Preface

The *Solaris 10 Sun Hardware Platform Guide* contains important information about Sun hardware supported by the following versions of the Solaris™ 10 Operating System:

- Solaris 10 8/07
- Solaris 10 11/06
- Solaris 10 6/06
- Solaris 10 1/06 (includes support initially provided by limited and temporary releases Solaris 10 3/05 HW1 and HW2)
- Solaris 10 3/05

This document describes installation resources, SPARC® platform types, and the current location of software formerly found on the Supplement CD.

Note – This is the final edition of the *Solaris 10 Sun Hardware Platform Guide*. For more recent information about supported Sun hardware products, refer to the *Solaris Hardware Compatibility List*, found online at:
<http://www.sun.com/bigadmin/hcl>

Solaris 10 Sun Hardware Platform Guide, part number 817-6337-15

Solaris 10 Sun Hardware Platform Guide

This document covers the following topics:

- “Solaris Software Installation” on page 2
- “Solaris 10 3/05 HW1 and HW2 OS” on page 2
- “Supported Sun SPARC Platforms” on page 3
- “Supported Graphics” on page 8
- “Power Management on Sun Hardware” on page 9
- “Former Supplement CD Contents” on page 9
- “Solaris 10 on Sun Hardware Document Collection” on page 10
- “Network Adapter Driver Platform Notes” on page 10
- “Sun Validation Test Suite (SunVTS) Software” on page 11
- “OpenBoot Information” on page 12

Appendix A covers the following topics for customers with hardware products running the temporary, limited-release Solaris 10 3/05 HW1 Operating System:

- “Issues and Bugs” on page 13
- “Solaris 10 3/05 HW1 Operating System SPARC Patch List” on page 17

Appendix B covers the following topics for customers with hardware products running the temporary, limited-release Solaris 10 3/05 HW2 Operating System:

- “Issues and Bugs” on page 21
- “Solaris 10 3/05 HW2 Operating System SPARC Patch List” on page 22

Note – This is the final edition of the *Solaris 10 Sun Hardware Platform Guide*. For more recent information about supported Sun hardware products, refer to the *Solaris Hardware Compatibility List*, found online at:
<http://www.sun.com/bigadmin/hcl>

Solaris Software Installation

Before installing the Solaris 10 software, check [TABLE 1](#) for other manuals that might also apply to your situation.

Note – If you are using a Solaris 10 update release that followed the original Solaris 10 3/05 OS release, check if there are manuals specific to that update release in a Solaris 10 Release and Installation Collection at <http://docs.sun.com/app/docs/prod/solaris.10>

TABLE 1 Manuals with Specific Installation Information

Installation Task	Document	Part Number
Beginning the installation process from the Solaris CD or DVD	<i>Solaris 10 Installation Guide: Basic Installations</i>	817-0544
Performing a basic installation using a GUI	<i>Solaris 10 Installation Guide: Basic Installations</i>	817-0544
Installing the Solaris Operating System (OS) on server systems	<i>Solaris 10 Installation Guide: Basic Installations</i>	817-0544
Upgrading your Solaris OS from CD or DVD, or use Live Upgrade	<i>Solaris 10 Installation Guide: Solaris Live Upgrade and Upgrade Planning</i>	817-5505
Performing an unattended custom JumpStart™ installation, or create RAID-1 volumes during a JumpStart installation	<i>Solaris 10 Installation Guide: Custom JumpStart and Advanced Installations</i>	817-5506
Creating Solaris Flash archives to install the Solaris OS on multiple systems	<i>Solaris 10 Installation Guide: Solaris Flash Archives (Creation and Installation)</i>	817-5668
Knowing about late-breaking news	<i>Solaris 10 Release Notes</i>	817-0552

Solaris 10 3/05 HW1 and HW2 OS

Prior to the release of the Solaris 10 1/06 OS, a few Sun hardware platforms were shipped with one of two temporary Solaris releases called the Solaris 10 3/05 HW1 and HW2 release. Such systems now support, and should be upgraded to, the latest version of the Solaris 10 software that supports them, the earliest of which is the Solaris 10 1/06 OS.

If your system is still running the Solaris 10 3/05 HW1 or HW2 OS and you do not wish to upgrade to a later, standard release of Solaris OS, refer to the additional release notes and lists of integrated patches in [Appendix A](#) or [Appendix B](#).

Supported Sun SPARC Platforms

Note – This is the final edition of the *Solaris 10 Sun Hardware Platform Guide*. For more recent information about supported Sun hardware products, refer to the *Solaris Hardware Compatibility List*, found online at: <http://www.sun.com/bigadmin/hcl>

You need to know your system architecture (platform group) if you are performing one of the following tasks:

- Setting up a boot server on a subnet
- Adding clients for network installation (standalone, servers, dataless, diskless)
- Writing a custom JumpStart installation rules file

The following tables list and categorize the SPARC platform names and platform groups of various Sun hardware systems supported by the Solaris 10 release. All SPARC platforms are 64-bit, but can run both 64-bit and 32-bit applications. These platforms require no special installation or upgrade instructions to use the Solaris 10 release.

Note – Platforms listed in [TABLE 2](#) are part of the sun4v platform group. Platforms listed in [TABLE 3](#) are part of the sun4u platform group. Refer to the *Solaris 10 Installation Guide* for information on platform groups for other systems.

TABLE 2 Supported Sun SPARC Systems: sun4v Platform Group

Category	System	Platform Name	Minimum Solaris 10 Version Required (if not supported since Solaris 10 3/05)
Midrange Servers	Sun SPARC Enterprise T5220	SUNW,SPARC-Enterprise-T5220	Solaris 10 8/07
	Sun SPARC Enterprise T5120	SUNW,SPARC-Enterprise-T5120	Solaris 10 8/07

TABLE 2 Supported Sun SPARC Systems: sun4v Platform Group (Continued)

Category	System	Platform Name	Minimum Solaris 10 Version Required (if not supported since Solaris 10 3/05)
Entry/Workgroup Servers	Sun SPARC Enterprise T2000	SUNW,SPARC-Enterprise-T2000	Solaris 10 11/06
	Sun SPARC Enterprise T1000	SUNW,SPARC-Enterprise-T1000	Solaris 10 11/06
	Sun Fire™ T2000	SUNW,Sun-Fire-T200	Solaris 10 1/06 or Solaris 10 3/05 HW2; Solaris 10 6/06 for 2.1 Ghz processor
	Sun Fire T1000	SUNW,Sun-Fire-T1000	Solaris 10 1/06
Server Module	Sun Blade T6320	SUNW,Sun-Blade-T6320	Solaris 10 8/07
Netra™ Servers	Sun Netra T5220	SUNW,Netra-T5220	Solaris 10 8/07
	Sun Netra T2000	MATT ???	Solaris 10 1/06

TABLE 3 Supported Sun SPARC Systems: sun4u Platform Group

Category	System	Platform Name	Minimum Solaris 10 Version Required (if not supported since Solaris 10 3/05)
High-End Servers	Sun Fire E25K	SUNW,Sun-Fire-Enterprise-25K	See “Support Issues for UltraSPARC IV+ Processors” on page 8
	Sun Fire E20K	SUNW,Sun-Fire-Enterprise-20K	See “Support Issues for UltraSPARC IV+ Processors” on page 8
	Sun Fire 15K	SUNW,Sun-Fire-15000	See “Support Issues for UltraSPARC IV+ Processors” on page 8
	Sun Fire 12K	SUNW,Sun-Fire-12000	See “Support Issues for UltraSPARC IV+ Processors” on page 8
	Sun Enterprise 10000	SUNW,Ultra-Enterprise	
Midrange Servers	Sun Fire E6900	SUNW,Sun-Fire	See “Support Issues for UltraSPARC IV+ Processors” on page 8

TABLE 3 Supported Sun SPARC Systems: sun4u Platform Group (Continued)

Category	System	Platform Name	Minimum Solaris 10 Version Required (if not supported since Solaris 10 3/05)
	Sun Fire E4900	SUNW,Sun-Fire	See "Support Issues for UltraSPARC IV+ Processors" on page 8
	Sun Fire E2900	SUNW,Sun-Fire	See "Support Issues for UltraSPARC IV+ Processors" on page 8
	Sun Fire 6800	SUNW,Sun-Fire

Note – This is the final edition of the *Solaris 10 Sun Hardware Platform Guide*. For more recent information about supported Sun hardware products, refer to the *Solaris Hardware Compatibility List*, found online at:
<http://www.sun.com/bigadmin/hcl>

Support Issues for UltraSPARC IV+ Processors

Some systems are available with UltraSPARC IV+ processors. If a system includes this style of processor, the system might require a later version of Solaris than is required on other models of that system. The system must use a Solaris version that satisfies the highest minimum requirement of any processor in the system.

Processor Type	Minimum Solaris Version
UltraSPARC IV+ 1.8 GHz	Solaris 10 1/06 or Solaris 10 3/05 HW1
UltraSPARC IV+ 2.1 GHz	Solaris 10 6/06

Supported Graphics

The *Sun Graphics Platform Matrix* (817-6969) lists the graphics accelerators and the Sun hardware and software platforms supported by each. You can access all graphics accelerator documentation, including the *Sun Graphics Platform Matrix*, at:

<http://docs.sun.com>

See the *Solaris Handbook for Sun Frame Buffers*, included in the Solaris 10 on Sun Hardware collection, for information on previously released cards.

Power Management on Sun Hardware

The United States Environmental Protection Agency created the Energy Star[®] guidelines for computer products to encourage the use of energy-efficient computer systems and to reduce air pollution associated with energy generation.

To meet these guidelines, Sun Microsystems, Inc. designs hardware to use power efficiently. It also provides Power Management[™] software with which to configure the power management settings. Refer to the *Solaris Common Desktop Environment: User's Guide* in the Solaris 10 documentation collections for more information on Power Management software features, defaults, and commands to determine which version works with your system.

Former Supplement CD Contents

The CD labeled Solaris *x* Software Supplement, also called the Supplement CD, is no longer provided with Solaris releases and is no longer a separate portion of the Solaris DVD. The software items formerly found there during Solaris 9 releases are now incorporated in the main Solaris 10 packages or are available for download from the Sun Microsystems software download site. The manuals formerly included on the Supplement CD are available at: <http://sun.com/documentation>

TABLE 4 shows the status and new locations of the software items formerly found on the Supplement CD.

TABLE 4 Former Supplement CD Contents

Product	Last Version on a Solaris 9 OS Supplement CD	New Location for Solaris 10
Java 3D [™]	1.3.1	http://java.sun.com
OpenGL [®] software	1.3	OpenGL software is included in the main Solaris packages
Sun Enterprise 10000 SSP	3.5	http://sun.com/software/download
Sun Enterprise 10000 Capacity on Demand	1.0	http://sun.com/software/download
Sun Fire 15K SMS	1.4	http://sun.com/software/download
Lights Out Management	2.0	http://sun.com/software/download
Netra ct Platform	1.0	http://sun.com/software/download

TABLE 4 Former Supplement CD Contents (*Continued*)

Product	Last Version on a Solaris 9 OS Supplement CD	New Location for Solaris 10
Netra t11xx Alarms	2.0	http://sun.com/software/download
Sun Fire 880 FC-AL Backplane Firmware	1.0	http://sun.com/software/download
SunForum™	3.2	http://sun.com/software/download
Sun Remote System Control (RSC) for Sun Enterprise Servers	2.2.2	http://sun.com/software/download
SunATM™ driver	5.1	http://sun.com/software/download
SunHSI™ PCI driver	3.0	http://sun.com/software/download
SunVTS™ software	5.1	SunVTS software is included in the main Solaris packages, starting with Solaris 10 5/08. In earlier Solaris 10 releases, SunVTS is in the ExtraValue directory of the Solaris DVD
WBEM Dynamic Reconfiguration (WDR)	1.0	http://sun.com/software/download (Solaris 10 does not support this software.)

Solaris 10 on Sun Hardware Document Collection

The Solaris 10 on Sun Hardware document collection, formerly found on the Supplement CD, can now be found with other Solaris 10 documentation at:

<http://docs.sun.com/app/docs/prod/solaris.10>

The documents available on the web are the most recent.

Network Adapter Driver Platform Notes

The Solaris 10 on Sun Hardware document collection includes manuals with more detailed information about some network adapters that are supported by drivers included in Solaris 10.

To determine which network adapter device driver a system is using, use the `ifconfig -a` command. This command displays a list of all network connections that have been plumbed.

TABLE 5 lists the device names and Platform Notes for network adapters whose device drivers are supplied with the Solaris media. For information on other device drivers, see the System Administrator Collection for your Solaris version at:

<http://docs.sun.com>

TABLE 5 Network Adapter Device Driver Documentation

Device Name	Platform Note

hme	<i>Platform Notes: The hme FastEthernet Device Driver</i>
eri	<i>Platform Notes: The eri FastEthernet Device Driver</i>
ce	<i>Platform Notes: Sun GigaSwift Ethernet Device Driver</i>
qfe	<i>Platform Notes: Sun Quad FastEthernet Device Driver</i>

Sun Validation Test Suite (SunVTS) Software

The SunVTS validation test suite is a diagnostic tool designed to test Sun hardware. Its multiple diagnostic hardware tests verify the connectivity and functionality of most hardware controllers and devices for SPARC and x86 architectures. SunVTS also provides an infrastructure for programmers to develop their own tests and run them using the SunVTS interface.

SunVTS software was included on the Supplement CD for releases prior to Solaris 10. Solaris 10 5/08 is the first release to include SunVTS software in the main Solaris packages. In earlier Solaris 10 releases, SunVTS software packages were delivered on the Solaris 10 DVD in: `ExtraValue/CoBundled`

Note – For example, the Solaris 10 6/06 release includes SunVTS 6.2 in this directory. That SunVTS 6.2 software can be used with any earlier Solaris 10 release.

Software provided in the `ExtraValue/CoBundled` directory is not installed automatically when Solaris is installed.

Recent SunVTS releases are also available at:

<http://sun.com/software/download>

To find and use the latest version of the SunVTS software, refer to the Sun Validation Test Suite documentation at:

<http://docs.sun.com/app/docs/prod/test.validate>

OpenBoot Information

The information about OpenBoot™ emergency procedures, formerly found in editions of the *Solaris Sun Hardware Platform Guide*, can be found in the *OpenBoot 4.x Command Reference Manual* (part number 816-1177) at:

<http://docs.sun.com/app/docs/doc/816-1177-10>

Release Notes Supplement for Solaris 10 3/05 HW1

This appendix describes issues specific to the Solaris 10 3/05 HW1 OS, a temporary Solaris release included with early shipments of Sun hardware platforms that included UltraSPARC IV+ CPU/memory boards or system boards. Such systems should now be running the latest regular version of the Solaris 10 OS that supports them, the earliest of which is the Solaris 10 1/06 OS.

Note – The information in this appendix applies only to platforms still running the temporary Solaris 10 3/05 HW1 release. For information about the HW2 OS, a similar temporary release, see [Appendix B](#).

You should not need to install the obsolete HW1 OS. However, if unusual circumstances call for you to do so on a system or domain that is currently running the Solaris 8 2/04 release or Solaris 9 4/04 OS release, you can use the upgrade process. You cannot use the upgrade process to install the HW1 OS on a system or domain that is running the Solaris 10 3/05 OS. For that, you must do a fresh install.

Issues and Bugs

If you are using hardware still running the temporary Solaris 10 3/05 HW1 OS (a specific form of the Solaris 10 3/05 OS that initially shipped on certain hardware), take into account the following issues as well as those published in the *Solaris 10 Release Notes* (part number 817-0552) on <http://docs.sun.com>.

Solaris Install Launcher Exiting Causes Reboots (6300863)

In some situations, installation of Solaris 10 3/05 HW1 fails when the Solaris Install Launcher fails to find `find_device.out`, reboots, then reaches the same point and calls for a reboot again.

Workaround: Specify the `- text` option when booting:

```
boot net - text
```

UltraSPARC IV+ Large Pages (32 MB and 256 MB) Should Be Deactivated (6287398 and 6313025)

In Solaris 10 3/05 HW1, the UltraSPARC IV+ large pages feature is available, but should not be used. Running an application that attempts to map to large pages might cause the application to execute improperly and result in a core dump or hang.

Workaround: The kernel update (KU) patch 118822-18 includes an interim fix, which deactivates the large pages feature.

Note – Avoid installing KU patch 118822-16 on UltraSPARC IV+ systems, because that specific dash version includes a function that attempts to use large pages.

`page_get_replacement_page` Might Fail With Large Pages (6266922)

When `cfgadm` (IM) removes memory from a running system, the system may hang when running applications that use large pages, such as Oracle. The kernel fails to find memory on other boards to replace large pages of data from the memory being removed. There are no error messages for this condition.

Workaround: Do not use dynamic reconfiguration (DR) with Oracle. If the `cfgadm` operation is hung, kill it and retry when the large pages are freed.

prtdiag Still Shows System Board After the Board Is Removed From the Domain Using DR (6298989)

If an UltraSPARC IV+ board is removed from a Sun Fire E20K or E25K system's domain via dynamic reconfiguration, the `prtconf` and `prtdiag` programs still report the nodes corresponding to the UltraSPARC IV+ CPUs as being in the system. These reports remain until the system is rebooted.

Workaround: Between the time of removing a board using DR and rebooting the domain, take into account the incorrect node information in reports.

System Fails With "transport rejected bad packet" Message Under Stress I/O Condition (6261607)

During stressed I/O conditions, I/O fails with a `TRAN_BADPKT` message such as the following:

```
WARNING:/ssm@0,0/pci@18,700000/SUNW,q1c@3,1/fp@0,0/ssd@w500000e010e9a152,0 (ssd68): transport rejected bad packet
```

Workaround: None

Systems Panic Due to Limit on Max Number of lgrps (6256111)

This problem appears only in large machines such as a fully loaded Sun Fire E25K system. During booting, this error message appears and the system panics:

```
More leaf lgrps in system than are supported!
```

This problem only occurs during the boot itself. If your system boots normally, the problem is not occurring.

Workaround: Try using fewer CPUs on the affected systems. For example, if this error occurs on a Sun Fire E25K system, try booting with fewer than 120 CPU cores. Use DR to bring the remaining boards into the active domain.

Race Condition Between EF/kcfd and IPsec Algorithm Availability (6266083)

This problem might occur on a freshly installed system or a system that imports a large number of new Service Management Facility (SMF) manifests during the boot. After these booting conditions, IPsec (part of `svc:/network/initial:default`) might be initialized prior to the encryption framework (`svc:/system/cryptosvc:default`). Because authentication or encryption algorithms are not available, creation of IPsec security associations might fail with an error message such as this:

```
PF_KEY error: type=ADD, errno=22: Invalid argument, diagnostic
code=40: Unsupported authentication algorithm
```

For example, this might occur when using DR on a Sun Fire E25K system, which involves IPsec services.

Workaround: Before performing operations that use IPsec services, perform the following steps after a boot that imports a large number of new SMF manifests:

1. Issue this command after booting:

```
ipsecalgs -s
```

2. If `/etc/inet/secret/ipseckeys` exists on the system, also issue this command:

```
ipseckey -f /etc/inet/secret/ipseckeys
```

Now you can perform actions that create IPsec security associations, such as using DR on a Sun Fire E25K system.

This procedure needs to be repeated only when a large number of new SMF manifests are imported during the boot.

Solaris 10 3/05 HW1 Operating System SPARC Patch List

This section provides patch information that applies only to SPARC systems running the Solaris 10 3/05 HW1 OS. It does not apply to systems running the Solaris 10 3/05, Solaris 10 3/05 HW2, or Solaris 10 1/6 OS. See also the *Solaris 10 Release Notes* at <http://docs.sun.com>.

The patches that are listed in this appendix have been applied to the Solaris 10 3/05 HW1 Operating system in one of the following ways:

- SolStart

These patches are located in the `/var/sadm/patch` directory on an installed system

- Freshbits technology

These patches were applied when the Solaris 10 3/05 HW1 OS was created. Therefore, these patches are not located in the `/var/sadm/patch` directory.

The `showrev -p` command provides a list of all patches that were applied to the installed system, regardless of how these patches were applied. The Solaris 10 3/05 HW1 software includes a known and tested level of patches. However, patches cannot be backed out of the Solaris 10 3/05 HW1 release.

Note – The Solaris 10 3/05 HW1 software contains special patches that perform tasks that are specific to the Solaris release installation images. These patches are specific to each Solaris software release and do not apply to other systems or releases of the Solaris software. Do not attempt to download or install these patches on other systems or installations of the Solaris OS.

Release Notes Supplement for Solaris 10 3/05 HW2

This appendix provides information about issues specific to the Solaris 10 3/05 HW2 OS, a temporary Solaris release included with early shipments of the Sun Fire T2000 system. All T2000 systems should now be running the latest regular version of Solaris 10 OS that supports them, the earliest of which is the Solaris 10 1/06 OS.

Note – The information in this appendix applies only to platforms still running the temporary Solaris 10 3/05 HW2 release. For information about the HW1 OS, a similar temporary release, see [Appendix A](#).

Issues and Bugs

If you are using a Sun Fire T2000 server that is still running the temporary Solaris 10 3/05 HW2 OS it initially shipped with, take into account the issues published in the Sun Fire T2000 Server Product Notes (part number 819-2544), as well as those published in the *Solaris 10 Release Notes* (part number 817-0552) on <http://docs.sun.com>.

Unless you are upgrading your system to the Solaris 10 1/06 OS, you might need to obtain and install newer versions of some patches than the versions that were applied to the Solaris 10 3/05 HW2 OS. This appendix discusses the patches that were incorporated in the HW2 OS.

Solaris 10 3/05 HW2 Operating System SPARC Patch List

This section provides patch information that applies only to systems running the Solaris 10 3/05 HW2 OS. It does not apply to systems running the Solaris 10 3/05 OS or others that came later. See also the *Solaris 10 Release Notes* at <http://docs.sun.com>.

The patches that are listed in this appendix have been applied to the Solaris 10 3/05 HW2 Operating system in one of the following ways:

- SolStart

These patches are located in the `/var/sadm/patch` directory on an installed system

- Freshbits technology

These patches were applied when the Solaris 10 3/05 HW2 OS was created. Therefore, these patches are not located in the `/var/sadm/patch` directory.

The `showrev -p` command provides a list of all patches that were applied to the installed system, regardless of how these patches were applied. The Solaris 10 3/05 HW2 software includes a known and tested level of patches. However, patches cannot be backed out of the Solaris 10 3/05 HW2 release.

Note – The Solaris 10 3/05 HW2 software contains special patches that perform tasks that are specific to the Solaris release installation images. These patches are specific to each Solaris software release and do not apply to other systems or releases of the Solaris software. Do not attempt to download or install these patches on other systems or installations of the Solaris OS.
