p> <p>The bootstrap implementation has not been loaded.</p> <p>Cause: This error cannot occur with any of the admin clients (asadmin, ant, admin console, NetBeans IDE). It can occur only when using the JMX interface directly to install a component, and the loadNewInstaller operation has not been invoked prior to invoking the install operation.</p> <p>Action: Change the JMX client to invoke the loadNewInstaller operation first, or use one of the standard admin clients instead.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW1108	WARNING	<p>The bootstrap getExtensionMBeanName() method threw a {0} exception. The exception message is: {1}</p> <p>Cause: The component's installer bootstrap failed on a request for its configuration MBean.</p> <p>Action: The exception class and the exception message should provide information about why the error occurred. Correct the problem and retry the installation.</p> <p>The bootstrap cleanUp() method threw a {0} exception. The exception message is: {1}</p> <p>Cause: After some other failure, the component's installer bootstrap cleanup failed.</p> <p>Action: Look for previous error messages about the installation failure and correct those problems before retrying the installation.</p> <p>After installation of {0} {1}, the bootstrap cleanUp() method threw a {2} exception. The exception message is: {3}</p> <p>Cause: This is a failure during the cleanup processing in the component's installer class.</p> <p>Action: The exception class and exception message should provide information about why the error occurred. The component has already successfully completed its installation processing; this error is just in the cleanup processing. Manual cleanup of any persistent resources created by the installer class may be required, depending on the error. There is no need to install the component again, as it was successfully installed.</p>
JBIFW1116	INFO	<p>{0} {1} has been uninstalled.</p> <p>Cause: The named component has been uninstalled from the system.</p> <p>Action: None required, informational message only.</p>

Check the server log for the other messages to determine the appropriate action.</p>
JBIFW1325	WARNING	<p>This Shared Library is referenced by: {0}. These components must be shut down before the Shared Library can be uninstalled.</p> <p>Cause: An attempt was made to uninstall a Shared Library while components that depend on it are still active.</p> <p>Action: The listed components must be shut down before uninstalling the Shared Library.</p>
JBIFW1326	WARNING	<p>Unable to uninstall Shared Library {0} due to active dependent components.</p> <p>Cause: An attempt was made to uninstall a Shared Library while components that depend on it are still active.</p> <p>Action: This message will be accompanied by other messages that list the dependent components that must be shut down.</p>
JBIFW1327	INFO	<p>Class loader removal for Shared Library {0} failed due to an exception: {1}</p> <p>Cause: During uninstallation of a Shared Library, the class loader for that library could not be removed.</p> <p>Action: None required, informational message only.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW1350	WARNING	<p>DeliveryChannel not available for {0}.</p> <p>Cause: A component attempted a call to the NMR when the delivery channel was not available.</p> <p>Action: This is most likely due to a bug in the component. If the component is a user-written component, check the component code to make sure that the NMR calls are being made in the correct place. Otherwise, contact Sun for support.</p>
JBIFW1351	WARNING	<p>A logger with name {0} cannot be created because the resource bundle {1} cannot not be found.</p> <p>Cause: A component attempted to create a logger with an associated resource bundle but the resource bundle could not be found.</p> <p>Action: This is most likely due to a bug in the component. If the component is a user-written component, check the component packaging to make sure that the resource bundle is included. Otherwise, contact Sun for support.</p>
JBIFW1352	WARNING	<p>A logger with name {0} cannot be created using resource bundle {1}. A logger with the same name already exists using resource bundle {2}.</p> <p>Cause: A component attempted to create a logger with an associated resource bundle but there is already a logger by the same name using a different resource bundle.</p> <p>Action: This is most likely due to a bug in the component. If the component is a user-written component, check the component code to make sure that it is not creating the same logger with two different resource bundles. Otherwise, contact Sun for support.</p>
JBIFW1356	WARNING	<p>Null suffix argument received. The suffix argument must be non-null.</p> <p>Cause: A component called the <code>javax.jbi.component.ComponentContext.getLogger()</code> method but provided a null value for the suffix argument.</p> <p>Action: This is a bug in the component. If the component is a user-written component, check the component code to make sure that it is not creating the same logger with two different resource bundles. Otherwise, contact Sun for support.</p>
JBIFW2001	WARNING	<p>Component state cannot change from {0} to {1}.</p> <p>Cause: An invalid component state transition was attempted.</p> <p>Action: This is an internal error that should not normally occur. If the problem persists, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2002	WARNING	<p>Bootstrap implementation for {0} could not be loaded. {1}</p> <p>Cause: A failure occurred while loading the component's installer bootstrap implementation class.</p> <p>Action: The end of this message contains a more detailed error message that should indicate the exact problem. Typically this error is due to either a problem in the packaging of the component or a corrupted filesystem. If this is a user-written component, check the packaging of the component to make sure that all of the classes are included and in the correct locations. Otherwise, contact Sun for support.</p>
JBIFW2003	WARNING	<p>LifeCycle implementation for {0} could not be loaded. {1}</p> <p>Cause: A failure occurred while loading the component's life cycle implementation class.</p> <p>Action: The end of this message contains a more detailed error message that should indicate the exact problem. Typically this error is due to a problem in the packaging of the component or a corrupted filesystem. If this is a user-written component, check the packaging of the component to make sure that all of the classes are included and in the correct locations. Otherwise, contact Sun for support.</p>
JBIFW2004	WARNING	<p>Required class {0} was not found.</p> <p>Cause: A class required by the component was not found in the class path.</p> <p>Action: This is typically due to either a problem in the packaging of the component or a corrupted filesystem. If this is a user-written component, check the packaging of the component to make sure that all of the classes are included and in the correct locations. Otherwise, contact Sun for support.</p>
JBIFW2007	WARNING	<p>The class {0} does not implement the required interface {1}.</p> <p>Cause: The specified class in the component does not implement the specified required interface.</p> <p>Action: This is a problem in the component. If the component is a user-written component, check the code to make sure that all of the required JSR208 interfaces are implemented. Otherwise, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2009	WARNING	<p>A {0} exception was encountered.</p> <p>Cause: An unexpected exception occurred while attempting to load either the life cycle class or the bootstrap class for the component.</p> <p>Action: This is most likely a problem in the component. If the component is a user-written component, check the packaging of the component. Otherwise, contact Sun for support.</p>
JBIFW2010	WARNING	<p>The Component.{0} method returned a null value. No implementation of the {1} interface is available.</p> <p>Cause: The named method in the component's implementation of the javax.jbi.component.Component interface failed to return a valid implementation of the named interface.</p> <p>Action: This is a problem in the component. If the component is a user-written component, check the code to make sure that all of the required JSR208 interfaces are correctly implemented. Otherwise, contact Sun for support.</p>
JBIFW2011	WARNING	<p>Another request is already in progress for {0}.</p> <p>Cause: An attempt to process a life cycle or deployment request for the component was denied because another request is being processed.</p> <p>Action: Retry the request later. This is a transient condition; multiple concurrent life cycle or deployment requests cannot be allowed without compromising the integrity of the system.</p>
JBIFW2012	WARNING	<p>Unable to create directory {0} for storing logger level settings for {1} {2}. Logger level settings will be lost upon restart of the system.</p> <p>Cause: An I/O error occurred when creating the directory for storing logger settings for the component.</p> <p>Action: Check to make sure the disk is accessible and has available space. Without this directory, logger settings cannot be persisted across restarts of the runtime.</p>
JBIFW2013	WARNING	<p>Unable to write logger level settings for {0} {1} to file {2}. Logger level settings will be lost upon restart of the system.</p> <p>Cause: An I/O error occurred when writing the logger settings for the component to the specified file.</p> <p>Action: Check to make sure the disk is accessible and has available space. Without this file, logger settings cannot be persisted across restarts of the runtime.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2014	WARNING	<p>Unable to read logger level settings for {0} {1} from file {2}. Logger level settings will not be restored.</p> <p>Cause: An I/O error occurred when reading the logger settings for the component from the specified file.</p> <p>Action: Check to make sure the file is accessible. Without this file, logger settings cannot be persisted across restarts of the runtime.</p>
JBIFW2015	WARNING	<p>Unable to close logger level settings file {0} for {1} {2}.</p> <p>Cause: An I/O error occurred when creating the directory for storing logger settings for the component.</p> <p>Action: Check to make sure the disk is accessible and has available space. Without this directory, logger settings cannot be persisted across restarts of the runtime.</p>
JBIFW2016	WARNING	<p>Logger {0} is not registered.</p> <p>Cause: The logger specified is not registered in the component's logger MBean.</p> <p>Action: This is due to the logger name not being included in the logger definitions in the jbi.xml for the component. If this is a user-written component, update the logger definitions in jbi.xml to include this logger name. Otherwise, contact Sun for support.</p>
JBIFW2103	WARNING	<p>A component with name {0} is already registered.</p> <p>Cause: An attempt was made to install a component but there is already a component installed with the same name.</p> <p>Action: Make sure you have specified the correct component archive.</p>
JBIFW2105	WARNING	<p>Component {0} not found, permanent registration cannot be completed.</p> <p>Cause: This is an internal error that should not normally occur.</p> <p>Action: Contact Sun for support.</p>
JBIFW2108	WARNING	<p>No component with name {0} is registered.</p> <p>Cause: A query was made for a Service Unit for the named component, but there is no component registered with the specified name.</p> <p>Action: This could happen if the component was being uninstalled at the same time a query was made. If this message continues to be logged, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2152	WARNING	<p>A Shared Library with name {0} is already registered.</p> <p>Cause: An attempt was made to install a Shared Library but there is already a Shared Library installed with the same name.</p> <p>Action: If you intended to replace the existing Shared Library, you must first uninstall the existing one.</p>
JBIFW2155	WARNING	<p>No Shared Library with name {0} is registered.</p> <p>Cause: An attempt was made to uninstall a Shared Library that does not exist.</p> <p>Action: Make sure the correct Shared Library name is specified.</p>
JBIFW2204	WARNING	<p>Unrecognized component type ({0}), component {1} ignored.</p> <p>Cause: This is an internal error that should not normally occur.</p> <p>Action: Contact Sun for support.</p>
JBIFW2400	WARNING	<p>Service Unit {0} already exists for {1} {2}.</p> <p>Cause: A Service Unit by the name displayed has already been deployed to the component.</p> <p>Action: Change the name of the Service Unit in your application to avoid the duplicate name, and redeploy the application.</p>
JBIFW2401	WARNING	<p>Service Unit {0} not found for {1} {2}.</p> <p>Cause: During an undeploy of the Service Unit, no Service Unit by this name was found associated with the component.</p> <p>Action: This is an internal error that should not normally occur. If the problem persists, contact Sun for support.</p>
JBIFW2402	WARNING	<p>Service Unit state cannot change from {0} to {1}.</p> <p>Cause: An invalid Service Unit state transition was attempted.</p> <p>Action: This is an internal error that should not normally occur. If the problem persists, contact Sun for support.</p>
JBIFW2450	WARNING	<p>Service Unit {0} not found.</p> <p>Cause: An operation was attempted on a Service Unit that does not exist in the runtime.</p> <p>Action: This is an internal error that should not normally occur. If the problem persists, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2451	WARNING	<p>Service Unit {0} is already deployed.</p> <p>Cause: An attempt was made to deploy a Service Unit that is already deployed.</p> <p>Action: This should not normally occur if the supported clients are being used (NetBeans, asadmin, or admin console). If this message persists, contact Sun for support.</p>
JBIFW2452	WARNING	<p>Service Unit {0} cannot be initialized, it has already been started.</p> <p>Cause: An attempt was made to initialize a service unit that is already started.</p> <p>Action: This should not normally occur if the supported clients are being used (NetBeans, asadmin, ant, or admin console). If this message persists, contact Sun for support.</p>
JBIFW2453	WARNING	<p>Service Unit {0} cannot be started, it has not been initialized.</p> <p>Cause: An attempt was made to start a Service Unit that is not initialized.</p> <p>Action: This should not normally occur if the supported clients are being used (NetBeans, asadmin, ant, or admin console). If this message persists, contact Sun for support.</p>
JBIFW2454	WARNING	<p>Service Unit {0} cannot be stopped, it is shut down.</p> <p>Cause: An attempt was made to stop a Service Unit that is already shut down.</p> <p>Action: This should not normally occur if the supported clients are being used (NetBeans, asadmin, ant, or admin console). If this message persists, contact Sun for support.</p>
JBIFW2455	WARNING	<p>Service Unit {0} cannot be shut down, it has not been stopped.</p> <p>Cause: An attempt was made to shut down a Service Unit that is not stopped.</p> <p>Action: This should not normally occur if the supported clients are being used (NetBeans, asadmin, ant, or admin console). If this message persists, contact Sun for support.</p>
JBIFW2456	WARNING	<p>Service Unit {0} cannot be undeployed because it is in {1} state. It must be shut down before undeploying.</p> <p>Cause: An attempt was made to undeploy the Service Unit but it is not in the SHUTDOWN state.</p> <p>Action: Make sure that the Service Assembly containing this Service Unit has been shut down before attempting to undeploy.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2457	WARNING	<p>Service Unit {0} state change after {1} could not be persisted. {2}</p> <p>Cause: The state of the Service Unit was not persisted after an operation that affected its state.</p> <p>Action: Check the server log for other messages that precede this message. Those messages will provide more details about the error. If the problem persists, contact Sun for support.</p>
JBIFW2458	WARNING	<p>Interrupt occurred on {0} for Service Unit {1}.</p> <p>Cause: The operation on the Service Unit was interrupted, causing a <code>java.lang.InterruptedExecution</code>.</p> <p>Action: Examine the server log for messages that might explain why the operation was interrupted. If this problem persists, contact Sun for support.</p>
JBIFW2459	WARNING	<p>Unexpected exception {0} occurred on {1} for Service Unit {2}. Exception message text is: {3}.</p> <p>Cause: The operation on the Service Unit failed due to an exception. The message from the exception is included in this message.</p> <p>Action: The exception message should provide information about what caused the failure. If the failure is persistent, it could be a problem in the component. If the component is a user-written component, use the information from the failure to assist in debugging the problem. Otherwise, contact Sun for support.</p>
JBIFW2460	WARNING	<p>Unexpected exception {0} occurred on {1} for Service Unit {2}. The exception has no message text.</p> <p>Cause: The operation on the Service Unit failed due to an exception. The exception contained no message.</p> <p>Action: The exception in this case provided no message. If the failure is persistent, it could be a problem in the component. If the component is a user-written component, use the information from the failure to assist in debugging the problem. Otherwise, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2461	WARNING	<p>Timeout occurred on {0} for Service Unit {1}. The operation did not complete before the timeout interval of {2} milliseconds expired.</p> <p>Cause: The operation on the Service Unit failed to complete within the time interval specified by the serviceUnitTimeout runtime configuration parameter.</p> <p>Action: Depending on the complexity of the component's processing for a Service Unit, this may or may not be a problem with the component. Try increasing the value specified by serviceUnitTimeout in the runtime configuration. If that does not help, there could be an environmental issue that is affecting the component. If the component is one of the supported components included in the product, contact Sun for support.</p>
JBIFW2462	WARNING	<p>Unable to perform {0} of Service Unit {1}. The component is not started.</p> <p>Cause: An attempt was made to perform an operation on a Service Unit, but the required component was not active.</p> <p>Action: Make sure the component is started before attempting a Service Unit operation.</p>
JBIFW2463	WARNING	<p>Unable to perform {0} of Service Unit {1}. The Service Unit Manager for the component is not available.</p> <p>Cause: A Service Unit operation was attempted, but the component did not provide a Service Unit Manager implementation.</p> <p>Action: If this is a user-written component, check to be sure the <code>javax.jbi.component.Component.getServiceUnitManager()</code> method is correctly implemented. Otherwise, contact Sun for support.</p>
JBIFW2500	WARNING	<p>ServiceUnitManager stack trace follows:\n{0}</p> <p>Cause: The component's ServiceUnitManager implementation encountered an exception and the stack trace is logged in this message.</p> <p>Action: This is a bug in the component. If the component is a user-written component, use the information in the stack trace to help debug the component. Otherwise, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2501	WARNING	<p>Error in ServiceUnitManager for {0} {1}: {2}</p> <p>Cause: The component's ServiceUnitManager implementation encountered an exception.</p> <p>Action: This is a bug in the component. This message is normally followed by message JBIFW2500, which provides the stack trace. If the component is a user-written component, use the information in the stack trace to help debug the component. Otherwise, contact Sun for support.</p>
JBIFW2502	WARNING	<p>Limit of {0} initialization timeouts reached. Terminating processing for {1} {2}.</p> <p>Cause: During startup of the component, the runtime encountered multiple timeouts on initialization of Service Units deployed to the component. The number of timeouts reached the specified limit and Service Unit initialization processing was terminated.</p> <p>Action: Check the server log to determine what is causing the service unit initializations to time out. If the problem persists, contact Sun for support.</p>
JBIFW2503	WARNING	<p>Limit of {0} start timeouts reached. Terminating processing for {1} {2}.</p> <p>Cause: During startup of the component, the runtime encountered multiple timeouts on starts of Service Units deployed to the component. The number of timeouts reached the specified limit and Service Unit start processing was terminated.</p> <p>Action: Check the server log to determine what is causing the Service Unit starts to time out. If the problem persists, contact Sun for support.</p>
JBIFW2504	WARNING	<p>Limit of {0} stop timeouts reached. Terminating processing for {1} {2}.</p> <p>Cause: During stop or shutdown of the component, the runtime encountered multiple timeouts on stops of Service Units deployed to the component. The number of timeouts reached the specified limit and Service Unit stop processing was terminated.</p> <p>Action: Check the server log to determine what is causing the Service Unit stops to time out. If the problem persists, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2505	WARNING	<p>Limit of {0} shutdown timeouts reached. Terminating processing for {1} {2}.</p> <p>Cause: During shutdown of the component, the runtime encountered multiple timeouts on shutdowns of Service Units deployed to the component. The number of timeouts reached the specified limit and Service Unit shutdown processing was terminated.</p> <p>Action: Check the server log to determine what is causing the Service Unit shutdowns to time out. If the problem persists, contact Sun for support.</p>
JBIFW2507	INFO	<p>Service Unit {0} for component {1} in Service Assembly {2} has been started.</p> <p>Cause: The named Service Unit has been successfully started.</p> <p>Action: None required, informational message only.</p>
JBIFW2508	INFO	<p>Service Unit {0} for component {1} in Service Assembly {2} has been stopped.</p> <p>Cause: The named Service Unit has been successfully stopped.</p> <p>Action: None required, informational message only.</p>
JBIFW2509	INFO	<p>Service Unit {0} for component {1} in Service Assembly {2} has been shut down.</p> <p>Cause: The named Service Unit has been successfully shut down.</p> <p>Action: None required, informational message only.</p>
JBIFW2550	WARNING	<p>Component {0} has not registered a configuration MBean.</p> <p>Cause: The named component did not register a configuration MBean.</p> <p>Action: None required, this means that the component does not provide an MBean for managing its runtime configuration.</p>
JBIFW2551	WARNING	<p>Component {0} configuration change {1} could not be persisted. {2}</p> <p>Cause: An error occurred updating the registry to persist a static configuration attribute for the component.</p> <p>Action: Look at the error message from the registry operation to determine whether the problem is a disk issue or an environmental issue. If the problem persists, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2552	WARNING	<p>Failed to add application variable {0} of component {1} to the registry. {2}</p> <p>Cause: An error occurred adding the named application variable to the registry for the component.</p> <p>Action: Look at the error message from the registry operation to determine whether the problem is a disk issue or an environmental issue. If the problem persists, contact Sun for support.</p>
JBIFW2553	WARNING	<p>Failed to update application variable {0} of component {1} in the registry. {2}</p> <p>Cause: An error occurred updating the named application variable in the registry for the component.</p> <p>Action: Look at the error message from the registry operation to determine whether the problem is a disk issue or an environmental issue. If the problem persists, contact Sun for support.</p>
JBIFW2554	WARNING	<p>Failed to delete application variable {0} of component {1} from the registry. {2}</p> <p>Cause: An error occurred removing the named application variable from the registry for the component.</p> <p>Action: Look at the error message from the registry operation to determine whether the problem is a disk issue or an environmental issue. If the problem persists, contact Sun for support.</p>
JBIFW2555	WARNING	<p>Operation {0} is not implemented by MBean {1}.</p> <p>Cause: An operation was invoked on the configuration MBean but that operation was not supported by the MBean.</p> <p>Action: This is most likely a bug in the component. If the component is a user-written component, make sure that the MBean implements all of the required operations. Otherwise, contact Sun for support.</p>
JBIFW2556	WARNING	<p>Failed to add application configuration {0} of component {1} to the registry. {2}</p> <p>Cause: An error occurred adding the named application configuration to the registry for the component.</p> <p>Action: Look at the error message from the registry operation to determine whether the problem is a disk issue or an environmental issue. If the problem persists, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2557	WARNING	<p>Failed to update application configuration {0} of component {1} to the registry. {2}</p> <p>Cause: An error occurred updating the named application configuration in the registry for the component.</p> <p>Action: Look at the error message from the registry operation to determine whether the problem is a disk issue or an environmental issue. If the problem persists, contact Sun for support.</p>
JBIFW2558	WARNING	<p>Failed to delete application configuration {0} of component {1} from the registry. {2}</p> <p>Cause: An error occurred removing the named application configuration from the registry for the component.</p> <p>Action: Look at the error message from the registry operation to determine whether the problem is a disk issue or an environmental issue. If the problem persists, contact Sun for support.</p>
JBIFW2600	WARNING	<p>No {0} element was found for the {1} element.</p> <p>Cause: While processing information from the component descriptor (jbi.xml), a required element was not found.</p> <p>Action: Check the content of the component descriptor to make sure that it is complete. If this error occurs for one of the supported components included with the product, contact Sun for support.</p>
JBIFW2601	WARNING	<p>Found {0} {1} elements, but only one is allowed.</p> <p>Cause: While processing information from the component descriptor (jbi.xml), more than one element was found where only one is allowed.</p> <p>Action: Check the content of the component descriptor to make sure that it is correct. If this error occurs for one of the supported components included with the product, contact Sun for support.</p>
JBIFW2602	WARNING	<p>Empty {0} element not allowed, must have a single text value.</p> <p>Cause: While processing information from the component descriptor (jbi.xml), an element that requires a text value had no value specified.</p> <p>Action: Check the content of the component descriptor to make sure that it is correct. If this error occurs for one of the supported components included with the product, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW2603	WARNING	<p>Invalid {0} element, found incorrect content. This element must have a single text value.</p> <p>Cause: While processing information from the component descriptor (jbi.xml), an element that requires a text value contained an element that was not expected.</p> <p>Action: Check the content of the component descriptor to make sure that it is correct. If this error occurs for one of the supported components included with the product, contact Sun for support.</p>
JBIFW2604	WARNING	<p>DOMException: {0}.</p> <p>Cause: This is an internal error that should not normally occur.</p> <p>Action: Contact Sun for support.</p>
JBIFW2650	WARNING	<p>Unable to create user data for notification, {0} exception occurred building CompositeData.</p> <p>Cause: This is an internal error that should not normally occur.</p> <p>Action: Contact Sun for support.</p>
JBIFW2651	WARNING	<p>Unable to send notification for event type {0}, source type {1}, source name {2}; {3} exception occurred.</p> <p>Cause: The runtime attempted to send a JMX notification for an event, and encountered an exception.</p> <p>Action: This should not normally occur. If the problem persists, contact Sun for support.</p>
JBIFW5000	WARNING	<p>Unable to query appserver config: {0}</p> <p>Cause: An exception occurred while attempting to query GlassFish for configuration information while setting up the HTTP binding configuration. The exception message is included in this message.</p> <p>Action: Check the GlassFish server log for further information about the error. If the cause is not pinpointed there, contact Sun for support.</p>
JBIFW5002	WARNING	<p>Failed to write httpsoap configuration file {0} : {1}</p> <p>Cause: An error occurred while writing the configuration file for the HTTP binding component.</p> <p>Action: This is probably due to either a lack of disk space or an error on the filesystem. Make sure there is sufficient disk space and that the filesystem is not corrupted.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW5003	INFO	<p>An exception occurred during initialization of system components.</p> <p>Cause: An error occurred while initializing the system components.</p> <p>Action: This message will be preceded by more detailed messages that provide further information.</p>
JBIFW5051	WARNING	<p>Get XA Resources from JBI components failed with exception: {0}</p> <p>Cause: An error occurred while attempting to get a list of XA resources requiring synchronization.</p> <p>Action: The exception should contain detailed information about the error. Correct any problems and try restarting. If this problem persists, set the level of the com.sun.jbi.framework.sun logger to FINE to obtain further diagnostics, and contact Sun for support.</p>
JBIFW5100	SEVERE	<p>Synchronization failed with the following exception: {0}</p> <p>Cause: An error occurred during cluster instance synchronization.</p> <p>Action: The exception should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, set the level of the com.sun.jbi.framework.sun logger to FINE to obtain further diagnostics, and contact Sun for support.</p>
JBIFW5101	WARNING	<p>Synchronization of file ({0}) from DAS to local file ({1}) failed with exception: {2}.</p> <p>Cause: During cluster instance synchronization, a copy operation on a file from the DAS to the local instance failed.</p> <p>Action: Check the exception to determine why the copy failed. Make sure there is sufficient space for the local copy of the file and that the filesystem is accessible. If this problem persists, contact Sun for support.</p>
JBIFW5102	WARNING	<p>Synchronization of config file encountered difference problems. Exception was: {0}.</p> <p>Cause: During cluster instance synchronization, a problem was encountered when determining the differences between the DAS JBI configuration and the local JBI configuration.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, set the level of the com.sun.jbi.framework.sun logger to FINE to obtain further diagnostics, and contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW5103	WARNING	<p>Synchronization of archive file failed. Exception was {0}.</p> <p>Cause: During cluster instance synchronization, a problem was encountered when downloading a Shared Library, Component, or Service Assembly archive from the DAS.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5104	WARNING	<p>Synchronization failed to uninstall component ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered while uninstalling a component from the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5105	WARNING	<p>Synchronization failed to install component ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered while installing a component into the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5106	WARNING	<p>Synchronization cannot get state for component ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered getting the state of a component from the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5107	WARNING	<p>Synchronization cannot set state for component ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered setting the state of a component in the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW5108	WARNING	<p>Synchronization failed to uninstall shared library ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered while uninstalling a Shared Library from the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5109	WARNING	<p>Synchronization failed to install shared library ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered while installing a Shared Library into the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5110	WARNING	<p>Synchronization failed to undeploy Service Assembly ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered while undeploying a Service Assembly from the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5111	WARNING	<p>Synchronization failed to deploy Service Assembly ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered while deploying a Service Assembly to the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW5112	WARNING	<p>Synchronization cannot get state for Service Assembly ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered getting the state of a Service Assembly from the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5113	WARNING	<p>Synchronization cannot set state for Service Assembly ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered setting the state of a Service Assembly in the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5115	WARNING	<p>Synchronization failed to set configuration for component ({0}) with exception: {1}</p> <p>Cause: During cluster instance synchronization, a problem was encountered setting the configuration for a component in the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5116	INFO	<p>Synchronization skipped. Unable to connect to the DAS.</p> <p>Cause: During cluster instance synchronization, the local instance was unable to connect to the DAS.</p> <p>Action: Messages preceding this one should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, set the level of the com.sun.jbi.framework.sun logger to FINE to obtain further diagnostics, and contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW5119	WARNING	<p>Synchronization failed to add application variable ({0}) for component ({1}) with exception: {2}</p> <p>Cause: During cluster instance synchronization, a problem was encountered adding an application variable for a component in the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5120	WARNING	<p>Synchronization failed to remove application variable ({0}) for component ({1}) with exception: {2}</p> <p>Cause: During cluster instance synchronization, a problem was encountered removing an application variable for a component in the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5121	WARNING	<p>Synchronization failed to add application config ({0}) for component ({1}) with exception: {2}</p> <p>Cause: During cluster instance synchronization, a problem was encountered adding an application configuration for a component in the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5122	WARNING	<p>Synchronization failed to remove application config ({0}) for component ({1}) with exception: {2}</p> <p>Cause: During cluster instance synchronization, a problem was encountered removing an application configuration for a component in the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>

Message ID	Severity	Message Text, Cause, and Action
JBIFW5123	WARNING	<p>Synchronization failed to set property ({0}) for component ({1}) with exception: {2}</p> <p>Cause: During cluster instance synchronization, a problem was encountered setting a property for a component in the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5124	WARNING	<p>Synchronization failed to apply configuration category ({0}) to target ({1}) with exception: {2}</p> <p>Cause: During cluster instance synchronization, a problem was encountered applying a configuration for a JBI system service in the local instance.</p> <p>Action: The exception message should contain detailed information about the error. Check the GlassFish server log for further diagnostics. If this problem persists, contact Sun for support.</p>
JBIFW5190	WARNING	<p>Unable to query appserver config: {0}</p> <p>Cause: An exception occurred while attempting to query GlassFish for configuration information during cluster instance synchronization. The exception message is included in this message.</p> <p>Action: Check the GlassFish server log for further information about the error. If the cause is not pinpointed there, contact Sun for support.</p>
JBIFW5192	WARNING	<p>Failed to write httpsoap configuration file {0} : {1}</p> <p>Cause: An error occurred while writing the configuration file for the HTTP binding component during cluster instance synchronization.</p> <p>Action: This is probably due to either a lack of disk space or an error on the filesystem. Make sure there is sufficient disk space and that the filesystem is not corrupted.</p>
JBIFW5199	WARNING	<p>Synchronization currently disabled. Use com.sun.jbi.synch.enabled property to control.</p> <p>Cause: Cluster instance synchronization is disabled.</p> <p>Action: To enable synchronization of JBI entities among cluster instances, the com.sun.jbi.synch.enabled property must be set to TRUE.</p>

Runtime NMR Error Messages

The following table lists each error message generated by the JBI NMR, and describes the cause of the log message as well as providing a recommended action for you to take.

Message ID	Severity	Message Text, Cause, and Action
JBIMR0001	Severe	<p>A fault cannot be set on an exchange already containing a message. Pattern({0}).</p> <p>Cause: A component attempted to perform an action considered illegal by the JSR208 specification.</p> <p>Action: Try and determine the component causing the exception and report a problem to Sun against that component.</p> <p>Resource Key: FAULT_ON_MSG</p>
JBIMR0002	SEVERE	<p>Status cannot be set on an exchange already containing a message. Pattern({0}).</p> <p>Cause: A component attempted to perform an action considered illegal by the JSR208 specification.</p> <p>Action: Try and determine the component causing the exception and report a problem to Sun against that component.</p> <p>Resource Key: STATUS_ON_MSG</p>
JBIMR0003	SEVERE	<p>Current exchange status is ERROR. Changing status to DONE is not allowed.</p> <p>Cause: A component attempted to perform an action considered illegal by the JSR208 specification.</p> <p>Action: During component shutdown, this exception is possible while the component is in the processing of cleaning up. Other messages in the log file may give you a clue as to whether this is the situation. If this is not the situation, determine the component causing the exception and report a problem to Sun against that component.</p> <p>Resource Key: ERROR_STATUS</p>
JBIMR0005	SEVERE	<p>Endpoint required to send message exchange.</p> <p>Cause: Component code didn't specify the required target endpoint for this message exchange.</p> <p>Action: Try and determine the component causing the exception and report a problem to Sun against that component.</p> <p>Resource Key: ADDR_NO_ENDPOINT</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMR0011	SEVERE	<p>Can't find endpoint for service {0}</p> <p>Cause: The requested service name could not be translated into an known endpoint name.</p> <p>Action: This is typically one of the following problems:</p> <ol style="list-style-type: none"> 1. A misconfiguration issue with a WSDL service description. Check to see if this service name corresponds to something that it should have been created by some component. 2. The component providing this service has not started. Determine the component that should provide this service and check that it is running and is configured to advertise this service. 3. The component providing the service has been shutdown or the whole JBI installation is shutting down. These types of errors are possible during the shutdown process. <p>Resource Key: CANT_FIND_ENDPOINT_FOR_SERVICE</p>
JBIMR0012	SEVERE	<p>Endpoint has been deactivated. Service({0}) Endpoint({1})</p> <p>Cause: The endpoint has been deactivated by the owning component.</p> <p>Action: This could be the type of error that can happen when a component or the JBI runtime is being shutdown. It can also be a problem in the implementation of a component. If no other shutdown messages occur in the log then file a problem to Sun with the component that logged this error.</p> <p>Resource Key: INACTIVE_ENDPOINT</p>
JBIMR0014	SEVERE	<p>Invalid message exchange pattern URI. Pattern({0})</p> <p>Cause: Component requested a Message Exchange Pattern not supported by this runtime.</p> <p>Action: The set of legal Message Exchange Patterns is relatively static. This likely means there is a problem with the component that is getting this error. Report a problem to Sun against the component.</p> <p>Resource Key: INVALID_MEP_URI</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMR0017	SEVERE	<p>The destination channel for this exchange is invalid or has been deactivated.</p> <p>Cause: The endpoint target for this message is a component which is not active.</p> <p>Action: This is a typical condition that can result when a component is shutdown while other components are using it. If this is not the case than report a problem to Sun against the JBI NMR runtime.</p> <p>Resource Key: INVALID_DESTINATION</p>
JBIMR0018	SEVERE	<p>Fault not supported in exchange pattern({0}).</p> <p>Cause: A component either attempted to create a fault or to set a fault on a Message Exchange and the current state of the Message Exchange doesn't allow this operation.</p> <p>Action: Report a problem to Sun against the component that received this error.</p> <p>Resource Key: FAULT_NOT_SUPPORTED</p>
JBIMR0021	SEVERE	<p>Attempt to perform operation inconsistent with exchange pattern. Pattern({0}) {1}-State({2}).</p> <p>Cause: Component attempted to set the status or set a message on a Message Exchange and that action is not allowed by the Message Exchange Pattern.</p> <p>Action: Report a problem to Sun against the component that received this error.</p> <p>Resource Key: PATTERN_INCONSISTENT</p>
JBIMR0022	WARNING	<p>Operation unavailable - DeliveryChannel has been closed.</p> <p>Cause: The Delivery Channel is closed. No operations are allowed.</p> <p>Action: This is a frequent error to see when a component is shutting down. If this error observed and is not related to a shutdown situation, a problem with the OpenESB runtime and/or the component should be reported to Sun.</p> <p>Resource Key: CHANNEL_CLOSED</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMR0023	SEVERE	<p>Send operation not legal in current state. Pattern({0}) State({1})</p> <p>Cause: A component attempted a SEND operation which isn't allowed in the current state.</p> <p>Action: Report this as a problem to Sun against the component that received the error. This exception can happen during shutdown of a component, and would be considered normal in that case.</p> <p>Resource Key: SEND_NOT_LEGAL</p>
JBIMR0024	SEVERE	<p>SendSynch operation not legal in current state. Pattern ({0}) {1}-State({2})</p> <p>Cause: A component attempted a SEND_SYNCH operation which isn't allowed in the current state.</p> <p>Action: Report this as a problem to Sun against the component that received the error. This exception can happen during shutdown of a component, and would be considered normal in that case.</p> <p>Resource Key: SENDSYNCH_NOT_LEGAL</p>
JBIMR0025	SEVERE	<p>Unexpected illegal state change. Pattern ({0}) {1}-State ({2})</p> <p>Cause: A component attempted an operation that was allowed by the current state of the Message Exchange.</p> <p>Action: Report this as a problem to Sun against the component that received this exception. This exception is possible when a component is shutting down.</p> <p>Resource Key: ILLEGAL_STATE_CHANGE</p>
JBIMR0026	SEVERE	<p>Error occurred getting default transaction from Transaction manager.</p> <p>Cause: A component requested that a Message Exchange be associated with a transaction, but the JBI NMR couldn't create a default transaction.</p> <p>Action: The GlassFish transaction support is either disabled or not functioning correctly. Check your GlassFish configuration before reporting this problem to Sun.</p> <p>Resource Key: CANT_GET_DEFAULT_TRANSACTION</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMR0027	SEVERE	<p>Error attempting to suspend transaction.</p> <p>Cause: Unexpected error from GlassFish transaction manager.</p> <p>Action: If nothing can be found that points at the problem, report a problem to Sun against the GlassFish transaction manager used by OpenESB.</p> <p>Resource Key: CANT_SUSPEND</p>
JBIMR0028	SEVERE	<p>Transaction has not been suspended before send().</p> <p>Cause: A component performed a SEND operation but didn't suspend the transaction associated with the sending thread.</p> <p>Action: Report this as a problem against the component getting the exception.</p> <p>Resource Key: MUST_SUSPEND</p>
JBIMR0029	SEVERE	<p>Error attempting to resume transaction.</p> <p>Cause: Unexpected error from GlassFish transaction manager.</p> <p>Action: If nothing can be found that points at the problem, report a problem to Sun against the GlassFish transaction manager used by OpenESB.</p> <p>Resource Key: CANT_RESUME</p>
JBIMR0030	SEVERE	<p>Error attempting to resume invalid transaction.</p> <p>Cause: Unexpected error from GlassFish transaction manager.</p> <p>Action: Report an problem to Sun with the GlassFish transaction manager or OpenESB.</p> <p>Resource Key: CANT_RESUME_INVALID</p>
JBIMR0032	SEVERE	<p>Deactivation failed - endpoint can only be deactivated by component which activated it.</p> <p>Cause: A component attempted to deactivate an endpoint it didn't own.</p> <p>Action: Report this as a problem to Sun against the component getting the exception.</p> <p>Resource Key: DEACTIVATE_NOT_OWNER</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMR0033	SEVERE	<p>Activated service name or endpoint name must not be null or empty.</p> <p>Cause: A component attempted to activate an endpoint with a null value or an empty name.</p> <p>Action: Report this as a problem against the component receiving the exception.</p> <p>Resource Key: ACTIVATE_NOT_NULL</p>
JBIMR0034	SEVERE	<p>Endpoint ({0}) has already been activated by component {1}.</p> <p>Cause: A component attempted to activate an endpoint that was already active by another component.</p> <p>Action: This is typically a problem with the configuration of a component. If not, report this problem to Sun against the component getting the exception.</p> <p>Resource Key: DUPLICATE_ENDPOINT</p>
JBIMR0035	WARNING	<p>Message Exchange timed out.</p> <p>Cause: A Message Exchange ACCEPT actions timed out instead of completing.</p> <p>Action: Normal exception when timeouts are used. Report an problem to Sun against the component if the error seems to be happening when not expected.</p> <p>Resource Key: MESSAGE_TIMEOUT</p>
JBIMR0036	SEVERE	<p>Error occurred importing WSDL for service {0} : {1}</p> <p>Cause: A component gave the JBI NMR an incorrectly formatted description of the service.</p> <p>Action: Report a problem to Sun against the component that created the service. It likely isn't the component that receives this exception.</p> <p>Resource Key: WSDL_IMPORT_ERROR</p>
JBIMR0038	SEVERE	<p>Service connection already exists for interface {0}</p> <p>Cause: A Service Assembly was deployed that created an interface connection that already exists.</p> <p>Action: Determine the conflicting Service Assemblies and correct the interface names.</p> <p>Resource Key: INTERFACE_CONNECTION_EXISTS</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMR0039	SEVERE	<p>Service connection already exists for endpoint {0} {1} owned by component {2}</p> <p>Cause: A Service Assembly was deployed that created an service connection that already exists.</p> <p>Action: Determine the conflicting Service Assemblies and correct the service names.</p> <p>Resource Key: ENDPOINT_CONNECTION_EXISTS</p>
JBIMR0040	SEVERE	<p>Component did not return a descriptor for endpoint {0}</p> <p>Cause: A component requested an Message Exchange to be created targeting a particular operation for a service. This operation could not be found in the endpoint description returned by the owning component.</p> <p>Action: This is commonly a configuration issue where the abstract WSDL given to a client does not match with the concrete WSDL given to a service. Look at the service description and usages of the service. Can occasionally be a problem with the component that owns the service. In this case report a problem to Sun against the owning component.</p> <p>Resource Key: ENDPOINT_NO_DESCRIPTOR</p>
JBIMR0041	SEVERE	<p>Operation {0} was not found in service {1}</p> <p>Cause: A component requested a Message Exchange to be created targeting a particular service. No operation information was returned in the service description returned by the owning component.</p> <p>Action: This is commonly a configuration issue where the abstract WSDL given to a client does not match with the concrete WSDL given to a service. Look at the service description and usages of the service. Can occasionally be a problem with the component that owns the service. In this case report a problem to Sun against the owning component.</p> <p>Resource Key: NONEXISTENT_OPERATION</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMR0042	SEVERE	<p>Can't find endpoint for interface {0}</p> <p>Cause: The requested interface name could not be translated into an known endpoint name.</p> <p>Action: This is typically one of the following problems:</p> <ol style="list-style-type: none"> 1. A misconfiguration issue with a WSDL service description. Check to see if this interface name corresponds to something that is should have been created by some component. 2. The component providing this interface has not started. Determine the component that should provide this interface and check that it is running and is configured to advertise this interface. 3. The component providing the interface has been shutdown or the whole JBI installation is shutting down. These types of errors are possible during the shutdown process. <p>Resource Key: CANT_FIND_ENDPOINT_FOR_INTERFACE</p>
JBIMR0043	SEVERE	<p>Unable to match required capabilities to available service endpoint</p> <p>Cause: A Message Exchange was targeted at any instance of a particular service. No service instance was found that both the consumer and provider could agree on.</p> <p>Action: Typically this points at a problem with the configuration of a consumer or provider component. This is a rarely used feature, thus it requires detailed investigation of the components involved. It may require reporting a problem to Sun against both components.</p> <p>Resource Key: CAPABILITY_NO_MATCH</p>
JBIMR0044	SEVERE	<p>Unable to locate activated endpoint for service connection {0} {1}.</p> <p>Cause: A component attempted to send to a logical service endpoint, but no physical instance of the endpoint currently exists.</p> <p>Action: This typically means one of two things: 1) The component that should create the physical instance of the service endpoint is not running or hasn't completed startup processing. This is typically resolved by starting the components in a different order or restarting a failed component. 2) There is a configuration problem with the component that should create the physical instance. This is typically resolved by looking at the Service Assembly descriptor.</p> <p>Resource Key: SERVICE_CONNECTION_NO_ENDPOINT</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMR0045	SEVERE	<p>Endpoint addresses can't be an External endpoint: {0} {1}</p> <p>Cause: A component addressed a MessageExchange with an External Endpoint. External Endpoints are only used by binding components (like the HTTP Binding Component) for their internal needs. They can't be used as a Message Exchange target.</p> <p>Action: Report a problem to Sun against the component that received this exception.</p> <p>Resource Key: EXTERNAL_ENDPOINT_NOT_VALID</p>

Runtime Management Error Messages

The following table lists each error message generated by runtime management, and describes the cause of the log message as well as providing a recommended action for you to take.

Message ID	Severity	Message Text, Cause, and Action
JBIMR0140	Warning	<p>Autoinstallation of Service Assemblies is not supported.</p> <p>Cause: A Service Assembly archive (JAR or ZIP) file was found in the <code>autoinstall</code> directory.</p> <p>Action: The <code>autoinstall</code> directory is not for deployment of Service Assemblies; it is for installation of components and shared libraries. Use the <code>autodeploy</code> directory for deployment of Service Assemblies.</p> <p>Resource Key: AA_DEPLOY_NOT_SUPPORTED</p>
JBIMA0141	Warning	<p>This file is not a valid Service Assembly archive. It cannot be processed by <code>autodeploy</code>.</p> <p>Cause: A component or shared library archive (JAR or ZIP) file was found in the <code>autodeploy</code> directory.</p> <p>Action: The <code>autodeploy</code> directory is not for installation of components and shared libraries, but is for deployment of Service Assemblies only. Use the <code>autoinstall</code> directory for installation of components and shared libraries.</p> <p>Resource Key: AA_INSTALL_NOT_SUPPORTED</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMA0201	Warning	<p>getComponentByName: Lookup failed for "{0}".</p> <p>Cause: The specified component's ComponentLifeCycle MBean was not found.</p> <p>Action: The ComponentsLifeCycle MBean is registered when the component is installed. The most likely cause of this warning in the server log is that the component is not installed.</p> <p>Resource Key: AS_GETCOMPONENTBYID_LOOKUP_FAILED</p>
JBIMA0202	Severe	<p>getComponentById: Too many mbeans returned by query "{0}".</p> <p>Cause: More than one ComponentLifeCycleMBean instances is registered for a component.</p> <p>Action: This is a rare scenario. Check for orphan MBean registrations or restart the target server instance or cluster.</p> <p>Resource Key: AS_GETCOMPONENTBYID_TOO_MANY_MBEANS</p>
JBIMA0204	Info	<p>AdminService.getInstalledComponents: lookup failed for "{0}".</p> <p>Cause: There are no installed bindings and components. A query was performed for installed components, and there are no installed components.</p> <p>Action: None required.</p> <p>Resource Key: AS_GETINSTALLEDCOMPONENTS_FAILURE</p>
JBIMA0205	Severe	<p>getRemoteFileUploadURL: Exception occured: {0}</p> <p>Cause: An exception occurred when the runtime was constructing the URL used to upload and deploy a remote Service Assembly. The most likely cause is that the HTTP server port could not be obtained from the MBeanServer.</p> <p>Action: Check the server log for the exception message. Perform the necessary action based on the server log information.</p> <p>Resource Key: AS_GETREMOVEFILEUPLOADURL_EXCEP</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMA0206	Severe	<p>getSystemService: Lookup failed for "{0}".</p> <p>Cause: Either a specific system service or all system services are not available; for example, zero MBeans are registered with ComponentType=System.</p> <p>Action: Check the server log. If an error occurred while registering a system service, the related error information should be logged in the server log. The course of action varies based on the cause of failure to register a system service</p> <p>Resource Key: AS_GETSYSTEMSERVICE_LOOKUP_FAILED</p>
JBIMA0207	Severe	<p>getSystemService: NO SYSTEM SERVICES.</p> <p>Cause: There are system service MBeans registered with ComponentType=System, but they are not the standard runtime services. For example, zero service MBeans are registered with ControlType=*Service, such as ControlType=DeploymentService.</p> <p>Action: Check the server log. If an error occurred while registering a system service, the related error information should be logged in the server log. The course of action varies based on the cause of failure to register a system service</p> <p>Resource Key: AS_GETSYSTEMSERVICE_NO_SERVICES</p>
JBIMA0208	Severe	<p>getSystemService: Too many mbeans returned by query "{0}".</p> <p>Cause: When looking up a particular system service MBean more than one was found; for instance, two DeploymentServices are registered.</p> <p>Action: This is a rare scenario. Check for orphan MBean registrations or restart the target server instance/cluster.</p> <p>Resource Key: AS_GETSYSTEMSERVICE_TOO_MANY_MBEANS</p>
JBIMA0213	Severe	<p>Failed to create MBean for ("AdminService", "HeartBeat").</p> <p>Cause: A service required for the auto install or deploy tasks has not been registered</p> <p>Action: Check the server log for any warning messages related to AdminService or HeartBeat service creation or registration failure.</p> <p>Resource Key: AS_HEARTBEAT_NULL</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMA0221	Severe	<p>{0}: bad MBean name "{1}".</p> <p>Cause: A query was performed for a single MBean of a set of MBeans, but the ObjectName pattern is malformed or there was an exception when querying for the object name.</p> <p>Action: Check the MBean name being queried, and make sure the JMX MBeanServer is up and running.</p> <p>Resource Key: AS_QUERYHELPER_EXCEP</p>
JBIMA0315	Severe	<p>getSystemConfigMBeans: NO SYSTEM SERVICE CONFIGURATION MBEANS.</p> <p>Cause: The configuration MBeans for the system services (DeploymentService, InstallationService, and so on) could not be found.</p> <p>Action: This is a rare scenario and would occur if there is a failure to register the system service configuration MBeans. Check the server log for any warnings during server startup.</p> <p>Resource Key: CS_GETSYSTEMCONFIGMBeans_NO_SERVICES</p>
JBIMA0318	Severe	<p>Invalid attribute value. Attribute with name {0} is expected to be of type "{1}" and not "{2}".</p> <p>Cause: The user attempted to set a system service configuration attribute, but the type of the attribute is not correct.</p> <p>Action: Check the error message and fix the attribute value or type.</p> <p>Resource Key: CS_INVALID_ATTRIBUTE_VALUE</p>
JBIMA0319	Severe	<p>Failed to set value of attribute {0} to {1}. {2}</p> <p>Cause: Failed to set a configuration attribute. The exact cause is included in the message text.</p> <p>Action: The exact cause for the failure is found in the message text. Fix the attribute value and retry the operation.</p> <p>Resource Key: CS_SET_ATTRIBUTE_FAILED</p>
JBIMA0320	Severe	<p>Failed to get value of attribute {0}. {1}</p> <p>Cause: Failed to get the value of a configuration attribute. The exact cause is included in the message text.</p> <p>Action: The exact cause for the failure is found in the message text. Fix the attribute problem accordingly and retry the operation.</p> <p>Resource Key: CS_GET_ATTRIBUTE_FAILED</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMA0321	Severe	<p>Required field {0} is not set in the descriptor for attribute {1}.</p> <p>Cause: The required metadata for a configuration attribute is missing.</p> <p>Action: Add the required field to the attribute descriptor. This is a system error and not a runtime error. It will not occur at runtime.</p> <p>Resource Key: CS_DESCR_REQ_FIELD_MISSING</p>
JBIMA0322	Severe	<p>Invalid attribute information provided for attribute {0}. The descriptor is NULL.</p> <p>Cause: Metadata information for a configuration attribute is missing.</p> <p>Action: This is a system error and will not be seen at runtime.</p> <p>Resource Key: CS_ATTRIBUTE_DESCR_NULL</p>
JBIMA0323	Severe	<p>Invalid attribute information provided for attribute {0}. The descriptor is invalid : one of the required fields is missing.</p> <p>Cause: The metadata information for a configuration attribute is incorrect.</p> <p>Action: This is a system error and will not be seen at runtime.</p> <p>Resource Key: CS_ATTRIBUTE_DESCR_INVALID</p>
JBIMA0401	Severe	<p>Service Assembly {0} failed to deploy.</p> <p>Cause: There could be more than one cause for Service Assembly deployment failure. For example, service units failed to deploy to target components, the target server or cluster is not running, the Service Assembly is not valid, and so on. The cause is reported in detail in the error log.</p> <p>Action: Check the error message from the client for the cause of the error, resolve the error, and then redeploy.</p> <p>Resource Key: DS_DEPLOYMENT_FAILURE</p>
JBIMA0402	Info	<p>Service Assembly {0} has been deployed.</p> <p>Cause: The Service Assembly has been deployed.</p> <p>Action: None required.</p> <p>Resource Key: DS_DEPLOYMENT_SUCCESS</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMA0403	Severe	<p>Deployment Service ({0}) unable to create exception message</p> <p>Cause: When a deployment task fails, a detailed XML message is generated that reports the exact cause of the failure. This error indicates that the runtime deployment service failed to build the XML message. The most likely cause is insufficient or incorrect information provided to the deployment service by the deploy operation. For instance deploying a service unit to a component failed, but the component did not set a valid cause XML in the exception.</p> <p>Action: Check the server log for warning messages indicating the cause for failure to build the exception message.</p> <p>Resource Key: DS_DEPLOY_NO_EXCEPTION_MSG</p>
JBIMA0404	Warning	<p>Deployment of Service Assembly {0} succeeded partially; some service units failed to deploy.</p> <p>Cause: One or more service units in the Service Assembly failed to deploy to the target components.</p> <p>Action: A detailed message with the cause of failure is displayed to the user by the clients. Fix the cause of the failure and retry the operation.</p> <p>Resource Key: DS_DEPLOY_SCSS_WITH_WRNING_MSG</p>
JBIMA0405	Warning	<p>Start of Service Assembly {0} succeeded partially; some service units failed to start.</p> <p>Cause: One or more service units in the Service Assembly failed to start.</p> <p>Action: A detailed message with the cause of failure is displayed to the user by the clients. Fix the cause of the failure and retry the operation.</p> <p>Resource Key: DS_START_SCSS_WITH_WRNING_MSG</p>
JBIMA0406	Severe	<p>A Service Assembly with the same name exists in the repository with different contents.</p> <p>Cause: An attempt was made to deploy a Service Assembly when another Service Assembly with the same name is already deployed.</p> <p>Action: Rename the Service Assembly and redeploy.</p> <p>Resource Key: DS_SERVICE_ASSEMBLY_WITH_SAME_NAME_EXISTS</p>

Runtime Application Verifier Error Messages

The following table lists each error message generated by the runtime application verifier, and describes the cause of the log message as well as providing a recommended action for you to take.

Message ID	Severity	Message Text, Cause, and Action
JBIMR1068	Severe	The application {0} could not be located in DAS repository. Cause: The application name provided to the export-application-environment command is not available in repository. Action: Check the application name by listing Service Assemblies. Resource Key: VERIFIER_APPLICATION_NOT_LOCATED
JBIMA1069	Severe	There was an error in collecting the list of application variables used in SA {0} Cause: An error occurred while collecting a list of application variables to be exported by the command export-application-environment. Action: Look up and verify the application variables using the list command. Resource Key: VERIFIER_ISSUE_COLLECTING_LIST_OF_APP_VARS

Message ID	Severity	Message Text, Cause, and Action
JBIMA1070	Severe	<p>There was an error in collecting the list of application configs used in SA {0}.</p> <p>Cause: An error occurred while collecting a list of application configurations to be exported by the command <code>export -application -environment</code>.</p> <p>Action: Look up and verify the application configurations using the <code>list</code> command.</p> <p>Resource Key: VERIFIER_ISSUE_COLLECTING_LIST_OF_APP_CONFIGS</p>
JBIMA1071	Severe	<p>There was an error in getting the application configuration type {0}.</p> <p>Cause: An error occurred while getting the type of application configuration used by the given application {0}.</p> <p>Action: Look up and verify the application configuration using the <code>list</code> command.</p> <p>Resource Key: VERIFIER_ISSUE_COLLECTING_LIST_OF_APP_CONFIG_TYPE</p>
JBIMA1072	Severe	<p>There was an error in exporting application environment.</p> <p>Cause: An error occurred while exporting the application environment.</p> <p>Action: Verify that the given application is deployed.</p> <p>Resource Key: VERIFIER_ERROR_EXPORTING_APP_CONFIG</p>
JBIMA1073	Severe	<p>There was an error in retrieving application variable value for component {0}.</p> <p>Cause: The value of an application variable for the component could not be looked up.</p> <p>Action: Verify that the component is running.</p> <p>Resource Key: VERIFIER_ISSUE_GETTING_APP_VAR_VALUE</p>
JBIMA1074	Severe	<p>There was an error in retrieving application configuration value for component {0}.</p> <p>Cause: The value of an application configuration for the component could not be looked up.</p> <p>Action: Verify that the component is running.</p> <p>Resource Key: VERIFIER_ISSUE_GETTING_APP_CONFIG_VALUE</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMA1075	Severe	<p>There was an error in retrieving application variable value of {0}.</p> <p>Cause: The value of an application variable for the component could not be looked up.</p> <p>Action: Verify that the component is running.</p> <p>Resource Key: VERIFIER_ISSUE_EXPORTING_APP_VAR_VALUE</p>
JBIMA1076	Severe	<p>There was an error in retrieving application configuration value of {0}.</p> <p>Cause: The value of an application configuration for the component could not be looked up.</p> <p>Action: Verify that the component is running.</p> <p>Resource Key: VERIFIER_ISSUE_EXPORTING_APP_CONFIG_VALUE</p>
JBIMA1077	Severe	<p>Verification of JavaEEServiceEngine service unit failed.</p> <p>Cause: The service unit for the Java EE Service Engine (sun-javaee-engine) could not be verified.</p> <p>Action: Check the server log for additional information, and check the application archive.</p> <p>Resource Key: VERIFIER_JAVAAEE_VERIFICATION_FAILED</p>
JBIMA6000	Severe	<p>Please provide a valid Service Assembly archive.</p> <p>Cause: The verifier is not able to read the given Service Assembly archive.</p> <p>Action: Verify that the correct archive is being passed to the verify command.</p> <p>Resource Key: VERIFIER_INVALID_INPUT</p>
JBIMA6001	Severe	<p>Archive {0} is not a Service Assembly archive.</p> <p>Cause: The archive provided to the verifier is not a Service Assembly.</p> <p>Action: Verify that the correct archive is being passed to the verify command.</p> <p>Resource Key: VERIFIER_INVALID_SA</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMA6002	Info	<p>The following components are not installed: {0}</p> <p>Cause: The components in the list are not installed and the Service Assembly may fail deployment.</p> <p>Action: Install the missing components before attempting to deploy the Service Assembly.</p> <p>Resource Key: VERIFIER_COMPONENT_INSTALLATION_STATUS_ERROR</p>
JBIMA6004	Warning	<p>SU artifact {0} is not present</p> <p>Cause: A service unit artifact of the specified name is missing in the application archive.</p> <p>Action: Verify that the list of service units in <code>jbi.xml</code> is the same as the list of service units included in the Service Assembly archive.</p> <p>Resource Key: VERIFIER_SU_ARTIFACT_MISSING</p>
JBIMA6005	JBIMA6004	<p>A list of WSDL files in the SA could not be obtained because the SA was not extracted.</p> <p>Cause: The verifier could not read the Service Assembly archive to get a list of the WSDL files used.</p> <p>Action: Verify that the correct archive is being passed to the verify command.</p> <p>Resource Key: VERIFIER_SA_NOT_EXTRACTED</p>
JBIMA6006	Warning	<p>Component {0} could not be started for application verification.</p> <p>Cause: The verifier could not start the specified component for application environment verification</p> <p>Action: Check the status of the specified component.</p> <p>Resource Key: VERIFIER_COMPONENT_NOT_STARTED</p>
JBIMA6007	Warning	<p>Component {0} has no lifecycle mbean in target {1}.</p> <p>Cause: The verifier could not start the specified component in the specified target for application environment verification.</p> <p>Action: Check the status of the specified component in the target.</p> <p>Resource Key: VERIFIER_NO_COMPONENT_LIFECYCLE_OBJECT</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMA6008	Warning	<p>Component {0} has many lifecycle mbeans in target {1}.</p> <p>Cause: The verifier could not start the specified component because there are many lifecycle MBeans.</p> <p>Action: Check the status of the component in the target.</p> <p>Resource Key: VERIFIER_MANY_COMPONENT_LIFECYCLE_OBJECT</p>
JBIMA6009	Warning	<p>Component {0} has no mbean with the following pattern: {1}.</p> <p>Cause: The verifier could not look up the component configuration extension MBean for the specified component.</p> <p>Action: Check the status of the component.</p> <p>Resource Key: VERIFIER_NO_COMPONENT_EXTENSION_OBJECT</p>
JBIMA6010	Warning	<p>Component {0} has many mbeans with the following pattern: {1}.</p> <p>Cause: There is more than one component configuration MBean for the specified component.</p> <p>Action: Check the status of the component.</p> <p>Resource Key: VERIFIER_MANY_COMPONENT_EXTENSION_OBJECT</p>
JBIMA6011	Warning	<p>MBean {0} is not registered in {1}.</p> <p>Cause: The specified MBean is not available in the specified target.</p> <p>Action: Check the server log for additional information, and verify that the MBean is available.</p> <p>Resource Key: VERIFIER_INVALID_MBEAN</p>
JBIMA6012	Warning	<p>Status of endpoint {0} could not be determined.</p> <p>Cause: The verifier could not verify the status of the given endpoint.</p> <p>Action: Verify that the application is deployed and started.</p> <p>Resource Key: VERIFIER_ENDPOINT_STATUS_NOT_DETERMINED</p>

Message ID	Severity	Message Text, Cause, and Action
JBIMA6013	Warning	<p>Component {0} was not shutdown.</p> <p>Cause: The verifier started the component but could not shut it down.</p> <p>Action: Check server log for additional information, and shut down component.</p> <p>Resource Key: VERIFIER_COMPONENT_NOT_SHUTDOWN</p>
JBIMA6014	Severe	<p>Templates could not be created.</p> <p>Cause: The export application environment command was not able to create template files.</p> <p>Action: Verify that the directory provided for template creation exists and has write permissions.</p> <p>Resource Key: VERIFIER_TEMPLATE_ZIP_NOT_CREATED</p>
JBIMA6015	Severe	<p>Template zip file exists and could not be deleted</p> <p>Cause: The export application environment command was not able to create template files.</p> <p>Action: Erase any previously created application-name-templates.zip files in the directory provided for template creation.</p> <p>Resource Key: VERIFIER_TEMPLATE_ZIP_EXISTS</p>
JBIMA6016	Warning	<p>A valid ear/jar file is not found in the service unit for sun-javaee-engine.</p> <p>Cause: The given application archive does not contain a service unit for the Java EE Service Engine (sun-javaee-engine).</p> <p>Action: Check the Service Assembly archive.</p> <p>Resource Key: VERIFIER_JAVAEE_EAR_FILE_NOT_FOUND</p>
JBIMA6017	Warning	<p>The application {0} is not deployed in target {1}.</p> <p>Cause: The export application environment cannot be completed for the specified application because it is not deployed in the target.</p> <p>Action: Check the application name passed to the export application environment command.</p> <p>Resource Key: VERIFIER_EXPORT_CONFIG_APP_NOT_DEPLOYED</p>

Runtime Common Client Error Messages

The following table lists each error message generated by the runtime common client, and describes the cause of the log message as well as providing a recommended action for you to take.

Message ID	Severity	Message Text, Cause, and Action
UICMN1000	Severe	<p>jbi.xml not found in META-INF directory.</p> <p>Cause: Component installer archive file does not contain the required JBI descriptor (jbi.xml).</p> <p>Action: Verify that the archive file passed is actually the component installer archive.</p>
UICMN1001	Severe	<p>jbi.xml not found in META-INF directory.</p> <p>Cause: The archive file used with the operation does not contain the JBI descriptor (jbi.xml).</p> <p>Action: Verify that the archive file passed is either installable or deployable with the correct JBI descriptor (jbi.xml)</p>
UICMN1002	Severe	<p>xml text is not a valid jbi descriptor xml.</p> <p>Cause: The JBI descriptor in the installable or deployable archive file is not a valid XML schema JBI descriptor.</p> <p>Action: Verify that the jbi.xml file in the archive is a valid XML schema.</p>
UICMN1003	Severe	<p>Error during remote file upload.</p> <p>Cause: An error occurred during remote file upload to perform installation or deployment.</p> <p>Action: Verify that the runtime is started without errors or restart the server, and try again. The low-level error messages in the result message or server log provide more details about the error.</p>
UICMN1004	Severe	<p>Error during remote file download.</p> <p>Cause: An error occurred during remote file download.</p> <p>Action: Verify the application configuration and application variables on the specific target. Verify that the specified server target is started without errors or restart the server, and try again.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN1005	Severe	<p>{0} is not a valid boolean value string. Please specify either "true" or "false".</p> <p>Cause: The value of the parameter passed to the operation or task is expected as a String representation of a Boolean value.</p> <p>Action: Make sure the String value for the parameter passed to the operation or task is either true or false.</p>
UICMN1006	Severe	<p>{0} is not a valid object value string for an object of type {1}.</p> <p>Cause: The value of the parameter passed to the operation or task is expected as a string representation of the object of certain type.</p> <p>Action: Make sure the String representation is correct for the object of the required type specified in the message.</p>
UICMN1901	Severe	<p>Invalid MBeanServerConnection object passed in.</p> <p>Cause: An internal error occurred during JMX invocation.</p> <p>Action: Verify that the server is up and running without errors. Verify the JMX Connection settings. If it is not resolved, contact Sun for support, and provide the diagnostic information from the server log including any stack trace.</p>
UICMN1902	Severe	<p>Connection failure connecting to MBeanServer with parameters: host:{0}, port:{1}, userName:{2}, password:(not displayed), protocol:{3}</p> <p>Cause: Connecting to the server using JMX failed.</p> <p>Action: Verify the connection settings and ensure that the server is running.</p>
UICMN1903	Severe	<p>Connection failure connecting to MBeanServer with parameters: url:{0}, userName:{1}, password:(not displayed)</p> <p>Cause: JMX connection authentication failed.</p> <p>Action: Change the user name and password used in the JMX connection to valid values for JMX authentication.</p>
UICMN1904	Severe	<p>Connection failure connecting to MBeanServer with parameters: protocol:{0}, host:{1}, port:{2}</p> <p>Cause: JMX connection failed due to an invalid hostname or port number.</p> <p>Action: Change the host name or port values to valid connection settings and ensure that the server is running.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN1905	Severe	Unknown host {0} - Cannot determine whether its local or remote. Cause: JMX connection failed due to an invalid host name. Action: Make sure the host name is correct in the JMX connection settings.
UICMN1906	Severe	Error during remote file upload. Cause: An error occurred during remote file upload. Action: Check the server log for errors. If the error can not be corrected, report the issue to Sun for support and provide the diagnostic information from the server log including the stack trace.
UICMN1907	Severe	Archive file "{0}" does not exist. Cause: An error occurred during remote file upload Action: Make sure that the archive file path passed to the admin commands exists.
UICMN2000	Severe	An unknown error occurred in JMX access. Cause: An internal error occurred in the JMX layer that cannot be identified Action: Check whether the server startup is complete without any errors and try again. If it is not resolved, contact Sun for support and provide the diagnostic information from the server log including any stack trace.
UICMN2001	Severe	Cannot create JMX connection factory using the class {0} Cause: A JMX connection setup error occurred. Action: Verify that the JMX settings from the client side are correct.
UICMN2002	Severe	Not connected to JMX Server. Cause: The JMX connection to the server is not established. Action: Verify that the JMX settings such as host name, port, user name, and password are correct.
UICMN2003	Severe	The port number {0} specified for the JMX connection is not valid. Cause: The port number specified for the JMX connection is not valid. Action: Change the port number to a valid JMX port configured for the server.

Message ID	Severity	Message Text, Cause, and Action
UICMN2004	Severe	<p>An error occurred in validating the host for JMX connection.</p> <p>Cause: An error occurred while validating the host for JMX connection.</p> <p>Action: Change the host name to a valid host name for connecting to the server.</p>
UICMN2005	Severe	<p>An error occurred while opening a JMX Connection with JMX Service URL: {0}.</p> <p>Cause: The JMX Service URL created from the connection parameters is invalid and cannot connect to the server.</p> <p>Action: Change the JMX Connection parameters according to the server's JMX settings. Verify that the server is started without errors.</p>
UICMN2006	Severe	<p>An io error occurred while opening a JMX Connection. Make sure that the connection parameters (host,port,username,password) are correct and server is running for JMX Service URL: {0}.</p> <p>Cause: The JMX Service URL created from the connection parameters is invalid and cannot connect to the server</p> <p>Action: Verify that the JMX connection parameters are correct. Verify that the server is started without errors.</p>
UICMN2007	Severe	<p>A Security error occurred while opening a JMX Connection. Make sure that the connection parameters (host,port,username,password) are correct and server is running for JMX Service URL: {0}.</p> <p>Cause: JMX connection validation failed.</p> <p>Action: Make sure that the connection parameters (host name, port, username, and password) are correct and that the server is running.</p>
UICMN2008	Severe	<p>An error occurred during JMX MBean method invocation.</p> <p>Cause: An error occurred during JMX MBean method invocation.</p> <p>Action: Make sure that the server started without errors and completed initialization. If it is not resolved, contact Sun for support and provide the diagnostic information from the server log including any stack trace.</p>
UICMN2009	Severe	<p>An error occurred while closing a JMX Connection.</p> <p>Cause: An error occurred while closing a JMX Connection.</p> <p>Action: Verify that the server is running without errors.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN2091	Severe	<p>Installing a component to JBI Runtime on a remote machine is not supported. Make sure that the host parameter (host = {0}) passed is for the local machine.</p> <p>Cause: Trying to install the component to a JBI Runtime on a remote machine, which is not supported.</p> <p>Action: Make sure that the host parameter passed is for the local machine.</p>
UICMN2092	Severe	<p>Installing a component with configuration parameters to Jbi Runtime on a remote machine is not supported. Make sure that the host parameter (host = {0}) passed is for the local machine.</p> <p>Cause: Trying to install the component to JBI Runtime on a remote machine, which is not supported.</p> <p>Action: Make sure that the host parameter passed is for the local machine.</p>
UICMN2093	Severe	<p>Installing a shared library to Jbi Runtime on a remote machine is not supported. Make sure that the host parameter (host = {0}) passed is for the local machine.</p> <p>Cause: Trying to install a shared library to a JBI Runtime on a remote machine, which is not supported.</p> <p>Action: Make sure that the host parameter passed is for the local machine.</p>
UICMN2094	Severe	<p>Unable to connect to host = {0}, port = {1} for user {2}. Check the connection settings and ensure that the server is running.</p> <p>Cause: The JMX connection settings are incorrect for the server or the server is not running.</p> <p>Action: Verify the connection settings and change them if needed. Ensure that the server is running.</p>
UICMN2095	Severe	<p>The directory name {0} is invalid.</p> <p>Cause: A directory cannot be created to download the application configuration template ZIP file.</p> <p>Action: Verify that the server instance has the permission to create the specified directory.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN2801	Severe	<p>Component name {0} does not exist in the JBI Runtime.</p> <p>Cause: There is no component in the runtime with the component name used in the task.</p> <p>Action: Change the component name to a valid component name. To verify that the component with the name exists in the JBI Runtime, use the list components command.</p>
UICMN2807	Severe	<p>No installation configuration MBean implemented by the installer to set the installer configuration attributes.</p> <p>Cause: Install-time configuration parameters are passed to the install command, but the component being installed is not supporting the install time configuration.</p> <p>Action: Install the component without the install-time configuration parameters passed to the install command.</p>
UICMN2808	Severe	<p>Error occurred while setting the installer configuration attribute {0}.</p> <p>Cause: The install-time configuration attribute cannot be set on a component during component installation.</p> <p>Action: Verify that the specified attribute is supported in the component. Modify or remove the attribute from the configuration parameters and try again.</p>
UICMN2809	Severe	<p>InstallerMBean Object name does not exist for unloading the InstallerMBean.</p> <p>Cause: An internal error occurred. The MBean object for the installer MBean of the component does not exist.</p> <p>Action: The component might not have implemented the InstallerMbean properly. Check the server log for more information and contact Sun support.</p>
UICMN2810	Severe	<p>InstallerMBean ObjectName does not have ComponentName for unloading the InstallerMBean. InstallerMBean Object name: {0}</p> <p>Cause: An internal error occurred. The InstallerMBean ObjectName for the component being installed is not correctly constructed.</p> <p>Action: The component installer implementation is not correct. Check the server log for more information and contact Sun support.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN2811	Severe	<p>Installation Configuration Mbean attribute info not found for attribute "{0}".</p> <p>Cause: The attribute is not supported by the component installation configuration.</p> <p>Action: Check with the component provider for the supported attributes, and check the server log for more information.</p>
UICMN2812	Severe	<p>Can not convert attribute string value "{0}" to attribute type "{1}" for attribute "{2}".</p> <p>Cause: The String form of the attribute value passed for component install-time configuration is not a valid value to convert to an attribute type.</p> <p>Action: Fix the value of the configuration attribute. See the component documentation for supported attributes.</p>
UICMN2813	Severe	<p>Error occurred while setting the installer configuration attributes.</p> <p>Cause: Some of the install-time configuration attributes cannot be set on a component during component installation.</p> <p>Action: Modify the value of the attribute or if the attribute is not supported, remove it. See the component documentation for supported attributes.</p>
UICMN2815	Severe	<p>deploy method in DeploymentServiceMBean returned NULL.</p> <p>Cause: An internal error occurred and the deployment result is invalid.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log, including the stack trace.</p>
UICMN2816	Severe	<p>undeploy method in DeploymentServiceMBean returned NULL.</p> <p>Cause: An internal error occurred and the undeployment result is invalid.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log, including the stack trace.</p>
UICMN2817	Severe	<p>Component with name {0} is not registered in target {1}.</p> <p>Cause: The component with the specified name might not have been installed in the specified target.</p> <p>Action: Change the component name to a valid component name that exists in the target. To verify that a component with the specified name exists in the target, use the list components command.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN2818	Severe	<p>Component with name {0} is not registered in target {1}.</p> <p>Cause: There are multiple lifecycle MBeans present for a particular component name in a target.</p> <p>Action: The component installation might not have been completed correctly on the specified target. Restart the target, check the server log for any errors, and retry.</p>
UICMN2822	Severe	<p>An exception occurred while getting the state of the service unit ({0}) on component({1}). Exception message: {2}</p> <p>Cause: The component on which the service unit is deployed might not be in a correct state for this query.</p> <p>Action: Check the component state and check the server log for any error messages from the component. Restart the component if required.</p>
UICMN2823	Severe	<p>Deployer mbean not found for component Name {0}. There is no component deployer mbean found with mbean server query pattern: {1}.</p> <p>Cause: A component with the specified component name does not exist, or the deployer MBean registration failed during component startup.</p> <p>Action: Check whether the component with the specified name exists in the server.</p>
UICMN2824	Severe	<p>Deployer mbean not found with component Name {0}. There are multiple component deployer mbeans found with mbean server query pattern: {1}.</p> <p>Cause: An internal error occurred. There are multiple deployer MBeans found for the specified component.</p> <p>Action: Restart the JBI Runtime to reset the component MBeans registration. If this problem occurs consistently, contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p>
UICMN2825	Severe	<p>The state value passed is invalid. state = {0}.</p> <p>Cause: An invalid state valued was passed.</p> <p>Action: Modify the state value to one of these valid states: Started, Stopped, Shutdown, and Unknown.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN2826	Severe	<p>Cannot perform lifecycle operations on domain target.</p> <p>Cause: An invalid target was passed to the command. "domain" is not a valid target for the operation.</p> <p>Action: Change the target name.</p>
UICMN2827	Severe	<p>Invalid target: {0}.</p> <p>Cause: The target with the specified name does not exist or the name of the target is invalid.</p> <p>Action: Change the target name.</p>
UICMN2829	Severe	<p>loadNewInstaller method in InstallationServiceMBean failed to return the component installer MBean name.</p> <p>Cause: The component installer did not implement the installation contract correctly.</p> <p>Action: Check whether the component installer archive is the correct one. Check the server log for more messages specific to the component, and contact Sun support if necessary.</p>
UICMN2840	Severe	<p>Extension mbean not found for component Name {0}. There is no component extension mbean found with mbean server query pattern: {1}.</p> <p>Cause: The component did not implement the JBI MBean contracts correctly.</p> <p>Action: Check whether the component installer archive is the correct one. Check the server log for more messages specific to the component, and contact Sun support if necessary.</p>
UICMN2841	Severe	<p>getLoggerMBeanNames operation invoked from getComponentLoggerLevels returned NULL.</p> <p>Cause: Internal operation results were invalid.</p> <p>Action: This is an internal error. Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p>
UICMN2842	Severe	<p>setLoggerMBeanNames operation invoked from setComponentLoggerLevels returned NULL.</p> <p>Cause: Internal operation results were invalid.</p> <p>Action: This is an internal error. Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN2843	Severe	<p>Logger {0} does not exist in the JBI Runtime.</p> <p>Cause: The logger name passed to the operation does not exist in the JBI Runtime.</p> <p>Action: Change the logger name to a valid logger name.</p>
UICMN2844	Severe	<p>Invalid key "{0}" passed in as part of runtime configuration value set.</p> <p>Cause: The name of the runtime configuration attribute is not valid.</p> <p>Action: Change the name of the invalid attribute to a valid attribute name.</p>
UICMN2845	Severe	<p>Clustered Server "{0}" is down. Please try this operation when it is back up.</p> <p>Cause: The server specified for the operation is not running.</p> <p>Action: Fix any server startup problems or restart the server.</p>
UICMN2846	Severe	<p>Target "{0}" is not a supported target type for this operation.</p> <p>Cause: The specified target is not a supported target type for this operation.</p> <p>Action: Change the target name to a valid target name.</p>
UICMN2847	Severe	<p>Exception caught while getting component configuration attributes.</p> <p>Cause: A component's configuration attributes could not be retrieved from a specified target.</p> <p>Action: Check if the target is up and running. Check the nested result and the server log for more information about the exception.</p>
UICMN2848	Severe	<p>Exception caught while setting component configuration attributes.</p> <p>Cause: The component configuration attributes could not be set.</p> <p>Action: Correct any invalid attribute names and values for this component configuration.</p>
UICMN2849	Severe	<p>Component "{0}" is not in Started state. Please start it and retry this operation.</p> <p>Cause: The component is not in the Started state.</p> <p>Action: Please start the component and retry this operation.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN2850	Severe	<p>Cannot find Configuration MBean for component "{0}" on target "{1}".</p> <p>Cause: The component with the specified name was not found on the target or it was not started properly.</p> <p>Action: Check whether the component is installed and started on the specified target correctly.</p>
UICMN2851	Severe	<p>Failed to set component configuration attributes for component {0}. {1}</p> <p>Cause: The component's configuration attributes were not set on a specified target</p> <p>Action: Check whether the component is installed and started on the specified target correctly. Also verify that the configuration attributes passed to the operation are valid for the component.</p>
UICMN2853	Severe	<p>Target "{0}" is not up. Please start the target and retry this operation.</p> <p>Cause: The target is not running.</p> <p>Action: Please restart the target and retry this operation.</p>
UICMN2854	Severe	<p>Failed to list runtime logger levels for server instance {0}.</p> <p>Cause: The server instance is not running.</p> <p>Action: Start the instance and retry this operation.</p>
UICMN2855	Severe	<p>getLoggerMBeanNames operation invoked from getComponentLoggerLevels returned NULL.</p> <p>Cause: An internal error occurred and the results of the operation were invalid.</p> <p>Action: Check whether the specified component exists at the target instance and is started properly. If this problem occurs consistently, contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p>
UICMN2856	Severe	<p>getLoggerMBeanNames operation invoked from getComponentLoggerDisplayNames returned NULL.</p> <p>Cause: An internal error occurred and the results of the operation were invalid.</p> <p>Action: Check whether the specified component exists in the target instance and is started properly. If this problem occurs consistently, contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN2857	Severe	<p>Component {0} is not installed on target {1}.</p> <p>Cause: The component is not installed on the specified target.</p> <p>Action: Install the component on the specified target and try the operation again.</p>
UICMN2858	Severe	<p>Runtime configuration is managed at the cluster level. Target "{0}" is a clustered instance. Please use the cluster target "{1}" for this command.</p> <p>Cause: The specified target is not valid for the runtime configuration.</p> <p>Action: Use the cluster target specified for this command.</p>
UICMN2990	Severe	<p>Deploying the Service Assembly to Jbi Runtime on a remote machine is not supported. Make sure that the host parameter (host = {0}) passed is for the local machine.</p> <p>Cause: You are trying to deploy the Service Assembly from this machine to a remote machine, which is not supported.</p> <p>Action: Make sure that the host parameter passed is for the local machine.</p>
UICMN3000	Severe	<p>Component {0} is not installed on target {1}. Please install the component and retry this operation.</p> <p>Cause: The component is not installed on the target for component application configuration.</p> <p>Action: Install the component and retry this operation.</p>
UICMN3001	Severe	<p>Failed to add application configuration {0} for component {1} on target {2}.</p> <p>Cause: An exception occurred while adding the application configuration for the specified component on the specified target.</p> <p>Action: See the nested exception in the management result message for more details, and check the server log for any information about the error.</p>
UICMN3002	Severe	<p>Failed to set application configuration {0} for component {1} on target {2}.</p> <p>Cause: An exception occurred while setting the application configuration for the specified component on a specified target.</p> <p>Action: See the nested exception in the management result message for more details, and check the server log for any information about the error.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN3003	Severe	<p>Failed to delete application configuration {0} for component {1} from target {2}.</p> <p>Cause: An exception occurred while deleting the application configuration for the specified component on a specified target.</p> <p>Action: See the nested exception in the management result message for more details, and check the server log for any information about the error.</p>
UICMN3004	Severe	<p>Failed to get application configurations for component {0} from target {1}.</p> <p>Cause: An exception occurred while retrieving the application configuration for the specified component on a specified target.</p> <p>Action: See the nested exception in the management result message for more details, and check the server log for any information about the error.</p>
UICMN3005	Severe	<p>The target domain is not supported by component configuration operations.</p> <p>Cause: The target specified for the operation is a domain that is not supported for component configuration operations.</p> <p>Action: Change the target to the valid server instance name.</p>
UICMN3006	Severe	<p>Component {0} is not started on target {1}. Cannot configure a component which is not started or not stopped.</p> <p>Cause: The state of the specified component on the specified target is not suitable for managing the component's configuration.</p> <p>Action: Start the component if it is already installed, or install and start the component on the specified target before trying to change the component's configuration on this target.</p>
UICMN3007	Severe	<p>Application configuration "{0}" is not defined for component {1} on target {2}.</p> <p>Cause: Application configuration for the specified component is not defined on the specified target.</p> <p>Action: Add the application configuration for the component on the target.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN3008	Severe	<p>Failed to get application variables for component {0} on target {1}.</p> <p>Cause: An exception occurred while trying to retrieve the application variable for component on a target.</p> <p>Action: Check whether the component is installed and running on the specified target. Check the nested result message for more details about the exception, and check the server log for additional information about the error.</p>
UICMN3009	Severe	<p>Failed to add application variable {0} to component {1} on target {2}.</p> <p>Cause: An exception occurred while adding the application variable to the component on a target.</p> <p>Action: Check whether the component is installed and running on the specified target, and check whether the variable already exists. Check the nested result message for more details about the exception, and check the server log for more information about the error.</p>
UICMN3010	Severe	<p>Failed to update application variable {0} in component {1} on target {2}.</p> <p>Cause: An exception occurred while updating the application variable for the component on a target.</p> <p>Action: Check whether the component is installed and running on the specified target. If a variable with the specified name is not already present, add it before updating. Check the nested result message for more details about the exception, and check the server log for more information about the error.</p>
UICMN3011	Severe	<p>Component {0} on target {1} does not support application variables.</p> <p>Cause: Application variables are not supported on the specified target for the component.</p> <p>Action: Change the target to a valid target for managing the application variables.</p>
UICMN3012	Severe	<p>Component {0} on target {1} does not support application configurations.</p> <p>Cause: Application configuration is not supported on a specified target for the component.</p> <p>Action: Change the target to a valid target for managing the application configuration.</p>
UICMN3100	Severe	<p>Server "{0}" is down. Please try this operation when it is back up.</p> <p>Cause: The specified target server is not running.</p> <p>Action: Start the server and try again.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN3101	Severe	<p>Target "{0}" is not a supported target type for this operation.</p> <p>Cause: The specified target is not a supported target for this operation.</p> <p>Action: Change the target name to a valid target name and try again.</p>
UICMN3102	Severe	<p>Component type could not be determined for {0}.</p> <p>Cause: Component information was not found for the specified component.</p> <p>Action: Check whether the component with the specified name is installed and started properly.</p>
UICMN3103	Severe	<p>Statistics not available for component {0}.</p> <p>Cause: Statistics are not available for the component.</p> <p>Action: Check whether the component supports statistics. See the component documentation or contact Sun support for more information.</p>
UICMN3104	Severe	<p>MBean {0} is not available.</p> <p>Cause: The statistics MBean is not available for the component.</p> <p>Action: Check whether the component supports providing extra statistics. See the component documentation or contact Sun support for more information.</p>
UICMN3105	Severe	<p>Component {0} is not started in target {1}.</p> <p>Cause: The component is not started in the target.</p> <p>Action: Start the component.</p>
UICMN3106	Severe	<p>An error was encountered in composing composite data for {0}.</p> <p>Cause: An error was encountered in composing JMX composite data. This is an internal error.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p>
UICMN3107	Severe	<p>The endpoint "{0}" does not exist.</p> <p>Cause: The endpoint does not exist on the specified target and instance.</p> <p>Action: Check for any deployment errors on the specified target and instance.</p>

Message ID	Severity	Message Text, Cause, and Action
UICMN3108	Severe	<p>Component {0} is not installed in target {1}.</p> <p>Cause: The component with the specified component name is not installed on the target.</p> <p>Action: Check whether the component is in the list of components on the target. If necessary, install the component with the specified name before performing this operation.</p>
UICMN3109	Severe	<p>The Service Assembly "{0}" does not exist.</p> <p>Cause: A Service Assembly with the specified name does not exist.</p> <p>Action: Check whether the Service Assembly with the specified name exists in the target.</p>
UICMN3110	Severe	<p>Component "{0}" does not exist.</p> <p>Cause: A component with the specified component name does not exist.</p> <p>Action: Check whether the component with the specified name is installed.</p>

Runtime Utility Error Messages

The following table lists each error message generated by the runtime utility, and describes the cause of the log message as well as providing a recommended action for you to take.

Message ID	Severity	Message Text, Cause, and Action
JBIUT0000	Severe	<p>Internal error: Null argument received for {0}.</p> <p>Cause: This is an internal error where a method received a null argument where a non-null argument was required.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p> <p>Resource Key: NULL_ARGUMENT</p>
JBIUT0001	Severe	<p>Internal error: Empty list argument received for {0}.</p> <p>Cause: This is an internal error where a method received an empty list argument and a non-empty list argument was required.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p> <p>Resource Key: EMPTY_LIST_ARGUMENT</p>

Message ID	Severity	Message Text, Cause, and Action
JBIUT0010	Severe	<p>Failed to create MBean {0}; implementation class {1} is not JMX-compliant.</p> <p>Cause: This is an internal error that should not normally occur.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log including any stack trace.</p> <p>Resource Key: MBEAN_CREATION_NOT_JMX_COMPLIANT</p>
JBIUT0011	Warning	<p>Failed to register MBean {0}; an MBean is already registered with this name.</p> <p>Cause: A duplicate registration request was attempted for the MBean.</p> <p>Action: This should go away at the next restart of the JBI runtime. If the problem persists, contact Sun for support.</p> <p>Resource Key: MBEAN_ALREADY_REGISTERED</p>
JBIUT0012	Severe	<p>Failed to register MBean {0}; JMX encountered a {1} exception. The exception message is: {2}</p> <p>Cause: This is an internal error that should not normally occur.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log including any stack trace.</p> <p>Resource Key: MBEAN_REGISTRATION_EXCEPTION</p>
JBIUT0013	Severe	<p>Failed to register MBean; implementation class {0} is not JMX-compliant.</p> <p>Cause: This is an internal error that should not normally occur.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log including any stack trace.</p> <p>Resource Key: MBEAN_REGISTRATION_NOT_JMX_COMPLIANT</p>
JBIUT0014	Severe	<p>Failed to unregister MBean {0}; JMX encountered a {1} exception. The exception message is: {2}</p> <p>Cause: This is an internal error that should not normally occur.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log including any stack trace.</p> <p>Resource Key: MBEAN_UNREGISTRATION_EXCEPTION</p>

Message ID	Severity	Message Text, Cause, and Action
JBIUT0200	Severe	<p>Failed to convert {0} to OpenType {1}.</p> <p>Cause: This is an internal error that should not normally occur.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log including any stack trace.</p> <p>Resource Key: CCFG_FAILED_CONVERSION_TO_OPEN_TYPE</p>
JBIUT0201	Severe	<p>Failed to convert {0} to OpenType array {1}.</p> <p>Cause: This is an internal error that should not normally occur.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log including any stack trace.</p> <p>Resource Key: CCFG_FAILED_CONVERSION_TO_OPEN_TYPE_AR</p>
JBIUT0202	Severe	<p>The operation failed since the provided application configuration has invalid properties {0}.</p> <p>Cause: There is extraneous data in the application configuration data.</p> <p>Action: Check the application configuration data and provide only the necessary fields.</p> <p>Resource Key: CCFG_CD_EXTRA_PROPS</p>
JBIUT0203	Severe	<p>Component configuration {0} is not defined in the configuration meta-data.</p> <p>Cause: The component configuration attribute is not defined in the components deployment descriptor.</p> <p>Action: The component configuration attribute is missing in the <code>jbi.xml</code> file. Either it has been deprecated or it was not added. Contact Sun support and provide details on the descriptor.</p> <p>Resource Key: CCFG_ATTR_DEF_MISSING_IN_XML</p>
JBIUT0204	Severe	<p>Application configuration attribute {0} is not defined in the application configuration meta-data.</p> <p>Cause: The application configuration attribute is not defined in the components deployment descriptor.</p> <p>Action: The application configuration attribute is missing in the <code>jbi.xml</code> file. Either it has been deprecated or was not added. Contact Sun support and provide them details on the descriptor.</p> <p>Resource Key: CCFG_APP_CFG_ATTR_DEF_MISSING_IN_XML</p>

Message ID	Severity	Message Text, Cause, and Action
JBIUT0205	Severe	<p>Application configuration is not defined in the component configuration meta-data.</p> <p>Cause: Application configuration information is missing in the components descriptor.</p> <p>Action: Contact Sun support if the component is expected to support application configuration.</p> <p>Resource Key: CCFG_APP_CFG_DEF_MISSING_IN_X</p>

Runtime Command-Line Interface Error Messages

The following table lists each error message generated by the runtime command-line interface (CLI), and describes the cause of the log message as well as providing a recommended action for you to take.

Message ID	Severity	Message Text, Cause, and Action
CLI201	Warning	<p>Installation failed. The file {0} could not be found.</p> <p>Cause: The component or shared library installation file was not found.</p> <p>Action: Validate the path and filename of the specified file.</p> <p>Resource Key: JBIInstallationFileNotFound</p>
CLI202	Warning	<p>Deployment failed. The file {0} could not be found.</p> <p>Cause: The Service Assembly file was not found.</p> <p>Action: Validate the path and filename of the specified file.</p> <p>Resource Key: JBIDeploymentFileNotFound</p>
CLI203	Warning	<p>The specified component {0} does not exist.</p> <p>Cause: The component with the specified name does not exist.</p> <p>Action: Check the component name.</p> <p>Resource Key: JBINoComponentToShow</p>
CLI204	Warning	<p>The shared library specified {0} does not exist.</p> <p>Cause: The shared library with the specified does not exist.</p> <p>Action: Check the shared library name.</p> <p>Resource Key: JBINoLibraryToShow</p>

Message ID	Severity	Message Text, Cause, and Action
CLI205	Warning	<p>The Service Assembly specified {0} does not exist.</p> <p>Cause: The Service Assembly specified does not exist.</p> <p>Action: Check the Service Assembly name.</p> <p>Resource Key: JBINoServiceAssemblyToShow</p>
CLI301	Warning	<p>Upgrade failed. The file {0} could not be found.</p> <p>Cause: The specified component upgrade file does not exist.</p> <p>Action: Validate the path and filename of the specified file.</p> <p>Resource Key: JBIUpgradeFileNotFound</p>
CLI303	Severe	<p>Error retrieving NMR statistics.</p> <p>Cause: No statistics were returned from the JBI Runtime.</p> <p>Action: This is an internal error. Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p> <p>Resource Key: JBIErrrorRetrievingNMRStats</p>
CLI304	Severe	<p>Error retrieving Component statistics.</p> <p>Cause: No statistics were returned from the JBI Runtime.</p> <p>Action: This is an internal error. Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p> <p>Resource Key: JBIErrrorRetrievingComponentStats</p>
CLI305	Severe	<p>Error retrieving Framework statistics.</p> <p>Cause: No statistics were returned from the JBI Runtime.</p> <p>Action: This is an internal error. Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p> <p>Resource Key: JBIErrrorRetrievingFrameworkStats</p>
CLI306	Severe	<p>Error retrieving Endpoint statistics.</p> <p>Cause: No statistics were returned from the JBI Runtime.</p> <p>Action: This is an internal error. Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p> <p>Resource Key: JBIErrrorRetrievingEndpointStats</p>

Message ID	Severity	Message Text, Cause, and Action
CLI307	Severe	<p>Error retrieving Service Assembly statistics.</p> <p>Cause: No statistics were returned from the JBI Runtime.</p> <p>Action: This is an internal error. Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p> <p>Resource Key: JBIErrorRetrievingServiceAssemblyStats</p>
CLI308	Warning	<p>One or more statistic option must be specified (--framework, --nmr, --component, --endpoint, --serviceassembly).</p> <p>Cause: Missing a required option.</p> <p>Action: Make sure one or more type options are specified in the command. The type options are: --- framework, --- nmr, --- component, --- endpoint, or --- serviceassembly.</p> <p>Resource Key: JBINoStatisticsOptionSpecified</p>
CLI309	Severe	<p>Error processing the verify results.</p> <p>Cause: Verification results were not returned from the JBI Runtime.</p> <p>Action: This is an internal error. Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p> <p>Resource Key: JBIErrorProcessingVerifyResults</p>
CLI310	Severe	<p>Error encountered while converting configuration files in directory {0}.</p> <p>Cause: An internal error occurred while exporting the application environment.</p> <p>Action: Contact Sun for support, and provide the diagnostic information from the server log including the stack trace.</p> <p>Resource Key: JBIErrorConfigFileConversion</p>

Runtime Command-Line Interface Error Messages

The following table lists each error message generated by the runtime upgrade tool, and describes the cause of the log message as well as providing a recommended action for you to take.

Message ID	Severity	Message Text, Cause, and Action
JBIUG001	Warning	<p>Wrong input parameter(s). Usage: java -jar jbi-upgrade-tool.jar \${APPSERVER_INSTALL_ROOT} \${DESTINATION_DOMAIN_ROOT}</p> <p>Cause: Input parameters provided to the upgrade tool are not correct.</p> <p>Action: Check the input parameter values.</p> <p>Resource Key: jbi.upgrade.tool.usage</p>
JBIUG002	Severe	<p>Exception/Error Summary: {0}</p> <p>Cause: The upgrade tool encountered an exception with summary {0}.</p> <p>Action: Review the server log for more information about the cause of the error.</p> <p>Resource Key: jbi.upgrade.tool.exception.summary</p>
JBIUG003	Severe	<p>JBI Registry not found</p> <p>Cause: The upgrade tool could not locate the JBI runtime registry, jbi-registry.xml, in the current installation.</p> <p>Action: Check if the correct value is provided for the existing installation root directory.</p> <p>Resource Key: jbi.upgrade.tool.jbi.registry.not.found</p>
JBIUG004	Severe	<p>JBI Registry parsing error</p> <p>Cause: The upgrade tool could not parse the jbi-registry.xml file.</p> <p>Action: Check whether the installation in current installation root directory is corrupted.</p> <p>Resource Key: jbi.upgrade.tool.jbi.registry.parsing.error</p>
JBIUG005	Severe	<p>App Server install root not found: "{0}"</p> <p>Cause: The upgrade tool did not find an application server installation at {0}.</p> <p>Action: Check the values of the parameters for the upgrade command.</p> <p>Resource Key: jbi.upgrade.tool.jbi.appserverInstallRoot.not.found</p>

Message ID	Severity	Message Text, Cause, and Action
JBIUG006	Severe	<p>domain root not found: "{0}"</p> <p>Cause: The upgrade tool did not find a domain at the provided destination domain root.</p> <p>Action: Check the values of the parameters for the upgrade command.</p> <p>Resource Key: <code>jbi.upgrade.tool.jbi.domain.root.not.found</code></p>
JBIUG007	Warning	<p>jbi.xml not found</p> <p>Cause: The upgrade tool did not find the <code>jbi.xml</code> file for an existing component installation.</p> <p>Action: Check the status of the component in the domain.</p> <p>Resource Key: <code>jbi.upgrade.tool.jbi.xml.not.found</code></p>
JBIUG008	Warning	<p>jbi.xml parsing error</p> <p>Cause: The upgrade tool could not parse the <code>jbi.xml</code> file in an existing component installation.</p> <p>Action: Check the status of the component in the domain.</p> <p>Resource Key: <code>jbi.upgrade.tool.jbi.xml.parsing.error</code></p>
JBIUG009	Warning	<p>component install jar or component not found for "{0}", upgrade or migration skipped.</p> <p>Cause: The upgrade tool could not upgrade component {0} because the component installation root directory is corrupted.</p> <p>Action: Check the status of the component {0}.</p> <p>Resource Key: <code>jbi.upgrade.tool.component.install.jar.not.found</code></p>
JBIUG010	Warning	<p>component install_root not found for "{0}"</p> <p>Cause: The upgrade tool could not upgrade component {0} because the component installation root directory is corrupted.</p> <p>Action: Check the status of the component {0}.</p> <p>Resource Key: <code>jbi.upgrade.tool.component.install.root.not.found</code></p>

Message ID	Severity	Message Text, Cause, and Action
JBIUG011	Warning	<p>shared library install_root not found for "{0}"</p> <p>Cause: The upgrade tool could not locate the installation root directory for the shared library {0}.</p> <p>Action: Check the status of the shared library in the domain.</p> <p>Resource Key: jbi.upgrade.tool.shared.lib.install.root.not.found</p>
JBIUG012	Warning	<p>Service Assembly install root not found for "{0}"</p> <p>Cause: The upgrade tool could not locate the deployment root directory for the Service Assembly {0}.</p> <p>Action: Check the status of the shared library deployment.</p> <p>Resource Key: jbi.upgrade.tool.service.assembly.install.root.not.found</p>
JBIUG013	Warning	<p>component directory not found for "{0}"</p> <p>Cause: The upgrade tool could not upgrade component {0} because the component installation root directory is corrupted.</p> <p>Action: Check the status of the component {0}.</p> <p>Resource Key: jbi.upgrade.tool.component.dir.not.found</p>
JBIUG014	Warning	<p>More than two component install jars found</p> <p>Cause: The upgrade tool could not upgrade component {0} because the component installation root is corrupted.</p> <p>Action: Check the status of the component {0}.</p> <p>Resource Key: jbi.upgrade.tool.more.than.two.component.dirs.found</p>
JBIUG015	Severe	<p>Unknown error occurred.</p> <p>Cause: An error occurred during the upgrade process.</p> <p>Action: Check the server log.</p> <p>Resource Key: jbi.upgrade.tool.unknown.io.exception</p>

Message ID	Severity	Message Text, Cause, and Action
JBIUG016	Info	<p>Component "{0}" found in destination domain "{1}", migration for "{0}" skipped.</p> <p>Cause: Component {0} is already found in the destination domain and was not migrated from the source domain.</p> <p>Action: None required.</p> <p>Resource Key: jbi.upgrade.tool.component.found.in.dest.domain</p>
JBIUG017	Severe	<p>destination domain root not found: "{0}"</p> <p>Cause: The upgrade tool did not find a domain at the provided destination domain root directory.</p> <p>Action: Check the values of the parameters for the upgrade command.</p> <p>Resource Key: jbi.upgrade.tool.dest.domain.root.not.found</p>
JBIUG018	Severe	<p>source domain root not found: "{0}"</p> <p>Cause: The upgrade tool did not find a domain at the provided source domain root directory.</p> <p>Action: Check the values of the parameters for the upgrade command.</p> <p>Resource Key: jbi.upgrade.tool.src.domain.root.not.found</p>
JBIUG019	Info	<p>shared library "{0}" found in destination domain "{1}", migration for "{0}" skipped.</p> <p>Cause: The shared library {0} is already found in the destination domain and was not migrated from the source domain.</p> <p>Action: None required.</p> <p>Resource Key: jbi.upgrade.tool.shared.lib.found.in.dest.domain</p>
JBIUG020	Info	<p>Service Assembly "{0}" found in destination domain "{1}", migration for "{0}" skipped.</p> <p>Cause: The Service Assembly {0} is already found in the destination domain and was not migrated from the source domain.</p> <p>Action: None required.</p> <p>Resource Key: jbi.upgrade.tool.service.assembly.found.in.dest.domain</p>

Message ID	Severity	Message Text, Cause, and Action
JBIUG021	Warning	<p>directory not found: "{0}"</p> <p>Cause: The upgrade tool could not find the directory {0}.</p> <p>Action: Check the status of the installation directory for the source domain.</p> <p>Resource Key: <code>jbi.upgrade.tool.directory.not.found</code></p>
JBIUG022	Severe	<p>Can not create file: "{0}"</p> <p>Cause: The upgrade tool could not create files in the destination domain.</p> <p>Action: Make sure the destination domain root directory has write permissions.</p> <p>Resource Key: <code>jbi.upgrade.tool.can.not.create.file</code></p>
JBIUG023	Severe	<p>IOException occurred during file copying from "{0}" to "{1}".</p> <p>Cause: The upgrade tool could not copy files in the destination domain.</p> <p>Action: Make sure the destination domain root directory has write permissions.</p> <p>Resource Key: <code>jbi.upgrade.tool.io.exception.during.file.copy</code></p>
JBIUG024	Warning	<p>Unjar error for "{0}".</p> <p>Cause: The upgrade tool could not extract the files from archive {0}.</p> <p>Action: Check the status of the installation in the destination domain.</p> <p>Resource Key: <code>jbi.upgrade.tool.io.unjar.error</code></p>
JBIUG039	Severe	<p>Error when updating JBI registry.</p> <p>Cause: The upgrade tool could not update the <code>jbi-registry.xml</code> file in the destination domain.</p> <p>Action: Check the status of the installation in the destination domain.</p> <p>Resource Key: <code>jbi.upgrade.tool.error.when.updating.jbi.registry</code></p>
