Sun Microsystems, Inc. has intellectual property rights relating to technology that is described in this document. In particular, and without limitation, these intellectual property rights may include one or more of the U.S. patents listed at http://www.sun.com/patents and one or more additional patents or pending patent applications in the U.S. and in other countries.

This document and the product to which it pertains are distributed under licenses restricting their use, copying, distribution, and decompilation. No part of the product or of this document may be reproduced in any form by any means without prior written authorization of Sun and its licensors, if any.

Third-party software, including font technology, is copyrighted and licensed from Sun suppliers.

Parts of the product may be derived from Berkeley BSD systems, licensed from the University of California. UNIX is a registered trademark in the U.S. and in other countries, exclusively licensed through X/Open Company, Ltd.

Sun, Sun Microsystems, the Sun logo, Java, AnswerBook2, docs.sun.com, SunVTS, Netra, Sun Blade, Sun Enterprise, SPARC, and Solaris are trademarks or registered trademarks of Sun Microsystems, Inc. in the U.S. and in other countries.

All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. in the U.S. and in other countries. Products bearing SPARC trademarks are based upon an architecture developed by Sun Microsystems, Inc.

The OPEN LOOK and Sun™ Graphical User Interface was developed by Sun Microsystems, Inc. for its users and licensees. Sun acknowledges the pioneering efforts of Xerox in researching and developing the concept of visual or graphical user interfaces for the computer industry. Sun holds a non-exclusive license from Xerox to the Xerox Graphical User Interface, which license also covers Sun's licensees who implement OPEN LOOK GUIs and otherwise comply with Sun's written license agreements.

U.S. Government Rights—Commercial use. Government users are subject to the Sun Microsystems, Inc. standard license agreement and applicable provisions of the FAR and its supplements.

DOCUMENTATION IS PROVIDED "AS IS" AND ALL EXPRESS OR IMPLIED CONDITIONS, REPRESENTATIONS AND WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT, ARE DISCLAIMED, EXCEPT TO THE EXTENT THAT SUCH DISCLAIMERS ARE HELD TO BE LEGALLY INVALID.

Copyright 2006 Sun Microsystems, Inc., 4150 Network Circle, Santa Clara, Californie 95054, États-Unis. Tous droits réservés.

Sun Microsystems, Inc. possède les droits de propriété intellectuels relatifs à la technologie décrite dans ce document. En particulier, et sans limitation, ces droits de propriété intellectuels peuvent inclure un ou plusieurs des brevets américains listés sur le site http://www.sun.com/patents, un ou les plusieurs brevets supplémentaires ainsi que les demandes de brevet en attente aux les États-Unis et dans d'autres pays.

Ce document et le produit auquel il se rapporte sont protégés par un copyright et distribués sous licences, celles-ci en restreignent l'utilisation, la copie, la distribution, et la décompilation. Aucune partie de ce produit ou document ne peut être reproduite sous aucune forme, par quelque moyen que ce soit, sans l'autorisation préalable et écrite de Sun et de ses bailleurs de licence, s'il y en a.

Tout logiciel tiers, sa technologie relative aux polices de caractères, comprise, est protégé par un copyright et licencié par des fournisseurs de Sun.

Des parties de ce produit peuvent dériver des systèmes Berkeley BSD licenciés par l'Université de Californie. UNIX est une marque déposée aux États-Unis et dans d'autres pays, licenciée exclusivement par X/Open Company, Ltd.

Sun, Sun Microsystems, le logo Sun, Java, AnswerBook2, docs.sun.com, SunVTS, Netra, Sun Blade, Sun Enterprise, SPARC, et Solaris sont des marques de fabrique ou des marques déposées de Sun Microsystems, Inc. aux États-Unis et dans d'autres pays.

Toutes les marques SPARC sont utilisées sous licence et sont des marques de fabrique ou des marques déposées de SPARC International, Inc. aux États-Unis et dans d'autres pays. Les produits portant les marques SPARC sont basés sur une architecture développée par Sun Microsystems, Inc.

L'interface utilisateur graphique OPEN LOOK et Sun™ a été développée par Sun Microsystems, Inc. pour ses utilisateurs et licenciés. Sun reconnaît les efforts de pionniers de Xerox dans la recherche et le développement du concept des interfaces utilisateur visuelles ou graphiques pour l'industrie informatique. Sun détient une license non exclusive de Xerox sur l'interface utilisateur graphique Xerox, cette licence couvrant également les licenciés de Sun implémentant les interfaces utilisateur graphiques OPEN LOOK et se conforment en outre aux licences écrites de Sun.

LA DOCUMENTATION EST FOURNIE "EN L'ÉTAT" ET TOUTES AUTRES CONDITIONS, DÉCLARATIONS ET GARANTIES EXPRESSES OU TACITES SONT FORMELLEMENT EXCLUES DANS LA LIMITE DE LA LOI APPLICABLE, Y COMPRIS NOTAMMENT TOUTE GARANTIE IMPLICITE RELATIVE À LA QUALITÉ MARCHANDE, À L'APTITUDE À UNE UTILISATION PARTICULIÈRE OU À L'ABSENCE DE CONTREFAÇON.

SunVTS 6.1 Release Notes

The SunVTS™ 6.1 software is designed for the Solaris™ 10 1/06 Operating System (OS) and is compatible with the Solaris 10 3/05 OS.

Note – All new features, tests, and test enhancements that are released in SunVTS 6.1 are documented in the *SunVTS 6.1 Test Reference Manual*, and *SunVTS 6.1 User's Guide*. These documents are included on the Solaris on Sun Hardware collection on the Solaris Documentation DVD, in the extra value (EV) directory. These documents are also available at: `http://docs.sun.com`

For the latest version of this document (819-2363), go to:
`http://www.sun.com/documentation`

SunVTS Support for the Solaris OS on x86-Based Systems

Note – In this document these x86 related terms mean the following:
"x86" refers to the larger family of 64-bit and 32-bit x86 compatible products.
"x64" points out specific 64-bit information about AMD64 or EM64T systems.

Starting with the Solaris 10 OS, the SunVTS infrastructure and core diagnostics are available for x86 platforms. Starting with Solaris 10 3/05 HW1, SunVTS diagnostics for x86 platforms are supported in the AMD 64-bit environment for the SunVTS kernel (`vtsk`). All diagnostics except the System Test (`systest`) are ported to 64-bit.

SunVTS is supported and tested on the following Sun x86 platforms:

- Sun Fire™ V60x

- Sun™ LX50
- Sun Fire B100x
- Sun Fire B200x
- Sun Fire V20z
- Sun Fire V40z

You must install the x86 version of the SunVTS packages to perform SunVTS on x86 platforms. The software packages use the same names as in the SPARC® environment. The SunVTS packages delivered separately for both x86 and SPARC Solaris platforms are as follows:

- `SUNWvts` – Contains the SunVTS core framework that includes the kernel and user interface.
- `SUNWvtsmn` – Contains the SunVTS online manual pages
- `SUNWvtsr` – Contains the SunVTS framework configuration files in the root partition (superuser).
- `SUNWvtsts` – Contains the SunVTS test binaries.

The SunVTS components available for x86 Solaris platforms are as follows.

Infrastructure:

- `sunvts`
- `vtsk`
- `vts_cmd`
- `vtstty`
- `vtsui`
- `vtsprobe`

SunVTS tests:

- CD DVD Test (`cddvdtest`)
- CPU Test (`cputest`)
- Disk and Floppy Drives Test (`disktest`)
- Data Translation Look-aside Buffer (`dtlbtest`)
- Floating Point Unit Test (`fputest`)
- InfiniBand Host Channel Adapter (`ibhcatest`)
- Level 1 Data Cache Test (`l1dcachetest`)
- Level 2 SRAM Test (`l2sramtest`)
- Ethernet Loopback Test (`netlbtest`)
- Network Hardware Test (`nettest`)
- Physical Memory Test (`pmemtest`)
- RAM test (`ramtest`)
- Serial Port Test (`serialtest`)
- System Test (`systest`)
- Universal Serial Board Test (`usbtest`)
- Virtual Memory Test (`vmemtest`)

Displaying SunVTS Package and Version Information

Use the following command to display SunVTS package information:

```
# pkginfo -c SUNWvts SUNWvtsx SUNWvtsmn
```

You can also use either of the following commands to display additional SunVTS package information:

- `# pkginfo | grep vts`
- `# showrev -p | grep vts`

Use either of the following commands to display SunVTS version information:

- `# sunvts -v`
- `# /opt/SUNWvts/bin/.version`

Open Issues

Possible Installation Issue

Install and Uninstall Using the Same Program

Use the same tool or utility for installation and removal of the SunVTS software. If you use `pkgadd` for installation, use `pkgrm` to uninstall; if you use Web Start for installation, use the Product Registry to uninstall.

Possible Runtime Issues for Both x86 and SPARC Platforms

SunVTS Memory or CPU Tests Could Fail Due to Lack of System Resources (CR ID 6331819)

When too many instances of SunVTS functional tests are run in parallel on UltraSPARC® T1 CMT CPU-based (sun4v) entry-level servers with low memory configurations, SunVTS tests might fail due to lack of system resources. For example, you could see an error message similar to the following:

```
"System call fork failed; Resource temporarily unavailable"
```

Workaround: Decrease the number of SunVTS test instances or perform SunVTS functional tests separately. In addition, you can increase the delay value for CPU tests or increase the test memory reserve space.

Using `usbtest` on sun4v Systems (CR ID 6310384)

The `usbtest` keyboard test might indicate a successful keyboard probe when a keyboard is not present.

Workaround: None.

Using `netlbtest` on Sun Fire T2000 Servers (CR ID 6349218)

Performing `netlbtest` on all `ipge` ports simultaneously in systems with Sun PCI-Express Dual Gigabit MMF/UTP adapters could fail. Performing `netlbtest` on one port per adapter, avoids this failure.

Workaround: Perform `netlbtest` on one port per Sun PCI-Express Dual Gigabit MMF/UTP adapter.

Using `netlbtest` (CR ID 6331398)

The `netlbtest` external loopback test could incorrectly report that the test passed when no loopback packets were transmitted or received by the `ipge` driver.

Workaround: None.

Using `qlctest` (CR ID 6306254)

On dual-port host bus adapters (HBAs), testing both ports simultaneously could cause intermittent test failures.

Workaround: Test only one port of dual-port HBAs at a time.

Using `audiotest` Loopback Tests (CR ID 6344984)

`audiotest` on Sun Ultra™ 45 workstations currently supports the line-in/line-out external loopback test only.

Workaround: None.

Creating Option Files on Enterprise Servers (CR ID 6345990)

Creating option files on Sun Enterprise™ and Sun Fire 15K servers (UltraSPARC III) with the SunVTS GUI could cause a core dump.

Workaround: Use the TTY user interface to create option files.

Using Memory Tests (CR ID 6347456)

SunVTS memory tests might log a warning message similar to the following in rare cases when the ECC Error Monitor (`errmon`) option is enabled.

```
WARNING: software error encountered while processing
/var/fm/fmd/errlog
         Additional-Information: end-of-file reached
Workaround: Do not enable the errmon option. The errmon option is
disabled by default.
```

Workaround: Disable the `errmon` option. The `errmon` option is disabled by default.

Supporting x86 Clients on a SPARC Server (CR ID 6344791)

Installing SunVTS x86 packages on a SPARC server to serve x86 clients with SunVTS images is not supported. Installing SunVTS SPARC packages on an x64 or x86 server to serve SPARC clients is supported.

Workaround: None.

Using `cddvdrwtest` (CR ID 6333687)

In rare cases, repeated reuse of DVD+RW optical media on Sun Ultra 45 workstations could cause failures when performing high stress DVD+RW SunVTS tests.

Workaround: Replace the DVD+RW media upon failure, or use other types of media such as CD-RW.

Using `cddvdtest` (CR ID 6220163)

`cddvdtest` might fail when used for testing CD/DVD RW drives with Read/Write media.

Workaround: Either use a blank media for testing, or insert a CD-ROM media into the drive and restart SunVTS. The user interface then invokes the test with read only options.

Using `serialtest` and `disktest` Simultaneously (CR ID 4858028)

Sun Blade™ 100 and 150 systems with SunVTS can produce errors when the serial port controller (southbridge) is also handling other traffic as data access from and to the IDE hard disk. With SunVTS simultaneously running `serialtest` and `disktest` on Sun Blade 100 and 150 systems, you might see `serialtest` report failures.

Workaround: Do not perform `serialtest` and `disktest` simultaneously.

SunVTS Does Not Support Processor Sets

If processor sets are defined, you must first delete the processor sets before running SunVTS.

Workaround: None.

Netra CT 820 Server Support

The Netra™ CT 820 server is not currently supported in Solaris 9 or Solaris 10 Operating Systems.

Possible Runtime Issues for x86 Platforms

Using `qlctest` (CR ID 6344143)

Performing `qlctest` with the default settings (Exclusive test mode and Online Selftest enabled) could fail with an error message similar to the following:

```
......
Probable_Cause(s):
    (1)wrong/missing QLC driver
    (2)system software
  Recommended_Actions:
    (1)Reload correct revision driver
    (2)if the problem persists, contact authorized Sun service
provider
.......
```

Workaround: Disable the Online Selftest.

Possible Runtime Issues for SPARC Platforms

Using `env5test` (CR ID 6176527) and `i2ctest` (CR ID 6176554)

`env5test` and `i2ctest` could fail due to a Solaris 10 OS PICL initialization issue. When PICL is stopped and started, the tests pass appropriately.

Workaround: Enter the following commands directly after the Solaris OS is booted:

```
# cvsadm disable /system/picl
# cvsadm enable /system/picl
```

Adding Boards With Dynamic Reconfiguration (DR) to Sun Fire 15K Systems (CR ID 4959606)

On Sun Fire 15K systems, adding new boards with DR might cause some of the processor and memory related tests to perform ineffectively. Specifically, `cmttest` might fail to recognize the CMT processors on the new board. Similar failures might also occur in `l2sramtest`, `l1dcachetest`, `dtlbtest`, `ramtest`, `bustest`, `mptest`, and `fputest`.

Workaround: Reboot the system after adding a new board with DR.

`pfbtest` Fails When Used in the Gnome Desktop Environment (CR ID 4938281)

`pfbtest` might fail when performed in the Gnome desktop environment on a Sun XVR-100 graphics accelerator if the test is performed in the default console window.

This failure does not occur in the Solaris 8 2/02 OS and the Solaris 8 HW 3/03 OS. If this failure occurs, an error message similar to the following is displayed:

```
pfb3(pfbtest)            passes: 26 errors: 12
```

Workaround: Most graphics tests fail when running under Gnome. Enter the `xscreensaver-command -exit` command before performing graphics test under the Gnome desktop environment to avoid these failures.
