**Action:** Create data links using only database columns and groups.

**Level:** 1  
**Type:** ERROR  
**Impact:** Data

REP-01298: Columns [0] and [1] have incompatible types to be linked.  
**Cause:** The parent and child columns in the data link have incompatible datatypes that cannot be linked. For example, an attempt was made to link a Number column to a Character column.

REP-01299: Groups [0] and [1] in different cross products cannot be linked.  
**Cause:** An attempt was made to create a data link between dimension groups of two different cross product groups, or between columns of the dimension groups.  
**Action:** Delete data links between two different cross product groups or their columns.

**Level:** 1  
**Type:** ERROR  
**Impact:** Other

REP-01300: Text boilerplate [0] has no contents.  
**Cause:** A text boilerplate object was created that contains no text.  
**Action:** Enter some text in the boilerplate object, or delete it.
REP-01301: The data link creates a sibling of group \{0\} within a cross product.

**Cause:** A data link was defined that created a sibling of a dimension group within a cross product group. No siblings of dimension groups are allowed within the cross product.

**Action:** Delete the sibling of the dimension group.

REP-01302: The cross product has two or more child groups.

**Cause:** A cross product group has more than one child group. Only one child is allowed per cross product group.

**Action:** Remove all but one of the child groups to the cross product group.

REP-01303: The query must be completely in or out of cross product group \{0\}.

**Cause:** A query was created whose groups are not all inside the cross product, above the cross product, or below the cross product, respectively.

**Action:** Verify that each query's groups are all inside of a cross product, above a cross product, or below a cross product.

REP-01304: Cross product group \{0\} contains another cross product as child.

**Cause:** A cross product group was created that is a child of another cross product group, which is not allowed.

**Action:** Ensure that the child group of the cross product group is not a cross product group.

REP-01305: Frame \{0\} intersects but does not enclose object \{1\}.

**Cause:** The report layout contains a frame that does not completely enclose the named object. Thus, the object is not considered to be inside the frame.

**Action:** To enclose the object with the frame, resize or move the frame.
REP-01306: Summary column {0} has an invalid source.

Cause: An invalid source was specified for the summary column. A summary column's source must be from the same group as the summary column, or from a group below the summary column.

Action: Change the source of the summary column to be from the same group as the summary column or from a group below the summary column.

Level: 1
Type: ERROR
Impact: Other

REP-01307: Summary column {0} has an invalid product order.

Cause: The possible causes of this error include: Case 1: A summary exists that is not a running summary (that is, its Reset At is not Report), but its Product Order is not a subset of the source column's product order. The source column of the summary must be at least as frequent as the summary, which means that the summary’s Product Order should be some subset of the source column’s Product Order. Case 2: A running summary (that is, its Reset At is Report) exists with a Product Order that is not a prefix of the source column’s Product Order. For example, if the source column's Product Order were A,B,C, then the summary column’s Product Order would have to be either A (by itself) or A,B. The summary’s Product Order could not be B,A.

Action: Take the following actions to correct this error: If Case 1: Change the Product Order of the summary such that it is a subset of its source column’s Product Order. If Case 2: Change the Product Order of the summary such that it is a prefix of the Source column’s Product Order.

REP-01308: Placeholder column {0} is not supported in a cross product.

REP-01309: Report level summary {0} cannot be a percent of total.

Cause: A summary was created at the report-level (that is, a summary outside of all the groups in the data model) with a Function of % of Total. This Function makes no sense for a report-level summary because it will always be 100%.

Action: Delete the summary or move it into a group where it will make sense.

REP-01310: Boilerplate {0} references &{1} which is not a field.

Cause: A boilerplate object has a reference to a field that does not exist. It could be that the field being referenced was deleted or renamed and so this reference in the boilerplate object is now invalid.

Action: Depending on circumstances, remove the reference, replace it with a reference to another field, or create the field that it references.

REP-01311: Object {0} with page-dependent references have been changed to fixed sizing.

Cause: A field or boilerplate object has a reference to a page calculation or a total number of pages variable. (This is known as a forward reference.) Such layout objects must be fixed in size both horizontally and vertically.

Action: The layout object’s Horizontal and Vertical Elasticity have been set to Fixed by Oracle Reports Builder. Check the output to ensure that the values are not being truncated. If they are, enlarge the layout object so that it is large enough to contain the values.

REP-01318: An error occurred while setting transaction to read-only.
   Cause: Having specified READONLY=YES, this error occurred at the start of report execution, while ending the current transaction (with a COMMIT) and starting the read-only transaction, or at the end of report execution, while ending the read-only transaction (with a COMMIT).
   Action: Verify the database connection, and verify that no cursors or locks were left pending by the previous transaction.
   Level: 1

Type: ERROR

REP-01319: Implicit anchoring algorithm cannot uniquely identify the anchoring object {0}. Arbitrarily choosing {1}.
   Cause: The specified object (object1) is in the "push path" of two objects and it is equidistant from both objects. As a result, Oracle Reports Builder cannot use its normal criteria (shortest distance) to determine the implicit anchor. In the absence of its normal criteria, Oracle Reports Builder randomly creates an implicit anchor to the specified object (object2). Note that the implicit anchor may vary between runs of the report.
Action: To avoid the random creation of an implicit anchor, explicitly anchor the specified object (object1) to another object.

Level: 1
Type: ERROR

REP-01320: Program unit {0} references a column with invalid ID {1}.
Cause: A report was run containing invalid PL/SQL (for example, PL/SQL that did not compile). The PL/SQL source included a column reference that cannot be resolved.

REP-01322: Page break after on object {0} has no effect.
Cause: A Page Break After was activated on an object that has no other objects anchored to it (implicitly or explicitly). In this case, Page Break After has no effect and is invalid. Notice that this is a warning, not an error message.
Action: Deactivate Page Break After for the object.

REP-01323: Output columns in format trigger {0} are not allowed.
Cause: In the format trigger for the specified object, an attempt was made to set the value of an Oracle Reports Builder column parameter. REP-01325: Output columns in a Between Page Trigger are not allowed.
Cause: In the Between Page trigger, an attempt was made to set the value of an Oracle Reports Builder column or parameter. REP-01340: Passed-in columns do not match report definition {0}.
Cause: Another component (for example, Oracle Forms) passed a query to Oracle Reports Builder and there is a mismatch between the columns passed and the columns expected by Oracle Reports Builder. Possible causes of this error include: Case 1: Oracle Reports Builder was expecting more or fewer columns than the number that was actually passed by the calling application. Case 2: The parameter list of the calling application described a column differently than what Oracle Reports Builder expected. For example, if the report's query selects a character column and the calling application assigns that column a date data type, this error is raised.

**Cause:** TopLink is missing the class for indicator field value classFieldValue of type type. There was no class entry found in the inheritance policy for the indicator field value that was read from the database. It is likely that the method addClassIndicator(Class class, Object typeValue) was not called for the field value. The class and typeValue are stored in a hash table, and later the class is extracted from the hash table by passing typeValue as a key. TOP-00048: Multiple writable mappings exist for the field [{0}]. Only one may be defined as writable, all others must be specified read-only.
Cause: Multiple writable mappings for the field fieldName are defined in the descriptor. Exactly one must be defined as writable; the others must be specified as read-only. When multiple write mappings are defined for the field, TopLink is unable to choose the appropriate mapping for writing the value of the field in the database row. Therefore, the exception is raised during the validation process of descriptors. The most common cause of this problem is when the field has direct-to-field mapping, as well as one-to-one mapping. In this case, the one-to-one mapping must either be read-only or a target foreign key reference.
