SunVTS Support for the Solaris OS on x86-Based Systems

Note – In this document these x86 related terms mean the following:
“x86” refers to the larger family of 64-bit and 32-bit x86 compatible products.
“x64” points out specific 64-bit information about AMD64 or EM64T systems.

Starting with the Solaris 10 OS, the SunVTS infrastructure and core diagnostics are available for x86 platforms. Starting with Solaris 10 3/05 HW1, SunVTS diagnostics for x86 platforms are supported in the AMD 64-bit environment for the SunVTS kernel (vtsk). All diagnostics are ported to 64-bit.

SunVTS 6.4 Patch Set 4 supports all Sun manufactured x86/x64 systems. Non-Sun systems are not supported.

Note – If you perform SunVTS on an unsupported platform, a warning message appears and SunVTS stops.

You must install the x86 version of the SunVTS packages to perform SunVTS on x86 platforms. The software packages use the same names as in the SPARC® environment. The SunVTS packages delivered separately for both x86 and SPARC Solaris platforms are as follows:

- SUNWvts – Contains the SunVTS core framework that includes the kernel and user interface.
- SUNWvtsmn – Contains the SunVTS online manual pages
- SUNWvtshr – Contains the SunVTS framework configuration files in the root partition (superuser).
- SUNWvtsts – Contains the SunVTS test binaries.
