169 Index

Preface

Ximian Evolution 1.4 Sun Microsystems Edition User Guide describes how to use Ximian Evolution 1.4 Sun Microsystems Edition.

Who Should Use This Book

This book is for users who want to use Ximian Evolution 1.4 Sun Microsystems Edition for the following applications:

- Email client
- Calendar
- Task manager

Before You Read This Book

Before you read this book, you should ensure that you have some familiarity with the following topics:

- Email applications
- Calendar applications

How This Book Is Organized

This book is organized as follows:

- Part I introduces Ximian Evolution, provides information on how to get started with Ximian Evolution, and describes how to use Ximian Evolution.
- Part II describes how to customize Ximian Evolution to your requirements.
- Appendix A provides information for troubleshooting Ximian Evolution.
- Glossary is a list of terms used in this book, and definitions of the terms.

Associated Documentation

The following manuals are associated with this guide:

- GNOME 2.2 Desktop Accessibility Guide
- GNOME 2.2 Desktop on Linux System Administration Guide
- GNOME 2.2 Desktop on Linux User Guide

Accessing Sun Documentation Online

The docs.sun.comSM Web site enables you to access Sun technical documentation online. You can browse the docs.sun.com archive or search for a specific book title or subject. The URL is http://docs.sun.com.

Ordering Sun Documentation

Sun Microsystems offers select product documentation in print. For a list of documents and how to order them, see "Buy printed documentation" at http://docs.sun.com.

Typographic Conventions

The following table describes the typographic changes that are used in this book.

TABLE P-1 Typographic Conventions

Typeface or Symbol	Meaning	Example
AaBbCc123	The names of commands, files, and directories, and onscreen computer output	Edit your .login file. Use ls -a to list all files. machine_name% you have mail.
AaBbCc123	What you type, contrasted with onscreen computer output	machine_name% su Password:
AaBbCc123	Command-line placeholder: replace with a real name or value	To delete a file, type rm filename.
AaBbCc123	Book titles, new terms, or terms to be emphasized	Read Chapter 6 in <i>User's Guide</i> . These are called <i>class</i> options. You must be <i>root</i> to do this.

Shell Prompts in Command Examples

The following table shows the default system prompt and superuser prompt for the C shell, Bourne shell, and Korn shell.

TABLE P-2 Shell Prompts

Shell	Prompt
C shell prompt	machine_name%
C shell superuser prompt	machine_name#
Bourne shell and Korn shell prompt	Ş
Bourne shell and Korn shell superuser prompt	#

Using Ximian Evolution

If you want to find out how to implement the various configuration possibilities that are mentioned in this section, see Part II. This part of the manual contains the following chapters:

■ Chapter 1

Read this chapter for an introduction to the major components and functions of Evolution.

■ Chapter 2

Read this chapter for information about how to get started with Evolution.

■ Chapter 3

Read this chapter for information about how to use your **Summary**.

■ Chapter 4

Read this chapter for information about how to use your **Inbox** to compose, send, receive, and manage messages.

■ Chapter 5

Read this chapter for information about how to use **Calendar** to schedule appointments, meetings, and tasks.

■ Chapter 6

Read this chapter for information about how to use **Tasks** to manage the work tasks that you perform.

■ Chapter 7

Read this chapter for information about how to use **Contacts** to create an address book of your contacts.

■ Chapter 8

Read this chapter for information about how to use the Sun Java™ System Calendar Server connector to access your Sun Java System Calendar Server information.

Overview of Ximian Evolution

This chapter provides an overview of Ximian Evolution.

- "Introduction to Evolution" on page 17
- "Accessing Evolution Applications" on page 19
- "Using the Shortcuts Bar" on page 19
- "Using Folders" on page 22
- "Performing Actions in Evolution" on page 24
- "Sorting Items" on page 24
- "Using Views" on page 25

Introduction to Evolution

Evolution helps you to work in a networked environment. Evolution contains the following component applications:

Calendar	You can use	Calendar to	schedule ap	pointments.	meetings.	and tasks.

Contacts You can use **Contacts** to create an address book of your contacts.

Inbox You can use Inbox to compose, send, receive, and manage email

messages.

Summary gives you an overview of your day. **Summary** displays an

overview of your email messages, and your appointments, meetings,

and tasks.

Tasks You can use **Tasks** to manage the work tasks that you perform.

Connectors You can use connectors to connect to calendar servers.

Figure 1–1 shows an Evolution window that displays **Summary**.

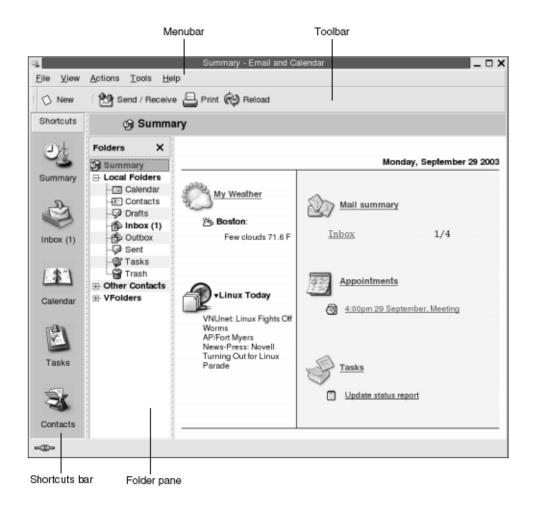

FIGURE 1–1 Evolution Summary Window

The Evolution window contains the following items:

Menubar Contains menus that you use to perform tasks in Evolution.

Toolbar Contains buttons that you use to perform tasks in Evolution.

Shortcuts bar Displays your shortcuts. Shortcuts are icons that provide quick

access to your folders. The shortcuts bar is located at the extreme left

side of the Evolution window.

To display the shortcuts bar, choose View \rightarrow Shortcut Bar so that the

Shortcut Bar menu item is selected.

To hide the shortcuts bar, choose View \rightarrow Shortcut Bar again, so that the Shortcut Bar menu item is deselected.

Folder pane

Displays a list of your folders. The folder pane is located at the left side of the Evolution window.

To display the folder pane, choose View \rightarrow Folder Bar so that the Folder Bar menu item is selected. Alternatively, click on the name of the current folder at the top of the message list.

To hide the folder pane, choose View \rightarrow Folder Bar again, so that the Folder Bar menu item is deselected. Alternatively, click on the Close button at the top of the folder pane.

Most Evolution components also contain a searchbar. You can use the searchbar to perform simple searches. For example, you can search **Inbox** for a message that contains a particular text string.

Accessing Evolution Applications

To display one of the component applications in Evolution, perform one of the following actions:

- Click on the appropriate shortcut in the shortcuts bar. For example, click on the Inbox shortcut to display your email messages.
 - To display the shortcuts bar, choose View \rightarrow Shortcut Bar.
- Choose the folder for the application from the folder pane. For example, choose
 Calendar from the folder pane to display your calendar.
 - To display the folder pane, choose View \rightarrow Folder Bar.
- Choose File → Go to Folder. Select the folder for the application from the Go to folder dialog, then click OK. Alternatively, double-click on the folder.

Using the Shortcuts Bar

By default, Evolution contains shortcuts for the following component applications: Calendar, Contacts, Inbox, Summary, Tasks.

You can open shortcuts from the shortcuts bar in any of the following ways:

- Click on the shortcut.
- Right-click on the shortcut, then choose Open from the popup menu.
- To open the shortcut in a new window, right-click on the shortcut, then choose
 Open in New Window from the popup menu.

You can also customize the shortcuts bar. The following sections describe how to customize the shortcuts bar.

Working With Shortcuts Groups

You can create groups of shortcuts in the shortcuts bar. By default, the shortcuts bar contains one group which is represented by the Shortcuts button at the top of the shortcuts bar.

To open a group, click on the button that represents the group.

To Create a Shortcuts Group

Right-click on a vacant space on the shortcuts bar, then choose Add Group from the popup menu. A **Create New Shortcut Group** dialog is displayed. Type a name for the new group in the dialog, then click OK. A button that represents the group is added to the shortcuts bar.

To Rename a Shortcuts Group

Right-click on the button that represents the group, then choose Rename this Group from the popup menu. A **Rename Shortcut Group** dialog is displayed. Type a new name for the group in the dialog, then click OK. The text on the button in the shortcuts bar that represents the group is updated.

To Remove a Shortcuts Group

Right-click on the button that represents the group, then choose Remove this Group from the popup menu. A **Remove Shortcut Group** dialog is displayed. Click Delete to remove the shortcuts group.

Note – You cannot remove the **Shortcuts** group.

To Change the Size of Icons in a Shortcuts Group

Right-click on the button that represents the group, then choose Small Icons or Large Icons from the popup menu.

Working With Shortcuts

You can add, rename, and remove shortcuts from your shortcuts groups. The following sections describe how to work with shortcuts.

To Add a Shortcut

To add a shortcut to a shortcuts group, perform the following steps:

- 1. Open the shortcuts group to which you want to add the shortcut.
- 2. In the folder pane, select the folder for which you want to add a shortcut, then choose File \rightarrow Folder \rightarrow Add to Shortcut Bar. The folder is added to the shortcuts group as a shortcut.

Alternatively, in the folder pane, right-click on the folder for which you want to add a shortcut, then choose Add to Shortcut Bar from the popup menu.

To Add Default Shortcuts

You can add the default shortcuts to a shortcuts group. To add the default shortcuts to a shortcuts group, perform the following steps:

- 1. Open the shortcuts group to which you want to add the default shortcuts.
- 2. Right-click on a vacant space on the shortcuts bar, then choose Create Default Shortcuts from the popup menu. The default shortcuts are added to the shortcuts group.

To Rename a Shortcut

To rename a shortcut, right-click on the shortcut, then choose Rename from the popup menu. A Rename Shortcut dialog is displayed. Type a new name for the shortcut in the dialog, then click OK. The text on the shortcut is updated.

To Remove a Shortcut

To remove a shortcut, right-click on the shortcut, then choose Remove from the popup menu.

Using Folders

In Evolution, you store your information in folders. For example, the default location for your incoming messages is the **Inbox** folder.

You can use the following user interface components to work with your folders:

- File menu
- Folder pane

To Open a Folder

Choose File \rightarrow Go to Folder. Select the folder that you want to open from the **Go to folder** dialog, then click OK.

Alternatively, click on the folder in the folder pane.

To open the current folder in a new window, choose File \rightarrow Folder \rightarrow Open in New Window.

Alternatively, right-click on the folder in the folder pane, then choose Open in New Window from the popup menu.

To Create a New Folder

Perform the following steps:

- Choose File → Folder → New Folder. Alternatively, right-click in the folder pane, then choose New Folder from the popup menu. A Create New Folder dialog is displayed.
- 2. Enter the details of the folder that you want to create in the **Create New Folder** dialog. The following table describes the elements on the **Create New Folder** dialog:

Element	Description
Folder name	Type a name for the folder in the text box.
Folder type	Select the type of folder from the drop-down list.
Specify where to create the folder	Use the tree to select the location where you want to create the new folder.

3. Click OK.

To Move a Folder

Perform the following steps:

- 1. Open the folder that you want to move, then choose File \rightarrow Folder \rightarrow Move. Alternatively, right-click on the folder that you want to move in the folder pane, then choose Move from the popup menu. A Move Folder dialog is displayed.
- 2. Use the tree in the Move Folder dialog to select the location where you want to move the folder.
 - To create a new folder, click on the New button. A Create New Folder dialog is displayed. For more information, see "To Create a New Folder" on page 22.
- 3. Click OK.

To Copy a Folder

Perform the following steps:

- 1. Open the folder that you want to copy, then choose File \rightarrow Folder \rightarrow Copy. Alternatively, right-click on the folder that you want to copy in the folder pane, then choose Copy from the popup menu. A Copy Folder dialog is displayed.
- 2. Use the tree in the **Copy Folder** dialog to select the location where you want to copy the folder.
 - To create a new folder, click on the New button. A **Create New Folder** dialog is displayed. For more information, see "To Create a New Folder" on page 22.
- 3. Click OK.

To Rename a Folder

Perform the following steps:

1. Open the folder that you want to rename, then choose File \rightarrow Folder \rightarrow Rename. Alternatively, right-click on the folder that you want to rename in the folder pane, then choose Rename from the popup menu. A **Rename Folder** dialog is displayed. 2. Type a new name for the folder in the dialog, then click OK.

To Delete a Folder

Open the folder that you want to delete, then choose File \rightarrow Folder \rightarrow Delete. Alternatively, right-click on the folder that you want to delete in the folder pane, then choose Delete from the popup menu. A confirmation dialog is displayed. Click Delete to delete the folder.

Performing Actions in Evolution

In Evolution, you can perform the same action in several ways. For example, you can delete a message from your **Inbox** in the following ways:

UI Component	Action
Menubar	Choose Edit \rightarrow Delete.
Toolbar	Click on the Delete toolbar button.
Popup menu	Right-click on the message, then choose Delete from the popup menu.
Shortcut keys	Press Ctrl + D.

This guide describes functionality from the menubar.

Sorting Items

You can sort items in Evolution to arrange the items in the order that you prefer. You can sort messages, tasks, and contacts.

You can sort items by the fields that relate to the item. For example, you can sort tasks by their **Summary** field.

You can sort items in ascending or descending order. For example, you can sort your messages by date in descending order, so that the most recent messages are at the top of the message list.

You can sort items in Evolution in any of the following ways:

- To sort the items in ascending order, click on the column heading that represents the field by which you want to sort the items. A down arrow is displayed in the column heading.
 - Alternatively, right-click on the column heading, then choose Sort Ascending from the popup menu.
- To sort the items in descending order, click twice on the column heading that represents the field by which you want to sort the items. An up arrow is displayed in the column heading.
 - Alternatively, right-click on the column heading, then choose Sort Descending from the popup menu.
- You can also unsort the items. That is, you can return the items from the current sort order to the default sort order. To return your messages to the default sort order, right-click on the column heading, then choose Unsort from the popup menu.

The default sort order for email messages is sorted by received date in ascending order. The default sort order for tasks is sorted by summary in ascending order. The default sort order for contacts is sorted by organization in ascending order.

Using Views

A view is a particular arrangement of the items in a folder. Views enable you to look at items in different ways.

Standard views are available from the View menu. To use a standard view, choose View \rightarrow Current View, then select the view that you require. For example, you can choose to view your calendar with one of the following views:

- Day View
- Work Week View
- Week View
- Month View

You can modify the current view, then save the current view. You can also create custom views for messages, tasks, and contacts. The following table shows the characteristics that you can modify for message, task, and contact views:

Characteristic	Description
Fields	You can specify the fields that you want to display in the view. For example, an Inbox view might display only the From , Subject , Date , and Follow Up Flag fields.
Groups	You can group the items in a view by particular fields. For example, an Inbox view might group messages by the Follow Up Flag field.
Sort order	You can specify the order in which the items in the view are sorted. For example, an Inbox view might sort messages by the Date field, within the group.

To Format the Columns in the Current View

You can format the display of columns in the current view in the following ways:

- To add a column to the view, right-click on any column heading, then choose Add a Column from the popup menu. An Add a column dialog is displayed.
 To add a column, drag the column from the dialog to the position in which you want the column to appear.
- To move a column, drag the column heading. Drop the column heading at the position in which you want the column to appear.
- To remove a column, right-click on the column heading, then choose Remove This Column from the popup menu.
- To adjust the width of the columns, point to the edge of the column that you want to change. A resize table column pointer is displayed. Drag the edge of the column to the size that you want.
 - Alternatively, you can automatically adjust the width of the columns to fit the contents. To automatically adjust the width of the columns, right-click on the column heading, then choose Best Fit from the popup menu.

For information on how to save the current view, see "To Save the Current View" on page 27.

To Customize the Current View

To customize the current view, except for calendar views, perform the following steps:

- 1. Right-click on any column heading, then choose Customize Current View from the popup menu. A **Customize Current View** dialog is displayed.
- 2. To specify the fields displayed in the view, click on the Fields Shown button. A **Show Fields** dialog is displayed.

To add a field to the view, select the field in the **Available Fields** list box, then click Add. The field is moved to the **Show these fields in order** list box.

To remove a field from the view, select the field in the Show these fields in order list box, then click Remove. The field is moved to the **Available Fields** list box.

To change the position of a field in the view, select the field in the **Show these** fields in order list box. Click the Move Up button or Move Down button to change the position of the field. Repeat these steps until the field is in the required position.

Click OK to close the **Show Fields** dialog.

3. To specify how items are grouped in the view, click on the Group By button. A **Group** dialog is displayed.

Select the first field by which you want to group items from the Group Items By drop-down list. Use the Ascending or Descending options to select the order in which you want to display the items in the group. To display the name of the field by which the items are grouped, select the **Show field in View** option.

To group items by additional fields, use the Then By drop-down lists and the associated options.

To clear all the settings in all the elements in the **Group** dialog, click on the Clear All button.

Click OK to save your settings and close the **Group** dialog.

Note – You cannot specify how to group items in Inbox views.

4. To specify how the fields are sorted in the view, click on the Sort button. A Sort dialog is displayed.

Select the first field by which you want to sort items from the Sort Items By drop-down list. Use the **Ascending** or **Descending** options to select the order in which you want to display the items in the view.

To sort items by additional fields, use the Then By drop-down lists and the associated options.

Click OK to close the **Sort** dialog.

5. Click OK to close the **Customize Current View** dialog.

For information on how to save the current view, see "To Save the Current View" on page 27.

To Save the Current View

Perform the following steps:

- 1. Choose View \rightarrow Current View \rightarrow Save Custom View.
- 2. To create a new view, select the Create New View Named option. Type a name for the new view in the text box under the Create New View Named option.

Alternatively, to overwrite the current view, select the **Replace Existing View** option.

3. Click OK.

To Create a Custom View

Perform the following steps:

- 1. Choose View → Current View → Define Views. A **Define Views for** *component* dialog is displayed.
- 2. To create a new view, click New.
- 3. Type a name for the view in the **Name of new view** text box. Select a type of view from the **Type of view** list box. Click OK. A dialog is displayed that you can use to define the characteristics of the view.
- 4. To specify the fields displayed in the view, click on the Fields Shown button. A **Show Fields** dialog is displayed. For information on how to use specify the fields displayed in the view, see "To Customize the Current View" on page 26.
- 5. To specify how the items are grouped in the view, click on the Group By button. A **Group** dialog is displayed. For information on how to specify how the items are grouped in the view, see "To Customize the Current View" on page 26.
- 6. To specify how the fields are sorted in the view, click on the Sort button. A **Sort** dialog is displayed. For information on how to specify how the fields are sorted in the view, see "To Customize the Current View" on page 26.
- 7. Click OK on the define views dialog to create the view.

 Alternatively, to revert to the default view settings, click on the Revert button.
- 8. Click OK on the **Define Views for Mail** dialog to close the dialog.

Getting Started

The information in this chapter describes how to use Evolution Setup Assistant to get started with Ximian Evolution. This chapter contains information on how to configure your email account, and how to import data from other applications. This chapter also describes how to configure your Sun Java System Calendar Server account, and how to configure an LDAP server.

- "Using the Evolution Setup Assistant" on page 29
- "Configuring Your Sun Java System Calendar Server Account" on page 38
- "Configuring an LDAP Server" on page 39

Using the Evolution Setup Assistant

When you start Ximian Evolution for the first time, the Evolution Setup Assistant guides you through the initial configuration process for Evolution. In the initial configuration process, you do the following:

- Enter identity information.
- Create an email account.
- Select your time zone.
- Import data from other applications.

The Evolution Setup Assistant displays pages where you enter the configuration information. The first page displays a welcome message. To begin the initial configuration process for Evolution, click on the Forward button on the **Welcome** page.

The Evolution Setup Assistant window contains the following buttons:

Forward When you have entered the required information in the page and you are ready to continue to the next page in the configuration process, click on the Forward button.

Back If you want to return to the previous page, click on the Back button.

Cancel Click on the Cancel button to stop the Evolution configuration process

and close the Evolution Setup Assistant.

The following sections describe the information that you need to enter in the Evolution Setup Assistant. If you are unsure what information to enter, contact your system administrator.

Entering Your Identity Information

Enter your identity information in the **Identity** page in the Evolution Setup Assistant. Table 2–1 lists the identity settings that you can configure.

When you complete your identity information, click on the Forward button.

TABLE 2–1 Identity Settings

Element	Description
Full name	Type your full name in the text box.
Email address	Type your email address in the text box.
Reply-To	Optional. In the text box, type the email address to which to send replies to your messages. When someone replies to your messages, the reply goes to this address. If you do not type an address in this text box, the address in the Email address text box is used as your reply-to address.
Organization	Optional. Type the name of the organization for which you work.

Configuring a Mail Server From Which to Receive Email

Enter your receiving mail server information in the first **Receiving Mail** page in the Evolution Setup Assistant.

Evolution can receive email in several ways. Select the type of server from which you want to receive email from the **Server Type** drop-down list. Select one of the following options:

■ IMAP: Internet Message Access Protocol (IMAP) servers receive and store your messages. When you log in to an IMAP server, you can view header information for your messages. You can open the messages that you want to read, and you can also create and use folders on the IMAP server.

Select this option if you want to access your email from multiple systems.

- POP: Post Office Protocol (POP) servers store your messages until you log in to the server. When you log in to the POP server, all your messages are downloaded to your local area and are deleted from the POP server. You work with your messages in your local area. Typically, a POP server has a permanent connection to the Internet, and the clients of the server connect occasionally to the Internet.
 - Select this option to download your messages to your local directories.
- **Local delivery**: The mbox format stores your messages in one large file in your local file system. This file is called a *mail spool*.
 - Select this option if you want to store email from the mail spool in your home directory.
- MH-format mail directories: Mail servers that use mh format store messages in individual files. Select this option if you want to use an application that uses the mh format.
- Maildir-format mail directories: Mail servers that use maildir format also store messages in individual files. The maildir format is similar to the mh format. Select this option if you want to use an application that uses the maildir format, for example, gmail.
- Standard Unix mbox spool or directory: This option uses mbox format. Select this option if you want to store email from the mail spool in a directory other than your home directory.
- **None**: Select this option if you do not want to use this email account to receive email messages.
- Microsoft Exchange: Select this option if you want to access your account on a Microsoft Exchange 2000 server. This option is only available if you purchase Ximian Connector for Microsoft Exchange.

When you select an option from the **Server Type** drop-down list, more options are displayed in the **Receiving Mail** page. Different options are displayed, depending on the option that you select . Table 2–2 lists the receiving mail server settings that you can configure.

When you complete the receiving mail server information, click on the Forward button.

TABLE 2-2 Receiving Mail Server Settings

Element	Description
Host	Enter the host name of the mail server in this field.
	IMAP, POP options only.
Username	Enter your username for your account on the mail server in this field.
	IMAP, POP options only.

Element	Description
Authentication type	Select a type of authentication to use for the account.
	IMAP, POP options only.
Check for supported types	Click on this button to check what types of authentication the server supports. The types of authentication that the server supports are added to the Authentication type drop-down list.
	IMAP, POP options only.
Remember this password	Select this option if you want to connect directly to the mail server, rather than enter your password each time you connect.
	IMAP, POP options only.
Path	Enter the path to the location where you want to store your email.
	Valid only for the following options: ■ Local delivery ■ MH-format mail directories ■ Maildir-format mail directories ■ Standard Unix mbox spool or directory

Configuring Receiving Email Options

Enter your receiving email options in the second Receiving Mail page in the Evolution Setup Assistant. Table 2–3 lists the options for receiving email that you can configure.

When you complete the receiving email options, click on the Forward button.

TABLE 2–3 Receiving Email Options

Element	Description
Automatically check for new mail every	Select this option if you want Evolution to check for new messages automatically. Use the spin box to specify how often to check for new messages, in minutes.
Check for new messages in all folders	Select this option if you want Evolution to check for new messages in all your IMAP folders.
	IMAP option only.

TABLE 2–3 Receiving Email Options	(Continued)
Element	Description
Show only subscribed folders	Select this option to view only the IMAP folders to which you have subscribed, not all of your IMAP folders.
	IMAP option only.
Override server-supplied folder namespace	An <i>IMAP namespace</i> is a directory where your messages are stored. Select this option if you want to store your messages in a namespace other than the default namespace that the IMAP server provides.
	IMAP option only.
Namespace	If you select the Override server-supplied folder namespace option, enter the namespace in which you want to store your messages in this field.
	IMAP option only.
Apply filters to new messages in INBOX on this server	Select this option to apply your message filters to messages that are delivered to your Inbox on the IMAP server, as well as to messages that you download to your local area.
	IMAP option only.
Leave messages on server	Select this option to store copies of your messages on the POP server.
	POP option only.
Apply filters to new messages in INBOX	Select this option to apply your message filters to your Inbox.
	Valid only for the following options: ■ Maildir-format mail directories ■ Standard Unix mbox spool or directory
Store status headers in Elm/Pine/Mutt format	Select this option if you want to use the X-Status message header format.
	Select this option if you use email applications that use the X-Status message header format. For example, Elm, mutt, and Pine use the X-Status message header format.
	Standard Unix mbox spool or directory option only.
Use the '.folders' folder summary file (exmh)	Select this option if you want Evolution to use the folder summary file that is generated by the exmh application.
	MH-format mail directories option only.

Configuring How to Send Email

Enter your sending email configuration information in the **Sending Mail** page in the Evolution Setup Assistant. Evolution can send email in several ways. Select the type of server that you want to use to send email from the **Server Type** drop-down list. Select one of the following options:

- **SMTP**: Uses Simple Mail Transfer Protocol (SMTP) to forward messages to a server. The server sends the messages.
- **Sendmail**: Uses the sendmail program to send email from your system.
- Microsoft Exchange: Uses a Microsoft Exchange server which uses several protocols to send email. This option is only available with Ximian Connector for Microsoft Exchange.

When you select an option from the **Server Type** drop-down list, more dialog elements are displayed in the **Sending Mail** page. Depending on the option that you select, different elements are displayed in the page. Table 2–4 lists the sending email settings that you can configure.

When you complete the configuration information for sending email, click on the Forward button.

TABLE 2–4 Sending Email Settings

Element	Description
Host	Enter the DNS name or the IP address of the mail server in this field.
	SMTP, Microsoft Exchange options only.
Server requires authentication	Select this option if the server requires you to authenticate when you log in to send email.
	SMTP option only.
Authentication Type	Select a type of authentication to use for the account.
	SMTP option only.
Check for supported types	Click on this button to check what types of authentication the server supports. The types of authentication that the server supports are added to the Authentication Type drop-down list.
	SMTP option only.
Username	Enter your username for your account on the mail server in this field.
	SMTP option only.

TABLE 2–4 Sending Email Settings	(Continued)	
Element	Description	
Remember this password	Select this option if you want to connect directly to the mail server, rather than enter your password each time you connect.	
	SMTP option only.	

Configuring Account Management Settings

Enter your account management information in the Account Management page in the Evolution Setup Assistant. Table 2–5 lists the account management settings that you can configure.

When you complete the account management information, click on the Forward button.

TABLE 2–5 Account Management Settings

Element	Description
Name	Type a name for this email account in the text box.
Make this my default account	Select this option to make the new account your default email account.

Selecting a Time Zone

Select your time zone in the Timezone page in the Evolution Setup Assistant. The **Timezone** page shows a map of the world. The red dots on the map represent major cities and other locations.

Use your mouse to select a time zone, as follows:

Mouse	Point to a red dot on the map to display the name of the location. The name is displayed under the map.
Left mouse button	Click on an area on the map to zoom in to that area and to select that time zone.
Right mouse button	Click the right mouse button on the map to zoom out.

Alternatively, select a time zone from the **Selection** drop-down list.

When you select a time zone, click on the Forward button.

Importing Data

Evolution searches for email and contact data to import. For information on the data that Evolution can import, see the next section.

If Evolution finds email or contact data on your system, the Evolution Setup Assistant displays an **Importing Files** page. The **Importing Files** page displays a list of the applications for which Evolution has found email or contact data.

To import data, select the data that you want to import, then click on the Import button.

When you complete the import, click on the Forward button.

When you complete entering configuration information, click on the Apply button.

Note – If you do not want to import data when you do the initial configuration of Evolution, you can use the Evolution Import Assistant. For more information, see the following section.

Importing Email and Contacts

Evolution can import email and contact data in the following formats:

mbox format Evolution, Netscape Version 4.7x, Mozilla, Eudora, Pine, and Elm

use this email format.

.mbx format Microsoft Outlook Express 4 uses this email format.

Vcard format GnomeCard, other GNOME applications, KDE, and other contact

management applications use this format for contact information. Typically, files in this format have .vcf or .gcrd file extensions.

To import data, choose File \rightarrow Import from the Evolution window. The Evolution Import Assistant guides you through the process to import data to Evolution.

If Evolution finds email or contact data from the listed applications on your system, the Evolution Import Assistant displays an **Importing Files** page. The **Importing Files** page displays a list of the applications for which Evolution has found email or contact data.

If Evolution finds email data for an application, a **mail** check box is displayed under the application.

If Evolution finds contact data for an application, an **address book** check box is displayed under the application.

To import data, select the check boxes for the data that you want to import, then click on the Import button.

When you complete the import, click on the Forward button.

Importing Email from mutt

The mutt email client is text-based. Linux and UNIX distributions often include mutt. You can import your email easily from mutt to Evolution because mutt uses the standard mbox, maildir, and mh formats.

By default, mutt stores your email as follows:

Format	Directory
mbox	~/mbox
maildir	~/Maildir

To import email from mutt to Evolution, perform the following steps:

- 1. Choose File \rightarrow Import from the Evolution window.
- 2. Click on the Forward button in the Evolution Import Assistant to begin the configuration process.
- 3. Select the **Import a single file** option from the **Importer Type** page, then click on the Forward button.
- 4. Enter the name of the file that you want to import in the **Filename** field. Alternatively, to browse for the file, click on the Browse button. When you select a file, click OK, then click on the Forward button.
- 5. Click on the Import button. A **Select folder** dialog is displayed.
- 6. Select the Evolution folder to which you want to import the mutt email. Alternatively, click on the New button to create a new folder.
 - When you select a folder, click OK. Your mutt email is imported to the folder that you specified.

Importing Email from KMail

KMail is the email client for KDE. You can import your email easily from KMail to Evolution because KMail uses the standard mbox format. By default, KMail stores your email in the Mail directory of your home directory.

To import email from KMail to Evolution, perform the following steps:

- 1. Choose File \rightarrow Import from the Evolution window.
- 2. Click on the Forward button in the Evolution Import Assistant to begin the configuration process.
- Select the Import a single file option from the Importer Type page, then click on the Forward button.
- 4. Enter the name of the file that you want to import in the **Filename** field. Alternatively, to browse for the file, click on the Browse button. When you select a file, click OK, then click on the Forward button.
- 5. Click on the Import button.
- 6. Select the Evolution folder to which you want to import the KMail mail in the Select folder dialog. Alternatively, click on the New button to create a new folder. When you select a folder, click OK. Your KMail email is imported to the folder that you specified.

Configuring Your Sun Java System Calendar Server Account

The Sun Java System Calendar Server connector for Evolution allows you to use Evolution as a client for the Sun Java System Calendar Server.

To configure a Sun Java System Calendar Server account, perform the following steps:

- 1. Choose Tools \rightarrow Settings.
- 2. Click on **Sun One accounts** in the left pane of the **Evolution Settings** dialog. A table for Sun Java System Calendar Server accounts is displayed in the right pane.
- 3. Click Add. An **Add new account** dialog is displayed.
- 4. Enter the Sun Java System Calendar Server account information in the Add new account dialog. The following table describes the elements on the Add new account dialog:

Element	Description
Account Name	Type a short account name.

Element	Description
Protocol	Select one of the following protocols from the drop-down list: http: Select this protocol for normal operation. https: Select this protocol for additional security.
	If you are not sure which protocol to specify, contact your Sun Java System Calendar Server system administrator.
Server	Type the name of the server that you use for Sun Java System Calendar Server. For example, sunone.internal.company.com.
Port	Type the port number to use for Sun Java System Calendar Server.
User	Type the username that you use to log in to Sun Java System Calendar Server. Usernames are case sensitive.
	Do not enter your password in this dialog. Sun Java System Calendar Server asks for the password when you access the account.
Poll Interval (min)	Use this spin box to specify how frequently to check the server for updates.

- 5. Click OK to save your changes and close the **Add new account** dialog. Evolution checks your Sun Java System Calendar Server account information, then displays an Information dialog that tells you that you must restart Evolution for these settings to take effect.
- 6. Restart Evolution.

Configuring an LDAP Server

The Lightweight Directory Access Protocol (LDAP) enables users to access contact information over a network. Users can share the same contact information. A typical application of LDAP is a single address book for all employees in a company, that all employees can access.

To configure an LDAP server, perform the following steps:

- 1. Choose Tools \rightarrow Settings.
- 2. Click on Directory Servers in the left pane of the Evolution Settings dialog. A table for LDAP servers is displayed in the right pane.

- 3. Click Add. An LDAP Configuration Assistant is displayed. The LDAP Configuration Assistant guides you through the configuration process for an LDAP server. Click on the Forward button to begin the configuration process.
- 4. Enter general server information in the **Server Information** page. The following table describes the elements on the **Server Information** page:

Dialog Element	Description
Server name	Enter a DNS name or an IP address for the LDAP server where the contact information is located.
Log in method	 Select a method to use to log in. Select one of the following options: Anonymously: Select this option if you do not want to authenticate your identity when you log in. Using email address: Select this option if you want to use your email address to log in to the LDAP server. Your email address must be added to the LDAP server before you can use the email address to log in to the server. Using distinguished name (DN): Select this option if you want to use your distinguished name to log in to the LDAP server. A distinguished name uniquely identifies a user in an LDAP directory. Your distinguished name must be added to the LDAP server before you can use the distinguished name to log in to the server.
Email Address, or Distinguished name	Enter the email address or the distinguished name with which you want to log in to the LDAP server.

When you complete the general server information, click on the Forward button. A **Connecting to Server** page is displayed.

5. Enter server connection information in the **Connecting to Server** page. The following table describes the elements on the **Connecting to Server** page:

Dialog Element	Description
Port number	Enter the port number for Evolution to use to connect to the LDAP server in the field. A typical value for this field is 389.

Dialog Element	Description
Use SSL/TLS	Select when to use the <i>Secure Sockets Layer (SSL)</i> protocol or the <i>Transport Layer Security (TLS)</i> to connect to the LDAP server. Select one of the following options: Always: Select this option to always use SSL or TLS to connect to the LDAP server. Whenever Possible: Select this option to use SSL or TSL to connect to the LDAP server only if you are not in a secure environment. Never: Select this option to never use SSL or TLS to connect to the LDAP server.

When you complete the server connection information, click on the Forward button.

6. Enter search details for the directory on the server in the **Searching the Directory** page. The following table describes the elements on the Searching the Directory page:

Dialog Element	Description
Search base	The information in an LDAP server is organized as a tree structure. A <i>search base</i> is a particular location in the tree structure that is the starting point for an LDAP directory search.
	Type the name of the search base to use for your LDAP directory searches in the text box.
Show Supported Bases	Click on this button to display a list of search bases that are supported by Evolution.
Search scope	 Select the scope for your directory searches. Select one of the following options: One: Select this option to search the search base and one level below the search base. Sub: Select this option to search the search base and all levels below the search base.
Timeout (minutes)	Use the slider to specify the amount of time to wait before Evolution stops the search.
Download limit	Specify the maximum number of contacts that you want to download from the LDAP server.

When you complete the search information, click on the Forward button.

7. Type a name for the server in the **Display name** text box. This name is displayed in your Evolution interface.

- When you complete the display name, click on the Forward button. A Finished page is displayed.
- 8. Click on the Apply button to create the LDAP server and close the LDAP Configuration Assistant.

Using Summary

The information in this chapter describes how to use Ximian Evolution Summary.

- "Introduction to Summary" on page 43
- "To Print Your Summary" on page 45
- "Using Summary to Update Appointments and Tasks" on page 45

Introduction to Summary

Summary gives you an overview of your day. Figure 3–1 shows a typical **Summary** window.

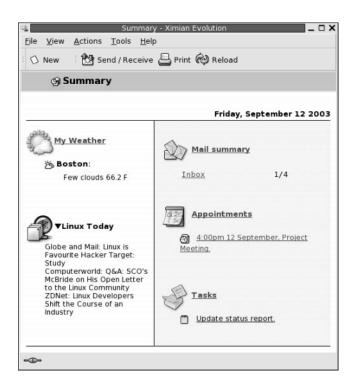

FIGURE 3–1 Typical Summary Window

The **Summary** window shows the following information:

My Weather	Displays weather information from the Internet. To view the website that provides the weather information, click on the My Weather link. You can customize your summary to show weather information for different locations.
News feeds	Displays news headlines from websites that provide news feeds. To view a story, click on the headline for the story. To view the website that provides the news headlines, click on the link at the top of the news headlines.
Mail summary	Shows the number of new messages in your folders, and the total number of messages in your folders. To display your email, click

number of messages in your folders. To display your email, click on the **Mail summary** link. If your **Mail summary** displays other folders, click on the link to the folder to display the folder.

Appointments Shows your appointments and meetings. To display your calendar, click on the **Appointments** link.

Shows your tasks that are not completed. Tasks that are overdue are displayed in different color than tasks that are in progress. To display your tasks, click on the **Tasks** link.

Tasks

To reload your summary display, click on the Reload button.

You can perform some common actions from **Summary**, such as updating your appointments and tasks.

You can customize what information is displayed in your summary. For example, you can specify which folders to show in your mail summary. You can also specify the number of days for which you want to display appointments and tasks. For more information on customizing your summary, see "Setting Summary Preferences" on page 159.

Note – By default, **Summary** displays only the appointments, meetings, and tasks, that are in your local folders. You can customize Ximian Evolution to display appointments, meetings, and tasks from your Sun Java System Calendar Server account. For more information on how to customize Evolution to display information from your Sun Java System Calendar Server account, see "Sun Java System Calendar Server Accounts" on page 158.

To Print Your Summary

To print your summary, click on the Print button. A **Print Summary** dialog is displayed. Select the options that you require from the **Print Message** dialog, then click on the Print button.

If you want to preview how the message looks when printed, click on the Print Preview button in the **Print Summary** dialog.

Using Summary to Update Appointments and Tasks

To update an appointment from **Summary**, click on the appointment. An **Appointment** window is displayed. Modify the details of the appointment in the **Appointment** window, choose File \rightarrow Save. For more information on working with appointments, see Chapter 5.

To update a task from **Summary**, click on the task. A **Task** window is displayed. Modify the details of the task in the **Task** window, choose File \rightarrow Save. For more information on working with tasks, see Chapter 6.

Using Inbox

The information in this chapter describes how to use **Inbox**.

- "Introduction to Inbox" on page 47
- "Receiving Your Messages" on page 51
- "Displaying Your Messages" on page 51
- "Sending Messages" on page 54
- "Composing Messages" on page 59
- "Deleting Messages" on page 65
- "Sending and Receiving International Messages" on page 66
- "Working Offline" on page 67
- "Working With Secure Messages" on page 68
- "Managing Your Messages" on page 69
- "Using Inbox Folders" on page 74
- "Searching Your Messages" on page 78
- "Using Filters" on page 81
- "Using Virtual Folders" on page 84

Introduction to Inbox

Inbox is the default location for your email messages. You can use **Inbox** to compose, send, and receive messages. Figure 4–1 shows a typical **Inbox** window.

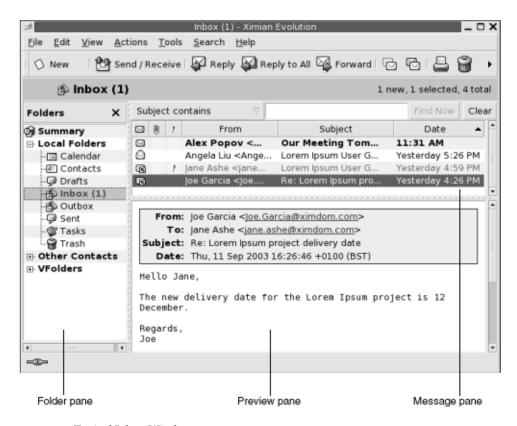

FIGURE 4–1 Typical Inbox Window

The **Inbox** window contains a folder pane. The folder pane displays the folders in which you can store your messages. To show or hide the folder pane, choose View \rightarrow Folder Bar.

The **Inbox** window also contains a message pane and a preview pane. In the upper part of the window, the message pane displays a list of your messages. In the lower part of the window, the preview pane displays a preview of the currently selected message. To show or hide the preview pane, choose View \rightarrow Preview Pane.

Figure 4–2 shows a typical message pane.

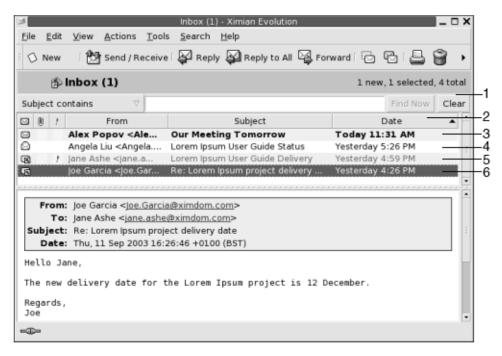

FIGURE 4-2 Typical Message Pane

The following table lists the message pane interface components that are in Figure 4–2:

Number	Description
1	Searchbar. You can use the searchbar to perform a simple search of all messages in a folder. For example, you can search for a message that contains a particular text string.
2	Column headings. In the message pane, your messages are organized as a table. The rows of the table contain header information for your messages. The columns represent information fields of your messages, such as the sender of the message, the subject of the message, and so on. By default, the message pane displays the following columns, from left to right: Status Attachment Important From Subject Date

The message header information is displayed in different formats in the message list, depending on the status of the message. Figure 4–2 illustrates these formats in the message list. The following table lists and describes the formats in which the message header information is displayed:

Number	Format	Description
3	Bold	This message has not been read.
4	No formatting	This message has been read.
5	Red color	This message is marked as important.
6	Highlighted	This message is currently selected.

You can use the **Inbox** window to perform all of your email-related tasks, such as reading, composing, and sending messages. Ximian Evolution enables you to organize your messages into folders, and to sort your messages by different fields. You can mark, flag, and label your messages to help you to manage your messages.

You can also use the following Evolution features to help you to manage your messages:

Views	Views enable you to look at your messages in different ways. A <i>view</i> is a particular arrangement of messages. A view specifies which columns are displayed in a message list, and by which fields the messages are sorted. You can use standard views, or you can create custom views.
Virtual folders	A <i>virtual folder</i> represents messages that might reside in more than one folder. Virtual folders enable you to view messages that are located in several folders, as if the messages are in one folder.
Filters	A <i>filter</i> is a tool that you can use to test your messages for specific conditions, then perform actions on the messages that meet the conditions. For example, you can use a filter to automatically move email that you receive from a specific address to a folder.
Searches	The Inbox window contains a searchbar. You can use the searchbar to search the contents of the messages in your message list. You can also perform advanced searches.
	Evolution enables you to save your searches. The saved searches are added to the Search menu, and you can choose the searches from this menu. Evolution also contains a search editor that you can use to add, edit, and delete searches.

Receiving Your Messages

To receive your messages, choose Actions → Send/Receive. Typically, your new messages are displayed in your Inbox. If you have new messages, the title of your **Inbox** is displayed in bold. The number of new messages is displayed beside the Inbox title.

Displaying Your Messages

You can save and print your messages. You can also change how your messages are displayed.

To Open a Message

To open a message, double-click on the message in the message list.

Alternatively, select the message that you want to open in the message list, then choose File \rightarrow Open Message.

To Save a Message

To save a message as a file, open the message, then choose File \rightarrow Save As. Enter a name for the file in the Save Message As dialog, then click OK.

To Print a Message

To print a message, open the message, then choose File → Print. Select the options that you require from the **Print Message** dialog, then click Print.

To preview how the message looks when printed, choose File \rightarrow Print Preview.

To View an Attachment in a Message

An *attachment* is a file that is included in a message. If you want to send a file to someone, you can attach the file to the message. If a message contains attachments, a button for each attachment appears at the bottom of the message. If your system recognizes the file type of the attachment, the icon for that file type is displayed in the button.

You can perform the following actions on an attachment:

Action	Instructions
View the attachment in the message	Click on the right arrow icon at the left side of the button. Alternatively, click on the down arrow at the right side of the button, then choose View Inline from the popup menu.
	If the attachment is already displayed in the message, click on the down arrow icon at the left side of the button to the hide the attachment. Alternatively, click on the down arrow at the right side of the button, then choose Hide from the popup menu.
Save the attachment	Click on the down arrow at the right side of the button, then choose Save Attachment from the popup menu. A Save Attachment dialog is displayed. Use the Save Attachment dialog to save the attachment.
Open the attachment in an application	If your system recognizes the file type of the attachment, you can open the attachment in an application. To open the attachment, click on the down arrow at the right side of the button, then choose Open in <i>application-name</i> from the popup menu.

To View Images in Messages

You might receive messages that contain images in the body of the message. You might also receive messages that contain links to images on the Internet. Linked images might be slow to load, and in some cases might provide information to senders of *spam* email. By default, Evolution does not display linked images in messages.

To display a linked image in a message, open the message, then choose View \rightarrow Message Display \rightarrow Load Images.

To Change the Size of Text in Messages

You can change the size in which text is displayed in messages. You can change the size of text in a message window or in the preview pane.

To reduce the size of the text, choose View \rightarrow Text Size \rightarrow Smaller. To increase the size of the text, choose View \rightarrow Text Size \rightarrow Larger.

To return the size of the text to the default size, choose View \rightarrow Text Size \rightarrow Original Size.

To Change the Display of Messages

You can change the way in which your messages are displayed. You can change the message display in a message window, or in the preview pane.

To display full header information for your messages, choose View → Message Display → Show Full Headers. The header information contains technical details of the message, such as the server that delivered the message, the format of the message, and so on.

To display the full source for the message, choose View \rightarrow Message Display \rightarrow Show Email Source. The full source for the message is the source code for the message.

To return to normal display, choose View \rightarrow Message Display \rightarrow Normal Display.

To Add a Sender to Your Contacts

You can add the sender of a message to your list of contacts. To add a sender to your contacts, perform the following steps:

- 1. Open the folder that contains the message whose sender you want to add to your list of contacts. In the message list, select the message.
 - Alternatively, open the message whose sender you want to add to your list of contacts.
- 2. Choose Actions \rightarrow Add Sender to Addressbook. A **Sender** window opens. The **Sender** window displays the details for the contact.
- 3. Click on the Add to Contacts button. A **Contact Quick-Add** dialog is displayed.
- 4. To add the contact to your list of contacts, click OK.
 - Alternatively, to add more information for the contact, click on the Edit Full button. A Contact Editor window opens. For more information on how to complete the details in this window, see "To Add a Contact" on page 122.

Sending Messages

You can send new messages, reply to messages that you receive, or forward messages that you receive. You can enter addresses to which you want to send messages in the following fields in the message window:

- **To** Enter the addresses to which you want to send the message in this field.
- Cc To cc a message means to copy the message to another address. Enter the addresses to which you want to copy the message in this field. To display the Cc field, choose View \rightarrow Cc Field in the message window.
- Bcc Enter the addresses to which you want to *blind-copy* the message in this field. When you blind-copy a message, the addresses that you blind-copy do not appear in the delivered message. To display the Bcc field, choose View \rightarrow Bcc Field in the message window.

You can also use the To, Cc, and Bcc buttons to select contacts to send your message to. For information on how to add contacts from your contacts list to the **To** field, see "To Select Contacts to Send a Message To" on page 58.

To Send a New Message

To compose and send a new message, perform the following steps:

- 1. Choose File → New → Mail Message. Alternatively, choose Actions → Compose New Message. A **Compose a message** window is displayed.
- 2. Use the **Compose a message** window to compose your message. The following table describes the elements in the **Compose a message** window:

Element	Description	
From	If you have more than one email account, use this drop-down list to select which email address to put in the From field of the message.	
Signature	If you want to add a signature to your message, use this drop-down list to select the signature to add. You can select a signature that is generated automatically from your email account details. You can also create custom signatures. For more information on signatures, see "Setting Composer Preferences" on page 152.	

Element	Description
То	Enter the email address to which you want to send the message. If you want to send the message to more than one address, separate the addresses with a comma.
	For information on how to add contacts from your contacts list to the To field, see "To Select Contacts to Send a Message To" on page 58.
Subject	Type a brief summary of the topic of your message in this text box.
Content	Type the text of your message in the area of the window under the Subject field and the format toolbar.
	You can format messages that you send. For more information, see "Composing Messages" on page 59.

- 3. You can attach a file to the message. To attach a file to the message, perform the following steps:
 - a. In the **Compose a message** window, choose Insert \rightarrow Attachment. An **Attach** file(s) dialog is displayed.
 - b. Use the dialog to select a file to attach to the message. When you select a file, click OK. The attachment is displayed as an icon in an attachments pane on the Compose a message window.
- 4. To send the message, choose File \rightarrow Send.

To Reply to a Message

To reply to a message, perform the following steps:

- 1. Open the folder that contains the message to which you want to reply. In the message list, select the message to which you want to reply.
 - Alternatively, open the message to which you want to reply.
- 2. To reply to the sender of the message, choose Actions \rightarrow Reply to Sender.
 - To reply to the sender of the message, and everyone copied on the message, choose Actions \rightarrow Reply to All.
 - You can reply to a message from a mailing list, so that your reply is sent only to the mailing list, but not sent to the sender, or to individuals copied on the message. To do this, choose Actions \rightarrow Reply to List.
 - A new message window is displayed. Depending on your preference settings, the new message might contain the original message.
- 3. Type the text of your message in the area of the window under the **Subject** field and the format toolbar.

4. To send the message, choose File \rightarrow Send.

To Forward a Message

You can forward a message to other addresses. You can forward a message in several ways. The following table describes the ways you can forward a message:

Forward As	Description
An attachment	Attaches the forwarded message as a file to the new message.
Inline	Inserts the forwarded message in the body of the new message. This style is useful if you want to quote from the forwarded message.
Quoted	Inserts the forwarded message in the body of the new message, and inserts characters, such as greater-than signs (>), before each line of the forwarded message. This style is useful if you want to quote from the forwarded message, and want to visually mark the lines from the forwarded message.
Redirect	Forwards the message and preserves the message header information. For example, imagine that you receive a message from Alex Popov, then redirect the message to Joe Garcia. When Joe Garcia opens the message, Alex Popov appears as the sender of the message.
	This style is useful if you receive a message for which you are not the most appropriate recipient. For example, if you work in customer service, and the message is a sales inquiry.

To forward a message, perform the following steps:

- 1. Open the folder that contains the message that you want to forward. In the message list, select the message that you want to forward.
 - Alternatively, you can open the message that you want to forward.
- 2. Choose Actions \rightarrow Forward Message. A new message window is displayed.

Alternatively, you can use the Actions \rightarrow Forward menu to forward the message in another style. The following table describes how to forward a message in other styles:

To Forward a Message as	Choose
An attachment	Actions \rightarrow Forward \rightarrow Attached
Inline	Actions \rightarrow Forward \rightarrow Inline
Quoted	$Actions \rightarrow Forward \rightarrow Quoted$

To Forward a Message as	Choose
Redirect	$Actions \rightarrow Forward \rightarrow Redirect$

- 3. In the **To** field, enter the email address to which you want to forward the message. If you want to forward the message to more than one address, separate the addresses with a comma.
 - For information on how to add contacts to the To field, see "To Select Contacts to Send a Message To" on page 58.
- 4. If you want to add more text to the message, type the text in the area under the **Subject** field and the format toolbar.
- 5. To send the message, choose File \rightarrow Send.

You can specify a default forward style. For more information, see "Setting Composer Preferences" on page 152.

To Resend a Message

To resend a message, perform the following steps:

- 1. Open the folder that contains the message that you want to resend. In the message list, select the message that you want to resend.
 - Alternatively, open the message that you want to resend.
- 2. To resend the message, choose Actions \rightarrow Resend. A new message window is displayed.
- 3. To send the message, choose File \rightarrow Send.

To Post a Message to a Folder

You can post a message to a folder. Evolution sends the message to users who have subscribed to the folder, and stores a copy of the message in the folder.

To compose and post a new message to a folder, perform the following steps:

- 1. Choose File \rightarrow New \rightarrow Post Message. Alternatively, choose Actions \rightarrow Post New Message. A **Compose a message** window is displayed.
- 2. Use the Compose a message window to compose your message. For information on the elements in the Compose a message window, see "To Send a New Message" on page 54.
- 3. To select a folder to which to post the message, click on the folder selector button in the **Post To** field. A **Posting destination** dialog is displayed. Select the folder in which to store your draft messages from the Posting destination dialog, then click OK.

4. To post the message to the selected folder, choose File \rightarrow Send.

To Select Contacts to Send a Message To

You can add contacts from your contacts folders to the **To**, **Cc**, and **Bcc** fields of your message.

To add contacts to a message, perform the following steps:

- 1. To add contacts, click on the To, Cc, or Bcc buttons in your message. A **Select Contacts from Addressbook** dialog is displayed.
- 2. Use the **Select Contacts from Addressbook** dialog to add contacts to your message. The following table describes the elements in the **Select Contacts from Addressbook** dialog:

Element	Description
Folder	Click on the folder selector button to select a contacts folder from which you want to select the contacts.
	For information on how to specify a default contacts folder, see "Setting Folders Preferences" on page 146.
Category	Select a category to which the contact belongs from the drop-down list. The list of contacts in the lower part of the dialog displays all contacts in that category.
	To display contacts in all categories, select All Categories .
Name text box	Type the name of a contact to search for, then click on the Find button to find the contact in the list of contacts.
List of contacts	Displays a list of the contacts and contact lists in the current folder. The contents of the list depend on the following factors: The folder that you select. The category that you select. Whether you search for names. Whether you add contacts to the To, Cc, Bcc fields.
То	To add a contact to the To field of your message, select the contact in the list of contacts, then click on the To button.
Cc	To add a contact to the Cc field of your message, select the contact in the list of contacts, then click on the Cc button.
Всс	To add a contact to the Bcc field of your message, select the contact in the list of contacts, then click on the Bcc button.

3. Click OK to add the contacts to the To, Cc, and Bcc fields of your message, and close the dialog.

To Clear Passwords

When you configure how your email accounts receive messages, you can select a Remember this password option. You select this option if you want to connect directly to the mail server, rather than enter your password each time you connect. Evolution stores your password, and enters the password to the mail server for you.

You can clear your password or passwords from Evolution. To clear your passwords, choose Actions \rightarrow Forget Passwords.

Composing Messages

You can cut, copy, and paste the content of messages that you compose. You can search for text and replace that text. You can check the spelling of your message. You can also save drafts of your messages.

You can use the following formats for your messages:

■ HTML format

You can apply formatting to text in HTML format, as follows:

Bold, italic, underline, font size, font color, and other font Font formatting

formatting.

Paragraph formatting Paragraph styles, including heading styles, bulleted list

styles, and numbered list styles. You can also specify

paragraph alignment and indentation.

Page formatting Enables you to select a message template, to set a

document, to specify a background image, and other

page formatting.

You can also insert emoticons into your messages. An emoticon is an icon that represents a facial expression.

Plain text format

You cannot apply any formatting to plain text messages.

Editing the Content of a Message

You can edit the content of a message when you work in the message composition window. You can edit the content of a message as follows:

- To select all the text in a message, choose Edit \rightarrow Select All.
- To remove text from a message and place the text on the clipboard, select the text in the message, then choose Edit → Cut.
- To copy text from a message to the clipboard, select the text in the message, then choose Edit → Copy.
- To paste text from the clipboard into a message, position the cursor in the message where you want to insert the text. Choose Edit → Paste.
- To paste text from the clipboard into a message as a quotation, position the cursor in the message where you want to insert the text. Choose Edit → Paste Quotation. The text is inserted into the message, with greater-than signs (>) before each line of the inserted text.

Using Undo

To undo the last edit action, choose Edit \rightarrow Undo.

If you later decide that you do not want to undo the action, choose Edit \rightarrow Redo.

Finding and Replacing Text in Message

When you compose a message, you can search for text in the message. You can also replace the text you search for.

To Find Text in a Message

To search for text in a message, perform the following steps:

- Choose Edit → Find. Type the text to search for in the text box of the Find dialog.
 Alternatively, you can use a regular expression to search for text. A regular expression is a way to specify a text pattern to search for. For example, the regular expression t*e finds the text the, time, table, and so on.
 - To use a regular expression to search for text, choose Edit \rightarrow Find Regular Expression. Type the regular expression to search for in the text box of the **Find Regular Expression** dialog.
- 2. Select the **Backward** option to begin the search from the end of the message, or from the cursor location, and proceed towards the start of the message.

- 3. Select the **Case sensitive** option to find occurrences only of the text that match the case of the text that you type in the dialog.
- 4. Click on the Find button. If the text is found in the message, the first match is highlighted in the message.
- 5. To find the next occurrence of the text, choose Edit \rightarrow Find Again.

To Replace Text in a Message

To search for text, and replace the text with alternative text, perform the following steps:

- 1. Choose Edit \rightarrow Replace.
- 2. Type the text to search for in the **Replace** text box.
- 3. Type the text to use to replace the text that you find, in the **With** text box.
- 4. Select the Search backward option to begin the search from the end of the message, or from the cursor location, and proceed towards the start of the message.
- 5. Select the Case sensitive option to find occurrences only of the text that match the case of the text that you type in the dialog.
- 6. Click on the Find and Replace button. If the text is found in the message, a **Replace** confirmation dialog is displayed. Use the buttons on the Replace confirmation dialog to replace the text in the message, as described in the following table.

Button	Function
Replace all	Replaces all occurrences of the search text with the replacement text.
Next	Skips the current occurrence of the search text, and finds the next occurrence.
Close	Closes the Replace confirmation dialog, and does not replace any text.
Replace	Replaces the current occurrences of the search text with the replacement text, and finds the next occurrence.

To Check the Spelling of a Message

To check the spelling in a message, choose Edit \rightarrow Spell Check Document.

When the spellchecker encounters a misspelled word, the Spell checker dialog displays a list of suggestions to replace the misspelled word. You can perform the following actions from the **Spell checker** dialog:

- To replace the misspelled word with one of the suggestions in the **Spell checker** dialog, select the suggestion, then click on the Replace button.
- To ignore the misspelled word, click on the Ignore button. The spellchecker no longer identifies the word as a misspelled word.
- To move to the next misspelled word and make no change to the current word, click on the Skip button.
- To return to the previous misspelled word and make no change to the current word, click on the Back button.
- To add the misspelled word to a dictionary, select the dictionary from the **Add to dictionary** drop-down list, then click on the Add word button.

Evolution checks the spelling of your messages against the languages that you have enabled in your Evolution preferences. To use another language to check the spelling of your message, choose Edit \rightarrow Current Languages, then select the language you require.

For information on how to modify the default spellchecker languages, see "Setting Composer Preferences" on page 152.

To Save a Draft of a Message

If you want to save a message that you do not want to send yet, you can save a draft of the message. To save a draft of a message that you are composing, choose File \rightarrow Save Draft. The message is saved in your local **Drafts** folder.

To continue to compose a draft message, open the message from your local **Drafts** folder, then complete

To send a draft message, open the message from your local **Drafts** folder. Complete the message in the composition window, then choose File \rightarrow Send.

To Create a Message in HTML Format

To create a message in HTML format, choose File \rightarrow New \rightarrow Mail Message. In the **Compose a message** window, choose Format \rightarrow HTML so that the HTML menu item is selected.

To Apply Font Formatting to Messages in HTML Format

To apply font formatting, perform the following steps:

- 1. Select the text that you want to format.
- 2. To format the selected text, perform one or more of the following actions:

Format	Action	
Plain text	Choose Format \rightarrow Style \rightarrow Plain text.	
Bold	Choose Format \rightarrow Style \rightarrow Bold.	
Italic	Choose Format \rightarrow Style \rightarrow Italic.	
Underline	Choose Format \rightarrow Style \rightarrow Underline.	
Strikethrough	Choose Format \rightarrow Style \rightarrow Strikeout.	
Font size	Choose Format \rightarrow Font Size, then select the font size from the submenu. You must specify the size of the text in relation to the size of normal text. The options that you can select include +2 , +1 , -1 , -2 , and so on.	
Font color	Choose Format \rightarrow Text. Click on the arrow in the Color drop-down list. Select a color from the color table.	
	Alternatively, to specify a custom color, click on the Custom Color color selector button. Use the color wheel or the spin boxes to select the color. Click OK to add the new color to the color table.	
	Click OK to apply the font color formatting, and close the dialog.	

You can also use the format toolbar to format text. To use the format toolbar to format text, click on the button that represents the format that you want to apply.

To Apply Paragraph Formatting to Messages in **HTML** Format

To apply paragraph formatting, perform the following steps:

- 1. Click in the paragraph that you want to format.
- 2. To format the selected paragraph, perform one or more of the following actions:

Format	Action
Style	Choose Format → Paragraph. Select the style that you want from the Style drop-down list. The styles that you can select include the following: Normal Preformatted text Heading styles Address style Bulleted lists Ordered lists
	Click OK to apply the style and close the Properties: Paragraph dialog.
Alignment	Choose Format \rightarrow Paragraph. Select the alignment from the Left , Center , or Right options.
	Click OK to apply the alignment and close the Properties: Paragraph dialog.
Indentation	To increase the indent in the paragraph, choose Format \rightarrow Increase Indent. To decrease the indent in the paragraph, choose Format \rightarrow Decrease Indent.

You can also use the format toolbar to format paragraphs. To use the format toolbar to format paragraphs, click on the button that represents the format that you want to apply.

To Apply Page Formatting to Messages in HTML Format

To apply page formatting, perform the following steps:

- 1. Choose Format \rightarrow Page.
- 2. Select a template for the page from the **Template** drop-down list in the **Properties**: **Page** dialog.
- 3. Type a name for the page in the **Document Title** text box.
- 4. Enter the name of the image file that you want to use for the message background in the **Background Image** drop-down combination box.
 - Alternatively, click Browse to display a **Background Image** dialog. Use the dialog to specify the image file that you want to use.
- To select a color for the text, links, or message background, click on the arrow in the appropriate drop-down list in the Colors group. Select a color from the color table.

- Alternatively, to specify a custom color, click on the **Custom Color** color selector button. Use the color wheel or the sliders to select the color. Click OK to add the new color to the color table. Click OK to apply the color and close the dialog.
- 6. Click OK to apply the formatting to the message and close the **Properties: Page** dialog.

To Insert an Emoticon Into a Message

To insert an emoticon into a message, choose Insert \rightarrow Smiley, then choose the emoticon that you require.

Customizing the Message Composition Window

You can customize which message elements are displayed in a message composition window. The following table describes how to display message elements in a message composition window:

To Display	Choose
Attachments pane	$View \rightarrow Show attachments$
From field	$View \rightarrow From Field$
Reply-To field	$View \rightarrow Reply-To Field$
Cc field	$View \rightarrow Cc Field$
Bcc field	$View \rightarrow Bcc Field$

Deleting Messages

When you delete a message, the following events occur:

- The message is moved to your **Trash** folder.
- If your Inbox is configured to show deleted messages, the message appears in your message list, in strikethrough format. To show deleted messages, choose View \rightarrow Hide Deleted Messages so that the Hide Deleted Messages menu item is deselected.

If you need to retrieve a message from Trash, you can undelete the message. When you undelete a message, the message is restored to the folder from which you deleted the message.

You can *expunge* a folder to remove permanently from the folder the messages that you deleted.

You can empty your **Trash** folder to delete the contents of **Trash** permanently. That is, when you empty **Trash**, you expunge all your folders.

To Delete a Message

To delete a message, select the message that you want to delete in the message list, then choose $Edit \rightarrow Delete$.

To Undelete a Message

To undelete a message, select the message that you want to undelete in the **Trash** folder, then choose Edit \rightarrow Undelete.

To Expunge a Folder

To delete permanently the messages from a folder, open the folder, then choose Actions \rightarrow Expunge.

To Empty Trash

To empty Trash, choose Actions \rightarrow Empty Trash.

Sending and Receiving International Messages

Each message that you send and receive is in a particular *character encoding*. Character encoding is the method by which a message is converted into characters. For example, the **Greek** character encoding converts messages into Greek-language characters.

Evolution displays messages that you receive in the character encoding in which the message was sent. However, some messages do not contain enough information in the message header to identify the character encoding in which the message was sent. Evolution enables you to change the character encoding for individual messages that you receive.

You can change the character encoding in a message that you send. When you reply to a message, the message is sent in the character encoding of the original message. If you change the character encoding in your reply, the characters of the original message might not display properly.

To Change the Character Encoding for a Message You Receive

To change the character encoding of a message that you receive, open the message. Choose View → Character Encoding, then select the character encoding that you require.

For information on how to set a default character encoding for messages that you receive, see "Setting Mail Preferences" on page 148.

To Change the Character Encoding for a Message You Send

To change the character encoding of a message that you send, open a new message, or reply to a message that you receive. In the message composition window, choose Edit → Character Encoding, then select the character encoding that you require.

For information on how to set a default character encoding for messages that you send, see "Setting Composer Preferences" on page 152.

Working Offline

If you receive your messages from an IMAP server, you can work in offline mode. You can work in offline mode to reduce the amount of time that you spend online.

When you switch to offline mode, Evolution creates a local copy of folders that you have selected for offline use. You can read and respond to the messages in the folders in offline mode. When you send a message, Evolution stores the message in your **Outbox** folder until you switch to online mode again.

Offline mode is not the same as being disconnected. Evolution does not attempt to connect when you work offline. Instead, Evolution completes all actions that you performed offline when you return to online mode.

To specify which folders to create copies of when you are in offline mode, see "Setting Folders Preferences" on page 146.

To switch to offline mode, choose File \rightarrow Work Offline. Alternatively, click on the connected cables icon at the bottom left of the Evolution window. A cross appears through the connected cables icon.

To switch to online mode, choose File \rightarrow Work Online. Alternatively, click on the connected cables icon. The cross disappears from the connected cables icon.

Working With Secure Messages

Evolution includes security features that you can use to ensure that messages are not forged, and that the content of your messages cannot be read by anyone other than the intended recipient. Evolution uses *Pretty Good Privacy (PGP)* and *GNU Privacy Guard (GPG)* to implement security features.

PGP and GPG use public key encryption. That is, PGP and GPG use two keys, as follows:

Public key

You give this key to anyone who wants to send you an encrypted message, or to whom you want to send encrypted messages. Messages are encrypted with this key.

You exchange public keys with anyone to whom you want to send and receive signed messages or encrypted messages. The public key is used to sign or encrypt your messages, and your recipients need the public key to verify or decrypt your messages. When you receive a public key from someone, you import the public key to your *public keyring*. A public keyring is a file that lists all of the public keys that you know.

Private key

This is your secret key. You do not disclose your private key to anyone. Encrypted messages are decrypted with this key.

You can use security features with your messages in the following ways:

- Add an encrypted signature to a message that you send. The message is not encrypted, but the receiver can use the signature to verify that the message is from you.
- Encrypt a message that you send.
- Verify a signed message that you receive.
- Decrypt a message that you receive.

When you create your public key and private key, you create a *security passphrase*. You use the security passphrase when you use the security features in Evolution.

To Sign a Message

To sign a message that you send, choose Security \rightarrow PGP Sign from the message composition window. When you send the message, an **Enter Password** dialog is displayed. Enter your security passphrase in the dialog, then click OK.

To Send an Encrypted Message

To encrypt a message that you send, choose Security \rightarrow PGP Encrypt from the message composition window, before you send the message. When you send the message, an **Enter Password** dialog is displayed. Enter your security passphrase in the dialog, then click OK.

To Verify a Signed Message

To verify a signed message that you receive, open the message and scroll to the end of the message. Click on the lock icon. If the sender is in your public keyring, a message is displayed that confirms that the sender of the message is authentic. If the sender is not in your public keyring, a message is displayed that says that the security features cannot authenticate the sender of the message.

To Decrypt a Message That You Receive

To read a message that has been sent to you and encrypted with your public key, you must provide your security passphrase. When you open the message, an **Enter Password** dialog is displayed. Enter your security passphrase in the dialog, then click OK.

Managing Your Messages

The following sections describe how you can navigate, select, and sort your messages. The following sections also describe how to mark and flag your messages to help manage your work.

Navigating Messages

You can navigate the messages in your message list in several ways. Table 4–1 describes how to navigate messages in a message list.

TABLE 4–1 Navigating Messages

Task	Action
Go to the first message.	Press Home.
Go to the last message.	Press End.
Move up a page in the message list.	Press Page Up.
Move down a page in the message list.	Press Page Down.
Go to the next message.	Choose Actions \rightarrow Go To \rightarrow Next Message.
Go to the next unread message.	Choose Actions \rightarrow Go To \rightarrow Next Unread Message.
Go to the next message that is marked as important.	Choose Actions \rightarrow Go To \rightarrow Next Important Message.
Go to the first message of the next thread.	Choose Actions \rightarrow Go To \rightarrow Next Thread.
Go to the previous message.	Choose Actions \rightarrow Go To \rightarrow Previous Message.
Go to the previous unread message.	Choose Actions \rightarrow Go To \rightarrow Previous Unread Message.
Go to the previous message that is marked as important.	Choose Actions \rightarrow Go To \rightarrow Previous Important Message.

Selecting Messages

You can select messages in several ways in a message list. Table 4–2 describes how to select messages in a message list.

TABLE 4–2 Selecting Messages in a Message List

Task	Action
Select a message	Click on the message.
Select a group of contiguous messages	Press-and-hold Shift. Click on the first message in the group, then click on the last message in the group.
Select multiple messages	Press-and-hold Ctrl. Click on the messages that you want to select.

TABLE 4–2 Selecting Messages in a Message List (Continued)

Task	Action
Select all messages in a folder	Choose Edit \rightarrow Select All.
Invert the selection of messages	Choose Edit \rightarrow Invert Selection. The messages that are currently selected become deselected, and the messages that are not selected become selected.

Note – Do not click on the icon in the status column to select a message.

Viewing Messages by Thread

You can display your messages by thread. A message thread is a set of emails, composed of an initial email message about a subject and all responses to that message. A message thread is created when you send a message, and you receive a number of replies to the message. When you display your messages by thread, you can view the messages on a particular subject in chronological order. In this way, you can follow an email conversation from one message to the next message.

To display your messages by thread, choose View → Threaded Message List.

Marking Messages as Read or Unread

When you receive a message, the message is marked as unread. In your message list, the message header information is displayed in bold, and the message icon shows a closed envelope. After you open the message, or display the message in the preview pane, the message is automatically marked as read. The message header information is displayed in normal text, and the message icon shows an open envelope.

You can mark messages that you have read as unread, and you can mark messages that you have not read as read.

To mark a message as unread, select the message in the message list. Choose Edit \rightarrow Mark as Unread.

To mark a message as read, select the message in the message list. Choose Edit \rightarrow Mark as Read.

To mark all messages in a folder as read, select the folder in the folder pane. Choose Edit \rightarrow Mark All as Read.

Marking Messages as Important

You can mark messages that you receive as important, to visually mark the message in your message list. When you mark a message as important, the message header information changes color, and an exclamation-point icon is displayed in the Important column.

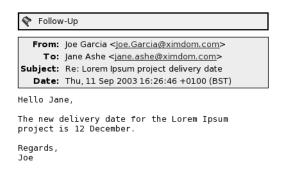

To mark a message as important, select the message in the message list. Choose Edit \rightarrow Mark as Important.

To mark a message as normal, select the message in the message list. Choose Edit \rightarrow Mark as Unimportant.

Flagging Messages for Follow Up

You can add a follow-up flag to a message in your Inbox. A flag can specify a follow-up action for the message, and a due date and due time for the action. Use flags to remind yourself to follow up on issues that arise from your messages.

Flags are displayed at the top of messages. The following figure shows a **Follow-Up** flag in a message:

When the action associated with a flag is completed, you can set the status of the flag to completed. You can also clear a flag from a message.

You can display the following flag-related fields in your message list:

- Flag Status
- Follow Up Flag
- Due By

For more information, see "To Customize the Current View" on page 26.

To Flag a Message

To flag a message, perform the following steps:

- 1. Select the message or messages that you want to flag in the message list.
- 2. Choose Actions \rightarrow Follow Up.
- 3. Enter the details for the flag in the Flag to Follow Up dialog. The following table describes the elements on the Flag to Follow Up dialog:

Element	Description
Flag	Select the flag that you want to add to the message or messages from the drop-down combination box. For example, if you want to remind yourself to reply to a message, select the Reply flag.
	Alternatively, you can type a new flag name in the text box.
Clear	Click on this button to remove the flag from the message.
Due by	Use the drop-down combination boxes to specify the date and time by which the task associated with the flag is due to be completed.
Completed	Select this option to indicate that the action specified by the flag is completed.

4. Click OK.

To Set a Flag to Completed

To set a flag to completed, right-click on the message in the message list. Choose Flag Completed from the popup menu. The flag is removed from the top of the message.

Alternatively, select the message in the message list, then choose Actions \rightarrow Follow Up. On the Flag to Follow Up dialog, select the Completed option.

To Clear a Flag

To remove a flag from a message, right-click on the message in the message list. Choose Clear Flag from the popup menu.

Alternatively, you can select the message, then choose Actions \rightarrow Follow Up. In the Flag to Follow Up dialog, click on the Clear button.

Labelling Messages

You can add a color label to messages in the message list. The label changes the color of the message header information in the message list to visually mark the message. For example, to mark a message as personal, you can add a Personal label to the message.

To label a message, right-click on the message in the message list. Choose Label from the popup menu, then select the label that you require from the submenu.

You can customize labels and the color associated with labels. For more information, see "Setting Mail Preferences" on page 148.

Hiding Messages

You can hide messages in a message list. To hide messages, select the messages that you want to hide, then choose $View \rightarrow Hide Selected Messages$.

To hide messages that you have read, choose View → Hide Read Messages.

To show hidden messages, choose View \rightarrow Show Hidden Messages. When you show hidden messages, Evolution does not show deleted messages.

To show deleted messages, choose View \rightarrow Hide Deleted Messages. The deleted messages appear in strikethrough format in the folder from which you deleted the messages.

Using Inbox Folders

You can store your messages in folders. By default, Evolution provides the following folders for your messages:

Folder	Description
Drafts	The default folder for draft messages. When you compose a message, then choose File \rightarrow Save Draft, the message is saved in this folder. When you complete and send the message, the message is deleted from this folder.
Inbox	The default location of your incoming messages.

Folder	Description
Outbox	Contains messages that you sent, but which Evolution has not sent yet because you have not connected to the mail server.
Sent	The default folder for messages that you send.
Trash	Contains messages that you deleted.

To organize your messages, you can create folders, and move or copy messages from your Inbox to the folders. For more information on how to use folders, see the following sections.

To Open the Folder of Another User

You can open the folders of other users, if you have the appropriate permissions. To open the folder of another user, perform the following steps:

- 1. Choose File \rightarrow Open Other User's Folder.
- 2. Enter the details of the folder that you want to open in the Open Other User's Folder dialog. The following table describes the elements on the Open Other User's Folder dialog:

Element	Description
Account	Use the drop-down list to select the email account that contains the folder that you want to open.
User	In the field, type the name of the user who owns the folder that you want to open. Alternatively, to select a user from a list of contacts, click on the User button. Use the Select Contacts from Addressbook dialog to select a user.
Folder Name	Use the drop-down combination box to specify the name of the folder that you want to open.

3. Click OK.

To close the folder of the other user, choose File \rightarrow Remove Other User's Folder.

To View the Properties of a Folder

To view the properties of a folder in your local system, open the folder, then choose File \rightarrow Folder \rightarrow Properties for "folder-name". You can view the properties of the folder in the properties dialog.

To Subscribe to a Folder on a Mail Server

To subscribe to a folder on a mail server, perform the following steps:

- 1. Choose Tools \rightarrow Subscribe to Folders.
- 2. Enter the details of the folder to which you want to subscribe in the **Folder Subscriptions** dialog. The following table describes the elements on the **Folder Subscriptions** dialog:

Element	Description
Server	Use the drop-down list to select the mail server that contains the folder to which you want to subscribe.
Folder tree	Select the folder to which you want to subscribe from the tree.
Subscribe	To subscribe to the selected folder, click on the Subscribe button.
Unsubscribe	To unsubscribe from the selected folder, click on the Unsubscribe button.

To Change the Format of a Folder

You can change the email format of your local mail folders to one of the following email formats:

- maildir
- mbox
- mh

Caution – If a problem occurs when you convert from one format to another, you might not be able to recover your data.

To change the email format of a local mail folder, perform the following steps:

- 1. Right-click on the folder whose format you want to change, then choose Properties from the popup menu.
- 2. Select the email format that you require from the **New store format** drop-down list in the **Reconfigure** dialog.
- 3. If you want to index the contents of the bodies of the messages in the folder, select the **Index body contents** option.

To Move a Message to a Folder

To move a message to a folder, perform the following steps:

- 1. Select the message that you want to move, then choose Actions → Move to Folder.
- 2. Use the tree in the **Move message(s) to** dialog to select the folder to which you want to move the message.

To create a new folder, click on the New button. A Create New Folder dialog is displayed. For more information, see "To Create a New Folder" on page 22.

3. Click OK.

Alternatively, to move a message, you can cut a message from a folder, then paste the message to another folder, as follows:

- 1. Select the message to move.
- 2. Choose Edit \rightarrow Cut.
- 3. Select the folder to which to move the message.
- 4. Choose Edit \rightarrow Paste.

Alternatively, display the folder pane, then drag the message to the folder in the folder pane.

To Copy a Message to a Folder

To copy a message to a folder, perform the following steps:

- 1. Select the message that you want to copy, then choose Actions \rightarrow Copy to Folder.
- 2. Use the tree in the Copy message(s) to dialog to select the folder to which you want to copy the message.

To create a new folder, click on the New button. A Create New Folder dialog is displayed. For more information, see "To Create a New Folder" on page 22.

3. Click OK.

Alternatively, to copy a message, you can copy the message, then paste the message to another folder, as follows:

- 1. Select the message to copy.
- 2. Choose Edit \rightarrow Copy.
- 3. Select the folder to which to copy the message.
- 4. Choose Edit \rightarrow Paste.

Searching Your Messages

Evolution enables you to search your messages. You can search for text in individual messages. You can use the searchbar to perform a simple search of all messages in a folder. For example, you can search for a message that contains a particular text string.

You can also perform advanced searches that use more complex search criteria. For example, you can search for messages that include an attachment, that are flagged, and that you received on a particular date.

You can also save your searches, then use the searches later from the Search menu.

To Search a Message

To search a message, perform the following steps:

- Open the message that you want to search.
 Alternatively, check that the preview pane is displayed, then select the message that you want to search.
- 2. Choose Edit \rightarrow Search Message.
- 3. Type the text that you want to search for in the **Find** text box in the **Find in Message** dialog. To make the search case sensitive, select the **Case Sensitive** option.
- 4. Click Find. The matches are highlighted in the message. The total number of matches is displayed in the **Find in Message** dialog.
- 5. To close the **Find in Message** dialog, click Close.

To Search All Messages in a Folder

To search all messages in a folder, perform the following steps:

- 1. Display the folder that contains the messages that you want to search.
- 2. Select the message component in which to search from the drop-down list in the searchbar
- 3. Type the text that you want to search for in the text box on the searchbar.
- 4. Click on the Find Now button. Alternatively, choose Search → Find Now. The messages that match the search criteria are displayed in the message list.
 - To save the search, choose Search \rightarrow Save Search. A **Save Search** dialog is displayed. Type a name for the search in the **Rule name** text box, then click OK.
 - To clear the search criteria and display all the messages in the folder, choose Search \rightarrow Clear. Alternatively, click on the Clear button in the searchbar.

To Perform an Advanced Search

To perform an advanced search on your messages, perform the following steps:

- 1. Display the folder that contains the messages that you want to search.
- 2. Choose Search → Advanced. Alternatively, select **Advanced** from the drop-down list in the searchbar.
- 3. Use the If group box in the Advanced Search dialog to create criteria for the search. To create criteria, perform the following steps:
 - a. From the first drop-down list, select the message component in which to search. For example, select **Message Body** to search the text in the body of the message.
 - b. From the second drop-down list, select the relationship between the message component and the search text. For example, to search for messages whose body includes the search text, select **contains** from the second drop-down list.
 - c. In the text box, type the search text. This text is not case sensitive.
 - d. To add more criteria, click on the Add button. To remove a criterion, click on the Remove button beside the criterion.
- 4. Select the appropriate option from the Execute actions drop-down list. Select one of the following options:
 - if any criteria are met: Select this option if you want the search to return matches where any of the specified criteria are met.
 - if all criteria are met: Select this option if you want the search to return only matches where all of the specified criteria are met.
- 5. Click OK to perform the advanced search. The messages that match are displayed in the message list.

Alternatively, to save the search, type a name for the search in the **Rule name** text box, then click Save. Choose Search \rightarrow search-name to perform the search.

To clear the advanced search criteria and display all the messages in the folder, choose Search \rightarrow Clear.

Using the Search Editor

Evolution enables you to save your searches. The saved searches are added to the Search menu, and you can choose the searches from this menu. Evolution contains a search editor to enable you to add, edit, and delete your searches. You can also rearrange the order of the searches in your Search menu.

To Add a Search

To add a search, perform the following steps:

1. Choose Search \rightarrow Edit Saved Searches.

- 2. Click Add in the Search Editor dialog.
- 3. Enter the details for the search in the **Add Rule** dialog. The following table describes the elements on the **Add Rule** dialog:

Element	Description
Rule name	Type a name for the search in the text box.
Add	Click this button to add more criteria.
Execute actions	Use the drop-down list to specify whether the search returns a message if the message meets all, or any, of the criteria in the search.
First drop-down list	Select the message component in which to search. For example, select Message Body to search the text in the body of the message.
Second drop-down list	Select the relationship between the message component and the search text. For example, to search for messages whose body includes the search text, select contains from the second drop-down list.
Text box	Type the search text. This text is not case sensitive.
Remove	To remove a criterion, click on the Remove button beside the criterion.

4. Click OK. The search is added to the Search menu.

You can also save searches that you perform from the searchbar. For more information, see "To Search All Messages in a Folder" on page 78. You can also use the **Advanced Search** dialog to save a search. For more information, see "To Perform an Advanced Search" on page 79.

To Edit a Search

To edit a search, perform the following steps:

- 1. Choose Search \rightarrow Edit Saved Searches.
- 2. In the **Search Editor** dialog, select the search that you want to edit, then click Edit. An **Edit Rule** dialog is displayed. Modify the details for the search in the **Edit Rule** dialog. For more information on the elements in the dialog, see "To Add a Search" on page 79.
- 3. Click OK to save your changes and close the **Edit Rule** dialog.
- 4. Click OK to close the **Search Editor** dialog.

To Delete a Search

To delete a search, perform the following steps:

- 1. Choose Search \rightarrow Edit Saved Searches.
- 2. In the Search Editor dialog, select the search that you want to delete, then click Remove.
- 3. Click OK. The search is removed from the Search menu.

To Arrange the Searches in the Search Menu

To arrange the searches in the Search menu, perform the following steps:

- 1. Choose Search → Edit Saved Searches. The **Search Editor** dialog displays your searches in the same order as the Search menu.
- 2. Select a search whose position you want to change, then click Up button or Down button until the search is in the required position.
- 3. Click OK. The position of the search is updated in the Search menu.

Using Filters

You can use filters to perform actions on your incoming and outgoing email. For example, you can create a filter that automatically moves email that you receive from a particular address to a particular folder.

Use filters to deal with spam email. For example, you can create a filter to delete messages from a particular address. You can also create filters to delete messages that contain particular terms in the Subject field or in the message body.

Using the Filter Editor

You can use the filter editor to add, edit, and delete message filters. You can also use the filter editor to rearrange the positions of your filters in the filter editor.

To Add a Filter

To add a filter, perform the following steps:

1. Choose Tools \rightarrow Filters.

- 2. From the drop-down list at the top of the **Filters** dialog, select whether you want the filter to apply to incoming or outgoing email.
- 3. Click Add.
- 4. Enter the details for the filter in the **Add Rule** dialog. Enter the criteria for the filter in the top section of the dialog. The following table describes the elements in the top section of the **Add Rule** dialog:

Element	Description
Rule name	Type a name for the filter in the text box.
Add	Click this button to add more criteria to the filter.
Execute actions	Use the drop-down list to specify whether to perform the filter actions if the message meets all, or any, of the criteria for the filter.
First drop-down list	Select the message component to use for the criterion. For example, if you want the filter to search the text in the body of the message, select Message Body .
Second drop-down list	Select the relationship between the message component and the search text. For example, if you want the filter to search for messages whose body includes the search text, select contains from the second drop-down list.
Text box	Type the search text. This text is not case sensitive.
Remove	To remove a criterion, click on the Remove button beside the criterion.

5. Enter the actions to take if the criteria are met, in the bottom section of the dialog. The following table describes the elements in the bottom section of the **Add Rule** dialog:

Element	Description
Add	Click this button to add more actions to the filter.
Drop-down list	Select an action to perform from the drop-down list. Depending on the action that you select, another control might appear beside the drop-down list. For example, if you select the Move to Folder action, a button is displayed. Click on the button to open a dialog from which you can select a folder.
Remove	To remove an action, click on the Remove button beside the action.

- 6. When you have entered the details for the filter, click OK on the **Add Rule** dialog.
- 7. Click OK to close the **Filters** dialog.

Note - You can create a filter that copies messages that match your criteria to more than one folder.

To Edit a Filter

To edit a filter, perform the following steps:

- 1. Choose Tools \rightarrow Filters.
- 2. From the drop-down list at the top of the Filters dialog, select whether the filter that you want to edit is for incoming or outgoing email.
- 3. Select the filter that you want to edit, then click Edit. An Edit Rule dialog is displayed.
- 4. Modify the details of the filter in the dialog as required. For more information on the dialog, see "To Add a Filter" on page 81.
- 5. When you have modified the details for the filter, click OK on the Edit Rule dialog.
- 6. Click OK to close the **Filters** dialog.

To Delete a Filter

To delete a filter, perform the following steps:

- 1. Choose Tools \rightarrow Filters.
- 2. From the drop-down list at the top of the **Filters** dialog, select whether the filter that you want to delete is for incoming or outgoing email.
- 3. Select the filter that you want to delete, then click Remove.
- 4. Click OK to close the **Filters** dialog.

To Change the Position of a Filter

To change the position of a filter in the **Filters** dialog, perform the following steps:

- 1. Choose Tools \rightarrow Filters.
- 2. From the drop-down list at the top of the Filters dialog, select whether the filter whose position you want to change is for incoming or outgoing email.
- 3. Select the filter whose position you want to change.
- 4. Click the Up button or the Down button to change the position of the filter. Repeat this step until the filter is in the required position.

5. Click OK to close the **Filters** dialog.

To Create a Filter From a Message

To create a filter from a message, perform the following steps:

- 1. Select the message from which you want to create a filter in the message list.
- Choose Tools → Create Filter From Message, then choose one of the following menu items:
 - Filter on Subject: Creates a filter from the subject of the selected message.
 - Filter on Sender: Creates a filter from the sender of the selected message.
 - Filter on Recipients: Creates a filter from the recipients of the selected message.
 - Filter on Mailing List: Creates a filter from the mailing lists in the To and Cc fields of the selected message.

An **Add Filter Rule** dialog is displayed. The dialog contains criteria for the filter, depending on which menu item you chose.

- 3. Modify the details of the filter in the dialog if required. For more information on the dialog, see "To Add a Filter" on page 81.
- 4. Click OK. The filter is added to your list of filters.

To Apply Filters to Selected Messages

You can apply all the filters in the filter editor to messages that you select. You can use this function to check that a filter works.

To apply filters to messages, perform the following steps:

- 1. Select the message or messages to which you want to apply filters.
- 2. Choose Actions \rightarrow Apply Filters.

If messages meet the criteria in your filters, the actions that are associated with the filters are performed.

Using Virtual Folders

Virtual folders enable you to use one folder to view messages that are located in several folders. Your virtual folders are listed in **VFolders** in your folder pane. To display a virtual folder, select the virtual folder from the **VFolders** item in your folder pane.

If your folder pane is not displayed, choose View \rightarrow Folder Bar.

Use virtual folders to organize messages that are located in more than one folder. For example, imagine your company has a product that is called Lorem Ipsum. You have a client called Ximdom.Com. Employees of Ximdom.Com send you messages regularly about Lorem Ipsum, and about other products. You store the messages in many folders.

You can use virtual folders to organize messages from Ximdom.Com that are related to the Lorem Ipsum product, and that are not related to the product. To organize messages in this way, you might create the following virtual folders:

Ximdom.Com (Lorem Ipsum)	Displays messages from all folders that are from addresses that contain @ximdom.com, and that have the text <i>lorem ipsum</i> in the message body.
Ximdom.Com (Other)	Displays messages from all folders that are from addresses that contain @ximdom.com, and that do not have the text <i>lorem ipsum</i> in the message body.

You can create virtual folders in the following ways:

- Use the virtual folder editor.
- Use a message in your message list to automatically generate the virtual folder.
- Perform a search, then use the search to automatically generate the virtual folder.

Using the Virtual Folder Editor

You can use the virtual folder editor to add, edit, and delete virtual folders. You can also use the virtual folder editor to rearrange the positions of your virtual folders in the folder pane.

To Add a Virtual Folder

To add a virtual folder, perform the following steps:

- 1. Choose Tools \rightarrow Virtual Folder Editor.
- 2. Click Add on the **vFolders** dialog.
- 3. Enter the details for the virtual folder in the Add Rule dialog. The following table describes the elements on the Add Rule dialog:

Element	Description
Rule name	Type a name for the virtual folder in the text box.

Element	Description
Add	Click this button to add more criteria to the virtual folder.
Execute actions	Use the drop-down list to specify whether a message must meet all, or any, of the criteria, to be added to the virtual folder. You can select the following options: if all criteria are met: Select this option to specify that the message must meet all of the criteria in the search. if any criteria are met: Select this option to specify that the message must meet at least one of the criteria in the search.
First drop-down list	Select the message component to use for the criterion. For example, if you want the virtual folder to search the text in the body of the message, select Message Body .
Second drop-down list	Select the relationship between the message component and the search text. For example, if you want the virtual folder to search for messages whose body includes the search text, select contains from the second drop-down list.
Text box	Type the search text. This text is not case sensitive.
Remove	To remove a criterion, click on the Remove button beside the criterion.

Element	Description
vFolder Sources	From the drop-down list, select the folders from which you want to create the virtual folder. Select one of the following options: specific folders only: Select this option to create the virtual folder from folders that you specify. To specify a folder, click Add. Select the folder that you want to add from the Select Folder dialog, then click OK. To remove a folder, select the folder, then click Remove. with all local folders: Select this option to create the virtual folder from all folders on your local system. with all active remote folders: Select this option to create the virtual folder from all folders on the mail server to which you are connected. with all local and active remote folders: Select this option to create the virtual folder from the following: All folders on your local system. All folders on the mail server to which you are connected.

- 4. When you have entered the details for the virtual folder, click OK on the Add Rule dialog.
- 5. Click OK to close the **vFolders** dialog.

To Edit a Virtual Folder

To edit a virtual folder, perform the following steps:

- 1. Choose Tools \rightarrow Virtual Folder Editor.
- 2. In the vFolders dialog, select the virtual folder that you want to edit, then click
- 3. Modify the details of the virtual folder in the **Edit Rule** dialog as required. For more information on the dialog, see "To Add a Virtual Folder" on page 85.
- 4. When you have modified the details for the virtual folder, click OK on the Edit Rule dialog.
- 5. Click OK to close the **vFolders** dialog.

To Delete a Virtual Folder

To delete a virtual folder, perform the following steps:

- 1. Choose Tools \rightarrow Virtual Folder Editor.
- 2. In the **vFolders** dialog, select the virtual folder that you want to delete, then click Remove.
- 3. Click OK to close the **vFolders** dialog.

To Change the Position of a Virtual Folder

To change the position of a virtual folder in your folder pane, perform the following steps:

- 1. Choose Tools \rightarrow Virtual Folder Editor.
- 2. In the **vFolders** dialog, select the virtual folder whose position you want to change.
- 3. Click the Up button or the Down button to change the position of the virtual folder. Repeat this step until the virtual folder is in the required position.
- 4. Click OK to close the **vFolders** dialog.

To Create a Virtual Folder From a Message

To create a virtual folder from a message, perform the following steps:

- Select the message from which you want to create a virtual folder in the message list.
- 2. Choose Tools → Create Virtual Folder From Message, then choose one of the following menu items:
 - VFolder on Subject: Creates a virtual folder from the subject of the selected message.
 - VFolder on Sender: Creates a virtual folder from the sender of the selected message.
 - VFolder on Recipients: Creates a virtual folder from the recipients of the selected message.
 - VFolder on Mailing List: Creates a virtual folder from the mailing lists in the To and Cc fields of the selected message.

A **New VFolder** dialog is displayed. The dialog contains criteria for the virtual folder, depending on which menu item you chose.

- 3. Modify the details of the virtual folder in the dialog if required. For more information on the dialog, see "To Add a Virtual Folder" on page 85.
- 4. Click OK. The virtual folder is added to the list of virtual folders in the folder pane.

To Create a Virtual Folder From a Search

To create a virtual folder from a search, perform the following steps:

- 1. Perform the search from which you want to create a virtual folder. For more information, see "Searching Your Messages" on page 78.
- 2. After you perform the search, choose Search \rightarrow Create Virtual Folder From Search. A New VFolder dialog is displayed. The dialog contains the search criteria for the search you performed.
- 3. Modify the details of the virtual folder in the dialog if required. For more information on the dialog, see "To Add a Virtual Folder" on page 85.
- 4. Click OK. The virtual folder is added to the list of virtual folders in the folder pane.

Using Calendar

The information in this chapter describes how to use Ximian Evolution Calendar.

- "Introduction to Calendar" on page 91
- "Viewing Your Calendar" on page 93
- "Navigating Your Calendar" on page 93
- "Creating an Appointment" on page 94
- "Deleting an Appointment" on page 99

- "Sending Meeting Information" on page 104
- "Canceling a Meeting" on page 104
- "Replying to a Meeting Invitation" on page 105
- "Updating a Meeting Based on Invitation Replies" on page 106
- "Refreshing the Meeting Details" on page 106
- "Publishing Free or Busy Information" on page 107

Introduction to Calendar

You can use **Calendar** to schedule appointments, meetings, and tasks. This chapter describes the features of a local calendar. Most of the features in a Sun Java System Calendar Server are the same as those in a local calendar. See Chapter 8 for more information about the differences between a local calendar and a Sun Java System Calendar Server calendar.

Figure 5–1 shows a typical **Calendar** window.

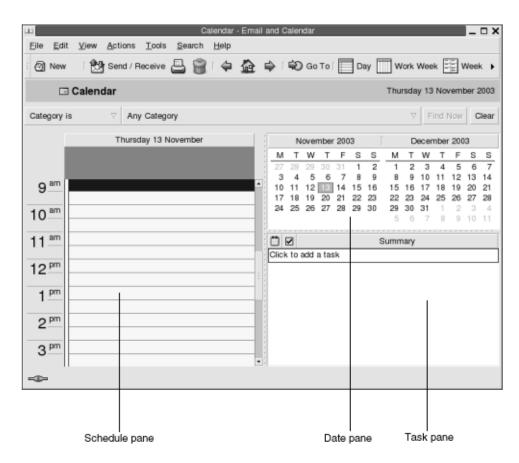

FIGURE 5–1 Typical Calendar Window

The Calendar window contains the following panes:

Pane	Description
Schedule pane	The schedule pane is the largest pane in the Calendar window. The schedule pane displays the schedule for the selected dates, using the specified view.
Date pane	In the upper right area of the Calendar window, the date pane displays all of the dates in the current month as dark numerals. Dates in the previous month and next month, if included, are shown as light numerals. The date for today is outlined with a red box. Dates on which an appointment is scheduled are displayed in bold type. Currently selected dates are highlighted.
Task pane	In the lower right area of the Calendar window, the task pane displays the task list from the default tasks folder.

Viewing Your Calendar

You can change the view that Evolution uses to display the schedule, as follows:

View	Description
View → Current View → Day View	Displays the schedule for a single day. By default, Evolution displays the daily schedule divided into thirty-minute segments. The time segments for work hours have a light background, the time segments for nonwork hours have a dark background. The single-day view is the default view.
$ \begin{array}{l} \text{View} \rightarrow \text{Current} \\ \text{View} \rightarrow \text{Work} \\ \text{Week View} \end{array} $	Displays the schedule for a work week. By default, this view displays the schedule for Monday to Friday inclusive.
$ \begin{array}{l} \text{View} \rightarrow \text{Current} \\ \text{View} \rightarrow \text{Week} \\ \text{View} \end{array} $	Displays the schedule for a week.
$ \begin{array}{l} \text{View} \rightarrow \text{Current} \\ \text{View} \rightarrow \text{Month} \\ \text{View} \end{array} $	Displays the schedule for a month.

Navigating Your Calendar

Evolution automatically displays the schedule for today. You can navigate to another date to display the schedule for that date.

To Go to a Particular Date

To go to a particular date, perform the following steps:

- 1. Choose View \rightarrow Go to Date, to display the **Go To Date** dialog.
- 2. Use the month drop-down list to select the required month.
- 3. Use the year spin box to select the required year, or type the year in the text box. Evolution displays the dates in the specified month, in the main section of the Go To Date dialog.
- 4. Select the required date. Evolution closes the Go To Date dialog, then displays the schedule for the selected date.

To Return to the Schedule for Today

To return to the schedule for today, choose View \rightarrow Go to Today.

Creating an Appointment

You can use **Calendar** to create an all-day appointment, or an appointment of short duration. You can create a standalone appointment, or a series of appointments.

To Create a Standalone Appointment

To create a standalone appointment, perform the following steps:

- 1. Choose File \rightarrow New \rightarrow Appointment.
- 2. Enter the appointment details in the **Appointment** tabbed section. The following table describes the elements in the **Appointment** tabbed section:

Element	Description
Summary	Type a short description of the appointment.
Location	Type the location of the appointment.
Start time	Use these drop-down combination boxes to specify the appointment start date and time.
End time	Use these drop-down combination boxes to specify the appointment end date and time.
Globe button	To specify a time in a different time zone, click on the globe button to the right of the drop-down combination boxes. Click on the map in the Select a Time Zone dialog to select a time zone, or select a time zone from the drop-down list, then click OK.
All day event	Select this option to create an all-day appointment.
	To create an appointment of shorter duration, deselect this option.
Details text box	Type the details of the appointment.

Element	Description
Classification	 Select one of the following options: Public: Select this option to enable other users on your network to see all details of this appointment in your schedule. Private: Select this option to specify that other users on your network cannot see any details of this appointment in your schedule. Confidential: Select this option to allow other users on your network to see only that this appointment is in your schedule. The other users cannot see the appointment details.
Show Time As	 Select one of the following options: Free: Select this option to indicate to other users on your network that you are free to attend another meeting during the time specified for this appointment. Busy: Select this option to indicate to other users on your network that you are not free to attend another meeting during the time specified for this appointment.
Categories and text box	Type the category name to assign a category to this appointment. If you want to assign more than one category, separate the categories with a comma.
	Alternatively, click on the Categories button. Use the Edit Categories dialog to select a category.

3. To schedule an alert to remind you about the appointment, click on the **Reminder** tab. The following table describes the elements in the **Reminder** tabbed section:

Element	Description
Basics	Displays the date, start time, and end time of the appointment.
Display a Message	Select one of the following alert types from the drop-down list: Display a message Play a sound Run a program Send an Email
Time-units spin box	Use the spin box to specify the number of time units.
minute(s)	Select one of the following time-unit types from the drop-down list: minute(s) hour(s) day(s)
before	Select one of the following options from the drop-down list: before after

Element	Description
start of appointment	Select one of the following options from the drop-down list: start of appointment end of appointment
Options	Click on the Options button to display an Alarm Options dialog. See "Alarm Options Dialog" on page 96.
Alarm list	This element displays a list of the alarms that are set for the currently selected appointment.
Add	Click Add to add the specified alarm to the Reminders list.
Remove	Click Remove to remove the selected alarm from the Reminders list.

4. To save the appointment, choose File \rightarrow Save.

To save the appointment and then close the **Appointment** window, choose File \rightarrow Save and Close.

To save the appointment in a file, choose File \rightarrow Save As to display the **Save as** window. Type the filename, then click OK.

To close the **Appointment** window without saving the appointment, choose File \rightarrow Close.

5. To preview the details of the appointment, choose File \rightarrow Print Preview. To print the details of the appointment, choose File \rightarrow Print.

Alarm Options Dialog

Use the **Alarm Options** dialog to specify additional options for an alarm. The following table describes the elements in the **Alarm Options** dialog:

Element	Description
Repeat the alarm	Select this option to show the alarm more than once.
extra times	Use this spin box to specify the number of times to repeat the alarm.
every	Use this spin box to specify the number of time units between each repeated alarm.
minutes	Select one of the following time-unit types from the drop-down list: minutes hours days

Element	Description
text box T	The title of the text box depends on the alarm type, as follows: Display a Message:
	Type the message text in the Message to Display text box.
	■ Play a Sound:
	Enter the name of the sound file in the Play sound drop-down combination box.
	Alternatively, click Browse to display a Select file dialog. Use the dialog
	to specify the sound file that you want to use.
	Run a Program:
	Type the program name in the Run program text box. Type the program arguments in the With these arguments text box.
	Send an Email:
	Type the email addresses to which you want to send the email reminder, in the text box beside the Send To button. If you want to send the
	reminder to more than one address, separate the addresses with a
	comma. Alternatively, click on the Send To button. Use the Select
	Contacts from Addressbook dialog to select addresses.
	Type the message text in the Message to Send text box.
	Note – The Alarm Repeat functionality is not supported in this release.

To Create an All-Day Appointment

To create an all-day appointment, perform the following steps:

- 1. Choose File \rightarrow New \rightarrow All Day Appointment. An **Appointment** window is displayed, with the All day event option selected. The Appointment window is similar to that displayed when you choose File \rightarrow New \rightarrow Appointment, except that the start time and end time are not displayed.
- 2. Enter the appropriate details in the **Appointment** window, as described in "To Create a Standalone Appointment" on page 94.
- 3. Choose File \rightarrow Save and Close. Evolution saves the all-day appointment and then closes the **Appointment** window.

To Create a Recurring Appointment

To create a recurring appointment, perform the following steps:

- 1. Create an appointment as described in "To Create a Standalone Appointment" on page 94.
- 2. In the **Appointment** window, click on the **Recurrence** tab to display the **Recurrence** tabbed section. The following table describes the elements in the **Recurrence** tabbed section:

Element	Description
Basics	Displays the date, start time, and end time of the appointment.
Recurrence Rule	 Select one of the following options: No recurrence: Select this option to schedule one appointment only. Simple recurrence: Select this option to use predefined settings to schedule a series of appointments. Custom recurrence: If this option is selected, the appointment contains recurrences that you cannot edit in Evolution.
Every	Use this spin box to specify the number of time units between each appointment in the series.
day(s)	Select one of the following time-unit types from the drop-down list: day(s) week(s) month(s) year(s)
forever	 Select one of the following options from the drop-down list, to specify when the series of appointments ends: forever: Select this option to specify that the series of appointments continues indefinitely. for: Select this option to display the occurrences spin box. Use the spin box to specify the number of appointments in the series. until: Select this option to display a drop-down combination box. Use the drop-down combination box to specify the date of the last appointment in the series.
Exceptions	Use this drop-down combination box to specify the dates in the series when you do not want to schedule an appointment.
Add	Click Add to add the specified date to the list of exceptions.
Modify	Click Modify to make the specified changes to the selected date in the list of exceptions.
Remove	Click Remove to remove the selected date from the list of exceptions.
Preview	The Preview section displays all of the dates in the current month. The current date is outlined in red. Dates on which an appointment is scheduled in the current series are displayed in bold. Figure 5–2 shows a typical Preview section.
	Click on the left arrow, to the left of the month name in the Preview section, to display the previous month. Click on the left arrow several times to scroll back through several months.
	Click on the right arrow, to the right of the month name in the Preview section, to display the next month. Click on the right arrow several times to scroll forward through several months.

3. Choose File \rightarrow Save and Close. Evolution saves the series of appointments and then closes the **Appointment** window.

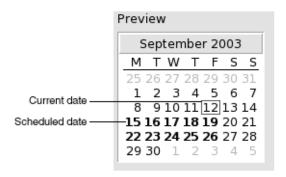

FIGURE 5-2 Typical Preview Section

Deleting an Appointment

You can delete a standalone appointment, a series of appointments, or an appointment within a series of appointments.

To Delete a Standalone Appointment

To delete a standalone appointment, perform the following steps:

- 1. Double-click on the appointment in the schedule pane, to open the **Appointment** window.
- 2. Choose File \rightarrow Delete.
- 3. If a confirmation alert appears, click Yes.

To Delete a Series of Appointments

To delete a series of appointments, perform the following steps:

- 1. Double-click on any appointment in the series, in the schedule pane, to open the **Appointment** window.
- 2. Choose File \rightarrow Delete.
- 3. If a confirmation alert appears, click Yes.

To Delete an Appointment Within a Series of Appointments

To delete an appointment within a series of appointments, perform the following steps:

- 1. Choose View \rightarrow Current View \rightarrow Day View.
- 2. Right-click on the appointment that you want to delete, in the schedule pane.
- 3. Choose Delete this Occurrence from the popup menu.

Creating a Meeting

You can use Evolution to create a meeting, to invite others to the meeting, and book the necessary resources for the meeting.

To Create a Meeting

To create a meeting, perform the following steps:

- Choose File → New → Meeting. An Appointment window is displayed similar to that when you choose File → New → Appointment, except that the window contains two additional tabs: Scheduling and Meeting.
- 2. Enter the appropriate details in the **Appointment**, **Reminder**, and **Recurrence** tabs in the **Appointment** window, as described in "To Create a Standalone Appointment" on page 94 and "To Create a Recurring Appointment" on page 97.
- 3. To enter more details about the meeting, click on the **Meeting** tab to display the **Meeting** tabbed section.
- 4. Select the organizer of the meeting from the Organizer drop-down list. Evolution automatically enters the name of the current user in the Organizer text box. If you maintain several Evolution accounts, select the appropriate account from the drop-down list.
- 5. The meeting attendees are listed in table format. From left to right, the meeting attendees table contains the following columns by default:

Column	Description
Attendee	Evolution automatically enters the current user as the first entry in the attendee list.
	To add another attendee to the list, click on the Click here to add an attendee text below the attendee list. Type the name or email address of the person or group that you want to invite to the meeting, or the name of the resource or room that you want to book for the meeting. If you want to send the meeting information to the attendee, you must type the email address of the attendee in this field.
Type	Click on the field under the Type column header, to activate a drop-down list. Select one of the following types from the drop-down list: Individual Group Resource Room Unknown
Role	Click on the field under the Role column header, to activate a drop-down list. Select one of the following roles from the drop-down list: Chair Required Participant Optional Participant Non-Participant Unknown
RSVP	Click on the field under the RSVP column header, to activate a drop-down list. Select one of the following options from the drop-down list, to specify whether a reply should be sent to the meeting organizer: Yes No
Status	Click on the field under the Status column header, to activate a drop-down list. Select one of the following status options from the drop-down list: Needs Action Accepted Declined Tentative Delegated

Press Return to add the new entry to the attendee list.

To delete an attendee from the list, right-click on the entry in the attendee list, then choose Delete from the popup menu.

For information on how to change the current view, save the current view, or create custom views, see "Using Views" on page 25.

- 6. Click on the **Invite Others** button to create a new entry in the table. Evolution also displays the Select Contacts from Addressbook dialog, which you can use to select attendees.
- 7. Click on the **Scheduling** tab to display the **Scheduling** tabbed section. You can use the Scheduling tabbed section to identify a time period when all attendees are free to attend the meeting, and when the necessary resources are available for the meeting. The following table describes the elements in the **Scheduling** tabbed section:

Element	Description
Attendee list	Displays the list of meeting attendees. This attendee list is the same as that in the Meeting tabbed section, except that the Role and RSVP columns are not displayed. You can customize the contents of this table, as described in "Using Views" on page 25.
Legend	Describes the color codes that are used in the schedule to indicate the following: Tentative: The attendee has another appointment but has marked the time as free, so the attendee might be able to attend this meeting at the indicated time. Busy: The attendee has another appointment and cannot attend this meeting at the indicated time. Out of Office: The attendee is out of the office and cannot attend this meeting at the indicated time. No Information: The attendee has not published their free or busy information, so Evolution cannot determine whether the attendee can attend this meeting at the indicated time.
Schedule	Displays the schedule for each of the meeting attendees. The time segments for the currently selected time period have a light background, all other time segments have a dark background. The free or busy time for each attendee is indicated by colored squares.
Invite Others	Click on the Invite Others button to create a new entry in the attendee list. Evolution also displays the Select Contacts from Addressbook dialog, which you can use to select attendees.

Element	Description
Options	Click on the Options button to display a popup menu that contains the following menu items: Show Only Working Hours: Select this option to change the schedule to show only the work hours in each day. Deselect this option to show all hours in each day. Work hours are defined as the hours between Day begins and Day ends . Show Zoomed Out: Select this option to change the schedule to show a summarized schedule for several days. Deselect this option to show a detailed schedule for each day. Update Free/Busy: Choose this menu item to update the free or busy information in the schedule, for each attendee in the attendee list.
<< button	Click on the << button to highlight in the schedule the previous time period that meets the selected Autopick criteria. Evolution automatically updates the Meeting start time and Meeting end time values.
Autopick	 Click on the Autopick button to display a popup menu that contains the following menu items: All People and Resources: Choose this menu item to highlight a time period when all of the specified people and all of the specified resources are free. All People and One Resource: Choose this menu item to highlight a time period when all of the specified people and any of the specified resources are free. Required People: Choose this menu item to highlight a time period when all of the required people are free. Required People and One Resource: Choose this menu item to highlight a time period when all of the required people and any of the specified resources are free.
>> button	Click on the >> button to highlight in the schedule the next time period that meets the selected Autopick criteria. Evolution automatically updates the Meeting start time and Meeting end time values.
Meeting start time	Use these drop-down combination boxes to specify the meeting start date and time.
Meeting end time	Use these drop-down combination boxes to specify the meeting end date and time.

- 8. Choose File \rightarrow Save and Close. Evolution creates the meeting and then asks if you would like to send the meeting information.
- 9. Click Yes to send the meeting information to the specified mail addresses. Click No to save the meeting information without sending the information to the specified mail addresses. You can send the meeting information at a later time, as described in "Sending Meeting Information" on page 104.

Sending Meeting Information

To send meeting information, perform the following steps:

- Double-click on the meeting in the schedule pane, to open the **Appointment** window.
- Choose Actions → Forward as iCalendar to display an email message window, similar to the Inbox Compose a message window. Evolution automatically inserts text in the Subject text box and in the message content area. Evolution includes the meeting information in the message body.
- 3. Enter the email addresses to which you want to send the meeting information, in the **To** field. If you want to send the information to more than one address, separate the addresses with a comma.
 - For more information about the elements in the message window, see "To Send a New Message" on page 54.
- Choose File → Send to send the meeting information to the specified email addresses.
- 5. Choose File \rightarrow Close to close the **Appointment** window.

Canceling a Meeting

You can cancel a meeting, or revoke an invitation to a meeting for individual attendees.

To Cancel a Meeting

To cancel a meeting, perform the following steps:

- Double-click on the meeting in the schedule pane, to open the **Appointment** window.
- 2. Choose Action \rightarrow Cancel Meeting to display a confirmation alert.
- 3. Click Yes to cancel the meeting. Evolution sends a cancellation notice to the specified mail addresses.

To Revoke an Invitation to a Meeting

To revoke an invitation to a meeting, perform the following steps:

- 1. Double-click on the meeting in the schedule pane, to open the **Appointment** window.
- 2. Click on the **Meeting** tab to display the **Meeting** tabbed section.
- 3. Right-click on the attendee whose invitation you want to revoke, then choose Delete from the popup menu. Evolution deletes the attendee from the attendee list. Repeat this step for each additional attendee whose invitation you want to revoke.
- 4. Choose File → Save and Close. Evolution asks if you would like to send the updated meeting information.
- 5. Click Yes to send the updated meeting information to the specified mail addresses:
 - A message with the subject Cancel: Calendar Information is sent to the attendees whose invitation is revoked.
 - A message with the subject Calendar information is sent to the attendees who remain on the attendee list.

Click No to save the updated meeting information without sending a message to the specified mail addresses.

Replying to a Meeting Invitation

Evolution sends meeting invitations to your Inbox, as attachments to email messages. To reply to a meeting invitation, perform the following steps:

- 1. Open the email message to which the meeting invitation is attached.
- 2. Open the meeting invitation by viewing the attachment in the message, as described in "To View an Attachment in a Message" on page 52.
- 3. Select one of the following options:
 - Accept
 - **Tentatively Accept**
 - Decline

If you accept the invitation, Evolution adds the event to your calendar when you close the meeting invitation.

- 4. Select the **RSVP** option to specify that you want to reply to the meeting organizer.
 - If you select the RSVP option, Evolution sends an email to the meeting organizer with the details of your reply, when you close the meeting invitation.
 - If you do not select the **RSVP** option, Evolution does not send a reply to the meeting organizer.
- 5. Click on the calendar button to display a popup menu that lists your calendar folders. Select the calendar where you want to save the details of this invitation.

- 6. Click OK to close the meeting invitation.
- 7. Close the email message.

Updating a Meeting Based on Invitation Replies

When a meeting attendee replies to your meeting invitation, you receive an email with the reply attached. To update the meeting based on the reply, perform the following steps:

- 1. Open the email message to which the reply is attached.
- 2. Open the reply by viewing the attachment in the message, as described in "To View an Attachment in a Message" on page 52.
- 3. Click OK to close the reply. Evolution updates the attendee list, based on the details of the reply.
- 4. Close the email message.

Refreshing the Meeting Details

When you accept a meeting invitation, you add the meeting to your calendar. You might want to check that the meeting details are still up-to-date. To do this, perform the following steps:

- Double-click on the meeting in the schedule pane, to open the **Appointment** window.
- 2. Choose Actions → Refresh Meeting to send an email message to the meeting organizer. The subject of the email is **Refresh: Calendar information**.
- 3. The organizer decides whether to send you the latest meeting details.

 Only the organizer can change the details of a meeting. Any changes made by a meeting attendee are ignored.

Publishing Free or Busy Information

You can publish the free or busy information for an account, so that other users on the network can consult the schedule for that account when they want to organize a meeting.

To Publish Free or Busy Information

To publish the free or busy information for an account, perform the following steps:

- Choose Actions → Publish Free/Busy Information, to display the Calendar information window. The Calendar information window is an email window, similar to the Inbox Compose a message window. Evolution automatically inserts text in the Subject text box and in the message content area. Evolution includes the free or busy information as an attachment to the email.
- 2. Type, in the **To** text box, the email addresses to which you want to send the free or busy information. If you want to send the information to more than one address, separate the addresses with a comma.
 - Alternatively, click on the To button. Use the **Select Contacts from Addressbook** dialog to select addresses.
 - For more information about the elements in the **Calendar information** window, see "To Send a New Message" on page 54.
- 3. Choose File \rightarrow Send to send the free or busy information to the specified email addresses.

Using Tasks

This chapter provides information on how to work with Ximian Evolution Tasks.

- "Introduction to Tasks" on page 109
- "Creating a Task" on page 111
- "Assigning a Task" on page 115
- "Sending Task Information" on page 116
- "Marking a Task as Complete" on page 117
- "Deleting Tasks" on page 117

Introduction to Tasks

You can use **Tasks** to create a task, view existing tasks, sort the task list, or change the status of a task.

Figure 6–1 shows a typical **Tasks** window.

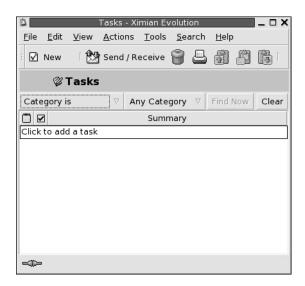

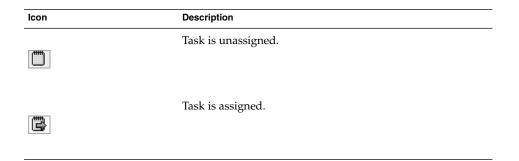

FIGURE 6–1 Typical Tasks Window

In the **Tasks** window, your tasks are organized as a table. The rows of the table display information about your tasks. The columns represent information fields for your tasks, such as the completed status of the task, the summary of the task, and so on. From left to right, the **Tasks** window displays the following columns by default:

Type

The task type is indicated by an icon. The following table lists and describes the task-type icons:

Complete

The completion status is indicated by an icon. The following table lists and describes the completion-status icons:

Icon	Description
	Task is incomplete.
	Task is complete.

■ Summary

The **Summary** is a short text description of the task.

For information on how to change the current view, save the current view, or create custom views, see "Using Views" on page 25.

Tasks are displayed in different formats in the Tasks window, depending on the status of the task. The following table lists and describes the task formats:

Format	Description
Normal	Task is not started or is in progress.
Highlighted	Task is currently selected.
Strikethrough	Task is completed.
Colored	Task is overdue or is due today.

Creating a Task

To create a task, perform the following steps:

- 1. Choose File \rightarrow New \rightarrow Task.
- 2. Enter the task information in the **Basic** tabbed section in the **Task** window. The following table describes the elements in the **Basic** tabbed section:

Element	Description
Summary	Type a short description of the task.

Element	Description
Due Date	Use the drop-down combination boxes to specify the date and time by which to complete the task.
Start Date	Use the drop-down combination boxes to specify the date and time at which to start the task.
Globe button	To specify a time in a different time zone, click on the globe button to the right of the drop-down combination boxes. A Select a Time Zone dialog is displayed. Click on the map to select a time zone, or select a time zone from the drop-down list, then click OK.
Description	Type a detailed description of the task.
Classification	 Select one of the following options: Public: Select this option to enable other users on your network to see all details of this task in your schedule. Private: Select this option to prevent other users on your network from seeing any details of this task in your schedule. Confidential: Select this option to allow other users on your network to see only that this task is in your schedule. The other users cannot see the task details.
Categories and text box	Type the category name to assign a category to this task. If you want to assign more than one category, separate the categories with a comma.
	Alternatively, click on Categories. Use the Edit Categories dialog to select a category.

3. To enter more details about the task, click on the **Details** tab. The following table describes the elements in the **Details** tabbed section:

Element	Description
Status	Select one of the following status options from the drop-down list: Not Started
	■ In Progress
	■ Completed
	■ Cancelled
Priority	Select one of the following priority options from the drop-down list: • Undefined
	■ Low
	■ Normal
	■ High

Element	Description
% Complete	Use the spin box to specify how complete the task is, or type the percentage in the text box.
	Depending on the value that you enter, Evolution updates several other elements, as follows: 100:
	Selects Completed from the Status drop-down list.
	 Inserts the current date and time in the Date Completed drop-down combination boxes.
	■ 1–99 inclusive:
	 Selects In Progress from the Status drop-down list. Inserts None in the first Date Completed drop-down combination
	box.
	 Clears the contents of the second Date Completed drop-down combination box.
	1 0:
	 Selects Not Started from the Status drop-down list.
	Inserts None in the first Date Completed drop-down combination box.
	 Clears the contents of the second Date Completed drop-down combination box.

Element Description Date Select a date from the first drop-down combination box, and a time from Completed the second drop-down combination box, to specify the date and time at which the task was completed. Depending on the value that you enter, Evolution updates several other elements, as follows: date: Selects Completed from the Status drop-down list. Inserts 100 in the % Complete text box. Inserts the selected date in the first Date Completed drop-down combination box. Inserts the current time in the second Date Completed drop-down combination box. Now: Selects **Completed** from the **Status** drop-down list. Inserts 100 in the % Complete text box. Inserts the current date in the first Date Completed drop-down combination box. Inserts the current time in the second Date Completed drop-down combination box. Today: Selects Completed from the Status drop-down list. Inserts 100 in the % Complete text box. Inserts the current date in the first Date Completed drop-down combination box. The contents of the second **Date Completed** drop-down combination box remain unchanged. None: If the status of the task is **Not Started**, no elements are affected. If the status of the task is In Progress, Evolution inserts 50 in the % Complete text box. If the status of the task is **Completed**, Evolution updates several elements, as follows: Selects Not Started from the Status drop-down list. Inserts 0 in the % Complete text box. Inserts None in the first **Date Completed** drop-down

Type the URL associated with the task, if any. Click on the connect button to open the specified URL in the default web browser.

Clears the contents of the second Date Completed drop-down

4. To save the task, choose File \rightarrow Save.

URL

To save the task and then close the **Task** window, choose File \rightarrow Save and Close.

combination box.

combination box.

To save the task details in a file, choose File \rightarrow Save As to display the **Save as** window. Enter the filename, then click OK.

To close the **Task** window without saving the task, choose File \rightarrow Close.

5. To preview the details of the task, choose File \rightarrow Print Preview. To print the details of the task, choose File \rightarrow Print.

Assigning a Task

You can only assign a task from a local folder. You cannot assign a task from a Sun Java System Calendar Server folder.

To assign a task, perform the following steps:

- 1. Double-click on the task in the Tasks window to open a Task window containing the tabbed sections described in "Creating a Task" on page 111.
- 2. Choose Actions \rightarrow Assign Task to display the **Assignment** tabbed section.
- 3. Select the organizer of the task from the **Organizer** drop-down list.
- 4. The task assignments are listed in table format. You can customize the table by adding or removing columns, as described in "Using Views" on page 25. By default, the task assignments table contains the columns described in the following table:

Column	Description
Attendee	Evolution automatically enters the current user as the first entry in the attendee list.
	To add another attendee to the list, click on the Click here to add an attendee text below the attendee list. Type the name of the person, group, resource, or room to which you want to assign the task. If you want to send the task information to the attendee, you must type the email address of the attendee in this field.
Type	Click on the field under the Type column header to activate a drop-down list. Select one of the following types from the drop-down list: Individual Group Resource Room Unknown

Column	Description
Role	Click on the field under the Role column header to activate a drop-down list. Select one of the following roles from the drop-down list: Chair Required Participant Optional Participant Non-Participant Unknown
RSVP	Click on the field under the RSVP column header to activate a drop-down list. Select Yes or No from the drop-down list to specify whether to send a reply to the meeting organizer.
Status	Click on the field under the Status column header, to activate a drop-down list. Select one of the following status options from the drop-down list: Needs Action Accepted Declined Tentative Delegated

- 5. Click on the **Invite Others** button to create a new entry in the assignments table. Evolution also displays the **Select Contacts from Addressbook** dialog, which you can use to select attendees.
- 6. Choose File → Save and Close. Evolution creates the task assignments and then asks if you would like to send the task assignment information.
- 7. Click Yes to send the task assignment information to the specified mail addresses. Click No to save the task assignment information without sending to the specified mail addresses. You can send the task assignment information at a later time, as described in "Sending Task Information" on page 116.

Sending Task Information

To send task information, perform the following steps:

- 1. Double-click on the task in the **Tasks** window to open a **Task** window.
- Choose Actions → Forward as iCalendar to display a task information window.
 The task information window is an email message window, similar to the Inbox
 Compose a message window. Evolution automatically inserts text in the Subject
 text box and in the message content area. Evolution includes the task information
 as an attachment to the message.

- 3. Type the email addresses to which you want to send the task information, in the **To** text box. If you want to send the information to more than one address, separate the addresses with a comma. Alternatively, click on the To button. Use the Select Contacts from Addressbook dialog to select addresses.
 - For more information about the elements in the task information window, see "To Send a New Message" on page 54.
- 4. Choose File → Send to send the task information to the specified email addresses.
- 5. Choose File \rightarrow Close to close the **Task** window.

Marking a Task as Complete

To mark a task as complete, perform the following steps:

- 1. Select the task in the **Tasks** window.
- 2. Choose Edit \rightarrow Mark as Complete.

Deleting Tasks

You can delete individual tasks, or all tasks marked as complete.

To Delete Individual Tasks

To delete individual tasks, perform the following steps:

- 1. Select the tasks in the **Tasks** window.
- 2. Choose Edit \rightarrow Delete to display a confirmation alert.
- 3. Click Yes to delete the selected tasks.

To Delete All Tasks Marked As Complete

To delete all tasks marked as complete, perform the following steps:

- 1. Choose Actions \rightarrow Expunge to display a confirmation alert.
- 2. Click Yes to delete all tasks marked as completed.

Using Contacts

The information in this chapter describes how to use Evolution to manage your contact information.

- "Introduction to Contacts" on page 119
- "Searching Your Contacts" on page 120
- "Managing Your Contacts" on page 122

Introduction to Contacts

Evolution enables you to store information about your contacts in contacts folders. For each contact, you can store the name, job title, telephone numbers, email addresses, and so on. You can also create contact lists. You can use a contact list to send a message to many of your contacts at one time.

Figure 7–1 shows a typical contacts window.

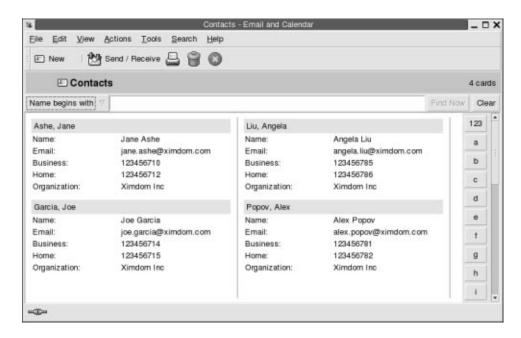

FIGURE 7–1 Typical Contacts Window

Evolution uses the Vcard format for contact information.

Evolution also enables you to use an LDAP server for your contact information. For more information on how to configure an LDAP server, see "Configuring an LDAP Server" on page 39.

Searching Your Contacts

Evolution enables you to search your contacts. You can use the searchbar to perform a simple search of all contacts in a folder. For example, you can search for a message that contains a particular text string. You can use the alphabetic index buttons to search for a contact whose name begins with a particular letter.

You can also perform advanced searches that use more complex search criteria. For example, you can search for contacts by email address or category.

To Search All Contacts in a Folder

To search all contacts in a folder, perform the following steps:

- 1. Display the folder that contains the contacts that you want to search.
- 2. Select the contact component in which to search from the drop-down list in the searchbar.
- 3. Type the text that you want to search for in the text box on the searchbar.
- 4. Click on the Find Now button. Alternatively, choose Search \rightarrow Find Now. The contacts that match the search criteria are displayed.
 - To clear the search criteria and display all the contacts in the folder, choose Search \rightarrow Clear. Alternatively, click on the Clear button in the searchbar.

You can also use the alphabetic index buttons at the right side of the window to search for contacts. To search for a contact whose name begins with a particular letter, click on that letter. To search for contacts whose name begins with a number or another non-alphabetic character, click on the 123 index button.

To Perform an Advanced Search

To perform an advanced search on your contacts, perform the following steps:

- 1. Display the folder that contains the contacts that you want to search.
- 2. Choose Tools → Search for Contacts. Alternatively, select **Advanced** from the drop-down list in the searchbar. An **Advanced Search** dialog is displayed.
- 3. Use the If group box to create criteria for the search. To create criteria, perform the following steps:
 - a. From the first drop-down list, select the contact component in which to search. For example, select **Email** to search the text in the email address of the contact.
 - b. From the second drop-down list, select the relationship between the contact component and the search text. For example, to search for contacts whose email address includes the search text, select contains from the second drop-down list
 - c. In the text box, type the search text. This text is not case sensitive.
 - d. To add more criteria, click on the Add button. To remove a criterion, click on the Remove button beside the criterion.
- 4. Select the appropriate option from the Execute actions drop-down list. Select one of the following options:
 - if any criteria are met: Select this option if you want the search to return matches where any of the specified criteria are met.
 - if all criteria are met: Select this option if you want the search to return only matches where all of the specified criteria are met.

5. Click OK to perform the advanced search. The contacts that match are displayed in the contacts folder.

To clear the advanced search criteria and display all the messages in the folder, choose Search \rightarrow Clear.

Managing Your Contacts

The following sections describe how to perform the following tasks:

- Add contacts and contact lists.
- Edit contacts and contact lists.
- Delete contacts and contact lists.
- Save contacts and contact lists.
- Forward contacts and contact lists.
- Save contacts and contact lists.
- Move and copy contacts and contact lists.
- Send messages to contacts and contact lists.
- Select multiple contacts and contact lists.

To Add a Contact

To add a contact, perform the following steps:

- 1. Choose File \rightarrow New \rightarrow Contact. A **Contact Editor** window is displayed.
- 2. Enter the contact details in the General tabbed section. The following table describes the elements in the General tabbed section:

Element	Description
Full Name	Type the full name of the contact.
	Alternatively, click on the Full Name button. Use the Full Name dialog to create the full name of the contact.
Job title	Type the job title of the contact.
Organization	Type the organization to which the contact belongs.
File as	Use the drop-down list to select how to file the contact in your list of contacts. The options in the drop-down list are generated from the full name that you enter.

Element	Description
Business, Home, Business fax, Mobile	Use these elements to enter the telephone numbers of the contact, and other information.
	Select the category of information that you want to enter from the category drop-down list to the left of the text box. For example, to enter the business telephone number of the contact, select Business from the drop-down list. To enter the pager number of the contact, select Pager , and so on.
	Type the contact information for the category that you selected in the text box.
Primary email	Type the primary email address for the contact.
	To enter another email address, select Email 2 or Email 3 from the category drop-down list to the left of the text box. Type the other email address for the contact in the text box.
Wants to receive HTML mail	Select this option if this contact wants to receive email in HTML format. If you do not select this option, when you send email in HTML format to this contact, Evolution converts the email to plain text format.
Business	Select the category of address that you want to enter from the category drop-down list to the left of the address text area. For example, to enter the home address of the contact, select Home from the drop-down list.
Address field	Enter the address of the contact.
	Alternatively, click on the Address button. Use the Full Address dialog to create the full address of the contact.
This is the mailing address	Select this option to use the address in the address field as the mail address for the contact.
Web page address	Enter a URL for a web page for the contact in the field. Click on the connect button to open the specified URL in the default web browser.

Element	Description
Categories	Type the categories to which the contact belongs in the text box. If you type more than one category, separate the categories with a comma.
	Alternatively, click on the Categories button. An Edit Categories dialog is displayed. To select a category, click on the check box for the category to display a check mark.
	To add a new category, click on the Edit Master Category List button. An Edit Global Category List dialog is displayed. Click on the text area at the top of the category list, type the name of the new category, then press Return. To delete a category, select the category, then click on the Remove button. Click Close to close the Edit Global Category List dialog.
	Click OK to put the information from the Edit Categories dialog into the text box in the General tabbed section, and close the dialog.

3. To enter more contact details, click on the **Details** tab. The following table describes the elements in the **Details** tabbed section:

Element	Description
Department	Type the department in which the contact works.
Office	Type the office in which the contact works.
Profession	Type the profession of the contact.
Manager's name	Type the name of the manager of the contact.
Assistant's name	Type the name of the assistant to the contact.
Nickname	Type the nickname of the contact.
Spouse	Type the name of the spouse of the contact.
Birthday	Use the drop-down combination box to specify the date of the birthday of the contact.
Anniversary	Use the drop-down combination box to specify the date of the wedding anniversary of the contact.
Notes	Type any other information that you want to add for the contact.

4. To enter free or busy information, or other calendar information for the contact, click on the **Collaboration** tab. The following table describes the elements in the **Collaboration** tabbed section:

Element	Description
Public Calendar URL	Enter a URL that you can access to view the public calendar information for the contact. Click on the connect button to open the specified URL in the default web browser.
Free/Busy URL	Enter a URL that you can access to view the free or busy information for the contact. Click on the connect button to open the specified URL in the default web browser.

5. To save the contact, choose File \rightarrow Save.

To save the contact and then close the **Contact Editor** window, choose File \rightarrow Save and Close.

To save the contact as a Vcard-format file, choose File \rightarrow Save As to display the **Save Contact as VCard** window. Type the filename, then click OK.

To close the **Contact Editor** window without saving the contact, choose File \rightarrow Close.

6. To print the details of the contact, choose File \rightarrow Print.

Note – In **Phone List** and **By Company** views, you can add a contact directly into the contacts window. To add a contact in these views, click on the **Click here to add a contact** area, then enter contact information in each of the available fields.

To Add a Contact List

To add a contact list, perform the following steps:

- 1. Choose File \rightarrow New \rightarrow Contact List.
- Type a name for the list in the List name text box in the Contact List Editor window.
- 3. To add an email address to the contact list, type the email address in the text box at the top of the **Members** group box, then click on the Add button. The email address is added to the contact list.
- 4. To add a contact from your **Contacts** folder to the list, open your **Contacts** folder in a separate window. Drag the contact from the **Contacts** folder to the list in the lower part of the **Members** group box.
- 5. To remove a member from the contact list, select the member in the list in the lower part of the **Members** group box, then click Remove.

- 6. When you send a message to a contact list, the names or email addresses of members of the list are added to the **To** field of the message. If you do not want to send the names or email addresses of members when you send messages to the list, select the Hide addresses when sending mail to this list option. If you select this option, when you send a message to the contact list, the names or email addresses of members of the list are added to the Bcc field of the message.
- 7. To save the contact list, choose File \rightarrow Save.

To save the contact list and then close the **Contact List Editor** window, choose File \rightarrow Save and Close.

To save the contact list as a Vcard-format file, choose File \rightarrow Save As to display the **Save List as VCard** window. Type the filename, then click OK.

To close the **Contact List Editor** window without saving the contact, choose File \rightarrow Close.

To Edit a Contact

To edit a contact, perform the following steps:

- 1. In a contacts folder, select the contact that you want to edit, then choose File \rightarrow Open. Alternatively, double-click on the contact.
 - A **Contact Editor** dialog is displayed with the details of the contact.
- 2. Use the Contact Editor dialog to modify the information for the contact. For information on the elements in the **Contact Editor** dialog, see "To Add a Contact" on page 122.
- 3. Choose File \rightarrow Save to save your changes.

To Edit a Contact List

To edit a contact list, perform the following steps:

- 1. In a contacts folder, select the contact list that you want to edit, then choose File \rightarrow Open. Alternatively, double-click on the contact list.
 - A **Contact List Editor** dialog is displayed with the details of the contact list.
- 2. Use the Contact List Editor dialog to modify the information for the contact list. For information on the elements in the Contact List Editor dialog, see "To Add a Contact List" on page 125.
- 3. Choose File \rightarrow Save to save your changes.

To Save a Contact or Contact List in Vcard Format

To save a contact or contact list as a file in Vcard format, perform the following steps:

- 1. In a contacts folder, select the contact or contact list that you want to save, then choose File \rightarrow Save as VCard.
 - Alternatively, select the contact or contact list, then right-click on the contact or contact list. Choose Save as VCard from the popup menu.
- 2. Use the Save as VCard dialog to specify a location and name for the file.

To Forward a Contact or Contact List

To send a contact or contact list as a file attachment in Vcard format, perform the following steps:

- 1. In a contacts folder, select the contact or contact list that you want to send, then choose Actions \rightarrow Forward Contact.
 - Alternatively, select the contact or contact list, then right-click on the contact or contact list. Choose Forward Contact from the popup menu.
 - A message window is displayed, with the contact or contact list added as an attachment.
- 2. Enter the email address to which you want to send the contact or contact list in the To field.
- 3. Type any text that you want to add to the message in the content area, then choose File \rightarrow Send from the message window.

To Save a Contact or Contact List That You Receive

If you receive a contact or contact list in a message as a file attachment in Vcard format, you can save the contact or contact list to your contacts.

In the message, click on the right arrow icon at the left side of the button, then choose View Inline. The contact or contact list is displayed in the message. Click on the Save to addressbook button to add the contact or contact list.

To Move a Contact or Contact List

To move a contact or contact list to another folder, perform the following steps:

- 1. In a contacts folder, select the contact or contact list that you want to move, then choose Actions \rightarrow Move to Folder.
 - Alternatively, select the contact or contact list, then right-click on the contact or contact list. Choose Move to folder from the popup menu.
- 2. Use the **Move card to** dialog to specify the folder to which you want to move the contact or contact list.

Note – You can only move a contact or contact list to folders whose folder type is **Contacts**.

To Copy a Contact or Contact List

To copy a contact or contact list to another folder, perform the following steps:

- In a contacts folder, select the contact or contact list that you want to copy, then choose Actions → Copy to Folder.
 - Alternatively, select the contact or contact list, then right-click on the contact or contact list. Choose Copy to folder from the popup menu.
- Use the Copy card to dialog to specify the folder to which you want to copy the contact or contact list.

Note – You can only copy a contact or contact list to folders whose folder type is **Contacts**.

To Delete a Contact or Contact List

To delete a contact or contact list, select the contact or contact list that you want to delete, then choose Edit \rightarrow Delete.

A confirmation dialog is displayed. Click Delete to delete the contact or contact list.

To Send a Message to a Contact or Contact List

To send a message to a contact or contact list, select the contact or contact list in a contacts folder, then choose Actions \rightarrow Send Message to Contact. A **Compose a message** window opens, with the contacts in the appropriate field. Compose the message, then send the message.

Using Sun Java System Calendar Server Accounts and Folders

The information in this chapter describes how to use Sun Java System Calendar Server for Ximian Evolution accounts and folders.

- "Introduction to Sun Java System Calendar Server" on page 129
- "Working with Sun Java System Calendar Server Accounts" on page 130
- "Using the Personal Calendar Folder" on page 131
- "Using the Personal Tasks Folder" on page 132
- "Using the Personal Invitations Folder" on page 133
- "Managing Subscriptions" on page 133
- "Setting Access Permissions" on page 135

Introduction to Sun Java System Calendar Server

The Sun Java System Calendar Server connector enables you to use Evolution as a client for the Sun Java System Calendar Server. You can access one or more accounts on Sun Java System Calendar Server, send and receive invitations to meetings, and share calendar access with other people in your organization. The server is designed to work with LDAP directory servers and POP or IMAP email servers, which you can configure separately.

Sun Java System Calendar Server accounts are distinct from email or directory server accounts, and have their own section in the **Evolution Settings** dialog. Sun Java System Calendar Server accounts and folders differ from other Evolution folders in the following ways:

A Sun Java System Calendar Server account always has at least three folders: Personal Calendar, Personal Tasks, and Personal Invitations. You cannot delete these three folders. To delete other folders that you create, right-click on the folder then select Delete from the popup menu.

- The Sun Java System Calendar Server does not support nested folders more than one level deep. Each folder that you create or open exists on the same level as all other folders. Each folder that you create automatically contains three subfolders: Calendar, Tasks, and Invitations.
- As with individual mail accounts, each Sun Java System Calendar Server account is displayed as a top-level folder in the folder pane. You can drag one or more folders to the shortcuts bar to create shortcuts, but no shortcuts are created automatically. To display the folder pane, choose View → Folder Bar from the main Evolution window.
- Each Sun Java System Calendar Server folder has two types of ownership: primary ownership and normal ownership. If you create a folder, you are the primary owner and have all of the access permissions for the folder. You can also add others to the list of owners for that folder. You can set different access levels for the other owners. For more information, see "Setting Access Permissions" on page 135.

Working with Sun Java System Calendar Server Accounts

This section describes how to create, edit, or delete a Sun Java System Calendar Server account.

To Create a Sun Java System Calendar Server Account

For information on how to create a new Sun Java System Calendar Server account, see "Configuring Your Sun Java System Calendar Server Account" on page 38.

To Edit a Sun Java System Calendar Server Account

To edit a Sun Java System Calendar Server account, perform the following steps:

- 1. Choose Tools \rightarrow Settings to display the **Evolution Settings** dialog.
- 2. Click on **Sun ONE accounts** in the left pane. Evolution displays a table of accounts that you have created, in the right pane.
- 3. Select the account that you want to edit.

- 4. Click Edit to display an **Options for account** *name* dialog. For information on the contents of the **Options for account** *name* dialog, see "Configuring Your Sun Java System Calendar Server Account" on page 38.
- 5. Use the **Options for account** *name* dialog to modify the details of the Sun Java System Calendar Server account.
- 6. Click OK to save your changes and close the **Options for account** *name* dialog.
- 7. Click OK to close the **Information** alert that tells you that you must restart Evolution for the change to take effect.
- 8. Restart Evolution.

To Delete a Sun Java System Calendar Server Account

To delete a Sun Java System Calendar Server account, perform the following steps:

- 1. Choose Tools \rightarrow Settings to display the **Evolution Settings** dialog.
- 2. Click on the Sun ONE accounts button in the left pane. Evolution displays a table of accounts that you have created, in the right pane.
- 3. Select the account that you want to delete.
- 4. Click Remove to display a confirmation alert.
- 5. Click Delete to delete the selected account.
- 6. Click OK to close the **Information** alert that tells you that you must restart Evolution for the change to take effect.
- 7. Restart Evolution.

Using the Personal Calendar Folder

A calendar that is stored on a Sun Java System Calendar Server functions in a similar way to a calendar stored locally, as described in Chapter 5. There are some differences, as described in this section:

- Every event in a Sun Java System Calendar Server calendar is a meeting, which
 includes schedule and invitation data as well as time, recurrence, and reminder
 data.
- The reminder feature for calendars stored on a Sun Java System Calendar Server works in the same way as the reminder feature for local calendars, except as follows:
 - For security reasons, you can send an email message as a reminder for Sun Java System Calendar Server meetings, but not for locally stored calendars.

- The Sun Java System Calendar Server stores a maximum of one reminder per meeting. Locally stored meetings can have one of each supported reminder
- If you create a reminder and then change the meeting time for a meeting stored on a Sun Java System Calendar Server, the reminder does not adjust automatically. You must delete the old reminder then create a new reminder.
- When you use the Sun Java System Calendar Server calendar to create a meeting, attendees with a Sun Java System Calendar Server account receive their meeting invitation in their **Personal Invitations** folder. If you enter an email address that is not associated with an account on the Sun Java System Calendar Server server, that attendee receives an email notification of the event.
- When you modify or delete a series of appointments, or an appointment within a series of appointments, in a Sun Java System Calendar Server calendar, Evolution displays a **Question** dialog when you save the changes. Select one of the following options in the **Question** dialog, then click OK:
 - This Instance Only: Select this option to delete only the selected appointment.
 - This and Future Instances: Select this option to delete the selected appointment and all future appointments in the series.
 - All Instances: Select this option to delete all appointments in the series.

Free or Busy Information and the Directory Server

You can publish the free or busy information for an account, so that other users on the network can consult the schedule for that account when they want to organize a meeting.

To take advantage of free or busy information, and other Sun Java System Calendar Server calendar server features, use the Sun Java™ System Directory Server where possible. Alternatively, copy cards from the directory server to your local address book. Contact cards that come from the server have a special attribute that identifies that they have calendars on a Sun Java System Calendar Server. Cards that you create may appear identical to cards from the server. However, cards that you create function by email address only, and are not identified and integrated into the Sun Java System Calendar Server system.

Using the Personal Tasks Folder

Task folders stored on a Sun Java System Calendar Server server appear identical to those stored locally, as described in Chapter 6.

Using the Personal Invitations Folder

When someone else creates a meeting in their Sun Java System Calendar Server calendar and lists you as a participant, a new invitation appears in your **Personal Invitations** folder. Invitation folders are structured as follows: the top half of the folder displays a list of invitations, and the bottom half of the folder displays details about the selected item.

The invitations are listed in table format. The following table describes the columns in the invitations table:

Column	Description	
Starts	Indicates when the meeting is scheduled to start.	
Summary	Provides a short description of the meeting.	
Organizer	Specifies the organizer of the meeting.	
Status	Indicates the current status of the meeting invitation. If the invitation is new, the status is Needs Action . To respond to the invitation, click on the field under the Status column header, to activate a drop-down list. Select one of the following status values from the drop-down list: Accepted Declined Tentative	
	This status is displayed until the server synchronizes, which can take up to one minute. At that point, the invitation disappears from your Personal Invitations folder. If you accept the invitation, the event appears in your calendar.	

For information on how to change the current view, save the current view, or create custom views, see "Using Views" on page 25.

Managing Subscriptions

If you have the required access permissions, you can subscribe to calendars owned by other users. If you do not have permission to read a calendar, you can see that the calendar exists and subscribe to the calendar, but you cannot read any of the calendar contents.

To Display All Calendars

To display all calendar folders on the Sun Java System Calendar Server, including folders that belong to other people, right-click on any Sun Java System Calendar Server folder. Choose Manage Subscriptions from the popup menu to open the **SunOne Calendar Subscriptions** dialog.

The available calendars are listed in table format. The following table describes the columns in the calendars table:

Column	Description
Subscribed	Indicates whether you are subscribed to the calendar.
Calendar ID	Provides a unique identifier for the calendar.
Owner	Specifies the owner of the calendar.
Description	Provides a short description of the calendar.

For information on how to change the current view, save the current view, or create custom views, see "Using Views" on page 25.

Click Cancel to close the **SunOne Calendar Subscriptions** dialog.

To Display a Subset of Calendars

By default, all calendars are listed. To display a subset of calendars, perform the following steps:

- Right-click on any Sun Java System Calendar Server folder, then choose Manage Subscriptions from the popup menu to open the SunOne Calendar Subscriptions dialog.
- 2. Select one of the following search criteria from the drop-down list:
 - Any field contains
 - Calendar ID contains
 - Owner contains
 - Description contains
- 3. Type the search text in the text box.
- 4. Click on the **Find Now** button. Evolution lists only the calendars that match the search criteria.
 - To clear the search, click on the Clear button.
- 5. Click Cancel to close the SunOne Calendar Subscriptions dialog.

To Subscribe to a Calendar

To subscribe to a calendar, perform the following steps:

- Right-click on any Sun Java System Calendar Server folder, then choose Manage Subscriptions from the popup menu to open the SunOne Calendar Subscriptions dialog.
- 2. Select the calendar to which you want to subscribe.
- 3. Click on the Subscribe button.
- 4. Click OK to save your changes and close the **SunOne Calendar Subscriptions** dialog.

Evolution displays the selected calendar as a subfolder of the specified Sun Java System Calendar Server folder.

To Unsubscribe From a Calendar

To unsubscribe from a calendar, perform the following steps:

- 1. Right-click on any Sun Java System Calendar Server folder, then choose Manage Subscriptions from the popup menu to open the **SunOne Calendar Subscriptions** window.
- 2. Select the calendar from which you want to unsubscribe.
- 3. Click on the Unsubscribe button.
- Click OK to save your changes and close the SunOne Calendar Subscriptions dialog.

Evolution deletes the selected calendar from the specified Sun Java System Calendar Server folder.

Setting Access Permissions

Access permissions control who can view or change each calendar folder.

Primary calendar owners have full access to their own calendars. The Sun Java System Calendar Server does not perform any access control checks when primary owners access their own calendars. Primary calendar owners can designate other owners for their calendars. The other owner can then act on behalf of the primary owner to schedule, delete, modify, accept, or decline events or tasks for a calendar.

Access Control Rule Ordering

The order in which the access control rules are listed is significant, because the server follows the first rule that grants or denies access, and ignores all subsequent conflicts.

Always put the most specific rules first, and the more general rules later. For example, suppose the first rule for the calendar jane.ashe:sports grants read access to all users. Then, the Sun Java System Calendar Server encounters a second rule that denies angela.liu read access to this calendar. In this case, the Sun Java System Calendar Server grants angela.liu read access to this calendar and ignores the second rule because of the conflict.

To ensure that an access right for a specific user such as angela.liu is honored, place the rule for angela.liu before more global entries such as a rule that applies to all users of a calendar.

To Display the Access Permissions

To display the access permissions for a folder, perform the following steps:

- 1. Right-click on the folder, then choose Permissions from the popup menu to display the **Folder permissions** dialog.
- 2. The access control rules are listed in the **Permissions** tabbed section. The following table describes the elements in the **Permissions** tabbed section:

Element	Description
Name	Name of the person or group with access permissions.
Availability	Select this option to allow the named person to see that the folder exists.
Invite	Select this option to allow the named person to invite you to meetings.
Read	Select this option to allow the named person to read the contents of the folder.
Delete	Select this option to allow the named person to delete the contents of the folder.
Modify	Select this option to allow the named person to modify the contents of the folder.
Add	Click Add to add a new entry to the permissions list.
Edit	Click Edit to edit an entry in the permissions list.
Remove	Click Remove to remove an entry from the permissions list.
OK	Click OK to save your changes and close the Folder permissions dialog.

Element	Description
Cancel	Click Cancel to close the Folder permissions dialog without saving your changes.

3. To display the list of owners for the folder, click on the **Owners** tab. The following table describes the elements in the **Owners** tabbed section:

Element	Description
User	Displays the list of owners of the folder.
Add	Click Add to add a user to the User list.
Remove	Click Remove to remove the selected user from the User list.
OK	Click OK to save your changes and close the Folder permissions dialog.
Cancel	Click Cancel to close the Folder permissions dialog without saving your changes.

To Grant Access Permissions to a User

To grant access permissions for a folder to a user, perform the following steps:

- 1. Right-click on the folder and choose Permissions from the popup menu to display the Folder permissions dialog.
- 2. Click Add to display the **Add permission** dialog.
- 3. Type the name of the user in the **User** text box.
- 4. Select some or all of the required permissions:
 - Availability
 - Invite
 - Read
 - Delete
 - Modify
- 5. Click OK to save your changes and close the **Add permission** dialog.
- 6. Click OK to save your changes and close the Folder permissions dialog.

To Add a User to the List of Owners

To add a user to the list of owners for a folder, perform the following steps:

1. Right-click on the folder and choose Permissions from the popup menu to display the Folder permissions dialog.

- 2. Click on the **Owners** tab to display the **Owners** tabbed section.
- 3. Click Add to display the **Add owner** dialog.
- 4. Type the name of the user in the **Enter user name** text box.
- 5. Click OK to save your changes and close the **Add owner** dialog.
- 6. Click OK to save your changes and close the Folder permissions dialog.

You can grant different levels of access to the owners. Unless you choose otherwise, the owners can view and edit Public, Private, and Confidential tasks and events for that folder.

To Remove Access Permissions from a User

To remove access permissions for a folder from a user, perform the following steps:

- 1. Right-click on the folder and choose Permissions from the popup menu to display the **Folder permissions** dialog.
- 2. Select the user in the **Permissions** tabbed section.
- 3. Deselect some or all of the required permissions:
 - Availability
 - Invite
 - Read
 - Delete
 - Modify

Alternatively, click Remove to remove the user from the list.

4. Click OK to save your changes and close the Folder permissions dialog.

To Remove a User from the List of Owners

To remove a user from the list of owners for a folder, perform the following steps:

- 1. Right-click on the folder and choose Permissions from the popup menu to display the **Folder permissions** dialog.
- 2. Click on the Owners tab to display the Owners tabbed section.
- 3. Select the user in the list.
- 4. Click Remove to remove the user from the list of owners.
- 5. Click OK to save your changes and close the **Folder permissions** dialog.

PART

Customizing Evolution

If you want to find out how to use Evolution, see Part I. This part of the manual contains the following chapter:

■ Chapter 9

Read this chapter for information about how to configure the various components of Evolution.

Configuring Evolution

This chapter describes how to configure Evolution.

- "Selecting Functionality to Configure" on page 141
- "Configuring Mail Accounts" on page 142
- "Setting Folders Preferences" on page 146
- "Setting Mail Preferences" on page 148
- "Setting Composer Preferences" on page 152
- "Setting Calendar and Tasks Preferences" on page 155
- "Sun Java System Calendar Server Accounts" on page 158
- "LDAP Servers" on page 158
- "Setting Summary Preferences" on page 159

Selecting Functionality to Configure

To select the functionality that you want to configure, perform the following steps:

- 1. Choose Tools \rightarrow Settings.
- 2. Select the functionality that you want to configure from the left pane of the **Evolution Settings** dialog. The preferences for that functionality are displayed in the right pane.

Use the right pane to modify the preferences for the functionality.

The **Evolution Settings** dialog contains buttons. The following table describes the buttons:

Button	Description
Apply	Click on this button to save any changes that you have made in the Evolution Settings dialog, and to implement the changes immediately.
Close	Click on this button to close the Evolution Settings dialog. Any changes that you made are not saved.
OK	Click on this button to save any changes that you have made in the Evolution Settings dialog, and to close the dialog.

Configuring Mail Accounts

To configure your mail accounts, click on the Mail Accounts icon in the left pane of the Evolution Settings dialog. Table 9–1 lists the dialog elements that you can use to configure your mail account settings.

TABLE 9–1 Mail Account Preferences

Dialog Element	Description
Accounts table	This table lists your mail accounts. Double-click on a mail account to edit the mail account.
Add	Click on this button to add a mail account. The Evolution Account Assistant is displayed. The Evolution Account Assistant guides you through the process to add a mail account.
	For more information on how to add a mail account, see "Using the Evolution Setup Assistant" on page 29.
Edit	To edit a mail account, select the account in the accounts table, then click on the Edit button.
	For more information on how to edit a mail account, see "To Edit a Mail Account" on page 143.
Remove	To delete a mail account, select the account in the accounts table, then click on the Remove button. A confirmation dialog is displayed. Click Delete on the confirmation dialog to delete the mail account.
Default	To make a mail account your default mail account, select the account in the accounts table, then click on the Default button.

TABLE 9–1 Iviali Account Preferences (Continuea)	
Dialog Element	Description
Enable, Disable	To disable a mail account, select the account in the accounts table, then click on the Disable button. Alternatively, click on the check box in the Enabled column for the account.
	To enable a mail account, select the account, then click on the Enable button. Alternatively, click on the check box in the

Enabled column for the account.

To Edit a Mail Account

You can customize your mail account in the following functional areas:

- Identity
- Receiving Mail
- **Receiving Options**
- Sending Mail
- Defaults
- Security

Identity Details

Use the Identity tabbed section to specify identity details for a mail account. For information on the elements in the Identity tabbed section, see "Configuring Account Management Settings" on page 35 and "Entering Your Identity Information" on page 30. Table 9-2 lists the identity details that you can specify that are not described in "Configuring Account Management Settings" on page 35 and "Entering Your Identity Information" on page 30.

TABLE 9-2 Mail Account Identity Preferences

Dialog Element	Description
Default signature	Select a signature to use as your default signature from the drop-down list. The signature that you select is added to all your messages.

ABLE 9–2 Mail Account Identity Preferences (Continued)	
Dialog Element	Description
Add new signature	Click on this button to add a signature to the list of signatures.
	 To add a signature to the list of signatures, perform the following steps: Click on the Add button to display the Edit signature dialog. Type a name for the signature in the Name text box. Type the signature in the content area of the dialog. For information on how to format the signature, see "Composing Messages" on page 59. Choose File → Save and Close to save the signature and close the dialog.

Receiving Mail Details

Use the **Receiving Mail** tabbed section to specify details for receiving mail for a mail account. For information on the elements in the **Receiving Mail** tabbed section, see "Configuring a Mail Server From Which to Receive Email" on page 30.

Receiving Mail Preferences

Use the **Receiving Options** tabbed section to specify options for receiving mail for a mail account. For information on the elements in the **Receiving Options** tabbed section, see "Configuring Receiving Email Options" on page 32.

Sending Mail Details

Use the **Sending Mail** tabbed section to specify details for sending mail from a mail account. For information on the elements in the **Sending Mail** tabbed section, see "Configuring How to Send Email" on page 34.

Defaults Preferences

Use the **Defaults** tabbed section to specify default preferences for a mail account. Table 9–3 lists the default preferences that you can specify.

TABLE 9-3 Mail Account Default Preferences

Dialog Element	Description
Drafts folder	When you choose File → Save Draft from the Compose a message window, the draft message is saved. Use this preference to specify the folder in which to store your draft messages.
	Click on the folder button to open the Select Folder dialog. Select the folder in which to store your draft messages from the Select Folder dialog, then click OK.
Sent messages folder	When you send a message, a copy of the message is saved automatically. Use this preference to specify the folder in which to store your sent messages.
	Click on the folder button to open the Select Folder dialog. Select the folder in which to store your sent messages from the Select Folder dialog, then click OK.
Restore Defaults	Click on this button to restore the Evolution default settings for the Drafts folder and Sent messages folder preferences.
Always carbon-copy (Cc) to	Select this option if you want to copy all of your messages to an address. Enter the address to which you want to copy your messages in the field. If you want to copy your messages to more than one address, separate the addresses with a comma.
Always blind carbon-copy (Bcc) to	Select this option if you want to blind-copy all of your messages to an address. Enter the address to which you want to blind-copy your messages in the field. If you want to blind-copy your messages to more than one address, separate the addresses with a comma.

Security Preferences

Use the **Security** tabbed section to specify your PGP or GPG security preferences for a mail account. PGP and GPG are applications that are used to encrypt and decrypt messages.

Table 9–3 lists the security preferences that you can set.

TABLE 9–4 Mail Account Security Preferences

Dialog Element	Description
PGP/GPG Key ID	Type your public key in the text box.

TABLE 9-4 Mail Account Security Preferences	(Continued)
Dialog Element	Description
Always sign outgoing messages when using this account	Select this option to attach an encrypted signature to all messages that you send from this email account.
Don't sign meeting requests (for Outlook compatibility)	Select this option if you do not want to attach an encrypted signature when you send meeting information to attendees in Calendar .
	Outlook cannot accept meeting requests with encrypted signatures. Select this option if any of the meeting attendees use Outlook.
Always encrypt to myself when sending encrypted mail	Select this option to always send a copy of your encrypted messages to yourself in encrypted form.
	Select this option if you want to be able to decrypt the encrypted messages that you send, for example, in your Sent folder or Outbox folder.
Always trust keys in my keyring when encrypting	Select this option if you do not want to validate the public keys of contacts who are in your <i>public keyring</i> when you encrypt a message. A public keyring is a file that lists all of the public keys that you know.

Setting Folders Preferences

Use the **Folder Settings** dialog to specify folder preferences. You can customize the folder preferences in the following functional areas:

- Default Folders
- Offline Folders
- Autocompletion Folders

Default Folders Preferences

Use the **Default Folders** tabbed section to specify default folders for Evolution components. Table 9–5 lists the default folder preferences that you can set.

TABLE 9–5 Default Folder Preferences

Dialog Element	Description
Mail	Use this preference to specify the folder to which you want incoming messages delivered. This preference relates to POP email accounts only.
	Click on the folder button to open the Select Default Folder dialog. Select the folder to which you want your messages delivered from the dialog, then click OK.
Contacts	Use this preference to specify the default folder where you want to store your contact information.
	Click on the folder button to open the Select Default Folder dialog. Select the folder where you want to store your contacts from the dialog, then click OK.
Calendar	Use this preference to specify the default folder where you want to store your appointments and meetings.
	A summary of the default calendar folder is displayed in your Summary . When you synchronize a PDA, the PDA synchronizes with the default calendar folder.
	Click on the folder button to open the Select Default Folder dialog. Select the folder where you want to store your appointments and meetings from the dialog, then click OK.
	Note – To use your Personal Calendar folder from your Sun Java Enterprise System Calendar Server account, select the Personal Calendar folder from the Select Default Folder dialog.
Tasks	Use this preference to specify the default folder where you want to store your tasks.
	A summary of the default tasks folder is displayed in your Summary . When you synchronize a PDA, the PDA synchronizes with the default tasks folder.
	Click on the folder button to open the Select Default Folder dialog. Select the folder where you want to store your tasks from the dialog, then click OK.
	Note – To use your Personal Tasks folder from your Java Enterprise System calendar server account, select the Personal Tasks folder from the Select Default Folder dialog.

Offline Folders Preferences

Use the **Offline Folders** tabbed section to specify your offline folders. When you switch from online mode to offline mode, Evolution creates copies of the folders you select, on your system. For more information on offline mode and online mode, see "Working Offline" on page 67.

Use the mail folder tree to select the folders that you want to work with offline. Click on the plus sign (+) beside a folder to expand the contents of the folder. To collapse the contents of a folder, click on the minus sign (-) beside the folder.

Autocompletion Folders Preferences

Use the **Autocompletion Folders** tabbed section to specify contact folders to search when Evolution attempts to autocomplete addresses in the **To**, **Cc**, and **Bcc** fields of your messages.

To specify an address autocompletion folder, click on the Add button. Select the folder that you want from the **Add a Folder** dialog, then click OK.

To remove a folder from the list of address autocompletion folders, select the folder in the **Extra Completion folders** list, then click on the Remove button.

Setting Mail Preferences

Use the **Mail Preferences** dialog to specify general mail preferences, preferences for HTML mail, and to customize labels and label colors. You can customize your mail preferences in the following functional areas:

- General
- HTML Mail
- Colors

General Mail Preferences

Use the **General** tabbed section to set general mail preferences. Table 9–6 lists the general mail preferences that you can configure.

TABLE 9–6 General Mail Preferences

Dialog Element	Description
Use the same fonts as other applications	Select this option if you want Evolution to use the font settings that are specified in the Font preference tool. Evolution uses the font settings in the Font preference tool for the Evolution user interface, and for messages in HTML format.
Standard Font	If you deselect the Use the same fonts as other applications option, use this preference to select a font to use for the Evolution user interface, and for messages in HTML format. Click on the font selector button. A Select HTML variable width font dialog is displayed. Use the dialog to select the font that you require.
Terminal Font	If you deselect the Use the same fonts as other applications option, use this preference to select a font to use in the preview pane. Click on the font selector button. A Select HTML fixed width font dialog is displayed. Use the dialog to select the font that you require.
Mark messages as read after n seconds	Select this option if you want to mark messages as read automatically after the message is displayed in the preview pane for a specified period of time.
	Use the spin box to specify how long to wait before the message is marked as read.
Default character encoding	Select the default character encoding for your messages from the drop-down list. For information on character encoding and international messages, see "Sending and Receiving International Messages" on page 66.
Highlight quotations with color color	Lines in messages that begin with a greater-than sign (>) are quotations from other messages. Select this option if you want quotations in your messages to appear in a particular color.
	Click on the color selector button to select a color for quotations. A Pick a color dialog is displayed. Use the dialog to select the color that you require.

Dialog Element	Description
Empty trash folders on exit	Select this option to delete permanently the contents of your Trash folders when you quit Evolution.
Confirm before expunging a folder	Select this option to display a confirmation message before you remove permanently from a folder the messages that you deleted from that folder.
Do not notify me when new mail arrives	Select this option to give no audible feedback when a message is received.
Beep when new mail arrives	Select this option if you want Evolution to make a sound when a message is received.
Play sound file when new mail arrives	Select this option to play a sound file when you receive a message.
	Enter the name of the sound file to play in the Specify filename drop-down combination box. Alternatively, click Browse to display an Execute Command dialog. Use the dialog to select the sound file to play.

HTML Mail Preferences

Use the **HTML Mail** tabbed section to set preferences for HTML mail. Table 9–7 lists the HTML mail preferences that you can configure.

TABLE 9–7 HTML Mail Preferences

Dialog Element	Description
Loading Images group	You might receive messages that contain images in the body of the message. You might also receive messages that contain links to images on the Internet. Linked images might be slow to load, and in some cases might provide information to senders of spam email.
	Select one of the options from this group to specify what Evolution does with linked images. Select one of the following options: Never load images off the net: Select this option to never download linked images. Load images if sender is in addressbook: Select this option to download linked images only if the sender is in your list of contacts. Always load images off the net: Select this option to download all linked images.
Show animated images	Select this option to show animated images that are either inserted into, or attached to, messages that you receive.
Prompt when sending HTML messages to contacts that don't want them	Select this option to display an alert when you send a message in HTML format to a contact who does not want to receive messages in HTML format. The alert is displayed when you send a message in HTML format to a contact in your contact list that does not have the Wants to receive HTML mail option selected.

Color Preferences

Use the **Color** tabbed section to set color preferences for labels.

To change the color of a label, click on the color selector button at the right side of the label text box. Use the Pick a color dialog to select the color that you require for the label.

To create a new label, you must overwrite one of the current labels. Type a name for the new label in the text box of the label that you want to overwrite. To change the color of the label, click on the color selector button at the right side of the text box. Use the **Pick a color** dialog to select the color that you require for the label.

To restore the Evolution default settings for labels, click on the Restore defaults button.

Setting Composer Preferences

Use the **Composer Preferences** settings to specify color. You can customize the composer preferences in the following functional areas:

- General
- Signatures
- Spell Checking

General Message Composition Preferences

Use the **General** tabbed section to set message composition preferences. Table 9–8 lists the message composition preferences that you can set.

TABLE 9–8 General Message Composition Preferences

Dialog Element	Description
Forward style	You can select different styles in which to forward messages. Select the default forward style for your messages from the drop-down list.
	For more information on the styles in which to forward messages, see "To Forward a Message" on page 56.
Reply style	You can select different styles in which to reply to messages. Select the default reply style for your messages from the drop-down list.
	 Select one of the following options: Quote original message: Select this option to insert the original message in the body of the new message, and insert greater-than signs (>), before each line of the original message. Do not quote original message: Select this option to exclude the original message from the reply message. Attach original message: Select this option to attach the original message to the new message.

Dialog Element	Description
Character set	Select the default character encoding for your messages from the drop-down list.
Format messages in HTML	Select this option to make HTML format the default format for your messages. If you do not select this option, the default format is plain text format.
Automatically insert smiley images	Select this option to insert emoticon images automatically as you type. For example, when you type : -), a smile icon is inserted automatically.
	This option applies only to messages in HTML format.
Prompt when sending messages with an empty subject line	Select this option to display an alert message when you send a message that has an empty Subject text box.
Prompt when sending messages with only Bcc recipients defined	Select this option to display an alert message when you send a message that only has addresses in the Bcc field, but not in the To field or Cc field.

Signature Preferences

Use the **Signatures** tabbed section to set signature preferences. Table 9–9 lists the signature preferences that you can set.

TABLE 9–9 Signature Preferences

Dialog Element	Description
Signature list	Displays a list of signatures that you can insert into your messages. When you compose a message, you can select one of the signatures from the Signature drop-down list.

Dialog Element	Description
Add	Click on this button to add a signature to the list of signatures.
	 To add a signature to the list of signatures, perform the following steps: Click on the Add button to display the Edit signature dialog. Type a name for the signature in the Name text box. Type the signature in the content area of the dialog. For information on how to format the signature, see "Composing Messages" on page 59. Choose File → Save and Close to save the signature and close the dialog.
Add Script	You can use a script to generate your signature. Click on the Add Script button to add a script to generate your signatures.
	 To add a script to the list of signatures, perform the following steps: Click on the Add Script button to display the Add script signature dialog. Type a name for the script in the Name text box.
	 Enter the filename of the script that you want to use in the Script drop-down combination box. Alternatively, click Browse to display a Select file dialog. Use the dialog to select the script that you want to use. Click OK.
Edit	To edit a signature or a signature script, select the item from the signature list, then click on the Edit button.
Remove	To delete a signature or a signature script, select the item from the signature list, then click on the Remove button.

Spell Checking Preferences

Use the Spell Checking tabbed section to set spellchecker preferences. Table 9–10 lists the spellchecker preferences that you can set.

TABLE 9-10 Spellcheck Preferences

Dialog Element	Description
Language table	Displays a list of languages for which you have a dictionary installed.
	To enable a language, select the language in the language table, then click on the Enable button. Alternatively, click on the check box in the Enabled column for the language to display a check mark in the check box.
Check spelling while I type	Select this option if you want Evolution to check your spelling while you type. Evolution checks your spelling against the dictionaries for the languages selected in the languages table.
Color for misspelled words	If you select the Check spelling while I type option, Evolution underlines words in your messages that do not match terms in the dictionaries for the languages selected in the languages table.
	Click on the color selector button to change the color of the line under words that do not match. Use the Pick a color dialog to select the color that you require.

Setting Calendar and Tasks Preferences

Use the Calendar and Tasks settings to specify preferences for your calendar and your tasks. You can customize the Calendar and Tasks preferences in the following functional areas:

- General
- Display

General Calendar and Task Preferences

Use the General tabbed section to set general calendar and task preferences. Table 9–11 lists the general calendar and task preferences that you can set.

TABLE 9-11 General Calendar and Task Preferences

Dialog Element	Description
Time zone	Select a time zone for Evolution. To select a time zone, click on the globe button. A Select a Time Zone dialog is displayed.
	The dialog shows a map of the world. Use the dialog to select the Evolution time zone. When you select a time zone, click OK.
	For information on how to use the dialog to select a time zone, see "Selecting a Time Zone" on page 35.
	 Note – Evolution uses the following time zones: Sun Java Enterprise System calendar server time zone System time zone Evolution time zone
	The time zones must be the same for Evolution to function correctly.
Time format	 Select the time format for Calendar. Select one of the following options: 12 hour (AM/PM): Select this option to display the time in the a.m./p.m. format. 24 hour: Select this option to display the time in the 00.00 to 24.00 format.
Week starts	Select the day to use as the first day of the week in the date pane.
Work days	Select the days to include in your work week. The days that you select here are the days that are displayed in Work Week View .
Day begins	Use the drop-down combination box to specify the time at which the day begins in the schedule pane.
Day ends	Use the drop-down combination box to specify the time at which the day ends in the schedule pane.
Ask for confirmation when deleting items	Select this option to display a confirmation message when you delete appointments and tasks.
Show a reminder time before every appointment	Select this option to display a reminder message before your appointments. Use the spin box and the drop-down list to specify how long before the appointment to display the reminder. Use the spin box to specify the number, and use the drop-down list to specify the units of time.

Display Preferences

Use the **Display** tabbed section to set calendar and task display preferences. Table 9–12 lists the calendar and task display settings that you can set.

TABLE 9–12 Calendar and Tasks Display Preferences

Dialog Element	Description
Time divisions	Select the time intervals that you want to use in the schedule pane.
Show appointment end times in week and month views	Select this option to display the end time of appointments in Week View and Month View .
Compress weekends in month view	Select this option to display the information for Saturday and Sunday in one column in the schedule pane in Month View .
Show week numbers in date navigator	Select this option to show the week number in the year in the date pane.
Tasks due today	If a task is due today, Evolution displays the task in colored format.
	Click on the color selector button to change the color in which tasks that are due today are displayed. Use the Color for tasks due today dialog to select the color that you require.
Overdue tasks	If a task overdue, Evolution displays the task in colored format.
	Click on the color selector button to change the color in which tasks that are overdue are displayed. Use the Color for overdue tasks dialog to select the color that you require.
Hide completed tasks after time	Select this option to hide completed tasks after a specific period of time. Use the spin box and the drop-down list to specify how long after the task is completed to hide the task. Use the spin box to specify the number, and use the drop-down list to specify the units of time.

Sun Java System Calendar Server Accounts

The Sun Java System Calendar Server connector for Evolution allows you to use Evolution as a client for Sun Java System Calendar Server calendar server. For information on how to configure your Sun Java System Calendar Server account in Evolution, see "Configuring Your Sun Java System Calendar Server Account" on page 38.

LDAP Servers

Use the **Directory Servers** dialog to specify LDAP servers.

TABLE 9–13 LDAP Server Settings

Dialog Element	Description
List of LDAP servers	Displays a list of the LDAP servers to which Evolution can connect.
Add	Click on this button to add an LDAP server. For information on how to configure an LDAP server, see "Configuring an LDAP Server" on page 39.
Edit	To edit an LDAP server, select the server in the list of LDAP servers, then click on the Edit button. For information about using the Edit LDAP Server dialog, see "Configuring an LDAP Server" on page 39.
	When you have entered the information in the dialog, click OK to apply the changes to the LDAP server and close the dialog.
Remove	To delete an LDAP server, select the server in the list of LDAP servers, then click on the Remove button.

Setting Summary Preferences

Use the settings in the **Summary Preferences** dialog to specify summary preferences. You can customize the **Summary Preferences** in the following functional areas:

- Mail
- **News Feeds**
- Weather
- Schedule

Summary Mail Preferences

Use the Mail tabbed section to specify which mail folders to display in the Summary. Table 9–14 lists the mail folder preferences that you can configure for the **Summary**.

TABLE 9–14 Summary Mail Folder Preferences

Dialog Element	Description
Mail folder tree	Use the mail folder tree to select the folders that you want to display in your summary. Click on the plus sign (+) beside a folder to expand the contents of the folder. To collapse the contents of a folder, click on the minus sign (-) beside the folder.
	To select a folder to display in your summary, click on the check box to the left of the folder to display a check mark in the box. To deselect a folder, click on the check box again to remove the check mark.
Show full path for folders	Select this option to display the full path to the folders that are displayed in your summary.

News Feed Preferences

Use the News Feeds tabbed section to specify which news feeds to display in the Summary. Table 9-15 lists the news feed preferences that you can configure for the Summary.

TABLE 9–15 Summary News Feed Preferences

Dialog Element	Description
All news feed list	Displays a list of all the news feeds that you can display in your summary.
Add	To add a news feed to your summary, select the news feed in the All news feed list, then click on the Add button. The news feed is added to the Shown news feed list.
Remove	To remove a news feed from your summary, select the news feed in the Shown news feed list, then click on the Remove button. The news feed is removed from the Shown news feed list.
Shown news feed list	Displays a list of the news feeds that are displayed in your summary.
Refresh time (seconds)	Use the spin box to specify how often you want to refresh the display of news headlines in your summary.
New Feed	Use this button to add a news feed to the All news feed list.
	 To add a news feed to the All news feed list, perform the following steps: Click on the New Feed button. Type a name for the news feed in the Name text box in the New News Feed dialog. Enter the URL for the news feed in the URL field. Click OK.
Max number of items shown	Use the spin box to specify the maximum number of headlines to show for each news feed.
Delete Feed	To delete a news feed that you have added, select the news feed, then click on the Delete Feed button. The news feed is deleted from the All news feed list.

Weather Preferences

Use the **Weather** tabbed section to specify the locations whose weather you want to view in the **Summary**. Table 9–16 lists the weather preferences that you can configure for the **Summary**.

TABLE 9–16 Summary Weather Preferences

Dialog Element	Description
All location tree	Use the location tree to select the locations whose weather you want to display in your summary. Click on the plus sign (+) beside a location to expand the contents of the location. To collapse the contents of a location, click on the minus sign (-) beside the folder.
Add	To add a location to your summary, select the location in the All location tree, then click on the Add button. The location is added to the Shown location list.
Remove	To remove a location from your summary, select the location in the Shown location list, then click on the Remove button.
Shown location list	Displays a list of the locations whose weather is displayed in your summary.
Show temperatures in	Select whether to display temperatures in degrees Celsius or degrees Fahrenheit.
Refresh time (seconds)	Use the spin box to specify how often you want to refresh the display of weather information in your summary.

Summary Calendar and Task Preferences

Use the **Schedule** tabbed section to specify the calendar and task information that you want to view in the Summary. Table 9–17 lists the calendar and task information settings that you can configure for the Summary.

 TABLE 9–17 Summary Calendar and Task Preferences

Dialog Element	Description
How many days should the calendar display at once?	Select how many days of your calendar to display in your summary.
Show all tasks	Select this option to display all your tasks in your summary. Completed tasks that are hidden are not displayed. To hide completed tasks, use the Hide completed tasks after <i>time</i> option. For more information on how to hide completed tasks, see "Setting Calendar and Tasks Preferences" on page 155.

TABLE 9–17 Summary Calendar and Task Preferences (Continued)	
Dialog Element	Description
Show today's tasks	Select this option to display only the tasks for today in your summary. Completed tasks that are hidden are not displayed.

APPENDIX A

Troubleshooting Ximian Evolution

This appendix provides troubleshooting information for Ximian Evolution.

- "Opening Evolution From a Command Line" on page 163
- "Importing Email From Outlook and Outlook Express" on page 164
- "Importing Email From Netscape 4.x" on page 164
- "Importing Contacts From Outlook Express" on page 164
- "Exporting Data from Ximian Evolution" on page 165

Opening Evolution From a Command Line

When you open Evolution, the last folder that you used is displayed. For example, if you display **Inbox**, then close Evolution, the next time that you open Evolution, **Inbox** is displayed.

You can open Evolution from a command line, and specify the folder that you want to open. The following table lists some typical Evolution folders, and the commands that you use to open Evolution with that folder displayed:

Folder	Command
Calendar	evolution-1.4 evolution:/local/Calendar
Contacts	evolution-1.4 evolution:/local/Contacts
Inbox	evolution-1.4 evolution:/local/Inbox
Summary	evolution-1.4 evolution:/local/Summary

Folder	Command
Any folder	evolution-1.4 evolution:/folder-path

Importing Email From Outlook and Outlook Express

The following email applications use proprietary formats that Evolution cannot read or import:

- Microsoft Outlook
- Versions of Outlook Express higher than version 4

To import email from Microsoft Outlook and Versions of Outlook Express higher than version 4, use the following workaround:

- 1. In Windows, import the Microsoft Outlook or Outlook Express emails into an email application that uses the mbox format. For example, import the emails into Mozilla, Netscape, or Eudora.
- 2. Copy the emails to the system or partition you use for Evolution.
- 3. Use the Evolution Import Assistant to import the emails.

Importing Email From Netscape 4.x

Before you import email from Netscape Version 4.x, choose File \rightarrow Compact All Folders from the Netscape Messenger window. If you do not perform this action, Evolution imports and undeletes the messages in your **Trash** folders.

Importing Contacts From Outlook Express

To import contacts from versions of Outlook Express higher than version 4, perform the following steps:

1. In Outlook Express, export each of your contacts and contact lists as Vcard files.

- 2. In Outlook Express, attach each of the Vcard files to a message, then send the message to your Evolution account.
- 3. In Evolution, receive the message.
- 4. In Evolution, to import a contact or contact list from the message, click on the right arrow icon at the left side of the button, then choose View Inline. The contact or contact list is displayed in the message. Click on the Save to addressbook button to import the contact or contact list.

Repeat this step to import other contacts or contact lists from the message.

Exporting Data from Ximian Evolution

Evolution uses standard formats to store data. You can export data easily from Evolution to other applications. The following table lists the formats that Evolution uses to store data:

Application	Format
Email	mbox
Calendar	iCalendar
Contacts	Vcards in a .db3 database

Glossary

bcc To blind-copy a message. The acronym *bcc* means *blind carbon copy*.

blind-copy To copy a message, so that the address that are blind-copied do not

appear in the delivered message.

cc To copy a message. The acronym *cc* means *carbon copy*.

distinguished name A name that uniquely identifies an entry in an LDAP directory.

emoticon An icon that represents a facial expression. For example, the smiley

icon is an emoticon.

expunge To remove permanently from a folder the messages that you deleted.

filter A tool that you use to perform actions automatically on your incoming

and outgoing email. For example, you can create a filter that

automatically moves email that you receive from a particular address

to a particular folder.

GPG GNU Privacy Guard.

IMAP Internet Message Access Protocol (IMAP). Servers that use IMAP

receive and store your messages.

IMAP namespace A directory where your messages are stored.

LDAP Lightweight Directory Access Protocol (LDAP). A protocol that enables

users to access contact information over a network.

mail spool The mbox format stores your messages in one large file. This file is

called a mail spool.

maildir An email format that stores your messages in individual files.

mbox An email format that stores your messages in one large file. Ximian

Evolution uses this format.

mh An email format that stores your messages in individual files.

PGP Pretty Good Privacy.

POP Post Office Protocol (POP). Typically, servers that use POP store your

messages, and allow you to retrieve the messages when you log in to

the server.

public keyring A file that lists all of the public encryption keys that you know.

regular expression A way to specify a pattern to search for in text. For example, the

regular expression t*e finds the text the, time, table, and so on.

search base A location in an LDAP server that is the starting point for an LDAP

search.

security passphrase A sequence of alphanumeric characters that you use with the security

features of Evolution. For example, you must enter your security

passphrase to decrypt an encrypted message.

sendmail A program that sends email.

SMTP Simple Mail Transfer Protocol (SMTP). Typically, an email application

uses SMTP to send a message to a mail server. The mail server then

forwards the message to the appropriate server.

SSL Secure Sockets Layer (SSL). A protocol for secure information transfer

across a network.

TLS Transport Layer Security (TLS). A protocol for secure information

transfer across a network.

virtual folder A tool that you can use to organize your messages, where you use one

folder to view messages that are located in several folders.
