Palo Alto, CA 94303
U.S.A.

Part No: 806-0224-10
May 1999

Copyright 1999 Sun Microsystems, Inc. 901 San Antonio Road, Palo Alto, California 94303-4900 U.S.A. All rights reserved.

This product or document is protected by copyright and distributed under licenses restricting its use, copying, distribution, and decompilation. No part of this product or document may be reproduced in any form by any means without prior written authorization of Sun and its licensors, if any. Third-party software, including font technology, is copyrighted and licensed from Sun suppliers.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, AnswerBook2, SunStore, docs.sun.com, Java, Java Development Kit (JDK), Solaris Web Start, JumpStart, NFS, HotJava, DiskSuite, Solstice AdminSuite, SunLink, Solstice AutoClient, and Solaris are trademarks, registered trademarks, or service marks of Sun Microsystems, Inc. in the U.S. and other countries. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc. Netscape Navigator is a trademark of Netscape Communications Corporation.

The OPEN LOOK and Sun™ Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

RESTRICTED RIGHTS: Use, duplication, or disclosure by the U.S. Government is subject to restrictions of FAR 52.227-14(g)(2)(6/87) and FAR 52.227-19(6/87), or DFAR 252.227-7015(b)(6/95) and DFAR 227.7202-3(a).

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Copyright 1999 Sun Microsystems, Inc. 901 San Antonio Road, Palo Alto, Californie 94303-4900 Etats-Unis. Tous droits réservés.

Ce produit ou document est protégé par un copyright et distribué avec des licences qui en restreignent l'utilisation, la copie, la distribution, et la décompilation. Aucune partie de ce produit ou document ne peut être reproduite sous aucune forme, par quelque moyen que ce soit, sans l'autorisation préalable et écrite de Sun et de ses bailleurs de licence, s'il y en a. Le logiciel détenu par des tiers, et qui comprend la technologie relative aux polices de caractères, est protégé par un copyright et licencié par des fournisseurs de Sun.

Des parties de ce produit pourront être dérivées du système Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays et licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, AnswerBook2, SunStore, docs.sun.com, Java, Java Development Kit (JDK), Solaris Web Start, JumpStart, NFS, HotJava, DiskSuite, Solstice AdminSuite, SunLink, Solstice AutoClient, et Solaris sont des marques de fabrique ou des marques déposées, ou marques de service, de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays. Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc. Netscape Navigator est une marque de Netscape Communications Corporation.

L'interface d'utilisation graphique OPEN LOOK et Sun™ a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciés de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui en outre se conforment aux licences écrites de Sun.

CETTE PUBLICATION EST FOURNIE "EN L'ETAT" ET AUCUNE GARANTIE, EXPRESSE OU IMPLICITE, N'EST ACCORDEE, Y COMPRIS DES GARANTIES CONCERNANT LA VALEUR MARCHANDE, L'APTITUDE DE LA PUBLICATION A REpondre A UNE UTILISATION PARTICULIERE, OU LE FAIT QU'ELLE NE SOIT PAS CONTREFAISANTE DE PRODUIT DE TIERS. CE DENI DE GARANTIE NE S'APPLIQUERAIT PAS, DANS LA MESURE OU IL SERAIT TENU JURIDIQUEMENT NUL ET NON AVENU.

A. Maintenance Update Patch List 39

Patch List 39

Preface

The *Solaris™ 7 (SPARC™ Platform Edition) 5/99 Release Notes* contain installation problem details and other information that was not available until immediately before the release of the Solaris 7 5/99 operating environment, too late to be included in the SUNWrdm package that is resident on the Solaris 7 5/99 CD. This document complements the information in the SUNWrdm package, the online release notes, except for the information in Chapter 1.

Chapter 1 supersedes the information in the `installation_bugs` file that is part of the online release notes.

You can access the SUNWrdm package (the online release notes) as follows:

- When reading from the Solaris 7 5/99 CD, information about this release can be found in the directory:

```
/cdrom/sol_7_599_sparc/s0/Solaris_2.7/Docs/release_info/C
```

- The default installed location for information about this release can be found in the directory:

```
/usr/share/release_info/Solaris_2.7/C
```

Note - The name of this product is Solaris 7 5/99, but code and path or package path names may use Solaris 2.7 or SunOS 5.7. Always follow the code or path as it is written.

Who Should Use This Book

These notes are for users and system administrators who are installing and using the Solaris 7 5/99 operating environment.

Related Books

You may need to refer to the following manuals when installing Solaris software:

- *Solaris 7 (SPARC Platform Edition) Start Here*
- *Solaris 7 (SPARC Platform Edition) Installation Library*
- *Solaris 7 Installation Supplement*
- *Solaris 7 System Administration Supplement*
- *Solaris 7 Software Developer Supplement*

Solaris documentation is available on the Solaris 7 Documentation CD included with this product.

In this Solaris release you will find supplemental documentation describing new functionality. If a Solaris 7 AnswerBook2™ collection has been updated, you will find a *Solaris 7 Supplement* in that collection.

For some hardware configurations, you may need supplemental hardware-specific instructions for installing the Solaris operating environment. If your system requires hardware-specific actions at certain points, the manufacturer of your hardware has provided supplemental Solaris installation documentation. Refer to those materials for hardware-specific installation instructions.

For known problems, new features, and patches not relating to installation, view the online files in the

`/cdrom/sol_7_599_sparc/s0/Solaris_2.7/Docs/release_info/C`
directory on the Solaris 7 5/99 CD.

The `/cdrom/sol_7_599_sparc/s0/Solaris_2.7/Docs/release_info/C` directory includes these files:

- `new_features` - product news and features that arrived too late to be included in the “*What’s New in Solaris*” documentation on the Solaris 7 Documentation CD
- `runtime_bugs` - late-breaking problems not related to installation
- `installation_bugs` - known installation problems
- `patches` - late-breaking information on current and non-integrated patches for Solaris 7
- `eof` - late-breaking end of feature statements
- `driverupdate` - late-breaking information on drivers
- `documentation_issues` - late-breaking information about documentation errata and other documentation-related issues.

The installed location for the these files is the directory:

Ordering Sun Documents

The Sun Software Shop stocks hundreds of manuals from Sun Microsystems, Inc. You can purchase individual printed manuals and AnswerBook2™ CDs.

For a list of documents and how to order them, visit the Software Shop at <http://www.sun.com/software/shop>.

Accessing Sun Documentation Online

The docs.sun.comSM web site enables you to access Sun technical documentation online. You can browse the docs.sun.com archive or search for a specific book title or subject. The URL is <http://docs.sun.com>.

What Typographic Changes Mean

TABLE P-1 Typographic Conventions

Typeface or Symbol	Meaning	Example
AaBbCc123	The names of commands, files, and directories; on-screen computer output	Edit your <code>.login</code> file. Use <code>ls -a</code> to list all files. <code>machine_name% you have mail.</code>
AaBbCc123	What you type, contrasted with on-screen computer output	<code>machine_name% su</code> <code>Password:</code>

TABLE P-1 Typographic Conventions *(continued)*

Typeface or Symbol	Meaning	Example
<i>AaBbCc123</i>	Command-line placeholder: replace with a real name or value	To delete a file, type <code>rm filename</code> .
<i>AaBbCc123</i>	Book titles, new words, or terms, or words to be emphasized.	Read Chapter 6 in <i>User's Guide</i> . These are called <i>class</i> options. You must be <i>root</i> to do this.

Installation Issues

This chapter describes problems relating to the installation of the Solaris 7 5/99 software environment.

The information in this chapter supersedes any information listed in the `installation_bugs` file that is part of the `SUNWrdm` package on the Solaris 7 5/99 CD. If you boot from the Solaris 7 5/99 CD, the `installation_bugs` file is located in the directory:

```
/cdrom/sol_7_599_sparc/s0/Solaris_2.7/Docs/release_info/C
```

The default installed location for the `installation_bugs` file is located in the directory:

```
/usr/share/release_info/Solaris_2.7/C
```

Note - The name of this product is Solaris 7 5/99, but code and path or package path names may use Solaris 2.7 or SunOS 5.7. Always follow the code or path as it is written.

READ THIS FIRST

Remote Login From `dtgreet` Freezes Local Window System (4213502)

If you select Remote Login from the main CDE login menu by clicking the Options button, a login to another host system occurs. When you terminate the remote login session and return to the original system, the screen freezes. To start another CDE session on a hung screen, log in remotely to the system and kill the hung DT session.

Workaround: Apply patch ID 107180-05 or later to prevent this problem. This patch is available through approved Sun support channels.

Solaris Web Start Issues

This section only describes known installation issues that may occur when using Solaris Web Start, the browser-based program that enables you to install both the Solaris software and co-packaged software.

Limited Browser Support In Client-Server Mode

To use the client-server mode of Solaris Web Start, you must have one of the following software configurations installed on the client:

- The Solaris 2.6 or Solaris 7 operating environment with its accompanying version of the HotJava™, Netscape Navigator™ 4.0, or Netscape Navigator™ 4.5 browser
- Windows 95 with the HotJava, Netscape Navigator 4.0, or Netscape Navigator 4.5 browser

Solaris Web Start may not run or display properly with older versions of HotJava, older versions of the Navigator browser, or with Internet Explorer.

Solaris Web Start Bugs

This section only describes known installation bugs that may occur when using Solaris Web Start, the browser-based program that enables you to install both the Solaris software and copackaged software.

Cannot Move the Root File System (4046659)

You can choose a system disk in Solaris Web Start but you cannot move the root file system off the system disk afterwards.

Workaround: If you need to do this, use the Solaris Interactive Installation program instead of Solaris Web Start.

Products May Not Use All Reserved Space (4059182)

Solaris Web Start reserves disk space based on the total requirements of all the products that you install. If you check disk space allocation after installing but before using the products, you may find a substantial amount of apparently unused space. Some of this space may be taken up when you run the software; some of it may remain unused.

Workaround: If you want to allocate less total disk space than Solaris Web Start requires, use the Solaris Interactive Installation program instead.

Interactive Installation Issues

New JumpStart Behavior

When you turn on a system with the JumpStart™ software already installed (this includes new systems and preinstalled systems on which another installation has been performed) in the Solaris 7 as well as the Solaris 2.6 operating environments, Solaris Web Start's introductory screen is displayed. You can now exit Solaris Web Start and perform a JumpStart installation.

Solaris dtlogin Screen

The Solaris 7 as well as the Solaris 2.6 operating environments default to a login screen when you initially boot your workstation, regardless of which desktop you are using. You can select your desktop from the login screen. The login screen requires the user's name and password. Your desktop is displayed upon authentication of your login name and password. For more information about the login screen, see the `dtlogin` man page (provided with the Solaris Common Desktop Environment (CDE) man pages) or the *Common Desktop Environment: Advanced User's and System Administrator's Guide*.

dtlogin Notes for System Administrators

A system administrator who is new to CDE needs to know about CDE's graphical login program, `dtlogin`. Review the `dtconfig` man pages.

Interactive Installation Bugs

Installation Fails With a False Non-Mountable File System Error (4164303)

The following message may be displayed:

```
The Solaris operating environment on slice c0t0d0s0 cannot be upgraded.  
A file system listed in the file system table (vfstab) could not be mounted.
```

The installation software may interpret inodes that are stored on striped DiskSuite™ meta devices for root inodes and attempt to mount the meta devices as upgradable slices. When this problem occurs, the mounts fail and the installation aborts.

TotalNET Advanced Server (SunLink) Drivers Cause Panic After a Reboot (4121961)

```
Warning: mod_install: MT-unsafe driver 'tnatp' rejected panic[cpu0] /  
thread=7051e040:mutex-enter:bad_mutex lp=1046aa20 owner=7051e040  
thread=7051e040
```

An upgrade to TotalNET Advanced Server (SunLink™) version 5.2 is required with the Solaris 7 operating environment because of a driver conflict. Version 5.0 and version 5.1 for the TotalNET Advanced Server cause the Solaris 7 operating environment to not boot correctly.

Workaround: Before you install the Solaris 7 operating environment, you must upgrade all installations to version 5.2 for the TotalNET Advanced Server, which is available on the Solaris Easy Access Server 2.0 CD. Follow the instructions provided to upgrade existing TotalNET Advanced Server installations.

Installation Bugs That Occur During an Interactive Installation

Erroneous Messages Indicating Packages Added a Second Time (1235464)

This appears as an attempt to install the same architecture and version of a package that is already installed. This installation overwrites this package.

When upgrading a system with the Entire Distribution plus OEM Cluster, the following packages seem to be added twice:

- SUNWolinc
- SUNWxwdim
- SUNWxwinc
- SUNWxwman
- SUNWxwpmn
- SUNWxwsrc
- SUNWolbk
- SUNWoldim
- SUNWolman
- SUNWolsrc

Installation Progress Bar May Be Inaccurate (1266156)

The “Installing Solaris Software - Progress” bar sometimes indicates that an installation is complete when it is still in progress. The install program may add packages for several minutes after the progress bar has indicated that the installation is complete. Do not rely on the progress bar to indicate that the installation is complete. The installation displays the following message when the program has completed all installation operations:

```
Installation complete
```

Installation of Diskless Client Does Not Preserve Changes in the `dfstab` File on a Server (4045544)

When you upgrade the Solaris operating environment on a server with diskless clients, the options on the `dfstab` line are not preserved for `/usr`. For example, if you entered the following in the `dfstab` file:

```
share -F nfs -o rw /export/exec/Solaris_2.7_sparc.all/usr
```

then this entry is automatically replaced with the following entry during the upgrade:

```
share -F nfs -o ro /export/exec/Solaris_2.7_sparc.all/usr
```

Workaround: Before you attempt to upgrade the Solaris operating environment on an OS server that has a diskless client or Solstice AutoClient, back up the `/etc/dfs/dfstab` file for the clients.

Installation Bugs That May Occur During an Upgrade

Multiple Architecture Server Cannot Be Patched (1249343)

After upgrading a server with diskless clients of more than one SPARC kernel architecture, such as a `sun4u` server with diskless `sun4c`, `sun4d`, and `sun4m` clients, the `SUNWkvm` packages for clients whose kernel architectures differ from that of the server cannot be patched.

Workaround: Add all of the `SUNWkvm` packages before applying any patches that affect them:

```
# pkgadd -d SUNWkvm.*
```

Disk Space Requirements Can Be Exaggerated By the Upgrade Process (4041733)

The upgrade program can exaggerate by as much as 30 percent the amount of space required for upgrades to systems with the Solaris software. Therefore, it prevents

many systems from being upgraded without deselecting packages or finding more space.

Workaround: You can manually reallocate disk space among file systems or use the Software Customization menu to remove software packages that are not needed.

sun4m Solstice AutoClients Fail to Mount Cache After an Upgrade From the Solaris 2.6 Hardware: 3/98 Release (4121951)

The Solstice AutoClients display the following message when rebooting:

```
fsck -F cachefs: Cache directory /.cache/rootcache does not exist.  
mount -F cachefs: cache fsck mount failed  
fsck -F cachefs: Cache directory /.cache/rootcache does not exist.  
mount -F cachefs: cache fsck mount failed
```

This directive indicates to the kernel that the root file system is of type `cachefs`. To determine whether or not a specific Solstice AutoClient can be affected by this problem before you attempt an upgrade, examine the directory `/export/root/client-name/var/sadm/pkg` on the server (this is the Solstice AutoClient's `/var/sadm/pkg` directory). If this directory contains a subdirectory called `TADcar`, the Solstice AutoClients may be affected.

Workaround: Edit the `/etc/system` file for the Solstice AutoClients after the upgrade by appending the following line:

```
rootfs:cachefs
```

The Solstice AutoClients' `/etc/system` file is stored on the server as `/etc/root/client-name/etc/system`.

Clients Do Not Receive All Patches When a Server Is Upgraded (4175220)

Patches located in the `Patches` directory on the Solaris 7 5/99 CD are not automatically applied to clients whenever a server is upgraded.

Workaround: Apply the patches located in the `Patches` directory to clients after the upgrade has been completed.

SUNWcvc.u and SUNWdrr.u Packages Are Missing If You Upgrade From the Solaris 2.6 Hardware 3/98 or Solaris 2.6 5/98 Operating Environment to the Solaris 7 Operating Environment (4229675)

After you upgrade from the Solaris 2.6 Hardware 3/98 or the Solaris 2.6 5/98 operating environment and if your systems have sun4u diskless clients or Solstice AutoClients, then the SUNWcvc.u and SUNWdrr.u packages are not installed on diskless or Solstice AutoClients.

Workaround: After you have completed an upgrade, add the SUNWcvc.u and SUNWdrr.u packages to a sun4u diskless client or Solstice AutoClient as follows with a client called *foo*:

1. Mount the Solaris 7 5/99 CD for the SPARC platform.
2. Change to the following directory:

```
# cd /cdrom/cdrom0/s0/Solaris_2.7/Product
```

3. Add the following packages using the pkgadd command:

```
# pkgadd -R /export/root/foo -d `pwd` SUNWcvc.u
```

Errors May Occur When Applying the European Locale Updates Patch During an Upgrade (4230247)

If you applied any of the European locale update patches, 106857-04, 106931-04, 107616-01, or 107617-01, and then upgraded your system, the following errors are then reported in the upgrade logs:

```
Doing pkgadd of SUNWplow to /.
pkgadd: ERROR: unable to create package object
</a/usr/openwin/share/locale/de.ISO8859-15>.
  file type <s> expected <d> actual
  unable to remove existing directory at
</a/usr/openwin/share/locale/de.ISO8859-15>
....
Installation of <SUNWplow> partially failed.
pkgadd return code = 2

Doing pkgadd of SUNWpldte to /.
```

(continued)

```
WARNING: /a/usr/dt/appconfig/types/de.ISO8859-15
may not overwrite a populated directory.
.....
pkgadd: ERROR: /a/usr/dt/appconfig/types/de.ISO8859-15
could not be installed.
.....
Installation of <SUNWpldte> partially failed.
pkgadd return code = 2
```

This warning occurs because the patch switches the affected directories listed in the upgrade logs from symbolic links to directories. The upgrade process then attempts to install an updated version of the package that does not include the change. These errors do not affect the operating environment on your system.

Workaround: Ignore these error messages.

Solaris Installation Bugs

Warnings May Occur When Creating a File System (4189127)

One of the following error messages may be displayed when creating a file system during installation:

```
Warning: inode blocks/cyl group (87) >= data blocks (63) in last
cylinder group. This implies 1008 sector(s) cannot be allocated.
```

Or:

```
Warning: 1 sector(s) in last cylinder unallocated
```

The warning occurs when the size of the file system being created does not map exactly to the space on the disk being used. This can result in unused space on the disk that is not incorporated into the indicated file system. This unused space is not available for use by other file systems.

Workaround: Ignore the error message.

Not All Locales Supported Outside of Entire Metacluster (4181942)

All locales are supported only in the Entire Distribution and Entire Distribution plus OEM metaclusters. Subsets of these locales are supported in the Developer, End User, and Core metaclusters.

If you select a locale at the beginning of the installation that is not supported by the metacluster that you choose to install later in the installation on the metacluster selection screen, the following occur:

- Web Start installation of co-packaged products fails without installing the co-packaged products.
- You cannot open terminal windows in CDE.

For Desktop editions of the Solaris 7 5/99 operating environment, the Web Start installer installs the End User metacluster. For Server editions of the Solaris 7 5/99 operating environment, Web Start installs the Entire metacluster. You can change the defaults by selecting a Custom installation.

The following is the list of locales supported by each metacluster:

Workaround: To prevent the problem, install the metacluster that contains the desired locale.

To repair an existing installation in the `/etc/default/init` file, change the references to the unsupported locale to reference a supported locale for the installed metacluster.

System Administration Installation Bugs

Addition of Solaris 7 Service to an OS Server Results in an Upgrade Failure Message (4171470)

When the Solaris 7 system software is added to an OS server as a service, the following error message is displayed:

```
celebris: Error: Error adding OS service Solaris 2.7 i386 i86pc:
service modification failed.
See /var/sadm/system/logs/upgrade_log for more information
(/var/sadm/install_data/upgrade_log on Solaris 2.3 or 2.4).
```

Where *celebris* is the name of the OS server.

If you review the indicated log file, you will see that the addition of the SUNWplow package failed with the following message:

```
Doing pkgadd of SUNWplow to /.
ERROR: attribute verification of
<export/exec/Solaris_2.7_i386.all/etc/default/init> failed
pathname does not exist
```

Workaround: Ignore the error message.

User Disabling of Daemons and Servers in `inetd.conf` Overridden by Package Instance (4220923)

The interactive installation program adds lines for the KCMS Profile Server, Font Server, CacheFS Daemon, and Kerbd Daemon even though they already exist and are commented out in `/etc/inetd.conf`.

Workaround: The unnecessary entries in `/etc/inetd.conf` can be deleted or commented out with a text editor.

64-Bit Solaris Issues

This section describes installation-related 64-bit Solaris issues.

Sun UltraSPARC System (sun4u) May Need Flash PROM (Open Boot) Upgrade

If you want to run the 64-bit Solaris operating environment on an UltraSPARC system, you may need to upgrade its Flash PROM firmware. The Solaris 7 installation programs have a new check box for adding 64-bit support. This new 64-bit support is selected by default when installing on Sun UltraSPARC systems.

Note - If you choose to run the 32-bit Solaris operating environment on any Sun or UltraSPARC system, the Flash PROM upgrade is not needed.

The following table lists the UltraSPARC (sun4u) systems that are affected and the minimum firmware versions needed. If the system is not listed in the table, it does not need a Boot PROM upgrade. Use `uname -i` to check the system type. Use `prtconf -v` to identify the firmware version.

System Type from <code>uname -i</code>	Minimum Firmware Version from <code>prtconf -v</code>
SUNW,Ultra-1-Engine	3.10.0
SUNW,Ultra-1	3.11.1
SUNW,Ultra-2	3.11.2
SUNW,Ultra-4	3.7.107
SUNW,Ultra-Enterprise	3.2.16

Note - For instructions on performing the Flash PROM update using the Solaris CD, refer to the *Solaris 7 Sun Hardware Platform Guide*. If you do not have this manual, it can be obtained at <http://docs.sun.com>.

AnswerBook2 Documentation Bug

`ab2cd -s` Does Not Add Locally-Installed Document Collections to the Server (4208243)

When running the AnswerBook2 server from the CD, the command `ab2cd -s` causes any locally-installed document collections to be added to the server database. However, it does not find any local document collections.

Workaround: If you have locally-installed document collections, install the AnswerBook2 server software. Do not run the server from the CD.

Late-Breaking Solaris Runtime Issues

This chapter describes known runtime problems. You may also want to refer to the online `runtime_bugs` file in the `SUNWrdm` package on the Solaris 7 5/99 CD for additional runtime problems.

The information in this chapter supplements any information listed in the `runtime_bugs` file that is part of the `SUNWrdm` package on the Solaris 7 5/99 CD. If you boot from the Solaris 7 5/99 CD, the `runtime_bugs` file is located in the directory:

```
/cdrom/sol_7_599_sparc/s0/Solaris_2.7/Docs/release_info/C
```

The default installed location for the `runtime_bugs` file is the directory:

```
/usr/share/release_info/Solaris_2.7/C
```

Note - The name of this product is Solaris 7 5/99, but code and path or package path names may use Solaris 2.7 or SunOS 5.7. Always follow the code or path as it is written.

Common Desktop Environment (CDE) Bugs

Solaris Information Files Display in English (4202477)

If you display the 7 Solaris information files (listed in Step 2 on page 26) that are included in the `SUNW?rdm` packages and installed in the

`/usr/share/release_info/Solaris_2.7/locale` directory, you can only view them in English even though you logged in using the European locale.

1. **Select Information from the front panel's Help menu.**
2. **Double-click the Solaris_2.7 folder in the Application Manager.**

The following 7 Solaris Information files are displayed:

- `documentation_issues`
- `driverupdate`
- `eof`
- `installation_bugs`
- `new_features`
- `patches`
- `runtime_bugs`

3. **Double-click on each file.**

It displays each file in `dtpad`.

Workaround: Go to `/usr/share/release_info/Solaris_2.7/locale` and use `vi` or `dtpad`.

System Administration Bugs

`init` Does Not Recognize Carrier Drop Off From a Serial Display and Therefore Does Not Revert to the Default Console (4191023)

If you lose the carrier, i.e., become disconnected from the serial port (that is not located on the default console or on an auxiliary console through which you are logged in, and then bring the system to single-user or administrative mode by executing the `init` command from that port, you must ensure that the carrier is reestablished on that serial port before bringing the system back up. The system then prompts you for a run level to which you want to boot the system (only on the port where the `init` command was initiated).

Workaround: Reconnect to the serial ports when you lose the carrier before rebooting the system.

`init` Prompts for Run Level When the `reboot` Command Is Executed From a Standalone Session (4191148)

A misleading message is sometimes displayed on the device on which you initiated the `init` state transition when administering a system using the `init` command even though you executed the `reboot` command. When executing `init s`, a single-user shell is established on a remote console and the subsequent rebooting of the system can cause the following message to be displayed:

```
Enter run level
```

Workaround: Ignore the misleading message.

Change the `init` Command's Run Level Prompt to Display on a `tty` On Which `Shift D` or the `exit` Command Are Executed (4196862)

If you press `Shift—D` as a superuser or after logging in as `root` from the superuser login prompt and then issue an `exit` command to be at the default run level, you are prompted for the default run level. The prompt is displayed on a console on which the `init` command was initially executed instead of the console on which `Shift—D` or the `exit` command were originally issued.

If you execute the `init` command from a `pty`, `/dev/console` becomes the default device on which you are prompted for a run level. If you are running a remote console and log in as a superuser and then type `Shift—D` to boot the system, the run level prompt is then displayed on the console instead of the auxiliary console.

The `init` Command Does Not Display Its Run Level Prompt When Reconnecting to the Port of an Auxiliary Console (4196993)

If a configuration includes one or more auxiliary consoles and the carrier drops the connection for the auxiliary console on which the `init` command was run, and the `su` login shell has exited from another auxiliary or default console, then the following

prompt will not be displayed after reestablishing the connection on the port from which the carrier dropped the connection:

```
ENTER RUN LEVEL
```

Although you are never prompted for the run level, the system is still waiting for the run level to be entered.

Workaround: Reestablish the connection on the port from the carrier has dropped the connection and enter the desired run level even though you are not prompted for the run level.

Some Console Messages Cannot Be Redirected to Auxiliary Consoles (4197589)

Daemons or commands may use `/dev/console` explicitly to display messages. The frequency of such messages is low among the set of messages that the console may display.

Workaround: All messages are still printed to `/dev/console` and can therefore be monitored. You can also monitor `syslog` log files.

`syslog` Writes Messages to `/dev/syscon` When Unable to Send to `syslogd` (4219265)

If `syslogd` needs to display error messages on a console, these messages will be directed to the default location `/dev/syscon`. The error messages are not displayed on any configured auxiliary consoles in this feature patch.

UFS Quotas Not Enabled After Booting (4226352)

If you have UFS file systems listed in `/etc/vfstab` with quotas enabled, you must apply the following workaround. Otherwise, quotas are not enabled automatically after booting a system.

Workaround: You must run `quotacheck -a` and `quotaon -a` for quotas to be correctly enabled. Otherwise, quotas remain disabled.

64-Bit Solaris Bugs

krtld Does Not Recognize sparcv9 Register Symbols (4203394)

When loading an unbundled device driver, STREAMS module, file system, or other kernel module, you may see the following error message:

```
kernel_module_path: undefined symbol
WARNING: mod_load: cannot load module 'kernel_module_path'
```

The kernel runtime linker does not recognize the new register symbol type introduced in the SC5.0 FCS compilers and assemblers for 64-bit SPARC binaries.

Workaround: You must verify that the error message was generated because the kernel runtime linker does not recognize the new register symbol type. To do this, type:

```
# nm kernel_module_path | grep REGI
```

If this is the problem, the output from this command is a table that shows one row with 2 in the Value column and REGI in the Type column, and another row with 3 in the Value column and REGI in the Type column. An example is:

```
[154] |          2 |          0|REGI |GLOB |0 |UNDEF |
[155] |          3 |          0|REGI |GLOB |0 |UNDEF |
```

To correct the problem:

- If you have the source code for the kernel module, recompile the kernel module with `-xregs=no%appl` option, or, if it is written in assembly language, assemble it with `-xregsym=no` option.
- If you do not have the source code, contact the provider of the kernel module to report the problem.

Debugging Bugs

dbx 4.0 Cannot Dump the Stack Trace When Debugging a Multi-Threaded Program (4207409)

When debugging a multi-threaded program with a signal handler on a given thread stack, dbx 4.0 cannot successfully dump the thread's stack.

Workaround: Use dbx 5.0.

Java Development Kit (JDK) Bugs

Java Applications Dump Core When There Is Insufficient Swap Space (4037312, 4042667)

Java applications dump core when there is not enough swap space. Applications sometimes produce the following bus error:

```
not enough space
```

Workaround: Exit other applications running on the system or add more swap space. See the *Solaris System Administration Guide* for details on adding swap space.

Adjust Colormap To Improve Performance in True-Color Environment (4102599)

Many X-requests in Java applications can cause a slow startup in 8-bit color (TrueColor or PseudoColor) environments. This is apparent on slower systems. A large part of the startup delay is due to the computation of an optimal dithered colormap by the `awt` library during initialization.

Workaround: Adjust the colormap size computed at initialization by using the environment variable `VIRTUBESIZE`. Set it to a power of 2 between 4 and 32. The default value is 32.

```
setenv VIRTUBESIZE 8
```

The `-nojit` Option Displays a Warning (4144550)

When the `-nojit` option is used, the following warning is displayed:

```
Warning: JIT compiler "none" not found. Will use interpreter
```

Workaround: Use the `-Djava.compiler=NONE` command line option instead of the `-nojit` option.

Values in Italian Euro Currency Format Are Not Represented With Fractional Digits (4183898)

In the Italian locale that supports euro currency (`it_IT_EURO`), the default currency format obtained using either `getCurrencyInstance()` or `getCurrencyInstance(locale)` from the `java.text.NumberFormat` returns currency values formatted as integers.

Workaround: Use your own currency format rather than the locale's default.

Late-Breaking News

This chapter lists late-breaking new features that arrived too late to be included in the “What’s New: A Closer Look” in the *Solaris 7 (SPARC Platform Edition) Installation Library*. In addition, you can also refer to the “What’s New at a Glance” section in the *Solaris 7 Supplement*, the *Solaris 7 System Administration Supplement*, and the *Solaris 7 Software Developer Supplement*. You may also want to refer to the online `new_features` file in the `SUNWrdm` package on the Solaris CD for additional information on new features.

The information in this chapter supplements any information listed in the `new_features` file that is part of the `SUNWrdm` package on the Solaris 7 5/99 CD. If you boot from the Solaris 7 5/99 CD, the `new_features` file is located in the directory:

```
/cdrom/sol_7_599_sparc/s0/Solaris_2.7/Docs/release_info/
```

The default installed location for the `new_features` file is the directory:

```
/usr/share/release_info/Solaris_2.7/C
```

Note - The name of this product is Solaris 7 5/99, but code and path or package path names may use Solaris 2.7 or SunOS 5.7. Always follow the code or path as it is written.

Java Development Kit 1.1.6_03

Java Runtime Environment (JRE) Available

A JRE corresponding to the latest version of the JDK is available for download at

<http://www.sun.com/solaris/jre>

Refer to the document, *Solaris Java Runtime Environment (JRE) 1.1.6 Configuration Guide* at http://www.sun.com/solaris/jre/1.1/jre_config.txt.

This document contains the following information:

- JRE overview
- How to bundle and run the JRE

The bugs in these release notes apply to the JRE, except for those bugs that apply to components not included in the JRE.

Large File Support

Beginning with JDK 1.1.6_03, the classes and methods that access files include support for large files (greater than or equal to 2 GBytes [2^{31} bytes]). There are no API changes. A Java application that is run with this version of the JDK can access large files.

Large files are supported as of Solaris 2.6.

High-Performance JIT Compiler

JDK 1.1.6_03 introduced the High-Performance JIT compiler, an optimized version that enables significant performance gains over the JIT compiler bundled with the Solaris 2.6 operating environment.

Release Naming Convention

Release Name Strings

The release name for this and future releases can be displayed using `java-fullversion`, and can be interpreted as follows:

TABLE 3-1 Solaris_JDK_1.1.6_03

Solaris_JDK_	Constant for all Sun Solaris JDK production releases
1.1.6	Version of the Java Software JDK that this version of the Solaris JDK is compatible with, as measured by the FCS version of the JDK
03	Number that increases with every new FCS release

Dynamic Reconfiguration (DR) for Sun Enterprise 6x00, 5x00, 4x00, and 3x00 Systems

If you plan to implement DR on Sun Enterprise 6x00, 5x00, 4x00 and 3x00 systems, visit the following Sun web site for late-breaking news, frequently-asked questions (FAQ) and the latest downloading instructions for patches and firmware needed to run DR:

<http://sunsolve2.sun.com/sunsolve/Enterprise-dr>

End-of-Support Statements

This chapter lists late-breaking end-of-support statements that arrived too late to be included in the online `eof` file in the `SUNWrdm` package on the Solaris CD.

The information in this chapter supplements any information listed in the `eof` file that is part of the `SUNWrdm` package on the Solaris 7 5/99 CD. If you boot from the Solaris 7 5/99 CD, the `eof` file is located in the directory:

```
/cdrom/sol_7_599_sparc/s0/Solaris_2.7/Docs/release_info/C
```

The default installed location for the `eof` file is the directory:

```
/usr/share/release_info/Solaris_2.7/C
```

Note - The name of this product is Solaris 7 5/99, but code and path or package path names may use Solaris 2.7 or SunOS 5.7. Always follow the code or path as it is written.

End of Software Support Statements for Future Releases of the Solaris Operating Environment

The `sysidnis(1M)` System Identification Program

The `sysidnis(1M)` program may be removed in a future release. `sysidnis(1M)` is the System Identification program responsible for configuring name services during installation and upgrade, and after unconfiguration using `sys-unconfig(1M)`.

`sysidnis(1M)` will be replaced by `sysidns(1M)`.

XIL

XIL may no longer be supported in a future release. The following warning is generated when an XIL program is compiled:

```
#error: "XGL has been declared Obsolete and may not be present in
versions of Solaris after 8.
#define SUNXIL_WARNING_DISABLE (or use -D) to disable this message."
```

To compile an XIL program, disable the message by adding `#define` to the program:

```
#define SUNXIL_WARNING_DISABLE
```

or by using the following compiler directive:

```
-DSUNXIL_WARNING_DISABLE
```

Maintenance Update Patch List

The patches listed in this appendix are on the Solaris 7 5/99 CD. They have been applied using::

- SolStart

The patches are located in the `/var/sadm/patch` directory on an installed system.

- Freshbits technology

These patches were applied when the Solaris 7 5/99 CD was created. Therefore, these patches are not located in the `/var/sadm/patch` directory.

The `showrev -p` command provides a list of all patches applied to the installed system regardless of how they were applied. The Solaris 7 5/99 CD includes a known and tested level of patches; however, patches cannot be backed out of the Solaris 7 5/99 release.

Patch List

106146-05 : SunOS 5.7 M64 Graphics Patch
