Safety Instructions

Installation

- Do not cover the vents on the monitor cabinet.
- Improper ventilation may cause overheating.

Cleaning

⚠ To clean the monitor case, wipe with a slightly moistened, soft fabric.

⚠ To clean the surface of the LCD, wipe either with a soft, dry cloth or a cloth slightly damped with water. No not use any chemicals.

Other

- Do not remove cover (or back). No user serviceable parts inside.
- Refer servicing to qualified service personnel.

- If your monitor does not operate normally or if there are any unusual sounds or smells coming from it - unplug it immediately and contact an authorized dealer.

- Never insert anything metallic into the monitor openings.

- Getting Started Guide

Please make sure the items shown are included with your monitor. If any items are missing, contact your dealer.
Press the MENU button (4) to display the OSD (On Screen Display) menu on the screen.

1. There are a total of 7 OSD submenus divided by categories. Select the desired submenu by pressing the OSD button < or > (2 and 3).

2. Press the OSD button MENU (4) to activate the selected function or associated submenu.

3. If you have selected a submenu, you may select its sub function by using < or > (2 and 3).

4. Set the desired value using the OSD button < or > (2 and 3).

5. Direct luminance (Brightness) adjustment by use of the < and > (2 and 3).

6. The current settings are automatically saved when you return to the previous level or exit the OSD menu. Repeat steps 2–5 to make further adjustments as needed.

7. The OSD menu automatically disappears if no changes are made for more than 45 seconds (default setting). The current settings will be saved. You can close it manually by pressing the button SOURCE (1).

8. Use this button to turn the monitor on and off (6).

9. This light glows green during normal operation and goes amber during power saving (5).
Introduction

Rear

1. Power Port  Connect the power cord (purchased separately) for your monitor to the power connector on the back of the monitor.
2. DVI Port  Connect the DVI cable to the DVI port on the back of your monitor.
3. HD-15 Port  Connect the signal cable to the 15-pin, HD-15 connector on the back of your monitor.

a. Locking Port  For connecting Kensington® compatible security devices.

Note:  See the section "Connecting Your Monitor" for further information regarding cable connections.

Connecting Your Monitor

1. Connect the power cord for your monitor to the power port on the back of the monitor. Plug the power cord for the monitor into a nearby outlet.

3. Using the DVI (Digital) connector on the video card. Connect the DVI cable to the DVI port on the back of your Monitor.

- If you properly connect your monitor using the DVI connector but get a blank screen, push the SOURCE button to see if the monitor status is set to analog.

Note. Only one cable is needed to provide the source to the monitor. DVI is recommended whenever possible. The second signal cable can be used for an alternate source, where the "Source" button controls which source is selected.
Installing alternate mounts for the monitor

(3rd party mounts are available for this monitor via the VESA-compliant 4-hole, 100mm spacing mounting configuration.)

1. Turn off your monitor and unplug its power cord.
2. Lay the LCD monitor face-down on a flat surface with a cushion beneath it to protect the screen.
3. Remove the four screws circled in blue in the above diagram and then remove the cover plate.

**Image Control** (not available in DVI digital mode)

**Image Control**

- **Auto Adjustment**: Automatically selects the optimal settings for image parameters (image position, phase, etc.) by using the button MENU (4).
- **H. Position**: Controls the picture’s horizontal position.
- **V. Position**: Controls the picture’s vertical position.
- **Clock**: Adjusts the internal clock frequency for the analog video input.
- **Phase**: Adjusts the internal clock phase for fine-tuning the displayed image to the analog video input.
- **Sharpness**: Controls image sharpness (only for resolutions less than 1680 x 1050 pixels).

**Color**

This menu lets you select a preset color temperature (Default, COOL, sRGB, and CUSTOM COLOR) by pressing the OSD buttons < or > (2 and 3). Changes to the color temperature take immediate effect on screen. If you wish to set individual color values, select the Custom Color option. Then press the MENU button (4) to select the red, green and blue settings and set the desired value using the OSD buttons < or > (2 and 3). The current settings are automatically saved when you return to the previous level or exit the OSD menu.

OSD Control

**OSD Control**

- **H. OSD Position**: Controls the OSD menu's horizontal position.
- **V. OSD Position**: Controls the OSD menu’s vertical position.
- **OSD Timeout**: Determines how long (in seconds) the OSD menu waits before closing automatically after no action has been performed.
- **OSD Rotation**: Controls the OSD menu’s rotation (0 and 90 degrees).

**Other**

**Language:** English, German, French, Italian, Spanish, Russian, Traditional Chinese, Japanese.

**Input:** Controls the selection of the input signal. The monitor allows you to make the following connections: analog graphics card via the 15-pin mini HD-15 interface, digital graphics card via the 24-pin DVI-D interface.

**Information:** There is an optional OSD window (on/off) that displays the newly adjusted screen resolution settings.

**Autoswitch:** This option allows you to decide if the auto adjustment function should take effect after each change to the monitor’s resolution.

**Resolution Notifier:**
When input timing isn't 1680x1050, the screen should show "Timing Error  Reset >> 1680X1050".

**Serial Number and Timing:**
The monitor’s serial number and timing information are shown. Timing details consist of clock frequency, horizontal frequency, vertical frequency, resolution, and sync type and polarity. These are estimates, not precise values. (Numbers shown are examples only.)

Reset

**Reset**

**Yes:** Resets the monitor to original factory settings.

**No:** Exits the reset function without changing the settings.
### Troubleshooting

#### Check List

**Note**  Before calling for service, you should check the information in this section to see if these tips will remedy the problem.

<tr>
<td>Connected using the DVI cable?</td>
<td>You may get a blank screen if you boot the system before you connect the DVI cable, or disconnect and then reconnect the DVI cable while the system is running, as certain graphic cards may not send out video signals with no monitor attached. Connect the DVI cable and then reset the video.</td>

</tbody>
</table>

Check the following items if there is trouble with the monitor.

1. Check if the power cord and the video cable(s) are properly connected to the computer.
2. For analog video, do not exceed 75Hz when using the maximum resolution.
   For digital video, do not exceed 60Hz for any resolution over 1680x1050.
   Any resolution higher than that is limited to 60Hz refresh frequency.

Note: If problems repeatedly occur, contact an authorized service center.
Self-Test Feature Check

Your monitor provides a self test feature via a status light and on-screen warning message that allows you to check whether your monitor is functioning properly.

- **Blank Screen**
  1. **Power indicator is off**
     Make sure the power cable is connected properly (see the section “Connecting Your Monitor”).
     Make sure that the monitor was turned on using the power switch.
  2. **Power indicator lights amber**
     Perhaps a power saving mode is active. Press any key on your keyboard or click the mouse button.
  3. **Power indicator lights green**
     Indicates normal operation of the monitor.
  4. **“No Signal!” message**
     Is the signal cable connected to the monitor and the computer’s graphics port?
     (see the section “Connecting Your Monitor”)

- **Display Problems**
  1. **Image is displaced to the left/right or to the top/bottom**
     If the image appears normal but off-center for the analog video input, you can adjust it using the OSD function under "Image Control" called "Auto Adjustment". There are no such adjustments for digital video (DVI-D) as they are not needed.

The optimal resolution and only resolution recommended for this monitor is 1680x1050@60Hz. These preset timing modes are offered only to help assure that video will be displayed under most boot or hot-plug conditions. It is recommended to change to 1680x1050@60Hz once video from the computer system is seen on the display.
