Aucune partie de ce produit ou document ne peut être reproduite sous aucune forme, par quelque moyen que ce soit, sans l'autorisation préalable et écrite de Sun et de ses bailleurs de licence, s'il y en a. Le logiciel détenu par des tiers, et qui comprend la technologie relative aux polices de caractères, est protégé par un copyright et licencié par des fournisseurs de Sun.

Des parties de ce produit pourront être dérivées du système Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays et licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, docs.sun.com, AnswerBook, AnswerBook2, Java et Solaris sont des marques de fabrique ou des marques déposées, de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays. Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

L'interface d'utilisation graphique OPEN LOOK et Sun a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciés de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui en outre se conforment aux licences écrites de Sun.

CETTE PUBLICATION EST FOURNIE “EN L’ETAT” ET AUCUNE GARANTIE, EXPRESSE OU IMPLICITE, N’EST ACCORDEE, Y COMPRIS DES GARANTIES CONCERNANT LA VALEUR MARCHANDE, L’APTITUDE DE LA PUBLICATION A REPONDRE A UNE UTILISATION PARTICULIERE, OU LE FAIT QU’ELLE NE SOIT PAS CONTREFAISANTE DE PRODUIT DE TIERS. CE DENI DE GARANTIE NE S’APPLIQUEURAIT PAS, DANS LA MESURE OU IL SERAIT TENU JURIDIQUEMENT NUL ET NON AVENU.

Technical Note: Deploying Access Manager Instances to an Application Server Cluster

This document describes how to deploy Sun Java™System Access Manager 7 2005Q4 to a Sun Java System Application Server Enterprise Edition 8.1 2005Q4 cluster, either on a single host server or on multiple host servers, including:

- “Before You Get Started” on page 3
- “Installation and Configuration Steps” on page 4
- “Accessing Sun Resources Online” on page 9
- “Revision History” on page 10

Before You Get Started

This document is intended for system administrators and software technicians. You should be familiar with the administrative commands for your deployment platform (Solaris™ system or Linux system) and the following tasks.

Task	Where to Find More Information
<p>Running the Java ES installer to install Java ES components. The examples in this technical note will use separate machines for the following, with Access Manager installed on all three machines:</p> <ul style="list-style-type: none"> ■ Sun Java System Application Server with cluster instances ■ Sun Java System Directory Server Access Manager requires Directory Server. Either install a new Directory Server or use an existing one. ■ Sun Java System Web Server as a Load Balancer. 	<i>Sun Java Enterprise System 2005Q4 Installation Guide for UNIX</i>
<p>Applying any required patches for Access Manager and other Java ES components.</p>	<p>Check for required patches in the Java ES 2005Q4 Release Notes Collection: http://docs.sun.com/coll/1315.1</p>
<p>Administering Access Manager, Application Server, and Directory Server</p>	<p>Also, check with your Sun Microsystems technical representative.</p> <p>You can download patches from SunSolve Online: http://sunsolve.sun.com/</p> <p>Java ES component documentation:</p> <ul style="list-style-type: none"> ■ Access Manager: http://docs.sun.com/coll/1292.1 ■ Application Server: http://docs.sun.com/coll/1310.1 ■ Directory Server: http://docs.sun.com/coll/1316.1

Installation and Configuration Steps

To deploy Access Manager instances to an Application Server 8.1 2005Q4 cluster, follow these steps:

- “Install and Configure Application Server” on page 4
- “Install and Configure Access Manager” on page 6
- “Add Instances to the Platform Server List and Realm/DNS Aliases” on page 7
- “Add Listeners to the Clusters for the Load Balancer” on page 8
- “Restart All Application Server Instances” on page 9

Install and Configure Application Server

In this section, one machine will contain the DAS host server and the Application Server host-server1). Two additional servers (server1 and server2) will contain the Application Server instances.

1. Install Application Server using the Java ES installer with the Configure Now option. When you install Application Server, the Java ES installer also creates the node agent..
2. Install the Application Server command line utilities on `server1` and `server2`. You will install node agents on these servers (See Step 3c). The examples in this document use `nodeagent1`, `nodeagent2`, `nodeagent3` as the node agent names
3. Configure the Application Server Cluster. Examples in the following steps use the Application Server `asadmin` command-line utility; however, you can use the Application Server Administration Console, if you prefer.
 - a. Start the node agent on the DAS (`host-server1`). For example:

```
asadmin> start-node-agent --user admin --passwordfile password-file nodeagent1
```

- b. Create node agents on `server1` and `server2`.

```
asadmin> create-node-agent --host host-server1.example.com --port 4849 --user admin
```

```
--passwordfile password-file nodeagent2
```

```
asadmin> create-node-agent --host host-server1.example.com --port 4849 --user admin
```

```
--passwordfile password-file nodeagent3
```

- c. Start the node agents on `server1` and `server2`. For example:

```
asadmin> start-node-agent --user admin --passwordfile password-file nodeagent2
```

```
asadmin> start-node-agent --user admin --passwordfile password-file nodeagent3
```

- d. Create the cluster on the DAS. For example:

```
asadmin create-cluster --user admin --passwordfile password-file amcluster
```

- e. Create a server instance for the cluster at the DAS. For example:

```
asadmin> create-instance --user admin --passwordfile password-file
```

```
--cluster amcluster --nodeagent nodeagent1
```

```
--systemproperties HTTP_LISTENER_PORT=8182: instance1
```

```
asadmin> create-instance --user admin --passwordfile password-file
```

```
--cluster amcluster --nodeagent nodeagent2
```

```
--systemproperties HTTP_LISTENER_PORT=8182: instance2
```

```
asadmin> create-instance --user admin --passwordfile password-file
```

```
--cluster amcluster --nodeagent nodeagent3
```

```
--systemproperties HTTP_LISTENER_PORT=8182: instance3
```

Note – If you are creating an instance on a remote server, specify the node agent name on the remote server. Also, make sure that the node agent is running on the remote server.

Install and Configure Access Manager

Perform the following steps on all of the servers:

1. Install Access Manager using the Java ES installer with the Configure Later option. Access Manager requires Sun Java System Directory Server. Either install Directory Server before you install Access Manager. Or, use an existing Directory Server.
2. Start all instances of Application Server to verify that they are installed properly.
3. Create an `amsamplesilent` file on the DAS machine (`host-server1`) and set the following attributes:

```
SERVER_NAME=host-server1
SERVER_HOST=$SERVER_NAME.example.com
SERVER_PORT=8082
ADMIN_PORT=4849
DS_HOST=qa-host-server1.example.comDS_DIRMGRPASSWD=password
ROOT_SUFFIX="dc=example,dc=com"
ADMINPASSWD=password
AMLDAPUSERPASSWORD=password
COOKIE_DOMAIN=.example.com
AM_ENC_PWD=""
NEW_OWNER=root
NEW_GROUP=other
PAM_SERVICE_NAME=other
WEB_CONTAINER=AS8
```

```
AS81_HOST=host-server1.example.com
AS81_INSTANCE=amcluster
```

4. Save and deploy the `amsamplesilent` file. For example:

```
amconfig -s amsamplesilent
```

5. Restart Access Manager and the cluster instance
6. Log in to Access Manager as `amadmin` on the DAS machine and add the additional server instances to the Platform server list. For more information, see “[Add Instances to the Platform Server List and Realm/DNS Aliases](#)” on page 7.
7. Copy the `amsamplesilent` file to `/usr/tmp` directory on both `server1` and `server2`.
8. On the DAS machine, locate the `AM_ENC_PWD` property in `amconfig.properties` (located in `/etc/opt/SUNWam/config`):

```
am.encryption.pwd=RrO0vsw+sg8D1+3ldZ6imu9yhjhyksS2
```

9. Copy the value of the `AM_ENC_PWD` from the DAS machine and replace the value in the `amsamplesilent` file for both `server1` and `server2`:

```
SERVER_NAME=server1
AM_ENC_PWD=RrO0vsw+sg8D1+3ldZ6imu9yhjhyksS2
```

```
SERVER_NAME=server2
AM_ENC_PWD=RrO0vsw+sg8D1+3ldZ6imu9yhjhysS2
```

10. Deploy the configuration file on `server1` and `server2`. The applications will produce error messages when attempting to deploy, because the applications are already in the domain. The configuration files need to be created and the command line utilities need to be defined. To do so, run the `amconfig` command for each installed instance. For example:

```
amconfig -s /usr/tmp/ amsamplesilent
```

For more information, see the Access Manager Administration Guide.

Note – Certain error messages will be sent, but these are expected and can be ignored.

- Access Manager 7 errors:

Directory Server is already loaded with Access Manager DIT.

CLI171 Command deploy failed : Application `amserver` is already deployed on other targets. Please use `create-application-ref` command to create reference to the specified target; requested operation cannot be completed

Failed to deploy `/amserver`

`cp: cannot access /var/opt/SUNWappserver/domains/domain1/config/domain.xml`

`cp: cannot access /var/opt/SUNWappserver/domains/domain1/config/server.policy`

CLI167 Could not create the following jvm options. Options exist:

`-Djava.protocol.handler.pkgs=com.iplanet.services.com`

`-DLOG_COMPATMODE=Off`

`-Ds1is.java.util.logging.config.class=com.sun.identity.log.s1is.LogConfigReader`

`-Dcom.iplanet.am.serverMode=true`

CLI137 Command `create-jvm-options` failed.

11. Repeat these steps for other instances in the cluster.

Add Instances to the Platform Server List and Realm/DNS Aliases

To add Access Manager instances to the Platform Server List and Realm/DNS Aliases, use the Access Manager Admin Console on the first host server (`host-server1`)

1. Log in to the Access Manager Console as `amadmin` on the first host server (`host-server1`).
2. In the Access Manager Console, click Configuration, System Properties, and then Platform.
3. Add each additional instance to the Platform Server List:
 - a. Under Instance Name, click New.
 - b. In New Server Instance, add the Server and Instance Name. For example:
`Server: http://host-server1.example.com:8182`

Instance Name: 02

- c. Click OK to add the instance.
- d. After you have added all instances, click Save.

Your Platform Server List will like similar to this list:

```
http://host-server1.example.com:8182|01  
http://server1.example.com:8182|02  
http://server2.example.com:8182|03
```

In this example, all instances are on the same server. If instances are on remote servers, specify the remote host server names when you add the servers to the list.

If you have instances on remote servers, update the Realm/DNS Aliases (`sunOrganizationAliases`) with the remote host names:

1. In the Access Manager Console on the first host server (`host-server1`), click Access Control and then the root (top-level) realm under Realm Name.
2. Under Realm Attributes, add each remote instance to the Realm/DNS Aliases and then click Add. For example:

`host-server2.example.com`

3. After you have added all remote instances, click Save.

Your Realm/DNS Aliases will like similar to this list:

```
host-server1.example.com  
server1.example.com  
server2.example.com
```

Install Web Server as a Load Balancer

Install Web Server on one of the machines and configure it as a load balancer. For information, see the Sun Java System Web Server documentation at <http://docs.sun.com/app/docs/coll/1308.1>.

Be sure to add the load balancer's site and address to Access Manager's platform list.

Add Listeners to the Clusters for the Load Balancer

Log in to the machine that has Web Server configured as the load balancer plug-in. You will create a listener for each instance of the cluster and the contexts roots for Access manager.

1. Locate the `loadbalancer.xml` file.
2. Add the listeners to the file. For example:

```
<instance name="instance1" enabled="true" disable-timeout-in-minutes="60"
listeners="http://host-server1.example.com:8182"/>
    <instance name="instance2" enabled="true" disable-timeout-in-minutes="60"
listeners="http://server1.example.com:8182"/>
        <instance name="instance3" enabled="true" disable-timeout-in-minutes="60"
listeners="http://server2.example.com:8182"/>

    <web-module context-root="/amserver" enabled="true" disable-timeout-in-minutes="60"
error-url="sun-http-lberror.html" />
        <web-module context-root="/ampassword" enabled="true" disable-timeout-in-minutes="60"
error-url="sun-http-lberror.html" />
            <web-module context-root="/amcommon" enabled="true" disable-timeout-in-minutes="60"
error-url="sun-http-lberror.html" />
```

3. In `loadbalancer.xml`, change property name to the following:

```
<property name="response-timeout-in-seconds" value="120"/>
```

4. Restart the Web Server.

Restart All Application Server Instances

Restart all Application Server instances using the following commands:

```
asadmin> stop-cluster --user admin --passwordfile password-file amcluster
asadmin> start-cluster --user admin --passwordfile password-file amcluster
```

Accessing Sun Resources Online

The docs.sun.com web site enables you to access Sun technical documentation online. You can browse the docs.sun.com archive or search for a specific book title or subject. Books are available as online files in PDF and HTML formats. Both formats are readable by assistive technologies for users with disabilities.

To access the following Sun resources, go to <http://www.sun.com>:

- Downloads of Sun products
- Services and solutions
- Support (including patches and updates)
- Training
- Research
- Communities (for example, Sun Developer Network)

Third-Party Web Site References

Third-party URLs are referenced in this document and provide additional, related information.

Note – Sun is not responsible for the availability of third-party web sites mentioned in this document. Sun does not endorse and is not responsible or liable for any content, advertising, products, or other materials that are available on or through such sites or resources. Sun will not be responsible or liable for any actual or alleged damage or loss caused or alleged to be caused by or in connection with use of or reliance on any such content, goods, or services that are available on or through such sites or resources.

Sun Welcomes Your Comments

Sun is interested in improving its documentation and welcomes your comments and suggestions. To share your comments, go to <http://docs.sun.com> and click Send Comments. In the online form, provide the full document title and part number. The part number is a 7-digit or 9-digit number that can be found on the book's title page or in the document's URL. For example, the part number of this document is 819-6769.

Revision History
