Introduction

The *Solaris 8 Maintenance Update 4 Installation Guide* explains how to install and back out the Solaris™ 8 Maintenance Update™ 4 (MU4) software. This guide is for system administrators installing the MU4 software. For late-breaking MU4 issues identified too late to be included in this guide, refer to the *Solaris 8 Maintenance Update 4 Installation Guide* on <http://docs.sun.com>.

If you need more information on general procedures for system administration, refer to the *Solaris 8 System Administration Guide, Volumes I, II, and III*.

What Is the Solaris 8 Maintenance Update 4

The Solaris 8 MU4 contains the same set of patches as the ones prepackaged on the Solaris 8 4/01 software CDs. These patches have been tested together and packaged for a one-step installation. The MU4 installation automatically updates your system without regressing any patches you have previously installed.

The Solaris 8 MU4 is available on a CD or as a file for download from the Web.

When to Install the Solaris 8 Maintenance Update 4

If your system is running the Solaris 8, Solaris 8 6/00, Solaris 8 10/00, or Solaris 8 1/01 operating environment and you want to apply patches released in the Solaris 8 4/01 operating environment without losing patches you previously applied to your system, install the Solaris 8 MU4. Patches applied using the MU4 can be backed out.

If your system is running the Solaris 8 operating environment, or a Solaris 8 Update release, and you want to fully upgrade to new features and hardware support, install the Solaris 8 4/01 operating environment. The patches applied by installing the Solaris 8 4/01 operating environment will replace any previously installed Solaris 8 patches and cannot be backed out of the release.

Maintenance Updates are primarily designed to update the Solaris operating environment to a known, tested patch-level. If you want to apply a particular patch, and only that patch, do so through your normal support channels.

Note - The name of this product is Solaris 8 MU4, but code or package path names might use Solaris 2.8 or SunOS™ 5.8. Always follow the code or path as it is written in this document.

Installing the Solaris 8 Maintenance Update 4

This chapter describes how to install your Solaris 8 MU4 software. If you want to install the Solaris 8 MU4 software as part of a custom JumpStart™ installation, refer to the *Solaris 8 Advanced Installation Guide*.

Time Considerations

The Solaris 8 MU4 installation procedure is faster than the installation of the individual MU4 patches. The Solaris 8 MU4 installation time varies depending on:

- CPU speed of your machine
- `install_mu` option you select
- Transfer speed of the CD-ROM drive, hard drive, or network you use to access the `install_mu` code and patch set

If you install the MU4 with the backout option disabled, installation will proceed more quickly. However, you will not be able to back out any of the patches MU4 delivers.

Requirements

The MU4 may only be installed on a system running the Solaris 8, Solaris 8 6/00, Solaris 8 10/00, or Solaris 8 1/01 operating environment.

Space requirements per file system vary depending on:

- Whether you select the backout option
- The location of the backout directory when saving backout data
- The disk partitions and the space available in each file system versus the patch disk space needed per file system
- Your system's locale
- Whether some of the Maintenance Update patches are already installed on your system

The `install_mu` script performs a space analysis and reports the space needed per file system, including back out space if applicable. The space calculations take several minutes to complete.

The `install_mu` script does not proceed if it determines that space is lacking in one or more file systems. Although the patch installation space needed is calculated fairly precisely, the backout data space need is estimated and the reported need may be higher than the actual need.

If you are certain that you have enough space to apply the patch set (and backout data if desired) and you want to bypass the space calculation, run `install_mu` with the `-f` option.

Installing the Solaris 8 MU4

Solaris 8 MU4 software can only be installed if the system running `install_mu` is already running the Solaris 8, Solaris 8 6/00, Solaris 8 10/00, or Solaris 8 1/01 operating environment.

Note - Diskless client systems are not supported in MU4.

It is best to reboot your system in single-user mode before installing MU4 because MU4 applies patches to system libraries. Individual systems in a multiuser system will be unstable if any processes have mapped to an unpatched version of a library and later attempt to map to different sections of the old library.

In single-user mode, network services are not available. If the MU4 image is on the network rather than on a CD, you must copy the MU4 image from the network to your local system before booting your system in single-user mode.

If it is not possible to reboot the system in single-user mode or if you do not have enough disk space to make a local copy of the MU4 image, you will need to install MU4 using NFS in multiuser mode. In this case, you should have the system in as quiet a state as possible, without users logged on or running jobs.

When in single-user mode, you must reboot your system after MU4 is installed. Do not use the `exit` command. If `exit` is used, the system is brought to `init 3` and no one can log in until the system is brought to the `ok` prompt and rebooted. If operating in multi-user mode, no one can log in until the system is rebooted. If the root user has logged out and no other root users remain logged in, the system must be booted from the `ok` prompt. See Chapter 4, *Known Problems*, for more detail.

Note - Be sure that you have backed up your system's operating system before proceeding.

To install the Solaris 8 MU4 software:

1. Make sure that no important user or system processes are running.

2. Exit the current session.

The CDE login screen appears.

3. Click the Options button and select Command Line Login.

The system prompts you to log in.

4. Type your login name as `root` and type the root password:

```
login: root
password: root password
```

5. Reboot in single-user mode. From the root shell prompt, type:

```
# reboot -- -s
```

Note - Changing the run level from multiuser mode to single-user mode with the `shutdown` or `init` command might leave the `vold` process running. This process can cause problems mounting the MU4 CD in single-user mode.

6. Type the root password.

Check that the system displays the following message and is now in system maintenance mode.

```
Entering System Maintenance Mode

Sun Microsystems Inc. SunOS 5.8 Generic Feb 2000
#
```

7. Determine where you are running the `install_mu` command.

- If you are running `install_mu` from the CD, go to Step 8 on page 10.
- If you are running `install_mu` from a local copy of the MU4 image, go to Step 9 on page 10.

8. To mount the MU4 CD, place the CD in the drive and from the root shell prompt, type:

```
# mount -o ro -F hsfs /dev/dsk/c0t6d0s0 /cdrom
```

Note - In some cases the CD-ROM drive might be on a controller other than `c0` or a target other than `t6`, which would require a different path to the CD-ROM device. Check with your system administrator if you have questions about mounting the CD-ROM drive.

9. Run `install_mu`.

- From a local copy of the MU4 image, type:

```
# cd local_directory
# ./install_mu options
```

- From the MU4 CD, type:

```
# cd /cdrom
# ./install_mu options
```

You can use the following options on the command line.

TABLE 2-1 Command-Line Options for `install_mu`

Option	Description
<code>-d</code>	Specifies that patches will not be backed up. Using this argument decreases the time to install the software, but it also prevents you from backing out individual patches. Cannot be specified with <code>-B</code> option.
<code>-p patchdir</code>	Specifies directory that includes all the patches.
<code>-q</code>	Disables the display of dots that indicate <code>install_mu</code> activity.
<code>-B backoutdir</code>	Specifies that the backout data is saved in the indicated directory. Cannot be specified with the <code>-d</code> option.
<code>-f</code>	Forces installation of patch set without checking for sufficient disk space. Using this option saves time, but you must use it only if you are certain that you have enough space.

When the installation is complete, the following message appears.

```
install_mu completed at date_time.
```

- If you see this message, go to Step 10 on page 11.
- If you encounter any errors, go to Chapter 5.

10. Reboot the system by typing:

```
# sync ; reboot
```

You are then prompted for a login.

Note - To prevent the library conflict problem, you must reboot your system after installing MU4.

11. Type your login name and password:

```
login: login  
password: password
```

Identifying the Version of Your Solaris 8 Maintenance Update

To identify the version of your Solaris 8 MU software, type:

```
# cat /etc/release
```

To identify the patches the MU software applied to your system, type:

```
# showrev -p
```

Note - If you compare the `showrev -p` output from applying the Solaris 8 MU4 software to the `showrev -p` output from installing the Solaris 8 4/01 operating environment, you will note that the following patches are not applied in the MU4 installation:

■ Solaris 8 MU4 SPARC Platform Edition:

- 110597-02
- 110600-02
- 110712-03
- 110423-01
- 110418-01

■ Solaris 8 MU4 Intel Platform Edition:

- 110598-02
- 110601-02
- 110713-03
- 110424-01
- 110419-01

These patches are needed to generate the Solaris 8 4/01 operating environment, but are not needed to apply the Solaris 8 MU4 patches.

Backing Out the Solaris 8 Maintenance Update 4

The patches in the Solaris 8 MU4 software have been tested together as a set and, for the greatest stability, should be used that way. If you need to remove one of the patches, you may do so provided that you did not use the `-d` option of `install_mu` during the installation of the Solaris 8 MU4 software.

Instructions for backing out individual patches are located in each patch directory. Patch directories are located in `/var/sadm/patch/`.

Note - Backing out the entire MU is not possible if you selected the `-d` option of `install_mu`.

Backing Out the Solaris 8 MU4

It is best to reboot your system in single-user mode before backing out the MU4. MU4 applies patches to system libraries. Individual systems in a multiuser system will be unstable if any processes have mapped to a patched version of a library and later attempt to map to different sections of the old library.

In single-user mode, network services are not available. If the MU4 image is on the network rather than on a CD, you must copy the MU4 image from the network to your local system before booting your system in single-user mode.

If you cannot reboot the system in single-user mode or if you do not have enough disk space to make a local copy of the MU4 image, you need to back out MU4 using NFS in multiuser mode. In this case, you should have the system in as quiet a state as possible, without users logged on or running jobs.

The `backout_mu` script provided by MU4 enables you to back out an entire MU.

To back out the Solaris 8 MU4 software:

1. Make sure that no important user or system processes are running.

2. Exit the current session.

The CDE login screen appears.

3. Click the Options button and select Command Line Login.

The system prompts you to log in.

4. Type your login name as `root` and type the root password:

```
login: root
password: root password
```

5. Reboot in single-user mode. From the root shell prompt, type:

```
# reboot -- -s
```

Note - Changing the run level from multiuser mode to single-user mode with the `shutdown` or `init` command might leave the `vold` process running. This process can cause problems when mounting the MU4 CD in single-user mode.

6. Type the root password.

Check that the system displays the following message and is now in system maintenance mode.

```
Entering System Maintenance Mode
Sun Microsystems Inc. SunOS 5.8 Generic Feb 2000
#
```

7. Determine where you are running the `backout_mu` command.

- If you are running `backout_mu` from the CD, go to Step 8 on page 17.
- If you are running `backout_mu` from a local copy of the MU4 image, go to Step 9 on page 17.

8. To mount the MU4 CD, place the CD in the drive and from the root shell prompt, type:

```
# mount -o ro -F hsfs /dev/dsk/c0t6d0s0 /cdrom
```

Note - In some cases, the CD-ROM drive might be on a controller other than `c0` or a target other than `t6`, which would require a different path to the CD-ROM device. Check with your system administrator if you have questions about mounting the CD-ROM drive.

9. Run `backout_mu`.

- From a local copy of the MU4 image, type:

```
# cd local_directory
# ./backout_mu options
```

- From the MU4 CD, type:

```
# cd /cdrom
# ./backout_mu options
```

TABLE 3-1 Command-Line Options for `backout_mu`

Option	Description
<code>-q</code>	Disables the display of dots that indicate <code>backout_mu</code> activity
<code>-B backoutdir</code>	Specifies an alternate directory in which the information required to back a patch out will be held

When the backout is complete, the following message is displayed.

```
backout_mu completed at date_time.
```

- If you see this message, go to Step 10 on page 18 to complete the backout.
- If you encounter any errors, go to Chapter 5.

10. Reboot the system by typing:

```
# sync ; reboot
```

You are then prompted for a login.

Note - To prevent the library conflict problem, you must reboot your system after backing out MU4 .

11. Type your login name and password:

```
login: login
password: password
```

Known Problems

This chapter describes known problems relating to the installation and use of the Solaris 8 MU4 software.

Installation Bugs

`install_mu` Does Not Function Correctly When Starting It Using `sh` (4062334)

Because of problems regarding the interactions between `sh(1)` and `ksh(1)`, the `install_mu` utility might fail to install certain patches correctly when you start it using the following command from the command line or from an administrative script:

```
# /bin/sh ./install_mu options
```

Workaround: Execute `install_mu` from the command line or from an administrative script as follows:

```
# ./install_mu options
```

Patchadd Displays an Error That It Is Terminating

One of the following benign messages might be displayed by `install_mu`:

```
One or more patch packages included in
XXXXXX-YY are not installed on this system.

Patchadd is terminating.
```

Or:

```
Installation of XXXXXX-YY failed:
  Attempting to patch a package that is not installed.
```

These messages indicate that `patchadd` could not find on your system any of the packages that it intended to patch, so it skipped the indicated patch.

The message is displayed when `patchadd` notices a discrepancy installing a patch of one architecture onto a system with a different architecture (for example, a `sun4u` patch on a `sun4m` system.)

This may also be the result of one or more missing packages. The package might have been removed by the administrator, or never installed, as in the case of installing a cluster smaller than the Entire Distribution.

Workaround: Ignore the message.

Cannot login if System is Not Rebooted (4423853)

When installing in single-user mode, do not use the `exit` command when done. You must instead use the `reboot` command. If `exit` is used instead of `reboot`, the following happens:

- The system is brought to `init 3` and you cannot log in until the system is brought to the `ok` prompt and rebooted.
- No other users can log in until the system is rebooted.
- `pam_projects.so.1` dumps core when any user or process tries to log in. The following message is displayed:

```
NOTICE: core_log: in.rshd[1479] core dumped:
/var/crash/core.in.rshd.1479
```

- If a process attempts to access the `pam_projects.so.1` module, load module messages are displayed on the system console. A message similar to the following is displayed:

```
cron[1433]: load_modules: can not open module
/usr/lib/security/pam_projects.so.1
```

These messages are also displayed if MU4 is installed in multi-user mode. In both cases, the messages will disappear once the system is rebooted.

Workaround: If the `exit` command is used after installing in single-user mode, go to the ok prompt and type **boot**.

If the `exit` command is used after installing in multi-user mode and no root user remains logged in, go to the ok prompt and type **boot**.

Error Messages

The screen messages displayed during the execution of `install_mu` and `backout_mu` do not include all errors that might have occurred. Therefore, check the detail log file for additional information about any patches or packages that were not installed or backed out.

```
# more /var/sadm/install_data/log_file.mu_version_name.date_time
```

In this example:

- *log_file* is the name of the log file for the process you completed. For install, it is `Maintenance_Update_log`. For backout, it is `MU_Backout_log`.
- *mu_version_name* is the name of the MU (it is `Solaris_8MU4` for MU4).
- *date_time* is the designated date and time copied from `date +%y%m%d%H%M%S` (`yyyymmddHHMMSS` or *year-month-day-hour-minute-second*).

Note - `/var/sadm/install_data/log_file` is a symbolic link to the most recent MU log file.

Note - You will see only the error text when the message appears, not the error code number included here. The error code numbers are included here in case you are writing a script that calls the `install_mu` or `backout_mu` and your script needs to know the return values for the failure conditions.

Error Code 1:

signal detected.

`install_mu` (`backout_mu`) is terminating.

Explanation and recommended action: You interrupted `install_mu` (or `backout_mu`) by pressing Control-C. Reinvoke the program. If you reinvoke `install_mu`, error messages about previously applied patches will appear in the log file. Ignore the error messages.

Error Code 2:

`install_mu` (`backout_mu`) is unable to find the `INST_RELEASE` file for the target file system. This file must be present for `install_mu` (`backout_mu`) to function correctly.

Explanation and recommended action: The program cannot find the file `/var/sadm/system/admin/INST_RELEASE` in the client's root area. The client was not created properly or has become corrupted. Back up the client, then remove and re-create it.

Error Code 3:

ERROR: Cannot find `$xcommand` which is required for proper execution of `install_mu` (`backout_mu`).

Explanation and recommended action: `install_mu` and `backout_mu` require certain system utilities (for example `awk`, `sed`, `grep`) to be present in the server's `/usr/bin` and `/usr/sbin` directories. One of these utilities is missing. Contact your system administrator for assistance.

Error Code 4:

The `-B` and `-d` arguments are mutually exclusive.

Explanation and recommended action: The `-d` option requests that no backout data be saved. The `-B` option specifies a directory to store backout data. You cannot use these two options together. Reinvoke `install_mu` with only one of these options.

Error Code 5:

The `-p` parameter must be a directory. `$uPATCHDIR` is not a directory.

Explanation and recommended action: You selected the `-p` option and supplied a path that is not a valid directory. Reinvoke `install_mu` (or `backout_mu`) with a valid path to the `-p` option.

Error Code 6:

The `-B` parameter must be a directory. `$1` is not a directory.

Explanation and recommended action: You supplied an option to `-B` that is not a directory. Reinvoke `install_mu` (or `backout_mu`) with a valid path to the `-B` option.

Error Code 7:

Permissions on backout directory `$BACKOUTDIR` not adequate.

Explanation and recommended action: You supplied an option to `-B` that is not a writable directory. Contact your system administrator for assistance.

Error Code 10:

Invalid option.

Explanation and recommended action: You selected an unrecognized option. Read the usage message displayed and reinvoke `install_mu` (or `backout_mu`).

Error Code 11:

Can't write to Log File: `$LOGFILE`

Explanation and recommended action: `install_mu` and `backout_mu` need to write its log into the `/var/sadm/install_data` directory. Check that the `install_data` directory is writable, then reinvoke `install_mu` (or `backout_mu`).

Error Code 12:

`SUNWcar` (core architecture root) package does not exist in `/var/sadm/pkg`.

Explanation and recommended action: The `/var/sadm/pkg/SUNWcar` directory is missing in the client or server's root area. Your client or server has become corrupted. Contact your system administrator for assistance.

Error Code 13:

`install_mu` (`backout_mu`) only supports `sparc` and `i386` architectures. `install_mu` (`backout_mu`) has detected `ARCH=$LPROC`.

Explanation and recommended action: You ran `install_mu` (or `backout_mu`) on a system whose architecture is not `SPARC` or `i386`. Reinvoke `install_mu` (or `backout_mu`) on a supported platform.

Error Code 14:

`-p` parameter does not point to a directory containing a `.order` file. Looked in `$uPATCHDIR` and in `$uPATCHDIR/$MU_TOP/$LPROC/Patches`.

Explanation and recommended action: You provided a path to a patch directory but `install_mu` could not find a `.order` file in that directory, which it needs to determine the correct patch installation order. `install_mu` (or `backout_mu`)

looked in *\$path_you_specified* and in *\$path_you_specified/MU/\$arch/Patches*, where *\$arch* is either “sparc” or “i386.” Check for the existence of a *.order* file and reinvoke *install_mu* (or *backout_mu*).

Error Code 15:

install_mu cannot locate patch order (*.order*) file. Paths searched: *./\$LPROC/Patches*, *\$MU_TOP/\$LPROC/Patches*, */cdrom/cdrom0/\$LPROC/Patches*, *./\$uPATCHDIR*, and *./\$uPATCHDIR/\$MU_TOP/\$LPROC/Patches*.

Explanation and recommended action: You did not supply *install_mu* (or *backout_mu*) with the *-p* option to identify the patch directory and *install_mu* (or *backout_mu*) could not locate the patch directory. Reinvoke *install_mu* (or *backout_mu*) with the *-p* option.

Error Code 16:

You must be root to execute this script.

Explanation and recommended action: You need root privileges to run *install_mu* or *backout_mu* because only user root can apply and remove patches. Reinvoke the program as root.

Error Code 17:

install_mu (*backout_mu*) can only patch version 2.8 systems. Target system is version *\$TrgOSVers*.

Explanation and recommended action: You asked *install_mu* to apply patches to a server or client not running Solaris 8, or you asked *backout_mu* to back out patches from a server or client not running Solaris 8. *install_mu* and *backout_mu* must be run on a Solaris 8 system.

Error Code 22:

Not enough disk space to apply entire patch set.

Explanation and recommended action: *install_mu* analyzed your system and determined that not enough disk space was on one or more file systems to install the entire patch set. Make disk space available in the deficient file systems reported and reinvoke *install_mu*. If you believe that you have enough disk space to apply the Maintenance Update, reinvoke *install_mu* with the *-f* option.

Error Code 23:

Not enough disk space to save patch backout data.

Explanation and recommended action: *install_mu* analyzed your system and determined that not enough disk space was in the backout directory to save patch backout data. Select a backout directory with enough space, then reinvoke

install_mu. If you believe that you really have enough disk space in the backout directory, reinvoke install_mu with the -f option.

Error Code 24:

Dry run disk space check failed.

Explanation and recommended action: install_mu invokes pkgadd with a special option to check for sufficient disk space. pkgadd failed, probably because / or /var is very low on disk space or because your system has become corrupted. Contact your system administrator for assistance.

Error Code 25:

The -f and -D options are mutually exclusive.

Explanation and recommended action: The -f option instructs install_mu to skip the dry-run disk space calculation phase. The -D option requests that only the dry-run calculations be made. Choose one option, but not both.

Error Code 27:

Cannot find state file. Looked for a file of the form /var/sadm/install_data/.mu_state.\${root_or_usr.date_time}.

Explanation and recommended action: backout_mu requires a file containing a list of the patches install_mu applied in order to know which patches to back out. If this file is missing, backout_mu cannot function. To remove the MU4 patch set, run the backout_mu program from the MU4 software distribution.

Solaris 8 Maintenance Update 4 Contents

This chapter provides the contents of the Solaris 8 MU4.

For example, the following patch:

108561-02 : CDE 1.4 Window Manager Features Patch

4301525 4301522 4299651 4301229 4300013 4303415 4304468 4302626

lists all parts of a patch where:

- 108561-02 is the patch ID number
- CDE 1.4 Window Manager Features Patch is the synopsis patch description
- 4301525 4301522 4299651 4301229 4300013 4303415 4304468 4302626 are the identification numbers of the bugs fixed by patch ID 108561-02
