Copyright 2003 Sun Microsystems, Inc., 4150 Network Circle, Santa Clara, California 95054, U.S.A. All rights reserved.

Sun Microsystems, Inc. has intellectual property rights relating to technology embodied in the product that is described in this document. In particular, and without limitation, these intellectual property rights may include one or more of the U.S. patents listed at <http://www.sun.com/patents>, and one or more additional patents or pending patent applications in the U.S. and in other countries.

This document and the product to which it pertains are distributed under licenses restricting their use, copying, distribution, and decompilation. No part of the product or of this document may be reproduced in any form by any means without prior written authorization of Sun and its licensors, if any.

Third-party software, including font technology, is copyrighted and licensed from Sun suppliers.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, AnswerBook2, docs.sun.com, Sun Enterprise, OpenBoot, Sun Enterprise Authentication Mechanism, Sun Fast Ethernet, Sun Quad Fast Ethernet, Xterminal, StarOffice, SunHSI/S, SunHSI/P, SunFDDI, Ultra, Sun MediaCenter, JDK, SunATM, SunScreen, Sun Enterprise SyMON, Power Management, SunVTS, Solstice DiskSuite, SunForum, Sun StorEdge, SunSolve, SunSwift, Sun Fire, Starfire, Sun Blade, Netra, Java, and Solaris are trademarks, registered trademarks, or service marks of Sun Microsystems, Inc. in the U.S. and other countries.

All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc.

The OPEN LOOK and Sun™ Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

OpenGL® is a registered trademark of Silicon Graphics, Inc.

U.S. Government Rights—Commercial use. Government users are subject to the Sun Microsystems, Inc. standard license agreement and applicable provisions of the FAR and its supplements.

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Copyright 2003 Sun Microsystems, Inc., 4150 Network Circle, Santa Clara, California 95054, Etats-Unis. Tous droits réservés.

Sun Microsystems, Inc. a les droits de propriété intellectuels relatants à la technologie incorporée dans le produit qui est décrit dans ce document. En particulier, et sans la limitation, ces droits de propriété intellectuels peuvent inclure un ou plus des brevets américains énumérés à <http://www.sun.com/patents> et un ou les brevets plus supplémentaires ou les applications de brevet en attente dans les Etats-Unis et dans les autres pays.

Ce produit ou document est protégé par un copyright et distribué avec des licences qui en restreignent l'utilisation, la copie, la distribution, et la décompilation. Aucune partie de ce produit ou document ne peut être reproduite sous aucune forme, par quelque moyen que ce soit, sans l'autorisation préalable et écrite de Sun et de ses bailleurs de licence, s'il y en a.

Le logiciel détenu par des tiers, et qui comprend la technologie relative aux polices de caractères, est protégé par un copyright et licencié par des fournisseurs de Sun.

Des parties de ce produit pourront être dérivées des systèmes Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays et licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, AnswerBook2, docs.sun.com, Sun Enterprise, OpenBoot, Sun Enterprise Authentication Mechanism, Sun Fast Ethernet, Sun Quad Fast Ethernet, Xterminal, StarOffice, SunHSI/S, SunHSI/P, SunFDDI, Ultra, Sun MediaCenter, JDK, SunATM, SunScreen, Sun Enterprise SyMON, Power Management, SunVTS, Solstice DiskSuite, SunForum, Sun StorEdge, SunSolve, SunSwift, Sun Fire, Starfire, Sun Blade, Netra, Java, et Solaris sont des marques de fabrique ou des marques déposées de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays.

Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

L'interface d'utilisation graphique OPEN LOOK et Sun™ a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciées de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui en outre se conforment aux licences écrites de Sun.

LA DOCUMENTATION EST FOURNIE "EN L'ÉTAT" ET TOUTES AUTRES CONDITIONS, DECLARATIONS ET GARANTIES EXPRESSES OU TACITES SONT FORMELLEMENT EXCLUES, DANS LA MESURE AUTORISÉE PAR LA LOI APPLICABLE, Y COMPRIS NOTAMMENT TOUTE GARANTIE IMPLICITE RELATIVE A LA QUALITE MARCHANDE, A L'APTITUDE A UNE UTILISATION PARTICULIERE OU A L'ABSENCE DE CONTREFAÇON.

Late-Breaking News

This manual provides the following information:

- Late-breaking news (this chapter)
- End-of-support and future end-of-support statements (Chapter 2)
- Open issues (Chapter 3)
- Alternate Pathing issues (Chapter 4)
- Sun Fire 6800/4810/4800/3800 issues (Chapter 5)
- Sun midrange system open issues (Chapter 6)
- Sun Enterprise™ 10000 server issues (Chapter 7)
- Sun Management Center license terms (Chapter 8)
- Patches available since Solaris 8 2/02 (Chapter 9)

This manual supplements the *Solaris 8 HW 7/03 Sun Hardware Platform Guide* and the *Solaris 8 2/02 Release Notes*.

Note – Some documents and CDs provided with this release have names based on the Solaris 8 2/02 release. These are included intentionally for use with the Solaris 8 HW 7/03 operating environment. The contents of these documents and CDs have not been changed since the earlier release.

Release Notes Update

New information that becomes available between the time this document goes to press and the release of the Solaris™ 8 HW 7/03 operating environment is available in this section.

No OEM Content in This Release

The Solaris 8 HW 7/03 media is intended only for installation on Sun Fire B100s, Sun Fire B10n, Sun Fire V210, Sun Fire V240, Sun Fire V250, Sun Fire V440, Sun Blade 1500, and Sun Blade 2500 systems. It includes no new functionality other than support for these systems. Customers installing the Solaris 8 operating system on systems other than those listed above are advised to use the Solaris 8 2/02 update instead, and may choose to also add standard patches found on the SunSolve website:

<http://sunsolve.sun.com/>

Patches included in this platform-specific release that are not in the Solaris 8 2/02 update are listed by number in Chapter 9 of these release notes.

Unbundled Product Support

Although the Solaris 8 HW 7/03 software is designed and tested to be compatible with previous releases, some applications may not be fully ABI-compliant. Contact the supplier of the unbundled product directly for information about compatibility.

If you are upgrading from an existing version of Solaris software and have installed unbundled products, either from Sun or from a different company, you must ensure that all those products are supported on the Solaris 8 HW 7/03 operating environment prior to upgrading. Depending on the status of each unbundled product, you have three options for each unbundled product:

- Verify that the existing version of the unbundled product is supported on the Solaris 8 HW 7/03 operating environment.
- Acquire and install a new version of the unbundled product that is supported on the Solaris 8 HW 7/03 operating environment. Note that in this case you may need to remove the previous version of the unbundled product prior to upgrading to the Solaris 8 HW 7/03 operating environment. See the unbundled product documentation for more details.
- Remove the unbundled product prior to upgrading to the Solaris 8 HW 7/03 operating environment.

For additional information contact the supplier of the unbundled product or your service provider or go to:

<http://sunsolve.sun.com/pubpatch>

Documents on the Solaris 8 HW 7/03 Software Supplement CD

Note – In this document, the CD labeled “Solaris 8 HW 7/03 Software Supplement” is called the “Supplement CD”.

[TABLE 1-1](#) lists some documents available on the Supplement CD that are not included in AnswerBook™ or man page collections.

TABLE 1-1 Documents on the Supplement CD

System_Management_Services_1.2/Docs/816-2528-10.pdf	<i>System Management Services (SMS) 1.2 Reference Manual</i>

Note – The `_en` indicates an English language document. Other languages may be indicated, depending on locale.

The Supplement CD also contains other documentation in AnswerBook packages and in man page packages. The documentation in AnswerBook packages can only be read through the AnswerBook2™ server software provided on the Solaris Documentation CD. Documents in the man page packages can only be read through the `man` command. Refer to the *Solaris 8 HW 7/03 Sun Hardware Platform Guide* for details on installing these packages from the Supplement CD.

Flash PROM Update for 64-Bit Operations

Some sun4u systems need to be updated to a higher level of OpenBoot™ firmware in the flash PROM before they can run the 64-bit mode of the Solaris 8 HW 7/03 operating environment. Systems that can only run the 32-bit mode (such as those in the sun4d and sun4m platform groups) do not require updated firmware to run Solaris 8 HW 7/03 software.

The only systems that may require this flash PROM update are the following:

- Sun Ultra™ 1
- Ultra 2
- Ultra 450 and Sun Enterprise 450
- Sun Enterprise 3000, 4000, 5000, and 6000 systems

See the *Solaris 8 HW 7/03 Sun Hardware Platform Guide* for instructions for determining whether your system needs a flash PROM update and for instructions on performing that update.

For the Ultra and Ultra 2 systems, an antistatic wrist strap may be required for the update. If you need a wrist strap, send e-mail to strap@sun.com.

Flash PROM Update CD No Longer Included

As of Solaris 8 7/01, the Flash PROM multimedia AnswerBook CD is no longer available. Up-to-date instructions for updating flash PROM are still available in the *Solaris 8 HW 7/03 Sun Hardware Platform Guide*.

Removable Media Manager Issues

The Removable Media Manager replaces the “Open Floppy” and “Open CD-ROM” options formerly found in the CDE menus and front panel. For related bug descriptions and workarounds, refer to the “Common Desktop Environment Bugs” section of “Solaris Runtime Issues” in the *Solaris 8 (SPARC Platform Edition) 10/00 Release Notes Update* on <http://docs.sun.com>.

Patch Enables Booting From DVD-ROM Media

The Supplement CD contains a patch that enables some DVD-ROM drives installed on Sun hardware to boot from DVD-ROM media. This patch may need to be applied to your hardware before you can boot a software product supplied on DVD-ROM.

This patch updates firmware in the Toshiba 1401 DVD-ROM drive. You can find Patch 111649 on the Supplement CD in this directory:

```
DVD_Firmware/Patches
```

See the README file in this directory for instructions on installing the patch. Be sure to read and follow all the cautions and warnings in this README file before you install the patch.

Patch 111649 is associated with Bug ID 4467424.

Patches Enable StarOffice 6.0

To install and run StarOffice 6.0 with Solaris 8 HW 7/03, make sure that the following patches are installed on your system:

- 108434-09 or later
- 108435-09 or later

DVD-ROM/CD-ROM Drives on Headless Systems (BugID 4365497)

Power management of interactive devices such as removable media is linked with power management of your monitor and the graphics card that drives your monitor. If your screen is active, devices such as the CD-ROM drive and floppy disk are kept at full-power mode. This means that if you are running a system without a monitor, these devices may go into low-power mode. If you want to restore power to the CD or floppy, simply type `volcheck` to cause the OS to get the latest status from each removable device.

Alternatively, you can disable power management on your system by using the `dtpower` GUI. Then the devices are not put into low-power mode even when on a headless system, but run at full power all the time. This is not a bug, but is the intended behavior.

Maintenance Update CD

Future updates to the Solaris operating environment might no longer include the Maintenance Update (MU) CD. The preferred mechanism for updating a Solaris release—for example, to update from the Solaris 8 6/00 operating environment to the Solaris 8 1/01 operating environment—is to use the "upgrade" mechanism (see *Solaris 8 Advanced Installation Guide, SPARC Platform Edition*, Chapter 3). The MU CD does not include all of what comprises a Solaris update, and takes longer to install than an upgrade.

In cases where the MU method is still considered necessary, the MU image can be obtained from the web at:

<http://sunsolve.sun.com>

Installing Supplement CD Products From DVD

If you are installing Solaris using a DVD and want to install any products from the Supplement CD, select the “custom installation” option in the “Select Type of Install” window.

Patch 114152-01 Available

Patch 114152-01 is now available on SunSolve for use with Solaris 8 HW 7/03. This patch fixes two previous bugs: BugID 4775194 (which affected any user who installed the Japanese BCP package), and BugID 4775198.

This patch can be obtained from the web at:

<http://sunsolve.sun.com>

End-of-Support Products

Products Not Supported in the Solaris 8 Operating Environment

Support for the following products has been discontinued. For more information, contact your support provider.

Sun4c Systems

The following sun4c architecture systems and servers based on these systems are not supported by this Solaris release:

- SPARCstation™ SLC
- SPARCstation ELC
- SPARCstation IPC
- SPARCstation IPX
- SPARCstation 1
- SPARCstation 1+
- SPARCstation 2

Note – All hardware options (such as SCSI devices) and supported configurations that are dependent upon the sun4c architecture are no longer supported. A list of these options is included in the Supplement CD /Docs/HWPG directory in the EOS.html file.

SPARCstation Voyager

SPARCstation Voyager™ systems are not supported by this Solaris release.

SPARC Xterminal 1

SPARC Xterminal 1™ systems are not supported by this Solaris release.

ShowMe TV

ShowMe TV™ is not supported by this Solaris release.

Future End-of-Support Products

Support for the following products may be discontinued in future releases. For more information, contact your service provider.

sun4d Servers (32-bit only)

The following sun4d architecture servers may no longer be supported in a future release:

- SPARCserver™ 1000 systems
- SPARCcenter 2000 systems

Hardware options that are dependent on the sun4d architecture may no longer be supported in a future release.

Ethernet Quad Drivers `qe` and `qec`

Ethernet Quad drivers `qe` and `qec` may no longer be supported in a future release.

PC File Viewer

PC file viewer may no longer be supported in a future release.

Alternate Pathing Multipath I/O

Alternate Pathing (AP) multipath I/O technology may no longer be supported in a future release. See [Chapter 4](#) for further details.

SunHSI/S, SunFDDI/S, SunFDDI/P, 1e Drivers

SunHSI™/S, 1e, SunFDDI™/S, and SunFDDI/P drivers may no longer be supported in a future release.

Token Ring Network Drivers

SBus Token Ring and PCI bus Token Ring network drivers may no longer be supported in a future release.

SPC Driver

The SPC S-Bus interface card driver may no longer be supported in a future release. The SPC card is a serial parallel controller (S-Bus, 8-port serial, 1 parallel).

Sun4m Platform Group

The sun4m platform group may no longer be supported in a future release. This would affect the following platforms:

- SPARCclassic
- SPARCstation™ LX / LX+
- SPARCstation 4
- SPARCstation 5
- SPARCstation 10
- SPARCstation 20

Open Issues

StarOffice Support

The Sun StarOffice™ Knowledge Database is the current customer support resource for StarOffice 5.2. For more information, refer to:

http://www.sun.com/software/product_categories/desktop_applications.html

Booting From Partitions Greater Than 2 Gbytes (BugID 1234177)

Due to PROM limitations, no sun4d and sun4m architectures boot from partitions greater than 2 Gbytes. These systems fail with the following message:

```
bootblk: can't find the boot program
```

Note – All sun4u architectures support booting from larger partitions.

One related bug (4023466) reports a problem with `re-preinstall` where the boot image for large disks creates root partitions greater than 2 Gbytes. System administrators are cautioned not to use `re-preinstall` on sun4d or on sun4m systems with large root disks (4 Gbytes and greater).

Network Drivers Installed by Default

The Computer Systems Installer CD automatically installs the Network Drivers from the Supplement CD. Drivers for the SunATM™, SunHSI/S, SunHSI/P, SunFDDI/S, and SunFDDI/P cards are now installed by default when the Solaris 8 HW 7/03 operating environment is installed. Error messages might be displayed if you do not have some of the corresponding hardware installed. You can ignore these error messages.

Serial Parallel Controller Driver Does Not Support Dynamic Reconfiguration (BugID 4177805)

This `spc` driver does not support Dynamic Reconfiguration features in the Solaris 8 operating environment.

Booting a Sun Enterprise 10000 System in 32-Bit Mode (BugID 4348354)

Sun Enterprise 10000 systems with 64 Gbytes of memory cannot boot the Solaris 8 7/03 operating environment in 32-bit mode.

Some DVD and CD-ROM Drives Fail to Boot Solaris (BugID 4397457)

The default timeout value for the SCSI portion of the SunSwift PCI Ethernet/SCSI host adapter (X1032A) card does not meet the timeout requirements of the Sun SCSI DVDROM drive (X6168A). With marginal media, the DVD-ROM occasionally experiences timeout errors. The only exceptions are Sun Fire 6800, 4810, 4800, and 3800 systems, which overwrite the SCSI timeout value via OBP.

Workaround for other platforms: use the on-board SCSI interfaces or DVD-ROM compatible SCSI adapters, such as X1018A (SBus: F501-2739-xx) or X6540A (PCI: F375-0005-xx).

FDDI May Hang During Heavy Load (BugIDs 4485758, 4174861, 4486543)

The PCI FDDI card has known hardware problems related to `DTXSUSP` (DMA TX process suspend interrupt) and `DRXSUSP` (DMA RX process suspend interrupt) bits in the `MAIN_CONTROL` and `MAIN_STATUS` registers. These hardware bugs minimally affect FDDI functionality under normal conditions. However, under a *very* heavy TX or RX load, the card posts an unexpected interrupt. The system posts the error message, "Interrupt level 6 is not serviced". After 20 such errors, the `pcipsy` driver shuts down interrupt processing for the FDDI and hangs FDDI.

DR Commands Hang Waiting for `rcm_daemon` While Running `ipc`, `vm`, and `ism` Stress (BugID 4508927)

In rare cases when a quiesce of the Solaris operating environment fails to stop certain user threads, other user threads may not be restarted and remain in a stopped state. Depending on the threads affected, applications running on the domain may stop running and other DR operations may not be possible until the domain is rebooted.

Workaround: To avoid this problem, do not use DR to remove a board that contains permanent memory.

Monitor Goes Blank When Stop-A Is Pressed During Screen Lock (BugID 4519346)

The monitor may go blank if all of the following conditions occur:

- Your frame buffer card is a Creator3D or an Elite3D.
- The "Blank Screen" screen saver is used.
- Stop-A is pressed while in the blank screen mode.

Workaround: If your screen saver is enabled, choose any pattern other than "Blank Screen."

U-Code Does Not Reload After IFB Driver Unloaded (BugID 4532844)

At the command line login, systems with Expert3D or Expert3D-Lite cards may be unable to start a window system or dtlogin.

Workaround:

1. Remotely log into the troubled system as superuser.
2. Stop all `ifbdaemon` processes:

```
# sh /etc/init.d/ifbinit stop
```

3. Start all `ifbdaemon` processes:

```
# sh /etc/init.d/ifbinit start
```

QFE May Panic the System During Heavy Load (BugIDs 4510631, 4517740)

In rare cases, Sun Fire 6800, 4810, 4800, or 3800 systems configured with multiple network interfaces may panic under a heavy traffic load. Also in rare cases, Sun Enterprise 10000 systems may panic under an extremely heavy network load.

SunScreen SKIP 1.1.1 Not Supported in Solaris 8 HW 7/03 Operating Environment

If you have SunScreen™ SKIP 1.1.1 software currently installed on your system, you should remove the SKIP packages before installing or upgrading to the Solaris 8 HW 7/03 operating environment. The packages you should remove are: SICGbdcdr, SICGc3des, SICGcdes, SICGcrc2, SICGcrc4, SICGcsafe, SICGes, SICGkdsup, SICGkeymg, SICGkisup.

SunVTS 5.1 Patch Set 3 (PS3) Issues

The following issues apply to the SunVTS™ 5.1 PS3 product.

New Features and Tests for This Release

The SunVTS 5.1 PS3 software is compatible with Solaris 8 2/02, Solaris 8 HW 12/02, Solaris 8 HW 5/03, Solaris 8 HW 7/03, Solaris 9, Solaris 9 9/02, Solaris 9 12/02, Solaris 9 4/03, and Solaris 9 8/03 operating environments. The following new features and tests are added to the SunVTS 5.1 PS3 release:

- Level 2 sram test (`12sramtest`) – Tests the functionality of the Level 2 sram.
- Chip Multi-Threading test (`cmttest`) – Verifies the functionality of multiprocessing hardware.

Note – The SunPCi™ II Test (`sunpci2test`) tests both the SunPCi II and SunPCi III cards in SunVTS 5.1 PS2.

Note – All new features, tests, and test enhancements that are released in SunVTS 5.1 PS3 are documented in the *SunVTS 5.1 Patch Set 3 Documentation Supplement* (817-2116-10). This document is included on the Solaris Software Supplement CD and is available at <http://docs.sun.com>.

Refer to the *SunVTS 5.1 Patch Set 3 Documentation Supplement* for details about the new features and tests offered in this release.

Note – The name of the Remote System Control test (`rsctest`) has been changed to System Service Processor test (`ssptest`) in SunVTS 5.1 PS1. The reason for this change is that `ssptest` tests the Advanced Lights-Out Management (ALOM) hardware in addition to both Remote System Control 1.0 and 2.0 hardware.

Note – The SPARCstorage® Array Controller Test (`plntest`) will be discontinued in this release of SunVTS.

Online Help Documentation

The online help documentation available with the SunVTS 5.1 software includes a chapter describing the RAM test (`ramtest`). This test is not supported in SunVTS 5.1.

SunVTS 5.1 Test Reference Manual Errata

This section lists corrections to errors in the Supported Test Modes tables of the following test chapters in the SunVTS 5.1 Test Reference Manual:

- Compact Disk Test (`cdtest`)

Online test mode is supported in SunVTS 5.1.

- CPU Test (`cputest`)

Online test mode is supported in SunVTS 5.1.

- Disk and Floppy Drives Test (`disktest`)

Online test mode is supported in SunVTS 5.1.

- DVD Test (`dvdttest`)

Online test mode is supported in SunVTS 5.1.

- ECP 1284 Parallel Port Printer Test (`ecpptest`)

Online test mode is not supported in SunVTS 5.1.

- Sun StorEdge A5x00 Test (`enatest`)

Functional and Online test modes are supported in SunVTS 5.1.

- Sun StorEdge 1000 Enclosure Test (`enctest`)

Online test mode is supported in SunVTS 5.1.

- Environmental Test (`env2test`)

Online and Exclusive test modes are not supported in SunVTS 5.1.

- Environmental Test (`env4test`)

Connection test mode is supported in SunVTS 5.1

- Floating Point Unit Test (`fputest`)

Online and Exclusive test modes are supported in SunVTS 5.1.

- Cache Consistency Test (`mpconstest`)

Only Exclusive test mode is supported in SunVTS 5.1.

- Multiprocessor Test (`mpptest`)

Only Exclusive test mode is supported in SunVTS 5.1.

- Qlogic 2202 Board Test (`qlctest`)

Only Exclusive and Connection test modes are supported in SunVTS 5.1.

- Serial Ports Test (`sptest`)

Online test mode is not supported in SunVTS 5.1.

- System Service Processor Test (`ssptest`)

Exclusive test mode is supported in SunVTS 5.1.

Functional test mode is not supported in SunVTS 5.1

- SunHSI Board Test (`sunlink`)

Online test mode is not supported in SunVTS 5.1.

- System Test (`sytest`)

Connection test mode is not supported in SunVTS 5.1.

- Tape Drive Test (`tapetest`)

Online test mode is not supported in SunVTS 5.1.

- S24 Frame Buffer Test (`tcxtest`)

Connection test mode is supported in SunVTS 5.1.

SunVTS 5.1 User's Guide Errata

In Appendix A, SunVTS Window and Dialog Box Reference, Table A-11 indicates the incorrect default value of 0 (zero) for the Max Errors field of the example systest Test Parameter Options dialog box in Figure A-11. The correct default value of the Max Errors field of the systest Test Parameter Options dialog box is 1 (one) as indicated in Figure A-11.

Also in Appendix A, Table A-13 indicates the incorrect default value of 0 (zero) for the Max System Errors field of the example systest Threshold Options dialog box in Figure A-13. The correct default value of the Max System Errors field of the systest Threshold Options dialog box is 1 (one) as indicated in Figure A-13.

Possible Installation Issues

You might encounter an installation problem when you attempt to install SunVTS with an installation program other than the `pkgadd` command as described in the following subsections.

If SunVTS 5.1 software is installed in the default `/opt` directory, you cannot install a subsequent SunVTS 5.1 Patch Set release in a different directory on the same system. When this duplicate installation is attempted with `pkgadd`, the following error message occurs:

```
pkgadd: ERROR: SUNWvts is already installed at /opt. Cannot create
a duplicate installation.
```

The reason for this error is that the base package revision is the same for both SunVTS 5.1 and any subsequent SunVTS 5.1 Patch Set release. When a SunVTS 5.1 Patch Set release is installed in the default `/opt` directory which already has SunVTS 5.1 software installed, the installation completes successfully with the following warning message:

```
This appears to be an attempt to install the same architecture and
version of a package which is already installed. This
installation will attempt to overwrite this package.
```

Installation Package Dependency Issue for Solaris 8 (RFE ID 4823716)

From SunVTS 5.1, the SunVTS software depends on XML packages that are not included with the Solaris 8 2/02 distribution. For Solaris 9, all of the prerequisite packages are installed with the End User Solaris Software Group as a minimum.

Note – The additional XML packages are available on the Solaris 8 HW 12/02 through Solaris 8 HW 7/03 Software Supplement CD-ROMs and not on the Solaris 8 2/02 Software Supplement CD-ROM. Although SunVTS 5.1 installation is supported on Solaris 8 2/02, the XML packages are not included in the Solaris 8 2/02 distribution.

You may install SunVTS 5.1 on Solaris 8 2/02, Solaris 8 HW 12/02, Solaris 8 HW 5/03, or Solaris 8 HW 7/03. If you choose to install SunVTS 5.1 or later on either of these releases, you must separately install the required XML packages (SUNWlxml[32-bit] and SUNWlxmlx[64-bit]) from either the Solaris 8 HW 12/02, Solaris 8 HW 5/03, or Solaris 8 HW 7/03 Software Supplement CD-ROM.

Note – SunVTS 4.6, which is delivered on the Solaris 8 2/02 Software Supplement CD-ROM, does not have the XML packages dependency and is supported on Solaris 8 2/02. SunVTS 5.1 is also supported on Solaris 8 2/02 if the XML packages are installed from either the Solaris 8 HW 12/02, Solaris 8 HW 5/03, or Solaris 8 HW 7/03 Software Supplement CD-ROM.

For Solaris 8 releases:

1. Install the minimum End User Solaris Software Group.
2. Install the XML packages SUNWlxml(32 bit) and SUNWlxmlx(64 bit) from either the Solaris 8 HW 12/02, Solaris 8 HW 5/03, or Solaris 8 HW 7/03 Software Supplement CD-ROM.

Note – These XML packages are not available in the Solaris 8 2/02 distribution.

3. Install SUNWzlib(32 bit) and SUNWzlibx(64 bit) packages from the Entire Solaris Software Group from either the Solaris 8 2/02, Solaris 8 HW 12/02, Solaris 8 HW 5/03, or Solaris 8 HW 7/03 Software CD-ROM.

Note – The XML packages depend on the SUNWzlib(32 bit) and SUNWzlibx(64 bit) packages which are not part of the End User Solaris Software Group for Solaris 8 2/02, Solaris 8 HW 12/02, Solaris 8 HW 5/03, or Solaris 8 HW 7/03.

4. Install the optional `SUNWcpc(x)/SUNWcpcu(x)` packages only if you want to enable displaying certain performance counters for certain CPU and memory tests. Otherwise, these packages need not be installed.

The `SUNWcpc(x)/SUNWcpcu(x)` packages are included in the Entire Solaris Software Group for Solaris 8 2/02, Solaris 8 HW 12/02, Solaris 8 HW 5/03, and Solaris HW 7/03. These packages are not included in the End User Solaris Software Group for Solaris 8 2/02, Solaris 8 HW 12/02, Solaris 8 HW 5/03, nor Solaris 8 HW 7/03.

For Solaris 9 and later releases:

1. Install the End User Solaris Software Group (or any software group).

The XML packages (`SUNWlxml[32-bit]` and `SUNWlxmlx[64-bit]`) and the `SUNWzlib` packages (`SUNWzlib[32 bit]` and `SUNWzlibx[64 bit]`) are part of the End User Solaris Software Group (and Entire Solaris Software Groups) for Solaris 9 releases.

2. Install the optional `SUNWcpc(x)/SUNWcpcu(x)` packages only if you want to enable displaying certain performance counters for certain CPU and memory tests. Otherwise, these packages need not be installed.

The `SUNWcpc(x)/SUNWcpcu(x)` packages are part of the Entire Solaris Software Group and not the End User Solaris Software Group.

Installation Issue:

32-bit Only Systems and Web Start 2.0 (Bug ID 4257539)

Web Start 2.0 may not install SunVTS on systems that do not have the Solaris 64-bit environment installed. Web Start 2.0 removes the SunVTS 32-bit packages when the SunVTS 64-bit packages cause the installation to suspend.

Workaround: Use the `pkgadd` command to install the 32-bit SunVTS packages as described in the *SunVTS 5.1 User's Guide*.

Installation Issue:

Security and Web Start 2.0 (Bug ID 4362563)

When you install SunVTS using Web Start 2.0, you are not prompted to enable the Sun Enterprise Authentication Mechanism™ (SEAM) Kerberos v5, SunVTS security feature. The installation defaults in a way that installs SunVTS without this high level of security. If you do not want the high-level security, there is no problem.

Workaround: To enable the high-level SEAM security, use the `pkgadd` command to install SunVTS packages as described in the *SunVTS 5.1 User's Guide*.

Installation Issue:

The Installation Directory With Web Start 2.0 Is Not User-Definable (Bug ID 4243921)

When you attempt to install SunVTS using Web Start 2.0, you are unable to change the directory where SunVTS is installed. SunVTS will be installed in `/opt`.

Workaround: Use the `pkgadd -a none` command to install SunVTS in the directory of your choice as described in the *SunVTS 5.1 User's Guide*.

Installation Recommendation:

Install and Uninstall Using the Same Program

Use the same tool or utility for installation and removal of the SunVTS software. If you use `pkgadd` for installation, use `pkgrm` to uninstall; if you use Web Start for installation, use the Product Registry to uninstall.

Possible Runtime Issues

Using `zulutest` (Bug ID 4753578)

If you perform the Sun XVR-4000 Graphics Accelerator Test (`zulutest`) on a system that was powered on without running X-Windows, you must bring up X-Windows on the Sun XVR-4000 Graphics Accelerator device under test and kill the X-Windows process before performing `zulutest`. Otherwise, the Convolve subtest might fail, and other subtests might also fail.

Note – You must enable multisampling with the `fbconfig` command before performing the following workaround. To perform `zulutest` with X-Windows (CDE) the following workaround is not necessary.

Workaround: To bring up X-Windows on the Sun XVR-4000 Graphics Accelerator device under test, enter the following command:

```
/usr/openwin/bin/Xsun -dev /dev/fbs/device_name &
```

It takes 30 to 45 seconds before Xsun comes up. To kill the Xsun process, enter the following command:

```
pkill -KILL Xsun
```

Once the Xsun process is killed, the `zulutest` can be performed without the incorrect subtest errors.

The Sun XVR-4000 Graphics Accelerator cannot perform video read back in Interlaced and Stereo modes because the Convolve subtest cannot keep up.

For `zulutest` to be able to perform the Convolve subtest, multisampling must be enabled.

Using `pkginfo -c sunvts` Command

The command `pkginfo -c sunvts` does not produce any output in SunVTS 5.1. This is to correctly implement the semantics of the `-c` option of the `pkginfo` command.

Workaround: Use the following command to receive SunVTS 5.1 package information:

```
# pkginfo -l SUNWvts SUNWvtsx SUNWvtsmn
```

You can also use either of the following commands to receive additional SunVTS 5.1 package information:

```
# pkginfo | grep vts  
# showrev -p | grep vts
```

Testing Systems Under High Stress (Bug ID 4827599)

Timeout errors might occur when performing `netlbtst` on Sun Fire systems that have excessive loads incurred from non-network tests that are being performed concurrently. The timeout errors could be caused by the current workload if the packets are held up because of waiting for CPU resources.

In addition, these timeout errors could occur because SunVTS tests are performed at the application level; thus, when a packet is lost or stuck anywhere below the application level, `netlbtst` will report a packet has not been received within the timeout time.

Workaround: Increase the timeout value from the default of 10 seconds to 120 seconds.

Multiple Instances of `fptest` (RFE ID 4741204)

In SunVTS 5.1 PS3 and later releases, a certain number of instances of `fptest` may run in Exclusive test mode in parallel. Note that no two different tests can run in Exclusive mode at the same time. However, the same test can run in parallel on different devices in Exclusive mode. This test-based parallelism is currently available for `fptest` only. The concurrency of `fptest` in Exclusive mode is dynamically set with an optimal value depending on the system resources and is not user-configurable. All other tests, are not executed in parallel even if the device has multiple instances; instead, the instances are executed in sequence.

Using `sutest` (Bug ID 4750344)

Performing `sutest` on a port that is being used as console causes `sutest` to fail.

Workaround: Do not perform `sutest` on a port that is being used as a console.

PCMCIA Issues

The following bugs have been filed against PCMCIA device support in this Solaris release.

Known Bugs

System Appears to Hang When the PC ATA (`pcata`) Module Is `modunloaded` (BugID 4096137)

If there is a PCMCIA I/O card in a slot that has been accessed and the card driver is unloaded (as occurs during `modunload -i 0` at the end of multi-user boot) the system appears to hang.

Workaround: Removing the card may bring the system back.

Booting the Solaris 8 Operating Environment Initially With a 64-bit Kernel May Not Create the Device `/dev/term/pc0`, PC Card Serial Driver (BugID 4162969)

When booting the Solaris 8 operating environment initially with a 64-bit kernel, the `/dev/term/pc0` hardware device node for PC card serial device may not be created.

Workaround: Boot the system with the 32-bit kernel first, then reboot with the 64-bit kernel.

PC File Viewer Issues

Install in the `/opt` Directory

The *Solaris 8 HW 7/03 Sun Hardware Platform Guide* provides installation instructions that might indicate that PC file viewer can be installed in a directory other than the default directory. The instructions are misleading. PC file viewer *must* be installed in the default (`/opt`) directory.

Known Bugs

- Backdrop image is not displayed in PowerPoint97 document (BugID 4159447).
- Cannot display nonstandard fonts in PowerPoint97 (BugID 4159448).
- Excel graph/table in PowerPoint97 document is not displayed (BugID 4159449).
- Cannot display scaled font, colored text, italic-underlined text in PowerPoint97 (BugID 4159450, 4159451, 4159452).
- Copy and paste of certain files into a text editor results in asterisks (*) instead of actual text (BugID 4165089).
- Searching does not work for multibyte (`tch`, `ko`) in PC file viewer (BugID 4151774).
- Wrong string is reversed in PC file viewer search on Japanese locales (BugID 4171815).
- Cannot display TCH Word95 saved in Word97 or PowerPoint97 formats in `zh.TW.BIG5` locale (BugID 4150413).

Documentation Errata

The following documentation errors have been found in the Solaris 8 HW 7/03 documents.

Note – Some documents and CDs provided with this release have names based on the Solaris 8 2/02 release. These are included intentionally for use with the Solaris 8 HW 7/03 operating environment. The contents of these documents and CDs have not been changed since the earlier release.

ShowMe TV Not Supported

The ShowMe TV software is not supported in this Solaris release. References to this product in the *Solaris 8 HW 7/03 Sun Hardware Platform Guide*, *Supplemental License Terms*, and *Roadmap* are not valid.

References to MPxIO Documentation

The *Sun Enterprise 10000 SSP 3.5 User Guide*, *Sun Enterprise 10000 Dynamic Reconfiguration User Guide*, and the *Sun Enterprise 10000 DR Configuration Guide* contain references to a document that is not available, namely the *MPxIO Installation and Configuration Guide*.

The MPxIO product is now called the Sun StorEdge™ Traffic Manager. Information on installing and configuring the Sun StorEdge Traffic Manager is provided in the *Sun StorEdge™ Traffic Manager Software Installation and Configuration Guide*, available on the Sun Network Storage Solutions website:

<http://www.sun.com/storage/san>

To access this document:

1. Go to <http://www.sun.com/storage/san> and click the “Sun StorEdge™ SAN3.0 release Software/Firmware Upgrades and Documentation” link.
2. Sign on or register.
3. Click the “Download STMS Install/Config Guide, Solaris/SPARC (.35 MB)” link.

SSP 3.5 Installation Guide and Release Notes

Page 8: In the description of the `snmpd` memory leaks (Bug ID 4486454), you must be superuser on the main SSP to stop and start SSP daemons, not user `ssp` as indicated in the text.

Pages 75 and 99: The references to the *Solaris 8 Installation Supplement* are incorrect. Refer to the *Solaris 8 Advanced Installation Guide* for details.

`eri(7d)` Man Page

The `eri(7d)` man page incorrectly states that the `eri.conf` file is in the `/kernel/drv/sparcv9/eri.conf` file

The correct location is: `/kernel/drv/eri.conf`

Netra T4/Netra T20 Issues

System Incorrectly Reports Removed Device Links (BugID 4418718)

When calling `luxadm remove_device /dev/rdisk/c1t1d0s2`, the system asks for confirmation and reports that the disk is spinning down and being taken offline. When the disk is removed, pressing Return causes the system to report that the device links are removed.

However, the device links are not removed. The disk can then be re-inserted and used without running the `luxadm insert_device` command. When the command is subsequently run, the system reports that no new devices were added and the following message is produced at the console:

```
bash-2.03# luxadm remove_device /dev/rdisk/clt1d0s2
```

```
WARNING!!! Please ensure that no filesystems are mounted on these device(s).  
All data on these devices should have been backed up.
```

```
The list of devices which will be removed is:
```

```
1: Device name: /dev/rdisk/clt1d0s2  
Node WWN:      2000002037e367e4  
Device Type:Disk device  
Device Paths:  
    /dev/rdisk/clt1d0s2
```

```
Please verify the above list of devices and  
then enter 'c' or <CR> to Continue or 'q' to Quit. [Default: c]:  
stopping: /dev/rdisk/clt1d0s2....Done  
offlining: /dev/rdisk/clt1d0s2....Done
```

```
Hit <Return> after removing the device(s)
```

```
Device: /dev/rdisk/clt1d0s2  
Logical Nodes being removed under /dev/dsk/ and /dev/rdisk:  
    clt1d0s0  
    clt1d0s1  
    clt1d0s2  
    clt1d0s3  
    clt1d0s4  
    clt1d0s5  
    clt1d0s6  
    clt1d0s7
```

```

bash-2.03# luxadm insert_device
Please hit <RETURN> when you have finished adding Fibre Channel Enclosure(s)/
Device(s):

Waiting for Loop Initialization to complete...
No new device(s) were added!!

```

To work around, enter the following when `luxadm remove_device` claims to have completed successfully:

```
# devfsadm -C -c disk
```

Not All USB Zip Drives Found (BugID 4453787)

If four USB Iomega zip drives are attached, `prtconf` indicates that no driver is loaded after the system has booted. `drvconf` starts a system probe that finds only two of the four USB zip drives.

Running `cat` on the `/dev/usb/hub0` file causes the system to add the two zip drives.

Workaround: Do not use more than two zip drives in the current release.

LOMlite2 `reset-x` Does Not Reset CPUs (BugID 4462131)

The LOMlite2 `reset-x` command does not currently reset the CPUs. Look for this functionality in a later revision of the OpenBoot PROM.

LOMlite 2 Lights Out Management Software Release Notes

This release of the Lights Out Management (LOM) software is currently supported on Sun Fire V100, Sun Fire V120, Netra T1, Netra X1, Netra t1, Netra t1400/1405 servers. For configuration and operation instructions for Lights Out Management software, see the relevant chapter in the User Manual that came with the supported server platforms.

Adding the LOMlite2 Software

1. Insert the Supplemental CD and change to the LOMlite 2.0 software directory:

```
# cd /cdrom/cdrom0/Lights_Out_Management_2.0/Product
```

2. Add the LOMlite 2.0 packages, responding `y` to all questions:

```
# pkgadd -d . SUNWlomm SUNWlomr SUNWlomu
```

3. Verify that the LOMlite 2.0 packages were installed:

```
# pkgchk -v SUNWlomm SUNWlomr SUNWlomu
```

The LOMlite2 software is now installed. Continue by adding LOMlite2 Patch 110208 as described in the next section.

Adding LOMlite2 Patch 110208

Ensure you have the latest revision of Patch 110208 from SunSolve (revision -13 or later).

Note – The LOMlite2 software does not function unless this patch is added.

1. Confirm the base LOMlite2 firmware version.

Type #. to change to the lom> prompt, then run version.

```
#.  
lom>version  
  
LOM version:           v4.4-LW2+  
LOM checksum:         387e  
LOM firmware part#    258-7939-12  
Microcontroller:      H8S/2148  
LOM firmware build    Aug 30 2001 18:02:40  
Configuration rev.    v1.2  
  
lom>console
```

The LOM firmware version must not be earlier than 4.5.

2. Type console at the lom> prompt to return to the # prompt.

3. Confirm that the device node is present (via PROM 4.2.4):

```
# prtconf -v  
OBP 4.2.4 2001/06/13 10:10  
# prtconf | grep SUNW,lomv  
SUNW,lomv (driver not attached)
```

4. Copy the patch to a temporary directory (/var/tmp).

Confirm that the patch is present:

```
# cd /var/tmp  
# ls  
110208-13.zip
```

5. Extract the patch:

```
# unzip 110208-13.zip
```

6. Apply the patch:

```
# patchadd 110208-13  
# reboot
```

7. Confirm that the patch has been loaded:

```
# modinfo | grep lomv
```

8. To upgrade the firmware, type:

```
# lom -G default
```

When prompted, type **C** to continue.

Note – This process takes several minutes. Do not turn off the system while the update is progressing.

9. Press Return to redisplay the UNIX prompt.

Note – If the system displays the `ok` prompt, type **go** to return to the UNIX prompt.

10. Check the functionality by running the `lom -a` command:

```
# lom -a
PSUs:
1 OK

Fans:
1 OK speed 90%
2 OK speed 86%
3 OK speed 75%

LOMlite configuration settings:
serial escape character=#
serial event reporting=default
Event reporting level=fatal, warning & information

Serial security=enabled
Disable watchdog on break=enabled
Automatic return to console=disabled
alarm3 mode=user controlled
firmware version=4.5
firmware checksum=1164
product revision=1.4
product ID=Netra T4
.
<truncated>
.
LOMlite led states:
1      on      Power
2      off     Fault
3      off     Supply A
4      off     Supply B
5      on      PSU ok
6      off     PSU fail
#
```

The software is now installed and the system is ready for use.

Sun Remote System Control 2.2 Release Notes

This document deals with Sun Remote System Control (RSC) 2.2 hardware and software issues. For complete information about using RSC, see the *Sun Remote System Control (RSC) 2.2 User's Guide*.

What's New in RSC 2.2

Several new features are available in RSC 2.2:

- The RSC GUI requires an updated version of the Java™ Runtime Environment, Java 2 Standard Edition (J2SE) Runtime Environment Version 1.3.0_02 or greater. You can download the appropriate version from one of these Web sites:
 - Solaris—<http://www.sun.com/solaris/java>
 - Windows—<http://java.sun.com/j2se/1.3/>
- Client support has been added for the Microsoft Windows 2000 operating environment. RSC 2.2 does not support Windows 95.
- Sun Fire V480 servers include a new hardware feature, a Locator LED on the system's front and rear panels. RSC software allows you to toggle the state of these LEDs to help identify a particular system that may be located in a rack with other servers.
- Support for a maximum of 16 RSC user accounts has been added. A maximum of 10 users can be logged in at one time. However, the increased number of user accounts does not affect the limitation of five concurrent `telnet` or GUI login sessions per server.

Before Installing Sun Remote System Control Software

RSC software is included as part of the default installation set for this Solaris Supplement CD. You should install RSC server components on a compatible Solaris server only; you can install the client software on any computer that meets the Solaris or Windows operating environment requirement. You must install and configure the RSC software before you can use RSC.

Important: Before upgrading from a previous version of RSC server software or reinstalling the software, log in to the server as superuser and back up your configuration data using the following commands:

```
# rscadm show > remote_filename
# rscadm usershow >> remote_filename
```

Use a meaningful file name that includes the name of the server that RSC controls. After installation, you can refer to this file to restore your configuration settings if necessary. Reverting to a previous version of RSC server software after installing version 2.2 is not recommended. However, if you do revert, you will need to restore your configuration information and also power cycle the server.

You can install the RSC 2.2 server software package, `SUNWrsc`, on:

- A Sun Fire V480 server running the Solaris 8 2/02 or Solaris 8 HW 7/03 operating environment
- A Sun Fire V880 server running the Solaris 8 7/01 operating environment or another Solaris version that supports the RSC 2.2 product
- A Sun Fire 280R server running the Solaris 8 1/01 operating environment or another Solaris version that supports the RSC 2.2 product
- A Sun Enterprise 250 server running one of the following operating environments:
 - Solaris 2.6
 - Solaris 7
 - Solaris 8

You can install the RSC 2.2 client software packages on:

- Any other computer running the Solaris 2.6, Solaris 7, or Solaris 8 operating environment. The packages are `SUNWrscj` (GUI) and `SUNWrscd` (documentation).
- Any computer running one of the following Microsoft Windows operating environments:
 - Windows 98
 - Windows 2000
 - Windows NT 4.0

The file used to install the RSC GUI and documentation for the Microsoft Windows operating environments is `SunRsc.exe`.

- Client computers require Java 2 Standard Edition (J2SE) Runtime Environment Version 1.3.0_02 or a subsequent 1.3.x version to run RSC 2.2 software. RSC 2.2 software does not run using J2SE Runtime Environment Version 1.2.x. You can download the appropriate version from one of these Web sites:
 - Solaris—<http://www.sun.com/solaris/java>

- Windows—<http://java.sun.com/j2se/1.3/>

Installation on the Solaris operating environment places the *Sun Remote System Control (RSC) 2.2 User's Guide* in the location `/opt/rsc/doc/locale/pdf/user_guide.pdf`. Installation on the Windows operating environment places the User's Guide in the location `C:\Program Files\Sun Microsystems\Remote System Control\doc\locale\pdf\user_guide.pdf`.

The following sections describe Sun Remote System Control (RSC) 2.2 issues.

RSC General Issues

This section describes issues that affect RSC running on all platforms (Sun Enterprise 250, Sun Fire 280R, Sun Fire V880, and Sun Fire V480 servers):

Alert Messages May Be Delayed (BugID 4474273)

If the RSC variables `page_enabled` and `mail_enabled` are set to `true` and multiple alert messages are generated within a short interval, the first message is delivered in a timely fashion but each subsequent message issued during the interval is delayed by 3-4 minutes.

Keyswitch Position in RSC GUI Is Unknown When RSC Is on Battery Power (BugID 4492888)

When the RSC card is running on battery power, the keyswitch slot in the RSC GUI displays as a gray dot, and the mouse-over text on the keyswitch reads `Current Keyswitch Position Unknown`.

Wrong Information Provided on `alerts.html` (BugID 4522646)

When configuring the `page_info1` or `page_info2` fields, you may use any digit or the alphanumeric characters `#`, `@`, and `,` (comma) when specifying a pager phone number, but the PIN area may only contain digits (0-9). In the RSC GUI, the online help for this function is incorrect. For more information about how to configure RSC to work with a pager, refer to the *Sun Remote System Control (RSC) 2.2 User's Guide*.

rsc-console Will Switch to Tip Connection During Boot if diag-switch? Is Set to true (BugID 4523025)

If `diag-switch?` is set to `true` and you use the `bootmode -u` command to reboot your workstation, `rsc-console` will revert to the serial (tip) connection after Solaris restarts, even if you have previously redirected the console to RSC.

If this occurs, manually redirect the console output to RSC again after the reboot operation has completed. Refer to the *Sun Remote System Control (RSC) 2.2 User's Guide* for more information.

Power On From GUI/CLI Is Allowed, Yet Doesn't Work, With Keyswitch Turned to Off (BugID 4524277)

If the system's state changes from battery power to standby power and the keyswitch is in the off position, the RSC software should generate a warning that you cannot turn the system power back on when you issue a `poweron` command from either the CLI or the GUI. The RSC software should issue this warning. You need to move the keyswitch back into the on position.

If this happens, use the `resetrsc` command.

RSC `bootmode -u` Command Fails to Toggle the Console (BugID 4525310)

This intermittent problem has been observed on Sun Fire V880 servers running OpenBoot PROM version 4.4.6. Occasionally, the `bootmode -u` command fails to redirect the console to RSC. If this happens, use the `resetrsc` command.

OBP 4.4.3 Displays ERROR: RSC-Initiated Reset Instead of a Warning Message (BugID 4514863)

On servers running OpenBoot PROM software version 4.4.3, an RSC-initiated system reset produces the following message:

```
ERROR: RSC-initiated Reset
```

This message serves as a warning-level message only; no action is required.

RSC Restart Error on Japanese Windows 98 Systems

If you install the RSC client on the Japanese version of Microsoft Windows 98, RSC does not start again once you exit from the client and the `javaw stack error` appears, unless you reboot the system. This situation occurs only on the initial version of Windows 98, and does not happen on other versions of Microsoft Windows (95, 98 Second Edition, NT).

Workaround: Download and install the Microsoft IME98 Service Release 1 (IME98-SR1) from the Microsoft Website. The crash does not occur after IME98-SR1 has been installed.

RSC Issues for Sun Fire 280R, Sun Fire V880, and Sun Fire V480 Servers

This section describes issues that affect RSC running on Sun Fire 280R, Sun Fire V880, and Sun Fire V480 servers.

Removing and Installing the RSC Card

Caution – Removing or installing the RSC card while the system has the AC power cord connected could damage your system *or* your RSC card. Only qualified service personnel should remove or replace the RSC card. Contact your qualified service representative to perform this service operation.

*Before you follow the procedures in the *Sun Fire 280R Server Service Manual* or *Sun Fire 880 Server Service Manual* to remove or install the RSC card, perform this procedure to ensure that there is *no AC power present* in the system.*

- 1. Shut down and halt the system.**
- 2. With the system at the `ok` prompt, turn the keyswitch to the Off position.**
Standby power is still present in the system at this point.
- 3. Disconnect all AC power cords from their back panel receptacles.**
This ensures that there is no standby power voltage present in the system.
- 4. Follow the procedure you require in your service manual.**

Additional RSC Alerts

RSC generates the following alerts on a Sun Fire 280R or Sun Fire V880 server when the RSC card begins battery use after a power interruption:

```
00060012: "RSC operating on battery power."
```

RSC generates the following alerts when the host system has shut down from RSC. The messages appear in the log history.

```
00040000: "RSC Request to power off host."
```

```
00040029: "Host system has shut down."
```

If you shut down the system using the keyswitch, or by using the OpenBoot PROM `poweroff` command, the above alert 00040029 is the only alert displayed.

These alerts are not documented in the *Sun Remote System Control (RSC) 2.2 User's Guide*.

Going from Battery to Standby, the Locator LED Will Turn On in the GUI (BugID 4524272; Sun Fire V480 Servers Only)

When the RSC hardware changes state from battery power to standby power, the Locator LED on the Sun Fire V480 appears illuminated in the GUI only. It does not illuminate on the system.

If this situation happens, use the `resetrsc` command.

RSC Issues for Sun Fire 280R Servers Only

This section describes issues that affect RSC running on Sun Fire 280R servers only. See the *Sun Fire 280R Server Product Notes* for other Sun Fire 280R server issues.

Soft Reset With `xir` Does Not Work Correctly (BugID 4361396, 4411330)

The `xir` command does not bring the server to the `ok` prompt as expected. This issue may have been resolved for your server type; see your hardware platform release notes.

Boot Sequence Sometimes Bypasses RSC (BugID 4387587)

In rare instances, the system may bypass the RSC card during startup. To check whether the system booted and is online, use the `ping` command to see if the card is alive, or log in using `telnet` or `rlogin`. If the system is not connected to the network, establish a `tip` connection to the system. (Be sure that console I/O is not directed to the RSC card.) Use the `tip` connection to view boot messages on the troubled system, or reboot the system. For help in diagnosing the problem, see your hardware Owner's Guide.

False Drive Fault Reported at Power On (BugID 4343998, 4316483)

When you power on the system, it may report a false internal drive fault that is recorded in the Sun Remote System Control (RSC) log history.

If the error is reported by RSC, you should disregard the report if the system boots successfully to the Solaris operating environment. In most cases the erroneous fault does not reappear. You can verify the disk after the boot process by using the `fsck` utility.

Note – Any disk drive error message reported by the Solaris operating environment is a real disk drive error.

If a disk fault is reported at the `ok` prompt and the system fails to boot to the Solaris operating environment, there may be a problem with the disk drive. Test the disk drive with the OpenBoot Diagnostics tests documented in the “Diagnostics, Monitoring, and Troubleshooting” chapter in the *Sun Fire 280R Server Service Manual*.

Command `rscadm resetrsc` Fails (BugID 4374090)

After a cold restart or after powering on the system, the RSC command `rscadm resetrsc` fails; this is a known condition. You need to reset the host system for the command to function correctly.

There are three ways you can reset the host. Use one of the following commands:

- At the `ok` prompt, execute the `reset-all` command.
- At the RSC command-line interface (CLI) prompt, issue the `reset` command.
- At the Solaris CLI prompt, issue the `reboot` command.

The RSC `rscadm resetrsc` command will now function correctly.

RSC Issue for Sun Fire V880 Servers Only

This section describes an issue that affects RSC running on Sun Fire V880 servers only.

Soft Reset With `xir` Does Not Work Correctly (BugID 4361396, 4411330)

The `xir` command does not bring the server to the `ok` prompt as expected. This issue may have been resolved for your server type; see your hardware platform release notes.

RSC Issues for Sun Enterprise 250 Servers Only

This section describes issues that affect RSC running on Sun Enterprise 250 servers only. See the *Sun Enterprise 250 Server Product Notes* for other Sun Enterprise 250 server issues.

Increased Number of RSC User Accounts Not Supported

Support for a maximum of 16 RSC user accounts has been added for RSC 2.2. However, Sun Enterprise 250 servers continue to be limited to four RSC user accounts because of hardware limitations.

Do Not Run OpenBoot PROM `fsck` Command From the RSC Console (BugID 4409169)

Do not issue the `fsck` command from the redirected RSC console.

Reset the system's `input-device` and `output-device` settings to `ttya`. Then reboot the system and access the system through its local console or terminal and execute the OpenBoot PROM `fsck` command directly.

Do Not Run OpenBoot PROM `boot -s` Command From the RSC Console (BugID 4409169)

The command `boot -s` does not work from the RSC console.

Reset the system's `input-device` and `output-device` settings to `ttya`. Then reboot the system and access the system through its local console or terminal and execute the `boot -s` command directly.

Change to the `serial_hw_handshake` Variable Requires a System Reboot (BugID 4145761)

In order for changes to the RSC configuration variable `serial_hw_handshake` to take effect, the server must be rebooted. This also affects the Enable Hardware Handshaking check box in the RSC graphical user interface. This limitation is not stated in the documentation.

Power Supply Alerts Display Incorrect Index in the GUI (BugID 4521932)

In the Sun Enterprise 250, the power supplies are numbered 0 and 1, but the RSC GUI refers to them as Power Supply 1 and Power Supply 2 in the event log and in alerts.

USB Dual Framework

This software release features a dual USB framework. The original framework, released with Solaris 8 2/02, is provided for compatibility with all preexisting USB drivers. It supports USB 1.0 and USB 1.1 devices, and operates devices connected to on-board and other USB 1.0 or 1.1 ports.

Note – On-board USB ports include those next to the rear fan on Sun Blade 1500 and 2500 systems, and the two ports at the bottom of the Sun Blade 1500 system's front panel. If your Sun Blade 1500 or 2500 system came with the IEEE 1394 and USB 2.x card, it also has three USB 2.0 ports next to two IEEE 1394 ports, located in the rear near the bottom of the system.

The USB A 1.0 framework (new in Solaris 8 HW 5/03) is more evolved, and as such offers better performance and support for more devices than the original framework. It supports high speed USB 2.0 devices, and operates devices connected to the computer's USB 2.0 ports.

This dual framework release is supported on Sun Blade 1500 and Sun Blade 2500 systems. Systems pre-equipped with the IEEE 1394 and USB 2.x card support USB 2.0 through the card's USB 2.0 ports. Additionally, some aftermarket PCI USB 2.0 cards may work. For a listing of Solaris Verified PCI USB 2.0 cards for use with other platforms, see:

<http://www.sun.com/io>

Optimal USB Device Connections

The USB console keyboard and mouse must be connected through an on-board USB port. This is required in order use them as console devices which can boot, halt and examine a system, and allow the window manager to start.

All other USB 1.1 devices can be connected through a USB 2.0 hub to any port. Note, however, that any device connected to a USB 2.0 port on the computer can take advantage of the USB 1.0 framework.

For best performance, connect USB 2.0 storage devices to a USB 2.0 computer port (optionally through a USB 2.0 hub). While USB 2.0 devices can function on other ports, they operate significantly slower when using USB 1.1.

Device Restrictions

USB 1.x devices do not function when connected through a USB 2.0 hub to a computer USB 2.0 port. You can connect the USB 2.0 hub to an on-board or other USB 1.1 port, use a USB 1.1 hub, or bypass the hub and plug the USB 1.x device directly into a USB port on the computer.

Man Page Updates

The man pages covering the dual USB framework are delivered in a package separate from other manpages (`SUNWs8hwman1` instead of `SUNWman`). The `SUNWs8hwman1` package installs into a different directory tree than other Solaris manpages (`/opt/SUNWs8hwman1/man` instead of `/usr/man`).

The USB man pages in `/usr/man` are part of the Solaris 8 2/02 documentation set, and as such cover only the original USB 1.0 framework. The USB manpages in `/opt/SUNWs8hwman1/man` cover both the USB 1.0 and original frameworks.

There are three ways of making the man pages in `/opt/SUNWs8hwman1/man` accessible:

- Copy them from the `/opt/SUNWs8hwman1/man` directory tree to the `/usr/man` tree:

```
# cp -r /opt/SUNWs8hwman1/man /usr/man
```

Note that this overwrites some of the original USB man pages in `/usr/man`.

- Specify the `/opt/SUNWs8hwman1/man` directory tree in the `MANPATH` before `/usr/man`:

```
ksh:    export MANPATH=/opt/SUNWs8hwman1/man:$MANPATH
csh:    setenv MANPATH /opt/SUNWs8hwman1/man:$MANPATH
sh:     MANPATH=/opt/SUNWs8hwman1/man:$MANPATH ; export MANPATH
```

- Specify the `/opt/SUNWs8hwman1/man` directory tree using the `-M` option to `man(1)`. For example:

```
# man -M /opt/SUNWs8hwman1/man manpage
```

This command looks in the `/opt/SUNWs8hwman1/man` man page directory when searching for the desired man page.

Note – This third method is only temporary, for reading a man page one time, whereas the first two methods are permanent.

Administration of the Dual Framework

Please see <http://www.sun.com/desktop/whitepapers.html> for a link to a guide which discusses administration of USB devices on both frameworks. It is more complete than the System Administration Guide, which covers only the original framework.

All USB Storage Devices Treated as Removable Media

This change was implemented to fix inconsistent behavior in previous releases, where some USB storage devices were seen as removable devices and others were not.

What This Change Means

In general, USB devices now operate with a more consistent interface, and are easier to use:

- The `rmformat(1)` program can now be used to format USB storage devices, instead of other, more complicated programs such as `format(1M)`.
- USB hard drives with a FAT file system can be mounted and used.
- Non-root users can now access USB storage devices, since a root-privileged mount command is no longer needed. The volume manager mounts it and makes it available under `/rmdisk`. (See [“Caveats” on page 46](#) for restrictions.)
- All USB storage devices are power managed, except for those which support log sense pages. Devices with log sense pages are usually SCSI devices connected through a USB to SCSI bridge device.
- Error handling is more forgiving for removable media devices, with increased timeouts for recovery or preparing for the drive to become ready.

Caveats

- External removable media applications might not work correctly if they make assumptions about the size of the media or are not largefile aware. For example, a number field containing a disk size may overflow.
- If a new USB device is connected while the system is down, a reconfiguration boot (`boot -r`) is required for the volume manager to find it for automatic mounting. If a new device is connected while the system is up, the volume manager must be restarted. Refer to `vold(1M)`, `scsa2usb(7D)`, the System Administration Guide, and [“Known Bugs” on page 47](#) for more information.
- The `format(1M)` program must now be started in expert mode (`-e`) in order to see any USB storage device. In previous releases, those USB storage devices which were not seen as removable media could be seen without the `-e` switch. You must either answer questions about device geometry or furnish an entry for `/etc/format.dat` in order to utilize the program.
- Some applications which make `DKIOCEJECT ioctl`s may have returned `ENOTTY` for non-removable media. These now succeed with no effect because the device is treated as a removable media device.
- Setting `removable=false` in `/kernel/drv/scsa2usb.conf` (original framework) or `/kernel/drv/usba10_scsa2usb.conf` (USBA 1.0 framework) for a particular device type overrides the forced treatment of that device type as removable media. Use this option if compatibility with previous releases is an issue. Please see these configuration files for more details.
- For best performance, connect USB 2.0 storage devices to a USB 2.0 computer port (optionally through a USB 2.0 hub). While USB 2.0 devices can function on other ports, they operate significantly slower when using USB 1.1.

Known Bugs

The vold Process Does Not See USB Devices After a Non-Reconfigure Reboot (Bug ID: 4799998)

USB storage devices are not automatically seen by the `vold` process after a non-reconfigure reboot, due to a boot-time delay in starting the USB frameworks.

Workaround: use any of the four workarounds listed below.

- As root, edit the `/etc/init.d/initusb` script. Change the entry `sleep 60` to `sleep 5`. This alleviates the delay in starting the USB frameworks, and almost always causes the `vold` process to find the devices automatically; however, it also increases the boot time by a few seconds. If a device still is not found, hotplug it as in the second workaround listed.
- Hotplug the USB storage device two minutes after the system has given the login prompt. This method must be repeated for each USB storage device after every reboot.
- As root, stop and restart `vold`:

```
# /etc/init.d/volmgt stop
# /etc/init.d/volmgt start
```

Do this after every reboot, two minutes after the system has given the login prompt.

- As root, send a `SIGHUP` signal to the `vold` process to rescan for devices:

```
# pkill -HUP vold
```

Do this after every reboot, two minutes after the system has given the login prompt.

Note – Due to a bug in the `vold` process, CD-ROM drives might eject their media in response to this signal.

ugen Returns EIO on Bulk Write Out Endpoints for a USB Canon Scanner (BugID 4786786)

The generic USB (`ugen`) driver only works with devices that support setting of configurations and alternate interfaces. Attempts to open data endpoints on devices which do not support these settings fail with an I/O error. Please see Chapter 9 of the USB 2.0 spec (<http://www.usb.org>) for more information.

Enumeration Fails if String Descriptor Is Not Provided (BugID 4798619)

As part of first-order identification (enumeration) to the operating system, USB devices say whether or not they provide a string descriptor (used to identify the device for messages). A system cannot use USB devices that say they provide such a descriptor and then fail to provide that descriptor.

Slow Enumeration Might Prevent Device Connection (BugID 4735465)

Some USB devices fail to identify themselves within the system's allotted window. If this happens, the user sees the following error message:

```
WARNING: (usba10_ohci0): Connecting device on port x failed
```

Workaround: Hot-plugging the device again might successfully identify it.

USB Floppy Devices

USB floppy devices appear as removable media devices, as all other USB disks do. USB floppy devices are not managed by the `fd` (floppy) driver. Applications which issue `ioctl(2)` calls intended for the `fd` driver fail. Applications which issue only `read(2)` and `write(2)` calls succeed. Some other applications, such as `SunPCI` and `rmformat`, do work.

Use With Volume Manager and File Manager

Volume Manager sees the USB floppy as a SCSI removable media device. Volume Manager makes the device available for access under `/rmdisk`.

File Manager does not fully support the USB floppy at this time. Floppies containing a `ufs` file system can be opened, renamed and formatted from the File Manager's Removable Media Manager. However, the only action that the Removable Media Manager can take with a floppy containing a `pcfs` file system is to open it. Floppies containing either type of file system can successfully drag and drop files.

Always perform a reconfigure boot (`boot -r`) when rebooting your system, if you plan to use a connected USB floppy device with Volume Manager and File Manager. When you hotplug a new USB floppy device, you must stop and restart `vold` in order for `vold` to find the newly connected device.

Manual Configuration

This section describes how to use a USB floppy without the File Manager.

After plugging in the device, find the device's name:

```
# cd /dev/rdisk
# devfsadm -C
# ls -l c*0 | grep usb
lrwxrwxrwx  1 root    root          55 Mar  5 10:35 c2t0d0s0 ->
../../../../devices/pci@1f,0/usb@c,3/storage@3/disk@0,0:a,raw
```

Here, the device name shows as `c2t0d0s0`. The device can be accessed as raw device `/dev/rdisk/c2t0d0s0`, and as block device `/dev/dsk/c2t0d0s0`.

Floppies support both `pcfs` (7FS) and `ufs` file systems. Below are examples of how the different file systems are used. The examples assume a device of `/dev/[r]dsk/c2t0d0s0`.

If multiple device names are displayed, determine which name corresponds to the USB floppy device:

1. Insert a floppy disk into the USB floppy device.
2. Cycle through each device, attempting to access each device (using `od(1)` on that device's raw partition, for example).

The USB floppy's indicator lamp lights up when you have found the floppy.

Floppies support both `pcfs` (7FS) and `ufs` file systems. The following commands are examples of how to use the two file systems. The examples assume a device of `/dev/[r]dsk/c2t0d0s0`.

Use the following commands to create and use the floppy as a `pcfs` file system:

Format:

```
rmformat -Flong /dev/rdisk/c4t0d0s0
```

Create 1.4 Mb file system:

```
mkfs -F pcfs -o nofdisk,size=2880 /dev/rdisk/c4t0d0s0
```

Mount:

```
mount -F pcfs /dev/dsk/c4t0d0s0:c /mnt
```

Unmount:

```
umount /mnt
```

Use the following commands to create and use the floppy as a `ufs` file system:

Format:

```
rmformat -Flong /dev/rdisk/c4t0d0s0
```

Create filesystem:

```
newfs /dev/rdisk/c4t0d0s0
```

Mount:

```
mount /dev/dsk/c4t0d0s0 /mnt
```

Unmount:

```
umount /mnt
```

Solstice DiskSuite and Alternate Pathing (BugID 4367639)

A segmentation fault error occurs when invoking the Solstice DiskSuite™ 4.1.2 metatool on a Sun Enterprise 6000 system with Alternate Pathing 2.3 or 2.3.1 already installed and configured on a SPARCstorage™ Array 100 or SPARCstorage Array 200.

After invoking the metatool, the following message is displayed:

```
root@[/]>metatool &  
[1]      2569  
root@[/]>Initializing metatool... Done.  
Discovering drives and slices... metatool: Segmentation Fault
```

Workaround: Move /usr/lib/libssd.so.1 and /usr/lib/libap_dmd.so.1 to /usr/sadm/lib/lvm.

SunFDDI and Diskless Booting (BugID 4390228)

The SunFDDI PCI board (FDDI/P) does not support diskless booting. The SunFDDI SBus board (FDDI/S) supports diskless booting on sun4m and sun4u platforms only.

Multiple Sun GigaSwift Ethernet Cards May Hang System (BugID 4336400, 4365263, 4431409)

Your system may experience heavy CPU usage or may hang if more than two Sun GigaSwift Ethernet cards are installed.

System May Hang When the `cpr` Module Runs (BugID 4466393)

If you are running any version of the Solaris 8 software with an Expert3D or Expert3D-Lite card, you may experience problems after `cpr` runs.

Workaround: Install Patch 108576-15 or greater.

`librt` Objects Do Not Transition to Multi-User Mode (BugID 4479719)

SunVTS may fail in multi-user mode when semaphores are created improperly.

Workaround: Kill and restart `picld` after the machine reaches multiuser mode, but before running SunVTS:

```
# /etc/init.d/picld stop
# /etc/init.d/picld start
```

Vulnerability in the ToolTalk Database Server Allows Root Access (BugID 4499995)

When the ToolTalk Database Server (`/usr/openwin/bin/rpc.ttdbserverd`) is enabled, remote and local attacks are possible. These attacks can potentially give root access to the system. Attacked systems can be identified by the presence of garbage files in the root directory that begin with an `A`.

Workaround: Remove the `rpc.ttdbserverd` line from the `inetd.conf` file. Disable the service by using the `chmod a-x` command on `/usr/openwin/bin/rpc.ttdbserverd`. Check with your Sun representative about future patches.

Invalid Warning During System Boot (BugID 4519441)

A warning message may appear when booting a Netra ct 800 or Sun Blade™ 100 system which reads:

```
invalid vector intr: number 0x7de, pil 0x0
```

This message is benign and can be ignored.

Veritas VRTSvxfs Package Fails Installation (BugID 4820479)

When attempting to install the third-party Veritas 3.4 filesystem vxvm using the pkgadd utility, the VRTSvxfs package might fail installation with an error message that reads, in part:

```
ERROR: This package requires same or higher revision
      of < 108528-02 > which has not been applied to the system.
      Exiting installation...
pkgadd: ERROR: checkinstall script did not complete successfully
```

Veritas has fixed this bug in the installation script. A new revision of the Version 3.4 vxfs is available from Veritas which fixes this problem. The Version 3.5 vxfs product has also corrected this problem. Both of these versions are available directly from the Veritas web site:

<http://veritas.com>

AP 2.3.1 on Sun Enterprise Servers

AP 2.3.1 on Sun Enterprise Servers

This section contains the release notes for Alternate Pathing (AP) 2.3.1 on Sun Enterprise 3x00, 4x00, 5x00, 6x00, and 10000 servers.

AP enables you to define and control alternate physical paths to peripheral devices, adding increased availability and a level of fault recovery to your server. If a physical path to a device becomes unavailable, an alternate path can be used. For more information, see the *Sun Enterprise Server AP 2.3.1 User Guide* in the AnswerBook2 Alternate Pathing 2.3.1 Collection.

Future AP Support

AP multipath I/O technology is being retired in favor of the newer, more scalable technologies presented by Sun StorEdge Traffic Manager and IPMP.

These modern technologies present better overall multipath solutions, with refined, user-friendly interfaces that are well integrated with Solaris. IPMP also provides true automatic switching for networks upon error detection.

If you use AP for its I/O multipath capabilities, you are encouraged to unconfigure your AP installations, and begin utilizing these newer technologies for I/O multipath control.

All 3 technologies are available during the Solaris 8 timeframe. However, be advised that AP will no longer be available in Solaris 9.

Installation Issues

If you are upgrading from Solaris 2.6 or Solaris 7 software to Solaris 8 software and have AP 2.1 or AP 2.2 on your system, you must upgrade to AP 2.3 or AP 2.3.1. The following sections include references to a volume manager because most systems have one installed.

Note – AP 2.3.1 installation is Solaris operating environment specific. If you have already installed AP 2.3.1 on your system and choose to upgrade your operating system at a later date, you must follow the upgrade procedure to remove the AP 2.3.1 software using `pkgrm` and re-install AP 2.3.1.

This section contains an overview of the entire upgrade process, which requires you to use several sections from different publications. You should ensure that you have the following publications before you start the upgrade:

- *Solaris 8 HW 7/03 Release Notes Supplement for Sun Hardware* (available in printed form in your Solaris 8 HW 7/03 Media Kit)
- *Solaris 8 HW 7/03 Sun Hardware Platform Guide* (available in printed form in your Solaris 8 Media Kit or in AnswerBook2 format on the Sun Hardware Supplements CD)
- *Sun Enterprise Server Alternate Pathing 2.3.1 User Guide* (available in AnswerBook2 format on the Sun Hardware Supplements CD in your Solaris 8 Media Kit)
- Your Volume Manager User's Guide
- Your Volume Manager Installation and Product Notes

Note – Before attempting an upgrade, verify that your volume manager supports the Solaris 8 software.

Caution – You must follow the sequence given here to successfully complete the upgrade.

In general, you will perform the following tasks:

- Unconfigure your volume manager.
- Remove the previous version of AP.
- Upgrade to the Solaris 8 operating environment.
- Install AP 2.3.1.
- Install and reconfigure your volume manager.

Specifically, you must perform the following tasks:

1. Read “Performing an Upgrade of AP” in the *Solaris 8 HW 7/03 Sun Hardware Platform Guide*.

2. Commit any uncommitted AP metadevices (see Step 1 in “To Upgrade to AP 2.3.1” in the *Solaris 8 HW 7/03 Sun Hardware Platform Guide*).
3. Unconfigure your volume manager using the documentation provided by the specific vendor.

Note – With regard to AP, no additional steps need to be taken to do this other than those recommended by the manufacturer to unconfigure the volume manager.

Caution – When the volume manager has been unconfigured and you are instructed to install the new operating environment, stop at that point and remove your previous version of AP. Do *not* install Solaris 8 software at this time.

4. Remove the current AP configuration using “Remove the current AP configuration.” of the *Solaris 8 HW 7/03 Sun Hardware Platform Guide*.
5. Upgrade to Solaris 8 using “Upgrade the Solaris operating environment (if applicable) now” in the *Solaris 8 HW 7/03 Sun Hardware Platform Guide*.
6. Upgrade to AP 2.3.1 using instructions in the *Solaris 8 HW 7/03 Sun Hardware Platform Guide*.
7. Install your volume manager according to your manufacturer’s instructions.

When upgrading AP 2.3.1, unless both paths are accessible when you run `ap_upgrade_begin`, `ap_upgrade_finish` completes but is unable to recreate your path groups. No error message appears.

General Issues

This section contains general issues that involve AP on Sun Enterprise servers. Read this section before you attempt to install or configure AP.

Note – If you are upgrading to AP 2.3.1 on *all* Sun Enterprise 10000 domains, then you can safely remove the `SUNwapssp` package software from the SSP workstation using `pkgrm`. If, however, any domain will remain at an earlier version of AP, then you must *not* remove the AP software on the SSP workstation. In either case, leaving AP software on SSP workstations has *no* effect on AP 2.3.1.

Supported Devices

The following devices are supported by the AP software on Sun Enterprise servers:

- Sun SPARCstorage™ Arrays recognized by AP using the `pln(soc)` controllers
- Sun StorEdge A5000 recognized by AP using `sf(socal)` or `fp(qlc)` controllers
- Sun StorEdge T3 recognized by AP using `sf(socal)` or `fp(qlc)` controllers
- Sun Enterprise E3500 internal drives recognized by using `sf(socal)` or `fp(qlc)` controllers
- SunFastEthernet™ 2.0 (`hme`)
- SunFDDI/S 6.0 (`nf`) SAS (Single-Attach Station) and DAS (Dual-Attach Station)
- SCSI-2/Buffered Ethernet FSBE/S and DSBE/S (`le`)
- Quad Ethernet (`qe`)
- Sun Quad FastEthernet™ (`qfe`)
- Sun Gigabit Ethernet 2.0 (`ge`)

The following table lists the devices supported in each release:

TABLE 4-1 AP Support Matrix

AP Version	Solaris Release	NICs									Disk Controllers	Storage Products
		ge	hme	le	nf	bf	hi	qe	qfe	vge		
2.0	2.5.1		X	X	X	X	X	X	X		pln/soc	SSA
2.0.1	2.5.1		X	X	X	X	X	X	X		pln/soc, sf/socal	SSA, A5000
2.1	2.6	X	X	X	X			X	X	X	pln/soc, sf/soc	SSA, A5000
2.2	7	X	X	X	X			X	X		pln/soc, sf/socal, fp/qlc*	SSA, A5000
* - fp/qlc support for AP 2.2 requires a patch for Solaris 7 (included in Solaris 7 11/99) and for AP 2.2. Refer to http://www.sunsolve.com for more information.												
† - fp/qlc support requires Solaris 7 11/99 or Solaris 8.												
§ - AP 2.3 has not been optimized for Sun StorEdge T3 support.												

TABLE 4-1 AP Support Matrix

AP Version	Solaris Release	NICs									Disk Controllers	Storage Products
		ge	hme	le	nf	bf	hi	qe	qfe	vge		
2.3	2.6	X	X	X	X			X	X	X	pln/soc, sf/socal	SSA, A5000,
	7	X	X	X	X			X	X		pln/soc, sf/socal, fp/qlct	SSA, A5000, T3§
	8	X	X	X	X				X		pln/soc, sf/socal, fp/qlc	SSA, A5000, T3§
2.3.1	8	X	X	X	X				X		pln/soc, sf/socal, fp/qlc	SSA, A5000, T3
<p>* - fp/qlc support for AP 2.2 requires a patch for Solaris 7 (included in Solaris 7 11/99) and for AP 2.2. Refer to http://www.sunsolve.com for more information.</p>												
<p>† - fp/qlc support requires Solaris 7 11/99 or Solaris 8.</p>												
<p>§ - AP 2.3 has not been optimized for Sun StorEdge T3 support.</p>												

SunFDDI and Gigabit Ethernet Devices

AP 2.3.1 validation tests were performed on SunFDDI/S (revision 7.0) and Gigabit Ethernet (revision 2.0). If you install either of these devices, you must use the revision level that was tested, unless a higher revision level exists. In addition, you must install all of the available patches for these devices. Refer to <http://www.sunsolve.sun.com> for more information about the patches.

Sun StorEdge A3000

The Sun StorEdge A3000 supports failover capabilities that are similar to those provided by AP 2.3.1. Because of this, AP 2.3.1 does not support the Sun StorEdge A3000. See that product's documentation for more information about its failover support.

Sun StorEdge A5000

AP 2.3.1 supports the Sun StorEdge A5000 for this release.

Sun StorEdge A7000

AP 2.3.1 does not support the Sun StorEdge A7000 for this release.

Sun StorEdge T3

AP 2.3.1 supports the Sun StorEdge T3 in a path optimized AP configuration with this release. Path optimization refers to the efficient distribution of I/O traffic for the T3.

Software Compatibility

The following lists includes the possible combinations of AP and Solaris software you can install on a Sun Enterprise server.

- Solaris 8 with AP 2.3.1 and DR
- Solaris 8 with AP 2.3 and DR
- Solaris 7 with AP 2.3.1 and DR
- Solaris 7 with AP 2.3 and DR
- Solaris 7 with AP 2.2 and DR
- Solaris 2.6 with AP 2.3.1 and DR
- Solaris 2.6 with AP 2.3 and DR
- Solaris 2.6 with AP 2.1 and DR
- Solaris 2.5.1 with AP 2.0.1 and DR (Sun Enterprise 10000 server only)
- Solaris 2.5.1 with AP 2.0 and DR (Sun Enterprise 10000 server only)

Note – AP does not support DR model 3.0, which runs on Sun Enterprise 10000 domains running the Solaris 8 2/02 operating environment. AP does support DR model 2.0 on Sun Enterprise 10000 domains. For details on the multipathing software compatible with DR model 3.0, refer to the *SSP 3.5 Installation Guide and Release Notes*.

AP Patches

Check the SunSolve website on a regular basis for any AP patches that may be available, and apply the recommended patches:

<http://sunsolve.sun.com>

Dynamic Reconfiguration (DR) Issues

The DR Attach operation can complete without the controller being immediately accessible to AP. You must verify that the physical device is present before switching to the new controller using `apconfig`.

A Sun Enterprise 10000 server running the Solaris 2.6 operating environment requires Patch 106284-02 for AP 2.3.1 to run correctly with the `dr_daemon`.

Boot Disk Issues

AP 2.3.1 provides support for only one alternately pathed boot disk plus a mirror disk per domain.

In order to fix inconsistencies in boot recovery behavior, device aliases for the boot disk are not supported.

Boot recovery is architecture generic in AP 2.3.1. Boot recovery works on Sun Fire as well as Starfire platforms.

IPMP Issues

IPMP/AP path groups are not supported for this release.

Sun Fibre Channel Port Driver (qlc/fp) Issues

A SENA device that uses the qlc/fp drivers is considered a different physical device than a SENA device that uses the social/sf stack. SENA devices do not support mixed configurations where qlc/fp and social/sf drivers service a single SENA device. Therefore, the two devices cannot be combined in an AP metadvice.

Revising the firmware on a physical SENA device using social/sf drivers to use qlc/fp drivers for your Fibre Channel controllers is the same as replacing the hardware with a different type of controller. (The converse is also true.) You must unconfigure Alternate Pathing on such controllers *before* you revise the firmware. For example:

```
# apdisk -d sf:0
# apdb -C
```

Revise the SENA firmware.

After you have performed the revision, recreate your pathgroups using the new device names, for example:

```
# apdisk -c -pfp:0 -a fp:1
# apdb -C
```

Caution – If you change firmware without unconfiguring AP, file systems available from the new alternately-pathed controllers may not be accessible. If those file systems are required during boot, your system can become unbootable.

AP Documentation Locations

Documentation for AP 2.0 and 2.0.1 can be found in their respective collections under Hardware -> Enterprise Servers at docs.sun.com.

AP 2.1 and 2.2, however, are in the Hardware -> Solaris on Sun Hardware AnswerBook collection at docs.sun.com.

AP 2.3 and 2.3.1 are in their own collections under Hardware -> Enterprise Servers.

Known Bugs/RFEs

Panic while switching unplumbed metanetwork. (BugID 4361968)

Fixed Bugs

This section contains the synopses and Sun BugID number of the more important bugs that have been fixed since the AP 2.3 release (Solaris 8). This list does not include all of the fixed bugs.

(RFE) An immediate switch of path using AP after DR configure forces it into a 'T' state. (BugID 4265982)

(RFE) AP handling for individual target failure, FC hubs/fabric, and daisy chaining. (BugID 4276330)

(RFE) Hang on Sun Enterprise 3500 with mirrored internal disk pull out with AP and sds. (BugID 4297492)

Read/write errors during ctrl failover with Sun StorEdge T3 Array partner group or 2x2 expansion. (BugID 4342963)

Multiple ".probe" execution causes LUNs on UNIX host to fail with ENODEV. (BugID 4347014)

ENXIO from Sun StorEdge T3 ONLINE Master immediately after .probe initiated ctrl failure. (BugID 4347016)

Other Bugs

This section contains the synopses and Sun BugID number of the more important bugs that have been discovered regarding AP 2.3.1 and the Solaris 8 operating environment. This list does not include all bugs.

Other Fixed Bugs

ssd: Serial Number Should Be Obtained From the Unit Serial Number Page (Bug ID 4295457)

Description: AP depends on Sun Device ID functions; specifically `ddi_dev_id_compare()`. Any device that AP supports must adequately interface with the Sun Device ID. This leads to a direct dependency on the resolution of Sun BugID 4295457. Thus, there is a dependency on three separate patches:

- Patch 105356-15 for Solaris 2.6
- Patch 107458-09 for Solaris 7
- Patch 109524-01 for Solaris 8

Solution: You can obtain these patches from SunSolve at:
<http://sunsolve.sun.com>

qfe Driver Does Not Respond With DL_OK_ACK To a DL_ENABMULTI_REQ Primitive (Bug ID 4241749)

Systems running the Solaris 7 operating environment using `qfe` controllers should install patch 107743-06, to prevent system hangs when switching pathgroups with `qfe` controllers in them.

Solution: You can obtain Patch 107743-06 from SunSolve at:
<http://sunsolve.sun.com>

Open Issues for Sun Fire 6800/4810/4800/3800 Systems

This chapter describes open issues related to the use of the Solaris operating environment on Sun Fire 6800/4810/4800/3800 systems.

Sun Fire 6800/4810/4800/3800 Systems

This section provides information on using the Solaris operating environment.

Displaying System Configuration Information

The `prtdiag` command is one of the Solaris operating environment commands that displays system configuration parameters. The information on this command in the *Sun Hardware Platform Guide* for this operating system release is incorrect. Following is the corrected information.

The Solaris operating environment `prtdiag (1M)` command displays the following information to the domain of your Sun Fire 6800/4810/4800/3800 system:

- Configuration
- Diagnostic
- Total amount of memory (similar to the `prtconf` command)

Dynamic Reconfiguration on Sun Fire 6800/4810/4800/3800 Systems

Dynamic reconfiguration (DR) is supported for Solaris 8 HW 7/03. This section includes open issues for DR on the Sun Fire 6800/4810/4800/3800 systems at the time of this release.

Note – For information on the system controller firmware that contains DR functionality, refer to the *Sun Fire 6800/4810/4800/3800 Systems Software Release Notes* included with the 5.12.6 firmware release. This firmware and related documentation is included in SunSolve patch 112127-02, which is available on the SunSolve web site (<http://sunsolve.sun.com>).

These release notes for dynamic reconfiguration (DR) on Sun Fire 6800, 4810, 4800, and 3800 systems cover the following topics:

- [“Dynamic Reconfiguration Software Installation Instructions” on page 67](#)
- [“Known DR Limitations” on page 70](#)
- [“Dynamic Reconfiguration Software Bugs” on page 74](#)

System-Specific DR Support

System-specific DR support on the 6800/4810/4800/3800 systems is shown by the `cfgadm` command. System boards are indicated as class “sbd.” CompactPCI (cPCI) cards are shown as class “pci.” Users of DR through the `cfgadm` interface will see other DR classes as well.

For more information about system-specific problems with DR, see [“Known Dynamic Reconfiguration Bugs” on page 74](#).

To view the classes that are associated with attachment points, run the following command as superuser:

```
# cfgadm -s "cols=ap_id:class"
```

Dynamic attachment points may also be listed by using the `cfgadm` command with the `-a` option. To determine the class of a specific attachment point, add the point as an argument to the above command.

Dynamic Reconfiguration Software Installation Instructions

The following software supports DR on a Sun Fire system: version 8 HW 7/03 of the Solaris operating environment, and version 5.12.6 of the system firmware.

In addition, you have the option of installing the Sun Management Center (SunMC). Refer to the *SunMC 3.0 Software Supplement for Sun Fire 6800/4810/4800/3800 Systems* for complete instructions.

Upgrading the System Firmware

An upgrade of the Sun Fire system firmware takes place via an FTP or HTTP connection from an FTP or HTTP server where the firmware image is stored. Refer to the *Sun Fire 6800/4810/4800/3800 Systems Platform Administration Manual* for more information.

Note – Additional information about installing the firmware patch is available in the `README` and `Install.info` files that accompany the patch.

Caution – Do not update the system controller firmware without updating the firmware for all your CPU/Memory boards and I/O assemblies. If the firmware for your CPU/Memory boards and I/O assemblies is different from the system controller firmware, you may not be able to boot your domains.

▼ To Upgrade the System Firmware:

1. Set up the FTP or HTTP server.

For more information, see Appendix B of the *Sun Fire 6800/4810/4800/3800 Systems Platform Administration Manual* (part number 805-7373-13).

2. Download the 5.12.6 firmware.

This firmware and related documentation is included in SunSolve patch 112127-02, which is available on the SunSolve Web site located at:

`http://sunsolve.Sun.COM/pub-cgi/show.pl?target=patches/patch-access`

3. Copy the patch onto the FTP or HTTP server using a command such as the following:

```
# cp /patch_location/* /export/ftp/pub/5.12.6
```

4. Connect to the system controller console (serial port) to monitor the system when you upgrade the firmware (Step 6).

The prompt for the system controller is:

```
schostname:SC>
```

5. Shut down all the domains by halting the Solaris operating environment.

The keyswitch remains in the on position in these domains.

6. In each domain that you shut down in step 5, set the keyswitch position to standby:

```
schostname:A> setkeyswitch standby
```

7. Verify that all the CPU/Memory boards and I/O assemblies are powered on by running the `showboards` command on the system controller in the platform shell:

```
schostname:SC> showboards
```

8. If any CPU/Memory boards or I/O assemblies are not powered on, use the `poweron` command on the system controller in the platform shell to power on those components:

```
schostname:SC> poweron component_names
```

9. Upgrade the firmware by using the `flashupdate` command on the system controller in the platform shell.

Caution – Do not power down the system or reset the system while performing this step.

Use the command syntax appropriate to the URL protocol:

```
schostname:SC> flashupdate -f URL all
```

The `flashupdate` command reboots the system controller and upgrades the CPU/Memory boards and I/O assemblies, `scapp`, and RTOS.

Note – When running `scapp 5.12.5` or higher and `RTOS 18` or higher, the upgrade procedure updates `scapp` and `RTOS` only when the image to be installed is different from the image currently installed.

10. After the system controller reboots successfully, connect to each domain console and power off all the CPU/Memory boards and I/O assemblies by setting the keyswitch position to `off`:

```
schostname:A> setkeyswitch off
```

11. Verify that all the CPU/Memory boards and I/O assemblies are powered off by running the `showboards` command on the system controller in the platform shell:

```
schostname:SC> showboards
```

12. If any CPU/Memory boards or I/O assemblies are not powered off, use the `poweroff` command on the system controller in the platform shell to power off those components:

```
schostname:SC> poweroff component_names
```

13. Bring up each domain by setting the keyswitch position to `on`:

```
schostname:A> setkeyswitch on
```

14. After all the domains have been brought up, update the configuration backup of the system controller by using the `dumpconfig` command:

```
schostname:SC> dumpconfig -f URL
```

where *URL* specifies the ftp protocol.

Known DR Limitations

This section contains known DR software limitations of the Sun Fire 6800, 4810, 4800, and 3800 systems.

General DR Limitations

- If you add a system board to a domain without using DR procedures, such as by running the `addboard` command-line interface (CLI) command on the system controller (SC), you must run the `setkeyswitch off` command and then the `setkeyswitch on` command to bring the board into the system.
- This release of the DR software does not support Sun StorEdge Traffic Manager.
- Before performing any DR operation on an I/O (IBx) board, enter the following command to stop the vold daemon:

```
# sh /etc/init.d/volmgt stop
```

After the DR operation has successfully completed, enter the following command to re-start the vold daemon:

```
# sh /etc/init.d/volmgt start
```

- On Sun Fire 6800, 4810, 4800, and 3800 systems, DR does not support HIPPI/P, nor SAI/P (bug 4466378), nor the SunHSI/P driver (bug 4496362).
- You must execute the `devfsadm(1M)` command to see any changes that have been made, especially in regard to changes from PCI to cPCI.
- Do not reboot nor reset the system controller (SC) during DR operations. In addition, do not perform a `flashupdate`, which requires a reboot upon completion.

Limitations Specific to CompactPCI

- You can unconfigure a CompactPCI (cPCI) I/O assembly only if all the cards in the board are in an unconfigured state. If any cPCI card is busy (such as with a plumbed/up interface or a mounted disk), the board unconfigure operation fails with the status “busy.” All cPCI cards should be unconfigured before attempting to unconfigure the cPCI I/O assembly.
- When a multipath disk is connected to two cPCI cards, it is possible to see disk activity across the cards when none is expected. For this reason, make sure that there is no activity on the local side of the resource. This is more likely to occur when attempting to perform DR operations on a cPCI card that shows a busy status, even when there is no activity on the local side of the resource. A subsequent DR attempt may be required.
- When a user lists attachment points using the `cfgadm(1M)` command with the `-a` option, cPCI slots and PCI buses are all listed as attachment points. The `cfgadm -a` command displays an attachment point for a PCI bus as `N0.IB8:pci0`. There are four such attachment points for each cPCI board. The user should not perform DR operations on these, nor on the `sghsc` attachment point (which the `cfgadm -a` command displays as `N0.IB8:sghsc4`), because DR is not actually performed, and some internal resources are removed. However, there is no harm in doing so.
- In order for DR to function properly with cPCI cards, the levers on all cPCI cards that are inserted at Solaris boot time must be fully engaged.

Procedures for Bringing a cPCI Network Interface (IPMP) Online or Offline

▼ To Take a cPCI Network Interface (IPMP) Offline and Remove It

1. Retrieve the group name, test address, and interface index by typing the following command.

```
# ifconfig interface
```

For example, `ifconfig hme0`

2. Use the `if_mpadm(1M)` command as follows:

```
# if_mpadm -d interface
```

This takes the interface offline and causes the failover addresses to be failed over to another active interface in the group. If the interface is already in a failed state, then this step simply marks and ensures that the interface is offline.

3. (Optional) Unplumb the interface.

This step is required only if you want to use DR to reconfigure the interface automatically at a later time.

4. Remove the physical interface.

Refer to the `cfgadm(1M)` man page and the *Sun Fire 6800, 4810, 4800 and 3800 Systems Dynamic Reconfiguration User Guide* for more information.

▼ To Attach and Bring Online a cPCI Network Interface (IPMP)

● Attach the physical interface.

Refer to the `cfgadm(1M)` man page and the *Sun Fire 6800, 4810, 4800 and 3800 Systems Dynamic Reconfiguration User Guide* for more information.

After you attach the physical interface, it is automatically configured using settings in the hostname configuration file (`/etc/hostname.interface`, where *interface* is a value such as `hme1` or `qfe2`).

This triggers the `in.mpathd` daemon to resume probing and detect repairs. Consequently, `in.mpathd` causes original IP addresses to failback to this interface. The interface should now be online and ready for use under IPMP.

Note – If the interface had not been unplumbed and set to the OFFLINE status prior to a previous detach, then the attach operation described here would not automatically configure it. To set the interface back to the ONLINE status and failback its IP address after the physical attach is complete, enter the following command: `if_mpadm -r interface`

Operating System Quiescence

This section discusses permanent memory, and the requirement to quiesce the operating system when unconfiguring a system board that has permanent memory.

A quick way to determine whether a board has permanent memory is to run the following command as superuser:

```
# cfgadm -av | grep permanent
```

The system responds with output such as the following, which describes system board 0 (zero):

```
N0.SB0::memory connected configured ok base address 0x0, 4194304  
KBytes total, 668072 KBytes permanent
```

Permanent memory is where the Solaris kernel and its data reside. The kernel cannot be released from memory in the same way that user processes residing in other boards can release memory by paging out to the swap device. Instead, `cfgadm` uses the copy-rename technique to release the memory.

The first step in a copy-rename operation is to stop all memory activity on the system by pausing all I/O operations and thread activity; this is known as *quiescence*. During quiescence, the system is frozen and does not respond to external events such as network packets. The duration of the quiescence depends on two factors: how many I/O devices and threads need to be stopped; and how much memory needs to be copied. Typically the number of I/O devices determines the required quiescent time, because I/O devices must be paused and unpaused. Typically, a quiescent state lasts longer than two minutes.

Because quiescence has a noticeable impact, `cfgadm` requests confirmation before effecting quiescence. If you enter:

```
# cfgadm -c unconfigure N0.SB0
```

The system responds with a prompt for confirmation:

```
System may be temporarily suspended, proceed (yes/no)?
```

If you are using SunMC to perform the DR operation, a pop-up window displays this prompt.

Enter **yes** to confirm that the impact of the quiesce is acceptable, and to proceed.

Dynamic Reconfiguration Software Bugs

This section contains the synopses and Sun BugID numbers of the more important bugs that have been discovered during testing of DR. This list does not include all bugs.

Known Dynamic Reconfiguration Bugs

cryptorand Exited After Removing CPU Board With Dynamic Reconfiguration (BugID 4456095)

Description: If a system is running the `cryptorand` process, which is found in the SUNWski package, an unconfigure of memory, such as part of a CPU/Memory (SB) board disconnect, causes `cryptorand` to close with messages recorded in `/var/adm/messages`. This action denies random number services to secure sub-systems, and any memory present when `cryptorand` is started should not be unconfigured.

The `cryptorand` process supplies a random number for `/dev/random`. After `cryptorand` is started, the amount of time before `/dev/random` becomes available depends on the amount of memory in the system. It takes about two minutes per GB of memory. Applications that use `/dev/random` to get random numbers may experience temporary blockage. It is not necessary to restart `cryptorand` if a CPU/memory board is added to a domain.

Workaround: If a CPU/memory board is removed from the domain, restart `cryptorand` by entering the following command as superuser:

```
# sh /etc/init.d/cryptorand start
```

SBM Sometimes Causes System Panic During DR Operations (BugID 4506562)

Description: A panic may occur when a system board that contains CPUs is removed from the system while Solaris Bandwidth Manager (SBM) is in use.

Workaround: Do not install SBM on systems that will be used for DR trials, and do not perform CPU system board DR operations on systems with SBM installed.

DR Hangs During Configure Operation With IB Board With `vxdmpadm policy=check_all` (BugID 4509462)

Description: A DR configure operation hangs with an IBx (I/O) board after a few successful iterations. This situation occurs when the DR operation is executed concurrently with the DMP daemon that is implementing the policy `check_all` with a time interval.

Workaround: To avoid the deadlock between the DMP daemon and system board DR, enter the following command before performing DR operations. This command stops and re-starts the DMP daemon.

```
# /usr/sbin/vxdmpadm stop restore
```

Unable to Disconnect SCSI Controllers Using DR (BugID 4446253)

Description: When a SCSI controller is configured but not busy, it cannot be disconnected using the DR `cfgadm(1M)` command.

Workaround: None.

`cfgadm_sbd` Plugin in Multi-Threaded Environment Is Broken (BugID 4498600)

Description: When a multi-threaded client of the `cfgadm` library issues concurrent `sbd` requests, the system may hang.

Workaround: None. Currently there are no existing applications implementing multithreaded usage of the `cfgadm` library.

DR Operations Hang After a Few Loops When CPU Power Control Is Also Running (BugID 4114317)

Description: When multiple concurrent DR operations occur, or when `psradm` is run at the same time as a DR operation, the system can hang because of a mutex deadly embrace.

Workaround: Perform DR operations serially (one DR operation at a time); and allow each to complete successfully before running `psradm`, or before beginning another DR operation.

SC Console Bus ERROR Seen While SNMP Enabled and Running DR Suite (BugID 4485505)

Description: A console bus error message is occasionally generated during SNMP get operations on the `cpuModDescr` object. This occurs infrequently, and only when SunMC is monitoring a system. When the message does occur, `unknown` is returned to SunMC as the value of the `cpuModDescr` object.

Workaround: The only workaround is to not use SunMC. However, the message is harmless, and the problem occurs rarely, so it is safe simply to ignore it. The only risk is that the SunMC GUI may occasionally display the wrong value for `cpuModDescr`.

System May Panic When `send_mondo_set` Times Out (BugID 4518324)

A Sun Fire system may panic if one or more of the CPU boards are sync paused during a DR operation. Sync pause is required to attach or detach boards. If there are outstanding `mondo` interrupts, and for any reason the SC is not able to complete sync pause within the one-second `send_mondo_timeout` limit, the system panics.

Sun Midrange Systems Open Issues

This chapter contains the latest information for the Sun Enterprise systems running the Solaris 8 operating environment. These include the Sun Enterprise 6500, 6000, 5500, 5000, 4500, 4000, 3500, and 3000 systems.

The Solaris 8 operating environment includes support for the CPU/memory boards and most I/O boards in the systems mentioned above.

Dynamic Reconfiguration of Sun Enterprise 6x00, 5x00, 4x00, and 3x00 Systems

These release notes provide the latest information on Dynamic Reconfiguration (DR) functionality for Sun Enterprise 6x00, 5x00, 4x00, and 3x00 systems running the Solaris 8 HW 7/03 operating environment from Sun Microsystems. For more information on Sun Enterprise Server Dynamic Reconfiguration, refer to the *Dynamic Reconfiguration User's Guide for Sun Enterprise 3x00/4x00/5x00/6x00 Systems*.

The Solaris 8 HW 7/03 operating environment includes support for CPU/memory boards and most I/O boards in Sun Enterprise 6x00, 5x00, 4x00, and 3x00 systems.

Supported Hardware

Before proceeding, ensure the system supports dynamic reconfiguration. If you see the following message on your console or in your console logs, the hardware is of an older design and not suitable for dynamic reconfiguration.

```
Hot Plug not supported in this system
```

Supported I/O boards are listed in the “Solaris 8” section on the following Web site:

<http://sunsolve5.sun.com/sunsolve/Enterprise-dr>

I/O board Type 2 (graphics), Type 3 (PCI), and Type 5 (graphics and SOC+) are not currently supported.

Firmware Notes

FC-AL Disk Arrays or Internal Drives

For Sun StorEdge A5000 disk arrays or for internal FC-AL disks in the Sun Enterprise 3500 system, the firmware version must be ST19171FC 0413 or a subsequently compatible version. For more information, refer to the “Solaris 8” section at the following web site:

<http://sunsolve5.sun.com/sunsolve/Enterprise-dr>

PROM Updates for CPU and I/O Boards

Users of Solaris 8 HW 7/03 software who wish to use Dynamic Reconfiguration must be running CPU PROM version 3.2.22 (firmware patch ID 103346-xx) or a subsequently compatible version. This firmware is available from the Web site. See [“How to Obtain Firmware” on page 79](#).

Older versions of the CPU PROM may display the following message during boot:

```
Firmware does not support Dynamic Reconfiguration
```

Caution – CPU PROM 3.2.16 and earlier versions do not display this message, although they do not support dynamic reconfiguration of CPU/memory boards.

- To see your current PROM revision, enter `.version` and `banner` at the `ok` prompt.

Your display will be similar to the following:

```
ok .version
Slot 0 - I/O Type 1 FCODE 1.8.22 1999/xx/xx 19:26 iPOST 3.4.22 1999/xx/xx 19:31
Slot 1 - I/O Type 1 FCODE 1.8.22 1999/xx/xx 19:26 iPOST 3.4.22 1999/xx/xx 19:31
Slot 2 - CPU/Memory OBP 3.2.22 1999/xx/xx 19:27 POST 3.9.22 1999/xx/xx 19:31
Slot 3 - I/O Type 4 FCODE 1.8.22 1999/xx/xx 19:27 iPOST 3.4.22 1999/xx/xx 19:31
Slot 4 - CPU/Memory OBP 3.2.22 1999/xx/xx 19:27 POST 3.9.22 1999/xx/xx 19:31
Slot 5 - CPU/Memory OBP 3.2.22 1999/xx/xx 19:27 POST 3.9.22 1999/xx/xx 19:31
Slot 6 - CPU/Memory OBP 3.2.22 1999/xx/xx 19:27 POST 3.9.22 1999/xx/xx 19:31
Slot 7 - CPU/Memory OBP 3.2.22 1999/xx/xx 19:27 POST 3.9.22 1999/xx/xx 19:31
Slot 9 - CPU/Memory OBP 3.2.22 1999/xx/xx 19:27 POST 3.9.22 1999/xx/xx 19:31
Slot 11 - CPU/Memory OBP 3.2.22 1999/xx/xx 19:27 POST 3.9.22 1999/xx/xx 19:31
Slot 12 - CPU/Memory OBP 3.2.22 1999/xx/xx 19:27 POST 3.9.22 1999/xx/xx 19:31
Slot 14 - CPU/Memory OBP 3.2.22 1999/xx/xx 19:27 POST 3.9.22 1999/xx/xx 19:31
ok banner
16-slot Sun Enterprise E6500
OpenBoot 3.2.22, 4672 MB memory installed, Serial #xxxxxxx.
Ethernet address 8:0:xx:xx:xx:xx, Host ID: xxxxxxxx.
```

How to Obtain Firmware

For information about updating your firmware, refer to the “Solaris 8” section at the following Web site:

<http://sunsolve5.sun.com/sunsolve/Enterprise-dr>

At this site, there is information on how to:

- Download the DR-capable PROM firmware
- Upgrade the PROM

If you cannot use the Web site, contact your Sun support service provider for assistance.

Software Notes

Enabling Dynamic Reconfiguration

In the `/etc/system` file, two variables must be set to enable dynamic reconfiguration and an additional variable must be set to enable the removal of CPU/memory boards.

1. **Log in as superuser.**
2. **To enable dynamic reconfiguration, edit the `/etc/system` file and add the following lines to the `/etc/system` file:**

```
set pln:pln_enable_detach_suspend=1
set soc:soc_enable_detach_suspend=1
```

3. **To enable the removal of a CPU/memory board, add this line to the `/etc/system` file:**

```
set kernel_cage_enable=1
```

Setting this variable enables the memory unconfiguration operation.

4. **Reboot the system to put the changes into effect.**

Quiesce Test

On a large system, the `quiesce-test` command (`cfgadm -x quiesce-test sysctrl0:slotnumber`) may run as long as a minute or so. During this time no messages are displayed if `cfgadm` does not find incompatible drivers. This is normal behavior.

Disabled Board List

If a board is on the disabled board list, an attempt to connect the board may produce an error message:

```
# cfgadm -c connect sysctrl0:slotnumber
cfgadm: Hardware specific failure: connect failed: board is
disabled: must override with [-f][-o enable-at-boot]
```

- To override the disabled condition, use the force flag (-f) or the enable option (-o enable-at-boot) with the `cfgadm` command:

```
# cfgadm -f -c connect sysctrl0:slotnumber
```

```
# cfgadm -o enable-at-boot -c connect sysctrl0:slotnumber
```

- To remove all boards from the disabled board list, set the `disabled-board-list` variable to a null set with the system command:

```
# eeeprom disabled-board-list=
```

- If you are at the OpenBoot prompt, use this command instead of the above to remove all boards from the disabled board list:

```
OK set-default disabled-board-list
```

For further information about the `disabled-board-list` setting, refer to the section “Specific NVRAM Variables” in the *Platform Notes: Sun Enterprise 3x00, 4x00, 5x00, and 6x00 Systems* manual in the Solaris on Sun Hardware Collection AnswerBook set in this release.

Disabled Memory List

For information about the OpenBoot PROM `disabled-memory-list` setting, refer to the section “Specific NVRAM Variables” in the *Platform Notes: Sun Enterprise 3x00, 4x00, 5x00, and 6x00 Systems* in the Solaris on Sun Hardware Collection AnswerBook set in this release.

Unloading Detach-Unsafe Drivers

If it is necessary to unload detach-unsafe drivers, use the `modinfo(1M)` line command to find the module IDs of the drivers. You can then use the module IDs in the `modunload(1M)` command to unload detach-unsafe drivers.

Interleaved Memory

A memory board or CPU/memory board that contains interleaved memory cannot be dynamically unconfigured.

To determine if memory is interleaved, use the `prtdiag` command or the `cfgadm` command.

To permit DR operations on CPU/memory boards, set the NVRAM `memory-interleave` property to `min`.

For related information about interleaved memory, see “[Memory Interleaving Set Incorrectly After a Fatal Reset \(BugID 4156075\)](#)” on page 83 and “[DR: Cannot Unconfigure a CPU/Memory Board That Has Interleaved Memory \(BugID 4210234\)](#)” on page 83.

Self-Test Failure During a Connect Sequence

If the error “`cfgadm: Hardware specific failure: connect failed: firmware operation error`” is displayed during a DR connect sequence, remove the board from the system as soon as possible. The board has failed self-test, and removing the board avoids possible reconfiguration errors that can occur during the next reboot.

If you want to immediately retry the failed operation, you must first remove and reinsert the board, because the board status does not allow further operations.

Known Bugs

The following list is subject to change at any time. For the latest bug and patch information, refer to:

<http://sunsolve5.sun.com/sunsolve/Enterprise-dr>.

`cfgadm -v` Not Working Properly (BugID 4149371)

The memory test should give occasional indications that it is still running. During a long test, the user cannot easily determine that the system is not hanging.

Workaround: Monitor system progress in another shell or window, using `vmstat (1M)`, `ps (1)`, or similar shell commands.

Memory Interleaving Set Incorrectly After a Fatal Reset (BugID 4156075)

Memory interleaving is left in an incorrect state when a Sun Enterprise x500 server is rebooted after a Fatal Reset. Subsequent DR operations fail. The problem only occurs on systems with memory interleaving set to min.

Workarounds: Two choices are listed below.

- **To clear the problem after it occurs, manually reset the system at the OK prompt.**
- **To avoid the problem before it occurs, set the NVRAM `memory-interleave` property to `max`.**

This causes memory to be interleaved whenever the system is booted. However, you may find this option to be unacceptable, as a memory board containing interleaved memory cannot be dynamically unconfigured. See [“DR: Cannot Unconfigure a CPU/Memory Board That Has Interleaved Memory \(BugID 4210234\)”](#) on page 83.

vmstat Output Is Incorrect After Configuring Processors (Bug ID 4159024)

vmstat shows an unusually high number of interrupts after configuring CPUs. With vmstat in the background, the interrupt field becomes abnormally large (but this does not indicate a problem exists). In the last row in the example below, the interrupts (in) column has a value of 4294967216:

#	procs			memory				page					disk					faults				cpu	
r	b	w	swap	free	re	mf	pi	po	fr	de	sr	s6	s9	s1	--	in	sy	cs	us	sy	id		
0	0	0	437208	146424	0	1	4	0	0	0	0	0	1	0	0	50	65	79	0	1	99		
0	0	0	413864	111056	0	0	0	0	0	0	0	0	0	0	0	198	137	214	0	3	97		
0	0	0	413864	111056	0	0	0	0	0	0	0	0	0	0	0	286	101	200	0	3	97		
0	0	0	413864	111072	0	11	0	0	0	0	0	0	1	0	0	4294967216	43	68	0	0	100		

Workaround: Restart vmstat.

DR: Cannot Unconfigure a CPU/Memory Board That Has Interleaved Memory (BugID 4210234)

Cannot unconfigure a CPU/memory board that has interleaved memory.

To unconfigure and subsequently disconnect a CPU board with memory or a memory-only board, it is necessary to first unconfigure the memory. However, if the memory on the board is interleaved with memory on other boards, the memory cannot currently be unconfigured dynamically.

Memory interleaving can be displayed using the `prtdiag` or the `cfgadm` commands.

Workaround: Shut down the system before servicing the board, then reboot afterward. To permit future DR operations on the CPU/memory board, set the NVRAM `memory-interleave` property to `min`. See also [“Memory Interleaving Set Incorrectly After a Fatal Reset \(BugID 4156075\)” on page 83](#) for a related discussion on interleaved memory.

DR: Cannot Unconfigure a CPU/Memory Board That Has Permanent Memory (BugID 4210280)

To unconfigure and subsequently disconnect a CPU board with memory or a memory-only board, it is necessary to first unconfigure the memory. However, some memory is not currently relocatable. This memory is considered permanent.

Permanent memory on a board is marked “permanent” in the `cfgadm` status display:

```
# cfgadm -s cols=ap_id:type:info
Ap_Id Type Information
ac0:bank0 memory slot3 64Mb base 0x0 permanent
ac0:bank1 memory slot3 empty
ac1:bank0 memory slot5 empty
ac1:bank1 memory slot5 64Mb base 0x40000000
```

In this example, the board in slot3 has permanent memory and so cannot be removed.

Workaround: Shut down the system before servicing the board, then reboot afterward.

`cfgadm` Disconnect Fails When Running Concurrent `cfgadm` Commands (BugID 4220105)

If a `cfgadm` process is running on one board, an attempt to simultaneously disconnect a second board fails.

A `cfgadm` disconnect operation fails if another `cfgadm` process is already running on a different board. The message is:

```
cfgadm: Hardware specific failure: disconnect failed: nexus error
during detach: address
```

Workaround: Do only one `cfgadm` operation at a time. If a `cfgadm` operation is running on one board, wait for it to finish before you start a `cfgadm` disconnect operation on a second board.

Cannot Drain and/or Detach Sun Enterprise Server Boards That Host QFE Cards (BugID 4231845)

A server configured as a boot server for Solaris 2.5.1-based Intel platform clients has several `rpld` jobs running, whether or not such devices are in use. These active references prevent DR operations from detaching these devices.

Workaround: Perform a DR detach operation:

1. **Remove or rename the `/rplboot` directory.**
2. **Shut down NFS services with this command:**

```
# sh /etc/init.d/nfs.server stop
```

3. **Perform the DR detach operation.**
4. **Restart NFS services with this command:**

```
# sh /etc/init.d/nfs.server start
```

Sun Enterprise 10000 Release Notes

This chapter contains the release notes for the following features on the Sun Enterprise 10000 server: SSP 3.5, dynamic reconfiguration (DR), InterDomain Networks (IDNs), and the Solaris operating environment on Sun Enterprise 10000 domains.

SSP 3.5 Open Issues

For an overview of updated functionality in SSP 3.5, including open and fixed bugs, refer to the *SSP 3.5 Installation Guide and Release Notes*.

Check the SunSolve website on a regular basis for the SSP patches available for SSP 3.5:

<http://sunsolve.Sun.com>

If you need to install SSP software patches, be sure to install the patches on both the main and spare SSP, as explained in the *SSP 3.5 Installation Guide and Release Notes*.

Note – For the Solaris 8 HW 7/03 release, be aware that SSP Patch 112178-01 has been applied to the SSP 3.5 software. This patch fixes bug 4505031, which involves the repeated display of a prompt that asks whether the system is to be configured as an SSP for the Sun Enterprise 10000 server. This prompt appears after the installation of the Solaris operating environment. The patch does not affect basic SSP 3.5 software functionality.

machine_server Memory Leaks during multiple hpost Operations (Bug ID 4493987)

Memory leaks related to the `machine_server` daemon can occur after multiple `hpost` processes.

Workaround: If SSP performance is affected by this memory leak, stop and start SSP daemons. As superuser on the main SSP, type:

```
ssp# /etc/init.d/ssp stop
ssp# /etc/init.d/ssp start
```

showdevices Does Not Display Base Memory Address for System Board (Bug ID 4495747)

This bug causes the `showdevices` command to display incorrect memory base address information. See also BugID 4497243.

Workaround: Use `rcfgadm` along with the `-av` options to display memory base address information.

Dynamic Reconfiguration

Release notes and other technical information in this section apply only to the Solaris 8 2/02 version of the Sun Enterprise 10000 dynamic reconfiguration (DR) feature.

General Issues

This section contains general issues that involve DR on the Sun Enterprise 10000 server. You should read this section before you attempt to install or configure DR.

DR and Bound User Processes

For Solaris 8 HW 7/03, DR no longer automatically unbinds user processes from CPUs that are being detached. Users are now required to perform this operation themselves before initiating a detach sequence. The drain operation fails if CPUs are found with bound processes.

Problem with `oprom_checknodeid()` during DR (4474330)

A panic can occur under certain circumstances when the `/dev/openprom` interface accesses the PROM device tree after a DR disconnect. The `openprom` driver caches node information that can become invalid after a DR disconnect. As a result, OpenBoot PROM can be passed a bad node address.

Workaround: To minimize the possibility of encountering this situation, discontinue using applications, such as `prtconf`, that use the `/dev/openprom` interface during or immediately before or after a DR disconnect operation. Note that `picld(1M)` uses the `/dev/openprom` driver.

QFE Fails to Resume After DR Detach (4499428)

After the `qfe` driver is suspended during a DR operation quiesce of the Solaris operating environment, the `qfe` driver might not resume correctly. This results in a loss of network connectivity. If this condition occurs, the domain will still be accessible through the network console from the SSP.

Workaround: Reset the `qfe` device by executing the following sequence of commands from the network console:

```
# ifconfig qfe_device down
# ifconfig qfe_device up
```

Where `qfe_device` is the affected `qfe` device, e.g. `qfe0`.

Enabling DR 3.0 Requires an Extra Step in Certain Situations (Bug ID 4507010)

If you upgrade or perform a fresh install of the Solaris operating environment on a domain before you upgrade the SSP to SSP 3.5, the domain will not be properly configured for DR 3.0.

Workaround: Run the following command as superuser on the domain, after the SSP has been upgraded to SSP 3.5. This workaround is not necessary until DR 3.0 is enabled on the domain.

```
# devfsadm -i ngdr
```

InterDomain Networks (IDN)

General Issues

For a domain to become part of an IDN, all boards in that domain that have active memory must have at least one active CPU.

Solaris Operating Environment

This section contains general issues, known bugs, patches, and notes about the Solaris 8 HW 7/03 operating environment on the Sun Enterprise 10000 server.

General Issues

Alternate Pathing (AP), dynamic reconfiguration (DR), and InterDomain Networks are supported in the Solaris 8 HW 7/03 release.

Note – If you intend to use DR model 3.0 on a Sun Enterprise 10000 domain, you must install SSP 3.5 on your System Service Processor before you begin the fresh install or upgrade of the Solaris 8 HW 7/03 operating environment on that domain. SSP 3.5 supports the Solaris 8 HW 7/03 operating environment on Sun Enterprise 10000 domains.

Caution – Do not use the Solaris 8 HW 7/03 Installation CD to install or upgrade the Solaris operating environment on Sun Enterprise 10000 domains. Begin installation from the Solaris 8 HW 7/03 Software 1 of 2 CD, as explained in the *SSP 3.5 Installation Guide and Release Notes*.

Solaris 8 HW 7/03 and Boot-Disk Partition Sizes

If you are upgrading the operating environment from Solaris 2.6 to Solaris 8 HW 7/03 and you used the partition layout suggested in the *SMCC Hardware Platform Guide Solaris 2.6*, the partitions may not be large enough for the upgrade. For instance, the `/usr` partition must be at least 653 megabytes. If `/usr` is smaller than the size needed to perform the upgrade, `suninstall` uses the Dynamic Space Reallocation (DSR) mode to reallocate the space of the disk partitions.

DSR may calculate a partition layout which is not acceptable for some systems. For instance, DSR may select partitions that appear to DSR as being unused (non-UFS partitions which may contain raw data or other types of file systems). If DSR selects a used partition, data loss may occur. Therefore, you must know the current status of the partitions DSR wants to use before you allow DSR to continue with the reallocation of the disk partitions.

After DSR presents an acceptable layout and you choose to proceed with the reallocation, DSR adjusts the affected file systems, and the upgrade continues. However, if you cannot constrain the layout so that it is acceptable for your needs, then you may need to manually repartition the boot device, or you may have to perform a fresh install.

OpenBoot PROM Variables

Before you perform the `boot net` command from the OpenBoot PROM prompt (`ok`), you must verify that the `local-mac-address?` variable is set to *false*, which is the factory default. If the variable is set to *true*, you must ensure that this value is an appropriate local configuration.

Caution – If `local-mac-address?` is set to *true*, it may prevent the domain from successfully booting over the network.

In a `netcon(1M)` window, you can use the following command at the OpenBoot PROM prompt to display the values of the OpenBoot PROM variables:

```
ok printenv
```

▼ To Set the `local-mac-address?` Variable

- If the variable is set to `true`, use the `setenv` command to set it to `false`.

```
ok setenv local-mac-address? false
```

Sun Management Center License Terms

New License Agreement Terms

This section provides the most up-to-date binary software license agreement for Sun Management Center 3.0 and its add-on packages. The information here supercedes any earlier versions of the Sun Management Center 3.0 terms.

Sun Microsystems Inc. Binary Software License Agreement For SUN MANAGEMENT CENTER 3.0 and the SUN MANAGEMENT CENTER 3.0 ADD-ON PACKAGES:

- Sun Management Center 3.0 Advanced Systems Monitoring
- Sun Management Center 3.0 Premier Management Applications
- Sun Management Center 3.0 System Reliability Manager
- Sun Management Center 3.0 Service Availability Manager

SUN IS WILLING TO LICENSE THE ACCOMPANYING BINARY SOFTWARE IN MACHINE- READABLE FORM, TOGETHER WITH ACCOMPANYING DOCUMENTATION (COLLECTIVELY "SOFTWARE") TO YOU ONLY UPON THE CONDITION THAT YOU ACCEPT ALL OF THE TERMS AND CONDITION CONTAINED IN THESE LICENSE AGREEMENTS. READ THE TERMS AND CONDITIONS OF THESE AGREEMENTS CAREFULLY BEFORE OPENING THE SOFTWARE MEDIA PACKAGE. BY OPENING THE SOFTWARE MEDIA PACKAGE, YOU AGREE TO THE TERMS OF THESE AGREEMENTS. IF YOU ARE

ACCESSING THE SOFTWARE ELECTRONICALLY, INDICATE YOUR ACCEPTANCE OF THESE TERMS BY SELECTING THE "ACCEPT" BUTTON AT THE END OF THESE AGREEMENTS. IF YOU DO NOT AGREE TO ALL THESE TERMS, PROMPTLY RETURN THE UNUSED SOFTWARE TO YOUR PLACE OF PURCHASE FOR A REFUND OR, IF THE SOFTWARE IS ACCESSED ELECTRONICALLY, SELECT THE "DECLINE" BUTTON AT THE END OF THESE AGREEMENTS.

LICENSE TO EVALUATE (TRY) THE SUN MANAGEMENT CENTER 3.0 ADD-ON PACKAGES SOFTWARE: If you have not paid the applicable license fees for Sun Management Center 3.0 Advanced Systems Monitoring, Sun Management Center 3.0 Premier Management Applications, Sun Management Center 3.0 System Reliability Manager, or Sun Management Center 3.0 Service Availability Manager (individually a "Sun Management Center 3.0 Add-On Package"), the Binary Code License Agreement ("BCL"), the Sun Management Center 3.0 Add-On Packages Supplemental Terms ("Supplemental Terms"), and the Evaluation Terms ("Evaluation Terms") below shall apply to that Sun Management Center 3.0 Add-On Package. When referring to a Sun Management Center 3.0 Add-On Package for which fees have not been paid, the BCL, Supplemental Terms, and the Evaluation Terms shall collectively be referred to as the Evaluation Agreement ("Evaluation Agreement").

LICENSE TO USE (BUY) THE SUN MANAGEMENT CENTER 3.0 ADD-ON PACKAGES SOFTWARE: If you have paid the applicable license fees for a Sun Management Center 3.0 Add-On Package, the BCL and the Sun Management Center 3.0 Add-On Packages Supplemental Terms ("Supplemental Terms") provided following the BCL shall apply to that Sun Management Center 3.0 Add-On Package. When referring to such a Sun Management Center 3.0 Add-On Package, the BCL and the Supplemental Terms shall collectively be referred to as the Agreement ("Agreement").

LICENSE TO USE THE SUN MANAGEMENT CENTER 3.0 SOFTWARE. For Sun Management Center 3.0, the BCL and the Sun Management Center 3.0 Supplemental Terms ("Supplemental Terms") provided following the Sun Management Center 3.0 Add-On Packages Supplemental Terms shall apply. When referring to Sun Management Center 3.0, the BCL and the Sun Management Center 3.0 Supplemental Terms shall collectively be referred to as the Agreement ("Agreement").

EVALUATION TERMS

If you have not paid the applicable license fees for the Software, the terms of the Evaluation Agreement shall apply. These Evaluation Terms add to or modify the terms of the Agreement. Capitalized terms not defined in these Evaluation Terms shall have the same meanings ascribed to them in the Agreement below, or in any license contained within the Software.

1. LICENSE TO EVALUATE. Sun grants to you, a non-exclusive, non-transferable, royalty-free and limited license to use the Software internally for the purposes of evaluation only for sixty (60) days after the date you install the Software on your system ("Evaluation Period"). No license is granted to you for any other purpose. You may not sell, rent, loan or otherwise encumber or transfer the Software in whole or in part, to any third party. Licensee shall have no right to use the Software for productive or commercial use.
2. TIMEBOMB. Software may contain a timebomb mechanism. You agree to hold Sun harmless from any claims based on your use of Software for any purposes other than those of internal evaluation.
3. TERMINATION AND/OR EXPIRATION. Upon expiration of the Evaluation Period, unless terminated earlier by Sun, you agree to immediately cease use of and destroy Software.
4. NO SUPPORT. Sun is under no obligation to support Software or to provide upgrades or error corrections ("Software Updates") to the Software. If Sun, at its sole option, supplies Software Updates to you, the Software Updates will be considered part of Software, and subject to the terms of this Agreement.

SUN MANAGEMENT CENTER 3.0 ADD-ON PACKAGES SUPPLEMENTAL LICENSE TERMS

These supplemental license terms ("Supplemental Terms") add to or modify the terms of the Binary Code License Agreement (collectively, the "Agreement"). Capitalized terms not defined in these Supplemental Terms shall have the same meanings ascribed to them in the Agreement. These Supplemental Terms shall supersede any inconsistent or conflicting terms in the Agreement, or in any license contained within the Software.

1. Trademarks and Logos. You acknowledge and agree as between you and Sun that Sun owns the SUN, SOLARIS, JAVA, JINI, FORTE, and iPLANET trademarks and all SUN, SOLARIS, JAVA, JINI, FORTE, and iPLANET-related trademarks, service marks, logos and other brand designations ("Sun Marks"), and you agree to comply with the Sun Trademark and Logo Usage Requirements currently located at <http://www.sun.com/policies/trademarks>. Any use you make of the Sun Marks inures to Sun's benefit.
2. Source Code. Software may contain source code that is provided solely for reference purposes pursuant to the terms of this Agreement.
3. Termination for Infringement. Either party may terminate this Agreement immediately should any Software become, or in either party's opinion be likely to become, the subject of a claim of infringement of any intellectual property right.

SUN MANAGEMENT CENTER 3.0 SUPPLEMENTAL LICENSE TERMS

These supplemental terms ("Supplemental License Terms") add to the terms of the Binary Code License Agreement (collectively, the "Agreement"). "Software" as defined in Section 1 of the Binary Code License Agreement expressly includes, but is not limited to, the Sun Management Center 3.0 software and the iPlanet (tm) Web Server, FastTrack Edition and certain third party software products incorporated in Sun Management Center 3.0. Capitalized terms not defined herein shall have the same meanings ascribed to them in the Binary Code License Agreement. The Supplemental License Terms shall take precedence over any inconsistent or conflicting terms in the Binary Code License Agreement or in the Software.

1. **General Use Restriction for iPlanet Products.** You may only use the copy of the iPlanet Web Server bundled with the Sun Management Center 3.0 software in conjunction with the Sun Management Center 3.0 software. You may not use the copy of the Web Server bundled with the Sun Management Center 3.0, or any other bundled third party component, independently of Sun Management Center 3.0.
2. **Third Party Database Software Restrictions.** The Software includes third party database software which is provided to support Solaris' operating system services only. The third party database software may not be used to provide any other type of data storage nor may the interfaces from the third party database software be accessed or used by any third party applications.
3. **Third Party Software.** Some portions of Software are provided with notices and/or licenses from other parties which govern the use of those portions, including the read-me file named Read-Me-License.
4. **Trademarks and Logos.** You acknowledge and agree as between you and Sun that Sun owns the SUN, SOLARIS, JAVA, JINI, FORTE, and iPLANET trademarks and all SUN, SOLARIS, JAVA, JINI, FORTE, and iPLANET-related trademarks, service marks, logos and other brand designations ("Sun Marks"), and you agree to comply with the Sun Trademark and Logo Usage Requirements currently located at <http://www.sun.com/policies/trademarks>. Any use you make of the Sun Marks inures to Sun's benefit.
5. **Source Code.** Software may contain source code that is provided solely for reference purposes pursuant to the terms of this Agreement.
6. **Termination for Infringement.** Either party may terminate this Agreement immediately should any Software become, or in either party's opinion be likely to become, the subject of a claim of infringement of any intellectual property right.

Released Patches Integrated into the Solaris 8 HW 7/03 Release

This is a list of officially released Solaris patches whose fixes are included from the Solaris 8 2/02 release through the Solaris 8 HW 7/03 release.

Solaris 8 HW 7/03 Patches

Patch-ID : 108434-12
 Keywords : libC.so.5 libCrun.so.1 libdemangle.so.1
 Synopsis : 32-Bit Shared library patch for C++
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4199587 4205763 4271402 4285270 4318566 4338406

Patch-ID : 108569-08
Keywords : Add new link to SUNWxwpsr
Synopsis : X11 6.4.1: platform support for new hardware
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4335033 4346835 4376310 4376485 4414947 4427178
4731970 4726510

Patch-ID : T108576-41 (Preliminary Patch - Not Yet Released)
Keywords : Expert3D ifb ddx window
Synopsis : SunOS 5.8: Expert3D IFB Graphics Patch
Obsoletes these patches: 112538-01
SunOs Release :
Relevant Architectures : sparc.sun4u

SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4334446 4346495 4358337

Patch-ID : 109881-02
Keywords : IEEE 1394 HCI1394_ISO_CTXT_BFFILL ixl1394_xmit_special
panic
Synopsis : SunOS 5.8: 1394 adb macros patch
Obsoletes these patches:109346-02
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4329522 4330882 4331744 4351774

Patch-ID : 109882-06
Keywords : eri 10/100 Ethernet suspend resume non-cable SUNW,eri0
Synopsis : SunOS 5.8: eri header files patch
Obsoletes these patches:109347-02
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4231424 4327054 4345671 4345969 4363777 4364842

Patch-ID : 109931-05
Keywords : planes imagetool snapshot tif image results color sdtimage
postscript
Synopsis : CDE 1.4: sdtimage Patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4345373 4396192 4492924 4634906 4474936 4746059

Patch-ID : 109933-01
Keywords : mv hang page_lock
Synopsis : SunOS 5.8: mv, cp, ln patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4264701

Patch-ID : 109935-03
Keywords : prtdiag FRU Netra ct libprtdiag_psr.so.1
Synopsis : SunOS 5.8: libprtdiag_psr.so.1 for SUNW,UltraSPARC-III-Netract patch
Obsoletes these patches:112128-01
SunOs Release :
Relevant Architectures : sparc.sun4u
BugIds fixed with this patch : 4338306 4353761 4353762 4364922 4422397

Patch-ID : 109936-01
Keywords : diff case Swedish characters single-byte 8-bit Latin-1
Synopsis : SunOS 5.8: /usr/bin/diff patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4338744

Patch-ID : 109951-01
Keywords : security Wnn6 jserver overflow
Synopsis : SunOS 5.8: jserver buffer overflow
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4352777

Patch-ID : 109960-01
Keywords : input chinese remote textfield memory leak leaks
Synopsis : CDE 1.4: sdtperfmeter patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4341412 4290470 4280252

Patch-ID : 109990-01
Keywords : dis v8plusb elf header
Synopsis : SunOS 5.8: /usr/ccs/bin/dis patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4015840 4350263

Patch-ID : 109992-01
Keywords : Thai
Synopsis : Thai prolog.ps is incorrect.
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4353523

Patch-ID : 109994-01
Keywords : dis adb UltraSPARC-III
Synopsis : SunOS 5.8: /usr/bin/sparcv7/adb and /usr/bin/sparcv9/adb
patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4015840 4350263

Patch-ID : 110019-06
Keywords : JFP message ja patch
Synopsis : SunOS 5.8: JFP install/sysadm messages patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4354350 4375794 4405716 4449597 4481597 4512272

Patch-ID : 110044-01
Keywords : zh.GBK iswalphalpha()
Synopsis : SunOS 5.8: iswalphalpha() can't work well in zh.GBK locale
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4355229

Patch-ID : 110053-02
Keywords : LC_CTYPE arabic locale
Synopsis : Arabic locale has errors in / lacks some LC_CTYPE definitions
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : generic sparc
BugIds fixed with this patch : 4310887

Patch-ID : 110065-01
Keywords : install update u2
Synopsis : SunOS 5.8: New features added to install
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4357775

Patch-ID : 110068-02
Keywords : security sdtpdasync script more robust palm conduit private addresses
Synopsis : PDASync patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4341358 4335220 4367008

Patch-ID : 110075-01
Keywords : security devinfo driver hardening
Synopsis : SunOS 5.8: /kernel/drv/devinfo and /kernel/drv/sparcv9/devinfo patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4341354

Patch-ID : T110088-02 (Preliminary Patch - Not Yet Released)
Keywords : dtpower delete customizations power.conf fbpm Grover CDE headless
Synopsis : CDE 1.4: DtPower patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4354583 4336307 4370067 4372350 4374505 4374554

Patch-ID : 110127-04
Keywords : framebuffer config
Synopsis : SunOS 5.8: Generic Framebuffer configuration Graphics Patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4305334 4472448

Patch-ID : 110150-04
Keywords : SUNW,UltraSPARC-IIi-Engine
Synopsis : SunOS 5.8: rasctrl driver patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sun4u
BugIds fixed with this patch : 4351894 4364221 4493395 4501846

Patch-ID : 110165-04
Keywords : sed disks ucblinks.sh core truncating files GABI non-whitespace
Synopsis : SunOS 5.8: /usr/bin/sed patch
Obsoletes these patches:

SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4287555 4356581 4400740 4725906

Patch-ID : 110206-01
Keywords :
Synopsis : sdtwinlst and sdtgwm utf8 unlocalised
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4352861 4352800

Patch-ID : T110221-07 (Preliminary Patch - Not Yet Released)
Keywords : dcam1394 1394 digital camera driver window
Synopsis : SunOS 5.8: Dcam1394 patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sun4u
BugIds fixed with this patch : 4365341 4349294 4372839 4382327 4424042 4423667
4500186 4699746 4827215

Patch-ID : 110251-01
Keywords : hu_HU.ISO8859-2 Sort Order Error Hungarian
Synopsis : SunOS 5.8: Sort error in hu locale
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4338099

Patch-ID : 110269-01
Keywords : rpc.nisd NIS+ fsync fflush
Synopsis : SunOS 5.8: /usr/lib/libnisdb.so.2 patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4318294

Patch-ID : 110274-03
Keywords : FIGGS Install New Features help
Synopsis : SunOS 5.8:Figgs Custom install new features and install help
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4367029

Patch-ID : 110283-06
Keywords : mkfs newfs near-terabyte slow filesystems mkfs_ufs core
Synopsis : SunOS 5.8: mkfs and newfs patch

Obsoletes these patches:110332-01

SunOs Release : 5.8

Relevant Architectures : sparc

Patch-ID : 110851-02
Keywords : new platform ssc050
Synopsis : SunOS 5.8: /platform/sun4u/kernel/drv/sparcv9/ssc050 patch
Obsoletes these patches:110785-01 111427-01
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4369175 4381743 4403503 4410299

Patch-ID : 110852-03
Keywords : new platform ssc100 note.h I2CTest subaddresses SUNvts
Synopsis : SunOS 5.8: /platform/sun4u/kernel/drv/sparcv9/ssc100 patch

Obsoletes these patches:110786-01

SunOs Release :

Relevant Architectures : sparc

BugIds fixed with this patch : 4369175 4381743 4434341 4480752

Patch-ID : 110853-01

Keywords : new platform usr_platform

Synopsis : SunOS 5.8: usr_platform patch

Obsoletes these patches:110787-01

SunOs Release :

Relevant Architectures : sparc

BugIds fixed with this patch : 4369175 4381743

Patch-ID : 110854-02

Keywords : new platform smbus_ara note.h

Synopsis : SunOS 5.8: /platform/sun4u/kernel/drv/sparcv9/smbus_ara patch

Obsoletes these patches:110788-01

SunOs Release :

Relevant Architectures : sparc

BugIds fixed with this patch : 4369175 4381743 4434341

Patch-ID : 110856-01

Keywords : services dr

Synopsis : SunOS 5.8: /etc/inet/services patch

Obsoletes these patches:110574-01

SunOs Release :

Relevant Architectures : sparc

BugIds fixed with this patch : 4363907

Patch-ID : 110864-01

Keywords : Thai upgrade

Synopsis : SunOS 5.8:Need to back port fixes for SUNW_PKGLIST for ALC packages

Obsoletes these patches:

SunOs Release : 5.8

Relevant Architectures : sparc

BugIds fixed with this patch : 4402062

Patch-ID : 110867-01

Keywords : 64bit upgrade

Synopsis : SunOS 5.8:Need to back port fixes for SUNW_PKGLIST for ALC packages

Obsoletes these patches:

SunOs Release : 5.8

Relevant Architectures : sparc

BugIds fixed with this patch : 4399082

Patch-ID : 110885-01
Keywords : product registry
Synopsis : SunOS 5.8: JFP Solaris Product Registry 3.0 patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4405721

Patch-ID : 110888-01
Keywords : New translations
Synopsis : SunOS 5.8 : s28u4_06,figgs,New and updated message strings
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4406660 4407100

Patch-ID : 110896-02
Keywords : security mount cachefs cfsadmin nsr cache cachefs cachefsd
inetdconf
Synopsis : SunOS 5.8: cachefs/mount patch
Obsoletes these patches:108825-01
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4207874 4230685 4332446 4338920 4467621 4698882
4698886 4740460

Patch-ID : 110898-08
Keywords : security cshh tmpfiles pfcsh EACCES cores errors env chars seg
fault
Synopsis : SunOS 5.8: csh/pfcsh patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 1227664 4302461 4374736 4384080 4402562 4404641

Patch-ID : 110901-01
Keywords : sgen hang USCSI
Synopsis : SunOS 5.8: /kernel/drv/sgen and /kernel/drv/sparcv9/sgen patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4319695 4325990

Patch-ID : 110903-05
Keywords : security vi edit dtterm temporary files long EXINIT tags line
Synopsis : SunOS 5.8: edit, ex, vedit, vi and view patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4059978 4300381 4320573 4364594 4614041 4635504

Patch-ID : 110905-02
Keywords : find expansion execvp option
Synopsis : SunOS 5.8: /usr/bin/find patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4333804 4354572 4445793

Patch-ID : 110907-01
Keywords : UNIX98 inet.h in6_addr
Synopsis : SunOS 5.8: /usr/include/arpa/inet.h patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4345816

Patch-ID : 110910-01
Keywords : fsck user confirmation
Synopsis : SunOS 5.8: /usr/lib/fs/ufs/fsck patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4225018

Patch-ID : 110912-03
Keywords : cfgadm libcfgadm pointers arguments cfgadm DR
Synopsis : SunOS 5.8: cfgadm patch
Obsoletes these patches:111511-01
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4301920 4301922 4301984

4387106 4433560 4495168

Patch-ID : 110914-01
Keywords : tr core options
Synopsis : SunOS 5.8: /usr/bin/tr patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4366964

Patch-ID : 110916-04
Keywords : sort fields columns piping SIGBUS NEWLINE fault diagnostics
Synopsis : SunOS 5.8: sort patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4300461 4303258 4304444 4314724 4330831 4334641

SunOs Release :
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4384285

Patch-ID : 111269-03
 Keywords : authentication error messages command line interface stdout toolbox
 Synopsis : SunOS 5.8: Solaris Management Console patch
 Obsoletes these patches:
 SunOs Release :
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4354567 4394572 4457451

Patch-ID : 111275-01
 Keywords : gwm wdev smartcard flash sdtwinlst dtstyle dhcpcmgr cdrw mp
 Synopsis : SunOS 5.8: New features Solaris 8 Update 5 European
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4451579 4355669 4437042

Patch-ID : 111295-01
 Keywords : pstack sendfilev
 Synopsis : SunOS 5.8: /usr/bin/sparcv7/pstack & /usr/bin/sparcv9/pstack patch
 Obsoletes these patches:111213-01
 SunOs Release :
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4393386 4399452 4400361

Patch-ID : 111297-01
 Keywords : sendfilev libsendfile sendfile
 Synopsis : SunOS 5.8: /usr/lib/libsendfile.so.1 patch
 Obsoletes these patches:111219-01
 SunOs Release :
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4400361

Patch-ID : 111302-02
 Keywords : EDHCP libraries libdhcpsvc libdhcputil libinetutil
 Synopsis : SunOS 5.8: EDHCP libraries patch
 Obsoletes these patches:111170-01
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4118738 4247106 4404390 4406599

Patch-ID : 111304-01
Keywords : EDHCP nfs_dlboot
Synopsis : SunOS 5.8: /kernel/misc/nfs_dlboot patch
Obsoletes these patches:111166-01
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4247106

Patch-ID : 111306-04
Keywords : EDHCP inetboot PXE ufsboot bop_alloc corrupts panic overflow
Synopsis : SunOS 5.8: ufsboot and inetboot patch
Obsoletes these patches:111168-01 111384-01
SunOs Release : 5.8
Relevant Architectures : sparc.sun4d sparc.sun4m sparc.sun4u
BugIds fixed with this patch : 4247106 4402048 4411148 4463870

Patch-ID : 111308-03
Keywords : EDHCP libmtmalloc mtmalloc memalign valloc SIGABRT multi-threaded
Synopsis : SunOS 5.8: /usr/lib/libmtmalloc.so.1 patch
Obsoletes these patches:111172-01
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4222368 4247106 4308095 4308252 4384513 4451603 4456270 4617257

Patch-ID : 111310-01
Keywords : EDHCP libdhcpagent
Synopsis : SunOS 5.8: /usr/lib/libdhcpagent.so.1 patch
Obsoletes these patches:111164-01
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4247106

Patch-ID : 111313-01
Keywords : viper tools servlet performance MRU
Synopsis : SunOS 5.8: Viper tools are very slow to load
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4415738

Patch-ID : 111317-04
Keywords : process table init getutxent_freq looping system hang
Synopsis : SunOS 5.8: /sbin/init and /usr/sbin/init patch
Obsoletes these patches:

SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4350392 4461715 4503048 4662013

Patch-ID : 111319-01
Keywords : in.rdisc advertisements lifetime
Synopsis : SunOS 5.8: /usr/sbin/in.rdisc patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4304158

Patch-ID : 111321-03
Keywords : security lm_shutdown clients klmops strlen panic
lm_copy_config
Synopsis : SunOS 5.8: klmmod and klmops patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4370038 4372812 4492876

Patch-ID : 111323-01
Keywords : xpg4 more 0xff
Synopsis : SunOS 5.8: /usr/xpg4/bin/more patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4373943

Patch-ID : 111325-02
Keywords : security ttymon SIGCLD ports denial service console fattach
Synopsis : SunOS 5.8: /usr/lib/saf/ttymon patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4246300 4657339

Patch-ID : 111327-05
Keywords : getaddrinfo AI_PASSIVE INADDR_LOOPBACK libsocket
3SOCKET ai_addr
Synopsis : SunOS 5.8: libsocket patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4316349 4324375 4356490 4458516 4464883

Patch-ID : 111332-06
Keywords : security DCS rcm_request_capacity_change inetd Sun-Fire-15000 DoS
Synopsis : SunOS 5.8: /usr/lib/dcs patch
Obsoletes these patches:111652-01
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4402784 4429775 4456661 4457741 4460279 4480306 4497243 4683247

Patch-ID : 111335-16
Keywords : DR copy-rename cfgadm dr drmach SUNW,Sun-Fire-15000 panic pt11 fcgp2
Synopsis : SunOS 5.8: Sun-Fire-15000 dr, gptwo_pci & sc_gptwocfg drivers patch
Obsoletes these patches:111395-02
SunOs Release : 5.8
Relevant Architectures : sparc.sun4u
BugIds fixed with this patch : 4346494 4379810 4385107 4397382 4399138 4399165 4399184 4400692 4404492 4404532 4406374 4406573 4406903 4407043 4407520 4409977 4412070 4414010 4414500 4414580 4416528 4416546 4416565 4417163 4418267 4418315 4418721 4419158 4419171 4421238 4422498 4422946 4423982 4434338 4446470 4451073 4451120 4451354 4451879 4451940 4453614 4455850 4456609 4458013 4458210 4459820 4460715 4461330 4461811 4464336 4465918 4466463 4467405 4467793 4468133 4468450 4469104 4469251 4470271 4470641 4475481 4476158 4477894 4478178 4478393 4481262 4485627 4487620 4489166 4489890 4491299 4495650 4495712 4496385 4500100 4503287 4506806 4508895 4509391 4509968 4510008 4512458 4513778 4514400 4519712 4520227 4521645 4522151 4522581 4523099 4523109 4523979 4525053 4525286 4526043 4527408 4532551 4609938 4613988 4614002 4616340 4620790 4622938 4630898 4642161 4646811 4652995 4661605 4664749 4669462 4670106 4675057 4676706 4680826 4682022 4682824 4692462 4692542 4696700 4700564 4707287 4728572 4746505 4749709 4756790 4759384 4769147

Patch-ID : 111359-02
Keywords : pkgpatch CAS
Synopsis : SunOS 5.8: SPECIAL PATCH: postinstall replacement scripts (S8U6)
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sun4u
BugIds fixed with this patch :

Patch-ID : 111360-02
Keywords : pkgpatch CAS
Synopsis : SunOS 5.8: SPECIAL PATCH: postinstall replacement scripts (S8U6)
Obsoletes these patches:

SunOs Release : 5.8
 Relevant Architectures : sun4u
 BugIds fixed with this patch :

Patch-ID : 111368-01
 Keywords : groups getgrgid supplementary core
 Synopsis : SunOS 5.8: /usr/bin/groups patch
 Obsoletes these patches:
 SunOs Release :
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4423602

Patch-ID : 111380-01
 Keywords : Solaris Registration
 Synopsis : solregis: Japanese message patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4449182

Patch-ID : 111382-01
 Keywords : keyboards arabic turkish greek belgian symbols layout
 Synopsis : X11 6.4.1: keyboards patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4434254

Patch-ID : 111386-01
 Keywords : dhcpmgr
 Synopsis : SunOS 5.8: s28u6 Euro bug fixing
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4466198 4471313

Patch-ID : 111398-01
 Keywords : parse_dynamic_clustertoc dynamic_tests
 Synopsis : SunOS 5.8: parse_dynamic_clustertoc needs to use dynamic_tests
 Obsoletes these patches:
 SunOs Release :
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4430962

Patch-ID : 111400-01
 Keywords : kcms, security, -P, printer
 Synopsis : SunOS 5.8: KCMS configure tool has a security vulnerability
 Obsoletes these patches:

SunOs Release : 5.8
 Relevant Architectures : sun4u
 BugIds fixed with this patch : 4415570

Patch-ID : 111415-05
 Keywords : pkgpatch CAS
 Synopsis : SunOS 5.8: SPECIAL PATCH: postinstall replacement scripts (S8U&)
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sun4u
 BugIds fixed with this patch :

Patch-ID : 111439-02
 Keywords : tmpfs mount 2GB memory fsflush panic tdirrename multithreaded
 Synopsis : SunOS 5.8: /kernel/fs/tmpfs patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4356012 4415160 4682537

Patch-ID : 111471-04
 Keywords : mp print filter
 Synopsis : Bug fix for mp
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4413076 4426344 4428395 4501631 4502513 4502970 4503472 4505538 4724107

Patch-ID : 111481-01
 Keywords : timezone user interface clock
 Synopsis : OpenWindows 3.6.2: clock Patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4443940

Patch-ID : 111498-04
 Keywords : i8042 kb_ps2 kdmouse PS/2 mouse UltraAX-e2
 Synopsis : SunOS 5.8: PS2 Keyboard/mouse patch
 Obsoletes these patches:108833-06
 SunOs Release : 5.8
 Relevant Architectures : sun4u
 BugIds fixed with this patch : 4456340 4462332 4473496 4286023 4309431 4351910 4359774 4433935 4493395 4501840 4502088

Patch-ID : 111504-01
 Keywords : security tip getent tgetent buffer uucp
 Synopsis : SunOS 5.8: /usr/bin/tip patch
 Obsoletes these patches:
 SunOs Release :
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4330475 4430971

Patch-ID : 111548-01
 Keywords : security catman tmpfiles
 Synopsis : SunOS 5.8: catman, man, whatis, apropos and makewhatis patch
 Obsoletes these patches:
 SunOs Release :
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4392144 4434978

Patch-ID : 111562-02
 Keywords : shm_open /var/tmp POSIX envmond library mq_ functions
 Synopsis : SunOS 5.8: /usr/lib/librt.so.1 patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4285279 4288759 4526005

Patch-ID : 111570-02
 Keywords : security buffer overflow uucp uid strcpy destination dir
 Synopsis : SunOS 5.8: uucp patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4416701 4686442

Patch-ID : 111588-04
 Keywords : security wscons wcnget vnode rwsconsvp specs fopen
 UNIX98 I_STR
 Synopsis : SunOS 5.8: /kernel/drv/ws and /kernel/fs/specfs patch
 Obsoletes these patches:111267-02
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 1101389 4013043 4223214 4445656 4587859 4614329

Patch-ID : 111596-03
 Keywords : security rpc.yppasswdd buffer overflow default shell
 Synopsis : SunOS 5.8: /usr/lib/netsvc/yp/rpc.yppasswdd patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4283355 4392250 4456994 4466065

Patch-ID : T111606-03 (Preliminary Patch - Not Yet Released)
Keywords : security ftpd memory GAVSIZ S_ISGID preserve DOS
Synopsis : SunOS 5.8: /usr/sbin/in.ftpd patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4244544 4436988 4445755 4446600 4451524 4452705
4714534

Patch-ID : 111624-04
Keywords : security inetd rpc file descriptor t_close TLI SIGHUP monitor
fails
Synopsis : SunOS 5.8: /usr/sbin/inetd patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4132950 4314498 4343874 4345189 4383820

Patch-ID : 111626-03
Keywords : security overflow dumps core cmdtool cpu
Synopsis : OpenWindows 3.6.2: Xview Patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc

 SunOs Release :
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4426200

Patch-ID : 111804-03
Keywords : rem_drv power cycle basedir
Synopsis : SunOS 5.8: /usr/sbin/rem_drv patch
Obsoletes these patches:111452-01 114303-01
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4273250 4335834 4461373 4747701 4776340

Patch-ID : 111808-02
Keywords : adb power cycle
Synopsis : SunOS 5.8: /usr/lib/adb/devinfo patch
Obsoletes these patches:111454-01 114304-01
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4335834 4747667 4776340

Patch-ID : 111822-01
Keywords : PICL plugins SUNW,Sun-Fire-480R libpiclfrudata.conf
Synopsis : SunOS 5.8: libpiclfrudata.conf patch for SUNW,Sun-Fire-480R
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc.sun4u
BugIds fixed with this patch : 4451172

Patch-ID : 111823-01
Keywords : New Features
Synopsis : New Features
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch :

Patch-ID : 111826-01
Keywords : security buffer overflow whodo TZ
Synopsis : SunOS 5.8: /usr/sbin/sparcv7/whodo & /usr/sbin/sparcv9/whodo patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4477380

Patch-ID : 111831-01
Keywords : dump_ioctl DIOCSETDEV DIOCTRYDEV v_count
Synopsis : SunOS 5.8: /usr/kernel/drv/dump patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4341921

Patch-ID : 111844-02
 Keywords : finger xdm wrong version
 Synopsis : X11 6.4.1 xdm patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4180129 4470241

Patch-ID : 111852-01
 Keywords : spam sx xilcg cg14 SS20
 Synopsis : SunOS 5.8: SX Graphics Patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sun4m
 BugIds fixed with this patch : 4458250

Patch-ID : 111874-06
 Keywords : security rfc822 mail multiline header overflow Buffer command-line
 Synopsis : SunOS 5.8: usr/bin/mail patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4452230 4465086 4502850 4624990 4705717

Patch-ID : 111876-01
 Keywords : decimal euro frac_digit iso8859-15@euro precision
 Synopsis : nl.iso 15@euro locale incorrectly sets decimal precision
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4481685

Patch-ID : 111881-03
 Keywords : security telmod panic kmem_flags QNEXTLESS I_STR ioctl payloads
 Synopsis : SunOS 5.8: /usr/kernel/strmod/telmod patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc
 BugIds fixed with this patch : 4206774 4448655 4587859

Patch-ID : T111883-14 (Preliminary Patch - Not Yet Released)
 Keywords : ce performance schizo infinite_burst hang
 Synopsis : SunOS 5.8: Sun GigaSwift Ethernet 1.0 driver patch
 Obsoletes these patches:
 SunOs Release : 5.8
 Relevant Architectures : sparc

Patch-ID : 111953-04
Keywords : zh_CN.GB18030
Synopsis : SunOS 5.8: zh_CN.GB18030 locale support (part 1)
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4502871 4502970 4508981 4513275 4515844

Patch-ID : 111958-02
Keywords : statd core t_splay terminated
Synopsis : SunOS 5.8: /usr/lib/nfs/statd patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4456871 4515121

Patch-ID : 111989-01
Keywords : egrep Dash class string
Synopsis : SunOS 5.8: usr/bin/egrep patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 1042934

Patch-ID : 111995-06
Keywords : pkgpatch editable files
Synopsis : SunOS 5.8: SPECIAL PATCH: editable file replacements
(SU7/HW2)
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4105425 4105459 4105493 4109696 4136950 4171405

4713409 4748504 4776340 4740300 4771216

Patch-ID : 112001-08
Keywords : pkgpatch CAS
Synopsis : SunOS 5.8: SPECIAL PATCH: class action replacement scripts (SU7/HW2)
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4514892 4734122 4337350 4723473 4740300 4419540 4787105 4749894 4776340 4654448 4735539 4829272 4825337 4846488

Patch-ID : 112003-03
Keywords : 64-bit fontset iso-8859-15 iso-8859-1
Synopsis : SunOS 5.8: Unable to load fontset in 64-bit Solaris 8 iso-1 or iso-15
Obsoletes these patches:112359-01
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4490186 4614971 4614237

Patch-ID : 112032-02
Keywords : zh_CN.GB18030
Synopsis : SunOS 5.8: New locale zh_CN.GB18030 support (Apply with 111953-xx)
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4503474 4502883 4508981

Patch-ID : 112036-02
Keywords : en_US.UTF-8 XI18N
Synopsis : SunOS 5.8: en_US.UTF-8 locale XI18N patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4470772 4503088 4528408

Patch-ID : 112039-01
Keywords : security stack overflow core
Synopsis : SunOS 5.8: usr/bin/ckitem patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4466215 4482260

Patch-ID : 112050-01
Keywords : ptree child processes display
Synopsis : SunOS 5.8: ptree patch
Obsoletes these patches:

SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4233996

Patch-ID : 112057-01
Keywords : SUNWale mailx
Synopsis : SunOS 5.8: Asian mailx and in.comsat update
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4350331 4467096 4497465

Patch-ID : 112077-07
Keywords : RSM KA credit overflow ASSERT cluster interface boots injection
Synopsis : SunOS 5.8: usr/kernel/drv/rsm patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4479418 4482081 4493394 4513789 4519566 4679690 4700142 4728023 4754589 4780149 4781177 4784242

Patch-ID : 112082-02
Keywords : Webstart garbage install
Synopsis : SunOS 5.8: Webstart install patch for ja_JP.PCK and ja_JP.UTF-8
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4500679

Patch-ID : 112084-01
Keywords : Korean sdthanja
Synopsis : SunOS 5.8: regression: sdthanja displays garbages using libXm.so.4
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4488389

Patch-ID : 112097-02
Keywords : cpio wrong links performance extract USTAR
Synopsis : SunOS 5.8: /usr/bin/cpio patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc

dump
Synopsis : SunOS 5.8: /usr/sbin/rpcbind patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 1226166 4500062 4690775

Patch-ID : 112345-03
Keywords : source compatibility pax restore data regexp
Synopsis : SunOS 5.8: /usr/bin/pax patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4508106 4628110 4766460

Patch-ID : 112369-01
Keywords : environ_overtemp_poll stack thread overflow environ
Synopsis : SunOS 5.8:: environ driver patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc.sun4u
BugIds fixed with this patch : 4514619

Patch-ID : 112371-01
Keywords : ruptime uptimes
Synopsis : SunOS 5.8:: /usr/bin/ruptime patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4341794

Patch-ID : 112394-01
Keywords : euro print
Synopsis : SunOS 5.8 : Print euro and other ext. chars
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4512357 4554802

Patch-ID : 112396-02
Keywords : fgrep wordlist fails large
Synopsis : SunOS 5.8: /usr/bin/fgrep patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4498984

Patch-ID : 112425-01
Keywords : logging global option mount ufs
Synopsis : SunOS 5.8:: /usr/lib/fs/ufs/mount and /etc/fs/ufs/mount
patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4618830

Patch-ID : 112438-01
Keywords : random number generator PRNG
Synopsis : SunOS 5.8: /kernel/drv/random patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4337350

Patch-ID : 112459-01
Keywords : security pt_chmod ACLs fdetach SEGVs
Synopsis : SunOS 5.8:: /usr/lib/pt_chmod patch
Obsoletes these patches:
SunOs Release :
Relevant Architectures : sparc
BugIds fixed with this patch : 4026558 4394991 4448407

Patch-ID : 112472-01
Keywords : Thai Lucida fonts merlin-th
Synopsis : SunOS 5.8: Font2DTest2 abort when Lucida Sans Thai Typewriter selected
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4370527

Patch-ID : 112501-01
Keywords : dtcreate dies
Synopsis : CDE 1.4: dtcreate patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4623665

Patch-ID : 112597-01
Keywords : runacct wtmpx pacct data
Synopsis : SunOS 5.8: /usr/lib/acct/runacct patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4494635

Patch-ID : 112607-02
Keywords : on command garbage hostname core
Synopsis : SunOS 5.8: /usr/bin/on patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4520108 4636697

Patch-ID : 112611-01
Keywords : security libz zlib
Synopsis : SunOS 5.8: /usr/lib/libz.so.1 patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4644859

Patch-ID : 112663-01
Keywords :
Synopsis : X11 6.4.1: keyboards patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4646705

Patch-ID : 112666-01
Keywords : acctcon core system inactive
Synopsis : SunOS 5.8: /usr/lib/acct/acctcon patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4587606

Patch-ID : 112668-01
Keywords : security gzip
Synopsis : SunOS 5.8: /usr/bin/gzip patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4644742

Patch-ID : 112670-01
Keywords : clinfo error messages
Synopsis : SunOS 5.8: /usr/sbin/clinfo patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4638788

Patch-ID : 112781-01
Keywords : PGX64
Synopsis : X11 6.4.1: twm patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4659947

Patch-ID : 112792-01
Keywords : security root pcmcia writing
Synopsis : SunOS 5.8: /usr/lib/pcmcia patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4280870

Patch-ID : 112794-01
Keywords : bp_mapout pcam PCMCIA buf
Synopsis : SunOS 5.8: /kernel/drv/pcram and /kernel/drv/sparcv9/pcram
patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4390335

Patch-ID : 112796-01
Keywords : security in.talkd user format
Synopsis : SunOS 5.8: /usr/sbin/in.talkd patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4651310

Patch-ID : 112798-01
Keywords : rlmmod QNEXTLESS
Synopsis : SunOS 5.8: /usr/kernel/strmod/rlmod patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4206774

Patch-ID : 112844-02
Keywords : proc utils sigpipe pfiles truss incomplete fix
Synopsis : SunOS 5.8: pfiles and plimit patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4317104 4743679

Patch-ID : 112846-01
Keywords : security rpc.rwalld format string
Synopsis : SunOS 5.8: /usr/lib/netnsvc/rwall/rpc.rwalld patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4664537

Patch-ID : 112850-01
Keywords : icmp6 QNEXTLESS
Synopsis : SunOS 5.8: /kernel/drv/icmp6 and /kernel/drv/sparcv9/icmp6
Patch
Obsoletes these patches:

SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4647983

Patch-ID : 112989-01
Keywords : conv_lpd gettext nawk
Synopsis : SunOS 5.8: /usr/lib/print/conv_lpd patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4505678

Patch-ID : 112991-01
Keywords : prtvtoc mpzio segmentation fault
Synopsis : SunOS 5.8: /usr/sbin/prtvtoc patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4663500

Patch-ID : 112993-01
Keywords : rolemod name user_attr deletes
Synopsis : SunOS 5.8: /usr/sbin/passmgmt patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4687515

Patch-ID : 112996-01
Keywords : permission sysconf
Synopsis : SunOS 5.8: /usr/aset/tasks/sysconf patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4225930

Patch-ID : 113128-02
Keywords : X11 XKB xkb
Synopsis : X11 6.4.1: XKB patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4526418 4644622 4689365

Patch-ID : 113242-01
Keywords : GNOME 2.x requires
Synopsis : CDE 1.4: libSDtRmedia patch
Obsoletes these patches:

SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4753801

Patch-ID : 113261-02
Keywords : UTF-8 ICONV
Synopsis : SunOS 5.8: UTF-8 locale ICONV patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4182076 4220837 4225886 4264093 4264158 4265806
4295452 4414954 4488242 4615109 4804535

Patch-ID : 113372-02
Keywords : xpr
Synopsis : X11 6.4.1: xpr patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4704388

Patch-ID : 113401-01
Keywords : Korean iconv
Synopsis : SunOS 5.8: UTF-8 iconv modules generate/accept invalid ko
3byte values
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4667222

Patch-ID : 113413-01
Keywords : sw nlt lex error pattern-action rules
Synopsis : SunOS 5.8: /usr/ccs/bin/lex patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4480804

Patch-ID : 113415-01
Keywords : gettext msgfmt bytes limitation GNU gmsgfmt
Synopsis : SunOS 5.8: gmsgfmt, msgfmt, gettext patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4335175 4340959 4475044

Patch-ID : 113417-01
Keywords : slp Java daemon API crash multicast slp.jar
Synopsis : SunOS 5.8: slp.jar and slpd.jar patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4494011 4618817 4625681

Patch-ID : 113419-01
Keywords : prun process agent
Synopsis : SunOS 5.8: /usr/bin/sparcv7/prun and usr/bin/sparcv9/prun patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4521582

Patch-ID : 113501-01
Keywords : special patch postinstall replacement
Synopsis : SunOS 5.8: Sun GigaSwift Ethernet 1.0 procedural patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4735162

Patch-ID : 113648-01
Keywords : mount leak descriptor parallel mounting
Synopsis : SunOS 5.8: /usr/sbin/mount patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4715028

Patch-ID : 113650-01
Keywords : security utmp_update buffer-overflow load_utmpx_struct bug
Synopsis : SunOS 5.8: /usr/lib/utmp_update patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4705891

Patch-ID : 113654-01
Keywords : zulu VM MMU DMA
Synopsis : SunOS 5.8: /platform/sun4u/kernel/misc/sparcv9/zuluvmm patch
Obsoletes these patches:

SunOs Release : 5.8
Relevant Architectures : sparc.sun4u
BugIds fixed with this patch : 4749934

SunOs Release : 5.8
Relevant Architectures : sun4u
BugIds fixed with this patch : 4327656 4336169 4348220 4359774 4493395 4501846
4720029

Patch-ID : 114610-01
Keywords : ansi-1251 encodings crash
Synopsis : SUNOS 5.8: ANSI-1251 encodings file errors
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4812123

Patch-ID : 114667-01
Keywords : lorder object dependencies
Synopsis : SunOS 5.8: /usr/ccs/bin/lorder patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4747253

Patch-ID : 114671-01
Keywords : pcfs diskettes Mount failure
Synopsis : SunOS 5.8: /usr/kernel/fs/pcfs patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4413261 4782709

Patch-ID : 114673-01
Keywords : security wall simulate messages root
Synopsis : SunOS 5.8: /usr/sbin/wall patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4803267

Patch-ID : 114773-01
Keywords : unix98 dd specification operands
Synopsis : SunOS 5.8: /usr/bin/dd patch
Obsoletes these patches:
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4632818

Patch-ID : 115274-02
Keywords : raidctl configure
Synopsis : SunOS 5.8: /usr/sbin/raidctl patch
Obsoletes these patches: 114701-02
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4749542 4771216 4773186 4784977 4818095 4820668
4828527 4832896 4858641 4860424 4860428

Patch-ID : 115275-01
Keywords : MPT
Synopsis : SunOS 5.8: mpt driver patch
Obsoletes these patches: 114702-02
SunOs Release : 5.8
Relevant Architectures : sparc
BugIds fixed with this patch : 4749542 4771216 4773186 4784977 4820668 4825337
