CHAPTER 1

Solaris 8 (Intel Platform Edition) 6/00 Hardware Compatibility List

This document provides information about general IA hardware requirements and the peripherals and system platforms that are supported in Solaris™ 8 *Intel Platform Edition*.

It documents cumulative changes since the release of Solaris 8 *Intel Platform Edition*.

Note - In this document the term "IA" refers to the Intel 32–bit processor architecture, which includes the Pentium, Pentium Pro, Pentium II, Pentium II Xeon, Celeron, Pentium III, and Pentium III Xeon processors and compatible microprocessor chips made by AMD and Cyrix.

Note - System platforms listed in this document are tested "as-shipped" by the hardware manufacturers, but due to the nature of this industry, there might be unexpected and unannounced changes.

It is common practice for hardware vendors to release variants of a particular hardware design under a single marketing name. In some cases, not all variants will work with the current Solaris device driver. Check the "Device Reference Pages" in *Solaris 8 (Intel Platform Edition) Device Configuration Guide* to see if they provide additional information about specific hardware versions supported by the current Solaris device driver.

How This Document Is Organized

This document is divided into these major sections:

- "General Requirements" on page 9 lists the Intel 32–bit processor architecture (IA) hardware requirements for installing the Solaris 8 operating environment.
- "System Platforms" on page 9 lists the platforms supported in the Solaris 8 *Intel Platform Edition* product; not all of the peripherals listed in "Supported Devices" on page 20 have been tested in all combinations on all of these platforms. This is *not* intended to be an exhaustive list of IA machines that can run Solaris 8 software.
- "Supported Devices" on page 20 lists the supported peripherals.

Specific machines and classes of devices are shown in these tables in this document.

- "System Platforms" on page 9
  - Single Processor Systems, Table 1–1
  - Multiprocessor Systems (SMP), Table 1–2
- "Supported Devices" on page 20
  - SCSI Host Bus Adapters, Table 1–3
  - SCSI RAID Controllers, Table 1–4
  - CD-ROM / DVD-ROM Drives, Table 1–5
  - Jaz / Zip Drives, Table 1–6
  - Audio Devices, Table 1–7
  - Multiport Serial Adapters, Table 1–8
  - Network Adapters—Ethernet, Table 1–9
  - Network Adapters—Fast Ethernet, Table 1–10
  - Network Adapters—Token Ring, Table 1–11
  - AT-ISDN Adapters, Table 1–12
  - PC Card (PCMCIA)—Add-On Boards, Table 1–13
  - PC Card (PCMCIA)—Modems, Table 1–14
  - PC Card (PCMCIA)—Serial Cards, Table 1–15
  - PC Card (PCMCIA)—SRAM Memory Cards, Table 1–16
  - Pointing Devices, Table 1–17
  - Tape Drives—SCSI, Table 1–18
  - SCSI RAID Tape, Table 1–19
  - Motherboards, Table 1–20
  - Video Display Devices, Table 1–21
- "Devices Supported by Verified Third-Party Drivers" on page 64

Conventions Used

- Pentium system platforms and motherboards listed in this document show the CPU type and speed in parentheses after the model name.
  - The term (P-*xxx*) indicates a Pentium processor; the *xxx* is replaced by the speed of the system in megahertz. For example, P-100 indicates a 100-MHz Pentium processor.
  - The term (PP-*xxx*) indicates a Pentium Pro processor; the *xxx* is replaced by the speed of the system in megahertz. For example, PP-150 indicates a 150-MHz Pentium Pro processor.
  - The term (PII-*xxx*) indicates a Pentium II processor; the *xxx* is replaced by the speed of the system in megahertz. For example, PII-233 indicates a 233-MHz Pentium II processor.
  - The term (PIII-*xxx*) indicates a Pentium III processor; the *xxx* is replaced by the speed of the system in megahertz. For example, PIII-450 indicates a 450-MHz Pentium III processor.
- In "Supported Devices" on page 20, peripherals that require additional configuration and that have a Device Reference Page in the *Solaris 8 (Intel Platform Edition) Device Configuration Guide* are marked with a # symbol.

Related Books

For specific hardware configuration information necessary to install and run the Solaris environment on your particular hardware, see the *Solaris 8 (Intel Platform Edition) Device Configuration Guide.*

Solaris Certification Program

For information about the Solaris hardware certification program, see `http://soldc.sun.com/support/certify`. Because certification testing is an ongoing process, updated Hardware Compatibility Lists are produced between releases; they are available at `http://soldc.sun.com/support/drivers/hcl`.

Corrections and Additions

Vendors, OEMs, and manufacturers: To supply corrections or add products to this list, send email to `x86-certify@cypress.west.sun.com`.

Ordering Sun Documents

Fatbrain.com, an Internet professional bookstore, stocks select product documentation from Sun Microsystems, Inc.

For a list of documents and how to order them, visit the Sun Documentation Center on Fatbrain.com at `http://www1.fatbrain.com/documentation/sun`.

Accessing Sun Documentation Online

The docs.sun.com[SM] Web site enables you to access Sun technical documentation online. You can browse the docs.sun.com archive or search for a specific book title or subject. The URL is `http://docs.sun.com`.

General Requirements

CPU	Memory	Bus	Disk Interface	Distribution Media	Devices for Installing Solaris
Intel Pentium Intel Pentium Pro Intel Pentium with MMX Intel Pentium II Intel Pentium II Xeon Intel Celeron Intel Pentium III Intel Pentium III Xeon AMD-K5 AMD-K6 AMD-K6-2 AMD Athlon K7 Cyrix 5x86-100GP Cyrix 6x86-P120+GP Cyrix 6x86-P150+ Cyrix 6x86-P166+ Cyrix 6x86MX-PR150 Cyrix MII	Minimum: 64 Mbytes Maximum: 32 Gbytes[1]	ISA, PCI, VLB	IDE, E-IDE, SCSI	CD-ROM and a single boot diskette	Diskette drive *and* one of the following devices: • Local SCSI or ATAPI/IDE CD-ROM or DVD-ROM drive • Remote SCSI or ATAPI/IDE CD-ROM or DVD-ROM drive available over the network • Remote hard disk available over the network

1. IA based systems that use the Intel Pentium Pro and subsequently released Intel CPUs can address up to 32 Gbytes of physical memory. Individual processes are still limited to a maximum of 3.5 Gbytes of virtual address space however.

System Platforms

Solaris 8 *Intel Platform Edition* has been successfully installed and tested on the computers listed in this section configured as they are shipped by the system manufacturer.

Zenith Data Systems Express5800-MT2200 (2 CPUs, PII-300)
Zenith Data Systems Express5800-RM4100 (2 CPUs, PP-200)

1. 3Com EtherLink XL 3C905B cards in a Compaq ProLiant 6500 can fail to generate interrupts. Refer to the "3Com EtherLink XL (3C900, 3C900-COMBO, 3C900B-COMBO, 3C900B-TPC, 3C900B-TPO), Fast EtherLink XL (3C905-TX, 3C905-T4, 3C905B-TX, 3C905B-T4)" Device Reference Page for additional information.
2. This system supports PCI hot-plugging.
3. This system has a built-in AMI MegaRAID 438 controller, which is *not* currently supported by the Solaris operating environment. Contact AMI to obtain information and support for this device.
4. To use the NCR 4380 model series, you must install Solaris patch `ncr4380_set`, which can be downloaded from `http://www3.ncr.com/support/solaris/alphabetical_list.shtml`.

Supported Devices

Devices listed in this section have been successfully tested with Solaris 8 *Intel Platform Edition* in a varied but limited number of hardware configurations. While a complete system composed of the devices listed in this section should enable you to install and run the Solaris software, some combinations of devices might not be usable or might require additional configuration.

SCSI Host Bus Adapters

Note - Devices that require additional configuration and that have a Device Reference Page in the *Solaris 8 (Intel Platform Edition) Device Configuration Guide* are marked with a # symbol.

1. This device supports PCI hot-plugging.
2. This adapter can be made RAID-capable with the addition of a Hardware Disk Array module.
3. This adapter does not have the SDMS BIOS on board. It should be used only on a system that contains the SCSI BIOS as part of its main system BIOS.
4. Wide SCSI not yet supported in Solaris driver.

SCSI RAID Controllers

Note - Devices that require additional configuration and that have a Device Reference Page in the *Solaris 8 (Intel Platform Edition) Device Configuration Guide* are marked with a # symbol.

1. Various CD-ROM players might not be fully SCSI-compliant in their handling of the `CDROMREADHEADER` command. This might cause failures from `vold` not mounting an eligible CD-ROM. The workaround is to mount the CD-ROM manually.
2. Early versions of NEC firmware were not fully SCSI-compliant; thus these drives might only work if synchronous negotiation and disconnect are disabled on the SCSI adapter used with the CD-ROM drive, or if the drive is jumpered to use `scsi-1` commands, as appropriate.
3. Only the first CD-ROM in the Pioneer DRM-604X CD-ROM changer is supported by default.
4. This drive does not work with the Adaptec AHA-2940 SCSI HBA.
5. Firmware must be at version 1.0r or later to boot from the CD.
6. Must have at least BIOS 1.0.

1. 3Com EtherLink XL 3C905B cards in a Compaq ProLiant 6500 can fail to generate interrupts. Refer to the "3Com EtherLink XL (3C900, 3C900-COMBO, 3C900B-COMBO, 3C900B-TPC, 3C900B-TPO), Fast EtherLink XL (3C905-TX, 3C905-T4, 3C905B-TX, 3C905B-T4)" Device Reference Page for additional information.
2. Because certain board revisions have been found not to work, refer to the table in the "DEC 21040, 21041, 21140, 21142, 21143 Ethernet" Device Reference Page for additional information.
3. Refer to the "Compaq NetFlex-3, Netelligent Controllers" Device Reference Page for tested chipsets.
4. Special configuration required; refer to the table in the "DEC 21040, 21041, 21140, 21142, 21143 Ethernet" Device Reference Page for additional information.
5. This device supports PCI hot-plugging.
6. This device supports two 10/100Mbps interfaces on a single board.

Network Adapters—Token Ring

Note - Devices that require additional configuration and that have a Device Reference Page in the *Solaris 8 (Intel Platform Edition) Device Configuration Guide* are marked with a # symbol.

Video Display Devices

Note - Video support is limited to support for computer monitors. Other features, such as TV output, that come with some video devices are not supported.

Note - "—" in the Bus column indicates a video device that is used on video cards and motherboards.

Note - The information in the Video Chip column does not guarantee that video cards made by another manufacturer using the same video device will work. Only the specific models listed by Vendor, Model, Bus, and Video Chip have been tested.

1. Video adapters based on the Cirrus Logic GD5424 chipset with 512-Kbyte DRAM might not perform well in 800x600x256 mode, particularly if the selected monitor refresh rate is 60 Hz or higher.
2. Every video device with this chip might not work, but it is possible that your model can be used successfully.
3. Support is provided for ATI cards with ATI Mach64 chips and these RAMDACS: ATT68860, ATT20C408, ATT20C491, ATT20C498, STG1702, and STG1703.
4. The ATI RAGE PRO TURBO is the same video chip as the ATI RAGE PRO. The ATI RAGE PRO TURBO support covers ATI video chips intended for non-LCD desktop monitors. These chips are identified by the markings, `3D RAGE PRO` or `RAGE PRO TURBO`, followed by a `215R3`*xxxxx* number. The support does not cover RAGE LT PRO chips, which are identifed by the markings `RAGE LT PRO` followed by a `215LT`*xxxxx* number.
5. The ATI Winturbo model is equivalent to the Gateway ATI GX Mach64 PCI video card.

TABLE 1–21 Video Display Devices *(continued)*

6. The ProSignia 300 systems and some models of the ProSignia Server systems with the Cirrus Logic 5424 graphics chip are supported. Choose one of the "Cirrus Logic 5424 (512k)" entries when configuring the window system using `kdmconfig`.
7. Video adapters based on the NVIDIA RIVA TNT2 chipset might not work well in 640x480 mode on some displays.
8. For cards using the IBM or TI RAMDACs only.
9. The ELSA Winner 1000Pro with the ATT20C498 RAMDAC is supported.
10. Both the STG1702 and the ATT21C498 RAMDACs are supported.
11. Select "Cirrus Logic 542x" when configuring the display adapter during Solaris installation.
12. 640x480, 16 colors. Any 256-Kbyte or better VGA adapter supporting standard IBM mode 0x12 graphics. For VGA with 800x600 virtual screen, select "16 color, 640x480 VGA panning @800x600 (for experts only, see docs)" when configuring the display adapter during Solaris installation. Warning: This selection enables panning mode on a standard VGA. This video mode supports a virtual resolution of 800x600, but is only capable of physically displaying 640x480 pixels at a time. This might be a preferred mode to use on small screens, but the use of panning might require some training.
13. To support the Intergraph G95, select the graphics card "Matrox MGA Millennium" when configuring the Solaris windowing system.
14. To support the Intergraph ISMP, select the graphics card "Cirrus Logic GD5434" when configuring the Solaris windowing system.
15. The 8-Mbyte version of the Number Nine Imagine 128 Series 2e is not supported.
16. Select "#9GXE 64 (Trio64)" when configuring the display adapter during Solaris installation.
17. Older versions of the Orchid Kelvin 64 VLB card have memory addressing limitations that might cause problems on systems containing 32 Mbytes or more of RAM. If you experience a problem, contact Orchid Technology for assistance.
18. This card does not work at the 1024x768 resolution with a 56-kHz refresh rate.

Devices Supported by Verified Third-Party Drivers

The following devices have been verified using third-party drivers. Contact the vendor for these drivers and for support for these devices. Sun disclaims any and all liability resulting from the use of these devices.
