This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, duplication, disclosure, modification, and adaptation shall be subject to the restrictions and license terms set forth in the applicable Government contract, and, to the extent applicable by the terms of the Government contract, the additional rights set forth in FAR 52.227-19, Commercial Computer Software License (December 2007). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications which may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

1 Introduction to Oracle Universal Content Management Services	
2 Using Services	
2.1 Overview of Services	2-1
2.1.1 Service Requests and Responses	2-1
2.1.1.1 Internal Service Requests	2-2
2.1.1.2 External Service Requests	2-2
2.1.1.3 Request Parameters	2-3
2.1.1.4 Date and Time Formatting	2-3
2.1.1.5 Case Sensitivity Considerations	2-3
2.1.2 Page Retrieval	2-4
2.1.3 Oracle UCM Search Services	2-4
2.1.4 Integration Methods	2-4
2.1.5 Calling Services Using Persistent URLs	2-5
2.1.6 Customizing Locale Parameters	2-6
2.1.7 Forcing Authentication Challenges	2-8
2.2 Custom Application Example	2-8
2.2.1 Services Called	2-9
2.2.2 Private Functions	2-9
2.2.3 Sample Code	2-9
2.3 Redirecting Template Page for Response Output	2-15
2.3.1 Basic Concepts	2-15
2.3.2 Creating a HCST Page	2-15
2.3.3 Reformatting the Search Results Page	2-16
2.3.4 Additional Options	2-16

3 Customizing Services

3.1	Service Structure Overview	3-1
3.1.1	Name	3-2
3.1.2	Attributes	3-2
3.1.2.1	Service Class	3-3
3.1.2.2	Access Level	3-4
3.1.2.3	Template Page	3-6
3.1.2.4	Service Type	3-6
3.1.2.5	Subjects Notified	3-7
3.1.2.6	Error Message	3-8
3.1.3	Actions	3-8
3.1.3.1	Action Type	3-9
3.1.3.2	Action Name	3-10
3.1.3.3	Action Parameters	3-10
3.1.3.4	Action Control Mask	3-10
3.1.3.5	Action Error Message	3-12
3.2	Service Example	3-12
3.2.1	DOC_INFO Service Definition	3-12
3.2.2	DOC_INFO Attributes	3-13
3.2.3	DOC_INFO Actions	3-14
3.2.3.1	Action 1 Definition and Description	3-14
3.2.3.2	Action 2 Definition and Description	3-14
3.2.3.3	Action 3 Definition and Description	3-14
3.2.3.4	Action 4 Definition and Description	3-15
3.2.3.5	Action 5 Definition and Description	3-15
3.2.3.6	Action 6 Definition and Description	3-15
3.2.3.7	Action 7 Definition and Description	3-16
3.2.3.8	Action 8 Definition and Description	3-16
3.2.3.9	Action 9 Definition and Description	3-16
3.2.3.10	Action 10 Definition and Description	3-17
3.2.4	DOC_INFO Template	3-17
3.3	Creating a Service Resource	3-20
3.3.1	Creating a Custom Service Manually	3-20
3.3.2	Define the service in an HTM file	3-20
3.3.2.1	Load the service in the custom component HDA file	3-21
3.3.3	Creating a Custom Service using Component Wizard	3-22

4 Core Oracle Content Server Services

4.1	About Core Oracle Content Server Services	4-1
4.2	General Services (Core Oracle Content Server)	4-2
4.2.1	ADD_DOC_ACCOUNT	4-3
4.2.2	ADD_DOCEXTENSION	4-4
4.2.3	ADD_DOCFORMAT	4-4
4.2.4	ADD_DOCTYPE	4-4
4.2.5	APPLET_DOCINFO	4-5
4.2.6	CONFIG_INFO	4-5
4.2.7	DELETE_DOC_ACCOUNT	4-5

4.2.8	DELETE_DOCEXTENSION.....	4-5
4.2.9	DELETE_DOCFORMAT	4-6
4.2.10	DELETE_DOCTYPE	4-6
4.2.11	EDIT_DOCEXTENSION.....	4-6
4.2.12	EDIT_DOCFORMAT	4-6
4.2.13	EDIT_DOCTYPE	4-7
4.2.14	EDIT_TRACE_OPTIONS	4-7
4.2.15	GET_DATARESULTSET	4-7
4.2.16	GET_DOCEXTENSIONS.....	4-8
4.2.17	GET_DOCFORMATS.....	4-8
4.2.18	GET_DOCTYPES	4-8
4.2.19	GET_FILELIST.....	4-8
4.2.20	GET_METADEFs.....	4-9
4.2.21	GET_RESULT_OPTIONS	4-9
4.2.22	GET_SYSTEM_AUDIT_INFO.....	4-9
4.2.23	GET_TABLE	4-9
4.2.24	GET_USER_METADEFs	4-9
4.2.25	JAVA_PROPERTIES.....	4-10
4.2.26	LM_BUILD_WEB_STRING_FILES	4-10
4.2.27	LM_LOAD_LAYOUTS	4-10
4.2.28	LM_LOAD_LAYOUTS_SUB.....	4-10
4.2.29	LOAD_DOC_ENVIRONMENT	4-10
4.2.30	LOGIN	4-10
4.2.31	MERGE_TABLE	4-11
4.2.32	PING_SERVER.....	4-13
4.2.33	QUERY_DOC_ACCOUNTS	4-14
4.2.34	SOAP_FAULT	4-14
4.3	Doc Services (Core Oracle Content Server).....	4-14
4.3.1	ASSIGN_DOCINFO_FORM	4-17
4.3.2	CACHE_CHECKIN_NEW	4-17
4.3.3	CACHE_CHECKIN_SEL.....	4-17
4.3.4	CACHE_SUBMIT_HTML_FORM.....	4-17
4.3.5	CACHE_WORKFLOW_CHECKIN	4-17
4.3.6	CHECKIN_ARCHIVE_NO_NOTIFY	4-18
4.3.7	CHECKIN_BYNAME	4-18
4.3.8	CHECKIN_CONFIRM_FORM	4-21
4.3.9	CHECKIN_LIST	4-21
4.3.10	CHECKIN_NEW	4-22
4.3.11	CHECKIN_NEW_FORM.....	4-27
4.3.12	CHECKIN_NEW_SUB.....	4-27
4.3.13	CHECKIN_SEL	4-29
4.3.14	CHECKIN_SEL_FORM	4-32
4.3.15	CHECKIN_SEL_SUB.....	4-34
4.3.16	CHECKIN_SIMILAR_FORM.....	4-34
4.3.17	CHECKIN_UNIVERSAL.....	4-35
4.3.18	CHECKOUT	4-38
4.3.19	CHECKOUT_BY_NAME	4-40

4.3.20	CHECKOUT_OK	4-41
4.3.21	CHECKOUT_SUB.....	4-42
4.3.22	CONTINUE_CHECKIN	4-42
4.3.23	CONTINUE_SUBMIT_HTML_FORM	4-43
4.3.24	CREATE_SUBSCRIPTION_TYPE	4-43
4.3.25	DELETE_BYCLASS	4-43
4.3.26	DELETE_BYNAME	4-43
4.3.27	DELETE_BYREV	4-44
4.3.28	DELETE_BYREV_REVISION.....	4-44
4.3.29	DELETE_CHECKIN_CACHE	4-44
4.3.30	DELETE_DOC.....	4-44
4.3.31	DELETE_REV.....	4-44
4.3.32	DELETE_REV_EX.....	4-46
4.3.33	DELETE_SUBSCRIPTION_TYPE.....	4-46
4.3.34	DOC_FORMATS_WIZARD.....	4-46
4.3.35	DOC_INFO	4-46
4.3.36	DOC_INFO_BY_NAME	4-49
4.3.37	DOC_INFO_LATESTRELEASE	4-51
4.3.38	DOC_INFO_SIMPLE.....	4-52
4.3.39	DOC_INFO_SIMPLE_BYREV.....	4-52
4.3.40	DOC_SUBS_LIST	4-53
4.3.41	EDIT_DOC_FORMATS	4-55
4.3.42	FORM_PROCESS.....	4-55
4.3.43	FORM_SUBMIT	4-55
4.3.44	GET_CACHED_CHECKIN_INFO.....	4-56
4.3.45	GET_DOC_CONFIG_INFO	4-56
4.3.46	GET_DOC_SUBSCRIBERS.....	4-56
4.3.47	GET_ENVIRONMENT	4-57
4.3.48	GET_EXPIRED	4-57
4.3.49	GET_PACKAGE_ENVIRONMENT_PAGE	4-58
4.3.50	GET_UPDATE_FORM.....	4-58
4.3.51	NOTIFY_INDEXER.....	4-59
4.3.52	ODMA_DOC_INFO_SIMPLE	4-59
4.3.53	PACKAGE_ENVIRONMENT	4-59
4.3.54	REMOVE_METAFILE_SUB.....	4-59
4.3.55	REPLACE_METAFILE_SUB.....	4-59
4.3.56	RESUBMIT_FOR_CONVERSION.....	4-59
4.3.57	REV_HISTORY.....	4-61
4.3.58	SELECTDOC	4-61
4.3.59	SUBMIT_HTML_FORM	4-62
4.3.60	SUBSCRIBE.....	4-63
4.3.61	SUBSCRIBE_DOC_USER	4-64
4.3.62	SUBSCRIBE_EX.....	4-65
4.3.63	SUBSCRIBE_FORM.....	4-66
4.3.64	SUBSCRIPTION_LIST.....	4-66
4.3.65	UNDO_CHECKOUT.....	4-67
4.3.66	UNDO_CHECKOUT_BY_NAME.....	4-69

4.3.67	UNSUBSCRIBE	4-70
4.3.68	UNSUBSCRIBE_FORM.....	4-71
4.3.69	UNSUBSCRIBE_FROM_LIST	4-72
4.3.70	UNSUBSCRIBE_FROM_LIST_EX	4-73
4.3.71	UPDATE_BYREV.....	4-74
4.3.72	UPDATE_DOCINFO.....	4-74
4.3.73	UPDATE_DOCINFO_BYFORM.....	4-77
4.3.74	UPDATE_DOCINFO_BYREV	4-80
4.3.75	UPDATE_DOCINFO_METAFILE_BYREV	4-80
4.3.76	UPDATE_DOCINFO_STATUS	4-80
4.3.77	UPDATE_DOCINFO_SUB.....	4-80
4.3.78	UPDATE_SUBSCRIPTION_NOTIFY	4-80
4.3.79	UPDATE_SUBSCRIPTION_TYPE	4-80
4.3.80	UPDATE_SUBSCRIPTION_USED.....	4-81
4.3.81	UPDATE_METADATA	4-82
4.3.82	VALIDATE_DOCINFO	4-82
4.3.83	WORK_IN_PROGRESS	4-82
4.4	Doc Profile Services (Core Oracle Content Server).....	4-83
4.4.1	ADD_DOCPROFILE	4-83
4.4.2	ADD_DOCRULE	4-84
4.4.3	DELETE_DOCPROFILE	4-84
4.4.4	DELETE_DOCRULE	4-84
4.4.5	DOCPROFILE_PREVIEW	4-84
4.4.6	EDIT_DOCPROFILE	4-84
4.4.7	EDIT_DOCPROFILE_TRIGGER	4-85
4.4.8	EDIT_DOCRULE	4-85
4.4.9	GET_DOCPROFILE.....	4-85
4.4.10	GET_DOCPROFILES	4-85
4.4.11	GET_DOCRULE.....	4-86
4.4.12	GET_DOCRULES	4-86
4.5	File Services (Core Oracle Content Server)	4-86
4.5.1	ADD_WEB_APP	4-86
4.5.2	APPEND_FILE_CACHING_INFO	4-86
4.5.3	GET_DYNAMIC_CONVERSION.....	4-87
4.5.4	GET_DYNAMIC_CONVERSION_SUB	4-88
4.5.5	GET_DYNAMIC_URL.....	4-88
4.5.6	GET_TEMPLATE_CONVERSIONS	4-89
4.5.7	GET_WEB_APP_STATUS	4-89
4.5.8	LOAD_RESOURCE_FILE.....	4-89
4.5.9	REMOVE_WEB_APP	4-90
4.5.10	SAVE_TEMPLATE_CONVERSIONS.....	4-91
4.6	Indexer Services (Core Oracle Content Server)	4-91
4.6.1	CANCEL_SEARCH_INDEX.....	4-91
4.6.2	CONTROL_SEARCH_INDEX.....	4-91
4.6.3	GET_FILE.....	4-94
4.6.4	START_SEARCH_INDEX.....	4-97
4.7	Internal Services (Core Oracle Content Server).....	4-97

4.7.1	CANCEL_COMPONENT_INSTALL	4-98
4.7.2	CLEAR_SERVER_OUTPUT	4-98
4.7.3	DOWNLOAD_COMPONENT	4-98
4.7.4	GET_COMPONENT_CONFIG.....	4-98
4.7.5	GET_COMPONENT_INSTALL_FORM	4-98
4.7.6	GET_COMPONENT_INSTALL_PROMPTS_FORM	4-98
4.7.7	GET_COMPONENT_INSTALL_SETTINGS'	4-98
4.7.8	GET_LOCAL_REGISTRATION_FORM	4-98
4.7.9	GET_MANIFEST_INFO	4-98
4.7.10	GET_SERVER_OUTPUT	4-98
4.7.11	PROXIED_REQUEST	4-98
4.7.12	UNINSTALL_COMPONENT.....	4-99
4.7.13	UPDATE_COMPONENT_CONFIG.....	4-99
4.7.14	UPDATE_LICENSE.....	4-99
4.7.15	UPLOAD_NEW_COMPONENT	4-99
4.8	Meta Services (Core Oracle Content Server).....	4-99
4.8.1	ADD_METADEF	4-99
4.8.2	DEL_METADEF	4-100
4.8.3	EDIT_METADEF	4-101
4.8.4	GET_ADVANCED_SEARCH_OPTIONS	4-101
4.8.5	GET_DOC_METADATA_INFO.....	4-101
4.8.6	GET_OPTION_LIST	4-102
4.8.7	GET_USER_METADATA_INFO	4-102
4.8.8	MOVE_METADEF	4-102
4.8.9	UPDATE_ADVANCED_SEARCH_OPTIONS	4-102
4.8.10	UPDATE_USER_META.....	4-102
4.8.11	UPDATE_USER_META_TABLE.....	4-103
4.8.12	UPDATE_META_TABLE.....	4-103
4.8.13	UPDATE_OPTION_LIST	4-104
4.9	Miscellaneous Services (Core Oracle Content Server).....	4-104
4.9.1	CHUNKED_UPLOAD.....	4-105
4.9.2	DOWNLOAD_LISTBOX_ITEMS	4-105
4.9.3	LOAD_USER_LOCALIZATION.....	4-105
4.10	Page Handler/Page Request Services (Core Oracle Content Server)	4-105
4.10.1	DELETE_RESULT_TEMPLATE	4-106
4.10.2	GET_ADMIN_PAGE.....	4-106
4.10.3	GET_DOC_PAGE	4-107
4.10.4	GET_DYNAMIC_PAGE	4-108
4.10.5	GET_PERSONALIZED_JAVASCRIPT.....	4-110
4.10.6	GET_PORTAL_PAGE	4-110
4.10.7	GET_SECURE_PAGE.....	4-110

Index

Preface

This guide provides detailed information about Oracle Content Server services, which are functions or procedures performed by the Oracle Content Server system.

Audience

This guide is intended for developers who use services to customize the software and for application developers who access Oracle Content Server functions.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at <http://www.oracle.com/accessibility/>.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/support/contact.html> or visit <http://www.oracle.com/accessibility/support.html> if you are hearing impaired.

Related Documents

Additional information is provided in the following documents:

- *Oracle Fusion Middleware Application Administrator's Guide for Content Server*
- *Oracle Fusion Middleware Developer's Guide for Oracle Universal Content Management*
- *Oracle Fusion Middleware Idoc Script Reference Guide*
- *Oracle Fusion Middleware System Administrator's Guide for Oracle Content Server*

Further details about Oracle Content Server services and their use can be found in *The Definitive Guide to Stellent Content Server Development* by Brian Huff, 2006, Apress, Berkeley, CA.

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

What's New in This Guide

This chapter describes the most important changes to Oracle Universal Content Management (Oracle UCM) services introduced in the Oracle Fusion Middleware 11g Release 1 (11.1.1) release.

New Features for Release 11gR1

Features include the following:

- **Services Preview functionality:** When adding a service through the Component Wizard, you can now preview details about services. Information for a service can be viewed by selecting the new **Preview** button in the upper right corner of the **Resource Selection** dialog. When the **Preview Information for SERVICE_NAME** dialog is displayed, the online help for that service is available by clicking the **Help** button.

For information about accessing this new functionality, see step 1 in [Section 3.3.3, "Creating a Custom Service using Component Wizard."](#)
- Folders services includes more input parameter descriptions and examples.
- Extended User Attributes component services have been added.
- Folios component services have been added.
- Virtual Content Repository component services have been added.
- The CHECKIN_NEW service has been revised to include information about the DirectReleaseNewCheckinDoc variable, which directs content items being checked in to bypass Inbound Refinery, workflow, and indexing.
- The GET_ENVIRONMENT service has been revised to include information about the StartTime variable.
- The DELETE_DOC service has been revised to show that it removes all revisions of a content item, not just a single revision.
- The CHECKIN_SEL service has been revised to remove inaccurate information about metadata values not specified in the service call being inherited from the previous revision. Metadata values are not inherited from the previous revision. CHECKIN_UNIVERSAL and UPDATE_DOCINFO are the two services that inherit unspecified metadata values.
- Location path names have been revised to reflect the new directory and file structure for an Oracle Content Server instance deployed in an Oracle UCM domain on Oracle WebLogic Server.

- Oracle UCM Directories and Files: Oracle UCM 11g Release 1 (11.1.1) is provided as part of a full media install of Oracle Enterprise Content Management Suite, with the Oracle UCM directories and files. The directory structure for an Oracle UCM 11g instance is different from an Oracle UCM 10g instance. The following terms and path names are important to understanding and working with the Oracle UCM structure:
 - *IdcHomeDir*: This variable refers to the /ucm/idc directory in the Enterprise Content Management (ECM) home where the Oracle UCM server media is located. The server media can run Oracle Content Server, Oracle Inbound Refinery, or Oracle Universal Records Management. This is essentially a read-only directory. The variable portion of the default location is *ECM_ORACLE_HOME/ucm/idc*. The variable portion of the default location can be changed, but the /ucm/idc portion is required.
 - *DomainHome*: This variable refers to the user-specified directory where an Oracle UCM server is deployed to run on an Oracle WebLogic Server application server. The *DomainHome/ucm/short-product-id/bin* directory contains the intradoc.cfg file and executables. The default location for *DomainHome* is *MW_HOME/user_projects/domains/base_domain*, but you can change the path and domain name (*base_domain*) during the deployment of Oracle UCM to Oracle WebLogic Server.
 - *short-product-id*: This variable refers to the type of Oracle UCM server deployed on an Oracle WebLogic Server. Possible values are:
 - * *cs* (Oracle Content Server)
 - * *ibr* (Oracle Inbound Refinery)
 - * *urm* (Oracle Universal Records Management)
 - *IntradocDir*: This variable refers to the root directory for configuration and data files specific to an Oracle Content Server instance that is part of an Oracle UCM application deployed to an Oracle WebLogic Server domain. This Idoc Script variable is configured for one type of Oracle Content Server instance: Oracle Content Server (*cs*), Oracle Inbound Refinery (*ibr*), or Oracle Universal Records Management (*urm*). This directory can be located elsewhere, but the default location is *DomainHome/ucm/short-product-id/*. The specified directory must be an absolute path to the instance directory, and it must be unique to the particular server or node.

Removed Features for Release 11gR1

Features removed in release 11gR1 include the following:

- Collaboration Manager services have been removed because the product is not supported. Core collaboration services have been moved to the Core Services chapter. Collaboration Manager services include:
 - ADD_COLLABORATION_AND_COLLECTION
 - ADD_COLLABORATION_SUB
 - ADD_PROJECT_ROOT
 - ADD_USER_COLLABORATION_AND_COLLECTION
 - CHANGE_ACCESS
 - CLBRA_GET_INHERIT_CONFIG

- CM_COLLECTION_DOCUMENT_DEFAULTS
- CM_CREATE_OR_SUBMIT_FOLDER_FORM_APPEND_ONLY
- CM_GET_ASSOCIATED_FOLDER_INFO
- CM_GET_FOLDER_DISCUSSION_FILE
- CM_GET_FOLDER_INFO
- CM_GET_PROJECT_DASHBOARD
- DELETE_PROJECT_WITHOUT_FOLDER
- EDIT_COLLABORATION_MEMBERS
- EDIT_COLLABORATION_SUB
- EDIT_FOLDER_MEMBERS
- GET_CLBRA_INFO
- GET_COLLABORATION_RESULTSET
- GET_COLLABORATION_LIST

Introduction to Oracle Universal Content Management Services

This guide provides detailed information about Oracle Universal Content Management (Oracle UCM) services, which are functions or procedures performed by the Oracle Content Server system, Oracle Inbound Refinery system, Universal Records Management system, and other Oracle Content Server components.

Calling an Oracle UCM service (making a service request) is the only way to communicate with the Oracle UCM system or access the Oracle Content Server database. This guide describes service usage and syntax, and provides detailed descriptions and examples of commonly used and predefined Oracle UCM services.

The information contained in this guide is based on Oracle UCM 11g Release 1 (11.1.1). The information is subject to change as the product technology evolves and as hardware and operating systems are created and modified. Due to the technical nature of browsers, databases, Web servers, and operating systems, Oracle cannot warrant compatibility with all versions and features of third-party products.

Note: For more information about customizing and integrating the Oracle UCM system, see *Oracle Fusion Middleware Developer's Guide for Oracle Universal Content Management*.

This guide is arranged according to Oracle UCM functionality or component, making it easier for you to find information about specific services. Services that are used extensively have an extended description. In addition, frequently-used services are marked with an asterisk (*) in introductory lists in each chapter.

- [Chapter 2, "Using Services,"](#) explains how Oracle UCM services work and provides examples of how Oracle Content Server services can be called externally from custom applications.
- [Chapter 3, "Customizing Services,"](#) explains the structure of Oracle UCM services, provides an example of how services, queries, and templates work together, and describes how to create a service resource for use with a custom component.
- [Chapter 4, "Core Oracle Content Server Services,"](#) describes standard Oracle Content Server services, grouped by common usage.
- [Chapter 5, "Workflow Services,"](#) describes Oracle Content Server workflow services.
- [Chapter 6, "Archive Services,"](#) describes archiving services used in the Oracle Content Server system.

-
- [Chapter 7, "Folders Services,"](#) describes services used with folders and the Folders_g component.
 - [Chapter 8, "Oracle Universal Records Management Services,"](#) describes services used with the Universal Records Management component.
 - [Chapter 9, "Extended User Attributes Services,"](#) describes services used with the Extended User Attributes component.
 - [Chapter 10, "Folios Services,"](#) describes services used with Folios in the Oracle Content Server system.
 - [Chapter 11, "Virtual Content Repository Services,"](#) describes services used by applications that work with the Virtual Content Repository (VCR) service provider interfaces.
 - [Appendix A, "Actions,"](#) describes the actions used by individual services.

An index is provided at the end of this guide.

Using Services

This chapter discusses how to use services and provides an example of a custom service. It covers the following topics:

- [Section 2.1, "Overview of Services"](#)
- [Section 2.2, "Custom Application Example"](#)
- [Section 2.3, "Redirecting Template Page for Response Output"](#)

2.1 Overview of Services

A service is a function or procedure that is performed by the Oracle Universal Content Management (Oracle UCM) system. Calling an Oracle UCM service (making a service request) is the only way a client can communicate with the Oracle UCM system or access the Oracle Content Server database.

This section covers the following topics:

- [Section 2.1.1, "Service Requests and Responses"](#)
- [Section 2.1.2, "Page Retrieval"](#)
- [Section 2.1.3, "Oracle UCM Search Services"](#)
- [Section 2.1.4, "Integration Methods"](#)
- [Section 2.1.5, "Calling Services Using Persistent URLs"](#)
- [Section 2.1.6, "Customizing Locale Parameters"](#)

2.1.1 Service Requests and Responses

Any service can be called either externally (from outside the Oracle UCM system) or internally (within the Oracle UCM system itself). Typically, client services are called externally, while administrative services are called internally. When a service is requested, any applicable parameters are passed to the service. The service uses its attributes and actions to execute the request based on the specified parameters. The service then returns a response either externally or internally, as applicable. This section covers the following topics:

- [Section 2.1.1.1, "Internal Service Requests"](#)
- [Section 2.1.1.2, "External Service Requests"](#)
- [Section 2.1.1.3, "Request Parameters"](#)
- [Section 2.1.1.4, "Date and Time Formatting"](#)
- [Section 2.1.1.5, "Case Sensitivity Considerations"](#)

2.1.1.1 Internal Service Requests

Although any service can be called internally, typically only administrative services are called internally. Internal service requests are made from within the Oracle UCM system itself, and results are returned only to the Oracle UCM system. For example, you can use the `START_SEARCH_INDEX` service to update or rebuild the search index automatically in a background thread.

2.1.1.2 External Service Requests

Any external program or HTML page can call any Oracle UCM service to request information from the Oracle UCM system or perform a specified function, such as full-text and metadata searching, library services, workflow services, subscription notifications, and content conversion capabilities. Typically, only client services are called externally (administrative services are typically called internally). For example, when you click a **Search** link on an Oracle Content Server web page, the standard search page is delivered to your web browser by the `GET_DOC_PAGE` service using the following URL segment:

```
IdcService=GET_DOC_PAGE&Action=GetTemplatePage&Page=STANDARD_QUERY_PAGE
```

External requests are sent from a client (for example, a web browser) to the Web server using one of many protocols. The service call must include any parameters that the service requires. The Web server routes the service request to the Oracle UCM system, along with any required and optional parameters. The Oracle UCM system then executes the service using the provided parameters. In the case of search services, this involves sending a search request to the search engine. The Oracle UCM system then returns the results to the Web server, and the Web server returns the results to the web browser client.

Figure 2-1 External Requests and Responses Between Content Management System Elements

2.1.1.3 Request Parameters

A service request must include every parameter that the service requires. For example, when calling the DOC_INFO service to obtain information about a content item, the service call must provide the dID (generated content item revision identifier) to the service. The following segment shows how this would be done through a persistent URL:

```
http://cs.example.com/cs/idcplg?
IdcService=DOC_INFO&dID=194
```

2.1.1.4 Date and Time Formatting

Default date and time formatting are determined using the Localization tab on the System Properties utility interface. The general format for date and time is:

```
MM/DD/{YY} {hh:mm[:ss] {aa} [zzz]} !mAM,PM!zTimezoneCity
```

- The date/time format is a grouping of Y, D, M for Year, Day, and Month, and h, m, and s for hours, minutes, and seconds. The number of times the letter repeats designates the minimum number of digits used (for example, YY/MM/DD hh:mm could designate 04/12/09 12:12 or MM/DD/YYYY hh:mm:ss would be 09/12/2004 04:12:33).
- The a represents the meridian symbol (for example, AM or PM).
- The m represents minutes.
- Braces ({ }) indicate that the item is optional when in the input data, but will always appear in the output.
- The exclamation mark (!) is used to separate additional date format specifications. For example, !mXXX,YYY could designate the meridian symbols (where XXX is the symbol meaning "before noon" and YYY is the symbol meaning "after noon"). Everything after the exclamation point passes the meridian and time zone symbols along with the date format.

2.1.1.5 Case Sensitivity Considerations

Case sensitivity is important when calling standard Oracle UCM services.

- **Parameters:** Parameters are case sensitive. For example, when specifying the IdcService parameter you must use IdcService, not IDCSERVICE.
- **Parameter values:** Parameter values are typically case sensitive. The value for the IdcService parameter is always case sensitive, and the convention used for standard Oracle UCM services is all capital letters. For example, when specifying the value for the IdcService parameter you must use DOC_INFO, not Doc_InfO.
- **Databases:** The database you are using with Oracle UCM might affect the case sensitivity of parameters and parameter values. For example, some databases do not have case-sensitive column names and other databases are case-insensitive by default. So a database may have stored "DDOCNAME", but the value that the Oracle UCM system expects is still "dDocName". Also, some databases store values in uppercase, but they perform case-insensitive queries. For example, if you store the dDocName "BouncyCaps", a query for "bouncycaps" would find that row.

2.1.2 Page Retrieval

When a web page is requested from the Oracle UCM system, one of the following page types is returned:

- **static page:** The content of a static web page is pre-formatted, and does not change from one request to the next. In a typical Oracle UCM web site, the only static page is the guest home page (for example, *DomainHome/ucm/cs/weblayout/portal.htm*).
- **dynamic page:** A dynamic web page is assembled at the time of the Web server request, using Oracle UCM services and templates to determine the content and formatting. For example, each user's portal design page is generated using an Oracle UCM service called GET_PORTAL_PAGE and a template called PNE_PORTAL_DESIGN_PAGE.

2.1.3 Oracle UCM Search Services

A search request is a special kind of Oracle UCM service. When the Oracle UCM system receives a search request, it sends the request on to the search engine using a search engine API. This allows different search engines to be used with the Oracle UCM system.

2.1.4 Integration Methods

Service requests can be made by any external program or HTML page using a wide variety of protocols. The Oracle UCM system can be integrated with other enterprise applications using a wide variety of integration methods. One common integration method is to reference content that is managed within the Oracle UCM system by persistent URL. For more information, see [Section 2.1.5, "Calling Services Using Persistent URLs."](#)

The following are other possible integration methods:

- Oracle WebLogic Server Web Services (WS) using integrated WebLogic JAXP and SAML support
- Oracle UCM Web services component for the Oracle Content Server and Remote Intradoc Client (RIDC) component for clients
- Java API (IdcCommand) integration using the IdcCommand Java Command Utility
- Java Server Page (JSP) integration from a JSP running in Oracle UCM, a JSP through the Oracle UCM JavaBean, or a JSP through the Oracle UCM Enterprise JavaBean (EJB) deployed on your J2EE application server
- Java 2 Enterprise Edition API (J2EE) integration by deploying the Oracle UCM Enterprise JavaBean on your J2EE-compliant application server
- Simple Object Access Protocol (SOAP) integration using the SOAP protocol
- Virtual Folders integration using the Folders_g component
- Web Distributed Authoring and Versioning (WebDAV) integration using the WebDAV component

- Component Object Model (COM) integration using the ActiveX utility or the IntradocClient OCX component

Note: For more detailed information on available integration methods, see the *Oracle Fusion Middleware Developer's Guide for Oracle Universal Content Management*.

2.1.5 Calling Services Using Persistent URLs

In this integration method, all of the necessary information for the service call is sent to the Oracle Content Server system through the URL. The following is a typical URL; in this case, it is the URL for the Home page:

```
http://cs.example.com/cs/idcplg?
IdcService=GET_DOC_PAGE&Action=GetTemplatePage&Page=HOME_PAGE
```

- **http://cs.example.com/** is the web address of the Oracle Content Server instance.
- **cs/idcplg** is the path to the Web server filter.
- **IdcService=GET_DOC_PAGE** tells the Oracle Content Server system to execute the GET_DOC_PAGE service.
- **Action=GetTemplatePage** tells the Oracle Content Server system to return the results using a specified template page. This parameter is specific to the GET_DOC_PAGE service example.
- **Page=HOME_PAGE** tells the Oracle Content Server system which template page to use. This parameter is specific to the GET_DOC_PAGE service example.
- The question mark (?) indicates the end of the Web server path and the beginning of Oracle Content Server parameters.
- Ampersands (&) are used as separators between Oracle Content Server parameters.
- You can include certain Idoc Script variables in a URL to affect page display at the time of the page request. This is useful for troubleshooting or for customizing your Oracle Content Server pages.

Troubleshooting Examples

- IsJava=1
- IsPageDebug=1

Customization Examples

- StdPageWidth=1000
- dDocType=HRForm

Example

The following example describes the steps that occur when a persistent URL is used to request a dynamic page from the Oracle Content Server system.

1. When a user clicks the Administration link in the navigation area, a request for the GET_ADMIN_PAGE service is sent to the Web server. The URL of the Administration link contains the following commands:

```
IdcService=GET_ADMIN_PAGE&Action=GetTemplatePage&Page=ADMIN_LINKS
```

2. The Web server recognizes this request as an Oracle Content Server function and sends the specific request to the Oracle Content Server system.
3. When the Oracle Content Server system has processed the request, it passes the result back to the Web server. In the case of the Administration link, the GET_ADMIN_PAGE service:
 - Provides a login prompt if the user is not currently logged in.
 - Verifies that the user has *admin* permission.
 - Assembles the Administration page using the ADMIN_LINKS template.
 - Returns the assembled web page to the Web server.
4. The Web server delivers the results of the Oracle Content Server service to the originating Web browser client.

Example

The following example describes the steps that occur when a persistent URL is used to perform a search request.

1. When a user clicks the Search button on the standard Search page, a request for the GET_SEARCH_RESULTS service is sent to the Web server. The URL for the search request specifies the service to execute, the search criteria, and the result parameters:

```
IdcService=GET_SEARCH_RESULTS&QueryText=oracle&ftx=1  
&AdvSearch=True&ResultCount=25&SortField=dInDate&SortOrder=Desc
```

2. The Web server recognizes the request as a Oracle Content Server function, and sends the specific request to the Oracle Content Server system.
3. The Oracle Content Server system passes the request to the search engine.
4. The search engine returns the search results to the Oracle Content Server system.
5. Based on the user login and security permissions, the Oracle Content Server system assembles the search results page and returns it to the Web server.
6. The Web server delivers the results to the originating Web browser client.

2.1.6 Customizing Locale Parameters

When using the Oracle Content Server system in a client server operation mode, you can use several parameters to improve the handling of locale-sensitive data, helping to avoid date and encoding incompatibility problems.

In the following descriptions, it is assumed that an HDA formatted request is being made to the Oracle Content Server system using an operation such as IdcClient, IdcCommandUX, IdcServerBean, or a custom server communication.

The following parameters are available:

- **UserDateFormat:** Specifies the date/time format for dates in the incoming request and any dates produced in the response to the request. If not specified, the response format always uses the login user's date locale. If that is unavailable, it uses the Oracle Content Server system locale date. Do not use the ODBC date/time format used internally by the Oracle Content Server system for archiver batch load files; that can create time zone ambiguity errors.

```
UserDateFormat=M/D/YYYY hh:mm[:ss] {aa} !mAM, PM! zUTC
```

- `blDateFormat`: Specifies the format of dates in the body of the incoming request. It does not affect the format of the response. If set, this overrides values set with `UserDateFormat`. If not specified, the incoming request format uses the login user's locale date format. If that is unavailable, it uses the Oracle Content Server system locale date format. This parameter is not available except if one of the headers that precedes the request is a `REQUEST_METHOD` header with a `POST` value. `GET` style requests do not support this parameter.
- `ClientEncoding`: Specifies the character encoding to be used in the response. If no HDA header line exists with either the `charset` or `jcharset` specification, this parameter also dictates the encoding used to decode the body of the request.

```
ClientEncoding=cp1252
```

- `HEADER_ENCODING`: Used in the header that precedes the body of the HDA request. This allows the requesting agent to specify the encoding of headers. This functionality is useful for dictating the encoding of the `HTTP_INTERNETUSER` and `REMOTE_USER` header entities.
- `blFieldTypes`: Specifies a field type (date or message) during the translation of a response. A 'message' is a formatted string, usually an error message, that has not been localized. You can use this parameter to ensure that ODBC formatted fields are parsed and returned in the format specified by `blDateFormat` or `UserDateFormat` and will be applied even if the field is only in the response and not in the request. If the field types are not specified in `blFieldTypes`, then fields are treated like plain strings and no localization is performed on them.

The only fields that typically need such translation are ones created by customized extensions of Oracle Content Server behavior (such as those created using Idoc Script, for example). This is only available for `POST` style requests (`REQUEST_METHOD` header with value `POST`). This is normally used to specify additional date fields and is best used in combination with `UserDateFormat` or `blDateFormat` to indicate that a field needs special handling as a date.

```
blFieldTypes=xNewDate date, xComment message
```

- `extraFieldTypes`: Specifies a field type during the translation of a response to HDA formatted requests, used in place of `blFieldTypes`. It is best used inside an Idoc Script expression that is executed when fulfilling a Oracle Content Server request. It cannot be used in Idoc Script when generating the format of the response because the response is in a data format (such as HDA). It can, however, be used in other places where Idoc Script is evaluated when executing the logic of a request, such as the processing of an HCSP form, or determining the effects of a document profile.

```
extraFieldTypes=xNewDate date, xComment message
```

- `convertDatabaseDate`: Ensures that `blFieldTypes` or `extraFieldTypes` are used to convert the ODBC date format to the desired response date format. This variable is necessary when using the `blFieldTypes` or `extraFieldTypes` variables.

If this variable is not set, the ODBC date formats may not be converted to the desired response date format. ODBC dates can still be converted even if this variable is not set. This occurs if the Oracle Content Server system determines that the response needs a full coercion from one date format to another. This typically happens only if the incoming date format is different from the outgoing date format.

```
convertDatabaseDate=1
```

- `SuppressResultLocalization`: Suppresses localization conversions performed before the response is sent back. Conversions done on incoming data can still be performed.

This parameter is useful to prevent messages from being localized or dates being fully converted. An example of usage is when the response is to be forwarded to another Oracle Content Server instance to be processed or when the data is to be persistently stored and replayed back to the original Oracle Content Server instance as needed.

```
SuppressResultLocalization=1
```

All of the parameters that affect date and message processing can be used with this parameter, but the other parameters are only used when the data is replayed against another Oracle Content Server instance or the current Oracle Content Server instance.

Note: The operation making the HDA request may set values for these parameters; therefore, users may find that the values they set do not change the behavior as expected.

2.1.7 Forcing Authentication Challenges

It is sometimes necessary that a user be re-authenticated for a Oracle Content Server service or for other activities. For example, during a workflow, it might be necessary to acquire a 'digital signature' for a user at a specific step in the workflow process. This can be done using the `isRepromptLogin` configuration variable. For more details, see the *Oracle Fusion Middleware Idoc Script Reference Guide*.

To force re-authentication of any service, perform the following steps:

1. Add `checkForRevalidateLogin` as a service definition function.
2. Add `revalidateLoginID` as a parameter to the service call being made, with a randomly generated value.

These two actions cause the Oracle Content Server system to refuse to accept the currently supplied credentials until the `AllowedLoginID` cookie is set with the same value as the parameter to `revalidateLoginID`. The cookie is set during the redundant challenge to the current credentials.

Note that this clears the current credentials so the user will need to login again to access any Oracle Content Server functionality.

2.2 Custom Application Example

This example application calls five services and defines six private functions.

- [Services Called](#)
- [Private Functions](#)
- [Sample Code](#)

2.2.1 Services Called

These services are called and a serialized HDA string is built for each:

- CHECKOUT_BY_NAME
- CHECKIN_UNIVERSAL
- DOC_INFO
- GET_FILE

These parameters for CHECKIN_UNIVERSAL are defined:

- doFileCopy
- dDocName
- dDocTitle
- dDocType
- dSecurityGroup
- dDocAuthor
- dDocAccount
- primaryFile

The GET_TABLE service is called and this parameter is defined:

- tableName

2.2.2 Private Functions

These private functions are defined:

- getNativeFilePath
- checkOutByName
- checkinUniversal
- getDocInfo
- getFile
- parseResultSet

2.2.3 Sample Code

This sample is in Visual Basic.

```
' Defines a private function.
Private Function getNativeFilePath() As String
Dim idccmd As IdcCommandX
Dim str As String
Dim res
Dim dID As String, dExtension As String, dDocType As String, dDocAccount As String

dID = "2"
dExtension = "pdf"
dDocType = "acc"
dDocAccount = ""

' Builds a serialized HDA string.
str = "@Properties LocalData" + vbCrLf
```

```
str = str + "dID=" + dID + vbCrLf
str = str + "dExtension=" + dExtension + vbCrLf
str = str + "dDocType=" + dDocType + vbCrLf
str = str + "dDocAccount=" + dDocAccount + vbCrLf
str = str + "@end" + vbCrLf

Set idccmd = New IdcCommandX
res = idccmd.init("sysadmin", "c:\oracle\bin")
res = idccmd.computeNativeFilePath(str)

Open "c:\newdoc.txt" For Binary Access Write As #1
Put #1, , str
Put #1, , res
Close #1
MsgBox (res)
End Function

' Defines a private function.
Private Function checkOutByName(ByVal dDocName As String) As String
Dim idccmd As IdcCommandX
Dim idcService As String, str As String
Dim res

' Calls a service and builds a serialized HDA string.
idcService = "CHECKOUT_BY_NAME"
str = "@Properties LocalData" + vbCrLf
str = str + "IdcService=" + idcService + vbCrLf
str = str + "dDocName=" + dDocName + vbCrLf
str = str + "@end" + vbCrLf

' In an actual application the return codes need to be handled. For this example,
' the service is called while there is no content with that specific dDocName.
Set idccmd = New IdcCommandX
res = idccmd.init("sysadmin", "c:\oracle\bin")
res = idccmd.executeCommand(str)
End Function

' Defines a private function.
Private Function checkinUniversal(ByVal doFileCopy As String, ByVal dDocName As
String, ByVal dDocTitle As String, ByVal dDocType As String, ByVal dSecurityGroup
As String, ByVal dDocAuthor As String, ByVal dDocAccount As String, ByVal
primaryFile As String) As String

' Builds a serialized HDA string.
Dim idccmd As IdcCommandX
Dim idcService, res, str As String

' Calls a service and builds a serialized HDA string.
idcService = "CHECKIN_UNIVERSAL"
str = "@Properties LocalData" + vbCrLf
str = str + "IdcService=" + idcService + vbCrLf
str = str + "doFileCopy=" + doFileCopy + vbCrLf

2.3 Redirecting Template Page for Response Output

Sometimes it is desirable to display a page other than the default (change the delivery mechanism for the response template) after executing a CGI request (either a GET or a POST). For example, you might want to redirect the page after a login or after executing a search. One way to do this is by modifying the service call through the component architecture, and specifying a different template page. Another more flexible way to do this as needed is to specify the `urlTemplate` parameter, to redirect the response page to a HCSP or HCST, and reformat the results in any way you want.

This section covers the following topics:

- [Section 2.3.1, "Basic Concepts"](#)
- [Section 2.3.2, "Creating a HCST Page"](#)
- [Section 2.3.3, "Reformatting the Search Results Page"](#)
- [Section 2.3.4, "Additional Options"](#)

2.3.1 Basic Concepts

You should be somewhat familiar with Idoc Script and with Dynamic Server Pages (HCST, HCSP, HCSF) before attempting this exercise. You should also be somewhat familiar with Oracle Content Server component architecture. It would also be helpful to be familiar with HTML FORM objects.

2.3.2 Creating a HCST Page

As an example, we will create a HCST page that can be used as a URL template to reformat the search results. We could also create a HCSP, but for simplicity, we will use a HCST. We will name the file `test_result.hcst`, and have it contain the following text:

```
<html>
<table width=300>
<tr bgcolor="#000000" style="color: #ffffff;">
<td><b>Name</b></td>
<td><b>Title (Author)</b></td>
</tr>
<$loop SearchResults$>
<tr <$if doShade$>bgcolor="#E5E7D4"<$endif$>>
<td><a href="<$URL$>"><$dDocName$></a></td>
<td><$dDocTitle$> (<$dDocAuthor$>)</td>
</tr>
<$if doShade$><doShade=""$><else$><doShade="1"$><$endif$>
<$endloop$>
</table>
</html>
```

Next, we should check this file into the Oracle Content Server instance. For simplicity, we will check it into the Public security group, with a content type of ADACCT, and the Content ID `test_result`. Its URL will then be something like this:

```
http://myhost/oracle/groups/public/documents/document/test_
result.hcst
```

2.3.3 Reformatting the Search Results Page

To test our new template, we will start by going to a search page. Enter in any search criteria and click **Search**. You should see the standard search page with your results contained in it.

Now, add this text to the end of the URL that brought you to the search results page:

```
&urlTemplate=/oracle/groups/public/documents/adacct/test_result.hcst
```

You should now see the same search results formatted in a minimalist HTML page. Note how the full URL is not used, but just the URL relative to your host computer.

If you would like the default search page to always format pages with this template, you can change the HTML FORM object on the search page to also have this field:

```
<input type=hidden name='urlTemplate'  
value='/oracle/groups/public/documents/document/test_result.hcst'>
```

This can be done by creating a component that modifies the include *query_results_options* to contain the sample HTML. Alternatively, the value for `urlTemplate` can be calculated dynamically on the search page with JavaScript, to redirect to different pages based on the metadata entered by the user.

2.3.4 Additional Options

In addition to `urlTemplate`, you can also use the parameters `docTemplateName`, `docTemplateID`, or `RedirectUrl` to change the result page. These all have different behavior, as follows:

- **urlTemplate:** Set to the full relative URL of the hcst page you want to use. For example:

```
IdcService=DOC_INFO&urlTemplate=/idc1/groups/public/documents/adacct/test_  
result.hcst
```

Because `RedirectURL` doesn't work with all service calls, and pre-6.0 versions of Oracle Content Server software have minor data pollution bugs with `docTemplateName` and `docTemplateID`, it is usually safest to use `urlTemplate`. However, if you change the Content Type or the Security Group of your template, then the URL will no longer be valid and will need to be updated. Also, this parameter is not recommended for overriding the template used for a 'POST' service.

- **docTemplateName:** Set to a `dDocName` of a template (for example, *test_result*). This parameter behaves like `urlTemplate`, but finds the location of the latest released web-viewable for a document with `dDocName` of *docTemplateName*.
- **docTemplateID:** Set to a `dID` of a specific revision of a template (for example, *100*). Like `docTemplateName`, but finds the Web-viewable of a specific `dID` revision.
- **RedirectUrl:** Set to the last part of a CGI URL back into the Oracle Content Server (for example, *IdcService=DOC_INFO&dID=<\$dID\$>*). This is only for the few dozen 'POST' services that execute the action *prepareRedirect*, such as `CHECKIN_NEW` and `SUBMIT_HTML_FORM`.
- By using a redirect after each HTML 'POST', the response page can be safely refreshed by the end user without reissuing the post. In the definition of each of these services there is a `3:prepareRedirect:...:0:null` line. The `RedirectUrl` overrides the results of the `prepareRedirect` method and allows a different URL to be used as the location for redirects. The `RedirectUrl` can have Idoc Script in it that

will be executed just before the redirect is issued. This can create complex Idoc Script nesting, because the RedirectUrl assignment will typically occur in a resource includes. For example:

```
... Standard Idoc form beginning ...
<input type=edit name=myparam value=''>
<input type=hidden name=RedirectUrl
value='<$HttpCgiPath$?<$xml (' IdcService=MY_RESPONSE_TEMPLATE&dID=<$dID$>&
myparam=<$myparam$>')$>'>
... Standard Idoc form closure ...
```

Much of the Idoc Script is nested inside an Idoc literal string. This delays the execution of the script until the redirect URL is being computed. That allows the RedirectUrl to pick up the value of `myparam` even though the user has still to select its value.

A single quote is used on the outside and a double quote on the inside. This reduces confusion and because both HTML and Idoc Script support both single and double quotes for quoting, it is sometimes a good idea to switch between the two for nesting constructs.

Note the usage of the `xml` function. This guarantees that the input field's value is a well-formed HTML literal string construct. In this particular case, it is not needed. But for more complex constructs it can be helpful.

Customizing Services

This chapter discusses the basic structure of services and covers the following topics:

- [Section 3.1, "Service Structure Overview"](#)
- [Section 3.2, "Service Example"](#)
- [Section 3.3, "Creating a Service Resource"](#)

3.1 Service Structure Overview

This section describes how standard services are implemented in the Oracle Content Server system. For information about calling services from other programs, see the chapter about integration methods in the *Oracle Fusion Middleware Developer's Guide for Oracle Universal Content Management*.

A service resource is defined in an HTM file using a ResultSet table with the following three columns:

- [Section 3.1.1, "Name"](#)
- [Section 3.1.2, "Attributes"](#)
- [Section 3.1.3, "Actions"](#)

The standard Oracle Content Server services are defined in the StandardServices table in the *IdcHomeDir/resources/core/templates/std_services.htm* file. You can also find special-purpose services in the *workflow.htm* file in the same directory.

Services depend on other resource definitions to perform their functions.

- Any service that returns HTML requires a template to be specified. A common exception is the PING_SERVER service, which does not return a page to the browser.
- Most services use a query. A common exception is the SEARCH service, which sends a request directly to the search collection.

Merge rules are not required for a service resource. However, the service resource must be listed as a table in the ResourceDefinition ResultSet.

The following table row is an example of a service definition.

Figure 3–1 Example of a Service Definition

Scripts For Standard Services		
Name	Attributes	Actions
DELETE_DOC	DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)	5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists 3:checkParametersAgainstResultSet:DOC_INFO,dRevClassID,!csRevClassIDMismatch,dDocName,!csDocNameMismatch:0:!csUnableToDeleteItem(dDocName) 3:checkSecurity:DOC_INFO:0:null 3:checkWorkflow:WF_INFO,isNotActiveBasic,DOC_INFO:0:!csUnableToDeleteItem(dDocName)!csItemsInWorkflow(dWfName) 3:docHistoryInfo:Delete Document,IdocHistory:1 :null 5:QrevisionsByClass:REVISIONS:0:!csDeleteUnableToAccessRevList(dDocName) 3:markDocDeleted:0:!csUnableToDeleteItem(dDocName) 3:doWorkflowAction:deleteCriteriaDoc:0:null 3:deleteDoc:REVISIONS:0:null 3:deleteDocumentSubscription:deleteDoc,REVISIONS:8:null 3:setStatusMessage:delete_doc:0:null

3.1.1 Name

The *Name* column in the StandardServices table defines the name for each service. For client-side service requests, this is the name called in [Calling Services Using Persistent URLs](#). For standard Web requests, this is almost always the URL to the Oracle Content Server Web page.

Figure 3–2 The Name Column of the DELETE_DOC Service Definition

Scripts For Standard Services		
Name	Attributes	Actions
DELETE_DOC	DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)	5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists 3:checkParametersAgainstResultSet:DOC_INFO,dRevClassID,!csRevClassIDMismatch,dDocName,!csDocNameMismatch:0:!csUnableToDeleteItem(dDocName) 3:checkSecurity:DOC_INFO:0:null 3:checkWorkflow:WF_INFO,isNotActiveBasic,DOC_INFO:0:!csUnableToDeleteItem(dDocName)!csItemsInWorkflow(dWfName) 3:docHistoryInfo:Delete Document,IdocHistory:1 :null 5:QrevisionsByClass:REVISIONS:0:!csDeleteUnableToAccessRevList(dDocName) 3:markDocDeleted:0:!csUnableToDeleteItem(dDocName) 3:doWorkflowAction:deleteCriteriaDoc:0:null 3:deleteDoc:REVISIONS:0:null 3:deleteDocumentSubscription:deleteDoc,REVISIONS:8:null 3:setStatusMessage:delete_doc:0:null

3.1.2 Attributes

The *Attributes* column in the StandardServices table defines aspects of each service, discussed in the following sections:

- [Section 3.1.2.1, "Service Class"](#)
- [Section 3.1.2.2, "Access Level"](#)
- [Section 3.1.2.3, "Template Page"](#)

- Section 3.1.2.4, "Service Type"
- Section 3.1.2.5, "Subjects Notified"
- Section 3.1.2.6, "Error Message"

Figure 3–3 The Attributes Column of the DELETE_DOC Service Definition

<@table StandardServices@>		
Scripts For Standard Services		
Name	Attributes	Actions
DELETE_DOC	DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)	5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists 3:checkParametersAgainstResultSet:DOC_INFO,dRevClassID,!csRevClassIDMismatch, dDocName,!csDocNameMismatch:0:!csUnableToDeleteItem(dDocName) 3:checkSecurity:DOC_INFO:0:null 3:checkWorkflow:WF_INFO,isNotActiveBasic, DOC_INFO:0:!csUnableToDeleteItem(dDocName)!csItemIsInWorkflow(dWfName) 3:docHistoryInfo>Delete Document,IdocHistory:1:null 5:QrevisionsByClass:REVISIONS:0:!csDeleteUnableToAccessRevList(dDocName) 3:markDocDeleted:0:!csUnableToDeleteItem(dDocName) 3:doWorkflowAction:deleteCriteriaDoc:0:null 3:deleteDoc:REVISIONS:0:null 3:deleteDocumentSubscription:deleteDoc,REVISIONS:8:null 3:setStatusMessage:delete_doc:0:null

<@end@>

3.1.2.1 Service Class

The *service class* attribute specifies the Java class object that the service has access to. The classpath prefix `intradoc.service` is assumed unless a full path is given. The service class determines, in part, what actions can be performed by the service. The possible service classes are:

Service Class	Description
ArchiveService	Performs functions related to archiving.
BatchService	Performs functions related to batch loading.
ChunkedService	Performs functions related to HTTP file chunking for the upload and download of applets.
DocService	Performs actions on documents. Examples are checkin, checkout, document information, and subscription services.
DocProfileService	Performs actions on document profiles, such as adding, editing, and deleting profiles.
FileService	Retrieves files from the Oracle Content Server.
IndexerService	Performs functions related to indexing for search engine maintenance.
ListBoxService	Downloads lists from the Oracle Content Server. For example, lists of users, dependent choice lists, and so forth.
LocaleService	Performs functions specific to a user's location or environment (for example, used in internationalization to identify a user's location and provide string files in the appropriate language).
MetaService	Manages metadata fields.
PageHandlerService	Manages Library Web pages (created by Web Layout Editor).

Service Class	Description
PageRequestService	Retrieves an HTML page.
ProjectService	Manages Publisher projects.
ProviderManagerService	Manages providers (an Application Programming Interface, or API, that establishes connection to outside entities).
SchemaService	Manages the server-side publishing of JavaScript files of database tables, such as option lists.
SearchService	Performs functions related to searching.
Service	Performs a general service.
UserService	Manages users.
WorkflowService	Manages workflows.
WorkflowTemplateService	Manages workflow templates.
intradoc.admin.AdminService	Performs functions through the Admin Server. Generally called internally by the Oracle Content Server itself. These services are very complicated, and failing to call them correctly can result in the loss or corruption of Oracle Content Server data. Therefore, it is strongly recommends that you <i>do not</i> use or modify these services.

In the example of the DELETE_DOC service, the service class is *DocService*:

```
DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)
```

3.1.2.2 Access Level

The service security model is similar to the document security model used throughout the Oracle Content Server system. The *access level* attribute assigns permission levels to the service. Any user attempting to execute the service must have at least this permission.

Security access is stored as bit flags. Generally only one privilege out of READ, WRITE, DELETE, or ADMIN is assigned to a service. The access level number is the sum of the following possible bit flags:

Bit Flag	Permission	Description
1	READ_PRIVILEGE	Read permission is required for the security group referenced in the service.
2	WRITE_PRIVILEGE	Write permission is required for the security group referenced in the service.
4	DELETE_PRIVILEGE	Delete permission is required for the security group referenced in the service.
8	ADMIN_PRIVILEGE	Admin permission is required for the security group referenced in the service.

Bit Flag	Permission	Description
16	GLOBAL_PRIVILEGE	The service calls the global security check to determine if the current user has permission to execute the service. The check validates if the <i>admin</i> role is required or if the user only needs a given permission (Read, Write, or Delete) on at least one security group.
32	SCRIPTABLE_SERVICE	Scriptable services don't require parameter input, so they can be called with the <i>executeService</i> function on dynamic server pages.

If a service is acting on a document, the user must have READ, WRITE, DELETE, or ADMIN permission (in that order) for that document's security group to execute the service. For example, to subscribe to a document the user only needs READ permission for that document's security group. However, to check in a new document the user would also need WRITE permission for that document's security group.

If the service does not act on a specific document (such as GET_USER_INFO, CHECKIN_NEW_FORM, and so forth), the GLOBAL_PRIVILEGE bit flag should be set along with at least one more permission bit flag. The user must have that level of permission in at least one security group to execute the service

Note: A service should never just specify the GLOBAL_PRIVILEGE bit flag alone. At least one more permission bit flag should be specified.

SCRIPTABLE_SERVICE permission means that the service can be executed through the *executeService* *IdocScript* function. This should be restricted to read-only services, such as GET_SEARCH_RESULTS, GET_USER_INFO, and so forth.

The following is a complete list of all access levels and their meanings:

- 0: no access allowed
- 1: Read permission required
- 2: Write permission required
- 3: Read/write permission required
- 4: Delete permission required
- 8: Admin permission required
- 16: Global permission required
- 17: Global and read permission required
- 18: Global and write permission required
- 19: Global and read/write permission required
- 23: Global, read/write/delete permission required
- 24: Global, admin permission required
- 32: Scriptable permission required
- 33: Scriptable and read permission required
- 34: Scriptable and write permission required

- 40: Scriptable and admin permission required
- 49: Scriptable and global, read permission required
- 50: Scriptable, global, write permission required
- 51: Scriptable, global, read/write permission required
- 56: Scriptable, global, admin permission required

In the example of the DELETE_DOC service, the access level is 4, meaning that the user must have DELETE_PRIVILEGE to execute the service:

```
DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)
```

As another example, the access level for the ADD_ALIAS service is 24, meaning that the user must have ADMIN_PRIVILEGE and GLOBAL_PRIVILEGE to execute the service:

```
ADD_ALIAS UserService 24 null null aliases !csUnableToAddAlias
```

For details about user accounts and roles permissions see the *Oracle Fusion Middleware System Administrator's Guide for Oracle Content Server*.

3.1.2.3 Template Page

The *template page* attribute specifies the template that displays the results of the service. If the results of the service do not require presentation (such as the PageHandlerService type), this attribute is *null*.

Templates are a combination of HTML and IdocScript. The IdocScript is used to format the HTML and display the data in the response. The template page name is mapped to an HTML file in the *IdcHomeDir/components/Folders/resources/templates/templates.hda* file:

- Most template pages are mapped in the IntradocTemplates ResultSet.
- Search template pages are mapped in the SearchResultTemplates ResultSet.

In the example of the DELETE_DOC service, the template page that presents the results of the service is MSG_PAGE, which is mapped to the msg_page.htm file:

```
DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)
```

3.1.2.4 Service Type

The *service type* attribute specifies if the service is to be executed as a SubService inside another service. You cannot call a second service from a main service unless the second service is a SubService.

Service Type	Description
SubService	The service is a subservice that is executed only inside another service.
null	The service is not a subservice.

For example, the UPDATE_DOCINFO service executes the UPDATE_DOCINFO_SUB, which has the service type of *SubService*.

In the example of the DELETE_DOC service, the service is not a subservice, so the service type is *null*:

```
DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)
```

3.1.2.5 Subjects Notified

The *subjects notified* attribute specifies the subjects (subsystems) to be notified by the service. If a service changes one or more subjects, it must notify the remote sources (such as database tables) that cached information has been updated.

For example, if you do an `IsJava=1` call for any service, you will always see `changedSubjects` and `refreshSubjects` in the response. These subjects are used to notify the client when the state of the Oracle Content Server instance has changed. For example, they notify the client when a new user is added to the system, when a new document has been checked in, when custom metadata has been changed, and so on. This allows external applications to refresh their data when the Oracle Content Server state changes. It is also the underlying mechanism behind keeping the Oracle Content Server administration applets up-to-date with the number of users, document types, and documents in the system. For example, if you launch the Repository Manager and then check in a new document, you will (in a few seconds) see that item appear in the applet.

The subjects notified string is a comma-delimited list of changed subjects. (If no subjects are notified, this attribute is *null*.) For example, the value of the subjects notified attribute for the `EDIT_METADEF` service is `metadata,dynamicqueries`. This service modifies a metadata field, and subsequently informs the system that the `metadata` and `dynamicqueries` subjects have changed.

Possible subjects are:

Subject	Must be notified of changes to:
accounts	Predefined accounts
aliases	User aliases
collections	Archiver collections
config	Global configuration information
docformats	File formats
doctypes	Content Types
documents	New content items, revised content items, or updated content item metadata
dynamicqueries	Dynamic queries that retrieve the list of metadata fields from the database
indexerstatus	Indexer status
indexerwork	Content items; specifies that an indexing update cycle is required
metadata	Metadata fields
metaoptlists	Metadata field option lists
pagelist	Library (Web Layout Editor) pages
renditions	Additional renditions (from XML Converter, Thumbnails, and so forth)
reports	Report data sources
schema	Schema definitions
searchapi	Connection to the indexing search engine
subscriptiontypes	Subscription types

Subject	Must be notified of changes to:
templates	Search result templates (which are configured from Web Layout Editor)
usermetaoptlists	User information field option lists
users	User information
wfscripts	Workflow event scripts
wftemplates	Workflow templates
workflows	Workflows

In the example of the DELETE_DOC service, the *documents* subject is the only subject notified:

```
DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)
```

3.1.2.6 Error Message

The *error message* attribute defines the error message that is returned by the service if no action error message overrides it. This can be either an actual text string or a reference to a locale-sensitive string. For more information, see *Oracle Fusion Middleware Developer's Guide for Oracle Universal Content Management*.

In the example of the DELETE_DOC service, the error message is a localized string:

```
DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)
```

3.1.3 Actions

The *Actions* column defines one or more steps taken to process the service. An *action* is an operation to be performed as part of a service script. Actions can execute SQL statements, perform a query, run code, cache the results of a query, or load an option list. The data returned by one action can alter the behavior of later actions.

An action is defined as a list of colon-separated segments, using the following format:

```
type:name:parameters:control mask:error message
```

See the following sections for more information:

- [Section 3.1.3.1, "Action Type"](#)
- [Section 3.1.3.2, "Action Name"](#)
- [Section 3.1.3.3, "Action Parameters"](#)
- [Section 3.1.3.4, "Action Control Mask"](#)
- [Section 3.1.3.5, "Action Error Message"](#)

Note: In an HTML resource file that defines services, the `
` tags in the Actions column are for browser display purposes only, so they are optional. However, the `</td>` tag must occur immediately after the list of actions, without a line break in between.

Figure 3–4 The Actions Column of the DELETE_DOC Service Definition

Scripts For Standard Services		
Name	Attributes	Actions
DELETE_DOC	DocService 4 MSG_PAGE null documents !csUnableToDeleteItem(dDocName)	5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists 3:checkParametersAgainstResultSet:DOC_INFO,dRevClassID,!csRevClassIDMismatch, dDocName,!csDocNameMismatch:0:!csUnableToDeleteItem(dDocName) 3:checkSecurity:DOC_INFO:0:null 3:checkWorkflow:WF_INFO,isNotActiveBasic, DOC_INFO:0:!csUnableToDeleteItem(dDocName)!csItemsInWorkflow(dWFName) 3:docHistoryInfo:Delete Document,IdocHistory:1:null 5:QrevisionsByClass:REVISIONS:0:!csDeleteUnableToAccessRevList(dDocName) 3:markDocDeleted:0:!csUnableToDeleteItem(dDocName) 3:doWorkflowAction:deleteCriteriaDoc:0:null 3:deleteDoc:REVISIONS:0:null 3:deleteDocumentSubscription:deleteDoc,REVISIONS:8:null 3:setStatusMessage:delete_doc:0:null

3.1.3.1 Action Type

The first segment of an action statement defines the type of action.

- **Action Type #:** used to identify the action type in the service resource file.
- **Component Wizard Identifier:** used to identify the action type in the Component Wizard. In the service resource file, the action type is represented as a number.
- **Java Constant:** used to identify the action type in Java code.

The possible action types are:

Action Type #	Component Wizard Identifier	Java Constant	Description
1	Select query	QUERY_TYPE	Executes a predefined SQL database query to retrieve information (read-only action) and then immediately discards the results. For example, a select query might be used to see if a specific dDocName (Content ID) already exists in the database. The query is specified by the Action Name of the action.
2	Execute query	EXECUTE_TYPE	Executes a predefined SQL database query to delete, add, or update information in the database.
3	Java method	CODE_TYPE	Specifies a code module that is a part of the Java class implementing the service.
4	Load option list	OPTION_TYPE	Loads an option list stored in the system. This is a deprecated action type.
5	Select cache query	CACHE_RESULT_TYPE	Executes an SQL database query to retrieve information (read-only action) and then stores the results for later use. For example, a select cache query might be used to find all users subscribed to a content item and save the list for display to consumers. The query is specified by the Action Name of the action.

In the example of the first action of the DELETE_DOC service, the action is a *Select cache query* type (5):

```
5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists
```

3.1.3.2 Action Name

The second segment of an action statement defines the name of the action.

- For the *Java method* action type, the action name is the Java method.
- For the *Load option list* action type, the action name is the option list.
- For the *Select query*, *Execute query*, and *Select cache query* action types, the action name is the query name. For standard Oracle Content Server services, typically uses a prefix to identify the action performed on the database. The possible prefixes for queries are:

Query Prefix	Description
Q	Query (retrieve) information from the database (read-only action).
D	Delete information from the database.
I	Insert (add) information in the database.
U	Update information in the database.

In the example of the first action of the DELETE_DOC service, the name of the action is *QdocInfo*. This specifies that a read-only query (Q) will be performed on the database:

```
5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists
```

3.1.3.3 Action Parameters

The third segment of an action statement specifies the parameters that the action requires. If no parameters are required, this segment is left empty (two colons appear in place of the parameters).

- If the action requires parameters, enter the parameters as a comma-delimited list.
- For the *Select cache query* action type, the first parameter is the name that the action assigns to the ResultSet returned from the query. This ResultSet can then be referenced in the template page.
- For the *Load option list* action type, the parameters are optional. However, if parameters are given, the first parameter is the key under which the option list is loaded, and the second parameter is the selected value for display on an HTML page.

In the example of the first action of the DELETE_DOC service, the ResultSet that is returned from the service query will be named *DOC_INFO*:

```
5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists
```

3.1.3.4 Action Control Mask

The fourth segment of an action statement is an optional bit flag that controls the results of queries to the Oracle Content Server database.

- **Control Mask Bit Flag:** Used to identify the control mask in the service resource file. The control mask number used in the service resource file represents the sum of the bit flags for all controls being applied. For standard Oracle Content Server services, the control mask bit flag is typically used instead of the control mask string value.
- **Control Mask String Value:** Used to identify the control mask in the service resource file. For multiple control masks, the string values are placed in a

comma-delimited list. For custom services, the string value is used instead of the control mask bit flag.

- **Component Wizard Identifier:** Used to identify the control mask in the Component Wizard. In the service resource file, the control mask is represented by either the sum of its bit flags (standard Oracle Content Server services), or a comma-delimited list of bit flag string values (custom services).
- **Java Constant:** Used to identify the control mask in the Java code.

The possible control masks are:

Control Mask Bit Flag	Control Mask String Value	Component Wizard Identifier	Java Constant	Description
0	-	-	-	No control is applied.
1	ignoreError	Ignore error	CONTROL_IGNORE_ERROR	Do not terminate the service on error.
2	mustExist	Check result non-empty	CONTROL_MUST_EXIST	At least one record must be returned by the query, or the action fails. Used only for the <i>Select query</i> and <i>Select cache query</i> action types.
4	beginTran	Begin transaction	CONTROL_BEGIN_TRAN	Starts a database transaction.
8	commitTran	Commit transaction	CONTROL_COMMIT_TRAN	Concludes a database transaction.
16	mustNotExist	Check result empty	CONTROL_MUST_NOT_EXIST	Query must not return any rows, or the action fails. Used only for the <i>Select query</i> and <i>Select cache query</i> action types.
32	retryQuery	Retry query	CONTROL_RETRY_QUERY	When the action type is set to <i>Execute query</i> and the query fails, the error will be logged. After three seconds, the query will be run again. If the query fails three times, the service will fail. Used mostly for checking in content. No longer used.
64	doNotLog	Do not log	CONTROL_DO_NOT_LOG	When the action type is set to <i>Select query</i> and the query fails, the service will fail. However, the error will NOT be logged in the system logs. Used internally by when developing components as a debug flag for testing.

Note: The *Check result non-empty* and *Check result empty* control masks are used only for the *Select query* and *Select cache query* action types. See [Section 3.1.3.1, "Action Type."](#)

In the example of the first action of the DELETE_DOC service, the control mask value is 6, which means that at least one record must be returned by the query (2), and the action starts a database transaction (4):

```
5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists
```

If this was a custom service created using the Component Wizard, the sum of the control mask bit flags would be replaced by a comma-delimited list of the bit flag string values:

```
5:QdocInfo:DOC_INFO:mustExist, beginTran:!csUnableToDeleteItem(dDocName)
!csRevisionNoLongerExists
```

3.1.3.5 Action Error Message

The fifth segment of an action statement defines the error message to be displayed if this action fails. This can be either an actual text string or a reference to a locale-sensitive string. For more information, see *Oracle Fusion Middleware Developer's Guide for Oracle Universal Content Management*.

- An action error message overrides the error message provided as an attribute of the service.
- If the error message for an action is not null, it becomes the error message for the remainder of the actions in the service.
- If the error message for an action is null, the error message remains unchanged from the previous action.
- String references are preceded by an exclamation point.

In the example of the first action of the DELETE_DOC service, the error message is a combination of two localized strings:

```
5:QdocInfo:DOC_INFO:6:!csUnableToDeleteItem(dDocName)!csRevisionNoLongerExists
```

3.2 Service Example

The DOC_INFO service provides a good example of how services, queries, and templates work together. This section covers the following topics:

- [Section 3.2.1, "DOC_INFO Service Definition"](#)
- [Section 3.2.2, "DOC_INFO Attributes"](#)
- [Section 3.2.3, "DOC_INFO Actions"](#)
- [Section 3.2.4, "DOC_INFO Template"](#)

3.2.1 DOC_INFO Service Definition

This section shows details of the DOC_INFO service definition from the *IdcHomeDir/resources/core/templates/std_services.htm* file.

The following is an example of the DOC_INFO service definition, displayed in a text editor:

```
<@table StandardServices@>
<table border=1><caption><strong>Scripts For Standard Services</strong></caption>
<tr>
  <td>Name</td><td>Attributes</td><td>Actions</td>
</tr>
<tr>
  <td>DOC_INFO</td>
  <td>DocService
    33
    DOC_INFO
    null
    null<br>
```

```

!csUnableToGetRevInfo</td>
<td>5:QdocInfo:DOC_INFO:2:!csItemNoLongerExists2

3:mapNamedResultSetValues:DOCINFO,dStatus,dStatus,dDocTitle,dDocTitle:0:null
3:checkSecurity:DOC_INFO:0:!csUnableToGetRevInfo2(dDocName)
3:getDocFormats:QdocFormats:0:null
3:getURLAbsolute::0:null
3:getUserMailAddress:dDocAuthor,AuthorAddress:0:null
3:getUserMailAddress:dCheckoutUser,CheckoutUserAddress:0:null
3:getWorkflowInfo:WF_INFO:0:null
3:getDocSubscriptionInfo:QisSubscribed:0:null
5:QrevHistory:REVISION_HISTORY:0:!csUnableToGetRevHistory(dDocName)</td>
</tr>
</table>
<@end@>

```

Figure 3-5 Example of the DOC_INFO Service Definition

<@table StandardServices@>		
Scripts For Standard Services		
Name	Attributes	Actions
DOC_INFO	DocService 33 DOC_INFO null null !csUnableToGetRevInfo	5:QdocInfo:DOC_INFO:2:!csItemNoLongerExists2 3:mapNamedResultSetValues:DOC_INFO,dStatus,dStatus,dDocTitle,dDocTitle:0:null 3:checkSecurity:DOC_INFO:0:!csUnableToGetRevInfo2(dDocName) 3:getDocFormats:QdocFormats:0:null 3:getURLAbsolute::0:null 3:getUserMailAddress:dDocAuthor,AuthorAddress:0:null 3:getUserMailAddress:dCheckoutUser,CheckoutUserAddress:0:null 3:getWorkflowInfo:WF_INFO:0:null 3:getDocSubscriptionInfo:QisSubscribed:0:null 5:QrevHistory:REVISION_HISTORY:0:!csUnableToGetRevHistory(dDocName)
<@end@>		

3.2.2 DOC_INFO Attributes

The following table describes the attributes of the DOC_INFO service:

Attribute	Value	Description
Service class	DocService	This service is providing information about a content item.
Access level	33	1 = The user requesting the service must have Read permission on the content item. 32 = This service can be executed with the <i>executeService</i> Idoc Script function.
Template page	DOC_INFO	This service uses the DOC_INFO template (doc_info.htm file). The results from the actions will be merged with this template and presented to the user.
Service type	null	This service is not a subservice.
Subjects notified	null	No subjects are affected by this service.

Attribute	Value	Description
Error Message	!csUnableToGetRevInfo	If this service fails on an English Oracle Content Server system, it returns the error message string: Unable to retrieve information about the revision

3.2.3 DOC_INFO Actions

The DOC_INFO service executes the following ten actions.

3.2.3.1 Action 1 Definition and Description

Action 1 takes the following form:

- **Action 1** - 5:QdocInfo:DOC_INFO:2:!csItemNoLongerExists2
- **5** : Select cache query action that retrieves information from the database using a query.
- **QDocInfo** : This action retrieves content item information using the *QDocInfo* query in the query.htm file.
- **DOC_INFO** : The result of the query is assigned to a ResultSet called DOC_INFO and stored for later use.
- **2** : The Check result non-empty control mask specifies that the query must return a record, or the action fails.
- **!csItemNoLongerExists2** : If this action fails on an English Oracle Content Server system, it returns the error message string:

This content item no longer exists

3.2.3.2 Action 2 Definition and Description

Action 2 takes the following form:

- **Action 2** :
3:mapNamedResultSetValues:DOCINFO,dStatus,dStatus,dDocTitle,dDocTitle:0:null
- **3** : Java method action specifying a module that is a part of the Java class implementing the service.
- **mapNamedResultSetValues** : This action retrieves the values of dStatus and dDocTitle from the first row of the DOC_INFO ResultSet and stores them in the local data. (This increases speed and ensures that the correct values are used.)
- **DOC_INFO,dStatus,dStatus,dDocTitle,dDocTitle** : Parameters required for the *mapNamedResultSetValues* action.
- **0** : No control mask is specified.
- **null** : No error message is specified.

3.2.3.3 Action 3 Definition and Description

Action 3 takes the following form:

- **Action 3** : 3:checkSecurity:DOC_INFO:0:!csUnableToGetRevInfo2(dDocName)
- **3** : Java method action specifying a module that is a part of the Java class implementing the service.

- **checkSecurity** : This action retrieves the data assigned to the DOC_INFO ResultSet and evaluates the assigned security level to verify that the user is authorized to perform this action.
- **DOC_INFO** : ResultSet that contains the security information to be evaluated by the *checkSecurity* action.
- **0** : No control mask is specified.
- **!csUnableToGetRevInfo2(dDocName)** : If this action fails on an English Oracle Content Server system, it returns the error message string:

```
Unable to retrieve information for '{dDocName}.'
```

3.2.3.4 Action 4 Definition and Description

Action 4 takes the following form:

- **Action 4** : 3:getDocFormats:QdocFormats:0:null
- **3** : Java method action specifying a module that is a part of the Java class implementing the service.
- **getDocFormats** : This action retrieves the file formats for the content item using the *QdocFormats* query in the query.htm file. A comma-delimited list of the file formats is stored in the local data as dDocFormats.
- **QdocFormats** : Specifies the query used to retrieve the file formats.
- **0** : No control mask is specified.
- **null** : No error message is specified.

3.2.3.5 Action 5 Definition and Description

Action 5 takes the following form:

- **Action 5** : 3:getURLAbsolute::0:null
- **3** : Java method action specifying a module that is a part of the Java class implementing the service.
- **getURLAbsolute** : This action resolves the URL of the content item and stores it in the local data as DocUrl.
- **blank** : This action takes no parameters.
- **0** : No control mask is specified.
- **null** : No error message is specified.

3.2.3.6 Action 6 Definition and Description

Action 6 takes the following form:

- **Action 6** : 3:getUserMailAddress:dDocAuthor,AuthorAddress:0:null
- **3** : Java method action specifying a module that is a part of the Java class implementing the service.
- **getUserMailAddress** : This action resolves the e-mail address of the content item author.
- **dDocAuthor,AuthorAddress** : This action passes dDocAuthor and AuthorAddress as parameters.

- **0** : No control mask is specified.
- **null** : No error message is specified.

3.2.3.7 Action 7 Definition and Description

Action 7 takes the following form:

- **Action 7** : 3:getUserMailAddress:dCheckoutUser,CheckoutUserAddress:0:null
- **3** : Java method action specifying a module that is a part of the Java class implementing the service.
- **getUserMailAddress** : This action resolves the e-mail address of the user who has the content item checked out.
- **dCheckoutUser,CheckoutUserAddress** : This action passes dCheckoutUser and CheckoutUserAddress as parameters.
- **0** : No control mask is specified.
- **null** : No error message is specified.

3.2.3.8 Action 8 Definition and Description

Action 8 takes the following form:

- **Action 8** : 3:getWorkflowInfo:WF_INFO:0:null
- **3** : Java method action specifying a module that is a part of the Java class implementing the service.
- **getWorkflowInfo** : This action evaluates whether the content item is part of a workflow. If the WF_INFO ResultSet exists, workflow information is merged into the DOC_INFO template.
- **WF_INFO** : This action passes WF_INFO as a parameter.
- **0** : No control mask is specified.
- **null** : No error message is specified.

3.2.3.9 Action 9 Definition and Description

Action 9 takes the following form:

- **Action 9** : 3:getDocSubscriptionInfo:QisSubscribed:0:null
- **3** : Java method action specifying a module that is a part of the Java class implementing the service.
- **getDocSubscriptionInfo** : This action evaluates if the current user has subscribed to the content item:
 - If the user is subscribed, an **Unsubscribe** button is displayed.
 - If the user is not subscribed, a **Subscribe** button is displayed.
- **QisSubscribed** : Specifies the query used to retrieve the subscription information.
- **0** : No control mask is specified.
- **null** : No error message is specified.

3.2.3.10 Action 10 Definition and Description

Action 10 takes the following form:

- **Action 10 :**
5:QrevHistory:REVISION_HISTORY:0:!csUnableToGetRevHistory(dDocName)
- **5 :** Select cache query action that retrieves information from the database using a query.
- **QrevHistory :** This action retrieves revision history information using the *QrevHistory* query in the query.htm file.
- **REVISION_HISTORY :** The result the query is assigned to a ResultSet called REVISION_HISTORY. The DOC_INFO template loops on this ResultSet to present information about each revision.
- **0 :** No control mask is specified.
- **!csUnableToGetRevHistory(dDocName) :** If this action fails on an English Oracle Content Server system, it returns the error message string:

Ubpnable to retrieve revision history for ''{dDocName}.'

3.2.4 DOC_INFO Template

The template page for the DOC_INFO service is the DOC_INFO template. It is important to know what is happening between the files so that you can understand the interactions between the template page and the actions performed in a service.

The definition for the content that the doc_info.htm template contains is located in the *IdcHomeDir/components/Folders/resources/std_page.htm* file. Code from both files appear in the following markup section:

Markup from the *IdcHomeDir/resources/core/templates/doc_info.htm* file:

```
<!DOCTYPE HTML PUBLIC "-//IETF//DTD HTML//EN">
<html>
<head>

<$include std_info_html_head_declarations$>

</head>
<$include info_body_def$>
<$include info_page_content$>
</body>
</html>
```

Markup from the *IdcHomeDir/components/Folders/resources/std_page.htm* file that defines what will appear in the doc_info.htm template:

```
<@dynamichtml info_page_content@>
<$include std_page_begin$>
<$include std_header$>
...
<!-- Do a loop on DOC_INFO so that all substitution tags will use DOC_INFO as
their first place to find their values. Otherwise their is confusion between
this result set and the REVISION_HISTORY table that comes later. For example
'dStatus' is a value in both tables-->
<$loop DOC_INFO$>
<$if AllowPrimaryMetaFile and isTrue(AllowPrimaryMetaFile) and
isTrue(dFormat like "*idcmeta*")$>
<$showPrimaryMetaFileFields = "1"$>
```

```

<endif$>
<include doc_info_notify_data$>

<table border=0 cellpadding=2 cellspacing=0 width=<$docInfoWidth-30$>>
<caption align=top><h4 class=pageTitle><$pageTitle$></caption>
<include special_checkin_fields1$>
<include std_revision_label_field$>
<include std_document_type_field$>
<include std_document_title_field$>
<include author_checkin_field$>
<include std_meta_fields$>
<include security_checkin_fields$>
<include checkout_author_info_field$>
<if IsStagingDoc$>
<include doc_date_fields$>
<endif$>
<fieldName = "dStatus", fieldCaption = "Status"$><include std_displayonly_
field$>
<if HasOriginal$>
<fieldName = "dDocFormats", fieldCaption = "Formats"$><include std_display_
field$>

</td>
</tr>
</table>
<$include std_page_end$>
<@end@>

```

3.3 Creating a Service Resource

There are two ways to create a service resource for use with a custom component:

- [Section 3.3.1, "Creating a Custom Service Manually"](#)
- [Section 3.3.3, "Creating a Custom Service using Component Wizard"](#)

Note: For more information about custom components, see the *Oracle Fusion Middleware Developer's Guide for Oracle Universal Content Management*.

3.3.1 Creating a Custom Service Manually

To create a custom service resource manually:

- [Section 3.3.2, "Define the service in an HTM file"](#).
- [Section 3.3.2.1, "Load the service in the custom component HDA file"](#).

3.3.2 Define the service in an HTM file

The HTM file must include a table that is identical in structure to the *StandardServices* table. See [Section 3.1, "Service Structure Overview"](#).

Make a copy of the `std_services.htm` file, place it in your custom component's `/resources` directory, and rename the file to avoid confusion. For example:

```
/custom/my_component/resources/my_services.htm
```

1. Change the name of the `StandardServices` table to a new name. For example:

```
<@table MyServices@>
```

2. Delete all of the rows in the table except for a service that is similar to the one you want to create.
3. Edit the entries in the Name, Attributes, and Actions columns.
4. Save and close the file.

For example, the following HTM file shows two custom services named `ADD_REPORT` and `REPORTS_LIST`:

Here is an example of a custom services HTM file, displayed in a text editor.

```

<HTML>
<HEAD>
<META HTTP-EQUIV='Content-Type' content='text/html; charset=iso-8859-1'>

```

```

<TITLE>Custom Scripted Services</TITLE>
</HEAD>
<BODY>
<@table MyServices@>
<table border=1><caption><strong>Scripts For Custom Services
</strong></caption>
<tr>
<td>Name</td><td>Attributes</td><td>Actions</td>
</tr>
<tr>
<td>ADD_REPORT</td>
<td>Service
18
ADD_REPORT_FORM
null
null<br>
Unable to add report.</td>
<td>2:Ireport::0:null</td>
</tr>
<tr>
<td>REPORTS_LIST</td>
<td>Service
17
REPORT_LIST_FORM
null
null<br>
Unable to retrieve reports.</td>
<td>5:Qreports:REPORT_LIST:0:null</td>
</tr>
</table>
<@end@>
<br><br>
</BODY>
</HTML>

```

Figure 3–6 Example of Custom Services HTM File, Displayed in a Web Browser

Scripts For Custom Services		
Name	Attributes	Actions
ADD_REPORT	Service 18 ADD_REPORT_FORM null null Unable to add report.	2:Ireport::0:null
REPORTS_LIST	Service 17 REPORT_LIST_FORM null null Unable to retrieve reports.	5:Qreports:REPORT_LIST:0:null

3.3.2.1 Load the service in the custom component HDA file

1. Open the component definition (glue) file of the custom component in a text editor. For example, *DomainHome/ucm/cs/custom/my_component/my_component.hda*.
2. Add the new HTM file to the ResourceDefinition ResultSet. For example:

```

@ResultSet ResourceDefinition
4
type
filename

```

```

tables
loadOrder
service
resources/my_services.htm
MyServices
1
@end
    
```

3. Save the file.

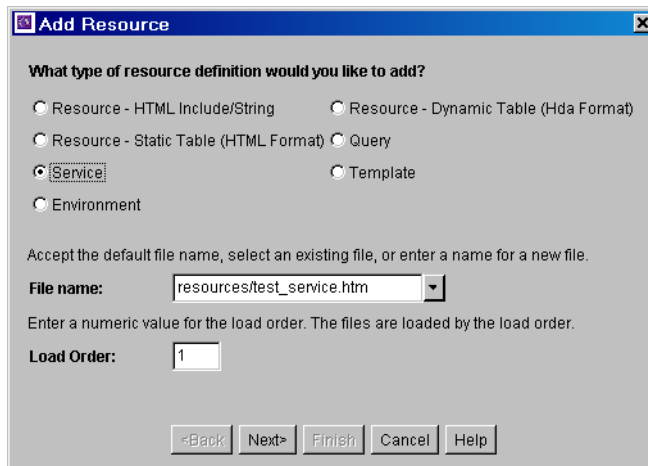

3.3.3 Creating a Custom Service using Component Wizard

To create a service resource using the Component Wizard:

1. In the Component Wizard, open the component the resource will be created for.
2. On the Resource Definition tab, click **Add**.

The Add Resource screen is displayed.

Figure 3–7 Defining a New Custom Service

1. Select the **Service** option.
2. Enter the file name for the resource file. The default file name is `resources/ componentname_ service. html`.

If a resource file has been created for services, you can append the new service table to the existing file by selecting the file name. Any changes you make to the load order will apply to the entire resource file.

To create a new resource file with a different file name, enter the file name. For example, `my_services.htm`.

3. If you want the new resource file to be loaded in a particular order, enter the number in the **Load Order** field.

Note: Unless you have a particular reason for the resource file to be loaded after other resources, you should leave the load order set to 1.

4. Click **Next**.

The Add Service Table Information screen is displayed.

Figure 3–8 Defining a New Service Table

Add Service Table Information

A new service will be created with the following definition:

Resource Type: Service
 File name: resources/test_service.htm
 Load Order: 1

Table Definition

Enter the name of the table to be defined.

Table Name:

<Back Next> Finish Cancel Help

1. Enter a name for the service table.

It is a good idea to leave the name of the component as a prefix. For example, *My_Component_Services*.

Each service table in a component must have a unique name, even if the tables are in different resource files.

2. Click **Next**.

The Add Service screen is displayed.

Figure 3–9 Defining Service Attributes

Add Service

Name:

Service Class:

Template:

Service Type:

Access Level: Read Write Delete Admin Global Scriptable

Subjects Notified:

Error Message:

Actions

Action	Type

<Back Next> Finish Cancel Help

1. Enter the service attributes directly, or start with an existing service definition as follows:

- a. Click **Select**.

A list of commonly used services is displayed.

Select the **Show All** check box to show the entire list of predefined services.

- b. Select a service from the list. To view details about a service, highlight the service name and click **Preview**.

Tip: To view the online help for the selected service, click the **Help** button on the Preview Information for Service <SERVICE_NAME> dialog.

- c. Click **OK**.

The service attributes and actions are filled in.

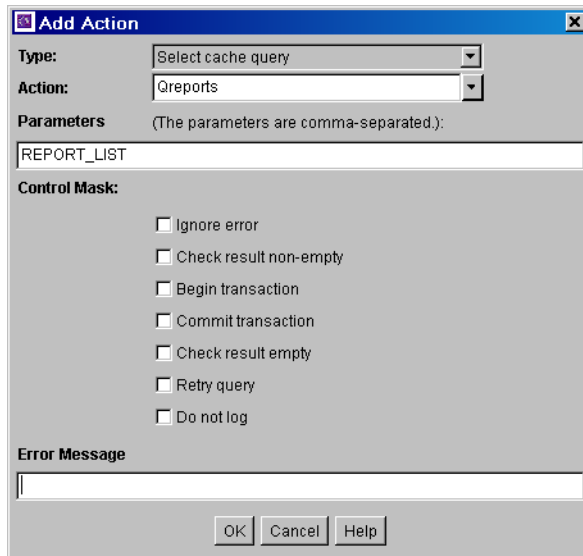

Note: If you do not change the name of the service and this component is loaded last, the custom service will override the standard service and any other custom services with the same name.

- d. Edit the service attributes as necessary.

2. Enter the actions as necessary.

- Actions must appear in the Actions list in order of execution. Use the **Up** and **Down** buttons to move the selected action.
- To add an action, click **Add**. Enter the action definition and click **OK**.
- To edit an action, select the action and click **Edit**. Modify the action definition and click **OK**.
- To remove an action, select the action and click **Delete**.

Figure 3–10 Defining an Action

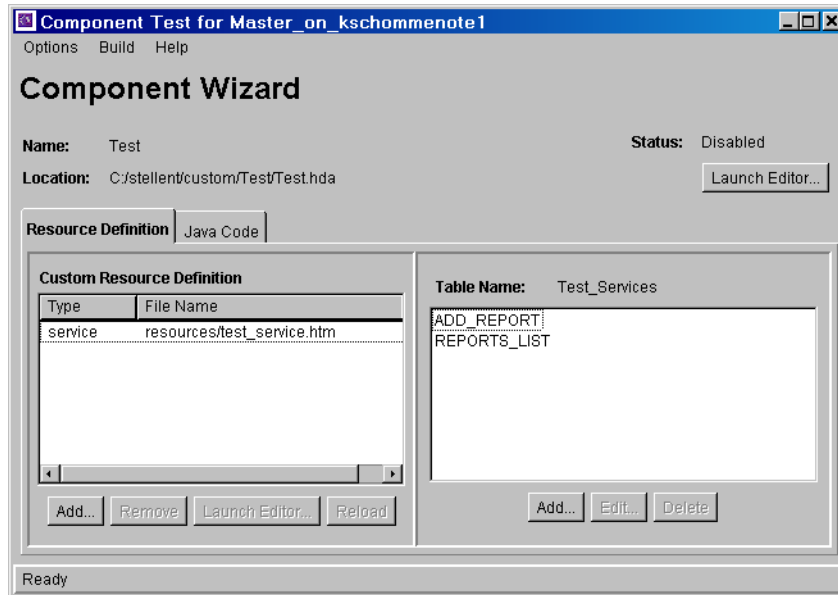

1. Click **Finish**.

A dialog box asks if you want to launch the text editor to continue editing.

- 2. Click **Yes** to open the resource file in the text editor. Click **No** to return to the Component Wizard.

The service resource file now appears in the Custom Resource Definition list, and the service table appears in the Table Name list in the right pane.

Figure 3–11 Custom Service Resource Defined in the Component Wizard

Core Oracle Content Server Services

This chapter describes the core services available for the Oracle Content Server system. The services in this chapter are divided according to Service Class.

This chapter covers the following topics:

- [Section 4.1, "About Core Oracle Content Server Services"](#)
- [Section 4.2, "General Services \(Core Oracle Content Server\)"](#)
- [Section 4.3, "Doc Services \(Core Oracle Content Server\)"](#)
- [Section 4.4, "Doc Profile Services \(Core Oracle Content Server\)"](#)
- [Section 4.5, "File Services \(Core Oracle Content Server\)"](#)
- [Section 4.6, "Indexer Services \(Core Oracle Content Server\)"](#)
- [Section 4.7, "Internal Services \(Core Oracle Content Server\)"](#)

4.1 About Core Oracle Content Server Services

Note: The most commonly used services have more extensive descriptions.

A typical service entry is similar to the following:

```
REMOVE_METAFILE_SUB
DocService 0 null SubService null !csDocumentNotDeleted(dDocName)
3:deleteRevFiles::0:!csUpdateFileDeleteFailed(dDocName)
2:Ddocument::0:null
```

In this example:

- The first line indicates the service name: `REMOVE_METAFILE_SUB`
- The second line lists the service's attributes:
 - Service class: `DocService`
 - Access level: `0`
 - Template: `null` (none used)
 - Service type: `SubService`
 - Subjects Notified: `null`
 - Error message: `Document Not Deleted`
- The remainder of the entry lists the service's actions, each line designating one action:
 - action type: for example, `3`, indicating a Java method.
 - action name: for example, `deleteRevFiles`
 - action parameters: if no parameters are specified, double-colons (`: :`) are included.
 - action control mask: for example, `0`, indicating no control mask. The double-colon indicator (`: :`) can also be included.
 - action error message, or `null` if no message is available.

Each element of the service's action is separated by a colon (`:`).

Important: All services have at least one required parameter. The `IdcService` parameter takes the name of the service as its argument. If other parameters are required, they are noted in the description of the service.

For details about service attributes and actions, see [Section 3, "Customizing Services."](#)

4.2 General Services (Core Oracle Content Server)

General services are used throughout the Oracle Content Server system and are often not tied to a specific functionality. Frequently used services are marked with an asterisk (*) in the following list.

This section describes these services:

- [ADD_DOC_ACCOUNT](#)
- [ADD_DOCEXTENSION](#)
- [ADD_DOCFORMAT](#)
- [ADD_DOCTYPE](#)
- [APPLET_DOCINFO](#)
- [CONFIG_INFO](#)
- [DELETE_DOC_ACCOUNT](#)
- [DELETE_DOCEXTENSION](#)

- DELETE_DOCFORMAT
- DELETE_DOCTYPE
- EDIT_DOCEXTENSION
- EDIT_DOCFORMAT
- EDIT_DOCTYPE
- EDIT_TRACE_OPTIONS
- GET_DATARESULTSET
- GET_DOCEXTENSIONS
- GET_DOCFORMATS
- GET_DOCTYPES
- GET_FILELIST
- GET_METADEFS
- GET_RESULT_OPTIONS
- GET_SYSTEM_AUDIT_INFO
- GET_TABLE
- GET_USER_METADEFS
- JAVA_PROPERTIES
- LM_BUILD_WEB_STRING_FILES
- LM_LOAD_LAYOUTS
- LM_LOAD_LAYOUTS_SUB
- LOAD_DOC_ENVIRONMENT
- *LOGIN
- MERGE_TABLE
- *PING_SERVER
- QUERY_DOC_ACCOUNTS
- SOAP_FAULT

4.2.1 ADD_DOC_ACCOUNT

Service used to create a new account. The most likely error is an account name that is not unique.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dDocAccount: The security account for the content item.

Example

```
IdcService=ADD_DOC_COLLECTION
dDocAccount=newaccount
```

4.2.2 ADD_DOCEXTENSION

Service that adds a file extension to an existing file. The most likely error is when a matching file with that extension already exists in the system.

Additional Required Service Parameters

- `dExtension`: The file extension such as *hcsf*, *doc*, *txt*.
- `dFormat`: The formatting process used to create the web-viewable version of the content. For example, *application/hcsf* or *application/doc*.

Example

```
IdcService=ADD_DOCEXTENSION
dExtension=doc
dFormat=application/doc
```

4.2.3 ADD_DOCFORMAT

Service that creates a new file format. The most likely error is when the file format already exists in the system.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `dFormat`: The formatting process used to create the web-viewable version of the content. For example, *application/hcsf* or *application/doc*.
- `dConversion`: The conversion algorithm is determined by the parameter *dConversion*.

If the conversion type is not *Passthru* or *NoConversion* (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

If the file mime-type is *application/FDF*, the server sets the conversion to *exchange-fdf*.

- `dDescription`: The file format description.

Example

```
IdcService=ADD_DOCFORMAT
dFormat=application/doc
dDescription=mword
dConversion=PASSTHRU
```

4.2.4 ADD_DOCTYPE

Used to create a new content item type. The most likely error is when the content item type name is not unique.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `dDocType`: The new content item Type.
- `dDescription`: Description of the new type.

- `dGif`: The file name of the GIF image that is displayed as an icon to represent the new doc type. Include the `.gif` extension.

Example

```
IdcService=ADD_DOCTYPE
dDocType=MYTEST
dDescription=My Description.
dGif=adeng.gif
```

4.2.5 APPLET_DOCINFO

Service that retrieves content item information. The most likely error is when the content item no longer exists in the system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dID`: The generated content item revision ID.

Example

```
IdcService=APPLET_DOCINFO
dID=47
```

4.2.6 CONFIG_INFO

Service that retrieves configuration information from the Admin Server. The service retrieves configuration information for the currently active component.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.7 DELETE_DOC_ACCOUNT

Service that deletes an existing account.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dDocAccount`: The account name.

Example

```
IdcService=DELETE_DOC
dDocAccount=mainaccount
```

4.2.8 DELETE_DOCEXTENSION

Service that deletes an existing file extension.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dExtension`: The file extension, such as *hcsf*, *doc*, *txt*.

Example

```
IdcService=DELETE_DOCEXTENSION
dExtension=hcsf
```

4.2.9 DELETE_DOCFORMAT

Service that deletes an existing document format.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **dFormat:** The name of the MIME format. For example, *application/hcsf* or *application/doc*.

Example

```
IdcService=DELETE_DOCFORMAT
dFormat=application/hcsf
```

4.2.10 DELETE_DOCTYPE

Service that deletes an existing content item type. The most likely errors are when the specified file type does not exist or when a file of that type still exists in the system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **dDocType:** The content item type.

Example

```
IdcService=DELETE_DOCTYPE
dDocType=TEST
```

4.2.11 EDIT_DOCEXTENSION

Service that modifies an existing file extension.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **dExtension:** The file extension such as *doc*, *txt*, or *pdf*.
- **dFormat:** The formatting process used to create the web-viewable version of the content. For example, *application/hcsf* or *application/doc*.

Example

```
IdcService=EDIT_DOCEXTENSION
dExtension=hcsf
dFormat=application/hcsf
```

4.2.12 EDIT_DOCFORMAT

Service that modifies an existing content item format. This service is called from the Configuration Manager applet.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **dFormat:** The formatting process used to create the web-viewable version of the content. For example, *application/hcsf* or *application/doc*.
- **dDescription:** The format description.

- **dConversion:** The conversion algorithm is determined by this parameter.
 If the conversion type is not *Passthru* or *NoConversion* (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

 If the file mime-type is *application/FDF*, the server sets the conversion to *exchange-fdf*.

Example

```
IdcService=EDIT_DOCFORMAT
dFormat=application/hcsf
dDescription=hypercontent
dConversion=PASSTHRU
```

4.2.13 EDIT_DOCTYPE

Service that modifies an existing content item type.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- **dDocType:** The content item type.
- **dDescription:** The type description.
- **dGif:** The file name of the GIF image that is displayed as an icon to represent the type. Include the *.gif* extension.

Example

```
IdcService=EDIT_DOCTYPE
dDocType=MY_TEST
dDescription=edit testing
dGif=admkt.gif
```

4.2.14 EDIT_TRACE_OPTIONS

Service that retrieves trace options on the System Audit Info page.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.2.15 GET_DATARESULTSET

This service executes a Select query against the database. The query is built from the *dataSource* parameter. The service returns the following information:

- The result set containing the results of the query.
- An indication if the results were truncated. If the *dataSource* was defined so it cannot exceed the maximum number of rows and if the query returns more than the maximum allowed, the *copyAborted* key is set to 1 (*true*). This indicates that the returned result set only contains a subset of the query.

Any query that tries to select against certain core Oracle Content Server tables have a security clause applied. In particular, Documents, Revisions, and Users tables have extra security clauses applied.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- **dataSource:** A Select query with a potential WHERE clause and ORDER BY clause that is provided by the caller. The dataSource is an Oracle Content Server resource, defined in the DataSources table (see the resource.htm file for the standard list of dataSources.)

Optional Service Parameters

- **whereClause:** The WHERE clause to the Select query.
- **orderClause:** If set to *true*, orders the query by clause.
- **resultName:** specifies the name to use for the result set of the query.

4.2.16 GET_DOCEXTENSIONS

Service that returns a list of all content item extensions and the file format each extension is mapped to. Returns the properties information and ExtensionFormatMap ResultSet.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.17 GET_DOCFORMATS

Service that returns a list of all content item formats and their associated conversion methods and descriptions. Returns the properties information and DocFormats ResultSet.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.18 GET_DOCTYPES

Service that returns a list of all content item types, their descriptions, and their associated GIF images. Returns the properties information and DocTypes ResultSet.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.19 GET_FILELIST

An administrative service that retrieves a file listing in a directory matching a specified filter. The directory is specified by an ID, not by the user. The service then maps the ID to a directory.

In practice, this service is only used to retrieve the content type GIF list for the Configuration Manager applet. This list is located in the /weblayout/images/docgifs directory. The results are returned in the value specified in the fileListName parameter as an option list.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **directoryID:** The directory identifier. Possible values include *docgifs*, *images*, *templates*, *resources*.
- **fileFilter:** Wild card filter to use to select the files.
- **fileListName:** Option list which holds the values returned.

4.2.20 GET_METADEFs

Service that returns a list of all custom metadata fields and their attributes. Returns the properties information and MetaFieldInfo ResultSet.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.21 GET_RESULT_OPTIONS

Service that returns information from the search results templates.

Note: As of version 3.5.3, the Oracle Content Server system no longer uses this service. It remains in the *std_services.htm* file as legacy code for reverse compatibility.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.22 GET_SYSTEM_AUDIT_INFO

Service that retrieves system audit information for the Oracle Content Server system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.23 GET_TABLE

Service that exports a database table to a result set in an HDA file.

If the specified table is not found, the service fails. It is up to the calling program receiving the HDA data to store this result set for later usage.

The most likely error is a table name that does not exist.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `tableName`: The name of table to export.

Example

- `IdcCommand` command file format:

```
IdcService=GET_TABLE
tableName=Users
```

- HDA format:

```
@Properties LocalData
IdcService=GET_TABLE
tableName=Users
@end
```

4.2.24 GET_USER_METADEFs

Service that returns a list of all user information fields and their attributes. Returns the properties information and ResultSet.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.25 JAVA_PROPERTIES

Service that returns information about the Java Resource Environment in use.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.26 LM_BUILD_WEB_STRING_FILES

Service that publishes strings to a static .js file.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.27 LM_LOAD_LAYOUTS

Service that loads user interface layouts from the *DomainHome*/ucm/cs/weblayout/common/layouts directory. Calls LM_LOAD_LAYOUTS_SUB.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.28 LM_LOAD_LAYOUTS_SUB

Subservice used to call layouts from the *DomainHome*/ucm/cs/weblayout/common/layouts directory.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.29 LOAD_DOC_ENVIRONMENT

This subservice loads the template page configuration information for the content item environment.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.30 LOGIN

Service that forces a login and executes an HTML page request. This is one of many ways to authenticate the user with the Web server.

Access Level: N/A (0)

Location: *IdcHomeDir*/resources/core/templates//std_services.htm

Additional Required Service Parameters

- Action: The action to execute. Usually GetTemplatePage.
- Page: The name of the page template.
- Auth: Required only when logging in from a browser interface. For example:
Auth=Internet

The other possible value is Intranet, which is used for NTLM logins.

Results

- Local Data:
 - dUser
 - RedirectParams
 - StatusMessage
- Response Template: null (default redirect to HOME_PAGE)

Used By

- Resource Includes:
 - pne_nav_userprofile_links
 - subscription_action_script
 - home_page_static_content
- Templates:
 - QUERY_NOTIFICATION (query_notification_mail.htm)
 - SELF_REGISTER_PROMPT_LOGIN (self_register_prompt_login.htm)
 - (std_home_page.htm)
- Standard Navigation: commonNav.js

Example

Displays the home page when you login to the Oracle Content Server system:

```
IdcService=LOGIN
```

```
Action=prepareRedirect
Page=HOME_PAGE
```

4.2.31 MERGE_TABLE

Service that merges a result set with an existing database table. All errors are logged to the Oracle Content Server log.

Important: By default, this service is not error tolerant and does not execute the merge in a transaction. Consequently, if the *isErrorTolerant* or *isTransactional* optional parameters are not set to *true* and if the service encounters an error, it terminates where the error occurred and does not roll back the already updated and inserted rows. In this situation, if you do not specify constraints and rerun the merge table, the merge fails in Microsoft SQL Server and Oracle due to constraint violations.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `tableName`: The name of the database table to merge into. The result set must have the same name as this table.

Important: The `ResultSet` definition for the table containing the rows to insert or update must also be specified.

Optional Service Parameters

- `constraintKeys`: Specifies a comma-delimited list of column names used as unique identifiers. The service initially does a look up with these constraints. If the row is found, the service does an update. Otherwise, a new row is inserted.

If this parameter is not defined, the service attempts to insert the rows.

- `isDeleteTable`: If *true*, the service deletes the table before attempting the merge. The delete is performed in a transaction with the merge, if *isTransactional* is *true*. By default, this value is *false*.
- `isErrorTolerant`: If *true*, does not terminate when errors are encountered during the merge. By default, this value is *false*.
- `isTransactional`: If *true*, the merge is performed in a transaction. If an error occurs during the merge and *isErrorTolerant* is *false*, the merge terminates and rolls back all the changes. By default, this value is *false*.

Example

- `IdcCommand` command file format:

```
# Merge new entries into the Alias table
IdcService=MERGE_TABLE
tableName=Alias
constraintKeys=dAlias
```

```
# Rows to be updated or inserted
@ResultSet Alias
2
dAlias
dAliasDescription
MyAlias
Just a test alias
@end
<<EOD>>
```

```
# Delete the alias table and insert new rows, do a rollback if something fails.
IdcService=MERGE_TABLE
tableName=Alias
isTransactional=true
isDeleteTable=true
```

```
# Rows to be updated or inserted
@ResultSet Alias
2
dAlias
dAliasDescription
MyAlias
Just a test alias
@end
<<EOD>>
```

- HDA format (Example 1):

```
@Properties LocalData
IdcService=MERGE_TABLE
```

```

tableName=Alias
constraintKeys=dAlias
@end
@ResultSet Alias
2
dAlias
dAliasDescription
MyAlias
Just a test alias
@end

```

- HDA format defining a table name and ResultSet and inserting a new row into the database (inserts new row into Users table):

```

@Properties LocalData
IdcService=MERGE_TABLE
tableName=Users
@end
@ResultSet Users
2
dName
dUserAuthType
user15
LOCAL
@end

```

4.2.32 PING_SERVER

Service that evaluates if a connection to the Oracle Content Server instance exists and returns status information. It also forces users to log in if they are not already logged in.

Tip: Execute a PING_SERVER request before calling other services to ensure that there is a connection to the Oracle Content Server instance and that you are logged in as a user authorized to execute commands.

Access Level: N/A (0)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Results

- Local Data:
 - dUser
 - StatusMessage
- Response Template: null

Used By

- Applets:
 - Batch Loader
 - Configuration Manager
 - Page Builder
- Templates:

- SUBSCRIBE_FORM (subscribe_form.htm)
- SUBSCRIPTION_LIST (subscription_list.htm)
- UNSUBSCRIBE_FORM (unsubscribe_form.htm)

Example

HDA format:

```
@Properties LocalData
IdcService=PING_SERVER
IsJava=1
Auth=Internet
@end
```

Sample return information:

```
Content-type: text/html
Content-Length: 421
```

```
<?hda version="6.0 SNAP-020207" jcharset=Cp1252 encoding=iso-8859-1?>
```

```
@Properties LocalData
dUser=sysadmin
blFieldTypes=StatusMessage message
refreshSubMonikers=
StatusMessage=You are logged in as 'sysadmin'.
loadedUserAttributes=1
blDateFormat=M/d{/yy} {h:mm[:ss]} {aa}{zzz}}!tAmerica/Chicago!mAM,PM
changedSubjects=
refreshSubjects=
Auth=Internet
refreshMonikers=
changedMonikers=
IdcService=PING_SERVER
IsJava=1
@end
```

4.2.33 QUERY_DOC_ACCOUNTS

Service that returns a list of all accounts in the Oracle Content Server system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.2.34 SOAP_FAULT

Service used to process failed SOAP requests.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3 Doc Services (Core Oracle Content Server)

Doc services perform actions on documents, such as checkin, checkout, subscription actions, and accessing document information. Frequently used services are marked with an asterisk (*) in the following list.

This section describes these services:

- [ASSIGN_DOCINFO_FORM](#)
- [CACHE_CHECKIN_NEW](#)

- CACHE_CHECKIN_SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_ARCHIVE_NO_NOTIFY
- CHECKIN_BYNAME
- *CHECKIN_CONFIRM_FORM
- *CHECKIN_LIST
- *CHECKIN_NEW
- *CHECKIN_NEW_FORM
- *CHECKIN_NEW_SUB
- *CHECKIN_SEL
- *CHECKIN_SEL_FORM
- CHECKIN_SEL_SUB
- *CHECKIN_SIMILAR_FORM
- *CHECKIN_UNIVERSAL
- *CHECKOUT
- CHECKOUT_BY_NAME
- *CHECKOUT_OK
- *CHECKOUT_SUB
- CONTINUE_CHECKIN
- CONTINUE_SUBMIT_HTML_FORM
- CREATE_SUBSCRIPTION_TYPE
- DELETE_BYCLASS
- DELETE_BYNAME
- DELETE_BYREV
- DELETE_BYREV_REVISION
- DELETE_CHECKIN_CACHE
- DELETE_DOC
- *DELETE_REV
- DELETE_REV_EX
- DELETE_SUBSCRIPTION_TYPE
- DOC_FORMATS_WIZARD
- *DOC_INFO
- *DOC_INFO_BY_NAME
- *DOC_INFO_LATESTRELEASE
- *DOC_INFO_SIMPLE
- *DOC_INFO_SIMPLE_BYREV

- *DOC_SUBS_LIST
- EDIT_DOC_FORMATS
- FORM_PROCESS
- FORM_SUBMIT
- GET_CACHED_CHECKIN_INFO
- GET_DOC_CONFIG_INFO
- GET_DOC_SUBSCRIBERS
- GET_ENVIRONMENT
- *GET_EXPIRED
- GET_PACKAGE_ENVIRONMENT_PAGE
- *GET_UPDATE_FORM
- NOTIFY_INDEXER
- ODMA_DOC_INFO_SIMPLE
- PACKAGE_ENVIRONMENT
- REMOVE_METAFILE_SUB
- REPLACE_METAFILE_SUB
- *RESUBMIT_FOR_CONVERSION
- *REV_HISTORY
- SELECTDOC
- *SUBMIT_HTML_FORM
- *SUBSCRIBE
- SUBSCRIBE_DOC_USER
- SUBSCRIBE_EX
- *SUBSCRIBE_FORM
- *SUBSCRIPTION_LIST
- *UNDO_CHECKOUT
- UNDO_CHECKOUT_BY_NAME
- *UNSUBSCRIBE
- *UNSUBSCRIBE_FORM
- *UNSUBSCRIBE_FROM_LIST
- UNSUBSCRIBE_FROM_LIST_EX
- UPDATE_BYREV
- *UPDATE_DOCINFO
- *UPDATE_DOCINFO_BYFORM
- UPDATE_DOCINFO_BYREV
- UPDATE_DOCINFO_METAFILE_BYREV
- UPDATE_DOCINFO_STATUS

- [UPDATE_DOCINFO_SUB](#)
- [UPDATE_SUBSCRIPTION_NOTIFY](#)
- [UPDATE_SUBSCRIPTION_TYPE](#)
- [UPDATE_SUBSCRIPTION_USED](#)
- [UPDATE_METADATA](#)
- [VALIDATE_DOCINFO](#)
- [*WORK_IN_PROGRESS](#)

4.3.1 ASSIGN_DOCINFO_FORM

Service that retrieves the DOCINFO_FORM and assigns it to content.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.3.2 CACHE_CHECKIN_NEW

Service used with preview. When a user performs a preview during a checkin the information is cached on the server side. This service is modeled after the non-cache version and uses the same parameters as CHECKIN_NEW.

To disallow the check in of empty files, set the following:

`ValidatePrimaryFileNotEmpty=1`

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.3.3 CACHE_CHECKIN_SEL

Service used with preview. When a user performs a preview during a checkin the information is cached on the server side. This service is modeled after the non-cache version and uses the same parameters as CHECKIN_SEL.

To disallow the check in of empty files, set the following:

`ValidatePrimaryFileNotEmpty=1`

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.3.4 CACHE_SUBMIT_HTML_FORM

Service used with preview. When a user performs a preview during a checkin the information is cached on the server side. This service is modeled after the non-cache version and uses the same parameters as SUBMIT_HTML_FORM.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.3.5 CACHE_WORKFLOW_CHECKIN

Service used with preview. When a user performs a preview during a checkin the information is cached on the server side. This service is modeled after the non-cache version and uses the same parameters as WORKFLOW_CHECKIN.

To have the service return an error if the content item file is empty, use the configuration setting: `ValidatePrimaryFileNotEmpty=1`.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.3.6 CHECKIN_ARCHIVE_NO_NOTIFY

A general checkin service used by client applications. It is generally used when the client application knows it will be checking in a large number of files and it does not want the indexer to be initiated by the check-in activity.

NO_NOTIFY indicates that this service does not notify the Oracle Content Server subjects that are normally notified during a checkin. This service suppresses the Released Documents subject, which starts the indexer.

The user of this service should notify the indexer subject to proceed to do work by calling the NOTIFY_INDEXER service.

This service is not used by the archiver.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

For additional parameters, see [CHECKIN_ARCHIVE](#).

Optional Service Parameters

For additional parameters, see [CHECKIN_ARCHIVE](#).

Example

```
IdcService=CHECKIN_ARCHIVE_NO_NOTIFY
Action=insert
dDocAuthor=user1
dDocName=test
dDocTitle=new content
dSecurityGroup=Public
primaryFile=c:/test.txt
doFileCopy=true
```

4.3.7 CHECKIN_BYNAME

Service that checks in a content item revision based on the content item name or Content ID.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

A user must have Admin permission to the content item's security settings to change the security group (*dSecurityGroup*), account (*dDocAccount*), or author (*dDocAuthor*).

- If the content item uses entity security, the user must have at least Write permission granted by the entities, unless the user has Admin rights to the security group being assigned to the document.
- If the content item is in a workflow, the user must be a reviewer/contributor for the current step.
- If metafile generation is enabled (by setting the AllowPrimaryMetaFile or AllowAlternateMetaFile environment variables, or both) and the metafile generation variables (createPrimaryMetaFile and createAlternateMetaFile) are *true*, a real file cannot be associated with the current content item. Only one metafile can be associated with a content item. If createPrimaryMetaFile is *true*, createAlternateMetaFile must be *false* and vice-versa.
- The most likely error is a revision failing to insert or when the refinery was not successfully initiated.

Important: Either the content item name or the content item revision ID must be specified.

To disallow the check in of empty files, set the following:

`ValidatePrimaryFileNotEmpty=1`

Additional Required Service Parameters

- `dDocName`: The Content ID for the content item.
 - If Content ID auto generation is enabled, this parameter is not required. If `dDocName` is defined, it overrides the auto generated Content ID.
 - The Content ID cannot contain spaces or invalid characters
`;/ \?:@&=+"#%<>*~|[]`.
- `dDocAuthor`: The content item author (contributor).
- `dDocTitle`: The content item title.
- `dDocType`: The content item type.
- `dSecurityGroup`: The security group such as *Public* or *Secure*.
- `dDocAccount`: The account for the content item. Required only if accounts are enabled.
- `primaryFile`: The absolute path to the location of the file as seen from the server. Use the slash as the file separator.

A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.

- If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist).
- If both a primary and alternate file is specified, their extensions must be different.
- `doFileCopy`: 1 (*true*): The file is not deleted from the hard drive after checkin.
- 0 (*false*): The file is removed from the hard drive after checkin.
- Required custom fields: Custom metadata fields that are required must also be specified.

Optional Service Parameters

- `dID`: The generated content item revision ID.
- `alternateFile`: The alternate file for conversion.
- Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist.)

If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.

- `AutoNumberPrefix`: This is a configuration entry but can be specified as a parameter. The auto prefix script is evaluated after the revision class ID is generated and before metadata validation.

- **createAlternateMetaFile:** To enable alternate metafile generation, the `AllowAlternateMetaFile` environment value must be *true* and the parameter `createAlternateMetaFile` must be *true*.
- **createPrimaryMetaFile:** To enable primary metafile generation, the `AllowPrimaryMetaFile` environment value must be *true* and the parameter `createPrimaryMetaFile` must be *true*.
- **dConversion:** The conversion algorithm is determined by this parameter.

If the conversion type is not *Passthru* or *NoConversion* (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

If the file mime-type is *application/FDF*, the server sets the conversion to *exchange-fdf*.

- **dCreateDate:** The date the content item was created. By default, this is the current date.
- **dExtension:** The file extension such as *hcsf*, *doc*, *txt*.
- **dFormat:** The formatting process used to create the web-viewable version of the content. For example, *application/hcsf* or *application/doc*.
- **dInDate:** The content release date. The date the content item is to be released to the Web. By default, this is the current date.

If the content release date (`dInDate`) is not specified, the creation date (`dCreateDate`) is used. This value is auto generated if it is not supplied.

- **dOutDate:** The content expiration date. By default, this is blank and does not specify an expiration date.

If the content expiration date (`dOutDate`) is not entered, the value remains empty. This is a valid state.

- **dPublishState:** The publish state. If the content item exists in the system `dPublishState` must be empty.
- **dReleaseState:** The release state (used to indicate the Web state of the revision).
- **dRevClassID:** The revision class ID.
- **dRevLabel:** The revision label for the content item. If set, the label is used to locate the specified revision.
- **dWfType:** The workflow type such as *Basic* or *Criteria*.
- **IsAutoNumber:** This is a configuration entry but can be specified as a parameter. If the configuration variable `IsAutoNumber` is set to *true*, the Content ID (`dDocName`) is generated by concatenating the auto prefix with the revision class ID (`dRevClassID`, the counter of uniquely differentiated content items), pre-filled with leading zeroes to be six digits long. Auto numbering is not performed if the Content ID (`dDocName`) is already specified.
- **IsEditRev:** If set to *true*, this entry checks if the content revision is in a workflow and enables editing.
- **IsWorkflowInfo:** This is a configuration entry but can be specified as a parameter. If set to *true*, this entry checks for workflow information and checks allowable actions for the workflow steps.

- **webViewableFile:** If a content item has a web-viewable file associated with it, the conversion format is the format of the web-viewable file (the parameter `webViewableFile:format`) and the extension is the web-viewable file's extension (the parameter `dWebExtension`). Otherwise, the extension and file format are determined by the parameters `dExtension` and `dFormat`, respectively. The user can override the file format and extension by setting these additional parameters.
- **Optional custom fields:** Custom metadata fields that are not required can also be specified.

Example

```

IdcService=CHECKIN_BYNAME
dDocName=test1000
dSecurityGroup=public
dDocAuthor=sysadmin
dDocType=ADENG
dDocTitle=another test
doFileCopy=true
primaryFile=c:/test.txt

```

4.3.8 CHECKIN_CONFIRM_FORM

Service that returns confirmation upon successful checkin through a browser.

Access Level: Write, Global, Scriptable (50)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **dID:** The content ID.
- **dDocAuthor:** The document author.
- **dDocName:** The document name.
- **dDocTitle:** The document title.

Results

- **Local Data:**
 - `dDocAuthor`
 - `dDocName`
 - `dDocTitle`
 - `dID`
- **Response Template:** CHECKIN_CONFIRM (`checkin_confirm.htm`)

Used By

- Redirect service for: CHECKIN_NEW, CHECKIN_SEL, CONTINUE_CHECKIN

4.3.9 CHECKIN_LIST

Service that returns a list of checked-out items (those that are not checked in or deleted). The most likely error is when the checkout list cannot be retrieved from the database.

Access Level: Write, Global, Scriptable (50)

Queries Executed: QcheckinCachesForUser

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Optional Service Parameters

- **userOnly:** When 1 (*true*), returns only items checked out to the current user.
- **MaxQueryRows:** Controls the number of items returned in the list.

Results

- **Result Sets:**
 - CHECKIN_LIST (All Fields from Revisions and DocMeta for checked-out revisions.)
 - CHECKIN_CACHES (All Fields from DatedCaches.)
- **Local Data:**
 - copyAborted
 - DataSource
- **Response Template:** CHECKIN_LIST (checkin_list.htm)

Used By

- **Resource Includes:**
 - pne_nav_management_links
 - std_doc_man_pages
 - checkin_multiuploadapplet_processing_functions
- **Standard Navigation:**
 - commonNav.js
 - commonBundle.js
- **Other:**
 - SoapCustom:Wsd!CheckIn:Services
 - Redirect service for: DELETE_CHECKIN_CACHE

4.3.10 CHECKIN_NEW

Service that checks in a new content item. This service calls the CHECKIN_NEW_SUB subservice.

Access Level: Write (2)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

- If you attempt to set the author (dDocAuthor) to someone other than the currently logged in user, you must have Admin permission to the security attributes being assigned to the document.
- If the content uses entity security, the user must have at least Write permission granted by the entities, unless the user has Admin rights to the security group being assigned to the document.
- If metafile generation is enabled (by setting the AllowPrimaryMetaFile or AllowAlternateMetaFile environment variables, or both) and the metafile

generation variables (`createPrimaryMetaFile` and `createAlternateMetaFile`) are `true`, a real file cannot be associated with the current content item. Only one metafile can be associated with a content item: if `createPrimaryMetaFile` is `true`, `createAlternateMetaFile` must be `false` and vice-versa.

- The most likely error is when the content item was not properly defined.
- This service executes the subservice `CHECKIN_NEW_SUB`. This subservice checks in a new content item revision.
- A primary file is required. If you do not want to check in a primary file and want to check in only metadata, an additional parameter must be included and a configuration entry added in the Oracle Content Server system.
- To disallow the checkin of empty files, set the following:
`ValidatePrimaryFileNotEmpty=1`

Required additional parameter (metadata checkin):

```
createPrimaryMetaFile=true
```

Required Oracle Content Server configuration entry (metadata checkin):

```
AllowPrimaryMetaFile=true
```

Additional Required Service Parameters

- `dDocName`: The Content ID for the content item.
 - If Content ID auto generation is enabled, this parameter is not required. If `dDocName` is defined, it overrides the auto generated Content ID.
 - The Content ID cannot contain spaces or invalid characters
`;/ \?:@&=+"#%<>*~|[]`.
- `dDocAuthor`: The content item author (contributor).
- `dDocTitle`: The content item title.
- `dDocType`: The content item Type.
- `dSecurityGroup`: The security group such as *Public* or *Secure*.
- `dDocAccount`: The account for the content item. Required only if accounts are enabled.
- `primaryFile`: The absolute path to the location of the file as seen from the server. Use the slash as the file separator.

A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.

- If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist).
- If both a primary and alternate file is specified, their extensions must be different.
- Required custom fields: Custom metadata fields that are required must also be specified.

Optional Service Parameters

- **alternateFile:** The alternate file for conversion.
 - Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist.)
 - If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
- **AutoNumberPrefix:** This is a configuration entry but can be specified as a parameter. The auto prefix script is evaluated after the revision class ID is generated and before metadata validation.
- **createAlternateMetaFile:** To enable alternate metafile generation, the `AllowAlternateMetaFile` environment value must be set to `true` and the parameter `createAlternateMetaFile` must be set to `true`.
- **createPrimaryMetaFile:** To enable primary metafile generation, the `AllowPrimaryMetaFile` environment value must be `true` and the parameter `createPrimaryMetaFile` must be set to `true`.
- **DirectReleaseNewCheckinDoc:** Directs content items being checked in to bypass Inbound Refinery, workflow, and indexing. The default is 0. To enable, set `DirectReleaseNewCheckinDoc=1`.

This parameter can be used to support a high ingestion rate when transferring content items from an external repository into Content Server storage. Because this setting increases the speed of content checkin, it increases the number of check-ins that Content Server can support at a time. This capability is highly desirable in applications (for example, scanning applications) where large numbers of items are expected to be checked in at once.

Before you enable this setting, take into account the following important considerations.

- A content item checked in this way can only be found by searching with `DATABASE.METADATA`. However, other content items can still go through regular checkin and be `FULLTEXT` indexed.
- A rebuild of the index does not cause content checked in with this parameter to go through indexing.
- Content modification (updating or checking in a new revision) causes indexing to occur on a document checked in with this parameter.
- **dConversion:** The conversion algorithm is determined by this parameter.

If the conversion type is not *Passthru* or *NoConversion* (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

If the file mime-type is *application/FDF*, the server sets the conversion to *exchange-fdf*.
- **dCreateDate:** The date the content item was created. By default, this is the current date.
- **dFormat:** The formatting process used to create the web-viewable version of the content item. For example, *application/hcsf* or *application/doc*.

- **dInDate:** The release date. By default, this is the current date. If the content release date (**dInDate**) is not specified, the creation date (**dCreateDate**) is used. This value is auto generated if it is not supplied.
- **dOutDate:** The expiration date. By default, this is blank and does not specify an expiration date. If the content expiration date (**dOutDate**) is not entered, the value remains empty. This is a valid state.
- **dRendition:** Used to specify an additional rendition of the content item.
- **dRevClassID:** The revision class ID.
- **dRevisionLabel:** The revision label for the content item. If set, the label is used to locate the specified revision.
- **IsAutoNumber:** This is a configuration entry but can be specified as a parameter. If the configuration variable **IsAutoNumber** is set to *true*, the Content ID (**dDocName**) is generated by concatenating the auto prefix with the revision class ID (**dRevClassID**, the counter of uniquely differentiated content items), pre-filled with leading zeroes to be six digits long. Auto numbering is not performed if the Content ID (**dDocName**) is already specified.
- **webViewableFile:** If a content item has a web-viewable file associated with it, the conversion format is the format of the web-viewable file (the parameter **webViewableFile:format**) and the extension is the web-viewable file's extension (the parameter **dWebExtension**). Otherwise, the extension and file format are determined by the parameters **dExtension** and **dFormat**, respectively. The user can override the file format and extension by setting these additional parameters.
- **Optional custom fields:** Custom metadata fields that are not required can also be specified.

Results

- **Local Data:**
 - **dAction**
 - **dActionDate**
 - **dClbraName**
 - **dConversion** (If refinery-processes, contains information about what conversion occurred.)
 - **dCreateDate**
 - **dDocAccount**
 - **dDocAuthor**
 - **dDocID**
 - **dDocName**
 - **dDocTitle**
 - **dDocType**
 - **dExtension**
 - **dFileSize**
 - **dFormat**
 - **dID:** Internal reference to ID for the new content item.

- dInDate
- dIsWebFormat
- dIsPrimary
- dLocation
- dOriginalName
- dOutDate
- dpAction
- dpEvent
- dProcessingState
- dPublishState
- dPublishType
- dRawDocID

- StatusMessage
- VaultfilePath
- WebfilePath
- xClbraAliasList
- xClbraUserList
- Plus any custom metadata related to the item checked in
- Response Templates:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: CHECKIN_CONFIRM_FORM

Used By

- Resource Includes: std_doc_page_definitions

Example

```

IdcService=CHECKIN_NEW
dDocName=test1111
dDocTitle=test information
dDocAuthor=john
dSecurityGroup=public
primaryFile=c:/test.txt
doFileCopy=1

```

4.3.11 CHECKIN_NEW_FORM

Service that returns the check-in form for a new content item in a browser. The most likely error is when the content item was not properly defined.

Access Level: Write, Global, Scriptable (50)

Location: *IdcHomeDir*/resources/core/templates//std_services.htm

Results

- Result Sets:
 - DocFormats (dFormat, dConversion, dDescription)
 - DocTypes (dDocType, dDescription, dGif)
- Response Template: CHECKIN_NEW_FORM (checkin_new.htm)

Used By

- Applets:
 - Repository Manager
 - Workflow Admin
 - User Admin
 - Configuration Manager
- Resource Includes:
 - pne_nav_management_links
 - pne_nav_bookmark_links
 - calculate_doc_profile_urls
 - std_doc_man_pages
- Standard Navigation:
 - commonNav.js
 - commonBundle.js

4.3.12 CHECKIN_NEW_SUB

Subservice that checks in a new content item revision. Depending on which service calls this subservice, other validation is done, such as determining if this content item belongs in a criteria workflow. Also includes computing of derived fields, adding of

renditions, and initiation of refinery processing. A security check against group and account may need to be performed before executing this subservice.

Access Level: Subservice (N/A)

Inputs: All standard required fields for content checkin must be provided, plus any optional content metadata.

Queries Executed:

- QnextRevID
- UnextRevID
- Irevision
- Imeta
- Idocument
- IdocHistory

Location: *IdcHomeDir*/resources/core/templates//std_services.htm

Results

- Local Data:
 - dAction
 - dactionDate
 - dClbraName
 - dConversion
 - dCreateDate
 - dDocAccount
 - dDocAuthor

- dWorkflowState
- isDocProfileUsed
- isEditMode
- isNew
- isStatusChanged
- prevReleaseState
- primaryFile
- StatusCode
- StatusMessage
- VaultfilePath
- xClbraAliasList
- xClbraUserList
- WebfilePath
- Plus any custom metadata related to the item checked in

Used By

- Services: CHECKIN_NEW

4.3.13 CHECKIN_SEL

Service that checks in a revision to an existing content item. This calls the CHECKIN_SEL_SUB subservice.

Access Level: Write (2)

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

- The content item must be checked out for this service to execute.
- If the content item is in a workflow, the user must be a reviewer/contributor for the current step.

- A user must have Admin permission to the content item's security settings to change the security group (dSecurityGroup), account (dDocAccount), or author (dDocAuthor).
- If metafile generation is enabled (by setting the AllowPrimaryMetaFile or AllowAlternateMetaFile environment variables, or both) and the metafile generation variables (createPrimaryMetaFile and createAlternateMetaFile) are *true*, a real file cannot be associated with the current content item. Only one metafile can be associated with a content item. If createPrimaryMetaFile is *true*, createAlternateMetaFile must be *false* and vice-versa.
- The content item cannot be in the published state.
- The current user must be the Author of the content item or have Admin permission to check in a revision.
- The most likely error is when the content item is no longer in the system.
- This service executes the subservice CHECKIN_SEL_SUB. This subservice checks in a revision to a content item.
- To disallow the check in of empty files, set the following:
ValidatePrimaryFileNotEmpty=1

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
 - If Content ID auto generation is enabled, this parameter is not required. If dDocName is defined, it overrides the auto generated Content ID.
 - The Content ID cannot contain spaces or invalid characters
;/ \?:@&=+"#%<>*~|[].
- dDocAuthor: The content item author (contributor).
- dDocTitle: The content item title.
- dDocType: The content item Type.
- dID: The generated content item revision ID.
- dRevLabel: The content item revision label.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.
- primaryFile: The absolute path to the location of the file as seen from the server. Use the slash as the file separator. A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
 - If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist).
 - If both a primary and alternate file is specified, their extensions must be different.
 - doFileCopy: 1 (*true*): The file is not deleted from the hard drive after checkin.
0 (*false*): The file is removed from the hard drive after checkin.

- Required custom fields: Custom metadata fields that are required must also be specified.

Optional Service Parameters

- `alternateFile`: The alternate file for conversion.
- Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist.)
 - If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
- `createAlternateMetaFile`: To enable alternate metafile generation, the `AllowAlternateMetaFile` environment value must be set to `true` and the parameter `createAlternateMetaFile` must be set to `true`.
- `createPrimaryMetaFile`: To enable primary metafile generation, the `AllowPrimaryMetaFile` environment value must be set to `true` and the parameter `createPrimaryMetaFile` must be set to `true`.
- `dConversion`: The conversion algorithm is determined by the parameter `dConversion`.

If the conversion type is not *Passthru* or *NoConversion* (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

- If the file mime-type is *application/FDF*, the server sets the conversion to *exchange-fdf*.
- `dCreateDate`: The date the content item was created. By default, this is the current date.
- `dFormat`: The formatting process used to create the web-viewable version of the content. For example, *application/hcsf* or *application/doc*.
- `dInDate`: The content release date. The date the content item is to be released to the Web. By default, this is the current date. If the content release date (`dInDate`) is not specified, the creation date (`dCreateDate`) is used. This value is auto generated if it is not supplied.
- `dOutDate`: The content expiration date. By default, this is blank and does not specify an expiration date. If the content expiration date (`dOutDate`) is not entered, the value remains empty. This is a valid state.
- `dPublishState`: The publish state. If the content item exists in the system `dPublishState` must be empty.
- `dRevClassID`: The revision class ID.
- `AutoNumberPrefix`: This is a configuration entry but can be specified as a parameter. The auto prefix script is evaluated after the revision class ID is generated and before metadata validation.
- `IsAutoNumber`: This is a configuration entry but can be specified as a parameter. If the configuration variable `IsAutoNumber` is set to `true`, the Content ID (`dDocName`) is generated by concatenating the auto prefix with the revision class ID (`dRevClassID`, the counter of uniquely differentiated content items), pre-filled with leading zeroes to be six digits long. Auto numbering is not performed if the Content ID (`dDocName`) is already specified.

- **IsWorkflowInfo:** This is a configuration entry but can be specified as a parameter. If set to *true*, this entry checks for workflow information and checks allowable actions for the workflow steps.
- **webViewableFile:** If a content item has a web-viewable file associated with it, the conversion format is the format of the web-viewable file (the parameter `webViewableFile:format`) and the extension is the web-viewable file's extension (the parameter `dWebExtension`). Otherwise, the extension and file format are determined by the parameters `dExtension` and `dFormat`, respectively. The user can override the file format and extension by setting these additional parameters.
- **RedirectUrl:** Used to display another page after a topic file has been changed. If omitted, the user is redirected to the Oracle Content Server home page.
- **Optional custom fields:** Custom metadata fields that are not required can also be specified.
- **Results**
- **Local Data:**
 - **dConversion:** If refinery-processed, this contains information about what conversion occurred.
 - **dID:** Internal reference ID for the new content item.
 - **IsWorkflow:** Returns 1 (*true*) if item entered workflow upon checkin.
- **Response Templates:**
 - `REDIRECT_TEMPLATE` (`redirect_template.htm`)
 - Default redirect service: `CHECKIN_CONFIRM_FORM`

Used By

- Resource Includes: `std_doc_page_definitions`

Example

```

IdcService=CHECKIN_SEL
dDocName=test_000036
dDocTitle=my test
dDocAuthor=sysadmin
dDocType=ADENG
dSecurityGroup=Public
dID=49
dRevLabel=1
doFileCopy=1

```

4.3.14 CHECKIN_SEL_FORM

Service that returns the check-in form for a content item revision in a browser. It loads the current content information for the item. The form page is displayed with old metadata information.

The most likely error is when the content item is no longer in the system, information about the content item cannot be found, or when the system is unable to check revision properties.

Access Level: Write, Scriptable (34)

Queries Executed: `QdocID`, `Qrevisions`, `QdocInfo`

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

Additional Required Service Parameters

- dID: The generated content item revision ID.

Optional Service Parameters

- dDocName
- dWfName

Results

- Result Sets:
 - DOC_INFO (All fields from Revisions and DocMeta for the specified revision.)
 - DocFormats (dFormat, dConversion, dDescription)
 - DocTypes (dDocType, dDescription, dGif)
- Local Data:
 - CurRevCheckoutUser
 - CurRevID
 - CurRevIsCheckedOut
 - dDocAccount
 - dDocAuthor
 - dDocName
 - defaultAccount
 - dID
 - DocUrl
 - dPublishState
 - dReleaseState
 - dRevClassID
 - dRevLabel
 - dSecurityGroup
 - dStatus
 - dUser
 - dWorkflowState
 - isCurRevEmpty
 - IsNotLatestRev
 - IsWorkflow
 - latestID
 - Plus all DocMeta fields
- Response Template: CHECKIN_SEL_FORM (checkin_sel.htm)

Used By

- Resource Includes:
 - classic_info_page_content
 - workflow_action_popup
 - checkin_list_action_popup
 - legacy_checked_out_content_table
 - workflow_doc_action_links
 - docinfo_checkin_similar_option
 - setup_checked_out_content_action_popups
 - wf_reviewer_doc_action_links
- Templates:
 - CHECKOUT_OK (chkook.htm)
 - WORKFLOW_REVIEW_FORM (workflow_review_form.htm)

Example

```
IdcService=CHECKIN_SEL_FORM  
dID=55
```

4.3.15 CHECKIN_SEL_SUB

Subservice used if a content item being checked in already exists, is checked out, or if it is not in a workflow.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.16 CHECKIN_SIMILAR_FORM

Service that returns the check-in form for a new content item in a browser, with metadata from a similar content item filled in. The most likely error is when the content item was not properly defined.

Access Level: Write, Global, Scriptable (50)

Queries Executed: QdocInfoSimilarCheckin

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Results

- Result Sets:
 - DOC_INFO_SIMILAR (dDocTitle, dDocType, dSecurityGroup, dDocAccount for the specified revision)
 - DocFormats (dFormat, dConversion, dDescription)
 - DocTypes (dDocType, dDescription, dGif)
- Local Data:
 - dDocAccount
 - dDocType
 - dSecurityGroup

- Response Template: CHECKIN_NEW_FORM (checkin_new.htm)

Used By

- Resource Includes:
 - search_results_action_popup
 - docinfo_checkin_similar_option
 - doc_file_checkin_similar
 - setup_search_results_action_popups
- Templates: CHECKIN_CONFIRM (checkin_confirm.htm)

4.3.17 CHECKIN_UNIVERSAL

Service that performs an Oracle Content Server controlled checkin.

Access Level: Write (2)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

- This service sends the check-in request to one of the following subservices, which are the same subservices called during checkin through the browser or Repository Manager application. (These subservices are not called during a Batch Loader or Archive import.)
 - CHECKIN_NEW_SUB - If the content item does not exist in the server. This subservice validates the check-in data and determines if this content item belongs to a criteria workflow.
 - CHECKIN_SEL_SUB - If the content item exists on the system, the content item is checked out, and the content item is not in a workflow.
 - WORKFLOW_CHECKIN_SUB - If the content item exists and is in a workflow.
- This service checks security to determine if the user has sufficient permission to check in the content item.
- Determines if the content item is new or already exists in the system by querying the database using the Content ID (dDocName) as the key.
- If the content item exists in the system, the publish state (dPublishState) must be empty.
- If the item exists and is checked out, a new revision is checked in.
- The most likely errors are mismatched parameters or when the content item was not successfully checked in.

Note: All paths use the slash (/) as the file separator. This is because the backslash (\) is an escape character. For example,
primaryFile=d:/temp/myfile.txt.

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
 - If Content ID auto generation is enabled, this parameter is not required.
 - If dDocName is specified and exists in the Oracle Content Server system, a revision is checked in. If dDocName is specified and does not exist in the Oracle Content Server system, a new content item is checked in.
 - The Content ID cannot contain spaces or invalid characters
; / \ ? : @ & = + " # % < > * ~ | [] .
- dDocAuthor: The content item author (contributor).
- dDocTitle: The content item title.
- dDocType: The content item type.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.
- primaryFile: The absolute path to the location of the file as seen from the server. Use the slash as the file separator. A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
 - If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist).
 - If both a primary and alternate file is specified, their extensions must be different.
 - doFileCopy: 1 (*true*): The file is not deleted from the hard drive after checkin. 0 (*false*): The file is removed from the hard drive after checkin.
- Required custom fields: Custom metadata fields that are required must also be specified.
- Optional Service Parameters
- alternateFile: The alternate file for conversion.
- Only one metafile can exist for each content item (a primary AND alternate meta file cannot coexist.)
 - If an alternate file is specified with the primary file, the content refinery converts the alternate file. Otherwise, the primary file is converted.
- dCreateDate: The date the content item was created. By default, this is the current date.
- dInDate: The content release date. The date the content item is to be released to the Web. By default, this is the current date. If the content release date (dInDate) is not specified, the creation date (dCreateDate) is used. This value is auto generated if it is not supplied.
- dOutDate: The content expiration date. By default, this is blank and does not specify an expiration date. If the content expiration date (dOutDate) is not entered, the value remains empty. This is a valid state.
- dRevLabel: The revision label for the content item. If set, the label is used to locate the specified revision. If a revision label (dRevLabel) is specified, this service

checks if the content revision exists in the system; an exception is thrown if it exists.

- `isFinished`: Set to `true` (1) if this is a workflow checkin and you have finished editing it.
- For additional information, see [WORKFLOW_CHECKIN](#).

Note: Do not confuse the Content ID (`dDocName`) with the internal content item revision identifier (`dID`). The `dID` is a generated reference to a specific rendition of a content item.

Results

- Local Data:
 - `dConversion`: If refinery-processed, contains information about what conversion occurred.
 - `dID`: Internal reference ID for the new content item.
 - `IsWorkflow`: Returns 1 (`true`) if item entered workflow upon checkin.

Used By

- Resource Includes: `std_doc_page_definitions`
- Other:
 - `SoapCustom:Esdl:CheckIn:Services`
 - `SoapCustom:Wsd:Workflow:Services`

Example

- `IdcCommand` command file format:

```
IdcService=CHECKIN_UNIVERSAL
dDocName=adsales
dDocType=ADACCT
dDocTitle=Advertising Sales
dSecurityGroup=Secure
dDocAuthor=user1
dRevLabel=1
dDocType=ADACCT
primaryFile=c:/temp/docs/mydoc.txt
doFileCopy=1

# If this is a workflow check-in and you have finished editing it, mark it as
finished.
#isFinished=true

#Required depending on configuration
dDocAccount=mainaccount

#Optional fields:
#dCreateDate=
#dInDate=
#dOutDate=
#alternateFile=

#Custom metadata fields:
xComments=
```

```
xLocation=  
xProjects=
```

- HDA format (check in the content item *myDocName*):

```
@Properties LocalData  
IdcService=CHECKIN_UNIVERSAL  
doFileCopy=1  
dDocName=myDocName  
dDocTitle=My document title  
dDocType=ADACCT  
dSecurityGroup=Secure  
dDocAuthor=user1  
primaryFile=c:/temp/docs/mydoc.txt  
dDocAccount=mainaccount  
xComments=  
xLocation=  
xProjects=  
@end
```

4.3.18 CHECKOUT

Service that checks out the latest revision of a content item from a browser.

- The service fails if the content item does not exist in the system, if the content item is already checked out, or if the user does not have sufficient permission to check out the content item.
- The most likely error is when the content no longer exists in the system or when the system is unable to retrieve revision information.
- This service executes the subservice CHECKOUT_SUB. This subservice checks out a content item revision.

Access Level: Write, Scriptable (34)

Calls Subservice: CHECKOUT_SUB

Queries Executed:

- QdocID
- Qrevisions
- QdocInfo

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Note: This service only marks the content item as locked. It does not perform a download.

Additional Required Service Parameters

- *dID*: The generated content item revision ID.

Optional Service Parameters

- *dDocTitle*: The content item title.
- *RedirectUrl*: Used to display another page. If omitted, the user is redirected to the Oracle Content Server home page.

Results

- Local Data:
 - CurRevCheckoutUser
 - CurRevIsCheckedOut
 - CurRevID
 - dAction
 - dActionDate
 - dActionMillis
 - dCheckoutUser
 - dClbraName
 - dDocName
 - dIsCheckedOut
 - dPublishState
 - dReleaseState
 - dRevClassID
 - dRevLabel
 - dSecurityGroup
 - dStatus
 - dWorkflowState
 - isCurRevEmpty
 - isFinished
 - IsNotLatestRev
 - IsWorkflow
 - latestID
 - prevReleaseState
 - RedirectParams
 - wfAction
- Response Templates:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: CHECKOUT_OK

Used By

- Applets:
 - Repository Manager
 - Workflow Administrator
- Resource Includes:
 - classic_search_result_item_checkout
 - clbra_active_doc_display

- doc_file_checkout
- docinfo_checkout_form
- searchapi_result_table_content_end
- search_results_action_popup
- setup_search_results_action_popups
- wf_reviewer_doc_action_links
- wips_list_action_popup
- workflow_action_popup
- workflow_doc_action_links
- workflow_docs_table
- workflow_in_queue_table
- work_in_progress_table
- Template: WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
- Other: SoapCustom:WsdI:CheckIn:Services

Example

- IdcCommand command file format:

```
IdcService=CHECKOUT  
dID=55
```

- HDA format with optional parameter:

```
@Properties LocalData  
IdcService=CHECKOUT  
dID=55  
dDocTitle=Sample Title  
@end
```

4.3.19 CHECKOUT_BY_NAME

Service that checks out a content item from an applet or application.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

- The service fails if the content item does not exist in the system, if the content item is already checked out, or if the user does not have sufficient permission to check out the content item.
- The most likely error is a content item name not in the system.
- This service executes the subservice CHECKOUT_SUB. This subservice checks out a content item revision.

Note: This service only marks the content item as locked. It does not perform a download.

Additional Required Service Parameters

- dDocName: The Content ID of the content item.

Optional Service Parameters

- dDocTitle: The content item title.

Example

- IdcCommand command file format:

```
IdcService=CHECKOUT_BY_NAME
dDocName=myDocument
```

- HDA format with optional parameter:

```
@Properties LocalData
IdcService=CHECKOUT_BY_NAME
dDocName=myDocument
dDocTitle=Just a title
@end
```

4.3.20 CHECKOUT_OK

Called as a redirect service by the service(s) that check out a content item from a browser and display a checkout confirmation page.

Access Level: Write, Scriptable (34)

Queries Executed: QdocInfo

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

- The most likely error is when the revision no longer exists or when the system is unable to retrieve revision information.
- This service executes the subservice CHECKOUT_SUB. This subservice checks out a content item revision.

Additional Required Service Parameters

- dID: The generated content item revision ID.
- CurRevCheckoutUser: The user who checked out the item.

Optional Service Parameters

- CurRevID: The ID of the current revision, usually the same as dID.

Results

- Result Sets: DOC_INFO (All Fields from Revisions and DocMeta for the specified version.)
- Response Template: CHECKOUT_OK (chkook.htm)

Used By

- Other: Redirect service for CHECKOUT, CHECKOUT_BY_NAME

Example

```
IdcService=CHECKOUT_OK
dID=48
```

4.3.21 CHECKOUT_SUB

Subservice that checks out a content item revision. Requires that the binder contain a result set named DOC_INFO that contains the results of QdocInfo (or equivalent) for the most recent version of a content item.

Access Level: Subservice (N/A)

Queries Executed:

QworkflowDocInfo

- IdocHistory
- UcheckoutRevision

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Results

- Local Data:
 - CurRevCheckoutUser
 - dAction
 - dactionDate
 - dActionMillis
 - dCheckoutUser
 - dClbraName
 - dIsCheckedOut
 - hasUserAccessChanged
 - isCurRevEmpty
 - isFinished
 - IsNotLatestRev
 - prevReleaseState
 - wfAction

Used By

- Services:
 - CHECKOUT
 - CHECKOUT_BY_NAME
 - FORM_PROCESS (indirectly through the processForm method)

4.3.22 CONTINUE_CHECKIN

Service that completes a checkin that was started with the CACHE_CHECKIN_NEW or CACHE_CHECKIN_SEL service.

After a preview has been performed and the check-in data is cached the user can decide to finish or continue the checkin using this service.

The cached data must be provided to this service to perform a successful checkin. Filters are provided to customize the cache and check-in behavior.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.

4.3.23 CONTINUE_SUBMIT_HTML_FORM

Service that completes a checkin that was started with the CACHE_SUBMIT_HTML_FORM service.

After a preview has been performed and the check-in data is cached the user can decide to finish or continue the checkin using this service.

The cached data must be provided to this service to perform a successful checkin. Filters are provided to customize the cache and check-in behavior.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.

4.3.24 CREATE_SUBSCRIPTION_TYPE

Service that creates a new subscription type. The most likely error is when the subscription type name is not unique.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- scpType: The subscription type.
- scpDescription: The subscription description.
- scpEnabled: 1 (*true*): Subscription notifications are enabled. 0 (*false*): Subscription notifications are disabled.
- scpFields: The metadata fields that define the subscription criteria. For example, dDocAuthor, dDocType.

Example

```
IdcService=CREATE_SUBSCRIPTION_TYPE
scpType=subscription_test
scpFields=dDocType
scpDescription=testing the subscription
scpEnabled=1
```

4.3.25 DELETE_BYCLASS

Subservice used to delete content items based on specific parameters.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.26 DELETE_BYNAME

Subservice used to delete content items based on specific parameters.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.27 DELETE_BYREV

Subservice used to delete content items based on specific parameters.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.28 DELETE_BYREV_REVISION

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.29 DELETE_CHECKIN_CACHE

Subservice used to delete content items based on specific parameters.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.30 DELETE_DOC

Service that deletes the entire content item and all revisions. The user must have permission to delete the content item. The most likely error is when the content item no longer exists in the system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item ID.
- dDocName: The documentID for the document; the actual content ID.

Example

```
IdcService=DELETE_DOC  
dID=48  
dDocName=test1000
```

4.3.31 DELETE_REV

Service that deletes an existing content item revision from a browser. The most likely errors are mismatched parameters, when the content item no longer exists in the system, or when the content item is part of a workflow.

Access Level: Read, Write (3)

Calls Subservice: DELETE_BYREV_REVISION

Queries Executed: QdocInfo

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.

Results

- Result Sets: DOC_INFO (All fields from Revisions and DocMeta for the specified revision.)

- Local Data:
 - Oracle Content Server:
 - * currentReleaseState
 - * dAction (returns 'Delete Revision')
 - * dReleaseState
 - * isAllRevisionsDeleted (returns true when the last revision of an item is deleted)
 - * isCurRevEmpty
 - * newReleaseState
 - * prevID
 - If the item being deleted is currently in a workflow, the operation fails and the following workflow info is returned:
 - * dWfCurrentStepID
 - * dWfDocState
 - * dWfID
 - * dWfName
 - * dWfStatus
 - * dWfStepDescription
 - * dWfStepID
 - * dWfStepIsAll
 - * dWfStepName
 - * dWfStepType
 - * dWfStepWeight
 - * dWfType
 - * dWorkflowState
 - * IsWorkflow
 - * wfStepCheckinType
- Response Templates:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: DOC_INFO

Used By

- Resource Includes:
 - delete_rev_form
 - delete_revision_form

Example

```
IdcService=DELETE_REV
dID=51
```

4.3.32 DELETE_REV_EX

Service that deletes an existing content item revision from an applet or application. The most likely errors are mismatched parameters, when the content item no longer exists in the system, or when the content item is part of a workflow.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dID`: The generated content item revision ID.

Example

```
IdcService=DELETE_REV_EX  
dID=56
```

4.3.33 DELETE_SUBSCRIPTION_TYPE

Service that deletes an existing subscription type. The most likely error is a subscription type that is not in the system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `scpType`: The subscription type.

Example

```
IdcService=DELETE_SUBSCRIPTION_TYPE  
scpType=subscription_test
```

4.3.34 DOC_FORMATS_WIZARD

Service that retrieves content item format extensions. Used to load the content item configuration information and set the default content item format extension.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.35 DOC_INFO

Service that retrieves content item information for a specific revision of a content item. It returns all metadata associated with that revision of the content item. The most likely errors are when the content item no longer exists in the system or when the user does not have the security level to perform this action.

Limited information is provided for other revisions through the REVISION_HISTORY result set.

This service returns subscription information and workflow information if the item is in workflow.

Access Level: Read, Scriptable (33)

Queries Executed:

- `QdocInfo`
- `QdocFormats`

- QisSubscribed
- QrevHistory

Location: *IdcHomeDir* /resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The content item revision ID.
- dDocName: The content item ID.

Results

- Result Sets:
 - DOC_INFO (all fields from Revisions and DocMeta for the specified revision)
 - REVISION_HISTORY (dFormat, dInDate, dOutDate, dStatus, dProcessingState, dRevLabel, dID, dDocName, dRevisionID for all non-deleted revisions)
 - If item is in workflow: WF_INFO (all fields from Workflows and WorkflowDocuments for the specified revision)
- Local Data:
 - Oracle Content Server:
 - AuthorAddress
 - dDocFormats
 - dDocTitle
 - dID
 - DocUrl
 - dStatus
 - dSubscriptionAlias
 - dSubscriptionID
 - dSubscriptionType
 - dUser
 - If item is in workflow:
 - dWfCurrentStepID
 - dWfDocState
 - dWfID
 - dWfName
 - dWfStatus
 - wfStepCheckinType
 - dWfStepDescription
 - dWfStepID
 - dWfStepIsAll
 - dWfStepName
 - dWfStepType

- dWfStepWeight
- dWfType
- IsWorkflow
- String: DocURL (the full URL to the weblayout file associated with this revision)
- Response Template: DOC_INFO (doc_info.htm)

Used By

- Resource Includes:
 - checkin_list_action_popup
 - checkin_multiuploadapplet_processing_functions
 - classic_doc_rev_info
 - clbra_active_doc_display
 - clbra_wf_doc_list
 - dam_result_table_content_row
 - doc_info_action_image
 - docinfo_page_title
 - doc_rev_info
 - doc_revisions_table
 - email_docinfo_body_by_id
 - email_docinfo_body_by_name
 - legacy_basic_subscriptions_table
 - legacy_checked_out_content_table
 - legacy_expired_content_table
 - legacy_work_in_progress_table
 - my_view_result_table_cells
 - searchapi_result_doc_href_start
 - searchapi_result_table_content_end
 - search_result_info_button
 - search_results_action_popup
 - setup_checked_out_content_action_popups
 - setup_search_results_action_popups
 - setup_subscription_action_popups
 - setup_work_in_progress_action_popups
 - slim_result_table_content_row
 - subscription_action_popup
 - trays_search_result_section
 - wf_in_queue_display

- wf_reviewer_mail_link
- wips_list_action_popup
- Templates:
 - CHECKIN_CONFIRM (checkin_confirm.htm)
 - DOCUMENT_PROBLEMREPORTS (doc_problemreports.htm)
 - DOC_SUB_LIST (doc_sub_list.htm)
 - PR_CONTRIBUTOR_MAIL (pr_contributor_mail.htm)
 - PROBLEMREPORT_INFO (pr_info.htm)
 - QUERY_NOTIFICATION (query_notification_mail.htm)
 - SUBSCRIPTION_MAIL (subscription_mail.htm)
 - WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
 - WORKFLOW_REVIEW_FRAMES (workflow_review_frames.htm)
- Other:

 - SoapCustom:Wsd:DocInfo:Services
 - SoapCustom:Wsd:DocInfo:Service:DocInfoByID:ResponseParams
 - SoapCustom:Wsd:DocInfo:Service:DocInfoByName:ResponseParams
 - SoapCustom:Wsd:GetFile:Service:GetFileByID:ResponseParams
- Redirect service for:
 - DELETE_REV
 - RESUBMIT_FOR_CONVERSION
 - SUBSCRIBE
 - UNDO_CHECKOUT
 - UNSUBSCRIBE
 - UPDATE_DOCINFO_BYFORM

Example

```
IdcService=DOC_INFO
dID=54321
```

4.3.36 DOC_INFO_BY_NAME

Service that retrieves information about the latest revision of a content item based on the content ID (the dDocName) as a parameter rather than the revision-specific dID parameter, which is required by the DOC_INFO service. The RevisionSelectionMethod parameter can be set to *specific* to return information about a specific revision.

By default, this service returns information for the Latest revision, whether it is released or not. An item is not released until it is out of workflow. Results returned for a given revision are identical to those of the DOC_INFO service.

Access Level: Read, Scriptable (33)

Queries Executed:

- QdocInfo
- QdocFormats
- QisSubscribed
- QrevHistory
- QlatestIDByName (if RevisionSelectionMethod is empty or 'Latest')
- QlatestReleasedIDByName (if RevisionSelectionMethod is 'LatestReleased')

Location: *IdcHomeDir* /resources/core/templates/std_services.htm

Important: Either the content item name (*dDocName*) must be specified or a Content ID (*dDocName*) with the *RevisionSelectionMethod* parameter must be specified.

Additional Required Service Parameters

- *dDocName*: The content item name.

Optional Service Parameters

- *RevisionSelectionMethod*: Can be set to *Latest* to retrieve the most recent version, or *LatestReleased* to retrieve the most recently released version, or *Specific* (if set to *Specific*, a *dID* must be provided). If set to *Specific*, *dID* can be used instead of *dDocName* to point to a specific revision.

Results

- Result Sets:
 - *DOC_INFO* (all fields from Revisions and DocMeta for the specified revision)
 - *REVISION_HISTORY* (*dFormat*, *dInDate*, *dOutDate*, *dStatus*, *dProcessingState*, *dRevLabel*, *dID*, *dDocName*, *dRevisionID* for all non-deleted revisions)
 - If item is in workflow: *WF_INFO* (all fields from Workflows and WorkflowDocuments for the specified revision)
- Local Data:
 - Oracle Content Server:
 - * *AuthorAddress*
 - * *dDocFormats*
 - * *dDocTitle*
 - * *dID*
 - * *DocUrl*
 - * *dStatus*
 - * *dSubscriptionAlias*
 - * *dSubscriptionID*
 - * *dSubscriptionType*
 - * *dUser*

- If item is in workflow:
 - * dWfStatus
 - * dWfCurrentStepID
 - * dWfDocState
 - * dWfID
 - * dWfName
 - * dWfStepDescription
 - * dWfStepID
 - * dWfStepIsAll
 - * dWfStepName
 - * dWfStepType
 - * dWfStepWeight
 - * dWfType
 - * IsWorkflow
 - * wfStepCheckinType
- Response Template: DOC_INFO (doc_info.htm)

Used By

- Resource Includes:
 - email_docinfo_body_by_id
 - email_docinfo_body_by_name
 - setup_workflow_action_popups
 - workflow_action_popup
- Template: PR_PUBLISHER_MAIL (pr_publisher_mail.htm)
- Other: SoapCustom:WsdL:DocInfo:Services

4.3.37 DOC_INFO_LATESTRELEASE

Service that retrieves information only for the latest revision of a released content item. If the content item has no released revision, the service returns a StatusCode of -1, with a corresponding StatusMessage value. It only returns the DOC_INFO result set (no revision, workflow, or subscription information). Because it does not have a template it returns only raw data.

The most likely errors are when the content item no longer exists in the system or when the user does not have the security level to perform this action.

Access Level: Read, Scriptable (33)

Queries Executed: QlatestReleasedIDByName, QdocInfo

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dDocName: The document name for the content item.

Results

- Result Sets: DOC_INFO (All fields from Revisions and DocMeta for the latest released revision.)
- Local Data:
 - AuthorAddress
 - dDocName
 - dID
 - dUser

Example

```
IdcService=DOC_INFO_LATESTRELEASE  
dDocName=PublicDoc1_ia3c488971
```

4.3.38 DOC_INFO_SIMPLE

Service that returns information about a specific content item without workflow or subscription information. It returns revision information as a simple listing of rows from the Revisions table rather than a specific selection of fields from the Documents and Revisions table. These differences make this service a less expensive operation than the standard DOC_INFO service.

Because it does not have a template it returns only raw data.

Access Level: Read, Scriptable (33)

Queries Executed: QdocInfo, QdocName

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The Content ID for the content item.

Results

- Result Sets:
 - DOC_INFO (all fields from Revisions and DocMeta for specific revision)
 - DocRevisions (all fields from Revisions for all non-deleted revisions)
- Local Data:
 - AuthorAddress
 - dID
 - dUser

4.3.39 DOC_INFO_SIMPLE_BYREV

Service that returns information about a content item based on a revision number. This service differs from others by requiring a combination of Content ID (dDocName) and revision number (dRevLabel) as required parameters. All other revision-specific doc_info services require dID.

This service returns the DOC_INFO result set. DOC_INFO_SIMPLE also returns revision information.

Access Level: Read, Scriptable (33)

Queries Executed: QdocRev, QdocInfo

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dDocName: The document name for the content item.
- dRevLabel: The revision number for the content item.

Results

- Result Sets:
 - DOC_INFO (all fields from Revisions and DocMeta for specific revision)
- Local Data:
 - dUser
 - dRevLabel
 - dID
 - AuthorAddress
 - dDocName

4.3.40 DOC_SUBS_LIST

Service that returns a list of content items in a specific subscription.

For criteria-based subscriptions, this returns items matching the criteria. For basic subscriptions, it returns the item with a name that matches the subscription ID.

Access Level: Read, Global, Scriptable (49)

Queries Executed: QuserSubscription

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dSubscriptionID: The subscription ID. For a Basic subscription, this is the Content ID. For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the value for a Public content item authored by user1 would be *Public,user1*.

- dSubscriptionType: The subscription type, either *Basic* or a custom name. Must be set to *Basic* for a basic subscription.

Optional Service Parameters

- dSubscriptionAlias: Use to pass an alias or user name. If set to *alias*, a valid alias name must be used. If set to *user* a valid user name is necessary. If an invalid alias or user name is used, an error occurs. If left blank, the value defaults to *user* and is set to the current user (dUser).
- dSubscriptionAliasType: Determines what the service expects as a value for dSubscriptionAlias. Valid values are *alias* or *user*.
- unsubscribeService: For response pages (such as the default template for this service) that provide a link that allows the user to unsubscribe, a value must be passed as a parameter. If omitted an error does not appear but the unsubscribe

link on the response page produces an error if clicked (the standard value should be UNSUBSCRIBE).

- `subscribeService`: Same as `unsubscribeService` parameter except a link to subscribe is provided if the user is not already subscribed to the subscription (the standard value should be SUBSCRIBE).
- `MaxQueryRow`: Truncates the number of rows returned for the `DOCUMENT_LIST` result set.

Results

- Result Sets:
 - `DOCUMENT_LIST`: All fields from Revisions and DocMeta for items matching the subscription criteria. This data is returned regardless of whether the user is subscribed to the specified subscription.
 - `USER_SUBSCRIPTION`: All fields from Subscriptions for the row that assigns the specified subscription to the user/alias. If the user/alias is not subscribed to the specified subscription, the result set is empty.
- Local Data:
 - `dataSource`
 - `dSubscriptionAlias`
 - `dSubscriptionAliasType`
 - `dSubscriptionID`
 - `dSubscriptionType`
 - `dUser`
 - `MaxQueryRows`
 - `resultName`
 - `scpDescription`
 - `scpEnabled`
 - `whereClause`
- Response Template: `DOC_SUB_LIST` (`doc_sub_list.htm`)

Used By

- Applets: Repository Manager
- Resource Includes:
 - `criteria_subscription_info_image`
 - `legacy_criteria_subscriptions_table`
 - `setup_subscription_action_popups`
 - `subscription_action_popup`
- Templates:
 - `SUBSCRIBE_FORM` (`subscribe_form.htm`)
 - `UNSUBSCRIBE_FORM` (`unsubscribe_form.htm`)

Example

```
IdcService=DOC_SUBS_LIST
dSubscriptionType=my_subscription
dSubscriptionID=ADENG
```

4.3.41 EDIT_DOC_FORMATS

Service that modifies existing file formats. The service updates content item formats and file extension information. This service is executed in a browser interface by the Inbound Refinery.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- **dFormat:** The formatting process used to create the web-viewable version of the content. For example, *application/hcsf* or *application/doc*.
- **dDescription:** The format description.
- **dConversion:** The conversion algorithm is determined by this parameter.

If the conversion type is not *Passthru* or *NoConversion* (default value) and the content is not web-viewable or has a publish state, the content gets added to the queue to get converted. Otherwise, the server looks for the web-viewable (if applicable) and the vault file and updates the processing state to say that the file has already been converted.

If the file mime-type is *application/FDF*, the server sets the conversion to *exchange-fdf*.

- **extensions:** The file extensions such as *doc*, *txt*, or *pdf*.

Example

```
IdcService=EDIT_DOC_FORMATS
dFormat=application/msword
extensions=doc
dConversion=PASSTHRU
dDescription=adding the description
```

4.3.42 FORM_PROCESS

Service that processes a PDF form for submission. This service is called by FORM_SUBMIT. It uses the auto-generated ClientId parameter.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Note: This service cannot be executed by Idc Command.

4.3.43 FORM_SUBMIT

Service that submits a PDF form. This service calls the [FORM_PROCESS](#) service to process the PDF form before submission.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Note: This service cannot be executed by Idc Command.

4.3.44 GET_CACHED_CHECKIN_INFO

Service used to display the cached data for a cache checkin such as CACHE_CHECKIN_NEW. It is available from the checked-out content listing.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dDocName`: The Content ID for the content item.

4.3.45 GET_DOC_CONFIG_INFO

Service that returns Content Server configuration information. Gets a dump of the server environment form external applications.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Results

Returns the properties information, the security group option list, and these ResultSets:

- DOC_DEFAULT_INFO
- DocMetaDefinition
- DocTypes
- DocFormats

Example

- IdcCommand command file format:

```
#Retrieves content item configuration information
IdcServer=GET_DOC_CONFIG_INFO
```

- HDA format:

```
@Properties LocalData
IdcService=GET_DOC_CONFIG_INFO
@end
```

4.3.46 GET_DOC_SUBSCRIBERS

Service that returns a list of subscribers to a specific content item.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dDocName`: The Content ID for the content item.

Example

```
IdcService=GET_DOC_SUBSCRIBERS
dDocName=test_000036
```

4.3.47 GET_ENVIRONMENT

Service used to retrieve the settings of configuration values for an Oracle Content Server environment.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Optional Service Parameters

- `startTime`: The time (in milliseconds) that the instance started.

4.3.48 GET_EXPIRED

Service used to retrieve a list of expiring and expired items. The optional `isExpiredQuery` parameter, when set to *true*, causes the service to list only items that have already expired.

Without this parameter, the list also contains items that are scheduled to expire within the range of dates specified by `endDate` and `startDate`. This may include items that have already expired if the start date is earlier than the current system time.

Access Level: Read, Write, Global (18)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Optional Service Parameters

- `endDate`: Items expiring before this date are displayed.
- `isExpiredQuery`: Setting this parameter to 1 (*true*) causes searching for only expired items. If set to *true* and the end date is unspecified, the current system time is used as a default end date. This lists content that has already expired unless constrained by a specific start date.
- If set to 0 (*false*) and the start date is empty, the current system time is used as a default start date. This lists content items that expire in the future, constrained by a specified end date.

In all other situations, empty start or end dates are treated as empty, and no corresponding constraint is imposed upon the query.

- `startDate`: Items expiring after this date are displayed.

Results:

- Results Sets: EXPIRED_LIST (All fields from Revisions and DocMeta for expired or expiring items as defined by the dates and `isExpiredQuery` parameter.)
- Local Data:
 - `dataSource`
 - `endDate`
 - `expiredQuery`
 - `isExpiredQuery`
 - `isQueryResult`
 - `MaxQueryRows`
 - `orderClause`
 - `resultName`
 - `startDate`

- userDefinedEndDate
- userDefinedStartDate
- whereClause
- Response Template: EXPIRED_PAGE (expired_page.htm)

Used By

- Resource Includes:
 - pne_nav_management_links
 - std_doc_man_pages
- Templates: EXPIRED_PAGE (expired_page.htm)
- Standard Navigation: commonNav.js

4.3.49 GET_PACKAGE_ENVIRONMENT_PAGE

Services used to retrieve the page that initiates the packaging of the environment.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.50 GET_UPDATE_FORM

Service used to generate the Info Update Form for an existing content item.

The most likely error is naming a content item that is no longer in the system.

Access Level: Write, Scriptable (34)

Queries Executed: QdocInfo

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.

Results

- Result Sets:
 - DOC_INFO (all fields from Revisions and DocMeta for the specified revision)
 - DocFormats (all rows and fields of the DocFormats database table)
 - DocTypes (all rows and fields of the DocTypes database table)
- Local Data:
 - dDocAccount
 - dDocName
 - dDocType
 - defaultAccount
 - dID
 - dSecurityGroup
 - dUser

- Response Template: UPDATE_DOC_INFO (update_docinfo.htm)

Example

```
IdcService=GET_UPDATE_FORM
dID=59
```

4.3.51 NOTIFY_INDEXER

Service used to notify the indexer that work is to be done. This service is not used because normally a checkin notifies the indexer or because the indexer has its own timer, which checks for 'work to do' every five minutes.

This service should only be used if a NO_NOTIFY checkin has been performed and the client application does not want to wait for the normal indexing cycle.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.52 ODMA_DOC_INFO_SIMPLE

Service used by the ODMA client application to retrieve the content information for the specified content item.

This service is currently not in use.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The unique ID for the item revision.

4.3.53 PACKAGE_ENVIRONMENT

Service that creates a packaged zip file containing Oracle Content Server environment files.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.54 REMOVE_METAFILE_SUB

Subservice called to alter document meta information.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.55 REPLACE_METAFILE_SUB

Subservice called to replace document meta information.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.56 RESUBMIT_FOR_CONVERSION

Service that resubmits a content item for conversion when it fails the initial conversion attempt. The most likely errors are when the content item no longer exists in the system or when the user does not have the security level to perform this action.

This service can resubmit successful conversions and failed ones.

Access Level: Write (2)

Queries Executed: QdocInfo, QlatestID, Qdocuments

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.

Optional Service Parameters

- RedirectUrl: URL used for the redirected service.
- AlwaysResubmit: When set to 1 (*true*), allows the service to be used on items that were successfully converted. Otherwise the service only operates on failed conversions.

Results

- Local Data:
 - dConversion
 - dCurRevID
 - dDocID
 - dExtension
 - dFileSize
 - dFormat
 - dID
 - dOriginalName
 - dProcessingState
 - dPublishState
 - dRawDocID
 - dReleaseState
 - dRevClassID
 - dStatus
 - dWorkflowState
 - IsNotLatestRev
 - isStatusChanged
 - prevReleaseState
 - RedirectParams
 - VaultfilePath
 - WebfilePath
 - wfAction
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: DOC_INFO

Used By

- Applets: Repository Manager
- Resource Includes:
 - classic_info_page_content
 - docinfo_resubmit_option
 - std_docinfo_error_msg

Example

```
IdcService=RESUBMIT_FOR_CONVERSION
dID=62
```

4.3.57 REV_HISTORY

Service that returns the revision history for a content item revision.

Access Level: Read, Scriptable (33)

Queries Executed: QdocInfo, QrevHistoryReleased

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.

Results

- Result Sets:
 - DOC_INFO (All fields from Revisions and DocMeta for the specified revision)
 - REVISIONS (Rows listing all the item's released revisions containing the fields: dDocAccount, dDocName, dDocType, dFormat, dID, dInDate, dProcessingState, dReleaseState, dRevLabel, dRevisionID, dSecurityGroup, dStatus, dWebExtension)
- Local Data: dID
- Response Template: REV_HISTORY (rev_history.htm)

Used By

- Resource Includes:
 - classic_search_result_item_revision
 - searchapi_result_table_content_end

Example

```
IdcService=REV_HISTORY
dID=62
```

4.3.58 SELECTDOC

Service that returns content item information and evaluates the user security level when selecting a content item using ODMA.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.

Example

```
IdcService=SELECTDOC  
dID=62
```

4.3.59 SUBMIT_HTML_FORM

Service that submits HCSP or HCSF forms for processing. These are Dynamic Server Pages used to process HTML-based business forms. This service calls the GET_FILE subservice, called with Java code from `intradoc.server.FormHandler.retrieveHtmlFormState()` method.

Usually the Auto Content ID feature is enabled to submit HTML forms. If not, each submitted form must be assigned a unique Content ID.

The most likely error is an HTML form that does not exist.

Access Level: Write (2)

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

Additional Required Service Parameters

- dID: The generated content item revision ID. The specified revision must be an HTML form.

Optional Service Parameters

- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Oracle Content Server home page.
- isFormFinished: Used on HCSP files. If this is set to 1 (*true*), the HCSP cannot be submitted again.
- Text fields: You can submit any text field in the form as an optional parameter and pass a value to that field. For example, if the form has a text field called *Product*, the string value *publisher* could be assigned to that field (`Product=publisher`).

Results

- Result Sets:
 - DocTypes
 - DocFormats
- Local Data:
 - dDocTitle
 - dID
- Response Template:
 - null
 - default redirect server (GET_DOC_PAGE: HOME_PAGE)

Used By

- Resource Includes: `std_html_form_submit_start`

Example

- IdcCommand command file format:
- IdcService=SUBMIT_HTML_FORM
dID=44
- HDA format with an optional parameter (assigns a value to a text field):

```
@Properties LocalData
IdcService=SUBMIT_HTML_FORM
dID=44
Product=publisher
@end
```

4.3.60 SUBSCRIBE

Service that subscribes a user to a content item or group of items. The most likely errors are when the content item no longer exists in the system or when the user does not have the security level to perform this action.

Access Level: Read (1)

Queries Executed:

- QdocInfo
- QuserSubscription
- Quser
- UserEmail
- Isubscription

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- dSubscriptionEmail: The e-mail address for the subscription. The service uses the value to overwrite the user's e-mail value in their user profile. If no value is passed for this parameter, the profile not updated. Essentially, every time this service is executed, the user's e-mail address is updated.
- dSubscriptionType: The subscription type. You can optionally provide the name of a custom subscription. If this parameter is used, the service subscribes the user to a criteria-based subscription where the specified custom subscription's criteria fields match the value of the corresponding metadata of the item specified through the dID parameter. If dSubscriptionType is left blank, the Basic subscription is used by default.

Optional Service Parameters

- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Oracle Content Server home page.

Results

- Local Data:
 - dID
 - dName

- dSubscriptionAlias
- dSubscriptionAliasType
- dSubscriptionCreateDate
- dSubscriptionID
- dSubscriptionType
- dUser
- Response Template:
 - DOC_INFO
 - Default redirect service: DOC_INFO

Used By

- Resource Includes:
 - docinfo_subscription_form
 - doc_subscription_unsubscription
- Other: SoapCustom:WsdL:Subscription:Services

Example

These parameters are passed in the browser environment to execute this command:

```
<input type=hidden name=IdcService value="SUBSCRIBE">
<input type=hidden name=dID value="63">
<input type=hidden name=dSubscriptionType value=my_subscription>
<input type=hidden name=dSubscriptionEmail value=sysadmin@example.com>
```

4.3.61 SUBSCRIBE_DOC_USER

Service used in the browser environment when a user subscribes to a content item (builds the subscription page).

This service is executed when a user subscribes to a document (performs a search and clicks Subscribe). If the system has more than one subscription type, the user is redirected to the Subscription page where the user can subscribe to different criteria.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.

Note: Additional parameters are passed when the user subscribes to the content item (see the following example).

Example

These parameters are passed in the browser environment to execute this command:

```
<form name=SubscriptionForm action="/cs/idcplg"method="GET">
<input type=hidden name=dID value="63">
<input type=hidden name=dDocName value="test_000045">
<input type=hidden name=IdcService value="SUBSCRIBE_DOC_USER">
<input type=hidden name=subscribeService value=SUBSCRIBE>
<input type=hidden name=exitUrl value="/cs/idcplg?IdcService=DOC_
```

```

INFO&dID=63&dDocName=test_000045">
<input type=hidden name=title value="Subscriptions">
<input type=hidden name=unsubscribeService value=UNSUBSCRIBE>
<input type=submit value="Subscriptions">
</form>

```

4.3.62 SUBSCRIBE_EX

Service used in Repository Manager to add a user or alias to a subscription. It returns the list of users and aliases subscribed to this type. The most likely error is when the specified subscription alias type or subscription alias does not exist.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dSubscriptionAlias`: The alias for the subscription.
- `dSubscriptionAliasType`: The type of user. This value must be either *user* or *alias*. It refers to the value defined in `dSubscriptionAlias`.
- `dSubscriptionEmail`: The email address for the subscription.
- `dSubscriptionID`: The subscription ID.
 - For a Basic subscription, this is the Content ID.
 - For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the `dSubscriptionID` parameter value for a *Public* content item authored by *user1* would be *Public,user1*.

- `dSubscriptionType`: Name of the subscription type defined in the applet. A subscription type consists of a list of fields. When subscribing to a subscription type, the user must specify the values for each of the fields that make up the subscription type.

Optional Service Parameters

To return information about who is subscribed, this service requires these parameters:

- `dataSource`: The data source.
- `resultName`: The `ResultSet` name.
- `whereClause`: The programmatic clause.

Example

```

IdcService=SUBSCRIBE_EX
dSubscriptionID=user20
dSubscriptionAlias=sysadmin
dSubscriptionAliasType=user
dSubscriptionType=test
dSubscriptionEmail=user20@example.com
resultName=USER_LIST
dataSource=Subscriptions
whereClause=dSubscriptionType='test'

```

4.3.63 SUBSCRIBE_FORM

Service that retrieves the subscription form used for content item subscriptions.

This service is identical to the UNSUBSCRIBE_FORM service except the template it returns.

Access Level: Read (1)

Queries Executed: QdocInfo, QSubscribed

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **dID**: The generated content item revision ID.
- **unsubscribeService**: For response pages (such as the default template for this service) that provide a link that allows the user to unsubscribe, a value must be passed as a parameter. If omitted an error does not appear but the unsubscribe link on the response page produces an error if clicked (the standard value should be UNSUBSCRIBE).
- **subscribeService**: Same as unsubscribeService parameter except a link to subscribe is provided if the user is not already subscribed to the subscription (the standard value should be SUBSCRIBE).

Results

- **Result Sets**:
 - **DOC_INFO** (All fields from Revisions and DocMeta for the revision specified by dID)
 - **SUBSCRIPTION_LIST** (All fields from the Subscription table plus the additional fields scpFields, scpDescription, scpEnabled, and notSubscribed for all defined subscriptions)
- **Local Data**:
 - dID
 - dSubscriptionAlias
 - dSubscriptionID
 - dSubscriptionType
 - dUser
- **Response Template**: SUBSCRIBE_FORM (subscribe_form.htm)

Used By

- **Resource Includes**:
 - docinfo_subscription_form
 - doc_subscription_unsubscription

4.3.64 SUBSCRIPTION_LIST

Service that returns a list of all subscribed content items for a specific user.

No alias-based subscriptions are returned by this service, even if the user belongs to an alias that has subscriptions.

Access Level: Read, Global, Scriptable (49)

Queries Executed: QdocNameSubscription, QnotDocNameSubscriptions

Location: *IdcHomeDir* /resources/core/templates/std_services.htm

Additional Required Service Parameters

- dUser: The user name of the currently logged-in user.

Results

- Result Sets: SUBSCRIPTION_LIST (Each row contains all fields from the Subscription table corresponding to each of the current user's subscriptions. Additionally, for BASIC subscriptions, each row contains all fields from the Revisions table (metadata) for the latest revision of the item subscribed to.)
- Local Data: dUser
- Response Template: SUBSCRIPTION_LIST (subscription_list.htm)

Used By

- Resource Includes: pne_nav_userprofile_links
- Templates:
 - DOC_SUB_LIST (doc_sub_list.htm)
 - USER_INFO (user_info.htm)
- Standard Navigation: commonNav.js
- Other:
 - SoapCustom:WsdL:Subscription:Services
 - SoapCustom:WsdL:Subscription:Service:SubscriptionList:ResponseParams
 - Redirect service for: UNSUBSCRIBE_FROM_LIST

Example

```
IdcService=SUBSCRIPTION_LIST
dUser=sysadmin
```

4.3.65 UNDO_CHECKOUT

Service that reverses a content item checkout from a browser. The service fails if the content item does not exist in the system, if the content item is not checked out, or the user does not have sufficient permission to undo the checkout.

Access Level: Write (2)

- Queries Executed:
 - QdocID
 - Qrevisions
 - QdocInfo
 - IdocHistory
 - QdocWebFormat
 - Uuncheckout

Location: *IdcHomeDir* /resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.

Optional Service Parameters

- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Oracle Content Server home page.

Results

- Local Data:
 - CurRevCheckoutUser
 - CurRevID
 - CurRevIsCheckedOut
 - dAction
 - dCheckoutUser
 - dClbraName
 - dDocAccount
 - dDocName
 - dID
 - dIsCheckedOut
 - dReleaseState
 - dRevClassID
 - dRevLabel
 - dSecurityGroup
 - dStatus
 - dUser
 - isFinished
 - IsWorkflow
 - latestID
 - noDocLock
 - prevReleaseState
 - wfAction
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: GET_PORTAL_PAGE (Page=WF_INQUEUE_LIST)

Used By

- Applets:
 - Repository Manager
 - Workflow

- Resource Includes:
 - checkin_list_action_popup
 - doc_file_checkout
 - docinfo_undo_checkout_form
 - setup_checked_out_content_action_popups
 - setup_workflow_action_popups
 - wf_reviewer_doc_action_links
 - workflow_action_popup
- Templates: WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
- Other: SoapCustom:WsdI:CheckIn:Services

Example

- IdcCommand command file format:

```
IdcService=UNDO_CHECKOUT
dID=44
```

- HDA format:

```
@Properties LocalData
IdcService=UNDO_CHECKOUT
dID=44
@end
```

4.3.66 UNDO_CHECKOUT_BY_NAME

Service that reverses a content item checkout from an applet or application. The service fails if the content item does not exist in the system, if the content item is not checked out, or the user does not have sufficient permission to undo the checkout.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.

Optional Service Parameters

- dDocTitle: The content item title.

Example

- IdcCommand command file format:

```
IdcService=UNDO_CHECKOUT_BY_NAME
dDocName=myDocument
```

- HDA format with optional parameter:

```
@Properties LocalData
IdcService=UNDO_CHECKOUT_BY_NAME
dDocName=myDocument
dDocTitle=Just a title
@end
```

4.3.67 UNSUBSCRIBE

Service that cancels a content item subscription when only the Basic subscription is defined. This service is run by clicking the **Unsubscribe** button on a Content Information page.

This service is different from the UNSUBSCRIBE_FROM_LIST service primarily in what data it returns. UNSUBSCRIBE redirects to the Content Info page by default, so it loads content info for the item specified by dID. UNSUBSCRIBE_FROM_LIST redirects to the subscription listing page by default, so it loads the data necessary to display the user's subscriptions.

Access Level: Read (1)

Queries Executed: QdocInfo, Dsubscription

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- dSubscriptionID: The subscription ID.
 - For a Basic subscription, this is the Content ID.
 - For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the dSubscriptionID parameter setting for a *Public* content item authored by *user1* would be *Public,user1*.

- dSubscriptionType: The subscription type.

Optional Service Parameters

- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Oracle Content Server home page.
- dSubscriptionAlias: The user or alias for the criteria subscription (set to a valid user name or alias name, depending upon the value for dSubscriptionAliasType).
- dSubscriptionAliasType: The alias for the subscription type. Valid values are *user* or *alias*.

If the current user has Admin privileges, the dSubscriptionAlias parameter with dSubscriptionAliasType can be used to unsubscribe a different user or alias from a subscription. If these parameters are omitted, the service defaults to a dSubscriptionAliasType of *user* and uses the current user (dUser) for the value of dSubscriptionAlias. If these parameters are included but the current user doesn't have Admin privileges, they are disregarded.

Results

- Local Data:
 - dCheckoutUser
 - dDocAccount
 - dDocName
 - dID
 - dRevClassID

- dSecurityGroup
- dUser
- Response Template:
 - DOC_INFO
 - Default redirect service: DOC_INFO

Used By

- Resource Includes:
 - docinfo_subscription_form
 - doc_subscription_unsubscription
- Other: SoapCustom:WSDL:Subscription:Services

Example

```

IdcService=UNSUBSCRIBE
dID=66
dSubscriptionType=test
dSubscriptionID=test_000048

```

4.3.68 UNSUBSCRIBE_FORM

Service that retrieves the form used when unsubscribing from a content item.

This service is identical to the SUBSCRIBE_FORM service except the template it returns.

Access Level: Read (1)

Queries Executed: QdocInfo, QisSubscribed

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- subscribeService: For response pages (such as the default template for this service) that provide a link that allows the user to unsubscribe, a value must be passed as a parameter. If omitted an error does not appear but the unsubscribe link on the response page produces an error if clicked (the standard value should be SUBSCRIBE).

Results

- Result Sets:
 - DOC_INFO (All fields from Revisions and DocMeta for the revision specified by dID)
 - SUBSCRIPTION_LIST (All fields from the Subscription table plus the additional fields scpFields, scpDescription, scpEnabled, and notSubscribed for all defined subscriptions)
- Local Data:
 - dID
 - dSubscriptionAlias

- dSubscriptionID
- dSubscriptionType
- dUser
- Response Template: UNSUBSCRIBE_FORM (unsubscribe_form.htm)

Used By

- Resource Includes:
 - docinfo_subscription_form
 - doc_subscription_unsubscription

4.3.69 UNSUBSCRIBE_FROM_LIST

Service that cancels a content item subscription from a browser when multiple subscriptions are defined.

This service is run from the Subscriptions page, either by clicking the **Unsubscribe** link, or by clicking the **Subscription Info** link for that content item and then clicking **Unsubscribe** on the Subscription Info page.

This service differs from the UNSUBSCRIBE service primarily in what data it returns. UNSUBSCRIBE_FROM_LIST redirects to the subscription listing page by default, so it loads the data necessary to display the user's subscriptions. UNSUBSCRIBE redirects to the Content Info page by default, so it loads content info for the item specified by dID.

Access Level: Read, Global (17)

Queries Executed:

- Dsubscription
- QdocNameSubscription
- QnotDocNameSubscriptions

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dSubscriptionID: The subscription ID. For a Basic subscription, this is the Content ID. For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the dSubscriptionID parameter setting for a *Public* content item authored by *user1* would be *Public,user1*.

- dSubscriptionType: The subscription type.
- Optional Service Parameters
 - RedirectUrl: Used to display another page. If omitted, the user is redirected to the Oracle Content Server home page.
 - dSubscriptionAlias: The user alias for the criteria subscription, set to a valid user name or alias name, depending on the value for dSubscriptionAliasType.
 - dSubscriptionAliasType: The alias for the subscription type, set to either *user* or *alias*.
 - If the current user has Admin privileges, the dSubscriptionAlias parameter with dSubscriptionAliasType can be used to unsubscribe a different user or alias from a

subscription. If these parameters are omitted, the service defaults to a `dSubscriptionAliasType` of *user* and uses the current user (`dUser`) for the value of `dSubscriptionAlias`. If these parameters are included but the current user doesn't have Admin privileges, they are disregarded.

Results

- Result Sets: SUBSCRIPTION_LIST. Each row contains all fields from the Subscription table corresponding to each of the current user's subscriptions. Additionally, for Basic subscriptions, each row contains all fields from the Revisions table (metadata) for the latest revision of the item subscribed to.
- Local Data:
 - `dID`
 - `dSubscriptionAlias`
 - `dSubscriptionAliasType`
 - `dUser`
- Response Template:
 - SUBSCRIPTION_LIST
 - Default redirect service: SUBSCRIPTION_LIST

Used By

- Applets: Repository Manager
- Resource Includes: `pne_nav_userprofile_links`
- Templates:
 - DOC_SUB_LIST (`doc_sub_list.htm`)
 - USER_INFO (`user_info.htm`)
- Standard Navigation: `commonNav.js`

Example

```
IdcService=UNSUBSCRIBE_FROM_LIST
dSubscriptionType=test
dSubscriptionID=test_000046
```

4.3.70 UNSUBSCRIBE_FROM_LIST_EX

Service used by the Repository Manager applet to remove a user or alias from the subscription type. For information about adding a user or alias, see [SUBSCRIBE_EX](#).

This service is normally run by deleting a user from a subscription in the Repository Manager applet.

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

Additional Required Service Parameters

- `dSubscriptionAlias`: Name of the subscription type as defined in the applet.
- `dSubscriptionAliasType`: The type of user. This value must be either *user* or *alias*. It refers to the value defined in `dSubscriptionAlias`.

- dSubscriptionID: The subscription ID.
 - For a Basic subscription, this is the Content ID.
 - For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the dSubscriptionID parameter setting for a *Public* content item authored by *user1* would be *Public,user1*.

- dSubscriptionType: The subscription type.

Optional Service Parameters

To return information about who is subscribed, this service requires these parameters:

- dataSource: The data source.
- resultName: The ResultSet name.
- whereClause: The programmatic clause.

Example

Unsubscribes *user20* from any content that is checked in by *sysadmin*:

```
IdcService=UNSUBSCRIBE_FROM_LIST_EX
dSubscriptionID=sysadmin
dSubscriptionAlias=user20
dSubscriptionAliasType=user
dSubscriptionType=test
dSubscriptionEmail=sysadmin@example.com
resultName=USER_LIST
dataSource=Subscriptions
whereClause=dSubscriptionType='test'
```

4.3.71 UPDATE_BYREV

Subservice used to check in content items based on specific parameters.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.72 UPDATE_DOCINFO

Service that updates the metadata for a content item from an applet or application. This service is used by the Repository Manager. and executes the UPDATE_DOCINFO_SUB subservice.

This service differs from the UPDATE_DOCINFO_BYFORM service which provides an option to redirect to a display template. UPDATE_DOCINFO provides no display option.

Access Level: Write (2)

Calls Subservice:

- UPDATE_DOCINFO_SUB. This subservice may also call REMOVE_METAFILE_SUB, REPLACE_METAFILE_SUB, and UPDATE_DOCINFO_STATUS.

Queries Executed (all queries executed within subservices):

- QdocInfo
- QlatestID
- Qdocuments

- Ddocument
- Idocument
- Urevision2
- Umeta
- IdocHistory

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
- dID: The generated content item revision ID.
- dRevLabel: The content item revision label.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.

Optional Service Parameters

- Metadata fields: You can submit any metadata field as an optional parameter and pass a value to that field.

Results

- Local Data:
 - Oracle Content Server:
 - * dAction
 - * dActionDate
 - * dClbraName
 - * dCreateDate
 - * dDocAccount
 - * dDocType
 - * dDocName
 - * dExtension
 - * dID
 - * dOriginalName
 - * dOutDate
 - * dpAction
 - * dpEvent
 - * dPublishState
 - * dPublishType
 - * dReleaseState
 - * dRevClassID
 - * dRevLabel

- * dSecurityGroup
- * dStatus
- * dUser
- * isCurRevEmpty
- * isDocProfileUsed
- * isEditMode
- * IsNotLatestRev
- * IsUpdate
- * IsUpdateMetaOnly
- * prevReleaseState
- * updateSideEffectServices
- Workflow:
 - * dCurRevID
 - * dWfComputed
 - * dWfCurrentStepID
 - * dWfDirectory
 - * dWfDocState
 - * dWfID
 - * dWfName
 - * dWfStatus
 - * dWfStepDescription
 - * dWfStepID
 - * dWfStepIsAll
 - * dWfStepName
 - * dWfStepType
 - * dWfStepWeight
 - * dWfType
 - * dWorkflowState
 - * IsWorkflow
 - * wfAction
 - * wfCurrentStepPrefix
 - * wfEditFinished
 - * wfMessage
 - * wfQueueActionState
 - * wfStepCheckinType
- Plus any custom doc meta fields
- Response Template: null

Used By

- Applets: Repository Manger
- Other: SoapCustom:Wsd:CheckIn:Services

Example

- IdcCommand command file format:

```
IdcService=UPDATE_DOCINFO
dID=66
dDocName=test_000048
dSecurityGroup=Secure
dRevLabel=2
```

- HDA format with additional and optional parameters (assigns a value to a metadata field):

```
@Properties LocalData
IdcService=UPDATE_DOCINFO
dID=66
dDocName=test_000048
dSecurityGroup=Secure
dRevLabel=2
dDocAccount=mainaccount
xComments=Preliminary
@end
```

4.3.73 UPDATE_DOCINFO_BYFORM

Service that updates content information for a content item from a browser. This service executes the subservice UPDATE_DOCINFO_SUB. This subservice updates content item information.

The difference between this service and UPDATE_DOCINFO is that this service provides an option to redirect to a display template.

Access Level: Write (2)

Calls Subservice:

- UPDATE_DOCINFO_SUB, which may also call REMOVE_METAFILE_SUB, REPLACE_METAFILE_SUB, and UPDATE_DOCINFO_STATUS

Queries Executed (all queries executed within subservices):

- QdocInfo
- QlatestID
- Qdocuments
- Ddocument
- Idocument
- Urevision2
- Umeta
- IdocHistory

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.
- dID: The generated content item revision ID.
- dRevLabel: The content item revision label.
- dSecurityGroup: The security group such as *Public* or *Secure*.
- dDocAccount: The account for the content item. Required only if accounts are enabled.

Optional Service Parameters

- Metadata fields: You can submit any metadata field as an optional parameter and pass a value to that field. For example, if the system has a metadata field called *xComments*, the string value *Preliminary* could be assigned to that field (*xComments=Preliminary*).
- RedirectUrl: Used to display another page. If omitted, the user is redirected to the Oracle Content Server home page.

Results

- Local Data:
 - Oracle Content Server:
 - * dAction
 - * dactionDate
 - * dClbraName
 - * dCreateDate
 - * dDocAccount
 - * dDocName
 - * dDocType
 - * dExtension
 - * dID
 - * dOriginalName
 - * dOutDate
 - * dpAction
 - * dpEvent
 - * dPublishState
 - * dPublishType
 - * dReleaseState
 - * dRevClassID
 - * dRevLabel
 - * dSecurityGroup
 - * dStatus
 - * dUser

- * isCurRevEmpty
- * isDocProfileUsed
- * isEditMode
- * IsNotLatestRev
- * IsUpdate
- * IsUpdateMetaOnly
- * prevReleaseState
- * updateSideEffectServices
- Workflow:
 - * dCurRevID
 - * dWfComputed
 - * dWfCurrentStepID
 - * dWfDirectory
 - * dWfDocState
 - * dWfID
 - * dWfName
 - * dWfStatus
 - * dWfStepDescription
 - * dWfStepID
 - * dWfStepIsAll
 - * dWfStepName
 - * dWfStepType
 - * dWfStepWeight
 - * dWfType
 - * dWorkflowState
 - * IsWorkflow
 - * wfAction
 - * wfCurrentStepPrefix
 - * wfEditFinished
 - * wfMessage
 - * wfQueueActionState
 - * wfStepCheckinType
- Plus any custom doc meta fields
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service: DOC_INFO

Used By

- Resource Includes: std_doc_page_definitions

Example

- IdcCommand command file format:

```
IdcService=UPDATE_DOCINFO_BYFORM
dID=66
dSecurityGroup=Secure
dDocName=test_000048
dRevLabel=2
```

- HDA format with additional and optional parameters (assigns a value to a metadata field):

```
@Properties LocalData
IdcService=UPDATE_DOCINFO_BYFORM
dID=66
dSecurityGroup=Secure
dDocName=test_000048
dRevLabel=2
dDocAccount=mainaccount
xComments=Preliminary
@end
```

4.3.74 UPDATE_DOCINFO_BYREV

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.75 UPDATE_DOCINFO_METAFILE_BYREV

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.76 UPDATE_DOCINFO_STATUS

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.77 UPDATE_DOCINFO_SUB

Subservice that updates content item information.

Location: *dcHomeDir*/resources/core/templates/std_services.htm

4.3.78 UPDATE_SUBSCRIPTION_NOTIFY

Currently unused in the core Oracle Content Server software.

Service that updates the notification timestamp and redirects the user to the page specified in the RedirectUrl parameter.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.79 UPDATE_SUBSCRIPTION_TYPE

Service that updates a Criteria subscription. The most likely error is when the specified subscription type does not exist.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `scpType`: The subscription type.

Optional Service Parameters

- `scpDescription`: The subscription description.
- `scpEnabled`:
 - 1 (*true*): Subscription notifications are enabled.
 - 0 (*false*): Subscription notifications are disabled.
- `scpFields`: A comma-delimited list of the metadata fields that define the subscription criteria. For example: `dDocAuthor, dDocType`.

Example

- IdcCommand command file format:

```
IdcService=UPDATE_SUBSCRIPTION_TYPE
scpType=my_subscription
```

- HDA file format (changes the subscription for Author and disables the subscription):

```
@Properties LocalData
IdcService=UPDATE_SUBSCRIPTION_TYPE
scpType=my_subscription
scpFields=dDocAuthor
scpDescription=updating subscription
scpEnabled=false
@end
```

4.3.80 UPDATE_SUBSCRIPTION_USED

Service that updates a user's subscription records when they access a content item from a subscription notification. This service updates the date in the `dSubscriptionUsedDate` column of the Subscription database table.

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

Additional Required Service Parameters

- `dDocName`: The Content ID for the content item.
- `dSubscriptionAlias`: The user alias for the criteria subscription.
- `dSubscriptionAliasType`: The alias subscription type.
- `dSubscriptionID`: The subscription ID.
 - For a Basic subscription, this is the Content ID.
 - For a Criteria subscription, this is a comma-delimited list of the values of the criteria fields.

For example, if the criteria fields are Author and Security Group, the `dSubscriptionID` parameter setting for a *Public* content item authored by *user1* would be *Public,user1*.

- `dSubscriptionType`: The subscription type.

Example

```
IdcService=UPDATE_SUBSCRIPTION_USED
dSubscriptionType=test_subscription
dSubscriptionID=sysadmin
dDocName=test_000056
dSubscriptionAlias=global
dSubscriptionAliasType=user
```

4.3.81 UPDATE_METADATA

Subservice that updates metadata.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.82 VALIDATE_DOCINFO

Service used for metadata-only checkins for a heavy client (InternalUpload = 1).

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.3.83 WORK_IN_PROGRESS

Service that returns a list of all content items in the GENWWW or DONE status. It does not show items currently in a workflow.

Access Level: Write, Global, Scriptable (50)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Optional Service Parameters

- `orderClause`: Use to provide a field name on which to sort the list.
- `MaxQueryRows`: Use to control the number of items returned in the list.

Results

- Result Sets: DOC_LIST (All Fields from Revisions and DocMeta)
- Local Data:
 - `copyAborted`
 - `dataSource`
 - `MaxQueryRows`
- Response Template: WIPS (`wips_list.htm`)

Used By

- Resource Includes:
 - `pne_nav_management_links`
 - `std_doc_man_pages`
- Standard Navigation:
 - `commonBundle.js`
 - `commonNav.js`

4.4 Doc Profile Services (Core Oracle Content Server)

The following services are used when creating, maintaining, or deleting document profiles:

- [ADD_DOCPROFILE](#)
- [ADD_DOCRULE](#)
- [DELETE_DOCPROFILE](#)
- [DELETE_DOCRULE](#)
- [DOCPROFILE_PREVIEW](#)
- [EDIT_DOCPROFILE](#)
- [EDIT_DOCPROFILE_TRIGGER](#)
- [EDIT_DOCRULE](#)
- [GET_DOCPROFILE](#)
- [GET_DOCPROFILES](#)
- [GET_DOCRULE](#)
- [GET_DOCRULES](#)

4.4.1 ADD_DOCPROFILE

Service that is used to add a document profile. The service adds the profile and description to the content profile listing and generates the profile definition file from the data which is passed in.

Note: The data provided for this service becomes the profile definition. When editing the profile (using `EDIT_DOCPROFILE`), the profile definition must first be read using `GET_DOCPROFILE` before adding or changing the desired values.

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

Additional Required Service Parameters

- `dpName`: The name for the profile. This must be a unique name.
- `dpDescription`: A description of the new profile.
- `dpTriggerValue`: The trigger value associated with the profile.
- `dpDisplayLabel`: The display label for the profile.

Optional Service Parameters

- `isValidateTrigger`: When set to *true*, validates that the trigger value exists. If the value does not exist, the service fails. When set to *false*, the profile is added without validating the trigger.

4.4.2 ADD_DOCRULE

Service used to create a new content profile rule. This service adds the rule to the content rule listing and creates the rule definition file. The data provided to the service becomes the rule definition.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dpRuleName`: The name for the new rule. This name must be unique.
- `dpRuleDescription`: A description for the rule.

4.4.3 DELETE_DOCPROFILE

Service used to remove a document profile from the profile listing and removes the content profile definition file.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dpName`: The name for the profile.

4.4.4 DELETE_DOCRULE

Service used to remove a content rule from the rule listing and deletes the content rule definition file from the system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dpRuleName`: The name for the rule.

4.4.5 DOCPROFILE_PREVIEW

Service used in the Configuration Manager applet to simulate the use of a content profile. The preview executes in the desired context and returns the resulting data in a data binder. The context consists of the event (submit, request, or import) and the action (search, checkin, and so on). It also includes a user name and a content item when necessary. The data includes display information for each field and which rule determined the display for each field.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dpName`: The name for the rule to be used in the preview.
- `dpTriggerValue`: the trigger value to use for the preview.

4.4.6 EDIT_DOCPROFILE

Service used to edit a document profile.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dpName`: The name for the profile to be edited.
- `dpDescription`: The new description for the profile.
- `dpTriggerValue`: The new trigger value for the profile.
- `dpDisplayLabel`: The new display label.

4.4.7 EDIT_DOCPROFILE_TRIGGER

Service that changes the metadata field that will be used as the trigger field for the content profile.

Note: Changing the metadata fields may invalidate all existing profiles.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `dpName`: The name of the profile to be edited.
- `dpTriggerField`: The new trigger field to be used for the profile. Changing the trigger to empty (`dpTriggerfield=`) invalidates all profiles.

4.4.8 EDIT_DOCRULE

Service that changes a document rule description.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `dpRuleName`: The name of the rule to be edited.
- `dpRuleDescription`: The new description for the rule.

4.4.9 GET_DOCPROFILE

Service that returns the profile definition file for the specified rule. The returned data is in a data binder and contains all information used to define the profile.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `dpName`: The name of the profile to be used.

4.4.10 GET_DOCPROFILES

Service that returns the listing file for the content profiles. The listing file contains the name, description, trigger value and display label for each profile.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.4.11 GET_DOCRULE

Service that returns the rule definition file for the specified rule. The returned data is returned in a data binder and contains all the information used to define the rule.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dpRuleName`: The name of the profile to be used.

4.4.12 GET_DOCRULES

Service that returns the listing file for the content rules. The listing file contains the name and description for each rule in the system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.5 File Services (Core Oracle Content Server)

File services are those which manipulate files, such as dynamic conversion and resource files. Frequently used services are marked with an asterisk (*) in the following list.

The following file services are described in this section:

- [ADD_WEB_APP](#)
- [APPEND_FILE_CACHING_INFO](#)
- [GET_DYNAMIC_CONVERSION](#)
- [GET_DYNAMIC_CONVERSION_SUB](#)
- [*GET_DYNAMIC_URL](#)
- [GET_TEMPLATE_CONVERSIONS](#)
- [GET_WEB_APP_STATUS](#)
- [LOAD_RESOURCE_FILE](#)
- [REMOVE_WEB_APP](#)
- [SAVE_TEMPLATE_CONVERSIONS](#)

4.5.1 ADD_WEB_APP

Used with the internal Tomcat engine.

Service used to add a WAR file to the Tomcat engine and to enable the contained JSP pages.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `pathToWAR`: Complete path to the WAR file.

4.5.2 APPEND_FILE_CACHING_INFO

Subservice used by `GET_SYSTEM_AUDIT_INFO` to return information on the System Audit Info page.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.5.3 GET_DYNAMIC_CONVERSION

Service that returns a content item as an HTML or XML file converted by Dynamic Converter. This is available if the Dynamic Converter component is installed and enabled.

Given a dID or a dDocName and a RevisionSelectionMethod parameter, the service determines the filename of a particular rendition of the revision and returns that file to the client. The most likely errors are mismatched parameters or a request for a content item that does not exist.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Note: dDocName should be included in all requests for content items where the requester knows the dDocName. Error messages in the Oracle Content Server system assume that it is present, as do other features such as forms.

Additional Required Service Parameters

Important: Either the content item revision ID (dID) must be specified or a Content ID (dDocName) with the RevisionSelectionMethod parameter.

- dID: The generated content item revision ID.
 - If dID is not specified, dDocName and RevisionSelectionMethod must be specified.
 - A rendition of the revision of the content item with this ID is returned, if it exists, and the RevisionSelectionMethod parameter does not exist or has the value *Specific*.
- dDocName: The Content ID of the content item.
 - If *dDocName* is not present, dID must be present and RevisionSelectionMethod must not be present.
 - If RevisionSelectionMethod is present, a rendition of a revision of the content item with this name is returned, if it exists. If RevisionSelectionMethod is not present, *dDocName* is used in error messages.
- RevisionSelectionMethod: The revision selection method.
 - If present, dDocName must be present. The value of this variable is the method used to compute a dID from the specified dDocName. Its value can be *Specific*, *Latest*, or *LatestReleased*.
 - If the value is *Specific*, the dDocName parameter is ignored, and dID is required and is used to get a revision. If the value is *Latest*, the latest revision of the content item is used to compute the dID. If the value is *LatestReleased*, the latest released revision of the content item is used to compute the dID.

Optional Service Parameters

- conversionTemplate: The conversion template. This parameter can be passed to the service to override the template conversions criteria page.

- **DCViewFormat**: The file to be converted and displayed: *Native*, *Alternate*, or *WebViewable*.
- **useDocInfoCache**: Disables the caching mechanism while requesting an individual content item. It applies only to the single request. You might use this parameter to test or troubleshoot the optimized query feature. To use this parameter, append it to your Oracle Content Server URL as follows (parameter is in bold):

```
http://<server name>/cs/idcplg?IdcService= GET_DYNAMIC_
CONVERSION&dDocName=aTest&RevisionSelectionMethod=
LatestReleased&useDocInfoCache=false
```

- **conversionRule**: Specifies the conversion rule to be used, rather than allowing the conversion rule to be selected by the conversion rule criteria.

Example

- **IdcCommand** command file format:

```
# Retrieve a web-viewable revision
IdcService=GET_DYNAMIC_CONVERSION
dDocName=corporatereport
RevisionSelectionMethod=LatestReleased
DCViewFormat=WebViewable
```

- **HDA** format:

```
@Properties LocalData
IdcService=GET_DYNAMIC_CONVERSION
dID=54321
@end
```

4.5.4 GET_DYNAMIC_CONVERSION_SUB

Subservice used by GET_DYNAMIC_CONVERSION.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.5.5 GET_DYNAMIC_URL

Service that is used internally to extract information from the web-viewable URL to determine if it maps into the /weblayout directory. If it does not map then it throws an exception.

This service is usually used to retrieve a dynamic page. This service is called from the Web server to deliver dynamic content web-viewable files. It is called in the core to dynamically change the response page for a service.

Access Level: Read, Scriptable (33)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **fileUrl**: The relative URL for the item. This can be a checked-in item in the Content Service, a Java Script file for Schema or Layout Manager, or an image file from the /images directory.

Results

- Result Sets:
 - DocFormats
 - DocTypes
- Local Data:
 - ref:dDocAccount
 - ref:dDocName
 - ref:dDocType
 - ref:dExtension
 - ref:dSecurityGroup
 - ref:hasDocInfo
 - ref:isLatestRevision
 - SourceID
 - HCSP/F metadata (including custom XML data between idcbegindata and idcenddata tags)
- Response Template: null (Returns the file requested in the fileUrl parameter.)

4.5.6 GET_TEMPLATE_CONVERSIONS

Service used by the Dynamic Converter to retrieve the list of templates that are used during conversion.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.5.7 GET_WEB_APP_STATUS

Used with the internal Tomcat engine.

Service that returns the status of the internal Tomcat engine. For internal use only.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.5.8 LOAD_RESOURCE_FILE

Service that returns a resource file.

Given a dID or a dDocName and a RevisionSelectionMethod parameter, the service determines the filename of a particular rendition of the revision and returns that file to the client.

The most likely errors are some form of mismatched parameters or a request for a revision or rendition that does not exist.

Note: It is recommended that dDocName be included in all requests for content items where the requester knows the dDocName. Error messages in the Oracle Content Server system assume that it is present, as do other features such as forms.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

Important: Either the content item revision ID (dID) must be specified or a content item name (dDocName) and a RevisionSelectionMethod parameter must be specified.

Optional Service Parameters

- dID: The generated content item revision ID.
 - If dID is not specified, dDocName and RevisionSelectionMethod must be specified.
 - A rendition of the revision of the content item with this ID is returned, if it exists, and the RevisionSelectionMethod parameter does not exist or has the value *Specific*.
- dDocName: The Content ID for the content item.
 - If dDocName is not present, dID must be present and RevisionSelectionMethod must not be present.
 - If RevisionSelectionMethod is present, a rendition of a revision of the content item with this name is returned, if it exists. If RevisionSelectionMethod is not present, dDocName is used in error messages.
 - RevisionSelectionMethod: The revision selection method.
 - If present, dDocName must be present. The value of this variable is the method used to compute a dID from the specified dDocName. Its value can be *Specific*, *Latest*, or *LatestReleased*.
 - If the value is *Specific*, the dDocName is ignored, and dID is required and is used to get a rendition. If the value is *Latest*, the latest revision of the content item is used to compute the dID. If the value is *LatestReleased*, the latest released revision of the content item is used to compute the *dID*.
- Rendition: The content item rendition. This parameter specifies the rendition of the content item and can be set to *Primary*, *Web*, or *Alternate*. If *Rendition* is not present, it defaults to *Primary*.
 - If the value is *Primary*, the primary rendition of the selected revision is returned.
 - If the value is *Web*, the web-viewable rendition of the selected revision is returned.
 - If the value is *Alternate*, the alternate rendition of the selected revision is returned.

Example

```
IdcService=LOAD_RESOURCE_FILE  
dID=456
```

4.5.9 REMOVE_WEB_APP

Used with the internal Tomcat engine.

This service is used to remove a WAR file from use with the internal Tomcat engine. For internal use only.

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

4.5.10 SAVE_TEMPLATE_CONVERSIONS

Service used by the Dynamic Converter to save the conversion template.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.6 Indexer Services (Core Oracle Content Server)

Indexer services are used to control the search index. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- [CANCEL_SEARCH_INDEX](#)
- [CONTROL_SEARCH_INDEX](#)
- [*GET_FILE](#)
- [START_SEARCH_INDEX](#)

4.6.1 CANCEL_SEARCH_INDEX

Service that cancels the current indexing session.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.6.2 CONTROL_SEARCH_INDEX

Service that updates or rebuilds the search index. Updates and rebuilds are performed automatically in a background thread.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Important: Rebuilding the search index is necessary only when you change or add metadata fields. Depending on the quantity and size of your files, this process can take several days. Rebuilding is system-intensive, so you should plan to rebuild during non-peak system usage times.

- This service is called when changes are made to the Automatic Update Cycle and Collection Rebuild Cycle options provided on the Repository Manager: Indexer Tab.
- The options defined on the Configure Automatic Update Cycle or Configure Collection Rebuild Cycle screen map to these parameters:
 - Content Items Per Indexer Batch (MaxCollectionSize)
 - Content Items Per Checkpoint (IndexerCheckpointCount)
 - Indexer Debug Level (SearchDebugLevel)
 - Indexer Auto Updates (sEnableAutoUpdate)

Additional Required Service Parameters

- **cycleID**: The index cycle type:
 - **update**: Incrementally updates the index database.
 - **rebuild**: The search index is entirely rebuilt, and the old index collection is replaced with a new index collection after the rebuild has successfully completed.
- **action**: The action to perform. This entry can be set to these values:
 - **start**: Begins the update or rebuild cycle.
 - **cancel**: Stops the update or rebuild cycle, and does not permit a future restart.
 - **suspend**: Stops the update or rebuild cycle, and permits a future restart.
 - **restart**: Restarts the update or rebuild cycle after a suspend was executed.
 - **setConfiguration**: Used when enabling or disabling the update cycle. Setting this value enables you to adjust the checkpoint (`IndexerCheckpointCount`), batch size (`MaxCollectionSize`), debug level (`SearchDebugLevel`), and auto update (`sEnableAutoUpdate`) options.

Additional Optional Service Parameters

This service might require these parameters, depending on the action to execute (see the following examples).

GetCurrentIndexingStatus: Setting this parameter to 1 (*true*) returns the status of the indexer cycle:

- **Idle**: An indexer cycle is complete.
- **Active**: An indexer cycle is currently running.
- **Interrupt**: An unexpected event, that abruptly ends the indexing cycle. For example, a power, database, or file system failure.
- **Suspend**: The indexing cycle was stopped in a controlled manner. For example, using the Suspend button on the Repository Manager: Indexer Tab.
- **Restart**: An interrupted or suspended cycle was started again. If you are restarting after an interrupted cycle, ensure that you have corrected the problem that caused the interrupt to occur.
- **Cancel**: The indexing cycle was stopped with no intent to restart.
- **getStatus**: Setting this parameter to 1 (*true*) returns the indexer settings and status information.
- **PerformProcessConversion**: Enables the process conversion when starting or restarting the Indexer rebuild process.
 - 1 (*true*): The process conversion is performed.
 - 0 (*false*): The process conversion is not performed.
- **IndexerCheckpointCount**: The number of files that go through each indexing state at a time.
 - You can have multiple batches of files indexed per checkpoint.
 - To update this entry, the action must be set to `setConfiguration`.

- **MaxCollectionSize:** The maximum number of files that the search index processes simultaneously.
 - The default is 25, which means 25 files are indexed together, then the next 25 files are indexed.
 - You can change this setting to 1 if you are experiencing problems with the search engine indexing large and complicated files. However, slow system performance can result.
 - To update this entry, the action must be set to setConfiguration.
- **SearchDebugLevel:** The indexer debug level.
 - The more debug information listed in the server window, the slower the indexing progresses.
 - To update this entry, the action must be set to setConfiguration.

These are the debug levels from the least to the most debug information:

- **none:** No information for each file accessed is displayed.
- **verbose:** Displays information for each file accessed. Indicates indexed, ignored, or failed.
- **debug:** Displays the medium level of information.
- **trace:** Displays the lowest level of information.
- **all:** Displays the highest level of information.
- **sEnableAutoUpdate:** To update this entry, the action must be set to setConfiguration.
 - 1 (*true*): Automatic update cycles are enabled.
 - 0 (*false*): Automatic update cycles are disabled.

Examples

These examples are for controlling the indexer from another process.

- HDA format to return the defined settings and status information:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
getStatus=1
@end
```

- HDA format to enable the update cycle:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
MaxCollectionSize=500
sEnableAutoUpdate=1
cycleID=update
action=setConfiguration
SearchDebugLevel=none
IndexerCheckpointCount=5000
GetCurrentIndexingStatus=1
@end
```

- HDA format to disable the update cycle:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
```

```
MaxCollectionSize=500
sEnableAutoUpdate=0
cycleID=update
action=setConfiguration
SearchDebugLevel=none
IndexerCheckpointCount=5000
GetCurrentIndexingStatus=1
@end
```

- HDA format to start the Indexer rebuild:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
cycleID=rebuild
action=start
getStatus=1
GetCurrentIndexingStatus=1
PerformProcessConversion=1
@end
```

- HDA format to cancel the Indexer rebuild:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
cycleID=rebuild
action=cancel
getStatus=1
GetCurrentIndexingStatus=1
@end
```

- HDA format to suspend the Indexer rebuild:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
cycleID=rebuild
action=suspend
getStatus=1
GetCurrentIndexingStatus=1
@end
```

- HDA format to restart the Indexer rebuild after being interrupted or suspended:

```
@Properties LocalData
IdcService=CONTROL_SEARCH_INDEX
cycleID=rebuild
action=restart
getStatus=1
GetCurrentIndexingStatus=1
PerformProcessConversion=1
@end
```

4.6.3 GET_FILE

Service that returns a specific rendition of a content item revision to a browser. A copy of the file is retrieved without performing a checkout.

- Given a dID or a dDocName and a RevisionSelectionMethod parameter, the service determines the file name of a particular rendition of the revision and returns that file to the client.
- The most likely errors are some form of mismatched parameters or a request for a revision or rendition that does not exist.

Note: It is recommended that `dDocName` be included in all requests for content items where the requester knows the `dDocName`. Error messages in the Oracle Content Server instance assume that it is present, as do other features such as forms.

Access Level: Read, Scriptable (33)

Queries Executed:

- QdocInfo
- QlatestIdByName
- QlatestReleasedIDByName

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

Additional Required Service Parameters

Note: Either the content item revision ID (`dID`) must be specified or a Content ID (`dDocName`) along with a `RevisionSelectionMethod` parameter must be defined.

- `dID`: The generated content item revision ID.
 - If `dID` is not specified, `dDocName` and `RevisionSelectionMethod` must be specified.
 - A rendition of the revision of the content item with this ID is returned, if it exists, and the `RevisionSelectionMethod` parameter does not exist or has the value `Specific`.
- `dDocName`: The Content ID for the content item.
 - If `dDocName` is not present, `dID` must be present and `RevisionSelectionMethod` must not be present.
 - If `RevisionSelectionMethod` is present, a rendition of a revision of the content item with this name is returned, if it exists. If `RevisionSelectionMethod` is not present, `dDocName` is used in error messages.
 - Optional Service Parameters
- `allowInterrupt`: If set to 1 (`true`), this suppresses an error if the user cancels the file download.
- `RevisionSelectionMethod`: The revision selection method.
 - If present, `dDocName` must be present. The value of this variable is the method used to compute a `dID` from the specified `dDocName`. Its value can be `Specific`, `Latest`, or `LatestReleased`.
 - If the value is `Specific`, the `dDocName` is ignored, and `dID` is required and is used to get a rendition. If the value is `Latest`, the latest revision of the content item is used to compute the `dID`. If the value is `LatestReleased`, the latest released revision of the content item is used to compute the `dID`.

- Rendition: The content item rendition. This parameter specifies the rendition of the content item and can be set to *Primary*, *Web*, or *Alternate*. If *Rendition* is not present, it defaults to *Primary*.
 - If the value is *Primary*, the primary rendition of the selected revision is returned.
 - If the value is *Web*, the web-viewable rendition of the selected revision is returned.
 - If the value is *Alternate*, the alternate rendition of the selected revision is returned.
- IsXml: When set to *true* or 1, returns the XML data island which is present in some HCSP, HCST, and HCSF pages. It returns the data island that is wrapped inside the `std_html_form_xml_wrapper` include, which can be modified to pass additional information if desired.

Results

- Response Template: null (Only the requested file is returned.)

Used By

- Applets: Configuration Manager
- Resource Includes:
 - `doc_file_get_copy`
 - `doc_odma_select_get`
 - `download_form_fields`
 - `email_docinfo_body_by_id`
 - `email_docinfo_body_by_name`
 - `legacy_workflow_in_queue_table`
 - `subscription_info_cell`
 - `subscription_info_cells`
 - `wf_in_queue_display`
 - `wf_review_cannot_view_msg`
- Templates:
 - `CHECKOUT_OK` (`chkook.htm`)
 - `DOWNLOAD_OK` (`dwnldok.htm`)
 - `QUERY_NOTIFICATION` (`query_notification_mail.htm`)
 - `REDIRECTION_FILE_TEMPLATE` (`redirectionfile_template.htm`)
 - `REV_HISTORY` (`rev_history.htm`)
 - `SELECTDOC_OK` (`slctdcok.htm`)
 - `WORKFLOW_REVIEW_FORM` (`workflow_review_form.htm`)
 - `WORKFLOW_REVIEW_FRAMES` (`workflow_review_frames.htm`)
- Other: SoapCustom:WsdL:GetFile:Services

Example

- IdcCommand command file format:

```
# Retrieve a web-viewable revision
IdcService=GET_FILE
dDocName=corporatereport
RevisionSelectionMethod=LatestReleased
Rendition=Web
```

- HDA format:

```
@Properties LocalData
IdcService=GET_FILE
dID=54321
@end
```

4.6.4 START_SEARCH_INDEX

Service that updates or rebuilds the search index. This service is asynchronous and the action is performed in a background thread. This service can only be executed in the context of the Oracle Content Server instance and only completes successfully if a connection is made to the Oracle Content Server instance.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Optional Service Parameters

- IsRebuild: Sets the scope of the indexing process.
 - 1 (*true*): The Indexer performs a complete rebuild of the search index. 0 (*false*): The Indexer performs an incremental update of the search index.
 - Default is 0 (*false*).

Example

- IdcCommand command file format:

```
# Rebuild the entire search index
IdcService=START_SEARCH_INDEX
IsRebuild=true
```

4.7 Internal Services (Core Oracle Content Server)

The following services are called internally by the Oracle Content Server system. **Do not use or modify these services:**

- [CANCEL_COMPONENT_INSTALL](#)
- [CLEAR_SERVER_OUTPUT](#)
- [DOWNLOAD_COMPONENT](#)
- [GET_COMPONENT_CONFIG](#)
- [GET_COMPONENT_INSTALL_FORM](#)
- [GET_COMPONENT_INSTALL_PROMPTS_FORM](#)
- [GET_COMPONENT_INSTALL_SETTINGS'](#)
- [GET_LOCAL_REGISTRATION_FORM](#)
- [GET_MANIFEST_INFO](#)

- [GET_SERVER_OUTPUT](#)
- [PROXIED_REQUEST](#)
- [UNINSTALL_COMPONENT](#)
- [UPDATE_COMPONENT_CONFIG](#)
- [UPDATE_LICENSE](#)
- [UPLOAD_NEW_COMPONENT](#)

4.7.1 CANCEL_COMPONENT_INSTALL

Do not use.

4.7.2 CLEAR_SERVER_OUTPUT

Do not use.

4.7.3 DOWNLOAD_COMPONENT

Do not use.

4.7.4 GET_COMPONENT_CONFIG

Do not use.

4.7.5 GET_COMPONENT_INSTALL_FORM

Do not use.

4.7.6 GET_COMPONENT_INSTALL_PROMPTS_FORM

Do not use.

4.7.7 GET_COMPONENT_INSTALL_SETTINGS'

Do not use.

4.7.8 GET_LOCAL_REGISTRATION_FORM

Do not use.

4.7.9 GET_MANIFEST_INFO

Do not use.

4.7.10 GET_SERVER_OUTPUT

Do not use.

4.7.11 PROXIED_REQUEST

Do not use.

4.7.12 UNINSTALL_COMPONENT

Do not use.

4.7.13 UPDATE_COMPONENT_CONFIG

Do not use.

4.7.14 UPDATE_LICENSE

Do not use.

4.7.15 UPLOAD_NEW_COMPONENT

Do not use.

4.8 Meta Services (Core Oracle Content Server)

The Meta Services are used to manage and alter metadata in the Oracle Content Server system. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- [ADD_METADEF](#)
- [DEL_METADEF](#)
- [EDIT_METADEF](#)
- [GET_ADVANCED_SEARCH_OPTIONS](#)
- [*GET_DOC_METADATA_INFO](#)
- [GET_OPTION_LIST](#)
- [GET_USER_METADATA_INFO](#)
- [MOVE_METADEF](#)
- [UPDATE_ADVANCED_SEARCH_OPTIONS](#)
- [UPDATE_USER_META](#)
- [UPDATE_USER_META_TABLE](#)
- [UPDATE_META_TABLE](#)
- [UPDATE_OPTION_LIST](#)

4.8.1 ADD_METADEF

Service that creates a new metadata field.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Note: For more details, see [UPDATE_META_TABLE](#) and [START_SEARCH_INDEX](#). These services must be run before storing data in a new metadata field. For details about updating the *OptionLists* database table, see also [UPDATE_OPTION_LIST](#).

Additional Required Service Parameters

- `dName`: Internal name of the field.
- `dCaption`: User-visible caption used to label the field in the Oracle Content Server pages.
- `dIsRequired`: Prevents files from being checked in if the field does not contain a value. Values are 1 (required) or 0 (not required). Default is 0.
- `dIsEnabled`: Enables the field to be displayed on user interface pages. Values are 1 (enabled) or 0 (disabled). Default is 1.
- `dIsSearchable`: Enables the field to be indexed and searchable. Values are 1 (searchable) or 0 (not searchable). Default is 1.
- `dIsOptionList`: Allows the use of a user-selectable option list on Oracle Content Server pages. Values are 1 (enabled) or 0 (disabled). Default is 0. If 1 is used then `dOptionListKey` is also required.
- `dOptionListKey`: Name of the option list to be used.
- `dOptionListType`: Specifies the type of option list to be used. Values can be `choice` (Select List Validated), `chunval` (Select List Not Validated), `combo` (Edit and Select List), `multi2` (Multiselect List) or `multi` (Edit and Multiselect List).
- `dType`: The type of field. Values can be `Text` (Text), `BigText` (Long Text), `Int` (Integer), `Date` (Date), `Memo` (Memo). Default: Text.
- `dOrder`: Sequence in which the field is displayed on Oracle Content Server pages. The default value is the highest current value of any existing field, plus one.
- `dDefaultValue`: Default value for the metadata field being created.

Example

```

IdcService=ADD_METADEF
dIsRequired=0
dOptionListKey=Web_SectionList
dOptionListType=choice
dIsOptionList=1
dOrder=5
dName=xWeb_Section
dIsSearchable=1
dIsEnabled=1
dType=Text
FieldName=Web_Section
dCaption=Web Section

```

4.8.2 DEL_METADEF

Service that deletes an existing custom metadata field. You cannot delete the standard metadata fields such as `dDocName`, `dSecurityGroup`, and so forth.

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

Additional Required Service Parameters

- `dName`: The metadata field name, including the 'x' prefix.

Example

```

IdcService=DEL_METADEF
dName=xCustomField

```

4.8.3 EDIT_METADEF

Service that modifies an existing custom metadata field.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **dName:** The metadata field name, including the 'x' prefix. For example, *xDepartment*.
- **dCaption:** The metadata field caption.
- **dType:** The metadata field type, such as *Text*, *BigText*, *Memo*, *Date*, or *Integer*.
- **dOrder:** The display order.
- **dIsRequired:** 1 (*true*): The field is required. 0 (*false*): The field is optional.
- **dIsEnabled:** 1 (*true*): The field is enabled on the user interface. 0 (*false*): The field is disabled on the user interface.
- **dIsSearchable:** 1 (*true*): The field is searchable. 0 (*false*): The field is not searchable.
- **dDefaultValue:** The default value for the metadata field.
- **dIsOptionList:** 1 (*true*): The field has an option list. 0 (*false*): The field does not have an option list.
- **dOptionListKey:** The option list key.
- **dOptionListType:** The option list type.

Example

```
IdcService=EDIT_METADEF
dName=xDepartment
dType=BigText
dIsRequired=1
dIsEnabled=1
dIsSearchable=1
dCaption=Caption_Changed
dIsOptionList=1
dDefaultValue=two
dOptionListKey=xDepartmen_fieldList
dOptionListType=chunval
dOrder=4
```

4.8.4 GET_ADVANCED_SEARCH_OPTIONS

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.8.5 GET_DOC_METADATA_INFO

Service that returns a list of custom metadata fields from the DocMetaDefinition table, and a listing of information for the available DocTypes as result sets. Also returns two option lists of available values for SecurityGroups and Accounts filtered to show only those the user can access. Used with SOAP retrievals and other remote applications.

Access Level: Read, Global, Scriptable (49)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Results

- Result Sets:
 - DocMetaDefinition (All rows and fields from DocMetaDefiniton database table.)
 - Doctypes (All rows and fields from DocTypes database table.)
- Option Lists:
 - SecurityGroups (Option list of security groups filtered based upon user's privileges/)
 - Accounts (Option list of Accounts filtered based upon user's privileges.)
- Local Data:
 - isAutoNumber
 - useAccounts

Used By

- Other: SoapCustom:Wsdl:MetaData:Services

4.8.6 GET_OPTION_LIST

Service that returns a table of all option lists. Returns the common key value, option value, and order for each option list.

Location: *IdcHomeDir* /resources/core/templates/std_services.htm

4.8.7 GET_USER_METADATA_INFO

Service that returns metadata information for users. Used with SOAP retrievals.

Location: *IdcHomeDir* /resources/core/templates/std_services.htm

4.8.8 MOVE_METADEF

Service used by the Configuration Manager to move a metadata field up or down in the list. Moving the metadata in the list changes the default order in which it is displayed on the Checkin, Update, Info, and Search pages.

Location: *IdcHomeDir* /resources/core/templates/std_services.htm

Additional Required Service Parameters

- *dName*: Name of the metadata field to move.

Optional Service Parameters

- *isMoveUp*: Default is *false*. Set to *true* to move the field up, not down.

4.8.9 UPDATE_ADVANCED_SEARCH_OPTIONS

Location: *IdcHomeDir* /resources/core/templates/std_services.htm

4.8.10 UPDATE_USER_META

Location: *IdcHomeDir* /resources/core/templates/std_services.htm

4.8.11 UPDATE_USER_META_TABLE

Service that updates the user information fields in the database. This service alters the database by adding, altering, and deleting columns.

- By default, fields will only be added or changed, not deleted. To delete a user information field, it must be specifically mentioned in the optional parameter *MetaFieldsToDelete*.
- This service is run when you add or delete user information fields in the User Admin applet and click the **Update Database Design** button.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Caution: Data may be lost if a column is deleted. Use this service carefully.

Optional Service Parameters

- *MetaFieldsToDelete*: Specifies a comma-delimited list of the database columns to delete.

Example

- IdcCommand command file format:

```
IdcService=UPDATE_USER_META_TABLE
```

- HDA format (deletes two fields from the database):

```
@Properties LocalData
IdcService=UPDATE_USER_META_TABLE
MetaFieldsToDelete=xUserLocation,xDivision
@end
```

4.8.12 UPDATE_META_TABLE

Service that updates the metadata fields in the database.

This service alters the database by adding, altering, and deleting columns in the *DocMeta* table to conform to the *DocMetaDefinition* table. By default, fields will only be added or changed, not deleted. To delete a metadata field, it must be specifically mentioned in the optional parameter *MetaFieldsToDelete*.

This service is run when you add or delete metadata fields in the Configuration Manager applet and click the **Update Database Design** button.

Caution: Data may be lost if a column is deleted. Use this service carefully.

Optional Service Parameters

- *MetaFieldsToDelete*: Specifies a comma-delimited list of the database columns to delete from the *DocMeta* table.

Example

- IdcCommand command file format:

```
# Synchronize the DocMeta table with the design in the DocMetaDefinition table
IdcService=UPDATE_META_TABLE
```

- HDA format (deletes two fields from the database):

```
@Properties LocalData
IdcService=UPDATE_META_TABLE
MetaFieldsToDelete=xInteger,xMemo
@end
```

4.8.13 UPDATE_OPTION_LIST

Service that adds or updates an option list for a metadata field. Updates or adds an option list in the *OptionLists* database table.

Caution: The option list values specified in the *OptionListString* parameter replace any existing values. To retain existing values, you must include the existing values along with any new values.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- *dKey*: The option list key.
- *OptionListString*: The list of options, separated by the `\n` escape sequence.

Example

- *IdcCommand* command file format:

```
# Add the new options list 'LocationList' and
# Add values Madrid, Tokyo, London, Washington
IdcService=UPDATE_OPTION_LIST
dKey=LocationList
OptionListString=Madrid\nTokyo\nLondon\nWashington
```

- HDA format (adds the option list *LocationList* with the values *Madrid*, *Tokyo*, *London*, and *Washington*):

```
@Properties LocalData
IdcService=UPDATE_OPTION_LIST
dKey=LocationList
OptionListString=Madrid\nTokyo\nLondon\nWashington
@end
```

4.9 Miscellaneous Services (Core Oracle Content Server)

The services in this section are used for a variety of tasks, including working with batch loads, retrieving pages, and chunking files for uploading. The following services are described in this section:

- [CHUNKED_UPLOAD](#)
- [DOWNLOAD_LISTBOX_ITEMS](#)
- [LOAD_USER_LOCALIZATION](#)

4.9.1 CHUNKED_UPLOAD

This service adds support for calling an Oracle Content Server service that is very large. It chunks the request.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.9.2 DOWNLOAD_LISTBOX_ITEMS

Service used by the SelectUser applet to provide type-ahead capabilities to the Users or Alias table. It returns ListBoxServiceItems, a resultset containing the results of the query.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dataSource: The name of the data source to use (for example, select query stub).

Optional Service Parameters

- limit: The number of items to download. The default is 100.
- op: The operator to use when creating the WHERE clause.

4.9.3 LOAD_USER_LOCALIZATION

Service that loads localization information for user.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.10 Page Handler/Page Request Services (Core Oracle Content Server)

Page Request Services retrieve HTML pages. Page Handler Services manage library Web pages created by the Web Layout Editor. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- [DELETE_RESULT_TEMPLATE](#)
- [*GET_ADMIN_PAGE](#)
- [*GET_DOC_PAGE](#)
- [*GET_DYNAMIC_PAGE](#)
- [GET_PERSONALIZED_JAVASCRIPT](#)
- [GET_PORTAL_PAGE](#)
- [*GET_SECURE_PAGE](#)
- [LOAD_GLOBALINCLUDES](#)
- [PAGE_HANDLER](#)
- [PNE_SAVE_QUERY](#)
- [PNE_UPDATE_PERSONAL_URLS](#)
- [PNE_UPDATE_PORTAL_INFO](#)
- [SAVE_GLOBALINCLUDES](#)
- [UPDATE_RESULT_TEMPLATE](#)

4.10.1 DELETE_RESULT_TEMPLATE

Service that deletes an existing search results template.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- name: The search results template name.

Example

```
IdcService=DELETE_RESULT_TEMPLATE  
name=test_template
```

4.10.2 GET_ADMIN_PAGE

Service that returns the Administration page in a browser. It does not load the server's configuration. If the user is not assigned the **admin** role, the service returns an error message.

Access Level: N/A (0)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- PageName: The name of the page template.

Optional Service Parameters

- Action: The action to execute. Usually set to *GetTemplatePage*.

Results

- Local Data:
 - TemplateType
 - TemplateClass
 - TemplateFilePath
- Response Template: Returns whatever template was passed as the value of the Page parameter. In standard usage this is ADMIN_LINKS (admin.htm).

Used By

- Resource Includes:
 - pne_nav_admin_links
 - std_admin_pages
- Templates:
 - ADMIN_LINKS (admin.htm)
 - IDC_ADMIN_PAGE (idc_admin_page.htm)
 - std_home_page.htm
- Standard Navigation: commonNav.js

Example

To get the standard Administration page:

```
IdcService=GET_ADMIN_PAGE
Page=ADMIN_LINKS
Action=GetTemplatePage
```

4.10.3 GET_DOC_PAGE

Service that executes an HTML page request. This service is usually called from the browser interface. It executes the LOAD_DOC_ENVIRONMENT subservice.

Access Level: Read, Global, Scriptable (49)

Calls Subservice: LOAD_DOC_ENVIRONMENT

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- PageName: The name of the page template.

Optional Service Parameters

- Action: The action to execute. Usually set to *GetTemplatePage*.

Results

- Result Sets:
 - DocFormats (All rows and fields of the DocFormats database table.)
 - DocTypes (All rows and fields of the DocTypes database table.)
- Local Data:
 - TemplateClass
 - TemplateFilePath
 - TemplateType
- Response Template: Returns whatever template was passed as the value of the Page parameter.

Used By

- Resource Includes:
 - calculate_doc_profile_urls
 - determine_wf_review_rendition_url
 - home_page_static_content
 - pne_nav_bookmark_links
 - pne_nav_shared_links
 - search_template_user_info_settings
 - std_js_bootstrap_vars
 - std_main_page_begin
 - std_query_page_link_args
 - xui_searchapi_results_action_form

- Templates:
 - PNE_PORTAL_DOC_PROFILES_PAGE (pne_portal_doc_profiles_page.htm)
 - PNE_PORTAL_PERSONAL_URLS_PAGE (pne_portal_personal_urls_page.htm)
 - PNE_PORTAL_SAVED_QUERIES_PAGE (pne_portal_saved_queries_page.htm)
 - PNE_PORTAL_SYSTEM_LINKS_PAGE (pne_portal_system_links_page.htm)
 - PREVIEW_FRAMES (preview_frames.htm)
 - USER_INFO (user_info.htm)
- Standard Navigation:
 - commonNav.js
 - Trays/layout.js
 - Trays/search_tray_tabs.htm
- Other:

Redirect service for: SUBMIT_HTML_FORM, LOGIN, EDIT_USER_PROFILE, CONTINUE_SUBMIT_HTML_FORM, UPLOAD_NEW_COMPONENT, CANCEL_COMPONENT_INSTALL, UPDATE_COMPONENT_CONFIG, UNINSTALL_COMPONENT, SAVE_USER_TOPICS, PUBLISH_SCHEMA, EDIT_SCHEMA_VIEW_VALUES

Example

- To get the home page the parameters are:

```
IdcService=GET_DOC_PAGE  
Page=HOME_PAGE  
Action=GetTemplatePage
```

- To get the standard query page the parameters are:

```
IdcService=GET_DOC_PAGE  
Page=STANDARD_QUERY_PAGE  
Action=GetTemplatePage
```

4.10.4 GET_DYNAMIC_PAGE

Service that returns a Library page for dynamic assembly. This service can be used in two ways:

- To load a library page for display directly in the Oracle Content Server system.
- Used in the background in a hidden frame to dynamically generate or update nodes in the Library tree display.

The default template used by the DIRECTORY_PAGE service (dir_page.htm) is branched based upon the value of lmXML to perform one or the other of the two uses for the service. If lmXML is set to 1 (*true*), the template generates an XML object instead of an HTML page, then fires the libraryNodeLoadSequence to update the Library navigation tree.

Access Level: Read, Scriptable (33)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- PageName: The name of the page template.

Results

- Result Sets:
 - PageMap (result set containing local pages contained within this library node; fields: PageName, PageParent)
 - LinkList (result set containing listing of links contained within this library node; fields: LinkType, LinkData, LinkTitle, LinkDescription)
- Local Data:
 - dSecurityGroup
 - HeaderText
 - LinkSelectedIndex
 - LocationInfo
 - OutOfDate
 - PageFunction
 - PageLastChanged
 - PageName
 - PageParent
 - PageTitle
 - PageType
 - PageUrl
 - restrictByGroup
 - TemplatePage
- Response Template: null (During execution of the service, the TemplatePage value is set to DIRECTORY_PAGE (dir_page.htm)).

Used By

- Applets: Installer
- Resource Includes:
 - calculate_all_doc_profile_urls
 - home_page_static_content
 - pne_nav_shared_links
 - std_main_page_begin
 - std_page_nav_bar
- Standard Navigation: commonNav.js

Example

To get the index page the required parameters are:

```
IdcService=GET_DYNAMIC_PAGE  
PageName=index  
Action=GetTemplatePage
```

4.10.5 GET_PERSONALIZED_JAVASCRIPT

Service that delivers the navigation information for a particular user's page. If a browser optimally caches the JavaScript, this enables the browser to not request the URL on every page load. If the navigation data changes, a numeric ID which is added at the end of the URL is changed and the browser will reload the page.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.10.6 GET_PORTAL_PAGE

Service that displays a Portal Design page. The most likely errors are when there is an error loading configuration information, an error retrieving the options list, or when the referenced HTML page is not found.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- Action: The action to execute. Usually *GetTemplatePage*.
- PageName: The name of the page template. The following standard pages are displayed using this parameter:
 - **Portal Design page:** PNE_PORTAL_DESIGN_PAGE
 - **System Links page:** PNE_PORTAL_SYSTEM_LINKS_PAGE
 - **Saved Queries page:** PNE_PORTAL_SAVED_QUERIES_PAGE
 - **Personal URLs page:** PNE_PORTAL_PERSONAL_URLS_PAGE

Example

- To get the Portal Design page, the parameters are:

```
IdcService=GET_PORTAL_PAGE  
Action=GetTemplatePage  
Page=PNE_PORTAL_DESIGN_PAGE
```

- To get the Saved Queries page, the parameters are:

```
IdcService=GET_PORTAL_PAGE  
Action=GetTemplatePage  
Page=PNE_PORTAL_SAVED_QUERIES_PAGE
```

4.10.7 GET_SECURE_PAGE

Service that executes a secure HTML page request. This service is usually called from the browser interface and is restricted to users with Write permission to at least one group. The most likely error is when the referenced HTML page is not found.

This service is identical to GET_DOC_PAGE except this service requires Write privileges to at least one security group, whereas GET_DOC_PAGE only requires Read access.

This service executes the `LOAD_DOC_ENVIRONMENT` subservice.

Access Level: Write, Global, Scriptable (50)

Calls Subservice: `LOAD_DOC_ENVIRONMENT`

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- Page: The name of the page template.

Optional Service Parameters

- Action: The action to execute. Usually *GetTemplatePage*.

Results

- Result Sets:
 - DocFormats (all rows and fields of the DocFormats database table)
 - DocTypes (all rows and fields of the DocTypes database table)
- Local Data:
 - TemplateClass
 - TemplateFilePath
 - TemplateType
- Response Template: Returns whatever template was passed as the value of the Page parameter

Used By

- Resource Includes: *pne_nav_management_links*
- Templates: *std_home_page.htm*

Example

To get the content management page the parameters are:

```
IdcService=GET_SECURE_PAGE
Page=DOC_MANAGEMENT_LINKS
Action=GetTemplatePage
```

4.10.8 LOAD_GLOBALINCLUDES

Service that returns the portal page content. This service is used during the page assembly process for dynamic pages. Using the Web Layout Editor applet, select **Options** then **Update Portal**. The content shown on that screen is the content that is returned from the Oracle Content Server system if you run this service.

Location: *IdcHomeDir*/resources/core/templates//std_services.htm

4.10.9 PAGE_HANDLER

Service that rebuilds the static web layout structure as defined in the Web Layout Editor. Returns the entire page list in HDA format. This service is asynchronous and the action is performed in a background thread. This service can only be executed in

the context of the Oracle Content Server instance and only completes successfully if a connection is made to the Oracle Content Server instance.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IsRebuild:** Enables a rebuild.
 - Must be set to *true* (1) for the server to rebuild the web layout pages.
 - Default is *false* (0).
- **PageFunction:** Must be set to *GetPageList*.

Example

- **IdcCommand** command file format (rebuild the web layout pages):

```
# Rebuild the entire search index
IdcService=PAGE_HANDLER
PageFunction=GetPageList
IsRebuild=1
```

- **HDA** format (rebuild the web layout pages):

```
@Properties LocalData
IdcService=PAGE_HANDLER
PageFunction=GetPageList
IsRebuild=1
@end
```

4.10.10 PNE_SAVE_QUERY

Service that saves a search query in the User Profile for the current user.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

The parameters for this are exhibited in the *std_page.htm* in the dynamic HTML definition *query_save_for_personalization_list_form_common_fields*. Parameters include the following:

- **queryText**
- **queryTitle**
- **sortField**
- **ResultCount**

4.10.11 PNE_UPDATE_PERSONAL_URLS

Service that updates the personal URLs in the User Profile for the current user.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **Action:** The action to execute. Usually set to *GetTemplatePage*.
- **Page:** The name of the page template.

- `titleEd`: The link name to be displayed in the portal navigation bar.
- `websiteEd`: The URL to be saved as a link.

Example

```
IdcService=PNE_UPDATE_PERSONAL_URLS
Page=PNE_PORTAL_PERSONAL_URLS_PAGE
Action=GetTemplatePage
titleEd=Company
websiteEd=http://www.example.com
```

4.10.12 PNE_UPDATE_PORTAL_INFO

Service that updates the System Links in the User Profile for the current user.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `Action`: The action to execute. Usually set to *GetTemplatePage*.
- `PageName`: The name of the page template.

Example

```
IdcService=PNE_UPDATE_PORTAL_INFO
Page=PNE_PORTAL_DESIGN_PAGE
Action=GetTemplatePage
```

4.10.13 SAVE_GLOBALINCLUDES

Service that saves all global includes used during the page assembly process for dynamic pages. This service runs when you update the portal page from the Web Layout Editor.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `IsRebuild`: Enables a rebuild of the portal page.
 - Must be set to 1 (*true*) for the Oracle Content Server system to update the portal page.
 - Default is 0 (*false*).
- `PageFunction`: Must be set to *GetPageList*.

Example

```
IdcService=SAVE_GLOBALINCLUDES
PageFunction=GetPageList
IsRebuild=1
```

4.10.14 UPDATE_RESULT_TEMPLATE

Service that updates a search results template.

When you launch the Web Layout Editor applet, select Options, select **Query Result Page**, and click **Add**, **Delete**, or **Edit**, enter template information, and click **OK**, this service is executed.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Note: See the following example of the entries required to add a new query result template in HDA format.

Example

- IdcCommand command file format:

```
IdcService=UPDATE_RESULT_TEMPLATE
```

- HDA file format (adds a new query result template called *my_research_template*).

```
@Properties LocalData
IdcService=UPDATE_RESULT_TEMPLATE
@end
@ResultSet ResultPageUpdates
6
name
formtype
filename
outfilename
flexdata
description
my_research_template
ResultsPage

Text2<${dDocAuthor$}><${dSecurityGroup$}>Text1<${dDocTitle$}>
testing the update template sevice
@end
```

Important: Notice that there are two blank lines between the *ResultsPage* entry and the *Text2* entry. This is required because there are no values for *filename* and *outfilename* (the blank lines define the empty values).

4.11 Provider Manager Services (Core Oracle Content Server)

Provider Manager services handle the providers that establish a connection to outside entities. The following services are described in this section:

- [ADD_EDIT_PROVIDER](#)
- [APPEND_DATABASE_AUDIT_INFO](#)
- [DELETE_PROVIDER](#)
- [ENABLE_DISABLE_PROVIDER](#)
- [GET_ADD_EDIT_PROVIDER_FORM](#)
- [GET_ALL_PROVIDERS](#)
- [GET_PROVIDER_INFO](#)
- [NOTIFY_CHANGE](#)
- [REQUEST_SECURITYINFO](#)
- [TEST_PROVIDER](#)

4.11.1 ADD_EDIT_PROVIDER

Service that creates a new provider. The most likely error is when the provider name is not unique.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **pName:** The provider name.
- **ProviderClass:** The provider class.
- **pDescription:** The description for the provider.
- **pType:** The provider type:
 - **database:** An information repository server that provides an API for connecting and communicating with it. This retrieves information and enables information to be changed in the database. Examples of this type are system databases and LDAP.
 - **incoming:** A connection initiated from an outside entity like a browser or client application. The server listens and is aware of incoming connections
 - **outgoing:** A connection initiated to an outside entity. You can use this type to communicate between Oracle Content Server instances.
 - **preview:** The API that establishes connections between Oracle Content Server and Preview technology like the DTM server for HTML Preview and Content Categorizer.
 - **LDAP:** The Lightweight Directory Access Protocol.

Example

```
IdcService=ADD_EDIT_PROVIDER
pName=admin_provider
pType=Database
pDescription=provider description
ProviderClass=providerclass
```

4.11.2 APPEND_DATABASE_AUDIT_INFO

Subservice used by GET_SYSTEM_AUDIT_INFO to return information on the System Audit Info page.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.11.3 DELETE_PROVIDER

Service that deletes an existing provider. The most likely error is a provider name not in the system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **pName:** The provider name.

Example

```
IdcService=DELETE_PROVIDE
pName=Proxied_2_on_test13
```

4.11.4 ENABLE_DISABLE_PROVIDER

Service that reverses the enable/disable state of an existing provider. If the provider is enabled, the service disables it. If the provider is disabled, the service enables it.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **pName:** The provider name.
- **pDescription:** The provider's description.
- **pType:** Used to create the provider type. Any component can add its own provider type. Currently, the following types are accepted:
 - **database:** An information repository server that provides an API for connecting and communicating with it. This retrieves information and enables information to be changed in the database. Examples of this type are system databases and LDAP.
 - **incoming:** A connection initiated from an outside entity like a browser or client application. The server listens and is aware of incoming connections
 - **outgoing:** A connection initiated to an outside entity. You can use this type to communicate between Oracle Content Server instances.
 - **preview:** The API that establishes connections between Oracle Content Server and Preview technology like the DTM server for HTML Preview and Content Categorizer.
 - **LDAP:** The Lightweight Directory Access Protocol.

Optional Service Parameters

- **IsEnabled:** The desired state of the provider, *true* or *false*.

Example

```
IdcService=ENABLE_DISABLE_PROVIDER  
pName=Proxied_2_on_test13  
pType=outgoing
```

4.11.5 GET_ADD_EDIT_PROVIDER_FORM

Service that returns a form for adding or editing a provider in a browser.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **isEdit:** 1 (*true*): An existing provider is edited. 0 (*false*): A new provider is added.
- **pName:** The provider name. Required only when editing a provider.
- **pType:** The provider type:
 - **Database:** An information repository server that provides an API for connecting and communicating with it. This retrieves information and enables information to be changed in the database. Examples of this type are system databases and LDAP.
 - **Incoming:** A connection initiated from an outside entity like a browser or client application. The server listens and is aware of incoming connections

- **Outgoing:** A connection initiated to an outside entity. You can use this type to communicate between Oracle Content Server instances.
- **Preview:** The API that establishes connections between Oracle Content Server and Preview technology like the DTM server for HTML preview and Content Categorizer.
- **LDAP:** The Lightweight Directory Access Protocol.
- **ResourceTemplate:** The resource template for the form. Required only when adding a provider.

Example

- If you are adding a provider, the parameters you pass are similar to the following:

```
IdcService=GET_ADD_EDIT_PROVIDER_FORM
pType=preview
ResourceTemplate=PROVIDER_ADD_PREVIEW
isEdit=0
```

- If you are editing a provider, the parameters you pass are similar the following:

```
IdcService=GET_ADD_EDIT_PROVIDER_FORM
pType=outgoing
pName=Proxied_2_on_server02
isEdit=1
```

4.11.6 GET_ALL_PROVIDERS

Service that returns a list of all providers.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.11.7 GET_PROVIDER_INFO

Service that returns information about a provider.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **pName:** The provider name.
- **ResourceTemplate:** The resource template for page display. Required only when running the service from a browser interface. For example:

```
ResourceTemplate=DATABASE_PROVIDER_INFO
```

Example

```
IdcService=GET_PROVIDER_INFO
pName=SystemDatabase
```

4.11.8 NOTIFY_CHANGE

Service that notifies an Oracle Content Server instance of changes to another Oracle Content Server instance through an outgoing provider.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name:** The name of the Oracle Content Server instance to be notified.

Example

```
IdcService=NOTIFY_CHANGE
IDC_Name=Master_on_server01
```

4.11.9 REQUEST_SECURITYINFO

Service that returns all security and user information from the Oracle Content Server instance.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.11.10 TEST_PROVIDER

Service that tests a provider.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- pName: The provider name.

Example

```
IdcService=TEST_PROVIDER
pName=provider22
```

4.12 Schema Services (Core Oracle Content Server)

These services manage the server-side publishing of JavaScript files of database tables, such as option lists. The following services are described in this section:

- [ADD_SCHEMA_FIELD](#)
- [ADD_SCHEMA_RELATION](#)
- [ADD_SCHEMA_VIEW](#)
- [ADDOREDIT_SCHEMA_TABLE](#)
- [CONTROL_SCHEMA](#)
- [DELETE_SCHEMA_FIELD](#)
- [DELETE_SCHEMA_RELATION](#)
- [DELETE_SCHEMA_TABLE](#)
- [DELETE_SCHEMA_VIEW](#)
- [EDIT_SCHEMA_FIELD](#)
- [EDIT_SCHEMA_NODE](#)
- [EDIT_SCHEMA_RELATION](#)
- [EDIT_SCHEMA_VIEW](#)
- [EDIT_SCHEMA_VIEW_VALUES](#)
- [GET_SCHEMA_FIELD_INFO](#)
- [GET_SCHEMA_FIELDS](#)
- [GET_SCHEMA_RELATIONS](#)
- [GET_SCHEMA_STATS](#)

- [GET_SCHEMA_TABLE_INFO](#)
- [GET_SCHEMA_TABLES](#)
- [GET_SCHEMA_VIEW_EDIT_INFO](#)
- [GET_SCHEMA_VIEW_FRAGMENT](#)
- [GET_SCHEMA_VIEW_INFO](#)
- [GET_SCHEMA_VIEW_VALUES](#)
- [GET_SCHEMA_VIEWS](#)
- [PUBLISH_SCHEMA](#)

4.12.1 ADD_SCHEMA_FIELD

Service that adds a field to a schema table.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `schFieldName`: The name of the field to be included.

4.12.2 ADD_SCHEMA_RELATION

Service that adds a relation to an existing schema.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `schRelationName`: The name of the relation to be included.

4.12.3 ADD_SCHEMA_VIEW

Service used to add a new view for a schema.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `schViewName`: The name of the view to be added.
- `schViewType`: The type of the schema view to be added.
- `schTableName`: The name of the table that the view is related to.

4.12.4 ADDOREDIT_SCHEMA_TABLE

Service used to add or edit a table used in a schema.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.12.5 CONTROL_SCHEMA

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.12.6 DELETE_SCHEMA_FIELD

Service used to delete a field from a schema table.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- schFieldName: The name of the field to be deleted.

4.12.7 DELETE_SCHEMA_RELATION

Service used to delete a relation from a schema.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- schRelationName: The name of the relation to be deleted.

4.12.8 DELETE_SCHEMA_TABLE

Service used to delete a table from a schema.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- schTableName: The name of the relation to be deleted.

4.12.9 DELETE_SCHEMA_VIEW

Service used to delete a view from a schema.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- schViewName: The name of the view to be deleted.

4.12.10 EDIT_SCHEMA_FIELD

Service used to edit a field in a schema.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- schFieldName: The name of the field to be edited.

4.12.11 EDIT_SCHEMA_NODE

Service used to edit a node in a schema.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- editViewValueAction: The action to be used for the node.
- schViewName: The name of the view used for the node.

4.12.12 EDIT_SCHEMA_RELATION

Service used to edit a schema relation.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- *schRelationName*: The name of the relation to be edited.
- *schTable#Table*: The number of the table to be used for the relation (for example, Table1 or Table2). If this value is not provided, no table is used for the relation.

4.12.13 EDIT_SCHEMA_VIEW

Service used to edit a schema view.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- *schViewType*: The type of the view to be edited.
- *schViewName*: The name of the view to be edited.
- *schTableName*: The name of the table associated with the schema.

4.12.14 EDIT_SCHEMA_VIEW_VALUES

Service used to edit values in a schema view.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- *schViewName*: The name of the view to be used.

4.12.15 GET_SCHEMA_FIELD_INFO

Service that returns information about a specific schema field.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- *schFieldName*: The name of the field to be used.

4.12.16 GET_SCHEMA_FIELDS

Service that returns information about fields used in schemas.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.12.17 GET_SCHEMA_RELATIONS

Service that returns information about relations used with schemas.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.12.18 GET_SCHEMA_STATS

Service that gathers statistics regarding schema usage for the Edit Active Console Output Tracing Report on the System Audit Info Page.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.12.19 GET_SCHEMA_TABLE_INFO

Service that returns information about all tables used in schemas.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.12.20 GET_SCHEMA_TABLES

Service that returns information about the tables and information in the tables that are used in schemas.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.12.21 GET_SCHEMA_VIEW_EDIT_INFO

Service that returns the editable information for a schema view.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- schViewName: The name of the view to be used.

4.12.22 GET_SCHEMA_VIEW_FRAGMENT

Service that returns a fragment of a Schema-based option list.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- schViewName: The name of the view to be used.

Optional Service Parameters

- schRelationName: If this field is a Dependent Choice List (DCL), this is the name of the Schema relation used to filter the list results.
- schParentValue: If this field is a DCL, this is the value of the parent field used with the relation to filter the list.

4.12.23 GET_SCHEMA_VIEW_INFO

Service that returns table and other information for the specified view.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- schViewName: The name of the view to be used.

4.12.24 GET_SCHEMA_VIEW_VALUES

Service that displays values in the specified view.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- schViewName: The name of the view to be used.

4.12.25 GET_SCHEMA_VIEWS

Service that retrieves all defined schema views.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.12.26 PUBLISH_SCHEMA

Service that initiates a publish of all schemas.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.13 Search Services (Core Oracle Content Server)

The Search Services are used to manage searching within the Oracle Content Server system. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- [APPEND_SEARCH_AUDIT_INFO](#)
- [GET_EXTERNAL_DOC_INFO](#)
- [GET_EXTERNAL_HIGHLIGHT_INFO](#)
- [GET_EXTERNAL_XML_HIGHLIGHT_INFO](#)
- [GET_HIGHLIGHT_INFO](#)
- [*GET_SEARCH_RESULTS](#)
- [GET_SEARCH_RESULTS_FORCELOGIN](#)
- [GET_XML_HIGHLIGHT_INFO](#)
- [PNE_GET_SEARCH_RESULTS](#)
- [VIEW_DOC](#)

4.13.1 APPEND_SEARCH_AUDIT_INFO

Subservice used by GET_SYSTEM_AUDIT_INFO to return information on the System Audit Info page.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.13.2 GET_EXTERNAL_DOC_INFO

Service that retrieves content information from an external Verity collection. Used with the LightlyManagedContent component.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dDocName`: The Content ID for the content item.
- `sCollectionID`: The collection ID used by the Oracle Content Server system to locate the collection.

Example

```
IdcService=GET_EXTERNAL_DOC_INFO
dDocName=adminform113
```

4.13.3 GET_EXTERNAL_HIGHLIGHT_INFO

Service that returns PDF or HTML highlight information for a content item in an external collection.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dDocName`: The Content ID for the content item.
- `HighlightType`: The highlight type:
 - For PDF, use *PdfHighlight*.
 - For HTML, use *HtmlHighlight*.
- `QueryText`: The full-text search expression.
- `SortField`: The name of the metadata field to sort on.
 - Examples: *dInDate*, *dOutDate*, *alternateFile*.
 - Defaults to *DocId*.
 - `SortOrder`: The sort order. Allowed values are *ASC* (ascending) and *DESC* (descending).

Example

```
IdcService=GET_EXTERNAL_HIGHLIGHT_INFO
dDocName=test113
HighlightType=PdfHighlight
QueryText=test
SortField=dInDate
SortOrder=Desc
```

4.13.4 GET_EXTERNAL_XML_HIGHLIGHT_INFO

Service that returns XML highlight information for a content item in an external collection. This service is called if a user is doing a full-text search for a PDF document in a browser environment. It occurs when the user selects the link for the PDF on the result page and views the highlighted word on the PDF.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dDocName`: The Content ID for the content item.
- `HighlightType`: The highlight type:
 - For PDF, use *PdfHighlight*.
 - For HTML, use *HtmlHighlight*.
- `QueryText`: The full-text search expression.
- `SortField`: The name of the metadata field to sort on.
 - Examples: *dInDate*, *dOutDate*, *alternateFile*.
 - Defaults to *DocId*.
- `SortOrder`: The sort order. Allowed values are *ASC* (ascending) and *DESC* (descending).

Example

```
IdcService=GET_EXTERNAL_XML_HIGHLIGHT_INFO
dDocName=test113
HighlightType=PdfHighlight
QueryText=test
SortField=dInDate
SortOrder=Desc
```

4.13.5 GET_HIGHLIGHT_INFO

Service that returns PDF or HTML highlight information for a content item.

This service is run from the browser interface when you do a full-text search and click the Content ID or thumbnail on the search result page. On the displayed page, the words that you searched for are highlighted. For HTML document the words are bold and for PDF document they are highlighted.

The most likely errors are when the content item no longer exists in the system or if the user fails the security check.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `dDocName`: The Content ID for the content item.
- `QueryText`: The full-text search expression.
- `SortField`: The name of the metadata field to sort on.
 - Examples: *dInDate*, *dOutDate*, *alternateFile*.
 - Defaults to *DocId*.
- `SortOrder`: The sort order. Allowed values are *ASC* (ascending) and *DESC* (descending).

Optional Service Parameters

- `dWebExtension`: The file extension of the web-viewable content. For example, *html*, *pdf*, or *txt*.
- `HighlightType`: The highlight type:
 - For PDF, use *PdfHighlight*.
 - For HTML, use *HtmlHighlight*.

Example

- IdcCommand command file format:

```
IdcService=GET_HIGHLIGHT_INFO
dDocName=test_000043
QueryText=service
SortField=dInDate
SortOrder=Desc
```

- HDA format with optional parameters:

```
@Properties LocalData
IdcService=GET_HIGHLIGHT_INFO
dDocName=test_000043
QueryText=service
SortField=dInDate
SortOrder=Desc
HighlightType=HtmlHighlight
dWebExtension=html
@end
```

4.13.6 GET_SEARCH_RESULTS

Service that returns a list of content items that match specific search criteria.

Access Level: Read (1)

Calls Subservice: SUB

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `QueryText`: The search expression.

You can append values for Title, Content ID, and so forth, on the `QueryText` parameter to refine this service.

Optional Service Parameters

- `ResultCount`: The number of results to return. Defaults to 25.
- `SearchEngineName`: The name of the search engine to be used. The default is the value specified in the config/config.cfg file.

Values can be `databasefulltext` or `database`. If set to `database` or `databasefulltext`, you must pass SQL in the `QueryText` parameter, as in this example:

```
dDocTitle like 'test'
```

This is equivalent to the Verity query:

```
dDocTitle <substring> 'test'
```

- **SortField:** The name of the metadata field to sort on.
 - Examples: *dInDate*, *dDocTitle*, *Score*.
 - Defaults to *dInDate*.
- **SortOrder:** The sort order. Allowed values are *ASC* (ascending) and *DESC* (descending).
- **SortSpec:** Enables sorting on more than one field. Set this parameter to the following sequence:

```
<sort field> <sort order> <sort field> <sort order>...
```

For example, `SortSpec=dDocTitle ASC dInDate DESC`.

- **StartRow:** The row to begin the search results display. For example, if *ResultCount=25*, setting *StartRow=26* displays the second page of results.
- **EndRow:** The row to end the search results display.
- **vcrContentType:** The name of a searchable content type. The server modifies the query text of the search to limit the results to documents of that type. For example, if the content type specified is one describing a profile, then the query text is modified to limit the documents returned to those whose profile trigger value matches that of the profile.
- **vcrAppendObjectClassInfo:** When set to *true*, the server adds an additional column to the SearchResults ResultSet called *vcrObjectClass*. This column lists the content type associated with each document in the results. The default is *true*.

Example

```
IdcService=GET_SEARCH_RESULTS
QueryText=benefits
```

4.13.7 GET_SEARCH_RESULTS_FORCELOGIN

Service that forces the user to be logged in before retrieving the search results. This service is equivalent to `GET_SEARCH_RESULTS`.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.13.8 GET_XML_HIGHLIGHT_INFO

Service that returns XML highlight information for a content item.

This service is called if a user is doing a full-text search for a PDF document in a browser environment. When the user selects the link for the PDF on the result page and views the highlighted word on the PDF.

The most likely error is a content item name that does not exist.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- **dDocName:** The Content ID for the content item.
- **HighlightType:** The highlight type:
 - For PDF, use *PdfHighlight*.
 - For HTML, use *HtmlHighlight*.

- **QueryText:** The full-text search expression.
- **SortField:** The name of the metadata field to sort on.
 - Examples: *dInDate*, *dOutDate*, *alternateFile*.
 - Defaults to *DocId*.
- **SortOrder:** The sort order. Allowed values are *ASC* (ascending) and *DESC* (descending).

Example

```
IdcService=GET_XML_HIGHLIGHT_INFO
dDocName=test13
QueryText=service
SortField=dInDate
SortOrder=Desc
dDocName=TEST13
HighlightType=PdfHighlight
```

4.13.9 PNE_GET_SEARCH_RESULTS

Service used to retrieve the search results where the presentation is controlled by the user's preferences (that is, the PNE settings).

The **QueryText** for the service targets the defined search engine and as such can use all the parameters available to the **GET_SEARCH_RESULTS** service.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **QueryText:** The search expression.

Example

```
IdcService=PNE_GET_SEARCH_RESULTS
QueryText=benefits
```

4.13.10 VIEW_DOC

Service that returns highlight information.

- Given a content item name, the service evaluates security information and displays the content item highlight information.
- Usually this service is used when you have an external collection rather than a Oracle Content Server search collection. But in either case, the search collection must be created by the Verity search engine. For example, if you want to do a search on an external collection, you must provide the **VdkVgwKey** and **sCollectionID** parameters so the collection can be located by the Oracle Content Server **INSTANCE**.
- Usually, the **VdkVgwKey** is the **dDocName**. Verity gives a unique ID to each content item, and the Oracle Content Server system maps that Verity ID (**VdkVgwKey**) with **dDocName** (Content ID).
- Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- QueryText: The search expression.
- sCollectionID: The collection ID used by the Oracle Content Server system to locate the collection.
- SortField: The name of the metadata field to sort on.
- Examples: *dInDate*, *dOutDate*, *alternateFile*.
 - Defaults to *docID*.
- SortOrder: The sort order. Allowed values are *Asc* (ascending) and *Desc* (descending).

Optional Service Parameters

- ViewType: The display format. If this parameter is not defined, *ViewText* is used by default.
 - Set to *ViewText* to display as Text.
 - Set to *ViewHtml* to display as HTML.

Example

```

IdcService=VIEW_DOC
IsCollectionID=external
SortField=dInDate
SortOrder=Desc
QueryText=test
ViewType=ViewText

```

4.14 User Services (Core Oracle Content Server)

User Services assist in managing user-related activities, such as adding accounts, aliases, and roles. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- [ADD_ALIAS](#)
- [ADD_GROUP](#)
- [ADD_ROLE](#)
- [ADD_USER](#)
- [CHANGE_USER_AUTH_TYPE](#)
- [*CHECK_USER_CREDENTIALS](#)
- [DELETE_ALIAS](#)
- [DELETE_GROUP](#)
- [DELETE_ROLE](#)
- [DELETE_USER](#)
- [EDIT_ALIAS](#)
- [EDIT_GROUP](#)
- [EDIT_ROLE](#)
- [EDIT_USER](#)

- [*EDIT_USER_PROFILE](#)
- [GET_ALIASES](#)
- [GET_FILTER_ADMIN_PAGE](#)
- [GET_SELF_REGISTER_PAGE](#)
- [*GET_USER_INFO](#)
- [GET_USERS](#)
- [LOAD_PNE_PORTAL](#)
- [*LOAD_USER_TOPIC](#)
- [QUERY_GROUP](#)
- [QUERY_USER_ATTRIBUTES](#)
- [REGISTER_USER](#)
- [*SAVE_USER_TOPICS](#)
- [UPDATE_FILTER_INFO](#)
- [UPDATE_USEROPTION_LIST](#)

4.14.1 ADD_ALIAS

Used to create a new alias. The most likely errors are mismatched parameters or when a user or alias already exists in the system.

If you add an alias using the User Admin applet, you must add at least one user. However, you do not need to add a user using IdcCommand or IdcCommandX. To add users using IdcCommand or IdcCommandX, the optional parameter AliasUsersString must be included.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dAlias`: The alias name.
- `dAliasDescription`: The alias description.

Optional Service Parameters

- `AliasUsersString`: The alias or user. To add multiple users:
 - In HDA format: Use the `\n` escape sequence between each user name when using HDA format, as in this example:
 - `AliasUsersString=sysadmin\nuser1`
 - When using SOAP format, put the unencoded line feed directly into the XML or encode the line feed as `(
)`.

Example

- To create an alias and add a user the required parameters are:

```
IdcService=ADD_ALIAS
dAlias=my_alias
dAliasDescription=admin users
AliasUsersString=sysadmin
```

- In HDA format, adding a user with the AliasUsersString parameter:

```
@Properties LocalData
IdcService=ADD_ALIAS
dAlias=my_alias
dAliasDescription=admin users
AliasUsersString=sysadmin
@end
```

- In HDA format, adding a user with the AliasUserMap and Alias result sets:

```
@Properties LocalData
IdcService=ADD_ALIAS
changedSubjects=aliases,1008291537850
dAliasDescription=Test Alias
refreshSubjects=
blFieldTypes=StatusMessage message
blDateFormat=M/d{/yy} {h:mm[:ss] {aa}[zzz]}!tAmerica/Chicago!mAM,PM
loadedUserAttributes=1
dUser=sysadmin
IsJava=1
changedMonikers=
refreshSubMonikers=
refreshMonikers=
dAlias=NewAlias
@end
@ResultSet AliasUserMap
2
dAlias 6 30
dUserName 6 50
YourAlias
Gillian
@end
@ResultSet Alias
2
dAlias 6 30
dAliasDescription 6 50
MyAlias
This is a test of adding an alias
NewAlias
Test Alias
YourAlias
Test Alias
@end
```

4.14.2 ADD_GROUP

Service that creates a new security group. The most likely error is when the security group name is not unique.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- **dGroupName:** The security group name.
- **dDescription:** The security group description.
- **dPrivilege:** The permission setting.

If this value is set to 0, only the **admin** role has RWDA permission on the security group; no other roles are able to access the security group. If the value is set to 15,

all roles get RWDA permission on the security group. For more information about numbering of permissions, see *Oracle Fusion Middleware System Administrator's Guide for Oracle Content Server*.

Example

```
IdcService=ADD_GROUP
dGroupName=NEW_GROUP
dPrivilege=15
dDescription=admin privileges
```

4.14.3 ADD_ROLE

Service that creates a new role. A role is a set of permissions (Read, Write, Delete, Admin) for each security group.

The service adds a row in the RoleDefinition table for every existing security group. The most likely error is when the role name is not unique.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **dRoleName:** The role name.
- **dPrivilege:** The permission setting.

If this value is set to 0, only the **admin** role has RWDA permission on the security group. No other roles are able to access the security group. If the value is set to 15, all roles get RWDA permission on the security group. For more information about numbering of permissions, see *Oracle Fusion Middleware System Administrator's Guide for Oracle Content Server*.

Example

```
IdcService=ADD_ROLE
dRoleName=specialuser
dPrivilege=15
```

4.14.4 ADD_USER

Service used to create a new user. The most likely error is when the user name is not unique.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **dName:** The user name.
- **dUserAuthType:** The user authorization type. This value must be set to either *Local* or *Global*.

Optional Service Parameters

- **dFullName:** The full name of the user.
- **dPassword:** The password for the user.
- **dEmail:** The email address for the user.

Optional Attribute Information

Optional attribute information is specified in a result set that contains the user's attribute information and references the roles the user belongs to and the accounts the user has access to. Attribute information consists of a list of three comma-delimited strings. The first string indicates the type of attribute, the second the name of the attribute, and the third is the access number for accounts or default entry for role.

Important: The user attribute information is not predefined. By default, a new user belongs to no roles or accounts, and becomes a guest in the system.

- **Attribute Type:** When defining a role, the first string specifies that this is a role attribute, the second string is the name of the role, and the third is the default entry of 15.

When defining an account, the first string specifies that this is an account attribute, the second string is the name of the account, and the third is the access level.

- For a role attribute, the information is in the form:
 - role,contributor,15
- For an account attribute, the information is in the form:
 - account,books,1

- **Attribute Name:** A user can belong to multiple roles and accounts, so there can be multiple role and account information strings separated by commas in the attribute information column. If the user is to have the **admin** role, define the user attribute information as follows:

```
@ResultSet UserAttribInfo
2
dUserName
AttributeInfo
jsmith
role,contributor,15
@end
```

If the user is to belong to both the *contributor* and *editor* roles and have Read permission on the *books* account, define the user attribute information as:

```
@ResultSet UserAttribInfo
2
dUserName
AttributeInfo
jsmith
role,contributor,15,role,editor,15,account,books,1
@end
```

- **Access Number:** These access numbers can be assigned to the user.
 - 1: Read only
 - 3: Read and write
 - 7: Read, write, delete
 - 15: Administrative permissions

Example

- IdcCommand command file format:

```
IdcService=ADD_USER
dName=specialuser
dUserAuthType=LOCAL
```

- HDA format with optional parameters:

```
@Properties LocalData
IdcService=ADD_USER
dName=jsmith
dUserAuthType=LOCAL
dFullName=Jennifer Smith
dPassword=password
dEmail=jsmith@example.com
@end
@ResultSet UserAttribInfo
2
dUserName
AttributeInfo
jsmith
role,admin,15,role,contributor,15
@end
```

4.14.5 CHANGE_USER_AUTH_TYPE

Service that changes the authentication type (global, local, or external) for users.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `curUserAuthType`: Current user authentication type.
- `dUserAuthType`: New user authentication type.

4.14.6 CHECK_USER_CREDENTIALS

Service that checks the credentials of a user. You can use this service to get information about a user (for example, roles and accounts), or use it to check a user/password pair to see if they match. This is called during the authentication process. The data is cached so it is not called for every service request.

This service does not return user data for Microsoft Active Directory managed users when the Oracle Content Server instance is configured to use ADSI. It does return the user data for local users and external LDAP managed users.

Access Level: N/A (0)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `userName`: The user name

Optional Service Parameters

- `getUserInfo`: 0 (*false*): Does not retrieve extended user information. 1 (*true*): Retrieves extended user information (full name, e-mail address, locale, and user type)

- `hasSecurityInfo`: 0 (*false*): Retrieves the user accounts. 1 (*true*): Does not retrieve the user accounts.
- `authenticateUser`: 0 (*false*): Does not authenticate the user (validate that the user/password pair match). 1 (*true*): Authenticates the user (validate that the user/password pair match). In this case, the `userPassword` parameter must be specified.
- `userPassword`: The password for the specified user name. If the `authenticateUser` parameter is included and set to 1 (*true*), the `userPassword` parameter must be specified.
- `userExtendedInfo`: This parameter, combined with the `getUserInfo` parameter, returns the user's accounts and groups in the data binder. 0 (*false*): Does not retrieve the information. 1 (*true*): Retrieves the information.

Results

- Local Data:
 - `extendedInfo`: HDA-encoded string containing user info fields (`ndUserLocale`, `nblFieldTypes`, `ndEmail`, `nblDateFormat`, `ndFullName`, `ndUserType`, `ndUserAuthType`, `ndUserChangeDate`, `ndUserTimeZone`, and `ndUserArriveDate`). Only returned if optional parameter `'getUserInfo'` is 1 (*true*).
 - `accounts`: comma-delimited list of user's accounts. Only returned if optional parameter `hasSecurityInfo` is 0 (*false*).
 - `roles`: comma-delimited list if user's roles. Only returned if optional parameter `hasSecurityInfo` is 0 (*false*).
 - `hasSecurityInfo`: Returns 1 (*true*) if security information is present in response.
 - `isAuthenticated`: Returns 1 (*true*) if optional parameter `authenticateUser` is set to 1 (*true*), and the optional parameter `userPassword` matches the password that corresponds to `userName`.
 - `isPromptLogin`: Returns 1 (*true*) if `userPassword` does not correspond to `userName`. No other data is returned in this situation.

Example

The following is an example CHECK_USER_CREDENTIALS service call to get information about a user:

```
@Properties LocalData
IdcService=CHECK_USER_CREDENTIALS
userName=user1
getUserInfo=1
@end
```

The following is an example of the results that would be returned by this service call to get user information (note that the accounts are returned):

```
Content-type: text/plain
<?hda version="6.3 dev (build-date)" jcharset=Cp1252 encoding=iso-8859-1?>
@Properties LocalData
dUser=user1
nblFieldTypes=
dUserOrgPath=
refreshSubMonikers=
accounts=#none,prj (RWD)
```

```

blDateFormat='{ts' ''yyyy-MM-dd HH:mm:ss''}'!tAmerica/Chicago
StatusCode=0
dUserSourceOrgPath=
hasSecurityInfo=1
roles=contributor
refreshSubjects=
changedSubjects=
dName=user1
refreshMonikers=
changedMonikers=
extendedInfo=@Properties LocalData\nu9=\nu8=\nu7=\ndUserArriveDate=
{ts '2003-02-11 08:34:35'}\nu6=\ndUserTimeZone=\nu5=\nu4=\nu3=\nu2=
\ndUserAuthType=LOCAL\nu1=\ndUserType=\ndUserChangeDate={ts '2003-04-03 11:57:29'}
\nuPhone=\nuCompany=\ndUserLocale=English-US\nblFieldTypes=\nu24=\nu23=\nu22=
\nu21=\nu20=\ndFullName=user1\nblDateFormat=M/d{/yyyy} {h:mm{:ss}}{.SSSS}
{aa}}!tAmerica/Chicago\ndEmail=\nu19=\nu18=\nu17=\nu16=\nu15=\nu14=\nu13=\nu12=
\nu11=\nu10=\n@end\n\n
@end

```

The following is an example of the results that would be returned by this service call to get user information (note that the accounts are *not* returned):

```

Content-type: text/plain
<?hda version="6.3 dev (build-date)" jcharset=Cp1252 encoding=iso-8859-1?>
@Properties LocalData
dUser=user1
blFieldTypes=
refreshSubMonikers=
blDateFormat='{ts' ''yyyy-MM-dd HH:mm:ss''}'!tAmerica/Chicago
StatusCode=0
changedSubjects=
refreshSubjects=
dName=user1
changedMonikers=
refreshMonikers=
extendedInfo=@Properties LocalData\nu9=\nu8=\nu7=\ndUserArriveDate=
{ts '2003-02-11 08:34:35'}\nu6=\ndUserTimeZone=\nu5=\nu4=\nu3=\nu2=
\ndUserAuthType=LOCAL\nu1=\ndUserType=\ndUserChangeDate={ts '2003-04-03
11:57:29'}\nuPhone=\nuCompany=\ndUserLocale=English-US\nblFieldTypes=\nu24=\nu23=
\nu22=\nu21=\nu20=\ndFullName=user1\nblDateFormat=M/d{/yyyy} {h:mm{:ss}}{.SSSS}
{aa}}!tAmerica/Chicago\ndEmail=\nu19=\nu18=\nu17=\nu16=\nu15=\nu14=\nu13=\nu12=
\nu11=\nu10=\n@end\n\n
@end

```

The following is an example CHECK_USER_CREDENTIALS service call to see if a user name/password pair match:

```

@Properties LocalData
IdcService=CHECK_USER_CREDENTIALS
userName=user1
authenticateUser=1
userPassword=idc
@end

```

The following is an example of the results that would be returned by this service call to check a user name/password pair match (note that the user name and password match; the key returned value being *isAuthenticated=1*):

```

Content-type: text/plain
<?hda version="6.3 dev (build-date)" jcharset=Cp1252 encoding=iso-8859-1?>
@Properties LocalData

```

```

dUser=user1
blFieldTypes=
refreshSubMonikers=
blDateFormat='{ts' ''yyyy-MM-dd HH:mm:ss''}'!tAmerica/Chicago
StatusCode=0
changedSubjects=
refreshSubjects=
dName=user1
changedMonikers=
refreshMonikers=
isAuthenticated=1
@end

```

The following is another example CHECK_USER_CREDENTIALS service call to see if a user name/password pair match:

```

@Properties LocalData
IdcService=CHECK_USER_CREDENTIALS
userName=user1
authenticateUser=1
userPassword=pppp
@end

```

The following is an example of the results that would be returned by this service call to check a user name/password pair match (note that the user name and password *do not* match; *isPromptLogin=1* is returned instead of *isAuthenticated=1*):

```

Content-type: text/plain
<?hda version="6.3 dev (build-date)" jcharset=Cp1252 encoding=iso-8859-1?>
@Properties LocalData
dUser=user1
blFieldTypes=
refreshSubMonikers=
blDateFormat='{ts' ''yyyy-MM-dd HH:mm:ss''}'!tAmerica/Chicago
StatusCode=0
isPromptLogin=1
changedSubjects=
refreshSubjects=
dName=user1
changedMonikers=
refreshMonikers=
@end

```

4.14.7 DELETE_ALIAS

Service that deletes an existing alias. The most likely errors are mismatched parameters, when the alias is being used in the workflow, or when the system is unable to delete the alias or the user.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dAlias: The alias name.

Example

```

IdcService=DELETE_ALIAS
dAlias=admin_alias

```

4.14.8 DELETE_GROUP

Service that deletes an existing security group. The most likely errors are when content items or workflows associated with this group still exist in the system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dGroupName`: The security group name.

Example

```
IdcService=DELETE_GROUP
dGroupName=adminingroup
```

4.14.9 DELETE_ROLE

Service that deletes an existing role. The most likely errors are when the specified role does not exist or when a user still has this role assigned.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dRoleName`: The role name.

Example

```
IdcService=DELETE_ROLE
dRoleName=test_role
```

4.14.10 DELETE_USER

Service that deletes an existing user. The most likely error is when the user has been assigned to an alias.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dName`: The user name.

Example

- IdcCommand command file format:

```
IdcService=DELETE_USER
dName=jsmith
```

- HDA format:

```
@Properties LocalData
IdcService=DELETE_USER
dName=jsmith
@end
```

4.14.11 EDIT_ALIAS

Service that modifies an existing alias. To edit and add users, the AliasUsersString parameter must be included.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Caution: Editing an alias deletes all existing data (Description and Users) from the alias. To retain existing data, you must include the existing data along with any new data.

Additional Required Service Parameters

- dAlias: The alias name.
- dAliasDescription: The alias description.
- AliasUsersString: The alias or user. To add multiple users:
 - In HDA format: Use the \n escape sequence between each user name when using HDA format, as in this example:

```
AliasUsersString=sysadmin\nuser1
```
 - When using SOAP format, put the unencoded line feed directly into the XML or encode the line feed as (
).

Example

- Edits an alias:

```
IdcService=EDIT_ALIAS
dAlias=my_alias
dAliasDescription=new user
AliasUsersString=sysadmin\nuser1
```

- In HDA format, adding users with the AliasUsersString parameter:

```
@Properties LocalData
monitoredTopics=appcommongui,1000382277000
IdcService=EDIT_ALIAS
dAliasDescription=Test Alias
blFieldTypes=
blDateFormat=M/d{/yy} {h:mm[:ss] {aa}[zzz]}!tAmerica/Chicago!mAM,PM
watchedMonikers=
monitoredSubjects=usermetaoptlists,1008541017549,aliases,1008541017549,
userlist,1008541017549,users,1008541017549,metadata,1008541017549,config,100854
1017549,accounts,1008541017549
AliasUsersString=Gillian\nMonique\nsysadmin\n
dAlias=YourAlias
@end
```

- In HDA format, adding users with the AliasUserMap and Alias result sets:

```
@Properties LocalData
refreshMonikers=
IsJava=1
refreshSubMonikers=
refreshSubjects=aliases,1008541017551
dAlias=YourAlias
refreshTopics=
AliasUsersString=Gillian\nMonique\nsysadmin\n
```

```
ClientEncoding=Cp1252
dUser=sysadmin
blDateFormat=M/d{/yy} {h:mm[:ss] {aa}[zzz]}!tAmerica/Chicago!mAM,PM
monitoredSubjects=usermetaoptlists,1008541017549,aliases,1008541017549,
userlist,1008541017549,users,1008541017549,metadata,1008541017549,config,
1008541017549,accounts,1008541017549
loadedUserAttributes=1
dUserName=sysadmin
watchedMonikers=
IdcService=EDIT_ALIAS
blFieldTypes=StatusMessage message
changedMonikers=
dAliasDescription=Test Alias
changedSubjects=
monitoredTopics=appcommongui,1000382277000
@end
@ResultSet AliasUserMap
2
dAlias 6 30
dUserName 6 50
YourAlias
Gillian
YourAlias
Monique
YourAlias
sysadmin
@end
@ResultSet UpdatedUserTopics
3
topicName
topicValue
topicTS
@end
@ResultSet Alias
2
dAlias 6 30
dAliasDescription 6 50
MyAlias
This is a test of adding an alias
NewAlias
Test Alias
YourAlias
Test Alias
@end
```

4.14.12 EDIT_GROUP

Service that modifies an existing security group.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **dGroupName**: The security group name.
- **dDescription**: The security group description.
- **dPrivilege**: The permission setting.

If this value is set to 0, only the **admin** role has RWDA permission on the group. No other roles are able to access the group. If the value is set to 15, all roles get RWDA permission on the group.

Example

```
IdcService=EDIT_GROUP
dGroupName=MY_GROUP
dPrivilege=0
dDescription=admin privileges
```

4.14.13 EDIT_ROLE

Service that modifies an existing role. A role is a set of permissions (Read, Write, Delete, Admin) for each security group.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `dRoleName`: The existing role name.
- `dGroupName`: The name of the security group.

Optional Service Parameters

- `dPrivilege`: The permission setting.

If this value is set to 0, only the **admin** role has RWDA permission on the group. No other roles are able to access the group. If the value is set to 15, all roles get RWDA permission on the group. For more information about numbering of permissions, see *Oracle Fusion Middleware System Administrator's Guide for Oracle Content Server*.

Example

```
IdcService=EDIT_ROLE
dRoleName=test_role
dGroupName=MY_GROUP
dPrivilege=15
```

4.14.14 EDIT_USER

Service that modifies an existing user. The most likely error is the user not having the security level to perform this action or the user not existing.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Caution: Editing a user deletes all existing user attributes (role and account permissions). To retain existing attributes, you must include the existing attributes along with any new or changed data. If user attributes are not defined, the user belongs to no roles or accounts, and becomes a guest in the system.

Note: If the specified user does not exist, the Oracle Content Server system adds the user.

Additional Required Service Parameters

- `dName`: The user name.
- `dUserAuthType`: The user authorization type. This value must be set to either *Local* or *Global*.

Optional Service Parameters

- `dFullName`: The full name of the user.
- `dPassword`: The password for the user.
- `dEmail`: The email address of the user.
- `dUserLocale`: The locale designation, such as *English-US*, *English-UK*, *Deutsche*, *Français*, or *Español*.
- `dUserType`: The user type.

Optional Attribute Information

Optional attributes are specified as a result set that contains the user's attribute information and specifies the roles the user belongs to and the accounts the user has access to. Attribute information consists of a list of three comma-delimited strings. The first string indicates the type of attribute, the second the name of the attribute, and the third is the access number for accounts or default entry for role.

- **Attribute Type**: When defining a role, the first string specifies that this is a role attribute, the second string is the name of the role, and the third is the default entry of 15. When defining an account, the first string specifies that this is an account attribute, the second string is the name of the account, and the third is the access level.

- For a role attribute, the information is in the form:

```
role, contributor, 15
```

- For an account attribute, the information is in the form:

```
account, books, 1
```

- **Attribute Name**: A user can belong to multiple roles and accounts, so there can be multiple role and account information strings separated by commas in the attribute information column. If the user is to have the **admin** role, define the user attribute information as follows:

```
@ResultSet UserAttribInfo
2
dUserName
AttributeInfo
jsmith
role, contributor, 15
@end
```

If the user is to belong to both the *contributor* and *editor* roles and have Read permission on the *books* account, define the user attribute information as:

```
@ResultSet UserAttribInfo
2
dUserName
AttributeInfo
jsmith
role, contributor, 15, role, editor, 15, account, books, 1
@end
```

- Access Number: These access numbers can be assigned to the user.
 - 1: Read only
 - 3: Read and write
 - 7: Read, write, delete
 - 15: Administrative permissions

Example

- IdcCommand command file format:

```
IdcService=EDIT_USER
dName=user20
dUserAuthType=Local
```

- HDA format with optional parameters and attribute information:

```
@Properties LocalData
IdcService=EDIT_USER
dName=jsmith
dFullName=Jennifer Smith
dUserAuthType=Local
dPassword=password
dEmail=jsmith@example.com
dUserType=MKT
dUserLocale=English-US
@end

@ResultSet UserAttribInfo
2
dUserName
AttributeInfo
jsmith
role,admin,15,role,contributor,15
@end
```

4.14.15 EDIT_USER_PROFILE

Service that modifies the user profile for an existing user. and saves profile settings. This cannot be used to change a user's security credentials.

Access Level: Read, Global (17)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

- Any of the fields in the Users table (except dName) can be updated by this service.
- You can use this service to edit personalization information that is not stored in the database. Some of a user's information is stored in the database and some is stored in personalization data .hda files.
- For information in the database, simply passing the corresponding field name and a value causes the field to be updated.
- For personalization data, encoded topic strings must be used (for example, `topicString1=updateKeys:pne_portal:lm_Layout:Trays`).
- The Password value cannot be updated for proxied users.
- The most likely reason this service would fail is if it cannot find the user (dName) in the system, or if the user name passed in dName does not match the current user.

Additional Required Service Parameters

- **dName:** The user name.

Optional Service Parameters

- **dFullName:** The full name of the user.
- **dPassword:** The password for the user.
- **dEmail:** The email address of the user.
- **dUserLocale:** The locale designation, such as *English-US*, *English-UK*, *Deutsche*, *Français*, or *Español*.
- **dUserType:** The user type.
- **emailFormatList:** Set to *HTML* for HTML-based emails or *text* for text-based email.
- **numTopics:** The number of additional personalization topics in this request.
- **topicString1:** An encoded string of a personalization topic to update.
- **numTopics:** The total number of topic strings being passed.
- Any field from the User's table (except **dName**): **dFullName**, **dEmail**, **dPasswordEncoding**, **dPassword**, **dUserType**, **dUserAuthType**, **dUserOrgPath**, **dUserSourceOrgPath**, **dUserSourceFlags**, **dUserArriveDate**, **dUserChangeDate**, **dUserLocale**, **dUserTimeZone**.
- **topicString1 - topicStringN:** Any number of strings encoded to define personalization topic edit operations.
- **RedirectUrl:** Used to display another page. If omitted, the user is redirected to the Oracle Content Server home page.

Optional parameters for Oracle Content Server version 7.0 and later:

- **Layout:** The API to use (for example, *Top Menu* or *Trays*).
- **Skin:** The skin to use (for example, *Windows*).
- **XuiSearchTemplate:** The template to use for the user's personalized Search Results page.

Results

- **Result Sets:** **UserTopicEdits** (Returned only if personalization data was edited. Contains info about what topic edits were performed. Has the following fields: **topicName**, **topicEditAction**, **topicKey**, **topicValue**. Note that **topicValue** is an HDA-encoded string.)
- **Local Data:**
 - **changedSubjects**
 - **dUser**
- **Response Template:**
 - **REDIRECT_TEMPLATE** (**redirect_template.htm**)
 - **Default redirect service:** **GET_DOC_PAGE** (**Page=HOME_PAGE**)

Used By

- **Resource Includes:** **user_info_submit_form**

Example

- IdcCommand command file format:

```
IdcService=EDIT_USER_PROFILE
dName=sysadmin
```

- HDA format with optional parameters:

```
@Properties LocalData
IdcService=EDIT_USER_PROFILE
dName=jsmith
dFullName=Jennifer Smith
dPassword=password
dEmail=jsmith@example.com
dUserType=MKT
dUserLocale=English-US
@end
```

4.14.16 GET_ALIASES

Service that returns a list of all aliases.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.14.17 GET_FILTER_ADMIN_PAGE

Service that retrieves the Configure Web Server Filter page in a browser.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.14.18 GET_SELF_REGISTER_PAGE

Service that returns the self-registration page and loads the user information for a self-registered user.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.14.19 GET_USER_INFO

Service that returns the User Profile page for the current user. Use [CHECK_USER_CREDENTIALS](#) to verify the roles and accounts for the user.

This service takes no parameters and derives its information based upon the value of the dUser server variable.

Access Level: Read, Global, Scriptable (49)

Queries Executed: Quser

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Results:

- Result Sets:
 - USER_INFO (fields from Users database table for current user)
 - UserMetaDefinition (result set that defines properties of user meta fields; matches contents of usermeta.hda file in data directory)

- LmLayouts (listing of names of available layouts; fields: layout)
- LmLayoutSkinPairs (listing of all available layout/skin combinations; fields: layout, skin)
- Option Lists Returned: Users_UserLocaleList
- Local Data:
 - dName
 - dUser
- Response Template: USER_INFO (user_info.htm)

Used By

- Resource Includes: pne_nav_userprofile_links
- Templates:
 - MY_VIEW_FORM (my_view_form.htm)
 - PNE_PORTAL_DESIGN_PAGE (pne_portal_design_page.htm)
 - PNE_PORTAL_DOC_PROFILES_PAGE (pne_portal_doc_profiles_page.htm)
 - PNE_PORTAL_PERSONAL_URLS_PAGE (pne_portal_personal_urls_page.htm)
 - PNE_PORTAL_SAVED_QUERIES_PAGE (pne_portal_saved_queries_page.htm)
 - PNE_PORTAL_SYSTEM_LINKS_PAGE (pne_portal_system_links_page.htm)
 - std_home_page.htm
 - SUBSCRIPTION_LIST (subscription_list.htm)
- Standard Navigation: commonNav.js

4.14.20 GET_USERS

Service that returns a list of all users and their attributes. Returns a list of all users registered in the system with their primary attributes: user name, full name, password, email address, directory, type, and password encoding.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.14.21 LOAD_PNE_PORTAL

Loads all data from the user's PNE file (pne_portal.htm), including standard personalization properties and result sets, and custom personalization data, for a user's saved queries. This is used by remote applications to obtain a user's personalization settings.

This is used as a remote application service. It is a raw data service with no associated template display.

Access Level: Read, Scriptable (33)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Results

- Result Sets: All result sets from the user's `pne_portal.htm` file. Typically this includes personal URLs and saved queries, but can also include any custom personalization result sets used by the specific implementation.
- Local Data: All LocalData properties from the user's `pne_portal.hda` file. This includes standard personalization properties (`XuiSearchTemplate`, `showDefaultQuery`, `defaultQueryRows`, `lm_Skin`, `lm_Layout`, `portalDesignLink`, `quickSearchLink`, `defaultQuery`, `searchFormType`, `emailFormat`), but can also include any custom personalization properties used by the specific implementation.

Used By

- Other: `SoapCustom:Wsd:PortalInfo:Services`

4.14.22 LOAD_USER_TOPIC

Loads personalization data based on the topic chosen. The topics correspond to HDA files in the `DomainHome/ucm/cs/data/users/profiles/` directories.

This is used as a remote application service. It is a raw data service with no associated template display.

Access Level: Read, Scriptable (33)

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

Additional Required Service Parameters

- `userTopic`: The name of the user topic, such as `pne_portal` or `wf_in_queue`.

Results

- Result Sets: All result sets in the specified topic file.
- Local Data: All LocalData properties in the specified topic file.

4.14.23 QUERY_GROUP

Service that returns the description of a security group.

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

Additional Required Service Parameters

- `dGroupName`: The security group name.

Example

```
IdcService=QUERY_GROUP
dGroupName=Public
```

4.14.24 QUERY_USER_ATTRIBUTES

Service that returns user attributes for a specific user.

This service does not return user data for Microsoft Active Directory managed users when the Oracle Content Server instance is configured to use ADSI. It does return the user data for local users and external LDAP managed users.

Location: `IdcHomeDir/resources/core/templates/std_services.htm`

Additional Required Service Parameters

- `dName`: The user name.

Example

```
IdcService=QUERY_USER_ATTRIBUTES
dName=jsmith
```

4.14.25 REGISTER_USER

Service that registers a user. If only the user name parameter (*dName*) is provided, the new user is a local user with the *guest* role and a blank password.

The most likely error is a user name that is not unique.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `dName`: The user name.

Optional Service Parameters

- `dFullName`: The full name of the user.
- `dPassword`: The password for the user.
- `dEmail`: The email address for the user.
- `dUserLocale`: The locale designation, such as *English-US*, *English-UK*, *Deutsche*, *Français*, or *Español*.
- `dUserType`: The user authorization type, either *Local* or *Global*.

Example

```
IdcService=REGISTER_USER
dName=user20
```

4.14.26 SAVE_USER_TOPICS

Service used to save personalization information for the user. Seven actions can be performed with this service. The required parameters for the service vary depending upon which action is being performed.

A form is normally used to submit the service request because of the complexity of the data and the number of additional parameters required.

Access Level: Read, Global (17)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Actions

The following actions are used with the `topicString` parameter:

- `updateKeys`: Updates a single `LocalData` key variable. The `topicString` parameter takes 4 values: the first 3 required values plus a fourth that contains the literal string value to be placed in the key variable.
- `updateKeyByName`: This action is new as of Oracle Content Server version 10gR1. Like `updateKeys`, this action updates a single `LocalData` key variable. It also takes 4 `topicString` values. Instead of containing a literal string, the fourth value contains

the name of an additional field/parameter that contains the value to be used in the update.

- **deleteKeys:** Deletes a single key variable. The `topicString` parameter takes the 3 required values only.
- **updateRows:** This action is used to add or update one or more result set rows using a single topic string. The `topicString` parameter takes 5 values: the first 3 required values; a fourth that contains a comma-delimited list of all result set column names in correct order; a fifth containing a number indicating the total number of rows being updated/added.

A set of additional fields/parameters with names corresponding to the column names must be provided for each row of data based upon the number of rows indicated in the fifth value of the `topicString`. Sequential numeric suffixes must be appended to the column names of the fields in each row's data set beginning with one and ending with total row number provided in the `topicString` (if any of these are missing, the Oracle Content Server system throws an error).

If the value for the first column (the unique key) of a row in the update data matches that of an existing row in the result set, the existing row will be updated; otherwise a new row will be appended to the bottom of the result set.

- **addMruRow:** The "Mru" in the name is an acronym for *most-recently-used*. This action adds a single row to the top of a result set. The number of rows in the result set is not allowed to exceed a specified maximum. If a row is added to a result set that already contains the maximum number of rows, the last row is deleted at the same time that the new one is added (essentially keeping only the N most recently used rows in a result set).

The maximum number of rows can be specified using an optional `mruNumber` parameter. If no `mruNumber` parameter is provided, the maximum defaults to 10.

The `topicString` parameter takes 4 values: the first 3 required values and a fourth that contains a comma-delimited list of all result set column names in correct order. Similar to `updateRows`, a set of additional fields/parameters with names corresponding to the column names must be provided; but since only one row is added/updated at a time, no numeric suffixes are required on the names.

If the value of the first column (the unique key) matches that of an existing row, that row is updated and moved to the top of the result set rather than adding a new row. The number of rows doesn't change, and the affected row is now considered the most-recently-used row.

- **deleteRows:** Deletes one or more rows from a result set. The `topicString` parameter takes 4 values: the first 3 required values, and a fourth that contains a comma-delimited list of strings that correspond to the DATA VALUES of the first column (unique key) of existing rows in the specified result set.
- **deleteSets:** Deletes one or more result sets from a topic file. The `topicString` parameter takes only 3 values, but in this case, the third value can be a comma-delimited list of names rather than a single key name, allowing multiple result sets to be deleted using a single `topicString`.

Optional Service Parameters

- **numTopics:** Tells the service the number of `topicStrings` to expect.
- **topicKeys:** Identifies the topic string parameter fields by name. Composed of a colon-separated list of one or more names that correspond to fields or parameters that contain the topic strings. A `numTopics` value must be present when this

parameter is used, even if you don't use the enumeration method of identifying topic string values. (Any value can be used for numTopics.)

- `topicStringn`: Composed of three to five values, separated by colons. The number of topic strings depends on the value in numTopics. For example, if numTopics is 2, `topicString1` and `topicString2` are required.
- The values are as follows:
 - The first value is the action to be taken by the service.
 - The second value is the name of the topic file that is acted on.
 - The third value is the key name of the item being modified (either the name of a LocalData key variable, or the name of a result set in the topic file).
 - The fourth value contains data information for an add or update action. It either contains the data string itself, or it points to additional fields or parameters that contain the data values.
 - The fifth value is used only with the `updateRows` action to indicate the number of rows of data being sent.

All of the update actions perform 'add' operations if a key of the given name is not found in the specified topic file. If a topic file matching the name given in the second value is present, but doesn't contain a key (variable or result set) matching the key name given in the third value, then a new variable or result set will be created using the data provided for the update operation. If the topic file itself is not found, it will also be created.

- `RedirectUrl`: Used to display another page. If omitted, the user is redirected to the Oracle Content Server home page.
- `mruNumber`: Used to specify the maximum number of rows in a result set when using the `addMruRow` - 'Add Most-Recently-Used Row' action.

Results

- **Result Sets:** `UserTopicEdits` (Rows represent each of the topic edits performed by the service call. Rows contain the fields: `topicName`, `topicEditAction`, `topicKey`, `topicValue`.)
- **Response Template:**
 - `REDIRECT_TEMPLATE` (`redirect_template.htm`)
 - Default redirect service: `GET_DOC_PAGE: HOME_PAGE`

Used By

- **Resource Includes:** `xui_searchapi_results_action_form`
- **Templates:**
 - `MY_VIEW_FORM` (`my_view_form.htm`)
 - `PNE_PORTAL_DOC_PROFILES_PAGE` (`pne_portal_doc_profiles_page.htm`)
 - `PNE_PORTAL_PERSONAL_URLS_PAGE` (`pne_portal_personal_urls_page.htm`)
 - `PNE_PORTAL_SAVED_QUERIES_PAGE` (`pne_portal_saved_queries_page.htm`)
 - `PNE_PORTAL_SYSTEM_LINKS_PAGE` (`pne_portal_system_links_page.htm`)
 - `WF_INQUEUE_LIST` (`workflow_queue.htm`)

Examples

Caution: The following example is not a core configuration of the Oracle Content Server instance. This is a custom feature extension and is only supported through the purchase of Consulting Services or through the purchase of our Developer Support Token Program. As with all customization, when you upgrade your software, the custom changes may be overwritten.

To add a personal URL, use the following parameters and values:

```
numTopics=1
topicString1=updateRows:pne_portal:PersonalURLS:title,website:1
```

These values add rows in the PersonalURLS ResultSet in the *pne_portal.hda* user topic. The columns in the ResultSet are *title* and *website*, which are taken from the fourth value of the topic string. The last value (*1*) tells the service that one row of data is being sent.

You must use additional parameters to the service to specify the row data. These parameters are taken from the *title* and *website* column names specified in the topicString. Because it is possible to specify more than one row of data, a numeric suffix is added to each of the column names to form the service parameter name. The first row would require the *title1* and *website1* parameters and a second row would require the *title2* and *website2* parameters.

To add a row of data that is a link to the home page, set the values of the *title1* and *website1* parameters to *Home Page* and *http://www.example.com*. These values must be URL-encoded if you are adding them directly to the URL in the browser address bar; if you use a form in a web page to submit the data, encoding is handled. Using a form, the complete service specification would be the following:

```
<FORM name='addPersonalUrlForm' method='POST'
action='<$HttpCgiPath$>'>
<INPUT type='hidden' name='IdcService' value='SAVE_USER_TOPICS'>
<INPUT type='hidden' name='numTopics' value='1'>
<INPUT type='hidden' name='topicString1'
value='updateRows:pne_portal:PersonalURLS:title,website:1'>
<INPUT type='hidden' name='title1' value='Company Home Page'>
<INPUT type='hidden' name='website1' value='http://www.example.com'>
<INPUT type='submit' value='Submit'>
</FORM>
```

4.14.27 UPDATE_FILTER_INFO

Service that updates the Web server filter settings.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

4.14.28 UPDATE_USEROPTION_LIST

Service that adds or updates an option list for a user information field.

Caution: The option list values specified in the OptionListString parameter replace any existing values. To retain existing values, you must include the existing values along with the new values.

Option list values for the User Type field and all custom user information fields are not stored in the database but in the *useroptions.hda* file, which is normally located in the *DomainHome/ucm/cs/data/users/config/* directory.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `dKey`: The option list key.
- `OptionListString`: The list of options, separated by the `\n` escape sequence.

Example

- IdcCommand command file format:

```
# Add values NY, DC, CA to UserTypeList
IdcService=UPDATE_USEROPTION_LIST
dKey=Users_UserTypeList
OptionListString=NY\nDC\nCA
```

- HDA format (adds the values *NY*, *DC*, and *CA* to *UserTypeList*):

```
@Properties LocalData
IdcService=UPDATE_USEROPTION_LIST
dKey=Users_UserTypeList
OptionListString=NY\nDC\nCA
@end
```

4.15 Collaboration Services (Core Oracle Content Server)

The following Collaboration Services ship with the core Oracle Content Server software:

- [ADD_COLLABORATION](#)
- [ADD_COLLABORATION_FORM](#)
- [DELETE_COLLABORATION](#)
- [EDIT_CLBRA_ACCESS_LIST](#)
- [EDIT_CLBRA_ACCESS_LIST_FORM](#)
- [EDIT_COLLABORATION](#)
- [EDIT_COLLABORATION_FORM](#)
- [GET_CLBRA_DOCUMENTS](#)
- [GET_CLBRA_INFO](#)
- [GET_COLLABORATION_LIST](#)
- [GET_USER_CLBRA_LIST](#)

Note: `dClbraType` is a required parameter for many services. At this time, *basic* is the only accepted value for this parameter.

4.15.1 ADD_COLLABORATION

Service called from ADD_COLLABORATION_FORM. This service calls ADD_COLLABORATION_SUB to add a collaboration project.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dClbraName: The project name.
- dClbraType: The type of collaboration project.

4.15.2 ADD_COLLABORATION_FORM

Service used to present a form to a user to add a Collaboration. After submitting this form, the ADD_COLLABORATION service is called.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.15.3 DELETE_COLLABORATION

Service used to delete a collaboration project.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dClbraName: The project name.

4.15.4 EDIT_CLBRA_ACCESS_LIST

Service used to edit the members in a collaboration project.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dClbraName: The project name.
- dClbraType: The type of collaboration project.

4.15.5 EDIT_CLBRA_ACCESS_LIST_FORM

Service that presents the form used to edit members in a collaboration project.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dClbraName: The project name.

4.15.6 EDIT_COLLABORATION

Service that calls EDIT_COLLABORATION_SUB to update existing project information.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dClbraName: The project name.
- dClbraType: The type of collaboration project.

4.15.7 EDIT_COLLABORATION_FORM

Service that presents the form used to edit a collaboration project.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dClbraName: The project name.

4.15.8 GET_CLBRA_DOCUMENTS

Service used to retrieve content in a collaboration project.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dClbraName: The project name.

4.15.9 GET_CLBRA_INFO

Service used to retrieve information about a specific collaboration project.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- dClbraName: The project name.

4.15.10 GET_COLLABORATION_LIST

Service that returns a list of all collaboration projects.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

4.15.11 GET_USER_CLBRA_LIST

Service that returns a list of users in all collaboration projects.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Workflow Services

This chapter describes the services available when using and customizing Oracle Universal Content Management (Oracle UCM) workflows, and other services which are stored in the workflow.htm file in the *IdcHomeDir/resources/core/templates/* directory.

This chapter covers the following topics:

- [Section 5.1, "About Workflow Services"](#)
- [Section 5.2, "Doc and General Services \(Workflows\)"](#)
- [Section 5.3, "Workflow Template Services"](#)
- [Section 5.4, "Workflow Services"](#)

5.1 About Workflow Services

Note: The most commonly used services have more extensive descriptions.

A typical service entry is similar to the following:

```
GET_WORKFLOW
WorkflowService 40 null null null!csWfRetrieveInfoError(dwfName)
5:QworkflowDocuments:WfDocuments:0:!csWfRetrieveInfoError(dwfName)
3:getWorkflowStepAliasesInfo::0:null
3:getWorkflowDesignInfo::0:null
3:getWorkflowDocumentInfo:WfDocuments:0:null
```

In this example:

- The first line indicates the service name: GET_WORKFLOW
- The second line lists the service's attributes:
 - Service class: WorkflowService
 - Access level: 40
 - Template: null
 - Service type: null
 - Subjects Notified: null
 - Error message and parameter used for error message: Retrieve Info Error

- The remainder of the entry lists the service's actions, each line designating one action:
 - action type: for example, 5, indicating a Select Cache Query, which specifies a query to retrieve information from the database and store it for later use.
 - action name: for example, `QworkflowDocuments`
 - action parameters: for example, `WfDocuments`. If no parameters are specified, double colons (`::`) are included.
 - action control mask: for example, 0, indicating 'Ignore error'. If no control mask is specified, double colons (`::`) or 0 is included.
 - action error message, or `null` if no message is available.

Each element of a service action is separated by a colon (`:`).

Important: All services have at least one required parameter. The `IdcService` parameter takes the name of the service as its argument. If other parameters are required, they are noted in the description of the service.

For details about a service's attributes and actions, see [Section 3, "Customizing Services."](#)

5.2 Doc and General Services (Workflows)

Doc services are those that are used to manage and manipulate documents or provide information about documents. General services are common or default services. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- `ADD_PROBLEMREPORT`
- `DELETE_PROBLEMREPORT`
- `GET_CRITERIA_WORKFLOWS_FOR_GROUP`
- `GET_DOCUMENT_PROBLEMREPORTS`
- `GET_PROBLEMREPORTS_SEARCH_FORM`
- `GET_PROBLEMREPORTS_SEARCH_RESULTS`
- `GET_UPDATE_PROBLEMREPORT_FORM`
- `GET_WORKFLOWDOCUMENTS`
- `GET_WORKFLOWS_FOR_ALL`
- `*LOAD_WORKFLOW_QUEUE`
- `NOTIFY_CONTRIBUTOR`
- `PROBLEMREPORT_INFO`
- `RESEND_PROBLEMREPORT`
- `REVIEW_WORKFLOW_DOC`
- `UPDATE_PROBLEMREPORT`
- `WORKFLOW_CHECKIN_SUB`

- [WORKFLOW_EDIT_REV](#)
- [WORKFLOW_NEW_REV](#)
- [WORKFLOW_REJECT_FORM](#)

5.2.1 ADD_PROBLEMREPORT

Service that adds a problem report to a content item.

The most likely errors are mismatched parameters, when the system is unable to add a problem report to the content item, or when the content item no longer exists in the system.

Service Class: Doc Service

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- *dDocName*: The content item identifier (Content ID).
- *dID*: The generated content item revision ID.
- *dPrCaption*: The caption for the problem report.
- *dPrSeverity*: The problem report severity level such as *Critical*, *Moderate*, or *Minor*. This option has no effect on how a problem report is handled within the workflow process.
- *dPrState*: The problem report state such as *Open*, *Closed*, or *Fixed*.

Note: Do not confuse the Content ID (*dDocName*) with the internal content item revision identifier (*dID*). The *dID* is a generated reference to a specific rendition of a content item.

Example

```
IdcService=ADD_PROBLEMREPORT
dPrCaption=Problem report for this content.
dDocName=PublicDoc1_ia3c488971
dID=67
dPrState=OPEN
dPrSeverity=MINOR
```

5.2.2 DELETE_PROBLEMREPORT

Service that deletes an existing problem report. The most likely errors are mismatched parameters or when the content item no longer exists in the system.

Service Class: Doc Service

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- *dPrID*: The problem report ID.

Example

```
IdcService=DELETE_PROBLEMREPORT
dPrID=1
```

5.2.3 GET_CRITERIA_WORKFLOWS_FOR_GROUP

Service that returns a list of Criteria workflows and workflow steps for a specific security group.

Returns the WorkflowsForGroup and WorkflowStepsForGroup result sets:

- WorkflowsForGroup lists all of the workflows for this group (dWfID, dWfName).
- WorkflowStepsForGroup lists all of the steps in all of the workflows for this group (dWfID, dWfName, dWfStepID, dWfStepName).
- The most likely error is a security group that does not exist or a user failing the security check.

Service class: Service (general service).

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dSecurityGroup: The security group such as *Public* or *Secure*.

Example

- IdcCommand command file format:

```
# Retrieves criteria workflow information
IdcService=GET_CRITERIA_WORKFLOWS_FOR_GROUP
dSecurityGroup=Public
```

- HDA format:

```
@Properties LocalData
IdcService=GET_CRITERIA_WORKFLOWS_FOR_GROUP
dSecurityGroup=Public
@end
```

5.2.4 GET_DOCUMENT_PROBLEMREPORTS

Service that returns all problem reports for a specific content item..

Service class: Doc Service

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dDocName: The Content ID for the content item.

Example

```
IdcService=GET_DOCUMENT_PROBLEMREPORTS
dDocName=security_000015
```

5.2.5 GET_PROBLEMREPORTS_SEARCH_FORM

Service that returns the problem report search form.

Service Class: Doc Service

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

5.2.6 GET_PROBLEMREPORTS_SEARCH_RESULTS

Service that returns a list of problem reports that match search criteria as specified on the Problem Reports search page. The search criteria can be any of the columns as specified in the Problem Reports table.

Search criteria that are used can take any of the columns specified in the Problem Reports table. The service is passed in name/value pairs, which are then turned into a database query's WHERE clause.

The Problem Reports data source (as specified in the resource.htm file) is used with the WHERE clause generated by the name/value pair to construct the query. The results of this query are then passed back for presentation.

Service Class: Doc Service

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Optional Service Parameters

- **dPrSeverity:** The problem report severity level such as *Critical, Moderate, Minor*. This option has no bearing on how a problem report is handled within the workflow process.
- **dPrAuthor:** The problem report author.
- **dPrCaption:** The caption for the problem report.
- **dPrState:** The problem report state such as *Open, Closed, Fixed*.
- **dDocTitle:** The content item title.
- **dDocName:** The Content ID for the content item.

5.2.7 GET_UPDATE_PROBLEMREPORT_FORM

Service that returns the update form for a problem report.

Service Class: Doc Service

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- **dPrID:** The problem report ID.

Example

```
IdcService=GET_UPDATE_PROBLEMREPORT_FORM
dPrID=1
```

5.2.8 GET_WORKFLOWDOCUMENTS

Service that returns a list of content item revisions that are in a specific workflow.

The service provides a list of all content items in workflows and is updated by the system server to keep track of the status of content items (state and step) that are in workflows.

The most likely error is a workflow name that does not exist.

Service class: Service (general service)

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- IdcService: Must be set to GET_WORKFLOWDOCUMENTS.
- dWfName: The workflow name.

Example

```
IdcService=GET_WORKFLOWDOCUMENTS  
dWfName=mktg_review
```

5.2.9 GET_WORKFLOWS_FOR_ALL

Service used by the Workflow applet to return information about all workflows and their steps.

Service Class: Service (general service)

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

5.2.10 LOAD_WORKFLOW_QUEUE

Service that returns the personalization data for the user, which contains a list of content items in a workflow that require action. The data comes from the wf_in_queue.hda file in the *DomainHome*/ucm/cs/data/users/profiles directories.

This is intended to be a remote applicaiton service because it is a raw data service with no associated display template.

Service Class: User Service

Access Level: Read, Scriptable (33)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Results

- Results Sets: WorkflowInQueue

Used By

- Other: SoapCustom:Wsdl:Workflow:Services

5.2.11 NOTIFY_CONTRIBUTOR

Service that notifies a contributor on the problem report for the specified content item. The most likely error is a content item no longer in the system.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.

Example

```
IdcService=NOTIFY_CONTRIBUTOR  
dID=55
```

5.2.12 PROBLEMREPORT_INFO

Service that returns all information about a problem report. The information for a problem report is in the file system and in the database. This service takes the user

(when used in context) to the problem report information page. This allows the user to resend, delete, or update the problem report from the user interface.

Service Class: Doc Service

Location: *IdcHomeDir* /resources/core/templates/workflow.htm

Additional Required Service Parameters

- dPrID: The problem report's unique ID.

Example

```
IdcService=PROBLEMREPORT_INFO  
dPrID=1
```

5.2.13 RESEND_PROBLEMREPORT

Service that resends email to all interested users that are to be notified about an activity. This service is accessible from the Problem Report page.

Service Class: Doc Service

Location: *IdcHomeDir* /resources/core/templates/workflow.htm

Additional Required Service Parameters

- dPrID: The problem report ID.

Example

```
IdcService=RESEND_PROBLEMREPORT  
dPrID=1
```

5.2.14 REVIEW_WORKFLOW_DOC

Service that generates the page allowing a user to review a document in a workflow.

Service Class: Doc Service

Location: *IdcHomeDir* /resources/core/templates/workflow.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.

5.2.15 UPDATE_PROBLEMREPORT

Service that updates problem report information.

Location: *IdcHomeDir* /resources/core/templates/workflow.htm

Additional Required Service Parameters

- dPrID: The problem report ID.
- dPrState: The problem report state, such as *Open*, *Closed*, *Fixed*.

Optional Service Parameters

- `dPrCaption`: The caption for the problem report.
- `dPrSeverity`: The problem report severity level, such as *Critical*, *Moderate*, *Minor*. This option has no effect on how a problem report is handled within the workflow process.
- `prMessage`: The problem report message.

Example

- IdcCommand command file format:

```
IdcService=UPDATE_PROBLEMREPORT
dPrID=1
dPrState=OPEN
```

- HDA file format with optional parameters:

```
@Properties LocalData
IdcService=UPDATE_PROBLEMREPORT
dPrID=1
dPrState=OPEN
prMessage=Description is stored in hda file.
dPrCaption=change this caption
dPrSeverity=SERIOUS
@end
```

5.2.16 WORKFLOW_CHECKIN_SUB

Subservice that checks in a content item if the item already exists and is in a workflow.

Service Class: Doc Service

Location: *IdcHomeDir* /resources/core/templates/workflow.htm

5.2.17 WORKFLOW_EDIT_REV

Subservice used by the WORKFLOW_CHECKIN_SUB subservice to determine what kind of workflow check is being performed. This service edits the workflow revision in place. When the workflow design is evaluated, a decision is made whether to use WORKFLOW_EDIT_REV or WORKFLOW_NEW_REV.

Service Class: Doc Service

Location: *IdcHomeDir* /resources/core/templates/workflow.htm

5.2.18 WORKFLOW_NEW_REV

Subservice used by the WORKFLOW_CHECKIN service to determine the type of workflow checkin being performed. This service creates a new revision for the workflow document.

Service Class: Doc Service

Location: *IdcHomeDir* /resources/core/templates/workflow.htm

5.2.19 WORKFLOW_REJECT_FORM

Service that returns the reject form for a rejected workflow revision. This service is executed when a reviewer rejects content in a workflow step (when the reviewer clicks Reject).

This service is normally performed in the browser environment, which uses JavaScript to assign values. Parameters that are passed in the browser environment are listed in the following subsection.

Service Class: Doc Service

Location: *IdcHomeDir* /resources/core/templates/workflow.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- dWfName: The workflow name.

Example

```
IdcService=WORKFLOW_REJECT_FORM
dWfName=mktg_review
dID=44
```

5.3 Workflow Template Services

Workflow Template Services are used to manage or alter workflow templates. All services listed here have a Service Class of Workflow Template Service. The following services are described in this section:

- [ADD_WF_TEMPLATE](#)
- [DELETE_WF_TEMPLATE](#)
- [EDIT_WF_TEMPLATE](#)
- [GET_WF_TEMPLATE](#)
- [GET_WF_TEMPLATES](#)

5.3.1 ADD_WF_TEMPLATE

Service that creates a new workflow template. The most likely error is when the workflow template name is not unique or when the system is unable to retrieve the workflow template list.

Location: *IdcHomeDir* /resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfTemplateName: The workflow template name.
- dWfTemplateDescription: The workflow template description.

Example

```
IdcService=ADD_WF_TEMPLATE
dWfTemplateName=mark_temp
dWfTemplateDescription=marketing template
```

5.3.2 DELETE_WF_TEMPLATE

Service that deletes an existing workflow template. The most likely error is when the system is unable to retrieve workflow templates.

Location: *IdcHomeDir* /resources/core/templates/workflow.htm

Additional Required Service Parameters

- `dWfTemplateName`: The workflow template name.

Example

```
IdcService=DELETE_WF_TEMPLATE
dWfTemplateName=wf_template_10
```

5.3.3 EDIT_WF_TEMPLATE

Service that modifies an existing workflow template. This service is similar to `EDIT_WORKFLOWSTEP`, as a workflow template has steps in it. However, this service allows the editing of more than one step and other parts of the template.

Location: `IdcHomeDir/resources/core/templates/workflow.htm`

Additional Required Service Parameters

- `dAliases`: The list of alias users separated by the `/n` escape sequence.
- For example: `dAliases=subadmins/nservices`
- `dWfStepDescription`: The step description.
- `dWfStepHasWeight`: Enables the limited reviewer option.
- Set to 1 (*true*), and define the number of reviewers with the `dWfStepWeight` parameter.
- Set to 0 (*false*) if `dWfStepIsAll` is enabled.
- `dWfStepIsAll`: Enables the all reviewer option.
- Set to 1 (*true*) to require all users assigned to the step to approve the revision before the workflow passes to the next step.
- Set to 0 (*false*) if `dWfStepHasWeight` is enabled.
- `dWfStepName`: The workflow step name. Typically this is the type of review (such as *initial review* or *copy edit*) or the function of the reviewer (such as *manager* or *copy editor*).
- `dWfStepType`: The workflow step type:
 - Reviewer: Approves or rejects the revision.
 - Reviewer/Contributor: Can edit the revision and approves or rejects it.
- `dWfStepWeight`: Defines the number of reviewers for the limited reviewer option.
 - Enter a numeric value for the number of reviewers. The workflow passes to the next step as soon as the number of users specified have approved the revision.
 - You can enter zero (0) in this field to notify reviewers that the revision has reached the step, but reviewers will not be able to approve, reject, or edit the revision at that step. The workflow will pass to the next step automatically.
- `dWfTemplateDescription`: The workflow template description.
- `dWfTemplateName`: The workflow template name.

Example

The following is an example EDIT_WF_TEMPLATE service call:

```

@Properties LocalData
dUser=fradiche
dWFStepIsAll=0
watchedMonikers=
blFieldTypes=StatusMessage message

5.3.4 GET_WF_TEMPLATE

Service that returns the description of a specific workflow template. The most likely error is a workflow template name that does not exist.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- `dWfTemplateName`: The workflow template name.

Example

```
IdcService=GET_WF_TEMPLATE
dWfTemplateName=servicestemplate
```

5.3.5 GET_WF_TEMPLATES

Service that returns a list of all workflow templates and their descriptions. The most likely error is a workflow name that does not exist.

Service Class: Workflow Template Service

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

5.4 Workflow Services

Workflow services are those used to manage workflows, including adding a workflow, adding tokens, and enabling or disabling a workflow. Frequently used services are marked with an asterisk (*) in the following list.

All of these services have a Service Class of Workflow Service.

The following services are described in this section:

- [ADD_WORKFLOW](#)
- [ADD_WORKFLOW_SCRIPT](#)
- [ADD_WORKFLOW_TOKEN](#)
- [ADD_WORKFLOWALIASES](#)
- [ADD_WORKFLOWDOCUMENT](#)
- [ADD_WORKFLOWDOCUMENT_SUB](#)
- [ADD_WORKFLOWDOCUMENTS](#)
- [ADD_WORKFLOWSTEP](#)
- [CRITERIAWORKFLOW_DISABLE](#)
- [CRITERIAWORKFLOW_DISABLE_SUB](#)
- [CRITERIAWORKFLOW_ENABLE](#)
- [DELETE_WFCONTRIBUTORS](#)
- [DELETE_WORKFLOW](#)

- DELETE_WORKFLOW_SCRIPT
- DELETE_WORKFLOW_TOKEN
- DELETE_WORKFLOWCRITERIA
- DELETE_WORKFLOWDOCUMENTS
- DELETE_WORKFLOWSTEP
- EDIT_WORKFLOW
- EDIT_WORKFLOW_SCRIPT
- EDIT_WORKFLOW_TOKEN
- EDIT_WORKFLOWCRITERIA
- EDIT_WORKFLOWSTEP
- *GET_ACTIVE_WORKFLOWS
- GET_ALL_WORKFLOWDOCREVISIONS
- GET_CRITERIA_WORKFLOWS_FOR_GROUP
- GET_WF_COMPANION_INFO
- GET_WORKFLOW
- *GET_WORKFLOW_INFO
- *GET_WORKFLOW_INFO_BYNAME
- GET_WORKFLOW_SCRIPT
- *GET_WORKFLOWDOCREVISIONS
- GET_WORKFLOW_INFO
- GET_WORKFLOWS
- TEST_WORKFLOW_SCRIPT
- WORKFLOW_APPROVE
- WORKFLOW_CANCEL
- *WORKFLOW_CHECKIN
- WORKFLOW_EDIT_APPROVE
- *WORKFLOW_REJECT
- WORKFLOW_START

5.4.1 ADD_WORKFLOW

Service that creates a new workflow. This service is executed by the Workflow Admin applet. Workflows and sub-workflows can be added, edited, enabled, disabled, and deleted from the Workflow Admin administration applet.

The most likely error is when the workflow name is not unique.

Location: *IdcHomeDir/resources/core/templates/workflow.htm*

Additional Required Service Parameters

- dWfName: The workflow name.
- dWfDescription: The workflow description.

- `dWfType`: The workflow type such as *Basic* or *Criteria*.
- `dSecurityGroup`: The security group such as *Public* or *Secure*.
- `dWfCriteriaName`: The workflow criteria field.
- `dWfCriteriaOperator`: The workflow criteria operator *matches*.
- `dWfCriteriaValue`: The workflow criteria value.

Example

```
IdcService=ADD_WORKFLOW
dWfName=test_workflow
dSecurityGroup=Public
dWfType=Criteria
dWfCriteriaName=dDocAuthor
dWfCriteriaOperator=matches
dWfCriteriaValue=sysadmin
dWfDescription=testing workflow
```

5.4.2 ADD_WORKFLOW_SCRIPT

Service used to add a script template for a workflow.

Location: `IdcHomeDir/resources/core/templates/workflow.htm`

Additional Required Service Parameters

- `wfScriptName`: Name of the script template to be used.
- `wfScriptDescription`: Description used for the script.

5.4.3 ADD_WORKFLOW_TOKEN

Service used to add tokens for workflows.

Service Class: Workflow Service

Location: `IdcHomeDir/resources/core/templates/workflow.htm`

Additional Required Service Parameters

- `wfToken`: Default token to use to create the new token.
- `wfTokenName`: Name of the new token to be added.
- `wfTokenDescription`: Description used for the token.

5.4.4 ADD_WORKFLOWALIASES

Service that adds a user or an alias to a workflow step. To add a user, set the `dAliasType` parameter to *user*. To add an alias, set `dAliasType` to *alias*. The most likely error is when the specified workflow does not exist.

Note: The alias is not defined here. The alias must already exist. It is usually created using the UserAdmin applet.

Service Class: Workflow Service

Location: `IdcHomeDir/resources/core/templates/workflow.htm`

Additional Required Service Parameters

- aliases: The alias name.
- dAliasType: The assigned alias type. Values can be *alias* or *user*.
- dWfID: The workflow ID.
- dWfName: The workflow name.
- dWfStepID: The workflow contribution stage ID. This auto-generated value can be retrieved from the database table. The Oracle Content Server system automatically assigns dWfStepID for that contribution stage.

Example

```
IdcService=ADD_WORKFLOWALIASES
dWfName=mktg_review
dWfID=12
dAliasType=user
aliases=sammy
dWfStepID=26
```

5.4.5 ADD_WORKFLOWDOCUMENT

Service that adds a new content item to a Basic workflow. The content item specified by dDocName does not have to exist in the system.

This service is called from the Workflow Admin applet by creating a Basic workflow and clicking **New** in the Content section. This service executes the ADD_WORKFLOWDOCUMENT_SUB subservice.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dDocName: The Content ID of the content item.

Example

```
IdcService=ADD_WORKFLOWDOCUMENT
dWfName=mktg_review
dDocName=test1234
```

5.4.6 ADD_WORKFLOWDOCUMENT_SUB

Subservice called by ADD_WORKFLOWDOCUMENTS and ADD_WORKFLOWDOCUMENT to add a content item to the Basic workflow.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

5.4.7 ADD_WORKFLOWDOCUMENTS

Service that adds the selected content items to a Basic workflow. The list of items to add is specified in the dDocName parameter.

This service is called from the Workflow Admin applet by creating a Basic workflow and clicking **Select** in the Content section.

This service executes the subservice ADD_WORKFLOWDOCUMENT_SUB.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- `dWfName`: The workflow name.
- `dDocName`: The Content ID of the content items to be added. If multiple items are to be added, use a tab-separated list.

Example

```

IdcService=ADD_WORKFLOWDOCUMENTS
dWfName=marketing_review
dDocName=test_000035
dataSource=Documents
resultName=DOCUMENTS
dWfType=Basic
whereClause=dSubscriptionType='test'
dWfDirectory=public

```

5.4.8 ADD_WORKFLOWSTEP

Service that creates a new workflow step.

- These parameters can be executed in a browser environment using the Workflow Admin applet. For example, the `dWfStepName`, `dWfStepDescription`, and `dWfStepType` entries correspond to the Name entry, the Description field, and the Type drop-down list of the Workflow Admin applet Edit Step Reviewer screen.
- Setting `dWfStepWeight` to a numeric value is the same as entering a value in the field associated with the **At least this many reviewers** option for Workflow Steps in the Workflow Admin applet. If defined, the workflow passes to the next step as soon as the number of users specified in `dWfStepWeight` have approved the revision.
- Setting `dWfStepIsAll` to 1 (*true*) is the same as enabling the **All Reviewers** option for Workflow Steps in the Workflow Admin applet. If set to *true*, all users assigned to the step must approve the revision before the workflow passes to the next step.
- The most likely error is when the specified workflow does not exist or when the specified step is not unique.

Location: `IdcHomeDir/resources/core/templates/workflow.htm`

Additional Required Service Parameters

- `dWfName`: The workflow name.
- `dWfStepName`: The workflow step name.
- `dWfStepDescription`: The step description.
- `dWfStepType`: The workflow step type:
 - Reviewer: Approves or rejects the revision.
 - Reviewer/Contributor: Can edit the revision and approves or rejects it.
- `dWfStepIsAll`:
 - 1 (*true*): All users assigned to the step must approve the revision before the workflow passes to the next step.
 - 0 (*false*): The number of approvals required is specified by the `dWfStepWeight` parameter.

- **dWfStepWeight:** The number of reviewers that must approve the revision before the workflow passes to the next step.
 - If **dWfStepIsAll** is 1 (*true*), this parameter is ignored. If **dWfStepIsAll** is 0 (*false*), this parameter is enabled.
 - Setting this parameter to 0 (*zero*) notifies reviewers that the revision has reached the step, but reviewers will not be able to approve, reject, or edit the revision at that step. The workflow will pass to the next step automatically.

Optional Service Parameters

- **wfEntryScript:** The step entry script.
- **wfExitScript:** The step exit script.
- **wfUpdateScript:** The step update script.

Note: Scripts must be placed within `<$` and `>$` delimiters. For example: `<$if ConditionExpression$>`

5.4.9 CRITERIAWORKFLOW_DISABLE

Service that disables a Criteria workflow. The most likely error is when the specified workflow does not exist.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- **dWfName:** The workflow name.

Example

```
IdcService=CRITERIAWORKFLOW_DISABLE
dWfName=mktg_review
```

5.4.10 CRITERIAWORKFLOW_DISABLE_SUB

Service that disables a sub-workflow in a Criteria workflow.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

5.4.11 CRITERIAWORKFLOW_ENABLE

Service that enables a Criteria workflow. The most likely error is when the specified workflow does not exist.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

dWfName: The workflow name.

Example

```
IdcService=CRITERIAWORKFLOW_ENABLE
dWfName=mktg_review
```

5.4.12 DELETE_WFCONTRIBUTORS

Service used to delete the users and aliases from the first step (the contribution step) of a Basic workflow. The most likely errors are mismatched parameters or when the specified workflow or alias does not exist.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- **aliases:** The aliases and users to be deleted from the Basic workflow. If multiple aliases are to be deleted, use a tab-separated list.
- **dWfName:** The workflow name.
- **dWfStepID:** The workflow contribution step ID. This auto-generated value can be retrieved from the database table.

Example

```
IdcService=DELETE_WFCONTRIBUTORS
dWfName=mktg_review
dWfStepID=26
aliases=user20
```

5.4.13 DELETE_WORKFLOW

Service that deletes an existing Basic workflow. The most likely error is when the specified workflow does not exist.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- **dWfName:** The workflow name.

Example

```
IdcService=DELETE_WORKFLOW
dWfName=mktg_review
```

5.4.14 DELETE_WORKFLOW_SCRIPT

Service that deletes a workflow script.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- **wfScriptName:** Name of the script template to be used.
- **wfScriptDescription:** Description used for the script.

5.4.15 DELETE_WORKFLOW_TOKEN

Service that deletes a workflow token.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- **wfTokenName:** Name of the token to be deleted.

5.4.16 DELETE_WORKFLOWCRITERIA

Service that deletes an existing Criteria workflow. If the workflow is active the user is prompted that this action will cause all content items in this workflow to exit the workflow. The most likely error is when the specified workflow does not exist.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- *dWfName*: The workflow name.

Example

```
IdcService=DELETE_WORKFLOWCRITERIA
dWfName=mktg_review
```

5.4.17 DELETE_WORKFLOWDOCUMENTS

Service that deletes content items from a Basic workflow. This service is executed by the Workflow Admin applet.

The most likely error is when the specified workflow does not exist.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- *dWfName*: The Basic workflow name.
- *docNames*: The content item names of the documents to be deleted. If multiple items are to be deleted, use a tab-separated list.

Note: It is recommended that you include both the *docNames* parameter and the *dDocName* parameter, as both parameters are used in the execution of this service.

Example

The following is an example DELETE_WORKFLOWDOCUMENTS service call:

```
@Properties LocalData
IdcService=DELETE_WORKFLOWDOCUMENTS
dWfName=w3
docNames=rr
dDocName=rr
@end
```

The following is an example of the results that would be returned:

Content-type: text/plain

Content-Length: 931

```
<?hda version="6.3 dev (build-date)" jcharset=Cp1252 encoding=iso-8859-1?>
```

```
@Properties LocalData
dUser=sysadmin
blFieldTypes=xThreadParentDocName bigtext,xCollectionID int,xMailType
text,xZoomLevel int,dCompletionDate date,xTargetCompression int,xTemplateType
text,xEmailFrom bigtext,xEmailCC memo,dMessage message2,xHidden text,
xClbraAliasList memo,xWebsiteID int,StatusMessage message,xComments memo,
```

```

@end
```

5.4.18 DELETE_WORKFLOWSTEP

Service that deletes a specified step from a workflow. This service is used from the Workflow applet. The user selects a step and clicks the **Delete Step** button. If this service is run outside the applet, then the controlling application must specify the workflow step. The step ID and name is stored in the database as part of the workflow design information and can be retrieved from there for use.

The most likely error is when the specified workflow or workflow step does not exist or if the workflow is active.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dWfStepName: The workflow step name.
- dWfStepID: The workflow contribution stage ID.

Example

```
IdcService=DELETE_WORKFLOWSTEP
dWfName=c2
dWfStepID=12
dWfStepName=edit
```

5.4.19 EDIT_WORKFLOW

Service that modifies an existing workflow. This service is executed by the Workflow Admin applet. The most likely error is a workflow name that does not exist or a user failing the security check.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dSecurityGroup: The security group such as *Public* or *Secure*.

Optional Service Parameters

- `dWfCriteriaName`: The workflow criteria name.
- `dWfCriteriaOperator`: The workflow criteria operator such as *Matches, Starts, Ends*.
- `dWfCriteriaValue`: The workflow criteria value.
- `dWfDescription`: The workflow description.
- `dWfType`: The workflow type such as *Basic* or *Criteria*.

Example

- IdcCommand command file format:

```
IdcService=EDIT_WORKFLOW
dWfName=c2
dSecurityGroup=Public
```

- HDA format with optional parameters:

```
@Properties LocalData
IdcService=EDIT_WORKFLOW
dWfName=test_workflow
dSecurityGroup=Public
dWfType=Criteria
dWfCriteriaName=dDocAuthor
dWfCriteriaOperator=matches
dWfCriteriaValue=sysadmin
dWfDescription=testing workflow
@end
```

5.4.20 EDIT_WORKFLOW_SCRIPT

Service used to edit a workflow script.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- `wfScriptName`: Name of the script template to be used.
- `wfScriptDescription`: Description used for the script.

5.4.21 EDIT_WORKFLOW_TOKEN

Service used to edit a workflow token.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- `wfTokenName`: Name of the token to be edited.

5.4.22 EDIT_WORKFLOWCRITERIA

Service that modifies the criteria for an existing Criteria workflow. Editing the criteria may include changing the workflow to a project or collaboration workflow, or changing the metadata conditions that a content item must meet to enter the workflow.

Two types of Criteria workflows exist: *criteria*, which is a workflow that requires a metadata condition and *subworkflow*, which does not have a metadata condition.

Because of the two types of workflows, `dWfType` is a required parameter to designate which type of Criteria workflow is to be used.

This service is executed by the Workflow Admin applet. The most likely error is a workflow name that does not exist or a user failing the security check.

Service Class: Workflow Service

Location: `IdcHomeDir/resources/core/templates/workflow.htm`

Additional Required Service Parameters

- `dWfName`: The workflow name.
- `dSecurityGroup`: The security group such as *Public* or *Secure*.
- `dWfType`: The workflow type.
- `dWfCriteriaName`: The workflow criteria name.
- `dWfCriteriaOperator`: The workflow criteria operator such as *Matches*, *Starts*, *Ends*.
- `dWfCriteriaValue`: The workflow criteria value.

Optional Service Parameters

- `dWfDescription`: The workflow description.

Example

```
IdcService=EDIT_WORKFLOWCRITERIA
dWfName=c2
dSecurityGroup=Public
dWfType=Criteria
dWfCriteriaName=dDocType
dWfCriteriaOperator=matches
dWfCriteriaValue=ADACCT
```

5.4.23 EDIT_WORKFLOWSTEP

Service that modifies an existing workflow step.

These parameters can be executed in a browser environment using the Workflow Admin applet. For example, the `dWfStepName`, `dWfStepDescription`, and `dWfStepType` entries correspond to the Name entry, the Description field, and the Type drop-down list of the Workflow Admin applet Edit Step Reviewer screen.

Setting `dWfStepWeight` to a numeric value is the same as entering a value in the field associated with the **At least this many reviewers** option for Workflow Steps in the Workflow Admin applet. If defined, the workflow passes to the next step as soon as the number of users specified in `dWfStepWeight` have approved the revision.

Setting `dWfStepIsAll` to 1 (*true*) is the same as enabling the **All Reviewers** option for Workflow Steps in the Workflow Admin applet. If set to *true*, all users assigned to the step must approve the revision before the workflow passes to the next step.

Location: `IdcHomeDir/resources/core/templates/workflow.htm`

Additional Required Service Parameters

- `dWfName`: The workflow name.
- `dWfStepName`: The workflow step name.

- **dAliases:** A tab-delimited list of aliases and users to be used for the step. The format for this parameter is *(alias/user) \t (alias/user type) \t (alias/user) \t (alias/user type)*.
- **dWfStepDescription:** The step description.
- **dWfStepType:** The workflow step type:
 - Reviewer: Approves or rejects the revision.
 - Reviewer/Contributor: Can edit the revision and approves or rejects it.
- **dWfStepIsAll:**
 - 1 (*true*): All users assigned to the step must approve the revision before the workflow passes to the next step.
 - 0 (*false*): The number of approvals required is specified by the **dWfStepWeight** parameter.
- **dWfStepWeight:** The number of reviewers that must approve the revision before the workflow passes to the next step.
 - If **dWfStepIsAll** is 1 (*true*), this parameter is ignored. If **dWfStepIsAll** is 0 (*false*), this parameter is enabled.
 - Setting this parameter to 0 (*zero*) notifies reviewers that the revision has reached the step, but reviewers will not be able to approve, reject, or edit the revision at that step. The workflow will pass to the next step automatically.

Optional Service Parameters

- **wfEntryScript:** The step entry script.
- **wfExitScript:** The step exit script.
- **wfUpdateScript:** The step update script.

Note: Scripts must be placed within `<$` and `>$` delimiters. For example, `<$if ConditionExpression$>`.

Example

Note in the following example, the convention `\t` denotes a tab separator.

```
IdcService=EDIT_WORKFLOWSTEP
dWfName=test_workflow
dWfStepName=edit
dWfStepType=Reviewer/Contributor
dWfStepDescription=copy edit step
dAliases=AllUsers\taliases\tsysadmin\tuser
dWfStepIsAll=0
dWfStepWeight=2
wfEntryScript=
wfExitScript=
wfUpdateScript=
```

5.4.24 GET_ACTIVE_WORKFLOWS

Service that returns the Active Workflows page where a user can select a workflow and view all documents in a workflow.

Access Level: Read, Global, Scriptable (49)

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Results

- Result Sets:
 - StdWorkflows (dWfName, dWfID, dWfDescription, dCompletionDate, dSecurityGroup, dWfStatus, dWfType, dIsCollaboration)
 - ClbraWorkflows (same fields as StdWorkflows)
 - ClbraAccessList (dClbraName, userList, aliasList)
- Response Template: WORKFLOW_LIST (workflow_list.htm)

Used By

- Resource Includes:
 - pne_nav_management_links
 - std_doc_man_pages
- Templates:
 - WORKFLOW_REJECT_FORM (reject_doc.htm)
 - ALL_WORKFLOW_DOCS (workflow_all_docs_list.htm)
 - WORKFLOW_DOCS (workflow_docs_list.htm)
 - WORKFLOW_INFO (workflow_info.htm)
 - WF_INQUEUE_LIST (workflow_queue.htm)
 - WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
- Standard Navigation: commonNav.js

5.4.25 GET_ALL_WORKFLOWDOCREVISIONS

Service that returns a result set of documents in a workflow and their revision information.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

5.4.26 GET_CRITERIA_WORKFLOWS_FOR_GROUP

Service used by the Workflow applet that returns workflows for a specified security group. It returns the step information for the returned workflows. The most likely error is a security group that does not exist or a user failing the security check.

Returns the WorkflowsForGroup and WorkflowStepsForGroup result sets:

- WorkflowsForGroup lists all of the workflows for this group (dWfID, dWfName).
- WorkflowStepsForGroup lists all of the steps in all of the workflows for this group (dWfID, dWfName, dWfStepID, dWfStepName).
- Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- `dSecurityGroup`: The security group such as *Public* or *Secure*.

Example

- IdcCommand command file format:

```
# Retrieves criteria workflow information
IdcService=GET_CRITERIA_WORKFLOWS_FOR_GROUP
dSecurityGroup=Public
```
- HDA format:

```
@Properties LocalData
IdcService=GET_CRITERIA_WORKFLOWS_FOR_GROUP
dSecurityGroup=Public
@end
```

5.4.27 GET_WF_COMPANION_INFO

Returns the companion information file for a document in a workflow.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- `dDocName`: The name of the document in the workflow.
- `dWfName`: The workflow name.

5.4.28 GET_WORKFLOW

Service that returns information about a specific workflow. The most likely error is a workflow name that does not exist.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- `dWfName`: The workflow name.

Example

```
IdcService=GET_WORKFLOW
dWfName=mktg_review
```

5.4.29 GET_WORKFLOW_INFO

Service that returns workflow step information for a content item. This service is executed in a browser interface by selecting Active Workflows from PNE links, clicking on the workflow name, and then clicking the link for step name.

The most likely error is a content item or workflow name that does not exist.

Access Level: Read, Global, Scriptable (49)

Queries Executed: `QdocInfo`, `QworkflowDocument`, `QworkflowForID`, `QwfDocState`, `QworkflowSteps`

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dID: The generated content item revision ID.
- dWfStepID: The workflow contribution stage ID. This auto-generated value can be retrieved from the database table.

Results

- Result Sets:
 - WorkflowSteps (All fields from all rows of WorkflowSteps DB table for specified workflow)
 - WorkflowStep (All WorkflowSteps fields for current step plus dUsers and dHasTokens fields)
 - DOC_INFO (All fields from Revisions and DocMeta for the specified revision)
 - WorkflowInfo (All fields from Workflows DB table for specified workflow)
 - WorkflowState (dUserName field only from WorkflowState DB table for specified content item)
 - WorkflowActionHistory (Result set from corresponding HDA file in data\workflow\states directory)
- Local Data:
 - AuthorAddress
 - dID
 - dUser
 - dWfCurrentStepID
 - dWfName
 - dWfStepID
 - RemainingStepUsers
- Response Template: WORKFLOW_INFO (workflow_info.htm)

Used By

- Resource Includes: clbra_wf_doc_list

Example

```
IdcService=GET_WORKFLOW_INFO  
dID=61  
dWfStepID=19
```

5.4.30 GET_WORKFLOW_INFO_BYNAME

Service used to retrieve information about a workflow based on the name of a document in the workflow. It returns the Workflow Information page for a content item, which lists the history of the document, what steps remain in the workflow, and who is currently reviewing the workflow.

Access Level: Read, Global, Scriptable (49)

Queries Executed:

- QdocNameMeta
- QworkflowDocument
- QworkflowForID
- QwfDocState
- QworkflowSteps

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dDocName: The name of a document in an active workflow.

Results

- Result Sets:
 - WorkflowSteps (All fields from all rows of WorkflowSteps DB table for specified workflow)
 - WorkflowStep (All WorkflowSteps fields for current step plus dUsers and dHasTokens fields)
 - DOC_INFO (All fields from Revisions and DocMeta for the specified content item)
 - WorkflowInfo (All fields from Workflows DB table for specified workflow)
 - WorkflowState (dUserName field only from WorkflowState DB table for specified content item)
 - WorkflowActionHistory (Result set from corresponding HDA file in data\workflow\states directory)
- Local Data:
 - AuthorAddress
 - dUser
 - dWfName
 - dWfStepID
 - RemainingStepUsers
- Response Template: WORKFLOW_INFO (workflow_info.htm)

Used By

- Resource Includes:
 - setup_workflow_action_popups
 - wf_in_queue_display
 - workflow_action_popup
- Templates:
 - WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
 - WORKFLOW_REVIEW_FRAMES (workflow_review_frames.htm)
- Other: SoapCustom:Wsdl:Workflow:Services

5.4.31 GET_WORKFLOW_SCRIPT

Service used to retrieve a workflow script.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- wfScriptName: Name of the script template to be used.
- wfScriptDescription: Description used for the script.

5.4.32 GET_WORKFLOWDOCREVISIONS

Service that returns a list of content item revisions that are in a specific workflow. This service is run in the browser environment by selecting **Active Workflows** in PNE links and clicking on the workflow name.

The most likely error is a workflow name that does not exist.

Access Level: Read, Global, Scriptable (49)

Queries Executed:

- Qworkflow
- QwfStates
- QworkflowDocuments
- QworkflowSteps

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.

Results

- Result Sets:
 - WorkflowSteps (All fields from all rows of WorkflowSteps DB table for specified workflow plus the additional fields, dUsers and dHasTokens)
 - WfDocuments (Rows correspond to each content item belonging to the specified workflow; each row contains all fields from WorkflowDocuments, Revisions, and DocMeta DB tables)
 - WorkflowStates (All fields from the WorkflowStates DB table for the specified workflow)
 - WF_INFO (All fields from the Workflows DB table for the specified workflow)
- Local Data:
 - dUser
 - dWfName
 - isCollaboration
- Response Template:
 - WORKFLOW_DOCS (workflow_docs_list.htm)

Used By

- Resource Includes:
 - checkin_multiuploadapplet_processing_functions
 - setup_active_standard_workflows_table_row
 - legacy_active_collaboration_workflows_table
 - legacy_active_standard_workflows_table
 - wf_in_queue_display
 - workflow_action_popup
 - workflow_revisions_href
- Templates:
 - CONTRIBUTOR_MAIL (contributor_mail.htm)
 - PROJECT_INFO (project_info.htm)
 - WF_REJECT_MAIL (reject_mail.htm)
 - WORKFLOW_INFO (workflow_info.htm)
 - WORKFLOW_REJECT_FORM (reject_doc.htm)
 - WORKFLOW_REVIEW_FORM (workflow_review_form.htm)
- Other: SoapCustom:Wsd:Workflow:Services
 - Redirect service for: WORKFLOW_APPROVE, WORKFLOW_EDIT_APPROVE, WORKFLOW_REJECT, WORKFLOW_CHECKIN

Example

```
IdcService=GET_WORKFLOW
dWfName=mktg_review
```

5.4.33 GET_WORKFLOWS

Service that retrieves a list of all workflows including their description, security group, status, and type.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

5.4.34 TEST_WORKFLOW_SCRIPT

Service used to check the validity of a workflow script.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- wfScriptName: Name of the script template to be used.
- wfScriptDescription: Description used for the script.
- dDocName: Content item to be used in the test scenario.

5.4.35 WORKFLOW_APPROVE

Service that approves a content item revision in a workflow.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- **dID**: The generated content item revision ID.

Example

```
IdcService=WORKFLOW_APPROVE  
dID=81
```

5.4.36 WORKFLOW_CANCEL

Service that cancels a Basic workflow.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- **dWfName**: The workflow name.

Example

```
IdcService=WORKFLOW_CANCEL  
dWfName=mktg_review
```

5.4.37 WORKFLOW_CHECKIN

Service that checks in a new revision of a content item that is in a workflow. The most likely error is when the specified content item or workflow does not exist.

This service executes the subservice WORKFLOW_CHECKIN_SUB. This subservice checks a content item revision into a workflow.

Access Level: Read (1)

Queries Executed: QdocInfo, Qrevisions

Calls Subservice: WORKFLOW_CHECKIN_SUB

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- **dDocName**: The content item identifier (Content ID).
- **dID**: The generated content item revision ID.
- **dSecurityGroup**: The security group such as *Public* or *Secure*.
- **dDocAccount**: The account for the content item. Required only if accounts are enabled.
- **primaryFile**: The absolute path to the location of the file as seen from the Oracle Content Server instance. Use the slash as the file separator.

A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery will convert the alternate file. Otherwise, the primary file will be converted.

- If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist though for each content item (a primary AND alternate metafile cannot coexist).
- If both a primary and alternate file is specified, their extensions must be different.

Optional Service Parameters

- isFinished: Indicates that the editing is finished for a rejected content item.
 - 1 (*true*): The revision will be checked in and approved. |
 - 0 (*false*): The revision will be checked in but will still need to be approved.
- doFileCopy:
 - 1 (*true*): The file will not be deleted from the hard drive after checkin.
 - 0 (*false*): The file will be removed from your hard drive after checkin.
- alternateFile
- RedirectUrl

Results

- Local Data:
 - Oracle Content Server:
 - alternateFile
 - changedSubjects
 - CurRevID
 - dAction
 - dActionDate
 - dCheckoutUser
 - dClbraName
 - dConversion
 - dCreateDate
 - dDocAccount
 - dDocAuthor
 - dDocID
 - dDocName
 - dDocTitle
 - dDocType
 - dExtension
 - dFileSize
 - dFormat
 - dID
 - dInDate
 - dIsPrimary

- dIsWebFormat
- dIsCheckedOut
- doFileCopy
- dLocation

- dOutDate
- dpAction
- dpEvent
- dProcessingState
- dPublishState
- dPublishType
- dRawDocID
- dReleaseState
- dRevClassID
- dRevisionID
- dRevLabel
- dRevRank
- dSecurityGroup
- dStatus
- dUser
- dUserName
- isCheckin
- isCurRevEmpty
- isDocProfileUsed
- isEditMode
- isInfoOnly
- isNew
- IsNotLatestRev
- isStatusChanged
- IsUpdate
- IsWorkflow
- latestID
- oldName
- prevID
- prevReleaseState
- primaryFile

- VaultfilePath
- WebfilePath
- Workflow:
 - * dWfComputed
 - * dWfCurrentStepID
 - * dWfDirectory
 - * dWfDocState
 - * dWfEntry
 - * dWfID
 - * dWfName
 - * dWfStatus
 - * dWfStepID
 - * dWfStepDescription
 - * dWfStepIsAll
 - * dWfStepName
 - * dWfStepType
 - * dWfStepWeight
 - * dWfType
 - * dWorkflowState
 - * entryCount
 - * wfAction
 - * wfCurrentStepPrefix
 - * WfEditFinished
 - * wfMessage
 - * wfStepCheckinType
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service (branched): GET_WORKFLOWDOCREVISIONS or GET_PORTAL_PAGE (Page=WF_INQUEUE_LIST)

Example

```
IdcService=WORKFLOW_CHECKIN
dID=92
dDocName=test_00063
dWfID=4
dSecurityGroup=Public
dDocAccount=mainaccount
dWfType=Criteria
```

```
dWfName=mktg_review
primaryFile=c:/hello_hello.txt
dRevLabel=2
doFileCopy=1
isFinished=1
```

5.4.38 WORKFLOW_EDIT_APPROVE

Service used for client applications (that is, not used by the core Oracle Content Server software) which need the ability to approve a document without passing through a checkin/checkout process.

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

5.4.39 WORKFLOW_REJECT

Service that rejects a content item revision in a workflow.

The system administrator cannot approve or reject a content item in a workflow unless they are defined as a reviewer for the current step. Therefore, if you run this service in *IdcCommand* as the user *sysadmin*, you cannot reject the content item unless *sysadmin* is defined as a reviewer.

Access Level: Read (1)

Queries Executed:

- QdocInfo
- IworkflowDocHistory
- UrevisionStatus
- UworkflowDocStep
- UrevisionStatus
- DworkflowDocState
- QwfDocInformation

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- *dID*: The generated content item revision ID.
- *wfRejectMessage*: The rejection message.

Optional Service Parameters

- *RedirectUrl*

Results

- Local Data:
 - Oracle Content Server:
 - * *changedSubjects*
 - * *dActionDate*
 - * *dClbraName*
 - * *dDocAuthor*

- * dDocName
- * dDocTitle
- * dExtension
- * dID
- * dPublishState
- * dReleaseState
- * dRevClassID
- * dStatus
- * dUser
- * isCurRevEmpty
- * IsWorkflow
- * prevReleaseState
- Workflow:
 - * dAction
 - * dOriginalName
 - * dWfCompute
 - * dWfCurrentStepID
 - * dWfDirectory
 - * dWfDocState
 - * dWfID
 - * dWfName
 - * dWfStatus
 - * dWfStepDescription
 - * dWfStepID
 - * dWfStepIsAll
 - * dWfStepName
 - * dWfStepType
 - * dWfStepWeight
 - * dWfType
 - * dWorkflowState
 - * entryCount
 - * wfAction
 - * wfCurrentStepPrefix
 - * WfEditFinished
 - * wfMailSubject
 - * wfMailTemplate
 - * wfMessage

- * wfRejectMessage
- * wfStepCheckinType
- * wfUsers
- Response Template:
 - REDIRECT_TEMPLATE (redirect_template.htm)
 - Default redirect service (branched): GET_WORKFLOWDOCREVISIONS or GET_PORTAL_PAGE (Page=WF_INQUEUE_LIST)

References

- Applets: Repostory Manager
- Templates: WORKFLOW_REJECT_FORM (reject_doc.htm)
- Other: SoapCustomer:Wsd:Workflow:Services

Example

```
IdcService=WORKFLOW_REJECT  
dID=95  
wfRejectMessage=Please Revise
```

5.4.40 WORKFLOW_START

Service Class: Workflow Service

Location: *IdcHomeDir*/resources/core/templates/workflow.htm

Additional Required Service Parameters

- dWfName: The workflow name.
- dSecurityGroup: The security group, such as *Public* or *Secure*.

Optional Service Parameters

- wfMessage: The message that will be included in the Workflow Started notification e-mail.

Example

```
IdcService=WORKFLOW_START  
dWfName=mktg_review  
dSecurityGroup=Public  
wfMessage=Please check in this content item
```

Archive Services

The following sections describe the services available when using and customizing Oracle Content Server archives. The location for specific archive services are listed within each individual service.

- [Section 6.1, "About Archive Services"](#)
- [Section 6.2, "Archive Services"](#)

6.1 About Archive Services

Note: The most commonly used services have more extensive descriptions.

A typical service entry is similar to the following:

```
GET_ARCHIVED_FILE
FileService 34 null null !csUnableToDownloadFile
3:computeDocID::0:!csUnableToDownload(dDocName)
5:QarchivedDoc:FILE_DOC_INFO:2:!csItemNoLongerInHistory
3:checkSecurity:FILE_DOC_INFO:0:!csUnableToDownload(dDocName)
3:createArchiveFileName::0:null
```

In this example:

- The first line indicates the service name: GET_ARCHIVED_FILE.
- The second line lists the service's attributes:
 - Service class: FileService. When using the Archiver, this is frequently ArchiveService.
 - Access level: 34, indicating this is Scriptable and Writeable.
 - Template: null
 - Service type: null
 - Subjects Notified: null
 - Error message and parameter used for error message: Unable to Download File
- The remainder of the entry lists the service's actions, each line designating one action:

- action type: for example, 5, indicating a Select Cache Query, which specifies a query to retrieve information from the database and store it for later use. This example also shows a type of 3, indicating a Java method.
- action name: for example, QarchivedDoc or computeDocID
- action parameters: for example, FILE_DOC_INFO. If no parameters are specified, double colons (: :) are included.
- action control mask: for example, 0, indicating 'Ignore error' or 2, indicating 'Must exist (at least one record must be returned by the query). If no control mask is specified, double colons (: :) or 0 are included.
- action error message, such as Item No Longer In History, or null if no message is available.

Each element of a service action is separated by a colon (:).

Important: All services have at least one required parameter. The IdcService parameter takes the name of the service as its argument. If other parameters are required, they are noted in the description of the service.

For details about a service's attributes and actions, see [Section 3, "Customizing Services."](#)

Important: Most archive services use the underlying method used by [EDIT_ARCHIVEDATA](#) and consequently require the EditItems parameter set to the appropriate value. The user interface usually controls what is put into this parameter. If necessary, the user should exercise archive services through the user interface with Filter Debug flags enabled to determine how the values should be set. By using the Filter Debug flags, the request as it is sent to the server can be captured.

6.2 Archive Services

Unless noted otherwise, all services listed here are the ArchiveService Service Class. Frequently used services are marked with an asterisk (*) in the following list.

The following services are described in this section:

- [ADD_ARCHIVE](#)
- [ADD_COLLECTION](#)
- [ADD_PROXIEDCOLLECTION](#)
- [CANCEL_ARCHIVE](#)
- [*CHECKIN_ARCHIVE](#)
- [COPY_ARCHIVE](#)
- [DELETE_ARCHIVE](#)
- [DELETE_BATCH_FILE](#)
- [DELETE_BATCH_FILE_DOCUMENTS](#)
- [DELETE_BATCH_FILE_TABLES](#)

- EDIT_ARCHIVE
- EDIT_ARCHIVEDATA
- EDIT_EXPORTERS
- EDIT_TRANSFEROPTIONS
- EXECUTE_BATCH
- EXPORT_ARCHIVE
- GET_ARCHIVECOLLECTIONS
- GET_ARCHIVETABLECONTENT
- GET_ARCHIVED_FILE
- GET_ARCHIVES
- GET_ARCHIVERELATIONQUERY
- GET_BATCH_FILE_DOCUMENTS
- GET_BATCH_PROPERTIES
- GET_BATCH_SCHEMA
- GET_BATCH_VALUES
- GET_BATCHFILES
- GET_PROXIED_ARCHIVECOLLECTIONS
- GET_PROXIEDSERVERS
- GET_REPLICATION_DATA
- GET_TABLECOLUMNLIST
- GET_TARGET_INFO
- GET_TARGET_TRANSFER_STATUS
- GET_TRANSFER_SOURCE_INFO
- IMPORT_ARCHIVE
- IMPORT_ARCHIVE_START_AUTOMATED
- IMPORT_BATCHFILE
- IMPORT_DOCUMENT
- IMPORT_TABLE_ENTRY
- INSERT_NATIVE
- INSERT_NEW
- REGISTER_IMPORTER
- REMOVE_COLLECTION
- REMOVE_EXPORTER
- REMOVE_IMPORTER
- REMOVE_PROXIEDTRANSFER
- REMOVE_QUEUED_IMPORT
- REMOVE_TRANSFER

- [REQUEST_TRANSFER](#)
- [TRANSFER_ARCHIVE](#)
- [UPDATE_TARGET_TOTALS](#)
- [UPDATE_TRANSFER_STATUS](#)
- [UPLOAD_ARCHIVE_TRANSFER](#)

6.2.1 ADD_ARCHIVE

Service that adds an archive to an archive collection. The most likely errors are mismatched parameters or when an archive name is not unique.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name**: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName**: The archive name.
- **aArchiveDescription**: The menu label for the Oracle Content Server instance (used on the interface). For example, *Master_on_server01*.

Example

To add an archive to a master Oracle Content Server instance, the required parameters will be:

```
IdcService=ADD_ARCHIVE
IDC_Name=Master_on_server01
aArchiveName=archive_test
aArchiveDescription=this is an archive test
```

6.2.2 ADD_COLLECTION

Service that creates a new archive collection. The most likely error is an instance menu label that is not unique.

Caution: Using duplicate *IDC_Name* collection names will cause data corruption. The Archiver cannot be used to move or copy data between two collections that share the same *IDC_Name*. To do so will corrupt the data on the target system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name**: The name of the collection.
- **aCollectionLocation**: The absolute path to the collection location. Use the slash as the file separator.
- **aVaultDir**: The absolute path to the *vault* directory. Use the slash as the file separator.
- **aWeblayoutDir**: The absolute path to the *weblayout* directory. Use the slash as the file separator.

Example

```

IdcService=ADD_COLLECTION
IDC_Name=new_collection
aCollectionLocation=c:/oracle/archives
aVaultDir=c:/oracle/value
aWeblayoutDir=c:/oracle/weblayout

```

6.2.3 ADD_PROXIEDCOLLECTION

Service used to add an archive collection from another server.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- psIDC_Name: The name of the provider (proxied connection).
- IDC_Name: The name of the archive collection.

6.2.4 CANCEL_ARCHIVE

Service that cancels the current archive request.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

6.2.5 CHECKIN_ARCHIVE

Service that checks a content item revision into an archive.

Access Level: Admin (8)

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

- This service executes one of the following subservices, based on parameters and conditional variables:
 - DELETE_BYREV: If the Action parameter is *Delete* and the content item revision exists in the system.
 - DELETE_BYCLASS: If the Action parameter is *Delete* and the content item revision does not exist in the system.
 - CHECKIN_NEW_SUB: If the content item does not exist in the system, the Action parameter is not *Delete*, and the conditional variable *IsPublish* is set to *true*.
 - INSERT_NEW: If the content item does not exist in the system, the Action parameter is not *Delete*, and the conditional variable *IsPublish* is set to *false* or not specified.
 - UPDATE_DOCINFO_BYREV: If the Action parameter is not *Delete* and the *primaryFile* parameter is not empty. Additionally, the conditional variable *IsPublish* must be *true* or the content item revision must exist in the system.
 - UPDATE_BYREV: If the Action parameter is not *Delete* and the *primaryFile* parameter is empty. Additionally, the conditional variable *IsPublish* must be *true* or the content item revision must exist in the system.

Important: The *IsPublish* variable is set by the server when a workflow or project is unregistered. This value cannot be set as a parameter or as a configuration entry in this service.

- If the `IsNative` parameter is *true*, the service executes one of the following subservices:
 - `DELETE_BYREV`: If the content item exists in the Revisions table and Action parameter is *Delete*.
 - `UPDATE_BYREV`: If the content item exists in the Revisions table, the content has not been deleted, and the Action parameter is *Update*.
 - `INSERT_NATIVE`: If the content item does not exist in the server and the action parameter is not *Delete*.
- If a content item already exists in the system and has not been deleted, the server cannot update or insert the entry; an error will be thrown.
- The most likely error is when the content item name is not unique or when the service is unable to check in the specified file.
- A primary file is required. If you do not want to check in a primary file and want to check in only metadata, an additional parameter must be included and a configuration entry added in the Oracle Content Server instance.
- Required additional parameter (metadata checkin):
`createPrimaryMetaFile=true`
- Required Oracle Content Server configuration entry (metadata checkin):
`AllowPrimaryMetaFile=true`
Example:
`IdcService=CHECKIN_ARCHIVE`
`Action=insert`
`dDocTitle=my_test`
`dDocAuthor=sysadmin`
`dDocType=ADACCT`
`dSecurityGroup=Public`
`createPrimaryMetaFile=true`

Additional Required Service Parameters

- `Action`: Must be set to a value as specified earlier.
- `dDocName`: The Content ID for the content item.
 - If Content ID auto generation is enabled, this parameter is not required. If `dDocName` is defined, it will override the auto generated Content ID.
 - The Content ID cannot contain spaces or invalid characters
`;/ \?:@&=+"#%<>*~|[]`.
- `dDocAuthor`: The content item author (contributor).
- `dDocTitle`: The content item title.
- `dSecurityGroup`: The security group such as *Public* or *Secure*.
- `dDocAccount`: The account for the content item. Required only if accounts are enabled.

- **primaryFile:** The absolute path to the location of the file as seen from the server. Use the slash as the file separator.

A primary file must be specified unless checking in metadata only. If an alternate file is specified with the primary file, the content refinery will convert the alternate file. Otherwise, the primary file will be converted.

 - If a primary file is not specified, you can use a metafile in its place. Only one metafile can exist though for each content item (a primary AND alternate meta file cannot coexist).
 - If both a primary and alternate file is specified, their extensions must be different.
 - **doFileCopy:** 1 (*true*): The file will not be deleted from the hard drive after checkin. 0 (*false*): The file will be removed from your hard drive after checkin.
- **Required custom fields:** Custom metadata fields that are required must also be specified.

Optional Service Parameters

- **alternateFile:** The alternate file for conversion.
 - Only one metafile can exist though for each content item (a primary AND alternate meta file cannot coexist.)
 - If an alternate file is specified with the primary file, the content refinery will convert the alternate file. Otherwise, the primary file will be converted.
- **dCreateDate:** The date the content item was created. By default, this is the current date.
- **dRevLabel:** The revision label for the content item. If set, the label will be used to locate the specified revision.
- **doDocSecurityCheck:** Enables the document security check. By default this entry is *false*.
- **dPublishState:** The publish state. If the content item exists in the system, this parameter must be empty.
- **dReleaseState:** The release state (used to indicate the web state of the revision).
- **IsNative:** This is a configuration entry but can be specified as a parameter.
 - If the IsNative parameter is *true* and the content item exists in the system, the specified Content ID (dDocName) must coincide with the content name in the database. Otherwise, the command is not native and the service will be determined as if the IsNative parameter is *false*.
 - If the IsNative parameter is *true* and the Action parameter is *Delete*, the content item must exist in the system. Otherwise, the command is not native and the service will be determined as if the IsNative parameter is *false*.
- **webViewableFile:** If the content is marked as web-viewable the file format is determined by the parameter **webViewableFile:format** and the extension is determined by the parameter **dWebExtension**. Otherwise, the extension and file format are determined by the parameters **dExtension** and **dFormat**, respectively. The user can override the file format and extension by overriding these parameters.
- **Optional custom fields:** Custom metadata fields that are not required can also be specified.

Results

- Local Data:
 - Action
 - dRevClassID
 - dRevisionID,
 - dRendition2
 - dRendition1
 - dDocAuthor
 - DocExists
 - isCheckin
 - StatusMessage
 - primaryFile
 - dStatus
 - dRevLabel
 - dWorkflowState
 - dDocTitle
 - StatusCode
 - dpEvent
 - isNew
 - dUser
 - isEditMode
 - dDocName

Used By

- Applets: Batch Loader

Example

```
IdcService=CHECKIN_ARCHIVE  
Action=insert  
dDocAuthor=user1  
dDocName=test  
dDocTitle=new content  
dSecurityGroup=Public  
primaryFile=c:/test.txt  
doFileCopy=true
```

6.2.6 COPY_ARCHIVE

Service that copies an archive into a collection.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `IdcService`: Must be set to `COPY_ARCHIVE`.
- `InstanceMenuLabel`: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.

Example

```
IdcService=COPY_ARCHIVE
InstanceMenuLabel=Master_on_server01
```

6.2.7 DELETE_ARCHIVE

Service that deletes an existing archive from a collection. The most likely error is when the specified archive does not exist on the system.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `IdcService`: Must be set to `DELETE_ARCHIVE`.
- `IDC_Name`: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- `aArchiveName`: The archive name.

Example

```
IdcService=DELETE_ARCHIVE
IDC_Name=Master_on_server01
aArchiveName=archive_test
```

6.2.8 DELETE_BATCH_FILE

Service that deletes a batch file from an archive.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `IDC_Name`: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- `aArchiveName`: The archive name.
- `aBatchFile`: The batch file subdirectory and HDA file name.

Example

```
IdcService=DELETE_BATCH_FILE
IDC_Name=Master_on_server01
aArchiveName=archive_test
aBatchFile=02-jan-16_12.02.06_184/0216120206~1.hda
```

6.2.9 DELETE_BATCH_FILE_DOCUMENTS

Service used during batch file editing. It is available when using the **Archiver/General/View Batch Files/Edit** dialog. Using this dialog, a user can delete selected entries in a batch file.

When the user finishes editing and clicks **OK**, the changes are sent to the server. The delete actions performed during the dialog operation are handled by this service.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- **IDC_Name**: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName**: The archive name.
- **aBatchFile**: The batch file subdirectory and HDA file name.
- **DeletedRows**: A resultset which contains the items to delete.

Example

```
IdcService=DELETE_BATCH_FILE_DOCUMENTS
IDC_Name=Master_on_server01
aArchiveName=archive_test
aBatchFile=02-jan-16_16.53.02_289/0216165302~1.hda
```

6.2.10 DELETE_BATCH_FILE_TABLES

Service similar to DELETE_BATCH_FILE_DOCUMENTS except it is used on exported table data.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- **IDC_Name**: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName**: The archive name.

6.2.11 EDIT_ARCHIVE

Service used to change the description of an archive after it has been created. To access the description, double click the archive in the archive list.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- **IDC_Name**: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.

Example

```
IdcService=EDIT_ARCHIVE
IDC_Name=Master_on_server01
```

6.2.12 EDIT_ARCHIVEDATA

Service used to edit the data as specified in the EditItems parameter.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Important: Most archive services use the underlying method used by EDIT_ARCHIVEDATA and consequently require the EditItems parameter set to the appropriate value. The user interface usually controls what is put into this parameter. If necessary, the user should exercise these services through the user interface with Filter Debug flags enabled to determine how the values should be set. By using the Filter Debug flags, the request as it is sent to the server can be captured.

Additional Required Service Parameters

- EditItems: A comma-delimited list of keys that are used to define the archive. Any key used must also be specified as a parameter. For example, if EditItems=aValueMaps, then aValueMaps is a required parameter to this service.
- KeyValue: Value for key in the EditItem parameter.
- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.

Example

```
IdcService=EDIT_ARCHIVEDATA
IDC_Name=Master_on_server01
```

6.2.13 EDIT_EXPORTERS

Service that edits the archive data for the specified archive. If specified, it registers or unregisters the archive.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- EditItems: The only values accepted are *aIsAutomatedExport* and *aRegisteredExporters*.

By setting EditItems, these parameters are also required:

- aIsAutomatedExport
- aRegisteredExporters

6.2.14 EDIT_TRANSFEROPTIONS

Service used to edit transfer options for an archive process.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.

6.2.15 EXECUTE_BATCH

Service that executes a batch operation for an archive.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `aBatchFile`: The path and name of the batch file to be executed.

6.2.16 EXPORT_ARCHIVE

Service that exports an archive.

- The export will read in the archive's definition file and will follow the export rules specified. This includes specifying the export query, whether users or document configuration information should be exported (or both), and whether previous batch files should be deleted.
- The Oracle Content Server system executes this service asynchronously. The server must be running for the services to be even executed and that `IdcCommand` will exit announcing success, when actually all it has done is told the server to perform the action.

Note: The `EXPORT_ARCHIVE` service only starts the archive export and provides confirmation that the request to start the export has been made. No notification is sent regarding the status or completion of the archive export. A custom component could be created to provide notification of the status and completion of the archive export.

- The Oracle Content Server system can only export archives one at a time. A batch file that has multiple exports will declare success on the first and failure on all subsequent commands until it has finished the first. A batch file should have only one export in it, and some external process will need to determine that the action has completed before issuing another export command.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `IDC_Name`: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- `aArchiveName`: The archive name.
- `dataSource`: Must be set to *RevisionIDs*. This is the query stub which, along with the export query, will be used to create the list of revisions to export.

Optional Service Parameters

- `aDoDelete`:
 - 1 (*true*): Revisions are deleted after successful export.
 - 0 (*false*): Revisions are not deleted after export.

Example

- IdcCommand command file format (exports the archive *archive_test* in the collection *Master_on_server01*):

```
# To export an archive
IdcService=EXPORT_ARCHIVE
aArchiveName=archive_test
IDC_Name=Master_on_server01
dataSource=RevisionIDs
```

- HDA format with optional parameter:

```
@Properties LocalData
IdcService=EXPORT_ARCHIVE
aArchiveName=archive_test
IDC_Name=Master_on_server01
dataSource=RevisionIDs
aDoDelete=1
@end
```

6.2.17 GET_ARCHIVECOLLECTIONS

Service that returns a list of all archive collections.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

6.2.18 GET_ARCHIVETABLECONTENT

Service used to preview the table data to be exported. It is used in the **Archiver/Export Data/Table/Preview** dialog.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- **IDC_Name**: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName**: The archive name.
- **resultName**: The result set name for the table content.

6.2.19 GET_ARCHIVED_FILE

Service that returns a specific rendition of an archived content item revision from an archive.

Given a **dID** or a **dDocName** and **RevisionSelectionMethod** parameter, the service determines the file name of a particular rendition of the revision and returns that file to the client.

The most likely errors are mismatched parameters or a request for a revision or rendition that does not exist.

Note: It is recommended that **dDocName** be included in all requests for content items where the requester knows the **dDocName**. Error messages in the Oracle Content Server system assume that it is present, as do other features such as forms.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

Important: Either the content item revision ID (dID) must be specified or a Content ID (dDocName) along with a RevisionSelectionMethod parameter must be defined.

Optional Service Parameters

- dID: The generated content item revision ID.
 - If dID is not specified, dDocName and RevisionSelectionMethod must be specified.
 - A rendition of the revision of the content item with this ID will be returned, if it exists, and the RevisionSelectionMethod parameter does not exist or has the value *Specific*.
- dDocName: The content item identifier (Content ID).
 - If dDocName is not present, dID must be present and RevisionSelectionMethod must not be present.
 - If RevisionSelectionMethod is present, a rendition of a revision of the content item with this name will be returned, if it exists. If RevisionSelectionMethod is not present, dDocName will be used in error messages.
- RevisionSelectionMethod: The revision selection method.
 - If present, dDocName must be present. The value of this variable is the method used to compute a dID from the specified dDocName. Its value can be *Specific*, *Latest*, or *LatestReleased*.
 - If the value is *Specific*, the dDocName is ignored, and dID is required and is used to get a rendition. If the value is *Latest*, the latest revision of the content item is used to compute the dID. If the value is *LatestReleased*, the latest released revision of the content item is used to compute the dID.
- Rendition: The content item rendition. This parameter specifies the rendition of the content item and can be set to *Primary*, *Web*, or *Alternate*. If Rendition is not present, it defaults to *Primary*.
 - If the value is *Primary*, the primary rendition of the selected revision is returned.
 - If the value is *Web*, the web-viewable rendition of the selected revision is returned.
 - If the value is *Alternate*, the alternate rendition of the selected revision is returned.

Example

```
IdcService=GET_ARCHIVED_FILE
dDocName=notice
RevisionSelectionMethod=LatestReleased
Rendition=web
```

6.2.20 GET_ARCHIVES

Service that returns a list of all archives in a collection.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name:** The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.

Example

```
IdcService=GET_ARCHIVES
IDC_Name=Master_on_server01
```

6.2.21 GET_ARCHIVERELATIONQUERY

Service used to query for the established relationships between exported tables. All parameters are provided by the user interface and come from the definition of the archive. Depending on the archive export definition, this service must be called before GET_ARCHIVETABLECONTENT.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

6.2.22 GET_BATCH_FILE_DOCUMENTS

Service that returns all batch file content items.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name:** The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName:** The archive name.
- **aBatchFile:** The batch file subdirectory and HDA file name.

Example

```
IdcService=GET_BATCH_FILE_DOCUMENTS
IDC_Name=Master_on_server01
aArchiveName=latest_archive
aBatchFile=02-jan-18_09.34.41_430/0218093441~1.hda
```

6.2.23 GET_BATCH_PROPERTIES

Service that returns the properties of the specified batchfile.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name:** The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName:** The archive name.
- **aBatchFile:** The batch file subdirectory and HDA file name.

6.2.24 GET_BATCH_SCHEMA

Service that returns the batch schema. Schema information describes the classes of objects that are stored in the database.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name**: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName**: The archive name.
- **aBatchFile**: The batch file subdirectory and HDA file name.

Example

```
IdcService=GET_BATCH_SCHEMA
IDC_Name=Master_on_server01
aArchiveName=latest_archive
aBatchFile=02-jan-18_09.34.41_430/0218093441~1.hda
```

6.2.25 GET_BATCH_VALUES

Service that returns the metadata field values for the batch.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name**: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName**: The archive name.
- **aBatchFile**: The batch file subdirectory and HDA file name.

Example

```
IdcService=GET_BATCH_VALUES
IDC_Name=Master_on_server01
aArchiveName=latest_archive
aBatchFile=02-jan-18_09.34.41_430/0218093441~1.hda
```

6.2.26 GET_BATCHFILES

Service that returns batch files for a specified archive.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Required Service Parameters

- **IDC_Name**: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName**: The archive name.

Example

```
IdcService=GET_BATCHFILES
IDC_Name=Master_on_server01
aArchiveName=latest_archive
```

6.2.27 GET_PROXYED_ARCHIVECOLLECTIONS

Service that returns a list of all archive collections on a proxied Oracle Content Server instance.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `psIDC_Name`: The name of the proxied Oracle Content Server instance.

Example

```
IdcService=GET_PROXYED_ARCHIVECOLLECTIONS
psIDC_Name=Proxied_2_on_test13
```

6.2.28 GET_PROXYEDSERVERS

Service that returns a list of outgoing providers.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

6.2.29 GET_REPLICATION_DATA

Service that returns replication data. The most likely error is an incorrect archive location.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `IDC_Name`: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.

Example

```
IdcService=GET_REPLICATION_DATA
IDC_Name=Master_on_server01
```

6.2.30 GET_TABLECOLUMNLIST

Service that retrieves the column information about specified tables. It returns the name, type, and length of the columns. In order to execute this service, the caller must have ADMIN rights.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- `IDC_Name`: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- `aArchiveName`: The archive name.
- `tableName`: A list of comma-delimited table names.

6.2.31 GET_TARGET_INFO

Service that performs a status check of a target. It does an initial status check to determine if the target is still targetable and if it exists.

This service is not intended for external use.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name:** The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName:** The archive name.
- **TargetCollection:** The name of the collection to be targeted.
- **TargetArchive:** The name of the archive within the target collection.
- **aTransferOwner:** The name of the user who is initiating the transfer.

6.2.32 GET_TARGET_TRANSFER_STATUS

Service used during transfer to determine transfer status. The TransferMonitor uses it to determine if the transfer has completed or is still in progress.

Not intended for external use.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

6.2.33 GET_TRANSFER_SOURCE_INFO

Service that is used during a pull transfer to establish the work that must be performed. Used when the source Archiver for the transfer resides on a proxied server and the transfer owner must determine what work, if any, must be done.

Not intended for external use.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name:** The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **SourceArchive:** The archive used as source for the target.
- **aTransferOwner:** The name of the user who is initiating the transfer.
- **aArchiveName:** The archive name.

6.2.34 IMPORT_ARCHIVE

Service that imports an archive.

- The import will read in the archive's definition file and will follow the import rules specified.
- The Oracle Content Server system executes this service asynchronously. The Oracle Content Server instance must be running for the service to be executed and

that IdcCommand will announce success as soon as the service has been requested, not when it has been executed successfully.

Note: The IMPORT_ARCHIVE service only starts the archive import and provides confirmation that the request to start the import has been made. No notification is sent regarding the status or completion of the archive import. A custom component could be created to provide notification of the status and completion of the archive import.

- The server can only import archives one at a time. A batch file that has multiple imports will declare success on the first and failure on all subsequent commands until it has finished the first. A batch file should have only one import in it and some external process will need to determine that the action has completed before issuing another import command.
- The most likely error is an archive name that does not exist.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- aArchiveName: The archive name.

Note: At least one of the Additional Service Parameters must be set for this service to execute successfully.

Additional Service Parameters

- aImportDocuments: When set to *true*, the service will import content item revisions.
- aImportDocConfig: When set to *true*, the service will import document configuration information.
- aImportUsers: When set to *true*, the service will import user information.

Important: If the users have not been exported and aImportUsers is set to *true*, the service fails. If the document configuration has not been exported and this parameter is set to *true*, the service fails.

Example

- IdcCommand command file format (import the revisions in the *archive_test* archive from the *Master_on_server01* collection):

```
# To import an archive
IdcService=IMPORT_ARCHIVE
aArchiveName=archive_test
IDC_Name=Master_on_server01
aImportDocuments=true
```

- HDA format:

```
@Properties LocalData
IdcService=IMPORT_ARCHIVE
aArchiveName=archive_test
IDC_Name=Master_on_server01
aImportDocuments=true
@end
```

6.2.35 IMPORT_ARCHIVE_START_AUTOMATED

Service that registers a queued archive for import.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- aArchiveName: The archive name.

6.2.36 IMPORT_BATCHFILE

Service that imports the content items in the specified batch files, as selected from the **View Batch File** dialog, into the Oracle Content Server instance.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- aArchiveName: The archive name.

6.2.37 IMPORT_DOCUMENT

Service that imports a specified document, usually selected from the **View Batch File** dialog, into the Oracle Content Server instance.

The most likely error is a content item name that does not exist.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- aArchiveName: The archive name.
- dDocName: The Content ID for the content item.

Example

```
IdcService=IMPORT_DOCUMENT
IDC_Name=Master_on_server01
aArchiveName=JAN_22_02
dDocName=billing_00004
```

6.2.38 IMPORT_TABLE_ENTRY

Service used to add entries to a table in an archive. This service is equivalent to IMPORT_DOCUMENT. It works on exported table items instead of exported content items. It is accessible from the **View Batch File** dialog and is used to import the specified table item.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- aArchiveName: The archive name.
- aBatchFile: The path and name of the batch file where the table is stored.

6.2.39 INSERT_NATIVE

Subservice used by the Archiver to recover IDs created during INSERT_NEW. This service does not generate new IDs. It reuses the IDs stored during the export. This subservice is only used when the administrator is archiving back into the original system that created the export. The Archiver uses INSERT_NATIVE when the exporter and importer have the same instance name (IDC_name) and the system is trying to recover the content item completely.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

To disallow the check in of empty files, set the following:

```
ValidatePrimaryFileNotEmpty=1
```

6.2.40 INSERT_NEW

Subservice used during a CHECKIN_ARCHIVE when the system has discovered no prior item with the specified dDocName. This subservice is used during a batch load and during an archive import operation. It adds a new content item into the system and creates new IDs (such as dID, dRevClassID) for it.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

To disallow the check in of empty files, set the following:

```
ValidatePrimaryFileNotEmpty=1
```

6.2.41 REGISTER_IMPORTER

Service that registers or unregisters the importer for an archive. The most likely errors are mismatched parameters or an incorrect instance menu label or archive name.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- IDC_Name: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- aArchiveName: The archive name.

- `EditItems`: Must be set to *aRegisteredImporter,aImportLogonUser*.
- `IsRegister`: Defines the registration setting:
 - 1 (*true*): Register Self
 - 0 (*false*): Unregister

Example

Self register the Oracle Content Server instance as importer:

```
IdcService=REGISTER_IMPORTER
IDC_Name=Master_on_server01
aArchiveName=JAN_22_02
IsRegister=1
EditItems=aRegisteredImporter,aImportLogonUser
```

6.2.42 REMOVE_COLLECTION

Service that removes an archive collection. You cannot remove the default archive collection.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `IDC_Name`: The name of the collection.

Example

```
IdcService=REMOVE_COLLECTION
IDC_Name=new_collection
```

6.2.43 REMOVE_EXPORTER

Service that removes an exporter from an archive. The most likely error is an incorrect archive location.

Location: *IdcHomeDir/resources/core/templates/std_services.htm*

Additional Required Service Parameters

- `aArchiveName`: The archive name.
- `IDC_Name`: The name of the exporter.
- Example

```
IdcService=REMOVE_EXPORTER
IDC_Name=Master_on_server02
aArchiveName=archive_02
```

6.2.44 REMOVE_IMPORTER

Service that removes an importer from an archive. The most likely error is an incorrect archive location.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name**: The name of the importer. If you are using the default collection, this is the name of the Oracle Content Server instance.
- **aArchiveName**: The archive name.

Example

```
IdcService=REMOVE_IMPORTER
IDC_Name=Master_on_server01
aArchiveName=my_archive_test
```

6.2.45 REMOVE_PROXIEDTRANSFER

Service that is called when removing the transfer settings for an archive but the Oracle Content Server instance performing the activity is not the Oracle Content Server instance that owns the archive (that is, the transfer is being proxied). To remove or stop the transfer, the request must be submitted to this proxied server.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **aArchiveLocation**: Location of the archive.
- **IDC_Name**: The name of the owner of the transfer.

6.2.46 REMOVE_QUEUED_IMPORT

Service that allows a user to delete a queued import. It is used from the Automation dialog, accessible by clicking **Archiver Options** then **View Automation** then Queued Automated Imports.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **IDC_Name**: The name of the importer. If you are using the default collection, this is the name of the Oracle Content Server instance.

6.2.47 REMOVE_TRANSFER

Service that allows a user to delete or stop an automated transfer. It is used from the Automation dialog, accessible by clicking **Archiver Options** then **View Automation**.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- **aArchiveLocation**: Location of the archive.
- **IDC_Name**: The name of the importer. If you are using the default collection, this is the name of the Oracle Content Server instance.

6.2.48 REQUEST_TRANSFER

Service that initiates a transfer request.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- *aArchiveName*: The archive name.
- *IDC_Name*: The name of the exporter. If you are using the default collection, this is the name of the Oracle Content Server instance.

6.2.49 TRANSFER_ARCHIVE

Service that initiates a specified manual transfer.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- *aArchiveName*: The archive name.
- *IDC_Name*: The name of the exporter. If you are using the default collection, this is the name of the Oracle Content Server instance.

6.2.50 UPDATE_TARGET_TOTALS

Service that updates the amount of work the archiver has completed in the archive definition file. This service is not intended for external use. It is part of the Transfer engine that is responsible for monitoring the automated transfer and updating the data on completion of any manual or automated transfers.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

6.2.51 UPDATE_TRANSFER_STATUS

Service used by the TransferMonitor to send update information about the progress of the transfer. Not intended for use by client applications.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

6.2.52 UPLOAD_ARCHIVE_TRANSFER

Service used to upload the export batch file to the target. This service is not extended for external use and is part of the service that make up the Transfer engine of the Archiver.

Location: *IdcHomeDir*/resources/core/templates/std_services.htm

Additional Required Service Parameters

- *IDC_Name*: The name of the collection. If you are using the default collection, this is the name of the Oracle Content Server instance.
- *TargetCollection*: The name of the collection to be targeted.
- *TargetArchive*: The name of the archive within the target collection.
- *SourceCollection*: The name of the collection used for the transfer.

- SourceArchive: The archive used as source for the target.
- aBatchFile: The name of the batch file used in the transfer.
- ZipFile:path: The path name to the zip file of the transfer to be uploaded.

Folders Services

The following sections describe the services available when using and customizing folders and Folders_g services.

- [Section 7.1, "About Folders Services"](#)
- [Section 7.2, "Folders Services"](#)

7.1 About Folders Services

A typical service entry is similar to the following:

```
COLLECTION_ADMIN_SELECT_COLLECTION
DocService 56 COLLECTION_PROFILE_SELECT_COLLECTION null null
!csCollectionUnableToRetrieveCollections
3:evaluate:<${isAdmin="true"}$>:null
3:loadAdminQueryConfig::null
```

In this example:

- The first line indicates the service name: `COLLECTION_ADMIN_SELECT_COLLECTION`.
- The second and third lines list the service's attributes:
 - Service class: `DocService`.
 - Access level: 54, indicating this is Scriptable, Global, and Admin permissions.
 - Template: `COLLECTION_PROFILE_SELECT_COLLECTION`
 - Service type: `null`
 - Subjects Notified: `null`
 - Error message and parameter used for error message: `Unable to Retrieve Collections`
- The remainder of the entry lists the service's actions, each line designating one action:
 - action type: for example, 3, indicating a Java method.
 - action name: for example, `evaluate`
 - action parameters: for example, `<${isAdmin="true"}$>`. If no parameters are specified, double colons (`::`) are included.

- action control mask: for example, 0, indicating 'Ignore error' or 2, indicating 'Must exist (at least one record must be returned by the query). If no control mask is specified, double colons (: :) or 0 is included.
- action error message, such as `Item No Longer In History`, or null if no message is available.

Each element of a service action is separated by a colon (:).

Important: All services have at least one required parameter. The `IdcService` parameter takes the name of the service as its argument. If other parameters are required, they are noted in the description of the service.

For details about a service's attributes and actions, see [Section 3, "Customizing Services."](#)

7.2 Folders Services

Individual folders service types are noted in each service description. The following services are described in this section:

- `COLLECTION_ADD`
- `COLLECTION_ADD_LINK`
- `COLLECTION_ADD_MOUNT`
- `COLLECTION_BROWSE`
- `COLLECTION_CHECKIN_NEW`
- `COLLECTION_CHECKIN_REVISION`
- `COLLECTION_CHECKIN_SEL_SUB`
- `COLLECTION_COPY_ALL`
- `COLLECTION_COPY_COLLECTION`
- `COLLECTION_COPY_ITEM`
- `COLLECTION_COPY_LOT`
- `COLLECTION_DELETE`
- `COLLECTION_DELETE_ALL`
- `COLLECTION_DELETE_COLLECTION`
- `COLLECTION_DELETE_ITEM`
- `COLLECTION_DELETE_LOT`
- `COLLECTION_DISPLAY`
- `COLLECTION_EDIT`
- `COLLECTION_GET_ADMIN_CONFIG`
- `COLLECTION_GET_ADMIN_INHERIT_CONFIG`
- `COLLECTION_GET_ADMIN_MARKED_CONFIG`
- `COLLECTION_GET_ADMIN_META_CONFIG`

- COLLECTION_GET_ADMIN_METADATA_DEFAULTS
- COLLECTION_GET_ADMIN_MOUNTED_CONFIG
- COLLECTION_GET_ARCHIVE
- COLLECTION_GET_BRANCH
- COLLECTION_GET_COLLECTION
- COLLECTION_GET_COLLECTIONS
- COLLECTION_GET_CONTENT_FILE
- COLLECTION_GET_CONTENTS
- COLLECTION_GET_FILE
- COLLECTION_GET_INFO
- COLLECTION_GET_LINKS
- COLLECTION_GET_META_MAPPING
- COLLECTION_GET_PROFILE_METADATA_DEFAULTS
- COLLECTION_GET_PROFILE_METADATA_REVISION_DEFAULTS
- COLLECTION_GET_REFERENCE
- COLLECTION_GET_SEARCH_FORM
- COLLECTION_GET_SYSTEM_FILE
- COLLECTION_GET_USER_CONFIG
- COLLECTION_INDEX_MOUNTS
- COLLECTION_INFO
- COLLECTION_ISVALID_META
- COLLECTION_LOCK
- COLLECTION_MOVE_ALL
- COLLECTION_MOVE_COLLECTION
- COLLECTION_MOVE_ITEM
- COLLECTION_MOVE_LOT
- COLLECTION_NEW
- COLLECTION_PROFILE_UPDATE_COLUMNS
- COLLECTION_REBUILD_MOUNT
- COLLECTION_REMOVE_MOUNT
- COLLECTION_RESTORE_COLLECTION
- COLLECTION_RESTORE_ITEM
- COLLECTION_SEARCH_CONTENT
- COLLECTION_SEARCH_RESULTS
- COLLECTION_SET_ARCHIVE
- COLLECTION_SET_USER_CONFIG
- COLLECTION_UNLOCK

- COLLECTION_UPDATE
- COLLECTION_UPDATE_ADMIN_CONFIG
- COLLECTION_UPDATE_ADMIN_INHERIT_CONFIG
- COLLECTION_UPDATE_ADMIN_METADATA_DEFAULTS
- COLLECTION_UPDATE_ALL
- COLLECTION_UPDATE_ITEM
- COLLECTION_UPDATE_META
- COLLECTION_UPDATE_META_TABLE
- COLLECTION_UPDATE_MOUNTS
- COLLECTION_UPDATE_PROFILE_METADATA_DEFAULTS
- COLLECTION_UPDATE_PROFILE_METADATA_REVISION_DEFAULTS
- COLLECTION_UPDATE_STRUCTURE
- COLLECTION_VERIFY_FOLDER_NAME
- GOTO_COLLECTION
- GOTO_ROOT_COLLECTION
- GET_OPTION_LISTS

7.2.1 COLLECTION_ADD

Service that creates a Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir* / components / folders_g / resources / folders_service.htm

Additional Required Service Parameters

- dCollectionName: The name of the folder to create.

One of the following sets of parameters to identify the parent folder:

- hasParentCollectionID: (Boolean) Specifies whether the dParentCollectionID parameter is used to identify the parent folder ID.
dParentCollectionID: The parent folder ID.
- hasParentCollectionPath: (Boolean) Specifies whether the dParentCollectionPath parameter is used to identify the path to the parent folder.
dParentCollectionPath: The path to the parent folder.
- hasParentCollection GUID: (Boolean) Specifies that the dParentCollectionGUID parameter is used to identify the GUID for the parent folder.
dParentCollectionGUID: The parent folder GUID.

Optional Service Parameters

- `dCollectionOwner`: The folder owner. If `xForceFolderSecurity=TRUE`, then the folder owner is the same as the parent folder's owner. Otherwise, the default is the current user.

This setting overrides the user set as the the collection owner. The owner can access and modify the folder despite other set security criteria.

- `dCollectionCreator`: Overrides the user set as the folder creator. The default value is the current user.
- `dCollectionModifier`: Overrides the user set as the last folder modifier. The default value is the current user.
- `ignoreMaxFolderLimit`: Allows more subfolders to be added to the parent folder than the currently set maximum limit. The default value is *false*.
- `mark`: Sets `dCollectionMark` for the folder. Folders with `dCollectionMark` set are not modifiable without `CollectionReadOnlyMarkedFolders` being set to *false* (not the default case). These marked folders and their enabled/disabled state can be viewed on the System Folder Configuration page. Contribution Folders and Trash are marked folders.
- `force`: Creates a folder under the root folder (`dParentCollectionID=-1`). The default value is *false*.
- *any system or custom metadata field*: The given field and value will be set for the folder and used as default values for content and folders created within the folder.

Example

```
IdcService=COLLECTION_ADD
hasParentCollectionID=true
dCollectionName=Products
dParentCollectionID=1
dCollectionOwner=bsmith
```

7.2.2 COLLECTION_ADD_LINK

Service that adds a shortcut to a folder or content within a `Folders_g` folder. The shortcut references the folder using either the folder ID, the actual path to the folder, or the folder GUID.

The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Service (general service)

Location: `IdcHomeDir/components/folders_g/resources/folders_services.htm`

Additional Required Service Parameters

- One of the following sets of parameters to identify destination parent folder for the created short cut:
 - `tohasCollectionID`: (Boolean) Specifies whether the `todCollectionID` parameter is used to identify the destination parent folder ID.
`todCollectionID`: The folder ID that the shortcut references.
 - `tohasCollectionPath`: (Boolean) Specifies whether the `todCollectionPath` parameter is used to identify the path to the folder.
`todCollectionPath`: The path to the folder that the shortcut references.

- tohasCollectionGUID: (Boolean) Specifies whether the todCollectionGUID parameter is used to identify the folder.
todCollectionGUID: The GUID for the folder that the shortcut references.
- dLinkName: The name of the shortcut being created.
- dLinkType: The type of shortcut being created. Must be either COLLECTION or CONTENT.
 - If COLLECTION is specified, then hasdCollectionID must be specified.
hasdCollectionID: (Boolean) Specifies whether the folder is referenced using a Collection ID.
dCollectionID: The folder ID of the parent folder referenced by the shortcut.
 - If CONTENT is specified, then dRevClassID must be specified.
dRevClassID: The revision class ID for the content item to which the shortcut points.

Example

```

IdcService=COLLECTION_ADD_LINK
tohasCollectionID=true
todCollectionID=99999999999900633
dLinkName=Shortcut
dLinkType=COLLECTION
hasdCollectionID=true
dCollectionID=999999999999004533
  
```

7.2.3 COLLECTION_ADD_MOUNT

Service that maps a folder to a local file system. Whenever the folder changes, the mapped directory is updated.

There is no security on this directory.

The most likely errors are mismatched parameters or the folder does not exist.

Service Class: SearchService

Location: *IdcHomeDir*/components/Folders/resources/folders_mounted_service.htm

7.2.4 COLLECTION_BROWSE

Service that loads the defined folder metadata and the folder path. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_interface_service.htm

Additional Required Service Parameters

- dCollectionID: The folder ID of the parent folder referenced by the shortcut (for example, ="id+").
- hasCollectionID: (Boolean) Specifies whether the folder has an assigned collection ID.
- changeToUser: Reassigns the folder to a different user.

Example

```

IdcService=COLLECTION_BROWSE
dCollectionID="+id+"
hasCollectionID=true
changeToUser=bsmith

```

7.2.5 COLLECTION_CHECKIN_NEW

Service that checks new content into a folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.6 COLLECTION_CHECKIN_REVISION

Service that checks in a revision to an existing folder.

This service sends the checkin request to one of the following subservices, which are the same subservices called during checkin through the browser or Repository Manager application. (These subservices are not called during a Batch Loader or Archive import.)

- COLLECTION_CHECKIN_SEL_SUB
- CHECKIN_SEL_FORM
- COLLECTION_SEARCH_CONTENT
- CHECKOUT_BY_NAMENULL
- COLLECTION_LOCKNULL
- DELETE_REVNULL

This service checks security to determine if the user has sufficient permission to check in the folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folder/resources/folders_service.htm

7.2.7 COLLECTION_CHECKIN_SEL_SUB

Service that checks in a revision to an existing folder under certain conditions. Used when the folder exists on the system but no valid revision was specified or when the content item is checked out (but not in a workflow).

The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.8 COLLECTION_COPY_ALL

Service that copies all content residing in the specified folder to the destination folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.9 COLLECTION_COPY_COLLECTION

Service that copies a specified Folders_g folder and places the copy into a different folder. The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the destination parent folder for the copied folder:

- **tohasCollectionID:** (Boolean) Specifies whether the `todCollectionID` parameter is used to identify the destination parent folder ID.
`todCollectionID:` The destination parent folder ID.
- **tohasCollectionPath:** (Boolean) Specifies whether the `todCollectionPath` parameter is used to identify the path to the destination parent folder.
`todCollectionPath:` The path to the destination parent folder.
- **tohasCollection GUID:** (Boolean) Specifies whether the `todCollectionGUID` parameter is used to identify the destination parent folder.
`todCollectionGUID:` The destination parent folder GUID.

One of the following sets of parameters to identify the source folder to be copied:

- **fromhasCollectionID:** (Boolean) Specifies whether the `fromdCollectionID` parameter is used to identify the the source folder.
`fromdCollectionID:` The source folder ID.
- **fromhasCollectionPath:** (Boolean) Specifies whether the `fromdCollectionPath` parameter is used to identify the path to the source folder.
`fromdCollectionPath:` The path to the source folder.
- **fromhasCollectionGUID:** (Boolean) Specifies whether the `fromdCollectionGUID` parameter is used to identify the source folder.
`fromdCollectionGUID:` The source folder GUID.
- **fromisLink:** (Boolean) Specifies whether the `fromdLinkID` parameter is used to identify the source folder.
`fromdLinkID:` The folder shortcut ID for the source folder
- **fromCollectionislink:** (Boolean) Specifies whether the `fromdCollectionLinkID` parameter is used to identify the source folder.
`fromdCollectionLinkID:` The collection shortcut ID for the source folder.

Example

```
IdcService=COLLECTION_COPY_COLLECTION
tohasCollectionID=true
todCollectionID=999999999999000633
fromhasCollectionID=true
fromdCollectionID=999999999999000633
```

7.2.10 COLLECTION_COPY_ITEM

Service that copies a single content item in a folder and places it in a destination Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: File Service

Location: *IdcHomeDir*/components/folders_g/resources//folders_service.htm

Additional Required Service Parameters

- **dDocName:** The content ID of the content item being copied.

One of the following sets of parameters to identify the destination folder:

- **tohasCollectionID:** (Boolean) Specifies whether the **todCollectionID** parameter is used to identify the destination folder.

todCollectionID: The ID for the destination folder.

- **tohasCollectionPath:** (Boolean) Specifies whether the **todCollectionPath** parameter is used to identify the destination folder.

todCollectionPath: The path to the destination folder.

- **tohasCollectionGUID:** (Boolean) Specifies whether the **todCollectionGUID** parameter is used to identify the destination folder.

todCollectionGUID: The GUID for the destination folder.

- **tolevel0:** Specifies the base value in the path for the destination parent folder (for example, /Contribution Folders).

tolevel1: Specifies the next level value in the path for the destination parent folder (for example, /t4).

tolevel2: Specifies the next level value in the path for the destination parent folder (for example, /1).

Example

```
IdcService=COLLECTION_COPY_ITEM
tohasCollectionPath=true
todCollectionPath=/Contribution Folders/t4/1
dDocName=000660
```

7.2.11 COLLECTION_COPY_LOT

Service that copies a set of items including content items, folders, shortcuts to content items, and shortcuts to folders. The copied items are placed into a single designated Folders_g folder.

The most likely errors are mismatched parameters or the designated folder does not exist. No returned data.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the destination parent folder for the copied items:

- **tohasCollectionID:** (Boolean) Specifies whether the `todCollectionID` parameter is used to identify the destination parent folder.
`todCollectionID:` The destination parent folder ID.
- **tohasCollectionPath:** (Boolean) Specifies whether the `todCollectionPath` parameter is used to identify the destination parent folder.
`todCollectionPath:` The path to the destination parent folder.
- **tohasCollection GUID:** (Boolean) Specifies whether the `todCollectionGUID` parameter is used to identify the destination parent folder.
`todCollectionGUID:` The destination parent folder GUID.

Parameters to designate content items (where *{n}* designates an integer used to distinguish parameters particular to one item to copy from other items to copy):

- **contentselect{n}:** (Boolean) Specifies whether to copy the content item. The value must be *true* to copy the content item.
- **fromContentisLink{n}:** (Boolean) Specifies whether this is a content item or a shortcut. The value must be 0 to specify a content item.
- **fromdDocName{n}:** The content ID of the content item to be copied.

Parameters to designate shortcuts to content items (where *{n}* designates an integer used to distinguish parameters particular to one item to copy from other items to copy):

- **contentselect{n}:** (Boolean) Specifies whether to copy the content item. The value must be *true* to copy the content item.
- **fromContentisLink{n}:** (Boolean) Specifies whether this is a content item or a shortcut. The value must be 1 to specify a shortcut.
- **fromdDocName{n}:** The content ID of the content item pointed to by the shortcut.

Parameters to designate folders (where *{n}* designates an integer used to distinguish parameters particular to one item to copy from other items to copy):

- **collectionselect{n}:** (Boolean) Specifies whether to copy the folder. The value must be *true* to copy the folder.
- **fromCollectionisLink{n}:** (Boolean) Specifies whether this is a folder or a shortcut. The value must be 0 to specify a folder.
- **fromdCollectionID{n}:** The `dCollectionID` of the folder being copied.
- **fromhasCollectionID{n}:** The value must be 1 to copy the folder.

Parameters to designate shortcuts to folders (where $\{n\}$ designates an integer used to distinguish parameters particular to one item to copy from other items to copy):

- `collectionselect{n}`: (Boolean) Specifies whether to copy the shortcut to the folder. The value must be *true* to copy the shortcut.
- `fromCollectionisLink{n}`: (Boolean) Specifies whether this is a folder or a shortcut. The value must be 1 to specify a shortcut.
- `fromCollectiondLinkID{n}`: The link ID of the shortcut to be copied.
- `fromdCollectionID{n}`: The dCollectionID of the folder pointed to by the shortcut.
- `fromhasCollectionID{n}`: The value must be 1 to copy the shortcut to the folder.

Example

```
IdcService=COLLECTION_COPY_LOT
tohasdCollectionID=true
todCollectionID=99999999999900633
contentselect=true
fromContentisLink=0
fromdDocName=PHL11GX010033
```

7.2.12 COLLECTION_DELETE

Service that deletes Folders_g folders. If Trash is enabled, the folder is moved to Trash and not directly deleted.

The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following parameter sets is required to identify the folder.

- `hasCollectionID`: (Boolean) Specifies that the dCollectionID parameter is used to identify the folder.
dCollectionID: The folder ID of the folder to delete.
- `hasCollectionPath`: (Boolean) Specifies that the dCollectionPath parameter is used to identify the folder.
dCollectionPath: The path of the folder to delete.
- `hasCollectionGUID`: (Boolean) Specifies that the dCollectionGUID parameter is used to identify the folder.
dCollectionGUID: The GUID of the folder to delete.

Example

```
IdcService=COLLECTION_DELETE
hasCollectionPath=true
dCollectionPath=/Contribution Folders/dept/hr
```

7.2.13 COLLECTION_DELETE_ALL

Service that deletes all content residing in a Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.14 COLLECTION_DELETE_COLLECTION

Service that deletes a specified Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.15 COLLECTION_DELETE_ITEM

Service that deletes a single content item in a Folders_g folder. If Trash is enabled, the item is moved to the Trash folder and not directly deleted. The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

- `dDocName`: The content ID of the content item to be deleted.

Example

```
IdcService=COLLECTION_DELETE_ITEM  
dDocName=000660
```

7.2.16 COLLECTION_DELETE_LOT

Service that deletes a set of items including content items, folders, shortcuts to content items, and shortcuts to folders. If Trash is enabled, the items are moved to Trash and not directly deleted.

The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

Parameters to designate content items (where *{n}* designates an integer used to distinguish parameters particular to one item to delete from other items to delete):

- `contentselect{n}`: (Boolean) Specifies whether to delete the content item. The value must be *true* to copy the content item.
- `fromContentisLink{n}`: (Boolean) Specifies whether this is a content item or a shortcut. The value must be 0 to specify a content item.
- `fromdDocName{n}`: The content ID of the content item to delete.

Parameters to designate shortcuts to content items (where $\{n\}$ designates an integer used to distinguish parameters particular to one item to delete from other items to delete):

- `contentselect{n}`: (Boolean) Specifies whether to delete the shortcut. The value must be *true* to delete the shortcut.
- `fromContentisLink{n}`: (Boolean) Specifies whether this is a content item or a shortcut. The value must be 1 to specify a shortcut.
- `fromContentdLinkID{n}`: The link ID of the shortcut.
- `fromdDocName{n}`: The content ID of the content item pointed to by the shortcut.

Parameters to designate folders (where $\{n\}$ designates an integer used to distinguish parameters particular to one item to delete from other items to delete):

- `collectionselect{n}`: (Boolean) Specifies whether to delete the folder. The value must be *true* to delete the folder.
- `fromCollectionisLink{n}`: (Boolean) Specifies whether this is a folder or a shortcut. The value must be 0 to specify a folder.
- `fromdCollectionID{n}`: The dCollectionID of the folder to delete.
- `fromhasCollectionID{n}`: The value must be 1 to delete the folder.

Parameters to designate shortcuts to folders (where $\{n\}$ designates an integer used to distinguish parameters particular to one item to delete from other items to delete):

- `collectionselect{n}`: (Boolean) Specifies whether to delete the shortcut to the folder. The value must be *true* to delete the shortcut.
- `fromCollectionisLink{n}`: (Boolean) Specifies whether this is a folder or a shortcut. The value must be 1 to specify a shortcut.
- `fromCollectiondLinkID{n}`: The link ID of the shortcut to delete.
- `fromdCollectionID{n}`: The dCollectionID of the folder pointed to by the shortcut.
- `fromhasCollectionID{n}`: The value must be 1 to delete the shortcut to the folder.

Example

```
IdcService=COLLECTION_DELETE_LOT
collectionselect=true
fromCollectionisLink=0
fromdCollectionID=999999999999004955
fromhasCollectionID=1
```

7.2.17 COLLECTION_DISPLAY

Service that returns a list of the items contained in a `Folders_g` folder, including content items, folders and short cuts. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: `IdcHomeDir/components/folders_g/resources/folders_interface_service.htm`

Additional Required Service Parameters

One of the following parameter sets is required to identify the folder.

- **hasCollectionID:** (Boolean) Specifies that the `dCollectionID` parameter is used to identify the folder.
`dCollectionID:` The collection ID of the folder.
- **hasCollectionPath:** (Boolean) Specifies that the `dCollectionPath` parameter is used to identify the folder.
`dCollectionPath:` The path of the folder.
- **hasCollectionGUID:** (Boolean) Specifies that the `dCollectionIGUID` parameter is used to identify the folder.
`dCollectionGUID:` The collection GUID for the folder.

Optional Service Parameters

- **CollectionDisplayResultSetSize:** Limits the number of items returned in the `COLLECTIONS` and `CONTENTS` ResultSets and establishes the page size.
- **showCollections:** Flag that signals the web UI presentation to display the `COLLECTIONS` ResultSet. This is effective when using `CollectionDisplayResultSetSize` and `PageNumber`.
- **showContent:** Flag that signals the web UI presentation to display the `CONTENTS` ResultSet. This is effective when using `CollectionDisplayResultSetSize` and `PageNumber`.
- **PageNumber:** Integer value 1 or greater displays the correct page size subset of data from the `CONTENTS` or `COLLECTIONS` ResultSets. Page size is set by `CollectionDisplayResultSetSize`.

Results

- **Result Sets:** (contain a row with folder metadata for each folder item directly contained by the folder, including shortcuts to folders)
 - `CONTENTS`
 - `COLLECTIONS`
 - `METAMAPPING`
 - `COLUMNS`
 - `Fields`
 - `METADATA_OVERRIDE`
 - `PATH`
 - `metadata`

Example

```
IdcService=COLLECTION_DISPLAY  
hasCollectionPath=true  
dCollectionPath=%2fContent%20Server%20Folders%2f
```

7.2.18 COLLECTION_EDIT

Service that edits a Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist.

Service type: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

- **hasCollectionID:** (Boolean) Specifies whether the folder has an assigned collection ID. If set to *true*, *dCollectionID* must be defined.
- **dCollectionID:** The folder ID of the parent folder.

7.2.19 COLLECTION_GET_ADMIN_CONFIG

Service that retrieves the current global values defined for the Folders_g folders hierarchy. No specific collection is passed. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.20 COLLECTION_GET_ADMIN_INHERIT_CONFIG

Service that retrieves the current metadata fields that are propagated when it is requested. The most likely errors are mismatched parameters or the Folders_g folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.21 COLLECTION_GET_ADMIN_MARKED_CONFIG

Service that retrieves 'special' Folders_g folders and their disabled/enabled status. A disabled folder does not show up in the hierarchy. An enabled folder is accessible. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.22 COLLECTION_GET_ADMIN_META_CONFIG

Service that retrieves the fields from the administration metadata ResultSet for the defined Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.23 COLLECTION_GET_ADMIN_METADATA_DEFAULTS

Service that retrieves the option lists for custom fields, default metadata, and the administration metadata of the Folders_g folder configuration (retrieves field

defaults). The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.24 COLLECTION_GET_ADMIN_MOUNTED_CONFIG

Service that retrieves the Folders_g folders system configuration for the local folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_mounted_service.htm

7.2.25 COLLECTION_GET_ARCHIVE

Service that downloads the archived Folders_g folder structure of the specified folder. This service does not download the contents of a folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: File Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.26 COLLECTION_GET_BRANCH

Service that retrieves the structure of the specified Folders_g folder and its subfolders. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.27 COLLECTION_GET_COLLECTION

Service that retrieves all the subfolders of the specified Folders_g folder. Compare COLLECTION_GET_COLLECTIONS. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.28 COLLECTION_GET_COLLECTIONS

Service that retrieves the Folders_g folder. Compare COLLECTION_GET_COLLECTION. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Example

To retrieve a listing of hierarchical collections, the required parameters are:

```
hasCollectionID=1  
dCollectionID=collectionnumber
```

7.2.29 COLLECTION_GET_CONTENT_FILE

Service that downloads the first content item of the specified Folders_g collection that matches the metadata of the item passed in (excluding revisions). The most likely errors are mismatched parameters or the folder does not exist.

Service Class: File Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.30 COLLECTION_GET_CONTENTS

Service that retrieves information for the content items contained directly in the specified Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following parameter sets is required to identify the folder.

- **hasCollectionID:** (Boolean) Specifies that the dCollectionID parameter is used to identify the folder.
dCollectionID: The folder ID of the folder.
- **hasCollectionPath:** (Boolean) Specifies that the dCollectionPath parameter is used to identify the folder.
dCollectionPath: The path of the folder.
- **hasCollectionGUID:** (Boolean) Specifies that the dCollectionGUID parameter is used to identify the folder.
dCollectionGUID: The GUID of the folder.

Results

- Result Sets:
 - CONTENTS (contains a row with content metadata for each content item contained in the folder)

Example

```
IdcService=COLLECTION_GET_CONTENTS
hasCollectionID=true
dCollectionID=999999999999000633
```

7.2.31 COLLECTION_GET_FILE

Service that determines the type of item specified and then downloads its content. The item may or may not be a content item. The most likely errors are mismatched parameters or the Folders_g folder does not exist.

Service Class: File Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.32 COLLECTION_GET_INFO

Service that retrieves Folders_g folder information for the local folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following parameter sets is required to identify the folder.

- **hasCollectionID:** (Boolean) Specifies whether the dCollectionID parameter is used to identify the folder.
dCollectionID: The folder ID of the folder.
- **hasCollectionPath:** (Boolean) Specifies whether the dCollectionPath parameter is used to identify the folder.
dCollectionPath: The path of the folder.
- **hasCollectionGUID:** (Boolean) Specifies that the dCollectionGUID parameter is used to identify the folder.
dCollectionGUID: The GUID of the folder.

Results

- Result Sets:
 - PATH (contains a row with folder metadata for each folder in the folder's path)

Example

```
IdcService=COLLECTION_GET_INFO
hasCollectionID=true
dCollectionID=999999999999000633
```

7.2.33 COLLECTION_GET_LINKS

Service that retrieves information about the specified shortcut (dLinkID) to a content item or folder. The most likely errors are mismatched parameters or the item or folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

- **dLinkID:** The link ID for a shortcut to a content item or folder.

Optional Service Parameters

- **resultSetname:** Sets the name of the returned ResultSet. The default value is LINKS.

Results

- Result Sets:
 - *\$resultSetname\$* (the ResultSet containing shortcut information for a content item or a folder)

7.2.34 COLLECTION_GET_META_MAPPING

Service used to retrieve the WebDAV equivalent properties of the specified folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.35 COLLECTION_GET_PROFILE_METADATA_DEFAULTS

Service used to retrieve the Default Information Field Configuration for a specific user. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.36 COLLECTION_GET_PROFILE_METADATA_REVISION_DEFAULTS

Service that retrieves the Revision Information Field Configuration values for a specific user. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.37 COLLECTION_GET_REFERENCE

Service used to determine the existence of an item within the folder hierarchy, and if the item exists, whether it is a folder, content item, or a shortcut. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following parameter sets is required to identify the path.

- **hasCollectionPath:** (Boolean) Specifies whether the `dCollectionPath` parameter is used to identify the parent folder.
 - `dCollectionPath:` The path of the parent folder.
- **level0:** The primary level of the parent folder.
 - `level1:` The secondary level of the parent folder.
 - `level2:` The content item within the folder.

Optional Service Parameters

- **RevisionHistory:** (Boolean) Specifies whether to include the `REVISION_HISTORY` result set if a content item is selected. The default value is *false*.

Results

- **isCollection:** (Boolean) Is *true* if the referenced path represents a folder.
- **isContent:** (Boolean) Is *true* if the referenced path represents a content item. If both `isCollection` and `isContent` are *false*, then no item exists with the given path.

- `isLink`: (Boolean) Is *true* if the referenced path represents a shortcut. If missing, the value is assumed *false*.
- Result Sets:
 - `REVISION_HISTORY` (only included if the `RevisionHistory` and `isContent` parameters are *true*)

Partial item information is returned for the referenced item in the binder's local data (Doc Info or Folder Info).

7.2.38 COLLECTION_GET_SEARCH_FORM

Service that retrieves the folder specific search form. The most likely errors are mismatched parameters or the folder does not exist.

Search Type: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.39 COLLECTION_GET_SYSTEM_FILE

Service that retrieves the files that are usually dynamically built at the time of the request and have no counterpart on the system. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: File Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.40 COLLECTION_GET_USER_CONFIG

Service that retrieves user specific configuration for the display and behavior of their folder structure. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location; *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.41 COLLECTION_INDEX_MOUNTS

Service that updates content that has been demoted by the Oracle Content Server indexer to the local folder by the new version. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_mounted_service.htm

7.2.42 COLLECTION_INFO

Service that retrieves the metadata associated with this particular `Folders_g` folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the folder:

- **hasCollectionID:** (Boolean) Specifies whether the `dCollectionID` parameter is used to identify the folder.
`dCollectionID:` The folder ID of the folder referenced by the shortcut.
- **hasCollectionPath:** (Boolean) Specifies whether the `dCollectionPath` parameter is used to identify the folder.
`dCollectionPath:` The path of the folder.
- **hasCollectionGUID:** (Boolean) Specifies whether the `dCollectionGUID` parameter is used to identify the folder.
`dCollectionGUID:` The GUID of the folder.

Results

- **canReadCollection:** (Boolean) Is *true* if the requesting user has read privilege for the folder.
- **canWriteCollection:** (Boolean) Is *true* if the requesting user has write privilege for the folder.
- **canAdminCollection:** (Boolean) Is *true* if the requesting user has admin privilege for the folder.
- **Result Sets:**
 - `PATH` (contains a row with folder information for every folder in the folder's path)
 - `DocFormats`
 - `ClbraProjectsAccessLists`
 - `DocTypes`
 - `metadata`

7.2.43 COLLECTION_ISVALID_META

Service that verifies that the folder can be added by the item of the specified metadata. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.44 COLLECTION_LOCK

Service that checks out a folder by name (`dDocName`) and locks the folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.45 COLLECTION_MOVE_ALL

Service that moves all of the content in a specified Folders_g folder into a different Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the current source folder of items to move:

- **fromhasCollectionID:** (Boolean) Specifies whether the `fromdCollectionID` parameter is used to identify the source folder.
`fromdCollectionID:` The source folder ID.
- **fromhasCollectionPath:** (Boolean) Specifies whether the `fromdCollectionPath` parameter is used to identify the source folder.
`fromdCollectionPath:` The path to the source folder.
- **fromhasCollectionGUID:** (Boolean) Specifies whether the `fromdCollectionGUID` parameter is used to identify the source folder.
`fromdCollectionGUID:` The source folder GUID.

One of the following sets of parameters to identify the destination folder:

- **tohasCollectionID:** (Boolean) Specifies whether the `todCollectionID` parameter is used to identify the destination parent folder.
`todCollectionID:` The ID for the destination parent folder.
- **tohasCollectionPath:** (Boolean) Specifies whether the `todCollectionPath` parameter is used to identify the destination parent folder.
`todCollectionPath:` The path to the destination parent folder.
- **tohasCollectionGUID:** (Boolean) Specifies whether the `todCollectionGUID` parameter is used to identify the destination parent folder.
`todCollectionGUID:` The GUID for the destination parent folder.
- **tolevel0:** Specifies the base value in the path for the destination parent folder (for example, `/Contribution Folders`).
- **tolevel1:** Specifies the next level value in the path for the destination parent folder (for example, `/t4`).
- **tolevel2:** Specifies the next level value in the path for the destination parent folder (for example, `/1`).

Example

```
IdcService=COLLECTION_MOVE_ALL
fromhasCollectionPath=true
fromdCollectionPath=/Contribution Folders/B/1
tohasCollectionPath=true
todCollectionPath=/Contribution Folders/t4/1
```

7.2.46 COLLECTION_MOVE_COLLECTION

Service that moves a folder into a different Folders_g folder. Compare COLLECTION_MOVE_ALL. The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the folder to move:

- **fromhasCollectionID:** (Boolean) Specifies that the **fromdCollectionID** parameter is used to identify the source folder.
fromdCollectionID: The source folder ID.
- **fromhasCollectionPath:** (Boolean) Specifies whether the **fromdCollectionPath** parameter is used to identify the source folder.
fromdCollectionPath: The path to the source folder.
- **fromhasCollectionGUID:** (Boolean) Specifies whether the **fromdCollectionGUID** parameter is used to identify the source folder.
fromdCollectionGUID: The source folder GUID.

One of the following sets of parameters to identify the destination parent folder:

- **tohasCollectionID:** (Boolean) Specifies whether the **todCollectionID** parameter is used to identify the destination parent folder.
todCollectionID: The ID for the destination parent folder.
- **tohasCollectionPath:** (Boolean) Specifies whether the **todCollectionPath** parameter is used to identify the destination parent folder.
todCollectionPath: The path to the destination parent folder.
- **tohasCollectionGUID:** (Boolean) Specifies whether the **todCollectionGUID** parameter is used to identify the destination parent folder.
todCollectionGUID: The GUID for the destination parent folder.
- **tolevel0:** Specifies the base value in the path for the destination parent folder (for example, /Contribution Folders).
tolevel1: Specifies the next level value in the path for the destination parent folder (for example, /t4).
tolevel2: Specifies the next level value in the path for the destination parent folder (for example, /1).

Example

```
IdcService=COLLECTION_MOVE_COLLECTION
fromhasCollectionID=true
fromdCollectionID=257
tohasCollectionID=true
```

todCollectionID=218

7.2.47 COLLECTION_MOVE_ITEM

Service that moves a single content item (or link) from the specified folder to the destination folder. If an item with the same file name exists in the target folder, the move fails. The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

- One of the following sets of parameters to identify the destination folder:
 - **tohasCollectionID:** (Boolean) Specifies whether the `todCollectionID` parameter is used to identify the destination folder.
`todCollectionID:` The ID for the destination folder.
 - **tohasCollectionPath:** (Boolean) Specifies whether the `todCollectionPath` parameter is used to identify the destination folder.
`todCollectionPath:` The path to the destination folder.
 - **tohasCollectionGUID:** (Boolean) Specifies whether the `todCollectionGUID` parameter is used to identify the destination folder.
`todCollectionGUID:` The GUID for the destination folder.
 - **tolevel0:** Specifies the first value in the path for the destination folder (for example, `/Contribution Folders`).
`tolevel1:` Specifies the next level value in the path for the destination folder (for example, `/t4`).
`tolevel2:` Specifies the next level value in the path for the destination folder (for example, `/1`).
- One of the following sets of parameters to identify the content item to move:
 - **dDocName:** The Content ID for the content item.
 - **fromhasCollectionPath:** (Boolean) Specifies whether the `fromhasCollectionPath` parameter is used to identify the contribution folder for the content item.
`fromdCollectionPath:` The path to the contribution folder for the content item.
 - **isLink:** (Boolean) Specifies whether the `dLinkID` parameter is used to identify the shortcut to the content item.
`dLinkID:` The Link ID for the shortcut to the content item.

Optional Service Parameters

- **toContentName:** New file name for the moved item.
- **destMustExist:** Defines (`true/false`) whether the destination for the item or link to move must exist. If this parameter is *false* or missing, and no destination folder is specified, then the item is removed from its current `Folders_g` folder (`xCollectionID` is set to 0).

Example

```

IdcService=COLLECTION_MOVE_ITEM
tohasCollectionID=true
todCollectionID=218
dDocName=TG000570
toContentName=moved_name.txt

```

7.2.48 COLLECTION_MOVE_LOT

Service that moves a set of items including folders, content items, and shortcuts to folders and content items to a single destination Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the destination parent folder for the moved items.

- **tohasCollectionID:** (Boolean) Specifies whether the `todCollectionID` parameter is used to identify the destination parent folder.
`todCollectionID:` The folder collection ID.
- **tohasCollectionPath:** (Boolean) Specifies whether the `todCollectionPath` parameter is used to identify the path to the destination folder.
`todCollectionPath:` The path to the destination folder.
- **tohasCollectionGUID:** (Boolean) Specifies whether the `todCollectionGUID` parameter is used to identify the destination folder.
`todCollectionGUID:` The GUID for the destination folder.

Parameters required to designate content items. *{n}* designates an integer used to distinguish parameters particular to one item to move from other items to move.

- **contentsselect*{n}*:** (Boolean) Specifies whether to move the content item. To move the item, the value must be *true*.
- **fromContentisLink*{n}*:** (Boolean) If the item is a content item and not a shortcut, the value must be 0.
- **fromdDocName*{n}*:** The content ID of the item to move.

Parameters required to designate shortcuts to content items. *{n}* designates an integer used to distinguish parameters particular to one item to move from other items to move.

- **contentsselect*{n}*:** (Boolean) Specifies whether to move the shortcut. To move the shortcut, the value must be *true*.
- **fromContentisLink*{n}*:** (Boolean) Specifies whether this is a shortcut and not a content item. If the item is a shortcut, the value must be 1.
- **fromContentdLinkID*{n}*:** The link ID of the shortcut to move.
- **fromdDocName*{n}*:** The content ID of the content item pointed to by the shortcut.

Parameters required to designate folders. *{n}* designates an integer used to distinguish parameters particular to one item to move from other items to move.

- `collectionselect{n}`: (Boolean) Specifies whether to move the folder. To move the shortcut, the value must be *true*.
- `fromCollectionisLink{n}`: (Boolean) Specifies whether this is a folder and not a shortcut. If this is a folder, the value must be 0.
- `fromdCollectionID{n}`: The `dCollectionID` of the folder to move.
- `fromhasCollectionID{n}`: To move the folder, the value must be 1.

Parameters required to designate shortcuts to folders. *{n}* designates an integer used to distinguish parameters particular to one item to move from other items to move.

- `collectionselect{n}`: (Boolean) Specifies whether to move the shortcut. To move the shortcut, the value must be *true*.
- `fromCollectionisLink{n}`: (Boolean) Specifies whether this is a shortcut and not a folder. If this is a shortcut, the value must be 1.
- `fromdCollectiondLinkID{n}`: = The link ID of the shortcut to move.
- `fromdCollectionID{n}`: The `dCollectionID` of the folder pointed to by the shortcut.
- `fromhasCollectionID{n}`: To move the folder shortcut, the value must be 1.

Example

```
IdcService=COLLECTION_MOVE_LOT
tohasCollectionID=true
docCollectionID=99999999999900633
contentselect1=true
fromContentisLink1=0
fromdDocName1=PHL11GX010033
```

7.2.49 COLLECTION_NEW

Service used to create a new folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: `IdcHomeDir/components/folders_g/resources/folders_service.htm`

Additional Required Service Parameters

- `hasParentCollectionID`: (Boolean) Specifies whether the folder being added as a parent folder. If set to *true*, `dParentCollectionID` must be defined.
- `dParentCollectionID`: (Boolean) Specifies whether the folder ID for the parent folder. Used when `hasParentCollectionID` is set to *true*.
- `dCollectionInherit`: (Boolean) Specifies whether to inherit folder metadata.

Example

```
IdcService=COLLECTION_NEW
hasParentCollectionID=true
dParentCollectionID=1
dCollectionInherit=0
```

7.2.50 COLLECTION_PROFILE_GET_COLUMNS

Service that return user hierarchy column information and metadata field information. There are no parameters.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Returned Data

- Result Sets:
 - COLUMNS (User-specific column set.) If the requesting user has not selected columns, the default columns returned are:
 - dFileSize
 - dDocType
 - dDocAuthor
 - dSecurityGroup
 - metadata (information about system and custom metadata fields)

7.2.51 COLLECTION_PROFILE_UPDATE_COLUMNS

Service that updates user hierarchy columns. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.52 COLLECTION_REBUILD_MOUNT

Service that rewrites the files of the specified local folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_mounted_service.htm

7.2.53 COLLECTION_REMOVE_MOUNT

Service that removes the specified local folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_mounted_service.htm

7.2.54 COLLECTION_RESTORE_COLLECTION

Service that restores a folder that is currently in the 'Trash' folder to its original location. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.55 COLLECTION_RESTORE_ITEM

Service that restores an item that is currently in the 'Trash' folder to its original location. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.56 COLLECTION_SEARCH_CONTENT

Service that retrieves all content that matches all of the metadata that is passed in for a content item. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.57 COLLECTION_SEARCH_RESULTS

Service that displays the search results of a search for Folders_g folders that match search criteria. Fields used for the search operands are those in the COLMETA and COLLECTIONS table. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Optional Service Parameters

- **ResultCount**: Limits the number of items returned in the SearchResults result set. The default is 25.
- **SortField**: Field used as a sort key. The default is dCollectionName.
- **SortOrder**: The sort direction. The default is ASC (ascending).
- **fieldname**: Name of the field to be used as part of a string search condition. Example: dSecurityGroup=true
- **opfieldname**: Operator, relative to the name field, to be used in a string search condition. Example: opdSecurityGroup=hasAsSubstring
- **comparefieldname**: Value to be use in a string search condition, relative to named field. Example: comparedSecurityGroup=public
- **fieldnameLE** or **fieldnameGE**: Field and value to be used in a date search condition. Example: dCreateDateLE=2008-03-01 00:01:00

Results

- **Result Sets**:
 - SearchResults (list of folders, with metadata, matching the search conditions)

Examples

- **startsWith** search:
`dCollectionName=true&opdCollectionName=beginWith&comparedCollectionName=a`

- endsWith search:
dCollectionName=true&opdCollectionName=endsWith&comparedCollectionName=12
- exact string match search:
dCollectionName=true&opdCollectionName>equals&comparedCollectionName=A-EZ-9
- field not empty search:
dDocTitle=true&opdDocTitle=hasAsSubstring&comparedDocTitle=%
- boolean field search:
xBooleanTestField=true&opxBooleanTestField>equals&comparexBooleanTestField=1
- later than search:
dCreateDatedateGE=2009-10-01 00:01:00
- earlier than search
dCreateDatedateLE=2008-03-01 00:01:00

7.2.58 COLLECTION_SET_ARCHIVE

Service that takes the uploaded archive and applies it to the system. This service deletes any folders that are in conflict with the archive. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/olders_service.htm

7.2.59 COLLECTION_SET_USER_CONFIG

Service that sets the user configuration for the display and behavior of their folder structure. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.60 COLLECTION_UNLOCK

Service that undoes a checkout of a content item and makes it available for use. This service frees content after a COLLECTION_LOCK. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.61 COLLECTION_UPDATE

Service that modifies field data for a Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the folder:

- **hasCollectionID:** (Boolean) Specifies whether the **dCollectionID** parameter is used to identify the folder.
dCollectionID: The folder ID.
- **hasCollectionPath:** (Boolean) Specifies whether the **dCollectionPath** parameter is used to identify the folder.
dCollectionPath: The path of the folder.
- **hasCollectionGUID:** (Boolean) Specifies whether the **dCollectionGUID** parameter is used to identify the folder.
dCollectionGUID: The GUID of the folder.

Optional Service Parameters

- **dCollectionName:** Collection ID for the folder.
- **dCollectionMark:**
- **dCollectionEnabled:**
- **dPromptForMetadata:**
- **dCreateDate:** Date the content item was created.
- **dInDate:** Content release date.
- **dOutDate:** Content expiration date.
- **dReleaseDate:** Release state (used to indicate the Web state of the revision).
- **dLastModifiedDate:** Date of the last modification to the content item.
- **dDocName:** Content ID for the content item.
- **dDocType:** Content item type.
- **dDocTitle:** Content item title.
- **dDocAuthor:** Content item author.
- **dRevLabel:** Revision label for the content item. If set, the label is used to locate the specified revision.
- **dSecurityGroup:** Security group such as *Public* or *Secure*.
- **dDocAccount:** Account for the content item. Required only if accounts are enabled.
- **dCollectionOwner:** Folder owner.
- **dCollectionCreator:** Overrides the user set as the folder creator. The default value is the current user.
- **dCollectionModifier:** Overrides the user set as the last folder modifier. The default value is the current user.
- **x?????:** Any of the fields as defined in the **ColMeta** table, which must exactly match the custom metadata fields in **DocMeta**.

Example

```
IdcService=COLLECTION_UPDATE
dCollectionName=Products
dParentCollectionID=1
dCollectionOwner=bsmith
```

7.2.62 COLLECTION_UPDATE_ADMIN_CONFIG

Service that updates the folders system configuration settings. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.63 COLLECTION_UPDATE_ADMIN_INHERIT_CONFIG

Service that updates the folders system configuration setting by inheriting the metadata from an existing folder (from which metadata is propagated). The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.64 COLLECTION_UPDATE_ADMIN_METADATA_DEFAULTS

Service that updates the folders system metadata field default system settings. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.65 COLLECTION_UPDATE_ALL

Service that updates all items in a collection and changes the defined metadata. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.66 COLLECTION_UPDATE_ITEM

Service that updates a specific item in a collection and changes the defined metadata. Folders related service (table *Folders_Services*). The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.67 COLLECTION_UPDATE_META

Service that propagates metadata values from a *Folders_g* folder to all underlying folders and content. The most likely errors are mismatched parameters or the folder does not exist. No returned data.

Service Class: Meta Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the folder:

- `hasCollectionID`: (Boolean) Specifies that the `dCollectionID` parameter is used to identify the folder.
`dCollectionID`: The folder ID of the parent folder.
- `hasCollectionPath`: (Boolean) Specifies that the `dCollectionPath` parameter is used to identify the folder.
`dCollectionPath`: The path of the parent folder.
- `hasCollectionGUID`: (Boolean) Specifies that the `dCollectionGUID` parameter is used to identify the folder.
`dCollectionGUID`: The GUID of the parent folder.

Example

```
IdcService=COLLECTION_UPDATE_META  
hasCollectionGUID=true  
dCollectionGUID=5A2E5617-7F95-7356-D923-F6DA894D489C
```

7.2.68 COLLECTION_UPDATE_META_TABLE

Service that updates a folder metadata table. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Meta Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.69 COLLECTION_UPDATE_MOUNTS

Service that updates the files of the specified local folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Search Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_mounted_service.htm

7.2.70 COLLECTION_UPDATE_PROFILE_METADATA_DEFAULTS

Service that updates the profile metadata field defaults. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.71 COLLECTION_UPDATE_PROFILE_METADATA_REVISION_DEFAULTS

Service that updates the profile metadata field defaults of a revision. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources//folders_service.htm

7.2.72 COLLECTION_UPDATE_STRUCTURE

Service that refreshes the folder cache. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Meta Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.73 COLLECTION_VERIFY_FOLDER_NAME

Service that validates that the given folder name is a valid name for a Folders_g folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

One of the following sets of parameters to identify the folder:

- `dCollectionName`: The Collection ID for the folder.
- `hasCollectionPath`: (Boolean) Specifies that the `dCollectionPath` parameter is used to identify the folder.

`dCollectionPath`: The path of the parent folder.

Optional Service Parameters

- `CollectionSkipIllegalFolderValidation`: Allows all validation to be skipped except `csCollectionFolderHasNoName`. The default is *false*.

Configuration Parameters

- `CollectionIllegalFolderCharacters`: String containing any illegal characters to use in a folder name. The default is `/\ : * ? " < > |`
- `dCollectionNameSize`: Maximum number of characters for a folder name. The default is 100.
- `CollectionIllegalFolderPattern_1`: A regular expression. If the expression matches the folder name, the verification will fail. The default is `\\. . *`
- `CollectionIllegalFolderPattern_2`: A regular expression. If the expression matches the folder name, the verification will fail. The default is `. * \\ .`
- `CollectionIllegalFolderPattern_3`: A regular expression. If the expression matches the folder name, the verification will fail. The default is `com[\\ d]`
- `CollectionIllegalFolderPattern_4`: A regular expression. If the expression matches the folder name, the verification will fail. The default is `lot[\\ d]`
- `CollectionIllegalFolderPattern_5`: A regular expression. If the expression matches the folder name, the verification will fail. The default is `con`
- `CollectionIllegalFolderPattern_6`: A regular expression. If the expression matches the folder name, the verification will fail. The default is `null`
- `CollectionIllegalFolderPattern_7`: A regular expression. If the expression matches the folder name, the verification will fail. The default is `prn`

Additional `CollectionIllegalFolderPattern_{n}` variables can be added. They are evaluated by the service as long as they are in sequence.

Results

- Result Sets:
 - SUCCESS
 - FAILED (csCollectionFolderHasNoName)
 - FAILED (csCollectionInvalidCharacter:pos=*position of first bad char*)
 - FAILED (csCollectionNameTooLong:*folder name,number of extra characters*)
 - FAILED (csCollectionIllegalPatternMatch:*folder name,illegal folder pattern*)

Example

```
IdcService=COLLECTION_VERIFY_FOLDER_NAME
hasCollectionPath=true
dCollectionPath=/Contribution Folders/dept/hr
CollectionSkipIllegalFolderValidation=true
dCollectionNameSize=90
```

7.2.74 GET_FOLDER_HISTORY_REPORT

Service that retrieves history data for Folders_g folders. The requesting user must have admin role.

Service Class: DocService

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

Additional Required Service Parameters

- `actionDateGreaterThan`: Date in ODBC format. All history data from two minutes before this time and later is returned. The two minutes is a margin for load-balanced servers. The default value is five minutes before the current time.

Results

- Result Sets
 - `HistoryReport`: Each row contains information about a folder history event: rename, update, move, or delete

Example

```
IdcService=GET_FOLDER_HISTORY_REPORT
actionDateGreaterThan={ts '2010-09-09 18:04:06.293'}
```

7.2.75 GET_OPTION_LISTS

Folders-related service that retrieves the option lists. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Service (general service)

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.76 GOTO_COLLECTION

Service that displays a folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources/folders_service.htm

7.2.77 GOTO_ROOT_COLLECTION

Service that displays the root folder. The most likely errors are mismatched parameters or the folder does not exist.

Service Class: Doc Service

Location: *IdcHomeDir*/components/folders_g/resources//folders_service.htm

Oracle Universal Records Management Services

The following sections describe the available Oracle Universal Records Management (Oracle URM) services:

- [Section 8.1, "About Oracle Universal Records Management Services"](#)
- [Section 8.2, "Oracle Universal Records Management Services"](#)

8.1 About Oracle Universal Records Management Services

A typical service call is similar to the following:

```
LIST_DISPOSITION_RECORDS
Service 33 PENDING_REVIEW_LIST null null !csUnableToGetRecordsList
3:hasRmaRights:admin.performactions:0:null
3:checkRecordsFoldersMap::0:null
3:setLocalValuesAfterEval:dRequestedUser,<$dUser$>:null
3:setLocalValues:IsNavigation,1::null
```

In this example:

- The first line indicates the service name: `LIST_DISPOSITION_RECORDS`
- The second line lists the service's attributes:
 - Service class: `service` (generic service)
 - Access level: `33`
 - Template: `PENDING_REVIEW_LIST`
 - Service type: `null`
 - Subjects Notified: `null`
 - Error message: `Unable To Get Records List`
- The remainder of the entry lists the service's actions, each line designating one action:
 - action type: for example, `3`, indicating a Java method.
 - action name: for example, `hasRmaRights`
 - action parameters: for example, `dRequestUser`. If no parameters are specified, `::` are included.

- action control mask: for example, 1, indicating "Ignore error". If no control mask is specified, : : is included.
- action error message, or null if no message is available.

Each element of a service action is separated by a colon (:).

All services have at least one required parameter. The IdcService parameter takes the name of the service as its argument. If any other parameters are required, they are noted in the description of the service.

For details about a service's attributes and actions, see [Section 3, "Customizing Services."](#)

8.2 Oracle Universal Records Management Services

The following services are used in Oracle Universal Records Management (Oracle URM) functions:

- [ACTIVATE_SERVICE](#)
- [APPROVE_DELETE_SERVICE](#)
- [BROWSE_CATEGORY_FORM](#)
- [BROWSE_FOLDER_FORM](#)
- [BROWSE_SERIES_FORM](#)
- [CHECKIN_NEW_REVISION_SERVICE](#)
- [CHECKIN_SIMILAR_FORM](#)
- [CLEAR_FOLDER_CANCELLED_DATE](#)
- [CLEAR_FOLDER_EXPIRATION_DATE](#)
- [CLEAR_FOLDER_OSBOLETE_DATE](#)
- [CLEAR_FOLDER_RESCINDED_DATE](#)
- [CLEAR_FOLDER_REVIEW_DATE](#)
- [CLEAR_RECORD_CANCELLED_DATE](#)
- [CLEAR_RECORD_EXPIRATION_DATE](#)
- [CLEAR_RECORD_OBSOLETE_DATE](#)
- [CLOSE_FOLDER](#)
- [CREATE_FOLDER](#)
- [CREATE_FOLDER_FORM](#)
- [DELETE_ALL_BUT_LAST_N_REVISIONS_SERVICE](#)
- [DELETE_FOLDER](#)
- [DELETE_REVISION_SERVICE](#)
- [EDIT_FOLDER](#)
- [EDIT_FOLDER_FORM](#)
- [FREEZE_FOLDER](#)
- [FREEZE_RECORD](#)
- [INFO_CATEGORY_FORM](#)

- INFO_FOLDER_FORM
- INFO_FOLDER_LIFECYCLE
- INFO_FOLDER_METADATA_HISTORY
- INFO_FOLDER_REVIEW_HISTORY
- INFO_RECORD_LIFECYCLE
- INFO_RECORD_METADATA_HISTORY
- INFO_RECORD_REVIEW_HISTORY
- INFO_SERIES_FORM
- MARK_FOLDER_ACTIVATION_DATE
- "MARK_FOLDER_CANCELLED_DATE" on page 9
- MARK_FOLDER_EXPIRATION_DATE
- MARK_FOLDER_OBSOLETE_DATE
- MARK_FOLDER_RESCINDED_DATE
- MARK_FOLDER_REVIEW_DATE
- MARK_FOLDER_REVIEW_DATE_RECURSIVE
- MARK_RECORD_CANCELLED_DATE
- MARK_RECORD_EXPIRATION_DATE
- MARK_RECORD_OBSOLETE_DATE
- MARK_RECORD_RESCINDED_DATE
- MARK_RECORD_REVIEW_DATE
- MOVE_FOLDER
- PREVIEW_RECORD_LIFECYCLE
- RMA_CLOSE_SERVICE
- RMA_CUTOFF_SERVICE
- RMA_DESTROY_SERVICE
- RMA_EXPORT_ARCHIVE_SERVICE
- RMA_EXPORT_SERVICE
- RMA_MARK_COMPLETED
- RMA_NO_ACTION_SERVICE
- RMA_OBSOLETE_SERVICE
- RMA_SCRUB_SERVICE
- RMA_SUPERSEDE_SERVICE
- UNCLOSE_FOLDER
- UNFREEZE_FOLDER
- UNFREEZE_RECORD

8.2.1 ACTIVATE_SERVICE

This service is used to set an Activate disposition action date.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action to be processed.

8.2.2 APPROVE_DELETE_SERVICE

This service is used to an Approve Delete disposition action date.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action to be processed.

8.2.3 BROWSE_CATEGORY_FORM

This service is used to retrieve a page used to browse the contents of a retention category in the retention schedule.

Additional Required Service Parameters

- dCategoryID: The unique identifier of the retention category to be retrieved.

8.2.4 BROWSE_FOLDER_FORM

This service is used to retrieve a page used to browse the contents of a record folder in the retention schedule.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be retrieved.

8.2.5 BROWSE_SERIES_FORM

This service is used to retrieve a page used to browse the contents of a series in the retention schedule.

Additional Required Service Parameters

- dSeriesID: The unique identifier of the series to be retrieved.

8.2.6 CHECKIN_NEW_REVISION_SERVICE

This service is used to check in the latest revision of a content item as a new revision. This is usually used to trigger a workflow.

8.2.7 CHECKIN_SIMILAR_FORM

This service is used to retrieve the Check In Similar page. This is a check-in page with metadata fields already filled in based on the previous content item checked in.

Additional Required Service Parameters

- dID: The unique content ID for the item already checked in.

8.2.8 CLEAR_FOLDER_CANCELLED_DATE

This service is used to clear the date for a canceled record folder.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.

8.2.9 CLEAR_FOLDER_EXPIRATION_DATE

This service is used to clear the expiration date for a canceled record folder.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.

8.2.10 CLEAR_FOLDER_OSBOLETE_DATE

This service is used to clear the date at which a record folder becomes obsolete.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.

8.2.11 CLEAR_FOLDER_RESCINDED_DATE

This service is used to clear the date at which a record folder is rescinded.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.

8.2.12 CLEAR_FOLDER_REVIEW_DATE

This service is used to clear the date at which a record folder was last reviewed.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.

8.2.13 CLEAR_RECORD_CANCELLED_DATE

This service is used to clear the date at which a content item was canceled.

Additional Required Service Parameters

- dID: The unique identifier of the content to be processed.

8.2.14 CLEAR_RECORD_EXPIRATION_DATE

This service is used to clear the date at which an item was expired.

Additional Required Service Parameters

- dID: The unique identifier of the item to be processed.

8.2.15 CLEAR_RECORD_OBSOLETE_DATE

This service is used to clear the date at which an item becomes obsolete.

Additional Required Service Parameters

- dID: The unique identifier of the item to be processed.

8.2.16 CLOSE_FOLDER

This service is used to close an existing record folder in the retention schedule. No further content items can be checked into the closed record folder or its subfolders unless the user has the Folder.Open/Close right or is the author of the closed folder.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.

8.2.17 CREATE_FOLDER

This service is used to create a new record folder in the retention schedule. This service is usually called from the CREATE_FOLDER_FORM page.

Additional Required Service Parameters

- dFolderID: A unique identifier of the new record folder.
- dFolderName: A name for the new record folder.
- dSecurityGroup: The security group to be associated with the new record folder.
- dDocAuthor: The person creating the new record folder.
- dCategoryID: The unique identifier of the retention category to be associated with the record folder.

8.2.18 CREATE_FOLDER_FORM

This service is used to call CREATE_FOLDER to create a new record folder in the retention schedule.

8.2.19 DELETE_ALL_BUT_LAST_N_REVISIONS_SERVICE

This service is used to process a Delete All But Last *N* Revisions disposition action. The administrator sets *n*, which is a variable.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action to be processed.

8.2.20 DELETE_FOLDER

This service is used to delete an existing record folder from the retention schedule.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.

8.2.21 DELETE_REVISION_SERVICE

This service is used to delete the latest revision of a content item.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action to be processed.

8.2.22 EDIT_FOLDER

This service is called by EDIT_FOLDER_FORM to update the (modified) properties of an existing record folder in the retention schedule.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be edited.
- dFolderName: The name of the record folder to be edited.
- dSecurityGroup: The security group associated with the record folder.
- dDocAuthor: The owner of the record folder.

8.2.23 EDIT_FOLDER_FORM

This service is used to call EDIT_FOLDER to edit a folder in the retention schedule.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be edited.

8.2.24 FREEZE_FOLDER

This service is used to freeze an existing record folder in the retention schedule. Freezing a folder pauses any processing of disposition rules associated with the folder until the UNFREEZE_FOLDER service is called.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be frozen.
- dCategoryID: The unique identifier of the retention category associated with the record folder.
- auditComments: The freeze name.
- auditComments2: The freeze reason.

8.2.25 FREEZE_RECORD

This service is used to freeze an existing content item. Freezing a content item pauses any processing of disposition rules associated with the content item until the UNFREEZE_RECORD service is called.

Additional Required Service Parameters

- dID: The content ID of the content item to be frozen.
- auditComments: The freeze name.
- auditComments2: The freeze reason.

8.2.26 INFO_CATEGORY_FORM

This service is used to retrieve the information page of a retention category.

Additional Required Service Parameters

- dCategoryID: The unique identifier of the retention category to be retrieved.

8.2.27 INFO_FOLDER_FORM

This service is used to retrieve the metadata information page and related content for a record folder in the retention schedule.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be retrieved.

8.2.28 INFO_FOLDER_LIFECYCLE

This service is used to retrieve the lifecycle information page for a record folder.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder.

8.2.29 INFO_FOLDER_METADATA_HISTORY

This service is used to retrieve the metadata history of a record folder.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder.

8.2.30 INFO_FOLDER_REVIEW_HISTORY

This service is used to retrieve the review history of a record folder.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder.

8.2.31 INFO_RECORD_LIFECYCLE

This service is used to retrieve the lifecycle information page for a content item.

Additional Required Service Parameters

- dID: The content ID of the item.
- dCategoryID: The unique identifier of the retention category associated with the item.

8.2.32 INFO_RECORD_METADATA_HISTORY

This service is used to retrieve the metadata history of a content item.

Additional Required Service Parameters

- dID: The content ID of the content item.

8.2.33 INFO_RECORD_REVIEW_HISTORY

This service is used to retrieve the review history of a content item.

Additional Required Service Parameters

- dID: The content ID of the content item.

8.2.34 INFO_SERIES_FORM

This service is used to retrieve the information page for a series in the retention schedule.

Additional Required Service Parameters

- dSeriesID: The unique identifier of the series.

8.2.35 MARK_FOLDER_ACTIVATION_DATE

This service is used to set the current date for when a record folder will be activated.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used for activation.

8.2.36 MARK_FOLDER_CANCELLED_DATE

This service is used to set the current date for when a record folder will be canceled.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used for cancellation.

8.2.37 MARK_FOLDER_EXPIRATION_DATE

This service is used to set the current date for the expiration date for a record folder.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used for expiration.

8.2.38 MARK_FOLDER_OBSOLETE_DATE

This service is used to set the current date for when a record folder becomes obsolete.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used as the obsolete date.

8.2.39 MARK_FOLDER_RESCINDED_DATE

This service is used to set the current date for when a record folder will be rescinded.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used as the rescinded date.

8.2.40 MARK_FOLDER_REVIEW_DATE

This service is used to set the current date for when a record folder will be reviewed.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used as the review date.

8.2.41 MARK_FOLDER_REVIEW_DATE_RECURSIVE

This service is used to set the current date for when a record folder, including all of its child folders, will be reviewed.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- currentDate: The date to be used as the review date.

8.2.42 MARK_RECORD_CANCELLED_DATE

This service is used to set the current date for when a content item will be canceled.

Additional Required Service Parameters

- dID: The content ID of the content item to be processed.
- currentDate: The date to be used as the cancellation date.

8.2.43 MARK_RECORD_EXPIRATION_DATE

This service is used to set the current date for when an item will expire.

Additional Required Service Parameters

- dID: The content ID of the item to be processed.
- currentDate: The date to be used as the expiration date.

8.2.44 MARK_RECORD_OBSOLETE_DATE

This service is used to set the current date to be used to make an item obsolete.

Additional Required Service Parameters

- dID: The content ID of the item to be processed.
- currentDate: The date to be used as the obsolete date.

8.2.45 MARK_RECORD_RESCINDED_DATE

This service is used to set the current date for when an item will be rescinded.

Additional Required Service Parameters

- dID: The content ID of the item to be processed.
- currentDate: The date to be used as the rescinded date.

8.2.46 MARK_RECORD_REVIEW_DATE

This service is used to set the current date for when a content item will be reviewed.

Additional Required Service Parameters

- dID: The content ID of the content item to be processed.
- currentDate: The date to be used as the review date.

8.2.47 MOVE_FOLDER

This service is used to move a record folder from one location in the retention schedule to another.

Additional Required Service Parameters

- dFolderID: The folder ID of the folder to be processed.
- dCategoryID: The folder category.

8.2.48 PREVIEW_RECORD_LIFECYCLE

This service is used to retrieve the lifecycle preview of a content item.

Additional Required Service Parameters

- dID: The content ID of the content item to be processed.

8.2.49 RMA_CLOSE_SERVICE

This service is used to process a Close disposition action on a folder. This service calls the CLOSE_FOLDER service.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action.

8.2.50 RMA_CUTOFF_SERVICE

This service is used to process a Cutoff disposition action.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action.

8.2.51 RMA_DESTROY_SERVICE

This service is used to process a Destroy disposition action. All revisions of content or folders are destroyed unless other disposition rules take precedence.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action.

8.2.52 RMA_EXPORT_ARCHIVE_SERVICE

This service is used to add an Oracle Universal Records Management archive to an Oracle Content Server archive.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action.

8.2.53 RMA_EXPORT_SERVICE

This service is used to create a zip archive.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action.

8.2.54 RMA_MARK_COMPLETED

This service is used to mark the completion of an action.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action.

8.2.55 RMA_NO_ACTION_SERVICE

This service is used to process a No Action disposition action.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action.

8.2.56 RMA_OBSOLETE_SERVICE

This service is used to process an Obsolete disposition action. This service calls MARK_FOLDER_OBSOLETE_DATE or MARK_RECORD_OBSOLETE_DATE.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action.

8.2.57 RMA_SCRUB_SERVICE

This service is used to securely delete record folders or content item so they cannot be recovered.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action.

8.2.58 RMA_SUPERSEDE_SERVICE

This service is used to process a Supersede disposition action.

Additional Required Service Parameters

- dDispositionID: The unique identifier of the disposition action.

8.2.59 UNCLOSE_FOLDER

This service is used to revoke the closed status of an existing record folder in the retention schedule. Unclosing a folder allows content to be checked into the closed record folder or its subfolders.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.

8.2.60 UNFREEZE_FOLDER

This service is used to unfreeze an existing record folder in the retention schedule. Unfreezing a folder releases the folder for processing of its associated disposition rules.

Additional Required Service Parameters

- dFolderID: The unique identifier of the record folder to be processed.
- auditComments: The unfreeze name.
- auditComments2: The unfreeze reason.

8.2.61 UNFREEZE_RECORD

This service is used to unfreeze an existing content item. Unfreezing releases the content item for processing of its associated disposition rules.

Additional Required Service Parameters

- dFolderID: The unique identifier of the content item to be processed.
- auditComments: The unfreeze name.
- auditComments2: The unfreeze reason.

Extended User Attributes Services

The following sections describe the services available for the Extended User Attributes component:

- [Section 9.1, "About Extended User Attributes Services"](#)
- [Section 9.2, "Extended User Attributes Services"](#)

9.1 About Extended User Attributes Services

A typical Extended User Attributes service entry is similar to the following:

```
ADD_EXTENDED_USER_ATTRIBUTES
UserService 0 null null null !csUnableToAddExtendedAttr(dName)
3:checkSubAdmin:UserAdmin:0:null
3:loadUserAndCheckEditAllowedWithExtendedAttributes::4:null
3:setLocalValues:alwaysSave,1,doAdminFields,1:0:null
3:removeCachedUser::0:null
3:setConditionVars:IsModifyExisting,1,IsAddingAttributes,1:0:null
3:modifyExtendedUserAttributes:IuserExtendedAttribute:8:null
3:checkRefreshUsers::0:null
```

- The first line indicates the service name: `ADD_EXTENDED_USER_ATTRIBUTES`
- The second line lists the service's attributes:
 - Service class: `UserService`
 - Access level: `0`
 - Template: `null` (none used)
 - Service type: `null` (not a subservice)
 - Subjects Notified: `null`
 - Error message: `Unable to add new extended attributes for user`
- The remainder of the entry lists the service's actions, each line designating one action:
 - action type: for example, `3`, indicating a Java method.
 - action name: for example, `modifyExtendedUserAttributes`
 - action parameters: for example, `IuserExtendedAttribute`. If no parameters are specified, double-colons (`: :`) are included.

- action control mask: for example, 8, indicating the end of a database transaction. The double-colon indicator (: :) can also be included.
- action error message: for example, null if no message is available.

Each element of a service action is separated by a colon (:).

Important: All services have at least one required parameter. The IdcService parameter takes the name of the service as its argument. If other parameters are required, they are noted in the description of the service.

See "[Customizing Services](#)" on page 3-1 for details about a service's attributes and actions.

9.2 Extended User Attributes Services

The following Extended User Attributes component services are installed when the Oracle Content Server instance is installed:

- [ADD_EXTENDED_USER_ATTRIBUTES](#)
- [EDIT_EXTENDED_USER_ATTRIBUTES](#)
- [DELETE_EXTENDED_USER_ATTRIBUTES](#)
- [DELETE_EXTENDED_ATTRIBUTES_BY_APPLICATION](#)
- [DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_USER](#)
- [DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_APPLICATION](#)
- [QUERY_EXTENDED_USER_ATTRIBUTES](#)
- [QUERY_EXTENDED_ATTRIBUTE_MAPPINGS](#)
- [EC_SET_PROPERTY](#)
- [EC_DELETE_PROPERTY](#)
- [EC_GET_PROPERTY](#)
- [EC_GET_PROPERTY_BY_KEY](#)
- [SET_DEFAULT_ATTRIBUTES](#)
- [DELETE_DEFAULT_ATTRIBUTES](#)
- [GET_DEFAULT_ATTRIBUTES](#)
- [SET_EXTENDED_ATTRIBUTE_MAPPINGS](#)
- [DELETED_EXTENDED_ATTRIBUTE_MAPPINGS](#)

The following services are extended to provide support for the Extended User Attributes component:

- [ADD_USER](#)
- [EDIT_USER](#)
- [DELETE_USER](#)
- [QUERY_USER_ATTRIBUTES](#)

9.2.1 ADD_EXTENDED_USER_ATTRIBUTES

Service adds extended attributes to a user. The user does not have to exist before using the service. If this service is asked to add extended attributes which already exist for the user, the service modifies the previous entries.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- `dName`: The user name.
- `ExtUserAttribInfo Resultset`: A result set containing extended user attribution information.

Optional Service Parameters

- `CheckUserMustExist`: If set to true, a limited check is performed to verify that the user exists before extended attributes are added. This check only works for local users; it is *not* recommended to set this value for typical service calls.

Example

The following example from `add_user_attr.txt` illustrates the use of this service:

```
# Add a security group and an account to the user's extended attributes
# with different applications
@Properties LocalData
IdcService=ADD_EXTENDED_USER_ATTRIBUTES
dName=jsmith
@end
@ResultSet ExtUserAttribInfo
3
dUserName
dApplication
AttributeInfo
jsmith
appl
account,abc/def,15
jsmith
app2
role,contributor,15
@end
```

9.2.2 EDIT_EXTENDED_USER_ATTRIBUTES

Service edits extended user attributes for a user. The user does not have to exist before using the service. All previously extended attributes are replaced by the new extended attributes provided.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- `dName`: The user name.
- `ExtUserAttribInfo ResultSet`: A result set containing extended user attribution information.

Optional Service Parameters

- **CheckUserMustExist:** If set to *true*, a limited check is performed to verify that the user exists before extended attributes are added. This check only works for local users; it is *not* recommended to set this value for typical service calls.

Example

The following example from `edit_user_attr.txt` illustrates the use of this service:

```
# Change the user to have all permissions with #all
@Properties LocalData
IdcService=EDIT_EXTENDED_USER_ATTRIBUTES
dName=jsmith
@end
@ResultSet ExtUserAttribInfo
3
dUserName
dApplication
AttributeInfo
jsmith
appl
account,\#all,15
@end
```

9.2.3 DELETE_EXTENDED_USER_ATTRIBUTES

Service deletes specific extended user attributes for a user.

Location:

`IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm`

Additional Required Service Parameters

- **dName:** The user name.
- **ExtUserAttribInfo ResultSet:** A result set containing extended user attribution information.
- **allowMissingAttributes:** If set to *true*, the service suppresses errors when trying to delete attributes that do not exist (the default is *false*).

Optional Service Parameters

- **CheckUserMustExist:** If set to *true*, a limited check is performed to verify that the user exists before extended attributes are added. This check only works for local users; it is *not* recommended to set this value for typical service calls.

Example

```
# Delete the #all account from extended attributes for jsmith
@Properties LocalData
IdcService=DELETE_EXTENDED_USER_ATTRIBUTES
dName=jsmith
@end
@ResultSet ExtUserAttribInfo
3
dUserName
dApplication
AttributeInfo
jsmith
appl
account,\#all,15
@end
```

9.2.4 DELETE_EXTENDED_ATTRIBUTES_BY_APPLICATION

Service deletes all extended attributes for a particular role/account for a specified application.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- dAttributeType: The type of attribute to delete.
- dAttributeName: The name of the attribute to delete.
- dApplication: The application from which to delete the attribute.

Example

The following example from `delete_attr_by_app.txt` illustrates the use of this service:

```
# Delete the xyz account from extended attributes for appl
@Properties LocalData
IdcService=DELETE_EXTENDED_ATTRIBUTES_BY_APPLICATION
dAttributeName=xyz
dAttributeType=account
dApplication=appl
@end
```

9.2.5 DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_USER

Service deletes all extended attributes for a user.

Additional Required Service Parameters

- dName: The user name.

Optional Service Parameters

- CheckUserMustExist: If set to *true*, a limited check is performed to verify that the user exists before extended attributes are added. This check only works for local users; it is *not* recommended to set this value for typical service calls.

Example

The following example from `delete_user_attr_all.txt` illustrates the use of this service:

```
# Add roles
@Properties LocalData
IdcService=DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_USER
dName=jsmith
@end
```

9.2.6 DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_APPLICATION

Service deletes all extended users attributes for an application.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- `dApplication`: The application.

Example

The following example from `del_all_attr_app.txt` illustrates the use of this service:

```
# Delete all extended attribute information for appl
@Properties LocalData
IdcService=DELETE_ALL_EXTENDED_ATTRIBUTES_FOR_APPLICATION
dApplication=appl
@end
```

9.2.7 QUERY_EXTENDED_USER_ATTRIBUTES

Service places all of a user's extended attributes into a result set in the binder. All of the data is put into the `ExtUserAttribInfo ResultSet`.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- `dName`: The user name.

Optional Service Parameters

- `dApplication`: The application name for the attribute.
- `dAttributeType`: The type of attribute.
- `dAttributeName`: The name of the attribute.

Example

Adding one or more of the optional parameters enables greater flexibility in narrowing the query. The following example from `query_user_attr_ext.txt` illustrates the use of this service:

```
# Query the extended attributes of a user
@Properties LocalData
IdcService=QUERY_EXTENDED_USER_ATTRIBUTES
dName=jsmith
@end
```

9.2.8 QUERY_EXTENDED_ATTRIBUTE_MAPPINGS

Service places all mapped extended attributes from a particular attribute into a result set in the binder. All of the data is put into the `ExtUserAttribInfo ResultSet`.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- `dMappedAttributeName`: The name of the attribute to be mapped.

Optional Service Parameters

- `dApplication`: The application name for the attribute.
- `dAttributeType`: The type of attribute.
- `dAttributeName`: The name of the attribute.

Example

Adding one or more of the optional parameters enables greater flexibility in narrowing the query. The following example from `query_attr_map_ext.txt` illustrates the use of this service:

```
<?hda version="11gR1-dev" jcharset=Cp1252 encoding=iso-8859-1?>

# Query the attributes mapped from role 'guest'
@Properties LocalData
IdcService=QUERY_EXTENDED_ATTRIBUTE_MAPPINGS
dMappedAttributeName=guest
@end
```

9.2.9 EC_SET_PROPERTY

Service sets an extended configuration property. It can be used to either add a new property or modify an existing property.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- `dECPropType`: The type of property.
- `dECPropKey`: A key (generally relating to `dECPropType`).
- `dECPropValue`: The property value.

Optional Service Parameters

- `dECPropSubKey`: (Recommended) A second key; for example, the key can be a feature of what is defined by `dECPropType` and `dEDPropKey`.

Example

The following example from `set_property.txt` illustrates the use of this service:

```
# Set an extended configuration property
@Properties LocalData
IdcService=EC_SET_PROPERTY
dECPropType=account
dECPropKey=#abc
dECPropSubKey=URL
dECPropValue=http://www.example.com
@end
```

9.2.10 EC_DELETE_PROPERTY

Service deletes an extended configuration property. It is important that the exact key be specified for deletion. This service does not automatically delete all subkeys under a key.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- `dECPropType`: The type of property.
- `dECPropKey`: A key (generally relating to `dECPropType`).

Optional Service Parameters

- `dECPropSubKey`: (Recommended) A second key; for example, the key can be a feature of what is defined by `dECPropType` and `dEDPropKey`.

Example

The following example from `del_property.txt` illustrates the use of this service:

```
# Delete an extended configuration property
@Properties LocalData
IdcService=EC_DELETE_PROPERTY
dECPropType=account
dECPropKey=#abc
dECPropSubKey=URL
@end
```

9.2.11 EC_GET_PROPERTY

Service returns a specified extended configuration property in the `ResultSet PROPERTY_LIST`. It is important that the exact key be specified; if you want to search based on just the key (not subkey) use `EC_GET_PROPERTY_BY_KEY`.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- dECPropType: The type of property.
- dECPropKey: A key (generally relating to dECPropType).

Optional Service Parameters

- dECPropSubKey: (Recommended) A second key; for example, the key can be a feature of what is defined by dECPropType and dEDPropKey.

Example

The following example from `get_property.txt` illustrates the use of this service:

```
# Retrieve an extended configuration property
@Properties LocalData
IdcService=EC_GET_PROPERTY
dECPropType=account
dECPropKey=#abc
dECPropSubKey=URL
@end
```

9.2.12 EC_GET_PROPERTY_BY_KEY

Service returns a specified extended configuration property in the ResultSet PROPERTY_LIST.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- dECPropType: The type of property.
- dECPropKey: A key (generally relating to dECPropType).

Example

The following example from `get_property_by_key.txt` illustrates the use of this service:

```
# Retrieve an extended configuration property by key - gets all
# accounts of key #abc (regardless of subkey)
@Properties LocalData
IdcService=EC_GET_PROPERTY_BY_KEY
dECPropType=account
dECPropKey=#abc
@end
```

9.2.13 SET_DEFAULT_ATTRIBUTES

Service sets some default attributes that will always be applied to a user. The type is defaults and the key is userattributes, so these do not need to be provided.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- `dDefAttribs`: The default attributes in the form of a comma-separated entry consisting of three items.

Optional Service Parameters

- `dECPropSubKey`: A second key; the default attributes will load for all users whether or not this key is specified.
- `IsSecureDefaultAttribute`: When set to 1 and used with the databinder when using the default web services () then it registers defaults that only apply to logged in users. (By default, default attributes apply to all users, including *anonymous*.)

Example

The following example from `set_defs.txt` illustrates the use of this service:

```
# Sets some default attributes for all users
@Properties LocalData
IdcService=SET_DEFAULT_ATTRIBUTES
dECPropSubKey=extprops
dDefAttribs=account,#abc,15
@end
```

9.2.14 DELETE_DEFAULT_ATTRIBUTES

Service deletes some default attributes that will always be applied to a user.

Location:

`IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm`

Optional Service Parameters

- `dECPropSubKey`: A second key. If this parameter is not specified, the service will only remove the default attributes specified without a subkey; it will not remove other attributes.
- `IsSecureDefaultAttribute`: If set to 1 and used with the databinder when using the default web services () then it deletes defaults that only apply to logged in users. (By default, default attributes apply to all users, including *anonymous*.)

Example

The following example from `del_defs.txt` illustrates the use of this service:

```
# Deletes some default attributes for all users
@Properties LocalData
IdcService=DELETE_DEFAULT_ATTRIBUTES
dECPropSubKey=extprops
@end
```

9.2.15 GET_DEFAULT_ATTRIBUTES

This service returns the default attributes that are applied to all users in the ResultSet `DEFAULT_ATTRIBUTES`.

Location:

`IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm`

Optional Service Parameters

- `dECPropSubKey`: If specified, it narrows the search for the default attributes to only the one matching that subkey.
- `IsSecureDefaultAttribute`: If set to 1 and used with the databinder when using the default web services () then it retrieves defaults that only apply to logged in users. (By default, default attributes apply to all users, including *anonymous*.)

Example

The following example from `get_defs.txt` illustrates the use of this service:

```
# Returns all default attributes for all users
@Properties LocalData
IdcService=GET_DEFAULT_ATTRIBUTES
@end
```

9.2.16 SET_EXTENDED_ATTRIBUTE_MAPPINGS

Service sets mappings from one user attribute to another user attribute. Only mappings from roles to other attributes is supported (mapping does not work when the source is an account).

Location:

```
IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm
```

Additional Required Service Parameters

- `ExtUserAttribInfo`: A result set containing extended user attribute information.

Example

The following example from `set_attr_mapping.txt` illustrates the use of this service:

```
<?hda version="11gR1-dev" jcharset=Cp1252 encoding=iso-8859-1?>

# Add the 'contributor' role to all users with the
# 'guest' role, and then consequently give all users
# with the 'contributor' role read/write access to
# account 'abc'. (This does mean that users with
# the 'guest' role ultimately end up with access to 'abc').
@Properties LocalData
IdcService=SET_EXTENDED_ATTRIBUTE_MAPPINGS
@end
@ResultSet ExtUserAttribInfo
3
dAttributeName
dApplication
guest
appl
role,contributor,15
contributor
app2
account,abc,3
@end
```

9.2.17 DELETED_EXTENDED_ATTRIBUTE_MAPPINGS

Service deletes mappings from one user attribute to another user attribute.

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Additional Required Service Parameters

- ExtUserAttribInfo: A result set containing extended user attribute information.

Optional Service Parameters

- allowMissingAttributes: If set to *true*, the service suppresses errors when trying to delete attributes that do not exist. The default is *false*.

Example

The following example from `del_attr_mapping.txt` illustrates the use of this service:

```
<?hda version="11gR1-dev" jcharset=Cp1252 encoding=iso-8859-1?>

# Delete two attribute mappings
@Properties LocalData
IdcService=DELETE_EXTENDED_ATTRIBUTE_MAPPINGS
@end
@ResultSet ExtUserAttribInfo
3
dAttributeName
dApplication
AttributeInfo
guest
appl
role,contributor,15
contributor
app2
account,abc,3
@end
```

9.2.18 ADD_USER

The service has been altered to add extended user attributes at the same time the user is added. For additional information see [Section 4.14.4, "ADD_USER."](#)

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Optional Service Parameter

- ExtUserAttribInfo ResultSet: A result set containing extended user attribution information. If it is not included, no extended attributes are added.

Example

The following example from `add_user.txt` illustrates the use of this service:

```
# Add user with extended security data
@Properties LocalData
IdcService=ADD_USER
dName=jsmith
dUserAuthType=Local
dFullName=Jennifer Smith
dPassword=password
dEmail=email@example.com
@end
@ResultSet UserAttribInfo
2
dUserName
AttributeInfo
jsmith
role,guest,15
@end
@ResultSet ExtUserAttribInfo
3
dUserName
dApplication
AttributeInfo
jsmith
appl
account,abc,15
@end
```

9.2.19 EDIT_USER

This service has been altered to allow editing of extended user attributes at the same time. The old values are completely replaced by the new ones. For additional information, see [Section 4.14.4, "ADD_USER."](#)

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Optional Service Parameters

- `ExtUserAttribInfo` ResultSet: A result set containing extended user attribution information. If it is not included, the extended attributes are not replaced.

Example

The following example from `edit_user.txt` illustrates the use of this service:

```
# Edit user with extended security data
@Properties LocalData
IdcService=EDIT_USER
dName=jsmith
dUserAuthType=Local
dFullName=Justin Smith
dPassword=12345
dEmail=real@real.com
@end
@ResultSet UserAttribInfo
2
dUserName
AttributeInfo
```

```
jsmith
role,guest,15
@end
@ResultSet ExtUserAttribInfo
3
dUserName
dApplication
AttributeInfo
jsmith
appl
account,abc,7,account,xyz,15
@end
```

9.2.20 DELETE_USER

This service has been altered to delete a user's extended attributes if they exist. For additional information, see [Section 4.14.10, "DELETE_USER."](#)

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Example

The following example from `delete_user.txt` illustrates the use of this service:

```
# Delete user with extended security data
@Properties LocalData
IdcService=DELETE_USER
dName=jsmith
@end
```

9.2.21 QUERY_USER_ATTRIBUTES

This service acts as usual however the attributes it returns are contingent on the value of the `getAllAttributes` parameter. If the parameter is passed as *true*, this service returns a merger of both regular and extended user attributes. For additional information, see [Section 4.14.24, "QUERY_USER_ATTRIBUTES."](#)

Location:

IdcHomeDir/components/ExtendedUserAttributes/resources/extendeduserattributes_services.htm

Example

The following example from `query_user_attr.txt` illustrates the use of this service:

```
# The normal QUERY_USER_ATTRIBUTES, except it gathers all
# attributes now
@Properties LocalData
IdcService=QUERY_USER_ATTRIBUTES
dName=jsmith
getAllAttributes=true
@end
```

This chapter describes the services available when using and customizing Folios. The location for specific Folios services are listed within each individual service.

10.1 Folio Services

Individual service types are noted in each service description. The following services are described in this section:

- [LOAD_FOLIO_NODE](#)
- [UPDATE_FOLIO](#)
- [CHECKIN_NEW_FOLIO](#)
- [CREATE_FOLIO_SNAPSHOT](#)
- [LOCK_FOLIO](#)
- [UNLOCK_FOLIO](#)
- [CREATE_FOLIO_RENDITION](#)
- [GENERATE_GUIDS](#)

10.1.1 LOAD_FOLIO_NODE

Service that displays the contents of a folio node by returning the nodes, slots and links that are the immediate children of the requested node. By default this service is not recursive; if called recursively, this service returns a complete folio.

Location: *IdcHomeDir*/components/ContentContentFolios/resources/cpd_service.htm

Additional Required Service Parameters

- `dID`: The content ID of the folio.
- `RevisionSelectionMethod`: Tells the Oracle Content Server instance whether to use retrieved information based on the latest revision, which could be in an unreleased state, or the latest released version. The value can be: *Specific*, *Latest* (which could be unreleased), or *Latest Released*.

Optional Service Parameter

- `parentNodeID`: Retrieves details, but not the properties, of the contents of the specified node within a folio. If this parameter is omitted, by default the service retrieves the root node and its properties.

Example 1

```
http://myserver/idc/idcplg?IdcService=LOAD_FOLIO_NODE&dID=68095
&RevisionSelectionMethod=Specific
```

Example 2

```
http://myserver/idc/idcplg?IdcService=LOAD_FOLIO_NODE&dID=68095
&RevisionSelectionMethod=Specific&parentNodeId=E176-3B00-1D2A-A592-E0CF
```

10.1.2 UPDATE_FOLIO

Service that adds one or more content items to a folio and modifies a folio. Multiple changes can be requested as part of a single service call.

Prerequisite: Before an item can be added to a folio, the item must be checked in to the Oracle Content Server instance using the standard [CHECKIN_NEW](#) or [CHECKIN_UNIVERSAL](#) services.

Location: *IdcHomeDir*/components/ContentContentFolios/resources/cpd_service.htm

Additional Required Service Parameters

- NumChanges: Specifies the number of changes or updates passed as part of the service call. For example, to pass two changes, NumChanges=2.
- change(*n-1*): Specifies the actual change to be made to the folio. The default is one change, which is indicated by change() or change0. If there are multiple changes to the folio, as indicated by NumChanges, then a parameter must be passed for each change. For example, if NumChanges=3, then change(), change1, and change2.

Note: For each change(*n-1*) parameter, you must use a change_data(*n-1*) parameter. For example, if you specify a change1 parameter you must also specify a change_data1 parameter.

The value for the change(*n-1*) parameter must be in the following format:
dID:Operation:TargetGUID:ParentGUID

- dID: The dID of the folio to be updated.
- Operation: One of the following choices:
 - * removeNode: remove a node
 - * addNode: add a node
 - * addItem: add a slot
 - * addContent: add an actual file
 - * removeContent: remove a content item
 - * modifyAttribute: modify a property
 - * modifyTemplateAttribute: modify a template property
- TargetGUID: The GUID of the node, slot, or content item in the folio to be modified.
- ParentGUID: The parent GUID of the mode, slot, or content item to be modified. This is relevant for only some of the operations, such as addNode.

- `change_data(n-1)`: Specifies the values for the operation specified in the `change(n-1)` parameter. The format for this parameter is `name:value` pairs separated by commas. A carat (^) can be used as a separator if a colon (:) is required in any of the names or values (`name:name^value`).

When adding content these properties must be specified:

- `dDocAuthor`
- `dDocName`
- `dDocName_encoded`
- `dDocTitle`
- `dDocType`
- `dFormat`
- `dID`
- `docURL`
- `docURL_encoded`
- `dOriginalName`
- `dRevLabel`

Property information can be retrieved using a [DOC_INFO](#) service call against the item you want to add to a folio. You must provide the information for the `dDocName_encoded`, `docURL`, and `docURL_encoded` properties. You can specify custom properties that you add to the folio definition as XCST or XCSD data.

Example 1

To add a new content item to an existing content folio, you must define two changes. The first change operation is to specify `addItem`, which will add a slot. The second change operation is to specify `addContent`, which will insert the document into the slot. For both changes, the `change_data` parameter must specify the content properties. The `xcsd^name` and `xcst^name` designation for the properties also must be specified.

```
IdcService=UPDATE_FOLIO
NumChanges=2
dDocName=OCS_223948
RevisionSelectionMethod=Latest
change0=8611:addItem:4952-6EBE-1275-0A59-0D19:F5C4-A3D0-E671-D4CF-9C28

```

Example 2

To add a new content item to an existing folio as part of RIDC code:

```
// Start a new client connection to UCM
IdcClientManager manager = new IdcClientManager();
// build a client that will communicate using the intradoc protocol
IdcClient idcClient = manager.createClient("idc://localhost:4444");

// create a trusted user connection to UCM
IdcContext userContext = new IdcContext("weblogic");

// create the binder for the set of GUIDs needed later on
DataBinder guidBinder = idcClient.createBinder();
// populate the binder with the parameters
guidBinder.putLocal("IdcService", "GENERATE_GUIDS");

// send the request and get the response back from local data and result set
ServiceResponse guidResponse = idcClient.sendRequest(userContext, guidBinder);
DataBinder folderData = guidResponse.getResponseAsBinder ();
DataResultSet guidResults = folderData.getResultSet ("GUID_SET");

// put the set of GUIDs in an array
String guids[] = new String[25];
int n = 0;
for (DataObject dataObject : guidResults.getRows ()) {
    guids[n] = dataObject.get("id");
}

// create the binder to get the content information of the document to add
DataBinder docInfoBinder = idcClient.createBinder();
// populate the binder with the parameters
docInfoBinder.putLocal("IdcService", "DOC_INFO_BY_NAME");
docInfoBinder.putLocal("dDocName", "OCS_158654");

// send the request and get the response back from local data and result set
ServiceResponse infoResponse = idcClient.sendRequest(userContext, docInfoBinder);
DataBinder infoData = infoResponse.getResponseAsBinder ();
DataResultSet docInfoResults = infoData.getResultSet ("DOC_INFO");

// create the binder to get the content information of the folio to update
DataBinder folioInfoBinder = idcClient.createBinder();
// populate the binder with the parameters
folioInfoBinder.putLocal("IdcService", "DOC_INFO_BY_NAME");
folioInfoBinder.putLocal("dDocName", "OCS_223948");

// send the request and get the response back from local data and result set
ServiceResponse folioInfoResponse = idcClient.sendRequest(userContext, folioInfoBinder);
DataBinder folioInfoData = folioInfoResponse.getResponseAsBinder ();
DataResultSet folioInfoResults = folioInfoData.getResultSet ("DOC_INFO");
String folioID = folioInfoData.getLocal("dID");

// build the change data string for the content
String newItemStr = "";
for (DataObject dataObject : docInfoResults.getRows ()) {
    // build the path to the document
    String urlStr = "/cs/groups/" + dataObject.get ("dSecurityGroup") + "/documents/" + dataObject.get
("dDocType") + "/" + dataObject.get ("dDocName") + "." + dataObject.get ("dWebExtension");
    // assemble the string with the parameters needed for the content folio service change string
    newItemStr = "xcsd^dFormat:" + dataObject.get ("dFormat") + ",";
    newItemStr += "id:" + guids[0] + ",";
}
```

```

newItemStr += "xcsd^dDocName:" + dataObject.get ("dDocName") + ",";
newItemStr += "xcsd^dID:" + dataObject.get ("dID") + ",";
newItemStr += "xcsd^dDocTitle:" + dataObject.get ("dDocTitle") + ",";
newItemStr += "xcsd^dDocType:" + dataObject.get ("dDocType") + ",";
newItemStr += "xcsd^dRendition1:" + dataObject.get ("dRendition1") + ",";
newItemStr += "xcsd^dRevLabel:" + dataObject.get ("dRevLabel") + ",";
newItemStr += "xcsd^dOriginalName:" + dataObject.get ("dOriginalName") + ",";
newItemStr += "xcsd^dDocAuthor:" + dataObject.get ("dDocAuthor") + ",";
newItemStr += "xcsd^docURL:" + urlStr + ",";
newItemStr += "xcsd^dDocName_encoded:" + java.net.URLEncoder.encode(dataObject.get ("dDocName"),
"UTF-8") + ",";
newItemStr += "xcsd^docURL_encoded:" + java.net.URLEncoder.encode(urlStr, "UTF-8") + ",";
newItemStr += "xcst^name:" + dataObject.get ("dDocTitle") + ",";
newItemStr += "xcst^description:";
}

// create the binder to get the folio root GUID
DataBinder rootBinder = idcClient.createBinder();
// populate the binder with the parameters
rootBinder.putLocal("IdcService", "LOAD_FOLIO_NODE");
rootBinder.putLocal("dDocName", folioName);
rootBinder.putLocal("RevisionSelectionMethod", "Latest");

// send the request and get the response back from local data
ServiceResponse rootGUIDResponse = idcClient.sendRequest(userContext, rootBinder);
DataBinder rootGUIDData = rootGUIDResponse.getResponseAsBinder ();
String rootGUID = rootGUIDData.getLocal("RootNode");

// assemble the first change parameter for the service. This will tell the content folio service
// to add a slot
String change0 = foliodID + ":addItem:" + guids[0] + ":" + rootGUID;

// assemble the second change parameter for the service. This will tell the content folio service
// to add a content item to the new slot
String change1 = foliodID + ":addContent:" + guids[0];

// create the binder to run the UPDATE_FOLIO service
DataBinder folioBinder = idcClient.createBinder();
// populate the binder with the parameters
folioBinder.putLocal("IdcService", "UPDATE_FOLIO");
folioBinder.putLocal("dDocName", folioName);
folioBinder.putLocal("RevisionSelectionMethod", "Latest");
folioBinder.putLocal("NumChanges", "2");
folioBinder.putLocal("change0", change0);
folioBinder.putLocal("change_data0", newItemStr);
folioBinder.putLocal("change1", change1);
folioBinder.putLocal("change_data1", newItemStr);

// send the request and get the response back from local data
ServiceResponse folioResponse = idcClient.sendRequest(userContext, folioBinder);
DataBinder folioData = folioResponse.getResponseAsBinder ();

```

10.1.3 CHECKIN_NEW_FOLIO

Service that creates and checks in a new folio with a root node.

Location: *IdcHomeDir*/components/ContentContentFolios/resources/cpd_service.htm

Optional Service Parameters

- This service can use standard metadata parameters, such as `dDocName`, `dDocTitle`, and so forth. Any other metadata required by parameters used in this service must also be specified.
- If auto-generation of content ID is set on the server and you do not specify the `dDocName` parameter, then a new content ID is automatically generated.
- The `dID` of the new folio is listed in the `LocalData` section of the service response.

Example

```
http://myserver/xpedio/icdplg?IdcServer=CHECKIN_NEW_FOLIO
&dDocName=myFolioTest&dDocTitle=MyFolioAPITest2&dDocType=TestData
&dDocAuthor=authorname&dSecurityGropu=Public&IsJava=1
```

10.1.4 CREATE_FOLIO_SNAPSHOT

Service that takes a version of a folio and creates a locked version and a new version.

Location: *IdcHomeDir*/components/ContentContentFolios/resources/cpd_service.htm

Additional Required Service Parameters

- `dID`: The content ID of the folio.
- `RevisionSelectionMethod`: Tells the Oracle Content Server whether to use retrieved information based on the latest revision, which could be in an unreleased state, or the latest released version. The value can be: `Specific`, `Latest` (which could be unreleased), or `Latest Released`.

Example

```
http://myserver/idc/idcplg?IdcService=CREATE_FOLIO_SNAPSHOT&dID=68095
&RevisionSelectionMethod=Specific
```

10.1.5 LOCK_FOLIO

Service that locks a folio so that it can not be edited, only viewed. No further modifications are allowed on this content item.

Location: *IdcHomeDir*/components/ContentContentFolios/resources/cpd_service.htm

Additional Required Service Parameters

- `dID`: The content ID of the folio.
- `RevisionSelectionMethod`: Tells the Oracle Content Server instance whether to use retrieve information based on the latest revision, which could be in an unreleased

state, or the latest released version. The value can be: *Specific*, *Latest* (which could be unreleased), or *Latest Released*.

Example

`http://myserver/idc/idcplg?IdcService=LOCK_FOLIO&dID=68095&RevisionSelectionMethod=Specific`

10.1.6 UNLOCK_FOLIO

Service that creates a new version of a locked folio, where the new version of the folio can be edited.

Location: `IdcHomeDir/components/ContentContentFolios/resources/cpd_service.htm`

Additional Required Service Parameters

- `dID`: The content ID of the folio.
- `RevisionSelectionMethod`: Tells the Oracle Content Server instance whether to use retrieve information based on the latest revision, which could be in an unreleased state, or the latest released version. The value can be: *Specific*, *Latest* (which could be unreleased), or *Latest Released*.

Example

`http://myserver/idc/idcplg?IdcService=UNLOCK_FOLIO&dID=68095&RevisionSelectionMethod=Specific`

10.1.7 CREATE_FOLIO_RENDITION

Service that returns a specific rendition of a folio revision to a browser. A copy of the folio is retrieved without performing a checkout.

Location: `IdcHomeDir/components/ContentContentFolios/resources/cpd_service.htm`

Additional Required Service Parameters

- `dID`: The content ID of the folio.
- `RenderID`: The type of rendition: PDF, ZIP, XML. A custom rendition can be used.

Example

`http://myserver/idc/idcplg?IdcService=CREATE_FOLIO_RENDITION&dID=68095&RenditionID=PDF`

10.1.8 GENERATE_GUIDS

Service that generates and returns 25 group user IDs for use.

Location: `IdcHomeDir/components/ContentContentFolios/resources/cpd_service.htm`

Example 1

`http://myserver/expedio/idcplg?IdcService=GENERATE_GUIDS&IsJava=1`

Virtual Content Repository Services

This chapter describes the services used by applications that work with the Virtual Content Repository (VCR) service provider interface, which is used by the Oracle WebLogic Portal as a way to expose content from different repositories. The Oracle Universal Content Management Oracle Content Server application supports VCR functionality.

11.1 Virtual Content Repository Services

The following Virtual Content Repository (VCR) services are described in this section:

- [VCR_FOLDER_INFO](#)
- [VCR_GET_CONTENT_TYPE](#)
- [VCR_GET_CONTENT_TYPES](#)
- [VCR_GET_DOCUMENT](#)
- [VCR_GET_DOCUMENT_BY_NAME](#)

11.1.1 VCR_FOLDER_INFO

Service that is used to retrieve information about a Folders_g folder having the content and in the format required by the Virtual Content Repository service provider interface.

Service Class: DocService

Additional Required Service Parameters

One of the following parameters to identify the Folders_g folder:

- dCollectionID: The folder ID of the folder containing the target content.
- dCollectionPath: The path to the folder containing the target content.

Results

- Result Sets:
 - VcrNode:
 - * createdBy
 - * createdDate
 - * hasChildren
 - * modifiedBy

- * modifiedDate
- * name
- * objectClass
- * parentID
- * path
- VcrPropertyValues:
 - * dChildManipulation
 - * dCollectionCreator
 - * dCollectionEnabled
 - * dCollectionGUID
 - * dCollectionID
 - * dCollectionInherit
 - * dCollectionMark
 - * dCollectionModifier
 - * dCollectionName
 - * dCollectionOwner
 - * dCollectionPath
 - * dCollectionQueries
 - * dCollectionType
 - * dCreateDate
 - * dDependent
 - * dDocAccount
 - * dDocAuthor
 - * dDocName
 - * dDocTitle
 - * dDocType
 - * dInDate
 - * dLastModifiedDate
 - * dOutDate
 - * dParentCollectionID
 - * dPromptForMetadata
 - * dReleaseDate
 - * dRevLabel
 - * dSecurityGroup
 - * xClbraAliasList
 - * xClbraRoleList
 - * xClbraUserList

- * xCollectionID
- * xComments
- * xDontShowInListsForWebsites
- * xEmailCC
- * xEmailFrom
- * xEmailSubject
- * xEmailTo
- * xForceFolderSecurity
- * xHidden
- * xIdcProfile
- * xInhibitUpdate
- * xprofileTrigger
- * xPublicationDate
- * xReadOnly
- * xReceivedDate
- * xRegionDefinition
- * xt
- * xTrashDeleteDate
- * xTrashDeleteLoc
- * xTrashDeleteName
- * xTrashDeleter
- * xtestdec2
- * xtestdec3
- * xtTestField1
- * xtTestField2
- * xtextINTEGER
- * xWebsiteObjectType
- * xWebsites
- * xWebsiteSection

11.1.2 VCR_GET_CONTENT_TYPE

Service that requests detailed information about a particular Virtual Content Repository content type.

Service Class: Service

Additional Required Service Parameters

- vcrContentType: The ID of the content type; also referred to as the content type's name.

Results

- Result Sets:
 - VcrContentType
 - VcrProperties
 - VcrPropertyChoices:
 - * FIELDNAME

11.1.3 VCR_GET_CONTENT_TYPES

Service that requests a list of all Virtual Content Repository content types defined by the system.

Service Class: Service

Results

- Result Sets:
 - VcrContentTypes

11.1.4 VCR_GET_DOCUMENT

Service that retrieves content item information for a specific revision of a content item.

This service is almost identical to the [DOC_INFO](#) service, however, the data returned is modified to be easier to work with in a Virtual Content Repository context.

Service Class: Service

Additional Required Service Parameters

- dID: The generated content item revision ID.

Results

- Result Sets:
 - VcrPropertyValues:
 - * all standard DOC_INFO ResultSet columns returned by the [DOC_INFO](#) service
 - * idcPrimaryFile
 - * idcRenditions
 - REVISION_HISTORY:
 - * dDocName
 - * dFormat
 - * dID
 - * dInDate
 - * dOutDate
 - * dProcessingState

- * dRevLabel
- * dRevisionID for all non-deleted revisions
- * dStatus

11.1.5 VCR_GET_DOCUMENT_BY_NAME

Service that retrieves information about the latest revision of a content item based on the content ID (the dDocName) as a parameter.

This service is almost identical to [DOC_INFO_BY_NAME](#) service, however, the data returned is modified to be easier to work with in a Virtual Content Repository context.

Service Class: Service

Additional Required Service Parameters

- dDocName: The content item name.

Optional Service Parameters

- RevisionSelectionMethod: Can be set to *Latest* to retrieve the most recent version, or *LatestReleased* to retrieve the most recently released version, or *Specific* (if set to *Specific*, a dID must be provided). If set to *Specific*, dID can be used instead of dDocName to point to a specific revision.

Results

- Result Sets:
 - VcrPropertyValues:
 - * all standard DOC_INFO ResultSet columns returned by the [DOC_INFO](#) service
 - * idcPrimaryFile
 - * idcRenditions
 - REVISION_HISTORY:
 - * dDocName
 - * dFormat
 - * dID
 - * dInDate
 - * dOutDate
 - * dProcessingState
 - * dRevisionID for all non-deleted revisions
 - * dRevLabel
 - * dStatus

This section describes the actions used by services. An *action* is an operation to be performed as part of a service script. Actions can execute SQL statements, perform a query, run code, cache the results of a query, or load an option list.

A.1 About Service Actions

An action is defined as a list of colon-separated segments, using the following format:

```
type:name:parameters:control mask:error message
```

The action type can be designated by a number or a descriptive name:

- 1: Select query. This executes a database query to retrieve information (read-only action) then discards the results.
- 2: Execute query. This executes a database query to delete, add, or update information in the database.
- 3: Java method. This specifies a code module that is a part of the Java class implementing the service.
- 4: Load option list. This loads an option list stored in the system.
- 5: Select cache query. This executes a database query to retrieve information (read-only action) and stores the results for later use.
- For details about actions, their parameters, and control masks, see [Section 3.1.3, "Actions."](#)

A.2 A

addAliases

Adds the aliases and passes *IworkflowAlias* as a parameter. Called as a Java method by [ADD_WORKFLOWALIASES](#).

addCollaboration

Called as a Java method by [ADD_COLLABORATION](#).

addContext

Called as a Java method by [ADD_WEB_APP](#).

addFiles:

Checks in the content item by name. Called as a Java method by these services:

- [CHECKIN_BYNAME](#)
- [CHECKIN_NEW_SUB](#)
- [CHECKIN_SEL_SUB](#)
- [INSERT_NATIVE](#)
- [INSERT_NEW](#)
- [REPLACE_METAFILE_SUB](#)
- [UPDATE_BYREV](#)
- [WORKFLOW_CHECKIN_SUB](#)

addOrEditDocMetaData

Called as a Java method by [ADD_METADEF](#) and [EDIT_METADEF](#).

addOrEditProvider

Adds the new provider. Called as a Java method by [ADD_EDIT_PROVIDER](#)

addOrEditSchemaTable

Called as a Java method by [ADDOREDIT_SCHEMA_TABLE](#).

addProblemReport

Adds the problem report to the database. Called as a Java method by [ADD_PROBLEMREPORT](#).

addRegisteredUserAttribute

Retrieves the user database profile information. Called as a Java method by [REGISTER_USER](#).

addSchemaRelation

Called as a Java method by [ADD_SCHEMA_RELATION](#).

addSchemaView

Called as a Java method by [ADD_SCHEMA_VIEW](#).

addSubscription

Adds the subscription and passes *Isubscription* as a parameter. Called as a Java method by [SUBSCRIBE](#).

addTemplate

Called as a Java method by [ADD_WF_TEMPLATE](#).

addUserAttributes

Adds/updates the user security attributes and passes *IuserSecurityAttribute* as a parameter. Called as a Java method by [ADD_USER](#) and [EDIT_USER](#).

addWfDocuments

Adds the workflow content items and passes *ADD_WORKFLOWDOCUMENT_SUB* as a parameter. The action throws a data exception if the service is unable to add content item revisions. Called as a Java method by [ADD_WORKFLOWDOCUMENTS](#).

addWorkflow

Adds the workflow. Called as a Java method by [ADD_WORKFLOW](#).

addWorkflowScript

Called as a Java method by [ADD_WORKFLOW_SCRIPT](#).

addWorkflowStep

Adds the workflow steps and passes *IworkflowStep* as a parameter. The action throws a data exception if the service is unable to add the step to the workflow. Called as a Java method by [ADD_WORKFLOWSTEP](#).

addWorkflowStepScript

Called as a Java method by [ADD_WORKFLOWSTEP](#).

addWorkflowToken

Called as a Java method by [ADD_WORKFLOW_TOKEN](#).

Alias

Retrieves alias information. The result of this query is assigned to the parameter *Alias* and stored for later use. Called as a Select Cache Query action by [GET_ALIASES](#).

AliasUserMap

Retrieves the user alias map. The result of this query is assigned to the parameter *AliasUserMap* and stored for later use. Called as a Select Cache Query action by [GET_ALIASES](#).

allowProblemReportAction

Allows the problem report action to execute and passes *update* as a parameter. Called as a Java method by [DELETE_PROBLEMREPORT](#) and [UPDATE_PROBLEMREPORT](#).

appendCommonSystemInfo

Called as a Java method by [GET_SYSTEM_AUDIT_INFO](#).

appendDatabaseAuditMessage

Called as a Java method by [APPEND_DATABASE_AUDIT_INFO](#).

appendFileCachingMessage

Called as a Java method by [APPEND_FILE_CACHING_INFO](#).

approveDo

Approves the content item for the workflow. Called as a Java method by [WORKFLOW_APPROVE](#).

A.3 B

buildAllWebStringFiles

Called as a Java method by [LM_BUILD_WEB_STRING_FILES](#).

buildExpiredContentQuery

Called as a Java method by [GET_EXPIRED](#).

buildPreviewList

Called as a Java method by these services:

- [CACHE_CHECKIN_NEW](#)
- [CACHE_CHECKIN_SEL](#)
- [CACHE_SUBMIT_HTML_FORM](#)
- [CACHE_WORKFLOW_CHECKIN](#)

buildSearchIndex

Called as a Java method by [START_SEARCH_INDEX](#).

buildSourceInfo

Builds the source information. Called as a Java method by [PROBLEMREPORT_INFO](#).

A.4 C

cacheCheckin

Called as a Java method by these services:

- [CACHE_CHECKIN_NEW](#)
- [CACHE_CHECKIN_SEL](#)
- [CACHE_SUBMIT_HTML_FORM](#)
- [CACHE_WORKFLOW_CHECKIN](#)

cacheTemplates

Caches templates. Called as a Java method by these services:

- [ADD_WF_TEMPLATE](#)
- [DELETE_WF_TEMPLATE](#)
- [EDIT_WF_TEMPLATE](#)

cancelComponentInstall

Cancels the installation of a component. Called as a Java method by [CANCEL_COMPONENT_INSTALL](#).

cancelCriteriaWorkflow

Cancels the criteria workflow and passes *WfDocuments* and *Qdocuments* as parameters. Called as a Java method by these services:

- [CRITERIAWORKFLOW_DISABLE](#)

- [CRITERIAWORKFLOW_DISABLE_SUB](#)
- [DELETE_WORKFLOWCRITERIA](#)

cancelSearchIndex

Cancels the search indexing session. Called as a Java method by [CANCEL_SEARCH_INDEX](#).

cancelWorkflow

Cancels the workflow and passes *WfDocuments* and *Qdocuments* as parameters. Called as a Java method by [DELETE_WORKFLOW](#) and [WORKFLOW_CANCEL](#).

canDeleteStep

Evaluates whether a workflow step can be deleted. Called as a Java method by [DELETE_WORKFLOWSTEP](#).

checkCanCreateDocSecurity

Evaluates the assigned security level to verify that the user is authorized to perform this action. Called as a Java method by these services:

- [CHECKIN_SEL_FORM](#)
- [CHECKOUT_SUB](#)
- [UNDO_CHECKOUT](#)
- [UNDO_CHECKOUT_BY_NAME](#)

checkCollaborationAccess

Called as a Java method by these services:

- [ADD_COLLABORATION](#)
- [ADD_COLLABORATION_FORM](#)
- [DELETE_COLLABORATION](#)
- [EDIT_CLBRA_ACCESS_LIST](#)
- [EDIT_CLBRA_ACCESS_LIST_FORM](#)
- [EDIT_COLLABORATION](#)
- [EDIT_COLLABORATION_FORM](#)
- [GET_CLBRA_DOCUMENTS](#)
- [GET_CLBRA_INFO](#)

checkConversionCache

Called as a Java method by [GET_DYNAMIC_CONVERSION_SUB](#).

checkCounters

Called as a Java method by [INSERT_NATIVE](#).

checkCriteriaWorkflow

Evaluates the criteria workflow. Called as a Java method by these services:

- [CHECKIN_BYNAME](#)
- [CHECKIN_NEW_SUB](#)

- [CHECKIN_SEL_SUB](#)

checkDocRules

Evaluates the defined content item rules and passes *checkout* and *isNotPublished* as parameters. Called as a Java method by these services:

- [CACHE_CHECKIN_NEW](#)
- [CHECKIN_NEW_SUB](#)
- [CHECKIN_SEL_FORM](#)
- [CHECKOUT_BY_NAME](#)
- [CHECKOUT_SUB](#)
- [GET_UPDATE_FORM](#)
- [UNDO_CHECKOUT](#)
- [UNDO_CHECKOUT_BY_NAME](#)
- [UPDATE_DOCINFO_SUB](#)

checkDocState

Called as a Java method by [ADD_WORKFLOWDOCUMENT_SUB](#).

checkForceLogin

Forces a log in. Called as a Java method by these services:

- [GET_CLBRA_DOCUMENTS](#)
- [LOGIN](#)
- [PING_SERVER](#)
- [UPDATE_SUBSCRIPTION_NOTIFY](#)
- [UPDATE_SUBSCRIPTION_USED](#)

checkForPublish

Called as a Java method by [UPDATE_BYREV](#).

checkForRefreshingCachedResources

Called as a Java method by [LOAD_RESOURCE_FILE](#).

checkInByID

Called as a Java method by [CACHE_CHECKIN_SEL](#) and [CHECKIN_SEL_SUB](#).

checkInByName

Checks in the content item by name. Called as a Java method by [CHECKIN_BYNAME](#).

checkIsLatestRev

Evaluates for the latest revision. Called as a Java method by [CHECKOUT_BY_NAME](#) and [RESUBMIT_FOR_CONVERSION](#).

checkIsSelf

Checks whether the user is editing self. Called as a Java method by [EDIT_USER_PROFILE](#).

checkParametersAgainstResultSet

Called as a Java method by [DELETE_DOC](#).

checkProblemReportSecurity

Retrieves the data assigned to the parameter *DOC_INFO* and evaluates the problem report security information. Called as a Java method by these services:

- [DELETE_PROBLEMREPORT](#)
- [GET_UPDATE_PROBLEMREPORT_FORM](#)
- [PROBLEMREPORT_INFO](#)
- [RESEND_PROBLEMREPORT](#)
- [UPDATE_PROBLEMREPORT](#)

checkRefreshUsers

Updates the user information. Called as a Java method by these services:

- [ADD_USER](#)
- [CHANGE_USER_AUTH_TYPE](#)
- [DELETE_USER](#)
- [EDIT_USER](#)
- [EDIT_USER_PROFILE](#)
- [REGISTER_USER](#)

checkRevisionProperties

Retrieves the latest revision information and passes *Qrevisions* as a parameter. Called as a Java method by these services:

- [CHECKIN_SEL_FORM](#)
- [CHECKOUT_OK](#)
- [CHECKOUT_SUB](#)
- [GET_UPDATE_FORM](#)

checkSecurity

Retrieves the data assigned to the parameter *DOC_INFO* and evaluates the assigned security level to verify that the user is authorized to perform this action. The parameter varies by service. Called as a Java method by these services:

- [ADD_PROBLEMREPORT](#)
- [ADD_WORKFLOW](#)
- [ADD_WORKFLOWALIASES](#)
- [ADD_WORKFLOWDOCUMENT](#)
- [ADD_WORKFLOWDOCUMENTS](#)
- [APPLET_DOCINFO](#)

- CACHE_CHECKIN_NEW
- CACHE_CHECKIN_SEL
- CACHE_SUBMIT_HTML_FORM
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_BYNAME
- CHECKIN_NEW
- CHECKIN_SEL
- CONTINUE_SUBMIT_HTML_FORM
- CONTINUE_CHECKIN
- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_ENABLE
- DELETE_CHECKIN_CACHE
- DELETE_DOC
- DELETE_REV
- DELETE_REV_EX
- DELETE_WFCONTRIBUTORS
- DELETE_WORKFLOW
- DELETE_WORKFLOWCRITERIA
- DELETE_WORKFLOWDOCUMENTS
- DOC_INFO
- EDIT_WORKFLOW
- EDIT_WORKFLOWCRITERIA
- FORM_PROCESS
- GET_ARCHIVED_FILE
- GET_DOCUMENT_PROBLEMREPORTS
- GET_DYNAMIC_CONVERSION
- GET_EXTERNAL_DOC_INFO
- GET_EXTERNAL_HIGHLIGHT_INFO
- GET_EXTERNAL_XML_HIGHLIGHT_INFO
- GET_FILE
- GET_HIGHLIGHT_INFO
- GET_UPDATE_FORM
- GET_WF_COMPANION_INFO
- GET_WORKFLOW_INFO
- GET_WORKFLOW_INFO_BYNAME
- GET_WORKFLOWDOCREVISIONS
- GET_WORKFLOWDOCUMENTS

- GET_XML_HIGHLIGHT_INFO
- LOAD_RESOURCE_FILE
- RESUBMIT_FOR_CONVERSION
- REV_HISTORY

- VALIDATE_DOCINFO
- VIEW_DOC
- WORKFLOW_APPROVE
- WORKFLOW_CANCEL
- WORKFLOW_CHECKIN
- WORKFLOW_REJECT
- WORKFLOW_REJECT_FORM
- WORKFLOW_START

checkSubAdmin

Checks if the user has the sub administrator role and passes a parameter, which varies depending which service is used. Called as a Java method by the following services:

- ADD_USER
- ADD_WORKFLOW
- ADD_WORKFLOW_SCRIPT
- ADD_WORKFLOW_TOKEN
- ADD_WORKFLOWALIASES
- ADD_WORKFLOWDOCUMENT
- ADD_WORKFLOWDOCUMENTS
- ADD_WORKFLOWSTEP
- CHANGE_USER_AUTH_TYPE
- CRITERIAWORKFLOW_DISABLE
- CRITERIAWORKFLOW_ENABLE
- DELETE_USER
- DELETE_WFCONTRIBUTORS
- DELETE_WORKFLOW
- DELETE_WORKFLOW_SCRIPT
- DELETE_WORKFLOW_TOKEN

- [DELETE_WORKFLOWCRITERIA](#)
- [DELETE_WORKFLOWDOCUMENTS](#)
- [DELETE_WORKFLOWSTEP](#)
- [EDIT_USER](#)
- [EDIT_WORKFLOW](#)
- [EDIT_WORKFLOW_SCRIPT](#)
- [EDIT_WORKFLOW_TOKEN](#)
- [EDIT_WORKFLOWCRITERIA](#)
- [EDIT_WORKFLOWSTEP](#)
- [GET_ADMIN_PAGE](#)
- [GET_CRITERIA_WORKFLOWS_FOR_GROUP](#)
- [GET_USERS](#)
- [GET_WF_COMPANION_INFO](#)
- [GET_WORKFLOW_SCRIPT](#)
- [GET_WORKFLOWS_FOR_ALL](#)
- [PAGE_HANDLER](#)
- [QUERY_USER_ATTRIBUTES](#)
- [UPDATE_USEROPTION_LIST](#)
- [WORKFLOW_CANCEL](#)
- [WORKFLOW_START](#)

checkUserAuthType

Called as a Java method by [CHANGE_USER_AUTH_TYPE](#).

checkWorkflow

Checks workflow information by referencing *WF_INFO* and passes *isNotActiveBasic* as a parameter. Called as a Java method by these services:

- [CACHE_CHECKIN_SEL](#)
- [CACHE_WORKFLOW_CHECKIN](#)
- [CHECKIN_BYNAME](#)
- [CHECKIN_SEL_SUB](#)
- [CHECKOUT_SUB](#)
- [DELETE_DOC](#)
- [DELETE_REV](#)
- [DELETE_REV_EX](#)
- [WORKFLOW_CHECKIN_SUB](#)
- [WORKFLOW_START](#)

checkWorkflowAdminAccess

Called as a Java method by [GET_WORKFLOWS](#).

computeCompanionDirectory

Called as a Java method by [ADD_WORKFLOWDOCUMENT_SUB](#).

computeDeleteSecurity

Called as a Java method by [DELETE_REV](#).

computeDocID

Computes the generated content item revision ID. Called as a Java method by these services:

- [GET_ARCHIVED_FILE](#)
- [GET_DYNAMIC_CONVERSION](#)
- [GET_FILE](#)
- [LOAD_RESOURCE_FILE](#)

computeDocInfoInHtmlPage

Evaluates the content information for the HTML page. Parameters vary by service. Called as a Java method by these services:

- [CHECKIN_LIST](#)
- [CONTINUE_CHECKIN](#)
- [DELETE_CHECKIN_CACHE](#)
- [DOC_SUBS_LIST](#)
- [GET_EXPIRED](#)
- [SUBSCRIPTION_LIST](#)
- [UNSUBSCRIBE_FROM_LIST](#)
- [WORK_IN_PROGRESS](#)

computeDocSubscribers

Evaluates the content item for subscribers. Called as a Java method by [GET_DOC_SUBSCRIBERS](#).

computeRejectTargetStep

Computes the reject target step. Called as a Java method by [WORKFLOW_REJECT](#).

computeRemainingUsers

Called as a Java method by these services:

- [GET_WORKFLOW_INFO](#)
- [GET_WORKFLOW_INFO_BYNAME](#)
- [WORKFLOW_REJECT](#)

computeURLs

Evaluates URLs and passes *REVISIONS* as a parameter. Called as a Java method by [REV_HISTORY](#).

computeWfDocumentsInfo

Evaluates the workflow content item information and passes *WfDocuments* as a parameter. Called as a Java method by [GET_WORKFLOWDOCUMENTS](#).

conditionalDetermineCheckin

Prepares the form for check in. Called as a Java method by [FORM_PROCESS](#).

continueCheckin

Called as a Java method by [CONTINUE_CHECKIN](#).

controlIndexing

Executes the search indexing control. Called as a Java method by [CONTROL_SEARCH_INDEX](#).

createAddEditProviderForm

Creates an Add/Edit provider form. Called as a Java method by [GET_ADD_EDIT_PROVIDER_FORM](#).

createArchiveFileName

Creates the archive file name. Called as a Java method by [GET_ARCHIVED_FILE](#).

createFileName

Creates a new file name. Called as a Java method by [GET_FILE](#) and [LOAD_RESOURCE_FILE](#).

createNewRev

Called as a Java method by [ADD_WORKFLOWDOCUMENT_SUB](#).

createResultSetSQL

Executes a query with parameters taken from the Data Binder (*dataSource* and *whereClause* local data) rather than from given parameters. It places the results in the local data using the ResultSet name found in the Data Binder (*resultName*). Called as a Java method by these services:

- [CHECKIN_LIST](#)
- [CONTINUE_CHECKIN](#)
- [DELETE_CHECKIN_CACHE](#)
- [GET_ACTIVE_WORKFLOWS](#)
- [DOC_SUBS_LIST](#)
- [GET_CLBRA_DOCUMENTS](#)
- [GET_DATARESULTSET](#)
- [GET_EXPIRED](#)
- [GET_WORKFLOWS](#)
- [SUBSCRIBE_EX](#)
- [UNSUBSCRIBE_FROM_LIST_EX](#)
- [WORK_IN_PROGRESS](#)

createSubscriptionType

Creates the subscription type. Called as a Java method by [CREATE_SUBSCRIPTION_TYPE](#).

createWebFileNameFromRelativeUrl

Creates a Web file name from the provided relative URL and passes *TEMPLATE_URL_INFO* as a parameter. Called as a Java method by [GET_DYNAMIC_URL](#).

createWorkflowID

Creates the workflow label. Called as a Java method by [ADD_WORKFLOW](#).

A.5 D

Dalias

Deletes the alias. Called as an Execute Query action by [DELETE_ALIAS](#).

DaliasUsers

Deletes the alias user. Called as an Execute Query action by [DELETE_ALIAS](#) and [EDIT_ALIAS](#).

Dcollaboration

Called as an Execute Query action by [DELETE_COLLABORATION](#).

DdocAccount

Deletes the content item account. Called as an Execute Query action by [DELETE_DOC_ACCOUNT](#).

DdocFormat

Deletes the content item format. Called as an Execute Query action by [DELETE_DOCFORMAT](#).

DdocType

Deletes the content item type. Called as an Execute Query action by [DELETE_DOCTYPE](#).

Ddocument

Called as an Execute Query action by these services:

- [REMOVE_METAFILE_SUB](#)
- [UPDATE_BYREV](#)
- [WORKFLOW_CHECKIN_SUB](#)

decodeTopicValues

Decodes the topic values. Called as a Java method by [PNE_SAVE_QUERY](#).

deleteAliases

Called as a Java method by [DELETE_WFCONTRIBUTORS](#).

deleteCollaboration

Called as a Java method by [DELETE_COLLABORATION](#).

deleteDoc

Retrieves the data assigned to the parameter *REVISIONS* and deletes the content item. Called as a Java method by [DELETE_BYCLASS](#) and [DELETE_BYNAME](#).

deleteDocumentSubscription

Deletes the content item subscription and passes *deleteRev* as a parameter. Called as a Java method by these services:

- [DELETE_BYCLASS](#)
- [DELETE_BYNAME](#)
- [DELETE_BYREV](#)
- [DELETE_DOC](#)
- [DELETE_REV_EX](#)

deleteProblemReport

Deletes the problem report information. Called as a Java method by [DELETE_PROBLEMREPORT](#).

deleteProvider

Deletes the provider. Called as a Java method by [DELETE_PROVIDER](#).

deleteResultTemplate

Deletes the result template. Called as a Java method by [DELETE_RESULT_TEMPLATE](#).

deleteRev

Deletes a previous revision of a content item and passes *DOC_INFO* as a parameter. Called as a Java method by [DELETE_REV](#) and [DELETE_REV_EX](#).

deleteRevFiles

Called as a Java method by these services:

- [REMOVE_METAFILE_SUB](#)
- [UPDATE_BYREV](#)
- [WORKFLOW_CHECKIN_SUB](#)

deleteSchemaRelation

Called as a Java method by [DELETE_SCHEMA_RELATION](#).

deleteSchemaTable

Called as a Java method by [DELETE_SCHEMA_TABLE](#).

deleteSchemaView

Called as a Java method by [DELETE_SCHEMA_VIEW](#).

deleteSubscriptionType

Action that deletes the subscription type. Called as a Java method by [DELETE_SUBSCRIPTION_TYPE](#).

deleteTemplate

Deletes the workflow template. Called as a Java method by [ADD_WF_TEMPLATE](#).

deleteWfDesign

Called as a Java method by [DELETE_WORKFLOW](#) and [DELETE_WORKFLOWCRITERIA](#).

deleteWfDocuments

Deletes workflow content items. Called as a Java method by [DELETE_WORKFLOWDOCUMENTS](#).

deleteWorkflowScript

Deletes a workflow script. Called as a Java method by [DELETE_WORKFLOW_SCRIPT](#).

deleteWorkflowStepScript

Deletes the script associated with the workflow step. Called as a Java method by [DELETE_WORKFLOWSTEP](#).

deleteWorkflowToken

Deletes the workflow token. Called as a Java method by [DELETE_WORKFLOW_TOKEN](#).

determineCheckin

Prepares the form for check in. Called as a Java method by these services:

- [CHECKIN_UNIVERSAL](#)
- [CONTINUE_SUBMIT_HTML_FORM](#)
- [SUBMIT_HTML_FORM](#)

DextensionMap

Deletes the extension map. Called as an Execute Query action by [DELETE_DOCEXTENSION](#).

DgroupRole

Deletes the role. Called as an Execute Query action by [DELETE_GROUP](#).

disableSendFile

Called as a Java method by [GET_DYNAMIC_CONVERSION](#).

Dmetadef

Deletes the meta definition information. Called as an Execute Query action by [DEL_METADEF](#).

doCachedCheckinCleanup

Called as a Java method by [CONTINUE_CHECKIN](#) and [DELETE_CHECKIN_CACHE](#).

doCachedCleanup

Called as a Java method by [CONTINUE_SUBMIT_HTML_FORM](#).

DocFormats

Retrieves content item formats. The result of this query is assigned to the *DocFormats* parameter and stored for later use. Called as a Select Cache Query action by [GET_DOCFORMATS](#).

docHistoryInfo

Evaluates content item history information and passes *Checkout* and *IdocHistory* as parameters. Called as a Java method by these services:

- [CHECKIN_BYNAME](#)
- [CHECKIN_NEW_SUB](#)
- [CHECKIN_SEL_SUB](#)
- [CHECKOUT_SUB](#)
- [CRITERIAWORKFLOW_DISABLE](#)
- [CRITERIAWORKFLOW_DISABLE_SUB](#)
- [CRITERIAWORKFLOW_ENABLE](#)
- [DELETE_BYCLASS](#)
- [DELETE_BYNAME](#)
- [DELETE_BYREV](#)
- [DELETE_DOC](#)
- [DELETE_REV](#)
- [DELETE_REV_EX](#)
- [INSERT_NATIVE](#)
- [INSERT_NEW](#)
- [UNDO_CHECKOUT](#)
- [UNDO_CHECKOUT_BY_NAME](#)
- [UPDATE_BYREV](#)
- [UPDATE_DOCINFO_BYREV](#)
- [UPDATE_DOCINFO_SUB](#)
- [WORKFLOW_APPROVE](#)
- [WORKFLOW_CANCEL](#)
- [WORKFLOW_CHECKIN_SUB](#)
- [WORKFLOW_REJECT](#)
- [WORKFLOW_START](#)

docRefinery

Initiates the refinery check-in process. Called as a Java method by these services:

- [CHECKIN_BYNAME](#)
- [CHECKIN_NEW](#)
- [CHECKIN_NEW_SUB](#)
- [CHECKIN_SEL_SUB](#)

- [INSERT_NATIVE](#)
- [INSERT_NEW](#)
- [REPLACE_METAFILE_SUB](#)
- [UPDATE_BYREV](#)
- [UPDATE_DOCINFO_SUB](#)
- [WORKFLOW_CHECKIN_SUB](#)

doSubService

Executes the specified subservice. Called as a Java method by these services:

- [ADD_WORKFLOWDOCUMENT](#)
- [CHECKIN_NEW](#)
- [CHECKIN_SEL](#)
- [CHECKOUT](#)
- [CHECKOUT_BY_NAME](#)
- [GET_DOC_PAGE](#)
- [GET_DYNAMIC_CONVERSION](#)
- [GET_SECURE_PAGE](#)
- [GET_SYSTEM_AUDIT_INFO](#)
- [LM_LOAD_LAYOUTS](#)
- [UPDATE_DOCINFO](#)
- [UPDATE_DOCINFO_BYFORM](#)
- [WORKFLOW_CHECKIN](#)

doSubserviceIfMetafile

Called as a Java method by [UPDATE_DOCINFO_SUB](#).

doUpload

Called as a Java method by [CHUNKED_UPLOAD](#).

downloadComponent

Called as a Java method by [DOWNLOAD_COMPONENT](#).

downloadItems

Called as a Java method by [DOWNLOAD_LISTBOX_ITEMS](#).

doWorkflowAction

Performs the workflow action. Called as a Java method by these services:

- [DELETE_BYCLASS](#)
- [DELETE_BYNAME](#)
- [DELETE_BYREV](#)
- [DELETE_DOC](#)

- [DELETE_REV](#)
- [DELETE_REV_EX](#)

DproblemReport

Deletes the problem report information. Called as an Execute Query action by [DELETE_PROBLEMREPORT](#).

Drole

Deletes the role. Called as an Execute Query action by [DELETE_ROLE](#).

DsecurityGroup

Deletes the security group. Called as an Execute Query action by [DELETE_GROUP](#).

DsubscriptionType

Deletes the subscription type. Called as an Execute Query action by [DELETE_SUBSCRIPTION_TYPE](#).

Duser

Called as an Execute Query action by [DELETE_USER](#).

DuserSecurityAttributes

Deletes the user security attributes. Called as an Execute Query action by these services:

- [ADD_USER](#)
- [DELETE_ROLE](#)
- [EDIT_USER](#)

DuserSubscription

Called as an Execute Query action by [DELETE_USER](#).

Dworkflow

Deletes the workflow. Called as an Execute Query method by [DELETE_WORKFLOW](#) and [DELETE_WORKFLOWCRITERIA](#).

DworkflowAliasAll

Deletes the workflow aliases. Called as an Execute Query action by [DELETE_WORKFLOW](#) and [DELETE_WORKFLOWCRITERIA](#).

DworkflowCriteria

Deletes the workflow criteria. Called as an Execute Query action by [DELETE_WORKFLOWCRITERIA](#).

DworkflowDocState

Deletes the workflow content item state. Called as an Execute Query action by [WORKFLOW_REJECT](#).

DworkflowDocumentAll

Deletes the workflow content items. Called as an Execute Query by these services:

- [CRITERIAWORKFLOW_DISABLE](#)

- [CRITERIAWORKFLOW_DISABLE_SUB](#)
- [DELETE_WORKFLOW](#)
- [DELETE_WORKFLOWCRITERIA](#)

DworkflowStateAll

Deletes the workflow states. Called as an Execute Query action by these services:

- [CRITERIAWORKFLOW_DISABLE](#)
- [CRITERIAWORKFLOW_DISABLE_SUB](#)
- [DELETE_WORKFLOW](#)
- [DELETE_WORKFLOWCRITERIA](#)
- [WORKFLOW_CANCEL](#)

DworkflowStep

Deletes the workflow steps. Called as an Execute Query action by [DELETE_WORKFLOWSTEP](#).

DworkflowStepAliases

Deletes the workflow step aliases. Called as an Execute Query action by [DELETE_WORKFLOWSTEP](#).

DworkflowStepsAll

Deletes the workflow steps. Called as an Execute Query action by [DELETE_WORKFLOW](#) and [DELETE_WORKFLOWCRITERIA](#).

DworkflowUserAttributeAll

Deletes the workflow user attributes. Called as an Execute Query action by these services:

- [CRITERIAWORKFLOW_DISABLE](#)
- [CRITERIAWORKFLOW_DISABLE_SUB](#)
- [DELETE_WORKFLOWCRITERIA](#)

A.6 E

editCollaboration

Called as a Java method by [EDIT_CLBRA_ACCESS_LIST](#) and [EDIT_COLLABORATION](#).

editCriteria

Prepares the criteria for edit. Called as a Java method by [EDIT_WORKFLOWCRITERIA](#).

editRole

Edits role information. Called as a Java method by [EDIT_ROLE](#).

editSchemaRelation

Called as a Java method by [EDIT_SCHEMA_RELATION](#).

editSchemaView

Called as a Java method by [EDIT_SCHEMA_VIEW](#).

editSchemaViewValues

Called as a Java method by [EDIT_SCHEMA_VIEW_VALUES](#).

editTemplate

Edits the workflow template. Called as a Java method by [EDIT_WF_TEMPLATE](#).

editWorkflowScript

Called as a Java method by [EDIT_WORKFLOW_SCRIPT](#).

editWorkflowStep

Edits the workflow step and passes *IworkflowStep* as a parameter. Called as a Java method by [EDIT_WORKFLOWSTEP](#).

editWorkflowStepScript

Edits the script associated with the workflow step. Called as a Java method by [EDIT_WORKFLOWSTEP](#).

editWorkflowToken

Called as a Java method by [EDIT_WORKFLOW_TOKEN](#).

enableDisableProvider

Changes the provider enable state. Called as a Java method by [ENABLE_DISABLE_PROVIDER](#).

executeArchiveMethod

Performs a specified action on an archive collection: add, delete, and so on. Called as a Java method by these services:

- [ADD_ARCHIVE](#)
- [ADD_COLLECTION](#)
- [ADD_PROXIEDCOLLECTION](#)
- [CANCEL_ARCHIVE](#)
- [COPY_ARCHIVE](#)
- [DELETE_ARCHIVE](#)
- [DELETE_BATCH_FILE](#)
- [DELETE_BATCH_FILE_DOCUMENTS](#)
- [EDIT_ARCHIVE](#)
- [EDIT_ARCHIVEDATA](#)
- [EDIT_EXPORTERS](#)
- [EDIT_TRANSFEROPTIONS](#)
- [EXPORT_ARCHIVE](#)
- [GET_ARCHIVES](#)
- [GET_BATCH_SCHEMA](#)

- [GET_BATCH_VALUES](#)
- [GET_BATCHFILES](#)
- [GET_BATCH_FILE_DOCUMENTS](#)
- [GET_REPLICATION_DATA](#)
- [GET_TARGET_INFO](#)
- [GET_TARGET_TRANSFER_STATUS](#)
- [GET_TRANSFER_SOURCE_INFO](#)
- [IMPORT_ARCHIVE](#)
- [IMPORT_DOCUMENT](#)
- [INSERT_NATIVE](#)
- [REMOVE_COLLECTION](#)
- [REMOVE_EXPORTER](#)
- [REMOVE_IMPORTER](#)
- [REMOVE_PROXIEDTRANSFER](#)
- [REMOVE_PROXIEDTRANSFER](#)
- [REQUEST_TRANSFER](#)
- [TRANSFER_ARCHIVE](#)
- [UPDATE_TARGET_TOTALS](#)
- [UPDATE_TRANSFER_STATUS](#)
- [UPLOAD_ARCHIVE_TRANSFER](#)

executeCommands

Called as a Java method by [EXECUTE_BATCH](#).

executeManifest

Executes the manifest. Called as a Java method by [UPLOAD_NEW_COMPONENT](#).

executePageService

Executes the page service. Called as a Java method by [PAGE_HANDLER](#) and [SAVE_GLOBALINCLUDES](#).

ExtensionFormatMap

Retrieves the extension format map. The result of this query is assigned to the *ExtensionFormatMap* parameter and stored for later use. Called as a Select Cache Query method by [GET_DOCEXTENSIONS](#).

A.7 F

filterUpdateData

Filters the update information. Called as a Java method by [EDIT_USER_PROFILE](#).

A.8 G

getCollaborationData

Called as a Java method by these services:

- [EDIT_CLBRA_ACCESS_LIST_FORM](#)
- [EDIT_COLLABORATION_FORM](#)
- [GET_CLBRA_INFO](#)

getCollaborationDocs

Called as a Java method by [GET_CLBRA_DOCUMENTS](#).

getCollaborations

Called as a Java method by [GET_COLLABORATION_LIST](#).

getCompanionHistory

Called as a Java method by [GET_WORKFLOW_INFO](#) and [GET_WORKFLOW_INFO_BYNAME](#).

getComponentConfig

Called as a Java method by [GET_COMPONENT_CONFIG](#).

getDefaultDocFormats

Sets the default content item format. Called as a Java method by [DOC_FORMATS_WIZARD](#).

getDocFormats

Retrieves the file formats for the content item. Called as a Java method by these services:

- [DOC_INFO](#)
- [REVIEW_WORKFLOW_DOC](#)
- [WORKFLOW_REJECT_FORM](#)

getDocSubscriptionInfo

Evaluates if the current user has subscribed to the content item and modifies the *DOC_INFO* page. Called as a Java method by these services:

- [DOC_INFO](#)
- [REVIEW_WORKFLOW_DOC](#)
- [SUBSCRIBE_DOC_USER](#)
- [SUBSCRIBE_FORM](#)
- [UNSUBSCRIBE_FORM](#)

getDocumentList

Retrieves the content item list. Called as a Java method by [DOC_SUBS_LIST](#).

getDynamicPage

Retrieves the dynamic page. Called as a Java method by [GET_DYNAMIC_PAGE](#).

getExternalDocInfo

Retrieves the external content item information. Called as a Java method by [GET_EXTERNAL_DOC_INFO](#).

getExternalSecurityInfo

Evaluates the assigned security level to verify that the user is authorized to perform this action. The action passes *SearchCollectionDocInfo* as a parameter. Called as a Java method by these services:

- [GET_EXTERNAL_DOC_INFO](#)
- [GET_EXTERNAL_HIGHLIGHT_INFO](#)
- [GET_EXTERNAL_XML_HIGHLIGHT_INFO](#)
- [VIEW_DOC](#)

getFilesInAppDir

Retrieves the files listed in the application directory. Called as a Java method by [GET_FILELIST](#).

getHighlightInfo

Presents the content item highlight information. Called as a Java method by these services:

- [GET_EXTERNAL_HIGHLIGHT_INFO](#)
- [GET_EXTERNAL_XML_HIGHLIGHT_INFO](#)
- [GET_HIGHLIGHT_INFO](#)
- [GET_XML_HIGHLIGHT_INFO](#)

getLatestID

Passes *QlatestID* as a parameter. Called as a Java method by [DELETE_REV](#).

getLatestIDRevInfo

Retrieves the latest revision information and passes *Qrevisions* as a parameter. Called as a Java method by these services:

- [CHECKIN_SEL_FORM](#)
- [CHECKOUT](#)
- [CHECKOUT_BY_NAME](#)
- [UNDO_CHECKOUT](#)
- [UNDO_CHECKOUT_BY_NAME](#)

getOptionList

Retrieves the latest revision information and passes *Qrevisions* as a parameter. Called as a Java method by [GET_OPTION_LIST](#) and [UPDATE_OPTION_LIST](#).

getOutgoingProviders

Called as a Java method by [GET_PROXYEDSERVERS](#).

getProxiedArchiveCollections

Called as a Java method by [GET_PROXYED_ARCHIVECOLLECTIONS](#).

getSchemaRelations

Called as a Java method by [GET_SCHEMA_RELATIONS](#).

getSchemaTableInfo

Called as a Java method by [GET_SCHEMA_TABLE_INFO](#) and [GET_SCHEMA_VIEW_INFO](#).

getSchemaTables

Called as a Java method by [GET_SCHEMA_TABLES](#).

getSchemaViewInfo

Called as a Java method by [GET_SCHEMA_VIEW_INFO](#).

getSchemaViews

Called as a Java method by [GET_SCHEMA_VIEWS](#).

getSearchResults

Retrieves the search results. Called as a Java method by [GET_SEARCH_RESULTS](#) and [PNE_GET_SEARCH_RESULTS](#).

getSubscriptionList

Retrieves the subscription list and passes *QdocNameSubscription* *QnotDocNameSubscriptions* as parameters. Called as a Java method by [SUBSCRIPTION_LIST](#) and [UNSUBSCRIBE_FROM_LIST](#).

getTable

Called as a Java method by [GET_TABLE](#).

getTemplate

Retrieves template data. Called as a Java method by [GET_WF_TEMPLATE](#).

getTemplateConversions

Called as a Java method by [GET_TEMPLATE_CONVERSIONS](#).

getTemplates

Retrieves the workflow template data. Called as a Java method by [GET_WF_TEMPLATES](#).

getURLAbsolute

Resolves the URL of the content item. The URL is passed to the **Web Location:** entry of the `DOC_INFO` template. Called as a Java method by [DOC_INFO](#) and [REVIEW_WORKFLOW_DOC](#).

getUserAttributes

Retrieves user attributes. Called as a Java method by [QUERY_USER_ATTRIBUTES](#).

getUserCollaborationList

Called as a Java method by [GET_USER_CLBRA_LIST](#).

getUserMailAddress

Resolves the email address of the content item author and the user who has checked out the content item. The action passes *dDocAuthor* and *AuthorAddress* as parameters. Called as a Java method by these services:

- [DOC_INFO](#)
- [DOC_INFO_LATESTRELEASE](#)
- [DOC_INFO_SIMPLE](#)
- [DOC_INFO_SIMPLE_BYREV](#)
- [GET_WORKFLOW_INFO](#)
- [GET_WORKFLOW_INFO_BYNAME](#)
- [PROBLEMREPORT_INFO](#)
- [REVIEW_WORKFLOW_DOC](#)

getUserProfile

Retrieves user profile information. Called as a Java method by [GET_USER_INFO](#).

getUsers

Retrieves user list. Called as a Java method by [GET_USERS](#).

getUserUnique

Retrieves the unique user name. Called as a Java method by [REGISTER_USER](#).

getViewEditInfo

Called as a Java method by [GET_SCHEMA_VIEW_EDIT_INFO](#).

getViewValues

Called as a Java method by [GET_SCHEMA_VIEW_VALUES](#).

getWebAppStatus

Called as a Java method by [GET_WEB_APP_STATUS](#).

getWfDocuments

Retrieves workflow content items and passes *WfDocuments* as a parameter. Called as a Java method by these services:

- [DELETE_WORKFLOW](#)
- [DELETE_WORKFLOWCRITERIA](#)
- [WORKFLOW_CANCEL](#)
- [WORKFLOW_START](#)

getWorkflowDesignInfo

Called as a Java method by [GET_WORKFLOW](#).

getWorkflowDocumentInfo

Called as a Java method by [GET_WORKFLOW](#).

getWorkflowInfo

Evaluates whether the content item is part of a workflow. The action passes *WF_INFO* as a parameter. The *DOC_INFO* template is referenced and if *WF_INFO* exists the workflow information is included in the *DOC_INFO* template. Called as a Java method by [DOC_INFO](#) and [REVIEW_WORKFLOW_DOC](#).

getWorkflowScript

Called as a Java method by [GET_WORKFLOW_SCRIPT](#).

getWorkflowStepAliasesInfo

Retrieves the workflow step alias information. Called as a Java method by [GET_WORKFLOW](#).

A.9 H

hidePassword

Hides the password and passes *USER_INFO* as a parameter. Called as a Java method by [GET_USER_INFO](#).

A.10 I

ialias

Inserts the alias user information. Called as an Execute Query action by [ADD_ALIAS](#).

icollaboration

Called as an Execute Query action by [ADD_COLLABORATION](#).

ldocAccount

Inserts a new account. Called as an Execute Query action by [ADD_DOC_ACCOUNT](#).

ldocFormat

Inserts the content item format. Called as an Execute Query action by [ADD_DOCFORMAT](#).

ldocType

Inserts the content item type. Called as an Execute Query action by [ADD_DOCTYPE](#).

lextensionMap

Inserts the extension map. Called as an Execute Query action by [ADD_DOCEXTENSION](#).

lmeta

Inserts the meta data information. Called as an Execute Query action by these services:

- [CHECKIN_BYNAME](#)
- [CHECKIN_NEW_SUB](#)
- [CHECKIN_SEL_SUB](#)
- [INSERT_NATIVE](#)

- [INSERT_NEW](#)

Imetadef

Inserts the meta data definition information. Called as an Execute Query action by [ADD_METADEF](#).

insertAliasUsers

Adds the alias information to the database. Called as a Java method by [ADD_ALIAS](#) and [EDIT_ALIAS](#).

insertGroupRow

Called as a Java method by [ADD_GROUP](#).

lproblemReport

Updates the problem report. Called as an Execute Query action by [ADD_PROBLEMREPORT](#).

lrevision

Updates the revision ID. Called as an Execute Query action by these services:

- [CHECKIN_BYNAME](#)
- [CHECKIN_NEW_SUB](#)
- [CHECKIN_SEL_SUB](#)
- [INSERT_NATIVE](#)
- [INSERT_NEW](#)

lrole

Inserts the role. Called as an Execute Query by [ADD_ROLE](#).

isDocCheckedOut

Called as a Java method by these services:

- [CACHE_WORKFLOW_CHECKIN](#)
- [WORKFLOW_APPROVE](#)
- [WORKFLOW_CHECKIN_SUB](#)

lsecurityGroup

Inserts the security group. Called as an Execute Query action by [ADD_GROUP](#).

lsubscription

Inserts the subscription. Called as an Execute Query by [SUBSCRIBE_EX](#).

lworkflow

Inserts the workflow information in the database. Called as an Execute Query action by [ADD_WORKFLOW](#).

lworkflowDocument

Called as an Execute Query action by [ADD_WORKFLOWDOCUMENT_SUB](#).

lworkflowState

Provides an internal status table that stores information about content items in active workflows. Called as an Execute Query action by [WORKFLOW_APPROVE](#).

A.11 L**loadActiveComponentData**

Loads configuration information and passes *ACTIVE_COMPONENTS* as a parameter. Called as a Java method by [CONFIG_INFO](#).

loadAndValidateValues

Evaluates the specified values. Called as a Java method by these services:

- [CRITERIAWORKFLOW_DISABLE](#)
- [CRITERIAWORKFLOW_DISABLE_SUB](#)
- [CRITERIAWORKFLOW_ENABLE](#)
- [WORKFLOW_CANCEL](#)
- [WORKFLOW_START](#)

loadCollaborationList

Called as a Java method by [GET_ACTIVE_WORKFLOWS](#).

loadComponentInstallInfo

Called as a Java method by [GET_COMPONENT_INSTALL_FORM](#).

loadComponentInstallSettings

Called as a Java method by [GET_COMPONENT_INSTALL_SETTINGS](#).

loadConfigurationInfo

Loads the content item specific configuration information. Called as a Java method by [GET_DOC_CONFIG_INFO](#).

loadDefaultInfo

Loads the default configuration information. Called as a Java method by these services:

- [ASSIGN_DOCINFO_FORM](#)
- [CHECKIN_NEW_FORM](#)
- [CHECKIN_SEL_FORM](#)
- [CHECKIN_SIMILAR_FORM](#)
- [GET_DOC_CONFIG_INFO](#)
- [GET_PORTAL_PAGE](#)
- [GET_UPDATE_FORM](#)
- [LOAD_DOC_ENVIRONMENT](#)

loadDocConfig

Loads the content item configuration information. Called as a Java method by [DOC_FORMATS_WIZARD](#) and [EDIT_DOC_FORMATS](#).

loadDocDefaults

Called as a Java method by these services:

- [ASSIGN_DOCINFO_FORM](#)
- [CHECKIN_NEW_FORM](#)
- [CHECKIN_SIMILAR_FORM](#)

loadFilterConfig

Called as a Java method by these services:

- [ASSIGN_DOCINFO_FORM](#)
- [CHECKIN_NEW_FORM](#)
- [CHECKIN_SIMILAR_FORM](#)

loadGlobalIncludes

Loads the global includes. Called as a Java method by [LOAD_GLOBALINCLUDES](#).

loadMetaDefaults

Loads the default configuration information. Called as a Java method these services:

- [ASSIGN_DOCINFO_FORM](#)
- [CHECKIN_NEW_FORM](#)
- [CHECKIN_SIMILAR_FORM](#)
- [GET_UPDATE_FORM](#)

loadMetaOptionsLists

Loads the meta data options list. Called as a Java method by these services:

- [ASSIGN_DOCINFO_FORM](#)
- [CHECKIN_NEW_FORM](#)
- [CHECKIN_SEL_FORM](#)
- [CHECKIN_SIMILAR_FORM](#)
- [GET_DOC_CONFIG_INFO](#)
- [GET_PORTAL_PAGE](#)
- [GET_UPDATE_FORM](#)
- [LOAD_DOC_ENVIRONMENT](#)

loadPRStateLists

Loads the problem report state lists. Called as a Java method by [GET_PROBLEMREPORTS_SEARCH_FORM](#) and [GET_UPDATE_PROBLEMREPORT_FORM](#).

loadRegisteredProjects

Retrieves problem report search information. Called as a Java method by [GET_PROBLEMREPORTS_SEARCH_FORM](#).

loadServerOutput

Loads the server output. Called as a Java method by [CLEAR_SERVER_OUTPUT](#) and [GET_SERVER_OUTPUT](#).

loadSharedTable

Loads the shared table information and passes *ArchiveCollections* as a parameter. Parameters vary by service. Called as a Java method by these services:

- [CREATE_SUBSCRIPTION_TYPE](#)
- [DELETE_SUBSCRIPTION_TYPE](#)
- [GET_ARCHIVECOLLECTIONS](#)
- [GET_DOC_CONFIG_INFO](#)
- [GET_PACKAGE_ENVIRONMENT_PAGE](#)
- [GET_PORTAL_PAGE](#)
- [GET_RESULT_OPTIONS](#)
- [GET_SYSTEM_AUDIT_INFO](#)
- [GET_USER_INFO](#)
- [LOAD_DOC_ENVIRONMENT](#)
- [UPDATE_SUBSCRIPTION_TYPE](#)

loadTopic

Called as a Java method by these services:

- [LOAD_PNE_PORTAL](#)
- [LOAD_USER_TOPIC](#)
- [LOAD_WORKFLOW_QUEUE](#)

loadTraceFlags

Called as a Java method by [GET_SYSTEM_AUDIT_INFO](#).

loadUserAndCheckEditAllowed

Loads the user information and evaluates the allowed edit privilege for the user. Called as a Java method by these services:

- [ADD_USER](#)
- [CHANGE_USER_AUTH_TYPE](#)
- [DELETE_USER](#)
- [EDIT_USER](#)
- [QUERY_USER_ATTRIBUTES](#)

loadUserMetaData

Loads the user meta data information. Called as a Java method by these services:

- [GET_FILTER_ADMIN_PAGE](#)
- [GET_SELF_REGISTER_PAGE](#)
- [GET_USER_INFO](#)

loadWfCompanionInfo

Retrieves information for companion workflows. Called as a Java method by [GET_WF_COMPANION_INFO](#).

A.12 M

makeNewRevClass

Called as a Java method by [CACHE_CHECKIN_NEW](#) and [CHECKIN_NEW_SUB](#).

mapDocNamedResultSetValuesCheckMetaChange

Called as a Java method by [CACHE_WORKFLOW_CHECKIN](#).

mapDocResultSetCheckMetaChange

Called as a Java method by [CACHE_CHECKIN_SEL](#) and [CHECKIN_SEL_SUB](#).

mapNamedResultSetValues

Retrieves the data assigned to the parameter *DOC_INFO* and maps the result set values for *dStatus*, *dReleaseState*, and *dProcessingState*. The parameter is the same among services while the result set map values vary by service. Called as a Java method by these services:

- [DELETE_REV](#)
- [DOC_INFO](#)
- [RESUBMIT_FOR_CONVERSION](#)
- [REVIEW_WORKFLOW_DOC](#)

mapResultSet

Maps the result set and passes *QdocInfo*, *dRevClassID*, *dDocName*, *dSecurityGroup*, *dCheckoutUser*, *dDocAccount*, and *dPublishState* as parameters. Parameters vary based on service. Called as a Java method by these services:

- [ADD_PROBLEMREPORT](#)
- [APPLET_DOCINFO](#)
- [CACHE_CHECKIN_NEW](#)
- [CACHE_CHECKIN_SEL](#)
- [CACHE_WORKFLOW_CHECKIN](#)
- [CHECKIN_BYNAME](#)
- [CHECKIN_NEW_SUB](#)
- [CHECKIN_SEL_FORM](#)
- [CHECKIN_SEL_SUB](#)
- [DOC_INFO_LATESTRELEASE](#)
- [DOC_INFO_SIMPLE_BYREV](#)

- [INSERT_NEW](#)
- [RESUBMIT_FOR_CONVERSION](#)
- [UNDO_CHECKOUT](#)
- [UNDO_CHECKOUT_BY_NAME](#)
- [SUBSCRIBE](#)
- [WORKFLOW_APPROVE](#)
- [WORKFLOW_CHECKIN_SUB](#)
- [WORKFLOW_REJECT](#)

markDocDeleted

Sets the status message and passes *delete_doc* as a parameter. Called as a Java method by these services:

- [DELETE_BYCLASS](#)
- [DELETE_BYNAME](#)
- [DELETE_DOC](#)

markRevDeleted

Updates the revision status as deleted. Called as a Java method by these services:

- [DELETE_BYREV](#)
- [DELETE_REV](#)
- [DELETE_REV_EX](#)

mergeTable

Merges the named table. Called as a Java method by [MERGE_TABLE](#).

A.13 N

notifyChange

Notifies the provider of changes to the content item. Called as a Java method by [NOTIFY_CHANGE](#).

notifyCollaborationUsers

Called as a Java method by [ADD_COLLABORATION](#) and [EDIT_CLBRA_ACCESS_LIST](#).

notifyContributor

Called as a Java method by [ADD_PROBLEMREPORT](#) and [RESEND_PROBLEMREPORT](#).

A.14 P

packageEnvironment

Called as a Java method by [PACKAGE_ENVIRONMENT](#).

packageLocalization

Called as a Java method by [LOAD_USER_LOCALIZATION](#).

pageRequest

Executes an HTML page request. Called as a Java method by these services:

- [GET_ADMIN_PAGE](#)
- [GET_DOC_PAGE](#)
- [GET_PORTAL_PAGE](#)
- [GET_SECURE_PAGE](#)
- [LOGIN](#)
- [PNE_SAVE_QUERY](#)
- [PNE_UPDATE_PERSONAL_URLS](#)
- [PNE_UPDATE_PORTAL_INFO](#)

postCheckinFilter

Processes the post checkin filter. Called as a Java method by [FORM_PROCESS](#).

postHtmlFormCheckin

Submits the HTML form. Called as a Java method by [CONTINUE_SUBMIT_HTML_FORM](#) and [SUBMIT_HTML_FORM](#).

prepareCheckinSecurity

Evaluates the assigned security level to verify that the user is authorized to perform this action. Called as a Java method by these services:

- [CHECKIN_NEW](#)
- [CHECKIN_SEL](#)
- [UPDATE_DOCINFO_SUB](#)

prepareDocInfoValidate

Called as a Java method by [VALIDATE_DOCINFO](#).

prepareFormContinue

Called as a Java method by [CONTINUE_SUBMIT_HTML_FORM](#).

prepareForPreview

Called as a Java method by [CACHE_SUBMIT_HTML_FORM](#).

prepareInsertNew

Called as a Java method by [INSERT_NEW](#).

prepareMailForStepUsers

Sends email to the workflow step users. Called as a Java method by [WORKFLOW_REJECT](#) and [WORKFLOW_START](#).

prepareRedirect

Prepares the redirect template for the specified service. Called as a Java method by these services:

- [ADD_COLLABORATION](#)
- [ADD_EDIT_PROVIDER](#)
- [ADD_PROBLEMREPORT](#)
- [CHECKIN_NEW](#)
- [CHECKIN_SEL](#)
- [CHECKOUT](#)
- [CLEAR_SERVER_OUTPUT](#)
- [CONTINUE_SUBMIT_HTML_FORM](#)
- [DELETE_COLLABORATION](#)
- [DELETE_PROBLEMREPORT](#)
- [DELETE_PROVIDER](#)
- [DELETE_REV](#)
- [EDIT_CLBRA_ACCESS_LIST](#)
- [EDIT_COLLABORATION](#)
- [EDIT_DOC_FORMATS](#)
- [EDIT_TRACE_OPTIONS](#)
- [EDIT_USER_PROFILE](#)
- [ENABLE_DISABLE_PROVIDER](#)
- [RESUBMIT_FOR_CONVERSION](#)
- [SAVE_TEMPLATE_CONVERSIONS](#)
- [SAVE_USER_TOPICS](#)
- [SUBMIT_HTML_FORM](#)
- [SUBSCRIBE](#)
- [TEST_PROVIDER](#)
- [UNDO_CHECKOUT](#)
- [UNSUBSCRIBE](#)
- [UPDATE_DOCINFO_BYFORM](#)
- [UPDATE_FILTER_INFO](#)
- [UPDATE_PROBLEMREPORT](#)
- [UPLOAD_NEW_COMPONENT](#)
- [WORKFLOW_APPROVE](#)
- [WORKFLOW_CHECKIN](#)
- [WORKFLOW_REJECT](#)

prepareTopicEdits

Prepares the topic edits. Called as a Java method by these services:

- [EDIT_USER_PROFILE](#)
- [GET_CLBRA_DOCUMENTS](#)
- [PNE_GET_SEARCH_RESULTS](#)
- [PNE_SAVE_QUERY](#)
- [PNE_UPDATE_PERSONAL_URLS](#)
- [PNE_UPDATE_PORTAL_INFO](#)
- [SAVE_USER_TOPICS](#)

prepareWebViewableDelivery

Called as a Java method by [GET_DYNAMIC_CONVERSION](#).

prepSubscription

Prepares the subscription. Called as a Java method by [DOC_SUBS_LIST](#).

prepSubscriptionDateUpdate

Prepares the subscription date for update and passes the specified parameter. Called as a Java method by [UPDATE_SUBSCRIPTION_NOTIFY](#) and [UPDATE_SUBSCRIPTION_USED](#).

processCheckinArchive

Checks the content item into the archive. Called as a Java method by these services:

- [CHECKIN_ARCHIVE](#)
- [CHECKIN_ARCHIVE_NO_NOTIFY](#)

processForm

Processes the form submission and passes *checkSecurity* as a parameter. Called as a Java method by [FORM_PROCESS](#).

A.15 Q

Qalias

Queries the user alias information. The result of this query is assigned to the parameter *AliasInfo*. Called as a Select Query action by [ADD_ALIAS](#) and [EDIT_ALIAS](#).

QaliasesForUser

Queries if the user has been assigned an alias. The result of this query is assigned to the parameter *Alias*. Called as a Select Query action by [DELETE_USER](#).

QarchivedDoc

Retrieves archived content item information from the database. The result of this query is assigned to the parameter *FILE_DOC_INFO* and stored for later use. This action should not throw any exceptions. The control mask setting specifies that the query must return a record or the action fails with the given error message. Called as a Select Cache Query action by [GET_ARCHIVED_FILE](#).

Qcache

Called as a Select Cache Query action by [CONTINUE_SUBMIT_HTML_FORM](#).

QcheckinCache

Called as a Select Cache Query by these services:

- [CACHE_CHECKIN_NEW](#)
- [CACHE_CHECKIN_SEL](#)
- [CACHE_SUBMIT_HTML_FORM](#)
- [CACHE_WORKFLOW_CHECKIN](#)
- [CONTINUE_CHECKIN](#)
- [DELETE_CHECKIN_CACHE](#)
- [GET_CACHED_CHECKIN_INFO](#)

QcheckinCachesForUser

Called as a Select Cache Query action by these services:

- [CHECKIN_LIST](#)
- [CONTINUE_CHECKIN](#)
- ["DELETE_BYREV"](#) on page 44

Qcollaboration

Called as a Select Query action by [ADD_COLLABORATION](#).

Called as a Select Cache Query action by these services:

- [DELETE_COLLABORATION](#)
- [EDIT_CLBRA_ACCESS_LIST](#)
- [EDIT_CLBRA_ACCESS_LIST_FORM](#)
- [EDIT_COLLABORATION](#)
- [EDIT_COLLABORATION_FORM](#)
- [GET_CLBRA_DOCUMENTS](#)
- [GET_CLBRA_INFO](#)

QdocAccount

Queries the content item account information. The result of this query is assigned to the parameter *DOCACCOUNT_INFO*. Called as a Select Query action by [ADD_DOC_ACCOUNT](#).

QdocAccounts

Retrieves content item account information. The result of this query is assigned to the parameter *DOCACCOUNT_INFO* and stored for later use. Called as a Select Cache Query action by [QUERY_DOC_ACCOUNTS](#).

QdocInfo

Retrieves content item information. The result of this query is assigned to the parameter *DOC_INFO*. Called as a Select Cache Query action by these services:

- [ADD_PROBLEMREPORT](#)

- APPLET_DOCINFO
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_SEL_FORM
- CHECKOUT
- CHECKOUT_BY_NAME
- CHECKOUT_OK
- DELETE_DOC
- DELETE_REV
- DELETE_REV_EX
- DOC_INFO
- DOC_INFO_LATESTRELEASE
- DOC_INFO_SIMPLE
- DOC_INFO_SIMPLE_BYREV
- GET_DOC_CONFIG_INFO
- GET_DYNAMIC_CONVERSION
- GET_FILE
- GET_UPDATE_FORM
- GET_WORKFLOW_INFO
- NOTIFY_CONTRIBUTOR
- RESUBMIT_FOR_CONVERSION
- REV_HISTORY
- REVIEW_WORKFLOW_DOC
- SELECTDOC
- SUBSCRIBE
- SUBSCRIBE_DOC_USER
- SUBSCRIBE_FORM
- UNSUBSCRIBE_FORM
- UPDATE_DOCINFO_BYREV
- UPDATE_DOCINFO_SUB
- WORKFLOW_CHECKIN

QdocInfoSimilarCheckin

Called as a Select Cache Query by [CHECKIN_SEL_SUB](#).

QdocName

Called as a Select Cache Query by these services:

- DELETE_PROBLEMREPORT
- DOC_INFO_SIMPLE
- GET_UPDATE_PROBLEMREPORT_FORM

- [GET_WF_COMPANION_INFO](#)
- [PROBLEMREPORT_INFO](#)
- [RESEND_PROBLEMREPORT](#)
- [UPDATE_PROBLEMREPORT](#)

QdocNameMeta

Retrieves the content item name. The result of this query is assigned to the parameter *DOC_INFO* and stored for later use. Called as a Select Cache Query by these services:

- [DOC_INFO_SIMPLE](#)
- [GET_DOCUMENT_PROBLEMREPORTS](#)
- [GET_WORKFLOW_INFO_BYNAME](#)

QdocType

Queries the content item's file type information. The result of this query is assigned to the parameter *DOCTYPE_INFO*. Called as a Select Query action by [ADD_DOCTYPE](#).

QdocTypeDocuments

Queries a specific content item's file type information. The result of this query is assigned to the parameter *DOCUMENTS*. Called as a Select Query action by [DELETE_DOCTYPE](#).

QdocTypes

Retrieves content item types. The result of this query is assigned to the parameter *DocTypes* and stored for later use. Called as a Select Cache Query action by [GET_DOCTYPES](#).

QdocumentProblemReports

Called as a Select Cache Query action by [GET_DOCUMENT_PROBLEMREPORTS](#).

Qdocuments

Called as a Select Cache Query action by [UPDATE_DOCINFO_BYREV](#) and [UPDATE_DOCINFO_SUB](#).

QextensionFormatMap

Queries the content item's format map extension. The result of this query is assigned to the parameter *FormatMap*. Called as a Select Query action by [DELETE_DOCFORMAT](#).

QextensionMap

Queries the mapping of the file extension. The result of this query is assigned to the parameter *ExtensionMap*. Called as a Select Query action by [ADD_DOCEXTENSION](#).

QformatMap

Queries the format map information. The result of this query is assigned to the parameter *FormatMap*. Called as a Select Query action by [ADD_DOCFORMAT](#).

Qgroup

Queries group information. The result of this query is assigned to the parameter *GROUP_INFO*. Called as a Select Query action by [ADD_GROUP](#).

QgroupRevisions

Queries group revision information. The result of this query is assigned to the parameter *GROUP_REVS*. Called as a Select Query action by [DELETE_GROUP](#).

QgroupRole

Queries group role information. The result of this query is assigned to the parameter *GroupRole*. Called as a Select Cache Query action by [EDIT_GROUP](#).

QgroupWF

Queries group workflow information. The result of this query is assigned to the parameter *GROUP_WF*. Called as a Select Query action by [DELETE_GROUP](#).

QisAliasSubscribed

Queries if the alias is subscribed. The result of this query is assigned to the parameter *SUBSCRIPTION_INFO*. Called as a Select Query action by [SUBSCRIBE_EX](#).

QisDocWFLocked

Called as a Select Query action by [ADD_WORKFLOWDOCUMENT_SUB](#).

QisWfTokenUsed

Called as a Select Query action by [DELETE_WORKFLOW_TOKEN](#).

QlatestIDByName

Retrieves the latest content item name information. The result of this query is assigned to the parameter *DOC_LATEST_ID* and stored for later use. The control mask setting specifies that the query must return a record or the action fails with the given error message. Called as a Select Cache Query action by [CHECKOUT_BY_NAME](#) and [UNDO_CHECKOUT_BY_NAME](#).

Qmetadef

Called as a Select Query action by these services:

- [ADD_METADEF](#)
- [EDIT_METADEF](#)
- [DEL_METADEF](#)

QmetaFieldInfo

Retrieves meta data field information and passes *MetaFieldInfo* as a parameter. Called as a Select Cache Query action by [GET_METADEFS](#) and [UPDATE_META_TABLE](#).

QODMAdocInfo

Called as a Select Cache Query action by [ODMA_DOC_INFO_SIMPLE](#).

QproblemReport

Retrieves problem report information from the database using a query. The result of this query is assigned to the parameter *ProblemReport* and stored for later use. Called as a Select Cache Query by these services:

- [ADD_PROBLEMREPORT](#)
- [DELETE_PROBLEMREPORT](#)
- [GET_UPDATE_PROBLEMREPORT_FORM](#)

- [PROBLEMREPORT_INFO](#)
- [RESEND_PROBLEMREPORT](#)
- [UPDATE_PROBLEMREPORT](#)

QprojectDocument

Called as a Select Cache Query by these services:

- [ADD_PROBLEMREPORT](#)
- [GET_DOCUMENT_PROBLEMREPORTS](#)
- [PROBLEMREPORT_INFO](#)
- [RESEND_PROBLEMREPORT](#)

QregisteredProject

Retrieves registered project information. The result of this query is assigned to the specified parameter. Called as a Select Cache Query by these services:

- [ADD_PROBLEMREPORT](#)
- [GET_DOCUMENT_PROBLEMREPORTS](#)
- [PROBLEMREPORT_INFO](#)
- [RESEND_PROBLEMREPORT](#)

QreleasedDocInfo

Retrieves content item security information. The result of this query is assigned to the parameter *SEC_DOC_INFO* and stored for later use. The control mask setting specifies that the query must return a record or the action fails with the given error message. Called as a Select Cache Query action by [GET_HIGHLIGHT_INFO](#) and [GET_XML_HIGHLIGHT_INFO](#).

QrevHistory

Retrieves revision history information. The result of this query is assigned to the parameter *REVISION_HISTORY*. The *DOC_INFO* template uses *REVISION_HISTORY* in a loop to present information about each revision in the *DOC_INF* page. Called as a Select Cache Query action by [DOC_INFO](#) and [REVIEW_WORKFLOW_DOC](#).

QrevHistoryReleased

Retrieves revision history information. The result of this query is assigned to the parameter *REVISION_HISTORY*. The *DOC_INFO* template uses *REVISION_HISTORY* in a loop to present information about each revision in the *DOC_INFO* page. Called as a Select Cache Query action by [REV_HISTORY](#).

QrevisionsByClass

Retrieves revision information by class. The result of this query is assigned to the parameter *REVISIONS* and stored for later use. Called as a Select Cache Query by [DELETE_BYCLASS](#) and [DELETE_DOC](#).

QrevisionsByName

Called as a Select Cache Query action by [DELETE_BYNAME](#).

Qrole

Queries role information. The result of this query is assigned to the parameter *ROLE_INFO*. Called as a Select Query action by [ADD_ROLE](#).

Qroles

Queries role information. The result of this query is assigned to the parameter *ROLES* and stored for later use. The action throws a data exception if it is unable to query for list of roles. Called as a Select Cache Query action by [ADD_GROUP](#).

QsecurityGroup

Retrieves security group information from the database. The result of this query is assigned to the parameter *SECURITY_GROUPS*. The control mask setting specifies that the query must return a record or the action fails with the given error message. The action throws a data exception if the security group is not in the database.

Called as a Select Query action by [EDIT_GROUP](#).

Called as a Select Cache Query action by [QUERY_GROUP](#).

Quser

Retrieves user information. The result of this query is assigned to the parameter *USER_INFO* and stored for later use. The control mask setting specifies that the query must return a record or the action fails with the given error message. The action throws a data exception if the system is unable to retrieve information for the specified user. Called as a Select Cache Query action by [GET_USER_INFO](#).

QuserMetaFieldInfo

Called as a Select Cache Query action by [GET_USER_METADEFs](#) and [UPDATE_USER_META_TABLE](#).

QuserSecurityAttributeByType

Retrieves the security attributes by type. The result of this query is assigned to the parameter *RoleUsers*. Called as a Select Query action by [DELETE_ROLE](#).

QuserSubscription

Retrieves the user subscription information. The result of this query is assigned to the parameter *USER_SUBSCRIPTION* and stored for later use. Called as a Select Cache Query action by [DOC_SUBS_LIST](#).

QwfCriteriaDocRevs

Retrieves the workflow revision criteria. The result of this query is assigned to the parameter *WfDocuments* and stored for later use. This action should not throw any exceptions. Called as a Select Cache Query by [CRITERIAWORKFLOW_DISABLE](#) and [CRITERIAWORKFLOW_DISABLE_SUB](#).

QwfDocInformation

References the active workflow content item revision ID. The result of this query is assigned to the parameter *DOC_INFO* and stored for later use. Called as a Select Cache Query action by [WORKFLOW_REJECT](#).

QwfDocName

Called as a Select Cache Query action by [ADD_WORKFLOWDOCUMENT_SUB](#).

QwfDocState

Called as a Select Cache Query action by [GET_WORKFLOW_INFO](#) and [GET_WORKFLOW_INFO_BYNAME](#).

QwfStates

Retrieves the workflow state information and provides an internal status table that stores information about content items in active workflows. The result of this query is assigned to the parameter *WorkflowState* and stored for later use. This action should not throw any exceptions. Called as a Select Cache Query action by [GET_WORKFLOWDOCREVISIONS](#).

Qworkflow

Retrieves workflow information. The result of this query is assigned to the specified parameter. Called as a Select Query by action by [ADD_WORKFLOW](#).

Called as a Select Cache Query action by these services:

- [ADD_WORKFLOWALIASES](#)
- [ADD_WORKFLOWDOCUMENT](#)
- [ADD_WORKFLOWDOCUMENTS](#)
- [ADD_WORKFLOWSTEP](#)
- [CRITERIAWORKFLOW_ENABLE](#)
- [CRITERIAWORKFLOW_DISABLE](#)
- [CRITERIAWORKFLOW_DISABLE_SUB](#)
- [DELETE_WFCONTRIBUTORS](#)
- [DELETE_WORKFLOW](#)
- [DELETE_WORKFLOWCRITERIA](#)
- [DELETE_WORKFLOWSTEP](#)
- [DELETE_WORKFLOWDOCUMENTS](#)
- [DELETE_WORKFLOWSTEP](#)
- [EDIT_WORKFLOW](#)
- [EDIT_WORKFLOWCRITERIA](#)
- [EDIT_WORKFLOWSTEP](#)
- [GET_WORKFLOW](#)
- [GET_WORKFLOWDOCUMENTS](#)
- [GET_WORKFLOWDOCREVISIONS](#)
- [WORKFLOW_START](#)
- [WORKFLOW_CANCEL](#)

QworkflowAlias

Retrieves workflow alias information. The result of this query is assigned to the parameter *WFAlias*. Called as a Select Query action by [DELETE_ALIAS](#).

QworkflowAliases

Retrieves workflow alias information. Called as a Select Cache Query action by [DELETE_WFCONTRIBUTORS](#)

QworkflowCriteriaForGroup

Called as a Select Cache Query action by [GET_CRITERIA_WORKFLOWS_FOR_GROUP](#).

QworkflowCriteriaStepsForGroup

Called as a Select Cache Query action by [GET_CRITERIA_WORKFLOWS_FOR_GROUP](#).

QworkflowDocument

Retrieves workflow content item information. The result of this query is assigned to the parameter *WfDocuments* and stored for later use. Called as a Select Cache Query action by these services:

- [GET_WF_COMPANION_INFO](#)
- [GET_WORKFLOW_INFO](#)
- [GET_WORKFLOW_INFO_BYNAME](#)

QworkflowDocuments

Retrieves workflow content item information. The result of this query is assigned to the parameter *WfDocuments* and stored for later use. Called as a Select Cache Query action by [GET_WORKFLOW](#) and [GET_WORKFLOWDOCUMENTS](#).

QworkflowForID

Called as a Select Cache Query action by [GET_WORKFLOW_INFO](#) and [GET_WORKFLOW_INFO_BYNAME](#).

Qworkflows

Called as a Select Cache Query by [GET_WORKFLOWS_FOR_ALL](#).

QworkflowStep

Retrieves workflow step information. The result of this query is assigned to the parameter *STEP_INFO*. The action throws a data exception if the step name is not unique. Called as a Select Query action by [ADD_WORKFLOWSTEP](#). Called as a Select Cache Query action by [EDIT_WORKFLOWSTEP](#).

QworkflowSteps

Retrieves workflow step information including step description, type, and number of reviewers required to pass each step. The result of this query is assigned to the specified parameter. Called as a Select Cache Query action by these services:

- [CRITERIAWORKFLOW_ENABLE](#)
- [GET_WORKFLOW_INFO](#)
- [GET_WORKFLOW_INFO_BYNAME](#)
- [WORKFLOW_START](#)

QworkflowStepsAll

Called as a Select Cache Query action by [GET_WORKFLOWS_FOR_ALL](#).

A.16 R

refreshCache

Refreshes the cached specified information. The specified information varies by service. Called as a Java method by these services:

- [ADD_ALIAS](#)
- [ADD_DOC_ACCOUNT](#)
- [ADD_DOCEXTENSION](#)
- [ADD_DOCFORMAT](#)
- [ADD_DOCTYPE](#)
- [ADD_METADEF](#)
- [ADD_WORKFLOW](#)
- [ADD_WORKFLOWALIASES](#)
- [ADD_WORKFLOWDOCUMENT](#)
- [ADD_WORKFLOWDOCUMENTS](#)
- [CRITERIAWORKFLOW_DISABLE](#)
- [CRITERIAWORKFLOW_ENABLE](#)
- [DEL_METADEF](#)
- [DELETE_ALIAS](#)
- [DELETE_DOC_ACCOUNT](#)
- [DELETE_DOCEXTENSION](#)
- [DELETE_DOCFORMAT](#)
- [DELETE_DOCTYPE](#)
- [DELETE_WFCONTRIBUTORS](#)
- [DELETE_WORKFLOW](#)
- [DELETE_WORKFLOWCRITERIA](#)
- [DELETE_WORKFLOWDOCUMENTS](#)
- [EDIT_ALIAS](#)
- [EDIT_DOCEXTENSION](#)
- [EDIT_DOCFORMAT](#)
- [EDIT_DOC_FORMATS](#)
- [EDIT_DOCTYPE](#)
- [EDIT_METADEF](#)
- [EDIT_WORKFLOW](#)
- [EDIT_WORKFLOWCRITERIA](#)
- [UPDATE_META_TABLE](#)
- [UPDATE_USER_META](#)
- [UPDATE_USER_META_TABLE](#)

- [WORKFLOW_CANCEL](#)
- [WORKFLOW_START](#)

refreshLayoutLists

Called as a Java method by [LM_LOAD_LAYOUTS_SUB](#).

refreshRoles

Refreshes the user roles. Called as a Java method by these services:

- [ADD_GROUP](#)
- [ADD_ROLE](#)
- [DELETE_GROUP](#)
- [DELETE_ROLE](#)
- [EDIT_ROLE](#)

rejectDoc

Rejects the content item and passes *UrevisionStatus* as a parameter. Called as a Java method by [WORKFLOW_REJECT](#).

remoteCredentialsCheck

Called as a Java method by [CHECK_USER_CREDENTIALS](#).

removeCachedUser

Called as a Java method by these services:

- [ADD_USER](#)
- [DELETE_USER](#)
- [EDIT_USER](#)
- [REGISTER_USER](#)

removeContext

Called as a Java method by [REMOVE_WEB_APP](#).

removeSubscription

Deletes the subscription and passes *Dsubscription* as a parameter. Called as a Java method by these services:

- [UNSUBSCRIBE](#)
- [UNSUBSCRIBE_FROM_LIST](#)
- [UNSUBSCRIBE_FROM_LIST_EX](#)

renameValues

Renames the associated values and passes specified parameters. Called as a Java method by these services:

- [ADD_PROBLEMREPORT](#)
- [CACHE_CHECKIN_SEL](#)
- [CACHE_WORKFLOW_CHECKIN](#)

- [CHECKIN_SEL_SUB](#)
- [CHECKIN_SIMILAR_FORM](#)
- [DELETE_PROBLEMREPORT](#)
- [DELETE_REV](#)
- [DELETE_ROLE](#)
- [DELETE_USER](#)
- [GET_UPDATE_FORM](#)
- [GET_WORKFLOW_INFO](#)
- [GET_WORKFLOW_INFO_BYNAME](#)
- [NOTIFY_CONTRIBUTOR](#)
- [SUBSCRIBE](#)
- [WORKFLOW_APPROVE](#)
- [WORKFLOW_CHECKIN_SUB](#)
- [WORKFLOW_REJECT](#)
- [WORKFLOW_START](#)

requestSecurityInfo

Requests the security information. Called as a Java method by [REQUEST_SECURITYINFO](#).

resubmitDocToConversion

Resubmits the content item for conversion. Called as a Java method by [RESUBMIT_FOR_CONVERSION](#).

retrieveAllProviderInfo

Retrieves the provider list. Called as a Java method by [GET_ALL_PROVIDERS](#)

retrieveCachedInfo

Called as a Java method by these services:

- [CONTINUE_CHECKIN](#)
- [CONTINUE_SUBMIT_HTML_FORM](#)
- [GET_CACHED_CHECKIN_INFO](#)

retrieveProblemReportInfo

Retrieves the problem report information. Called as a Java method by these services:

- [GET_UPDATE_PROBLEMREPORT_FORM](#)
- [PROBLEMREPORT_INFO](#)
- [RESEND_PROBLEMREPORT](#)

retrieveProviderInfo

Retrieves registered provider information. Called as a Java method by [GET_PROVIDER_INFO](#).

retrieveUserDatabaseProfileData

Retrieves the user database profile information. Called as a Java method by [REGISTER_USER](#).

runHtmlConversion

Called as a Java method by [GET_DYNAMIC_CONVERSION_SUB](#).

A.17 S

saveGlobalIncludes

Saves the global includes. Called as a Java method by [SAVE_GLOBALINCLUDES](#).

saveTemplateConversions

Called as a Java method by [SAVE_TEMPLATE_CONVERSIONS](#)

saveUserOptionList

Saves the user option list. Called as a Java method by [UPDATE_USEROPTION_LIST](#).

searchCacheReport

Called as a Java method by [APPEND_SEARCH_AUDIT_INFO](#).

searchProblemReports

Retrieves problem report search information. Called as a Java method by [GET_PROBLEMREPORTS_SEARCH_RESULTS](#).

sendMailTo

Sends an email to the problem report contributor. Called as a Java method by [NOTIFY_CONTRIBUTOR](#).

setConditionVars

Called as a Java method by these services:

- [ADD_COLLABORATION](#)
- [ADD_COLLABORATION_FORM](#)
- [ADD_WORKFLOW](#)
- [ADD_WORKFLOWALIASES](#)
- [ADD_WORKFLOWDOCUMENT](#)
- [ADD_WORKFLOWDOCUMENTS](#)
- [ASSIGN_DOCINFO_FORM](#)
- [CACHE_CHECKIN_NEW](#)
- [CACHE_CHECKIN_SEL](#)
- [CACHE_SUBMIT_HTML_FORM](#)
- [CACHE_WORKFLOW_CHECKIN](#)
- [CRITERIAWORKFLOW_DISABLE](#)
- [CRITERIAWORKFLOW_DISABLE_SUB](#)

- [CRITERIAWORKFLOW_ENABLE](#)
- [DELETE_COLLABORATION](#)
- [DELETE_WFCONTRIBUTORS](#)
- [DELETE_WORKFLOW](#)
- [DELETE_WORKFLOWCRITERIA](#)
- [DELETE_WORKFLOWDOCUMENTS](#)
- [EDIT_COLLABORATION](#)
- [EDIT_COLLABORATION_FORM](#)
- [EDIT_WORKFLOW](#)
- [EDIT_WORKFLOWCRITERIA](#)
- [GET_CLBRA_INFO](#)
- [GET_WORKFLOWDOCREVISIONS](#)
- [GET_WORKFLOWDOCUMENTS](#)
- [WORKFLOW_APPROVE](#)
- [WORKFLOW_CANCEL](#)
- [WORKFLOW_REJECT](#)
- [WORKFLOW_REJECT_FORM](#)
- [WORKFLOW_START](#)

setDateToPresent

Sets the current date and passes the specified parameter. Called as a Java method by these services:

- [SUBSCRIBE_EX](#)
- [UPDATE_SUBSCRIPTION_NOTIFY](#)
- [UPDATE_SUBSCRIPTION_USED](#)

setDeleteRevReleaseState

Updates the revision status as deleted. Called as a Java method by these services:

- [DELETE_BYREV](#)
- [DELETE_REV](#)
- [DELETE_REV_EX](#)

setExternalDocInfoFields

Sets the external content item information fields. Called as a Java method by [GET_EXTERNAL_DOC_INFO](#).

setFileConversionInfo

Called as a Java method by [GET_DYNAMIC_CONVERSION](#).

setInputConversionInfo

Called as a Java method by [GET_DYNAMIC_CONVERSION_SUB](#).

setLocalValues

Sets the associated local values and passes the specified parameters. Called as a Java method by these services:

- ADD_GROUP
- ADD_PROBLEMREPORT
- ADD_PROXIEDCOLLECTION
- ADD_ROLE
- ADD_USER
- ASSIGN_DOCINFO_FORM
- CACHE_WORKFLOW_CHECKIN
- CHECKIN_ARCHIVE_NO_NOTIFY
- CHECKIN_LIST
- CHECKIN_NEW_FORM
- CHECKIN_SIMILAR_FORM
- CLEAR_SERVER_OUTPUT
- CONTINUE_CHECKIN
- CONTINUE_SUBMIT_HTML_FORM
- DELETE_CHECKIN_CACHE
- DELETE_ROLE
- EDIT_CLBRA_ACCESS_LIST_FORM
- EDIT_USER
- EDIT_USER_PROFILE
- GET_ACTIVE_WORKFLOWS
- GET_CLBRA_DOCUMENTS
- GET_DOC_CONFIG_INFO
- GET_EXPIRED
- GET_SYSTEM_AUDIT_INFO
- GET_WORKFLOWS
- LOAD_PNE_PORTAL
- LOAD_WORKFLOW_QUEUE
- REGISTER_USER
- REMOVE_PROXIEDTRANSFER
- RESUBMIT_FOR_CONVERSION
- REVIEW_WORKFLOW_DOC
- UPDATE_BYREV
- UPDATE_DOCINFO_BYREV
- UPDATE_DOCINFO_SUB
- VALIDATE_DOCINFO

- [WORK_IN_PROGRESS](#)
- [WORKFLOW_APPROVE](#)
- [WORKFLOW_CHECKIN_SUB](#)
- [WORKFLOW_REJECT](#)

setOutputConversionInfo

Called as a Java method by [GET_DYNAMIC_CONVERSION_SUB](#).

setStatusMessage

Sets the status message and passes the specified parameter. Called as a Java method by these services:

- [CACHE_CHECKIN_NEW](#)
- [CACHE_CHECKIN_SEL](#)

- [REPLACE_METAFILE_SUB](#)
- [UPDATE_BYREV](#)
- [WORKFLOW_CHECKIN_SUB](#)

setTemplateConversionInfo

Called as a Java method by [GET_DYNAMIC_CONVERSION_SUB](#).

setTraceFlags

Called as a Java method by [EDIT_TRACE_OPTIONS](#).

startCriteriaWorkflow

Enables the criteria workflow. Called as a Java method by [CRITERIAWORKFLOW_ENABLE](#).

startWorkflow

Starts the workflow process and passes *WfDocuments* as a parameter. Called as a Java method by [WORKFLOW_START](#).

storeUserDatabaseProfileData

Stores the user profile information in the database. Called as a Java method by these services:

- [ADD_USER](#)
- [EDIT_USER](#)
- [EDIT_USER_PROFILE](#)
- [REGISTER_USER](#)

submitForm

Submits the form. Called as a Java method by [FORM_SUBMIT](#).

submitHtmlForm

Submits the form. Called as a Java method by these services:

- [CACHE_SUBMIT_HTML_FORM](#)
- [CONTINUE_SUBMIT_HTML_FORM](#)
- [SUBMIT_HTML_FORM](#)

A.18 T

testProvider

Tests the provider. Called as a Java method by [TEST_PROVIDER](#).

testWorkflowScript

Called as a Java method by [TEST_WORKFLOW_SCRIPT](#).

A.19 U

Ualias

Updates an alias. Called as an Execute Query action by [EDIT_ALIAS](#).

UcheckoutRevision

Updates the revision as checked out. Called as an Execute Query action by [CHECKOUT_SUB](#).

Ucollaboration

Called as an Execute Query action by [EDIT_CLBRA_ACCESS_LIST](#) and [EDIT_COLLABORATION](#).

UdeleteRevision

Updates the revision status as deleted. Called as an Execute Query action by these services:

- [DELETE_BYREV](#)
- [DELETE_REV](#)
- [DELETE_REV_EX](#)

UdocFormat

Updates the content item format information. Called as an Execute Query action by [EDIT_DOCFORMAT](#).

UdocType

Updates the content item type. Called as an Execute Query action by [EDIT_DOCTYPE](#).

UextensionMap

Updates the extension map. Called as an Execute Query action by [EDIT_DOCEXTENSION](#).

Umeta

Updates the metadata information. Called as an Execute Query action by these services:

- [UPDATE_BYREV](#)
- [UPDATE_DOCINFO_BYREV](#)
- [UPDATE_DOCINFO_SUB](#)
- [UPDATE_METADATA](#)
- [WORKFLOW_CHECKIN_SUB](#)

Umetadef

Updates the meta data definition information. Called as an Execute Query action by [EDIT_METADEF](#).

UnextCounter

Updates the counter. Called as an Execute Query action by [ADD_PROBLEMREPORT](#).

UnextRevID

Updates the revision ID. Called as an Execute Query action by these services:

- [CHECKIN_BYNAME](#)
- [CHECKIN_NEW_SUB](#)
- [CHECKIN_SEL_SUB](#)
- [INSERT_NEW](#)

uninstallComponent

Called as a Java method by [UNINSTALL_COMPONENT](#).

updateAffectedWorkflows

Called as a Java method by [EDIT_COLLABORATION](#).

updateCache

Called as a Java method by [UPDATE_FILTER_INFO](#).

updateCollaborationCache

Called as a Java method by these services:

- [ADD_COLLABORATION](#)

- [DELETE_COLLABORATION](#)
- [EDIT_CLBRA_ACCESS_LIST](#)
- [EDIT_COLLABORATION](#)

updateComponentConfig

Called as a Java method by [UPDATE_COMPONENT_CONFIG](#).

updateConversionCache

Called as a Java method by [GET_DYNAMIC_CONVERSION_SUB](#).

updateDocFormatsConfig

Updates content item format configuration. Called as a Java method by [EDIT_DOC_FORMATS](#).

updateDocInfo

Called as a Java method by [UPDATE_DOCINFO_BYREV](#) and [UPDATE_DOCINFO_SUB](#).

updateFilterConfig

Called as a Java method by [UPDATE_FILTER_INFO](#).

updateLicense

Called as a Java method by [UPDATE_LICENSE](#).

updateMetaTable

Updates the meta data information table. Called as a Java method by [UPDATE_META_TABLE](#).

updateOptionList

Updates the option list table. Called as a Java method by [UPDATE_OPTION_LIST](#).

updateProblemReport

Updates the problem report information in the database. Called as a Java method by [UPDATE_PROBLEMREPORT](#).

updateResultTemplate

Updates the result template. Called as a Java method by [UPDATE_RESULT_TEMPLATE](#).

updateRevisionIDAndLabel

Updates the revision ID and revision label. Called as a Java method by [CHECKIN_SEL_FORM](#).

updateSubscriptionType

Updates the subscription type. Called as a Java method by [UPDATE_SUBSCRIPTION_TYPE](#).

updateUserLocale

Called as a Java method by [EDIT_USER_PROFILE](#).

updateUserMeta

Called as a Java method by [UPDATE_USER_META](#).

updateUserMetaTable

Called as a Java method by [UPDATE_USER_META_TABLE](#).

updateWorkflowAndDocState

Updates the workflow and content item state information. Called as a Java method by [WORKFLOW_APPROVE](#) and [WORKFLOW_REJECT](#).

updateWorkflowState

Updates the workflow state. Called as a Java method by [DELETE_WORKFLOWDOCUMENTS](#).

updateWorkflowStateAfterCheckin

Called as a Java method by [WORKFLOW_CHECKIN_SUB](#).

UproblemReport

Updates the problem report information in the database. Called as an Execute Query action by [UPDATE_PROBLEMREPORT](#).

Urevision

Called as an Execute Query action by [WORKFLOW_CHECKIN_SUB](#).

Urevision2

Called as an Execute Query action by these services:

- [UPDATE_BYREV](#)
- [UPDATE_DOCINFO_BYREV](#)
- [UPDATE_DOCINFO_SUB](#)

UrevisionStatus

Updates the revision status. Called as an Execute Query action by [WORKFLOW_REJECT](#).

UroleDefinition

Updates the role definition. Called as an Execute Query action by [ADD_GROUP](#) and [ADD_ROLE](#).

UsecurityGroup

Updates the security group. Called as an Execute Query action by [EDIT_GROUP](#).

UsubscriptionNotification

Updates the subscription notification data. Called as an Execute Query action by [UPDATE_SUBSCRIPTION_NOTIFY](#).

UsubscriptionUse

Updates the user subscription. Called as an Execute Query action by [UPDATE_SUBSCRIPTION_USED](#).

Ucheckout

Updates the checkout information. Called as an Execute Query action by these services:

- [UNDO_CHECKOUT](#)
- [UNDO_CHECKOUT_BY_NAME](#)
- [UPDATE_BYREV](#)
- [WORKFLOW_CHECKIN_SUB](#)

UcheckoutPrevid

Updates the revision ID. Called as an Execute Query action by [CHECKIN_BYNAME](#) and [CHECKIN_SEL_SUB](#).

UserAuthType

Updates the user authorization type. Called as an Execute Query action by [CHANGE_USER_AUTH_TYPE](#).

Uworkflow

Updates the workflow. Called as an Execute Query action by [EDIT_WORKFLOW](#).

UworkflowCriteria

Updates the workflow criteria. Called as an Execute Query action by [EDIT_WORKFLOWCRITERIA](#).

UworkflowDocStep

Updates the content item workflow step. Called as an Execute Query action by [WORKFLOW_REJECT](#).

UworkflowWithProject

Updates workflow project information. Called as an Execute Query action by [EDIT_WORKFLOWCRITERIA](#).

A.20 V**validateCheckinData**

Validates the check in data and passes the specified parameter. Called as a Java method by these services:

- [CACHE_CHECKIN_NEW](#)
- [CACHE_CHECKIN_SEL](#)
- [CACHE_SUBMIT_HTML_FORM](#)
- [CACHE_WORKFLOW_CHECKIN](#)
- [CHECKIN_BYNAME](#)
- [CHECKIN_NEW_SUB](#)
- [CHECKIN_SEL_SUB](#)
- [INSERT_NATIVE](#)
- [INSERT_NEW](#)

- [UPDATE_BYREV](#)
- [UPDATE_DOCINFO_BYREV](#)
- [UPDATE_DOCINFO_SUB](#)
- [VALIDATE_DOCINFO](#)
- [WORKFLOW_CHECKIN_SUB](#)

validateCollaboration

Called as a Java method by these services:

- [ADD_COLLABORATION](#)
- [EDIT_CLBRA_ACCESS_LIST](#)
- [EDIT_COLLABORATION](#)

validateDelete

Validates the delete request. Called as a Java method by [DELETE_USER](#)

validateMetaData

Called as a Java method by [UPDATE_METADATA](#).

validateProblemReport

Validates the problem report. Called as a Java method by [ADD_PROBLEMREPORT](#) and [UPDATE_PROBLEMREPORT](#).

validateStandard

Validates the standard data. Called as a Java method by these services:

- [CACHE_CHECKIN_NEW](#)
- [CACHE_CHECKIN_SEL](#)
- [CACHE_SUBMIT_HTML_FORM](#)
- [CACHE_WORKFLOW_CHECKIN](#)
- [CHECKIN_BYNAME](#)
- [CHECKIN_NEW_SUB](#)
- [CHECKIN_SEL_SUB](#)
- [INSERT_NATIVE](#)
- [INSERT_NEW](#)
- [UPDATE_BYREV](#)
- [UPDATE_DOCINFO_BYREV](#)
- [UPDATE_DOCINFO_SUB](#)
- [VALIDATE_DOCINFO](#)
- [WORKFLOW_CHECKIN_SUB](#)

validateSteps

Validates the steps for *WfSteps* and *QworkflowStepAliases*. Called as a Java method by [CRITERIAWORKFLOW_DISABLE](#) and [WORKFLOW_START](#).

validateUserNameAndType

Called as a Java method by [ADD_USER](#) and [CHANGE_USER_AUTH_TYPE](#).

viewDoc

Displays the content item and passes *SearchCollectionDocInfo* as a parameter. Called as a Java method by [VIEW_DOC](#).
