Sun Microsystems, Inc. has intellectual property rights relating to technology embodied in the product that is described in this document. In particular, and without limitation, these intellectual property rights may include one or more of the U.S. patents listed at <http://www.sun.com/patents>, and one or more additional patents or pending patent applications in the U.S. and in other countries.

This document and the product to which it pertains are distributed under licenses restricting their use, copying, distribution, and decompilation. No part of the product or of this document may be reproduced in any form by any means without prior written authorization of Sun and its licensors, if any.

Third-party software, including font technology, is copyrighted and licensed from Sun suppliers.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, AnswerBook2, docs.sun.com, SunVTS, and Solaris are trademarks, registered trademarks, or service marks of Sun Microsystems, Inc. in the U.S. and other countries.

All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc.

The OPEN LOOK and Sun™ Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

Use, duplication, or disclosure by the U.S. Government is subject to restrictions set forth in the Sun Microsystems, Inc. license agreements and as provided in DFARS 227.7202-1(a) and 227.7202-3(a) (1995), DFARS 252.227-7013(c)(1)(ii) (Oct. 1998), FAR 12.212(a) (1995), FAR 52.227-19, or FAR 52.227-14 (ALT III), as applicable.

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Copyright 2005 Sun Microsystems, Inc., 4150 Network Circle, Santa Clara, California 95054, Etats-Unis. Tous droits réservés.

Sun Microsystems, Inc. a les droits de propriété intellectuelle relatifs à la technologie incorporée dans le produit qui est décrit dans ce document. En particulier, et sans limitation, ces droits de propriété intellectuelle peuvent inclure un ou plus des brevets américains énumérés à <http://www.sun.com/patents> et un ou les brevets plus supplémentaires ou les applications de brevet en attente dans les Etats-Unis et dans les autres pays.

Ce produit ou document est protégé par un copyright et distribué avec des licences qui en restreignent l'utilisation, la copie, la distribution, et la décompilation. Aucune partie de ce produit ou document ne peut être reproduite sous aucune forme, par quelque moyen que ce soit, sans l'autorisation préalable et écrite de Sun et de ses bailleurs de licence, s'il y en a.

Le logiciel détenu par des tiers, et qui comprend la technologie relative aux polices de caractères, est protégé par un copyright et licencié par des fournisseurs de Sun.

Des parties de ce produit pourront être dérivées des systèmes Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux Etats-Unis et dans d'autres pays et licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, AnswerBook2, docs.sun.com, SunVTS, et Solaris sont des marques de fabrique ou des marques déposées de Sun Microsystems, Inc. aux Etats-Unis et dans d'autres pays.

Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux Etats-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

L'interface d'utilisation graphique OPEN LOOK et Sun™ a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox pour la recherche et le développement du concept des interfaces d'utilisation visuelle ou graphique pour l'industrie de l'informatique. Sun détient une licence non exclusive de Xerox sur l'interface d'utilisation graphique Xerox, cette licence couvrant également les licenciés de Sun qui mettent en place l'interface d'utilisation graphique OPEN LOOK et qui en outre se conforment aux licences écrites de Sun.

LA DOCUMENTATION EST FOURNIE "EN L'ÉTAT" ET TOUTES AUTRES CONDITIONS, DECLARATIONS ET GARANTIES EXPRESSES OU TACITES SONT FORMELLEMENT EXCLUES, DANS LA MESURE AUTORISÉE PAR LA LOI APPLICABLE, Y COMPRIS NOTAMMENT TOUTE GARANTIE IMPLICITE RELATIVE A LA QUALITE MARCHANDE, A L'APTITUDE A UNE UTILISATION PARTICULIERE OU A L'ABSENCE DE CONTREFAÇON.

# SunVTS 6.0 Release Notes

---

---

## SunVTS 6.0 Open Issues

The following issues apply to the SunVTS™ 6.0 product.

---

**Note** – SunVTS 5.1 is not supported in the Solaris 10 Operating System.

---

## New Features and Tests for This Release

The SunVTS 6.0 software is compatible with the Solaris 10 Operating System and future compatible releases. The following new features are added to the SunVTS 6.0 release.

### x86 Solaris Support

Starting with Solaris 10, the SunVTS infrastructure and a few core diagnostics are available for x86 Solaris platforms. The current x86 support is for the 32-bit operating system only.

You must install the x86 version of the SunVTS packages to be able to perform SunVTS on x86 platforms. The software packages use the same names as in the SPARC environment. The SunVTS packages delivered separately for both x86 and SPARC Solaris platforms are as follows:

- `SUNWvts` – Contains the SunVTS core framework that includes the kernel and user interface.
- `SUNWvtsmnn` – Contains the SunVTS online manual pages

- `SUNWvtsr` – Contains the SunVTS framework configuration files in the root partition (Superuser).
- `SUNWvtsts` – Contains the SunVTS test binaries.

The SunVTS components available for x86 Solaris platforms are as follows.

Infrastructure:

- `sunvts`
- `vtsk`
- `vts_cmd`
- `vtstty`
- `vtsui`
- `vtsprobe`

Diagnostics:

- Optical Disk Drive Test (`cddvdtest`)
- CPU Test (`cputest`)
- Disk and Floppy Drives Test (`disktest`)
- Data Translation Look-aside Buffer Test (`dtlbtest`)
- Floating Point Unit Test (`fpustest`)
- Ethernet Loopback Test (`netlbtest`)
- Network Hardware Test (`nettest`)
- Physical Memory Test (`pmemtest`)
- Serial Ports Test (`serialtest`)
- System Test (`systemtest`)
- USB Device Test (`usbtest`)
- Virtual Memory Test (`vmemtest`)

## 32- and 64-bit Support With x86 Platforms

Three SunVTS tests support 64-bit x86 Solaris for the AMD64 based Sun platforms. By default, these files are installed in the `/bin/64` directory under the base SunVTS install location.

The following tests support 64-bit architecture on x86 Solaris.

- `pmemtest` - Physical Memory Test
- `ramtest` - Memory DIMMs (RAM) Test
- `vmemtest` - Virtual Memory Test

Currently, SunVTS does not provide 64-bit infrastructure support for x86 Solaris. For 64-bit x86 support, these tests can be performed as standalone with the Command Line Interface (CLI) only. To view the command-line options use the `-u` (usage) option as follows:

- `./pmemtest -u`
- `./ramtest -u`

- `./vmentest -u`

Refer to the `README.64` file for more information.

## Test Consolidation

The test binaries for the following tests are replaced with a new consolidated binary.

- Optical Disk Drive Test (`cddvdtest`) consolidates the optical media tests: `cdtest`, `dvdtest`, `cddvdrwtest`
- USB Device Test (`usbttest`) consolidates the USB port tests: `usbaudiotest`, `usbkbtest`, `usbppptest`
- Serial Ports Test (`serialtest`) consolidates the serial port tests: `sptest` and `sutest`
- Parallel Port Printer Test (`ppptest`) consolidates the parallel port tests: `bpptest`, `ecppptest`

---

**Note** – In a future release of SunVTS some additional diagnostics, such as environmental tests, might be consolidated into a single test.

---

## Discontinued Tests

The following tests are discontinued in this release of SunVTS:

- Advanced Frame Buffer Test (`afbtest`)
- Alarm Card Test for Netra CT Systems (`alarm2test`)
- Alarm Card Test (`alarmtest`)
- Color Graphics Frame Buffer Test (`cg14test`)
- Frame Buffer, GX, GXplus, and TurboGX Options Test (`cg6test`)
- Sun StorEdge A5x00 Test (`enatest`)
- Sun StorEdge 1000 Enclosure Test (`enctest`)
- Environmental Test (`env4test`)
- Frame Buffer Test (`fbtest`)
- Fast Frame Buffer Test (`ffbtest`)
- Graphics Frame Buffer Test (`gfbtest`)
- PGX32 Frame Buffer Test (`gfxtest`)
- Sun Enterprise Cluster 2.0 Network Hardware Test (`scitest`)
- Environmental Sensing Card Test (`sentest`)
- Soc+ Host Adapter Card Test (`socaltest`)
- Sun Fire Link Interconnect Test (`wrsmtest`)
- Sun™ XVR-4000 Graphics Accelerator Test (`zulutest`)

---

**Note** – The SunPCi™ II Test (`sunpci2test`) tests both the SunPCi II and SunPCi III cards as of SunVTS 5.1 PS2.

---

---

**Note** – All new features, tests, and test enhancements that are released in SunVTS 6.0 are documented in the *SunVTS 6.0 Test Reference Manual* (817-7665-10), and *SunVTS 6.0 User's Guide*, (817-7664-10). This document is included on the Solaris Documentation DVD; in the extra value (EV) directory; and is available at: <http://docs.sun.com>

---

---

**Note** – The name of the Remote System Control test (`rsctest`) has been changed to System Service Processor test (`ssptest`) as of SunVTS 5.1 Patch Set 1. The reason for this change is that `ssptest` tests the Advanced Lights-Out Management (ALOM) hardware in addition to both Remote System Control 1.0 and 2.0 hardware.

---

## Installation Recommendation: Install and Uninstall Using the Same Program

Use the same tool or utility for installation and removal of the SunVTS software. If you use `pkgadd` for installation, use `pkgrm` to uninstall; if you use Web Start for installation, use the Product Registry to uninstall.

## Possible Runtime Issues for Both x86 and SPARC Platforms

### `sunpci2test` Supports SunPCi-3 Cards in Solaris 10

`sunpci2test` now supports the SunPCi-3 cards. Solaris 10 supports SunPCi-3 Version 3.2.2 with Patch 118591-01 only. Solaris 10 does not support the SunPCi-2 card.

### Using `cddvdtest` (Bug ID 6220163)

`cddvdtest` may fail when used for testing CD/DVD RW drives with Read/Write media.

Workaround: Either use a blank media for testing, or insert a CD-ROM media into the drive and restart SunVTS. The user interface will then invoke the test with readonly options.

## Using usbtest (Bug ID 6207760)

Performing `usbtest` on systems with audio cards could cause the test to report errors that are not incremented in the error count. Error messages similar to the following are displayed in the `vtsk.err` file.

```
Dec 10 18:43:40 npgfx-1 SunVTS6.0: [VTSID 10006 usbtest.probe]
WARNING: audio probe error:
Dec 10 18:43:40 npgfx-1 SunVTS6.0: [VTSID NONE usbtest.probe]
Failed to open /dev/sound/2 (Invalid argument).
Probable_Cause(s): <Faulty USB device or motherboard hardware.>
<System software problem.> Recommended_Action(s): <Examine system
message files (/var/adm/messages) for other information.>
Dec 10 18:43:40 npgfx-1 SunVTS6.0: [VTSID NONE usbtest.probe]
```

Workaround: None

## Using usbtest (Bug ID 6197522)

`usbtest` could fail with error messages in "Test Messages" and in the `sunvts.err` file, but "failures" does not get incremented and the test reports passes instead.

Additionally, `usbtest` could report error messages similar to the following on a system without a printer attached.

```
11/18/04 14:28:55 machinename SunVTS6.0build73: VTSID 6000 usbtest.
ERROR printers/0: "Cannot get printer_info for /dev/printers/0"

11/18/04 14:29:07 machinename SunVTS6.0build73: VTSID 8100 usbtest.
ERROR printers/0: "ECPPIOC_GETDEVID failed (I/O error)"
Probable_Cause(s):
(1)Faulty printer or cable.
(2)Faulty ecpp device or motherboard hardware.
(3)System software problem.
Recommended_Action(s):
(1) Check printer cable connectivity
```

Workaround: None.

## Launching the WebStart Installer Could Fail (Bug ID 6220305)

When launching the installer, the `web_installer` GUI appears, but the "Component Selection" and "Ready to Install" windows contain nothing, and the process is blocked.

Workaround: None.

## `pcramtest` is Not a Supported Test (Bug ID 6216804)

The `pcramtest` appears in the `SUNWvts` package; however this test is not supported.

Workaround: Do not perform `pcramtest`.

## Using `serialtest` and `disktest` Simultaneously (Bug ID 4858028)

Sun Blade 100 and 150 systems with SunVTS can produce errors when the serial port controller (southbridge) is also handling other traffic as data access from and to the IDE hard disk. With SunVTS simultaneously running `serialtest` and `disktest` on Sun Blade 100 and 150 systems, you might see `serialtest` report failures.

Workaround: Do not perform `serialtest` and `disktest` simultaneously.

## Using Online Help in the `vtsui` Interface (Bug ID 6206107)

By default, the online help feature uses the Netscape browser instead of Mozilla. When selecting online help from the `vtsui` interface, the following error message is displayed:

```
Could not invoke netscape to display SunVTS online help.  
Please set the Netscape Path in your machine.  
Press Any Key to dismiss this window.
```

Workaround: Launch Mozilla and open the following file:

```
/opt/SUNWvts/lib/locale/C/help/help.html
```

## Using Online Help HTML files in the vt<sub>sui</sub> Interface (Bug ID 6217364)

The SunVTS 6.0 `SUNWvtsmn` package contains HTML files from the SunVTS 6.0 Test Reference Manual and User's Guide. However, updates were made to the SunVTS 6.0 Test Reference Manual that are not reflected in the version of the HTML files located in the `SUNWvtsmn` package.

Workaround: Use the SunVTS 6.0 Test Reference Manual available at <http://docs.sun.com/app/docs/coll/1140.1>

## Using the SunVTS Scheduler (Bug ID 6176355)

When saving schedules with the SunVTS Scheduler, the following characters cannot be used in the schedule name: t, d, p, and h. If these characters are used when saving a schedule, an error message similar to the following is displayed.

```
"ERROR:Invalid Character "t" in Schedule Name.
```

Workaround: None.

## Using netlbttest (Bug ID 5054858)

When SunVTS is stopped, netlbttest might not exit properly when it is running in external loopback mode on a Gigabit Ethernet network interface.

Workaround: Deselect netlbttest from SunVTS GUI and kill the netlbttest process manually.

## SunVTS Does not Support Processor Sets

If processor sets are defined, you must first delete the processor sets before running SunVTS.

Workaround: None.

## Netra CT 820 Server Support

The Netra CT 820 Server is not currently supported in Solaris 9 or Solaris 10 Operating Systems.

## Possible Runtime Issues for x86 Platforms

### Using `systemstest` (Bug ID 6206510)

32-bit SunVTS software performed with the x86 binary on a 64-bit Solaris Operating System causes a `systemstest` error. The SunVTS 6.0 x86 version supports the 32-bit SunVTS binary only. If a 32-bit SunVTS binary is used on a 64-bit Solaris Operating System and `systemstest` is performed with the `vtsui` or the `vtstty` interface, `systemstest` fails immediately. `systemstest` does not display the right error message, for example:

```
12/08/04 14:19:23 machinename SunVTS6.0: VTSID 8010 systemstest.FATAL system:
"kvm_open() failed: Error 0."Probable_Cause(s): <Attempted to use a 32-bit
version of the libkvm interfaces to open a 64-bit kernel image.>
Recommended_Action(s): <Run the 64-bit version of the test.>
12/08/04 14:19:24 ctech75 SunVTS6.0: VTSID 7012 vtsk.INFO : *Failed test*
system(systemstest)          passes: 0  errors: 1
```

Workaround: for `systemstest` by using command line interface with option `mem=disable`.

## Possible Runtime Issues for SPARC Platforms

### Using `env5test` (Bug ID 6176527) and `i2ctest` (Bug ID 6176554)

`env5test` and `i2ctest` could fail due to a Solaris 10 Operating System PICL initialization issue. When PICL is stopped and started, the tests pass appropriately.

Workaround: Enter the following commands directly after the Solaris Operating System is booted:

```
# cvsadm disable /system/picl
# cvsadm enable /system/picl
```

## Adding Boards With Dynamic Reconfiguration (DR) to Sun Fire 15K Systems (Bug ID 4959606)

On Sun Fire 15K systems, adding new boards with DR might cause some of the processor and memory related tests to perform ineffectively. Specifically, `cmttest` might fail to recognize the CMT processors on the new board. Similar failures might also occur in `l2sramtest`, `l1dcachetest`, `dtlbttest`, `ramtest`, `bustest`, `mpptest`, and `fpptest`.

Workaround: Reboot the system after adding a new board with DR.

## Using `ppptest` (Bug ID 6180140)

`ppptest` could hang when performed in the Functional test mode with the Printer subtest enabled in the Test Parameter Options dialog box.

Workaround: None.

## Using `fwcamtest` (Bug ID 5062974)

`fwcamtest` could hang with the following error message: "Termination of tests could be hung. Deselect tests to bring sunvts to an idle status." If `dcamtest` is deselected, all records regarding the test are removed. Display of the video does not go away after deselecting and quitting SunVTS. Black video output is seen from the video window.

## `pfbbtest` Fails When Used in the Gnome Desktop Environment (Bug ID 4938281)

`pfbbtest` might fail when performed in the Gnome desktop environment on a Sun XVR-100 graphics accelerator if the test is performed in the default console window.

This failure does not occur in the Solaris 8 2/02 and Solaris 8 HW 3/03 operating systems. If this failure occurs, you see an error message similar to the following:

```
pfbb3(pfbbtest)                passes: 26 errors: 12
```

Workaround: Most graphics tests fail when running under Gnome; enter the `xscreensaver-command -exit` command before performing graphics test under the Gnome desktop environment to avoid these failures.
