Release Notes for Sun Storage 6580 and 6780 Arrays

This document contains important release information about the Sun Storage 6580 and 6780 Arrays running Sun StorageTek Common Array Manager (CAM), Release 6.4. Read this document so that you are aware of issues or requirements that can affect the installation and operation of the arrays.

The release notes consist of the following sections:

- “New Features” on page 2
- “System Requirements” on page 2
- “Known Issues” on page 15
- “Product Documentation” on page 18
- “Service Contact Information” on page 20
- “Third-Party Web Sites” on page 20

For Information About CAM

A listing of available patches related to the array are listed.

New Features

The release of 7.50.xx.xx controller firmware for Sun Storage 6x80 arrays adds these new features:

- Support for Sun CSM100 expansion trays
- Maximum of 448 drives (28 expansion trays with up to 16 drives each) with CSM200 expansion trays for 6780
- 8-Gbit FC host ports
- Intermixing of 4-Gbit/second host ports and 8-Gbit/second host ports for 6780

The Sun Storage 6580 and 6780 Arrays are compared in [TABLE 1](#).

TABLE 1 Comparison of Sun Storage 6580 and 6780 Array Configurations

	6580	6780
Total cache size per array	8 or 16 Gbytes	8 or 16 Gbytes
Number of host ports	8 4-Gbit/second or 8 G-bit/second	8 or 16 4-Gbit/second or 8-Gbit/second
Host interface cards	2	2 or 4
Maximum number of drives supported	256	448
Disk reads	IOPS* 115K Throughput 3000 MB/second	IOPS* 175K Throughput 6400 MB/second
Maximum array configuration	1x16	1x28
Maximum raw capacity	256 Tbytes	448 Tbytes

* Input/output operations per second

System Requirements

The software and hardware products that have been tested and qualified to work with the Sun Storage 6580 and 6780 Arrays are described in the following sections. You must have Sun StorageTek Common Array Manager, v6.4 (or later) software.

- [“Firmware Requirements” on page 3](#)
- [“Disk Drives and Tray Capacity” on page 3](#)
- [“Data Host Requirements” on page 4](#)

Firmware Requirements

The minimum firmware required for Sun Storage 6580 and 6780 Arrays features described in this release note is version 07.50.08.1x. This firmware version (or higher) is installed on the array controllers prior to shipment and is also delivered with Sun StorageTek Common Array Manager (CAM) v, 6.4.

To download the latest controller firmware, go to:

http://www.sun.com/storage/management_software/resource_management/cam

Click the “Get It” tab to download the latest CAM software.

Disk Drives and Tray Capacity

TABLE 2 lists the size, speed, and tray capacity for the supported FC and SATA disk drives for Sun Storage 6580 and 6780 Arrays.

TABLE 2 Supported Disk Drives

Drive	Description
FC 146G15K	146-Gbyte 15,000-RPM FC drives (4 Gbits/sec); 2336 Gbytes per tray
FC 300G15K	300-Gbyte 15,000-RPM FC drives (4 Gbits/sec); 4800 Gbytes per tray
FC 400G10K	400-Gbyte 10,000-RPM FC drives (4 Gbits/sec); 6400 Gbytes per tray
FC 450G15K	450-Gbyte 15,000-RPM FC drives (4 Gbits/sec); 7200 Gbytes per tray
SATA 2, 500G7.2K	500-Gbyte 7,200-RPM SATA drives (3 Gbits/sec); 8000 Gbytes per tray
SATA 2, 750G7.2K	750-Gbyte 7,200-RPM SATA drives (3 Gbits/sec); 12000 Gbytes per tray
SATA 2, 1T7.2K	1-Tbyte 7,200-RPM SATA drives (3 Gbits/sec); 16000 Gbytes per tray

Additional legacy drives might also be supported with this product.

Data Host Requirements

This section describes supported data host software, HBAs, and switches.

- [“Multipathing Software” on page 4](#)
- [“Supported Host Bus Adaptors \(HBAs\)” on page 6](#)
- [“Supported Enterprise Software” on page 14](#)
- [“Supported FC and Multilayer Switches” on page 15](#)

Multipathing Software

This section provides a summary of the data host requirements for the Sun Storage 6580 and 6780 Arrays. It lists the current multipathing software and supported host bus adapters (HBAs) by operating system.

You must install multipathing software on each data host that communicates with Sun Storage 6580 and 6780 Arrays.

For Solaris OS 8 and 9 data hosts, the multipathing software is part of the Sun StorageTek SAN Foundation software. For data hosts running the Solaris OS, follow the instructions in the *Hardware Installation Guide for Sun Storage 6580 and 6780 Arrays* to download and install the software from the Sun Download Center.

Solaris OS 10 includes the multipathing software.

[TABLE 3](#) lists supported multipathing software by operating system.

TABLE 3 Multipathing Software

Note – The multipathing driver for the IBM AIX platform is Veritas DMP, bundled in Veritas Storage Foundation 5.0 for Sun Storage 6580 and 6780 Arrays. Download the Array Support Library (ASL) from <http://support.veritas.com/>.

Supported Host Bus Adaptors (HBAs)

TABLE 4, TABLE 5, and TABLE 6 lists supported HBAs and other data host platform elements by operating system.

HBAs must be ordered separately from Sun or its respective manufacturers. Sun HBAs can be ordered from:

[/www.sun.com/storageetek/storage_networking/hba/](http://www.sun.com/storageetek/storage_networking/hba/)

You can download HBA drivers and other host software from the Sun Download Center at:

<http://www.sun.com/software/download/>

Download operating system updates from the web site of the operating system company.

You must install the multipathing software before you install any OS patches.

Supported FC and Multilayer Switches

The following FC fabric and multilayer switches are compatible for connecting data hosts and Sun Storage 6580 and 6780 Arrays:

- Sun StorEdge Network 2 Gb FC Switch - 8, 16, and 64
- Brocade SilkWorm 200E/300/4100/4900/5000/5100/5300/7500/48000/DCX
- Cisco 9124/9134/9216/9216i/9222i/9506/9509/9513
- McDATA 6140/i10K/QPM 4 Gb blade for 6140
- QLogic SANBox 5602/9000

Known Issues

The following sections provide information about known issues and bugs filed against this product release:

- [“Installation and Hardware Related Issues” on page 15](#)

If a recommended workaround is available for a bug, it follows the bug description.

Installation and Hardware Related Issues

This section describes known issues and bugs related to installing and initially configuring Sun Storage 6580 and 6780 Arrays.

Setting the Tray Link Rate

When setting the tray link rate for an expansion tray, all expansion trays connected to the same drive channel must be set to operate at the same data transfer rate (speed).

For details about how to set the tray link rate, see “Setting the Tray Link Rate” in the *Hardware Installation Guide for Sun Storage 6580 and 6780 Arrays*.

Upgrading the Sun StorageTek 6540 Array

Bug CR 6783749 – When upgrading a Sun StorageTek 6540 array to a Sun Storage 6580 or 6780 Array, you cannot change the tray ID 85 to tray ID 99 using CAM.

Workaround – You can use controller tray ID 85 for array configurations up to a maximum of 256 drives.

Hardware Issues

This section describes general issues related to Sun Storage 6580 and 6780 Arrays hardware and firmware.

Replacing CRUs/FRUs in Less Than 15 Minutes

Caution – Without adequate ventilation and air circulation, the controller tray will overheat resulting in potential damage to all customer-replaceable units (CRUs) or field-replaceable units (FRUs). Do not allow any CRU/FRU slot to remain empty for an extended time. Replace the failed CRU/FRU within 15 minutes.

System Cabinet Doors Must Be Closed

Caution – The front and back doors of the system cabinet must be closed for compliance to domestic and international EMI regulations as well as proper equipment cooling. Do not block or cover the openings of the system cabinet. Cabinet airflow is from front to back. Allow at least 30 inches (76.2 cm) in front of the cabinet, and at least 24 (60.96 cm) inches behind the cabinet, for service clearance, proper ventilation, and heat dissipation.

Intermittent Power Supply Failure Notification

Bug 6760395 – CAM logEvent messages intermittently reports power supply failures and 12 seconds later changes to optimal. This is caused by devices not responding to polling.

Workaround – No workaround required. You can ignore the failure messages.

The `cfgadm -c unconfigure` Command Unconfigures UTM LUNs Only and Not Other Data LUNs (Solaris 10)

Bug 6362850 – The `cfgadm -c unconfigure` command unconfigures Universal Transport Mechanism (UTM) LUNs only and not other data LUNs. When this happens, you will not be able to unconfigure LUNs.

Workaround – Obtain Solaris 10 patch 118833-20 (SPARC) or patch 118855-16 (x86) to fix this issue.
