CHAPTER 1

Solaris 8 (Intel Platform Edition) 10/00 Hardware Compatibility List

This document provides information about general IA hardware requirements and the peripherals and system platforms that are supported in Solaris™ 8 *Intel Platform Edition*.

It documents cumulative changes since the release of Solaris 8 *Intel Platform Edition*, including those documented in the *Solaris 8 (Intel Platform Edition) 6/00 Hardware Compatibility List*.

Note - In this document the term "IA" refers to the Intel 32-bit processor architecture, which includes the Pentium, Pentium Pro, Pentium II, Pentium II Xeon, Celeron, Pentium III, and Pentium III Xeon processors and compatible microprocessor chips made by AMD and Cyrix.

Note - System platforms listed in this document are tested "as-shipped" by the hardware manufacturers, but due to the nature of this industry, there might be unexpected and unannounced changes.

It is common practice for hardware vendors to release variants of a particular hardware design under a single marketing name. In some cases, not all variants will work with the current Solaris device driver. Check the "Device Reference Pages" in the *Solaris 8 (Intel Platform Edition) Device Configuration Guide* to see if they provide additional information about specific hardware versions supported by the current Solaris device driver.

How This Document Is Organized

This document is divided into these major sections:

- "General Requirements" on page 9 lists the Intel 32-bit processor architecture (IA) hardware requirements for installing the Solaris 8 operating environment.
- "System Platforms" on page 10 lists the platforms supported in the Solaris 8 *Intel Platform Edition* product; not all of the peripherals listed in "Supported Devices" on page 23 have been tested in all combinations on all of these platforms. This is *not* intended to be an exhaustive list of IA machines that can run Solaris 8 software.
- "Supported Devices" on page 23 lists the peripherals supported by drivers bundled on the Solaris CD. Support for these drivers is provided by Sun.
- "Devices Supported by Verified Third-Party Drivers" on page 70 lists devices that are developed and supported by third-party vendors. Contact the vendor directly to get support for these third-party drivers.

Specific machines and classes of devices are shown in these tables in this document.

- "System Platforms" on page 10
  - Single Processor Systems, Table 1–1
  - Multiprocessor Systems (SMP), Table 1–2
- "Supported Devices" on page 23
  - SCSI Host Bus Adapters, Table 1–3
  - SCSI RAID Controllers, Table 1–4
  - CD-ROM / DVD-ROM Drives, Table 1–5
  - Jaz / Zip Drives, Table 1–6
  - Audio Devices, Table 1–7
  - Multiport Serial Adapters, Table 1–8
  - Network Adapters—Ethernet, Table 1–9
  - Network Adapters—Fast Ethernet, Table 1–10
  - Network Adapters—Token Ring, Table 1–11
  - AT-ISDN Adapters, Table 1–12
  - USB—Keyboards, Table 1–13
  - USB—Pointing Devices, Table 1–14
  - USB—Hubs, Table 1–15
  - USB—Storage Devices, Table 1–16
  - PC Card (PCMCIA)—Add-On Boards, Table 1–17
  - PC Card (PCMCIA)—Modems, Table 1–18
  - PC Card (PCMCIA)—Serial Cards, Table 1–19

- PC Card (PCMCIA)—SRAM Memory Cards, Table 1–20
- Pointing Devices, Table 1–21
- Tape Drives—SCSI, Table 1–22
- SCSI RAID Tape, Table 1–23
- Motherboards, Table 1–24
- Video Display Devices, Table 1–25

- "Devices Supported by Verified Third-Party Drivers" on page 70

Conventions Used

- Pentium system platforms and motherboards listed in this document show the CPU type and speed in parentheses after the model name.

  - The term (P-*xxx*) indicates a Pentium processor; the *xxx* is replaced by the speed of the system in megahertz. For example, P-100 indicates a 100-MHz Pentium processor.
  - The term (PP-*xxx*) indicates a Pentium Pro processor; the *xxx* is replaced by the speed of the system in megahertz. For example, PP-150 indicates a 150-MHz Pentium Pro processor.
  - The term (PII-*xxx*) indicates a Pentium II processor; the *xxx* is replaced by the speed of the system in megahertz. For example, PII-233 indicates a 233-MHz Pentium II processor.
  - The term (PIII-*xxx*) indicates a Pentium III processor; the *xxx* is replaced by the speed of the system in megahertz. For example, PIII-450 indicates a 450-MHz Pentium III processor.

- In "Supported Devices" on page 23, peripherals that require additional configuration and that have a Device Reference Page in the *Solaris 8 (Intel Platform Edition) Device Configuration Guide* are marked with a # symbol.

Related Books

For specific hardware configuration information necessary to install and run the Solaris environment on your particular hardware, see the *Solaris 8 (Intel Platform Edition) Device Configuration Guide.*

Solaris Certification and Verification Programs

For information about the Solaris hardware certification program, see `http://soldc.sun.com/support/certify`.

For information about the Solaris Device-Driver Verification Program for the IA Platform, see `http://soldc.sun.com/developer/support/driver/DVTS/verify-index.html`.

Because certification testing is an ongoing process, updated Hardware Compatibility Lists are produced between releases; they are available at `http://soldc.sun.com/support/drivers/hcl`.

Corrections and Additions

Vendors, OEMs, and manufacturers: To supply corrections or add products to this list, send email to `x86-certify@cypress.west.sun.com`.

Ordering Sun Documents

Fatbrain.com, an Internet professional bookstore, stocks select product documentation from Sun Microsystems, Inc.

For a list of documents and how to order them, visit the Sun Documentation Center on Fatbrain.com at `http://www1.fatbrain.com/documentation/sun`.

Accessing Sun Documentation Online

The docs.sun.com℠ Web site enables you to access Sun technical documentation online. You can browse the docs.sun.com archive or search for a specific book title or subject. The URL is `http://docs.sun.com`.

The *Solaris 8 (Intel Platform Edition) 10/00 Hardware Compatibility List* and other versions of this book are updated frequently at the Solaris Developer Connection web site. The URL is `http://soldc.sun.com/support/drivers/hcl`.

General Requirements

CPU	Memory	Bus	Disk Interface	Distribution Media	Devices for Installing Solaris
Intel Pentium Intel Pentium Pro Intel Pentium with MMX Intel Pentium II Intel Pentium II Xeon Intel Celeron Intel Pentium III Intel Pentium III Xeon AMD-K5 AMD-K6 AMD-K6-2 AMD Athlon K7 Cyrix 5x86-100GP Cyrix 6x86-P120+GP Cyrix 6x86-P150+ Cyrix 6x86-P166+ Cyrix 6x86MX-PR150 Cyrix MII	Minimum: 64 Mbytes Maximum: 32 Gbytes[1]	ISA, PCI, VLB	IDE, E-IDE, SCSI	CD-ROM and a single boot diskette	Diskette drive *and* one of the following devices: • Local SCSI or ATAPI/IDE CD-ROM or DVD-ROM drive • Remote SCSI or ATAPI/IDE CD-ROM or DVD-ROM drive available over the network • Remote hard disk available over the network

1. IA based systems that use the Intel Pentium Pro and subsequently released Intel CPUs can address up to 32 Gbytes of physical memory. Individual processes are still limited to a maximum of 3.5 Gbytes of virtual address space however.

System Platforms

Solaris 8 *Intel Platform Edition* has been successfully installed and tested on the computers listed in this section configured as they are shipped by the system manufacturer.

1. 3Com EtherLink XL 3C905B cards in a Compaq ProLiant 6500 can fail to generate interrupts. Refer to the "3Com EtherLink XL (3C900, 3C900-COMBO, 3C900B-COMBO, 3C900B-TPC, 3C900B-TPO), Fast EtherLink XL (3C905-TX, 3C905-T4, 3C905B-TX, 3C905B-T4)" Device Reference Page for additional information.
2. This system supports PCI hot-plugging.
3. This system has a built-in AMI MegaRAID 438 controller, which is *not* currently supported by the Solaris operating environment. Contact AMI to obtain information and support for this device.
4. To use the NCR 4380 model series, you must install Solaris patch `ncr4380_set`, which can be downloaded from `http://www3.ncr.com/support/solaris/alphabetical_list.shtml`.

Supported Devices

Devices listed in this section have been successfully tested with Solaris 8 *Intel Platform Edition* in a varied but limited number of hardware configurations. While a complete system composed of the devices listed in this section should enable you to install and run the Solaris software, some combinations of devices might not be usable or might require additional configuration.

SCSI Host Bus Adapters

Note - Devices that require additional configuration and that have a Device Reference Page in the *Solaris 8 (Intel Platform Edition) Device Configuration Guide* are marked with a # symbol.

1. This device supports PCI hot-plugging.
2. This adapter can be made RAID-capable with the addition of a Hardware Disk Array module.
3. This adapter does not have the SDMS BIOS on board. It should be used only on a system that contains the SCSI BIOS as part of its main system BIOS.
4. Wide SCSI not yet supported in Solaris driver.

1. Various CD-ROM players might not be fully SCSI-compliant in their handling of the `CDROMREADHEADER` command. This might cause failures from `vold` not mounting an eligible CD-ROM. The workaround is to mount the CD-ROM manually.
2. Early versions of NEC firmware were not fully SCSI-compliant; thus these drives might only work if synchronous negotiation and disconnect are disabled on the SCSI adapter used with the CD-ROM drive, or if the drive is jumpered to use `scsi-1` commands, as appropriate.
3. Only the first CD-ROM in the Pioneer DRM-604X CD-ROM changer is supported by default.
4. This drive does not work with the Adaptec AHA-2940 SCSI HBA.
5. Firmware must be at version 1.0r or later to boot from the CD.
6. Must have at least BIOS 1.0.

Video Display Devices

Note - Video support is limited to support for computer monitors. Other features, such as TV output, that come with some video devices are not supported.

Note - "—" in the Bus column indicates a video device that is used on video cards and motherboards.

Note - The information in the Video Chip column does not guarantee that video cards made by another manufacturer using the same video device will work. Only the specific models listed by Vendor, Model, Bus, and Video Chip have been tested.

1. Video adapters based on the Cirrus Logic GD5424 chipset with 512-Kbyte DRAM might not perform well in 800x600x256 mode, particularly if the selected monitor refresh rate is 60 Hz or higher.
2. Every video device with this chip might not work, but it is possible that your model can be used successfully.
3. Support is provided for ATI cards with ATI Mach64 chips and these RAMDACS: ATT68860, ATT20C408, ATT20C491, ATT20C498, STG1702, and STG1703.

TABLE 1–25 Video Display Devices *(continued)*

4. The ATI RAGE PRO TURBO is the same video chip as the ATI RAGE PRO. The ATI RAGE PRO TURBO support covers ATI video chips intended for non-LCD desktop monitors. These chips are identified by the markings, `3D RAGE PRO` or `RAGE PRO TURBO`, followed by a `215R3`*xxxxx* number. The support does not cover RAGE LT PRO chips, which are identifed by the markings `RAGE LT PRO` followed by a `215LT`*xxxxx* number.
5. The ATI Winturbo model is equivalent to the Gateway ATI GX Mach64 PCI video card.
6. The ProSignia 300 systems and some models of the ProSignia Server systems with the Cirrus Logic 5424 graphics chip are supported. Choose one of the "Cirrus Logic 5424 (512k)" entries when configuring the window system using `kdmconfig`.
7. Video adapters based on the NVIDIA RIVA TNT2 chipset might not work well in 640x480 mode on some displays.
8. For cards using the IBM or TI RAMDACs only.
9. The ELSA Winner 1000Pro with the ATT20C498 RAMDAC is supported.
10. Both the STG1702 and the ATT21C498 RAMDACs are supported.
11. Select "Cirrus Logic 542x" when configuring the display adapter during Solaris installation.
12. 640x480, 16 colors. Any 256-Kbyte or better VGA adapter supporting standard IBM mode 0x12 graphics. For VGA with 800x600 virtual screen, select "16 color, 640x480 VGA panning @800x600 (for experts only, see docs)" when configuring the display adapter during Solaris installation. Warning: This selection enables panning mode on a standard VGA. This video mode supports a virtual resolution of 800x600, but is only capable of physically displaying 640x480 pixels at a time. This might be a preferred mode to use on small screens, but the use of panning might require some training.
13. To support the Intergraph G95, select the graphics card "Matrox MGA Millennium" when configuring the Solaris windowing system.
14. To support the Intergraph ISMP, select the graphics card "Cirrus Logic GD5434" when configuring the Solaris windowing system.
15. The 8-Mbyte version of the Number Nine Imagine 128 Series 2e is not supported.
16. Select "#9GXE 64 (Trio64)" when configuring the display adapter during Solaris installation.
17. Older versions of the Orchid Kelvin 64 VLB card have memory addressing limitations that might cause problems on systems containing 32 Mbytes or more of RAM. If you experience a problem, contact Orchid Technology for assistance.
18. This card does not work at the 1024x768 resolution with a 56-kHz refresh rate.

Devices Supported by Verified Third-Party Drivers

The following devices have been verified using third-party drivers. Contact the vendor for these drivers and for support for these devices.

Each device listed has been verified through testing at one of these levels:

Level 1 — The device has passed Sun's Level 1 verification test suite, which tests basic driver functionality for Solaris compatibility.

Level 2 — The device has passed Sun's Level 2 verification test suite. The tests are rigorous enough to qualify IHVs to apply for the `Solaris Ready` logo. Vendors whose products are used in everyday business environments often choose Level 2 verification.

Level 3/Bundled — The device has passed Sun's Level 3 verification test suite. Vendors whose products are used in

enterprise and server environments often choose Level 3 verification.

- When listed as Bundled, the product has already been bundled with a Solaris release.
- When listed as Level 3, the product might be included in a forthcoming Solaris release.

Sun disclaims any and all liability resulting from the use of these devices.

TABLE 1–26 Network Devices Supported by Verified Third-Party Drivers

Device Type	Vendor	Device	Verification Level	Driver
FDDI	SysKonnect	SK-5521	Level 3	`skfp v2.00`
		SK-5522	Level 3	
		SK-5541	Level 3	
		SK-5543	Level 3	
		SK-5544	Level 3	
		SK-5821	Level 3	
		SK-5822	Level 3	
		SK-5841	Level 3	
		SK-5843	Level 3	
		SK-5844	Level 3	
Gigabit Ethernet	Intel	PRO/1000 F Server Adapter	Level 3	`e1000g v2.5.17`
		PRO/1000 T Server Adapter	Level 3	
	SysKonnect	SK-9821	Level 3	`sk98sol v3.07`
		SK-9822	Level 3	
		SK-9841	Level 2	
		SK-9842	Level 2	
		SK-9843	Level 3	
		SK-9844	Level 3	
		SK-9861	Level 2	
		SK-9862	Level 2	

TABLE 1–26 Network Devices Supported by Verified Third-Party Drivers *(continued)*

Device Type	Vendor	Device	Verification Level	Driver
Token Ring	Madge	Smart 16/4 PCI Ringnode Mk2	Level 2	`mtok v5.08`
		Smart 16/4 PCI Ringnode Mk3	Level 2	
		Smart MK4 100/16/4 PCI Ringnode	Level 2	
	Olicom	RF-3140	Level 2	`otr v3.3h`
		RF-3540	Level 2	

TABLE 1–27 Storage Devices Supported by Verified Third-Party Drivers

Device Type	Vendor	Device	Verification Level	Driver
Fibre Channel	Agilent	HHBA-5100B	Level 3	`hpfc v1.06`
		HHBA-5101B	Level 3	
		HHBA-5121A	Level 3	
RAID	AMI	Elite 1500 (467, 2 channel)	Level 2	`mega v2i17-8`
		Enterprise 1500 (467, 4 channel)	Level 2	
		Express 200 (466)	Level 2	
SCSI	Adaptec	29160	Level 2	`cadp160 d1.21`
		29160N	Level 2	
		39160	Level 2	
		AIC-7892B	Level 2	
		AIC-7899G[1]	Level 2	

1. This chip is certified only for add-in HBAs, not for HBAs on the motherboard.

TABLE 1–28 Serial I/O Devices Supported by Verified Third-Party Drivers

Device Type	Vendor	Device	Verification Level	Driver
Asynchronous	Digi International	AccelePort C/X AccelePort Xem	Level 2 Level 2	`epca v1.8.0`
