

Sun Ray™ Server Software 4.1 Release Notes

for the Linux Operating System

Sun Microsystems, Inc.
www.sun.com

Part No. 820-3775-11
October 2008, Revision A

Copyright 2002—2008, Sun Microsystems, Inc., 4150 Network Circle, Santa Clara, California 95054, U.S.A. All rights reserved.

Sun Microsystems, Inc. has intellectual property rights relating to technology embodied in the product that is described in this document. In particular, and without limitation, these intellectual property rights may include one or more of the U.S. patents listed at <http://www.sun.com/patents>, and one or more additional patents or pending patent applications in the U.S. and in other countries.

This document and the product to which it pertains are distributed under licenses restricting their use, copying, distribution, and decompilation. No part of the product or of this document may be reproduced in any form by any means without prior written authorization of Sun and its licensors, if any.

Third-party software, including font technology, is copyrighted and licensed from Sun suppliers.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, Sun Ray, Sun WebServer, Sun Enterprise, Ultra, UltraSPARC, SunFastEthernet, Sun Quad FastEthernet, Java, JDK, HotJava, and Solaris are trademarks, registered trademarks, or service marks of Sun Microsystems, Inc. in the U.S. and other countries. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc.

Netscape is a trademark or registered trademark of Netscape Communications Corporation.

The OPEN LOOK and Sun™ Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

Federal Acquisitions: Commercial Software—Government Users Subject to Standard License Terms and Conditions.

Use, duplication, or disclosure by the U.S. Government is subject to restrictions set forth in the Sun Microsystems, Inc. license agreements and as provided in DFARS 227.7202-1(a) and 227.7202-3(a) (1995), DFARS 252.227-7013(c)(1)(ii) (Oct. 1998), FAR 12.212(a) (1995), FAR 52.227-19, or FAR 52.227-14 (ALT III), as applicable.

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Copyright 2002—2008, Sun Microsystems, Inc., 4150 Network Circle, Santa Clara, California 95054, Etats-Unis. Tous droits réservés.

Sun Microsystems, Inc. a les droits de propriété intellectuelle relatants à la technologie incorporée dans le produit qui est décrit dans ce document. En particulier, et sans la limitation, ces droits de propriété intellectuelle peuvent inclure un ou plus des brevets américains énumérés à <http://www.sun.com/patents> et un ou les brevets plus supplémentaires ou les applications de brevet en attente dans les Etats-Unis et dans les autres pays.

Ce produit ou document est protégé par un copyright et distribué avec des licences qui en restreignent l'utilisation, la copie, la distribution, et la décompilation. Aucune partie de ce produit ou document ne peut être reproduite sous aucune forme, par quelque moyen que ce soit, sans l'autorisation préalable et écrite de Sun et de ses bailleurs de licence, s'il y en a.

Le logiciel détenu par des tiers, et qui comprend la technologie relative aux polices de caractères, est protégé par un copyright et licencié par des fournisseurs de Sun.

Des parties de ce produit pourront être dérivées des systèmes Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays et licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, Sun Ray, Sun WebServer, Sun Enterprise, Ultra, UltraSPARC, SunFastEthernet, Sun Quad FastEthernet, Java, JDK, HotJava, et Solaris sont des marques de fabrique ou des marques déposées, ou marques de service, de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays.

Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

Netscape est une marque de Netscape Communications Corporation aux Etats-Unis et dans d'autres pays.

L'interface d'utilisation graphique OPEN LOOK et Sun™ a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciés de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui en outre se conforment aux licences écrites de Sun.

LA DOCUMENTATION EST FOURNIE "EN L'ETAT" ET TOUTES AUTRES CONDITIONS, DECLARATIONS ET GARANTIES EXPRESSES OU TACITES SONT FORMELLEMENT EXCLUES, DANS LA MESURE AUTORISEE PAR LA LOI APPLICABLE, Y COMPRIS NOTAMMENT TOUTE GARANTIE IMPLICITE RELATIVE A LA QUALITE MARCHANDE, A L'APTITUDE A UNE UTILISATION PARTICULIERE OU A L'ABSENCE DE CONTREFAÇON.

Sun Ray Server Software 4.1 Release Notes for Linux

Supported Platforms

Sun Ray Server Software 4.1 for Linux runs on:

- SuSE Linux Enterprise Server (SLES) 10 with Service Pack 1 or later (32-bit and 64-bit)
- Red Hat Enterprise Linux 5 Update 1 (32-bit and 64-bit)

What's New

Sun Ray Server Software 4.1 for Linux offers the following new features:

Xnewt (Xorg Server)

SRSS 4.1 includes a new standalone Xserver, Xnewt, based on Xorg 7.2 community source. Xnewt is designed specifically for Sun Ray DTUs; it is not effective for non-Sun Ray devices.

Xnewt introduces two new extensions, XRandR, XVideo. For details, see the Xnewt(1) man page.

Multimedia Enhancements

This release provides enhanced multimedia playback capabilities that extend the Sun Ray architecture to accept H.264 (MPEG-4) and VC-1 (WMV9) streams and transmit them directly to Sun Ray 2/2FS/270 DTUs for decoding. In this case, neither the Sun Ray Server CPU nor Windows Server CPU is used for decoding. This is the optimal solution for conservation of server resource and network bandwidth.

For other types of video streams, this release leverages the standard (XVideo) interface on both Sun Ray 1 and Sun Ray 2 DTUS for general purpose player optimization, sending YUV streams directly to the DTU. This enables improved playback of video formats other than H.264 and VC-1 by reducing the bandwidth required to deliver the decoded video to the Sun Ray DTU. For example, RealPlayer supports the XVideo extension to utilize the accelerated YUV path.

This enhancement is supported only for clips played using Windows Media Player 10 and 11 on Windows XP and Windows 2003 platforms. Details are described in the *Sun Ray Connector for Window OS Version 2.1 Installation and Administration Guide*.

Remote Hotdesk Authentication

Remote Hotdesk Authentication (RHA) is a new security policy feature, turned on by default.

Before connecting to a pre-existing session, the Authentication Manager now asks the Session Manager to create a temporary new session for authentication of the user. After the user has been successfully authenticated, the Sun Ray DTU is connected directly to the user's session. This authentication does not apply to anonymous Kiosk Mode. Sun Ray Server Software can be configured to turn RHA off, if desired, via the Admin GUI or the -D option to utpolicy.

VPN Enhancements

This release supports Cisco ASA family (EzVPN) and Juniper/Netscreen IPsec-based gateways.

New Configuration Options (.parms)

This release unifies configuration so that most items can be set in .parms files, in a downloadable configuration file, or using the Pop-up GUI to set local configuration.

New configuration options include:

- MTU
- bandwidth
- Syslog event logging levels
- LogHost
- compress
- lossless
- stopqon
- utloadoff
- fulldup
- kbcountry

Except for MTU, GUI values always take precedence. They are also clearable so that `.parms` values can be used. New values replace most DHCP vendor options.

Self-Registration GUI Enhancement

The Self-Registration GUI has been enhanced for compatibility with PAM authentication. For details, see the man pages for `pam` and `pam.conf`. The Self-Registration GUI uses the PAM service name `utselfreg`. No specific PAM configuration is added to `/etc/pam.conf` for this service, so it defaults to the other PAM service, as described on the `pam.conf` man page.

Service Tags

Service Tags is a Sun-wide strategic effort for registering Sun software and hardware. Service Tags support in Sun Ray will allow users to register Sun Ray Software. These entries can then be harvested and fed back to Sun from customer installation.

Service Tags Installation

In addition to the normal SRSS installation, the SRSS installer also installs the Service Tags Add-On package, `SUNWutsvt`. This registers the SRSS product with Service Tags; however, the SRSS uninstaller does not uninstall the Service Tags Add-On.

To uninstall this package, run the following command:

```
# rpm -e SUNWutsvt-1.0-*.rpm
```

To configure/enable/disable the Service Tags feature, see:

</etc/opt/SUNWutsvt/utsvtd.conf.defaults>

With Service Tags, customers can register Sun products to Sun Connection automatically, for instance, by selecting Discover & Register at:

<https://sunconnection.sun.com/inventory>.

Linux customers should install Service Tags packages manually.

For further information on Sun Service Tags installation and configuration, see:

<http://wikis.sun.com/display/ServiceTag/Sun+Service+Tag+FAQ>

Known Problems and Workarounds

Installation, Configuration, and Upgrade Issues

Reboot Before Running utadm and utconfig

In SRSS 3.1 and later, Sun Ray services are started only on the first reboot after installation. Consequently, after you install Sun Ray Server Software, you must reboot the Sun Ray Server before running `utadm` and `utconfig`.

Restart Required on RHEL (Bug ID 6481726)

After Sun Ray Server Software installation on RHEL, Sun Ray Services must be restarted with the following command after the Sun Ray Server is rebooted:

```
# /opt/SUNWut/sbin/utrestart -c
```

Shutdown/Restart Options (Bug ID 6716548)

SRSS installation removes Shutdown/Restart options from the console; however, users can open a terminal and execute these commands.

GUI Issues

Admin GUI Upgrade (Bug ID 6572246)

The 4.0 Admin GUI requires a Web container that supports the Java Servlet and Java Server Pages (JSP) standards; earlier versions did not. Due to this change, Apache Tomcat 5.5 (or higher) has to be installed on the system, and the `utconfig` script has therefore been extended to ask for the location of an existing Tomcat instance.

If you perform an upgrade from a previous Sun Ray Server Software version (using a preserve file, for example), you must run `utconfig -w` after you have completed the upgrade. The `utconfig -w` command will prompt you for the Admin GUI settings, including the location of the Tomcat installation, after which the Admin GUI will be started automatically.

Remote Access (Bug ID 6508069)

Disabling remote access can result in an empty page.

The `utconfig -w` command allows you to enable or disable remote access to the Admin GUI. If remote access is disabled (the default), you must access the Admin GUI via `http://localhost:1660` or `http://127.0.0.1:1660`.

Accessing the Admin GUI via `http://<servername>:1660` will not work in this case and will result in an empty browser page. If you want to access the Admin GUI via `http://<servername>:1660`, you must enable remote access.

Self-Registration GUI (Bug IDs 6533780, 6538083)

If the wrong username or password is entered, the self-registration GUI does not allow text to be entered.

The workaround is to press the `Exit` button to relaunch the self-registration GUI.

Occasionally use of the self-registration GUI can result in a Java core dump, although registration continues to work as expected, and no other adverse side effects are observed. However, if `coreadm` is configured to name core dumps uniquely, disk space usage should be monitored.

Audio Issues

Low Volume on SuSE Multihead Sessions (Bug ID 6552753)

On SuSE, sometimes audio volume is very low in a multihead session.

The workaround is to create and use a new audio device by setting the `AUDIODEV` and `UTAUDIODEV` variables to the newly-created audio device.

xmms Player Configuration (Bug ID 6473628)

To configure an `xmms` player to play mp3 files, perform the following steps.:

1. Change the preferences on `xmms` output plugin to add more buffering.

2. Change the buffer size to 10000 ms and the Pre-Buffer percent to 90.

When you run `xmms`, from command line or menu, click on the O (letter O) on the left side of the panel to bring up the Preferences menu.

3. Under the Audio I/O Plugins button, select Output Plugin OSS Driver and press the Configure button.

4. Select Buffering.

a. The default Buffer size is 3000 ms. Change this to 10000 ms.

b. The default Pre-buffer percent is 25. Change this to 90.

5. Press OK, then Press OK on the Preferences panel.

6. Exit `xmms` and restart it.

Multimedia Issues

Media enhancements currently lack the following functionality:

- Low-bandwidth environment
- Multiple streams at the same time

Slow Maximized XVideo Playback in RealPlayer (Bug ID 6638225)

When video is played in an enlarged size (RealPlayer maximized mode), the user's X session responds very slowly, especially to menu requests.

RealPlayer Application (Bug ID 6667704)

Sometimes RealPlayer application exits with core dump while using XVideo to play a video clip.

This problem is caused by memory corruption in the RealPlayer process. The fix is beyond the scope of Sun Ray release.

Keyboard Issues

Right Shift Key (Bug ID 6633324)

In SLES 10, the Right Shift does not work.

The workaround is to disable the following shortcut:

From Computer -> Control Center:

1. Select Personal.
2. Select Shortcuts.
3. Select E-mail.
4. Disable it by pressing the Backspace key.

Xnewt CPU Utilization

Running `utswitch` from your `gnome-terminal` window (to switch to another Sun Ray server) while using Xnewt with the XKB extension enabled for a Sun Ray session, may generate repeated new lines in the window, causing the Xnewt to consume extra CPU resources. This only happens when you press the Return key a bit too long when entering the `utswitch` command.

Workarounds include:

- Using the `utselect` GUI tool instead.
- Disabling the Repeat key for the user through the keyboard preference menu.
- Disabling XKB for the user with the `utxconfig -k off` option
- Changing the system default by including the `-a` option to the `utxconfig` command above.

XKB on RHEL

In RHEL, the following message is displayed after enabling XKB feature; however, the feature works as expected.

```
Error activating XKB configuration.  
Probably internal X server problem.
```

Numeric Keypad Mapping

Numeric keypad mapping does not work properly in Java-based Sun Ray tools such as `utsettings`, `utmhconfig`, and the registration GUI.

The workaround is to set the environment variable `_AWT_USE_TYPE4_PATCH` to false, as follows:

```
# setenv _AWT_USE_TYPE4_PATCH false
```

Keyboard Layout

`setxkbmap` cannot be used to set layouts for keyboards on Sun Ray DTUs.

Kiosk Issues

Set Kiosk Application Type Correctly (Bug ID 6533804)

Some Kiosk session types allow additional applications to be launched. Within the Admin GUI, you can specify a new Kiosk application either by entering a path to an executable or by specifying a path to an application descriptor (a file that lists the various properties for the application).

The Admin GUI cannot automatically determine the type (executable vs. descriptor), so you must specify the type correctly in the Admin GUI when adding a new application.

If you specify an incorrect type, the Kiosk session cannot start up correctly, and the affected DTUs will hang, typically with a 26D error.

If you encounter such an error, the workaround is to check the specified types in the Admin GUI and correct the settings, if necessary.

Unconfiguring Kiosk Mode Disables Kiosk Policy

If Kiosk mode is enabled for smart card and/or for non-card sessions, then disabling Kiosk mode (using `utconfig -u -k`) also disables the Kiosk policy.

This behavior may be surprising in a failover group, where Kiosk policy is disabled for the entire group when Kiosk Mode is unconfigured on any server in the group.

Before unconfiguring Kiosk Mode on any host in a failover group, disable Kiosk policy, and perform a cold restart of the server group.

To perform maintenance tasks on Kiosk user accounts without unconfiguring Kiosk Mode completely, use the `/opt/SUNWkio/bin/kioskuseradm` tool instead of `utconfig`.

Screen Issues

Resizing Multihead Session (Bug ID 6635409)

When resizing the screens for a multihead session, you must resize all the screens manually to the same size.

This can be done easily from the Desktop Preference menu.

No Screen Lock for Second Linux Session

A user who creates two Linux sessions cannot create a screen lock for the second session. When SRSS needs to lock the screen, it uses `xlock` for the second session. When the user tries to lock the screen from the menu, nothing happens. The workaround is to start a `screensaver` daemon for the second session manually, to enable screen locking and stop SRSS from using `xlock`.

```
# /usr/X11R6/bin/xscreensaver -nosplash &
```

Mass Storage Issues

Caution – Failure to run `utdiskadm -r` before unplugging mass storage devices will cause loss of data. Make sure your users run `utdiskadm -r` before they unplug any mass storage device.

```
% /opt/SUNWut/bin/utdiskadm -r device_name
```

USB Operations Fail After Idle Timeout Limit

If a user fails to access a given session for longer than the screen lock idle timeout interval while an application is accessing a USB device — for instance, while copying a large number of files to or from a USB flash drive — the session will be locked. With RHA, NSCM, and authenticated smart cards, this means the session detaches, and all USB devices disconnect from the session. This can interrupt or abort the application access to the device.

Workarounds include:

- Advising users to monitor their USB device usage to avoid being timed out
- Setting the timeout interval value high enough to allow I/O to complete before the interval elapses
- Disabling the screen saver
- Disabling RHA

Caution – Disabling RHA is less desirable because it removes an extra level of security.

L10N Issues

To display the locale correctly in the Admin GUI, adapt your browser's language preferences, and select the desired locale (fr, ja, or zh_CN).

For example, for Mozilla, go to Tools -> Options -> Advanced -> Edit Languages.

Portuguese Locale

To enable the Portuguese locale, use the **rpm -i** command to install the following package:

```
# rpm -i SUNWputo-4.1-04.i386.rpm
# rpm -i SUNWpkio-4.1-04.i386.rpm
```

utselect and utwall

In the Simplified Chinese, Traditional Chinese, and Korean locales, *utselect* and *utwall* do not work properly in Linux distributions.

A workaround for this issue is to remove the *utselect* and *utwall* catalog files from the appropriate locale sub-directory. This brings up *utselect* and *utwall* in English.

For the Simplified Chinese locale:

```
# rm /opt/SUNWut/lib/locale/zh_CN/LC_MESSAGES/utselect.mo
# rm /opt/SUNWut/lib/locale/zh_CN/LC_MESSAGES/utwall.mo

# rm /opt/SUNWut/lib/locale/zh_CN.utf8/LC_MESSAGES/utselect.mo
# rm /opt/SUNWut/lib/locale/zh_CN.utf8/LC_MESSAGES/utwall.mo
```

For the Traditional Chinese locale:

```
# rm /opt/SUNWut/lib/locale/zh_TW/LC_MESSAGES/utselect.mo
# rm /opt/SUNWut/lib/locale/zh_TW/LC_MESSAGES/utwall.mo
```

For the Korean locale:

```
# rm /opt/SUNWut/lib/locale/ko_KR.utf8/LC_MESSAGES/utselect.mo
# rm /opt/SUNWut/lib/locale/ko_KR.utf8/LC_MESSAGES/utwall.mo
```

Multibyte Font Display Problem (6737158)

In multibyte locales using pre-1.6 releases of JRE, Java-based Sun Ray tools such as *utsettings* GUI do not work properly. Proper multibyte font display requires JRE 1.6.

The workaround is to create a `guijre` symbolic link in `/etc/opt/SUNWut` to point to an appropriate JRE release, for instance:

```
# ln -s </path_to_jre_1.6> guijre
```
