Ce produit ou document est protégé par un copyright et distribué avec des licences qui en restreignent l'utilisation, la copie, la distribution, et la décompilation. Aucune partie de ce produit ou document ne peut être reproduite sous aucune forme, par quelque moyen que ce soit, sans l'autorisation préalable et écrite de Sun et de ses bailleurs de licence, s'il y en a. Le logiciel détenu par des tiers, et qui comprend la technologie relative aux polices de caractères, est protégé par un copyright et licencié par des fournisseurs de Sun.

Des parties de ce produit pourront être dérivées du système Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays et licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, SunDocs, Solaris, et docs.sun.com sont des marques de fabrique ou des marques déposées, ou marques de service, de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays. Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

L'interface d'utilisation graphique OPEN LOOK et Sun™ a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciés de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui en outre se conforment aux licences écrites de Sun.

CETTE PUBLICATION EST FOURNIE "EN L'ETAT" ET AUCUNE GARANTIE, EXPRESSE OU IMPLICITE, N'EST ACCORDEE, Y COMPRIS DES GARANTIES CONCERNANT LA VALEUR MARCHANDE, L'APTITUDE DE LA PUBLICATION A REPONDRE A UNE UTILISATION PARTICULIERE, OU LE FAIT QU'ELLE NE SOIT PAS CONTREFAISANTE DE PRODUIT DE TIERS. CE DENI DE GARANTIE NE S'APPLIQUERAIT PAS, DANS LA MESURE OU IL SERAIT TENU JURIDIQUEMENT NUL ET NON AVENU.

Solaris 7 (Intel Platform Edition) Hardware Compatibility List

This document provides information about general x86 hardware requirements and the peripherals and system platforms that are supported in the Solaris™ 7 *Intel Platform Edition* computing environment.

Note - The term “x86” refers to the Intel 8086 family of microprocessor chips, including the Pentium, Pentium Pro, Pentium II, Pentium II Xeon, and Celeron processors and compatible microprocessor chips made by AMD and Cyrix. In this document the term “x86” refers to the overall platform architecture, whereas “*Intel Platform Edition*” appears in the product name.

System platforms listed in this document are tested “as-shipped” by the hardware manufacturers. Since it is the nature of this industry to have unexpected and unannounced changes, Sun is committed to working with customers who experience difficulties installing the Solaris software on supported systems. If any problems are encountered with this release, contact your Sun Software Support Provider (SSSP). In North America, you can also call Sun Technical Support at 1-800-786-7638, option 4.

Note - It is common practice for hardware vendors to release variants of a particular hardware design under a single marketing name. In some cases, not all variants will work with the current Solaris device driver. Check the “Device Reference Pages” in *Solaris 7 (Intel Platform Edition) Device Configuration Guide* to see if they provide additional information about specific hardware versions supported by the current Solaris device driver.

How This Document Is Organized

This document is divided into these major sections:

- “General Requirements” on page 5 lists the x86 hardware requirements for installing the Solaris 7 operating environment.
- “System Platforms” on page 6 lists the platforms supported in the Solaris 7 *Intel Platform Edition* product; not all of the peripherals listed in “Supported Devices” on page 13 have been tested in all combinations on all of these platforms. This is *not* intended to be an exhaustive list of x86 machines that can run Solaris 7 software.
- “Supported Devices” on page 13 lists the supported peripherals.

Specific machines and classes of devices are shown in these tables in this document.

- “System Platforms” on page 6
- Single Processor Systems, Table 1–1
- Multiprocessor Systems (SMP), Table 1–2
- “Supported Devices” on page 13
 - SCSI Host Bus Adapters, Table 1–3
 - SCSI RAID Controllers, Table 1–4
 - Solid State SCSI Disk Devices, Table 1–5
 - CD-ROM Drives, Table 1–6
 - Printing Devices, Table 1–7
 - Audio Devices, Table 1–8
 - Telephony Products, Table 1–9
 - Multiport Serial Adapters, Table 1–10
 - Network Adapters—Ethernet, Table 1–11
 - Network Adapters—Fast Ethernet, Table 1–12
 - Network Adapters—Token Ring, Table 1–13
 - Network Adapters—WAN, Table 1–14
 - AT-ISDN Adapters, Table 1–15
 - High-Speed Networking, Table 1–16
 - PC Card (PCMCIA)—Add-On Boards, Table 1–17
 - PC Card (PCMCIA)—GPS and Navigation Devices, Table 1–18
 - PC Card (PCMCIA)—Modems, Table 1–19
 - PC Card (PCMCIA)—Serial Cards, Table 1–20

- PC Card (PCMCIA)—SRAM Memory Cards, Table 1-21
 - Pointing Devices, Table 1-22
 - Tape Drives—SCSI, Table 1-23
 - SCSI RAID Tape, Table 1-24
 - Uninterruptable Power Supplies (UPS), Table 1-25
 - Motherboards, Table 1-26
 - Video Display Devices, Table 1-27
-

Conventions Used

- Pentium system platforms and motherboards listed in this document show the CPU type and speed in parentheses after the model name.
 - The term (P-xxx) indicates a Pentium processor; the xxx is replaced by the speed of the system in megahertz. For example, P-100 indicates a 100-MHz Pentium processor.
 - The term (PP-xxx) indicates a Pentium Pro processor; the xxx is replaced by the speed of the system in megahertz. For example, PP-150 indicates a 150-MHz Pentium Pro processor.
 - The term (PII-xxx) indicates a Pentium II processor; the xxx is replaced by the speed of the system in megahertz. For example, PII-233 indicates a 233-MHz Pentium II processor.
 - In “Supported Devices” on page 13, peripherals that require additional configuration and that have a Device Reference Page in the *Solaris 7 (Intel Platform Edition) Device Configuration Guide* are marked with a # symbol.
-

Related Books

For specific hardware configuration information necessary to install and run the Solaris environment on your particular hardware, see the *Solaris 7 (Intel Platform Edition) Device Configuration Guide*.

Solaris Certification Program

Information about the Solaris hardware certification program can be found on the Internet at <http://access1.sun.com/certify>. Occasionally, updated Hardware Compatibility Lists are produced between releases. If a newer version of this document exists, it will be available at the certification Web site.

Corrections and Additions

Vendors, OEMs, and manufacturers: To supply corrections or add products to this list, send email to x86-certify@cypress.west.sun.com.

Ordering Sun Documents

The SunDocsSM program provides over 250 manuals from Sun Microsystems, Inc. If you live in the U.S., Canada, Europe, or Japan, you can purchase documentation sets or individual manuals using this program.

For a list of documents and ordering information, see the catalog section of SunExpressTM On The Internet at <http://www.sun.com/sunexpress>.

Accessing Sun Documentation Online

The docs.sun.comSM Web site enables you to access Sun technical documentation online. You can browse the docs.sun.com archive or search for a specific book title or subject. The URL is <http://docs.sun.com>.

Obtaining Technical Support

To obtain technical support:

- Contact your Sun Software Support Provider.
 - In North America, you can also call 1-800-786-7638 and choose option 4.
-

General Requirements

| CPU | Memory | Bus | Disk Interface | Distribution Media | Devices for Installing Solaris |
|---|--------------------|---------------------|------------------|-----------------------------------|---|
| Intel or compatible 486DX, 486DX2, 486SL, 486SX, 486DX4 | Minimum: 32 Mbytes | ISA, EISA, PCI, VLB | IDE, E-IDE, SCSI | CD-ROM and a single boot diskette | Diskette drive and one of the following devices: <ul style="list-style-type: none"> • Local SCSI or ATAPI/IDE CD-ROM drive |
| Intel Pentium | Maximum: 4 Gbytes | | | | |
| Intel Pentium Pro | | | | | |
| Intel Celeron | | | | | |
| Intel Pentium II | | | | | |
| Intel Pentium with MMX | | | | | |
| Intel Pentium II Xeon | | | | | |
| AMD 486DX2-66 | | | | | |
| AMD 486DX2-80 | | | | | |
| AMD 486DX4-100 | | | | | |
| AMD 486DX4-100 Enhanced | | | | | |
| AMD-K5 | | | | | |
| AMD-K6 | | | | | |
| AMD-K6-2 | | | | | |
| Cyrix 486DLC-40 | | | | | |
| Cyrix 5x86-100GP | | | | | |
| Cyrix 6x86-P120+GP | | | | | |
| Cyrix 6x86-P150+ | | | | | |
| Cyrix 6x86MX-PR150 | | | | | |
| Cyrix 6x86-P166+ | | | | | |

System Platforms

Solaris 7 *Intel Platform Edition* has been successfully installed and tested on the computers listed in this section configured as they are shipped by the system manufacturer.

1. 3Com EtherLink XL 3C905B cards in a Compaq ProLiant 6500 can fail to generate interrupts. Refer to the “3Com EtherLink XL (3C900, 3C900-COMBO, 3C900B-COMBO, 3C900B-TPC, 3C900B-TPO), Fast EtherLink XL (3C905-TX, 3C905-T4, 3C905B-TX, 3C905B-T4)” Device Reference Page in the *Solaris 7 (Intel Platform Edition) Device Configuration Guide* for additional information.
2. To use the NCR 4380 model series, you must install Solaris patch ncr4380_set, which can be downloaded from http://www3.ncr.com/support/solaris/alphabetical_list.shtml.

Supported Devices

Devices listed in this section have been successfully tested with Solaris 7 *Intel Platform Edition* in a varied but limited number of hardware configurations. While a complete system composed of the devices listed in this section should enable you to install and run the Solaris software, some combinations of devices may not be usable or may require additional configuration.

Note - Devices that require additional configuration and that have a Device Reference Page in the *Solaris 7 (Intel Platform Edition) Device Configuration Guide* are marked with a # symbol.

-
1. For configuration information, contact the vendor, Mylex Corporation.
 2. This adapter can be made RAID-capable with the addition of a Hardware Disk Array module.
 3. This adapter does not have the SDMS BIOS on board. It should be used only on a system that contains the SCSI BIOS as part of its main system BIOS.
 4. Wide SCSI not yet supported in Solaris driver.
 5. Configure as an Adaptec AHA-1520A.

Note - Devices that require additional configuration and that have a Device Reference Page in the *Solaris 7 (Intel Platform Edition) Device Configuration Guide* are marked with a # symbol.

1. Various CD-ROM players may not be fully SCSI-compliant in their handling of the `CDROMREADHEADER` command. This may cause failures from `vold` not mounting an eligible CD-ROM. The workaround is to mount the CD-ROM manually.
2. These devices are supported in CD-ROM mode only. Solaris *Intel Platform Edition* does not currently support the UDF file system on DVD disks and players.
3. Early versions of NEC firmware were not fully SCSI-compliant; thus these drives may only work if synchronous negotiation and disconnect are disabled on the SCSI adapter used with the CD-ROM drive, or if the drive is jumpered to use `scsi-1` commands, as appropriate.
4. Only the first CD-ROM in the Pioneer DRM-604X CD-ROM changer is supported by default.
5. This drive does not work with the Adaptec AHA-2940 SCSI HBA.
6. Must have at least BIOS 1.0.

TABLE 1–7 Printing Devices

| Vendor | Model |

1. Cards with "ASSY 03-0021-000, REV A" printed on them do not work with the Solaris software.
2. Card misdetects 8-bit slot.
3. Some NE2000plus clones may only work in I/O or shared memory mode, depending on the system or configuration, while running Solaris software.
4. Because certain board revisions have been found not to work, refer to the table in the "DEC 21040, 21041, 21140, 21142, 21143 Ethernet" Device Reference Page for additional information.
5. Special configuration required; refer to the table in the "DEC 21040, 21041, 21140, 21142, 21143 Ethernet" Device Reference Page for additional information.
6. Refer to the "Compaq NetFlex-3, Netelligent Controllers" Device Reference Page.

Note - Devices that require additional configuration and that have a Device Reference Page in the *Solaris 7 (Intel Platform Edition) Device Configuration Guide* are marked with a # symbol.

TABLE 1-26 Motherboards (*continued*)

Note - Video support is limited to support for computer monitors. Other features, such as TV output, that come with some video devices are not supported.

Note - “—” in the Bus column indicates a video device that is used on video cards and motherboards.

Note - The information in the Video Chip column does not guarantee that video cards made by another manufacturer using the same video device will work. Only the specific models listed by Vendor, Model, Bus, and Video Chip have been tested.

TABLE 1-27 Video Display Devices (*continued*)

1. The ET4000/W32 video cards that are shipped with Acer machines are not all the same. If you encounter any display problems when the window system is running, try using a different add-on board that is compatible with the Solaris operating environment.
2. Video adapters based on the Cirrus Logic GD5424 chipset with 512-Kbyte DRAM may not perform well in 800x600x256 mode, particularly if the selected monitor refresh rate is 60 Hz or higher.
3. Sun does not guarantee that every video device with this chip will work, but it is possible that your model can be used successfully.
4. Support is provided for ATI cards with ATI Mach64 chips and these RAMDACS: ATT68860, ATT20C408, ATT20C491, ATT20C498, STG1702, and STG1703.
5. The ATI Winturbo model is equivalent to the Gateway ATI GX Mach64 PCI video card.
6. The ProSignia 300 systems and some models of the ProSignia Server systems with the Cirrus Logic 5424 graphics chip are supported. Choose one of the "Cirrus Logic 5424 (512k)" entries when configuring the window system using `kdmconfig`.
7. For cards using the IBM or TI RAMDACS only.
8. The ELSA Winner 1000Pro with the ATT20C498 RAMDAC is supported.
9. Both the STG1702 and the ATT21C498 RAMDACS are supported.
10. Select "Cirrus Logic 542x" when configuring the display adapter during Solaris installation.
11. 640x480, 16 colors. Any 256-Kbyte or better VGA adapter supporting standard IBM mode 0x12 graphics. For VGA with 800x600 virtual screen, select "16 color, 640x480 VGA panning @800x600 (for experts only, see docs)" when configuring the display adapter during Solaris installation. Warning: This selection enables panning mode on a standard VGA. This video mode supports a virtual resolution of 800x600, but is only capable of physically displaying 640x480 pixels at a time. This may be a preferred mode to use on small screens, but the use of panning may require some training.
12. To support 1152x900 or 1280x1024 resolution on the Intergraph TD-1 display adapter, you must select an interlaced monitor type when configuring the Solaris window system. Choose "Multifrequency 56kHz (up to 1280x1024 interlaced)" as the monitor type.
13. To support the Intergraph G95, select the graphics card "Matrox MGA Millennium" when configuring the Solaris window system.
14. To support the Intergraph ISMP, select the graphics card "Cirrus Logic GD5434" when configuring the Solaris window system.
15. Repeatedly switching between graphics mode and text mode may cause your system to hang. If this happens, reboot the system.
16. The Number Nine #9GXE video display adapters (ISA and VESA local bus) support 24-bit color in 640x480 mode *only*.
17. The 8-Mbyte version of the Number Nine Imagine 128 Series 2e is not supported.
18. Select "#9GXE 64 (Trio64)" when configuring the display adapter during Solaris installation.
19. Older versions of the Orchid Kelvin 64 VLB card have memory addressing limitations that may cause problems on systems containing 32 Mbytes or more of RAM. If you experience a problem, contact Orchid Technology for assistance.
20. This card does not work at the 1024x768 resolution with a 56-kHz refresh rate.
