Preface

The *Solaris 8 Installation Supplement* provides instructions on how to install or upgrade to the Solaris™ 8 6/00 operating environment and how to use new installation features in the Solaris 8 6/00 operating environment.

Note - The Solaris operating environment runs on two types of hardware, or platforms - SPARC™ and IA (Intel Architecture). The Solaris operating environment also runs on both 64-bit and 32-bit address spaces. The information in this document pertains to both platforms and address spaces unless called out in a special chapter, section, note, bullet, figure, table, example, or code example.

Related Books

This document describes new or changed functionality in Solaris Update Releases. The information here supplements or supersedes information in the previous releases of Solaris 8 documentation sets.

You may need to refer to the following documents when installing Solaris software:

- *Solaris 8 Start Here* (printed document)
- *Solaris 8 (SPARC Platform Edition) Installation Guide* (on the Solaris 8 Documentation CD)
- *Solaris 8 (Intel Platform Edition) Installation Guide* (on the Solaris 8 Documentation CD)
- *Solaris 8 Advanced Installation Guide* (on the Solaris 8 Documentation CD)
- *Solaris 8 6/00 (SPARC or Intel Platform Edition) Release Notes* (printed document)

- *Solaris 8 6/00 Online Release Notes* (on the Solaris 8 Documentation CD)

Solaris documentation is available on the Solaris 8 Documentation CD included with the 6/00 release.

For some hardware configurations, you may need supplemental hardware-specific instructions for installing the Solaris operating environment. If your system requires hardware-specific actions at certain points, the manufacturer of your hardware has provided supplemental Solaris installation documentation. Refer to those materials for hardware-specific installation instructions.

Description	First Released in . . .
Upgrading	
The Patch Analyzer is now available when upgrading with Web Start 3.0 using the Solaris 8 6/00 Installation CD. The Patch Analyzer performs an analysis on your system to determine which (if any) patches will be removed or downgraded by upgrading from the Solaris 8 release to the Solaris 8 6/00 release.	6/00
Early Access	
This release includes an Early Access (EA) directory with EA software. For more information, see the README on the Solaris 8 Software 2 of 2 CD.	6/00

Upgrading to the Solaris 8 6/00 Operating Environment

This chapter provides information about using Web Start 3.0 on the Solaris 8 6/00 Installation CD to upgrade to the Solaris 8 6/00 operating environment. For complete installation instructions, refer to *Solaris 8 (SPARC Platform Edition) Installation Guide* or *Solaris 8 (Intel Platform Edition) Installation Guide*.

Upgrading From the Solaris 8 Operating Environment

If you are already running the Solaris 8 operating environment and have installed individual patches, upgrading to the Solaris 8 6/00 operating environment will cause:

- Any patches supplied as part of the Solaris 8 6/00 operating environment to be reapplied to your system. You will not be able to back out these patches.
- Any patches previously installed on your system that are not included in the Solaris 8 6/00 operating environment to be removed.

To see a list of patches that will be removed, use the Patch Analyzer as described below.

Analyzing the Patches

The Patch Analyzer performs an analysis on your system to determine which (if any) patches will be removed by upgrading to the Solaris 8 6/00 operating environment. The Patch Analyzer is available in the following formats.

- If you are using Web Start 3.0 on the Solaris 8 6/00 Installation CD to upgrade, refer to “Using the Patch Analyzer in Web Start” on page 12.
- If you are using the Interactive Installation method to upgrade, select Analyze on the Patch Analysis dialog box to perform the analysis. For detailed instructions see “Upgrading From Solaris 8 or a Solaris 8 Update: the Patch Analyzer” in *Solaris 8 Advanced Installation Guide*.
- If you are using a custom JumpStart™ installation to upgrade, run the `analyze_patches` script to perform the analysis. For detailed instructions, see “Upgrading From Solaris 8 or a Solaris 8 Update: the Patch Analyzer” in *Solaris 8 Advanced Installation Guide*.

Using the Patch Analyzer in Web Start

The Web Start installation method gives you the option to use the Patch Analyzer to analyze the patches on your system. After choosing Upgrade, the Patch Analyzer dialog box appears:

1. On the Patch Analyzer dialog box, choose Yes and click Next.

The Patch Analyzer reviews the system patches.

The total number of patches that will be removed, downgraded, accumulated, or obsoleted by other patches are displayed on the Patch Analyzer Summary dialog box.

2. To see the specific patches that may be removed, downgraded, accumulated, or obsoleted by other patches, click on the Details button(s).

3. Decide if patch replacements and deletions are acceptable.

- If the patch replacements and deletions by the Solaris 8 6/00 operating environment are acceptable, click Next to complete the upgrade.
- If the patch replacements and deletions by the Solaris 8 6/00 operating environment are not acceptable, click Exit to terminate the upgrade. You may use the Solaris 8 Maintenance Update 1 CD and the Solaris 8 Maintenance Update 1 Release Notes to install the patches on your Solaris 8 system.
