April 2011

This document describes all of the commands that are available to use with the WebLogic Scripting Tool (WLST). This document includes WLST commands for WebLogic Server, as well as custom WLST commands that can be used to manage installed Oracle Fusion Middleware components.
# Contents

**Preface**  
Documentation Accessibility ................................................................. xxiii  
Conventions .............................................................................................. xxiii

## 1 Introduction and Roadmap

1.1 Document Scope and Audience............................................................ 1-1  
1.2 Guide to This Document........................................................................... 1-1  
1.3 Related Documentation............................................................................ 1-3  
1.4 New and Changed WLST Features in This Release............................... 1-3

## 2 WebLogic Server WLST Online and Offline Command Reference

2.1 WebLogic Server WLST Command Summary, Alphabetically By Command ........... 2-1  
2.2 WebLogic Server WLST Online Command Summary .............................. 2-6  
2.3 WebLogic Server WLST Offline Command Summary.............................. 2-10

## 3 WLST Command and Variable Reference

3.1 Overview of WLST Command Categories.............................................. 3-1  
3.2 Browse Commands.................................................................................. 3-2  
3.2.1 cd ......................................................................................................... 3-2  
3.2.2 currentTree ......................................................................................... 3-3  
3.2.3 prompt ................................................................................................ 3-4  
3.2.4 pwd ...................................................................................................... 3-5  
3.3 Control Commands.................................................................................. 3-5  
3.3.1 addTemplate ..................................................................................... 3-6  
3.3.2 closeDomain ...................................................................................... 3-7  
3.3.3 closeTemplate ................................................................................... 3-7  
3.3.4 connect .............................................................................................. 3-7  
3.3.5 createDomain .................................................................................... 3-11  
3.3.6 disconnect ........................................................................................ 3-12  
3.3.7 exit ..................................................................................................... 3-12  
3.3.8 readDomain ...................................................................................... 3-13  
3.3.9 readTemplate .................................................................................... 3-14  
3.3.10 updateDomain ................................................................................ 3-15  
3.3.11 writeDomain ................................................................................... 3-15  
3.3.12 writeTemplate ................................................................................ 3-16
3.4 Customization Commands ................................................................. 3-17
3.4.1 addHelpCommandGroup .......................................................... 3-17
3.4.2 addHelpCommand ................................................................. 3-18
3.5 Deployment Commands ............................................................... 3-19
3.5.1 deploy ...................................................................................... 3-20
3.5.2 distributeApplication ............................................................. 3-23
3.5.3 getWLDM ................................................................................ 3-24
3.5.4 listApplications ................................................................. 3-25
3.5.5 loadApplication ................................................................. 3-25
3.5.6 redeploy .................................................................................. 3-26
3.5.7 startApplication ............................................................... 3-27
3.5.8 stopApplication ................................................................. 3-28
3.5.9 undeploy ............................................................................... 3-29
3.5.10 updateApplication ............................................................ 3-30
3.6 Diagnostics Commands ................................................................. 3-30
3.6.1 exportDiagnosticData ........................................................... 3-31
3.6.2 exportDiagnosticDataFromServer .......................................... 3-32
3.6.3 getAvailableCapturedImages ............................................... 3-33
3.6.4 saveDiagnosticImageCaptureFile .......................................... 3-34
3.6.5 saveDiagnosticImageCaptureEntryFile .............................. 3-35
3.7 Editing Commands ........................................................................ 3-36
3.7.1 activate .................................................................................... 3-37
3.7.2 assign ..................................................................................... 3-38
3.7.3 cancelEdit .............................................................................. 3-40
3.7.4 create ...................................................................................... 3-41
3.7.5 delete ..................................................................................... 3-42
3.7.6 encrypt .................................................................................. 3-43
3.7.7 get .......................................................................................... 3-44
3.7.8 getActivationTask ................................................................. 3-44
3.7.9 invoke ................................................................................... 3-45
3.7.10 isRestartRequired ............................................................... 3-46
3.7.11 loadDB .................................................................................. 3-46
3.7.12 loadProperties ................................................................. 3-47
3.7.13 save ..................................................................................... 3-48
3.7.14 set ......................................................................................... 3-48
3.7.15 setOption ............................................................................ 3-49
3.7.16 showChanges ................................................................. 3-51
3.7.17 startEdit .............................................................................. 3-51
3.7.18 stopEdit .............................................................................. 3-52
3.7.19 unassign ............................................................... 3-53
3.7.20 undo ............................................................................... 3-55
3.7.21 validate ............................................................... 3-55
3.8 Information Commands ............................................................... 3-56
3.8.1 addListener ......................................................................... 3-57
3.8.2 configToScript ................................................................. 3-58
3.8.3 dumpStack ......................................................................... 3-59
3.8.4 dumpVariables .................................................................. 3-59

4 Infrastructure Security Custom WLST Commands

4.1 Overview of WSLT Security Commands ................................................................. 4-1
4.2 Audit Configuration Commands ........................................................................... 4-2
4.2.1 getNonJavaEEAuditMBeanName ........................................................................ 4-2
4.2.2 getAuditPolicy .................................................................................................. 4-3
4.2.3 setAuditPolicy .................................................................................................. 4-3
4.2.4 getAuditRepository ......................................................................................... 4-5
4.2.5 setAuditRepository ......................................................................................... 4-5
4.2.6 listAuditEvents ............................................................................................... 4-6
4.2.7 exportAuditConfig .......................................................................................... 4-7
4.2.8 importAuditConfig ........................................................................................ 4-8
4.3 SSL Configuration Commands ........................................................................... 4-9
4.3.1 addCertificateRequest .................................................................................... 4-10
4.3.2 addSelfSignedCertificate ............................................................................... 4-10
4.3.3 changeKeyStorePassword ............................................................................... 4-11
4.3.4 changeWalletPassword ................................................................................... 4-12
4.3.5 configureSSL .................................................................................................. 4-12
4.3.6 createKeyStore ............................................................................................... 4-13
4.3.7 createWallet .................................................................................................... 4-14
4.3.8 deleteKeyStore ............................................................................................... 4-14
4.3.9 deleteWallet ................................................................................................... 4-15
4.3.10 exportKeyStore ............................................................................................. 4-15
4.3.11 exportKeyStoreObject .................................................................................. 4-16
4.3.12 exportWallet ................................................................................................ 4-17
4.3.13 exportWalletObject ...................................................................................... 4-17
4.3.14 generateKey .................................................................................................. 4-19
4.3.15 getKeyStoreObject ......................................................................................... 4-19
4.3.16 getSSL ........................................................................................................... 4-20
4.3.17 getWalletObject ........................................................................................... 4-21
4.3.18 importKeyStore ............................................................................................ 4-21
4.3.19 importKeyStoreObject .................................................................................. 4-22
4.3.20 importWallet ................................................................................................ 4-22
4.3.21 importWalletObject ...................................................................................... 4-24
4.3.22 listKeyStoreObjects ...................................................................................... 4-25
4.3.23 listKeyStores ................................................................................................ 4-25
4.3.24 listWalletObjects ......................................................................................... 4-26
4.3.25 listWallets ..................................................................................................... 4-27
4.3.26 removeKeyStoreObject .................................................................................. 4-27
4.3.27 removeWalletObject ..................................................................................... 4-28
4.4 Oracle Identity Federation Commands ................................................................ 4-29
4.4.1 addConfigListEntryInMap .............................................................................. 4-31
4.4.2 addConfigMapEntryInMap ............................................................................. 4-32

6.2.9  removeDMSEventDestination ............................................................. 6-18
6.2.10 removeDMSEventFilter ....................................................................... 6-19
6.2.11 removeDMSEventRoute ...................................................................... 6-19
6.2.12 updateDMSEventDestination ............................................................. 6-20
6.2.13 updateDMSEventFilter ....................................................................... 6-21
6.2.14 updateDMSEventRoute ....................................................................... 6-22

7 Logging Custom WLST Commands
7.1  Log Configuration Commands ................................................................. 7-1
7.1.1  configureLogHandler ........................................................................... 7-2
7.1.2  getLogLevel ......................................................................................... 7-5
7.1.3  listLoggers .......................................................................................... 7-6
7.1.4  listLogHandlers .................................................................................. 7-7
7.1.5  setLogLevel ......................................................................................... 7-7
7.2  Search and Display Commands ................................................................. 7-9
7.2.1  displayLogs ........................................................................................ 7-9
7.2.2  listLogs .............................................................................................. 7-11
7.3  Selective Tracing Commands ................................................................. 7-12
7.3.1  configureTracingLoggers ................................................................. 7-13
7.3.2  listActiveTraces ............................................................................... 7-13
7.3.3  listTracingLoggers ............................................................................ 7-14
7.3.4  startTracing ....................................................................................... 7-15
8 Metadata Services (MDS) Custom WLST Commands

8.1 Repository Management Commands ........................................................................... 8-1
8.1.1 createMetadataPartition ..................................................................................... 8-2
8.1.2 deleteMetadataPartition ..................................................................................... 8-2
8.1.3 deregisterMetadataDBRepository ....................................................................... 8-3
8.1.4 registerMetadataDBRepository ......................................................................... 8-3
8.2 Application Metadata Management Commands ....................................................... 8-4
8.2.1 deleteMetadata .................................................................................................. 8-4
8.2.2 exportMetadata .................................................................................................. 8-6
8.2.3 importMetadata .................................................................................................. 8-9
8.2.4 purgeMetadata ................................................................................................... 8-11
8.3 Sandbox Metadata Management Commands .......................................................... 8-12
8.3.1 exportSandboxMetadata .................................................................................... 8-12
8.3.2 importSandboxMetadata .................................................................................... 8-13
8.4 Application Label Management Commands ........................................................... 8-14
8.4.1 createMetadataLabel ....................................................................................... 8-15
8.4.2 deleteMetadataLabel ....................................................................................... 8-15
8.4.3 listMetadataLabels ............................................................................................ 8-16
8.4.4 promoteMetadataLabel ...................................................................................... 8-17
8.4.5 purgeMetadataLabels ....................................................................................... 8-17
8.5 Application Management Deployment Commands .................................................. 8-18
8.5.1 getMDSArchiveConfig ....................................................................................... 8-18
8.5.2 importMAR ...................................................................................................... 8-21

9 Oracle SOA Suite Custom WLST Commands

9.1 Overview of WSLT Command Categories ................................................................ 9-1
9.2 Deployment Commands .......................................................................................... 9-2
9.2.1 sca_deployComposite ....................................................................................... 9-2
9.2.2 sca_undeployComposite .................................................................................. 9-4
9.3 SOA Composite Application Management Commands ............................................ 9-5
9.3.1 sca_startComposite ......................................................................................... 9-6
9.3.2 sca_stopComposite .......................................................................................... 9-6
9.3.3 sca_activateComposite .................................................................................... 9-7
9.3.4 sca_retireComposite ....................................................................................... 9-8
9.3.5 sca_assignDefaultComposite ......................................................................... 9-9
9.3.6 sca_getDefaultCompositeRevision ................................................................... 9-10
9.3.7 sca_listDeployedComposites .......................................................................... 9-10
9.4 Configuration Plan Management Commands .......................................................... 9-11
9.4.1 sca_attachPlan .................................................................................................. 9-11
9.4.2 sca_extractPlan ................................................................................................ 9-12
9.4.3 sca_generatePlan .............................................................................................. 9-13
9.4.4 sca_validatePlan .............................................................................................. 9-13
9.5 Task Validation Commands ..................................................................................... 9-14
9.5.1 sca_validateTask .............................................................................................. 9-14
9.6 SOA Composite Application Compilation Commands ............................................ 9-15
10 Oracle WebCenter Custom WLST Commands

10.1 Oracle WebCenter WLST Command Categories ........................................ 10-2
10.2 General ................................................................................................. 10-3
10.2.1 deleteConnection ............................................................................... 10-3
10.2.2 setWebCenterServiceFrameworkConfig ............................................ 10-4
10.2.3 getWebCenterServiceFrameworkConfig ............................................ 10-5
10.2.4 webcenterErrorOccurred .................................................................... 10-6
10.2.5 getWebCenterConnectionTypes ......................................................... 10-6
10.2.6 cloneWebCenterManagedServer ......................................................... 10-7
10.3 Analytics ............................................................................................. 10-7
10.3.1 createAnalyticsCollectorConnection .............................................. 10-8
10.3.2 setAnalyticsCollectorConnection ..................................................... 10-10
10.3.3 listAnalyticsCollectorConnections .................................................. 10-11
10.3.4 setDefaultAnalyticsCollectorConnection ....................................... 10-12
10.3.5 listDefaultAnalyticsCollectorConnection ...................................... 10-13
10.3.6 setAnalyticsCollectorConfig ......................................................... 10-13
10.3.7 listAnalyticsCollectorConfig ......................................................... 10-14
10.3.8 listAnalyticsEventTypes ............................................................ 10-15
10.4 Activity Graph .................................................................................... 10-16
10.4.1 exportAGMetadata ........................................................................... 10-17
10.4.2 importAGMetadata ................................................................. 10-18
10.4.3 exportAGProviderConfiguration ........................................ 10-18
10.4.4 deleteAllAGMetadata .......................................................... 10-19
10.4.5 deleteAGAction ................................................................. 10-20
10.4.6 deleteAGNodeClass ............................................................ 10-20
10.4.7 deleteAGSimilarityCalculation ............................................ 10-21
10.4.8 deleteAGRankCalculation .................................................... 10-22
10.4.9 deleteAGProviderAssignment .............................................. 10-22
10.4.10 deleteAGQRPPRegistration ................................................ 10-23
10.4.11 deleteAGProviderConfiguration ........................................ 10-24
10.4.12 renameAGAction .............................................................. 10-24
10.4.13 renameAGNodeClass ........................................................ 10-25
10.4.14 setAGProperty ................................................................. 10-26
10.4.15 getAGProperty ................................................................. 10-27
10.4.16 setAGPasswordCredential ................................................ 10-28
10.5 Activity Stream ................................................................. 10-29
10.5.1 archiveASByDate ............................................................... 10-29
10.5.2 archiveASByDeletedObjects .............................................. 10-30
10.5.3 archiveASByClosedSpaces ................................................ 10-30
10.5.4 archiveASByInactiveSpaces .............................................. 10-31
10.5.5 restoreASByDate ............................................................... 10-32
10.5.6 truncateASInactiveSpaces ................................................ 10-33
10.6 Content Repository ........................................................... 10-33
10.6.1 createJCRContentServerConnection .................................... 10-34
10.6.2 setJCRContentServerConnection ........................................ 10-34
10.6.3 listJCRContentServerConnections ..................................... 10-38

Preface

This preface describes the document accessibility features and conversions used in this guide—WebLogic Scripting Tool Command Reference.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at http://www.oracle.com/accessibility/.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/support/contact.html or visit http://www.oracle.com/accessibility/support.html if you are hearing impaired.

Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>boldface</td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td>Convention</td>
<td>Meaning</td>
</tr>
<tr>
<td>------------</td>
<td>---------</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td>monospace</td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
This section describes the contents and organization of this guide—WebLogic Scripting Tool Command Reference.

- Section 1.1, "Document Scope and Audience"
- Section 1.2, "Guide to This Document"
- Section 1.3, "Related Documentation"
- Section 1.4, "New and Changed WLST Features in This Release"

### 1.1 Document Scope and Audience

This document describes all of the commands that are available to use with the WebLogic Scripting Tool (WLST). This document includes WLST commands for WebLogic Server, as well as custom WLST commands that can be used to manage installed Oracle Fusion Middleware components.

**Note:** Custom WLST commands for a given Oracle Fusion Middleware component are available for use only if the component is installed in the `ORACLE_HOME` directory.

This document is written for WebLogic Server administrators and operators who deploy Java EE applications using the Java Platform, Enterprise Edition (Java EE) from Oracle. It is assumed that readers are familiar with Web technologies and the operating system and platform where WebLogic Server is installed.

### 1.2 Guide to This Document

This document is organized as follows:

- This chapter, "Introduction and Roadmap," introduces the organization of this guide and lists related documentation.

- Chapter 2, "WebLogic Server WLST Online and Offline Command Reference," summarizes WebLogic Server WLST commands alphabetically and by online/offline usage.

- Chapter 3, "WLST Command and Variable Reference," provides detailed descriptions for each of the WebLogic Server WLST commands and variables.

- Chapter 4, "Infrastructure Security Custom WLST Commands," provides detailed descriptions for each of the custom WLST commands that can be used to manage the Oracle Fusion Middleware Infrastructure Security components.
Chapter 5, "User Messaging Service (UMS) Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware User Messaging Service (UMS) component.

Chapter 6, "DMS Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware Dynamic Monitoring Service (DMS) component.

Chapter 7, "Logging Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware Logging component.

Chapter 8, "Metadata Services (MDS) Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware Metadata Services (MDS) component.

Chapter 9, "Oracle SOA Suite Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware SOA component.

Chapter 10, "Oracle WebCenter Custom WLST Commands," provides detailed descriptions for each of the custom WLST commands that can be used to manage the Oracle Fusion Middleware WebCenter component.

Chapter 11, "Application Development Framework (ADF) Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware ADF component.

Chapter 12, "Portal Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware Portals component.

Chapter 13, "Java Required Files Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware JRF component.

Chapter 14, "Web Services Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware Web Services component.

Chapter 15, "Diagnostic Framework Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware Diagnostic Framework component.

Chapter 16, "Information Rights Management Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Fusion Middleware Information Rights Management component.

Chapter 17, "Imaging and Process Management Custom WLST Commands," provides detailed descriptions of the custom WLST commands that can be used to manage the Oracle Imaging and Process Management component.

Chapter 19, "Universal Content Management Custom WLST Commands," provides detailed descriptions of the custom WLST commands for Oracle Universal Content Management.
1.3 Related Documentation

For information about how to use the WebLogic Scripting Tool, refer to Oracle WebLogic Scripting Tool.

WLST is one of several interfaces for managing and monitoring WebLogic Server. For information about the other management interfaces, see:

- "Using Ant Tasks to Configure and Use a WebLogic Server Domain" in Developing Applications for Oracle WebLogic Server, describes using WebLogic Ant tasks for starting and stopping WebLogic Server instances and configuring WebLogic domains.

- "Deployment Tools" in Deploying Applications to Oracle WebLogic Server describes several tools that WebLogic Server provides for deploying applications and stand-alone modules.

- Administration Console Online Help describes a Web-based graphical user interface for managing and monitoring WebLogic domains.

- Creating WebLogic Domains Using the Configuration Wizard describes using a graphical user interface to create a WebLogic domain or extend an existing one.

- Creating Templates and Domains Using the Pack and Unpack Commands describes commands that recreate existing WebLogic domains quickly and easily.

- Developing Custom Management Utilities With JMX for Oracle WebLogic Server describes using Java Management Extensions (JMX) APIs to monitor and modify WebLogic Server resources.

- Oracle Fusion Middleware Administrator’s Guide describes how to manage Oracle Fusion Middleware, including how to start and stop Oracle Fusion Middleware, how to configure and reconfigure components, and how to back up and recover.

1.4 New and Changed WLST Features in This Release

For a comprehensive listing of the new WebLogic Server features introduced in this release, see What’s New in Oracle WebLogic Server.
The following sections summarize the WebLogic Server WLST commands, as follows:

- Section 2.1, "WebLogic Server WLST Command Summary, Alphabetically By Command"
- Section 2.2, "WebLogic Server WLST Online Command Summary"
- Section 2.3, "WebLogic Server WLST Offline Command Summary"

Note: You can list a summary of all online and offline commands from the command-line using the following commands, respectively:

```
help("online")
help("offline")
```

For information about custom WLST commands for Fusion Middleware (FMW) components, refer to the appropriate chapter in this document. For information on how to run FMW custom commands, see "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator’s Guide.

## 2.1 WebLogic Server WLST Command Summary, Alphabetically By Command

The following tables summarize each of the WebLogic Server WLST commands, alphabetically by command. This table does not include custom WLST commands for FMW components. For a list of custom commands for a given FMW component, refer to the appropriate chapter in this document.

### Table 2–1  WebLogic Server WLST Command Summary

<table>
<thead>
<tr>
<th>This command...</th>
<th>Enables you to...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>activate</td>
<td>Activate changes saved during the current editing session but not yet deployed.</td>
<td>Online</td>
</tr>
<tr>
<td>addHelpCommand</td>
<td>Adds new command help for a command to an existing command group. Once added to the group, the command (along with a brief description) is displayed in the command list for the group when you enter the help('commandGroup') command.</td>
<td>Online or Offline</td>
</tr>
</tbody>
</table>
### Table 2–1 (Cont.) WebLogic Server WLST Command Summary

<table>
<thead>
<tr>
<th>This command...</th>
<th>Enables you to...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>addHelpCommandGroup</td>
<td>Adds a new help command group to those shown by the WLST help() command.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>addListener</td>
<td>Add a JMX listener to the specified MBean.</td>
<td>Online</td>
</tr>
<tr>
<td>addTemplate</td>
<td>Extend the current WebLogic domain using an application or service extension template.</td>
<td>Offline</td>
</tr>
<tr>
<td>assign</td>
<td>Assign resources to one or more destinations.</td>
<td>Offline</td>
</tr>
<tr>
<td>cancelEdit</td>
<td>Cancel an edit session, release the edit lock, and discard all unsaved changes. This operation can be called by any user with administrator privileges, even if the user did not start the edit session.</td>
<td>Online</td>
</tr>
<tr>
<td>cd</td>
<td>Navigate the hierarchy of configuration or runtime beans.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>closeDomain</td>
<td>Close the current WebLogic domain.</td>
<td>Offline</td>
</tr>
<tr>
<td>closeTemplate</td>
<td>Close the current domain template.</td>
<td>Offline</td>
</tr>
<tr>
<td>configToScript</td>
<td>Convert an existing server configuration (config directory) to an executable WLST script.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>connect</td>
<td>Connect WLST to a WebLogic Server instance.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>create</td>
<td>Create a configuration bean of the specified type for the current bean.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>currentTree</td>
<td>Return the current location in the hierarchy.</td>
<td>Online</td>
</tr>
<tr>
<td>custom</td>
<td>Navigate to the root of custom MBeans that are registered in the Runtime MBean Server.</td>
<td>Online</td>
</tr>
<tr>
<td>delete</td>
<td>Delete an instance of a configuration bean of the specified type for the current configuration bean.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>deploy</td>
<td>Deploy an application to a WebLogic Server instance.</td>
<td>Online</td>
</tr>
<tr>
<td>disconnect</td>
<td>Disconnect WLST from a WebLogic Server instance.</td>
<td>Online</td>
</tr>
<tr>
<td>distributeApplication</td>
<td>Copy the deployment bundle to the specified targets.</td>
<td>Online</td>
</tr>
<tr>
<td>domainConfig</td>
<td>Navigate to the last MBean to which you navigated in the domain configuration hierarchy or to the root of the hierarchy, DomainMBean.</td>
<td>Online</td>
</tr>
<tr>
<td>domainCustom</td>
<td>Navigate to the tree of custom MBeans that are registered in the Domain Runtime MBean Server.</td>
<td>Online</td>
</tr>
<tr>
<td>domainRuntime</td>
<td>Navigate to the last MBean to which you navigated in the domain runtime hierarchy or to the root of the hierarchy, DomainRuntimeMBean.</td>
<td>Online</td>
</tr>
<tr>
<td>dumpStack</td>
<td>Display stack trace from the last exception that occurred while performing a WLST action, and reset the stack trace.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>This command...</td>
<td>Enables you to...</td>
<td>Use with WLST...</td>
</tr>
<tr>
<td>----------------</td>
<td>--------------------</td>
<td>------------------</td>
</tr>
<tr>
<td><strong>dumpVariables</strong></td>
<td>Display all variables used by WLST, including their name and value.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td><strong>edit</strong></td>
<td>Navigate to the last MBean to which you navigated in the configuration edit MBean hierarchy or to the root of the hierarchy, DomainMBean.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>encrypt</strong></td>
<td>Encrypt the specified string.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>exit</strong></td>
<td>Exit WLST from the user session and close the scripting shell.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td><strong>exportDiagnosticData</strong></td>
<td>Execute a query against the specified log file.</td>
<td>Offline</td>
</tr>
<tr>
<td><strong>exportDiagnosticDataFromServer</strong></td>
<td>Executes a query on the server side and retrieves the exported WebLogic Diagnostic Framework (WLDF) data.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>find</strong></td>
<td>Find MBeans and attributes in the current hierarchy.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>get</strong></td>
<td>Return the value of the specified attribute.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td><strong>getActivationTask</strong></td>
<td>Return the latest ActivationTask MBean on which a user can get status.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>getAvailableCapturedImages</strong></td>
<td>Returns a list of the previously captured diagnostic images.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>getConfigManager</strong></td>
<td>Return the latest ConfigurationManagerBean MBean which manages the change process.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>getMBean</strong></td>
<td>Return the MBean by browsing to the specified path.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>getMBI</strong></td>
<td>Return the MBeanInfo for the specified MBeanType or the cmo variable.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>getPath</strong></td>
<td>Return the MBean path for the specified MBean instance.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>getWLDM</strong></td>
<td>Return the WebLogic DeploymentManager object.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>invoke</strong></td>
<td>Invoke a management operation on the current configuration bean.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>isRestartRequired</strong></td>
<td>Determine whether a server restart is required.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>jndi</strong></td>
<td>Navigates to the JNDI tree for the server to which WLST is currently connected.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>listApplications</strong></td>
<td>List all applications that are currently deployed in the domain.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>listChildTypes</strong></td>
<td>List all the children MBeans that can be created or deleted for the cmo.</td>
<td>Online</td>
</tr>
<tr>
<td><strong>loadApplication</strong></td>
<td>Load an application and deployment plan into memory.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td><strong>loadDB</strong></td>
<td>Load SQL files into a database.</td>
<td>Offline</td>
</tr>
<tr>
<td><strong>loadProperties</strong></td>
<td>Load property values from a file.</td>
<td>Online and Offline</td>
</tr>
<tr>
<td><strong>lookup</strong></td>
<td>Look up the specified MBean.</td>
<td>Online</td>
</tr>
</tbody>
</table>
### Table 2–1 (Cont.) WebLogic Server WLST Command Summary

<table>
<thead>
<tr>
<th>This command...</th>
<th>Enables you to...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>ls</td>
<td>List all child beans and/or attributes for the current configuration or runtime bean.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>man</td>
<td>Display help from MBeanInfo for the current MBean or its specified attribute.</td>
<td>Online</td>
</tr>
<tr>
<td>migrate</td>
<td>Migrate services to a target server within a cluster.</td>
<td>Online</td>
</tr>
<tr>
<td>nm</td>
<td>Determine whether WLST is connected to Node Manager.</td>
<td>Online</td>
</tr>
<tr>
<td>nmConnect</td>
<td>Connect WLST to Node Manager to establish a session.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>nmDisconnect</td>
<td>Disconnect WLST from a Node Manager session.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>nmEnroll</td>
<td>Enroll the machine on which WLST is currently running.</td>
<td>Online</td>
</tr>
<tr>
<td>nmGenBootStartupProps</td>
<td>Generates the Node Manager property files, boot.properties and startup.properties, for the specified server.</td>
<td>Online</td>
</tr>
<tr>
<td>nmKill</td>
<td>Kill the specified server instance that was started with Node Manager.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>nmLog</td>
<td>Return the Node Manager log.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>nmServerLog</td>
<td>Return the server output log of the server that was started with Node Manager.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>nmServerStatus</td>
<td>Return the status of the server that was started with Node Manager.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>nmStart</td>
<td>Start a server in the current domain using Node Manager.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>nmVersion</td>
<td>Return the Node Manager server version.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>prompt</td>
<td>Toggle the display of path information at the prompt.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>pwd</td>
<td>Display the current location in the configuration or runtime bean hierarchy.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>readDomain</td>
<td>Open an existing WebLogic domain for updating.</td>
<td>Offline</td>
</tr>
<tr>
<td>readTemplate</td>
<td>Open an existing domain template for WebLogic domain creation.</td>
<td>Offline</td>
</tr>
<tr>
<td>redeploy</td>
<td>Reload classes and redeploy a previously deployed application.</td>
<td>Online</td>
</tr>
<tr>
<td>This command...</td>
<td>Enables you to...</td>
<td>Use with WLST...</td>
</tr>
<tr>
<td>-----------------</td>
<td>------------------</td>
<td>-----------------</td>
</tr>
<tr>
<td>redirect</td>
<td>Redirect WLST output to the specified filename.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>removeListener</td>
<td>Remove a listener that was previously defined.</td>
<td>Online</td>
</tr>
<tr>
<td>resume</td>
<td>Resume a server instance that is suspended or in ADMIN state.</td>
<td>Online</td>
</tr>
<tr>
<td>save</td>
<td>Save the edits that have been made but have not yet been saved.</td>
<td>Online</td>
</tr>
<tr>
<td>saveDiagnosticImageCaptureFile</td>
<td>Downloads the specified diagnostic image capture.</td>
<td>Online</td>
</tr>
<tr>
<td>saveDiagnosticImageCaptureEntryFile</td>
<td>Downloads a specific entry from the diagnostic image capture.</td>
<td>Online</td>
</tr>
<tr>
<td>serverRuntime</td>
<td>Navigate to the last MBean to which you navigated in the runtime MBean hierarchy or to the root of the hierarchy, ServerRuntimeMBean.</td>
<td>Online</td>
</tr>
<tr>
<td>set</td>
<td>Set the specified attribute value for the current configuration bean.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>setOption</td>
<td>Set options related to a WebLogic domain creation or update</td>
<td>Offline</td>
</tr>
<tr>
<td>showChanges</td>
<td>Show the changes made by the current user during the current edit session.</td>
<td>Online</td>
</tr>
<tr>
<td>showListeners</td>
<td>Show all listeners that are currently defined.</td>
<td>Online</td>
</tr>
<tr>
<td>shutdown</td>
<td>Gracefully shut down a running server instance or cluster.</td>
<td>Online</td>
</tr>
<tr>
<td>start</td>
<td>Start a Managed Server instance or a cluster using Node Manager.</td>
<td>Online</td>
</tr>
<tr>
<td>startApplication</td>
<td>Start an application, making it available to users.</td>
<td>Online</td>
</tr>
<tr>
<td>startEdit</td>
<td>Start a configuration edit session on behalf of the currently connected user.</td>
<td>Online</td>
</tr>
<tr>
<td>startNodeManager</td>
<td>Start Node Manager at default port (5556).</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>startRecording</td>
<td>Record all user interactions with WLST; useful for capturing commands to replay.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>startServer</td>
<td>Start the Administration Server.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>state</td>
<td>Returns a map of servers or clusters and their state using Node Manager.</td>
<td>Online</td>
</tr>
<tr>
<td>stopApplication</td>
<td>Stop an application, making it unavailable to users.</td>
<td>Online</td>
</tr>
<tr>
<td>stopEdit</td>
<td>Stop the current edit session, release the edit lock, and discard unsaved changes.</td>
<td>Online</td>
</tr>
<tr>
<td>stopNodeManager</td>
<td>Stop Node Manager.</td>
<td>Online or Offline</td>
</tr>
</tbody>
</table>
### Table 2–2 (Cont.) WebLogic Server WLST Command Summary

<table>
<thead>
<tr>
<th>This command...</th>
<th>Enables you to...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>stopRecording</td>
<td>Stop recording WLST commands.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>stopRedirect</td>
<td>Stop the redirection of WLST output to a file.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>storeUserConfig</td>
<td>Create a user configuration file and an associated key file.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>suspend</td>
<td>Suspend a running server.</td>
<td>Online</td>
</tr>
<tr>
<td>threadDump</td>
<td>Display a thread dump for the specified server.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>undeploy</td>
<td>Undeploy an application from the specified servers.</td>
<td>Online</td>
</tr>
<tr>
<td>updateApplication</td>
<td>Update an application configuration using a new deployment plan.</td>
<td>Online</td>
</tr>
<tr>
<td>updateDomain</td>
<td>Update and save the current domain.</td>
<td>Offline</td>
</tr>
<tr>
<td>unassign</td>
<td>Unassign applications or services from one or more destinations.</td>
<td>Offline</td>
</tr>
<tr>
<td>undo</td>
<td>Revert all unsaved or unactivated edits.</td>
<td>Online</td>
</tr>
<tr>
<td>validate</td>
<td>Validate the changes that have been made but have not yet been saved.</td>
<td>Online</td>
</tr>
<tr>
<td>viewMBean</td>
<td>Display information about an MBean, such as the attribute names and values, and operations.</td>
<td>Online</td>
</tr>
<tr>
<td>writeDomain</td>
<td>Write the domain configuration information to the specified directory.</td>
<td>Offline</td>
</tr>
<tr>
<td>writeIniFile</td>
<td>Convert WLST definitions and method declarations to a Python (.py) file.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>writeTemplate</td>
<td>Writes the domain configuration information to the specified domain template.</td>
<td>Offline</td>
</tr>
</tbody>
</table>

### 2.2 WebLogic Server WLST Online Command Summary

The following table summarizes the WebLogic Server WLST online commands, alphabetically by command. This table does not include custom WLST commands for FMW components. For a list of custom commands for a given FMW component, refer to the appropriate chapter in this document.

<table>
<thead>
<tr>
<th>This command...</th>
<th>Enables you to...</th>
</tr>
</thead>
<tbody>
<tr>
<td>activate</td>
<td>Activate changes saved during the current editing session but not yet deployed.</td>
</tr>
<tr>
<td>addHelpCommand</td>
<td>Adds new command help for a command to an existing command group. Once added to the group, the command (along with a brief description) is displayed in the command list for the group when you enter the help(‘commandGroup’) command.</td>
</tr>
<tr>
<td>Command</td>
<td>Enables you to...</td>
</tr>
<tr>
<td>-------------------------</td>
<td>----------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>addHelpCommandGroup</td>
<td>Adds a new help command group to those shown by the WLST help() command, and specifies the resource bundle in which the help information is defined for the group.</td>
</tr>
<tr>
<td>addListener</td>
<td>Add a JMX listener to the specified MBean.</td>
</tr>
<tr>
<td>cancelEdit</td>
<td>Cancel an edit session, release the edit lock, and discard all unsaved changes. This operation can be called by any user with administrator privileges, even if the user did not start the edit session.</td>
</tr>
<tr>
<td>cd</td>
<td>Navigate the hierarchy of configuration or runtime beans.</td>
</tr>
<tr>
<td>configToScript</td>
<td>Convert an existing server configuration (config directory) to an executable WLST script.</td>
</tr>
<tr>
<td>connect</td>
<td>Connect WLST to a WebLogic Server instance.</td>
</tr>
<tr>
<td>create</td>
<td>Create a configuration bean of the specified type for the current bean.</td>
</tr>
<tr>
<td>currentTree</td>
<td>Return the current tree location.</td>
</tr>
<tr>
<td>custom</td>
<td>Navigate to the root of custom MBeans that are registered in the Runtime MBean Server.</td>
</tr>
<tr>
<td>delete</td>
<td>Delete an instance of a configuration bean of the specified type for the current configuration bean.</td>
</tr>
<tr>
<td>deploy</td>
<td>Deploy an application to a WebLogic Server instance.</td>
</tr>
<tr>
<td>disconnect</td>
<td>Disconnect WLST from a WebLogic Server instance.</td>
</tr>
<tr>
<td>distributeApplication</td>
<td>Copy the deployment bundle to the specified targets.</td>
</tr>
<tr>
<td>domainConfig</td>
<td>Navigate to the last MBean to which you navigated in the domain configuration hierarchy or to the root of the hierarchy, DomainMBean.</td>
</tr>
<tr>
<td>domainCustom</td>
<td>Navigate to the tree of custom MBeans that are registered in the Domain Runtime MBean Server.</td>
</tr>
<tr>
<td>domainRuntime</td>
<td>Navigate to the last MBean to which you navigated in the domain runtime hierarchy or to the root of the hierarchy, DomainRuntimeMBean.</td>
</tr>
<tr>
<td>dumpStack</td>
<td>Display stack trace from the last exception that occurred, and reset the trace.</td>
</tr>
<tr>
<td>dumpVariables</td>
<td>Display all variables used by WLST, including their name and value.</td>
</tr>
<tr>
<td>edit</td>
<td>Navigate to the last MBean to which you navigated in the configuration edit MBean hierarchy or to the root of the hierarchy, DomainMBean.</td>
</tr>
<tr>
<td>encrypt</td>
<td>Encrypt the specified string.</td>
</tr>
<tr>
<td>exit</td>
<td>Exit WLST from the interactive session and close the scripting shell.</td>
</tr>
<tr>
<td>exportDiagnosticDataFromServer</td>
<td>Execute a query on the server side and retrieves the exported WebLogic Diagnostic Framework (WLDF) data.</td>
</tr>
<tr>
<td>find</td>
<td>Find MBeans and attributes in the current hierarchy.</td>
</tr>
<tr>
<td>get</td>
<td>Return the value of the specified attribute.</td>
</tr>
<tr>
<td>getActivationTask</td>
<td>Return the latestActivationTask MBean on which a user can get status.</td>
</tr>
</tbody>
</table>
### Table 2–2 (Cont.) WebLogic Server WLST Online Command Summary

<table>
<thead>
<tr>
<th>Command</th>
<th>Enables you to...</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>getAvailableCapturedImages</code></td>
<td>Returns a list of the previously captured diagnostic images.</td>
</tr>
<tr>
<td><code>getConfigManager</code></td>
<td>Return the latest <code>ConfigurationManagerBean</code> MBean which manages the change process.</td>
</tr>
<tr>
<td><code>getMBean</code></td>
<td>Return the MBean by browsing to the specified path.</td>
</tr>
<tr>
<td><code>getMBI</code></td>
<td>Return the <code>MBeanInfo</code> for the specified <code>MBeanType</code> or the <code>cmo</code> variable.</td>
</tr>
<tr>
<td><code>getPath</code></td>
<td>Return the MBean path for the specified MBean instance.</td>
</tr>
<tr>
<td><code>getWLDM</code></td>
<td>Return the WebLogic <code>DeploymentManager</code> object.</td>
</tr>
<tr>
<td><code>invoke</code></td>
<td>Invoke a management operation on the current configuration bean.</td>
</tr>
<tr>
<td><code>isRestartRequired</code></td>
<td>Determine whether a server restart is required.</td>
</tr>
<tr>
<td><code>jndi</code></td>
<td>Navigates to the JNDI tree for the server to which WLST is currently connected.</td>
</tr>
<tr>
<td><code>listApplications</code></td>
<td>List all applications that are currently deployed in the domain.</td>
</tr>
<tr>
<td><code>listChildTypes</code></td>
<td>List all the children MBeans that can be created or deleted for the <code>cmo</code>.</td>
</tr>
<tr>
<td><code>loadApplication</code></td>
<td>Load an application and deployment plan into memory.</td>
</tr>
<tr>
<td><code>loadProperties</code></td>
<td>Load property values from a file.</td>
</tr>
<tr>
<td><code>lookup</code></td>
<td>Look up the specified MBean.</td>
</tr>
<tr>
<td><code>ls</code></td>
<td>List all child beans and/or attributes for the current configuration or runtime bean.</td>
</tr>
<tr>
<td><code>man</code></td>
<td>Display help from <code>MBeanInfo</code> for the current MBean or its specified attribute.</td>
</tr>
<tr>
<td><code>migrate</code></td>
<td>Migrate services to a target server within a cluster.</td>
</tr>
<tr>
<td><code>nm</code></td>
<td>Determine whether WLST is connected to Node Manager.</td>
</tr>
<tr>
<td><code>nmConnect</code></td>
<td>Connect WLST to Node Manager to establish a session.</td>
</tr>
<tr>
<td><code>nmDisconnect</code></td>
<td>Disconnect WLST from a Node Manager session.</td>
</tr>
<tr>
<td><code>nmEnroll</code></td>
<td>Enroll the machine on which WLST is currently running.</td>
</tr>
<tr>
<td><code>nmGenBootStartupProps</code></td>
<td>Generates the Node Manager property files, <code>boot.properties</code> and <code>startup.properties</code>, for the specified server.</td>
</tr>
<tr>
<td><code>nmKill</code></td>
<td>Kill the specified server instance that was started with Node Manager.</td>
</tr>
<tr>
<td><code>nmLog</code></td>
<td>Return the Node Manager log.</td>
</tr>
<tr>
<td><code>nmServerLog</code></td>
<td>Return the server output log of the server that was started with Node Manager.</td>
</tr>
<tr>
<td><code>nmServerStatus</code></td>
<td>Return the status of the server that was started with Node Manager.</td>
</tr>
<tr>
<td><code>nmStart</code></td>
<td>Start a server in the current domain using Node Manager.</td>
</tr>
<tr>
<td><code>nmVersion</code></td>
<td>Return the Node Manager server version.</td>
</tr>
<tr>
<td><code>prompt</code></td>
<td>Toggle the display of path information at the prompt.</td>
</tr>
<tr>
<td>Command</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>pwd</td>
<td>Display the current location in the configuration or runtime bean hierarchy.</td>
</tr>
<tr>
<td>redeploy</td>
<td>Reload classes and redeploy a previously deployed application.</td>
</tr>
<tr>
<td>redirect</td>
<td>Redirect WLST output to the specified filename.</td>
</tr>
<tr>
<td>removeListener</td>
<td>Remove a listener that was previously defined.</td>
</tr>
<tr>
<td>resume</td>
<td>Resume a server instance that is suspended or in ADMIN state.</td>
</tr>
<tr>
<td>save</td>
<td>Save the edits that have been made but have not yet been saved.</td>
</tr>
<tr>
<td>saveDiagnosticImageCaptureFile</td>
<td>Downloads the specified diagnostic image capture.</td>
</tr>
<tr>
<td>saveDiagnosticImageCaptureEntryFile</td>
<td>Downloads a specific entry from the diagnostic image capture.</td>
</tr>
<tr>
<td>serverConfig</td>
<td>Navigate to the last MBean to which you navigated in the configuration MBean hierarchy or to the root of the hierarchy, DomainMBean.</td>
</tr>
<tr>
<td>serverRuntime</td>
<td>Navigate to the last MBean to which you navigated in the runtime MBean hierarchy or to the root of the hierarchy, ServerRuntimeMBean.</td>
</tr>
<tr>
<td>set</td>
<td>Set the specified attribute value for the current configuration bean.</td>
</tr>
<tr>
<td>showChanges</td>
<td>Show the changes made by the current user during the current edit session.</td>
</tr>
<tr>
<td>showListeners</td>
<td>Show all listeners that are currently defined.</td>
</tr>
<tr>
<td>shutdown</td>
<td>Gracefully shut down a running server instance or cluster.</td>
</tr>
<tr>
<td>start</td>
<td>Start a Managed Server instance or a cluster using Node Manager.</td>
</tr>
<tr>
<td>startApplication</td>
<td>Start an application, making it available to users.</td>
</tr>
<tr>
<td>startEdit</td>
<td>Start a configuration edit session on behalf of the currently connected user.</td>
</tr>
<tr>
<td>startNodeManager</td>
<td>Start Node Manager at default port (5556).</td>
</tr>
<tr>
<td>startRecording</td>
<td>Record all user interactions with WLST; useful for capturing commands to replay.</td>
</tr>
<tr>
<td>startServer</td>
<td>Start the Administration Server.</td>
</tr>
<tr>
<td>state</td>
<td>Returns a map of servers or clusters and their state using Node Manager.</td>
</tr>
<tr>
<td>stopApplication</td>
<td>Stop an application, making it unavailable to users.</td>
</tr>
<tr>
<td>stopEdit</td>
<td>Stop the current edit session, release the edit lock, and discard unsaved changes.</td>
</tr>
<tr>
<td>stopNodeManager</td>
<td>Stop Node Manager.</td>
</tr>
<tr>
<td>stopRedirect</td>
<td>Stop the redirection of WLST output to a file.</td>
</tr>
<tr>
<td>storeUserConfig</td>
<td>Create a user configuration file and an associated key file.</td>
</tr>
<tr>
<td>suspend</td>
<td>Suspend a running server.</td>
</tr>
<tr>
<td>threadDump</td>
<td>Display a thread dump for the specified server.</td>
</tr>
<tr>
<td>undeploy</td>
<td>Undeploy an application from the specified servers.</td>
</tr>
</tbody>
</table>
2.3 WebLogic Server WLST Offline Command Summary

The following table summarizes the WebLogic Server WLST offline commands, alphabetically by command.

<table>
<thead>
<tr>
<th>Command</th>
<th>Enables you to</th>
</tr>
</thead>
<tbody>
<tr>
<td>undo</td>
<td>Revert all unsaved or unactivated edits.</td>
</tr>
<tr>
<td>updateApplication</td>
<td>Update an application configuration using a new deployment plan.</td>
</tr>
<tr>
<td>validate</td>
<td>Validate the changes that have been made but have not yet been saved.</td>
</tr>
<tr>
<td>viewMBean</td>
<td>Display information about an MBean, such as the attribute names and values, and operations.</td>
</tr>
<tr>
<td>writeIniFile</td>
<td>Convert WLST definitions and method declarations to a Python (.py) file.</td>
</tr>
</tbody>
</table>

### Table 2–3 WebLogic Server WLST Offline Command Summary

<table>
<thead>
<tr>
<th>Command</th>
<th>Enables you to</th>
</tr>
</thead>
<tbody>
<tr>
<td>addHelpCommand</td>
<td>Adds new command help for a command to an existing command group. Once added to the group, the command (along with a brief description) is displayed in the command list for the group when you enter the <code>help('commandGroup')</code> command.</td>
</tr>
<tr>
<td>addHelpCommandGroup</td>
<td>Adds a new help command group to those shown by the WLST help() command, and specifies the resource bundle in which the help information is defined for the group.</td>
</tr>
<tr>
<td>addTemplate</td>
<td>Extend the current domain using an application or service extension template.</td>
</tr>
<tr>
<td>assign</td>
<td>Assign resources to one or more destinations.</td>
</tr>
<tr>
<td>cd</td>
<td>Navigate the hierarchy of configuration or runtime beans.</td>
</tr>
<tr>
<td>closeDomain</td>
<td>Close the current domain.</td>
</tr>
<tr>
<td>closeTemplate</td>
<td>Close the current domain template.</td>
</tr>
<tr>
<td>configToScript</td>
<td>Convert an existing server configuration (config directory) to an executable WLST script.</td>
</tr>
<tr>
<td>connect</td>
<td>Connect WLST to a WebLogic Server instance.</td>
</tr>
<tr>
<td>create</td>
<td>Create a configuration bean of the specified type for the current bean.</td>
</tr>
<tr>
<td>delete</td>
<td>Delete an instance of a configuration bean of the specified type for the current configuration bean.</td>
</tr>
<tr>
<td>dumpStack</td>
<td>Display stack trace from the last exception that occurred while performing a WLST action, and reset the stack trace.</td>
</tr>
<tr>
<td>dumpVariables</td>
<td>Display all variables used by WLST, including their name and value.</td>
</tr>
<tr>
<td>exit</td>
<td>Exit WLST from the interactive session and close the scripting shell.</td>
</tr>
<tr>
<td>exportDiagnosticData</td>
<td>Execute a query against the specified log file.</td>
</tr>
<tr>
<td>get</td>
<td>Return the value of the specified attribute.</td>
</tr>
<tr>
<td>Command</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>loadApplication</td>
<td>Load an application and deployment plan into memory.</td>
</tr>
<tr>
<td>loadDB</td>
<td>Load SQL files into a database.</td>
</tr>
<tr>
<td>loadProperties</td>
<td>Load property values from a file.</td>
</tr>
<tr>
<td>ls</td>
<td>List all child beans and/or attributes for the current configuration or runtime bean.</td>
</tr>
<tr>
<td>nmConnect</td>
<td>Connect WLST to Node Manager to establish a session.</td>
</tr>
<tr>
<td>prompt</td>
<td>Toggle the display of path information at the prompt.</td>
</tr>
<tr>
<td>pwd</td>
<td>Display the current location in the configuration or runtime bean hierarchy.</td>
</tr>
<tr>
<td>readDomain</td>
<td>Open an existing WebLogic domain for updating.</td>
</tr>
<tr>
<td>readTemplate</td>
<td>Open an existing domain template for domain creation.</td>
</tr>
<tr>
<td>redirect</td>
<td>Redirect WLST output to the specified filename.</td>
</tr>
<tr>
<td>set</td>
<td>Set the specified attribute value for the current configuration bean.</td>
</tr>
<tr>
<td>setOption</td>
<td>Set options related to a WebLogic domain creation or update.</td>
</tr>
<tr>
<td>startNodeManager</td>
<td>Start Node Manager at default port (5556).</td>
</tr>
<tr>
<td>startRecording</td>
<td>Record all user interactions with WLST; useful for capturing commands to replay.</td>
</tr>
<tr>
<td>startServer</td>
<td>Start the Administration Server.</td>
</tr>
<tr>
<td>stopNodeManager</td>
<td>Stop Node Manager.</td>
</tr>
<tr>
<td>stopRedirect</td>
<td>Stop the redirection of WLST output to a file.</td>
</tr>
<tr>
<td>threadDump</td>
<td>Display a thread dump for the specified server.</td>
</tr>
<tr>
<td>unassign</td>
<td>Unassign applications or services from one or more destinations.</td>
</tr>
<tr>
<td>updateDomain</td>
<td>Update and save the current domain.</td>
</tr>
<tr>
<td>writeDomain</td>
<td>Write the domain configuration information to the specified directory.</td>
</tr>
<tr>
<td>writeIniFile</td>
<td>Convert WLST definitions and method declarations to a Python (.py) file.</td>
</tr>
<tr>
<td>writeTemplate</td>
<td>Writes the domain configuration information to the specified domain template.</td>
</tr>
</tbody>
</table>
The following sections describe the WLST commands and variables in detail. Topics include:

- Section 3.1, "Overview of WLST Command Categories"
- Section 3.2, "Browse Commands"
- Section 3.3, "Control Commands"
- Section 3.4, "Customization Commands"
- Section 3.5, "Deployment Commands"
- Section 3.6, "Diagnostics Commands"
- Section 3.7, "Editing Commands"
- Section 3.8, "Information Commands"
- Section 3.9, "Life Cycle Commands"
- Section 3.10, "Node Manager Commands"
- Section 3.11, "Tree Commands"
- Section 3.12, "WLST Variable Reference"

### 3.1 Overview of WLST Command Categories

**Note:** It is recommended that you review "Syntax for WLST Commands" in *Oracle WebLogic Scripting Tool* for command syntax requirements.

WLST commands are divided into the following categories.

<table>
<thead>
<tr>
<th>Command Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Section 3.2, &quot;Browse Commands&quot;</strong></td>
<td>Navigate the hierarchy of configuration or runtime beans and control the prompt display.</td>
</tr>
</tbody>
</table>
| **Section 3.3, "Control Commands"** | - Connect to or disconnect from a server.  
|                         | - Create and configure a WebLogic domain or domain template.  
|                         | - Exit WLST.                                                                 |
Table 3–2 Browse Commands for WLST Configuration

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>cd</td>
<td>Navigate the hierarchy of configuration or runtime beans.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>currentTree</td>
<td>Return the current location in the hierarchy.</td>
<td>Online</td>
</tr>
<tr>
<td>prompt</td>
<td>Toggle the display of path information at the prompt.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>pwd</td>
<td>Display the current location in the hierarchy.</td>
<td>Online or Offline</td>
</tr>
</tbody>
</table>

3.2 Browse Commands

Use the WLST browse commands, listed in Table 3–2, to navigate the hierarchy of configuration or runtime beans and control the prompt display.

3.2.1 cd

Command Category: Browse Commands

Use with WLST: Online or Offline

3.2.1.1 Description

Navigates the hierarchy of configuration or runtime beans. This command uses a model that is similar to navigating a file system in a Windows or UNIX command shell. For example, to navigate back to a parent configuration or runtime bean, enter `cd ('..')`. The character string `..` (dot-dot), refers to the directory immediately
above the current directory. To get back to the root bean after navigating to a bean that is deep in the hierarchy, enter `cd('/')`.

You can navigate to beans in the current hierarchy and to any child or instance.

The `cd` command returns a stub of the configuration or runtime bean instance, if one exists. If you navigate to a type, this command returns a stub of the configuration or runtime bean instance from which you navigated. In the event of an error, the command returns a `WLSTException`.

---

**Note:** The `cmo` variable is initialized to the root of all domain configuration beans when you first connect WLST to a server instance. It reflects the parent configuration bean type until you navigate to an instance. For more information about the `cmo` variable, see "Changing the Current Management Object" in *Oracle WebLogic Scripting Tool*.

---

### 3.2.1.2 Syntax

```
cd(mbeanName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbeanName</td>
<td>Path to the bean in the namespace.</td>
</tr>
</tbody>
</table>

### 3.2.1.3 Examples

The following example navigates the hierarchy of configuration beans. The first command navigates to the `Servers` configuration bean type, the second, to the `myserver` configuration bean instance, and the last back up two levels to the original directory location.

```
wls:/mydomain/serverConfig> cd('Servers')
wls:/mydomain/serverConfig/Servers> cd('myserver')
wls:/mydomain/serverConfig/Servers/myserver> cd('..../..')
wls:/mydomain/serverConfig>
```

### 3.2.2 `currentTree`

Command Category: Browse Commands

Use with WLST: Online

#### 3.2.2.1 Description

Returns the current location in the hierarchy. This command enables you to store the current location in the hierarchy and easily return to it after browsing. In the event of an error, the command returns a `WLSTException`.

#### 3.2.2.2 Syntax

```
currentTree()
```

#### 3.2.2.3 Example

The following example stores the current location in the hierarchy in `myTree` and uses it to navigate back to the Edit MBean hierarchy from the runtime MBean hierarchy on an Administration Server instance.

```
wls:/mydomain/edit> myTree=currentTree()
wls:/mydomain/edit> serverRuntime()
```
Location changed to serverRuntime tree. This is a read-only tree with
ServerRuntimeMBean as the root.
For more help, use help('serverRuntime')

```
  wls:/mydomain/serverRuntime> myTree()
  wls:/mydomain/edit>
```

### 3.2.3 prompt

Command Category: Browse Commands

Use with WLST: Online or Offline

#### 3.2.3.1 Description

Toggles the display of path information at the prompt, when entered without an argument. This command is useful when the prompt becomes too long due to the length of the path.

You can also explicitly specify `on` or `off` as an argument to the command. When you specify `off`, WLST hides the WLST prompt and defaults to the Jython prompt. By default, the WLST prompt displays the configuration or runtime navigation path information.

When you disable the prompt details, to determine your current location in the hierarchy, you can use the `pwd` command, as described in Section 3.2.4, "pwd".

In the event of an error, the command returns a `WLSTException`.

#### 3.2.3.2 Syntax

```
prompt(myPrompt)
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>myPrompt</code></td>
<td>Optional. Hides or displays WLST prompt. Valid values include <code>off</code> or <code>on</code>.</td>
</tr>
<tr>
<td></td>
<td>■ The <code>off</code> argument hides the WLST prompt.</td>
</tr>
<tr>
<td></td>
<td>■ If you run <code>prompt('off')</code>, when using WLST online, the prompt defaults to the Jython prompt. You can create a new prompt using Jython syntax. For more information about programming using Jython, see <a href="http://www.jython.org">http://www.jython.org</a>. In this case, if you subsequently enter the <code>prompt</code> command without arguments, WLST displays the WLST command prompt without the path information. To redisplay the path information, enter <code>prompt()</code> again, or enter <code>prompt('on')</code>.</td>
</tr>
<tr>
<td></td>
<td>■ The <code>on</code> argument displays the default WLST prompt, including the path information.</td>
</tr>
</tbody>
</table>

#### 3.2.3.3 Examples

The following example hides and then redisplays the path information at the prompt.

```
  wls:/mydomain/serverConfig/Servers/myserver> prompt()
  wls:/> prompt()
  wls:/mydomain/serverConfig/Servers/myserver>
```

The following example hides the prompt and defaults to the Jython prompt (since the command is run using WLST online), changes the Jython prompt, and then redisplays the WLST prompt. This example also demonstrates the use of the `pwd` command.
3.2.4 pwd

Command Category: Browse Commands
Use with WLST: Online or Offline

3.2.4.1 Description
Displays the current location in the configuration or runtime bean hierarchy.
This command is useful when you have turned off the prompt display of the path information using the `prompt` command, as described in Section 3.2.3, "prompt".
In the event of an error, the command returns a WLSTException.

3.2.4.2 Syntax
`pwd()`

3.2.4.3 Example
The following example displays the current location in the configuration bean hierarchy.

```
ws:/mydomain/serverConfig/Servers/myserver> prompt('off')
>>> sys.ps1="myprompt>"
myprompt> prompt()
ws:/> pwd()
'serverConfig:Servers/myserver'
wsl:/> prompt()
wsl:/mydomain/serverConfig/Servers/myserver>
```

3.3 Control Commands

Use the WLST control commands, listed in Table 3–3, to perform the following tasks:
- Connect to or disconnect from a server (connect and disconnect commands)
- Create a new WebLogic domain from a domain template, similar to the Configuration Wizard (createDomain, readTemplate, writeDomain, and closeTemplate commands)
- Update an existing WebLogic domain, offline (readDomain, addTemplate, updateDomain, and closeDomain commands)
- Write a domain template (writeTemplate command)
- Exit WLST

Table 3–3 lists the control commands for WLST configuration.
### addTemplate

Command Category: Control Commands

Use with WLST: Offline

#### Description

Extends the current WebLogic domain using an application or service extension template. Use the Template Builder to create an application or service extension template. See *Oracle WebLogic Server Creating Templates Using the Domain Template Builder*.

In the event of an error, the command returns a `WLSTException`.

#### Syntax

```
addTemplate(templateFileName)
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>templateFileName</td>
<td>Name of the application or service extension template.</td>
</tr>
</tbody>
</table>

#### Example

The following example opens a WebLogic domain and extends it using the specified extension template, `DefaultWebApp.jar`.

```
wls:offline> readDomain('c:/Oracle/Middleware/user_projects/domains/wlw')
```

3.3.2 closeDomain

Command Category: Control Commands

Use with WLST: Offline

3.3.2.1 Description
Closes the current domain. The domain is no longer available for editing once it is closed. In the event of an error, the command returns a WLSTException.

3.3.2.2 Syntax
closeDomain()

3.3.2.3 Example
The following example closes the current domain:

```wls:/offline/wlw>
addTemplate('c:/Oracle/Middleware/wlserver_10.3/common/templates/applications/DefaultWebApp.jar')
wls:/offline/wlw>
```

3.3.3 closeTemplate

Command Category: Control Commands

Use with WLST: Offline

3.3.3.1 Description
Closes the current domain template. The domain template is no longer available once it is closed. In the event of an error, the command returns a WLSTException.

3.3.3.2 Syntax
closeTemplate()

3.3.3.3 Example
The following example opens an existing domain template, performs some operations, and then closes the current domain template.

```wls:/offline>
readDomain('c:/Oracle/Middleware/user_projects/domains/medrec')
...
wls:/offline/medrec>
updateDomain()
wls:/offline/medrec>
closeDomain()
wls:/offline>
```

3.3.4 connect

Command Category: Control Commands

Use with WLST: Online or Offline
3.3.4.1 Description
Connects WLST to a WebLogic Server instance.

Requires you to provide the credentials (user name and password) of a user who has been defined in the active WebLogic security realm. Once you are connected, a collection of security policies determine which configuration attributes you are permitted to view or modify. (See "Default Security Policies for MBeans" in the WebLogic Server MBean Reference.)

You can supply user credentials by doing any of the following:

- Enter the credentials on the command line. This option is recommended only if you are using WLST in interactive mode.
- Enter the credentials on the command line, then use the storeUserConfig command to create a user configuration file that contains your credentials in an encrypted form and a key file that WebLogic Server uses to unencrypt the credentials. On subsequent WLST sessions (or in WLST scripts), supply the name of the user configuration file and key file instead of entering the credentials on the command line. This option is recommended if you use WLST in script mode because it prevents you from storing unencrypted user credentials in your scripts.
- Use the credentials that are stored in the Administration Server's boot.properties file. By default, when you create an Administration Server, WebLogic Server encrypts the credentials used the create the server and stores them in a boot.properties file.

Please note:

- If you run the connect command in a script without specifying the username and password or user configuration file and key file, a WSLException occurs. In interactive mode, you are prompted for the username and password.
- Oracle strongly recommends that you connect WLST to the server through the SSL port or administration port. If you do not, the following warning message is displayed:

  Warning: An insecure protocol was used to connect to the server. To ensure on-the-wire security, the SSL port or Admin port should be used instead.

- If you are connecting to a WebLogic Server instance through an SSL listen port on a server that is using the demonstration SSL keys and certificates, invoke WLST using the following command:

  java -Dweblogic.security.SSL.ignoreHostnameVerification=true -Dweblogic.security.TrustKeyStore=DemoTrust weblogic.WLST

  For more information about invoking WLST, see "Main Steps for Using WLST in Interactive or Script Mode" in Oracle WebLogic Scripting Tool.

- If you are connecting to a WebLogic Server instance via HTTP, ensure that the TunnelingEnabled attribute is set to true for the WebLogic Server instance. For more information, see "TunnelingEnabled" in Oracle WebLogic Server MBean Reference.

- When trying to connect to the WebLogic Server Administration Server from WLST using localhost as the host name, the following message may be displayed if the listen-address attribute of the Administration Server has been restricted to certain IP addresses:

  javax.naming.CommunicationException [Root exception is java.net.ConnectException : <t3://HOST:PORT> : Destination unreachable;
nested exception is: java.net.ConnectException: Connection refused; No available router to destination

You can use either of the following workarounds for this issue:

- Check that the listen-address attribute of the Administration Server has been set correctly. For example, in the domain configuration file:

  ```xml
  <server>
    <name>AdminServer</name>
    <ssl>
      .
      .
    </ssl>
    <machine>your_machine</machine>
    <!-- listen-address><your_ip_address></listen-address -->
  </server>
  ```

- Use the hostname of the Administration Server, instead of localhost, in the WLST connect command.

After successfully connecting to a WebLogic Server instance, all the local variables are initialized.

In the event of an error, the command returns a WLSTException.

### 3.3.4.2 Syntax

```python
connect([username, password], [url], [timeout])
connect([userConfigFile, userKeyFile], [url], [timeout])
connect([url], [adminServerName], [timeout])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>username</td>
<td>Optional. Username of the operator who is connecting WLST to the server. If not specified, WLST processes the command as described above.</td>
</tr>
<tr>
<td>password</td>
<td>Optional. Password of the operator who is connecting WLST to the server. If not specified, WLST processes the command as described above.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. Listen address and listen port of the server instance, specified using the following format: [protocol://]listen-address:listen-port. If not specified, this argument defaults to t3://localhost:7001.</td>
</tr>
<tr>
<td>timeout</td>
<td>Optional. The number of milliseconds that WLST waits for online commands to complete (return). When you invoke a WLST online command, WLST connects to an MBean Server, invokes an MBean server method, and returns the results of the invocation. If the MBean server method does not return within the timeout period, WLST abandons its invocation attempt. Use the following syntax for this argument: timeout='milliseconds' A value of 0 indicates that the operation will not time out. This argument defaults to 300,000 ms (or 5 minutes).</td>
</tr>
</tbody>
</table>
### 3.3.4.3 Examples

The following example connects WLST to a WebLogic Server instance. In this example, the Administration Server name defaults to `AdminServer`. Note that a warning is displayed if the SSL or administration port is not used to connect to the server.

```wls
connect('weblogic','welcome1','t3://localhost:8001')
```

Connecting to weblogic server instance running at t3://localhost:8001 as username weblogic...

Successfully connected to Admin Server 'AdminServer' that belongs to domain 'mydomain'.

Warning: An insecure protocol was used to connect to the server. To ensure on-the-wire security, the SSL port or Admin port should be used instead.

```wls
username = 'weblogic'
password = 'welcome1'
connect(username,password,'t3s://myhost:8001')
```

The following example connects WLST to a WebLogic Server instance at the specified URL. In this example, the username and password are passed as variables. This example uses a secure protocol.

```wls
connect('weblogic','welcome1','t3s://myhost:8001')
```

```
Successfully connected to Admin Server 'AdminServer' that belongs to domain
```

---

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| userConfigFile | Optional. Name and location of a user configuration file which contains an encrypted username and password. Use the following syntax for this argument:  
userConfigFile='file-system-path'
If not specified, WLST processes the command as described above. When you create a user configuration file, the storeUserConfig command uses a key file to encrypt the username and password. Only the key file that encrypts a user configuration file can decrypt the username and password. (See Section 3.8.21, "storeUserConfig"). |
| userKeyFile | Optional. Name and location of the key file that is associated with the specified user configuration file and is used to decrypt it. Use the following syntax for this argument:  
userKeyFile='file-system-path'
If not specified, WLST processes the command as described above. See Section 3.8.21, "storeUserConfig". |
| adminServerName | Optional. Name of the Administration Server for the domain. Causes the connect command to use the credentials that are stored in the Administration Server's `boot.properties` file. Use the following syntax for this argument:  
adminServerName='server-name'
This argument is valid only when you start WLST from a domain directory. If the `boot.properties` file for the Administration Server is located in the domain directory, then you do not need to specify this argument. If not specified, WLST processes the command as described above. |

---
The following example connects WLST to a WebLogic Server instance using a user configuration and key file to provide user credentials.

```
wls:/offline> connect(userConfigFile='c:/myfiles/myuserconfigfile.secure',
userKeyFile='c:/myfiles/myuserkeyfile.secure')
Connecting to t3://localhost:7001 with userid username ...
```
Successfully connected to Admin Server 'AdminServer' that belongs to domain 'mydomain'.

```
wls:/mydomain/serverConfig>
```

The following example shows the prompts that are displayed in interactive mode if you run the command without parameters:

```
wls:/offline> connect()
Please enter your username :username
Please enter your password : 
Please enter your server URL [t3://localhost:7001] :
Connecting to t3://localhost:7001 with userid username
```

### 3.3.5 createDomain

**Command Category:** Control Commands  
**Use with WLST:** Offline

#### 3.3.5.1 Description

Creates a WebLogic domain using the specified template.

**Note:** If you wish to modify the domain configuration settings when creating a WebLogic domain, see Option 2 in "Editing a Domain (Offline)" in *Oracle WebLogic Scripting Tool*.  
The `createDomain` command is similar in functionality to the unpack command, as described in *Creating Templates and Domains Using the pack and unpack Commands*.

In the event of an error, the command returns a `WLSTException`.

#### 3.3.5.2 Syntax

```
createDomain(domainTemplate, domainDir, user, password)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>domainTemplate</code></td>
<td>Name and location of the domain template from which you want to create a domain.</td>
</tr>
</tbody>
</table>
| `domainDir`    | Name of the directory to which you want to write the domain configuration information.  
|                | Oracle recommends that you create all domains for your environment outside of the Middleware home directory. This makes it easier for you to remove an existing installation or install a new version of WebLogic Server without having to recreate your domains and applications. |
3.3.5.3 Example

The following example creates a new WebLogic domain using the Avitek MedRec template and sets the default username to weblogic and the password to welcome1. The domain is saved to the following directory:

c:/Oracle/Middleware/wlserver_10.3/user_projects/domains/medrec.

```
wlsh:/offline> createDomain('c:/Oracle/Middleware/wlserver_10.3/common/templates/domains/wls_medrec.jar','c:/Oracle/Middleware/user_projects/domains/medrec', 'weblogic', 'welcome1')
```

3.3.6 disconnect

Command Category: Control Commands

Use with WLST: Online

3.3.6.1 Description

Disconnects WLST from a WebLogic Server instance. The disconnect command does not cause WLST to exit the interactive scripting shell; it closes the current WebLogic Server instance connection and resets all the variables while keeping the interactive shell alive.

In the event of an error, the command returns a WLSTException.

You can connect to another WebLogic Server instance using the connect command, as described in Section 3.3.4, "connect".

3.3.6.2 Syntax

```
disconnect(force)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>force</td>
<td>Optional. Boolean value specifying whether WLST should disconnect without waiting for the active sessions to complete. This argument defaults to false, indicating that all active sessions must complete before disconnect.</td>
</tr>
</tbody>
</table>

3.3.6.3 Example

The following example disconnects from a running server:

```
wls:/mydomain/serverConfig> disconnect()
Disconnected from weblogic server: myserver
wlsh:/offline>
```

3.3.7 exit

Command Category: Control Commands

Use with WLST: Online or Offline
3.3.7.1 Description
Exits WLST from the user session and closes the scripting shell.

If there is an edit session in progress, WLST prompts you for confirmation. To skip the
prompt, set the defaultAnswer argument to y.

By default, WLST calls System.exit(0) for the current WLST JVM when exiting
WLST. If you would like the JVM to exit with a different exit code, you can specify a
value using the exitCode argument.

**Note:** When the WLST exit command is issued within an Ant script,
it may also exit the execution of the Ant script. It is recommended that
when invoking WLST within an Ant script, you fork a new JVM by
specifying fork="true".

In the event of an error, the command returns a WLSTException.

3.3.7.2 Syntax
exit([defaultAnswer], [exitcode])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>defaultAnswer</td>
<td>Optional. Default response, if you would prefer not to be prompted at the command line. Valid values are y and n. This argument defaults to null, and WLST prompts you for a response.</td>
</tr>
<tr>
<td>exitcode</td>
<td>Optional. Exit code to set when exiting WLST.</td>
</tr>
</tbody>
</table>

3.3.7.3 Example
The following example disconnects from the user session and closes the scripting shell.

```bash
wls:/mydomain/serverConfig> exit()
Exiting WebLogic Scripting Tool ...
c:>
```

The following example disconnects from the user session, closes the scripting shell,
and sets the error code to 101.

```bash
wls:/mydomain/serverConfig> exit(exitcode=101)
Exiting WebLogic Scripting Tool ...
c:>
```

3.3.8 readDomain

Command Category: Control Commands
Use with WLST: Offline

3.3.8.1 Description
Opens an existing WebLogic domain for updating.

WLST offline provides read and write access to the configuration data that is persisted
in the config directory for the WebLogic domain, or in a domain template JAR
created using Template Builder. This data is a collection of XML documents and
expresses a hierarchy of management objects.
When you open a template or WebLogic domain, WLST is placed at the root of the configuration hierarchy for that domain, and the prompt is updated to reflect the current location in the configuration hierarchy. For example:

```
wlst:/offline/base_domain>
```

For more information, see "Navigating and Interrogating MBeans" in Oracle WebLogic Scripting Tool.

In the event of an error, the command returns a WLSTException.

### 3.3.8.2 Syntax

```
readDomain(domainDirName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>domainDirName</code></td>
<td>Name of the WebLogic domain directory that you want to open.</td>
</tr>
</tbody>
</table>

### 3.3.8.3 Example

The following example opens the `medrec` domain for editing.

```
wlst:/offline> readDomain('c:/Oracle/Middleware/user_projects/domains/medrec')
wlst:/offline/medrec>
```

### 3.3.9 readTemplate

Command Category: Control Commands

Use with WLST: Offline

#### 3.3.9.1 Description

Opens an existing domain template for domain creation.

When you open a domain template, WLST is placed into the configuration bean hierarchy for that domain template, and the prompt is updated to reflect the current location in the configuration hierarchy. For example:

```
wlst:/offline/base_domain>
```

WebLogic Server configuration beans exist within a hierarchical structure. In the WLST file system, the hierarchies correspond to drives; types and instances are directories; attributes and operations are files. WLST traverses the hierarchical structure of configuration beans using commands such as `cd`, `ls`, and `pwd` in a similar way that you would navigate a file system in a UNIX or Windows command shell. After navigating to a configuration bean instance, you interact with the bean using WLST commands. For more information, see "Navigating and Interrogating MBeans" in Oracle WebLogic Scripting Tool.

**Note:** Using WLST and a domain template, you can only create and access security information when you are creating a new WebLogic domain. When you are updating a WebLogic domain, you cannot access security information through WLST.

In the event of an error, the command returns a WLSTException.
3.3.9.2 Syntax
readTemplate(templateFileName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>templateFileName</td>
<td>Name of the JAR file corresponding to the domain template.</td>
</tr>
</tbody>
</table>

3.3.9.3 Example
The following example opens the medrec.jar domain template for WebLogic domain creation.

```
wlst:/offline> readTemplate('c:/Oracle/Middleware/wlserver_10.3/common/templates/domains/wls_medrec.jar')
wls:/offline/wls_medrec>
```

3.3.10 updateDomain
Command Category: Control Commands
Use with WLST: Offline

3.3.10.1 Description
Updates and saves the current WebLogic domain. The domain continues to be editable after you update and save it.

In the event of an error, the command returns a WLSTException.

3.3.10.2 Syntax
updateDomain()

3.3.10.3 Example
The following examples opens the medrec domain, performs some operations, and updates and saves the current domain:

```
wls:/offline> readDomain('c:/Oracle/Middleware/user_projects/domains/medrec')
...
wls:/offline/medrec> updateDomain()
```

3.3.11 writeDomain
Command Category: Control Commands
Use with WLST: Offline

3.3.11.1 Description
Writes the domain configuration information to the specified directory.

Once you write the WebLogic domain to file system, you can continue to update the domain template object that exists in memory, and reissue the writeDomain command to store the domain configuration to a new or existing file.

By default, when you write a WebLogic domain, the associated applications are written to WL_HOME/user_projects/applications/domainname, where WL_HOME specifies the WebLogic Server home directory and domainname specifies the name of the WebLogic domain. This directory must be empty; otherwise, WLST displays an error.
When you have finished using the domain template object in memory, close it using the `closeTemplate` command. If you want to edit the WebLogic domain that has been saved to disk, you can open it using the `readDomain` command.

---

**Note:** The name of the WebLogic domain is derived from the name of the domain directory. For example, for a domain saved to `c:/Oracle/Middleware/user_projects/domains/myMedrec`, the domain name is `myMedrec`.

---

Before writing the domain, you must define a password for the default user, if it is not already defined. For example:

```bash
cd('/Security/base_domain/User/weblogic')
cmo.setPassword('welcome1')
```

In the event of an error, the command returns a `WLSTException`.

### 3.3.11.2 Syntax

```bash
writeDomain(domainDir)
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>domainDir</td>
<td>Name of the directory to which you want to write the domain configuration information.</td>
</tr>
</tbody>
</table>

### 3.3.11.3 Example

The following example reads the `medrec.jar` domain templates, performs some operations, and writes the domain configuration information to the `c:/Oracle/Middleware/user_projects/domains/medrec` directory.

```bash
wls:/offline> readTemplate('c:/Oracle/Middleware/wlserver_10.3/common/templates /domains/wls.jar')
...
wls:/offline/base_domain> writeDomain('c:/Oracle/Middleware/user_ projects/domains/base_domain')
```

### 3.3.12 writeTemplate

Command Category: Control Commands

Use with WLST: Offline

#### 3.3.12.1 Description

Writes the domain configuration information to the specified domain template. You can use the domain configuration template to recreate the WebLogic domain.

Once your write the configuration information to the domain configuration template, you can continue to update the WebLogic domain or domain template object that exists in memory, and reissue the `writeDomain` or `writeTemplate` command to store the domain configuration to a new or existing WebLogic domain or domain template file. For more information, see Section 3.3.11, "writeDomain" or Section 3.3.12, "writeTemplate", respectively.

In the event of an error, the command returns a `WLSTException`. 
3.3.12.2 Syntax

writeTemplate(templateName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>templateName</td>
<td>Name of the domain template to store the domain configuration information.</td>
</tr>
</tbody>
</table>

3.3.12.3 Example

The following example writes the current domain configuration to the domain template named c:/Oracle/Middleware/user_projects/templates/myTemplate.jar.

```
wls:/offline> readDomain('c:/Oracle/Middleware/user_projects/domains/mydomain')
...
wlst:/offline/base_domain> writeTemplate('c:/Oracle/Middleware/user_projects/templates/myTemplate.jar')
```

3.4 Customization Commands

Use the WLST customization commands, listed in Table 3–4, to add the command group help and command help that is listed by the WLST help() and help('commandGroup') commands. For more information about adding command help to WLST, see "Adding Integrated Help for Custom Commands" in Oracle WebLogic Scripting Tool.

<table>
<thead>
<tr>
<th>This command...</th>
<th>Enables you to...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>addHelpCommandGroup</td>
<td>Adds a new help command group to those shown by the WLST help() command.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>addHelpCommand</td>
<td>Adds new command help for a command to an existing command group. Once added to the group, the command (along with a brief description) is displayed in the command list for the group when you enter the help('commandGroup') command.</td>
<td>Online or Offline</td>
</tr>
</tbody>
</table>

3.4.1 addHelpCommandGroup

Command Category: Customization Commands

Use with WLST: Online or Offline

3.4.1.1 Description

Adds a new command help group to those shown by the WLST help() command, and specifies the resource bundle in which the help information is defined for the group.
3.4.1.2 Syntax
addHelpCommandGroup(commandGroup, resourceBundleName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>commandGroup</td>
<td>Use a unique name for the command group. Do not use a command group name that is already shown by the WLST help() command.</td>
</tr>
<tr>
<td>resourceBundleName</td>
<td>Represents either a class name or property resource file name. The resource bundle contains help text for entries for the command group using a standard pattern. The resource bundle name will be passed to ResourceBundle.getBundle(...). Multiple command groups can use the same resource bundle. The resource bundle must be present in the classpath. See &quot;Adding Integrated Help for Custom Commands&quot; in Oracle WebLogic Scripting Tool for information on how to define the help text for each command group and command. For more information on resourceBundles and localization, refer to <a href="http://java.sun.com/javase/6/docs/api/java/util/ResourceBundle.html">http://java.sun.com/javase/6/docs/api/java/util/ResourceBundle.html</a>.</td>
</tr>
</tbody>
</table>

3.4.1.3 Examples
The following example adds the boot command group to the list of groups shown by the help() command, and specifies that the help text is located in the property resource file 'myhelp':

```plaintext
wls:/offline> addHelpCommandGroup('boot','myhelp')
```

The following example adds the boot command group to the list of groups shown by the help() command, and specifies that the help text is located in the class foo.bar.MyResourceBundleClass:

```plaintext
wls:/offline> addHelpCommandGroup('boot','foo.bar.MyResourceBundleClass')
```

3.4.2 addHelpCommand
Command Category: Customization Commands
Use with WLST: Online or Offline

3.4.2.1 Description
Adds new command help for a command to an existing command group. Once added to the group, the command (along with a brief description) is displayed in the command list for the group when you enter the help('commandGroup') command. You can also specify whether or not the command is listed by the help('online') and help('offline') commands.

3.4.2.2 Syntax
addHelpCommand(commandName, commandGroup, [offline=false, online=false])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>commandName</td>
<td>The name of the command as defined in the command group specified by commandGroup.</td>
</tr>
<tr>
<td>commandGroup</td>
<td>The commandGroup to which the command belongs.</td>
</tr>
</tbody>
</table>
3.4.2.3 Example
The following example shows how to add the online command `bootDB` to the listing output by the `help('boot')` and `help('online')` commands:

```
wls:/offline> addHelpCommand('bootDB','boot',online='true',offline='false')
```

3.5 Deployment Commands
Use the WLST deployment commands, listed in Table 3–5, to:

- Deploy, undeploy, and redeploy applications and standalone modules to a WebLogic Server instance.
- Update an existing deployment plan.
- Interrogate the WebLogic Deployment Manager object.
- Start and stop a deployed application.

For more information about deploying applications, see *Deploying Applications to Oracle WebLogic Server*.

### Table 3–5 Deployment Commands for WLST Configuration

<table>
<thead>
<tr>
<th>This command...</th>
<th>Enables you to...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>deploy</td>
<td>Deploy an application to a WebLogic Server instance.</td>
<td>Online</td>
</tr>
<tr>
<td>distributeApplication</td>
<td>Copy the deployment bundle to the specified targets.</td>
<td>Online</td>
</tr>
<tr>
<td>getWLD M</td>
<td>Return the WebLogic DeploymentManager object.</td>
<td>Online</td>
</tr>
<tr>
<td>listApplications</td>
<td>List all applications that are currently deployed in the WebLogic domain.</td>
<td>Online</td>
</tr>
<tr>
<td>loadApplication</td>
<td>Load an application and deployment plan into memory.</td>
<td>Online and Offline</td>
</tr>
<tr>
<td>redeploy</td>
<td>Redeploy a previously deployed application.</td>
<td>Online</td>
</tr>
<tr>
<td>startApplication</td>
<td>Start an application, making it available to users.</td>
<td>Online</td>
</tr>
<tr>
<td>stopApplication</td>
<td>Stop an application, making it unavailable to users.</td>
<td>Online</td>
</tr>
<tr>
<td>undeploy</td>
<td>Undeploy an application from the specified servers.</td>
<td>Online</td>
</tr>
<tr>
<td>updateApplication</td>
<td>Update an application configuration using a new deployment plan.</td>
<td>Online</td>
</tr>
</tbody>
</table>
3.5.1 deploy

Command Category: Deployment Commands

Use with WLST: Online

3.5.1.1 Description
Deploys an application to a WebLogic Server instance.

The deploy command returns a WLSTProgress object that you can access to check the status of the command. For more information about the WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool. In the event of an error, the command returns a WLSTException.

**Note:** If there is an edit session in progress, the deploy command does not block user interaction.

3.5.1.2 Syntax
deploy(appName, path, [targets], [stageMode], [planPath], [options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the application or standalone Java EE module to be deployed.</td>
</tr>
<tr>
<td>path</td>
<td>Name of the application directory, archive file, or root of the exploded archive directory to be deployed.</td>
</tr>
<tr>
<td>targets</td>
<td>Optional. Comma-separated list of the targets. Each target may be qualified with a Java EE module name (for example, module1@server1) enabling you to deploy different modules of the application archive on different servers. This argument defaults to the server to which WLST is currently connected.</td>
</tr>
<tr>
<td>stageMode</td>
<td>Optional. Staging mode for the application you are deploying. Valid values are stage, nostage, and external_stage. For information about the staging modes, see &quot;Controlling Deployment File Copying with Staging Modes&quot; in Deploying Applications to Oracle WebLogic Server. If you do not specify a stage mode, the default stage mode is used. On the Administration Server, the default stage mode is nostage and on Managed Servers, it is stage.</td>
</tr>
<tr>
<td>planPath</td>
<td>Optional. Name of the deployment plan file. The filename can be absolute or relative to the application directory. This argument defaults to the plan/plan.xml file in the application directory, if one exists.</td>
</tr>
<tr>
<td>Argument</td>
<td>Definition</td>
</tr>
<tr>
<td>---------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>options</td>
<td>Optional. Comma-separated list of deployment options, specified as name-value pairs. Valid options include:</td>
</tr>
<tr>
<td></td>
<td>- altDD—Location of the alternate application deployment descriptor on the Administration Server.</td>
</tr>
<tr>
<td></td>
<td>- altWlsDD—Location of the alternate WebLogic application deployment descriptor on the Administration Server.</td>
</tr>
<tr>
<td></td>
<td>- archiveVersion—Archive version number.</td>
</tr>
<tr>
<td></td>
<td>- block—Boolean value specifying whether WLST should block user interaction until the command completes. This option defaults to true. If set to false, WLST returns control to the user after issuing the command; you can query the WLSTProgress object to determine the status of the command. If you are importing WLST as a Jython module, as described in &quot;Importing WLST as a Jython Module&quot; in <em>Oracle WebLogic Scripting Tool</em>, block is always set to true.</td>
</tr>
<tr>
<td></td>
<td>- clusterDeploymentTimeout—Time, in milliseconds, granted for a cluster deployment task on this application.</td>
</tr>
<tr>
<td></td>
<td>- createPlan—Boolean value indicating that user would like to create a default plan. This option defaults to false.</td>
</tr>
<tr>
<td></td>
<td>- defaultSubmoduleTargets—Boolean value indicating that targeting for qualifying JMS submodules should be derived by the system, see &quot;Using Sub-Module Targeting with JMS Application Modules&quot; in <em>Deploying Applications to Oracle WebLogic Server</em>. Default value is true.</td>
</tr>
<tr>
<td></td>
<td>- deploymentPrincipalName—String value specifying the principal for deploying the file or archive during server starts (static deployment; it does not effect the current deployment task). Make sure the user exists. This option adds &lt;deployment-principal-name&gt; to the &lt;app-deployment&gt; element in the config.xml file.</td>
</tr>
<tr>
<td></td>
<td>- forceUndeployTimeout—Force undeployment timeout value.</td>
</tr>
<tr>
<td></td>
<td>- gracefulIgnoreSessions—Boolean value specifying whether the graceful production to admin mode operation should ignore pending HTTP sessions. This option defaults to false and only applies if gracefulProductionToAdmin is set to true.</td>
</tr>
<tr>
<td></td>
<td>- gracefulProductionToAdmin—Boolean value specifying whether the production to Admin mode operation should be graceful. This option defaults to false.</td>
</tr>
<tr>
<td></td>
<td>- libImplVersion—Implementation version of the library, if it is not present in the manifest.</td>
</tr>
<tr>
<td></td>
<td>- libraryModule—Boolean value specifying whether the module is a library module. This option defaults to false.</td>
</tr>
</tbody>
</table>
3.5.1.3 Example

The following example deploys the businessApp application located at c:/myapps/business, a default deployment plan is created.

The deploy command returns a WLSTProgress object that you can access to check the status of the command. The WLSTProgress object is captured in a user-defined variable, in this case, progress.

```bash
wls:/mydomain/serverConfig/Servers> progress= deploy(appName='businessApp',path='c:/myapps/business',createplan='true')
```

The previous example stores the WLSTProgress object returned in a user-defined variable, in this case, progress. You can then use the progress variable to print the status of the deploy command. For example:

```bash
wls:/mydomain/serverConfig/Servers> progress.printStatus()
```

Current Status of your Deployment:
Deployment command type: deploy
Deployment State : completed
Deployment Message : null

---

**Argument | Definition**
---|---
**options**<br>(Continued)<br>**libSpecVersion**—Specification version of the library, if it is not present in the manifest.<br>**planVersion**—Plan version number.<br>**remote**—Boolean value specifying whether the operation will be remote from the file system that contains the source. Use this option when you are on a different machine from the Administration Server and the deployment files are already at the specified location where the Administration Server is located. This option defaults to false.<br>**retireGracefully**—Retirement policy to gracefully retire an application only after it has completed all in-flight work. This policy is only meaningful for stop and redeploy operations and is mutually exclusive to the retire timeout policy.<br>**retireTimeout**—Time (in seconds) WLST waits before retiring an application that has been replaced with a newer version. This option default to -1, which specifies graceful timeout.<br>**securityModel**—Security model. Valid values include: DDOnly, CustomRoles, CustomRolesAndPolicies, and Advanced.<br>**securityValidationEnabled**—Boolean value specifying whether security validation is enabled.<br>**subModuleTargets**—Submodule level targets for JMS modules. For example, submod@mod-jms.xml@target | submoduleName@target.<br>**testMode**—Boolean value specifying whether to start the Web application with restricted access. This option defaults to false.<br>**timeout**—Time (in milliseconds) that WLST waits for the deployment process to complete before canceling the operation. A value of 0 indicates that the operation will not time out. This argument defaults to 300,000 ms (or 5 minutes).<br>**upload**—Boolean value specifying whether the application files are uploaded to the WebLogic Server Administration Server's upload directory prior to deployment. Use this option when the Administration Server cannot access the application files through the file system. This option defaults to false.<br>**versionIdentifier**—Version identifier.
For more information about the WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool.

The following example deploys the demoApp application in the archive file located at c:/myapps/demos/app/demoApp.ear, targeting the application modules to myserver, and using the deployment plan file located in c:/myapps/demos/app/plan/plan.xml. WLST waits 120,000 ms for the process to complete.

The following example deploys the jmsApp application located at c:/myapps/demos/jmsApp/demo-jms.xml, targeting the application module to a specific target.

The following example shows how to set the application version (appVersion) to a unique identifier to support production (side-by-side) redeployment. This example deploys the demoApp application in the archive file located at c:/myapps/demos/app/demoApp.ear, and sets the application and archive version numbers to the specified values.

For more information about production redeployment strategies, see "Redeploying Applications in a Production Environment" in Deploying Applications to Oracle WebLogic Server.

### 3.5.2 distributeApplication

Command Category: Deployment Commands

Use with WLST: Online

#### 3.5.2.1 Description

Copies the deployment bundle to the specified targets. The deployment bundle includes module, configuration data, and any additional generated code. The distributeApplication command does not start deployment.

The distributeApplication command returns a WLSTProgress object that you can access to check the status of the command. For more information about the WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool. In the event of an error, the command returns a WLSTException.

#### 3.5.2.2 Syntax

distributeApplication(appPath, [planPath], [targets], [options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appPath</td>
<td>Name of the archive file or root of the exploded archive directory to be deployed.</td>
</tr>
</tbody>
</table>
3.5.2.3 Example

The following example loads the BigApp application located in the c:/myapps directory, and stores the WLSTProgress object in a user-defined variable, in this case, progress.

The following example distributes the c:/myapps/BigApp application to the myserver, oamserver1, and oamcluster servers, using the deployment plan defined at c:/deployment/BigApp/plan.xml.

```
wlst:/offline> progress=distributeApplication('c:/myapps/BigApp',
        'c:/deployment/BigApp/plan.xml', 'myserver,oamserver1,oamcluster')
Distributing Application and Plan ...
Successfully distributed the application.
```

The previous example stores the WLSTProgress object in a user-defined variable, in this case, progress. You can then use the progress variable to determine if the distributeApplication command has completed. For example:

```
wlst:/mydomain/serverConfig/Servers> progress.isCompleted()
1
wlst:/mydomain/serverConfig/Servers>
```

For more information about the WLSTProgress object, see “WLSTProgress Object” in Oracle WebLogic Scripting Tool.

3.5.3 getWLDM

Command Category: Deployment Commands

Use with WLST: Online

3.5.3.1 Description

Returns the WebLogic DeploymentManager object. You can use the object methods to configure and deploy applications. WLST must be connected to an Administration Server to run this command. In the event of an error, the command returns a WLSTException.

3.5.3.2 Syntax

getWLDM()

3.5.3.3 Example

The following example gets the WebLogicDeploymentManager object and stores it in the wldm variable.
3.5.4 listApplications

Command Category: Deployment Commands
Use with WLST: Online

3.5.4.1 Description
Lists all applications that are currently deployed in the WebLogic domain. In the event of an error, the command returns a WLSTException.

3.5.4.2 Syntax
listApplications()

3.5.4.3 Example
The following example lists all the applications currently deployed in mydomain.

```wls:/mydomain/serverConfig> listApplications()
SamplesSearchWebApp
asyncServletEar
jspSimpleTagEar
ejb30
webservicesJwsSimpleEar
ejb20BeanMgedEar
xmlBeanEar
extServletAnnotationsEar
examplesWebApp
apache_xbean.jar
mainWebApp
jdbcRowSetsEar```

3.5.5 loadApplication

Command Category: Deployment Commands
Use with WLST: Online and Offline

3.5.5.1 Description
Loads an application and deployment plan into memory. When used in online mode, you can connect only to the Administration Server; you cannot connect to a Managed Server.

The loadApplication command returns a WLSTPlan object that you can access to make changes to the deployment plan. For more information about the WLSTPlan object, see "WLSTPlan Object" in Oracle WebLogic Scripting Tool. In the event of an error, the command returns a WLSTException.

3.5.5.2 Syntax
loadApplication(appPath, [planPath], [createPlan])
### 3.5.5.3 Example

The following example loads the `c:/myapps/myejb.jar` application using the plan file at `c:/myplans/myejb/plan.xml`.

```
wlst:/offline> myPlan=loadApplication('c:/myapps/myejb.jar',
    'c:/myplans/myejb/plan.xml')
Loading application from c:/myapps/myejb.jar and deployment plan from c:/myplans/myejb/plan.xml ...
Successfully loaded the application.
```

The previous example stores the `WLSTPlan` object returned in the `myPlan` variable. You can then use `myPlan` variable to display information about the plan, such as the variables. For example:

```
wlst:/offline> myPlan.showVariables()
MyEJB jndi.ejb
MyWAR app.foo
```

For more information about the `WLSTPlan` object, see "WLSTPlan Object" in Oracle WebLogic Scripting Tool.

### 3.5.6 redeploy

#### Command Category: Deployment Commands

Use with WLST: Online

#### 3.5.6.1 Description

Reloads classes and redeploy a previously deployed application.

The `redeploy` command returns a `WLSTProgress` object that you can access to check the status of the command. For more information about the `WLSTProgress` object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool.

In the event of an error, the command returns a `WLSTException`.

For more information about redeploying applications, see "Overview of Common Deployment Scenarios" in Deploying Applications to Oracle WebLogic Server.

#### 3.5.6.2 Syntax

```
redeploy(appName, [planPath], [options])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the application to be redeployed.</td>
</tr>
</tbody>
</table>
3.5.6.3 Example

The following example redeploy the myApp application using the plan.xml file located in the c:/myapps directory.

```
wls:/mydomain/serverConfig> progress=redeploy('myApp' 'c:/myapps/plan.xml')
Redeploying application 'myApp' ...
Redeployment of 'myApp' is successful
wls:/mydomain/serverConfig>
```

The previous example stores the WLSTProgress object returned in a user-defined variable, in this case, progress. You can then use the progress variable to access the state of the redeploy command. For example:

```
wls:/mydomain/serverConfig/Servers> progress.getState()
'completed'
wls:/mydomain/serverConfig/Servers>
```

For more information about the WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool.

### 3.5.7 startApplication

Command Category: Deployment Commands

Use with WLST: Online

#### 3.5.7.1 Description

Starts an application, making it available to users. The application must be fully configured and available in the WebLogic domain.

The `startApplication` command returns a WLSTProgress object that you can access to check the status of the command. For more information about the WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool. In the event of an error, the command returns a WLSTException.

#### 3.5.7.2 Syntax

```
startApplication(appName, [options])
```

**Argument Definition**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>planPath</td>
<td>Optional. Name of the deployment plan file. The filename can be absolute or relative to the application directory. This argument defaults to the plan/plan.xml file in the application directory, if one exists.</td>
</tr>
</tbody>
</table>
| options    | Optional. Comma-separated list of deployment options, specified as name-value pairs. For a list of valid deployment options, see options argument description in Section 3.5.1, "deploy". In addition, the following deployment option can be specified for the redeploy command:  
- **appPath**—Name of the archive file or root of the exploded archive directory to be redeployed.  
- **deploymentPrincipalName**—String value specifying the principal for redeploying the file or archive during server starts. You can use this option to overwrite the current <deployment-principal-name> in the config.xml file. |
3.5.7.3 Example
The following example starts the BigApp application with the specified deployment options.

```
wls:/mydomain/serverConfig/Servers> progress=startApplication('BigApp',
stageMode='NOSTAGE', testMode='false')
Starting the application...
Successfully started the application.
```

The previous example stores the WLSTProgress object returned in a user-defined variable, in this case, `progress`. You can then use the `progress` variable to access the state of the `startApplication` command. For example:

```
wls:/mydomain/serverConfig/Servers> progress.getState()
'completed'
wls:/mydomain/serverConfig/Servers>
```

For more information about the WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool.

### 3.5.8 stopApplication

**Command Category:** Deployment Commands  
**Use with WLST:** Online

#### 3.5.8.1 Description
Stops an application, making it unavailable to users. The application must be fully configured and available in the WebLogic domain.

The `stopApplication` command returns a WLSTProgress object that you can access to check the status of the command. For more information about the WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool.

In the event of an error, the command returns a WLSTException.

#### 3.5.8.2 Syntax

```
stopApplication(appName, [options])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the application to stop, as specified in the plan.xml file.</td>
</tr>
<tr>
<td>options</td>
<td>Optional. Comma-separated list of deployment options, specified as name-value pairs. For a list of valid deployment options, see <code>options</code> argument description in Section 3.5.1, &quot;deploy&quot;.</td>
</tr>
</tbody>
</table>

#### 3.5.8.3 Example
The following example stops the BigApp application.

```
wls:/offline> progress=stopApplication('BigApp')
```

Stopping the application...
Successfully stopped the application.

The previous example stores the WLSTProgress object returned in a user-defined variable, in this case, `progress`. You can then use the `progress` variable to check whether `stopApplication` command is running. For example:

```
0
```

For more information about the WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool.

### 3.5.9 undeploy

Command Category: Deployment Commands

Use with WLST: Online

**3.5.9.1 Description**

Undeploys an application from the specified servers.

The `undeploy` command returns a WLSTProgress object that you can access to check the status of the command. For more information about the WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool. In the event of an error, the command returns a WLSTException.

For more information about deploying and undeploying applications, see "Overview of Common Deployment Scenarios" in Deploying Applications to Oracle WebLogic Server.

**3.5.9.2 Syntax**

```
undeploy(appName,[targets],[options])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Deployment name for the deployed application.</td>
</tr>
<tr>
<td>targets</td>
<td>Optional. List of the target servers from which the application will be removed. If not specified, defaults to all current targets.</td>
</tr>
<tr>
<td>options</td>
<td>Optional. Comma-separated list of deployment options, specified as name-value pairs. For a list of valid deployment options, see options argument description in Section 3.5.1, &quot;deploy&quot;.</td>
</tr>
</tbody>
</table>

**3.5.9.3 Example**

The following example removes the businessApp application from all target servers. WLST waits 60,000 ms for the process to complete.

```
wls:/mydomain/serverConfig/Servers> undeploy('businessApp', timeout=60000)
Undeploying application businessApp ... 
<Jul 20, 2005 9:34:15 AM EDT> <Info> <J2EE Deployment SPI> <BEA-260121>
<Initiating undeploy operation for application, businessApp [archive: null],
to AdminServer .>
Completed the undeployment of Application with status
Current Status of your Deployment:
Deployment command type: undeploy
Deployment State : completed
Deployment Message : no message
```
3.5.10 updateApplication

Command Category: Deployment Commands
Use with WLST: Online

3.5.10.1 Description
Updates an application configuration using a new deployment plan. The application 
must be fully configured and available in the WebLogic domain.

The updateApplication command returns a WLSTProgress object that you can 
access to check the status of the command. For more information about the 
WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool. In 
the event of an error, the command returns a WLSTException.

3.5.10.2 Syntax
updateApplication(appName, [planPath], [options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the application, as specified in the current plan.xml file.</td>
</tr>
<tr>
<td>planPath</td>
<td>Optional. Name of the new deployment plan file. The filename can be</td>
</tr>
<tr>
<td></td>
<td>absolute or relative to the application directory.</td>
</tr>
<tr>
<td>options</td>
<td>Optional. Comma-separated list of deployment options, specified as</td>
</tr>
<tr>
<td></td>
<td>name-value pairs. For a list of valid deployment options, see options</td>
</tr>
<tr>
<td></td>
<td>argument description in Section 3.5.1, &quot;deploy&quot;.</td>
</tr>
</tbody>
</table>

3.5.10.3 Example
The following example updates the application configuration for BigApp using the 
plan.xml file located in c:/myapps/BigApp/newPlan.

wls:/offline> progress=updateApplication('BigApp',
'n:c:/myapps/BigApp/newPlan/plan.xml', stageMode='STAGE', testMode='false')
Updating the application...
Successfully updated the application.

The previous example stores the WLSTProgress object returned in a user-defined 
variable, in this case, progress. You can then use the progress variable to access 
the state of the updateApplication command. For example:

wls:/mydomain/serverConfig/Servers> progress.getState()
'completed'

wls:/mydomain/serverConfig/Servers>

For more information about the WLSTProgress object, see "WLSTProgress Object" in Oracle WebLogic Scripting Tool.

3.6 Diagnostics Commands

Use the WLST diagnostics commands, listed in Table 3–6, to retrieve diagnostics data 
by executing queries against the WebLogic Diagnostics Framework (WLDF) data 
stores. For more information about WLDF, see Configuring and Using the Diagnostics 
Framework for Oracle WebLogic Server.
### 3.6.1 exportDiagnosticData

Command Category: Diagnostics Commands

Use with WLST: Offline

#### 3.6.1.1 Description

Executes a query against the specified log file. The results are saved to an XML file.

For more information about the WebLogic Server Diagnostic Service, see *Configuring and Using the Diagnostics Framework for Oracle WebLogic Server*.

In the event of an error, the command returns a *WLSTException*.

#### 3.6.1.2 Syntax

```bash
exportDiagnosticData([options])
```
3.6.1.3 Example

The following example executes a query against the ServerLog named myserver.log and stores the results in the file named myExport.xml.

```
wlsc:offline/mydomain>exportDiagnosticData(logicalName='ServerLog',
logName='myserver.log', exportFileName='myExport.xml')
{'elfFields': '', 'logName': 'myserver.log', 'logRotationDir': '.',
'endTimestamp': 9223372036854775807L, 'exportFileName': 'export.xml',
'storeDir': '../data/store/diagnostics', 'logicalName': 'ServerLog',
'query': '', 'beginTimestamp': 0}
```

Exporting diagnostic data to export.xml

```
<Aug 2, 2005 6:58:21 PM EDT> <Info> <Store> <BEA-280050> <Persistent store
"WLS_DIAGNOSTICS" opened: directory="c:\Oracle\Middleware
\wls\server_10.3\server\data\store\diagnostics"
writePolicy="Disabled" blockSize=512 directIO=false driver="wlfileio2"
```

3.6.2 exportDiagnosticDataFromServer

Command Category: Diagnostics Commands

Use with WLST: Online

3.6.2.1 Description

Executes a query on the server side and retrieves the exported WebLogic Diagnostic Framework (WLDF) data. The results are saved to an XML file.
For more information about the WebLogic Server Diagnostic Service, see *Configuring and Using the Diagnostics Framework for Oracle WebLogic Server*.

In the event of an error, the command returns a WLSTException.

### 3.6.2.2 Syntax

`exportDiagnosticDataFromServer([options])`

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>Optional. Comma-separated list of export diagnostic options, specified as name-value pairs. Valid options include:</td>
</tr>
<tr>
<td></td>
<td>■ <strong>beginTimestamp</strong>—Timestamp (inclusive) of the earliest record to be added to the result set. This option defaults to 0.</td>
</tr>
<tr>
<td></td>
<td>■ <strong>endTimestamp</strong>—Timestamp (exclusive) of the latest record to be added to the result set. This option defaults to <code>Long.MAX_VALUE</code>.</td>
</tr>
<tr>
<td></td>
<td>■ <strong>exportFileName</strong>—Name of the file to which the data is exported. This option defaults to <code>export.xml</code>.</td>
</tr>
<tr>
<td></td>
<td>■ <strong>logicalName</strong>—Logical name of the log file being read. Valid values include: HarvestedDataArchive, EventsDataArchive, ServerLog, DomainLog, HTTPAccessLog, WebAppLog, ConnectorLog, and JMSMessageLog. This option defaults to <code>ServerLog</code>.</td>
</tr>
<tr>
<td></td>
<td>■ <strong>query</strong>—Expression specifying the filter condition for the data records to be included in the result set. This option defaults to &quot;&quot; (empty string), which returns all data.</td>
</tr>
</tbody>
</table>

#### 3.6.2.3 Example

The following example executes a query against the HTTPAccessLog and stores the results in the file named `myExport.xml`.

```wls`

wls:/mydomain/serverRuntime>
exportDiagnosticDataFromServer(logicalName="HTTPAccessLog",
exportFileName="myExport.xml")
```

### 3.6.3 getAvailableCapturedImages

Command Category: Diagnostics Commands

Use with WLST: Online

#### 3.6.3.1 Description

Returns, as an array of strings, a list of the previously captured diagnostic images that are stored in the image destination directory configured on the server. The default directory is `SERVER\logs\diagnostic_images`.

This command is useful for identifying a diagnostic image capture that you want to download, or for identifying a diagnostic image capture from which you want to download a specific entry.

For more information about the WebLogic Server Diagnostic Service, see *Configuring and Using the Diagnostics Framework for Oracle WebLogic Server*.

In the event of an error, the command returns a WLSTException.

#### 3.6.3.2 Syntax

`getAvailableCapturedImages()`
3.6.3.3 Example

The following example returns an array of strings named `images`, which contains a list of the diagnostic image capture files available in the image destination directory, and prints the entries contained in the diagnostic image named `diagnostic_image_myserver_2009_06_15_14_58_36.zip`.

```
wls:/mydomain/serverRuntime> images=getAvailableCapturedImages()
Connecting to http://localhost:7001 with userid weblogic ...

wls:/mydomain/serverRuntime> print images ['diagnostic_image_myserver_2009_06_15_14_58_36.zip']
```

3.6.4 `saveDiagnosticImageCaptureFile`

Command Category: Diagnostics Commands
Use with WLST: Online

3.6.4.1 Description

Downloads the specified diagnostic image capture from the server to which WLST is currently connected.

For more information about the WebLogic Server Diagnostic Service, see *Configuring and Using the Diagnostics Framework for Oracle WebLogic Server*.

In the event of an error, the command returns a `WLSTException`.

3.6.4.2 Syntax

`saveDiagnosticImageCaptureFile(imageName, [outputFile])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>imageName</code></td>
<td>The name of the diagnostic image capture to download.</td>
</tr>
<tr>
<td><code>outputFile</code></td>
<td>Optional. Local path and file name in which the retrieved diagnostic image capture is to be stored. If not specified, this argument defaults to the value of <code>imageName</code> and the current working directory.</td>
</tr>
</tbody>
</table>

3.6.4.3 Example

The following example retrieves the list of the diagnostic image captures that are stored in the image destination directory on the server. It then shows two uses of the `saveDiagnosticImageCaptureFile` command. In the first use, the first diagnostic image capture in the list is downloaded to the local machine using the default output file name. In the second use, the first diagnostic image capture in the list is downloaded to the local machine in the file `mylocalimg.zip`.

```
wls:/mydomain/serverRuntime> images=getAvailableCapturedImages()
Connecting to http://localhost:7001 with userid weblogic ...

wls:/mydomain/serverRuntime> saveDiagnosticImageCaptureFile(images[0])
Retrieving diagnostic_image_myserver_2009_06_25_12_12_50.zip to local path diagnostic_image_myserver_2009_06_25_12_12_50.zip
Connecting to http://localhost:7001 with userid weblogic ...

wls:/mydomain/serverRuntime> saveDiagnosticImageCaptureFile(images[0], 'mylocalimg.zip')
Retrieving diagnostic_image_myserver_2009_06_25_12_12_50.zip to local path mylocalimg.zip
Connecting to http://localhost:7001 with userid weblogic ...
```
3.6.5 saveDiagnosticImageCaptureEntryFile

Command Category: Diagnostics Commands
Use with WLST: Online

3.6.5.1 Description
Downloads a specific entry from the diagnostic image capture that is located on the server to which WLST is currently connected.

For more information about the WebLogic Server Diagnostic Service, see Configuring and Using the Diagnostics Framework for Oracle WebLogic Server.

In the event of an error, the command returns a WLSTException.

3.6.5.2 Syntax
saveDiagnosticImageCaptureEntryFile(imageName, imageEntryName, [outputFile])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>imageName</td>
<td>Name of the diagnostic image capture containing the desired entry.</td>
</tr>
<tr>
<td>imageEntryName</td>
<td>Name of the specific entry to be retrieved from the diagnostic image capture. This can be one of the following:</td>
</tr>
<tr>
<td></td>
<td>image.summary</td>
</tr>
<tr>
<td></td>
<td>JTA.img</td>
</tr>
<tr>
<td></td>
<td>JRockitFlightRecorder.jfr</td>
</tr>
<tr>
<td></td>
<td>WatchSource.img</td>
</tr>
<tr>
<td></td>
<td>configuration.img</td>
</tr>
<tr>
<td></td>
<td>WORK_MANAGER.img</td>
</tr>
<tr>
<td></td>
<td>JNDI_IMAGE_SOURCE.img</td>
</tr>
<tr>
<td></td>
<td>APPLICATION.img</td>
</tr>
<tr>
<td></td>
<td>InstrumentationImageSource.img</td>
</tr>
<tr>
<td></td>
<td>SAF.img</td>
</tr>
<tr>
<td></td>
<td>Logging.img</td>
</tr>
<tr>
<td></td>
<td>PERSISTENT_STORE.img</td>
</tr>
<tr>
<td></td>
<td>JDBC.img</td>
</tr>
<tr>
<td></td>
<td>PathService.img</td>
</tr>
<tr>
<td></td>
<td>JMS.img</td>
</tr>
<tr>
<td></td>
<td>Deployment.img</td>
</tr>
<tr>
<td></td>
<td>JVM.img</td>
</tr>
<tr>
<td></td>
<td>CONNECTOR.img</td>
</tr>
<tr>
<td>outputFile</td>
<td>Optional. Local path and file name in which the entry retrieved from the diagnostic image capture is to be stored. If not specified, this argument defaults to the value of imageEntryName and the current working directory.</td>
</tr>
</tbody>
</table>

3.6.5.3 Example
The following example gets the list of diagnostic image captures, then uses the saveDiagnosticImageCaptureEntryFile twice. In the first use, this example retrieves the image summary to the local machine using the default output file name. In the second use, it retrieves the image summary to the local machine in the file myimage.summary.

wls:/mydomain/serverRuntime>images=getAvailableCapturedImages()
Connecting to http://localhost:7001 with userid weblogic ...
wls:/mydomain/serverConfig> saveDiagnosticImageCaptureEntryFile(images[0], 'image.summary')
Retrieving entry image.summar...
3.7 Editing Commands

Use the WLST editing commands, listed in Table 3–7, to interrogate and edit configuration beans.

Note: To edit configuration beans, you must be connected to an Administration Server, and you must navigate to the edit tree and start an edit session, as described in Section 3.11.5, "edit" and Section 3.7.17, "startEdit", respectively.

If you connect to a Managed Server, WLST functionality is limited to browsing the configuration bean hierarchy. While you cannot use WLST to change the values of MBeans on Managed Servers, it is possible to use the Management APIs to do so. Oracle recommends that you change only the values of configuration MBeans on the Administration Server. Changing the values of MBeans on Managed Servers can lead to an inconsistent domain configuration.

For more information about editing configuration beans, see "Using WLST Online to Update an Existing Domain" in Oracle WebLogic Scripting Tool.

<table>
<thead>
<tr>
<th>Table 3–7 Editing Commands for WLST Configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>This command...</strong></td>
</tr>
<tr>
<td>activate</td>
</tr>
<tr>
<td>assign</td>
</tr>
<tr>
<td>cancelEdit</td>
</tr>
<tr>
<td>create</td>
</tr>
<tr>
<td>delete</td>
</tr>
<tr>
<td>encrypt</td>
</tr>
<tr>
<td>get</td>
</tr>
<tr>
<td>getActivationTask</td>
</tr>
<tr>
<td>invoke</td>
</tr>
<tr>
<td>isRestartRequired</td>
</tr>
</tbody>
</table>
3.7.1 activate

Command Category: Editing Commands
Use with WLST: Online

3.7.1.1 Description
Activates changes saved during the current editing session but not yet deployed. This command prints a message if a server restart is required for the changes that are being activated.

The `activate` command returns the latest `ActivationTask` MBean which reflects the state of changes that a user is currently making or has made recently. You can then invoke methods to get information about the latest Configuration Manager activate task in progress or just completed. In the event of an error, the command returns a `WLSTException`.

3.7.1.2 Syntax

```
activate([timeout], [block])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>timeout</td>
<td>Optional. Time (in milliseconds) that WLST waits for the activation of configuration changes to complete before canceling the operation. A value of -1 indicates that the operation will not time out. This argument defaults to 300,000 ms (or 5 minutes).</td>
</tr>
</tbody>
</table>
3.7.1.3 Example

The following example activates the changes made during the current edit session that have been saved to disk, but that have not yet been activated. WLST waits for 100,000 ms for the activation to complete, and 200,000 ms before the activation is stopped.

```
wlst:/mydomain/edit !> activate(200000, block='true')
Activating all your changes, this may take a while ... The edit lock associated with this edit session is released once the activation is completed.
Action completed.
wlst:/mydomain/edit>
```

3.7.2 assign

Command Category: Editing Commands

Use with WLST: Offline

3.7.2.1 Description

Assigns resources to one or more destinations.

In the event of an error, the command returns a WLSTException.

3.7.2.2 Syntax

```
assign(sourceType, sourceName, destinationType, destinationName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>sourceType</td>
<td>Type of configuration bean to be assigned. This value can be set to one of the following values:</td>
</tr>
<tr>
<td></td>
<td>■ AppDeployment</td>
</tr>
<tr>
<td></td>
<td>■ Library</td>
</tr>
<tr>
<td></td>
<td>■ securityType (such as User)</td>
</tr>
<tr>
<td></td>
<td>■ Server</td>
</tr>
<tr>
<td></td>
<td>■ service (such as JDBCSystemResource)</td>
</tr>
<tr>
<td></td>
<td>■ service.SubDeployment, where service specifies the service type of the SubDeployment (such as JMSSystemResource.SubDeployment); you can also specify nested subdeployments (such as AppDeployment.SubDeployment .SubDeployment)</td>
</tr>
</tbody>
</table>

Guidelines for setting this value are provided below.
Use the following guidelines for setting the `sourceType` and `destinationType`:

- **When assigning application deployments**, set the values as follows:
  - `sourceType`: AppDeployment
  - `destinationType`: Target

- **When assigning libraries**, set the values as follows:
  - `sourceType`: Library
  - `destinationType`: Target

- **When assigning services**, set the values as follows:
  - `sourceType`: Name of the specific server, such as JDBCSystemResource
  - `destinationType`: Target

- **When assigning servers to clusters**, set the values as follows:
  - `sourceType`: Server
  - `destinationType`: Cluster

- **When assigning subdeployments**, set the values as follows:
  - `sourceType`: service.SubDeployment, where `service` specifies the parent of the SubDeployment, such as JMSSystemResource.SubDeployment; you can also specify nested subdeployments (such as AppDeployment.SubDeployment.SubDeployment)
  - `destinationType`: Target

- **When assigning security types**, set the values as follows:
  - `sourceType`: Name of the security type, such as User
  - `destinationType`: Name of the destination security type, such as Group

### 3.7.2.3 Example

The following examples:

- Assign the servers `myServer` and `myServer2` to the cluster `myCluster`.
Assign all servers to the cluster myCluster.

wls:/offline/mydomain> assign("Server", "myServer,myServer2", "Cluster", "myCluster")

Assign the application deployment myAppDeployment to the target server newServer.

wls:/offline/mydomain> assign("AppDeployment", "myAppDeployment", "Target", "newServer")

Assign the user newUser to the group Monitors.

wls:/offline/mydomain> assign("User", "newUser", "Group", "Monitors")

Assign the SubDeployment myQueueSubDeployment, which is a child of the JMS resource myJMSResource, to the target server newServer.

wls:/offline/mydomain> assign('JMSSystemResource.SubDeployment', 'myJMSResource.myQueueSubDeployment', 'Target', 'newServer')

Assign the nested SubDeployment MedRecAppScopedJMS.MedRecJMSServer, which is a child of the AppDeployment AppDeployment, to the target server AdminServer.

### 3.7.3 cancelEdit

Command Category: Editing Commands

Use with WLST: Online

#### 3.7.3.1 Description
Cancels an edit session, releases the edit lock, and discards all unsaved changes.

The user issuing this command does not have to be the current editor; this allows an administrator to cancel an edit session, if necessary, to enable other users to start an edit session.

In the event of an error, the command returns a WLSTException.

#### 3.7.3.2 Syntax

\[
\text{cancelEdit([defaultAnswer])}
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>defaultAnswer</td>
<td>Optional. Default response, if you would prefer not to be prompted at the command line. Valid values are y and n. This argument defaults to null, and WLST prompts you for a response.</td>
</tr>
</tbody>
</table>

#### 3.7.3.3 Example

The following example cancels the current editing session. WLST prompts for verification before canceling.

```
wls:/mydomain/edit !> cancelEdit()
Sure you would like to cancel the edit session? (y/n)y
```
3.7.4 create

Command Category: Editing Commands

Use with WLST: Online or Offline

3.7.4.1 Description

Creates a configuration bean of the specified type for the current bean.

The `create` command returns a stub for the newly created configuration bean. In the event of an error, the command returns a `WLSTException`.

---

**Note:** Child types must be created under an instance of their parent type. You can only create configuration beans that are children of the current Configuration Management Object (`cmo`) type. For more information about the `cmo` variable, see "Changing the Current Management Object" in *Oracle WebLogic Scripting Tool*.

Please note the following when using the `create` command with **WLST online**:

- You must be connected to an Administration Server. You cannot use the `create` command for runtime MBeans or when WLST is connected to a Managed Server instance.
- You must navigate to the edit configuration MBean hierarchy using the `edit` command before issuing this command. See Section 3.11.5, "edit".
- You can use the `create` command to create a WebLogic Server configuration MBean that is a child of the current MBean type.

Please note the following when using the `create` command with **WLST offline**:

- When using WLST offline, the following characters are not valid in object names: period (.), forward slash (/), or backward slash (\).

For more information about:

- Creating MBeans, see "Understanding WebLogic Server MBeans" in *Developing Custom Management Utilities with JMX*.
- Examples of creating specific types of MBean resources, for example, a JMS or JDBC system resource, refer to the WLST sample scripts installed with your product, as described in "WLST Sample Scripts" in *Oracle WebLogic Scripting Tool*.
- MBeans, their child types, attributes, and operations, see *Oracle WebLogic Server MBean Reference*.

3.7.4.2 Syntax

```java
create(name, childMBeanType, [baseProviderType])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>name</code></td>
<td>Name of the configuration bean that you are creating.</td>
</tr>
</tbody>
</table>
3.7.4.3 Example

The following example creates a child configuration bean of type Server named newServer for the current configuration bean, storing the stub as server1:

```
server1=create('newServer','Server')
Server with name 'newServer' has been created successfully.
server1.getName()  
'newServer'
```

The following example creates an authentication provider security provider called myProvider:

```
cd('SecurityConfiguration/mydomain/Realms/myrealm')
create('myProvider','weblogic.security.providers.authentication.SQLAuthenticator','AuthenticationProvider')
cd('AuthenticationProviders/myProvider')
set('ControlFlag', 'REQUIRED')
```

The following example creates a machine named highsec_nm and sets attributes for the associated Node Manager.

```
create('highsec_nm', 'Machine')
cd('Machine/highsec_nm/NodeManager/highsec_nm')
set('DebugEnabled', 'true')
set('ListenAddress', 'innes')
set('NMType', 'SSL')
set('ShellCommand', '')
```

3.7.5 delete

Command Category: Editing Commands

Use with WLST: Online or Offline

3.7.5.1 Description

Deletes an instance of a configuration bean of the specified type for the current configuration bean.

In the event of an error, the command returns a WLSTException.

**Note:** You can only delete configuration beans that are children of current Configuration Management Object (cmo) type. For more information about the cmo variable, see "Changing the Current Management Object" in Oracle WebLogic Scripting Tool.
3.7.5.2 Syntax

delete(name, childMBeanType)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the child configuration bean to delete.</td>
</tr>
<tr>
<td>childMBeanType</td>
<td>Type of the configuration bean to be deleted. You can delete instances of any type defined in the <code>config.xml</code> file. For more information about valid configuration beans, see Oracle WebLogic Server MBean Reference.</td>
</tr>
</tbody>
</table>

3.7.5.3 Example

The following example deletes the configuration bean of type `Server` named `newServer`:

```
wls:/mydomain/edit !> delete('newServer','Server')
```

Server with name 'newServer' has been deleted successfully.

```
wls:/mydomain/edit !>
```

3.7.6 encrypt

Command Category: Editing Commands

Use with WLST: Online

3.7.6.1 Description

Encrypts the specified string. You can then use the encrypted string in your configuration file or as an argument to a command.

You must invoke this command once for each WebLogic domain in which you want to use the encrypted string. The string can be used only in the WebLogic domain for which it was originally encrypted.

In the event of an error, the command returns a `WLSTException`.

3.7.6.2 Syntax

encrypt(obj, [domainDir])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>obj</td>
<td>String that you want to encrypt.</td>
</tr>
<tr>
<td>domainDir</td>
<td>Optional. Absolute path name of a WebLogic domain directory. The encrypted string can be used only by the WebLogic domain that is contained within the specified directory. If you do not specify this argument, the command encrypts the string for use in the WebLogic domain to which WLST is currently connected.</td>
</tr>
</tbody>
</table>

3.7.6.3 Example

The following example encrypts the specified string using the `security/SerializedSystemIni.dat` file in the specified WebLogic domain directory.

```
wls:/mydomain/serverConfig>
es=encrypt('myPassword','c:/Oracle/Middleware/domains/mydomain')
```
3.7.7 **get**

Command Category: Editing Commands

Use with WLST: Online or Offline

**3.7.7.1 Description**

Returns the value of the specified attribute. For more information about the MBean attributes that can be viewed, see *Oracle WebLogic Server MBean Reference*. In the event of an error, the command returns a *WLSTException*.

**Note:** You can list all attributes and their current values by entering `ls('a')`. For more information, see Section 3.8.12, "ls".

Alternatively, you can use the `cmo` variable to perform any get method on the current configuration bean. For example:

```java
cmo.getListenPort()
```

For more information about the `cmo` variable, see "Changing the Current Management Object" in *Oracle WebLogic Scripting Tool*.

**3.7.7.2 Syntax**

`get(attrName)`

**3.7.7.3 Example**

The following example returns the value of the `AdministrationPort` for the current configuration bean.

```bash
wls:/mydomain/serverConfig> get('AdministrationPort')
9002
```

Alternatively, you can use the `cmo` variable:

```java
cmo.getAdministrationPort()
```

**3.7.8 **getActivationTask**

Command Category: Editing Commands

Use with WLST: Online

**3.7.8.1 Description**

Return the latest `ActivationTask` MBean on which a user can get status. The `ActivationTask` MBean reflects the state of changes that a user has made recently in WLST. You can then invoke methods to get information about the latest Configuration Manager activate task in progress or just completed. In the event of an error, the command returns a *WLSTException*. 
3.7.8.2 Syntax
getActivationTask()

3.7.8.3 Example
The following example returns the latest ActivationTask MBean on which a user can get status and stores it within the task variable.

```
wlst:/mydomain/edit> task=getActivationTask()
wlst:/mydomain/edit> if task!=None:
   ...   task.getState()
   ...
```

3.7.9 invoke

Command Category: Editing Commands
Use with WLST: Online

3.7.9.1 Description
Invokes a management operation on the current configuration bean. Typically, you use this command to invoke operations other than the get and set operations that most WebLogic Server configuration beans provide. The class objects are loaded through the same class loader that is used for loading the configuration bean on which the action is invoked.

You cannot use the `invoke` command when WLST is connected to a Managed Server instance.

If successful, the `invoke` command returns the object that is returned by the operation invoked. In the event of an error, the command returns a `WLSTException`.

3.7.9.2 Syntax
invoke(methodName, parameters, signatures)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>methodName</td>
<td>Name of the method to be invoked.</td>
</tr>
<tr>
<td>parameters</td>
<td>An array of parameters to be passed to the method call.</td>
</tr>
<tr>
<td>signatures</td>
<td>An array containing the signature of the action.</td>
</tr>
</tbody>
</table>

3.7.9.3 Example
The following example invokes the `lookupServer` method on the current configuration bean.

```
wlst:/mydomain/config> objs = jarray.array([java.lang.String("oamserver")],java.lang.Object)
wlst:/mydomain/edit> strs = jarray.array(["java.lang.String"],java.lang.String)
wlst:/mydomain/edit> invoke('lookupServer',objs,strs)
true
```
3.7.10 isRestartRequired

Command Category: Editing Commands
Use with WLST: Online

3.7.10.1 Description
Determines whether a server restart is required.
If you invoke this command while an edit session is in progress, the response is based on the edits that are currently in progress. If you specify the name of an attribute, WLST indicates whether a server restart is required for that attribute only.
In the event of an error, the command returns a WLSTException.

3.7.10.2 Syntax
isRestartRequired([attributeName])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>attributeName</td>
<td>Optional. Name of a specific attribute for which you want to check if a server restart is required.</td>
</tr>
</tbody>
</table>

3.7.10.3 Example
The following example specifies whether a server restart is required for all changes made during the current WLST session.

wls:/mydomain/edit !> isRestartRequired()
Server re-start is REQUIRED for the set of changes in progress.

The following attribute(s) have been changed on MBeans that require server re-start.
MBean Changed : mydomain:Name=mydomain,Type=Domain
Attributes changed : AutoConfigurationSaveEnabled

The following example specifies whether a server restart is required if you edit the ConsoleEnabled attribute.

wls:/mydomain/edit !> isRestartRequired("ConsoleEnabled")
Server re-start is REQUIRED if you change the attribute ConsoleEnabled
wls:/mydomain/edit !>

3.7.11 loadDB

Command Category: Editing Commands
Use with WLST: Offline

3.7.11.1 Description
Loads SQL files into a database.
The loadDB command loads the SQL files from a template file. This command can only be issued after a domain template or extension template has been loaded into memory (see Section 3.3.8, "readDomain" and Section 3.3.9, "readTemplate").
Before executing this command, ensure that the following conditions are true:
The appropriate database is running.

SQL files exist for the specified database and version.

To verify that the appropriate SQL files exist, open the domain template and locate the relevant SQL file list, `jdbc.index`, in the `_jdbc_` directory. For example, for Oracle 9i, the SQL file list is located at `_jdbc_\Oracle\9i\jdbc.index`.

The command fails if the above conditions are not met.

In the event of an error, the command returns a `WLSTException`.

### 3.7.11.2 Syntax

```python
loadDB(dbVersion, datasourceName, dbCategory)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>dbVersion</code></td>
<td>Version of the database for which the SQL files are intended to be used.</td>
</tr>
<tr>
<td><code>datasourceName</code></td>
<td>Name of the JDBC data source to be used to load SQL files.</td>
</tr>
<tr>
<td><code>dbCategory</code></td>
<td>Optional. Database category associated with the specified data source. For more information about the <code>jdbc.index</code> file and database categories, see &quot;Files Typically Included in a Template&quot; in the Oracle WebLogic Server Domain Template Reference.</td>
</tr>
</tbody>
</table>

### 3.7.11.3 Example

The following example loads SQL files related to Drop/Create P13N Database Objects intended for version 5.1 of the database, using the `p13nDataSource` JDBC data source.

```bash
wls:/offline/mydomain> loadDB('5.1', 'p13nDataSource', 'Drop/Create P13N Database Objects')
```

### 3.7.12 loadProperties

Command Category: Editing Commands

Use with WLST: Online and Offline

#### 3.7.12.1 Description

Loads property values from a file and makes them available in the WLST session.

This command cannot be used when you are importing WLST as a Jython module, as described in "Importing WLST as a Jython Module" in Oracle WebLogic Scripting Tool.

In the event of an error, the command returns a `WLSTException`.

#### 3.7.12.2 Syntax

```python
loadProperties(fileName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>fileName</code></td>
<td>Properties file pathname.</td>
</tr>
</tbody>
</table>

#### 3.7.12.3 Example

This example gets and sets the properties file values.
3.7.13 save

Command Category: Editing Commands
Use with WLST: Online

3.7.13.1 Description
Saves the edits that have been made but have not yet been saved. This command is only valid when an edit session is in progress. For information about starting an edit session, see Section 3.7.17, "startEdit".

In the event of an error, the command returns a WLSTException.

3.7.13.2 Syntax
save()

3.7.13.3 Example
The following example saves the edits that have not yet been saved to disk.

```
> save()
Saving all your changes ...  
Saved all your changes successfully.
```

3.7.14 set

Command Category: Editing Commands
Use with WLST: Online or Offline

3.7.14.1 Description
Sets the value of a specified attribute in the current management object. When using WLST offline, this command writes the attribute value to the domain configuration files. When using WLST online, this command sets the value of an MBean attribute. Online changes are written to the domain configuration file when you activate your edits.

In the event of an error, the command returns a WLSTException.

For information about setting encrypted attributes (all encrypted attributes have names that end with Encrypted), see "Writing and Reading Encrypted Configuration Values" in Oracle WebLogic Scripting Tool.

Note the following when using WLST online:

- You must be in an edit session to use this command. See Section 3.7.17, "startEdit".
- You cannot use this command when WLST is connected to a Managed Server.
- As an alternative to this command, you can use the cmo variable with the following syntax:
  ```
  cmo.set.attrName(value)
  ```
  For example, instead of using `set('ListenPort', 7011)`, you can use:
  ```
  cmo.setListenPort(7011)
  ```

wls:/mydomain/serverConfig> loadProperties('c:/temp/myLoad.properties')
For more information about the \texttt{cmo} variable, see "Changing the Current Management Object" in \textit{Oracle WebLogic Scripting Tool}.

### 3.7.14.2 Syntax

\texttt{set(attrName, value)}

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>\texttt{attrName}</td>
<td>Name of the attribute to be set.</td>
</tr>
<tr>
<td>\texttt{value}</td>
<td>Value of the attribute to be set.</td>
</tr>
</tbody>
</table>

**Note:** This value should \texttt{not} be enclosed in single or double quotes. See the examples.

### 3.7.14.3 Example

The following example sets the \texttt{ArchiveConfigurationCount} attribute of \texttt{DomainMBean} to 10:

\texttt{wls:/mydomain/serverConfig> set('ArchiveConfigurationCount', 10)}

The following example sets the long value of the \texttt{T1TimerInterval} attribute of a custom Mbean to 123:

\texttt{wls:/mydomain/serverConfig> set('T1TimerInterval', Long(123))}

The following example sets the boolean value of the \texttt{MyBooleanAttribute} attribute of a custom Mbean to \texttt{true}:

\texttt{wls:/mydomain/serverConfig> set('MyBooleanAttribute', Boolean(true))}

### 3.7.15 setOption

Command Category: Editing Commands

Use with WLST: Offline

#### 3.7.15.1 Description

Sets options related to a WebLogic domain creation or update. In the event of an error, the command returns a \texttt{WLSTException}.

#### 3.7.15.2 Syntax

\texttt{setOption(optionName, optionValue)}
### Option Definitions

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>optionName</td>
<td>Name of the option to set.</td>
</tr>
</tbody>
</table>

#### Available options for domain creation include:

- **CreateStartMenu**—Boolean value specifying whether to create a Start Menu shortcut on a Windows platform. This option defaults to `true`.

  *Note:* If a user with Administrator privileges installed the software and chose to create the Start menu entries in the All Users folder, only users with Administrator privileges can create Start menu entries in the same folder when creating a WebLogic domain using the Configuration Wizard or WLST. That is, if a user without Administrator privileges uses the Configuration Wizard or WLST from this installation to create domains, Start menu shortcuts to the domains are not created. In this case, the users can manually create shortcuts in their local Start menu folder, if desired.

- **DomainName**—Name of the WebLogic domain. By default, the name of the WebLogic domain is derived from the name of the domain directory. For example, for a WebLogic domain saved to `c:/Oracle/Middleware/user_projects/domains/myMedrec`, the domain name is `myMedrec`. By setting DomainName, the name of the created domain will be independent of the domain directory name.

- **JavaHome**—Home directory for the JVM to be used when starting the server. The default for this option depends on the platform on which you install WebLogic Server.

- **OverwriteDomain**—Boolean value specifying whether to allow an existing WebLogic domain to be overwritten. This option defaults to `false`.

- **ServerStartMode**—Mode to use when starting the server for the newly created WebLogic domain. This value can be `dev` (development) or `prod` (production). This option defaults to `dev`.

#### Available options for domain updates include:

- **AllowCasualUpdate**—Boolean value specifying whether to allow a WebLogic domain to be updated without adding an extension template. This option defaults to `true`.

- **ReplaceDuplicates**—Boolean value specifying whether to keep original configuration elements in the WebLogic domain or replace the elements with corresponding ones from an extension template when there is a conflict. This option defaults to `true`.

#### Available options for both domain creation and domain updates include:

- **AppDir**—Application directory to be used when a separate directory is desired for applications, as specified by the template. This option defaults to `WL_HOME/user_projects/applications/domainname`, where `WL_HOME` specifies the WebLogic Server home directory and `domainname` specifies the name of the WebLogic domain.

- **AutoAdjustSubDeploymentTarget**—Boolean value specifying whether WLST automatically adjusts targets for the subdeployments of AppDeployments. This option defaults to `true`. To deactivate this feature, set the option to `false` and explicitly set the targeting for AppDeployment subdeployments before writing or updating the WebLogic domain or domain template.

- **AutoDeploy**—Boolean value specifying whether to activate auto deployment when a cluster or multiple Managed Servers are created. This option defaults to `true`. To deactivate this feature, set the option to `false` on the first line of your script.

<table>
<thead>
<tr>
<th>optionValue</th>
<th>Value for the option.</th>
</tr>
</thead>
</table>

*Note:* Boolean values can be specified as a String (`true`, `false`) or integer (0, 1).
3.7.15.3 Example
The following example sets the CreateStartMenu option to false:

```
wlsh:/offline> setOption('CreateStartMenu', 'false')
```

3.7.16 showChanges

Command Category: Editing Commands

Use with WLST: Online

3.7.16.1 Description

Shows the changes made to the configuration by the current user during the current edit session. In the event of an error, the command returns a WLSTException.

3.7.16.2 Syntax

```
showChanges([onlyInMemory])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>onlyInMemory</td>
<td>Optional. Boolean value specifying whether to display only the changes that have not yet been saved. This argument defaults to false, indicating that all changes that have been made from the start of the session are displayed.</td>
</tr>
</tbody>
</table>

3.7.16.3 Example

The following example shows all of the changes made by the current user to the configuration since the start of the current edit session.

```
wls:/mydomain/edit !> showChanges()
```

Changes that are in memory and saved to disc but not yet activated are:

<table>
<thead>
<tr>
<th>MBean Changed</th>
<th>com.bea:Name=basicWLSDomain,Type=Domain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operation Invoked</td>
<td>add</td>
</tr>
<tr>
<td>Attribute Modified</td>
<td>Machines</td>
</tr>
<tr>
<td>Attributes Old Value</td>
<td>null</td>
</tr>
<tr>
<td>Attributes New Value</td>
<td>Mach1</td>
</tr>
<tr>
<td>Server Restart Required</td>
<td>false</td>
</tr>
</tbody>
</table>

```
wls:/mydomain/edit !> showChanges()
```

Changes that are in memory and saved to disc but not yet activated are:

<table>
<thead>
<tr>
<th>MBean Changed</th>
<th>com.bea:Name=basicWLSDomain,Type=Domain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operation Invoked</td>
<td>add</td>
</tr>
<tr>
<td>Attribute Modified</td>
<td>Servers</td>
</tr>
<tr>
<td>Attributes Old Value</td>
<td>null</td>
</tr>
<tr>
<td>Attributes New Value</td>
<td>myserver</td>
</tr>
<tr>
<td>Server Restart Required</td>
<td>false</td>
</tr>
</tbody>
</table>

3.7.17 startEdit

Command Category: Editing Commands

Use with WLST: Online

3.7.17.1 Description

Starts a configuration edit session on behalf of the currently connected user. You must navigate to the edit configuration MBean hierarchy using the edit command before issuing this command. For more information, see Section 3.11.5, "edit".
This command must be called prior to invoking any command to modify the WebLogic domain configuration.

In the event of an error, the command returns a WLSTException.

**Note:** WLST automatically starts an edit session if it detects that there is an edit session that is already in progress by the same user, which may have been started via the Administration Console or another WLST session.

### 3.7.17.2 Syntax

\[
\text{startEdit(}[\text{waitTimeInMillis}], [\text{timeoutInMillis}], [\text{exclusive}])
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>waitTimeInMillis</code></td>
<td>Optional. Time (in milliseconds) that WLST waits until it gets a lock, in the event that another user has a lock. This argument defaults to 0 ms.</td>
</tr>
<tr>
<td><code>timeoutInMillis</code></td>
<td>Optional. Timeout (in milliseconds) that WLST waits to release the edit lock. This argument defaults to -1 ms, indicating that this edit session never expires.</td>
</tr>
<tr>
<td><code>exclusive</code></td>
<td>Optional. Specifies whether the edit session should be an exclusive session. If set to true, if the same owner enters the <code>startEdit</code> command, WLST waits until the current edit session lock is released before starting the new edit session. The exclusive lock times out according to the time specified in <code>timeoutInMillis</code>. This argument defaults to false.</td>
</tr>
</tbody>
</table>

### 3.7.17.3 Example

The following example saves the edits that have not yet been saved to disk.

```
wls:/mydomain/edit> startEdit(60000, 120000)
Starting an edit session ...
Started edit session, please be sure to save and activate your changes once you are done.
wls:/mydomain/edit !>
```

### 3.7.18 stopEdit

Command Category: Editing Commands

Use with WLST: Online

#### 3.7.18.1 Description

Stops the current edit session, releases the edit lock, and discards unsaved changes.

In the event of an error, the command returns a WLSTException.

#### 3.7.18.2 Syntax

\[
\text{stopEdit(}[\text{defaultAnswer}]\)
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>defaultAnswer</code></td>
<td>Optional. Default response, if you would prefer not to be prompted at the command line. Valid values are y and n. This argument defaults to null, and WLST prompts you for a response.</td>
</tr>
</tbody>
</table>
### 3.7.18.3 Example
The following example stops the current editing session. WLST prompts for verification before canceling.

```
wls:/mydomain/edit !> stopEdit()
Sure you would like to stop your edit session? (y/n)
y
Edit session has been stopped successfully.
wls:/mydomain/edit>
```

### 3.7.19 unassign

Command Category: Editing Commands

Use with WLST: Offline

#### 3.7.19.1 Description
Unassign applications or resources from one or more destinations.

In the event of an error, the command returns a `WLSTException`.

#### 3.7.19.2 Syntax
```
unassign(sourceType, sourceName, destinationType, destinationName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>sourceType</code></td>
<td>Type of configuration bean to be unassigned. This value can be set to one of the following values:</td>
</tr>
<tr>
<td><code>sourceName</code></td>
<td>Name of the application or resource to be unassigned. Multiple names can be specified, separated by commas, or you can use the wildcard (*) character to specify all resources of the specified type. Specify subdeployments using the following format: <code>service.subDeployment</code>, where <code>service</code> specifies the parent service and <code>subDeployment</code> specifies the name of the subdeployment. For example, <code>myJMSResource.myQueueSubDeployment</code>. You can also specify nested subdeployments, such as <code>MedRecEAR.MedRecAppScopedJMS.MedRecJMSServer</code>.</td>
</tr>
<tr>
<td><code>destinationType</code></td>
<td>Type of destination. Guidelines for setting this value are provided below.</td>
</tr>
<tr>
<td><code>destinationName</code></td>
<td>Name of the destination. Multiple names can be specified, separated by commas.</td>
</tr>
</tbody>
</table>

Use the following guidelines for setting the `sourceType` and `destinationType`:

- When unassigning **application deployments**, set the values as follows:
When unassigning **libraries**, set the values as follows:
- `sourceType`: Library
- `destinationType`: Target

When unassigning **security types**, set the values as follows:
- `sourceType`: Name of the security type, such as User
- `destinationType`: Name of the destination security type, such as Group

When unassigning **servers** from **clusters**, set the values as follows:
- `sourceType`: Server
- `destinationType`: Cluster

When unassigning **services**, set the values as follows:
- `sourceType`: Name of the specific server, such as JDBCSystemResource
- `destinationType`: Target

When unassigning **subdeployments**, set the values as follows:
- `sourceType`: `service.SubDeployment`, where `service` specifies the parent of the SubDeployment, such as `JMSSystemResource.SubDeployment`; you can also specify nested subdeployments (such as `AppDeployment.SubDeployment.SubDeployment`)
- `destinationType`: Target

### 3.7.19.3 Example

The following examples:

- **Unassign the servers** `myServer` and `myServer2` **from the cluster** `myCluster`.
  
  ```
  wls:/offline/medrec> unassign("Server", "myServer,myServer2", "Cluster", "myCluster")
  ```

- **Unassign all servers** **from the cluster** `myCluster`.
  
  ```
  wls:/offline/mydomain> unassign("Server", "", "Cluster", "myCluster")
  ```

- **Unassign the user** `newUser` **from the group** `Monitors`.
  
  ```
  wls:/offline/medrec> unassign("User", "newUser", "Group", "Monitors")
  ```

- **Unassign the application deployment** `myAppDeployment` **from the target server** `newServer`.
  
  ```
  wls:/offline/mydomain> unassign("AppDeployment", "myAppDeployment", "Target", "newServer")
  ```

- **Unassign the nested SubDeployment** `MedRecAppScopedJMS.MedRecJMSServer`, **which is a child of the** `AppDeployment` **AppDeployment**, **from the target server** `AdminServer`.
  
  ```
  ```
3.7.20 undo

Command Category: Editing Commands
Use with WLST: Online

3.7.20.1 Description
Reverts all unsaved or unactivated edits.
You specify whether to revert all unactivated edits (including those that have been saved to disk), or all edits made since the last save operation. This command does not release the edit session.
In the event of an error, the command returns a WLSTException.

3.7.20.2 Syntax
undo([unactivatedChanges], [defaultAnswer])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>unactivatedChanges</td>
<td>Optional. Boolean value specifying whether to undo all unactivated changes, including edits that have been saved to disk. This argument defaults to false, indicating that all edits since the last save operation are reverted.</td>
</tr>
<tr>
<td>defaultAnswer</td>
<td>Optional. Default response, if you would prefer not to be prompted at the command line. Valid values are y and n. This argument defaults to null, and WLST prompts you for a response.</td>
</tr>
</tbody>
</table>

3.7.20.3 Example
The following example reverts all changes since the last save operation. WLST prompts for verification before reverting.

```
wlst:/mydomain/edit !> undo()
Sure you would like to undo your changes? (y/n)
y
Discarded your in-memory changes successfully.
wls:/mydomain/edit>
```

The following example reverts all unactivated changes. WLST prompts for verification before reverting.

```
wls:/mydomain/edit !> undo('true')
Sure you would like to undo your changes? (y/n)
y
Discarded all your changes successfully.
wls:/mydomain/edit>
```

3.7.21 validate

Command Category: Editing Commands
Use with WLST: Online

3.7.21.1 Description
Validates the changes that have been made but have not yet been saved. This command enables you to verify that all changes are valid before saving them.
In the event of an error, the command returns a WLSTException.
### 3.7.21.2 Syntax

validate()

### 3.7.21.3 Example

The following example validates all changes that have been made but have not yet been saved.

```shell
wls:/mydomain/edit !> validate()
Validating changes ...
Validated the changes successfully
```

### 3.8 Information Commands

Use the WLST information commands, listed in Table 3–8, to interrogate domains, servers, and variables, and provide configuration bean, runtime bean, and WLST-related information.

<table>
<thead>
<tr>
<th>This command...</th>
<th>Enables you to...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>addListener</td>
<td>Add a JMX listener to the specified MBean.</td>
<td>Online</td>
</tr>
<tr>
<td>configToScript</td>
<td>Convert an existing server configuration (config directory) to an executable WLST script</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>dumpStack</td>
<td>Display stack trace from the last exception that occurred while performing a WLST action, and reset the stack trace.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>dumpVariables</td>
<td>Display all variables used by WLST, including their name and value.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>find</td>
<td>Find MBeans and attributes in the current hierarchy.</td>
<td>Online</td>
</tr>
<tr>
<td>getConfigManager</td>
<td>Return the latest ConfigurationManagerBean MBean which manages the change process.</td>
<td>Online</td>
</tr>
<tr>
<td>getMBean</td>
<td>Return the MBean by browsing to the specified path.</td>
<td>Online</td>
</tr>
<tr>
<td>getMBI</td>
<td>Return the MBeanInfo for the specified MBeanType or the cmo variable.</td>
<td>Online</td>
</tr>
<tr>
<td>getPath</td>
<td>Return the MBean path for the specified MBean instance.</td>
<td>Online</td>
</tr>
<tr>
<td>listChildTypes</td>
<td>List all the children MBeans that can be created or deleted for the cmo type.</td>
<td>Online</td>
</tr>
<tr>
<td>lookup</td>
<td>Look up the specified MBean.</td>
<td>Online</td>
</tr>
<tr>
<td>ls</td>
<td>List all child beans and/or attributes for the current configuration or runtime bean.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>man</td>
<td>Display help from MBeanInfo for the current MBean or its specified attribute.</td>
<td>Online</td>
</tr>
<tr>
<td>redirect</td>
<td>Redirect WLST output to the specified filename.</td>
<td>Online</td>
</tr>
<tr>
<td>removeListener</td>
<td>Remove a listener that was previously defined.</td>
<td>Online</td>
</tr>
</tbody>
</table>
3.8.1 addListener

Command Category: Information Commands
Use with WLST: Online

3.8.1.1 Description
Adds a JMX listener to the specified MBean. Any changes made to the MBean are reported to standard out and/or are saved to the specified configuration file.

In the event of an error, the command returns a WLSTException.

3.8.1.2 Syntax
addListener(mbean, [attributeNames], [logFile], [listenerName])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbean</td>
<td>Name of the MBean or MBean object to listen on.</td>
</tr>
<tr>
<td>attributeName</td>
<td>Optional. Comma-separated list of all attribute names on which you would like to add a JMX listener. This argument defaults to null, and adds a JMX listener for all attributes.</td>
</tr>
<tr>
<td>logFile</td>
<td>Optional. Name and location of the log file to which you want to write listener information. This argument defaults to standard out.</td>
</tr>
<tr>
<td>listenerName</td>
<td>Optional. Name of the JMX listener. This argument defaults to a WLST-generated name.</td>
</tr>
</tbody>
</table>

3.8.1.3 Example
The following example defines a JMX listener on the cmo MBean for the Notes and ArchiveConfigurationCount attributes. The listener is named domain-listener and is stored in ./listeners/domain.log.
3.8.2 configToScript

Command Category: Information Commands

Use with WLST: Online or Offline

Converts an existing server configuration (config directory) to an executable WLST script. You can use the resulting script to re-create the resources on other servers.

The configToScript command creates the following files:

- A WLST script that contains the commands needed to recreate the configuration.
- A properties file that contains domain-specific values. You can update the values in this file to create new domains that are similar to the original configuration.
- A user configuration file and an associated key file to store encrypted attributes. The user configuration file contains the encrypted information. The key file contains a secret key that is used to encrypt and decrypt the encrypted information.

When you run the generated script:

- If a server is currently running, WLST will try to connect using the values in the properties file and then run the script commands to create the server resources.
- If no server is currently running, WLST will start a server with the values in the properties file, run the script commands to create the server resources, and shutdown the server. This may cause WLST to exit from the command shell.

In the event of an error, the command returns a WLSTException.

3.8.2.1 Syntax

configToScript([configPath], [pyPath], [overwrite], [propertiesFile], [createDeploymentScript])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configPath</td>
<td>Optional. Path to the domain directory that contains the configuration that you want to convert. This argument defaults to the directory from which you start WLST (./).</td>
</tr>
<tr>
<td>pyPath</td>
<td>Optional. Path and filename to which you want to write the converted WLST script. This argument defaults to ./config/config.py.</td>
</tr>
<tr>
<td>overwrite</td>
<td>Optional. Boolean value specifying whether the script file should be overwritten if it already exists. This argument defaults to true, indicating that the script file is overwritten.</td>
</tr>
<tr>
<td>propertiesFile</td>
<td>Optional. Path to the directory in which you want WLST to write the properties files. This argument defaults to the pathname specified for the scriptPath argument.</td>
</tr>
<tr>
<td>createDeploymentScript</td>
<td>Optional. Boolean value specifying whether WLST creates a script that performs deployments only. This argument defaults to false, indicating that a deployment script is not created.</td>
</tr>
</tbody>
</table>

3.8.2.2 Example

The following example converts the configuration to a WLST script config.py. By default, the configuration file is loaded from ./config, the script file is saved to
.config/config.py, and the properties files is saved to .config/config.py.properties.

wls:/offline> configToScript()
configToScript is loading configuration from c:\Oracle\Middleware \user_projects\domains\wls\config\config.xml ...
Completed configuration load, now converting resources to wlst script...
configToScript completed successfully
The WLST script is written to c:\Oracle\Middleware \user_projects\domains\wls\config\config.py
and the properties file associated with this script is written to c:\Oracle\Middleware\user_projects\domains\wls\config\config.py.properties
wls:/offline>

The following example converts server resources configured in the file c:\Oracle\Middleware\user_projects\domains\mydomain\config directory to a WLST script c:\Oracle\Middleware\myscripts\config.py.

wls:/offline> configToScript('c:/Oracle/Middleware/user_projects/domains /mydomain','c:/Oracle/Middleware/myscripts')
configToScript is loading configuration from c:\Oracle\Middleware \user_projects\domains\mydomain\config\config.xml ...
Completed configuration load, now converting resources to wlst script...
configToScript completed successfully
The WLST script is written to c:\Oracle\Middleware\myscripts\config.py
and the properties file associated with this script is written to c:\Oracle\Middleware\mydomain\config.py.properties
wls:/offline>

3.8.3 dumpStack

Command Category: Information Commands
Use with WLST: Online or Offline

3.8.3.1 Description
Displays the stack trace from the last exception that occurred while performing a WLST action, and resets the stack trace.
If successful, the dumpstack command returns the Throwable object. In the event of an error, the command returns a WLSTException.

3.8.3.2 Syntax
dumpStack()  

3.8.3.3 Example
This example displays the stack trace.
wls:/myserver/serverConfig> dumpStack()
com.bea.plateng.domain.script.jython.WLSTException: java.lang.reflect.InvocationTargetException
TargetException
...

3.8.4 dumpVariables

Command Category: Information Commands
Use with WLST: Online or Offline
3.8.4.1 Description
Displays all the variables used by WLST, including their name and value. In the event of an error, the command returns a WLSTException.

3.8.4.2 Syntax
dumpVariables()

3.8.4.3 Example
This example displays all the current variables and their values.

wls:/mydomain/serverConfig> dumpVariables()
adminHome   weblogic.rmi.internal.BasicRemoteRef - hostID: 
            '-1 108080150904263937S:localhost:[7001,8001,-1,-1,-1,-1,-1]:
            mydomain:AdminServer', oid: '259', channel: 'null'
cmgr   [MBeanServerInvocationHandler]com.bea:Name=ConfigurationManager,
            Type=weblogic.management.mbeanservers.edit.ConfigurationManagerMBean
cmo   [MBeanServerInvocationHandler]com.bea:Name=mydomain,Type=Domain
connected true
domainName mydomain
...
wls:/mydomain/serverConfig>

3.8.5 find

Command Category: Information Commands
Use with WLST: Online

3.8.5.1 Description
Finds MBeans and attributes in the current hierarchy.
WLST returns the pathname to the MBean that stores the attribute and/or attribute type, and its value. If searchInstancesOnly is set to false, this command also searches the MBeanType paths that are not instantiated in the server, but that can be created. In the event of an error, the command returns a WLSTException.

3.8.5.2 Syntax
find([name], [type], [searchInstancesOnly])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Optional. Name of the attribute to find.</td>
</tr>
<tr>
<td>type</td>
<td>Optional. Type of the attribute to find.</td>
</tr>
<tr>
<td>searchInstancesOnly</td>
<td>Optional. Boolean value specifying whether to search registered instances only or to also search MBeanTypes paths that are not instantiated in the server, but that can be created. This argument defaults to true, indicating only the registered instances will be searched.</td>
</tr>
</tbody>
</table>

3.8.5.3 Example
The following example searches for an attribute named javaCompiler in the current configuration hierarchy.

wls:/mydomain/serverConfig> find(name = 'JavaCompiler')
Finding 'JavaCompiler' in all registered MBean instances ...
The following example searches for an attribute of type JMSRuntime in the current configuration hierarchy.

```
wlst:/mydomain/serverRuntime> find(type='JMSRuntime')
Finding MBean of type 'JMSRuntime' in all the instances ...
/JMSRuntime/AdminServer.jms
wlst:/mydomain/serverRuntime>
```

The following example searches for an attribute named execute in the current configuration hierarchy. The searchInstancesOnly argument is set to false, indicating to also search MBeanTypes that are not instantiated in the server.

```
wls:/mydomain/serverConfig> find(name='execute', searchInstancesOnly='false')
Finding 'execute' in all registered MBean instances ...
/Servers/AdminServer       ExecuteQueues      [Ljava.lang.Object;@1aa7dbc
/Servers/AdminServer       Use81StyleExecuteQueues  false
Now finding 'execute' in all MBean Types that can be instantiated ...
/Servers                   ExecuteQueues
/Servers                   Use81StyleExecuteQueues
wls:/mydomain/serverConfig>
```

### 3.8.6 getConfigManager

**Command Category:** Information Commands

**Use with WLST:** Online

**3.8.6.1 Description**

Returns the latest ConfigurationManager MBean which manages the change process. You can then invoke methods to manage configuration changes across a WebLogic domain. In the event of an error, the command returns a WLSTException.

**3.8.6.2 Syntax**

`getConfigManager()`

**3.8.6.3 Example**

The following example returns the latest ConfigurationManagerBean MBean and stores it in a cm variable.

```
wls:/mydomain/serverConfig> cm=getConfigManager()
wls:/mydomain/serverConfig> cm.getType()
'weblogic.management.mbeanservers.edit.ConfigurationManagerMBean'
```

### 3.8.7 getMBean

**Command Category:** Information Commands

**Use with WLST:** Online

**3.8.7.1 Description**

Returns the MBean by browsing to the specified path. In the event of an error, the command returns a WLSTException.
3.8.7.2 Syntax
getMBean(mbeanPath)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbeanPath</td>
<td>Path name to the MBean in the current hierarchy.</td>
</tr>
</tbody>
</table>

3.8.7.3 Example
The following example returns the MBean specified by the path.

```
> com=getMBean('Servers/myserver/COM/myserver')
> com.getType()
'Server'
```

3.8.8 getMBI
Command Category: Information Commands
Use with WLST: Online

3.8.8.1 Description
Returns the MBeanInfo for the specified MBeanType or the cmo variable. In the event of an error, the command returns a WLSTException.

3.8.8.2 Syntax
getMBI([mbeanType])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbeanType</td>
<td>Optional. MBeanType for which the MBeanInfo is displayed.</td>
</tr>
</tbody>
</table>

3.8.8.3 Example
The following example gets the MBeanInfo for the specified MBeanType and stores it in the variable svrMbi.

```
> svrMbi=getMBI('weblogic.management.configuration.ServerMBean')
```

3.8.9 getPath
Command Category: Information Commands
Use with WLST: Online

3.8.9.1 Description
Returns the MBean path for the specified MBean instance or ObjectName for the MBean in the current tree. In the event of an error, the command returns a WLSTException.

3.8.9.2 Syntax
getPath(mbean)
3.8.9.3 Example
The following example returns the MBean specified by the path.

```
wlst:/mydomain/edit !> path=getPath('com.bea:Name=myserver,Type=Server')
wls:/mydomain/edit !> print path
'Servers/myserver'
```

3.8.10 listChildTypes

Command Category: Information Commands
Use with WLST: Online

3.8.10.1 Description
Lists all the child MBeans that can be created or deleted for the `cmo`. The `cmo` variable specifies the configuration bean instance to which you last navigated using WLST. For more information about the `cmo` variable, see "Changing the Current Management Object" in *Oracle WebLogic Scripting Tool*.

In the event of an error, the command returns a *WLSTException*.

3.8.10.2 Syntax
```
listChildTypes([parent])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>parent</td>
<td>Optional. Parent type for which you want the children types listed.</td>
</tr>
</tbody>
</table>

3.8.10.3 Example
The following example lists the children MBeans that can be created or deleted for the `cmo` type.

```
wls:/mydomain/serverConfig> listChildTypes()
AppDeployments
BridgeDestinations
CachingRealms
Clusters
...
wls:/mydomain/serverConfig>
```

3.8.11 lookup

Command Category: Information Commands
Use with WLST: Online

3.8.11.1 Description
Looks up the specified MBean. The MBean must be a child of the current MBean. In the event of an error, the command returns a *WLSTException*. 
3.8.11.2 Syntax

lookup(name, [childMBeanType])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the MBean that you want to lookup.</td>
</tr>
<tr>
<td>childMBeanType</td>
<td>Optional. The type of the MBean that you want to lookup.</td>
</tr>
</tbody>
</table>

3.8.11.3 Example

The following example looks up the specified server, myserver, and stores the returned stub in the sbean variable.

```plaintext
wls:/mydomain/serverConfig> sbean=lookup('myserver','Server')
wls:/mydomain/serverConfig> sbean.getType()
'Server'
wls:/mydomain/serverConfig>
```

3.8.12 ls

Command Category: Information Commands

Use with WLST: Online or Offline

3.8.12.1 Description

Lists the attributes, operations, and child management objects of the specified management object.

In the event of an error, the command returns a WLSTException.

By default, the output is returned as a string and is arranged in three columns:

- The first column displays a set of codes that describe the listed item. See Table 3–9.
- The second column displays the item name.
- When the item is an attribute, the third column displays the attribute value. If an attribute is encrypted, the third column displays asterisks instead of the value. (See "Writing and Reading Encrypted Configuration Values" in Oracle WebLogic Scripting Tool.)
- When the item is an operation, the third column uses the following pattern to display the operation’s return type and input parameters: returnType: parameterType(parameterName)

Table 3–9 ls Command Output Information

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>d</td>
<td>Indicates that the item is a child management object. Like a directory in a UNIX or Windows file system, you can use the cd command to make the child object the current management object.</td>
</tr>
<tr>
<td>r</td>
<td>Indicates that the item is a child management object or an attribute that is readable, assuming that current user has been given read permission by the security realm’s policies. (See &quot;Default Security Policies for MBeans&quot; in the Oracle WebLogic Server MBean Reference.)</td>
</tr>
<tr>
<td>w</td>
<td>Indicates that the item is an attribute that is writable, assuming that current user has been given write permission by the security realm’s policies. (See &quot;Default Security Policies for MBeans&quot; in the Oracle WebLogic Server MBean Reference.)</td>
</tr>
</tbody>
</table>
By default, the output lists all attributes, operations, and child management objects of the current management object. To filter the output or to see a list for a different management object, you can specify a command argument.

**Table 3–9 (Cont.) ls Command Output Information**

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>x</td>
<td>Indicates that the item is an operation that can be executed, assuming that current user has been given execute permission by the security realm’s policies. (See “Default Security Policies for MBeans” in the Oracle WebLogic Server MBean Reference.)</td>
</tr>
</tbody>
</table>

**Note:** As a performance optimization, when using WLST offline, WebLogic Server does not store most of its default values in the configuration files for the WebLogic domain. In some cases, this optimization prevents entire management objects from being displayed by WLST offline (because WebLogic Server has never written the corresponding XML elements to the domain configuration files). For example, if you never modify the default logging severity level for a WebLogic domain while the domain is active, WLST offline will not display the Log management object for the domain.

If you want to change the default value of attributes whose management object is not displayed by WLST offline, you must first use the `create` command to create the management object. Then you can `cd` to the management object and change the attribute value. See Section 3.7.4, "create".

### 3.8.12.2 Syntax

```bash
ls( [ a | c | o ] [ moPath ])
```

```bash
ls( [ moPath ] returnMap [ returnType ] )
```

**Argument Definition**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>Optional. Displays only the attributes of the specified management object (suppresses the display of other items).</td>
</tr>
<tr>
<td>c</td>
<td>Optional. Displays only the child management objects of the specified management object (suppresses the display of other items).</td>
</tr>
<tr>
<td>o</td>
<td>Optional. Displays only the operations that can be invoked on the specified management object (suppresses the display of other items). This argument is only applicable for WLST online.</td>
</tr>
</tbody>
</table>
3.8.12.3 Example

The following example displays all the child configuration beans, and attribute names and values for the examples domain, which has been loaded into memory, in WLST offline mode:

```
wlst:/offline/mydomain > ls()
dr-- AppDeployments
dr-- BridgeDestinations
dr-- Clusters
dr-- CustomResources
dr-- DeploymentConfiguration
dr-- Deployments
dr-- EmbeddedLDAP
dr-- ErrorHandlings
dr-- FileStores
dr-- InternalAppDeployments
dr-- InternalLibraries
dr-- JDBCDataSourceFactories
dr-- JDBCStores
dr-- JDBCSystemResources
dr-- JMSBridgeDestinations
dr-- JMSInteropModules
dr-- JMS_servers
dr-- JMSSystemResources
dr-- JMX
...
wlst:/offline/examples>
```

The following example displays all the attribute names and values in DomainMBean:

```
wls:/mydomain/serverConfig> ls('a')
-r-- AdminServerName AdminServer
-r-- AdministrationMBeanAuditingEnabled false
```
The following example displays all the child beans and attribute names and values in Servers MBean:

```
wls:/mydomain/serverConfig> ls('Servers')
dr--   AdminServer
```

The following example displays the attribute names and values for the specified MBean path and returns the information in a map:

```
wls:/mydomain/serverConfig> svrAttrList = ls('edit:/Servers/myserver', 'true', 'a')
-rw- AcceptBacklog                                50
-rw- AdminReconnectIntervalSeconds                10
-rw- AdministrationPort                           9002
-rw- AdministrationProtocol                       t3s
-rw- AutoKillIfFailed                             false
-rw- AutoMigrationEnabled                         false
-rw- AutoRestart                                  true
-rw- COMEnabled                                   false
-rw- ClasspathServletDisabled                      false
-rw- ClientCertProxyEnabled                        false
- rw- Cluster                                     null
- rw- ClusterRuntime                              null
- rw- ClusterWeight                               100
```

### 3.8.13 man

**Command Category:** Information Commands  
**Use with WLST:** Online

**3.8.13.1 Description**

Displays help from MBeanInfo for the current MBean or its specified attribute. In the event of an error, the command returns a WLSTException.

**3.8.13.2 Syntax**

```bash
man([attrName])
```
### 3.8.13.3 Example

The following example displays help from `MBeanInfo` for the `ServerMBean` bean.

```
wls:/mydomain/serverConfig> man('Servers')
dynamic : true
creator : createServer
destroyer : destroyServer
description : <p>Returns the ServerMBeans representing the servers that have been configured to be part of this domain.</p>
descriptorType : Attribute
Name : Servers
interfaceClassName : [Lweblogic.management.configuration.ServerMBean;
displayName : Servers
relationship : containment
```

### 3.8.14 redirect

**Command Category:** Information Commands

**Use with WLST:** Online

### 3.8.14.1 Description

Redirects WLST information, error, and debug messages to the specified filename. Also redirects the output of the `dumpStack()` and `dumpVariables()` commands to the specified filename.

In the event of an error, the command returns a `WLSTException`.

### 3.8.14.2 Syntax

```
redirect(outputFile, [toStdOut])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>outputFile</td>
<td>Name of the file to which you want to record the WLST commands. The filename can be absolute or relative to the directory from which you started WLST.</td>
</tr>
<tr>
<td>toStdOut</td>
<td>Optional. Boolean value specifying whether the output should be sent to stdout. This argument defaults to <code>true</code>, indicating that the output will be sent to stdout.</td>
</tr>
</tbody>
</table>

### 3.8.14.3 Example

The following example begins redirecting WLST output to the `logs/wlst.log` file:

```
wls:/mydomain/serverConfig> redirect( './logs/wlst.log')
```

### 3.8.15 removeListener

**Command Category:** Information Commands

**Use with WLST:** Online
3.8.15.1 Description
Removes a listener that was previously defined. If you do not specify an argument, WLST removes all listeners defined for all MBeans. For information about setting a listener, see Section 3.8.1, “addListener”.

In the event of an error, the command returns a WLSTException.

3.8.15.2 Syntax
RemoveListener([mbean], [listenerName])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbean</td>
<td>Optional. Name of the MBean or MBean object for which you want to remove the previously defined listeners.</td>
</tr>
<tr>
<td>listenerName</td>
<td>Optional. Name of the listener to be removed.</td>
</tr>
</tbody>
</table>

3.8.15.3 Example
The following example removes the listener named mylistener.

wls:/mydomain/serverConfig> removeListener(listenerName="mylistener")

3.8.16 showListeners
Command Category: Information Commands
Use with WLST: Online

3.8.16.1 Description
Shows all listeners that are currently defined. For information about setting a listener, see Section 3.8.1, "addListener".

In the event of an error, the command returns a WLSTException.

3.8.16.2 Syntax
showListeners()

3.8.16.3 Example
The following example shows all listeners that are currently defined.

wls:/mydomain/serverConfig> showlisteners()

3.8.17 startRecording
Command Category: Information Commands
Use with WLST: Online or Offline

3.8.17.1 Description
Records all user interactions with WLST. This command is useful for capturing commands for replay.

In the event of an error, the command returns a WLSTException.

This command cannot be used when you are importing WLST as a Jython module, as described in "Importing WLST as a Jython Module" in Oracle WebLogic Scripting Tool.
3.8.17 Syntax

\texttt{startRecording(recordFile, [recordAll])}

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>\texttt{recordFile}</td>
<td>Name of the file to which you want to record the WLST commands. The \texttt{filename} can be absolute or relative to the directory from which you invoked WLST.</td>
</tr>
<tr>
<td>\texttt{recordAll}</td>
<td>Optional. Boolean value specifying whether to capture all user interactions in the file. This argument defaults to \texttt{false}, indicating that only WLST commands are captured, and not WLST command output.</td>
</tr>
</tbody>
</table>

3.8.17 Example

The following example begins recording WLST commands in the \texttt{record.py} file:

\texttt{wls:/mydomain/serverConfig> startRecording('c:/myScripts/record.py')}
Starting recording to \texttt{c:/myScripts/record.py}
\texttt{wls:/mydomain/serverConfig>}

3.8.18 state

Command Category: Information Commands
Use with WLST: Online

3.8.18.1 Description
Using Node Manager, returns a map of servers or clusters and their state. Node Manager must be running.

For more information about server states, see "Understanding Server Life Cycle" in \textit{Managing Server Startup and Shutdown for Oracle WebLogic Server}.

In the event of an error, the command returns a \texttt{WLSTException}.

3.8.18.2 Syntax

\texttt{state(name, [type])}

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>\texttt{name}</td>
<td>Name of the server or cluster for which you want to retrieve the current state.</td>
</tr>
<tr>
<td>\texttt{type}</td>
<td>Optional. Type, \texttt{Server} or \texttt{Cluster}. This argument defaults to \texttt{Server}. When returning the state of a cluster, you must set this argument explicitly to \texttt{Cluster}, or the command will fail.</td>
</tr>
</tbody>
</table>

3.8.18.3 Example

The following example returns the state of the Managed Server, \texttt{managed1}.

\texttt{wls:/mydomain/serverConfig> state('managed1','Server')}
Current state of \texttt{'managed1'}: SUSPENDED
\texttt{wls:/mydomain/serverConfig>}

The following example returns the state of the cluster, \texttt{mycluster}.

\texttt{wls:/mydomain/serverConfig> state('mycluster','Cluster')}
There are 3 server(s) in cluster: mycluster

States of the servers are
3.8.19 stopRecording

Command Category: Information Commands
Use with WLST: Online or Offline

3.8.19.1 Description
Stops recording WLST commands. For information about starting a recording, see Section 3.8.17, "startRecording".
In the event of an error, the command returns a WLSTException.

3.8.19.2 Syntax
stopRecording()

3.8.19.3 Example
The following example stops recording WLST commands.

wls:/mydomain/serverConfig> stopRecording()
Stopping recording to c:\myScripts\record.py
wls:/mydomain/serverConfig>

3.8.20 stopRedirect

Command Category: Information Commands
Use with WLST: Online or Offline

3.8.20.1 Description
Stops the redirection of WLST output to a file, if redirection is in progress.
In the event of an error, the command returns a WLSTException.

3.8.20.2 Syntax
stopRedirect()

3.8.20.3 Example
The following example stops the redirection of WLST output to a file:

wls:/mydomain/serverConfig> stopRedirect()
WLST output will not be redirected to myfile.txt any more

3.8.21 storeUserConfig

Command Category: Information Commands
Use with WLST: Online
3.8.21.1 Description
Creates a user configuration file and an associated key file. The user configuration file contains an encrypted username and password. The key file contains a secret key that is used to encrypt and decrypt the username and password.

Only the key file that originally encrypted the username and password can be used to decrypt the values. If you lose the key file, you must create a new user configuration and key file pair.

In the event of an error, the command returns a WLSTException.

3.8.21.2 Syntax
storeUserConfig([userConfigFile], [userKeyFile], [nm])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>userConfigFile</td>
<td>Optional. Name of the file to store the user configuration. The pathname can be absolute or relative to the file-system directory from which you started WLST. If you do not specify this argument, the command stores the file in your home directory as determined by your JVM. The location of the home directory depends on the SDK and type of operating system on which WLST is running. The default filename is based on the following pattern: username-WebLogicConfig.properties where username is the user name that you used to log in to the operating system. The command also prints to standard out the location in which it created the file.</td>
</tr>
<tr>
<td>userKeyFile</td>
<td>Optional. Name of the file to store the key information that is associated with the user configuration file that you specify. The pathname can be absolute or relative to the file-system directory from which you started WLST. If you do not specify this argument, the command stores the file in your home directory as determined by your JVM. The location of the home directory depends on the SDK and type of operating system on which WLST is running. The default filename is based on the following pattern: username-WebLogicKey.properties where username is the user name that you used to log in to the operating system. The command also prints to standard out the location in which it created the file.</td>
</tr>
<tr>
<td>nm</td>
<td>Optional. Boolean value specifying whether to store the username and password for Node Manager or WebLogic Server. If set to true, the Node Manager username and password is stored. This argument default to false.</td>
</tr>
</tbody>
</table>

3.8.21.3 Example
The following example creates and stores a user configuration file and key file in the default location.

wls:/mydomain/serverConfig> storeUserConfig()
Creating the key file can reduce the security of your system if it is not kept in a secured location after it is created. Do you want to create the key file? y or n y
The username and password that were used for this current WLS connection are stored in C:\Documents and Settings\pat\pat-WebLogicConfig.properties
The following example creates and stores a user configuration file and key file in the specified locations.

```
wlst:/mydomain/serverConfig> storeUserConfig('c:/myFiles/myuserconfigfile.secure', 'c:/myFiles/myuserkeyfile.secure')
```

Creating the key file can reduce the security of your system if it is not kept in a secured location after it is created. Do you want to create the key file? y or n

```
y
```

The username and password that were used for this current WLS connection are stored in `c:/myFiles/mysuserconfigfile.secure` and `c:/myFiles/myuserkeyfile.secure`

```
wls:/mydomain/serverConfig>
```

### 3.8.22 threadDump

Command Category: Information Commands

Use with WLST: Online or Offline

#### 3.8.22.1 Description

Displays a thread dump for the specified server. In the event of an error, the command returns a `WLSTException`

#### 3.8.22.2 Syntax

```
threadDump(
[writeToFile], 
[fileName], 
[serverName])
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>writeToFile</td>
<td>Optional. Boolean value specifying whether to save the output to a file. This argument defaults to <code>true</code>, indicating that output is saved to a file.</td>
</tr>
<tr>
<td>fileName</td>
<td>Optional. Name of the file to which the output is written. The filename can be absolute or relative to the directory where WLST is running. This argument defaults to <code>Thread_Dump_serverName</code> file, where <code>serverName</code> indicates the name of the server. This argument is valid only if <code>writeToFile</code> is set to <code>true</code>.</td>
</tr>
<tr>
<td>serverName</td>
<td>Optional. Server name for which the thread dump is requested. This argument defaults to the server to which WLST is connected. If you are connected to an Administration Server, you can display a thread dump for the Administration Server and any Managed Server that is running in the WebLogic domain. If you are connected to a Managed Server, you can only display a thread dump for that Managed Server.</td>
</tr>
</tbody>
</table>

#### 3.8.22.3 Example

The following example displays the thread dump for the current server and saves the output to the `Thread_Dump_serverName` file.

```
wls:/mydomain/serverConfig> threadDump()
```

The following example displays the thread dump for the server `managedServer`. The information is not saved to a file.

```
wls:/mydomain/serverConfig> threadDump(writeToFile='false', serverName='managedServer')
```
3.8.23 **viewMBean**

Command Category: Information Commands

Use with WLST: Online

### 3.8.23.1 Description
Displays information about an MBean, such as the attribute names and values, and operations. In the event of an error, the command returns a `WLSTException`.

### 3.8.23.2 Syntax

```
viewMBean(mbean)
```

### 3.8.23.3 Example

The following example displays information about the current MBean, `cmo`.

```
  wls:/mydomain/serverConfig> cmo.getType()
  'Domain'
  wls:/mydomain/serverConfig> viewMBean(cmo)

  Attribute Names and Values
  --------------------------
  XMLEntityCaches   null
  Targets   javax.management.ObjectName[com.bea
  :Name=MedRecJMSServer,Type=JMSServer,
  com.bea:Name=WSStoreForwardInternalJMSServerMedRecServer,Type=JMSServer,
  com.bea:Name=MedRecWseeJMSServer,Type=JMSServer,
  com.bea:Name=PhysWSEEJMServer,Type=JMSServer,
  com.bea:Name=MedRecSAAgent,Type=SAAgent,
  com.bea:Name=AdminServer,Type=Server]
  RootDirectory                                .
  EmbeddedLDAP                          com.bea:Name=OOTB_medrec,Type=EmbeddedLDAP
  RemoteSAFContexts  null
  Libraries   javax.management.ObjectName[com.bea
  ...

  wls:/mydomain/serverConfig>
```

3.8.24 **writeIniFile**

Command Category: Information Commands

Use with WLST: Online

### 3.8.24.1 Description

Converts WLST definitions and method declarations to a Python (`.py`) file to enable advanced users to import them as a Jython module. After importing, the definitions and method declarations are available to other Jython modules and can be accessed directly using Jython syntax. For more information, see "Importing WLST as a Jython Module" in Oracle WebLogic Scripting Tool.

In the event of an error, the command returns a `WLSTException`.

### 3.8.24.2 Syntax

```
writeIniFile(filePath)
```
3.8.24.3 Example
The following example converts WLST to a Python file named `wl.py`.

```bash
wls:/offline> writeIniFile("wl.py")
The Ini file is successfully written to `wl.py`
wls:/offline>
```

3.9 Life Cycle Commands

Use the WLST life cycle commands, listed in Table 3–10, to manage the life cycle of a server instance.

For more information about the life cycle of a server instance, see "Understanding Server Life Cycle" in Managing Server Startup and Shutdown for Oracle WebLogic Server.

**Table 3–10  Life Cycle Commands for WLST Configuration**

<table>
<thead>
<tr>
<th>This command...</th>
<th>Enables you to...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>migrate</td>
<td>Migrate services to a target server within a cluster.</td>
<td>Online</td>
</tr>
<tr>
<td>resume</td>
<td>Resume a server instance that is suspended or in ADMIN state.</td>
<td>Online</td>
</tr>
<tr>
<td>shutdown</td>
<td>Gracefully shut down a running server instance or cluster.</td>
<td>Online</td>
</tr>
<tr>
<td>start</td>
<td>Start a Managed Server instance or a cluster using Node Manager.</td>
<td>Online</td>
</tr>
<tr>
<td>startServer</td>
<td>Start the Administration Server.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>suspend</td>
<td>Suspend a running server.</td>
<td>Online</td>
</tr>
</tbody>
</table>

3.9.1 migrate

Command Category: Life Cycle Commands

Use with WLST: Online

3.9.1.1 Description

Migrates the specified services (JTA, JMS, or Server) to a targeted server within a cluster. In the event of an error, the command returns a `WLSTException`.

For information about migrating services, see "Service Migration" in Using Clusters for Oracle WebLogic Server.

3.9.1.2 Syntax

```
migrate(sname, destinationName, [sourceDown], [destinationDown], [migrationType])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>sname</td>
<td>Name of the server from which the services should be migrated.</td>
</tr>
</tbody>
</table>
### 3.9.1.3 Example

The following example migrates all JMS and JTA services on server1 to the server server2. The boolean arguments specify that the source server is down and the destination server is running.

```bash
wls:/mydomain/edit !> migrate('server1','server2', 'true', 'false', 'all')
Migrating all JMS and JTA services from 'server1' to destination 'server2' ...
```

The following example migrates all Server services on server1 to the server server2. The boolean arguments specify that the source server is down and the destination server is running.

```bash
wls:/mydomain/edit !> migrate('server1','server2', 'true', 'false', 'Server')
Migrating singleton server services from 'server1' to machine 'server2'...
```

### 3.9.2 resume

Command Category: Life Cycle Commands

Use with WLST: Online

#### 3.9.2.1 Description

Resumes a server instance that is suspended or in ADMIN state. This command moves a server to the RUNNING state. For more information about server states, see...
"Understanding Server Life Cycle" in Managing Server Startup and Shutdown for Oracle WebLogic Server.

In the event of an error, the command returns a WLSTException.

3.9.2.2 Syntax

```ruby
resume([sname], [block])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>sname</td>
<td>Name of the server to resume. This argument defaults to the server to which WLST is currently connected.</td>
</tr>
<tr>
<td>block</td>
<td>Optional. Boolean value specifying whether WLST should block user interaction until the server is resumed. This argument defaults to false, indicating that user interaction is not blocked. In this case, WLST returns control to the user after issuing the command and assigns the task MBean associated with the current task to a variable that you can use to check its status. If you are importing WLST as a Jython module, as described in &quot;Importing WLST as a Jython Module&quot; in Oracle WebLogic Scripting Tool, block is always set to true.</td>
</tr>
</tbody>
</table>

3.9.3 Example

The following example resumes a Managed Server instance.

```groovy
wls:/mydomain/serverConfig> resume('managed1', block='true')
Server 'managed1' resumed successfully.
```

3.9.3 shutdown

Command Category: Life Cycle Commands

Use with WLST: Online

3.9.3.1 Description

Gracefully shuts down a running server instance or a cluster. The shutdown command waits for all the in-process work to be completed before shutting down the server or cluster.

You shut down a server to which WLST is connected by entering the shutdown command without any arguments.

When connected to a Managed Server instance, you only use the shutdown command to shut down the Managed Server instance to which WLST is connected; you cannot shut down another server while connected to a Managed Server instance.

WLST uses Node Manager to shut down a Managed Server. When shutting down a Managed Server, Node Manager must be running.

In the event of an error, the command returns a WLSTException.

3.9.3.2 Syntax

```python
shutdown([name], [entityType], [ignoreSessions], [timeOut], [force], [block])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Optional. Name of the server or cluster to shutdown. This argument defaults to the server to which WLST is currently connected.</td>
</tr>
</tbody>
</table>
3.9.3.3 Example

The following example instructs WLST to shutdown the server to which you are connected:

```
$at://mydomain/serverConfig> shutdown()
Shutting down the admin server that you are currently connected to .......
Disconnected from weblogic server: AdminServer
```

The following example instructs WLST to wait 1000 seconds for HTTP sessions to complete or timeout (at 1000 seconds) before shutting down myserver:

```
$at://mydomain/serverConfig> shutdown('myserver','Server','false',1000,
block='false')
```

The following example instructs WLST to drop all HTTP sessions immediately while connected to a Managed Server instance:

```
$at://mydomain/serverConfig> shutdown('MServer1','Server','true',1200)
Shutting down a managed server that you are connected to ...
Disconnected from weblogic server: MServer1
```

The following example instructs WLST to shutdown the cluster mycluster:

```
$at://mydomain/serverConfig> shutdown('mycluster','Cluster')
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>entityType</td>
<td>Optional. Type, Server or Cluster. This argument defaults to Server. When shutting down a cluster, you must set this argument explicitly to Cluster, or the command will fail.</td>
</tr>
<tr>
<td>ignoreSessions</td>
<td>Optional. Boolean value specifying whether WLST should drop all HTTP sessions immediately or wait for HTTP sessions to complete or timeout while shutting down. This argument defaults to false, indicating that all HTTP sessions must complete or timeout.</td>
</tr>
<tr>
<td>timeOut</td>
<td>Optional. Time (in seconds) that WLST waits for subsystems to complete in-process work and suspend themselves before shutting down the server. This argument defaults to 0 seconds, indicating that there is no timeout.</td>
</tr>
<tr>
<td>force</td>
<td>Optional. Boolean value specifying whether WLST should terminate a server instance or a cluster without waiting for the active sessions to complete. This argument defaults to false, indicating that all active sessions must complete before shutdown.</td>
</tr>
<tr>
<td>block</td>
<td>Optional. Boolean value specifying whether WLST should block user interaction until the server is shutdown. This argument defaults to false, indicating that user interaction is not blocked. In this case, WLST returns control to the user after issuing the command and assigns the task MBean associated with the current task to a variable that you can use to check its status. If you are importing WLST as a Jython module, as described in &quot;Importing WLST as a Jython Module&quot; in Oracle WebLogic Scripting Tool, block is always set to true.</td>
</tr>
</tbody>
</table>

3.9.3.3 Example

The following example instructs WLST to shutdown the server to which you are connected:

```
$at://mydomain/serverConfig> shutdown()
Shutting down the admin server that you are currently connected to .......
Disconnected from weblogic server: AdminServer
```

The following example instructs WLST to wait 1000 seconds for HTTP sessions to complete or timeout (at 1000 seconds) before shutting down myserver:

```
$at://mydomain/serverConfig> shutdown('myserver','Server','false',1000,
block='false')
```

The following example instructs WLST to drop all HTTP sessions immediately while connected to a Managed Server instance:

```
$at://mydomain/serverConfig> shutdown('MServer1','Server','true',1200)
Shutting down a managed server that you are connected to ...
Disconnected from weblogic server: MServer1
```

The following example instructs WLST to shutdown the cluster mycluster:

```
$at://mydomain/serverConfig> shutdown('mycluster','Cluster')
```

<table>

In this case, WLST returns control to the user after issuing the command and assigns the task MBean associated with the current task to a variable that you can use to check its status. If you are importing WLST as a Jython module, as described in &quot;Importing WLST as a Jython Module&quot; in Oracle WebLogic Scripting Tool, block is always set to true.</td>
</tr>
</tbody>
</table>
3.9.4 start

Command Category: Life Cycle Commands

Use with WLST: Online

3.9.4.1 Description
Starts a Managed Server instance or a cluster using Node Manager. WLST must be connected to the Administration Server and Node Manager must be running.

For more information about WLST commands used to connect to and use Node Manager, see Section 3.10, "Node Manager Commands".

In the event of an error, the command returns a WLSTException.

3.9.4.2 Syntax

```
start(name, [type], [url], [block])
```

3.9.4.3 Example

The following example instructs Node Manager to start a Managed Server instance; the listen address is localhost and listen port is 8801. WLST returns control to the user after issuing this command, as block is set to false.

```
wls:/mydomain/serverConfig> start('myserver', 'Server', block='false')
Starting server myserver ...
Server with name myserver started successfully.
wls:/mydomain/serverConfig>
```

The following example instructs Node Manager to start a cluster. WLST block user interaction until the cluster is started, as block defaults to true.

```
wls:/mydomain/serverConfig> start('mycluster', 'Cluster')
Starting the following servers in Cluster, mycluster: MS1, MS2, MS3...
```

---

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the Managed Server or cluster to start.</td>
</tr>
<tr>
<td>type</td>
<td>Optional. Type, Server or Cluster. This argument defaults to Server. When starting a cluster, you must set this argument explicitly to Cluster, or the command will fail.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. Listen address and listen port of the server instance, specified using the following format: [protocol://]listen-address:listen-port. If not specified, this argument defaults to t3://localhost:7001.</td>
</tr>
<tr>
<td>block</td>
<td>Optional. Boolean value specifying whether WLST should block user interaction until the server or cluster is started. This argument defaults to false, indicating that user interaction is not blocked. In this case, WLST returns control to the user after issuing the command and assigns the task MBean associated with the current task to a variable that you can use to check its status. If you are importing WLST as a Jython module, as described &quot;Importing WLST as a Jython Module&quot; in Oracle WebLogic Scripting Tool, block is always set to true.</td>
</tr>
</tbody>
</table>
All servers in the cluster mycluster are started successfully.
wls:/mydomain/serverConfig>

## 3.9.5 startServer

Command Category: Life Cycle Commands

Use with WLST: Online or Offline

### 3.9.5.1 Description

Starts the Administration Server. In the event of an error, the command returns a WLSTException.

**Note:** You can use `startServer` only to start a WebLogic Administration Server, by running WLST from the WL_HOME/common/bin directory. You cannot use `startServer` to start an integrated WebLogic Administration Server (that is, an Administration Server for a Fusion Middleware Suite product installed in an ORACLE_HOME directory).

To start the Administration server for a Fusion Middleware Suite product other than WebLogic Server, use either of the following methods:

- Execute the server startup script for the associated WebLogic domain.
- Start the server using Node Manager. If you use this method, make sure that the `startScriptEnabled` property is set to `true` in Node Manager.

### 3.9.5.2 Syntax

```
startServer([adminServerName], [domainName], [url], [username], [password],
[domainDir], [block], [timeout], [serverLog], [systemProperties], [jvmArgs]
[spaceAsJvmArgsDelimiter])
```

**Argument Definition**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>adminServerName</td>
<td>Optional. Name of the Administration Server to start. This argument defaults to myserver.</td>
</tr>
<tr>
<td>domainName</td>
<td>Optional. Name of the WebLogic domain to which the Administration Server belongs. This argument defaults to mydomain.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. URL of the Administration Server. The URL supplied with the startServer command will override the listen address and port specified in the config.xml file. If not specified on the command line or in the config.xml file, this argument defaults to t3://localhost:7001.</td>
</tr>
<tr>
<td>username</td>
<td>Optional. Username use to connect WLST to the server. This argument defaults to weblogic.</td>
</tr>
<tr>
<td>password</td>
<td>Optional. Password used to connect WLST to the server. This argument defaults to welcome1.</td>
</tr>
<tr>
<td>domainDir</td>
<td>Optional. Domain directory in which the Administration Server is being started. This argument defaults to the directory from which you started WLST.</td>
</tr>
</tbody>
</table>
3.9.5.3 Example

The following example starts the Administration Server named *demoServer* in the *demoDomain*.

```bash
wls:/offline> startServer('demoServer','demoDomain','t3://localhost:8001',
'myweblogic','wlstdomain','c:/mydomains/wlst','false', 60000,
jvmArgs='-XX:MaxPermSize=75m, -Xmx512m, -XX:+UseParallelGC')
wls:/offline>
```

### 3.9.6 suspend

**Command Category:** Life Cycle Commands

**Use with WLST:** Online

#### 3.9.6.1 Description

Suspends a running server. This command moves a server from the **RUNNING** state to the **ADMIN** state. For more information about server states, see "Understanding Server Life Cycle" in *Managing Server Startup and Shutdown for Oracle WebLogic Server*.

In the event of an error, the command returns a **WLSTException**.

#### 3.9.6.2 Syntax

```bash
suspend([sname], [ignoreSessions], [timeout], [force], [block])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>sname</strong></td>
<td>Optional. Name of the server to suspend. The argument defaults to the server to which WLST is currently connected.</td>
</tr>
<tr>
<td><strong>ignoreSessions</strong></td>
<td>Optional. Boolean value specifying whether WLST should drop all HTTP sessions immediately or wait for HTTP sessions to complete or time out while suspending. This argument defaults to false, indicating that HTTP sessions must complete or time out.</td>
</tr>
</tbody>
</table>
Node Manager Commands

### 3.9.6.3 Example

The following example suspends a Managed Server instance:

```plaintext
wls:/mydomain/serverConfig> suspend('managed1')
Server 'managed1' suspended successfully.
wls:/mydomain/serverConfig>
```

### 3.10 Node Manager Commands

Use the WLST Node Managers commands, listed in Table 3–11, to start, shut down, restart, and monitor WebLogic Server instances.

**Note:** Node Manager must be running before you can execute the commands within this category.

For more information about Node Manager, see "Using Node Manager" in the *Node Manager Administrator’s Guide for Oracle WebLogic Server*.

<table>
<thead>

<td>Online or Offline</td>
</tr>
<tr>
<td>nmVersion</td>
<td>Return the Node Manager version.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>startNodeManager</td>
<td>Starts Node Manager on the same computer that is running WLST.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>stopNodeManager</td>
<td>Stops Node Manager.</td>
<td>Online or Offline</td>
</tr>
</tbody>
</table>

3.10.1 nm

Command Category: Node Manager Commands

Use with WLST: Online or Offline

3.10.1.1 Description

Determines whether WLST is connected to Node Manager. Returns true or false and prints a descriptive message. Node Manager must be running before you can execute this command.

In the event of an error, the command returns a WLSTException.

3.10.1.2 Syntax

nm()

3.10.1.3 Example

The following example indicates that WLST is currently connected to Node Manager that is monitoring mydomain.

wls:/mydomain/serverConfig> nm()
Currently connected to Node Manager that is monitoring the domain "mydomain"

The following example indicates that WLST is not currently connected to Node Manager.

wls:/mydomain/serverConfig> nm()
Not connected to any Node Manager

3.10.2 nmConnect

Command Category: Node Manager Commands

Use with WLST: Online or Offline
3.10.2.1 Description
Connects WLST to Node Manager to establish a session. After connecting to Node Manager, you can invoke any Node Manager commands via WLST. Node Manager must be running before you can execute this command.

Once connected, the WLST prompt displays as follows, where `domainName` indicates the name of the WebLogic domain that is being managed: `wls:/nm/domainName>`. If you then connect WLST to a WebLogic Server instance, the prompt is changed to reflect the WebLogic Server instance. You can use the `nm` command to determine whether WLST is connected to Node Manager, as described in Section 3.10.1, "nm".

In the event of an error, the command returns a `WLSTException`.

3.10.2.2 Syntax

```
nmConnect([username, password], [host], [port], [domainName], [domainDir] [nmType], [verbose])
nmConnect([userConfigFile, userKeyFile], [host], [port], [domainName], [domainDir] [nmType], [verbose])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| `username`   | Username of the operator who is connecting WLST to Node Manager. The username defaults to `weblogic`.  
               | **Note:** When running a server in production mode, you must specify the username and password explicitly on the command line to ensure that the appropriate username and password are used when connecting to Node Manager. |
| `password`   | Password of the operator who is connecting WLST to Node Manager. The password defaults to `welcome1`.  
               | **Note:** When running a server in production mode, you must specify the username and password explicitly on the command line to ensure that the appropriate username and password are used when connecting to Node Manager. |
| `host`       | Optional. Host name of Node Manager. This argument defaults to `localhost`.                                                                 |
| `port`       | Optional. Port number of Node Manager. This argument defaults to a value that is based on the Node Manager type, as follows:  
               | ■ For `plain` type, defaults to 5556  
               | ■ For `rsh` type, defaults to 514  
               | ■ For `ssh` type, defaults to 22  
               | ■ For `ssl` type, defaults to 5556 |
| `domainName` | Optional. Name of the WebLogic domain that you want to manage. This argument defaults to `mydomain`.                                    |
| `domainDir`  | Optional. Path of the domain directory to which you want to save the Node Manager secret file (`nm_password.properties`) and  
               | `SerializedSystemIni.dat` file. This argument defaults to the directory in which WLST was started.                                      |
3.10.2.3 Example

The following example connects WLST to Node Manager to monitor the oamdomain domain using the default host and port numbers and plain Node Manager type.

```
wlst:/myserver/serverConfig> nmConnect('weblogic', 'welcome1', 'localhost', '5555', 'oamdomain', 'c:/Oracle/Middleware/user_projects/domains/oamdomain','ssl')
Connecting to Node Manager Server ...
Successfully connected to Node Manager.
wlst:/nm/oamdomain>
```

The following example connects WLST to a Node Manager Server instance using a user configuration and key file to provide user credentials.

```
wlst:/myserver/serverConfig> nmConnect(userConfigFile='c:/myfiles/myuserconfigfile.secure',
userKeyFile='c:/myfiles/myuserkeyfile.secure',
host='172.18.137.82', port=26106, domainName='mydomain',
domainDir='c:/myfiles/mydomain', mType='ssl')
Connecting to Node Manager Server ...
Successfully connected to Node Manager.
wlst:/nm/mydomain>
```

3.10.3 nmDisconnect

Command Category: Node Manager Commands

Use with WLST: Online or Offline

WLST must be connected to Node Manager to run this command.

### Argument | Definition
--- | ---
**nmType** | The Node Manager type. Valid values are:
- plain for plain socket Java-based implementation
- rsh for RSH implementation
- ssh for script-based SSH implementation
- ssl for Java-based SSL implementation

*Note:* If you specify plain for nmType, you must manually set the SecureListener parameter in `WL_HOME/common/nodemanager/nodemanager.properties` to false. Otherwise, the nmConnect command will fail.

This argument defaults to `ssl`.

**verbose** | Optional. Boolean value specifying whether WLST connects to Node Manager in verbose mode. This argument defaults to `false`, disabling verbose mode.

**userConfigFile** | Optional. Name and location of a user configuration file which contains an encrypted username and password.

When you create a user configuration file, the storeUserConfig command uses a key file to encrypt the username and password. Only the key file that encrypts a user configuration file can decrypt the username and password. (See Section 3.8.21, “storeUserConfig”.)

**userKeyFile** | Optional. Name and location of the key file that is associated with the specified user configuration file and is used to decrypt it. (See Section 3.8.21, “storeUserConfig”.)
3.10.3.1 Description
Disconnects WLST from a Node Manager session.
In the event of an error, the command returns a `WLSTException`.

3.10.3.2 Syntax
`nmDisconnect()`

3.10.3.3 Example
The following example disconnects WLST from a Node Manager session.
```
wls:/nm/oamdomain> nmDisconnect()
Successfully disconnected from Node Manager
wls:/myserver/serverConfig>
```

3.10.4 nmEnroll
Command Category: Node Manager Commands
Use with WLST: Online

3.10.4.1 Description
Enrolls the machine on which WLST is currently running. WLST must be connected to an Administration Server to run this command; WLST does not need to be connected to Node Manager.

This command downloads the following files from the Administration Server:
- Node Manager secret file (`nm_password.properties`), which contains the encrypted username and password that is used for server authentication
- `SerializedSystemIni.dat` file

This command also updates the `nodemanager.domains` file under the `WL_HOME/common/nodemanager` directory with the domain information, where `WL_HOME` refers to the top-level installation directory for WebLogic Server.

You must run this command once per WebLogic domain per machine unless that domain shares the root directory of the Administration Server.

If the machine is already enrolled when you run this command, the Node Manager secret file (`nm_password.properties`) is refreshed with the latest information from the Administration Server.

In the event of an error, the command returns a `WLSTException`.

3.10.4.2 Syntax
`nmEnroll(['domainDir'], ['nmHome'])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>domainDir</code></td>
<td>Optional. Path of the domain directory to which you want to save the Node Manager secret file (<code>nm_password.properties</code>) and <code>SerializedSystemIni.dat</code> file. This argument defaults to the directory in which WLST was started.</td>
</tr>
<tr>
<td><code>nmHome</code></td>
<td>Optional. Path to the Node Manager home. The <code>nodemanager.domains</code> file, containing the domain information, is written to this directory. This argument defaults to <code>WL_HOME/common/nodemanager</code>, where <code>WL_HOME</code> refers to the top-level installation directory for WebLogic Server.</td>
</tr>
</tbody>
</table>
3.10.4.3 Example
The following example enrolls the current machine with Node Manager and saves the Node Manager secret file (nm_password.properties) and SerializedSystemIni.dat file to c:/Oracle/Middleware/mydomain/common/nodemanager/nm_password.properties. The nodemanager.domains file is written to WL_HOME/common/nodemanager by default.

wls:/mydomain/serverConfig>
nmEnroll('c:/Oracle/Middleware/mydomain/common/nodemanager')
Enrolling this machine with the domain directory at c:\Oracle\Middleware\mydomain\common\nodemanager....
Successfully enrolled this machine with the domain directory at C:\Oracle\Middleware\mydomain\common\nodemanager
wls:/mydomain/serverConfig>

3.10.5 nmGenBootStartupProps
Command Category: Node Manager Commands
Use with WLST: Online

3.10.5.1 Description
Generates the Node Manager property files, boot.properties and startup.properties, for the specified server. The Node Manager property files are stored relative to the root directory of the specified server. The target root directory must be on the same machine on which you are running the command.

You must specify the name of a server; otherwise, the command will fail.

In the event of an error, the command returns a WLSTException.

3.10.5.2 Syntax
nmGenBootStartupProps(serverName)

3.10.5.3 Example
The following example generates boot.properties and startup.properties in the root directory of the specified server, ms1.

wls:/mydomain/serverConfig> nmGenBootStartupProps('ms1')
Successfully generated boot.properties at c:\Oracle\Middleware\mydomain\servers\ms1\data\nodemanager\boot.properties
Successfully generated startup.properties at c:\Oracle\Middleware\mydomain\servers\ms1\data\nodemanager\startup.properties
wls:/mydomain/serverConfig>

3.10.6 nmKill
Command Category: Node Manager Commands
Use with WLST: Online or Offline

WLST must be connected to Node Manager to run this command.
3.10.6.1 Description
Kills the specified server instance that was started with Node Manager.

If you do not specify a server name using the serverName argument, the argument defaults to myServer, which must match your server name or the command will fail.

If you attempt to kill a server instance that was not started using Node Manager, the command displays an error.

In the event of an error, the command returns a WLSTException.

3.10.6.2 Syntax
nmKill([serverName],[serverType])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverName</td>
<td>Optional. Name of the server to be killed. This argument defaults to myserver.</td>
</tr>
<tr>
<td>serverType</td>
<td>Optional. The type of server to start. This argument defaults to WebLogic. Another valid option is Coherence.</td>
</tr>
</tbody>
</table>

3.10.6.3 Example
The following example kills the server named oamserver.

wls:/nm/oamdomain> nmKill('oamserver')
Killing server 'oamserver' ...
Server oamServer killed successfully.
wls:/nm/oamdomain>

3.10.7 nmLog
Command Category: Node Manager Commands
Use with WLST: Online or Offline
WLST must be connected to Node Manager to run this command.

3.10.7.1 Description
Returns the Node Manager log.

In the event of an error, the command returns a WLSTException.

3.10.7.2 Syntax
nmLog([writer])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>writer</td>
<td>Optional. java.io.Writer object to which you want to stream the log output. This argument defaults to the WLST writer stream.</td>
</tr>
</tbody>
</table>

3.10.7.3 Example
The following example displays the Node Manager log.

wls:/nm/oamdomain> nmLog()
Successfully retrieved the Node Manager log and written.
wls:/nm/oamdomain>
### 3.10.8 nmServerLog

**Command Category:** Node Manager Commands

**Use with WLST:** Online or Offline

WLST must be connected to Node Manager to run this command.

**3.10.8.1 Description**

Returns the server output log of the server that was started with Node Manager.

In the event of an error, the command returns a WLSTException.

**3.10.8.2 Syntax**

```java
nmServerLog([serverName], [writer], [serverType])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverName</td>
<td>Optional. Name of the server for which you want to display the server output log. This argument defaults to myserver.</td>
</tr>
<tr>
<td>writer</td>
<td>Optional. <code>java.io.Writer</code> object to which you want to stream the log output. This argument defaults to the WLSTInterpreter standard out, if not specified.</td>
</tr>
<tr>
<td>serverType</td>
<td>Optional. The type of server to start. This argument defaults to WebLogic. Another valid option is Coherence.</td>
</tr>
</tbody>
</table>

**3.10.8.3 Example**

The following example displays the server output log for the `oamserver` server and writes the log output to `myWriter`.

```bash
wls:/nm/oamdomain> nmServerLog('oamserver',myWriter)
Successfully retrieved the server log and written.
```

### 3.10.9 nmServerStatus

**Command Category:** Node Manager Commands

**Use with WLST:** Online or Offline

WLST must be connected to Node Manager to run this command.

**3.10.9.1 Description**

Returns the status of the server that was started with Node Manager.

In the event of an error, the command returns a WLSTException.

**3.10.9.2 Syntax**

```java
nmServerStatus([serverName], [serverType])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverName</td>
<td>Optional. Name of the server for which you want to display the status. This argument defaults to myserver.</td>
</tr>
<tr>
<td>serverType</td>
<td>Optional. The type of server to start. This argument defaults to WebLogic. Another valid option is Coherence.</td>
</tr>
</tbody>
</table>
3.10.9.3 Example
The following example displays the status of the server named oamserver, which was started with Node Manager.

```
  wls:/nm/oamdomain> nmServerStatus('oamserver')
  RUNNING
  wls:/nm/oamdomain>
```

3.10.10 nmStart
Command Category: Node Manager Commands
Use with WLST: Online or Offline
WLST must be connected to Node Manager to run this command.

3.10.10.1 Description
Starts a server in the current WebLogic domain using Node Manager.
In the event of an error, the command returns a WLSTException.

```
  Note: boot.properties must exist in order to start a server with nmStart. If this is the first time you are starting a server, you must manually create it in order to use nmStart.

  Alternatively, you can use the nmStartprops argument to provide user credentials (after connecting to Node Manager):

  prps = makePropertiesObject("username=weblogic, password=welcome1")
  nmStart("AdminServer", props=prps)
```

3.10.10.2 Syntax
```
  nmStart([serverName], [domainDir], [props], [writer], [serverType])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverName</td>
<td>Optional. Name of the server to be started.</td>
</tr>
<tr>
<td>domainDir</td>
<td>Optional. Domain directory of the server to be started. This argument defaults to the directory from which you started WLST.</td>
</tr>
<tr>
<td>props</td>
<td>Optional. System properties to apply to the new server.</td>
</tr>
<tr>
<td>writer</td>
<td>Optional. java.io.Writer object to which the server output is written. This argument defaults to the WLST writer.</td>
</tr>
<tr>
<td>serverType</td>
<td>Optional. The type of server to start. This argument defaults to WebLogic. Another valid option is Coherence.</td>
</tr>
</tbody>
</table>

3.10.10.3 Example
The following example starts the managed1 server in the current WebLogic domain using Node Manager.

```
  wls:/nm/mydomain> nmStart("managed1")
  Starting server managed1 ...
  Server managed1 started successfully
  wls:/nm/mydomain>
```
The following example starts the Administration Server in the specified WebLogic domain using Node Manager. In this example, the prps variable stores the system property settings and is passed to the command using the props argument.

```shell
wls:/nm/mydomain> prps = makePropertiesObject("weblogic.ListenPort=8001")
wls:/nm/mydomain> nmStart("AdminServer", props=prps)
Starting server AdminServer...
Server AdminServer started successfully
wls:/nm/mydomain>
```

### 3.10.11 nmVersion

**Command Category:** Node Manager Commands

**Use with WLST:** Online or Offline

WLST must be connected to Node Manager to run this command.

#### 3.10.11.1 Description

Returns the Node Manager version.

In the event of an error, the command returns a WLSTException.

#### 3.10.11.2 Syntax

```shell
nmVersion()
```

#### 3.10.11.3 Example

The following example displays the Node Manager version.

```shell
wls:/nm/oamdomain> nmVersion()
The Node Manager version that you are currently connected to is 9.0.0.0
wls:/nm/oamdomain>
```

### 3.10.12 startNodeManager

**Command Category:** Node Manager Commands

**Use with WLST:** Online or Offline

#### 3.10.12.1 Description

Starts Node Manager on the same computer that is running WLST.

---

**Notes:** The WebLogic Server custom installation process optionally installs and starts Node Manager as a Windows service on Windows systems. For more information, see “About Installing Node Manager as a Windows Service” in the [Oracle WebLogic Server Installation Guide](#). In this case, you do not need to start the Node Manager manually.

In production environments, Oracle recommends that you do not use the `startNodeManager` command to start Node Manager. The recommended approach is to install Node Manager as a service or daemon, or to use the `startNodeManager.sh` or `startNodeManager.cmd` script.

If Node Manager is already running when you invoke the `startNodeManager` command, the following message is displayed:
A Node Manager has already been started. Cannot start another Node Manager process via WLST.

In the event of an error, the command returns a WLSTException.

### 3.10.12 Syntax

```plaintext
startNodeManager([verbose], [nmProperties])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>verbose</td>
<td>Optional. Boolean value specifying whether WLST starts Node Manager in verbose mode. This argument defaults to false, disabling verbose mode.</td>
</tr>
<tr>
<td>nmProperties</td>
<td>Optional. Comma-separated list of Node Manager properties, specified as name-value pairs. Node Manager properties include, but are not limited to, the following: NodeManagerHome, ListenAddress, ListenPort, and PropertiesFile.</td>
</tr>
</tbody>
</table>

### 3.10.12.3 Example

The following example displays the Node Manager server version.

```plaintext
wls:/mydomain/serverConfig> startNodeManager(verbose='true',
NodeManagerHome='c:/Oracle/Middleware/wlserver_10.3/common/nodemanager',
ListenPort='6666', ListenAddress='myhost'))
Launching Node Manager ...
Successfully launched the Node Manager.
The Node Manager process is running independent of the WLST process
Exiting WLST will not stop the Node Manager process. Please refer to the Node Manager logs for more information.
The Node Manager logs will be under c:\Oracle\Middleware\wlserver_10.3\common\nodemanager.
wls:/mydomain/serverConfig>
```

### 3.10.13 stopNodeManager

Command Category: Node Manager Commands

Use with WLST: Online or Offline

#### 3.10.13.1 Description

Stops the Node Manager process.

**Note:** In order to stop the Node Manager process, you must have either started Node Manager with `startNodeManager`, or Node Manager must have been started with the property `QuitEnabled=true`. You can configure this property in `$WLS_HOME/common/nodemanager.properties`. This allows you to connect to the Node Manager to shut it down.

If the Node Manager is not running when you invoke the `stopNodeManager` command, the following message is displayed:

`Cannot stop the Node Manager unless you are connected to it.`
3.10.13.2 Syntax

custom

domainConfig

domainCustom

domainRuntime

edit

jndi

serverConfig

serverRuntime

3.10.13.3 Example

The following example stops the Node Manager process for the base_domain domain.

wls:/nm/base_domain> stopNodeManager()
Stopped Node Manager Process successfully
wls:/offline>

3.11 Tree Commands

Use the WLST tree commands, listed in Table 3–12, to navigate among MBean hierarchies.

Table 3–12  Tree Commands for WLST Configuration

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>custom</td>
<td>Navigate to the root of custom MBeans that are registered in the server.</td>
<td>Online</td>
</tr>
<tr>
<td>domainConfig</td>
<td>Navigate to the last MBean to which you navigated in the domain configuration hierarchy or to the root of the hierarchy, DomainMBean.</td>
<td>Online</td>
</tr>
<tr>
<td>domainCustom</td>
<td>Navigate to the root of custom MBeans that are registered in the Domain Runtime MBean Server.</td>
<td>Online</td>
</tr>
<tr>
<td>domainRuntime</td>
<td>Navigate to the last MBean to which you navigated in the domain runtime hierarchy or to the root of the hierarchy, DomainRuntimeMBean.</td>
<td>Online</td>
</tr>
<tr>
<td>edit</td>
<td>Navigate to the last MBean to which you navigated in the edit configuration MBean hierarchy or to the root of the hierarchy, DomainMBean.</td>
<td>Online</td>
</tr>
<tr>
<td>jndi</td>
<td>Navigates to the JNDI tree for the server to which WLST is currently connected.</td>
<td>Online</td>
</tr>
<tr>
<td>serverConfig</td>
<td>Navigate to the last MBean to which you navigated in the configuration MBean hierarchy or to the root of the hierarchy, DomainMBean.</td>
<td>Online</td>
</tr>
<tr>
<td>serverRuntime</td>
<td>Navigate to the last MBean to which you navigated in the runtime MBean hierarchy or to the root of the hierarchy, ServerRuntimeMBean.</td>
<td>Online</td>
</tr>
</tbody>
</table>

3.11.1 custom

Command Category: Tree Commands

Use with WLST: Online

3.11.1.1 Description

Navigates to the root of custom MBeans that are registered in the Runtime MBean Server. WLST navigates, interrogates, and edits custom MBeans as it does domain MBeans; however, custom MBeans cannot use the cmo variable because a stub is not available.
The `custom` command is available when WLST is connected to an Administration Server instance or a Managed Server instance. When connected to a WebLogic Integration or WebLogic Portal server, WLST can interact with all the WebLogic Integration or WebLogic Portal server MBeans.

For more information about custom MBeans, see *Developing Custom Management Utilities With JMX for Oracle WebLogic Server*.

In the event of an error, the command returns a `WLSTException`.

---

**Note:** When navigating to the `custom` tree, WLST queries all MBeans in the compatibility MBean server, the runtime MBean server, and potentially the JVM platform MBean server to locate the custom MBeans. Depending on the number of MBeans in the current WebLogic domain, this process may take a few minutes, and WLST may not return a prompt right away.

---

**Note:** You can also navigate to custom MBeans on the Domain Runtime MBean Server using the `domainCustom()` command. See Section 3.11.3, "domainCustom," for more information.

### 3.11.1.2 Syntax

custom()

### 3.11.1.3 Example

The following example navigates from the configuration MBean hierarchy to the custom MBean hierarchy on a Administration Server instance.

```
wm:/mydomain/serverConfig> custom()
Location changed to custom tree. This is a writeable tree with No root. For more help, use help('custom')
wls:/mydomain/custom>
```

### 3.11.2 domainConfig

Command Category: Tree Commands

Use with WLST: Online

#### 3.11.2.1 Description

Navigates to the last MBean to which you navigated in the domain Configuration hierarchy or to the root of the hierarchy, DomainMBean. This read-only hierarchy stores the configuration MBeans that represent your current WebLogic domain.

In the event of an error, the command returns a `WLSTException`.

#### 3.11.2.2 Syntax

domainConfig()

#### 3.11.2.3 Example

The following example navigates from the configuration MBean hierarchy to the WebLogic domain Configuration hierarchy on an Administration Server instance.

```
wls:/mydomain/serverConfig> domainConfig()
```
Location changed to domainConfig tree. This is a read-only tree with DomainMBean as the root.
For more help, use help('domainConfig')

```
wlst:/mydomain/domainConfig> ls()
```
```
dr-- AppDeployments
dr-- BridgeDestinations
dr-- Clusters
dr-- CustomResources
dr-- DeploymentConfiguration
dr-- Deployments
dr-- EmbeddedLDAP
dr-- ErrorHandlings
dr-- FileStores
dr-- InternalAppDeployments
dr-- InternalLibraries
dr-- JDBCDataSourceFactories
dr-- JDBCSStores
dr-- JDBCSystemResources
dr-- JMSBridgeDestinations
dr-- JMSInteropModules
dr-- JMSServers
dr-- JMSSystemResources
...
```

wlst:/mydomain/domainConfig>

### 3.11.3 domainCustom

Command Category: Tree Commands

Use with WLST: Online

#### 3.11.3.1 Description

Navigates to the domain custom tree of custom MBeans that are registered in the Domain Runtime MBean Server. WLST navigates, interrogates, and edits domain custom MBeans as it does domain MBeans; however, domain custom MBeans cannot use the cmo variable because a stub is not available.

**Note:** When navigating to the domainCustom tree, WLST queries all MBeans in the Domain Runtime MBean Server, the Runtime MBean Servers on each server, and potentially the JVM platform MBean server to locate the custom MBeans. Depending on the number of MBeans in the current WebLogic domain, this process may take a few minutes, and WLST may not return a prompt right away. It is recommended that a JMX query Object Name Pattern be specified to limit the amount of searching performed.

The `domainCustom` command is available only when WLST is connected to an Administration Server instance.

For more information about the Domain Runtime MBean Server, see "Understanding WebLogic Server MBeans" in *Developing Custom Management Utilities With JMX for Oracle WebLogic Server*.

In the event of an error, the command returns a WLSTException.
3.11.3.2 Syntax

domainCustom(ObjectNamePattern)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| ObjectNamePattern| A JMX query pattern, such as sip:* . The default value is null or *:* .

3.11.3.3 Example

The following example navigates from the configuration MBean hierarchy to the domain custom MBean hierarchy on an Administration Server instance:

```
ws:/mydomain/serverConfig> domainCustom()
Location changed to domain custom tree. This is a writeable tree with No root. For more help, use help('domainCustom').
```

```
ws:/mydomain/domainCustom
```

3.11.4 domainRuntime

Command Category: Tree Commands

Use with WLST: Online

3.11.4.1 Description

Navigates to the last MBean to which you navigated in the domain Runtime hierarchy or to the root of the hierarchy, DomainRuntimeMBean. This read-only hierarchy stores the runtime MBs that represent your current WebLogic domain.

In the event of an error, the command returns a WLSTException.

3.11.4.2 Syntax

domainRuntime()

3.11.4.3 Example

The following example navigates from the configuration MBean hierarchy to the domain Runtime hierarchy on an Administration Server instance.

```
ws:/mydomain/serverConfig> domainRuntime()
ws:/mydomain/domainRuntime> ls()
dr-- AppRuntimeStateRuntime
dr-- DeployerRuntime
dr-- DomainServices
dr-- LogRuntime
dr-- MessageDrivenControlEJBRuntime
dr-- MigratableServiceCoordinatorRuntime
dr-- MigrationDataRuntimes
dr-- SNMPAgentRuntime
dr-- ServerLifeCycleRuntimes
dr-- ServerRuntimes
dr-- ServerServices
```

```
-r-- ActivationTime Mon Aug 01 11:41:25 EDT 2005
-r-- Clusters null
-r-- MigrationDataRuntimes null
-r-- Name sampleMedRecDomain
-rw- Parent null
-r-- SNMPAgentRuntime null
3.11.5 edit

Command Category: Tree Commands

Use with WLST: Online

3.11.5.1 Description
Navigates to the last MBean to which you navigated in the edit configuration MBean hierarchy or to the root of the hierarchy, DomainMBean. This writable hierarchy stores all of the configuration MBeans that represent your current WebLogic domain.

| -r-- | Type                               | DomainRuntime |
|      | restartSystemResource              | Void :        |
|      | WebLogicMBean(weblogic.management.configuration.SystemResourceMBean) | wls:/mydomain/domainRuntime> |

In the event of an error, the command returns a WLSTException.

3.11.5.2 Syntax
edit()

3.11.5.3 Example
The following example illustrates how to navigate from the server configuration MBean hierarchy to the editable copy of the domain configuration MBean hierarchy, in an Administration Server instance.

wls:/myserver/serverConfig> edit()
Location changed to edit tree. This is a writeable tree with DomainMBean as the root.
For more help, use help('edit')
wls:/myserver/edit !> ls()
   dr-- AppDeployments
   dr-- BridgeDestinations
   dr-- Clusters
   dr-- DeploymentConfiguration
   dr-- Deployments
   dr-- EmbeddedLDAP
   ...
wls:/myserver/edit !>
3.11.6 jndi

Command Category: Tree Commands
Use with WLST: Online

3.11.6.1 Description
Navigates to the JNDI tree for the server to which WLST is currently connected. This read-only tree holds all the elements that are currently bound in JNDI.
In the event of an error, the command returns a WLSTException.

3.11.6.2 Syntax
jndi()

3.11.6.3 Example
The following example navigates from the runtime MBean hierarchy to the Domain JNDI tree on an Administration Server instance.

wls:/myserver/runtime> jndi()
Location changed to jndi tree. This is a read-only tree with No root. For more help, use help('jndi')
wls:/myserver/jndi> ls()
dr-- ejb
dr-- javax
dr-- jms
dr-- weblogic
...

3.11.7 serverConfig

Command Category: Tree Commands
Use with WLST: Online

3.11.7.1 Description
Navigates to the last MBean to which you navigated in the configuration MBean hierarchy or to the root of the hierarchy, DomainMBean.
This read-only hierarchy stores the configuration MBeans that represent the server to which WLST is currently connected. The MBean attribute values include any command-line overrides that a user specified while starting the server.
In the event of an error, the command returns a WLSTException.
For more information, see "Navigating Among MBean Hierarchies" in Oracle WebLogic Scripting Tool.

3.11.7.2 Syntax
serverConfig()

3.11.7.3 Example
The following example navigates from the domain runtime MBean hierarchy to the configuration MBean hierarchy on an Administration Server instance.

wls:/mydomain/domainRuntime> serverConfig()
wls:/mydomain/serverConfig>
3.11.8 serverRuntime

Command Category: Tree Commands

Use with WLST: Online

3.11.8.1 Description

Navigates to the last MBean to which you navigated in the runtime MBean hierarchy or to the root of the hierarchy, ServerRuntimeMBean. This read-only hierarchy stores the runtime MBeans that represent the server to which WLST is currently connected.

In the event of an error, the command returns a WLSTException.

3.11.8.2 Syntax

serverRuntime()

3.11.8.3 Example

The following example navigates from the configuration MBean hierarchy to the runtime MBean hierarchy on an Administration Server instance.

wls:/mydomain/serverConfig> serverRuntime()
Location changed to serverRuntime tree. This is a read-only tree with ServerRuntimeMBean as the root.
For more help, use help('serverRuntime')
wls:/mydomain/serverRuntime>

3.12 WLST Variable Reference

Table 3–13 describes WLST variables and their common usage. All variables are initialized to default values at the start of a user session and are changed according to the user interaction with WLST.
<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>cmgr</td>
<td>The cmgr variable is set to the ConfigurationManagerMBean. You can use this variable to get the current value of any ConfigurationManagerMBean attribute.</td>
<td>wls:/mydomain/edit&gt; cmgr.getCurrentEditor()</td>
</tr>
<tr>
<td></td>
<td></td>
<td>'weblogic'</td>
</tr>
<tr>
<td>cmo</td>
<td>Current Management Object. The cmo variable is set to the bean instance to which you navigate using WLST. You can use this variable to perform any get, set, or invoke method on the current bean instance.</td>
<td>wls:/mydomain/edit&gt; cmo.setAdministrationPort(9092)</td>
</tr>
<tr>
<td></td>
<td>WLST sets the variable to the current WLST path. For example, when you change to the serverConfig hierarchy, cmo is set to DomainMBean. When you change to the serverRuntime hierarchy, cmo is set to ServerRuntimeMBean.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>The variable is available in all WLST hierarchies except custom and jndi.</td>
<td></td>
</tr>
<tr>
<td>connected</td>
<td>Boolean value specifying whether WLST is connected to a running server. WLST sets this variable to true when connected to a running server; otherwise, WLST sets it to false.</td>
<td>wls:/mydomain/serverConfig&gt; print connected</td>
</tr>
<tr>
<td></td>
<td></td>
<td>false</td>
</tr>
<tr>
<td>domainName</td>
<td>Name of the WebLogic domain to which WLST is connected.</td>
<td>wls:/mydomain/serverConfig&gt; print domainName</td>
</tr>
<tr>
<td></td>
<td></td>
<td>mydomain</td>
</tr>
<tr>
<td>domainRuntimeService</td>
<td>DomainRuntimeServiceMBean MBean. This variable is available only when WLST is connected to the Administration Server.</td>
<td>wls:/mydomain/serverConfig&gt; domainService.getServerName()</td>
</tr>
<tr>
<td></td>
<td></td>
<td>'myserver'</td>
</tr>
<tr>
<td>editService</td>
<td>EditServiceMBean MBean. This variable is available only when WLST is connected to the Administration Server.</td>
<td>wls:/mydomain/edit&gt; dc = editService.getDomainConfiguration()</td>
</tr>
<tr>
<td>exitonerror</td>
<td>Boolean value specifying whether WLST terminates script execution when it encounters an exception. This variable defaults to true, indicating that script execution is terminated when WLST encounters an error. This variable is not applicable when running WLST in interactive mode.</td>
<td>wls:/mydomain/serverConfig&gt; print exitonerror</td>
</tr>
<tr>
<td></td>
<td></td>
<td>true</td>
</tr>
<tr>
<td>home</td>
<td>Represents the local MBeanHome.</td>
<td>wls:/mydomain/serverConfig&gt; print home</td>
</tr>
<tr>
<td></td>
<td></td>
<td>weblogic.rmi.internal.BasicRemoteRef - hostID: '-hostID: [7001,7001,-1,-1,-1,-1,-1]:mydomain:Admin Server', oid: '260', channel: 'null'</td>
</tr>
<tr>
<td>isAdminServer</td>
<td>Boolean value specifying whether WLST is connected to a WebLogic Administration Server instance. WLST sets this variable to true if WLST is connected to a WebLogic Administration Server; otherwise, WLST sets it to false.</td>
<td>wls:/mydomain/serverConfig&gt; print isAdminServer</td>
</tr>
<tr>
<td></td>
<td></td>
<td>true</td>
</tr>
</tbody>
</table>
**Table 3–13 (Cont.) WLST Variables**

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbs</td>
<td>MBeanServerConnection object that corresponds to the current location in the hierarchy.</td>
<td>wls:/mydomain/serverConfig&gt; mbs.isRegistered(ObjectName('mydomain: Name=mydomain, Type=Domain'))</td>
</tr>
<tr>
<td>recording</td>
<td>Boolean value specifying whether WLST is recording commands. WLST sets this variable to true when the startRecording command is entered; otherwise, WLST sets this variable to false.</td>
<td>wls:/mydomain/serverConfig&gt; print recording true</td>
</tr>
<tr>
<td>runtimeService</td>
<td>RuntimeServiceMBean MBean.</td>
<td>wls:/mydomain/serverConfig&gt; sr=runtimeService.getServerRuntime()</td>
</tr>
<tr>
<td>serverName</td>
<td>Name of the server to which WLST is connected.</td>
<td>wls:/mydomain/serverConfig&gt; print serverName myserver</td>
</tr>
<tr>
<td>typeService</td>
<td>TypeServiceMBean MBean.</td>
<td>wls:/mydomain/serverConfig&gt; mi=typeService.getMBeanInfo('weblogic. management.configuration.ServerMBean')</td>
</tr>
<tr>
<td>username</td>
<td>Name of user currently connected to WLST.</td>
<td>wls:/mydomain/serverConfig&gt; print username weblogic</td>

Infrastructure Security Custom WLST Commands

The following sections describe the Oracle Fusion Middleware Infrastructure Security custom WLST commands in detail. Topics include:

- Section 4.1, "Overview of WSLT Security Commands"
- Section 4.2, "Audit Configuration Commands"
- Section 4.3, "SSL Configuration Commands"
- Section 4.4, "Oracle Identity Federation Commands"
- Section 4.5, "Directory Integration Platform Commands"
- Section 4.6, "Security Commands"
- Section 4.7, "Oracle Access Manager Commands"
- Section 4.8, "Oracle Security Token Service"

For additional information about Oracle Platform Security Services, see Oracle Fusion Middleware Security Guide.

---

**Note:** To use the Infrastructure Security custom WLST commands, you must invoke the WLST script from the Oracle Common home. See "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator’s Guide.

### 4.1 Overview of WSLT Security Commands

WLST security commands are divided into the following categories:

<table>
<thead>
<tr>
<th>Command Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Audit Configuration Commands</strong></td>
<td>View and manage audit policies and the audit repository configuration</td>
</tr>
<tr>
<td><strong>SSL Configuration Commands</strong></td>
<td>View and manage wallets, JKS keystores, and SSL configuration for Oracle HTTP Server, Oracle WebCache, Oracle Internet Directory, and Oracle Virtual Directory components.</td>
</tr>
<tr>
<td><strong>Oracle Identity Federation Commands</strong></td>
<td>View and manage configuration for Oracle Identity Federation</td>
</tr>
</tbody>
</table>
4.2 Audit Configuration Commands

Use the WLST commands listed in Table 4-2 to view and manage audit policies and the audit repository configuration.

Table 4-2  WLST Audit Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>getNonJavaEEAuditMBeanName</td>
<td>Display the mBean name for a non-Java EE component.</td>
<td>Online</td>
</tr>
<tr>
<td>getAuditPolicy</td>
<td>Display audit policy settings.</td>
<td>Online</td>
</tr>
<tr>
<td>setAuditPolicy</td>
<td>Update audit policy settings.</td>
<td>Online</td>
</tr>
<tr>
<td>getAuditRepository</td>
<td>Display audit repository settings.</td>
<td>Online</td>
</tr>
<tr>
<td>setAuditRepository</td>
<td>Update audit repository settings.</td>
<td>Online</td>
</tr>
<tr>
<td>listAuditEvents</td>
<td>List audit events for one or all components.</td>
<td>Online</td>
</tr>
<tr>
<td>exportAuditConfig</td>
<td>Export a component's audit configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>importAuditConfig</td>
<td>Import a component's audit configuration.</td>
<td>Online</td>
</tr>
</tbody>
</table>

For more information, see the Oracle Fusion Middleware Security Guide.

4.2.1 getNonJavaEEAuditMBeanName

Online command that displays the mbean name for non-Java EE components.

4.2.1.1 Description

This command displays the mbean name for non-Java EE components given the instance name, component name, component type, and the name of the Oracle WebLogic Server on which the component’s audit mbean is running. The mbean name is a required parameter to other audit WLST commands when managing a non-Java EE component.

4.2.1.2 Syntax

getNonJavaEEAuditMBeanName(instName, compName, compType, srvName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
</tbody>
</table>
4.2.1.3 Example
The following interactive command displays the mBean name for an Oracle Internet Directory:

```
wlsc:/mydomain/serverConfig> getNonJavaEEAuditMBeanName(instName='inst1', compName='oid1', compType='oid', svrName='AdminServer')
```

4.2.2 getAuditPolicy
Online command that displays the audit policy settings.

4.2.2.1 Description
This command displays audit policy settings including the filter preset, special users, custom events, maximum log file size, and maximum log directory size. The component mbean name is required for non-Java EE components like Oracle Internet Directory and Oracle Virtual Directory.

```
Note: You can obtain a non-Java EE component's MBean name using the getNonJavaEEAuditMBeanName command.
```

4.2.2.2 Syntax
getAuditPolicy([mbeanName])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbeanName</td>
<td>Specifies the name of the component audit MBean for non-Java EE components.</td>
</tr>
</tbody>
</table>

4.2.2.3 Examples
The following command displays the audit settings for a Java EE component:

```
wlsc:/mydomain/serverConfig> getAuditPolicy()
Location changed to domainRuntime tree. This is a read-only tree with DomainMBean as the root.
For more help, use help(domainRuntime)

FilterPreset:All
Max Log File Size:104857600
Max Log Dir Size:0
```

The following command displays the audit settings for MBean CSAuditProxyMBean:

```
wls:/mydomain/serverConfig>
getAuditPolicy(on='oracle.security.audit.test:type=CSAuditMBean, name=CSAuditProxyMBean')
```

4.2.3 setAuditPolicy
Online command that updates an audit policy.

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are ohs, oid, ovd, and WebCache.</td>
</tr>
<tr>
<td>svrName</td>
<td>Specifies the name of the Oracle WebLogic Server.</td>
</tr>
</tbody>
</table>
4.2.3.1 Description
Online command that configures the audit policy settings. You can set the filter preset, add or remove users, and add or remove custom events. The component mbean name is required for non-Java EE components like Oracle Internet Directory and Oracle Virtual Directory.

**Note:** You can obtain a non-Java EE component’s MBean name using the `getNonJavaEEAuditMBeanName` command.

4.2.3.2 Syntax
```
setAuditPolicy([mbeanName],[filterPreset],[addSpecialUsers],
[removeSpecialUsers],[addCustomEvents],[removeCustomEvents])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbeanName</td>
<td>Specifies the name of the component audit MBean for non-Java EE components.</td>
</tr>
<tr>
<td>filterPreset</td>
<td>Specifies the filter preset to be changed.</td>
</tr>
<tr>
<td>addSpecialUsers</td>
<td>Specifies the special users to be added.</td>
</tr>
<tr>
<td>removeSpecialUsers</td>
<td>Specifies the special users to be removed.</td>
</tr>
<tr>
<td>addCustomEvents</td>
<td>Specifies the custom events to be added.</td>
</tr>
<tr>
<td>removeCustomEvents</td>
<td>Specifies the custom events to be removed.</td>
</tr>
</tbody>
</table>

4.2.3.3 Examples
The following interactive command sets audit policy to `None` level, and adds users `user2` and `user3` while removing `user1` from the policy:

```
wls:/mydomain/serverConfig> setAuditPolicy (filterPreset= 'None',addSpecialUsers='user2,user3',removeSpecialUsers='user1')
```

```
wls:/mydomain/serverConfig> getAuditPolicy();
Already in Domain Runtime Tree
FilterPresets:None
Special Users:user2,user3
Max Log File Size:104857600
Max Log Dir Size:0
```

The following interactive command adds login events while removing logout events from the policy:

```
wls:/mydomain/serverConfig> setAuditPolicy(filterPreset= 'Custom',addCustomEvents='UserLogin',removeCustomEvents='UserLogout')
```

The following interactive command sets audit policy to a `Low` level:

```
wls:/IDMDomain/domainRuntime> setAuditPolicy(filterPreset='Low');
Audit Policy Information updated successfully
```

```
wls:/IDMDomain/domainRuntime> getAuditPolicy();
Already in Domain Runtime Tree
FilterPresets:Low
Max Log File Size:104857600
Max Log Dir Size:0
```
The following command sets a custom filter to audit the CheckAuthorization event:

```
setAuditPolicy(filterPreset='Custom',
addCustomEvents='JPS:CheckAuthorization');
```

Audit Policy Information updated successfully

```
getAuditPolicy();
```

FilterPreset: Custom
Special Users: user1
Max Log File Size: 104857600
Max Log Dir Size: 0
Custom Events: JPS:CheckAuthorization

### 4.2.4 getAuditRepository

Online command that displays audit repository settings.

#### 4.2.4.1 Description

This command displays audit repository settings for Java EE components and applications (for other components like Oracle Internet Directory, the repository configuration resides in opmn.xml). Also displays database configuration if the repository is a database type.

#### 4.2.4.2 Syntax

```
getAuditRepository()
```

#### 4.2.4.3 Example

The following command displays audit repository configuration:

```
getAuditRepository()
```

Repository Type: File

### 4.2.5 setAuditRepository

Online command that updates audit repository settings.

#### 4.2.5.1 Description

This command sets the audit repository settings for Java EE components and applications (for other components like Oracle Internet Directory, the repository is configured by editing opmn.xml).

#### 4.2.5.2 Syntax

```
setAuditRepository([switchToDB],[dataSourceName],[interval])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>switchToDB</td>
<td>If true, switches the repository from file to database.</td>
</tr>
</tbody>
</table>

Infrastructure Security Custom WLST Commands 4-5
4.2.5.3 Examples

The following command switches from a file repository to a database repository:

```sh
wls:/IDMDomain/domainRuntime> setAuditRepository(switchToDB='true');
Already in Domain Runtime Tree

Audit Repository Information updated
```

```sh
wls:/IDMDomain/domainRuntime> getAuditRepository();
Already in Domain Runtime Tree
```

JNDI Name:jdbc/AuditDB
Interval:15
Repository Type:DB

The following interactive command changes audit repository to a specific database and sets the audit loader interval to 14 seconds:

```sh
wls:/mydomain/serverConfig> setAuditRepository(switchToDB='true',dataSourceName='jdbcAuditDB',interval='14')
```

4.2.6 listAuditEvents

Online command that displays a component's audit events.

4.2.6.1 Description

This command displays a component's audit events and attributes. For non-Java EE components, pass the component mbean name as a parameter. Java EE applications and services like Oracle Platform Security Services (OPSS) do not need the mbean parameter. Without a component type, all generic attributes applicable to all components are displayed.

**Note:** You can obtain a non-Java EE component's MBean name using the `getNonJavaEEAuditMBeanName` command.

4.2.6.2 Syntax

```sh
listAuditEvents([mbeanName],[componentType])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>mbeanName</code></td>
<td>Specifies the name of the component MBean.</td>
</tr>
<tr>
<td><code>componentType</code></td>
<td>Specifies the component type.</td>
</tr>
</tbody>
</table>

4.2.6.3 Examples

The following command displays audit events for the Oracle Platform Security Services component:

```sh
wls:/IDMDomain/domainRuntime> listAuditEvents(componentType='JPS');
Already in Domain Runtime Tree
```
Common Attributes
ComponentType
Type of the component. For MAS integrated SystemComponents this is the componentType
InstanceId
Name of the MAS Instance, that this component belongs to
HostId
DNS hostname of originating host
HostNwaddr
IP or other network address of originating host
ModuleId
ID of the module that originated the message. Interpretation is unique within Component ID.
ProcessId
ID of the process that originated the message

The following command displays audit events for Oracle HTTP Server:

```
wls:/mydomain/serverConfig> listAuditEvents(componentType='ohs')
```

The following command displays all audit events:

```
wls:/IDMDomain/domainRuntime> listAuditEvents();
```

Already in Domain Runtime Tree

Components:
DIP
JPS
OIF
OWSM-AGENT
OWSM-PM-EJB
ReportsServer
WS-PolicyAttachment
WebCache
WebServices

Attributes applicable to all components:
ComponentType
InstanceId
HostId
HostNwaddr
ModuleId
ProcessId
OracleHome
HomeInstance
ECID
RID
...

### 4.2.7 exportAuditConfig

Online command that exports a component's audit configuration.

#### 4.2.7.1 Description

This command exports the audit configuration to a file. For non-Java EE components, pass the component mbean name as a parameter. Java EE applications and services like Oracle Platform Security Services (OPSS) do not need the mbean parameter.
4.2.7.2 Syntax
exportAuditConfig([mbeanName],fileName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbeanName</td>
<td>Specifies the name of the non-Java EE component MBean.</td>
</tr>
<tr>
<td>fileName</td>
<td>Specifies the path and file name to which the audit configuration should be exported.</td>
</tr>
</tbody>
</table>

4.2.7.3 Examples
The following interactive command exports the audit configuration for a component:

wls:/mydomain/serverConfig>
exportAuditConfig(on='oracle.security.audit.test:type=CSAuditMBean,
name='CSAuditProxyMBean',fileName='/tmp/auditconfig')

The following interactive command exports the audit configuration for a Java EE component; no mBean is specified:

wls:/mydomain/serverConfig> exportAuditConfig(fileName='/tmp/auditconfig')

Note: You can obtain a non-Java EE component’s MBean name using the `getNonJavaEEAuditMBeanName` command.

4.2.8 importAuditConfig
Online command that imports a component’s audit configuration.

4.2.8.1 Description
This command imports the audit configuration from an external file. For non-Java EE components, pass the component mbean name as a parameter. Java EE applications and services like Oracle Platform Security Services (OPSS) do not need the mbean parameter.

Note: You can obtain a non-Java EE component’s MBean name using the `getNonJavaEEAuditMBeanName` command.

4.2.8.2 Syntax
importAuditConfig([mbeanName],fileName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbeanName</td>
<td>Specifies the name of the non-Java EE component MBean.</td>
</tr>
<tr>
<td>fileName</td>
<td>Specifies the path and file name from which the audit configuration should be imported.</td>
</tr>
</tbody>
</table>

4.2.8.3 Examples
The following interactive command imports the audit configuration for a component:

wls:/mydomain/serverConfig>
importAuditConfig(on='oracle.security.audit.test:type=CSAuditMBean,
name='CSAuditProxyMBean',fileName='/tmp/auditconfig')
The following interactive command imports the audit configuration for a component; no mBean is specified:

```
wl:mydomain/serverConfig> importAuditConfig(fileName='/tmp/auditconfig')
```

## 4.3 SSL Configuration Commands

Use the WLST commands listed in Table 4–3 to view and manage SSL configuration for Oracle Fusion Middleware components.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>addCertificateRequest</td>
<td>Generate a certificate signing request in an Oracle wallet.</td>
<td>Online</td>
</tr>
<tr>
<td>addSelfSignedCertificate</td>
<td>Add a self-signed certificate to an Oracle wallet.</td>
<td>Online</td>
</tr>
<tr>
<td>changeKeyStorePassword</td>
<td>Change the password to a JKS keystore.</td>
<td>Online</td>
</tr>
<tr>
<td>changeWalletPassword</td>
<td>Change the password to an Oracle wallet.</td>
<td>Online</td>
</tr>
<tr>
<td>configureSSL</td>
<td>Set the SSL attributes for a component listener.</td>
<td>Online</td>
</tr>
<tr>
<td>createKeyStore</td>
<td>Create a JKS keystore.</td>
<td>Online</td>
</tr>
<tr>
<td>createWallet</td>
<td>Create an Oracle wallet.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteKeyStore</td>
<td>Delete a JKS keystore.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteWallet</td>
<td>Delete an Oracle wallet.</td>
<td>Online</td>
</tr>
<tr>
<td>exportKeyStore</td>
<td>Export a JKS keystore to a file.</td>
<td>Online</td>
</tr>
<tr>
<td>exportKeyStoreObject</td>
<td>Export an object from a JKS keystore to a file.</td>
<td>Online</td>
</tr>
<tr>
<td>exportWallet</td>
<td>Export an Oracle wallet to a file.</td>
<td>Online</td>
</tr>
<tr>
<td>exportWalletObject</td>
<td>Export an object from an Oracle wallet to a file.</td>
<td>Online</td>
</tr>
<tr>
<td>generateKey</td>
<td>Generate a key pair in a JKS keystore.</td>
<td>Online</td>
</tr>
<tr>
<td>getKeyStoreObject</td>
<td>Display a certificate or other object present in a JKS keystore.</td>
<td>Online</td>
</tr>
<tr>
<td>getSSL</td>
<td>Display the SSL attributes for a component listener.</td>
<td>Online</td>
</tr>
<tr>
<td>getWalletObject</td>
<td>Display a certificate or other object present in an Oracle wallet.</td>
<td>Online</td>
</tr>
<tr>
<td>importKeyStore</td>
<td>Import a JKS keystore from a file.</td>
<td>Online</td>
</tr>
<tr>
<td>importKeyStoreObject</td>
<td>Import a certificate or other object from a file to a JKS keystore.</td>
<td>Online</td>
</tr>
<tr>
<td>importWallet</td>
<td>Import an Oracle wallet from a file.</td>
<td>Online</td>
</tr>
<tr>
<td>importWalletObject</td>
<td>Import a certificate or other object from a file to an Oracle wallet.</td>
<td>Online</td>
</tr>
<tr>
<td>listKeyStoreObjects</td>
<td>List all objects present in a JKS keystore.</td>
<td>Online</td>
</tr>
<tr>
<td>listKeyStores</td>
<td>List all JKS keystores configured for a component instance.</td>
<td>Online</td>
</tr>
<tr>
<td>listWalletObjects</td>
<td>List all objects present in an Oracle wallet.</td>
<td>Online</td>
</tr>
<tr>
<td>listWallets</td>
<td>List all Oracle wallets configured for a component instance.</td>
<td>Online</td>
</tr>
</tbody>
</table>
4.3.1 addCertificateRequest

Online command that generates a certificate signing request in an Oracle wallet.

**4.3.1.1 Description**
This command generates a certificate signing request in Base64 encoded PKCS#10 format in an Oracle wallet for a component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory). To get a certificate signed by a certificate authority (CA), send the certificate signing request to your CA.

**4.3.1.2 Syntax**
```
addCertificateRequest(instName, compName, compType, walletName, password, DN, keySize)
```

**Argument Definition**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'ohs', 'oid', and 'webcache'.</td>
</tr>
<tr>
<td>walletName</td>
<td>Specifies the name of the wallet file.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the wallet.</td>
</tr>
<tr>
<td>DN</td>
<td>Specifies the Distinguished Name of the key pair entry.</td>
</tr>
<tr>
<td>keySize</td>
<td>Specifies the key size in bits.</td>
</tr>
</tbody>
</table>

**4.3.1.3 Example**
The following command generates a certificate signing request with DN cn=www.acme.com and key size 1024 in wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1:
```
wls:/mydomain/serverConfig> addCertificateRequest('inst1', 'oid1', 'oid', 'wallet1', 'password', 'cn=www.acme.com', '1024')
```

4.3.2 addSelfSignedCertificate

Online command that adds a self-signed certificate.

### 4.3.2.1 Description
This command creates a key pair and wraps it in a self-signed certificate in an Oracle wallet for the specified component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory). Only keys based on the RSA algorithm are generated.

### 4.3.2.2 Syntax
```
addSelfSignedCertificate(instName, compName, compType, walletName, password, DN, keySize)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'ohs', 'oid', and 'webcache'.</td>
</tr>
<tr>
<td>walletName</td>
<td>Specifies the name of the wallet file.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the wallet.</td>
</tr>
<tr>
<td>DN</td>
<td>Specifies the Distinguished Name of the key pair entry.</td>
</tr>
<tr>
<td>keySize</td>
<td>Specifies the key size in bits.</td>
</tr>
</tbody>
</table>

### 4.3.2.3 Example
The following command adds a self-signed certificate with DN `cn=www.acme.com`, key size 1024 to `wallet1`, for Oracle Internet Directory instance `oid1`, in application server instance `inst1`:

```
wls:/mydomain/serverConfig> addSelfSignedCertificate('inst1', 'oid1', 'oid', 'wallet1', 'password', 'cn=www.acme.com', '1024')
```

### 4.3.3 changeKeyStorePassword
Online command that changes the keystore password.

#### 4.3.3.1 Description
This command changes the password of a Java Keystore (JKS) file for an Oracle Virtual Directory instance.

#### 4.3.3.2 Syntax
```
changeKeyStorePassword(instName, compName, compType, keystoreName, currPassword, newPassword)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid value is 'ovd'.</td>
</tr>
<tr>
<td>keystoreName</td>
<td>Specifies the filename of the keystore.</td>
</tr>
<tr>
<td>currPassword</td>
<td>Specifies the current keystore password.</td>
</tr>
<tr>
<td>newPassword</td>
<td>Specifies the new keystore password.</td>
</tr>
</tbody>
</table>
4.3.3 Example
The following command changes the password of file keys.jks for Oracle Virtual Directory instance ovdl in application server instance inst1:

```
wls:/mydomain/serverConfig> changeKeyStorePassword('inst1', 'ovdl', 'ovd','keys.jks', 'currpassword', 'newpassword')
```

4.3.4 changeWalletPassword

Online command that changes the password of an Oracle wallet.

4.3.4.1 Description
This command changes the password of an Oracle wallet for the specified component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory). This command is only applicable to password-protected wallets.

4.3.4.2 Syntax
```
changeWalletPassword(instName, compName, compType, walletName, currPassword, newPassword)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'oid', 'ohs', and 'webcache'.</td>
</tr>
<tr>
<td>walletName</td>
<td>Specifies the filename of the wallet.</td>
</tr>
<tr>
<td>currPassword</td>
<td>Specifies the current wallet password.</td>
</tr>
<tr>
<td>newPassword</td>
<td>Specifies the new wallet password.</td>
</tr>
</tbody>
</table>

4.3.4.3 Example
The following command changes the password for wallet1 from currpassword to newPassword for Oracle HTTP Server instance ohs1 in application server instance inst1:

```
wls:/mydomain/serverConfig> changeWalletPassword('inst1', 'ohs1', 'ohs','wallet1', 'currpassword', 'newpassword')
```

4.3.5 configureSSL

Online command that sets SSL attributes.

4.3.5.1 Description
This command sets the SSL attributes for a component listener. The attributes are specified in a properties file format (name=value). If a properties file is not provided, or it does not contain any SSL attributes, default attribute values are used. For component-specific SSL attribute value defaults, see the chapter “SSL Configuration in Oracle Fusion Middleware” in the Oracle Fusion Middleware Administrator’s Guide.

4.3.5.2 Syntax
```
configureSSL(instName, compName, compType, listener, filePath)
```
4.3.5.3 Examples

The following command configures SSL attributes specified in the properties file `/tmp/ssl.properties` for Oracle Virtual Directory instance `ovd1` in application server instance `inst1`, for listener `listener1`:

```console
wls:/mydomain/serverConfig> configureSSL('inst1', 'ovd1', 'ovd', 'listener1', '/tmp/ssl.properties')
```

The following command configures SSL attributes without specifying a properties file. Since no file is provided, the default SSL attribute values are used:

```console
wls:/mydomain/serverConfig> configureSSL('inst1', 'ovd1', 'ovd', 'listener2')
```

### 4.3.6 createKeyStore

Online command that creates a JKS keystore.

#### 4.3.6.1 Description

This command creates a Java keystore (JKS) for the specified Oracle Virtual Directory instance. For keystore file location and other information, see the chapter "Managing Keystores, Wallets, and Certificates" in the Oracle Fusion Middleware Administrator's Guide.

#### 4.3.6.2 Syntax

```
createKeyStore(instName, compName, compType, keystoreName, password)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>instName</code></td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td><code>compName</code></td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td><code>compType</code></td>
<td>Specifies the type of component. Valid value is 'ovd'.</td>
</tr>
<tr>
<td><code>keystoreName</code></td>
<td>Specifies the filename of the keystore file to be created.</td>
</tr>
<tr>
<td><code>password</code></td>
<td>Specifies the keystore password.</td>
</tr>
</tbody>
</table>

#### 4.3.6.3 Example

The following command creates JKS file `keys.jks` with password `password` for Oracle Virtual Directory instance `ovd1` in application server instance `inst1`:

```console
wls:/mydomain/serverConfig> createKeyStore('inst1', 'ovd1', 'ovd', 'keys.jks', 'password')
```
4.3.7 createWallet

Online command that creates an Oracle wallet.

4.3.7.1 Description
This command creates an Oracle wallet for the specified component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory). Wallets can be of password-protected or auto-login type. For wallet details, see the chapter "Managing Keystores, Wallets, and Certificates" in the Oracle Fusion Middleware Administrator’s Guide.

4.3.7.2 Syntax
createWallet(instName, compName, compType, walletName, password)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'oid', 'ohs', and 'webcache'.</td>
</tr>
<tr>
<td>walletName</td>
<td>Specifies the name of the wallet file to be created.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the wallet password.</td>
</tr>
</tbody>
</table>

4.3.7.3 Examples
The following command creates a wallet named wallet1 with password password, for Oracle HTTP Server instance ohs1 in application server instance inst1:

```
wls:/mydomain/serverConfig> createWallet('inst1', 'ohs1', 'ohs','wallet1', 'password')
```

The following command creates an auto-login wallet named wallet2 for Oracle WebCache instance wc1, in application server instance inst1:

```
wls:/mydomain/serverConfig> createWallet('inst1', 'wc1', 'webcache','wallet2', '')
```

4.3.8 deleteKeyStore

Online command that deletes a keystore.

4.3.8.1 Description
This command deletes a keystore for a specified Oracle Virtual Directory instance.

4.3.8.2 Syntax
deleteKeyStore(instName, compName, compType, keystoreName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid value is 'ovd'.</td>
</tr>
<tr>
<td>keystoreName</td>
<td>Specifies the name of the keystore file to delete.</td>
</tr>
</tbody>
</table>
4.3.8.3 Example
The following command deletes JKS file keys.jks for Oracle Virtual Directory instance ovd1 in application server instance inst1:

```
  wls:/mydomain/serverConfig> deleteKeyStore('inst1', 'ovd1', 'ovd', 'keys.jks')
```

4.3.9 deleteWallet
Online command that deletes an Oracle wallet.

4.3.9.1 Description
This command deletes an Oracle wallet for the specified component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory).

4.3.9.2 Syntax
```
deleteWallet(instName, compName, compType, walletName)
```

4.3.9.3 Example
The following command deletes a wallet named wallet1 for Oracle HTTP Server instance ohs1 in application server instance inst1:

```
  wls:/mydomain/serverConfig> deleteWallet('inst1', 'ohs1', 'ohs', 'wallet1')
```

4.3.10 exportKeyStore
Online command that exports the keystore to a file.

4.3.10.1 Description
This command exports a keystore, configured for the specified Oracle Virtual Directory instance, to a file under the given directory. The exported filename is the same as the keystore name.

4.3.10.2 Syntax
```
exportKeyStore(instName, compName, compType, keystoreName, password, path)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'oid', 'ohs', and 'webcache'.</td>
</tr>
<tr>
<td>walletName</td>
<td>Specifies the name of the wallet file to be deleted.</td>
</tr>
<tr>
<td>keystoreName</td>
<td>Specifies the name of the keystore file.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the keystore.</td>
</tr>
</tbody>
</table>
4.3.10.3 Example

The following command exports the keystore keys.jks for Oracle Virtual Directory instance ovdl to file keys.jks under /tmp:

```
  wls:/mydomain/serverConfig> exportKeyStore('inst1', 'ovd1', 'ovd', 'keys.jks', 'password', '/tmp')
```

4.3.11 exportKeyStoreObject

Online command that exports an object from a keystore to a file.

4.3.11.1 Description

This command exports a certificate signing request, certificate/certificate chain, or trusted certificate present in a Java keystore (JKS) to a file for the specified Oracle Virtual Directory instance. The certificate signing request is generated before exporting the object. The alias specifies the object to be exported.

4.3.11.2 Syntax

```
  exportKeyStoreObject(instName, compName, compType, keystoreName, password, type, path, alias)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid value is 'ovd'.</td>
</tr>
<tr>
<td>keystoreName</td>
<td>Specifies the name of the keystore file.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the keystore.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of the keystore object to be exported. Valid values are 'CertificateRequest', 'Certificate', 'TrustedCertificate' and 'TrustedChain'.</td>
</tr>
<tr>
<td>path</td>
<td>Specifies the absolute path of the directory under which the object is exported as a file named base64.txt.</td>
</tr>
<tr>
<td>alias</td>
<td>Specifies the alias of the keystore object to be exported.</td>
</tr>
</tbody>
</table>

4.3.11.3 Examples

The following command generates and exports a certificate signing request from the key-pair indicated by alias mykey in keys.jks, for Oracle Virtual Directory instance ovdl in application server instance inst1. The certificate signing request is exported under the directory /tmp:

```
  wls:/mydomain/serverConfig> exportKeyStoreObject('inst1', 'ovd1', 'ovd', 'keys.jks', 'password', 'CertificateRequest', '/tmp', 'mykey')
```

The following command exports a certificate or certificate chain indicated by alias mykey in keys.jks, for Oracle Virtual Directory instance ovdl, in application server
instance inst1. The certificate or certificate chain is exported under the directory /tmp:

wls:/mydomain/serverConfig> exportKeyStoreObject('inst1', 'ovd1', 'ovd', 'keys.jks', 'password', 'Certificate', '/tmp', 'mykey')

The following command exports a trusted certificate indicated by alias mykey in keys.jks, for Oracle Virtual Directory instance ovd1, in application server instance inst1. The trusted certificate is exported under the directory /tmp:

wls:/mydomain/serverConfig> exportKeyStoreObject('inst1', 'ovd1', 'ovd', 'keys.jks', 'password', 'TrustedCertificate', '/tmp', 'mykey')

4.3.12 exportWallet

Online command that exports an Oracle wallet.

4.3.12.1 Description

This command exports an Oracle wallet, configured for a specified component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory), to file(s) under the given directory. If the exported file is an auto-login only wallet, the file name is ‘cwallet.sso’. If it is password-protected wallet, two files are created: ‘ewallet.p12’ and ‘cwallet.sso’.

4.3.12.2 Syntax

exportWallet(instName, compName, compType, walletName,password, path)

4.3.12.3 Examples

The following command exports auto-login wallet wallet1 for Oracle Internet Directory instance oid1 to file cwallet.sso under /tmp:

wls:/mydomain/serverConfig> exportWallet('inst1', 'oid1', 'oid', 'wallet1', '', '/tmp')

The following command exports password-protected wallet wallet2 for Oracle Internet Directory instance oid1 to two files, ewallet.p12 and cwallet.sso, under /tmp:

wls:/mydomain/serverConfig> exportWallet('inst1', 'oid1', 'oid', 'wallet2', 'password', '/tmp')

4.3.13 exportWalletObject

Online command that exports a certificate or other wallet object to a file.
4.3.13.1 Description
This command exports a certificate signing request, certificate, certificate chain or trusted certificate present in an Oracle wallet to a file for the specified component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory). DN is used to indicate the object to be exported.

4.3.13.2 Syntax
exportWalletObject(instName, compName, compType, walletName, password, type, path, DN)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'ohs','oid', and 'webcache'.</td>
</tr>
<tr>
<td>walletName</td>
<td>Specifies the name of the wallet file.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the wallet.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of wallet object to be exported. Valid values are 'CertificateRequest', 'Certificate', 'TrustedCertificate' or 'TrustedChain'.</td>
</tr>
<tr>
<td>path</td>
<td>Specifies the absolute path of the directory under which the object is exported as a file base64.txt.</td>
</tr>
<tr>
<td>DN</td>
<td>Specifies the Distinguished Name of the wallet object being exported.</td>
</tr>
</tbody>
</table>

4.3.13.3 Examples
The following command exports a certificate signing request with DN cn=www.acme.com in wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1. The certificate signing request is exported under the directory /tmp:

wls:/mydomain/serverConfig> exportWalletObject('inst1', 'oid1', 'oid','wallet1', 'password', 'CertificateRequest', '/tmp','cn=www.acme.com')

The following command exports a certificate with DN cn=www.acme.com in wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1. The certificate or certificate chain is exported under the directory /tmp:

wls:/mydomain/serverConfig> exportWalletObject('inst1', 'oid1', 'oid','wallet1', 'password', 'Certificate', '/tmp','cn=www.acme.com')

The following command exports a trusted certificate with DN cn=www.acme.com in wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1. The trusted certificate is exported under the directory /tmp:

wls:/mydomain/serverConfig> exportWalletObject('inst1', 'oid1', 'oid','wallet1', 'password', 'TrustedCertificate', '/tmp','cn=www.acme.com')

The following command exports a certificate chain with DN cn=www.acme.com in wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1. The certificate or certificate chain is exported under the directory /tmp:

wls:/mydomain/serverConfig> exportWalletObject('inst1', 'oid1', 'oid','wallet1', 'password', 'TrustedChain', '/tmp','cn=www.acme.com')
4.3.14 generateKey

Online command that generates a key pair in a Java keystore.

4.3.14.1 Description
This command generates a key pair in a Java keystore (JKS) for Oracle Virtual Directory. It also wraps the key pair in a self-signed certificate. Only keys based on the RSA algorithm are generated.

4.3.14.2 Syntax
generateKey(instName, compName, compType, keystoreName, password, DN, keySize, alias, algorithm)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid value is ‘ovd’.</td>
</tr>
<tr>
<td>keystoreName</td>
<td>Specifies the name of the keystore.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the keystore.</td>
</tr>
<tr>
<td>DN</td>
<td>Specifies the Distinguished Name of the key pair entry.</td>
</tr>
<tr>
<td>keySize</td>
<td>Specifies the key size in bits.</td>
</tr>
<tr>
<td>alias</td>
<td>Specifies the alias of the key pair entry in the keystore.</td>
</tr>
<tr>
<td>algorithm</td>
<td>Specifies the key algorithm. Valid value is ‘RSA’.</td>
</tr>
</tbody>
</table>

4.3.14.3 Examples
The following command generates a key pair with DN cn=www.acme.com, key size 1024, algorithm RSA and alias mykey in keys.jks, for Oracle Virtual Directory instance ovd1 in application server instance inst1:

wls:/mydomain/serverConfig> generateKey('inst1', 'ovd1', 'ovd','keys.jks', 'password', 'cn=www.acme.com', '1024', 'mykey', 'RSA')

The following command is the same as above, except it does not explicitly specify the key algorithm:

wls:/mydomain/serverConfig> generateKey('inst1', 'ovd1', 'ovd','keys.jks', 'password', 'cn=www.acme.com', '1024', 'mykey')

4.3.15 getKeyStoreObject

Online command that shows details about a keystore object.

4.3.15.1 Description
This command displays a specific certificate or trusted certificate present in a Java keystore (JKS) for Oracle Virtual Directory. The keystore object is indicated by its index number, as given by the listKeyStoreObjects command. It shows the certificate details including DN, key size, algorithm, and other information.

4.3.15.2 Syntax
generateKey(instName, compName, compType, keystoreName, password, type,
4.3.15.3 Examples
The following command shows a trusted certificate with index 1 present in keys.jks, for Oracle Virtual Directory instance ovd1, in application server instance inst1:

```
wls:/mydomain/serverConfig> getKeyStoreObject('inst1', 'ovd1', 'ovd','keys.jks', 'password', 'TrustedCertificate', '1')
```

The following command shows a certificate with index 1 present in keys.jks, for Oracle Virtual Directory instance ovd1, in application server instance inst1:

```
wls:/mydomain/serverConfig> getKeyStoreObject('inst1', 'ovd1', 'ovd','keys.jks', 'password', 'Certificate', '1')
```

4.3.16 getSSL

Online command that lists the configured SSL attributes.

4.3.16.1 Description
This command lists the configured SSL attributes for the specified component listener. For Oracle Internet Directory, the listener name is always sslport1.

4.3.16.2 Syntax

```
getSSL(instName, compName, compType, listener)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'ovd', 'oid', 'ohs', and 'webcache'.</td>
</tr>
<tr>
<td>listener</td>
<td>Specifies the name of the component listener.</td>
</tr>
</tbody>
</table>

4.3.16.3 Example
The following command shows the SSL attributes configured for Oracle Internet Directory instance oid1, in application server instance inst1, for listener sslport1:

```
wls:/mydomain/serverConfig> getSSL('inst1', 'oid1', 'oid', 'sslport1')
```
4.3.17 **getWalletObject**

Online command that displays information about a certificate or other object in an Oracle wallet.

### 4.3.17.1 Description

This command displays a specific certificate signing request, certificate or trusted certificate present in an Oracle wallet for the specified component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory). The wallet object is indicated by its index number, as given by the `listWalletObjects` command. For certificates or trusted certificates, it shows the certificate details including DN, key size, algorithm and other data. For certificate signing requests, it shows the subject DN, key size and algorithm.

### 4.3.17.2 Syntax

```
getWalletObject(instName, compName, compType, walletName, password, type, index)
```

### 4.3.17.3 Examples

The following command shows certificate signing request details for the object with index 0 present in `wallet1`, for Oracle Internet Directory instance `oid1`, in application server instance `inst1`:

```
wls:/mydomain/serverConfig> getKeyStoreObject('inst1', 'oid1', 'oid','wallet1','password', 'CertificateRequest', '0')
```

The following command shows certificate details for the object with index 0 present in `wallet1`, for Oracle Internet Directory instance `oid1`, in application server instance `inst1`:

```
wls:/mydomain/serverConfig> getKeyStoreObject('inst1', 'oid1', 'oid','wallet1','password', 'Certificate', '0')
```

The following command shows trusted certificate details for the object with index 0, present in `wallet1`, for Oracle Internet Directory instance `oid1`, in application server instance `inst1`:

```
wls:/mydomain/serverConfig> getKeyStoreObject('inst1', 'oid1', 'oid','wallet1','password', 'TrustedCertificate', '0')
```
4.3.18 importKeyStore

Online command that imports a keystore from a file.

4.3.18.1 Description
This command imports a Java keystore (JKS) from a file to the specified Oracle Virtual Directory instance for manageability. The component instance name must be unique.

4.3.18.2 Syntax
importKeyStore(instName, compName, compType, keystoreName, password, filePath)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid value is 'ovd'.</td>
</tr>
<tr>
<td>keystoreName</td>
<td>Specifies the name of the keystore being imported. This name must be unique for this component instance.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the keystore.</td>
</tr>
<tr>
<td>filePath</td>
<td>Specifies the absolute path of the keystore file to be imported.</td>
</tr>
</tbody>
</table>

4.3.18.3 Example
The following command imports the keystore /tmp/keys.jks as file.jks into Oracle Virtual Directory instance ovd1. Subsequently, the keystore is managed through the name file.jks:

```
$ wls:/mydomain/serverConfig> importKeyStore('inst1', 'ovd1', 'ovd', 'file.jks', 'password', '/tmp/keys.jks')
```  

4.3.19 importKeyStoreObject

Online command that imports an object from a file to a keystore.

4.3.19.1 Description
This command imports a certificate, certificate chain, or trusted certificate into a Java keystore (JKS) for Oracle Virtual Directory, assigning it the specified alias which must be unique in the keystore. If a certificate or certificate chain is being imported, the alias must match that of the corresponding key-pair.

4.3.19.2 Syntax
importKeyStoreObject(instName, compName, compType, keystoreName, password, type, filePath, alias)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid value is 'ovd'.</td>
</tr>
<tr>
<td>keystoreName</td>
<td>Specifies the name of the keystore.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the keystore.</td>
</tr>
</tbody>
</table>
4.3.19.3 Examples
The following command imports a certificate or certificate chain from file cert.txt into keys.jks, using alias mykey for Oracle Virtual Directory instance ovd1, in application server instance inst1. The file keys.jks must already have an alias mykey for a key-pair whose public key matches that in the certificate being imported:

```
wls:/mydomain/serverConfig> importKeyStoreObject('inst1', 'ovd', 'keys.jks', 'password', 'Certificate', '/tmp/cert.txt', 'mykey')
```

The following command imports a trusted certificate from file trust.txt into keys.jks using alias mykey1, for Oracle Virtual Directory instance ovd1 in application server instance inst1:

```
wls:/mydomain/serverConfig> importKeyStoreObject('inst1', 'ovd', 'keys.jks', 'password', 'TrustedCertificate', '/tmp/trust.txt', 'mykey1')
```

4.3.20 importWallet
Online command that imports an Oracle wallet from a file.

4.3.20.1 Description
This command imports an Oracle wallet from a file to the specified component instance (Oracle HTTP Server, Oracle WebCache, or Oracle Internet Directory) for manageability. If the wallet being imported is an auto-login wallet, the file path must point to cwallet.sso; if the wallet is password-protected, it must point to ewallet.p12. The wallet name must be unique for the component instance.

4.3.20.2 Syntax
```
importWallet(instName, compName, compType, walletName, password, filePath)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'ohs', 'oid', and 'webcache'.</td>
</tr>
<tr>
<td>walletName</td>
<td>Specifies the name of the wallet being imported. The name must be unique for the component instance.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the wallet.</td>
</tr>
<tr>
<td>filePath</td>
<td>Specifies the absolute path of the wallet file being imported.</td>
</tr>
</tbody>
</table>

4.3.20.3 Examples
The following command imports auto-login wallet file /tmp/cwallet.sso as wallet1 into Oracle Internet Directory instance oid1. Subsequently, the wallet is
managed with the name wallet1. No password is passed since it is an auto-login wallet:

```
> importWallet('inst1', 'oid', 'oid', 'wallet1', '', '/tmp/cwallet.sso')
```

The following command imports password-protected wallet /tmp/ewallet.p12 as wallet2 into Oracle Internet Directory instance oid1. Subsequently, the wallet is managed with the name wallet2. The wallet password is passed as a parameter:

```
> importWallet('inst1', 'oid', 'oid', 'wallet2', 'password', '/tmp/ewallet.p12')
```

## 4.3.21 importWalletObject

Online command that imports a certificate or other object into an Oracle wallet.

### 4.3.21.1 Description

This command imports a certificate, trusted certificate or certificate chain into an Oracle wallet for the specified component instance (Oracle HTTP Server, Oracle WebCache component or Oracle Internet Directory). When importing a certificate, use the same wallet file from which the certificate signing request was generated.

### 4.3.21.2 Syntax

```
importWalletObject(instName, compName, compType, walletName, password, type, filePath)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'ohs', 'oid', and 'webcache'.</td>
</tr>
<tr>
<td>walletName</td>
<td>Specifies the name of the wallet file.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the wallet.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of wallet object to be imported. Valid values are 'Certificate', 'TrustedCertificate' and 'TrustedChain'.</td>
</tr>
<tr>
<td>filePath</td>
<td>Specifies the absolute path of the file containing the wallet object.</td>
</tr>
</tbody>
</table>

### 4.3.21.3 Examples

The following command imports a certificate chain in PKCS#7 format from file chain.txt into wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1:

```
> importWalletObject('inst1', 'oid', 'oid', 'wallet1', 'password', 'TrustedChain', '/tmp/chain.txt')
```

The following command imports a certificate from file cert.txt into wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1:

```
> importWalletObject('inst1', 'oid', 'oid', 'wallet1', 'password', 'Certificate', '/tmp/cert.txt')
```
The following command imports a trusted certificate from file `trust.txt` into `wallet1`, for Oracle Internet Directory instance `oid1`, in application server instance `inst1`:

```
wls:/mydomain/serverConfig> importWalletObject('inst1', 'oid1', 'oid', 'wallet1', 'password', 'TrustedCertificate', '/tmp/trust.txt')
```

### 4.3.22 listKeyStoreObjects

Online command that lists the contents of a keystore.

#### 4.3.22.1 Description

This command lists all the certificates or trusted certificates present in a Java keystore (JKS) for Oracle Virtual Directory.

#### 4.3.22.2 Syntax

```
lisKeyStoreObjects(instName, compName, compType, keystoreName, password, type)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>instName</code></td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td><code>compName</code></td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td><code>compType</code></td>
<td>Specifies the type of component. Valid value is 'ovd'.</td>
</tr>
<tr>
<td><code>keystoreName</code></td>
<td>Specifies the name of the keystore file.</td>
</tr>
<tr>
<td><code>password</code></td>
<td>Specifies the password of the keystore.</td>
</tr>
<tr>
<td><code>type</code></td>
<td>Specifies the type of keystore object to be listed. Valid values are 'Certificate' and 'TrustedCertificate'.</td>
</tr>
</tbody>
</table>

#### 4.3.22.3 Examples

The following command lists all trusted certificates present in `keys.jks`, for Oracle Virtual Directory instance `ovd1`, in application server instance `inst1`:

```
wls:/mydomain/serverConfig> listKeyStoreObjects('inst1', 'ovd1', 'ovd', 'keys.jks', 'password', 'TrustedCertificate')
```

The following command lists all certificates present in `keys.jks`, for Oracle Virtual Directory instance `ovd1`, in application server instance `inst1`:

```
wls:/mydomain/serverConfig> listKeyStoreObjects('inst1', 'ovd1', 'ovd', 'keys.jks', 'password', 'Certificate')
```

### 4.3.23 listKeyStores

Online command that lists all the keystores for a component.

#### 4.3.23.1 Description

This command lists all the Java keystores (JKS) configured for the specified Oracle Virtual Directory instance.

#### 4.3.23.2 Syntax

```
lisKeyStores(instName, compName, compType)
```
4.3.23.3 Example
The following command lists all keystores for Oracle Virtual Directory instance ovd1 in application server instance inst1:

```wls:/mydomain/serverConfig> listKeyStores('inst1', 'ovd1', 'ovd')```

4.3.24 listWalletObjects
Online command that lists all objects in an Oracle wallet.

4.3.24.1 Description
This command lists all certificate signing requests, certificates, or trusted certificates present in an Oracle wallet for the specified component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory).

4.3.24.2 Syntax

```
listWalletObjects(instName, compName, compType, walletName, password, type)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'ohs', 'oid', and 'webcache'.</td>
</tr>
<tr>
<td>walletName</td>
<td>Specifies the name of the wallet file.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the wallet.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of wallet object to be listed. Valid values are 'CertificateRequest', 'Certificate', and 'TrustedCertificate'.</td>
</tr>
</tbody>
</table>

4.3.24.3 Examples
The following command lists all certificate signing requests in wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1:

```wls:/mydomain/serverConfig> listWalletObjects('inst1', 'oid1', 'oid', 'wallet1', 'password', 'CertificateRequest')```

The following command lists all certificates in wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1:

```wls:/mydomain/serverConfig> listWalletObjects('inst1', 'oid1', 'oid', 'wallet1', 'password', 'Certificate')```

The following command lists all trusted certificates in wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1:

```wls:/mydomain/serverConfig> listWalletObjects('inst1', 'oid1', 'oid', 'wallet1', 'password', 'TrustedCertificate')```
4.3.25 listWallets

Online command that lists all wallets configured for a component instance.

4.3.25.1 Description
This command displays all the wallets configured for the specified component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory), and identifies the auto-login wallets.

4.3.25.2 Syntax

```
listWallets(instName, compName, compType)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are ‘ohs’, ‘oid’, and ‘webcache’.</td>
</tr>
</tbody>
</table>

4.3.25.3 Example

The following command lists all wallets for Oracle Internet Directory instance oid1 in application server instance inst1:

```
wls:/mydomain/serverConfig> listWallets('inst1', 'oid1', 'oid')
```

4.3.26 removeKeyStoreObject

Online command that removes an object from a keystore.

4.3.26.1 Description
This command removes a certificate request, certificate, trusted certificate, or all trusted certificates from a Java keystore (JKS) for Oracle Virtual Directory. Use an alias to remove a specific object; no alias is needed if all trusted certificates are being removed.

4.3.26.2 Syntax

```
removeKeyStoreObject(instName, compName, compType, keystoreName, password, type, alias)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid value is ‘ovd’.</td>
</tr>
<tr>
<td>keystoreName</td>
<td>Specifies the name of the keystore file.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the keystore.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of the keystore object to be removed. Valid values are 'Certificate', 'TrustedCertificate' or 'TrustedAll'.</td>
</tr>
<tr>
<td>alias</td>
<td>Specifies the alias of the keystore object to be removed.</td>
</tr>
</tbody>
</table>
4.3.26.3 Examples

The following command removes a certificate or certificate chain denoted by alias mykey in keys.jks, for Oracle Virtual Directory instance ovd1, in application server instance inst1:

```
wls:/mydomain/serverConfig> removeKeyStoreObject('inst1', 'ovd1', 'ovd', 'keys.jks', 'password', 'Certificate','mykey')
```

The following command removes a trusted certificate denoted by alias mykey in keys.jks, for Oracle Virtual Directory instance ovd1, in application server instance inst1:

```
wls:/mydomain/serverConfig> removeKeyStoreObject('inst1', 'ovd1', 'ovd', 'keys.jks', 'password', 'TrustedCertificate','mykey')
```

The following command removes all trusted certificates in keys.jks, for Oracle Virtual Directory instance ovd1, in application server instance inst1. Since no alias is required, the value None is passed for that parameter:

```
wls:/mydomain/serverConfig> removeKeyStoreObject('inst1', 'ovd1', 'ovd', 'keys.jks', 'password', 'TrustedAll',None)
```

4.3.27 removeWalletObject

Online command that removes a certificate or other object from an Oracle wallet.

4.3.27.1 Description

This command removes a certificate signing request, certificate, trusted certificate or all trusted certificates from an Oracle wallet for the specified component instance (Oracle HTTP Server, Oracle WebCache or Oracle Internet Directory). DN is used to indicate the object to be removed.

4.3.27.2 Syntax

```
removeWalletObject(instName, compName, compType, walletName, password, type, DN)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>instName</td>
<td>Specifies the name of the application server instance.</td>
</tr>
<tr>
<td>compName</td>
<td>Specifies the name of the component instance.</td>
</tr>
<tr>
<td>compType</td>
<td>Specifies the type of component. Valid values are 'ohs', 'oid', and 'webcache'.</td>
</tr>
<tr>
<td>walletName</td>
<td>Specifies the name of the wallet file.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the wallet.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of the keystore object to be removed. Valid values are 'CertificateRequest', 'Certificate', 'TrustedCertificate' or 'TrustedAll'.</td>
</tr>
<tr>
<td>DN</td>
<td>Specifies the Distinguished Name of the wallet object to be removed.</td>
</tr>
</tbody>
</table>

4.3.27.3 Examples

The following command removes all trusted certificates from wallet1, for Oracle Internet Directory instance oid1, in application server instance inst1. It is not necessary to provide a DN, so we pass null (denoted by None) for the DN parameter:

```
wls:/mydomain/serverConfig> removeWalletObject('inst1', 'oid1', 'oid', 'wallet1', None)
```
The following command removes a certificate signing request indicated by DN `cn=www.acme.com` from `wallet1`, for Oracle Internet Directory instance `oid1`, in application server instance `inst1`:

```
wlst:/mydomain/serverConfig> removeWalletObject('inst1', 'oid1', 'oid','wallet1', 'password', 'CertificateRequest','cn=www.acme.com')
```

The following command removes a certificate indicated by DN `cn=www.acme.com` from `wallet1`, for Oracle Internet Directory instance `oid1`, in application server instance `inst1`:

```
wlst:/mydomain/serverConfig> removeWalletObject('inst1', 'oid1', 'oid','wallet1', 'password', 'Certificate','cn=www.acme.com')
```

The following command removes a trusted certificate indicated by DN `cn=www.acme.com` from `wallet1`, for Oracle Internet Directory instance `oid1`, in application server instance `inst1`:

```
wlst:/mydomain/serverConfig> removeWalletObject('inst1', 'oid1', 'oid','wallet1', 'password', 'TrustedCertificate','cn=www.acme.com')
```

### 4.4 Oracle Identity Federation Commands

Use the WLST commands listed in Table 4–4 to view and manage configuration for Oracle Identity Federation.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>addConfigListEntryInMap</td>
<td>Add a configuration list entry to a map.</td>
<td>Online</td>
</tr>
<tr>
<td>addConfigMapEntryInMap</td>
<td>Add a configuration map entry to a map.</td>
<td>Online</td>
</tr>
<tr>
<td>addConfigPropertyListEntry</td>
<td>Add a configuration property list entry.</td>
<td>Online</td>
</tr>
<tr>
<td>addConfigPropertyMapEntry</td>
<td>Add a configuration property map entry.</td>
<td>Online</td>

</tbody>
</table>
For more information, see the Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Federation.

### 4.4.1 addConfigListEntryInMap

Online command that adds a property value to a map.

#### 4.4.1.1 Description

This command adds a property value to a nested list inside a map in config.xml.

#### 4.4.1.2 Syntax

```
addConfigListEntryInMap(configName, mapname, listName, value, type)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configname</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20) to be updated.</td>
</tr>
<tr>
<td>mapname</td>
<td>Specifies the name of the property to map to be changed in config.xml.</td>
</tr>
<tr>
<td>listname</td>
<td>Specifies the name of the list.</td>
</tr>
<tr>
<td>value</td>
<td>Specifies the property value.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of property, BOOLEAN or STRING or LONG.</td>
</tr>
</tbody>
</table>

---

### Table 4–4 (Cont.) WLST Commands for Oracle Identity Federation

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>removeConfigMapInMap</td>
<td>Delete a nested configuration map.</td>
<td>Online</td>
</tr>
<tr>
<td>removeConfigProperty</td>
<td>Delete a configuration property.</td>
<td>Online</td>
</tr>
<tr>
<td>removeConfigPropertyList</td>
<td>Delete a property list.</td>
<td>Online</td>
</tr>
<tr>
<td>removeConfigPropertyMap</td>
<td>Delete a property map.</td>
<td>Online</td>
</tr>
<tr>
<td>removeConfigPropertyMapEntry</td>
<td>Delete an entry in the property map.</td>
<td>Online</td>
</tr>
<tr>
<td>removeFederationListInMap</td>
<td>Delete a federation list in the map.</td>
<td>Online</td>
</tr>
<tr>
<td>removeFederationMapInMap</td>
<td>Delete a nested federation map.</td>
<td>Online</td>
</tr>
<tr>
<td>removeFederationMapEntryInMap</td>
<td>Delete a nested federation map entry.</td>
<td>Online</td>
</tr>
<tr>
<td>removeFederationProperty</td>
<td>Delete a federation property.</td>
<td>Online</td>
</tr>
<tr>
<td>removeFederationPropertyList</td>
<td>Delete a federation property list.</td>
<td>Online</td>
</tr>
<tr>
<td>removeFederationPropertyMap</td>
<td>Delete a federation property map.</td>
<td>Online</td>
</tr>
<tr>
<td>removeFederationPropertyMapEntry</td>
<td>Delete a federation property map entry.</td>
<td>Online</td>
</tr>
<tr>
<td>removePeerProviderEntry</td>
<td>Delete a peer provider entry.</td>
<td>Online</td>
</tr>
<tr>
<td>setConfigProperty</td>
<td>Set a configuration property.</td>
<td>Online</td>
</tr>
<tr>
<td>setCustomAuthnEngine</td>
<td>Define a custom authentication engine.</td>
<td>Online</td>
</tr>
<tr>
<td>setCustomSPEngine</td>
<td>Define a custom SP engine.</td>
<td>Online</td>
</tr>
<tr>
<td>setFederationProperty</td>
<td>Set a federation property.</td>
<td>Online</td>
</tr>
</tbody>
</table>
4.4.3 Example
The following command adds valueA to a map list in server configuration:

```
addConfigListEntryInMap('serverconfig', 'mymap', 'mylistA', 'valueA', 'string')
```

4.4.2 addConfigMapEntryInMap
Online command that adds a nested map property entry in a map.

4.4.2.1 Description
This command that adds a property name/value pair to a map nested inside a map in config.xml.

4.4.2.2 Syntax
```
addConfigMapEntryInMap(configName, mapname, nestedMapName, propName, value, type)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td>mapname</td>
<td>Specifies the name of the property map to be changed in config.xml.</td>
</tr>
<tr>
<td>nestedMapName</td>
<td>name of the nested property map to be changed.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the list.</td>
</tr>
<tr>
<td>value</td>
<td>Specifies the property value.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of property, BOOLEAN or STRING or LONG.</td>
</tr>
</tbody>
</table>

4.4.2.3 Example
The following command adds a boolean name/value pair to nestedmapB inside the map mymap.

```
addConfigMapEntryInMap('serverconfig', 'mymap', 'nestedmapB', 'myvarB', 'true', 'boolean')
```

4.4.3 addConfigPropertyListEntry
Online command that adds a list property entry to config.xml.

4.4.3.1 Description
This command adds a property value to a list in config.xml.

4.4.3.2 Syntax
```
addConfigPropertyListEntry(configName, listName, value, type)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the property list to be added in config.xml.</td>
</tr>
</tbody>
</table>
4.4.3.3 Example
The following command adds a string value to `mylistA`.

```
wlst:/mydomain/serverConfig>
addConfigPropertyListEntry('serverconfig','mylistA','valueA','string')
```

### 4.4.4 addConfigPropertyMapEntry

Online command that adds a property name/value entry in a map in config.xml.

#### 4.4.4.1 Description

This command adds a property name/value entry in a map in config.xml.

#### 4.4.4.2 Syntax

```
addConfigPropertyMapEntry(configName, mapName, propName, value, type)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map in config.xml.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property map.</td>
</tr>
<tr>
<td>value</td>
<td>Specifies the property map value to be added.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of property, BOOLEAN or STRING or LONG.</td>
</tr>
</tbody>
</table>

#### 4.4.4.3 Example

The following command adds `valueA` of string type to a map.

```
wlst:/mydomain/serverConfig>
addConfigPropertyMapEntry('serverconfig','mymapA','myvarA','valueA','string')
```

### 4.4.5 addCustomAuthnEngine

Online command that adds a custom authentication integration engine.

#### 4.4.5.1 Description

This command adds a custom authentication integration engine to config.xml.

#### 4.4.5.2 Syntax

```
addCustomAuthnEngine(name, [enabled], [webContext], [authnRelativePath], [logoutRelativePath], [logoutEnabled])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Specifies the name of the custom engine.</td>
</tr>
</tbody>
</table>
Oracle Identity Federation Commands

4.4.5.3 Example
The following command defines an engine named `test` and enables it.
```
wls:/mydomain/serverConfig> addCustomAuthnEngine('test','true')
```

4.4.6 addCustomSPEngine
Online command that adds a custom service provider (SP) engine.

4.4.6.1 Description
This command adds a custom SP integration engine to config.xml.

4.4.6.2 Syntax
```
addCustomSPEngine(name, [enabled, [authnMech], [webContext], [authnRelativePath],
[logoutRelativePath], [logoutEnabled])
```

4.4.6.3 Example
The following command adds an engine and gives it a disabled status.
```
addCustomSPEngine('new engine','false','oracle:fed:authentication:unspecified','webcontext')
```

4.4.7 addFederationListEntryInMap
Online command that adds a list property entry in a map.

4.4.7.1 Description
This command adds a property value to a nested list inside a map in cot.xml.
4.4.7.2 Syntax

addFederationListEntryInMap(providerID, mapname, listName, value, type)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the provider ID.</td>
</tr>
<tr>
<td>mapname</td>
<td>Specifies the name of the property map to be changed in cot.xml.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the property list to be added to the map.</td>
</tr>
<tr>
<td>value</td>
<td>Specifies the property list value to be added. The entered value is appended to the list.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of property, BOOLEAN or STRING or LONG.</td>
</tr>
</tbody>
</table>

4.4.7.3 Example

The following command adds a boolean property list to mymap.

```
wlst:/mydomain/serverConfig>
addFederationListEntryInMap('providerB','mymap','mylistB','true','boolean')
```

4.4.8 addFederationMapEntryInMap

Online command that adds a nested map property entry in a map.

4.4.8.1 Description

This command adds a property name/value pair to a map nested inside a map in cot.xml.

4.4.8.2 Syntax

addFederationMapEntryInMap(providerID, mapname, nestedMapName, propName, value, type)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the provider ID.</td>
</tr>
<tr>
<td>mapname</td>
<td>Specifies the name of the property map to be changed in cot.xml.</td>
</tr>
<tr>
<td>nestedMapName</td>
<td>Specifies the name of the nested property map to be changed.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be updated in the map.</td>
</tr>
<tr>
<td>value</td>
<td>Specifies the property value to be added. The entered value is appended to the list.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of property, BOOLEAN or STRING or LONG.</td>
</tr>
</tbody>
</table>

4.4.8.3 Example

The following command adds a value of type string to the myvarA property in a nested map.

```
wls:/mydomain/serverConfig>
addFederationMapEntryInMap('providerA','mymap','nestedMapA','myvarA','valueA','string')
```

4.4.9 addFederationPropertyListEntry

Online command that adds a list property entry.
4.4.9.1 Description
This command adds a property value to a list in cot.xml.

4.4.9.2 Syntax
addFederationPropertyListEntry(providerID, listName, value, type)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the provider ID.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the property list to be updated.</td>
</tr>
<tr>
<td>value</td>
<td>Specifies the property list value to be added. The entered value is appended to the list.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of property, BOOLEAN or STRING or LONG.</td>
</tr>
</tbody>
</table>

4.4.9.3 Example
The following command adds a value in string format to a specified property list.

```
addFederationPropertyListEntry('providerA','mylistA','valueA','string')
```

4.4.10 addFederationPropertyMapEntry
Online command that a property name/value entry in a map.

4.4.10.1 Description
This command adds a property name/value pair to a map in cot.xml.

4.4.10.2 Syntax
addFederationPropertyMapEntry(providerID, mapName, propName, value, type)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the provider ID.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map to be changed in cot.xml.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be added in the map.</td>
</tr>
<tr>
<td>value</td>
<td>Specifies the property value to be added. The entered value is appended to the list.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of property, BOOLEAN or STRING or LONG.</td>
</tr>
</tbody>
</table>

4.4.10.3 Example
The following command adds boolean property myvarB to a map.

```
addFederationPropertyMapEntry('providerA','mymapB','myvarB','true','boolean')
```

4.4.11 deleteCustomAuthnEngine
Online command that deletes a custom authentication integration engine from the configuration.
4.4.11.1 Description
This command deletes a custom authentication integration engine in config.xml. You must provide the engine ID for an existing custom authentication engine in config.xml.

4.4.11.2 Syntax
deleteCustomAuthnEngine(engineID)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>engineID</td>
<td>Specifies the engine ID of an existing engine to be deleted.</td>
</tr>
</tbody>
</table>

4.4.11.3 Example
The following command deletes the authentication engine with ID id1234.

```
wls:/mydomain/serverConfig> deleteCustomAuthnEngine('id1234')
```

4.4.12 deleteCustomSPEngine

Online command that deletes a custom service provider (SP) integration engine from the configuration.

4.4.12.1 Description
This command deletes a custom SP integration engine in config.xml. The EngineID for an existing custom SP engine in config.xml must be provided.

4.4.12.2 Syntax
ddeleteCustomSPEngine(engineID)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>engineID</td>
<td>Specifies the engine ID of an existing engine to be deleted.</td>
</tr>
</tbody>
</table>

4.4.12.3 Example
The following command deletes the engine with ID id1234.

```
wls:/mydomain/serverConfig> deleteCustomSPEngine('id1234')
```

4.4.13 deleteProviderFederation

Online command that deletes federations for given provider.

4.4.13.1 Description
This command deletes federations for given provider ID.

4.4.13.2 Syntax
deleteProviderFederation(providerID)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the ProviderID for the peer provider for which federation is to be deleted.</td>
</tr>
</tbody>
</table>
4.4.13.3 Example
The following command deletes providerA:

```
wls:/mydomain/serverConfig> deleteProviderFederation(providerA)
```

4.4.14 deleteUserFederation
Online command that deletes federations for given users.

4.4.14.1 Description
This command deletes federations for the given list of users.

4.4.14.2 Syntax
```
deleteUserFederation([user1,..])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>user1</td>
<td>Specifies a comma-separated list of users whose federations are to be deleted. At least one user must be specified.</td>
</tr>
</tbody>
</table>

4.4.14.3 Example
The following command deletes federations for three users:

```
wls:/mydomain/serverConfig> deleteUserFederation(['userA','userB','userC'])
```

4.4.15 changeMessageStore
Online command that changes the message store between memory and RDBMS.

4.4.15.1 Description
This command changes the message store to memory or RDBMS.

4.4.15.2 Syntax
```
changeMessageStore(type, [jndiname])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>Specifies the type of store, RDBMS or Memory. Default is Memory.</td>
</tr>
<tr>
<td>jndiname</td>
<td>Specifies the jndi name to set for the store. Required if type is RDBMS.</td>
</tr>
</tbody>
</table>

4.4.15.3 Example
The following command changes the message store to RDBMS:

```
wls:/mydomain/serverConfig> changeMessageStore('RDBMS','jdbc/mydb')
```

4.4.16 changePeerProviderDescription
Online command that changes the peer provider description.

4.4.16.1 Description
This command updates a peer provider description in cot.xml.
4.4.16.2 Syntax

```
changePeerProviderDescription(providerID, description)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the provider ID.</td>
</tr>
<tr>
<td>description</td>
<td>Specifies the provider description.</td>
</tr>
</tbody>
</table>

4.4.16.3 Example

The following command updates the description of a provider:

```
wls:/mydomain/serverConfig> changePeerProviderDescription('providerA','new description')
```

4.4.17 changeSessionStore

Online command that changes the session store between memory and RDBMS.

4.4.17.1 Description

This command changes the session store to memory or RDBMS.

4.4.17.2 Syntax

```
changeSessionStore(type, [jndiname])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>Specifies the type of store, RDBMS or Memory. Default is Memory.</td>
</tr>
<tr>
<td>jndiname</td>
<td>Specifies the jndi name to set for the store. Required if type is RDBMS.</td>
</tr>
</tbody>
</table>

4.4.17.3 Example

The following command changes the session store to RDBMS.

```
wls:/mydomain/serverConfig> changeSessionStore('RDBMS','jdbc/mydb')
```

4.4.18 createConfigPropertyList

Online command that creates a property list.

4.4.18.1 Description

This command creates a property list in config.xml.

4.4.18.2 Syntax

```
createConfigPropertyList(configName, listName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the property list name.</td>
</tr>
</tbody>
</table>

4.4.18.3 Example

The following command creates property list mylistA.
4.4.19 createConfigPropertyListInMap

Online command that creates a property list nested in the property map.

4.4.19.1 Description
This command creates a property list, nested in the property map, in config.xml.

4.4.19.2 Syntax
createConfigPropertyListInMap(configName, mapName, listName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies an existing property map to contain the nested list.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the property list name.</td>
</tr>
</tbody>
</table>

4.4.19.3 Example
The following command creates property list mylistA nested in a property map.

```
wls:/mydomain/serverConfig> createConfigPropertyListInMap('serverconfig','mymapA','mylistA')
```

4.4.20 createConfigPropertyMap

Online command that creates a property map.

4.4.20.1 Description
This command that creates a property map in config.xml.

4.4.20.2 Syntax
createConfigPropertyMap(configName, mapName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the property map to create.</td>
</tr>
</tbody>
</table>

4.4.20.3 Example
The following command creates property map mymapA:

```
wls:/mydomain/serverConfig> createConfigPropertyMap('serverconfig','mymapA')
```

4.4.21 createConfigPropertyMapInMap

Online command that creates a property map.

4.4.21.1 Description
This command that creates a property map in config.xml.
4.4.21.2 Syntax

createConfigPropertyMapInMap(configName, mapName, nestedMapName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of an existing property map.</td>
</tr>
<tr>
<td>nestedMapName</td>
<td>Specifies the name of the property map to create nested inside mapName.</td>
</tr>
</tbody>
</table>

4.4.21.3 Example

The following command creates nested property map nestedmymapA:

```
wls:/mydomain/serverConfig>
createConfigPropertyMapInMap('serverconfig','mymapA','nestedmapA')
```

4.4.22 createFederationPropertyList

Online command that creates a property list.

4.4.22.1 Description

This command creates a property list in cot.xml.

4.4.22.2 Syntax

createFederationPropertyList(providerID, listName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the provider ID.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the property list.</td>
</tr>
</tbody>
</table>

4.4.22.3 Example

The following command creates property list mylistA:

```
wls:/mydomain/serverConfig> createFederationPropertyList('providerA','mylistA')
```

4.4.23 createFederationPropertyListInMap

Online command that creates a property list nested in a property map.

4.4.23.1 Description

This command creates a property list, nested in a property map, in cot.xml.

4.4.23.2 Syntax

createFederationPropertyListInMap(providerID, mapName, listName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the provider ID.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies an existing property map to contain the nested list.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the property list.</td>
</tr>
</tbody>
</table>
4.4.23.3 Example
The following command creates nested property list mylistA:

```wls:mydomain/serverConfig>
createFederationPropertyListInMap('providerA','mymapA','mylistA')```

4.4.24 createFederationPropertyMap
Online command that creates a property map.

4.4.24.1 Description
This command that creates a property map in cot.xml.

4.4.24.2 Syntax
```
createFederationPropertyMap(providerID, mapName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the provider ID.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map to be added to cot.xml.</td>
</tr>
</tbody>
</table>

4.4.24.3 Example
The following command creates property map mymapA:

```wls:mydomain/serverConfig> createFederationPropertyMap('providerA','mymapA')```

4.4.25 createFederationPropertyMapInMap
Online command that creates a nested property map.

4.4.25.1 Description
This command that creates a property map, nested in another property map, in cot.xml.

4.4.25.2 Syntax
```
createFederationPropertyMapInMap(providerID, mapName, nestedMapName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the provider ID.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of an existing property map.</td>
</tr>
<tr>
<td>nestedMapName</td>
<td>Specifies the name of the property map to be nested inside mapName in cot.xml.</td>
</tr>
</tbody>
</table>

4.4.25.3 Example
The following command creates nested property map nestedmapA:

```wls:mydomain/serverConfig> createFederationPropertyMapInMap('providerA','mymapA','nestedmapA')```

4.4.26 createPeerProviderEntry
Online command that creates a peer provider property map entry.
4.4.26.1 Description
This command creates a peer provider as a Map property entry to cot.xml.

4.4.26.2 Syntax
createPeerProviderEntry(providerID, description, providerType, version)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the provider ID to be created.</td>
</tr>
<tr>
<td>description</td>
<td>This is the description of the provider ID.</td>
</tr>
<tr>
<td>providerType</td>
<td>Specifies the provider type of the peer provider to be created.</td>
</tr>
<tr>
<td>version</td>
<td>Specifies the version of the peer provider to be created.</td>
</tr>
</tbody>
</table>

4.4.26.3 Example
The following command creates a SAML 2.0 service provider:

```
createPeerProviderEntry('providerA','idptest','SP','SAML2.0')
```

4.4.27 getConfigListValueInMap
Online command that returns a list nested in a map.

4.4.27.1 Description
This command returns a list, nested in a map, from config.xml.

4.4.27.2 Syntax
getConfigListValueInMap(configName, mapName, listName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20, ..) to be accessed.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the list to be fetched from the map.</td>
</tr>
</tbody>
</table>

4.4.27.3 Example
The following command returns mylistA:

```
getConfigListValueInMap('serverConfig','mymapA','mylistA')
```

4.4.28 getConfigMapEntryInMap
Online command that returns a map property entry nested in a map.

4.4.28.1 Description
This command returns a map property entry, nested in a map, from config.xml.

4.4.28.2 Syntax
getConfigMapEntryInMap(configName, mapname, nestedMapName, propName)
4.4.28.3 Example
The following command returns property entry myvarA:

```
wlsc/mydomain/serverConfig>
getConfigMapEntryInMap('serverconfig','mymap','nestedmapA','myvarA')
```

4.4.29 getConfigProperty

Online command that returns a property value.

4.4.29.1 Description
This command returns a property value from config.xml.

4.4.29.2 Syntax
```
getConfigProperty(configName, propName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be accessed.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be fetched from the nested map.</td>
</tr>
</tbody>
</table>

4.4.29.3 Example
The following command returns property myvarA:

```
wls:/mydomain/serverConfig> getConfigProperty('serverconfig','myvarA')
```

4.4.30 getConfigPropertyList

Online command that returns a property list.

4.4.30.1 Description
This command returns a property list from config.xml.

4.4.30.2 Syntax
```
getConfigPropertyList(configName, listName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the configuration name.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the property list to be fetched from config.xml.</td>
</tr>
</tbody>
</table>
4.4.30.3 Example
The following command returns mylistA:

```
wls:/mydomain/serverConfig> getConfigPropertyList('serverconfig','mylistA')
```

4.4.31 getConfigPropertyMapEntry

Online command that returns a property value from a map.

4.4.31.1 Description
This command returns a property value from a map in config.xml.

4.4.31.2 Syntax
```
getConfigPropertyMapEntry(configName, mapName, propName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the configuration name (for example, idpsaml20, serverconfig, spsaml20,..).</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be fetched from the map in config.xml.</td>
</tr>
</tbody>
</table>

4.4.31.3 Example
The following command returns property propA:

```
wls:/mydomain/serverConfig> getConfigPropertyMapEntry('serverconfig','mapA','propA')
```

4.4.32 getFederationListValueInMap

Online command that returns a list value nested in a map.

4.4.32.1 Description
This command returns a list value nested in a map from cot.xml.

4.4.32.2 Syntax
```
getFederationListValueInMap(providerID, mapName, listName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the list to be fetched from the map.</td>
</tr>
</tbody>
</table>

4.4.32.3 Example
The following command returns nested list mylistA:

```
wls:/mydomain/serverConfig> getFederationListValueInMap('providerA','mymapA','mylistA')
```
4.4.33 `getFederationMapEntryInMap`

Online command that returns a map property entry nested in a map.

4.4.33.1 Description
This command returns a map property entry, nested in a map, from cot.xml.

4.4.33.2 Syntax
```plaintext
getFederationMapEntryInMap(providerID, mapname, nestedMapName, propName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map.</td>
</tr>
<tr>
<td>nestedMapName</td>
<td>Specifies the name of the nested property map.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be fetched from the nested map.</td>
</tr>
</tbody>
</table>

4.4.33.3 Example
The following command returns property entry `myvarA`:
```plaintext
wls:/mydomain/serverConfig>
getFederationMapEntryInMap('providerA','mymap','nestedmapA','myvarA')
```

4.4.34 `getFederationProperty`

Online command that returns a property value.

4.4.34.1 Description
This command returns a property value from cot.xml.

4.4.34.2 Syntax
```plaintext
getFederationProperty(providerID, propName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be fetched from cot.xml.</td>
</tr>
</tbody>
</table>

4.4.34.3 Example
The following command returns property `myvarA`:
```plaintext
wls:/mydomain/serverConfig> getFederationProperty('providerA','myvarA')
```

4.4.35 `getFederationPropertyList`

Online command that returns a property list.

4.4.35.1 Description
This command returns a property list from cot.xml.
4.4.35.2 Syntax
getFederationPropertyList(providerID, listName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the list to be fetched from the map.</td>
</tr>
</tbody>
</table>

4.4.35.3 Example
The following command returns list mylistA:

```bash
wls:/mydomain/serverConfig> getFederationPropertyList('providerA','mylistA')
```

4.4.36 extractproviderprops
A WLST script that exports the properties of a provider.

4.4.36.1 Description
A WLST script that extracts all the configuration properties of the specified provider and exports them to a text file. You can later use this file to set the same properties on another provider. Execute this command from a UNIX or Windows command shell prompt and not from the WLST command shell. This script is stored in `ORACLE_HOME/fed/scripts`.

4.4.36.2 Syntax
ejectproviderprops.py providerID filename

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the provider whose properties are to be extracted.</td>
</tr>
<tr>
<td>filename</td>
<td>Specifies the name of the text file to which the provider properties are extracted.</td>
</tr>
</tbody>
</table>

When you execute the script, you are prompted for the WebLogic administrator credentials and the connection URL; for the latter, specify the Managed Server port, not the Administration Server port.

File Format
The format of the extract file is:

```
TYPE:NAME:PROPNAME:PROPVALUE:PROPTYPE
```

For example:

```
X:X:sendattribute:false:boolean
MAP:attributelist/mailemail:datastore-attr:mail:string
LIST:sendattributefornameid:unspecified::string
```

4.4.37 setproviderprops
A WLST script that sets the properties of a provider using values from a text file.
4.4.37.1 Description
A WLST script that sets the properties of a provider using values from a text file. Execute this command from a UNIX or Windows command shell prompt and not from the WLST command shell. This script is stored in `ORACLE_HOME/fed/scripts`. The text file is generated by the `extractproviderprops` command.

4.4.37.2 Syntax
`setproviderprops.py providerID filename`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>providerID</code></td>
<td>Specifies the name of the provider whose properties are to be updated.</td>
</tr>
<tr>
<td><code>filename</code></td>
<td>Specifies the name of the input file from which to read the properties.</td>
</tr>
</tbody>
</table>

When you execute the script, you are prompted for the WebLogic administrator credentials and the connection URL; for the latter, specify the Managed Server port, not the Administration Server port.

4.4.38 `getFederationPropertyMapEntry`
Online command that returns a property value from a map.

4.4.38.1 Description
This command returns a property value from a map in `cot.xml`.

4.4.38.2 Syntax
`getFederationPropertyMapEntry(providerID, mapName, propName)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>providerID</code></td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td><code>mapName</code></td>
<td>Specifies the name of the property map.</td>
</tr>
<tr>
<td><code>propName</code></td>
<td>Specifies the name of the property to be fetched from the nested map.</td>
</tr>
</tbody>
</table>

4.4.38.3 Example
The following command returns property `propA` from a map:
```
<wls:/mydomain/serverConfig> getFederationPropertyMapEntry('providerA','mapA','propA')
```

4.4.39 `listCustomAuthnEngines`
Online command that returns a list of custom authentication integration engines.

4.4.39.1 Description
This command returns a list of custom authentication integration engines from `config.xml`.

4.4.39.2 Syntax
`listCustomAuthnEngines()`
4.4.39.3 Example
The following command returns the list of all SP engines:

\texttt{wls:/mydomain/serverConfig> \textbf{listCustomAuthnEngines()}}

### 4.4.40 listCustomSPEngines

Online command that returns a list of custom SP integration engines.

#### 4.4.40.1 Description

This command returns a list of custom service provider (SP) integration engines from \texttt{config.xml}.

#### 4.4.40.2 Syntax

\texttt{listCustomSPEngines()}

#### 4.4.40.3 Example

The following command returns the list of all SP integration engines:

\texttt{wls:/mydomain/serverConfig> \textbf{listCustomSPEngines()}}

### 4.4.41 loadMetadata

Online command that loads metadata from an input file.

#### 4.4.41.1 Description

This command loads metadata from an input file into \texttt{cot.xml}.

#### 4.4.41.2 Syntax

\texttt{loadMetadata(metadatafile,description)}

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>metadatafile</td>
<td>Specifies the metadata file of the peer provider to be added or updated.</td>
</tr>
<tr>
<td>description</td>
<td>This is a brief description of the peer provider to be loaded.</td>
</tr>
</tbody>
</table>

#### 4.4.41.3 Example

The following command loads metadata from the file \texttt{metadatafile.xml}:

\texttt{wls:/mydomain/serverConfig> \textbf{loadMetadata('/home/metadatafile.xml','some description')}}

### 4.4.42 oifStatus

Online command that reports the current status of the Oracle Identity Federation application in the managed server to which WLST is connected.

#### 4.4.42.1 Description

This command displays the current status of Oracle Identity Federation on the managed server.
4.4.42 Syntax
loifStatus('serverurl', 'configfile', 'keyfile')

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverurl</td>
<td>Specifies the URL of the managed server.</td>
</tr>
<tr>
<td>configfile</td>
<td>This is a pre-defined user configuration file created with the WLST storeUserConfig command.</td>
</tr>
<tr>
<td>keyfile</td>
<td>This is a pre-defined key file created with the WLST storeUserConfig command</td>
</tr>
</tbody>
</table>

4.4.42.3 Example
The following command provides no arguments; WLST prompts you for the Oracle WebLogic Server username, password, and the managed server URL, then displays the federation server status:

```
wls:/mydomain/serverConfig> oifStatus()
```

The following command provides only the managed server URL; WLST prompts you for the Oracle WebLogic Server username and password:

```
wls:/mydomain/serverConfig> oifStatus('', '', 't3://localhost:7499')
```

The following command provides all arguments needed for WLST to display the federation server status:

```
wls:/mydomain/serverConfig> oifStatus('configfileA', 'keyfileB', 't3://localhost:7499')
```

4.4.43 removeConfigListInMap
Online command that removes a list property nested in a map.

4.4.43.1 Description
This command removes a list property nested in a map from config.xml.

4.4.43.2 Syntax
removeConfigListInMap(configName, mapName, listName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be accessed.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the list to be removed from the map.</td>
</tr>
</tbody>
</table>

4.4.43.3 Example
The following command removes the list property mylistA:

```
wls:/mydomain/serverConfig>
removeConfigListInMap('serverConfig', 'mymapA', 'mylistA')
```

4.4.44 removeConfigMapEntryInMap
Online command that removes a map property nested in a map.
4.4.44.1 Description
This command removes a map property entry nested in a map from config.xml.

4.4.44.2 Syntax
removeConfigMapEntryInMap(configName, mapname, nestedMapName, propName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be accessed.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map.</td>
</tr>
<tr>
<td>nestedMapName</td>
<td>Specifies the name of the nested property map.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be removed from the nested map.</td>
</tr>
</tbody>
</table>

4.4.44.3 Example
The following command removes the nested property myvarA:

```
ws://mydomain/serverConfig>
removeConfigMapEntryInMap('serverconfig','mymap','nestedmapA','myvarA')
```

4.4.45 removeConfigMapInMap
Online command that removes a map property nested in a map.

4.4.45.1 Description
This command removes a map property entry nested in a map from config.xml.

4.4.45.2 Syntax
removeConfigMapEntryInMap(configName, mapName, nestedMapName, propName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map.</td>
</tr>
<tr>
<td>nestedMapName</td>
<td>Specifies the name of the nested property map.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be removed from the nested map.</td>
</tr>
</tbody>
</table>

4.4.45.3 Example
The following command removes the nested property myvarA:

```
ws://mydomain/serverConfig>
removeConfigMapEntryInMap('serverconfig','mymap','nestedmapA','myvarA')
```

4.4.46 removeConfigProperty
Online command that removes a configuration property.

4.4.46.1 Description
This command removes an entry from a configuration property in config.xml.
### 4.4.46 removeConfigProperty

**Syntax**

```
removeConfigProperty(configName, propName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>configName</code></td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td><code>propName</code></td>
<td>Specifies the name of the property to be removed.</td>
</tr>
</tbody>
</table>

**Example**

The following command removes the property `myvarA`:

```
wls:/mydomain/serverConfig> removeConfigProperty('serverconfig','myvarA')
```

### 4.4.47 removeConfigPropertyList

Online command that removes a configuration property list.

**Description**

This command removes a property list from config.xml.

**Syntax**

```
removeConfigPropertyList(configName, listName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>configName</code></td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td><code>listName</code></td>
<td>Specifies the name of the property list to be removed.</td>
</tr>
</tbody>
</table>

**Example**

The following command removes the property list `mylistA`:

```
wls:/mydomain/serverConfig> removeConfigPropertyList('serverconfig','mylistA')
```

### 4.4.48 removeConfigPropertyMap

Online command that removes a property map.

**Description**

This command removes a property map in config.xml.

**Syntax**

```
removeConfigPropertyMap(configName, mapName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>configName</code></td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td><code>mapName</code></td>
<td>Specifies the name of the property map to be removed.</td>
</tr>
</tbody>
</table>
4.4.48.3 Example
The following command removes mapA:

```
removeConfigPropertyMap('serverconfig','mapA')
```

4.4.49 removeConfigPropertyMapEntry
Online command that removes a property value from a map.

4.4.49.1 Description
This command removes a property value from a map in config.xml.

4.4.49.2 Syntax
```
removeConfigPropertyMapEntry(configName, mapName, propName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map to be updated.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be removed from the map.</td>
</tr>
</tbody>
</table>

4.4.49.3 Example
The following command removes property propA:

```
removeConfigPropertyMapEntry('serverconfig','mapA','propA')
```

4.4.50 removeFederationListInMap
Online command that removes a property list in a map.

4.4.50.1 Description
This command removes a property list in a map, in cot.xml.

4.4.50.2 Syntax
```
removeFederationListInMap(providerID, mapName, listName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the property list to be removed.</td>
</tr>
</tbody>
</table>

4.4.50.3 Example
The following command removes mylistA in mymapA:

```
removeFederationListInMap('providerA','mymapA','mylistA')
```
4.4.51 removeFederationMapInMap

Online command that removes a nested map in a map.

4.4.51.1 Description

This command removes a property map nested inside a map in cot.xml.

4.4.51.2 Syntax

`removeFederationMapInMap(providerID, mapname, nestedMapName)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>providerID</code></td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td><code>mapName</code></td>
<td>Specifies the name of the property map containing the nested map.</td>
</tr>
<tr>
<td><code>nestedMapName</code></td>
<td>Specifies the name of the nested property map to be removed.</td>
</tr>
</tbody>
</table>

4.4.51.3 Example

The following command removes `nestedmapA` in `mymap`:

```
<command>
  wls:/mydomain/serverConfig>
  removeFederationMapInMap('providerA','mymap','nestedmapA')
</command>
```

4.4.52 removeFederationMapEntryInMap

Online command that removes a nested map property entry in a map.

4.4.52.1 Description

This command removes a property name/value pair to a map nested inside a map in cot.xml.

4.4.52.2 Syntax

`removeFederationMapEntryInMap(providerID, mapname, nestedMapName, propName)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>providerID</code></td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td><code>mapName</code></td>
<td>Specifies the name of the property map containing the nested map.</td>
</tr>
<tr>
<td><code>nestedMapName</code></td>
<td>Specifies the name of the nested property map.</td>
</tr>
<tr>
<td><code>propName</code></td>
<td>Specifies the name of the property to be removed from the nested map.</td>
</tr>
</tbody>
</table>

4.4.52.3 Example

The following command removes map property entry `myvarA`:

```
<command>
  wls:/mydomain/serverConfig>
  removeFederationMapEntryInMap('providerA','mymap','nestedmapA','myvarA')
</command>
```

4.4.53 removeFederationProperty

Online command that removes a property value.
4.4.53.1 Description
This command removes a property entry in cot.xml.

4.4.53.2 Syntax
removeFederationProperty(providerID, propName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be updated.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be removed.</td>
</tr>
</tbody>
</table>

4.4.53.3 Example
The following command removes the provider property myvarA:

```
wls:/mydomain/serverConfig> removeFederationProperty('providerA','myvarA')
```

4.4.54 removeFederationPropertyList
Online command that removes a property list entry.

4.4.54.1 Description
This command removes a property list entry in cot.xml.

4.4.54.2 Syntax
removeFederationPropertyList(providerID, listName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td>listName</td>
<td>Specifies the name of the property list to be removed.</td>
</tr>
</tbody>
</table>

4.4.54.3 Example
The following command removes mylistA:

```
wls:/mydomain/serverConfig> removeFederationPropertyList('providerA','mylistA')
```

4.4.55 removeFederationPropertyMap
Online command that removes a property map.

4.4.55.1 Description
This command removes a property map in cot.xml.

4.4.55.2 Syntax
removeFederationPropertyMap(providerID, mapName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map to be removed.</td>
</tr>
</tbody>
</table>
4.4.55.3 Example
The following command removes a map:

```
wls:/mydomain/serverConfig> removeFederationPropertyMap('providerA','mapA')
```

4.4.56 removeFederationPropertyMapEntry
Online command that removes a property value from a map.

4.4.56.1 Description
This command removes a property value from a map in cot.xml.

4.4.56.2 Syntax
```
removeFederationPropertyMapEntry(providerID, mapName, propName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be accessed.</td>
</tr>
<tr>
<td>mapName</td>
<td>Specifies the name of the property map to be updated.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be removed from the map.</td>
</tr>
</tbody>
</table>

4.4.56.3 Example
The following command removes property propA from a map:

```
wls:/mydomain/serverConfig> removeFederationPropertyMapEntry('providerA','mapA','propA')
```

4.4.57 removePeerProviderEntry
Online command that removes a peer provider entry.

4.4.57.1 Description
This command removes a peer provider entry from cot.xml.

4.4.57.2 Syntax
```
removePeerProviderEntry(providerID)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be removed.</td>
</tr>
</tbody>
</table>

4.4.57.3 Example
The following command removes providerA:

```
wls:/mydomain/serverConfig> removePeerProviderEntry('providerA')
```

4.4.58 setConfigProperty
Online command that sets a property value in config.xml.

4.4.58.1 Description
This command adds or updates a property value in config.xml.
4.4.58.2 Syntax
setConfigProperty(configname, propName, value, type)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configName</td>
<td>Specifies the name of the configuration (for example, idpsaml20, serverconfig, spsaml20,..) to be updated.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be added/updated in config.xml.</td>
</tr>
<tr>
<td>value</td>
<td>Specifies the property value.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of property, BOOLEAN or STRING or LONG.</td>
</tr>
</tbody>
</table>

4.4.58.3 Example
The following command sets the property myvarA and its value in the server configuration:

```
wls:/mydomain/serverConfig>
setConfigProperty('serverconfig','myvarA','myvalA','string')
```

4.4.59 setCustomAuthnEngine
Online command that updates a custom authentication integration engine.

4.4.59.1 Description
This command updates a custom authentication integration engine in config.xml.

4.4.59.2 Syntax
setCustomAuthnEngine(engineID, name, [enabled], [webContext], [authnRelativePath], [logoutRelativePath], [logoutEnabled])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>engineID</td>
<td>Specifies the engine ID of an existing engine.</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name of the custom engine.</td>
</tr>
<tr>
<td>enabled</td>
<td>This flag specifies whether the engine is enabled (true) or not (false).</td>
</tr>
<tr>
<td>webContext</td>
<td>Specifies the web context for the engine.</td>
</tr>
<tr>
<td>authnRelativePath</td>
<td>Specifies the authentication relative path URL for the engine.</td>
</tr>
<tr>
<td>logoutRelativePath</td>
<td>Specifies the logout relative path URL for the engine.</td>
</tr>
<tr>
<td>logoutEnabled</td>
<td>This flag is set true to enable logout for the engine, else false.</td>
</tr>
</tbody>
</table>

4.4.59.3 Example
The following command updates the configuration of custom authentication engine abcd:

```
wls:/mydomain/serverConfig> setCustomAuthnEngine('abcd','custom one','false','oracle:fed:authentication:unspecified','webcontext')
```

4.4.60 setCustomSPEngine
Online command that updates a custom SP integration engine.
4.4.60.1 Description
This command updates an existing custom SP integration engine in config.xml.

4.4.60.2 Syntax
setCustomSPEngine(engineID, name, [enabled, [authnMech], [webContext], [authnRelativePath], [logoutRelativePath], [logoutEnabled])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>engineID</td>
<td>Specifies the engine ID of an existing custom engine.</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name of the custom engine.</td>
</tr>
<tr>
<td>enabled</td>
<td>This flag specifies whether the engine is enabled (true) or not (false).</td>
</tr>
<tr>
<td>authnMech</td>
<td>Specifies the authentication mechanism for the engine.</td>
</tr>
<tr>
<td>webContext</td>
<td>Specifies the web context for the engine.</td>
</tr>
<tr>
<td>authnRelativePath</td>
<td>Specifies the authentication relative path URL for the engine.</td>
</tr>
<tr>
<td>logoutRelativePath</td>
<td>Specifies the logout relative path URL for the engine.</td>
</tr>
<tr>
<td>logoutEnabled</td>
<td>This flag is set true to enable logout for the engine, else false.</td>
</tr>
</tbody>
</table>

4.4.60.3 Example
The following command sets the name and the enabled flag for the engine with ID engineID2:

```
wls:/mydomain/serverConfig> setCustomSPEngine('engineid2','test','true')
```

4.4.61 setFederationProperty
Online command that adds or updates a property value.

4.4.61.1 Description
This command adds a property entry or updates an existing entry in cot.xml.

4.4.61.2 Syntax
setFederationProperty(providerID, propName, value, type)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>providerID</td>
<td>Specifies the name of the peer provider to be updated.</td>
</tr>
<tr>
<td>propName</td>
<td>Specifies the name of the property to be added/updated in cot.xml.</td>
</tr>
<tr>
<td>value</td>
<td>Specifies the property value.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of property, BOOLEAN or STRING or LONG.</td>
</tr>
</tbody>
</table>

4.4.61.3 Example
The following command creates the property myvarA and sets its value:

```
wls:/mydomain/serverConfig> setFederationProperty('providerA','myvarA','myvalA','string')
```
4.5 Directory Integration Platform Commands

Some of the Directory Integration Platform (DIP) tools use WLST internally, and therefore, there are no custom WLST commands available to run from the WLST command prompt or to use within scripts. For information on DIP tools, see "Directory Integration Platform Tools" in the Oracle Fusion Middleware User Reference for Oracle Identity Management.

4.6 Security Commands

Use the WLST security commands listed in Table 4–5 to operate on a domain policy or credential store, and to migrate policies and credentials from a source repository to a target repository.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>listAppStripes</td>
<td>List application stripes in policy store.</td>
<td>Online</td>
</tr>
<tr>
<td>createAppRole</td>
<td>Create a new application role.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteAppRole</td>
<td>Remove an application role.</td>
<td>Online</td>
</tr>
<tr>
<td>grantAppRole</td>
<td>Add a principal to a role.</td>
<td>Online</td>
</tr>
<tr>
<td>revokeAppRole</td>
<td>Remove a principal from a role.</td>
<td>Online</td>
</tr>
<tr>
<td>listAppRoles</td>
<td>List all roles in an application.</td>
<td>Online</td>
</tr>
<tr>
<td>listAppRolesMembers</td>
<td>List all members in an application role.</td>
<td>Online</td>
</tr>
<tr>
<td>grantPermission</td>
<td>Create a new permission.</td>
<td>Online</td>
</tr>
<tr>
<td>revokePermission</td>
<td>Remove a permission.</td>
<td>Online</td>
</tr>
<tr>
<td>listPermissions</td>
<td>List all permissions granted to a principal.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteAppPolicies</td>
<td>Remove all policies in an application.</td>
<td>Online</td>
</tr>
<tr>
<td>migrateSecurityStore</td>
<td>Migrate policies or credentials from a source repository to a target repository.</td>
<td>Offline</td>
</tr>
<tr>
<td>listCred</td>
<td>Obtain the list of attribute values of a credential.</td>
<td>Online</td>
</tr>
<tr>
<td>updateCred</td>
<td>Modify the attribute values of a credential.</td>
<td>Online</td>
</tr>
<tr>
<td>createCred</td>
<td>Create a new credential.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteCred</td>
<td>Remove a credential.</td>
<td>Online</td>
</tr>
<tr>
<td>modifyBootStrapCredential</td>
<td>Update bootstrap credential store</td>
<td>Offline</td>
</tr>
<tr>
<td>addBootStrapCredential</td>
<td>Add a credential to the bootstrap credential store</td>
<td>Offline</td>
</tr>
<tr>
<td>reassociateSecurityStore</td>
<td>Reassociate policies and credentials to an LDAP repository</td>
<td>Online</td>
</tr>
<tr>
<td>upgradeSecurityStore</td>
<td>Upgrade security data from data used with release 10.1.x to data used with release 11.</td>
<td>Offline</td>
</tr>
<tr>
<td>createResourceType</td>
<td>Create a new resource type.</td>
<td>Online</td>
</tr>
<tr>
<td>getResourceType</td>
<td>Fetch an existing resource type.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteResourceType</td>
<td>Remove an existing resource type.</td>
<td>Online</td>
</tr>
<tr>
<td>createResource</td>
<td>Create a resource.</td>
<td>Online</td>
</tr>
</tbody>
</table>
Table 4–5  (Cont.) WLST Security Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>deleteResource</td>
<td>Remove a resource.</td>
<td>Online</td>
</tr>
<tr>
<td>listResources</td>
<td>List resources in an application stripe.</td>
<td>Online</td>
</tr>
<tr>
<td>listResourceActions</td>
<td>List actions in a resource.</td>
<td>Online</td>
</tr>
<tr>
<td>createEntitlement</td>
<td>Create an entitlement.</td>
<td>Online</td>
</tr>
<tr>
<td>getEntitlement</td>
<td>List an entitlement.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteEntitlement</td>
<td>Remove an entitlement.</td>
<td>Online</td>
</tr>
<tr>
<td>addResourceToEntitlement</td>
<td>Add a resource to an entitlement.</td>
<td>Online</td>
</tr>
<tr>
<td>revokeResourceFromEntitlement</td>
<td>Remove a resource from an entitlement</td>
<td>Online</td>
</tr>
<tr>
<td>listEntitlements</td>
<td>List entitlements in an application stripe.</td>
<td>Online</td>
</tr>
<tr>
<td>grantEntitlement</td>
<td>Create an entitlement.</td>
<td>Online</td>
</tr>
<tr>
<td>revokeEntitlement</td>
<td>Remove an entitlement.</td>
<td>Online</td>
</tr>
<tr>
<td>listEntitlement</td>
<td>List an entitlement.</td>
<td>Online</td>
</tr>
<tr>
<td>listResourceTypes</td>
<td>List resource types in an application stripe.</td>
<td>Online</td>
</tr>
</tbody>
</table>

4.6.1 createAppRole

Online command that creates a new application role.

4.6.1.1 Description

Creates a new application role in the domain policy store with a given application and role name. In the event of an error, the command returns a WLSTException.

4.6.1.2 Syntax

createAppRole(appStripe, appRoleName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies an application stripe.</td>
</tr>
<tr>
<td>appRoleName</td>
<td>Specifies a role name.</td>
</tr>
</tbody>
</table>

4.6.1.3 Example

The following invocation creates a new application role with application stripe myApp and role name myRole:

wls:/mydomain/serverConfig> createAppRole(appStripe="myApp", appRoleName="myRole")

4.6.2 deleteAppRole

Online command that removes an application role.

4.6.2.1 Description

Removes an application role in the domain policy store with a given application and role name. In the event of an error, the command returns a WLSTException.
4.6.2.2 Syntax
createAppRole(appStripe, appRoleName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies an application stripe.</td>
</tr>
<tr>
<td>appRoleName</td>
<td>Specifies a role name.</td>
</tr>
</tbody>
</table>

4.6.2.3 Example
The following invocation removes the role with application stripe myApp and role name myRole:

```
wls:/mydomain/serverConfig> createAppRole(appStripe="myApp", appRoleName="myRole")
```

4.6.3 grantAppRole
Online command that adds a principal to a role.

4.6.3.1 Description
Adds a principal (class or name) to a role with a given application stripe and name. In the event of an error, the command returns a WLSTException.

4.6.3.2 Syntax
grantAppRole(appStripe, appRoleName, principalClass, principalName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies an application stripe.</td>
</tr>
<tr>
<td>appRoleName</td>
<td>Specifies a role name.</td>
</tr>
<tr>
<td>principalClass</td>
<td>Specifies the fully qualified name of a class.</td>
</tr>
<tr>
<td>principalName</td>
<td>Specifies the principal name.</td>
</tr>
</tbody>
</table>

4.6.3.3 Example
The following invocation adds a principal to the role with application stripe myApp and role name myRole:

```
wls:/mydomain/serverConfig> grantAppRole(appStripe="myApp", appRoleName="myRole", principalClass="com.example.xyzPrincipal", principalName="myPrincipal")
```

4.6.4 revokeAppRole
Online command that removes a principal from a role.

4.6.4.1 Description
Removes a principal (class or name) from a role with a given application stripe and name. In the event of an error, the command returns a WLSTException.

4.6.4.2 Syntax
revokeAppRole(appStripe, appRoleName, principalClass, principalName)
4.6.4.3 Example
The following invocation removes a principal to the role with application stripe myApp and role name myRole:

```
revokeAppRole(appStripe="myApp", appRoleName="myRole", principalClass="com.example.xyzPrincipal", principalName="myPrincipal")
```

4.6.5 listAppRoles
Online command that lists all roles in an application.

4.6.5.1 Description
Lists all roles within a given application stripe. In the event of an error, the command returns a WLSTException.

4.6.5.2 Syntax
```
listAppRoles(appStripe)
```

4.6.5.3 Example
The following invocation returns all roles with application stripe myApp:

```
listAppRoles(appStripe="myApp")
```

4.6.6 listAppRolesMembers
Online command that lists all members in a role.

4.6.6.1 Description
Lists all members in a role with a given application stripe and role name. In the event of an error, the command returns a WLSTException.

4.6.6.2 Syntax
```
listAppRoleMembers(appStripe, appRoleName)
```

---

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies an application stripe.</td>
</tr>
<tr>
<td>appRoleName</td>
<td>Specifies a role name.</td>
</tr>
<tr>
<td>principalClass</td>
<td>Specifies the fully qualified name of a class.</td>
</tr>
<tr>
<td>principalName</td>
<td>Specifies the principal name.</td>
</tr>
</tbody>
</table>
4.6.6.3 Example
The following invocation returns all members in the role with application stripe myApp and role name myRole:

```
wlst:/mydomain/serverConfig> listAppRoleMembers(appStripe="myApp",
    appRoleName="myRole")
```

4.6.7 grantPermission
Online command that creates a new permission.

4.6.7.1 Description
Creates a new permission for a given code base or URL. In the event of an error, the command returns a WLSTException.

4.6.7.2 Syntax
Optional arguments are enclosed in between square brackets.

```
grantPermission([appStripe,] [codeBaseURL,] [principalClass,] [principalName,]
    permClass, [permTarget,] [permActions])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies an application stripe. If not specified, the command works on system policies.</td>
</tr>
<tr>
<td>codeBaseURL</td>
<td>Specifies the URL of the code granted the permission.</td>
</tr>
<tr>
<td>principalClass</td>
<td>Specifies the fully qualified name of a class (grantee).</td>
</tr>
<tr>
<td>principalName</td>
<td>Specifies the name of the grantee principal.</td>
</tr>
<tr>
<td>permClass</td>
<td>Specifies the fully qualified name of the permission class.</td>
</tr>
<tr>
<td>permTarget</td>
<td>Specifies, when available, the name of the permission target. Some permissions may not include this attribute.</td>
</tr>
<tr>
<td>permActions</td>
<td>Specifies a comma-separated list of actions granted. Some permissions may not include this attribute and the actions available depend on the permission class.</td>
</tr>
</tbody>
</table>

4.6.7.3 Examples
The following invocation creates a new application permission (for the application with application stripe myApp) with the specified data:

```
wlst:/mydomain/serverConfig> grantPermission(appStripe="myApp",
    principalClass="my.custom.Principal", principalName="manager",
    permClass="java.security.AllPermission")
```

The following invocation creates a new system permission with the specified data:

```
wlst:/mydomain/serverConfig> grantPermission(principalClass="my.custom.Principal",
    principalName="manager",
    permClass="java.io.FilePermission", permTarget="/tmp/fileName.ext",
    permTarget="/tmp/fileName.ext", permActions="read,write")
```

4.6.8 revokePermission
Online command that removes a permission.
4.6.8.1 Description
Removes a permission for a given code base or URL. In the event of an error, the command returns a WLSTException.

4.6.8.2 Syntax
Optional arguments are enclosed in between square brackets.

revokePermission([appStripe,] [codeBaseURL,] [principalClass,] [principalName,] permClass, [permTarget,] [permActions])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies an application stripe. If not specified, the command works on system policies.</td>
</tr>
<tr>
<td>codeBaseURL</td>
<td>Specifies the URL of the code granted the permission.</td>
</tr>
<tr>
<td>principalClass</td>
<td>Specifies the fully qualified name of a class (grantee).</td>
</tr>
<tr>
<td>principalName</td>
<td>Specifies the name of the grantee principal.</td>
</tr>
<tr>
<td>permClass</td>
<td>Specifies the fully qualified name of the permission class.</td>
</tr>
<tr>
<td>permTarget</td>
<td>Specifies, when available, the name of the permission target. Some permissions may not include this attribute.</td>
</tr>
<tr>
<td>permActions</td>
<td>Specifies a comma-separated list of actions granted. Some permissions may not include this attribute and the actions available depend on the permission class.</td>
</tr>
</tbody>
</table>

4.6.8.3 Examples
The following invocation removes the application permission (for the application with application stripe myApp) with the specified data:

wls:/mydomain/serverConfig> revokePermission(appStripe="myApp", principalClass="my.custom.Principal", principalName="manager", permClass="java.security.AllPermission")

The following invocation removes the system permission with the specified data:

wls:/mydomain/serverConfig> revokePermission(principalClass="my.custom.Principal", principalName="manager", permClass="java.io.FilePermission", permTarget="/tmp/fileName.ext", permActions="read,write")

4.6.9 listPermissions
Online command that lists all permissions granted to a given principal.

4.6.9.1 Description
Lists all permissions granted to a given principal. In the event of an error, the command returns a WLSTException.

4.6.9.2 Syntax
Optional arguments are enclosed in between square brackets.

listPermissions([appStripe,] principalClass, principalName)
Security Commands

4.6.9.3 Examples
The following invocation lists all permissions granted to a principal by the policies of application myApp:

```plaintext
wls:/mydomain/serverConfig> listPermissions(appStripe="myApp",
principalClass="my.custom.Principal",principalName="manager")
```

The following invocation lists all permissions granted to a principal by system policies:

```plaintext
wls:/mydomain/serverConfig> listPermissions(principalClass="my.custom.Principal",
principalName="manager")
```

4.6.10 deleteAppPolicies
Online command that removes all policies with a given application stripe.

4.6.10.1 Description
Removes all policies with a given application stripe. In the event of an error, the command returns a WLSTException.

4.6.10.2 Syntax
```plaintext
deleteAppPolicies(appStripe)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies an application stripe. If not specified, the command works on system policies.</td>
</tr>
</tbody>
</table>

4.6.10.3 Example
The following invocation removes all policies of application myApp:

```plaintext
wls:/mydomain/serverConfig> deleteAppPolicies(appStripe="myApp")
```

4.6.11 migrateSecurityStore
Offline command that migrates identities, application-specific, system policies, a specific credential folder, or all credentials.

4.6.11.1 Description
Migrates identities, application-specific, or system policies from a source repository to a target repository. Migrates a specific credential folder or all credentials.

The kinds of the repositories where the source and target data is stored is transparent to the command, and any combination of file-based and LDAP-based repositories is allowed (LDAP-repositories must use an OVD or an OID LDAP server only). In the event of an error, the command returns a WLSTException.
4.6.11.2 Syntax

The command syntax varies depending on the scope (system or application-specific or both) of the policies being migrated.

Optional arguments are enclosed in square brackets.

To migrate identities, use the following syntax:

migrateSecurityStore(type="idStore", configFile, src, dst, [dstLdifFile])

To migrate all policies (system and application-specific, for all applications) use the following syntax:

migrateSecurityStore(type="policyStore", configFile, src, dst,[overWrite,][preserveAppRoleGuid])

To migrate just system policies, use the following syntax:

migrateSecurityStore(type="globalPolicies", configFile, src, dst, [overWrite])

To migrate just application-specific policies, for one application, use the following syntax:

To migrate all credentials, use the following syntax:

migrateSecurityStore(type="credStore", configFile, src, dst, [overWrite])

To migrate just one credential folder, use the following syntax:

migrateSecurityStore(type="folderCred", configFile, src, dst, [srcFolder,] [dstFolder,] [srcConfigFile,] [overWrite])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>Specifies the type of policies migrates.</td>
</tr>
<tr>
<td></td>
<td>To migrate identities, set it to idStore.</td>
</tr>
<tr>
<td></td>
<td>To migrate all policies (system and application-specific, for all applications), set to policyStore.</td>
</tr>
<tr>
<td></td>
<td>To migrate just system policies, set to globalPolicies.</td>
</tr>
<tr>
<td></td>
<td>To migrate just application-specific policies, set to appPolicies.</td>
</tr>
<tr>
<td></td>
<td>To migrate all credentials, set to credStore.</td>
</tr>
<tr>
<td></td>
<td>To migrate just one credential folder, set to folderCred.</td>
</tr>
<tr>
<td>configFile</td>
<td>Specifies the location of a configuration file jps-config.xml relative to the directory where the command is run. The configuration file passed need not be an actual domain configuration file, but it can be assembled just to specify the source and destination repositories of the migration.</td>
</tr>
<tr>
<td>src</td>
<td>Specifies the name of a jps-context in the configuration file passed to the argument configFile, where the source store is specified.</td>
</tr>
<tr>
<td>dst</td>
<td>Specifies the name of another jps-context in the configuration file passed to the argument configFile, where the destination store is specified.</td>
</tr>
<tr>
<td>srcApp</td>
<td>Specifies the name of the source application, that is, the application whose policies are being migrated.</td>
</tr>
</tbody>
</table>
Note the following requirements about the passed arguments:

- The file `jps-config.xml` is found in the passed location.
- The file `jps-config.xml` includes the passed `jps-contexts`.
- The source and the destination context names are distinct. From these two contexts, the command determines the locations of the source and the target repositories involved in the migration.

### 4.6.11.3 Example

The following invocation illustrates the migration of the file-based policies of application `PolicyServlet1` to file-based policies of application `PolicyServlet2`, that does not stop on encountering duplicate principals or permissions, that migrates just one of duplicate items, and that logs a warning when duplicates are found:

```bash
wls:/mydomain/serverConfig> migrateSecurityStore(type="appPolicies",
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>dstApp</code></td>
<td>Specifies the name of the target application, that is, the application whose policies are being written. If unspecified, it defaults to the name of the source application.</td>
</tr>
<tr>
<td><code>srcFolder</code></td>
<td>Specifies the name of the folder from where credentials are migrated. This argument is optional. If unspecified, the credential store is assumed to have only one folder and the value of this argument defaults to the name of that folder.</td>
</tr>
<tr>
<td><code>dstFolder</code></td>
<td>Specifies the folder to where the source credentials are migrated. This argument is optional and, if unspecified, defaults to the folder passed to <code>srcFolder</code>.</td>
</tr>
<tr>
<td><code>srcConfigFile</code></td>
<td>Specifies the location of an alternate configuration file, and it is used in the special case in which credentials are not configured in the file passed to <code>configFile</code>. This argument is optional. If unspecified, it defaults to the value passed to <code>configFile</code>; if specified, the value passed to <code>configFile</code> is ignored.</td>
</tr>
<tr>
<td><code>overWrite</code></td>
<td>Specifies whether data in the target matching data being migrated should be overwritten by or merged with the source data. Optional and false by default. Set to true to overwrite matching data; set to false to merge matching data.</td>
</tr>
<tr>
<td><code>migrateIdStoreMapping</code></td>
<td>Specifies whether the migration of application policies should include or exclude the migration of enterprise policies. Optional and true by default. Set it to False to exclude enterprise policies from the migration of application policies.</td>
</tr>
<tr>
<td><code>dstLdifFile</code></td>
<td>Specifies the location where the LDIF file will be created. Required only if destination is an LDAP-based identity store. Notice that the LDIF file is not imported into the LDAP server; the importing of the file LDIF should be done manually, after the file has been edited to account for the appropriate attributes required in your LDAP server.</td>
</tr>
<tr>
<td><code>preserveAppRoleGuid</code></td>
<td>Specifies whether the migration of policies should preserve or recreate GUIDs. Optional and false, by default. Set to true to preserve GUIDs; set to false to recreated GUIDs.</td>
</tr>
<tr>
<td><code>mode</code></td>
<td>Specifies whether the migration should stop and signal an error upon encountering a duplicate principal or a duplicate permission in an application policy. Set to lax to allow the migration to continue upon encountering duplicate items, to migrate just one of the duplicated items, and to log a warning to this effect; set to strict to force the migration to stop upon encountering duplicate items. If unspecified, it defaults to strict.</td>
</tr>
</tbody>
</table>
The above invocation assumes that:

- The file `jps-config.xml` is located in the directory where the command is run (current directory).
- That file includes the following elements:

```
<serviceInstance name="policystore1.xml" provider="some.provider">
  <property name="location" value="jazn-data1.xml"/>
</serviceInstance>
<serviceInstance name="policystore2.xml" provider="some.provider">
  <property name="location" value="jazn-data2.xml"/>
</serviceInstance>
```

The file-based policies for the two applications involved in the migration are defined in the files `jazn-data1.xml` and `jazn-data2.xml`, which are not shown but assumed located in the current directory.

The following invocation illustrates the migration of file-based credentials from one location to another:

```
wls:/mydomain/serverConfig> migrateSecurityStore(type="credStore",
        configFile="jps-config.xml", src="default1", dst="context2")
```

The above invocation assumes that:

- The file `jps-config.xml` is located in the directory where the command is run (current directory).
- That file includes the following elements:

```
<serviceInstance name="credstore1" provider="some.provider">
  <property name="location" value="./credstore1/cwallet.sso"/>
</serviceInstance>
<serviceInstance name="credstore2" provider="some.provider">
  <property name="location" value="./credstore2/cwallet.sso"/>
</serviceInstance>
```

For detailed configuration examples to use with this command, see Oracle Fusion Middleware Security Guide.
4.6.12 listCred

Online command that returns the list of attribute values of a credential in the domain credential store.

4.6.12.1 Description

Returns the list of attribute values of a credential in the domain credential store with given map name and key name. This command lists the data encapsulated in credentials of type password only. In the event of an error, the command returns a WLSTException.

4.6.12.2 Syntax

listCred(map, key)

4.6.12.3 Example

The following invocation returns all the information (such as user name, password, URL, port, and description) in the credential with map name myMap and key name myKey:

```
wls:/mydomain/serverConfig> listCred(map="myMap", key="myKey")
```

4.6.13 updateCred

Online command that modifies the type, user name, and password of a credential.

4.6.13.1 Description

Modifies the type, user name, password, URL, and port number of a credential in the domain credential store with given map name and key name. This command can update the data encapsulated in credentials of type password only. In the event of an error, the command returns a WLSTException. This command runs in interactive mode only.

4.6.13.2 Syntax

Optional arguments are enclosed in square brackets.

updateCred(map, key, user, password, [desc])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>map</td>
<td>Specifies a map name (folder).</td>
</tr>
<tr>
<td>key</td>
<td>Specifies a key name.</td>
</tr>
</tbody>
</table>

4.6.13.3 Example

The following invocation updates a password credential with the specified data:
4.6.14 createCred

Online command that creates a new credential in the domain credential store.

4.6.14.1 Description

Creates a new credential in the domain credential store with a given map name, key name, type, user name and password, URL and port number. In the event of an error, the command returns a WLSTException. This command runs in interactive mode only.

4.6.14.2 Syntax

Optional arguments are enclosed in square brackets.

```
createCred(map, key, user, password, [desc])
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>map</td>
<td>Specifies a map name (folder).</td>
</tr>
<tr>
<td>key</td>
<td>Specifies a key name.</td>
</tr>
<tr>
<td>user</td>
<td>Specifies the credential user name.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the credential password.</td>
</tr>
<tr>
<td>desc</td>
<td>Specifies a string describing the credential.</td>
</tr>
</tbody>
</table>

4.6.14.3 Example

The following invocation creates a new password credential with the specified data:

```
wls:/mydomain/serverConfig> createCred(map="myMap", key="myKey", user="myUsr", password="myPassw", desc="updated passw cred to connect to app xyz")
```

4.6.15 deleteCred

Online command that removes a credential in the domain credential store.

4.6.15.1 Description

Removes a credential with given map name and key name from the domain credential store. In the event of an error, the command returns a WLSTException.

4.6.15.2 Syntax

```
deleteCred(map, key)
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>map</td>
<td>Specifies a map name (folder).</td>
</tr>
<tr>
<td>key</td>
<td>Specifies a key name.</td>
</tr>
</tbody>
</table>

4.6.15.3 Example

The following invocation removes the credential with map name `myMap` and key name `myKey`:

```
wls:/mydomain/serverConfig> deleteCred(map="myMap", key="myKey")
```
4.6.16 modifyBootStrapCredential

Offline command that updates a bootstrap credential store.

4.6.16.1 Description
Updates a bootstrap credential store with given user name and password. In the event of an error, the command returns a WLSTException.

Typically used in the following scenario: suppose that the domain policy and credential stores are LDAP-based, and the credentials to access the LDAP store (stored in the LDAP server) are changed. Then this command can be used to seed those changes into the bootstrap credential store.

4.6.16.2 Syntax
modifyBootStrapCredential(jpsConfigFile, username, password)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>jpsConfigFile</td>
<td>Specifies the location of the file jps-config.xml relative to the location where the command is run.</td>
</tr>
<tr>
<td>username</td>
<td>Specifies the distinguished name of the user in the LDAP store.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password of the user.</td>
</tr>
</tbody>
</table>

4.6.16.3 Example
Suppose that in the LDAP store, the password of the user with distinguished name cn=orcladmin has been changed to welcome1, and that the configuration file jps-config.xml is located in the current directory.

Then the following invocation changes the password in the bootstrap credential store to welcome1:

```
wls:/mydomain/serverConfig> modifyBootStrapCredential(jpsConfigFile='./jps-config.xml', username='cn=orcladmin', password='welcome1')
```

Any output regarding the audit service can be disregarded.

4.6.17 addBootStrapCredential

Offline command that adds a credential to the bootstrap credential store.

4.6.17.1 Description
Adds a password credential with the given map, key, user name, and user password to the bootstrap credentials configured in the default JPS context of a JPS configuration file. In the event of an error, the command returns a WLSTException.

4.6.17.2 Syntax
addBootStrapCredential(jpsConfigFile, map, key, username, password)
4.6.17.3 Example
The following invocation adds a credential to the bootstrap credential store:

```
wlst:/mydomain/serverConfig>
addBootStrapCredential(jpsConfigFile='./jps-config.xml', map='myMapName',
key='myKeyName', username='myUser', password='myPassword')
```

4.6.18 reassociateSecurityStore
Online command that migrates the policy and credential stores to an LDAP repository.

4.6.18.1 Description
Migrates, within a give domain, both the policy store and the credential store to a target LDAP server repository. The only kinds of LDAP servers allowed are OID or OVD. This command also allows setting up a policy store shared by different domains (see optional argument join below). In the event of an error, the command returns a WLSTException. This command runs in interactive mode only.

4.6.18.2 Syntax
```
reassociateSecurityStore(domain, admin, password, ldapurl, servertype, jpsroot [, join])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain</td>
<td>Specifies the domain name where the reassociating takes place.</td>
</tr>
<tr>
<td>admin</td>
<td>Specifies the administrator’s user name on the LDAP server. The format is cn=usrName.</td>
</tr>
<tr>
<td>password</td>
<td>Specifies the password associated with the user specified for the argument admin.</td>
</tr>
<tr>
<td>ldapurl</td>
<td>Specifies the URI of the LDAP server. The format is ldap://host:port, if you are using a default port, or ldaps://host:port, if you are using a secure LDAP port. The secure port must be configured specially for this function and it is distinct from the default (non-secure) port.</td>
</tr>
<tr>
<td>servertype</td>
<td>Specifies the kind of the target LDAP server. The only valid types are OID or OVD.</td>
</tr>
<tr>
<td>jpsroot</td>
<td>Specifies the root node in the target LDAP repository under which all data is migrated. The format is cn=nodeName.</td>
</tr>
<tr>
<td>join</td>
<td>Specifies whether the domain is to share a policy store specified in another domain. Optional. Set to true to share an existing policy store in another domain; set to false otherwise. The use of this argument allows multiple WebLogic domains to point to the same logical policy store.</td>
</tr>
</tbody>
</table>
4.6.18.3 Examples

The following invocation reassociates the domain policies and credentials to an LDAP Oracle Internet Directory server:

```
wls:/mydomain/serverConfig> reassociateSecurityStore(domain="myDomain",
admin="cn=adminName", password="myPass", ldapurl="ldap://myhost.example.com:3060",
servername="OID", jpsroot="cn=testNode")
```

Suppose that you want some other domain (distinct from myDomain, say otherDomain) to share the policy store in myDomain. Then you would invoke the command as follows:

```
wls:/mydomain/serverConfig> reassociateSecurityStore(domain="otherDomain",
admin="cn=adminName", password="myPass", ldapurl="ldap://myhost.example.com:3060",
servername="OID", jpsroot="cn=testNode", join=true)
```

4.6.19 upgradeSecurityStore

Offline command that migrates release 10.1.x security data to release 11 security data.

4.6.19.1 Description

Migrates identity, policy, and credential data used in release 10.1.x to security data that can be used with release 11. The migration of each kind of data is performed with separate invocations of this command. In the event of an error, the command returns a WLSTException.

4.6.19.2 Syntax

The syntax varies according to the type of data being updated.

To upgrade 10.1.x XML identity data to 11 XML identity data, use the following syntax:

```
updateSecurityStore(type="xmlIdStore", jpsConfigFile, srcJaznDataFile, srcRealm, dst)
```

To upgrade a 10.1.x XML policy data to 11 XML policy data, use the following syntax:

```
updateSecurityStore(type="xmlPolicyStore", jpsConfigFile, srcJaznDataFile, dst)
```

To upgrade a 10.1.x OID LDAP-based policy data to 11 XML policy data, use the following syntax:

```
updateSecurityStore(type="oidPolicyStore", jpsConfigFile, srcJaznDataFile, dst)
```

To upgrade a 10.1.x XML credential data to 11 XML credential data, use the following syntax:

```
updateSecurityStore(type="xmlCredStore", jpsConfigFile, srcJaznDataFile, users, dst)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>Specifies the kind of security data being upgraded. The only valid values are xmlIdStore, xmlPolicyStore, oidPolicyStore, and xmlCredStore.</td>
</tr>
</tbody>
</table>
The following invocation migrates 10.1.3 file-based identities to an 11 file-based identity store:

```
wlst:/mydomain/serverConfig> upgradeSecurityStore(type="xmlIdStore",
jpsConfigFile="jps-config.xml", srcJaznDataFile="jazn-data.xml",
srcRealm="jazn.com")
```

The following invocation migrates a 10.1.3 OID-based policy store to an 11 file-based policy store:

```
wlst:/mydomain/serverConfig> upgradeSecurityStore(type="oidPolicyStore",
jpsConfigFile="jps-config.xml", srcJaznDataFile="jazn-data.xml",
dst="destinationContext")
```

### 4.6.20 createResourceType

Online command that creates a new resource type in the domain policy store within a given application stripe.

#### 4.6.20.1 Description

Creates a new resource type element in the domain policy store within a given application stripe and with specified name, display name, description, and actions. Optional arguments are enclosed in between square brackets; all other arguments are required. In the event of an error, the command returns a WLSTException.

#### 4.6.20.2 Syntax

Optional arguments are enclosed in square brackets.

```
createResourceType(appStripe, resourceTypeName, displayName, description [, provider] [, matcher], actions [, delimiter])
```
4.6.20.3 Example
The following invocation creates a resource type in the stripe myApplication with actions BWPrint and ColorPrint delimited by a semicolon:

```wls
createResourceType(appStripe="myApplication", resourceTypeName="myResType", displayName="myResType", description="A resource type", provider="Printer", matcher="com.printer.Printer", actions="BWPrint;ColorPrint", [delimiter=";"]
```

4.6.21 getResourceType
Online command that fetches a resource type from the domain policy store within a given application stripe.

4.6.21.1 Description
Gets the relevant parameters of a <resource-type> entry in the domain policy store within a given application stripe and with specified name. In the event of an error, the command returns a WLSTException.

4.6.21.2 Syntax
getResourceType(appStripe, resourceTypeName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe from where to fetch the resource type.</td>
</tr>
<tr>
<td>resourceTypeName</td>
<td>Specifies the name of the resource type to fetch.</td>
</tr>
</tbody>
</table>

4.6.21.3 Example
The following invocation fetches the resource type myResType from the stripe myApplication:

```wls
getResourceType(appStripe="myApplication", resourceTypeName="myResType")
```

4.6.22 deleteResourceType
Online command that removes a resource type from the domain policy store within a given application stripe.
4.6.22.1 Description
Removes a <resource-type> entry in the domain policy store within a given application stripe and with specified name. In the event of an error, the command returns a WLSTException.

4.6.22.2 Syntax
deleteResourceType(appStripe, resourceTypeName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe from where to remove the resource type.</td>
</tr>
<tr>
<td>resourceTypeName</td>
<td>Specifies the name of the resource type to remove.</td>
</tr>
</tbody>
</table>

4.6.22.3 Example
The following invocation removes the resource type myResType from the stripe myApplication:

```
wlst:/mydomain/serverConfig> deleteResourceType(appStripe="myApplication", resourceTypeName="myResType")
```

4.6.23 listAppStripes
Online or offline command that lists the application stripes in the policy store.

4.6.23.1 Description
This script can be run in offline or online mode. When run in offline mode, a configuration file must be passed, and it lists the application stripes in the policy store referred to by the configuration in the default context of the passed configuration file; the default configuration must not have a service instance reference to an identity store. When run in online mode, a configuration file must not be passed, and it lists stripes in the policy store of the domain to which you connect. In any mode, if a regular expression is passed, it lists the application stripes with names that match the regular expression; otherwise, it lists all application stripes.

If this command is used in offline mode after reassociating to a DB-based store, the configuration file produced by the reassociation must be manually edited as described in "Running listAppStripes after Reassociating to a DB-Based Store" in Oracle Fusion Middleware Security Guide.

4.6.23.2 Syntax
listAppStripes([configFile="configFileName"] [, regularExpression="aRegExp"])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configFile</td>
<td>Specifies the path to the OPSS configuration file. Optional. If specified, the script runs offline; the default context in the specified configuration file must not have a service instance reference to an identity store. If unspecified, the script runs online and it lists application stripes in the policy store.</td>
</tr>
<tr>
<td>regularExpression</td>
<td>Specifies the regular expression that returned stripe names should match. Optional. If unspecified, it matches all names. To match substrings, use the character &quot;.&quot;</td>
</tr>
</tbody>
</table>
4.6.23.3 Examples
The following (online) invocation returns the list of application stripes in the policy store:

```
wlsc:/mydomain/serverConfig> listAppStripes
```

The following (offline) invocation returns the list of application stripes in the policy store referenced in the default context of the specified configuration file:

```
wlsc:/mydomain/serverConfig> listAppStripes(configFile="/home/myFile/jps-config.xml")
```

The following (online) invocation returns the list of application stripes that contain the prefix App:

```
wlsc:/mydomain/serverConfig> listAppStripes(regularExpression="App*")
```

4.6.24 createResource
Online command that creates a new resource.

4.6.24.1 Description
Creates a resource of a specified type in a specified application stripe. The passed resource type must exist in the passed application stripe.

4.6.24.2 Syntax
```
createResource(appStripe="appStripeName", name="resName", type="resTypeName"
[,,-displayName="dispName"] [,,-description="descript"])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the resource is created.</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name of the resource created.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of resource created. The passed resource type must be present in the application stripe at the time this script is invoked.</td>
</tr>
<tr>
<td>displayName</td>
<td>Specifies the display name of the resource created. Optional.</td>
</tr>
<tr>
<td>description</td>
<td>Specifies the description of the resource created. Optional.</td>
</tr>
</tbody>
</table>

4.6.24.3 Example
The following invocation creates the resource myResource in the stripe myApplication:

```
wls:/mydomain/serverConfig> createResource(appStripe="myApplication", name="myResource", type="myResType", displayName="myNewResource")
```

4.6.25 deleteResource
Online command that deletes a resource.

4.6.25.1 Description
Deletes a resource and all its references from entitlements in an application stripe. It performs a cascading deletion: if the entitlement refers to one resource only, it removes
the entitlement; otherwise, it removes from the entitlement the resource actions for the passed type.

4.6.25.2 Syntax
deleteResource(appStripe="appStripeName", name="resName", type="resTypeName")

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the resource is deleted.</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name of the resource deleted.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of resource deleted. The passed resource type must be present in the application stripe at the time this script is invoked.</td>
</tr>
</tbody>
</table>

4.6.25.3 Example
The following invocation deletes the resource myResource in the stripe myApplication:

```
$ wls:/mydomain/serverConfig> deleteResource(appStripe="myApplication", name="myResource", type="myResType")
```

4.6.26 listResources
Online command that lists resources in a specified application stripe.

4.6.26.1 Description
If a resource type is specified, it lists all the resources of the specified resource type; otherwise, it lists all the resources of all types.

4.6.26.2 Syntax
listResources(appStripe='appStripeName' [,type='resTypeName'])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the resources are listed.</td>
</tr>
<tr>
<td>type</td>
<td>Specifies the type of resource listed. The passed resource type must be present in the application stripe at the time this script is invoked.</td>
</tr>
</tbody>
</table>

4.6.26.3 Example
The following invocation lists all resources of type myResType in the stripe myApplication:

```
$ wls:/mydomain/serverConfig> listResources(appStripe="myApplication", type="myResType")
```

4.6.27 listResourceActions
Online command that lists the resources and actions in an entitlement.

4.6.27.1 Description
Lists the resources and actions in an entitlement within an application stripe.
4.6.27.2 Syntax

\[
\text{listResourceActions(appStripe=\"appStripeName\", permSetName=\"entitlementName\")}
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the entitlement resides.</td>
</tr>
<tr>
<td>permSetName</td>
<td>Specifies the name of the entitlement whose resources and actions to list.</td>
</tr>
</tbody>
</table>

4.6.27.3 Example

The following invocation lists the resources and actions of the entitlement myEntitlement in the stripe myApplication:

\[
\text{wls:/mydomain/serverConfig> listResourceActions(appStripe=\"myApplication\", permSetName=\"myEntitlement\")}
\]

4.6.28 createEntitlement

Online command that creates a new entitlement.

4.6.28.1 Description

Creates a new entitlement with just one resource and a list of actions in a specified application stripe. Use addResourceToEntitlement to add additional resources to an existing entitlement; use revokeResourceFromEntitlement to delete resources from an existing entitlement.

4.6.28.2 Syntax

\[
\text{createEntitlement(appStripe=\"appStripeName\", name=\"entitlementName\", resourceName=\"resName\", actions=\"actionList\" \[,-displayName=\"dispName\"\] \[,-description=\"descript\"\])}
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the entitlement is created.</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name of the entitlement created.</td>
</tr>
<tr>
<td>resourceName</td>
<td>Specifies the name of the one resource member of the entitlement created.</td>
</tr>
<tr>
<td>actions</td>
<td>Specifies a comma-separated the list of actions for the resource resourceName.</td>
</tr>
<tr>
<td>displayName</td>
<td>Specifies the display name of the resource created. Optional.</td>
</tr>
<tr>
<td>description</td>
<td>Specifies the description of the entitlement created. Optional.</td>
</tr>
</tbody>
</table>

4.6.28.3 Example

The following invocation creates the entitlement myEntitlement with just the resource myResource in the stripe myApplication:

\[
\text{wls:/mydomain/serverConfig> createEntitlement(appStripe=\"myApplication\", name=\"myEntitlement\", resourceName=\"myResource\", actions=\"read,write\")}
\]

4.6.29 getEntitlement

Online command that gets an entitlement.
4.6.29.1 Description
Returns the name, display name, and all the resources (with their actions) of an entitlement in an application stripe.

4.6.29.2 Syntax
getEntitlement(appStripe="appStripeName", name="entitlementName")

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the entitlement is located.</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name of the entitlement to access.</td>
</tr>
</tbody>
</table>

4.6.29.3 Example
The following invocation returns the information of the entitlement myEntitlement in the stripe myApplication:

```
wls:/mydomain/serverConfig> getEntitlement(appStripe="myApplication", name="myEntitlement")
```

4.6.30 deleteEntitlement
Online command that deletes an entitlement.

4.6.30.1 Description
Deletes an entitlement in a specified application stripe. It performs a cascading deletion by removing all references to the specified entitlement in the application stripe.

4.6.30.2 Syntax
deleteEntitlement(appStripe="appStripeName", name="entitlementName")

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the entitlement is deleted.</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name of the entitlement to delete.</td>
</tr>
</tbody>
</table>

4.6.30.3 Example
The following invocation deletes the entitlement myEntitlement in the stripe myApplication:

```
wls:/mydomain/serverConfig> deleteEntitlement(appStripe="myApplication", name="myEntitlement")
```

4.6.31 addResourceToEntitlement
Online command that adds a resource with specified actions to an entitlement.

4.6.31.1 Description
Adds a resource with specified actions to an entitlement in a specified application stripe. The passed resource type must exist in the passed application stripe.
4.6.31.2 Syntax

```
addResourceToEntitlement(appStripe="appStripeName", name="entName", 
resourceName="resName", actions="actionList")
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the entitlement is located.</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name of the entitlement to modify.</td>
</tr>
<tr>
<td>resourceName</td>
<td>Specifies the name of the resource to add.</td>
</tr>
<tr>
<td>resourceType</td>
<td>Specifies the type of the resource to add. The passed resource type must be present in the application stripe at the time this script is invoked.</td>
</tr>
<tr>
<td>actions</td>
<td>Specifies the comma-separated list of actions for the added resource.</td>
</tr>
</tbody>
</table>

4.6.31.3 Example

The following invocation adds the resource myResource to the entitlement myEntitlement in the application stripe myApplication:

```
wls:/mydomain/serverConfig> addResourceToEntitlement(appStripe="myApplication", 
name="myEntitlement", resourceName="myResource", resourceType="myResType", 
actions="view,edit")
```

4.6.32 revokeResourceFromEntitlement

Online command that removes a resource from an entitlement.

4.6.32.1 Description

Removes a resource from an entitlement in a specified application stripe.

4.6.32.2 Syntax

```
revokeResourceFromEntitlement(appStripe="appStripeName", name="entName", 
resourceName="resName", resourceType="resTypeName", actions="actionList")
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the entitlement is located.</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name of the entitlement to modify.</td>
</tr>
<tr>
<td>resourceName</td>
<td>Specifies the name of the resource to remove.</td>
</tr>
<tr>
<td>resourceType</td>
<td>Specifies the type of the resource to remove.</td>
</tr>
<tr>
<td>actions</td>
<td>Specifies the comma-separated list of actions to remove.</td>
</tr>
</tbody>
</table>

4.6.32.3 Example

The following invocation removes the resource myResource from the entitlement myEntitlement in the stripe myApplication:

```
wls:/mydomain/serverConfig> revokeResourceFromEntitlement(appStripe="myApplication", 
name="myEntitlement", resourceName="myResource", resourceType="myResType", 
actions="view,edit")
```

4.6.33 listEntitlements

Online command that lists the entitlements in an application stripe.
4.6.33 ListEntitlements

Lists all the entitlements in an application stripe. If a resource name and a resource type are specified, it lists the entitlements that have a resource of the specified type matching the specified resource name; otherwise, it lists all the entitlements in the application stripe.

4.6.33.1 Description

Lists all the entitlements in an application stripe. If a resource name and a resource type are specified, it lists the entitlements that have a resource of the specified type matching the specified resource name; otherwise, it lists all the entitlements in the application stripe.

4.6.33.2 Syntax

listEntitlements(appStripe="appStripeName", [resourceTypeName="resTypeName", resourceName="resName"])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe from where to list entitlements.</td>
</tr>
<tr>
<td>resourceTypeName</td>
<td>Specifies the name of the type of the resources to list. Optional.</td>
</tr>
<tr>
<td>resourceName</td>
<td>Specifies the name of resource to match. Optional.</td>
</tr>
</tbody>
</table>

4.6.33.3 Examples

The following invocation lists all the entitlements in the stripe myApplication:

```
listEntitlements(appStripe="myApplication")
```

The following invocation lists all the entitlements in the stripe myApplication that contain a resource type myResType and a resource whose name match the resource name myResName:

```
listEntitlements(appStripe="myApplication", resourceTypeName="myResType", resourceName="myResName")
```

4.6.34 grantEntitlement

Online command that creates a new entitlement.

4.6.34.1 Description

Creates a new entitlement with a specified principal in a specified application stripe.

4.6.34.2 Syntax

grantEntitlement(appStripe="appStripeName", principalClass="principalClass", principalName="principalName", permSetName="entName")

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the entitlement is created.</td>
</tr>
<tr>
<td>principalClass</td>
<td>Specifies the class associated with the principal.</td>
</tr>
<tr>
<td>principalName</td>
<td>Specifies the name of the principal to which the entitlement is granted.</td>
</tr>
<tr>
<td>permSetName</td>
<td>Specifies the name of the entitlement created.</td>
</tr>
</tbody>
</table>

4.6.34.3 Example

The following invocation creates the entitlement myEntitlement in the stripe myApplication:

```
grantEntitlement(appStripe="myApplication", principalClass="oracle.security.jps.service.policystore.ApplicationRole", principalName="myPrincipalName", permSetName="myEntitlement")
```
4.6.35 revokeEntitlement

Online command that deletes an entitlement.

4.6.35.1 Description

Deletes an entitlement and revokes the entitlement from the principal in a specified application stripe.

4.6.35.2 Syntax

revokeEntitlement(appStripe="appStripeName", principalClass="principalClass", principalName="principalName", permSetName="entName")

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the entitlement is deleted.</td>
</tr>
<tr>
<td>principalClass</td>
<td>Specifies the class associated with the principal.</td>
</tr>
<tr>
<td>principalName</td>
<td>Specifies the name of the principal to which the entitlement is revoked.</td>
</tr>
<tr>
<td>permSetName</td>
<td>Specifies the name of the entitlement deleted.</td>
</tr>
</tbody>
</table>

4.6.35.3 Example

The following invocation deleted the entitlement myEntitlement in the stripe myApplication:

wls:/mydomain/serverConfig> revokeEntitlement(appStripe="myApplication", principalClass="oracle.security.jps.service.policystore.ApplicationRole", principalName="myPrincipalName", permSetName="myEntitlement")

4.6.36 listEntitlement

Online command that lists an entitlement in a specified application stripe.

4.6.36.1 Description

If a principal name and a class are specified, it lists the entitlements that match the specified principal; otherwise, it lists all the entitlements.

4.6.36.2 Syntax

listEntitlement(appStripe="appStripeName", [principalName="principalName", principalClass="principalClass"])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appStripe</td>
<td>Specifies the application stripe where the entitlement is deleted.</td>
</tr>
<tr>
<td>principalName</td>
<td>Specifies the name of the principal to match. Optional.</td>
</tr>
<tr>
<td>principalClass</td>
<td>Specifies the class of the principal to match. Optional.</td>
</tr>
</tbody>
</table>

4.6.36.3 Example

The following invocation lists all entitlements in the stripe myApplication:

wls:/mydomain/serverConfig> listEntitlement(appStripe="myApplication")
4.6.37 listResourceTypes

Online command that lists resource types.

4.6.37.1 Description
Lists all the resource types in a specified application stripe.

4.6.37.2 Syntax
listResourceTypes(appStripe="appStripeName")

Argument | Definition
---|---
appStripe | Specifies the application stripe where the resource types are located.

4.6.37.3 Example
The following invocation lists all resource types in the stripe myApplication:

```
wls:/mydomain/serverConfig> listEntitlement(appStripe="myApplication")
```

4.7 Oracle Access Manager Commands

Use the WLST commands listed in Table 4–6 to manage Oracle Access Manager (OAM)-related components, such as authorization providers, identity asserters, and SSO providers, as well as to display metrics and deployment topology, manage Oracle Access Manager server and agent configuration and logger settings.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>listOAMAuthnProviderParams</td>
<td>List the parameters set for an Oracle Access Manager authentication or identity assertion provider.</td>
<td>Online</td>
</tr>
<tr>
<td>createOAMIdentityAsserter</td>
<td>Create a new identity asserator.</td>
<td>Online</td>
</tr>
<tr>
<td>updateOAMIdentityAsserter</td>
<td>Update an existing identity asserator.</td>
<td>Online</td>
</tr>
<tr>
<td>createOAMAuthenticator</td>
<td>Create a new authenticator.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteOAMAuthnProvider</td>
<td>Delete an existing authentication provider.</td>
<td>Online</td>
</tr>
<tr>
<td>updateOAMAuthenticator</td>
<td>Update an existing authenticator.</td>
<td>Online</td>
</tr>
<tr>
<td>addOAMSSOProvider</td>
<td>Add a new SSO provider.</td>
<td>Online</td>
</tr>
<tr>
<td>displayTopology</td>
<td>List the details of deployed Oracle Access Manager Servers.</td>
<td>Online</td>
</tr>
<tr>
<td>displayMetrics</td>
<td>Display the performance metrics of an Oracle Access Manager Server and domain.</td>
<td>Online</td>
</tr>
<tr>
<td>displayOamServer</td>
<td>Display Oracle Access Manager Server configuration details.</td>
<td>Online</td>
</tr>
<tr>
<td>createOamServer</td>
<td>Create an entry for an Oracle Access Manager Server configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>editOamServer</td>
<td>Edit the entry for an Oracle Access Manager Server configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>Use this command...</td>
<td>To...</td>
<td>Use with WLST...</td>
</tr>
<tr>
<td>---------------------</td>
<td>-------</td>

<tr>
<td>deleteOamServer</td>
<td>Delete the named Oracle Access Manager Server configuration.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>displayOssoAgent</td>
<td>Display OSSO Agent configuration details.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>editOssoAgent</td>
<td>Edit OSSO Agent configuration details.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>deleteOssoAgent</td>
<td>Delete the named OSSO Agent configuration.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>displayWebgateAgent</td>
<td>Display WebGate Agent configuration details.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>editWebgateAgent</td>
<td>Edit 10g WebGate Agent registration details.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>deleteWebgateAgent</td>
<td>Delete the named 10g WebGate Agent configuration.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>changeLoggerSetting</td>
<td>Change Logger Settings.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>changeConfigDataEncryptionKey</td>
<td>Regenerate the configuration data encryption key and re-encrypt data.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>displayUserIdentityStore</td>
<td>Display a user identity store registration.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>editUserIdentityStore</td>
<td>Edit a user identity store registration.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>createUserIdentityStore</td>
<td>Create a user identity store registration.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>deleteUserIdentityStore</td>
<td>Delete a user identity store registration.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>configRequestCacheType</td>
<td>Configure the SSO server request cache type.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>displayRequestCacheType</td>
<td>Display the SSO server request cache type entry.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>exportPolicy</td>
<td>Export Oracle Access Manager policy data from a test (source) to an intermediate Oracle Access Manager file.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>importPolicy</td>
<td>Import Oracle Access Manager policy data from the Oracle Access Manager file specified.</td>
<td>Online</td>
</tr>
<tr>
<td>importPolicyDelta</td>
<td>Import Oracle Access Manager policy changes from the Oracle Access Manager file specified.</td>
<td>Online</td>
</tr>
<tr>
<td>migratePartnersToProd</td>
<td>Migrate partners from the source Oracle Access Manager Server to the specified target Oracle Access Manager Server.</td>
<td>Online</td>
</tr>
</tbody>
</table>

Table 4–6 (Cont.) WLST Oracle Access Manager Commands
## Table 4–6 (Cont.) WLST Oracle Access Manager Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>exportPartners</td>
<td>Export the Oracle Access Manager partners from the source to the intermediate Oracle Access Manager file specified.</td>
<td>Online</td>
</tr>
<tr>
<td>importPartners</td>
<td>Import the Oracle Access Manager partners from the intermediate Oracle Access Manager file specified.</td>
<td>Online</td>
</tr>
<tr>
<td>configureOAAM</td>
<td>Configure the Oracle Access Manager-Oracle Adaptive Access Manager basic integration.</td>
<td>Online</td>
</tr>
<tr>
<td>registerOIFDAPPartner</td>
<td>Register Oracle Identity Federation as Delegated Authentication Protocol (DAP) Partner.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>enableCoexistMode</td>
<td>Enable the Coexist Mode.</td>
<td>Online</td>
</tr>
<tr>
<td>disableCoexistMode</td>
<td>Disable the Coexist Mode.</td>
<td>Online</td>
</tr>
<tr>
<td>editGITOValues</td>
<td>Edit GITO configuration parameters.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>editWebgate11gAgent</td>
<td>Edit an 11g WebGate registration.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>deleteWebgate11gAgent</td>
<td>Remove an 11g WebGate Agent registration.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>displayWebgate11gAgent</td>
<td>Display an 11g WebGate Agent registration.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>displayOAMMetrics</td>
<td>Display metrics of OAM Servers.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>updateOIMHostPort</td>
<td>Update the Oracle Identity Manager configuration when integrated with Oracle Access Manager.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>configureOIM</td>
<td>Creates an Agent registration specific to Oracle Identity Manager when integrated with Oracle Access Manager.</td>
<td>Online</td>
</tr>
<tr>
<td>updateOSSOResponseCookieConfig</td>
<td>Updates OSSO Proxy response cookie settings.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>deleteOSSOResponseCookieConfig</td>
<td>Deletes OSSO Proxy response cookie settings.</td>
<td>Online Offline</td>
</tr>
<tr>
<td>displaySimpleModeGlobalPassphrase</td>
<td>Displays the simple mode global passphrase in plain text from the system configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>exportSelectedPartners</td>
<td>Exports selected OAM Partners to the intermediate OAM file specified.</td>
<td>Online</td>
</tr>
<tr>
<td>migrateArtifacts</td>
<td>Migrates artifacts based on the input artifact file.</td>
<td>Online</td>
</tr>
<tr>
<td>registerThirdPartyTAPPartner</td>
<td>Registers any third party as a Trusted Authentication Protocol (TAP) Partner.</td>
<td>Online</td>
</tr>
</tbody>
</table>
4.7.1 listOAMAuthnProviderParams

Online command that lists the values of the parameters in effect in a domain authenticator or identity asseter.

4.7.1.1 Description
Lists the values of the parameters set for a given Oracle Access Manager authenticator or identity asseter. In the event of an error, the command returns a WLSTException.

4.7.1.2 Syntax
listOAMAuthnProviderParams(name)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Specifies the name of the authenticator or identity asseter.</td>
</tr>
</tbody>
</table>

4.7.1.3 Example
The following invocation lists the parameters and values set for the asseter named myIdAsseter:
listOAMAuthnProviderParams(name="myIdAsseter")

4.7.2 createOAMIdentityAsserter

Online command that creates an Oracle Access Manager identity asseter in the current domain.

4.7.2.1 Description
Creates an identity asseter with a given name in the current domain. Before executing this command, make sure that no Oracle Access Manager identity asseter is already configured in the current domain. In the event of an error, the command returns a WLSTException.

4.7.2.2 Syntax
createOAMIdentityAsserter(name)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Specifies the name of the new identity asseter. If no name is specified, it defaults to &quot;OAMIdentityAsserter&quot;.</td>
</tr>
</tbody>
</table>

4.7.2.3 Example
The following invocation creates a new identity asseter named OAMIdentityAsserter:
createOAMIdentityAsserter(name="OAMIdentityAsserter")

4.7.3 updateOAMIdentityAsserter

Online command that updates the values of parameters of the Oracle Access Manager identity asseter in the current domain.
4.7.3.1 Description
Updates the value of given parameters of the domain Oracle Access Manager identity asserter. In the event of an error, the command returns a WLSTException.

4.7.3.2 Syntax
updateOAMIdentityAsserter(name, paramNameValueList)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Specifies the name of the Oracle Access Manager identity asserter</td>
</tr>
<tr>
<td>paramNameValueList</td>
<td>Specifies the comma-separated list of pairs of parameter name-value to be updated. The format of each pair is: paramName=&quot;paramValue&quot;</td>
</tr>
</tbody>
</table>

The parameter names that can be updated are the following only:

- accessGateName—The name of the AccessGate used by the authenticator.
- accessGatePwd—The password to the AccessGate used by the authenticator.
- pAccessServer—The name of the primary access server. Values must have the format hostName:portNumber.
- sAccessServer—The name of the secondary access server. Values must have the format hostName:portNumber.
- transportSecurity—The mode of communication between AccessGate and OAM Access Server.
- keystorePwd—The password to access the domain key store.
- keystorePath—The absolute path of the JKS key store used for SSL communication between the authenticator and OAM Access Server.
- simpleModePassphrase—The password shared by AccessGate and OAM Access Server in simple communication mode.
- truststorePath—The absolute path of the JKS trust store used for SSL communication between the authenticator and OAM Access Server.
- poolMaxConnections—The maximum number of connections in the OAM Server connection pool.
- poolMinConnections—The minimum number of connections in the OAM Server connection pool.
- ssoHeaderName—The SSO header name.
- controlFlag—The JAAS control flag that sets up dependencies among all authenticators in the domain. Values can be only REQUIRED, SUFFICIENT, REQUISITE, or OPTIONAL.
- appDomain—The name of the application domain.

4.7.3.3 Example
The following invocation updates the parameters accessGateName, accessGatePwd, pAccessServer, and ssoHeaderName in the Oracle Access Manager identity asserter named myIdAsserter:

updateOAMIdentityAsserter(name="myIdAsserter",
  accessGateName="OAM IAP AccessGate", accessGatePwd="welcome1",
  pAccessServer="myhost.domain.com:5543", ssoHeaderName="OAM_SSO_HEADER")
4.7.4 createOAMAuthenticator

Online command that creates an Oracle Access Manager authenticator in the current domain.

4.7.4.1 Description

Creates an Oracle Access Manager authenticator with a given name in the current domain. Before executing this command, make sure that no Oracle Access Manager authenticator is already configured in the default security domain. In the event of an error, the command returns a WLSTException.

4.7.4.2 Syntax

createOAMAuthenticator(name)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Specifies the name of the new authentication provider in the default domain. If no name is specified, it defaults to &quot;OAMAuthenticator&quot;.</td>
</tr>
</tbody>
</table>

4.7.4.3 Example

The following invocation creates a new authentication provider named OAMAuthenticator:

createOAMAuthenticator(name="OAMAuthenticator")

4.7.5 deleteOAMAuthnProvider

Online command that deletes the OAM authenticator from the current domain.

4.7.5.1 Description

Deletes the OAM authenticator with a given name from the current domain. In the event of an error, the command returns a WLSTException.

4.7.5.2 Syntax

deleteOAMAuthnProvider(name)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Specifies the name of the authentication provider to delete.</td>
</tr>
</tbody>
</table>

4.7.5.3 Example

The following invocation deletes the authenticator myAuthenticator:

deleteOAMAuthnProvider(name="myAuthenticator")

4.7.6 updateOAMAuthenticator

Online command that updates the values of parameters of the Oracle Access Manager authenticator in the current domain.

4.7.6.1 Description

Updates the value of given parameters of the domain Oracle Access Manager authenticator. In the event of an error, the command returns a WLSTException.
4.7.6.2 Syntax

updateOAMAuthenticator(name, paramNameValueList)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Specifies the name of the Oracle Access Manager authenticator whose parameter values to update.</td>
</tr>
</tbody>
</table>
| paramNameValueList  | Specifies the comma-separated list of pairs of parameter name-value to be updated. The format of each pair is paramName='paramValue'

The only parameter names that can be updated are the following:

- **accessGateName**—The name of the AccessGate used by the authenticator.
- **accessGatePwd**—The password to the AccessGate used by the authenticator.
- **pAccessServer**—The name of the primary access server. Values must have the format hostName:portNumber.
- **sAccessServer**—The name of the secondary access server. Values must have the format hostName:portNumber.
- **transportSecurity**—The mode of communication between AccessGate and OAM Access Server: open, simple, or cert.
- **keyStorePwd**—The password to access the domain key store.
- **keyStorePath**—The absolute path of the JKS key store used for SSL communication between the authenticator and OAM Access Server.
- **simpleModePassphrase**—The password shared by AccessGate and OAM Access Server in simple communication mode.
- **trustStorePath**—The absolute path of the JKS trust store used for SSL communication between the authenticator and OAM Access Server.
- **poolMaxConnections**—The maximum number of connections in the OAM Server connection pool.
- **poolMinConnections**—The minimum number of connections in the OAM Server connection pool.
- **useRetNameAsPrincipal**—Specifies whether the user name retrieved from the OAM authenticator should be used as the name of the Principal in the Subject.
- **controlFlag**—The JAAS control flag that sets up dependencies among all authenticators in the domain. Values can be only REQUIRED, SUFFICIENT, REQUISITE, or OPTIONAL.
- **appDomain**—The name of the application domain.

4.7.6.3 Example

The following invocation updates the parameters accessGateName, accessGatePwd, and pAccessServer in the Oracle Access Manager authenticator named myAuthenticator:

```
updateOAMAuthenticator(name="myAuthenticator",
accessGateName="OAM AP AccessGate", accessGatePwd="welcome1",
pAccessServer="myhost.domain.com:5543")
```
4.7.7 addOAMSSOProvider

Online command that adds an Oracle Access Manager SSO provider with the given login URI, logout URI, and auto-login URI.

4.7.7.1 Description

Adds an SSO provider with the given login URI, logout URI, and auto-login URI. This command modifies the domain `jps-config.xml` by adding an Oracle Access Manager SSO service instance with the required properties. In the event of an error, the command returns a `WLSTException`.

4.7.7.2 Syntax

`addOAMSSOProvider(loginuri, logouturi, autologinuri, beginimpuri, endimpuri)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>loginuri</td>
<td>Required. Specifies the URI of the login page and triggers SSO authentication.</td>
</tr>
<tr>
<td>logouturi</td>
<td>Optional. Specifies the URI of the logout page and logs the signed-on user out. If unspecified, defaults to <code>logouturi=NONE</code>. Set to &quot;&quot; to ensure that ADF security calls the OPSS logout service, which uses the implementation of the class <code>OAMSSOServiceImpl</code> to clear the cookie <code>ObSSOCookie</code>. More generally, an ADF-secured web application that would like to clear cookies without logging out the user should use this setting.</td>
</tr>
<tr>
<td>autologinuri</td>
<td>Required. Specifies the URI of the autologin page. Optional. If unspecified, it defaults to <code>autologin=NONE</code>.</td>
</tr>
<tr>
<td>beginimpuri</td>
<td>Optional. Specifies the URI that triggers the impersonation SSO session.</td>
</tr>
<tr>
<td>endimpuri</td>
<td>Optional. Specifies the URI that terminates the impersonation SSO session.</td>
</tr>
</tbody>
</table>

4.7.7.3 Example

The following invocation adds an SSO provider with the passed URIs; note the special behavior implied by the setting `logouturi=""` and the impersonation parameters, as explained in the above table:

```java
addOAMSSOProvider(loginuri="/${app.context}/adfAuthentication",
logouturi="/oamsso/logout.html",
beginimpuri="https://login.acme.com/impersonationInit.html"
endimpuri="https://login.acme.com/impersonationTerm.html"
autologin="/fooBar.cgi")
```

4.7.8 displayTopology

Online and offline command that displays the information about all the OAM Servers in a deployment.

4.7.8.1 Description

Lists the topology of deployed OAM Servers. There are no arguments for this command.
4.7.8.2 Syntax
displayTopology

4.7.8.3 Example
The following invocation lists the details of all deployed OAM Servers, as described above:
displayTopology

4.7.9 displayMetrics
Online command that displays the performance metrics of an OAM Server and domain.

4.7.9.1 Description
Displays the performance metrics of an OAM Server and domain specific to collectors, including host, process, and server names. There are no arguments for this command.

If none of the arguments are specified all the details of all the servers and collectors are displayed.

4.7.9.2 Syntax
displayMetrics()

4.7.9.3 Example
The following invocation lists all metrics specific to named collectors, as described above:
displayMetrics()

4.7.10 displayOamServer
Online and offline command that displays OAM Server registration details.

4.7.10.1 Description
Displays OAM Server registration details, including the host, port, registration name, OAM Proxy port and server ID, and, optionally, the OAM Proxy shared secret.

The scope of this command is an instance, only. The scope is not an argument.

4.7.10.2 Syntax
displayOamServer(host, port)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>Mandatory. Specifies the name of the OAM Server host.</td>
</tr>
<tr>
<td>port</td>
<td>Mandatory. Specifies the listening port of the OAM Server host.</td>
</tr>
</tbody>
</table>
| domainhome  | Offline mode: Mandatory
              Online mode: Optional |

4.7.10.3 Example
The following invocation lists all metrics specific to named collectors, as described above:
displayOamServer(host="my_host", port="15000", domainHome="domainHome1")

4.7.11 createOamServer

Online and offline command that creates an OAM Server entry in the system configuration.

4.7.11.1 Description

Creates an OAM Server registration, including the host, port, registration name, OAM Proxy port and server ID, and, optionally, the OAM Proxy shared secret.

The scope of this command is an instance, only. The scope is not an argument

4.7.11.2 Syntax

createOamServer(host, port, paramNameValueList)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>Mandatory. Specifies the name of the OAM Server host.</td>
</tr>
<tr>
<td>port</td>
<td>Mandatory. Specifies the listening port of the OAM Server host.</td>
</tr>
</tbody>
</table>
| domainHome     | Offline mode: Mandatory  
                 | Online mode: Optional                                                      |
| paramNameValueList | Specifies the comma-separated list of parameter name-value pairs.      |
|                | The format of each pair is:                                                |
|                | paramName='paramValue'  
                | Mandatory:                                                                |
|                | ■ configurationProfile—The name of this instance registration, which appears under Server Instances on the System Configuration tab in the OAM Administration Console. |
|                | ■ oamProxyPort—The listening port of this instance.                        |
|                | ■ oamProxyServerID—The name of the OAM Proxy for this server instance, which will appear under the OAM Proxy sub tab of the server instance in the OAM Administration Console. |
|                | ■ siteName—siteName/serverName for the instance.                           |

4.7.11.3 Example

The following invocation creates a configuration for your_host with listening port 15000. The configuration entry in the Administration Console will be oam_server1. The OAM Proxy port is 3004 and the OAM Proxy Server ID is AccessServerConfigProxy:

createOamServer(host="my_host", port="15000", configurationProfile= 'oam_server1', oamProxyPort="3004", oamProxyServerID="ProxyID", siteName="siteName1", domainHome="domainHome1")

4.7.12 editOamServer

Online and offline command that enables you to edit OAM Server registration details.

4.7.12.1 Description

Edits the registration for an OAM Server, which can include the host, port, registration name, OAM Proxy port and server ID, and, optionally, the OAM Proxy shared secret.
The scope of this command is an instance, only. The scope is not an argument.

### 4.7.12.2 Syntax

```
editOamServer(name, port, paramNameValueList)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Mandatory. Specifies the name of the OAM Server host.</td>
</tr>
<tr>
<td>port</td>
<td>Mandatory. Specifies the port number of the OAM Server host.</td>
</tr>
</tbody>
</table>
| domainHome        | Offline mode: Mandatory  
                   |
|                   | Online mode: Optional                                                       |
| paramNameValueList| Specifies the comma-separated list of parameter name-value pairs. The format of each pair is:  
                   |
|                   | paramName='paramValue'                                                      |
|                   | Mandatory:                                                                  |
|                   | ■ configurationProfile—The name of this instance registration, which appears under Server Instances on the System Configuration tab in the OAM Administration Console. |
|                   | ■ oamProxyPort—The listening port of this instance.                         |
|                   | ■ oamProxyServerID—The name of the OAM Proxy for this server instance, which will appear under the OAM Proxy sub tab of the server instance in the OAM Administration Console. |
|                   | ■ siteName—siteName/serverName for the instance.                            |

### 4.7.12.3 Example

You can use any of the optional attributes to change current settings. The following invocation enables you to add the OAM Proxy shared secret to the configuration entry oam_server1.

```
editOamServer(name="oam_server1", port="15000", configurationProfile="oam_server1", oamProxyPort="3004", oamProxyServerID="Proxy1", siteName="siteName1", domainHome="domainHome1")
```

### 4.7.13 deleteOamServer

Online and offline command that enables you to delete the named OAM Server registration.

#### 4.7.13.1 Description

Deletes an entire OAM Server configuration.

The scope of this command is an instance, only. The scope is not an argument.

#### 4.7.13.2 Syntax

```
deleteOamServer(host, port)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>Mandatory. Specifies the name of the OAM Server host.</td>
</tr>
<tr>
<td>port</td>
<td>Mandatory. Specifies the listening port of the OAM Server host.</td>
</tr>
</tbody>
</table>
Oracle Access Manager Commands

4.7.13.3 Example
The following invocation enables you to delete the OAM Server registration for oam_server1 with listening port 15000.

`deleteOamServer(host="oam_server1",port="15000",domainHome="domainHome1")`

4.7.14 displayOssoAgent
Online and offline command that displays OSSO Agent configuration details.

4.7.14.1 Description
Displays OSSO Agent registration details, which also appear in the OAM Administration Console.

The scope of this command is an instance, only. The scope is not an argument

4.7.14.2 Syntax
`displayOssoAgent(agentName)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>agentName</td>
<td>Mandatory. Specifies the name of the OSSO Agent.</td>
</tr>
</tbody>
</table>
| domainhome | Offline mode: Mandatory  
            Online mode: Optional |

4.7.14.3 Example
The following invocation displays the OSSO Agent's registration information:

`displayOssoAgent(agentName="OSSOAgent1",domainHome="domainHome1")`

4.7.15 editOssoAgent
Online and offline command that enables you to edit an OSSO Agent registration.

4.7.15.1 Description
Changes OSSO Agent configuration details, including the Site Token, Success URL, Failure URL, Home URL, Logout URL, Start Date, End Date, Administrator ID, and Administrator Info.

The scope of this command is an instance, only. The scope is not an argument

4.7.15.2 Syntax
`editOssoAgent(agentName, paramNameValueList)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>agentName</td>
<td>Mandatory. Specifies the name of the OSSO Agent.</td>
</tr>
</tbody>
</table>
4.7.15.3 Example
The following invocation changes the Administrator ID and information in the registration entry for OSSOAgent1:

```bash
editOssoAgent(agentName="OSSOAgent1", siteToken="siteToken", successUrl="successUrl", failureUrl="failureUrl", homeUrl="homeUrl", logoutUrl="logoutUrl", startDate="2009-12-10", endDate="2012-12-30", adminId= 345", adminInfo="Agent11", domainHome="domainHome1")
```

4.7.16 deleteOssoAgent
Online and offline command that enables you to delete an OSSO Agent registration.

4.7.16.1 Description
Removes an OSSO Agent configuration.
The scope of this command is an instance, only. The scope is not an argument

4.7.16.2 Syntax
`deleteOssoAgent(agentName)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>agentName</td>
<td>Mandatory. Specifies the name of the OSSO Agent.</td>
</tr>
<tr>
<td>domainhome</td>
<td>Offline mode: Mandatory Online mode: Optional</td>
</tr>
</tbody>
</table>
4.7.16.3 Example
The following invocation removes the OSSO Agent named OSSOAgent1:
\[
deleteOssoAgent(agentName="OSSOAgent1", domainHome="domainHome1")
\]

4.7.17 displayWebgateAgent
Online and offline command that displays a 10g WebGate registration.

4.7.17.1 Description
Displays all 10g WebGate registration details, which can also be seen in the OAM Administration Console.

The scope of this command is an instance, only. The scope is not an argument.

4.7.17.2 Syntax
\[
displayWebgateAgent(agentName)
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>agentName</td>
<td>Mandatory. Specifies the name of the WebGate Agent.</td>
</tr>
</tbody>
</table>
| domainhome | Offline mode: Mandatory

4.7.17.3 Example
The following invocation displays registration information for my_WebGate:
\[
displayWebgateAgent(agentName="my_WebGate", domainHome="domainHome1")
\]

4.7.18 editWebgateAgent
Online and offline command that enables you to edit a 10g WebGate registration.

4.7.18.1 Description
Enables you to change 10g WebGate Agent registration details.

The scope of this command is an instance, only. The scope is not an argument.

4.7.18.2 Syntax
\[
editWebgateAgent(agentName, paramNameValueList)
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>agentName</td>
<td>Mandatory. Specifies the name of the WebGate Agent.</td>
</tr>
</tbody>
</table>
| domainhome | Offline mode: Mandatory

You can alter any or all of the settings. Use the following invocation to change specific information in the WebGate Agent registration, including the Agent ID, state, maximum connections, OAM Server timeout, primary cookie domain, cache time out,
cookie session timeout, maximum session timeout, idle session timeout, and failover threshold, as follows:

```java
editWebgateAgent(agentName="my_WebGate", agentId="WebGate2", state='enabled', maxConnections="2", aatimeOutThreshold="2",
primaryCookieDomain="adomain.com", cacheTimeOut="1200",
cookieSessionTime=1500, maxSessionTime=1500, idleSessionTimeout='1500', failoverThreshold='25', domainHome="domainHome1")
```

4.7.19 deleteWebgateAgent

Online and offline command that enables you to delete a 10g WebGate Agent registration.

4.7.19.1 Description

Removes an 10g WebGate Agent registration.

The scope of this command is an instance, only. The scope is not an argument.

4.7.19.2 Syntax

```
deleteWebgateAgent(agentName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>agentName</td>
<td>Mandatory. Specifies the name of the WebGate Agent.</td>
</tr>
<tr>
<td>domainhome</td>
<td>Offline mode: Mandatory Online mode: Optional</td>
</tr>
</tbody>
</table>

4.7.19.3 Example

The following invocation removes the WebGate Agent named my_WebGate:

```java
deleteWebgateAgent(agentName="my_WebGate", domainHome="domainHome1")
```

4.7.20 changeLoggerSetting

Online and offline command that changes the logger level.

4.7.20.1 Description

Changes the level of one or more, or all, loggers.

The scope of this command is an instance, only. The scope is not an argument.

4.7.20.2 Syntax

```
changeLoggerSetting (loggerName=' ', loggerLevel=' '):
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>loggerName</td>
<td>Optional. Specifies the OAM logger name. Multiple OAM logger names can be specified, separated by commas, or you can use the wildcard (*) character to specify all OAM collectors, which is the default.</td>
</tr>
<tr>
<td>loggerLevel</td>
<td>SEVERE, WARNING, INFO, CONFIG, FINE.</td>
</tr>
</tbody>
</table>
4.7.20.3 Example
The following invocation changes the logger level to SEVERE:

```bash
changeLoggerSetting(loggerName=" ", loggerLevel=SEVERE)
```

4.7.21 changeConfigDataEncryptionKey
Offline command that regenerates the configuration data encryption key.

4.7.21.1 Description
Regenerates the configuration data encryption key, re-encrypts the configuration data using the new key, and outputs attribute information of the identity store.

The scope of this command is an instance, only. The scope is not an argument.

4.7.21.2 Syntax

```bash
changePasswordEncKey (oldpassword='', newPassword='')
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>oldPassword</td>
<td>Mandatory. Specifies the password that retrieves the current encryption key.</td>
</tr>
<tr>
<td>newPassword</td>
<td>Mandatory. Defines a new password that protects the newly generated encryption key.</td>
</tr>
</tbody>
</table>

4.7.21.3 Example
The following invocation changes the old and new password, regenerates the key, and re-encrypts the configuration data:

```bash
changePasswordEncKey(oldpassword="oldpassword", newPassword="newpassword")
```

4.7.22 displayUserIdentityStore
Online and offline command that displays user identity store registration information.

4.7.22.1 Description
Displays information of the user identity store registered with Oracle Access Manager.

The scope of this command is an instance, only. The scope is not an argument.

4.7.22.2 Syntax

```bash
displayUserIdentityStore{name}
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Mandatory. Specifies the name of the LDAP user identity store.</td>
</tr>
<tr>
<td>domainhome</td>
<td>Offline mode: Mandatory</td>
</tr>
<tr>
<td></td>
<td>Online mode: Optional</td>
</tr>
</tbody>
</table>

4.7.22.3 Example
The following invocation displays registration details of the user identity store:

```bash
displayUserIdentityStore(name="ID_store1", domainHome="domainHome1")
```
4.7.23 editUserIdentityStore

Online and offline command that changes attributes of the user identity store for Oracle Access Manager.

4.7.23.1 Description

Changes one or more attributes of the user identity store registered with Oracle Access Manager.

The scope of this command is an instance, only. The scope is not an argument.

4.7.23.2 Syntax

editUserIdentityStore(name, paramNameValueList)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Mandatory. Specifies the unique name of the LDAP user identity store (only upper and lower case alpha characters and numbers).</td>
</tr>
<tr>
<td>domainhome</td>
<td>Offline mode: Mandatory</td>
</tr>
<tr>
<td></td>
<td>Online mode: Optional</td>
</tr>
<tr>
<td>paramNameValueList</td>
<td>Specifies the comma-separated list of parameter name-value pairs. The format of each pair is: paramName='paramValue' Include one or more of the following parameter name-value pairs, in addition to those in createUserIdentityStore, to change the OAM user identity store configuration:</td>
</tr>
<tr>
<td></td>
<td>- userFilterObjectClasses—List of user filter object classes (separated by semi-colon).</td>
</tr>
<tr>
<td></td>
<td>- groupFilterObjectClasses—List of group filter object classes (separated by semi-colon).</td>
</tr>
<tr>
<td></td>
<td>- referralPolicy—LDAP referral policy (either “follow”, “ignore” or “throw”).</td>
</tr>
<tr>
<td></td>
<td>- searchTimeLimit—Time limit in seconds for LDAP Search operation.</td>
</tr>
<tr>
<td></td>
<td>- minConnections—Minimum number of connections in the connection pool.</td>
</tr>
<tr>
<td></td>
<td>- maxConnections—Maximum number of connections in the connection pool.</td>
</tr>
<tr>
<td></td>
<td>- connectionWaitTimeout—Number of seconds to wait for obtaining a connection from the pool.</td>
</tr>
<tr>
<td></td>
<td>- connectionRetryCount—Number of attempts to establish a connection to identity store.</td>
</tr>
<tr>
<td></td>
<td>- groupNameAttr—Name of the attribute to look up the user groups. For example: ou=people,ou=myrealm,dc;base_domain</td>
</tr>
<tr>
<td></td>
<td>- groupCacheEnabled—Toggle (true/false) to enable LDAP group cache.</td>
</tr>
<tr>
<td></td>
<td>- groupCacheSize—Number of entries in LDAP group cache.</td>
</tr>
<tr>
<td></td>
<td>- groupCacheTTL—Total time to live for each entry of LDAP group cache.</td>
</tr>
</tbody>
</table>
4.7.23.3 Example
The following invocation changes the LDAP URL of the user identity store for OAM:

```java
editUserIdentityStore(name="identity_store_name",
LDAP_url="ldap://localhost:7003", domainHome="domainHome1")
```

4.7.24 createUserIdentityStore

Online and offline command that creates a user identity store registration for Oracle Access Manager.

4.7.24.1 Description
Creates an entry for a new user identity store to be registered with Oracle Access Manager.

The scope of this command is an instance, only. The scope is not an argument.

4.7.24.2 Syntax

```java
createUserIdentityStore(name=, paramNameValueList)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>name</code></td>
<td>Mandatory. Specifies the unique name of the LDAP user identity store (only upper and lower case alpha characters and numbers).</td>
</tr>
</tbody>
</table>
| `domainhome` | Offline mode: Mandatory  
Online mode: Optional                  |
4.7.24.3 Example

The following invocation creates a new Oracle Internet Directory user identity store definition for use with Oracle Access Manager:

```java
createUserIdentityStore(name="Name1",principal="Principal1",
credential="Credential1", type="OID", userAttr="userAttr1",
ldapProvider="ldapProvider", roleSecAdmin="roleSecAdmin1",
roleSysMonitor="roleSysMonitor", roleSysManager="roleSysManager",
roleAppAdmin="roleAppAdmin", userSearchBase="cn=users,
ldapUrl="ldapUrl", isPrimary="isPrimary", userIDProvider="userIDProvider",
groupSearchBase="cn=groups",domainHome="domainHome1")
```

4.7.25 deleteUserIdentityStore

Online and offline command that removes a Oracle Access Manager user identity store registration.

---

**Argument Definition**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>paramNameValueList</td>
<td>Specifies the comma-separated list of parameter name-value pairs. The format of each pair is: <code>paramName='paramValue'</code></td>
</tr>
<tr>
<td>name</td>
<td>The name for this user ID store.</td>
</tr>
<tr>
<td>principal</td>
<td>The login ID of the LDAP administrator. For example, cn=Admin.</td>
</tr>
<tr>
<td>credential</td>
<td>The password of the Principal, which is encrypted for security.</td>
</tr>
<tr>
<td>type</td>
<td>The type of the LDAP ID store to be created.</td>
</tr>
<tr>
<td>userAttr</td>
<td>User attributes of the store.</td>
</tr>
<tr>
<td>userSearchBase</td>
<td>The node under which user data is stored in the LDAP ID store to be created. For example: cn=users.</td>
</tr>
<tr>
<td>groupSearchBase</td>
<td>The node under which group data is stored in the LDAP ID store to be created. Mandatory Attribute. For example: cn=groups.</td>
</tr>
<tr>
<td>ldapUrl</td>
<td>The URL for the LDAP host, including port number of the LDAP ID store to be created. For example, ldap://localhost:7001.</td>
</tr>
<tr>
<td>roleSecAdmin</td>
<td>Name of the Admin group with all privileges for LDAP ID store.</td>
</tr>
<tr>
<td>roleSysMonitor</td>
<td>Name of the Admin group with read-only privileges for LDAP ID store to be created.</td>
</tr>
<tr>
<td>roleSysManager</td>
<td>Name of the Admin group with day-to-day operational privileges for LDAP ID store to be created.</td>
</tr>
<tr>
<td>ldapProvider</td>
<td>A supported LDAP provider. For example, OVD.</td>
</tr>
<tr>
<td>isPrimary</td>
<td>The designation of the primary User Identity Store. Boolean field.</td>
</tr>
<tr>
<td>userIDProvider</td>
<td>User Identity Provider of the store to be created.</td>
</tr>
<tr>
<td>domainHome</td>
<td>Domain Home location.</td>
</tr>
</tbody>
</table>
4.7.25.1 Description
Deletes the user identity store registered with Oracle Access Manager.
The scope of this command is an instance, only. The scope is not an argument.

4.7.25.2 Syntax
deleteUserIdentityStore(name)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Mandatory. Specifies the name of the LDAP user identity store to be removed.</td>
</tr>
<tr>
<td>domainHome</td>
<td>Offline mode: Mandatory Online mode: Optional</td>
</tr>
</tbody>
</table>

4.7.25.3 Example
The following invocation deletes the registration of the user identity store:
deleteUserIdentityStore(name="identity_store", domainHome="domainHome1")

4.7.26 configRequestCacheType
Online and offline command that configures the SSO server request cache type.

4.7.26.1 Description
Configures the SSO server request cache type.
The scope of this command is an instance, only. The scope is not an argument.

4.7.26.2 Syntax
cfgRequestCacheType(type)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>Mandatory. Specifies requestCacheType. requestCacheType—The value of request cache type: BASIC or COOKIE.</td>
</tr>
</tbody>
</table>

4.7.26.3 Example
The following invocation identifies the request cache type as Cookie:
cfgRequestCacheType(type="COOKIE")

4.7.27 displayRequestCacheType
Online and offline command that displays the SSO server request cache type.

4.7.27.1 Description
Displays the SSO server request cache type entry.
The scope of this command is an instance, only. The scope is not an argument.

4.7.27.2 Syntax
displayRequestCacheType(domainHome)
4.7.27.3 Example
The following invocation displays the request cache type.

displayRequestCacheType(domainHome="domainHome")

4.7.28 exportPolicy
Online only command that exports OAM policy data from a test (source) environment to the intermediate Oracle Access Manager file specified.

4.7.28.1 Description
Exports OAM policy data from a test (source) environment to the intermediate Oracle Access Manager file.
The scope of this command is an instance, only. The scope is not an argument.

4.7.28.2 Syntax
exportPolicy(pathTempOAMPolicyFile)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>pathTempOAMPolicyFile</td>
<td>Mandatory. Specifies the path to the temporary Oracle Access Manager file.</td>
</tr>
</tbody>
</table>

4.7.28.3 Example
The following invocation specifies the path to the temporary file used when exporting policy data from a test (source) environment.

exportPolicy(pathTempOAMPolicyFile="oam_policy.xml")

4.7.29 importPolicy
Online only command that imports the OAM policy data from the intermediate Oracle Access Manager file specified.

4.7.29.1 Description
Imports the OAM policy data from the intermediate Oracle Access Manager file specified.
The scope of this command is an instance, only. The scope is not an argument.

4.7.29.2 Syntax
importPolicy(pathTempOAMPolicyFile)
4.7.29.3 Example
The following invocation specifies the path to the temporary file used when importing policy data to a production (target).

`importPolicy(pathTempOAMPolicyFile="oam_policy.xml")`

4.7.30 importPolicyDelta
Online only command that imports the OAM policy changes from the intermediate Oracle Access Manager file specified.

4.7.30.1 Description
Imports the OAM policy changes from the intermediate Oracle Access Manager file specified.

The scope of this command is an instance, only. The scope is not an argument.

4.7.30.2 Syntax
`importPolicyDelta(pathTempOAMPolicyFile)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>pathTempOAMPolicyFile</code></td>
<td>Mandatory. Specifies the path to the temporary Oracle Access Manager file.</td>
</tr>
</tbody>
</table>

4.7.30.3 Example
The following invocation specifies the path to the temporary file used when importing only changed policy data to a production (target).

`importPolicyDelta(pathTempOAMPolicyFile="oam_policy_delta.xml")`

4.7.31 migratePartnersToProd
Online only command that migrates partners from the current (source) OAM Server to the specified (target) OAM Server.

4.7.31.1 Description
Migrates partners from the current (source) OAM Server to the specified (target) OAM Server.

The scope of this command is an instance, only. The scope is not an argument.

4.7.31.2 Syntax
`migratePartnersToProd(prodServerHost, prodServerPort, prodServerAdminUser, prodServerAdminPwd)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>prodServerHost</code></td>
<td>Host name of the target OAM Server to which partners are to be migrated.</td>
</tr>
</tbody>
</table>
4.7.31.3 Example
The following invocation specifies the required information.

```
migratePartnersToProd(prodServerHost="host", prodServerPort="port", prodServerAdminUser="weblogic", prodServerAdminPwd="welcome")
```

### 4.7.32 `exportPartners`

Online only command that exports Oracle Access Manager partners from the source to the intermediate Oracle Access Manager file specified.

#### 4.7.32.1 Description
Exports the Oracle Access Manager partners from the source to the intermediate Oracle Access Manager file specified.

The scope of this command is an instance, only. The scope is not an argument.

#### 4.7.32.2 Syntax

```
exportPartners(pathTempOAMPartnerFile)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>pathTempOAMPartnerFile</code></td>
<td>Mandatory. Specifies the path to the temporary Oracle Access Manager partner file.</td>
</tr>
</tbody>
</table>

#### 4.7.32.3 Example
The following invocation specifies the path to the intermediate OAM partners file.

```
exportPartners(pathTempOAMPartnerFile="oam_partners.xml")
```

### 4.7.33 `importPartners`

Online only command that imports Oracle Access Manager partners from the intermediate Oracle Access Manager file specified.

#### 4.7.33.1 Description
Imports the OAM partners from the intermediate Oracle Access Manager file specified.

The scope of this command is an instance, only. The scope is not an argument.

#### 4.7.33.2 Syntax

```
importPartners(pathTempOAMPartnerFile)
```
### 4.7.33 Example

The following invocation specifies the path to the intermediate OAM partners file.

```plaintext
importPartners(pathTempOAMPartnerFile='oam_partners.xml')
```

### 4.7.34 configureOAAM

Online only command that configures the Oracle Access Manager-Oracle Adaptive Access Manager basic integration.

#### 4.7.34.1 Description

Configures the OAM-OAAM basic integration.

The scope of this command is an instance, only. The scope is not an argument.

#### 4.7.34.2 Syntax

```plaintext
configureOAAM(dataSourceName, paramNameValueList)
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>dataSourceName</code></td>
<td>Name of the data source to be created</td>
</tr>
<tr>
<td><code>paramNameValueList</code></td>
<td>Specifies the comma-separated list of parameter name-value pairs. The format of each pair is: <code>paramName='paramValue'</code>. Mandatory:</td>
</tr>
<tr>
<td></td>
<td>■ <code>hostName</code>—The name of the database host.</td>
</tr>
<tr>
<td></td>
<td>■ <code>port</code>—Database port.</td>
</tr>
<tr>
<td></td>
<td>■ <code>sid</code>—The database sid (database identifier).</td>
</tr>
<tr>
<td></td>
<td>■ <code>userName</code>—OAAM schema name.</td>
</tr>
<tr>
<td></td>
<td>■ <code>passWord</code>—OAAM schema password.</td>
</tr>
<tr>
<td></td>
<td>Optional:</td>
</tr>
<tr>
<td></td>
<td>■ <code>maxConnectionSize</code>—Max connection reserve time out size.</td>
</tr>
<tr>
<td></td>
<td>■ <code>maxPoolSize</code>—Maximum size for connection pool.</td>
</tr>
<tr>
<td></td>
<td>■ <code>serverName</code>—Target server for the data source.</td>
</tr>
</tbody>
</table>

#### Example

The following invocation configures the Oracle Access Manager-Oracle Adaptive Access Manager basic integration.

```plaintext
configureOAAM(dataSourceName = "MyOAAMDS", hostName = "host.us.co.com", port = "1521", sid = "sid", userName = "username", passWord = "password", maxConnectionSize = None, maxPoolSize = None, serverName = "oam_server1")
```

### 4.7.35 registerOIFDAPPartner

Online and offline command that registers Oracle Identity Federation as a Delegated Authentication Protocol (DAP) Partner.
4.7.35.1 Description
Registers Oracle Identity Federation as Delegated Authentication Protocol (DAP) Partner.

The scope of this command is an instance only. The scope is not an argument.

4.7.35.2 Syntax
registerOIFDAPPartner()

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>paramNameValueList</td>
<td>Specifies the comma-separated list of parameter name-value pairs. The format of each pair is: paramName='paramValue'</td>
</tr>
</tbody>
</table>

Mandatory:
Include the following parameter name-value pairs to create a new OAM user identity store configuration:
- keystoreLocation—Location of the Keystore file (generated at the OIF Server).
- logoutURL—The OIF Server's logout URL.

Optional:
- rolloverInterval—The Rollover Interval for the keys used to encrypt/decrypt SASSO Tokens.

4.7.35.3 Example
The following invocation illustrates use of all parameters.

registerOIFDAPPartner(keystoreLocation="/scratch/keystore",

4.7.36 enableCoexistMode
Online command that enables the Coexist Mode.

4.7.36.1 Description
Enables the Coexist Mode.

The scope of this command is an instance, only. The scope is not an argument.

4.7.36.2 Syntax
enableCoexistMode()

4.7.36.3 Example
The following invocation enables the Coexist Mode.

enableCoexistMode

4.7.37 disableCoexistMode
Online command that disables the Coexist Mode.
4.7.37.1 Description
Disables the Coexist Mode.
The scope of this command is an instance, only. The scope is not an argument.

4.7.37.2 Syntax
disableCoexistMode()

4.7.37.3 Example
The following invocation enables the Coexist Mode.
disableCoexistMode

4.7.38 editGITOValues
Online and offline command that edits GITO configuration parameters.

4.7.38.1 Description
Edits GITO configuration parameters.
The scope of this command is an instance, only. The scope is not an argument.

4.7.38.2 Syntax
editGITOValues(gitoEnabled, paramNameValueList)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>gitoEnabled</td>
<td>True (or false). Allows (or denies) user to set GITO enabled property.</td>
</tr>
<tr>
<td>domainHome</td>
<td>Offline mode: Mandatory</td>
</tr>
<tr>
<td></td>
<td>Online mode: Optional</td>
</tr>
<tr>
<td>paramNameValueList</td>
<td>Specifies the comma-separated list of parameter name-value pairs.</td>
</tr>
<tr>
<td></td>
<td>The format of each pair is:</td>
</tr>
<tr>
<td></td>
<td>paramName='paramValue'</td>
</tr>
<tr>
<td></td>
<td>Mandatory:</td>
</tr>
<tr>
<td></td>
<td>Include the following parameter name-value pairs to create a new OAM user</td>
</tr>
<tr>
<td></td>
<td>identity store configuration:</td>
</tr>
<tr>
<td></td>
<td>■ gitoCookieDomain—Allows user to set the GITO cookie domain entry.</td>
</tr>
<tr>
<td></td>
<td>Optional:</td>
</tr>
<tr>
<td></td>
<td>■ gitoCookieName—Allows user to set the GITO cookie name.</td>
</tr>
<tr>
<td></td>
<td>■ gitoVersion—Allows user to set the GITO version. Can be ONLY v1.0 or v3.0.</td>
</tr>
<tr>
<td></td>
<td>■ gitoTimeout—Allows user to set the GITO timeout value.</td>
</tr>
<tr>
<td></td>
<td>■ gitoSecureCookieEnabled—True (or false). Allows (or denies) user to set</td>
</tr>
<tr>
<td></td>
<td>the GITO cookie enabled property.</td>
</tr>
</tbody>
</table>

4.7.38.3 Example
The following invocation edits GITO configuration parameters.
editGITOValues(gitoEnabled="true", gitoCookieDomain=".abc.com", gitoCookieName="ABC", gitoVersion="v1.0", gitoTimeout="20", gitoSecureCookieEnabled="false", domainHome="/"
4.7.39 editWebgate11gAgent

Online and offline command that edits an 11g WebGate registration.

4.7.39.1 Description
Edits an 11g WebGate registration.
The scope of this command is an instance, only. The scope is not an argument.

4.7.39.2 Syntax
editWebgate11gAgent(agentname, paramNameValueList)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>agentname</td>
<td>Name of the registered OAM 11g WebGate agent to be edited.</td>
</tr>
</tbody>
</table>
| domainhome   | Offline mode: Mandatory
               Online mode: Optional                                                        |
4.7.39.3 Example

The following invocation lists all mandatory and optional parameters.

```
editWebgate11gAgent(agentName="WebgateAgent1", accessClientPasswd = "welcome1",
state = "Enabled", preferredHost="141.144.168.148:2001", aaaTimeoutThreshold="10",
security = "open", logOutUrls = "http://<host>:<port>", maxConnections = "16",
maxCacheElems = "10000", cacheTimeout = "1800", logoutCallbackUrl =
"http://<host>:<port>", maxSessionTime = "24", logoutRedirectUrl =
"logoutRedirectUrl", failoverThreshold = "1", tokenValidityPeriod="aPeriod",
logoutTargetUrlParamName = "logoutTargetUrl", domainHome="domainHome1")
```

4.7.40 deleteWebgate11gAgent

Online and offline command that enables you to delete an 11g WebGate Agent registration.
4.7.40.1 **Description**
Removes an 11g WebGate Agent registration.
The scope of this command is an instance, only. The scope is not an argument.

4.7.40.2 **Syntax**
deleteWebgate11gAgent(agentName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>agentName</td>
<td>Mandatory. Specifies the name of the 11g WebGate Agent.</td>
</tr>
<tr>
<td>domainhome</td>
<td>Offline mode: Mandatory</td>
</tr>
<tr>
<td></td>
<td>Online mode: Optional</td>
</tr>
</tbody>
</table>

4.7.40.3 **Example**
The following invocation removes the 11g WebGate Agent named `my_11gWebGate`:
deleteWebgate11gAgent(agentName="my_11gWebGate", domainHome="domainHome1")

4.7.41 **displayWebgate11gAgent**
Online and offline command that enables you to display an 11g WebGate Agent registration.

4.7.41.1 **Description**
Displays an 11g WebGate Agent registration.
The scope of this command is an instance, only. The scope is not an argument.

4.7.41.2 **Syntax**
displayWebgate11gAgent(agentName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>agentName</td>
<td>Mandatory. Specifies the name of the WebGate Agent.</td>
</tr>
<tr>
<td>domainhome</td>
<td>Offline mode: Mandatory</td>
</tr>
<tr>
<td></td>
<td>Online mode: Optional</td>
</tr>
</tbody>
</table>

4.7.41.3 **Example**
The following invocation displays the WebGate Agent named `my_11gWebGate`:
displayWebgate11gAgent(agentName="my_11gWebGate", domainHome="domainHome1")

4.7.42 **displayOAMMetrics**
Online and offline command that enables the display of metrics of OAM Servers.

4.7.42.1 **Description**
Enables the display of metrics of OAM Servers.
The scope of this command is an instance, only. The scope is not an argument.
4.7.42.2 Syntax

displayOAMMetrics(domainHome)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>domainhome</td>
<td>Offline mode: Mandatory</td>
</tr>
<tr>
<td></td>
<td>Online mode: Optional</td>
</tr>
</tbody>
</table>

4.7.42.3 Example

The following invocation enables the display of metrics of OAM Servers.

displayOAMMetrics (domainHome=(domainHome1")

4.7.43 updateOIMHostPort

Online only command that updates the Oracle Identity Manager configuration when integrated with Oracle Access Manager.

4.7.43.1 Description

Updates the Oracle Identity manager configuration in system configuration.

The scope of this command is an instance, only. The scope is not an argument.

4.7.43.2 Syntax

updateOIMHostPort(hostname, port, secureProtocol)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>hostname</td>
<td>Name of the Oracle Identity Manager host.</td>
</tr>
<tr>
<td>port</td>
<td>Port of the Oracle Identity Manager host.</td>
</tr>
<tr>
<td>secureProtocol</td>
<td>True or false.</td>
</tr>
</tbody>
</table>

4.7.43.3 Example

The following invocation illustrates this command.

updateOIMHostPort(hostname="OIM host", port="7777", secureProtocol="true")

4.7.44 configureOIM

Online only command that creates an agent registration specific to Oracle Identity Manager when integrated with Oracle Access Manager.

4.7.44.1 Description

Creates an Agent registration specific to Oracle Identity Manager when integrated with Oracle Access Manager.

The scope of this command is an instance, only. The scope is not an argument.

4.7.44.2 Syntax

updateOIMHostPort(hostname, port, secureProtocol)
4.7.44.3 Example
The following invocation illustrates this command.

```java
updateOIMHostPort(hostName=“OIM host”, port=“7777”, secureProtocol=“true”)
configureOIM(oimHost=“OIM host”, oimPort=“7777”, oimSecureProtocolEnabled=“true”,
oimAccessGatePwd = "Access Gate Password", oimCookieDomain = "OIM Cookie Domain",
oimWgId="OIM Webgate ID", oimWgVersion="OIM Webgate Version")
```

4.7.45 updateOSSOResponseCookieConfig
Online and offline command that updates OSSO Proxy response cookie settings.

4.7.45.1 Description
Updates OSSO Proxy response cookie settings.
The scope of this command is an instance, only. The scope is not an argument.

4.7.45.2 Syntax
updateOSSOResponseCookieConfig()

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| domainhome   | Offline mode: Mandatory  
               Online mode: Optional |
| cookieName   | Optional. Name of the cookie for which settings are updated. If not specified, the global setting is updated. |
| cookieMaxAge | Maximum age of a cookie in minutes. A negative value sets a session cookie. |
| isSecureCookie | Boolean flag specifies if cookie should be secure (sent only over SSL channel). |
| cookieDomain | The domain of the cookie. |

4.7.45.3 Example
The following invocation illustrates this command.

```java
updateOSSOResponseCookieConfig(cookieName = "<cookieName>",
cookieMaxAge = "<cookie age in minutes>", isSecureCookie = "true | false",
cookieDomain="<domain of the cookie>“, domainHome = "<wls_domain_home_path>")
```
4.7.46 deleteOSSOResponseCookieConfig

Online and offline command that deletes OSSO Proxy response cookie settings.

4.7.46.1 Description

Deletes OSSO Proxy response cookie settings.

The scope of this command is an instance, only. The scope is not an argument.

4.7.46.2 Syntax

deleteOSSOResponseCookieConfig()

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>domainhome</td>
<td>Offline mode: Mandatory</td>
</tr>
<tr>
<td></td>
<td>Online mode: Optional</td>
</tr>
<tr>
<td>cookieName</td>
<td>Mandatory. Name of the cookie for which settings are deleted.</td>
</tr>
</tbody>
</table>

4.7.46.3 Example

The following invocation illustrates this command.

deleteOSSOResponseCookieConfig(cookieName = "<cookieName>",
cookieDomain="<domain of the cookie>", domainHome = "<wls_domain_home_path>"

4.7.47 displaySimpleModeGlobalPassphrase

Displays the simple mode global passphrase in plain text from the system configuration.

4.7.47.1 Description

Online only command that displays the simple mode global passphrase in plain text from the system configuration.

4.7.47.2 Syntax

displaySimpleModeGlobalPassphrase

There are no arguments for this command.

4.7.47.3 Example

The following invocation illustrates this command.

displaySimpleModeGlobalPassphrase

4.7.48 exportSelectedPartners

Exports selected OAM Partners.

4.7.48.1 Description

Exports selected OAM Partners to the intermediate OAM file specified.
4.7.48.2 Syntax
exportSelectedPartners

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>pathTempOAMPartnerFile</td>
<td>The temporary file containing partners to be migrated.</td>
</tr>
<tr>
<td>partnersNameList</td>
<td>comma separated list of partner ids to be migrated</td>
</tr>
</tbody>
</table>

4.7.48.3 Example
The following invocation illustrates this command.

```bash
exportSelectedPartners (pathTempOAMPartnerFile="/exampleroot/parent/tempfile.extn" partnersNameList="partner1,partner2")
```

4.7.49 migrateArtifacts
Migrates artifacts.

4.7.49.1 Description
Migrates artifacts based on the input artifact file.

4.7.49.2 Syntax
migrateArtifacts

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>path</td>
<td>Location of the artifacts file is present</td>
</tr>
<tr>
<td>password</td>
<td>Password used while generating original artifacts.</td>
</tr>
<tr>
<td>type</td>
<td>InPlace or OutOfPlace</td>
</tr>
<tr>
<td>isIncremental</td>
<td>true or false. If true, an incremental upgrade is done.</td>
</tr>
</tbody>
</table>

4.7.49.3 Example
The following invocation illustrates this command.

```bash
migrateArtifacts(path="/exampleroot/parent/t", password="password", type="InPlace", isIncremental="false")
```

4.7.50 registerThirdPartyTAPPartner
Registers any third party as a Trusted Authentication Protocol (TAP) Partner.

4.7.50.1 Description
Registers any third party as a Trusted Authentication Protocol (TAP) Partner.

4.7.50.2 Syntax
registerThirdPartyTAPPartner

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>path</td>
<td>Location of the artifacts file is present</td>
</tr>
<tr>
<td>password</td>
<td>Password used while generating original artifacts.</td>
</tr>
</tbody>
</table>
Oracle Security Token Service

4.7.50.3 Example

```java
```

4.8 Oracle Security Token Service

Table 4–7 describes the various types of WLST commands available for the Oracle Security Token Service.

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerName</td>
<td>Name of partner. Can be any name used for identifying the third party partner.</td>
</tr>
<tr>
<td>keystoreLocation</td>
<td>The jceks file location.</td>
</tr>
<tr>
<td>password</td>
<td>password</td>
</tr>
<tr>
<td>tapScheme</td>
<td>Trusted Authentication Protocol Authn Scheme (TAPScheme, out of the box.)</td>
</tr>
<tr>
<td>tapRedirectUrl</td>
<td>Third party access URL.</td>
</tr>
</tbody>
</table>

Use the WLST commands listed in Table 4–8 to manage Oracle Security Token Service.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Partner Commands</td>
<td></td>
<td></td>
</tr>
<tr>
<td>getPartner</td>
<td>Retrieve a partner and print result. Online</td>
<td></td>
</tr>
<tr>
<td>getAllRequesterPartners</td>
<td>Retrieve the names of Requester partners. Online</td>
<td></td>
</tr>
<tr>
<td>getAllRelyingPartyPartners</td>
<td>Retrieve the names of all Relying Party partners. Online</td>
<td></td>
</tr>
<tr>
<td>getAllIssuingAuthorityPartners</td>
<td>Retrieve the names of all Issuing Authority partners. Online</td>
<td></td>
</tr>
</tbody>
</table>

Table 4–7 WLST Oracle Security Token Service Command Groups

<table>
<thead>
<tr>
<th>OSTS Command Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Partner Commands</td>
<td>WLST commands related to tasks involving partners.</td>
</tr>
<tr>
<td>Relying Party Partner Mapping Commands</td>
<td>The WS Prefix to Relying Party Partner mappings are used to map a service URL, specified in the AppliesTo field of a WS-Trust RST request, to a partner of type Relying Party. The WS prefix string can be an exact service URL, or a URL with a parent path to the service URL. For example, if a mapping is defined to map a WS Prefix (<a href="http://test.com/service">http://test.com/service</a>) to a Relying Party (RelyingPartyPartnerTest), then the following service URLs would be mapped to the Relying Party: <a href="http://test.com/service">http://test.com/service</a>, <a href="http://test.com/service/calculatorService">http://test.com/service/calculatorService</a>, <a href="http://test.com/service/shop/cart">http://test.com/service/shop/cart</a>...</td>
</tr>
<tr>
<td>Partner Profiles Commands</td>
<td>WLST commands related to tasks involving partner profiles.</td>
</tr>
<tr>
<td>Issuance Templates Commands</td>
<td>WLST commands related to tasks involving issuance templates.</td>
</tr>
<tr>
<td>Validation Templates Commands</td>
<td>WLST commands related to tasks involving validation templates.</td>
</tr>
<tr>
<td>Use this command...</td>
<td>To...</td>
</tr>
<tr>
<td>---------------------</td>
<td>-------</td>
</tr>
<tr>
<td>isPartnerPresent</td>
<td>Query OSTS to determine whether or not the partner exists in the Partner store.</td>
</tr>
<tr>
<td>createPartner</td>
<td>Create a new Partner entry.</td>
</tr>
<tr>
<td>updatePartner</td>
<td>Update an existing Partner entry based on the provided information.</td>
</tr>
<tr>
<td>deletePartner</td>
<td>Delete a partner entry.</td>
</tr>
<tr>
<td>getPartnerUsernameTokenUsername</td>
<td>Retrieve the partner's username value.</td>
</tr>
<tr>
<td>getPartnerUsernameTokenPassword</td>
<td>Retrieve the partner's password value.</td>
</tr>
<tr>
<td>setPartnerUsernameTokenCredential</td>
<td>Set the username and password values of a partner entry.</td>
</tr>
<tr>
<td>deletePartnerUsernameTokenCredential</td>
<td>Remove the username and password values from a partner entry.</td>
</tr>
<tr>
<td>getPartnerSigningCert</td>
<td>Retrieve the Base64 encoded signing certificate for the partner.</td>
</tr>
<tr>
<td>getPartnerEncryptionCert</td>
<td>Retrieve the Base64 encoded encryption certificate for the partner.</td>
</tr>
<tr>
<td>setPartnerSigningCert</td>
<td>Upload the signing certificate to the partner entry.</td>
</tr>
<tr>
<td>setPartnerEncryptionCert</td>
<td>Upload the encryption certificate to the partner entry.</td>
</tr>
<tr>
<td>deletePartnerSigningCert</td>
<td>Remove the signing certificate from the partner entry.</td>
</tr>
<tr>
<td>deletePartnerEncryptionCert</td>
<td>Remove the encryption certificate from the partner entry.</td>
</tr>
<tr>
<td>getPartnerAllIdentityAttributes</td>
<td>Retrieve and display all Identity mapping attributes used to map a token to a requester partner.</td>
</tr>
<tr>
<td>getPartnerIdentityAttribute</td>
<td>Retrieve and display the identity mapping attribute.</td>
</tr>
<tr>
<td>setPartnerIdentityAttribute</td>
<td>Set the identity mapping attribute for a requester partner.</td>
</tr>
<tr>
<td>deletePartnerIdentityAttribute</td>
<td>Delete the identity mapping attribute for a requester partner.</td>
</tr>
<tr>
<td>Relying Party Partner Mapping Commands</td>
<td></td>
</tr>
<tr>
<td>getAllWSPrefixAndPartnerMappings</td>
<td>Retrieve and display all WS Prefixes.</td>
</tr>
<tr>
<td>getWSPrefixAndPartnerMapping</td>
<td>Retrieve and display the Relying Party Partner mapped to the specified wsprefix parameter.</td>
</tr>
<tr>
<td>createWSPrefixAndPartnerMapping</td>
<td>Create a new WS Prefix mapping to a Relying Partner.</td>
</tr>
</tbody>
</table>
### Table 4–8  (Cont.) WLST Commands Oracle Security Token Service

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>deleteWSPrefixAndPartnerMapping</td>
<td>Delete an existing WS Prefix mapping to a Relying Partner.</td>
<td>Online</td>
</tr>
</tbody>
</table>

#### Partner Profiles Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>getAllPartnerProfiles</td>
<td>Retrieve the names of all the existing partner profiles.</td>
</tr>
<tr>
<td>getPartnerProfile</td>
<td>Retrieve partner profile configuration data.</td>
</tr>
<tr>
<td>createRequesterPartnerProfile</td>
<td>Create a new Requester Partner profile with default configuration data.</td>
</tr>
<tr>
<td>createRelyingPartyPartnerProfile</td>
<td>Create a new Relying Party Partner profile with default configuration data.</td>
</tr>
<tr>
<td>createIssuingAuthorityPartnerProfile</td>
<td>Create a new Issuing Authority Partner profile with default configuration data.</td>
</tr>
<tr>
<td>deletePartnerProfile</td>
<td>Delete an existing partner profile.</td>
</tr>
</tbody>
</table>

#### Issuance Template Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>getAllIssuanceTemplates</td>
<td>Retrieve the names of all the existing Issuance Templates.</td>
</tr>
<tr>
<td>getIssuanceTemplate</td>
<td>Retrieve configuration data of a specific Issuance Template.</td>
</tr>
<tr>
<td>createIssuanceTemplate</td>
<td>Create a new Issuance Template with default configuration data.</td>
</tr>
<tr>
<td>deleteIssuanceTemplate</td>
<td>Delete an existing Issuance Template.</td>
</tr>
</tbody>
</table>

#### Validation Template Commands

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>getAllValidationTemplates</td>
<td>Retrieve the names of all the existing Validation Templates.</td>
</tr>
<tr>
<td>getValidationTemplate</td>
<td>Retrieve configuration data of a specific Validation Template.</td>
</tr>
<tr>
<td>createWSSValidationTemplate</td>
<td>Create a new WS Security Validation Template with default configuration data.</td>
</tr>
<tr>
<td>createWSTrustValidationTemplate</td>
<td>Create a new WS Trust Validation Template with default configuration data.</td>
</tr>
<tr>
<td>deleteValidationTemplate</td>
<td>Delete an existing Issuance Template.</td>
</tr>
</tbody>
</table>

### 4.8.1 getPartner

Online command that retrieves the Partner entry and prints out the configuration for this partner.

#### 4.8.1.1 Description

Retrieves the Partner entry and prints out the configuration for this partner.
4.8.1.2 Syntax
getPartner(partnerId)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the partnerId: the ID of the partner.</td>
</tr>
</tbody>
</table>

4.8.1.3 Example
The following invocation retrieves the Partner entry and prints out the configuration for customPartner:
getPartner(partnerId="customPartner")

4.8.2 getAllRequesterPartners
Online command that retrieves Requester type partners.

4.8.2.1 Description
Retrieves Requester type partners.

4.8.2.2 Syntax
getAllRequesterPartners()

4.8.2.3 Example
The following invocation retrieves Requester type partners:
getAllRequesterPartners()

4.8.3 getAllRelyingPartyPartners
Online command that retrieves Relying Party partners.

4.8.3.1 Description
Retrieves the Relying Party partners.

4.8.3.2 Syntax
getAllRelyingPartyPartners()

4.8.3.3 Example
The following invocation retrieves Relying Party partners:
getAllRelyingPartyPartners()

4.8.4 getAllIssuingAuthorityPartners
Online command that retrieves Issuing Authority partners and prints out the result.

4.8.4.1 Description
Retrieves the Issuing Authority partners and prints out the result.

4.8.4.2 Syntax
getAllIssuingAuthorityPartners()
4.8.4.3 Example
The following invocation retrieves Issuing Authority partners and prints out the result:

```java
getAllIssuingAuthorityPartners()
```

4.8.5 isPartnerPresent
Online command that queries OSTS to determine whether or not the specified partner exists in the Partner store.

4.8.5.1 Description
Queries OSTS to determine whether or not the specified partner exists in the Partner store, and prints out the result.

4.8.5.2 Syntax

```java
isPartnerPresent(partnerId)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the partner.</td>
</tr>
</tbody>
</table>

4.8.5.3 Example
The following invocation queries OSTS to determine whether or not `customPartner` exists in the Partner store, and prints out the result:

```java
isPartnerPresent(partnerId="customPartner")
```

4.8.6 createPartner
Online command that creates a new Partner entry.

4.8.6.1 Description
Creates a new Partner entry based on provided information. Displays a message indicating the result of the operation.

4.8.6.2 Syntax

```java
createPartner(partnerId, partnerType, partnerProfileId, description, bIsTrusted)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the new partner to be created.</td>
</tr>
<tr>
<td>partnerType</td>
<td>Specifies the type of partner. Values can be one of the following:</td>
</tr>
<tr>
<td></td>
<td>■ STS_REQUESTER for Requester</td>
</tr>
<tr>
<td></td>
<td>■ STS_RELYING_PARTY for Relying Party</td>
</tr>
<tr>
<td></td>
<td>■ STS_ISSUING_AUTHORITY for Issuing Authority</td>
</tr>
<tr>
<td>partnerProfileId</td>
<td>Specifies the profile ID to be attached to this partner. It must reference an existing partner profile, and the type of the partner profile must be compliant with the type of the new partner entry.</td>
</tr>
<tr>
<td>description</td>
<td>Specifies the optional description of this new partner entry.</td>
</tr>
</tbody>
</table>
4.8.6.3 Example
The following invocation creates STS_Requestor partner, customPartner, custom-partnerprofile with a description (custom requester), with a trust value of true, displays a message indicating the result of the operation:

```java
createPartner(partnerId="customPartner", partnerType="STS_REQUESTER", partnerProfileId="custom-partnerprofile", description="custom requester", bIsTrusted="true")
```

4.8.7 updatePartner
Online command that updates an existing Partner entry.

4.8.7.1 Description
Updates an existing Partner entry based on the provided information. Displays a message indicating the result of the operation.

4.8.7.2 Syntax
`updatePartner(partnerId, partnerProfileId, description, bIsTrusted)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the new partner to be updated.</td>
</tr>
<tr>
<td>partnerProfileId</td>
<td>Specifies the partner profile ID. It must reference an existing partner profile, and the type of the partner profile must be compliant with the type of the new partner entry.</td>
</tr>
<tr>
<td>description</td>
<td>Specifies the optional description for this new partner entry.</td>
</tr>
<tr>
<td>bIsTrusted</td>
<td>A value that indicates whether or not this new partner is trusted.</td>
</tr>
<tr>
<td></td>
<td>Value can be either:</td>
</tr>
<tr>
<td></td>
<td>■ true for trusted</td>
</tr>
<tr>
<td></td>
<td>■ false if not trusted</td>
</tr>
</tbody>
</table>

4.8.7.3 Example
The following invocation updates customPartner with a new profile ID, (x509-wss-validtemp), description (custom requester with new profile id), and a trust value of false. A message indicates the result of the operation:

```java
updatePartner(partnerId="customPartner", partnerProfileId="x509-wss-validtemp", description="custom requester with new profile id", bIsTrusted="false")
```

4.8.8 deletePartner
Online command that deletes a partner entry from OSTS.
4.8.8.1 Description
Deletes an existing Partner entry referenced by the partnerId parameter from OSTS, and prints out the result of the operation.

4.8.8.2 Syntax
deletePartner(partnerId)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the partner to be deleted.</td>
</tr>
</tbody>
</table>

4.8.8.3 Example
The following invocation deletes the customPartner partner entry referenced by the partnerId parameter from OSTS, and prints out the result of the operation:

deletePartner(partnerId="customPartner")

4.8.9 getPartnerUsernameTokenUsername
Online command that retrieves a partner's username value that will be used for UNT credentials partner validation or mapping operation.

4.8.9.1 Description
Retrieves a partner's username value that will be used for UNT credentials partner validation or mapping operation, and displays the value.

4.8.9.2 Syntax
getPartnerUsernameTokenUsername(partnerId)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the partner.</td>
</tr>
</tbody>
</table>

4.8.9.3 Example
The following invocation retrieves the customPartner partner username value that will be used for UNT credentials partner validation or mapping operation, and displays the value:

getPartnerUsernameTokenUsername(partnerId="customPartner")

4.8.10 getPartnerUsernameTokenPassword
Online command that retrieves a partner's password value that will be used for UNT credentials partner validation or mapping operation.

4.8.10.1 Description
Retrieves a partner password value that will be used for UNT credentials partner validation or mapping operation, and displays the value.

4.8.10.2 Syntax
getPartnerUsernameTokenPassword(partnerId)
4.8.10.3 Example
The following invocation retrieves customPartner partner password value that will be used for UNT credentials partner validation or mapping operation, and displays the value:

```
getPartnerUsernameTokenPassword(partnerId="customPartner")
```

### 4.8.11 setPartnerUsernameTokenCredential

Online command that sets the username and password values of a partner entry, that will be used for UNT credentials partner validation or mapping operation.

#### 4.8.11.1 Description
Sets the username and password values of a partner entry, that will be used for UNT credentials partner validation or mapping operation. Displays the result of the operation.

#### 4.8.11.2 Syntax
```
setPartnerUsernameTokenCredential(partnerId, UTUsername, UTPassword)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the partner.</td>
</tr>
<tr>
<td>UTUsername</td>
<td>Specifies the username value used for UNT credentials validation or mapping operations.</td>
</tr>
<tr>
<td>UTPassword</td>
<td>Specifies the username value used for UNT credentials validation or mapping operations.</td>
</tr>
</tbody>
</table>

#### 4.8.11.3 Example
The following invocation sets the username and password values of the customPartner partner entry, and displays the result of the operation:

```
setPartnerUsernameTokenCredential(partnerId="customPartner", UTUsername="test", UTPassword="password")
```

### 4.8.12 deletePartnerUsernameTokenCredential

Online command that removes the username and password values from a partner entry that are used for UNT credentials partner validation or mapping operation, and displays the result of the operation.

#### 4.8.12.1 Description
Removes the username and password values from a partner entry that are used for UNT credentials partner validation or mapping operation, and displays the result of the operation.

#### 4.8.12.2 Syntax
```
deletePartnerUsernameTokenCredential(partnerId)
```
4.8.12.3 Example
The following invocation removes the username and password values from a partner entry that are used for UNT credentials partner validation or mapping operation, and displays the result of the operation:

```java
deletePartnerUsernameTokenCredential(partnerId="customPartner")
```

4.8.13 getPartnerSigningCert
Online command that retrieves the Base64 encoded signing certificate for the partner referenced by the partnerId parameter, and displays its value, as a Base64 encoded string.

4.8.13.1 Description
Retrieves the Base64 encoded signing certificate for the partner referenced by the partnerId parameter, and displays its value, as a Base64 encoded string.

4.8.13.2 Syntax
```java
getPartnerSigningCert(partnerId)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the partner.</td>
</tr>
</tbody>
</table>

4.8.13.3 Example
The following invocation retrieves Base64 encoded signing certificate for the partner referenced by the partnerId parameter, and displays its value, as a Base64 encoded string:

```java
getPartnerSigningCert(partnerId="customPartner")
```

4.8.14 getPartnerEncryptionCert
Online command that retrieves the Base64 encoded encryption certificate, and displays its value as a Base64 encoded string.

4.8.14.1 Description
Retrieves the Base64 encoded encryption certificate for the partner referenced by the partnerId parameter, and displays its value as a Base64 encoded string.

4.8.14.2 Syntax
```java
getPartnerEncryptionCert(partnerId)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the partner.</td>
</tr>
</tbody>
</table>
4.8.14.3 Example
The following invocation retrieves the Base64 encoded encryption certificate for the partner referenced by the partnerId parameter, and displays its value, as a Base64 encoded string:

```java
getPartnerEncryptionCert(partnerId="customPartner")
```

4.8.15 setPartnerSigningCert

Online command that Uploads the provided certificate to the partner entry as the signing certificate. Displays the result of the operation.

4.8.15.1 Description
Uploads the provided certificate to the partner entry (referenced by the partnerId parameter) as the signing certificate. The supported formats of the certificate are DER and PEM. Displays the result of the operation.

4.8.15.2 Syntax

```java
setPartnerSigningCert(partnerId, certFile)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the partner.</td>
</tr>
<tr>
<td>certFile</td>
<td>Specifies the location of the certificate on the local filesystem.</td>
</tr>
<tr>
<td></td>
<td>Supported formats of the certificate are DER and PEM.</td>
</tr>
</tbody>
</table>

4.8.15.3 Example
The following invocation uploads the provided certificate to the partner entry `customPartner` as the signing certificate. Displays the result of the operation:

```java
setPartnerSigningCert(partnerId="customPartner", certFile="/temp/signing_cert")
```

4.8.16 setPartnerEncryptionCert

Online command that Uploads the provided certificate to the partner entry as the encryption certificate. Displays the result of the operation.

4.8.16.1 Description
Uploads the provided certificate to the partner entry (referenced by the partnerId parameter) as the encryption certificate. Displays the result of the operation.

4.8.16.2 Syntax

```java
setPartnerEncryptionCert(partnerId, certFile)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the partner.</td>
</tr>
<tr>
<td>certFile</td>
<td>Specifies the location of the certificate on the local filesystem.</td>
</tr>
<tr>
<td></td>
<td>Supported formats of the certificate are DER and PEM.</td>
</tr>
</tbody>
</table>

4.8.16.3 Example
The following invocation uploads the provided certificate to the partner entry `customPartner` as the signing certificate. Displays the result of the operation:
setPartnerSigningCert(partnerId="customPartner", certFile="/temp/signing_cert")

4.8.17 deletePartnerSigningCert

Online command that removes the encryption certificate from the partner entry and displays the result of the operation.

4.8.17.1 Description
Removes the encryption certificate from the partner entry, referenced by the partnerId parameter, and displays the result of the operation.

4.8.17.2 Syntax
deletePartnerSigningCert(partnerId)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the partner.</td>
</tr>
</tbody>
</table>

4.8.17.3 Example
The following invocation removes the encryption certificate from the partner entry, customPartner, and displays the result of the operation:

deletePartnerSigningCert(partnerId="customPartner")

4.8.18 deletePartnerEncryptionCert

Online command that removes the signing certificate from the partner entry and displays the result of the operation.

4.8.18.1 Description
Removes the signing certificate from the partner entry, referenced by the partnerId parameter, and displays the result of the operation.

4.8.18.2 Syntax
deletePartnerEncryptionCert(partnerId)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the partner.</td>
</tr>
</tbody>
</table>

4.8.18.3 Example
The following invocation removes the signing certificate from the partner entry, customPartner, and displays the result of the operation:

deletePartnerEncryptionCert(partnerId="customPartner")

4.8.19 getPartnerAllIdentityAttributes

Online command that retrieves and displays all the identity mapping attributes used to map a token to a requester partner, or to map binding data (SSL Client certificate or HTTP Basic Username) to a requester partner.
4.8.19.1 Description
Retrieves and displays all the identity mapping attributes used to map a token to a requester partner, or to map binding data (SSL Client certificate or HTTP Basic Username) to a requester partner.

The identity mapping attributes only exist for partners of type Requester.

4.8.19.2 Syntax
getPartnerAllIdentityAttributes(partnerId)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the Requester partner. Identity mapping attributes only exist for partners of type Requester</td>
</tr>
</tbody>
</table>

4.8.19.3 Example
The following invocation retrieves and displays all the identity mapping attributes used to map a token to a requester partner, or to map binding data (SSL Client certificate or HTTP Basic Username) to a requester partner: customPartner.

getPartnerAllIdentityAttributes(partnerId="customPartner")

4.8.20 getPartnerIdentityAttribute
Online command that retrieves and displays identity mapping attributes used to map a token or to map binding data to a requester partner.

4.8.20.1 Description
Retrieves and displays an identity mapping attribute used to map a token to a requester partner, or to map binding data (SSL Client certificate or HTTP Basic Username) to a requester partner.

The identity mapping attributes only exist for partners of type Requester.

4.8.20.2 Syntax
getPartnerIdentityAttribute(partnerId, identityAttributeName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerId</td>
<td>Specifies the ID of the Requester partner.</td>
</tr>
<tr>
<td>IdentityAttributeName</td>
<td>Specifies the name of the identity mapping attribute to retrieve and display. For example: httpbasicusername.</td>
</tr>
</tbody>
</table>

4.8.20.3 Example
The following invocation retrieves and displays one identityAttribute and its value as specified by identityAttributeName.

getPartnerIdentityAttribute(partnerId="customPartner", identityAttributeName="httpbasicusername")

4.8.21 setPartnerIdentityAttribute
Online command that sets the identity mapping attribute for the Requester partner.
4.8.21.1 Description
Set the identity mapping attribute specified by `identityAttributeName` for the partner of type requester specified by the `partnerId` parameter. These identity mapping attributes only exist for Requester partners. Displays the result of the operation.

4.8.21.2 Syntax
```
setPartnerIdentityAttribute(partnerId, identityAttributeName, identityAttributeValue)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>partnerId</code></td>
<td>Specifies the ID of the partner of type Requester.</td>
</tr>
<tr>
<td><code>identityAttributeName</code></td>
<td>Specifies the name of the identity mapping attribute to retrieve and display.</td>
</tr>
<tr>
<td><code>identityAttributeValue</code></td>
<td>Specifies the value of the identity mapping attribute to set.</td>
</tr>
</tbody>
</table>

4.8.21.3 Example
The following invocation sets the identity mapping attribute specified by `identityAttributeName` for the Requester partner of type requester specified by the `partnerId` parameter. Displays the result of the operation.
```
setPartnerIdentityAttribute(partnerId="customPartner", identityAttributeName="httpbasicusername", identityAttributeValue="test")
```

4.8.22 `deletePartnerIdentityAttribute`
Online command that deletes the identity mapping attribute.

4.8.22.1 Description
Deletes the identity mapping attribute specified by `identityAttributeName`.

The identity mapping attributes used to map a token to a requester partner, or to map binding data (SSL Client certificate or HTTP Basic Username) to a requester partner, and they only exist for Requester partners.

4.8.22.2 Syntax
```
deletePartnerIdentityAttribute(partnerId, identityAttributeName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>partnerId</code></td>
<td>Specifies the ID of the partner.</td>
</tr>
<tr>
<td><code>identityAttributeName</code></td>
<td>Specifies the name of the identity mapping attribute to delete.</td>
</tr>
</tbody>
</table>

4.8.22.3 Example
The following invocation deletes the identity mapping attribute specified by `identityAttributeName` for Requester partner `customPartner`.
```
deletePartnerIdentityAttribute(partnerId="customPartner", identityAttributeName="httpbasicusername")
```
4.8.23 getAllWSPrefixAndPartnerMappings
Online command that retrieves and displays all WS Prefixes to Relying Party Partner mappings.

4.8.23.1 Description
Retrieves and displays all WS Prefixes to Relying Party Partner mappings.

4.8.23.2 Syntax
getAllWSPrefixAndPartnerMappings()

4.8.23.3 Example
The following invocation retrieves and displays the WS Prefixes.
getAllWSPrefixAndPartnerMappings()

4.8.24 getWSPrefixAndPartnerMapping
Online command that retrieves and displays the Relying Party Partner mapped to the specified wsprefix parameter, if a mapping for that WS Prefix exists.

4.8.24.1 Description
Retrieves and displays the Relying Party Partner mapped to the specified wsprefix parameter, if a mapping for that WS Prefix exists.

4.8.24.2 Syntax
getWSPrefixAndPartnerMapping(wsprefix)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>wsprefix</td>
<td>Specifies the WS Prefix entry to retrieve and display. The path is optional. If specified, it should take the following form: http_protocol://hostname_ip/path</td>
</tr>
</tbody>
</table>

4.8.24.3 Example
The following invocation retrieves and displays the Relying Party Partner mapped to the specified wsprefix parameter, if a mapping for that WS Prefix exists.
getWSPrefixAndPartnerMapping(wsprefix="http://host1.example.com/path")

4.8.25 createWSPrefixAndPartnerMapping
Online command that creates a new WS Prefix mapping to a Relying Partner.

4.8.25.1 Description
Creates a new WS Prefix mapping to a Relying Partner referenced by the partnerid parameter, and displays the result of the operation.

4.8.25.2 Syntax
createWSPrefixAndPartnerMapping(wsprefix, partnerid, description)
4.8.25.3 Example
The following invocation creates a new WS Prefix mapping to a Relying Partner Partner referenced by the partnerid parameter, and displays the result of the operation.

createWSPrefixAndPartnerMapping(wsprefix="http://host1.example.com/path", partnerid="customRPpartner", description="some description")

4.8.26 deleteWSPrefixAndPartnerMapping
Online command that deletes an existing mapping of WS Prefix to a Relying Partner Partner.

4.8.26.1 Description
Deletes an existing mapping of WS Prefix to a Relying Partner, and displays the result of the operation.

4.8.26.2 Syntax
deleteWSPrefixAndPartnerMapping(wsprefix)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>wsprefix</td>
<td>Specifies the WS Prefix entry to retrieve and display. The path is optional.</td>
</tr>
<tr>
<td></td>
<td>If specified, it should take the following form:</td>
</tr>
<tr>
<td></td>
<td>http_protocol://hostname_ip/path</td>
</tr>
<tr>
<td>partnerid</td>
<td>Specifies the ID of the partner.</td>
</tr>
<tr>
<td>description</td>
<td>Specifies an optional description.</td>
</tr>
</tbody>
</table>

4.8.26.3 Example
The following invocation deletes the existing mapping of WS Prefix to a Relying Partner, and displays the result of the operation.

deleteWSPrefixAndPartnerMapping(wsprefix="http://host1.example.com/path")

4.8.27 getAllPartnerProfiles
Online command that retrieves the names of all the existing partner profiles and displays them.

4.8.27.1 Description
Retrieves the names of all the existing partner profiles and displays them.

4.8.27.2 Syntax
getAllPartnerProfiles()
4.8.27.3 Example
The following invocation retrieves the names of all the existing partner profiles and displays them.

`getAllPartnerProfiles()`

4.8.28 getPartnerProfile
Online command that retrieves the configuration data of a specific partner profile, and displays the content of the profile.

4.8.28.1 Description
Retrieves the configuration data of the partner profile referenced by the partnerProfileId parameter, and displays the content of the profile.

4.8.28.2 Syntax
`getPartnerProfile(partnerProfileId)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerProfileId</td>
<td>Specifies the name of the partner profile.</td>
</tr>
</tbody>
</table>

4.8.28.3 Example
The following invocation retrieves the configuration data of the partner profile referenced by the partnerProfileId parameter, and displays the content of the profile.

`getPartnerProfile(partnerProfileId="custom-partnerprofile")`

4.8.29 createRequesterPartnerProfile
Online command that creates a new requester partner profile with default configuration data.

4.8.29.1 Description
Creates a new requester partner profile with default configuration data, and displays the result of the operation.

Table 4–9 describes the default configuration created with this command.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Return Error for Missing Claims</td>
<td>Default: false</td>
</tr>
<tr>
<td>Allow Unmapped Claims</td>
<td>Default: false</td>
</tr>
</tbody>
</table>
Table 4–9 (Cont.) Default Configuration: createRequesterPartnerProfile

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Token Type Configuration</strong></td>
<td>The Token Type Configuration table includes the following entries. There are no mappings of token type to WS-Trust Validation Template:</td>
</tr>
<tr>
<td>- SAML 1.1 token type mapped to the following External URI:</td>
<td><a href="http://docs.oasis-open.org/wss/oasis-wss-saml-token-profile-1.1#SAMLV1.1">http://docs.oasis-open.org/wss/oasis-wss-saml-token-profile-1.1#SAMLV1.1</a></td>
</tr>
<tr>
<td>The SAML 1.1 token type is not mapped to any WS-Trust Validation Template.</td>
<td></td>
</tr>
<tr>
<td>- SAML 2.0 token type mapped to the following External URI:</td>
<td><a href="http://docs.oasis-open.org/wss/oasis-wss-saml-token-profile-1.1#SAMLV2.0">http://docs.oasis-open.org/wss/oasis-wss-saml-token-profile-1.1#SAMLV2.0</a></td>
</tr>
<tr>
<td>The SAML 2.0 token type is not mapped to any WS-Trust Validation Template.</td>
<td></td>
</tr>
<tr>
<td>- Username token type mapped to the following External URI:</td>
<td><a href="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-username-token-profile-1.0#UsernameToken">http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-username-token-profile-1.0#UsernameToken</a></td>
</tr>
<tr>
<td>The Username token type is not mapped to any WS-Trust Validation Template.</td>
<td></td>
</tr>
<tr>
<td><strong>Attribute Name Mapping</strong></td>
<td>Default: The Attribute Name Mapping table is empty by default.</td>
</tr>
</tbody>
</table>

4.8.29.2 Syntax

createRequesterPartnerProfile(partnerProfileId, defaultRelyingPartyPPID, description)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerProfileId</td>
<td>Specifies the name of the partner profile.</td>
</tr>
<tr>
<td>defaultRelyingPartyPPID</td>
<td>Specifies the relying party partner profile to use, if the AppliesTo field is missing from the RST or if it could not be mapped to a Relying Party Partner.</td>
</tr>
<tr>
<td>description</td>
<td>Specifies the optional description for this partner profile</td>
</tr>
</tbody>
</table>

4.8.29.3 Example

The following invocation creates a new requester partner profile with default configuration data, and displays the result of the operation. For default data descriptions, see Table 4–9.

createRequesterPartnerProfile(partnerProfileId="custom-partnerprofile", defaultRelyingPartyPPID="rpPartnerProfileTest", description="custom partner profile")
4.8.30 createRelyingPartyPartnerProfile

Online command that creates a new relying party partner profile with default configuration data.

4.8.30.1 Description

Creates a new relying party partner profile with default configuration data, and displays the result of the operation.

Table 4-10 describes the default configuration created with this command.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Download Policy</td>
<td>Default: false</td>
</tr>
<tr>
<td>Allow Unmapped Claims</td>
<td>Default: false</td>
</tr>
<tr>
<td>Token Type Configuration</td>
<td>The Token Type Configuration will contain a single entry, with:</td>
</tr>
<tr>
<td></td>
<td>■ The token type set to the type of Issuance Template referenced by defaultIssuanceTemplateID</td>
</tr>
<tr>
<td></td>
<td>■ The Issuance template set to defaultIssuanceTemplateID</td>
</tr>
<tr>
<td>Note:</td>
<td>For the token type of the issuance template referenced by defaultIssuanceTemplateID, it will be linked to the issuance template, while the other token types will not be linked to any issuance template.</td>
</tr>
<tr>
<td></td>
<td>If the issuance template referenced by defaultIssuanceTemplateID is of custom token type, the table will only contain one entry, with the custom token type, mapped to the custom token type as the external URI, and mapped to the issuance template referenced by defaultIssuanceTemplateID</td>
</tr>
</tbody>
</table>

Attribute Name Mapping          | The Attribute Name Mapping table is empty by default.                     |

4.8.30.2 Syntax

createRelyingPartyPartnerProfile(partnerProfileId, defaultIssuanceTemplateID, description)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partnerProfileId</td>
<td>Specifies the name of the partner profile.</td>
</tr>
<tr>
<td>defaultIssuanceTemplateID</td>
<td>Specifies the default issuance template and token type to issue if no token type was specified in the RST.</td>
</tr>
<tr>
<td>description</td>
<td>Specifies the optional description for this partner profile</td>
</tr>
</tbody>
</table>

4.8.30.3 Example

The following invocation creates a new relying party partner profile with default configuration data, and displays the result of the operation.

createRelyingPartyPartnerProfile(partnerProfileId="custom-partnerprofile", defaultIssuanceTemplateID="saml11-issuance-template", description="custom partner profile")
4.8.31 createIssuingAuthorityPartnerProfile

Online command that creates a new issuing authority partner profile with default configuration data.

4.8.31.1 Description

Creates a new issuing authority partner profile with the default configuration data in Table 4–11, and displays the result of the operation.

Table 4–11 Default Configuration: createIssuingAuthorityPartnerProfile

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Clockdrift</td>
<td>Default: 600 seconds</td>
</tr>
<tr>
<td>Token Mapping</td>
<td>The Token Mapping Section will be configured as follows:</td>
</tr>
<tr>
<td></td>
<td>■ Override Simple User Mapping: false</td>
</tr>
<tr>
<td></td>
<td>■ Override User NameID Mapping: false</td>
</tr>
<tr>
<td></td>
<td>■ Override Attribute Based User Mapping: false</td>
</tr>
<tr>
<td></td>
<td>■ Override Simple Partner Mapping: false</td>
</tr>
<tr>
<td></td>
<td>■ Override Partner NameID Mapping: false</td>
</tr>
<tr>
<td></td>
<td>Empty fields</td>
</tr>
<tr>
<td></td>
<td>■ simple user mapping</td>
</tr>
<tr>
<td></td>
<td>■ attribute based user mapping</td>
</tr>
<tr>
<td></td>
<td>■ simple partner mapping</td>
</tr>
<tr>
<td>Partner NameID Mapping</td>
<td>The Partner NameID Mapping table will be provisioned with the following entries as NameID format. However, without any data in the datastore column the issuance template referenced by defaultIssuanceTemplateID is of token type SAML 1.1, SAML 2.0, or Username.</td>
</tr>
<tr>
<td></td>
<td>The table will contain the following entries:</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:1.1:nameid-format:WindowsDomain QualifiedName</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:1.1:nameid-format:emailAddress</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:1.1:nameid-format:unspecified</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:2.0:nameid-format:kerberos</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:2.0:nameid-format:persistent</td>
</tr>
<tr>
<td>User NameID Mapping</td>
<td>The User NameID Mapping table will be provisioned with the following entries as NameID format:</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:1.1:nameid-format:WindowsDomain QualifiedName, empty datastore column</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName, dn set in the datastore column</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:1.1:nameid-format:emailAddress, mail set in the datastore column</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:1.1:nameid-format:unspecified, empty datastore column</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:2.0:nameid-format:kerberos, empty datastore column</td>
</tr>
<tr>
<td></td>
<td>■ urn:oasis:names:tc:SAML:2.0:nameid-format:persistent, empty datastore column</td>
</tr>
</tbody>
</table>
4.8.31 createIssuingAuthorityPartnerProfile

**Syntax**

createIssuingAuthorityPartnerProfile(partnerProfileId, description)

**Example**

The following invocation a new issuing authority partner profile with default configuration data, and displays the result of the operation.

createIssuingAuthorityPartnerProfile(partnerProfileId="custom-partnerprofile", description="custom partner profile")

4.8.32 deletePartnerProfile

Online command that deletes an partner profile referenced by the partnerProfileId parameter.

**Description**

Deletes an partner profile referenced by the partnerProfileId parameter, and displays the result of the operation.

**Syntax**

deletePartnerProfile(partnerProfileId)

**Example**

The following invocation deletes an partner profile referenced by the partnerProfileId parameter, and displays the result of the operation.

deletePartnerProfile(partnerProfileId="custom-partnerprofile")

4.8.33 getAllIssuanceTemplates

Online command that retrieves the names of all the existing issuance templates.

**Description**

Retrieves the names of all the existing issuance templates and displays them.

**Syntax**

getAllIssuanceTemplates
4.8.33 Example
The following invocation retrieves the names of all the existing issuance templates and displays them.
getAllIssuanceTemplates

4.8.34 getIssuanceTemplate
Online command that retrieves the configuration data of a specific issuance template.

4.8.34.1 Description
Retrieves the configuration data of the issuance template referenced by the issuanceTemplateId parameter, and displays the content of the template.

4.8.34.2 Syntax
getIssuanceTemplate(issuanceTemplateId)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>issuanceTemplateId</td>
<td>Specifies the name of the issuance template.</td>
</tr>
</tbody>
</table>

4.8.34.3 Example
The following invocation retrieves the configuration data of the issuance template referenced by the issuanceTemplateId parameter, and displays the content of the template.
getIssuanceTemplate(issuanceTemplateId="custom-issuancetemp")

4.8.35 createIssuanceTemplate
Online command that creates a new issuance template with default configuration data.

4.8.35.1 Description
Creates a new issuance template with default configuration data, and displays the result of the operation.

Table 4–12 describes the default configuration for this command.

<table>
<thead>
<tr>
<th>Token Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>The issuance template will be created with the following default values:</td>
</tr>
<tr>
<td></td>
<td>■ Send Encrypted Token: false</td>
</tr>
<tr>
<td></td>
<td>■ NameID User Attribute: uid</td>
</tr>
<tr>
<td></td>
<td>■ NameID User Attribute Store: User Store</td>
</tr>
<tr>
<td></td>
<td>■ Password Attribute: (empty)</td>
</tr>
<tr>
<td></td>
<td>■ Include Nonce: true</td>
</tr>
<tr>
<td></td>
<td>■ Include Timestamp: true</td>
</tr>
</tbody>
</table>

Table 4–12 Default Configuration: createIssuanceTemplate
### 4.8.35.2 Syntax

```java
createIssuanceTemplate(issuanceTemplateId, tokenType, signingKeyId, description)
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>issuanceTemplateId</td>
<td>Specifies the name of the issuance template to be created.</td>
</tr>
</tbody>
</table>
| tokenType        | Possible values can be:  
|                  | ■ username: indicates that the token type is UsernameToken  
|                  | ■ saml11: indicates that the token type is a SAML 1.1 Assertion  
|                  | ■ saml20: indicates that the token type is a SAML 2.0 Assertion  
|                  | ■ <other>: in this case, the token type is assumed to be a custom token type, referenced by <other> (replace <other> by a value) |
| signingKeyId     | Specifies the keyID referencing the key entry (defined in the STS General Settings UI section) that will be used to sign outgoing SAML Assertions. Only required when token type is saml11 or saml20. |
| description      | An optional description.                                                   |

### 4.8.35.3 Example

The following invocation creates a new issuance template with default configuration data, and displays the result of the operation.

```java
createIssuanceTemplate(issuanceTemplateId="custom-issuancetemp",
```
4.8.36 deleteIssuanceTemplate

Online command that deletes an issuance template referenced by the issuanceTemplateId parameter, and displays the result of the operation.

4.8.36.1 Description
Deletes an issuance template referenced by the issuanceTemplateId parameter, and displays the result of the operation.

4.8.36.2 Syntax
deleteIssuanceTemplate(issuanceTemplateId)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>issuanceTemplateId</td>
<td>Specifies the name of the existing issuance template to be removed.</td>
</tr>
</tbody>
</table>

4.8.36.3 Example
The following invocation deletes an issuance template referenced by the issuanceTemplateId parameter, and displays the result of the operation.

deleteIssuanceTemplate(issuanceTemplateId="custom-issuancetemp")

4.8.37 getAllValidationTemplates

Online command that retrieves the names of all the existing validation templates.

4.8.37.1 Description
Retrieves the names of all the existing validation templates and displays them.

4.8.37.2 Syntax
getAllValidationTemplates()

4.8.37.3 Example
The following invocation retrieves the names of all the existing validation templates and displays them.

getAllValidationTemplates()

4.8.38 getValidationTemplate

Online command that retrieves the configuration data of a specific validation template, and displays the content of the template.

4.8.38.1 Description
Retrieves the configuration data of the validation template referenced by the validationTemplateId parameter, and displays the content of the template.

4.8.38.2 Syntax
getValidationTemplate(validationTemplateId)
4.8.38.3 Example
The following invocation retrieves the configuration data of a specific validation template, and displays the content of the template.

```
getValidationTemplate(validationTemplateId="custom-wss-validtemp")
```

4.8.39 createWSSValidationTemplate
Online command that creates a new validation template with default configuration data.

4.8.39.1 Description
Creates a new validation template with default configuration data, and displays the result of the operation.

The WSS validation template is created with the values in Table 4–13, depending on the token type.

<table>
<thead>
<tr>
<th>Token Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Username</td>
<td>The validation template will be created with the following default values:</td>
</tr>
<tr>
<td></td>
<td>- Timestamp Lifespan: 600 seconds</td>
</tr>
<tr>
<td></td>
<td>- Enable Credential Validation: true</td>
</tr>
<tr>
<td></td>
<td>- Validation Source: Partner</td>
</tr>
<tr>
<td></td>
<td>- Token Mapping: Map token to Partner</td>
</tr>
<tr>
<td></td>
<td>- Enable Simple Partner Mapping: true</td>
</tr>
<tr>
<td></td>
<td>- Partner Datastore Attribute: username</td>
</tr>
</tbody>
</table>
The validation template will be created with the following default values:

- Authentication Timeout: 3600 seconds
- Timestamp Lifespan: 3600 seconds

The Token Mapping section will be created with the following default values:

- Map token: Map token to Partner
- Enable Simple User Mapping: false
- Enable User NameID Mapping: false
- Enable Attribute Based User Mapping: false
- Enable Simple Partner Mapping: false
- Enable Partner NameID Mapping: false

Empty fields: User Token Attribute, User Datastore Attribute and Attribute Based User Mapping

Also:

- Partner Token Attribute: NameID
- Partner Datastore Attribute: username

Partner NameID Mapping table will be provisioned with the following entries as NameID format, but without any data in the datastore column:

- urn:oasis:names:tc:SAML:1.1:nameid-format:WindowsDomainQualified Name
- urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName
- urn:oasis:names:tc:SAML:1.1:nameid-format:emailAddress
- urn:oasis:names:tc:SAML:1.1:nameid-format:unspecified
- urn:oasis:names:tc:SAML:2.0:nameid-format:kerberos
- urn:oasis:names:tc:SAML:2.0:nameid-format:persistent

User NameID Mapping table will be provisioned with the following entries as NameID format:

- urn:oasis:names:tc:SAML:1.1:nameid-format:WindowsDomainQualified Name, empty datastore column
- urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName, dn set in the datastore column
- urn:oasis:names:tc:SAML:1.1:nameid-format:emailAddress, mail set in the datastore column
- urn:oasis:names:tc:SAML:1.1:nameid-format:unspecified, empty datastore column
- urn:oasis:names:tc:SAML:2.0:nameid-format:kerberos, empty datastore column
- urn:oasis:names:tc:SAML:2.0:nameid-format:persistent, empty datastore column
Table 4–13 (Cont.) Default Configuration: createWSSValidationTemplate

<table>
<thead>
<tr>
<th>Token Type</th>
<th>Description</th>
</tr>
</thead>
</table>
| X.509      | The Token Mapping section will be created with the following default values:  
  - Map token: Map token to Partner  
  - Enable Simple User Mapping: false  
  - Enable Attribute Based User Mapping: false  
  - Enable Simple Partner Mapping: true  
  Empty fields: User Token Attribute, User Datastore Attribute and Attribute Based User Mapping  
  Also:  
  - Partner Token Attribute: DN  
  - Partner Datastore Attribute: sslclientcertdn |
| Kerberos   | The Token Mapping section will be created with the following default values:  
  - Map token: Map token to User  
  - Enable Simple User Mapping: true  
  - Enable Attribute Based User Mapping: false  
  - Enable Simple Partner Mapping: false  
  Empty fields: Partner Token Attribute, Partner Datastore Attribute and Attribute Based User Mapping  
  Also:  
  - User Token Attribute: TPE_KERBEROS_PRINCIPAL_FULL  
  - User Datastore Attribute: mail |

4.8.39.2 Syntax

createWSSValidationTemplate(templateId, tokenType, defaultRequesterPPID, description)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>templateId</td>
<td>Specifies the name of the validation template to be created.</td>
</tr>
</tbody>
</table>
| tokenType           | Specifies the token type of the validation template. Possible values can be:  
  - username: indicates that the token type is UsernameToken  
  - saml11: indicates that the token type is a SAML 1.1 Assertion  
  - saml20: indicates that the token type is a SAML 2.0 Assertion  
  - x509: indicates that the token type is an X.509 certificate  
  - kerberos: indicates that the token type is a Kerberos token  
  - oam: indicates that the token type is OAM |
| defaultRequesterPPID| Specifies the Requester partner profile to use if OSTS is configured not to map the incoming message to a requester. |
| description         | Specifies an optional description. |
4.8.39.3 Example
The following invocation creates a new validation template with default configuration data, and displays the result of the operation.

```java
createWSSValidationTemplate(templateId="custom-wss-validtemp", tokenType="custom", defaultRequesterPPID="requesterPartnerProfileTest", description="custom validation template")
```

4.8.40 createWSTrustValidationTemplate

Online command that creates a new WS-Trust validation template with default configuration data.

4.8.40.1 Description
Creates a new WS-Trust validation template with default configuration data, and displays the result of the operation.

The WS-Trust validation template is created with the values in Table 4–14, depending on the token type.

<table>
<thead>
<tr>
<th>Token Type</th>
<th>Description</th>
</tr>
</thead>
</table>
| Username    | The WS-Trust validation template will be created with the following default values:  
  - Timestamp Lifespan: 600 seconds  
  - Enable Credential Validation: false  
  - Validation Source: User Store  
  - Token Mapping: Map token to User  
  - Enable Simple User Mapping: true  
  - USeR Datastore Attribute: uid |
The WS-Trust validation template will be created with the following default values:

- Authentication Timeout: 3600 seconds
- Timestamp Lifespan: 3600 seconds

The Token Mapping section will be created with the following default values:

- Map token: Map token to User
- Enable Simple User Mapping: false
- Enable User NameID Mapping: true
- Enable Attribute Based User Mapping: false

Empty fields: User Datastore Attribute, Attribute Based User Mapping

User NameID Mapping table will be provisioned with the following entries as NameID format:

- urn:oasis:names:tc:SAML:1.1:nameid-format:WindowsDomainQualifiedName, empty datastore column
- urn:oasis:names:tc:SAML:1.1:nameid-format:X509SubjectName, dn set in the datastore column
- urn:oasis:names:tc:SAML:1.1:nameid-format:emailAddress, mail set in the datastore column
- urn:oasis:names:tc:SAML:1.1:nameid-format:unspecified, empty datastore column
- urn:oasis:names:tc:SAML:2.0:nameid-format:kerberos, empty datastore column
- urn:oasis:names:tc:SAML:2.0:nameid-format:persistent, empty datastore column

The WS-Trust Token Mapping section will be created with the following default values:

- Map token: Map token to User
- Enable Simple User Mapping: true
- Enable Attribute Based User Mapping: false
- Enable Simple Partner Mapping: true
- User Token Attribute: CN
- User Datastore Attribute: CN
- Attribute Based User Mapping (empty)

The WS-Trust Token Mapping section will be created with the following default values:

- Map token: Map token to User
- Enable Simple User Mapping: true
- Enable Attribute Based User Mapping: false
- Attribute Based User Mapping (empty)
- User Token Attribute: TPE_KERBEROS_PRINCIPAL_FULL
- User Datastore Attribute: mail
4.8.40.2 Syntax

createWSTrustValidationTemplate(templateId, tokenType, description)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>templateId</td>
<td>Specifies the name of the WS-Trust validation template to be created.</td>
</tr>
<tr>
<td>tokenType</td>
<td>Specifies the token type of the WS-Trust validation template. Possible values can be:</td>
</tr>
<tr>
<td></td>
<td>- username: indicates that the token type is UsernameToken</td>
</tr>
<tr>
<td></td>
<td>- saml11: indicates that the token type is a SAML 1.1 Assertion</td>
</tr>
<tr>
<td></td>
<td>- saml20: indicates that the token type is a SAML 2.0 Assertion</td>
</tr>
<tr>
<td></td>
<td>- x509: indicates that the token type is an X.509 certificate</td>
</tr>
<tr>
<td></td>
<td>- kerberos: indicates that the token type is a Kerberos token</td>
</tr>
<tr>
<td></td>
<td>- oam: indicates that the token type is an Oracle Access Manager token, supported by default</td>
</tr>
<tr>
<td></td>
<td>- &lt;other&gt;: in this case, the token type is assumed to be a custom token type, referenced by &lt;other&gt; (replace &lt;other&gt; by a value)</td>
</tr>
<tr>
<td>description</td>
<td>Specifies an optional description.</td>
</tr>
</tbody>
</table>

4.8.40.3 Example

The following invocation creates a new WS-Trust validation template with default configuration data, and displays the result of the operation.

createWSTrustValidationTemplate(templateId="custom-wss-validtemp", tokenType="custom", description="custom validation template")

4.8.41 deleteValidationTemplate

Online command that deletes a validation template.
4.8.41.1 Description
Deletes a validation template referenced by the validationTemplateId parameter, and
displays the result of the operation.

4.8.41.2 Syntax
deleteValidationTemplate(validationTemplateId)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>validationTemplateId</td>
<td>Specifies the name of the validation template to be removed.</td>
</tr>
</tbody>
</table>

4.8.41.3 Example
The following invocation deletes a validation template referenced by the
validationTemplateId parameter, and displays the result of the operation.

deleteValidationTemplate(validationTemplateId="custom-wss-validtemp")
User Messaging Service (UMS) Custom WLST Commands

Use the User Messaging Service commands, listed in Table 5–1, to download user messaging preferences from your backend database.

**Note:** To use these commands, you must invoke WLST from the Oracle home in which the component has been installed. See "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator’s Guide.

<table>
<thead>
<tr>
<th>Command category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Section 5.1, “UMS WLST Command Group”</td>
<td>Manage Oracle Unified Messaging Service commands.</td>
</tr>
</tbody>
</table>

### 5.1 UMS WLST Command Group

The UMS WLST commands are listed under the command group "ums".

#### 5.1.1 manageUserMessagingPrefs

Command Category: UMS

Use with WLST: Offline

**5.1.1.1 Description**

`manageUserMessagingPrefs` is used to download the user messaging preferences from a backend database to the specified xml file, or to upload the user messaging preferences from an XML file into the backend database.

**5.1.1.2 Syntax**

`manageUserMessagingPrefs {operation=, filename, url, username, password, [encoding], [guid], [merge] }`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>operation</td>
<td>specifies the upload or download operation to be performed.</td>
</tr>
</tbody>
</table>
5.1.1.3 Examples

To download the user messaging preferences of all users to the specified file.

```bash
wls:offline> manageUserMessagingPrefs(operation='download',
filename='download.xml', url='t3://localhost:8001', username='weblogic',
password='<password>')
```

To download the user messaging preferences of all users to the specified file using UTF-8 character encoding.

```bash
wls:offline> manageUserMessagingPrefs(operation='download',
filename='download.xml', url='t3://localhost:8001', username='weblogic',
password='<password>', encoding='UTF-8')
```

To download the user messaging preferences of the user with guid 'john.doe' to the specified file.

```bash
wls:offline> manageUserMessagingPrefs(operation='download',
filename='download.xml', url='t3://localhost:8001', username='weblogic',
password='<password>', guid='john.doe')
```

To download the user messaging preferences of the users with guid 'john.doe' and 'jane.doe' to the specified file using UTF-8 character encoding.

```bash
wls:offline> manageUserMessagingPrefs(operation='download',
filename='download.xml', url='t3://localhost:8001', username='weblogic',
password='<password>', guid='john.doe,jane.doe', encoding='UTF-8')
```

To upload the user messaging preferences from the specified file to the backend database.

```bash
wls:offline> manageUserMessagingPrefs(operation='upload', filename='upload.xml',
url='t3://localhost:8001', username='weblogic', password='<password>')
```

---

**Argument | Definition**
--- | ---
filename | For download, a unique file name (path) to download the user preferences to. For example, /tmp/download.xml (Linux) or C:\temp\download.xml (Windows).
For upload, the file name (path) from which to upload the user preferences.
url | The JNDI URL to access the User Messaging Server. For example: t3://<hostname>:<port>
username | The username with login permission to access the User Messaging Server.
password | The password of the username.
encoding | Character encoding to use to download the user preferences.
guid | The globally unique identifier (guid) of a list of users to use to download their preferences. If no guid is specified, the preferences for all users are downloaded.
merge | This option is for upload only. Valid values are:
create_new (default): Create new user device, device addresses and/or ruleset entities. An exception will be thrown if an entity with the same primary key already exists and processing will terminate.
overwrite: Remove all existing entities of a user and then create new entities.
append: Only upload entities that do not already exist.
To upload the user messaging preferences from the specified file to the backend database and overwrite existing preferences.

```wls:offline> manageUserMessagingPrefs(operation='upload', filename='upload.xml', url='t3://localhost:8001', username='weblogic', password='<password>', merge='overwrite')
```

5.1.2 `deployUserMessagingDriver`

Command Category: UMS

Use with WLST: Online

5.1.2.1 Description

`deployUserMessagingDriver` is used to deploy additional instances of user messaging drivers.

Specify a base driver type (for example: email, xmpp, voicexml, and others) and a short name for the new driver deployment. The string `usermessagingdriver-` will be prepended to the specified application name. Any valid parameters for the `deploy` command can be specified, and will be passed through when the driver is deployed.

5.1.2.2 Syntax

```bash
deployUserMessagingDriver(baseDriver, appName, [targets], [stageMode], [options])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>baseDriver</td>
<td>Specifies the base messaging driver type. Must be a known driver type, such as 'email', 'proxy', 'smpp', 'voicexml', or 'xmpp'.</td>
</tr>
<tr>
<td>appName</td>
<td>A short descriptive name for the new deployment. The specified value will be prepended with the string <code>usermessagingdriver-</code>.</td>
</tr>
<tr>
<td>targets</td>
<td>Optional. Additional arguments that are valid for the <code>deploy</code> command can be specified and will be passed through when the new driver is deployed.</td>
</tr>
<tr>
<td>stageMode</td>
<td></td>
</tr>
<tr>
<td>options</td>
<td></td>
</tr>
</tbody>
</table>

5.1.2.3 Examples

To deploy a second instance of an email driver with name `myEmail`.

```bash
wls:base_domain/servereConfig> deployUserMessagingDriver(baseDriver='email', appName='myEmail')
```

To deploy a second instance of an email driver, specifying deployment targets.

```bash
wls:base_domain/servereConfig> deployUserMessagingDriver(baseDriver='email', appName='email2', targets='server1,server2')
```
DMS Custom WLST Commands

Use the Dynamic Monitoring Service (DMS) commands in the categories in Table 6–1 to view performance metrics and to configure Event Tracing.

**Note:** To use these DMS custom WLST commands, you must invoke the WLST script from the Oracle Common home. See "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator’s Guide.

<table>
<thead>
<tr>
<th>Table 6–1 DMS Command Categories</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Command category</strong></td>
</tr>
<tr>
<td>DMS Metric Commands</td>
</tr>
<tr>
<td>DMS Event Tracing Commands</td>
</tr>
</tbody>
</table>

6.1 DMS Metric Commands

Use the commands in Table 6–2 to view information about a specific performance metric, a set of performance metrics, or all performance metrics for a particular server or component.

For additional details about metrics, see the chapter "Monitoring Oracle Fusion Middleware" in the Oracle Fusion Middleware Administrator’s Guide and the appendix "Instrumenting Applications with DMS" in the Oracle Fusion Middleware Performance Guide.

<table>
<thead>
<tr>
<th>Table 6–2 DMS Commands</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Use this command...</strong></td>
</tr>
<tr>
<td>displayMetricTableNames</td>
</tr>
<tr>
<td>displayMetricTables</td>
</tr>
<tr>
<td>dumpMetrics</td>
</tr>
<tr>
<td>reloadMetricRules</td>
</tr>
</tbody>
</table>

6.1.1 displayMetricTableNames

Command Category: DMS Metrics

Use with WLST: Online
6.1.1.1 Description
Displays the names of the available DMS metric tables. The returned value is a list of metric table names.

6.1.1.2 Syntax
`displayMetricTableNames([servers])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>servers</td>
<td>Optional. Specifies the servers from which to retrieve metrics. Valid values are a list of WebLogic Server instance names and system component names.</td>
</tr>
</tbody>
</table>

To specify one server, use the following syntax:

```java
servers='servername'
```

To specify multiple servers, use one of the following syntax options:

```java
servers=['servername1', 'servername2', ...]
servers=('servername1', 'servername2', ...)
```

If this argument is not specified, the command returns the list of metric table names for all WebLogic servers and system components.

6.1.1.3 Examples
The following example displays metric table names for all WebLogic servers and system components:

```java
displayMetricTableNames()
ADF
ADFc
ADFc_Metadata_Service
ADFc_Region
ADFc_Taskflow
ADFc_Viewport
BAM_common_connectionpool
BAM_common_connectionpool_main
BAM_common_messaging
BAM_common_messaging_consumers
...
```

The following example displays metric table names for the WebLogic Managed Server `soa_server1`:

```java
displayMetricTableNames(servers='soa_server1')
ADF
JVM
JVM_ClassLoader
JVM.Compiler
JVM_GC
JVM_Memory
JVM_MemoryPool
JVM_MemorySet
JVM_OS
JVM_Runtime
...
```
The following example displays metric table names for two WebLogic Managed Servers:

displayMetricTableNames(servers=['soa_server1', 'bam-server1'])

ADF
ADFc
ADFc_Metadata_Service
ADFc_Region
ADFc_Taskflow
ADFc_Viewport
BAM_common_connectionpool
BAM_common_connectionpool_main
BAM_common_messaging
BAM_common_messaging_consumers
.
.
.

6.1.2 displayMetricTables

Command Category: DMS Metrics

Use with WLST: Online

6.1.2.1 Description
Displays the content of the DMS metric tables.

The returned value is list of DMS metric tables, with the following information about each table:

- The metric table name.
- The metric table schema information.
- The metric table Rows.

The metric table schema information contains the following:

- The name of the column.
- The type of the column value.
- The unit of the column.
- The description of the column.

6.1.2.2 Syntax

displayMetricTables([metricTable_1] [, metricTable_2], [...] [, servers] [, variables])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>metricTable_n</td>
<td>Optional. Specifies a list of metric tables. By default, this argument displays all available metrics. The metric table name can contain special characters for simple pattern matching. The character '?' matches any single character. The character '*' matches zero or more characters. You specify the metric table name. You can specify multiple metric table names in a comma-separated list. These are the same names output by the WLST command displayMetricTableNames.</td>
</tr>
</tbody>
</table>
6.1.2.3 Examples

The following example displays the data from the JVM and the weblogic.management.runtime.WebAppComponentRuntimeMBean metric tables, and limits it to data retrieved from soa_server1 and bam_server1:

displayMetricTables('JVM','weblogic.management.runtime.WebAppComponentRuntimeMBean',
    servers=['soa_server1','bam_server1'])

ApplicationRuntime:     soa-infra
ComponentName:  /integration/services/IdentityService
ContextRoot:    /integration/services/IdentityService
DeploymentState:        2
FilterDispatchedRequestsEnabled:        false
IndexDirectoryEnabled:  false
JSPDebug:       false
JSPKeepGenerated:       false
JSPPageCheckSecs:       1
JSPVerbose:     true
ModuleId:       /integration/services/IdentityService
ModuleURI:      IdentityService.war
Name:   soa_server1_/integration/services/IdentityService
ObjectName:     com.bea:ApplicationRuntime=soa-infra,Name=soa_server1_

OpenSessionsCurrentCount:       0
OpenSessionsHighCount:  0

The following example displays the aggregated metric tables with the specified metric aggregation parameters:

displayMetricTables('j2ee_application:webservices_port_rollup',
    servers=['soa_server1','bam_server1'],
    variables={'host':hostname', 'servletName':'dms'})

---
j2ee_application:webservices_port_rollup
---

**Argument**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| servers  | Optional. Specifies the servers from which to retrieve metrics. Valid values are a list of WebLogic Server instance names and system component names. To specify one server, use the following syntax:

```
servers='servername'
```

To specify multiple servers, use one of the following syntax options:

```
servers=['servername1', 'servername2', ...]
servers=('servername1', 'servername2', ...)
```

If this argument is not specified, the command returns the list of metric tables for all WebLogic servers and system components. |

| variables | Optional. Defines the metric aggregation parameters. Valid values are a set of name-value pairs. It uses the following syntax:

```
variables={name1:value1, name2:value2, ...}
```

The specific name-value pairs depend on the aggregated metric tables. Each aggregated metric table has its specific set of variable names. |
Faults: 0
Requests: 0
Requests.averageTime: 0.0
Requests.totalTime: 0.0
ServerName: soa_server1
moduleName: RuntimeConfigService
moduleType: WEBs
portName: RuntimeConfigServicePortSAML
processRequest.active: 0
service.throughput: 0.0
service.time: 0.0
startTime: 1238182359291
webserviceName: RuntimeConfigService

Faults: 0
Requests: 0
Requests.averageTime: 0.0
Requests.totalTime: 0.0
ServerName: soa_server1
moduleName: TaskMetadataService
moduleType: WEBs
portName: TaskMetadataServicePort
processRequest.active: 0
service.throughput: 0.0
service.time: 0.0
startTime: 1238182358096
webserviceName: TaskMetadataService

The following example displays the metric tables which names match the specified patterns:

displayMetricTables('J??', 'JVM_*')

---------------
JVM_ThreadStats
---------------

Host: hostname.us.oracle.com
JVM: JVM
Name: threads
Parent: /JVM/MxBeans
Process: AdminServer:9001
ServerName: AdminServer
contention.value: enabled in JVM
daemon.value: 60 threads
deadlock.value: 0 threads
live.value: 61 threads
peak.value: 66 threads
started.value: 241 threads

Host: hostname.us.oracle.com
JVM: JVM
Name: threads
Parent: /JVM/MxBeans
Process: soa_server1:9001
6.1.3 dumpMetrics

Command Category: DMS Metrics
Use with WLST: Online

6.1.3.1 Description
Displays available metrics in the internal format or in XML. The returned value is a text document.

6.1.3.2 Syntax
dumpMetrics([servers] [, format])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| servers  | Optional. Specifies the servers from which to retrieve metrics. Valid values are a list of WebLogic Server instance names and system component names.  
To specify one server, use the following syntax:  
servers='servername'  
To specify multiple servers, use one of the following syntax options:  
servers=('[servername1]', 'servername2', ...)  
servers=('servername1', 'servername2', ...)  
If this argument is not specified, the command returns the list of metric tables for all WebLogic servers and system components. |
| format | Optional. Specifies the command output format. Valid values are 'raw' (the default), 'xml', and 'pdml'. For example:  
format='raw'  
format='xml'  
format='pdml'  
DMS raw format is a simple metric display format; it displays one metric per line. |

6.1.3.3 Examples
The following example outputs all available metrics, including native WebLogic Server metrics and internal DMS metrics, in the XML format:

dumpMetrics(format='xml')

```
<table name='weblogic_j2eeserver:jvm' keys='ServerName serverName' componentId='bam_server1' cacheable='false'>
  <row cacheable='false'>
    <column name='serverName'><![CDATA[bam_server1]]></column>
    <column name='nurserySize.value' type='DOUBLE'>0.0</column>
    <column name='jdkVersion.value'><![CDATA[1.6.0_05]]></column>
    <column name='jdkVendor.value'><![CDATA[BEA Systems, Inc.]]></column>
</table>
```
The following example outputs metrics from Server-0 in the default raw format:

dumpMetrics(servers='Server-0')

/JVM/MxBeans/threads/Thread-44 [type=JVM_Thread]
ECID.value: null
RID.value: null
blocked.value: 0 msec
blockedCount.value: 1 times
cpu.value: 40 msecs
lockName.value: null
lockOwnerID.value: null
lockOwnerName.value: null
name.value: LDAPConnThread-0 ldap://10.229.149.27:7001
state.value: RUNNABLE
waited.value: 0 msec
waitedCount.value: 0 times

/JVM/MxBeans/threads/Thread-45 [type=JVM_Thread]
ECID.value: null
RID.value: null
blocked.value: 0 msec

The following example outputs metrics from soa_server1 and bam_server1 in XML format:

dumpMetrics(servers=['soa_server1', 'bam_server1'], format='xml')
<table name='oracle_soainfra:high_latency_sync_composites' keys='ServerName soainfra_composite soainfra_composite_revision soainfra_domain' componentId='bam_server1' cacheable='false'>
</table>
<table name='weblogic_j2eeserver:ejb_transaction' keys='ServerName appName ejbModuleName name serverName' componentId='bam_server1' cacheable='false'>
<row cacheable='false'>
<column name='appName'><![CDATA[usermessagingserver]]></column>
<column name='name'><![CDATA[MessagingClientParlayX]]></column>
<column name='ejbTransactionCommit.completed' type='LONG'>0</column>
<column name='ejbTransactionRollback.completed' type='LONG'>0</column>
<column name='ejbTransactionTimeout.throughput' type='DOUBLE'>0.0</column>
<column name='ejbTransactionTimeout.completed' type='LONG'>0</column>
<column name='appName'><![CDATA[usermessagingserver]]></column>
<column name='name'><![CDATA[MessagingClientParlayX]]></column>
<column name='ejbTransactionRollback.throughput' type='DOUBLE'>0.0</column>
<column name='ejbTransactionCommit.throughput' type='DOUBLE'>0.0</column>
<column name='ejbModuleName'><![CDATA[sdpmessagingclient-ejb-parlayx.jar]]></column>
</row>
</table>
6.1.4 reloadMetricRules

Command Category: DMS Metrics
Use with WLST: Online

6.1.4.1 Description
Reloads the metric rules. You must run this command after you deploy system components or after you modify metric rules. Generally, Oracle does not recommend that you modify metric rules.

6.1.4.2 Syntax
reloadMetricRules()

6.1.4.3 Example
The following example reloads metric rules for all servers running in the domain:

```
reloadMetricRules()
Location changed to domainRuntime tree. This is a read-only tree with DomainMBean as the root.
For more help, use help(domainRuntime)
```

```
loaded 'server-oracle_eps_server-11.0.xml'
loaded 'server-weblogic_j2eeserver-11.0.xml'
loaded 'server-oracle_bamweb-11.0.xml'
loaded 'server-oracle_federation-11.0.xml'
loaded 'server-portal-11.0.xml'
loaded 'server-weblogic_j2ee_application_webcenter-11.0.xml'
```

6.2 DMS Event Tracing Commands

Use the commands in Table 6–3 to configure Event Tracing. Event Tracing configures live tracing with no restarts. DMS metrics that were updated using Oracle Fusion Middleware products may be traced using the DMS Event Tracing feature.

For information about using DMS Event Tracing, see "DMS Tracing and Events" in the Oracle Fusion Middleware Performance Guide.

```
Table 6–3   DMS Tracing Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>addDMSEventDestination</td>
<td>Add a new destination to the Event Tracing configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>addDMSEventFilter</td>
<td>Add a filter to the Event Tracing configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>addDMSEventRoute</td>
<td>Adds the specified event route to the Event Tracing configuration</td>
<td>Online</td>
</tr>
<tr>
<td>enableDMSEventTrace</td>
<td>Enable an event trace and create a filter with a specified condition and destination and an enabled event-route.</td>
<td>Online</td>
</tr>
<tr>
<td>listDMSEventConfiguration</td>
<td>Display an overview of the event tracing configuration.</td>
<td>Online</td>
</tr>
</tbody>
</table>
```
### 6.2.1 addDMSEventDestination

Command Category: DMS Event Tracing

Use with WLST: Online

**Description**

Adds a new destination to the Event Tracing configuration. If a destination with the same ID already exists, the command reports this and does not add the destination. You must be connected to the Administration Server to add a destination. If you are not, an error is returned.

**Syntax**

```java
addDMSEventDestination(id=id [, name=dest_name] ,class=class_name
[, props= {'name': 'value'...}] [,server=server_name])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>The unique identifier for the specified destination.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. A name for the destination.</td>
</tr>
<tr>
<td>class</td>
<td>The full class name of the destination.</td>
</tr>
<tr>
<td>props</td>
<td>Optional. The name/value properties to use for the destination. Some</td>
</tr>
<tr>
<td></td>
<td>destinations require properties. For example, the LoggerDestination class</td>
</tr>
<tr>
<td></td>
<td>requires the property loggerName.</td>
</tr>
<tr>
<td></td>
<td>See Table 6–4 for a list of available classes.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. The server on which to perform this operation. The default is</td>
</tr>
<tr>
<td></td>
<td>the server to which you are connected.</td>
</tr>
</tbody>
</table>

Table 6–4 shows the built-in destinations, with the full runtime class name.
6.2.1.3 Examples

The following example adds a destination with the ID jfr, the name Flight-Recorder, and the class oracle.dms.event.JRockitFlightRecorder:

```
addDMSEventDestination(id='jfr', name='Flight-Recorder',
    class='oracle.dms.event.JRockitFlightRecorder')
```

Destination "jfr" added.

The following example adds a destination with the ID destination1, the name File-system, the class oracle.dms.trace2.runtime.LoggerDestination. Because the LoggerDestination requires the property loggerName, it sets the value to trace2-logger:

```
addDMSEventDestination(id='destination1', name='File-system',
    class='oracle.dms.trace2.runtime.LoggerDestination',
    props={'loggerName': 'trace2-logger'})
```

Destination "destination1" added.

The following example attempts to add a destination with an ID that already exists:

```
addDMSEventDestination(id='destination1', name='File-system',
    class='oracle.dms.trace2.runtime.LoggerDestination',
    props={'loggerName': 'trace2-logger'})
```

Destination "destination1" already exists. Unable to add this.

### 6.2.2 addDMSEventFilter

Command Category: DMS Event Tracing

Use with WLST: Online
6.2.2.1 Description

Adds a filter to the Event Tracing configuration. If a filter with the same ID already exists, the command returns an error and does not add the filter.

You must be connected to the Administration Server to add an event filter. If you are not, an error message is reported.

6.2.2.2 Syntax

```
addDMSEventFilter{id=id [, name=name] [, etypes]
   , props= {'prop-name': 'value'...}
   [, server=server_name])
```

The following shows the syntax for `etypes`:

```
<etypes>::=<type>[<action>]
```

The following lists the valid etypes:

- EXECUTION_CONTEXT
- EXECUTION_CONTEXT:START
- EXECUTION_CONTEXT:STOP
- HTTP_REQUEST
- HTTP_REQUEST:START
- HTTP_REQUEST:STOP
- NOUN
- NOUN:CREATE
- NOUN:DELETE
- STATE_SENSOR
- STATE_SENSOR:CREATE
- STATE_SENSOR:DELETE

The following shows an etype with two event/action pairs, separated by a comma:

```
etypes='NOUN:DELETE, STATE_SENSOR:DELETE'
```

The following shows the syntax for the `<condition>` property of the argument `props`. The arguments are described in the tables following the syntax:

```
<condition>::=<type> [operator <condition>]
<type>::=<nountype>|<context>
```
The following table describes the arguments for `<nountype>`:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;nountype&gt;</code></td>
<td>Each Sensor, with its associated metric, is organized in a hierarchy according to Nouns. A Noun type is a name that reflects the set of metrics being collected. For example, JDBC could be a Noun type. For information about Sensors and Nouns, see &quot;Understanding DMS Terminology (Nouns and Sensors)&quot; in the Oracle Fusion Middleware Performance Guide.</td>
</tr>
<tr>
<td><code>&lt;context&gt;</code></td>
<td>An Execution Context is an association of the Execution Context ID (ECID), Relationship ID (RID), and Maps of Values. This argument allows the data stored in the map of values to be inspected and used by the filter. For example, if the map contains the key &quot;user&quot;, you can create a filter that returns requests with &quot;user&quot; equal to &quot;bruce&quot;.</td>
</tr>
</tbody>
</table>

The following table describes the arguments for `<nountype-operator>`:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>&lt;nountype-operator&gt;</code></td>
<td>The following are valid operators:</td>
</tr>
<tr>
<td>equals</td>
<td>Filters only if the Noun type name equals the value.</td>
</tr>
<tr>
<td>starts_with</td>
<td>Filters only if the Noun type name starts with the value.</td>
</tr>
<tr>
<td>contains</td>
<td>Filters only if the Noun type name equals the value.</td>
</tr>
<tr>
<td>not_equals</td>
<td>Filters only if the Noun type name does not equal the value.</td>
</tr>
<tr>
<td>value</td>
<td>The name of the Noun type on which to operate. The name can be any object for which you want to measure performance.</td>
</tr>
</tbody>
</table>

The following table describes `<context>`:

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CONTEXT</td>
<td>A keyword.</td>
</tr>
<tr>
<td>name</td>
<td>The name of the context to filter.</td>
</tr>
</tbody>
</table>
6.2.2.3 Examples

The following example adds a filter with the name MyFilter, specifying a Noun type and context:

```
addDMSEventFilter(id='mds1', name='MyFilter',
    props={'condition': 'NOUNTYPE equals MDS_Connections AND CONTEXT user equals bruce IGNORECASE'})
```

Filter 'mds1' added.

The following example attempts to add a filter with the same id. The command returns an error:

```
addDMSEventFilter(id='mds1', name='MyFilter',
    props={'condition': 'NOUNTYPE equals MDS_Connections AND CONTEXT user equals bruce'})
```

Filter 'mds1' already exists. Unable to add this.

The following example adds a filter with two event/action pairs:

```
addDMSEventFilter(id='mds2', name='MyFilter',
    etypes='NOUN:CREATE,HTTP_REQUEST:START',
    props={'condition': 'NOUNTYPE equals MDS_Connections
             AND CONTEXT user equals bruce IGNORECASE=true'})
```

Filter 'mds2' added.

### 6.2.3 addDMSEventRoute

Command Category: DMS Event Tracing

Use with WLST: Online

<table>
<thead>
<tr>
<th>Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>value</td>
<td>The name of the context on which to operate.</td>
</tr>
<tr>
<td>&lt;context-operator&gt;</td>
<td>The following are valid operators:</td>
</tr>
<tr>
<td>equals</td>
<td>Filters only if the context name equals the value.</td>
</tr>
<tr>
<td>starts_with</td>
<td>Filters only if the context name starts with the value.</td>
</tr>
<tr>
<td>contains</td>
<td>Filters only if the context name equals the value.</td>
</tr>
<tr>
<td>not_equals</td>
<td>Filters only if the context name does not equal the value.</td>
</tr>
<tr>
<td>is_null</td>
<td>Filters only if the context name is null.</td>
</tr>
<tr>
<td>lt</td>
<td>Filters only if the context name is less than the value.</td>
</tr>
<tr>
<td>gt</td>
<td>Filters only if the context name is greater than the value.</td>
</tr>
<tr>
<td>le</td>
<td>Filters only if the context name is less than or equal to the value.</td>
</tr>
<tr>
<td>ge</td>
<td>Filters only if the context name is greater than or equal to the value.</td>
</tr>
<tr>
<td>IGNORECASE</td>
<td>Optional. If specified, the case of the value is ignored.</td>
</tr>
</tbody>
</table>
| DATATYPE   | Optional. The valid values are string, long, or double. The default is string.
6.2.3.1 Description
Adds the specified event route to the Event Tracing configuration. If an event route with the same ID already exists, the command returns an error and does not add the event route.

You must be connected to the Administration Server to add an event route. If you are not, an error is returned.

6.2.3.2 Syntax
addDMSEventRoute([filterid=filter_id], destinationid=destination_id, [enable=true|false] [,server=server_name])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>filterid</td>
<td>Optional. The unique identifier for the filter.</td>
</tr>
<tr>
<td>destinationid</td>
<td>The unique identifier for the specific destination. The destination must exist.</td>
</tr>
<tr>
<td>enable</td>
<td>Optional. Enables the filter. Valid values are true and false. The default is true.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. The server on which to perform this operation. The default is the server to which you are connected.</td>
</tr>
</tbody>
</table>

6.2.3.3 Examples
The following example adds an event route with the filter id of mds1 and the destination id of jfr:
addDMSEventRoute(filterid='mds1', destinationid='jfr', enable='false')
Event-route for filter "mds1", destination "jfr" added.

The following example attempts to add an event route that already exists:
addDMSEventRoute(filterid='mds1', destinationid='jfr', enable='false')
Event-route for filter "mds1", destination "jfr" already exists. Unable to add this.

6.2.4 enableDMSEventTrace
Command Category: DMS Event Tracing
Use with WLST: Online

6.2.4.1 Description
Enables an event trace and creates a filter with a specified condition and destination and an enabled event-route. This is a simple way to start filtering, without having to explicitly create a filter, destination and event-route, but with less configuration options. The specified destination must exist.

You must be connected to the Administration Server to enable a DMS event trace. If you are not, an error is returned.

If you require a more complex configuration, use the addDMSEventDestination, addDMSEventFilter, and addDMSEventRoute.

6.2.4.2 Syntax
enableDMSEventTrace(destinationid=destinationid [, etypes=etype]

[ , condition=condition] [ , server=server_name])
6.2.4.3 Example

The following example enables an event trace with a specified condition:

```java
enableDMSEventTrace(condition='CONTEXT username EQUALS Joe AND CONTEXT ip EQUALS 192.168.1.5')
```

Filter "EventTrace9", using Destination "LoggerDestination" added, and event-route enabled.

6.2.5 listDMSEventConfiguration

Command Category: DMS Event Tracing

Use with WLST: Online

6.2.5.1 Description

Displays an overview of the Event Tracing configuration.

6.2.5.2 Syntax

`listDMSEventConfiguration([server=server_name])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>server</td>
<td>Optional. The server on which to perform this operation. The default is the server to which you are connected.</td>
</tr>
</tbody>
</table>

6.2.5.3 Example

The following example lists the configuration for the Managed Server to which you are connected:

```java
listDMSEventConfiguration()
```

Event routes:
```
FILTER   DESTINATION
MyFilter  des1
MyFilter  des2
null      des3
```

Filters with no event route:
```
Fred
```

Destinations with no event route:
```
des4
```
6.2.6 listDMSEventDestination

Command Category: DMS Event Tracing
Use with WLST: Online

6.2.6.1 Description
For a specific destination, display the full configuration. If no destination ID is specified, list the destination ID and name for all the destinations in the Event Tracing configuration.

6.2.6.2 Syntax
listDMSEventDestination([id=id] [, server=server_name])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>Optional. The unique identifier for the specific destination.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. The server on which to perform this operation. The default is the server to which you are connected.</td>
</tr>
</tbody>
</table>

6.2.6.3 Examples
The following example displays information about the destinations for the Managed Server to which you are connected:

```sql
listDMSEventDestination()
```

<table>
<thead>
<tr>
<th>ID</th>
<th>NAME</th>
</tr>
</thead>
<tbody>
<tr>
<td>destination1</td>
<td>File-system</td>
</tr>
<tr>
<td>jrf</td>
<td>Flight-Recorder</td>
</tr>
</tbody>
</table>

The following example displays information about the destinations for the Managed Server, MS1:

```sql
listDMSEventDestination(server='MS1')
```

<table>
<thead>
<tr>
<th>ID</th>
<th>NAME</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network1</td>
<td>Send file over network</td>
</tr>
<tr>
<td>desman1</td>
<td>File-system</td>
</tr>
</tbody>
</table>

The following example displays information about the destination destination1:

```sql
listDMSEventDestination(id='destination1')
```

<table>
<thead>
<tr>
<th>ID: destination1</th>
<th>NAME: File-system</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLASS:</td>
<td>oracle.dms.trace2.runtime.LoggerDestination</td>
</tr>
<tr>
<td>PROPERTIES:</td>
<td></td>
</tr>
<tr>
<td>NAME</td>
<td>VALUE</td>
</tr>
<tr>
<td>LoggerName</td>
<td>trace2-logger</td>
</tr>
</tbody>
</table>

6.2.7 listDMSEventFilter

Command Category: DMS Event Tracing
Use with WLST: Online
6.2.7.1 Description
For a specific filter, displays the full configuration. If you do not specify a filter ID, the
command displays the filter ID and name for all the filters in the Event Tracing
configuration.

6.2.7.2 Syntax
listDMSEventFilter([id=<id>] [, server=<server_name>])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>Optional. The unique identifier for specified filter.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. The server on which to perform this operation. The default is the server to which you are connected.</td>
</tr>
</tbody>
</table>

6.2.7.3 Example
The following example displays the list of all the filters in the Event Tracing configuration:

listDMSEventFilter()

<table>
<thead>
<tr>
<th>ID</th>
<th>NAME</th>
</tr>
</thead>
<tbody>
<tr>
<td>mds1</td>
<td>MyFilter</td>
</tr>
<tr>
<td>mds2</td>
<td>MDS2Filter</td>
</tr>
</tbody>
</table>

The following example displays the configuration of the filter mds1:

listDMSEventFilter(id='mds1')

<table>
<thead>
<tr>
<th>ID</th>
<th>NAME</th>
<th>PROPERTIES</th>
</tr>
</thead>
<tbody>
<tr>
<td>mds1</td>
<td>MyFilter</td>
<td>CONDITION: NOUNTYPE equals MDS_Connections AND CONTEXT user equals bruce IGNORECASE=false</td>
</tr>
</tbody>
</table>

6.2.8 listDMSEventRoutes
Command Category: DMS Event Tracing
Use with WLST: Online

6.2.8.1 Description
List the events routes and their status (enabled or disabled) that are associated with the specified filter or destination. If you do not specify a filterid or destinationid, this command lists all the event routes in the Event Tracing configuration.

6.2.8.2 Syntax
listDMSEventRoutes([filterid=<filter_id>] [, destinationid=<destination_id>] [, server=<server_name>])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>filterid</td>
<td>Optional. The unique identifier for the filter.</td>
</tr>
<tr>
<td>destinationid</td>
<td>Optional. The unique identifier for the specific destination. The destination must exist.</td>
</tr>
</tbody>
</table>
### 6.2.8.3 Examples

The following example lists all event routes:

```
listDMSEventRoutes()
```

```
FILTER     : mdsbruce
DESTINATION: jfr
ENABLED    : false
FILTER     : null
DESTINATION: destination1
ENABLED    : true
```

The following example lists the event routes with the filter id of filter1:

```
listDMSEventRoutes(filterid='filter1')
```

```
FILTER     : filter1
DESTINATION: jfr
ENABLED    : true
FILTER     : filter1
DESTINATION: destination1
ENABLED    : true
```

The following example lists the event routes with the destination id of destination1:

```
listDMSEventRoutes(destinationid='destination1')
```

```
FILTER     : filter1
DESTINATION: destination1
ENABLED    : true
```

### 6.2.9 removeDMSEventDestination

Command Category: DMS Event Tracing

Use with WLST: Online

#### 6.2.9.1 Description

Removes an existing destination from the Event Tracing configuration. You can remove a destination only if no event route depends on the destination. If an event route that depends on the destination exists, a warning is returned.

You must be connected to the Administration Server to remove a destination. If you are not, an error is returned.

#### 6.2.9.2 Syntax

```
removeDMSEventDestination(id=id [, server=server_name])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>The unique identifier for the destination to be removed.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. The server on which to perform this operation. The default is the server to which you are connected.</td>
</tr>
</tbody>
</table>
6.2.9.3 Examples

The following example removes the destination jfr:

```
removeDMSEventDestination(id='jfr')
```

Destination 'jfr' removed.

The following example attempts to remove the destination styx.inpass.db1. However, because an event route exists for the destination, the command returns an error.

```
removeDMSEventDestination(id='styx.inpass.db1')
```

Destination ''styx.inpass.db1'' cannot be removed. An event-route currently exists for that destination. Remove the event-route first using the command removeDMSEventRoute().

6.2.10 removeDMSEventFilter

Command Category: DMS Event Tracing

Use with WLST: Online

6.2.10.1 Description

Removes an existing filter from the Event Tracing configuration. You can remove a filter only if no event route depends on the filter. If an event route that depends on the filter exists, a warning is returned.

You must be connected to the Administration Server to remove an event filter. If you are not, an error is returned.

6.2.10.2 Syntax

```
removeDMSEventFilter(id=id [, server=server_name])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>The unique identifier for the filter to be removed.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. The server on which to perform this operation. The default is the server to which you are connected.</td>
</tr>
</tbody>
</table>

6.2.10.3 Example

The following example removes the filter mds1:

```
removeDMSEventFilter(id='mds1')
```

Filter 'mds1' removed.

The following example attempts to remove a filter for which and event-route currently exists:

```
removeDMSEventFilter(id='allaccounts')
```

Filter 'allaccounts' cannot be removed. An event-route currently exists for that filter. Remove the event-route first using the command removeDMSEventRoute().

6.2.11 removeDMSEventRoute

Command Category: DMS Event Tracing
6.2.11.1 Description
Removes the specified event route. You must be connected to the Administration Server to add an event route. If you are not, an error is returned.

6.2.11.2 Syntax
removeDMSEventRoute([filterid=filter_id] [, destinationid=destination_id] [, server=server_name])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>filterid</td>
<td>Optional. The unique identifier for the filter.</td>
</tr>
<tr>
<td>destinationid</td>
<td>Optional. The unique identifier for the specific destination. The destination must exist.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. The server on which to perform this operation. The default is the server to which you are connected.</td>
</tr>
</tbody>
</table>

6.2.11.3 Example
The following example removes the event route with the filterid mds1 and the destination jfr:

```
removeDMSEventRoute(filterid='mds1', destinationid='jfr')
```
Event-route for filter 'mds1', destination 'jfr' removed

The following example removes the event route with the destination destination1:

```
removeDMSEventRoute(destinationid='destination1')
```
Event-route for filter 'None', destination 'destination1' removed

6.2.12 updateDMSEventDestination
Command Category: DMS Event Tracing
Use with WLST: Online

6.2.12.1 Description
Updates an existing destination, allowing a specified argument to be updated. You must be connected to the Administration Server to update a destination. If you are not, an error is returned.

6.2.12.2 Syntax
updateDMSEventDestination(id=id [, name=dest_name], class=class_name [, props= {'name': 'value'...}] [, server=server_name])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>The unique identifier for the destination to be updated.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. A name for the destination.</td>
</tr>
<tr>
<td>class</td>
<td>The full classname of the destination.</td>
</tr>
<tr>
<td></td>
<td>See Table 6–4 for a list of available destinations.</td>
</tr>
</tbody>
</table>
6.2.12.3 Examples

The following example updates the name of the destination jfr:

```
updateDMSEventDestination(id='jfr', name='Alternative Flight-Recorder')
```

Destination 'jfr' updated.

The following example attempts to update a destination that does not exist. The command returns an error:

```
updateDMSEventDestination(id='destination1',
props={'loggerName': 'MyNewTrace2-logger'})
```

Destination 'destination1' does not yet exist. Unable to update this.

6.2.13 updateDMSEventFilter

Command Category: DMS Event Tracing

Use with WLST: Online

6.2.13.1 Description

Updates an existing filter in the Event Tracing configuration.

You must be connected to the Administration Server to update an event filter. If you are not, an error is returned.

6.2.13.2 Syntax

```
updateDMSEventFilter(id=id [, name=name] [,etypes=etypes],
props= {'prop-name': 'value'...} [,server=server_name])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>The unique identifier for the filter to be updated.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. The name of the filter to be updated.</td>
</tr>
<tr>
<td>etypes</td>
<td>Optional. A string containing a comma-separated list of event/action pairs. See addDMSEventFilter for a list of valid values.</td>
</tr>
<tr>
<td>props</td>
<td>prop-name: The name of the filter property. &lt;condition&gt; is the only valid property, and only one condition may be specified. See addDMSEventFilter for information on the syntax of prop-name. value: The value of the property of the filter.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. The server on which to perform this operation. The default is the server to which you are connected.</td>
</tr>
</tbody>
</table>
6.2.13.3 Examples
The following example updates the filter properties for the filter with the id mds1:

```
updateDMSEventFilter(id='mds1',
    props={'condition': 'NOUNTYPE equals XYZ_Total_Connections AND CONTEXT user equals bruce'})
```

Filter "mds1" updated.

The following example attempts to update a filter that does not exist:

```
updateDMSEventFilter(id='Filter2')
```

Filter "Filter2" does not yet exist. Unable to update this.

6.2.14 updateDMSEventRoute
Command Category: DMS Event Tracing
Use with WLST: Online

6.2.14.1 Description
Enables or disables the specified event route. You must be connected to the Administration Server to update an event route. If you are not, an error is returned.

6.2.14.2 Syntax
```
updateDMSEventRoute([filterid=filter_id], destinationid=destination_id [, enable=true|false] [, server=server_name])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>filterid</td>
<td>Optional. The unique identifier for the filter.</td>
</tr>
<tr>
<td>destinationid</td>
<td>Optional. The unique identifier for the specific destination. The destination must exist.</td>
</tr>
<tr>
<td>enable</td>
<td>Optional. Enables the filter. Valid values are true and false.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. The server on which to perform this operation. The default is the server to which you are connected.</td>
</tr>
</tbody>
</table>

6.2.14.3 Example
The following example disables the event route with the filterid mds1 and the destinationid jfr:

```
updateDMSEventRoute(filterid='mds1', destinationid='jfr', enable='false')
```

Event-route for filter "mds1", destination "jfr" disabled.
Use the logging commands to configure settings for log files and to view and search log files. Table 7–1 describes the different categories of logging commands.

For additional details about configuring and searching log files, see "Managing Log Files and Diagnostic Data" in the Oracle Fusion Middleware Administrator’s Guide.

Note: To use these logging custom WLST commands, you must invoke the WLST script from the Oracle Common home. See "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator’s Guide.

### Table 7–1 Logging Command Categories

<table>
<thead>
<tr>
<th>Command category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Log Configuration Commands</td>
<td>Configure settings for log files, such as the level of information written to the file or the maximum file size.</td>
</tr>
<tr>
<td>Search and Display Commands</td>
<td>View Oracle Fusion Middleware log files and search log files for particular messages.</td>
</tr>
<tr>
<td>Selective Tracing Commands</td>
<td>Configure and use selective tracing, which specifies that messages are traced for specific server, loggers, or users.</td>
</tr>
</tbody>
</table>

### 7.1 Log Configuration Commands

Use the commands in Table 7–2 to configure settings for log files, such as the level of information written to the file or the maximum file size. In the Use with WLST column, online means the command can only be used when connected to a running server. Offline means the command can only be used when not connected to a running server. Online or offline means the command can be used in both situations.

#### Table 7–2 Logging Configuration Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>configureLogHandler</td>
<td>Configure an existing log handler, add a new handler, or remove existing handlers.</td>
<td>Online</td>
</tr>
<tr>
<td>getLogLevel</td>
<td>Get the level for a given logger.</td>
<td>Online</td>
</tr>
<tr>
<td>listLoggers</td>
<td>Get the list of loggers and the level of each logger.</td>
<td>Online</td>
</tr>
<tr>
<td>listLogHandlers</td>
<td>List the configuration of one of more log handlers.</td>
<td>Online</td>
</tr>
<tr>
<td>setLogLevel</td>
<td>Set the level for a given logger.</td>
<td>Online</td>
</tr>
</tbody>
</table>
### 7.1.1 configureLogHandler

**Command Category:** Log Configuration  
**Use with WLST:** Online

#### 7.1.1.1 Description

Configures an existing Java logging handler, adds a new handler, or removes an existing handler. It returns a java.util.List with one entry for each handler. Each entry is a javax.management.openmbean.CompositeData object describing the handler.

With this command, you can change the location of the log files, the frequency of the rotation of log files, and other log file properties.

#### 7.1.1.2 Syntax

`configureLogHandler(options)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>options</code></td>
<td>Comma-separated list of options, specified as name-value pairs. Valid options include:</td>
</tr>
<tr>
<td>![ ]</td>
<td></td>
</tr>
<tr>
<td>![ ]</td>
<td></td>
</tr>
<tr>
<td>![ ]</td>
<td></td>
</tr>
<tr>
<td>![ ]</td>
<td></td>
</tr>
<tr>
<td>![ ]</td>
<td></td>
</tr>
<tr>
<td>![ ]</td>
<td></td>
</tr>
<tr>
<td>![ ]</td>
<td></td>
</tr>
<tr>
<td>![ ]</td>
<td></td>
</tr>
<tr>
<td>![ ]</td>
<td></td>
</tr>
<tr>
<td>![ ]</td>
<td></td>
</tr>
</tbody>
</table>

Note that this options does not apply to the QuickTrace handler.
The following table lists the properties for the quicktrace-handler. This handler allows you to trace messages from specific loggers and store the messages in memory. For more information, see "Configuring QuickTrace" in the Oracle Fusion Middleware Administrator’s Guide.

<table>
<thead>
<tr>
<th>QuickTrace Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>bufferSize</td>
<td>The approximate size of the circular QuickTrace buffer, in which log records are stored in memory. Note that actual memory consumption may be less than, but not more than this value.</td>
</tr>
</tbody>
</table>
### QuickTrace Property Description

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>enableDMSMetrics</td>
<td>If specified as true, DMS metrics are enabled for the quicktrace-handler. The default is true.</td>
</tr>
</tbody>
</table>
| enableUserBuffer             | If specified as true, the handler maintains an individual buffer for each user specified in the reserveBufferUserID property. If the user is not defined in the reserveBufferUserID property, the messages are cached in the COMMON buffer.  
If specified as false, the handler maintains only one buffer, COMMON. The default is false. |
| flushOnDump                  | If specified as true, the buffer is flushed when you execute the executeDump command. The default is true.                                                                                                 |
| includeMessageArguments     | If specified as true, message arguments are included with the formatted log messages that have a message ID. The default is false.                                                                             |
| maxFieldLength               | The maximum length, in bytes, for each field in a message. The fields can include the message text, supplemental attributes, thread name, source class name, source method name, and message arguments.  
The default is 240 bytes.  
A small number can restrict the amount of information returned for a message. An excessively number can reduce the amount of log records in the buffer because each message uses more bytes. |
| reserveBufferUserID          | A list of user IDs, separated by a comma. If enableUserBuffer is specified as true, any log messages related to the user are written to a separate buffer.                                                         |
| supplementalAttributes      | A list of supplemental attribute names. The attributes are listed in the logging.xml file. Setting supplemental attributes requires additional memory or CPU time.                                              |
| useDefaultAttributes        | If specified as true, default attribute values are added to each log message. The default attributes are HOST_ID, HOST_NWADDR, and USER_ID.                                                                |
| useLoggingContext           | If specified as true, the log message includes DMS logging context attributes. The default is false.                                                                                                       |
| useRealThreadID             | If specified as true, the handler attempts to use the real thread ID instead of the thread ID that is provided by the java.util.logging.LogRecord. The default is false.                                 |
| useThreadName                | If specified as true, the log message includes the thread name instead of the thread ID. The default is false.                                                                                           |

### 7.1.1.3 Examples
The following example specifies the maximum file size for the odl-handler:
```
configureLogHandler(name="odl-handler", maxFileSize="5M")
```

The following example specifies the rotation frequency for the odl-handler:
configureLogHandler(name="odl-handler", rotationFrequency="daily")

The following example specifies the rotation frequency and the retention period for the odl-handler. It also removes the properties maxFileSize and maxLogSize:

```java
configureLogHandler(name="odl-handler", rotationFrequency="daily",
    retentionPeriod="week", removeProperty=['maxFileSize', 'maxLogSize'])
```

The following example configures the quicktrace-handler, adding the logger oracle.adf.faces, and enabling user buffers for user1 and user2:

```java
configureLogHandler(name="quicktrace-handler", addToLogger="oracle.adf.faces",
    propertyName="enableUserBuffer", propertyValue="true",
    propertyName="reserveBufferUserID", propertyValue="user1, user2")
```

The oracle.adf logger is associated with the handlers odl-handler, wls-domain, and console-handler. When you set the level of the logger, these handlers will use the same level (TRACE:1) for the logger oracle.adf. As a result, much information will be written to the log files, consuming resources. To avoid consuming resources, set the level of the handlers to a lower level, such as WARNING or INFORMATION. For example:

```java
configureLogHandler(name="odl-handler", level="WARNING:1")
configureLogHandler(name="wls-domain", level="WARNING:1")
configureLogHandler(name="console-handler", level="WARNING:1")
```

### 7.1.2 getLogLevel

**Command Category:** Log Configuration

**Use with WLST:** Online

#### 7.1.2.1 Description

Returns the level of a given Java logger. The returned value is a string with the logger’s level, or None if the logger does not exist. An empty string indicates that the logger level is null.

#### 7.1.2.2 Syntax

```
getLogLevel(options)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>Comma-separated list of options, specified as name-value pairs. Valid options include:</td>
</tr>
<tr>
<td></td>
<td>■ target—The name of a WebLogic Server instance, or a string describing a system component. For system components, refer to the component’s documentation for details. The default value is the server to which WLST is connected.</td>
</tr>
<tr>
<td></td>
<td>■ logger—A logger name. An empty string denotes the root logger. This option is required and has no default.</td>
</tr>
<tr>
<td></td>
<td>■ runtime—A Jython boolean value (0 or 1) that determines if the operation is to list runtime loggers or config loggers. The default value is 1 (runtime).</td>
</tr>
</tbody>
</table>

#### 7.1.2.3 Examples

The following example returns the level for the logger oracle:
getLogLevel(logger='oracle')

The following example returns the level for the logger oracle, specifying only config
loggers, not runtime loggers:
getLogLevel(logger='oracle', runtime=0)

The following example returns the level for the logger oracle on the Oracle WebLogic
Server server2:
getLogLevel(logger='oracle', target='server2')

7.1.3 listLoggers
Command Category: Log Configuration
Use with WLST: Online

7.1.3.1 Description
Lists Java loggers and their levels. The command returns a PyDictionary object where
the keys are logger names and the associated values are the logger levels. An empty
level is used to indicate that the logger does not have the level set.

7.1.3.2 Syntax
listLoggers([options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>An optional comma-separated list of options, specified as name-value pairs. Valid options include:</td>
</tr>
<tr>
<td></td>
<td>■ target—The name of a WebLogic Server instance, or a string describing a system component. For system components, refer to the component’s documentation for details. The default value is the server to which WLST is connected.</td>
</tr>
<tr>
<td></td>
<td>■ pattern—A regular expression pattern that is used to filter logger names. The default value returns all logger names.</td>
</tr>
<tr>
<td></td>
<td>■ runtime—A Jython boolean value (0 or 1) that determines if the operation is to list runtime loggers or config loggers. The default value is 1 (runtime).</td>
</tr>
</tbody>
</table>

7.1.3.3 Examples
The following example lists all of the loggers:
listLoggers()

The following example lists all of the loggers that start with the name oracle.*:
listLoggers(pattern="oracle.*")

The following example list all config loggers:
listLoggers(runtime=0)

The following example list all loggers for the WebLogic Server server1:
listLoggers(target="server1")
7.1.4 listLogHandlers

Command Category: Log Configuration
Use with WLST: Online

7.1.4.1 Description
Lists Java log handlers configuration. This command returns a java.util.List with one entry for each handler. Each entry is a javax.management.openmbean.CompositeData object describing the handler.

7.1.4.2 Syntax

listLogHandlers([options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| options  | An optional comma-separated list of options, specified as name-value pairs. Valid options include:  
|          | ■ target—The name of a WebLogic Server instance, or a string describing a system component. For system components, refer to the component's documentation for details.  
|          | The default value is the server to which WLST is connected.  
|          | ■ name—The name of a log handler. If the name is not provided, then all handlers are listed. |

7.1.4.3 Examples
The following example lists all log handlers:
listLogHandlers()

The following example lists all log handlers named odl-handler:
listLogHandlers(name="odl-handler")

The following example lists all log handlers for the WebLogic Server server1:
listLogHandlers(target="server1")

7.1.5 setLogLevel

Command Category: Log Configuration
Use with WLST: Online

7.1.5.1 Description
Sets the level of information written by a given Java logger to a log file.

7.1.5.2 Syntax

setLogLevel(options)
Log Configuration Commands

7.1.5.3 Examples
The following example sets the log level to NOTIFICATION:1 for the logger oracle.my.logger:

```java
setLogLevel(logger="oracle.my.logger", level="NOTIFICATION:1")
```

The following example sets the log level to TRACE:1 for the logger oracle.my.logger and specifies that the level should be saved to the configuration file:

```java
setLogLevel(logger="oracle.my.logger", level="TRACE:1", persist=0)
```

The following example sets the log level to WARNING for the config logger oracle.my.logger on the WebLogic Server server1:

```java
setLogLevel(target="server1", logger="oracle.my.logger", level="WARNING", runtime=0)
```

## Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>Comma-separated list of options, specified as name-value pairs. Valid options include:</td>
</tr>
<tr>
<td></td>
<td>■ target—The name of a WebLogic Server instance, or a string describing a system component. For system components, refer to the component’s documentation for details. The default value is the server to which WLST is connected.</td>
</tr>
<tr>
<td></td>
<td>■ logger—A logger name. An empty string denotes the root logger. This option is required and has no default. The command throws an exception if the logger does not exist, unless the addLogger option is also used.</td>
</tr>
<tr>
<td></td>
<td>■ addLogger—A Jython boolean value (0 or 1) that determines if the logger should be created if it does not exist. This option is deprecated for runtime mode. Adding a runtime logger may have no effect because the logger may be garbage collected. If you need to set the level for a logger that has not yet been created, use the persist mode.</td>
</tr>
<tr>
<td></td>
<td>■ level—The level name. It can be either a Java level or an ODL level. Some valid Java levels are: SEVERE, WARNING, INFO, CONFIG, FINE, FINER, OR FINEST. Valid ODL levels include a message type followed by a colon and a message level. The valid ODL message types are: INCIDENT_ ERROR, ERROR, WARNING, NOTIFICATION, TRACE, and UNKNOWN. The message level is represented by an integer value that qualifies the message type. Possible values are from 1 (highest severity) through 32 (lowest severity). This option is required; there is no default value.</td>
</tr>
<tr>
<td></td>
<td>■ runtime—A Jython boolean value (0 or 1) that determines if the operation is to list runtime loggers or config loggers. The default value is 1 (runtime). If the target is a system component that does not support changing runtime loggers, this option is ignored. Note: Because runtime loggers may be garbage collected, you should change the level of the runtime logger only if you know that the logger exists and that there is a strong reference to the logger. If the logger is garbage collected, any changes made to the logger level in runtime mode that are not persisted may be lost.</td>
</tr>
<tr>
<td></td>
<td>■ persist—A Jython boolean value (0 or 1) that determines if the level should be saved to the configuration file. The default value is 1.</td>
</tr>
</tbody>
</table>
7.2 Search and Display Commands

Use the commands in Table 7–3 to view Oracle Fusion Middleware log files and to search log files for particular messages.

Table 7–3 Search and Display Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>displayLogs</td>
<td>List the logs for one or more components.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>listLogs</td>
<td>Search and display the contents of log files.</td>
<td>Online or Offline</td>
</tr>
</tbody>
</table>

7.2.1 displayLogs

Command Category: Search and Display

Use with WLST: Online or Offline

7.2.1.1 Description

Search and display the contents of diagnostic log files. The command returns a value only when the returnData option is set to true. By default it will not return any data. The return value depends on the option used.

7.2.1.2 Syntax

displayLogs([searchString,][options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| searchString | An optional search string. Only messages that contain the given string (case-insensitive) will be returned.  
Note that the displayLogs command can read logs in multiple formats and it converts the messages to ODL format. The search will be performed in the native format, if possible. Otherwise, it may be performed in the message contents, and it may exclude mark-up. Therefore you should avoid using mark-up characters in the search string. |
| options | An optional comma-separated list of options, specified as name-value pairs.  
Valid options include:  
- target—The name of a WebLogic Server instance, or a system component.  
For a system component, the syntax for the target is:  
opmn:instance-name/component-name  
In connected mode, the default target is the WebLogic domain. In disconnected mode, there is no default; the target option is required.  
- oracleInstance—Defines the path to the ORACLE_INSTANCE or WebLogic domain home. The command is executed in disconnected mode when you use this parameter.  
- log—A log file path. The command will read messages from the given log file. If the log file path is not given, the command will read all logs associated with the given target. |
<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| options         | ■ last—An integer value. Restricts the search to messages logged within the last minutes. The value can have a suffix s (second), m (minute), h (hour), or d (day) to specify a different time unit. (For example, last='2h' will be interpreted as the last 2 hours).  
■ tail—an integer value. Restrict the search to the last n messages from each log file and limits the number of messages displayed to n.  
■ pattern—a regular expression pattern. Only messages that contain the given pattern are returned. Using the pattern option is similar to using the searchString argument, except that you can use a regular expression.  
   The regular expression pattern search is case sensitive (unless you explicitly turn on case-insensitive flags in the pattern). The regular expression pattern must follow java.util.regex syntax.  
■ ecid—a string or string sequence containing one or more Execution Context ID (ECID) values to be used as a filter for log messages.  
■ component—a string or string sequence containing one or more component ID values to be used as a filter for log messages.  
■ module—a string or string sequence containing one or more module ID values to be used as a filter for log messages.  
■ type—a string or string sequence containing one or more message type values to be used as a filter for log messages.  
■ app—a string or string sequence containing one or more application values to be used as a filter for log messages.  
■ query—a string that specifies an expression used to filter the contents of log messages.  
   A simple expression has the form:  
   field-name operator value  
   where field-name is a log record field name and operator is an appropriate operator for the field type (for example, you can specify equals, startsWith, contains or matches for string fields).  
   A field name is either one of the standard ODL attribute names (such as COMPONENT_ID, MSG_TYPE, MSG_TEXT, and SUPPL_DETAIL), or the name of a supplemental attribute (application specific), prefixed by SUPPL_ATTR. (For example, SUPPL_ATTR.myAttribute).  
   A few common supplemental attributes can be used without the prefix. For example, you can use app to filter by application name.  
   You can combine multiple simple expressions using the boolean operators and, or and not to create complex expressions, and you can use parenthesis for grouping expressions.  
   See the Oracle Fusion Middleware Administrator’s Guide for a detailed description of the query syntax.  
■ groupBy—a string list. When the groupBy option is used, the output is a count of log messages, grouped by the attributes defined in the string list.  
■ orderBy—a string list that defines the sort order for the result. The values are log message attribute names. The name may be extended with an optional suffix "asc" or "desc" to specify ascending or descending sorting. The default sort order is ascending.  
   By default, the result is sorted by time.  
■ returnData—a Jython boolean value (0 or 1). If the value is true the command will return data (for example, to be used in a script). The default value is false, which means that the command only displays the data but does not return any data. |
7.2.1.3 Examples

The following example displays the last 100 messages from all log files in the domain:

```java
displayLogs(tail=100)
```

The following example displays all messages logged in the last 15 minutes:

```java
displayLogs(last='15m')
```

The following example displays log messages that contain a given string:

```java
displayLogs('Exception')
```

The following example displays log messages that contain a given ECID:

```java
displayLogs(ecid='0000Hl9TwKUCslT6uBi8UH18lWX000002')
```

The following example displays log messages of type ERROR or INCIDENT_ERROR:

```java
displayLogs(type=['ERROR','INCIDENT_ERROR'])
```

The following example displays log messages for a given Java EE application:

```java
displayLogs(app="myApplication")
```

The following example displays messages for a system component, ohs1:

```java
displayLogs(target="opmn:instance1/ohs1")
```

The following example displays a message summary by component and type:

```java
displayLogs(groupBy=['COMPONENT_ID', 'MSG_TYPE'])
```

The following example displays messages for a particular time interval:

```java
displayLogs(query="TIME from 11:15 and TIME to 11:20")
```

The following example shows an advanced query:

```java
displayLogs(query="TIME from 11:15 and TIME to 11:20 and ( MSG_TEXT contains exception or SUPPL_DETAIL contains exception )")
```

A similar query could be written as:

```java
displayLogs("exception", query="TIME from 11:15 and TIME to 11:20")
```

7.2.2 listLogs

Command Category: Search and Display

Use with WLST: Online or Offline
7.2.2.1 Description
Lists log files for Oracle Fusion Middleware components. This command returns a PyArray with one element for each log. The elements of the array are javax.management.openmbean.CompositeData objects describing each log.

7.2.2.2 Syntax
listLogs([options]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>An optional comma-separated list of options, specified as name-value pairs. Valid options include:</td>
</tr>
<tr>
<td>target</td>
<td>The name of a WebLogic Server instance, or an Oracle Fusion Middleware system component. For a system component, the syntax for the target is: opmn:instance-name/component-name</td>
</tr>
<tr>
<td>oracleInstance</td>
<td>Defines the path to the ORACLE_INSTANCE or WebLogic domain home. The command is executed in disconnected mode when you use this parameter.</td>
</tr>
<tr>
<td>unit</td>
<td>defines the unit to use for reporting file size. Valid values are B (bytes), K (kilobytes), M (megabytes), G (gigabytes), or H (display size in a human-readable form, similar to the UNIX ls -h option). The default value is H.</td>
</tr>
<tr>
<td>fullTime</td>
<td>A Jython Boolean value. If true, reports the full time for the log file last modified time. Otherwise, it displays a short version of the time. The default value is false.</td>
</tr>
</tbody>
</table>

7.2.2.3 Examples
The following example lists all of the log files for the WebLogic domain:

```
listLogs()
```

The following example lists the log files for the WebLogic Server server1:

```
listLogs(target="server1")
```

The following example lists the log files for the Oracle HTTP Server ohs1:

```
listLogs(target="opmn:instance1/ohs1")
```

The following example, used in disconnected mode, lists the log files for the WebLogic Server server1:

```
listLogs(oracleInstance="/middleware/user_projects/domains/base_domain", target="server1")
```

7.3 Selective Tracing Commands
Use the commands in Table 7–4 to configure and use selective tracing. Selective tracing provides fine-grained logging for specified users or other properties of a request. In the Use with WLST column, online means the command can only be used when connected to a running server.
7.3.1 configureTracingLoggers

Command Category: Tracing
Use with WLST: Online

7.3.1.1 Description
Configures one or more loggers for selective tracing. This command also enables or disables a logger for selective tracing.

7.3.1.2 Syntax
configureTracingLoggers([options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>A comma-separated list of options, specified as name-value pairs. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ target—Optional. The name of a WebLogic Server instance, or an array of strings containing one or more target names. By default, loggers on all running server instances in the domain that are JRF-enabled will be configured for tracing.</td>
</tr>
<tr>
<td></td>
<td>■ pattern—A regular expression pattern that is used to filter logger names. The default value matches all tracing logger names.</td>
</tr>
<tr>
<td></td>
<td>■ action—Enables or disables all loggers for tracing. Valid values are enable and disable. This option is required; there is no default value.</td>
</tr>
</tbody>
</table>

7.3.1.3 Examples
The following example configures selective tracing for all loggers beginning with oracle.security:

configureTracingLoggers(pattern='oracle.security.*', action="enable")
Configured 62 loggers

The following example disables selective tracing for all loggers:

configureTracingLoggers(action="disable")
Configured 1244 loggers

7.3.2 listActiveTraces

Command Category: Tracing
Use with WLST: Online
Selective Tracing Commands

7.3.2.1 Description
Lists the active traces.

7.3.2.2 Syntax
:listActiveTraces([options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>A comma-separated list of options, specified as name-value pairs. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ target—Optional. The name of a WebLogic Server instance, or an array of strings containing one or more target names. By default, loggers on all running server instances in the domain that are JRF-enabled are listed.</td>
</tr>
</tbody>
</table>

7.3.2.3 Example
The following example lists the active traces:

:listActiveTraces()

<table>
<thead>
<tr>
<th>Trace ID</th>
<th>Attr. Name</th>
<th>Attr. Value</th>
<th>Level</th>
<th>Exp. Time</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>a950e65-13c4-420b-977e-5ba7dd88ca7f</td>
<td>USER_ID</td>
<td>user1</td>
<td>FINE</td>
<td></td>
<td></td>
</tr>
<tr>
<td>a04b47f7-2830-4d80-92ee-ba160cdafcb</td>
<td>USER_ID</td>
<td>user2</td>
<td>FINE</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

7.3.3 listTracingLoggers
Command Category: Tracing
Use with WLST: Online or Offline

7.3.3.1 Description
Lists the loggers that support selective tracing. This command displays a table of logger names and their tracing status. The status enabled means that the logger is enabled for tracing on all servers. The status disabled means that the logger is disabled for tracing on all servers. The status mixed means that the logger is enabled for tracing on some servers, but disabled on others.

7.3.3.2 Syntax
:listTracingLoggers([options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>A comma-separated list of options, specified as name-value pairs. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ target—Optional. The name of a WebLogic Server instance, or an array of strings containing one or more target names. By default, loggers on all running server instances in the domain that are JRF-enabled are listed.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>A comma-separated list of options, specified as name-value pairs. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ pattern—A regular expression pattern that is used to filter logger names. The default value matches all tracing logger names.</td>
</tr>
</tbody>
</table>

7.3.3.3 Example
The following example lists all tracing loggers beginning with oracle.security:

:listTracingLoggers(pattern="oracle.security.*")

<table>
<thead>
<tr>
<th>Logger</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Selective Tracing Commands

---
oracle.security                                                   | enabled
oracle.security.audit.logger                                      | enabled
oracle.security.jps.az.common.util.JpsLock                        | enabled

7.3.4 startTracing

Command Category: Tracing
Use with WLST: Online

7.3.4.1 Description
Starts a new selective tracing session for a specified user or DMS context attribute at a specified level of tracing.

7.3.4.2 Syntax
startTracing([options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>A comma-separated list of options, specified as name-value pairs. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ target—Optional. The name of a WebLogic Server instance, or an array of strings containing one or more target names. By default, loggers on all running server instances in the domain that are JRF-enabled are included in the trace.</td>
</tr>
<tr>
<td></td>
<td>■ traceId—Optional. An identifier for the tracing session. If a traceId is not provided, the command generates a unique traceId.</td>
</tr>
<tr>
<td></td>
<td>■ attrName—Optional, unless the user argument is not specified. Valid values are USER_ID, APP, CLIENT_HOST, CLIENT_ADDR, composite_name, WEBSERVICE.name, WEBSERVICE_PORT.name.</td>
</tr>
<tr>
<td></td>
<td>■ attrValue—Required if attrName is specified. The value of the attribute.</td>
</tr>
<tr>
<td></td>
<td>■ user—The user name. Messages associated with the user are returned. This is equivalent to passing the USER_ID with the attrName and AttrValue options.</td>
</tr>
<tr>
<td></td>
<td>■ level—Required. The tracing level. The level must be a valid Java or ODL level. See the table “Mapping of Log Levels Among ODL, Oracle WebLogic Server, and Java” in the Oracle Fusion Middleware Administrator’s Guide.</td>
</tr>
<tr>
<td></td>
<td>■ desc—Optional. A description of the tracing session.</td>
</tr>
</tbody>
</table>

7.3.4.3 Example
The following example starts a trace for messages associated with user1 and sets the level of information to FINE:

```java
startTracing(user="user1", level="FINE")
```

Started tracing with ID: 885649f7-8efd-4a7a-9898-acbfc0bbba3

7.3.5 stopTracing

Command Category: Tracing
Use with WLST: Online
7.3.5.1 Description
Stops one or more selective tracing sessions.

7.3.5.2 Syntax
stopTracing([options])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>options</td>
<td>A comma-separated list of options, specified as name-value pairs. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ target—Optional. The name of a WebLogic Server instance, or an array of strings containing one or more target names. By default, loggers on all running server instances in the domain that are JRF-enabled are included in the operation.</td>
</tr>
<tr>
<td></td>
<td>■ stopAll—A Jython boolean value (0 or 1) that determines if all of the active traces are stopped. Required if the traceId, user, or attrName and attrValue arguments are not specified. The default value is 0 (false).</td>
</tr>
<tr>
<td></td>
<td>■ traceId—An identifier for the tracing session to be stopped. Required if the stopAll, user, or attrName and attrValue arguments are not specified.</td>
</tr>
<tr>
<td></td>
<td>■ attrName—Valid values are USER_ID, APP, CLIENT_HOST, CLIENT_ADDR, composite_name, WEBSERVICE.name, WEBSERVICE_PORT.name. Required if the traceId, user, stopAll arguments are not specified.</td>
</tr>
<tr>
<td></td>
<td>■ attrValue—Required if attrName is specified. The value of the attribute.</td>
</tr>
<tr>
<td></td>
<td>■ user—The user name. All tracing sessions associated with the user are stopped. Required if the stopAll, traceId, or attrName and attrValue arguments are not specified.</td>
</tr>
</tbody>
</table>

7.3.5.3 Examples
The following example stops a tracing session with a specified traceId:

```java
stopTracing(traceId="a04b47f7-2830-4d80-92ee-ba160cdacf6b")
```
Stopped 1 traces

The following example stops all tracing sessions:

```java
stopTracing(stopAll=1)
```
Stopped 1 traces
Use the Oracle Metadata Services (MDS) commands in the categories listed in Table 8–1 to manage MDS.

For additional details about creating and managing an MDS repository, see the chapter “Managing the Oracle Metadata Repository” in the Oracle Fusion Middleware Administrator’s Guide. For information about the roles needed to perform each operation, see "Understanding MDS Operations" in the Oracle Fusion Middleware Administrator’s Guide.

**Note:** To use these MDS custom WLST commands, you must invoke the WLST script from the Oracle Common home. See "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator’s Guide.

### Table 8–1  MDS Command Categories

<table>
<thead>
<tr>
<th>Command category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Repository Management Commands</td>
<td>Manage the MDS repository.</td>
</tr>
<tr>
<td>Application Metadata Management Commands</td>
<td>Manage the application metadata in the MDS repository.</td>
</tr>
<tr>
<td>Sandbox Metadata Management Commands</td>
<td>Manage the metadata in a sandbox in the MDS repository.</td>
</tr>
<tr>
<td>Application Label Management Commands</td>
<td>Manage the labels for the application.</td>
</tr>
<tr>
<td>Application Management Deployment Commands</td>
<td>Manage the application deployment.</td>
</tr>
</tbody>
</table>

### 8.1 Repository Management Commands

Use the MDS commands listed in Table 8–2 to manage the MDS repository. In the Use with WLST column, online means the command can only be used when connected to a running Administration Server. Offline means the command can only be used when not connected to a running server. Online or offline means the command can be used in both situations.
**8.1.1 createMetadataPartition**

Command Category: Repository Management

Use with WLST: Online

**8.1.1.1 Description**

A metadata repository is used as a common repository for managing metadata of different applications. Many applications use the MDS repository to manage their metadata. Each deployed application uses a logical partition in metadata repository. This logical partition also helps in maintaining the metadata lifecycle. Before deploying an application, you create a partition for it in MDS repository. This command creates a partition with the given name in the specified repository.

**8.1.1.2 Syntax**

createMetadataPartition(repository, partition)

**8.1.1.3 Example**

The following example creates the metadata partition `partition1` in the repository `mds-myrepos`:

```bash
wls:/weblogic/serverConfig> createMetadataPartition(repository='mds-myrepos', partition='partition1')
Executing operation: createMetadataPartition
Metadata partition created: partition1
```

**8.1.2 deleteMetadataPartition**

Command Category: Repository Management

Use with WLST: Online

**8.1.2.1 Description**

Deletes a metadata partition in the specified repository. When you delete a repository partition, all of the metadata in that partition is lost.

**8.1.2.2 Syntax**

deleteMetadataPartition(repository, partition)
8.1.2.3 Example
The following example deletes the metadata partition `partition1` from the repository `mds-myrepos`:

```bash
wls:/weblogic/serverConfig> deleteMetadataPartition(repository='mds-myrepos', partition='partition1')
Executing operation: deleteMetadataPartition
Metadata partition deleted: partition1
```

8.1.3 deregisterMetadataDBRepository

Command Category: Repository Management
Use with WLST: Online

8.1.3.1 Description
Removes the database metadata repository registration as a System JDBC data source in the domain. After this command completes successfully, applications can no longer use this repository.

8.1.3.2 Syntax
```
deregisterMetadataDBRepository(name)
```

8.1.3.3 Example
The following example deregisters the metadata repository `mds-myrepos`:

```bash
wls:/weblogic/serverConfig> deregisterMetadataDBRepository('mds-myrepos')
Executing operation: deregisterMetadataDBRepository.
Metadata DB repository "mds-myrepos" was deregistered successfully.
```

8.1.4 registerMetadataDBRepository

Command Category: Repository Management
Use with WLST: Online

8.1.4.1 Description
A database metadata repository should be registered with WebLogic Server instances before the application can use it. This command registers a System JDBC data source with the domain for use as database-based metadata repository.

8.1.4.2 Syntax
```
registerMetadataDBRepository(name, dbVendor, host, port, dbName, user, password [, targetServers])
```
8.1.4.3 Example
The following example registers the metadata repository myrepos to two servers, and specifies the database parameters:

```
$ wls:/weblogic/serverConfig> registerMetadataDBRepository('myrepos','ORACLE',
                     'test.oracle.com','1521','mds', 'user1','x','server1, server2')
```

Executing operation: registerMetadataDBRepository.
Metadata DB repository 'mds-myrepos' was registered successfully.

8.2 Application Metadata Management Commands
Use the commands in Table 8–3 to manage application metadata.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>deleteMetadata</td>
<td>Deletes the metadata in the application repository.</td>
<td>Online</td>
</tr>
<tr>
<td>exportMetadata</td>
<td>Exports metadata for an application.</td>
<td>Online</td>
</tr>
<tr>
<td>importMetadata</td>
<td>Imports metadata for an application.</td>
<td>Online</td>
</tr>
<tr>
<td>purgeMetadata</td>
<td>Purge metadata.</td>
<td>Online</td>
</tr>
</tbody>
</table>

8.2.1 deleteMetadata
Command Category: Application Metadata
Use with WLST: Online

8.2.1.1 Description
Deletes the selected documents from the application repository. When this command is run against repositories that support versioning (that is, database-based repositories), delete is logical and marks the tip version (the latest version) of the selected documents as “deleted” in the MDS repository partition.
You may want to delete metadata when the metadata is moved from one repository to another. In such a case, after you have exported the metadata, you can delete the metadata in the original repository.

### 8.2.1.2 Syntax

```python
deleteMetadata(application, server, docs [, restrictCustTo] [, excludeAllCust] [, excludeBaseDocs] [, excludeExtendedMetadata] [, cancelOnException] [, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The name of the application for which the metadata is to be deleted.</td>
</tr>
<tr>
<td>server</td>
<td>The target server on which this application is deployed.</td>
</tr>
</tbody>
</table>
| docs                  | A list of comma-separated, fully qualified document names or document name patterns, or both. The patterns can have the following wildcard characters: * and **.  
                        | The asterisk (*) represents all documents under the current namespace. The double asterisk (**) represents all documents under the current namespace and also recursively includes all documents in subnamespaces.  
                        | For example, "/oracle/*" will include all documents under "/oracle/" but not include documents under "/oracle/mds/".  
                        | As another example, "/oracle/**" will include all documents under "/oracle/" and also under "/oracle/mds/" and any other documents further in the namespace chain. |
| restrictCustTo        | Optional. Valid values are percent (%) or a list of comma-separated customization layer names used to restrict the delete operation to delete only customization documents that match the specified customization layers.  
                        | If you do not specify this argument, only customization classes declared in the cust-config element of adf-config.xml are deleted.  
                        | If there is no cust-config element declared in adf-config.xml, all customization classes are deleted. Each customization layer name can contain, within a pair of brackets, optional customization layer values and value patterns separated by commas.  
                        | If you specify percent (%) as the value of this argument, all customizations are deleted, whether or not they are declared in the cust-config element of adf-config.xml. Use this option to delete all customizations or a subset of declared customizations. You can also use this option to delete customizations from customization classes that are not declared in the cust-config element of adf-config.xml. |
| excludeAllCust        | Optional. A Boolean value (true or false) that specifies whether or not to delete all customization documents.  
                        | This argument defaults to false. It overrides the restrictCustTo option.                                                                  |
| excludeBaseDocs       | Optional. A Boolean value (true or false) that specifies whether or not to delete base documents. This argument defaults to false.            |
| excludeExtendedMetadata | Optional. A Boolean value (true or false) that specifies whether or not to delete the Extended Metadata documents. This argument defaults to false. |
8.2.1.3 Examples

The following example deletes metadata files under the package `mypackage` from `mdsApp` deployed in the server `server1`:

```plaintext
wls:/weblogic/serverConfig> deleteMetadata(application='mdsapp',
server='server1', docs='/mypackage/**')
Executing operation: deleteMetadata.
"deleteMetadata" operation completed. Summary of "deleteMetadata" operation is:
List of documents successfully deleted:
/mypackage/jobs.xml
/mypackage/mo.xml
/mypackage/mdssys/cust/site/site1/jobs.xml
/mypackage/mdssys/cust/site/site1/mo.xml
4 documents successfully deleted.
```

The following example deletes metadata files under the package `mypackage` from `mdsApp` deployed in the server `server1` and excludes extended metadata and all customizations:

```plaintext
wls:/weblogic/serverConfig> deleteMetadata(application='mdsapp',
server='server1', docs='/mypackage/**',
cancelOnException='false',
excludeExtendedMetadata='true',
excludeAllCust='true')
Executing operation: deleteMetadata.
"deleteMetadata" operation completed. Summary of "deleteMetadata" operation is:
List of documents successfully deleted:
/mypackage/jobs.xml
/mypackage/mo.xml
2 documents successfully deleted.
```

8.2.2 exportMetadata

Command Category: Application Metadata

Use with WLST: Online

8.2.2.1 Description

Exports application metadata. Use this command and the importMetadata command to transfer application metadata from one server location (for example, testing) to another server location (for example, production).

This command exports application metadata including customizations. However, by default, only those customizations from customization classes that are defined in the cust-config element of `adf.config.xml` are exported. To export customizations from customization classes not declared, use the restrictCustTo option.

8.2.2.2 Syntax

```plaintext
exportMetadata(application, server, toLocation [, docs]
 [, restrictCustTo] [, excludeCustFor] [, excludeAllCust] [, excludeBaseDocs]
```
Application Metadata Management Commands

Metadata Services (MDS) Custom WLST Commands

[, excludeExtendedMetadata] [, excludeSeededDocs]
[, fromLabel] [, toLabel] [, applicationVersion] [, remote])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The name of the application from which the metadata is to be exported.</td>
</tr>
<tr>
<td>server</td>
<td>The target server on which this application is deployed.</td>
</tr>
<tr>
<td>toLocation</td>
<td>The target directory or archive file (.jar, .JAR, .zip or .ZIP) to which documents selected from the source partition will be transferred. If you export to a directory, the directory must be a local or network directory or file where the application is physically deployed. If you export to an archive, the archive can be located on a local or network directory or file where the application is physically deployed, or on the system on which you are executing the command. If the location does not exist in the file system, a directory will be created except that when the names ends with .jar, .JAR, .zip or .ZIP, an archive file will be created. If the archive file already exists, the exportMetadata operation will overwrite the file. This argument can be used as temporary file system for transferring metadata from one server to another. For more information, see &quot;Moving Metadata from a Test System to a Production System&quot; in the Oracle Fusion Middleware Administrator’s Guide.</td>
</tr>
<tr>
<td>docs</td>
<td>Optional. A list of comma-separated, fully qualified document names or document name patterns, or both. The patterns can have the following wildcard characters: * and <strong>. This argument defaults to &quot;/</strong>&quot;, which exports all the metadata in the repository. The asterisk (*) represents all documents under the current namespace. The double asterisk (<strong>) represents all documents under the current namespace and also recursively includes all documents in subnamespaces. For example, &quot;/oracle/&quot; will include all documents under &quot;/oracle/&quot; but not include documents under &quot;/oracle/mds/&quot;. &quot;/oracle/</strong>&quot; will include all documents under &quot;/oracle/&quot; and also under &quot;/oracle/mds/&quot; and any other documents further in the namespace chain.</td>
</tr>
</tbody>
</table>
### Application Metadata Management Commands

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>restrictCustTo</td>
<td>Optional. Valid values are percent (%) or a list of comma-separated customization layer names used to restrict the export operation to export only customization documents that match the specified customization layers. Each customization layer name can contain, within a pair of brackets, optional customization layer values and value patterns separated by commas. If you do not specify this argument, only customization classes declared in the cust-config element of adf-config.xml are exported. If there is no cust-config element declared in adf-config.xml, all customization classes are exported. If you specify percent (%) as the value of this argument, all customizations are exported, whether or not they are declared in the cust-config element of adf-config.xml. Use this option to export all customizations or a subset of declared customizations. You can also use this option to export customizations from customization classes that are not declared in the cust-config element of adf-config.xml. This argument is ignored if the excludeAllCust argument is also specified.</td>
</tr>
<tr>
<td>excludeCustFor</td>
<td>Optional. A list of comma-separated customization layer names used to restrict the export operation to exclude customization documents that match the specified customization layers from being exported. This argument is ignored if the excludeAllCust argument is also specified.</td>
</tr>
<tr>
<td>excludeAllCust</td>
<td>Optional. A Boolean value (true or false) that specifies whether or not to export all customization documents. This argument defaults to false. This argument overrides the restrictCustTo and excludeCustFor arguments.</td>
</tr>
<tr>
<td>excludeBaseDocs</td>
<td>Optional. A Boolean value (true or false) that specifies whether or not to export base documents. This argument defaults to false.</td>
</tr>
<tr>
<td>excludeExtendedMetadata</td>
<td>Optional. A Boolean value (true or false) that specifies whether or not to export the Extended Metadata documents. This argument defaults to false.</td>
</tr>
<tr>
<td>excludeSeededDocs</td>
<td>Optional. A Boolean value (true or false) that specifies whether all documents or only non-seeded documents are exported. Seeded documents are those documents that are packaged in a MAR. To exclude seeded documents, specify true. The default is false.</td>
</tr>
<tr>
<td>fromLabel</td>
<td>Optional. Transfers the documents from the source partition that is associated with this label.</td>
</tr>
<tr>
<td>toLabel</td>
<td>Optional. Works with the fromLabel argument to transfer the delta between fromLabel to toLabel from the source partition.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. The application version, if multiple versions of the same application are deployed.</td>
</tr>
<tr>
<td>remote</td>
<td>Optional. A Boolean value (true or false) that specifies whether the archive file will be written to a location where the application is deployed (false) or to the system on which you are executing the command (true). The default is false.</td>
</tr>
</tbody>
</table>
8.2.2.3 Examples

The following example exports all metadata files from the application mdsapp deployed in the server server1.

```
8ls:/weblogic/serverConfig> exportMetadata(application='mdsapp',
   server='server1',toLocation='/tmp/myrepos',docs='/**')
Location changed to domainRuntime tree. This is a read-only tree with DomainMBean as the root.
For more help, use help(domainRuntime)
Executing operation: exportMetadata.
'exportMetadata' operation completed. Summary of "exportMetadata" operation is:
List of documents successfully transferred:
/mypackage/write.xml
/mypackage/write1.xml
/sample1.jspx
```

The following example exports only the customization documents under the layer user without any base documents from label label1 to label label2:

```
8ls:/weblogic/serverConfig> exportMetadata(application='mdsapp',
   server='server1',toLocation='/tmp/myrepos',
   restrictCustTo='user',
   excludeBaseDocs='true',
   fromLabel='label1',
   toLabel='label2',
   applicationVersion='11.1.1')
List of documents successfully transferred:
/mypackage/mdssys/cust/user/user1/write1.xml
/mypackage/mdssys/cust/user/user2/write2.xml
2 documents successfully transferred.
```

8.2.3 importMetadata

Command Category: Application Metadata

Use with WLST: Online

8.2.3.1 Description

Imports application metadata. Use the exportMetadata command and this command to transfer application metadata from one server location (for example, testing) to another server location (for example, production).

8.2.3.2 Syntax

```
importMetadata(application, server, fromLocation [, docs]
   [, restrictCustTo] [, excludeAllCust] [, excludeBaseDocs]
   [, excludeExtendedMetadata] [, excludeUnmodifiedDocs]
   [, cancelOnException] [, applicationVersion] [, remote])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The name of the application for which the metadata is to be imported.</td>
</tr>
<tr>
<td>server</td>
<td>The target server on which this application is deployed.</td>
</tr>
</tbody>
</table>
### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>fromLocation</td>
<td>The source directory or archive file from which documents will be selected for transfer. If you exported to a directory, the directory must be a local or network directory or file where the application is physically deployed. If you exported to an archive, the archive can be located on a local or network directory or file where the application is physically deployed, or on the system on which you are executing the command. This argument can be used as a temporary file system location for transferring metadata from one server to another. For more information, see &quot;Moving Metadata from a Test System to a Production System&quot; in the <em>Oracle Fusion Middleware Administrator’s Guide</em>.</td>
</tr>
<tr>
<td>docs</td>
<td>Optional. A list of comma-separated, fully qualified document names or document name patterns, or both. The patterns can have the following wildcard characters: * and <strong>. This argument defaults to &quot;/</strong>&quot;, which imports all of the documents in the repository. The asterisk (<em>) represents all documents under the current namespace. The double asterisk (**) represents all documents under the current namespace and also recursively includes all documents in subnamespaces. For example, &quot;/oracle/</em>&quot; will include all documents under &quot;/oracle/&quot; but not include documents under &quot;/oracle/mds/&quot;. &quot;/oracle/**&quot; will include all documents under &quot;/oracle/&quot; and also under &quot;/oracle/mds/&quot; and any other documents further in the namespace chain.</td>
</tr>
<tr>
<td>restrictCustTo</td>
<td>Optional. Valid values are percent (%) or a list of comma-separated customization layer names used to restrict the import operation to import only customization documents that match the specified customization layers, including customization classes that are not declared in the cust-config element of adf-config.xml. Each customization layer name can contain, within a pair of brackets, optional customization layer values and value patterns separated by commas. If you do not specify this argument, only customization classes declared in the cust-config element of adf-config.xml are imported. If there is no cust-config element declared in adf-config.xml, all customization classes are imported. If you specify percent (%) as the value of this argument, all customizations are imported, whether or not they are declared in the cust-config element of adf-config.xml. Use this option to import all customizations or a subset of declared customizations. You can also use this option to export customizations from customization classes that are not declared in the cust-config element of adf-config.xml. This argument is ignored if the excludeAllCust argument is also specified.</td>
</tr>
<tr>
<td>excludeAllCust</td>
<td>Optional. A Boolean value (true or false) that specifies whether or not to import all customization documents. This argument defaults to false. This argument overrides the restrictCustTo argument.</td>
</tr>
<tr>
<td>excludeBaseDocs</td>
<td>Optional. A Boolean value (true or false) that specifies whether or not to import base documents. This argument defaults to false.</td>
</tr>
<tr>
<td>excludeExtendedMetadata</td>
<td>Optional. A Boolean value (true or false) that specifies whether or not to import the Extended Metadata documents. This argument defaults to false.</td>
</tr>
</tbody>
</table>
8.2.3.3 Example
The following example imports all metadata available in /tmp/myrepos to the application mdsapp deployed in the server server1:

```
importMetadata(application='mdsapp', server='server1', fromLocation='/tmp/myrepos', docs='/**')
```

Executing operation: importMetadata.
'importMetadata' operation completed. Summary of "importMetadata" operation is:
List of documents successfully transferred:
/app1/jobs.xml
/app1/mo.xml
2 documents successfully transferred.

8.2.4 purgeMetadata
Command Category: Application Metadata
Use with WLST: Online

8.2.4.1 Description
Purges the older (non-tip) versions of unlabeled documents from the application's repository. All unlabeled documents will be purged if they are expired, based on Time-To-Live (the olderThan argument). This command is applicable only for repositories that support versioning, that is, database-based repositories.

8.2.4.2 Syntax
```
purgeMetadata(application, server, olderThan [, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| excludeUnmodifiedDocs | Optional. A Boolean value (true or false) that specifies whether only changed documents are imported.  
If you specify true, only changed documents are imported.  
The default is false. |
| cancelOnException | Optional. A Boolean value (true or false) that specifies whether or not to abort the import operation when an exception is encountered.  
The default is true. |
| applicationVersion | Optional. The application version, if multiple versions of the same application are deployed. |
| remote | Optional. A Boolean value (true or false) that specifies whether the archive file is in a location where the application is deployed (false) or on the system on which you are executing the command (true).  
The default is false. |
8.2.4.3 Example

The following example purges the document version history for the application mdsapp deployed in the server server1, if the version is older than 10 seconds:

```
<Example>
wlst:/weblogic/serverConfig> purgeMetadata('mdsapp', 'server1', 10)
Executing operation: purgeMetadata.
Metadata purged: Total number of versions: 10.
Number of versions purged: 0.
</Example>
```

8.3 Sandbox Metadata Management Commands

Use the commands in Table 8–4 to manage metadata in a sandbox. A sandbox is a temporary location for testing changes before moving them to a production system. Sandboxes are not visible to most users until they are applied.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>exportSandboxMetadata</td>
<td>Exports the metadata from a sandbox.</td>
<td>Online</td>
</tr>
<tr>
<td>importSandboxMetadata</td>
<td>Imports metadata into a sandbox.</td>
<td>Online</td>
</tr>
</tbody>
</table>

### 8.3.1 exportSandboxMetadata

Command Category: Sandbox Metadata Management

Use with WLST: Online

#### 8.3.1.1 Description

Exports the changes to the metadata from a sandbox on a test system.

You can only use this command with a database-based MDS repository.

#### 8.3.1.2 Syntax

```
exportSandboxMetadata{application, server, toArchive, sandboxName
[, restrictCustTo] [, applicationVersion] [, remote]}
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The name of the application from which the metadata is to be exported.</td>
</tr>
<tr>
<td>server</td>
<td>The target server on which this application is deployed.</td>
</tr>
<tr>
<td>toArchive</td>
<td>The target archive file (.jar, .JAR, .zip or .ZIP) to which the sandbox contents will be transferred. The archive can be located on a local or network directory where the application is physically deployed. If you specify the -remote argument, the archive can be located on the system on which you are executing the command.</td>
</tr>
<tr>
<td>sandboxName</td>
<td>The name of the sandbox to export.</td>
</tr>
</tbody>
</table>
8.3.1.3 Example
The following example exports a sandbox from the MDS repository for the application myapp:

```
wlst:/weblogic/serverConfig>exportSandboxMetadata('myapp', 'server1', '/tmp/sandbox1.jar', 'sandbox1')
```

8.3.2 importSandboxMetadata
Command Category: Sandbox Metadata Management
Use with WLST: Online

8.3.2.1 Description
Imports the contents of a sandbox archive to another sandbox in the MDS repository partition of the specified application. It can also update the contents of a given archive to a sandbox in the MDS repository partition of a given application. All customizations are imported, whether or not they are declared in the cust-config element of adf-config.xml. You can only use this command with a database-based MDS repository.

8.3.2.2 Syntax
```
importSandboxMetadata(application, server, fromArchive [, forceSBCreation] [, useExistingSandbox] [, sandboxName] [, applicationVersion] [, remote])
```
### 8.3.2.3 Examples

The following example imports the contents of the sandbox sandbox1.jar:

```java
wls:/weblogic/serverConfig> importSandboxMetadata(application='myapp', 'server1', '/tmp/sandbox1.jar')
```

The following example updates the sandbox sandbox1.jar:

```java
wls:/weblogic/serverConfig> importSandboxMetadata('myapp', 'server1', '/tmp/sandbox1.jar', useExistingSandbox='true', sandboxName='sandbox1')
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The name of the application for which the metadata is to be imported.</td>
</tr>
<tr>
<td>server</td>
<td>The target server on which this application is deployed.</td>
</tr>
<tr>
<td>fromArchive</td>
<td>The source archive file from which documents will be selected for transfer. The archive can be located on a local or network directory where the application is physically deployed. If you specify the -remote argument, the archive can be located on the system on which you are executing the command.</td>
</tr>
<tr>
<td>forceSBCreation</td>
<td>Optional. A Boolean value (true or false) that specifies whether the operation will overwrite an existing sandbox with the same name. When the argument is set to true, if the fromArchive argument specifies a sandbox with the same name as one that already exists in the application’s partition, the original sandbox is deleted and a new sandbox is created. When the argument is set to false, if a sandbox with the same name exists, an exception is thrown. The default is false.</td>
</tr>
<tr>
<td>useExistingSandbox</td>
<td>Optional. When set to true, the contents of the archive are imported to the sandbox specified with the sandboxName argument. This argument is ignored if there is no value specified for sandboxName. The default is false.</td>
</tr>
<tr>
<td>sandboxName</td>
<td>Optional. The name of the sandbox to update. This argument is ignored if useExistingSandbox is false.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. The application version, if multiple versions of the same application are deployed.</td>
</tr>
<tr>
<td>remote</td>
<td>Optional. A Boolean value (true or false) that specifies whether the archive file is in a location where the application is deployed (false) or on the system on which you are executing the command (true). The default is false.</td>
</tr>
</tbody>
</table>

### 8.4 Application Label Management Commands

Use the commands in Table 8–5 to manage labels for applications.

<table>
<thead>
<tr>
<th>Use this command</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>createMetadataLabel</td>
<td>Creates a metadata label.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteMetadataLabel</td>
<td>Deletes a metadata label from the repository partition.</td>
<td>Online</td>
</tr>
</tbody>
</table>
### 8.4.1 createMetadataLabel

Command Category: Application Label Management

Use with WLST: Online

**8.4.1.1 Description**

Creates a new label for the documents in the application's repository partition. This command is applicable only for repositories that support versioning.

**8.4.1.2 Syntax**

```
createMetadataLabel{application, server, name [, applicationVersion]}
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The name of the application for which a label will be created in the partition configured for this application.</td>
</tr>
<tr>
<td>server</td>
<td>The target server on which this application is deployed. If the application is deployed to multiple Managed Servers in a cluster, you can use the name of any of the server names. You cannot specify multiple server names.</td>
</tr>
<tr>
<td>name</td>
<td>The name of the label to create in the repository partition.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. The application version, if multiple versions of the same application are deployed.</td>
</tr>
</tbody>
</table>

**8.4.1.3 Example**

The following example creates the label `label1` for the application `mdsapp` deployed in the server `server1`:

```
wls:/weblogic/serverConfig> createMetadataLabel('mdsapp','server1','label1')
Executing operation: createMetadataLabel.
Created metadata label "label1".
```

### 8.4.2 deleteMetadataLabel

Command Category: Application Label Management

Use with WLST: Online

**8.4.2.1 Description**

Deletes a label for the documents in the application's repository partition. This command is applicable only for repositories that support versioning.

**8.4.2.2 Syntax**

```
deleteMetadataLabel{application, server, name [, applicationVersion]}
```
Application Label Management Commands

8.4.2.3 Example
The following example deletes the metadata label `label1` from the application `mdsapp` deployed in the server `server1`:

```
wlsl/weblogic/serverConfig> deleteMetadataLabel('mdsapp','server1','label1')
```

Executing operation: deleteMetadataLabel.

Deleted metadata label 'label1'.

8.4.3 listMetadataLabels

Command Category: Use with WLST: Online

8.4.3.1 Description
Lists all of the metadata labels in the application’s repository partition. This command is applicable only for repositories that support versioning.

8.4.3.2 Syntax
```
listMetadataLabels(application, server [, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The name of the application for which all of the labels in the repository partition should be listed.</td>
</tr>
<tr>
<td>server</td>
<td>The target server on which this application is deployed. If the application is deployed to multiple Managed Servers in a cluster, you can use the name of any of the server names. You cannot specify multiple server names.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. The application version, if multiple versions of the same application are deployed.</td>
</tr>
</tbody>
</table>

8.4.3.3 Example
The following example lists the metadata labels available for the application `mdsapp` deployed in the server `server1`:

```
wlsl/weblogic/serverConfig> listMetadataLabels('mdsapp', 'server1')
```

Executing operation: listMetadataLabels.

Database Repository partition contains the following labels:
- label2
- label3
8.4.4 promoteMetadataLabel

Command Category: Application Label Management
Use with WLST: Online

8.4.4.1 Description
Promotes documents associated with a label to the tip version in the repository. This command is useful to achieve rollback capability. This command is applicable only for repositories that support versioning.

8.4.4.2 Syntax
`promoteMetadataLabel(application, server, name [, applicationVersion])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The name of the application in whose associated repository the metadata is to be promoted to tip.</td>
</tr>
<tr>
<td>server</td>
<td>The target server on which this application is deployed. If the application is deployed to multiple Managed Servers in a cluster, you can use the name of any of the server names. You cannot specify multiple server names.</td>
</tr>
<tr>
<td>name</td>
<td>The name of the label to promote in the repository partition.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. The application version, if multiple versions of the same application are deployed.</td>
</tr>
</tbody>
</table>

8.4.4.3 Example
The following example promotes the metadata label `label1` to tip in the application `mdsapp` deployed in the server `server1`:

```text
wls:/weblogic/serverConfig> promoteMetadataLabel('mdsapp', 'server1','label1')
Executing operation: promoteMetadataLabel.
Promoted metadata label "label1" to tip.
```

8.4.5 purgeMetadataLabels

Command Category: Application Label Management
Use with WLST: Online

8.4.5.1 Description
Purges or lists the metadata labels that match the given pattern or age, but does not delete the metadata documents that were part of the label. You can delete the documents by executing the `purgeMetadata` command.

8.4.5.2 Syntax
`purgeMetadataLabels(repository, partition [, , namePattern] [, olderThanInMin] [, , infoOnly])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>repository</td>
<td>The name of the MDS repository that contains the partition whose metadata labels will be purged or listed.</td>
</tr>
<tr>
<td>partition</td>
<td>The name of the partition whose metadata labels will be purged or listed.</td>
</tr>
</tbody>
</table>
8.5 Application Management Deployment Commands

Use the commands in Table 8–6 to manage deployment.

Table 8–6 Application Management Deployment Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>getMDSArchiveConfig</td>
<td>Returns an MDSArchiveConfig object.</td>
<td>Offline</td>
</tr>
<tr>
<td>importMAR</td>
<td>Imports an MAR.</td>
<td>Online</td>
</tr>
</tbody>
</table>

8.5.1 getMDSArchiveConfig

Command Category: Application Management Deployment

Use with WLST: Offline
8.5.1.1 Description

Returns a handle to the MDSArchiveConfig object for the specified archive. The returned MDSArchiveConfig object's methods can be used to change application and shared repository configuration in an archive.

The MDSArchiveConfig object provides the following methods:

- **setAppMetadataRepository**—This method sets the connection details for the application metadata repository.
  
  If the archive's existing adf-config.xml file does not contain any configuration for the application's metadata repository, then you must provide all necessary arguments to define the target repository. To define a database-based repository, provide the repository, partition, type, and jndi arguments. For a file-based repository, provide the path argument instead of jndi.
  
  If the adf-config.xml file already contains some configuration for the application's metadata repository, you can provide only a subset of arguments that you want to change. You do not need to provide all arguments in such a case. However, if the store type is changed, then the corresponding jndi or path argument is required.

- **setAppSharedMetadataRepository**—This method sets the connection details for the shared repository in the application archive that is mapped to specified namespace.
  
  If the archive's existing adf-config.xml file does not contain any configuration for a shared metadata repository mapped to the specified namespace, you must provide all required arguments (in this case, repository, partition, type, and jndi or path). For a database-based repository, provide the jndi argument. For a file-based repository, path is a required argument.
  
  If the adf-config.xml file already contains some configuration for a shared metadata repository mapped to the specified namespace and you want to change some specific arguments, you can provide only a subset of those arguments; all others are not needed.

- **save**—If you specify the toLocation argument, then the changes will be stored in the target archive file and the original file will remain unchanged. Otherwise, the changes will be saved in the original file itself.

8.5.1.2 Syntax

```
archiveConfigObject = getMDSArchiveConfig(fromLocation)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>fromLocation</td>
<td>The name of the ear file, including its complete path.</td>
</tr>
</tbody>
</table>

The syntax for setAppMetadataRepository is:

```
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>repository</td>
<td>Optional. The name of the application's repository.</td>
</tr>
<tr>
<td>partition</td>
<td>Optional. The name of the partition for the application's metadata.</td>
</tr>
<tr>
<td>type</td>
<td>Optional. The type of connection, file or database, to the repository. Valid values are 'File' or 'DB' (case insensitive).</td>
</tr>
</tbody>
</table>
The syntax for setAppSharedMetadataRepository is:

```java
archiveConfigObject.setAppSharedMetadataRepository(namespace [, repository] [, partition] [, type] [, jndi] [, path])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>namespace</td>
<td>The namespace used for looking up the shared repository to set connection details.</td>
</tr>
<tr>
<td>repository</td>
<td>Optional. The name of the application’s shared repository.</td>
</tr>
<tr>
<td>partition</td>
<td>Optional. The name of the partition for the application’s shared metadata.</td>
</tr>
<tr>
<td>type</td>
<td>Optional. The type of connection, file or database, to the repository. Valid values are 'File' or 'DB' (case insensitive).</td>
</tr>
<tr>
<td>jndi</td>
<td>Optional. The JNDI location for the database connection. This argument is required if the type is set to DB. This argument will not be considered if the type is set to File.</td>
</tr>
<tr>
<td>path</td>
<td>Optional. The location of the file metadata store. This argument is required if the type is set to File. This argument will not be considered if the type is set to DB.</td>
</tr>
</tbody>
</table>

The syntax for save is:

```java
archiveConfigObject.save([toLocation])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>toLocation</td>
<td>Optional. The file name, including the absolute path to store the changes. If this option is not provided, the changes are written to the archive represented by this configuration object.</td>
</tr>
</tbody>
</table>

### 8.5.1.3 Examples

In the following example, if the adf-config.xml file in the archive does not have the application and shared metadata repositories defined, then you should provide the complete connection information.

```bash
wls:/offline> archive = getMDSArchiveConfig(fromLocation='/tmp/testArchive.ear')

wls:/offline> archive.setAppMetadataRepository(repository='AppRepos1', partition='partition1', type='DB', jndi='mds-jndi1')

wls:/offline> archive.setAppSharedMetadataRepository(namespace='/a', repository='SharedRepos1', partition='partition2', type='File', path='/temp/dir')

wls:/offline> archive.save()
```
In the following example, if the adf-config.xml file in the archive already has the application and shared metadata repositories defined, all arguments are optional. You can set only the arguments you want to change.

```
ws:/offline> archive = getMDSArchiveConfig(fromLocation='/tmp/testArchive.ear')
ws:/offline> archive.setAppMetadataRepository(partition='MDS-partition2')
ws:/offline> archive.setAppSharedMetadataRepository(namespace='/a',
    repository='SharedRepos2')
ws:/offline> archive.save(toLocation='/tmp/targetArchive.ear')
```

### 8.5.2 importMAR

Command Category: Application Management Deployment

Use with WLST: Online

#### 8.5.2.1 Description

Imports the metadata from the MAR that is packaged with the application's EAR file. If the MAR had already been imported into the partition, the command deletes the previous version and imports the new version.

#### 8.5.2.2 Syntax

```
importMAR(application, server [, force] [, applicationVersion] )
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>The name of the application for which the metadata is to be imported.</td>
</tr>
<tr>
<td>server</td>
<td>The target server on which this application is deployed.</td>
</tr>
<tr>
<td>force</td>
<td>Optional. A Boolean value (true or false) that specifies whether only changed documents and MARs are imported. For a database-based repository, if you set this argument to false, only new or changed documents from changed MARs are imported. The command creates a label for each MAR for which documents are imported. The label has the following format: <code>postDeploy_application_name_MAR_name_MAR_checksum</code> For a file-based repository, if you set this argument to false, only changed MARs are imported. The command does not compare individual documents. The command creates a file in the repository for each imported MAR. The default is true.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. The application version, if multiple versions of the same application are deployed.</td>
</tr>
</tbody>
</table>

#### 8.5.2.3 Example

The following example imports metadata from the MAR to the application mdsapp:

```
wls:/weblogic/serverConfig> importMAR('mdsapp','server1')
Executing operation: importMAR.
*importMAR* operation completed. Summary of "importMAR" operation is:
/appl/jobs.xml
/appl/mo.xml
2 documents successfully transferred.
```
This chapter describes WSLT commands for Oracle SOA Suite. These commands enable you to use WLST to configure SOA composite applications.

**Note:** To use these commands, you must invoke WLST from the Oracle home in which the component has been installed. See "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator's Guide.

This chapter includes the following sections:

- Section 9.1, "Overview of WSLT Command Categories"
- Section 9.2, "Deployment Commands"
- Section 9.3, "SOA Composite Application Management Commands"
- Section 9.4, "Configuration Plan Management Commands"
- Section 9.5, "Task Validation Commands"
- Section 9.6, "SOA Composite Application Compilation Commands"
- Section 9.7, "SOA Composite Application Packaging Commands"
- Section 9.8, "SOA Composite Application Test Commands"
- Section 9.9, "SOA Composite Application HTTP Client-Based Export and Import Commands"
- Section 9.10, "SOA Composite Application MBean-Based Export and Import Commands"
- Section 9.11, "SOA Composite Application Partition Management Commands"

For additional details about deployment, configuration plans, and test suites, see Oracle Fusion Middleware Developer’s Guide for Oracle SOA Suite.

### 9.1 Overview of WSLT Command Categories

WLST commands are divided into the categories shown in Table 9–1.

<table>
<thead>
<tr>
<th>Command category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Deployment Commands</strong></td>
<td>Deploy and undeploy SOA composite applications.</td>
</tr>
</tbody>
</table>
9.2 Deployment Commands

Use the deployment commands, listed in Table 9–2, to deploy and undeploy SOA composite applications.

**Table 9–2  Deployment Commands for WLST Configuration**

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>sca_deployComposite</td>
<td>Deploy a SOA composite application.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_undeployComposite</td>
<td>Undeploy a SOA composite application.</td>
<td>Offline</td>
</tr>
</tbody>
</table>

9.2.1 sca_deployComposite

Command Category: Deployment Commands

Use with WLST: Offline

**9.2.1.1 Description**

Deploys a SOA composite application to the Oracle WebLogic Server. This command does not package the artifact files of the application for deployment. See Section 9.7,
"SOA Composite Application Packaging Commands" for instructions on packaging a SOA composite application.

9.2.1.2 Syntax

sca_deployComposite(serverURL, sarLocation, [overwrite], [user], [password], [forceDefault], [configplan], [partition])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverURL</td>
<td>URL of the server that hosts the SOA Infrastructure application (for example, <a href="http://myhost10:7001">http://myhost10:7001</a>).</td>
</tr>
<tr>
<td>sarLocation</td>
<td>Absolute path to one the following:</td>
</tr>
<tr>
<td></td>
<td>▪ SOA archive (SAR) file.</td>
</tr>
<tr>
<td></td>
<td>▪ A SAR file is a special JAR file that requires a prefix of sca_ (for example, sca_HelloWorld_rev1.0.jar). The SAR file can be deployed with the deployment commands (such as sca_deployComposite()), but a regular .jar file is not treated as a special SAR file.</td>
</tr>
<tr>
<td></td>
<td>▪ ZIP file that includes multiple SARs, metadata archives (MARs), or both.</td>
</tr>
<tr>
<td></td>
<td>▪ Enterprise archive (EAR) file that contains a SAR file.</td>
</tr>
<tr>
<td>overwrite</td>
<td>Optional. Indicates whether to overwrite an existing SOA composite application file.</td>
</tr>
<tr>
<td></td>
<td>▪ false (default): Does not overwrite the file.</td>
</tr>
<tr>
<td></td>
<td>▪ true: Overwrites the file.</td>
</tr>
<tr>
<td>user</td>
<td>Optional. User name to access the composite deployer servlet when basic authentication is configured.</td>
</tr>
<tr>
<td>password</td>
<td>Optional. Password to access the composite deployer servlet when basic authentication is configured.</td>
</tr>
<tr>
<td>forceDefault</td>
<td>Optional. Indicates whether to set the new composite as the default.</td>
</tr>
<tr>
<td></td>
<td>▪ true (default): Makes it the default composite.</td>
</tr>
<tr>
<td></td>
<td>▪ false: Does not make it the default composite.</td>
</tr>
<tr>
<td>configplan</td>
<td>Optional. Absolute path of a configuration plan to be applied to a specified SAR file or to all SAR files included in the ZIP file.</td>
</tr>
<tr>
<td>partition</td>
<td>Optional. The name of the partition in which to deploy the SOA composite application. The default value is default. If you do not specify a partition, the composite is automatically deployed into the default partition.</td>
</tr>
</tbody>
</table>

Note: Human workflow artifacts such as task mapped attributes (previously known as flex field mappings) and rules (such as vacation rules) are defined based on the namespace of the task definition. Therefore, the following issues are true when the same SOA composite application with a human workflow task is deployed into multiple partitions:

- For the same task definition type, mapped attributes defined in one partition are visible in another partition.
- Rules defined on a task definition in one partition can apply to the same definition in another partition.
9.2.1.3 Examples
The following example deploys the HelloWorld application.

```bash
wls:/mydomain/ServerConfig> sca_deployComposite("http://myhost10:7001",
"/tmp/sca_HelloWorld_rev1.0.jar")
```

The following example deploys the HelloWorld application as the default version.

```bash
wls:/mydomain/ServerConfig> sca_deployComposite("http://myhost10:7001",
"/tmp/sca_HelloWorld_rev1.0.jar", true)
```

The following example deploys the HelloWorld application with a required user name when basic authentication is configured. You are then prompted to provide the password for this user name.

```bash
wls:/mydomain/ServerConfig> sca_deployComposite("http://myhost10:7001",
"/tmp/sca_HelloWorld_rev1.0.jar", user="weblogic")
Password:
```

The following example deploys the HelloWorld application and applies the configuration plan named deployplan.xml.

```bash
wls:/mydomain/ServerConfig> sca_deployComposite("http://myhost10:7001",
"/tmp/sca_HelloWorld_rev1.0.jar", forceDefault=false,
configplan="/tmp/deployplan.xml")
```

The following example deploys the HelloWorld ZIP file, which can include multiple SARs, MARs, or both.

```bash
wls:/mydomain/ServerConfig> sca_deployComposite("http://myhost10:7001",
"/tmp/HelloWorld.zip")
```

The following example deploys the HelloWorld application to the myPartition partition.

```bash
wls:/mydomain/ServerConfig> sca_deployComposite("http://stadp10:7001",
"/tmp/sca_HelloWorld_rev1.0.jar", partition="myPartition")
```

9.2.2 sca_undeployComposite

Command Category: Deployment Commands

Use with WLST: Offline

9.2.2.1 Description
Undeploys a currently deployed SOA composite application.

9.2.2.2 Syntax
sca_undeployComposite(serverURL, compositeName, revision, [user], [password], [partition])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverURL</td>
<td>URL of the server that hosts the SOA Infrastructure application (for example, <a href="http://myhost10:7001">http://myhost10:7001</a>).</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the SOA composite application.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision ID of the SOA composite application.</td>
</tr>
</tbody>
</table>
9.2.2.3 Examples

The following example undeploys the HelloWorld application.

```
wls:/mydomain/ServerConfig> sca_undeployComposite("http://myhost10:7001", "HelloWorld", "1.0")
```

The following example undeploys the HelloWorld application with a required user name when basic authentication is configured. You are then prompted to provide the password for this user name.

```
wls:/mydomain/ServerConfig> sca_undeployComposite("http://myhost10:7001", "HelloWorld", "1.0", user="weblogic")
Password:
```

The following example undeploys the HelloWorld application in the myPartition partition.

```
wls:/mydomain/ServerConfig> sca_undeployComposite("http://stadp10:7001", "HelloWorld", "1.0", partition='myPartition')
```

9.3 SOA Composite Application Management Commands

Use the management commands, listed in Table 9–3, to start, stop, activate, retire, assign a default revision version, and list deployed SOA composite applications.

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>user</td>
<td>Optional. User name to access the composite deployer servlet when basic authentication is configured.</td>
</tr>
<tr>
<td>password</td>
<td>Optional. Password to access the composite deployer servlet when basic authentication is configured.</td>
</tr>
<tr>
<td>partition</td>
<td>Optional. The name of the partition in which the SOA composite application is located. The default value is default. If you do not specify a partition, the default partition is searched for the SOA composite application. However, no other partitions are searched.</td>
</tr>
</tbody>
</table>

Table 9–3 SOA Composite Application Management Commands for WLST Configuration

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>sca_startComposite</td>
<td>Start a previously stopped SOA composite application.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_stopComposite</td>
<td>Stop a SOA composite application.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_activateComposite</td>
<td>Activate a previously retired SOA composite application.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_retireComposite</td>
<td>Retire a SOA composite application.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_assignDefaultComposite</td>
<td>Assign the default revision version to a SOA composite application.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_getDefaultCompositeRevision</td>
<td>List the revision of the default composite of the given composite series.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_listDeployedComposites</td>
<td>List the deployed SOA composite applications.</td>
<td>Offline</td>
</tr>
</tbody>
</table>
### 9.3.1 sca_startComposite

**Command Category:** Application Management Commands  
**Use with WLST:** Offline

#### 9.3.1.1 Description

Starts a previously stopped SOA composite application.

#### 9.3.1.2 Syntax

`sca_startComposite(host, port, user, password, compositeName, revision, [label], [partition])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>Hostname of the Oracle WebLogic Server (for example, myhost).</td>
</tr>
<tr>
<td>port</td>
<td>Port of the Oracle WebLogic Server (for example, 7001).</td>
</tr>
<tr>
<td>user</td>
<td>User name for connecting to the running server to get MBean information (for example, weblogic).</td>
</tr>
<tr>
<td>password</td>
<td>Password for the user name.</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the SOA composite application.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision of the SOA composite application.</td>
</tr>
<tr>
<td>label</td>
<td>Optional. Label of the SOA composite application. The label identifies the metadata service (MDS) artifacts associated with the application. If the label is not specified, the system finds the latest one.</td>
</tr>
<tr>
<td>partition</td>
<td>Optional. The name of the partition in which the SOA composite application is located. The default value is default. If you do not specify a partition, the default partition is searched for the SOA composite application. However, no other partitions are searched.</td>
</tr>
</tbody>
</table>

#### 9.3.1.3 Example

The following example starts revision 1.0 of the HelloWorld application.

```wls
wls:/mydomain/ServerConfig> sca_startComposite("myhost", "7001", "weblogic", "welcome1", "HelloWorld", "1.0")
```

The following example starts revision 1.0 of the HelloWorld application in the partition myPartition.

```wls
wls:/mydomain/ServerConfig> sca_startComposite("stadp10", "7001", "weblogic", "weblogic", "HelloWorld", "1.0", partition="myPartition")
```

### 9.3.2 sca_stopComposite

**Command Category:** Application Management Commands  
**Use with WLST:** Offline

#### 9.3.2.1 Description

Stops a currently running SOA composite application.

#### 9.3.2.2 Syntax

`sca_stopComposite(host, port, user, password, compositeName, revision, [label], [partition])`

---

**Oracle Fusion Middleware WebLogic Scripting Tool Command Reference**

9-6
**SOA Composite Application Management Commands**

**9.3.2.3 Example**

The following example stops revision 1.0 of the HelloWorld application.

```bash
wls:/mydomain/ServerConfig> sca_stopComposite("myhost", "7001", "weblogic", "welcome1", "HelloWorld", "1.0")
```

The following example stops revision 1.0 of the HelloWorld application in the partition myPartition.

```bash
wls:/mydomain/ServerConfig> sca_stopComposite("stadp10", "7001", "weblogic", "weblogic", "HelloWorld", "1.0", partition="myPartition")
```

**9.3.3 sca_activateComposite**

Command Category: Application Management Commands

Use with WLST: Offline

**9.3.3.1 Description**

Activates a retired SOA composite application and its instances. You can then create new instances.

**9.3.3.2 Syntax**

`sca_activateComposite(host, port, user, password, compositeName, revision, [label], [partition])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>Hostname of the Oracle WebLogic Server (for example, myhost).</td>
</tr>
<tr>
<td>port</td>
<td>Port of the Oracle WebLogic Server (for example, 7001).</td>
</tr>
<tr>
<td>user</td>
<td>User name for connecting to the running server to get MBean information (for example, weblogic).</td>
</tr>
<tr>
<td>password</td>
<td>Password for the user name.</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the SOA composite application.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision of the SOA composite application.</td>
</tr>
<tr>
<td>label</td>
<td>Optional. Label of the SOA composite application. The label identifies the MDS artifacts associated with the application. If the label is not specified, the system finds the latest one.</td>
</tr>
<tr>
<td>partition</td>
<td>Optional. The name of the partition in which the SOA composite application is located. The default value is default. If you do not specify a partition, the default partition is searched for the SOA composite application. However, no other partitions are searched.</td>
</tr>
</tbody>
</table>
### 9.3.3 Example

The following example activates revision 1.0 of the HelloWorld application.

```plaintext
wls:/mydomain/ServerConfig> sca_activateComposite("myhost", "7001", "weblogic", "welcome1", "HelloWorld", "1.0")
```

The following example activates revision 1.0 of the HelloWorld application in the partition myPartition.

```plaintext
wls:/mydomain/ServerConfig> sca_activateComposite("stadp10", "7001", "weblogic", "weblogic", "HelloWorld", "1.0", partition="myPartition")
```

### 9.3.4 sca_retireComposite

**Command Category:** Application Management Commands  
**Use with WLST:** Offline

#### 9.3.4.1 Description

Stops and retires a SOA composite application and all its running instances. If the process life cycle is retired, you cannot create a new instance. Existing instances are allowed to complete normally.

#### 9.3.4.2 Syntax

```plaintext
sca_retireComposite(host, port, user, password, compositeName, revision, [label], [partition])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>Hostname of the Oracle WebLogic Server (for example, myhost).</td>
</tr>
<tr>
<td>port</td>
<td>Port of the Oracle WebLogic Server (for example, 7001).</td>
</tr>
<tr>
<td>user</td>
<td>User name for connecting to the running server to get MBean information (for example, weblogic).</td>
</tr>
<tr>
<td>password</td>
<td>Password for the user name.</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the SOA composite application.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision of the SOA composite application.</td>
</tr>
<tr>
<td>label</td>
<td>Optional. Label of the SOA composite application. The label identifies the MDS artifacts associated with the application. If the label is not specified, the system finds the latest one.</td>
</tr>
<tr>
<td>partition</td>
<td>Optional. The name of the partition in which the SOA composite application is located. The default value is <code>default</code>. If you do not specify a partition, the <code>default</code> partition is searched for the SOA composite application. However, no other partitions are searched.</td>
</tr>
</tbody>
</table>
9.3.4.3 Example
The following example retires revision 1.0 of the HelloWorld application.

\[
\text{wls:/mydomain/ServerConfig}\rightarrow \text{sca\_retireComposite(}"\text{myhost", }"7001", \"\text{weblogic", }
\text{"welcome1", }"\text{HelloWorld", }"1.0")
\]

The following example retires revision 1.0 of the HelloWorld application in the partition myPartition.

\[
\text{wls:/mydomain/ServerConfig}\rightarrow \text{sca\_retireComposite(}"\text{stadp10", }"7001", \"\text{weblogic", }
\text{"weblogic", }"\text{HelloWorld", }"1.0", \text{partition="myPartition")}
\]

9.3.5 sca_assignDefaultComposite

Command Category: Application Management Commands
Use with WLST: Offline

9.3.5.1 Description
Sets a SOA composite application revision as the default version. This revision is instantiated when a new request comes in.

9.3.5.2 Syntax
\[
sca\_assignDefaultComposite(\text{host, port, user, password, compositeName, revision, [partition]})
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>Hostname of the Oracle WebLogic Server (for example, myhost).</td>
</tr>
<tr>
<td>port</td>
<td>Port of the Oracle WebLogic Server (for example, 7001).</td>
</tr>
<tr>
<td>user</td>
<td>User name for connecting to the running server to get MBean information (for example, weblogic).</td>
</tr>
<tr>
<td>password</td>
<td>Password for the user name.</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the SOA composite application.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision of the SOA composite application.</td>
</tr>
<tr>
<td>partition</td>
<td>Optional. The name of the partition in which the SOA composite application is located. The default value is default. If you do not specify a partition, the default partition is searched for the SOA composite application. However, no other partitions are searched.</td>
</tr>
</tbody>
</table>

9.3.5.3 Example
The following example sets revision 1.0 of the HelloWorld application as the default version.

\[
\text{wls:/mydomain/ServerConfig}\rightarrow \text{sca\_assignDefaultComposite(}"\text{myhost", }"7001", \"\text{weblogic", }
\text{"welcome1", }"\text{HelloWorld", }"1.0")
\]

The following example sets revision 1.0 of the HelloWorld application located in the partition myPartition as the default version.

\[
\text{wls:/mydomain/ServerConfig}\rightarrow \text{sca\_assignDefaultComposite(}"\text{stadp10", }"7001", \"\text{weblogic", }
\text{"weblogic", }"\text{HelloWorld", }"1.0", \text{partition="myPartition")}
\]
9.3.6 sca_getDefaultCompositeRevision

Command Category: Application Management Commands

Use with WLST: Offline

9.3.6.1 Description

Lists the revision of the default composite of the given composite series.

9.3.6.2 Syntax

sca_getDefaultCompositeRevision(host, port, user, password, compositeName, partition)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>Hostname of the Oracle WebLogic Server (for example, myhost).</td>
</tr>
<tr>
<td>port</td>
<td>Port of the Oracle WebLogic Server (for example, 7001).</td>
</tr>
<tr>
<td>user</td>
<td>User name for connecting to the running server to get MBean information</td>
</tr>
<tr>
<td></td>
<td>(for example, weblogic).</td>
</tr>
<tr>
<td>password</td>
<td>Password for the user name.</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the SOA composite application.</td>
</tr>
<tr>
<td>partition</td>
<td>Optional. The name of the partition in which the SOA composite application</td>
</tr>
<tr>
<td></td>
<td>is located. The default value is default. If you do not specify a</td>
</tr>
<tr>
<td></td>
<td>partition, the default partition is searched for the SOA composite</td>
</tr>
<tr>
<td></td>
<td>application. However, no other partitions are searched.</td>
</tr>
</tbody>
</table>

9.3.6.3 Example

The following example returns the revision of the default composite of the given composite series.

wls:/mydomain/ServerConfig> sca_getDefaultCompositeRevision("myhost", "7001", "weblogic", "weblogic", "HelloWorld")

The following example returns the revision of the default composite of the given composite series in the partition named myPartition.

wls:/mydomain/ServerConfig> sca_getDefaultCompositeRevision("myhost", "7001", "weblogic", "weblogic", "HelloWorld", partition="myPartition")

9.3.7 sca_listDeployedComposites

Command Category: Application Management Commands

Use with WLST: Offline

9.3.7.1 Description

Lists all SOA composite applications deployed to the SOA platform.

9.3.7.2 Syntax

sca_listDeployedComposites(host, port, user, password)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>host</td>
<td>Hostname of the Oracle WebLogic Server (for example, myhost).</td>
</tr>
</tbody>
</table>
9.3.7.3 Example
The following example lists all the deployed SOA composite applications on the server myhost.

```
ws:mydomain/ServerConfig> sca_listDeployedComposites('myhost', '7001', 'weblogic', 'welcome1')
```

9.4 Configuration Plan Management Commands
Use the configuration plan management commands, listed in Table 9–4, to attach, extract, generate, and validate configuration plans for SOA composite applications.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>sca_attachPlan</td>
<td>Attach the configuration plan file to the SOA composite application JAR file.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_extractPlan</td>
<td>Extract a configuration plan packaged with the JAR file for editing.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_generatePlan</td>
<td>Generate a configuration plan for editing.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_validatePlan</td>
<td>Validate the configuration plan.</td>
<td>Offline</td>
</tr>
</tbody>
</table>

9.4.1 sca_attachPlan
Command Category: Configuration Plan Management Commands
Use with WLST: Offline

9.4.1.1 Description
Attaches the configuration plan file to the SOA composite application file. If a plan already exists in the file, it is overwritten with this new plan.

9.4.1.2 Syntax
```
sca_attachPlan(sar, configPlan, [overwrite], [verbose])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>sar</td>
<td>Absolute path of the SAR file.</td>
</tr>
<tr>
<td>configPlan</td>
<td>Absolute path of the configuration plan file.</td>
</tr>
<tr>
<td>overwrite</td>
<td>Optional. Indicates whether to overwrite an existing configuration plan in the SAR file.</td>
</tr>
<tr>
<td></td>
<td>- false (default): Does not overwrite the plan.</td>
</tr>
<tr>
<td></td>
<td>- true: Overwrites the plan.</td>
</tr>
</tbody>
</table>
9.4.1.3 Examples

The following example attaches the configplan.xml configuration plan file to the HelloWorld application.

```bash
wls:/mydomain/ServerConfig> sca_attachPlan("/tmp/sca_HelloWorld_rev1.0.jar", "/tmp/configplan.xml")
```

The following example overwrites the existing configuration plan with configplan.xml file in the HelloWorld application.

```bash
wls:/mydomain/ServerConfig> sca_attachPlan("/tmp/sca_HelloWorld_rev1.0.jar", "/tmp/configplan.xml", overwrite=true)
```

9.4.2 sca_extractPlan

Command Category: Configuration Plan Management Commands
Use with WLST: Offline

9.4.2.1 Description

Extracts a configuration plan packaged with the SOA composite application file for editing. This is an optional step. If no plan exists, this is the same as creating a new file with sca_generatePlan.

9.4.2.2 Syntax

```
sca_extractPlan(sar, configPlan, [overwrite], [verbose])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>sar</td>
<td>Absolute path of a SAR file.</td>
</tr>
<tr>
<td>configPlan</td>
<td>Absolute path of a configuration plan file to which to be extracted.</td>
</tr>
<tr>
<td>overwrite</td>
<td>Optional. Indicates whether to overwrite an existing configuration plan file in the SAR file.</td>
</tr>
<tr>
<td></td>
<td>■ false (default): Does not overwrite the plan.</td>
</tr>
<tr>
<td></td>
<td>■ true: Overwrites the plan.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Indicates whether to print more information about configuration plan extraction.</td>
</tr>
<tr>
<td></td>
<td>■ true (default): Prints more information.</td>
</tr>
<tr>
<td></td>
<td>■ false: Does not print more information.</td>
</tr>
</tbody>
</table>

9.4.2.3 Example

The following example extracts the configplan.xml file for editing from the HelloWorld application.

```bash
wls:/mydomain/ServerConfig> sca_extractPlan("/tmp/sca_HelloWorld_rev1.0.jar", "/tmp/configplan.xml")
```
The following example extracts the configplan.xml file for editing from the HelloWorld application. This command also overwrites the existing plan.

```
wis:/mydomain/ServerConfig> sca_extractPlan("/tmp/sca_HelloWorld_rev1.0.jar", 
"/tmp/configplan.xml", overwrite=true)
```

### 9.4.3 sca_generatePlan

#### Command Category: Configuration Plan Management Commands

Use with WLST: Offline

#### 9.4.3.1 Description
Generates a configuration plan for editing.

#### 9.4.3.2 Syntax

```
sca_generatePlan(configPlan, sar, composite, [overwrite], [verbose])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>configPlan</td>
<td>Absolute path of the configuration plan file to be generated.</td>
</tr>
<tr>
<td>sar</td>
<td>Absolute path of the SAR file.</td>
</tr>
<tr>
<td>composite</td>
<td>Absolute path of the composite.xml file in the expanded (unzipped) SAR directory.</td>
</tr>
<tr>
<td>overwrite</td>
<td>Optional. Indicates whether to overwrite an existing configuration plan file:</td>
</tr>
<tr>
<td></td>
<td>■ false (default): Does not overwrite the plan.</td>
</tr>
<tr>
<td></td>
<td>■ true: Overwrites the plan.</td>
</tr>
<tr>
<td>verbose</td>
<td>Indicates whether to print more information about plan generation:</td>
</tr>
<tr>
<td></td>
<td>■ true (default): Prints more information.</td>
</tr>
<tr>
<td></td>
<td>■ false: Does not print more information.</td>
</tr>
</tbody>
</table>

#### 9.4.3.3 Examples

The following example generates the myplan.xml configuration plan file for the HelloWorld application.

```
wls:/mydomain/ServerConfig> sca_generatePlan("/tmp/myplan.xml", 
sar="/tmp/sca_HelloWorld_rev1.0.jar")
```

The following example generates the myplan2.xml configuration plan file for the HelloWorld application. The myplan2.xml file overwrites the existing plan.

```
wls:/mydomain/ServerConfig> sca_generatePlan("/tmp/myplan2.xml", 
composite="/tmp/HelloWorld_rev1.0/composite.xml", overwrite=true)
```

### 9.4.4 sca_validatePlan

#### Command Category: Configuration Plan Management Commands

Use with WLST: Offline

#### 9.4.4.1 Description
Validates the configuration plan. This command identifies all search and replacement changes to be made during deployment. Use this option for debugging only.
9.4.4.2 Syntax

sca_validatePlan(reportFile, configPlan, [sar], [composite], [overwrite], [verbose])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>reportFile</td>
<td>Absolute path of the report file to be generated. Validation results are written to this file.</td>
</tr>
<tr>
<td>configPlan</td>
<td>Absolute path of the configuration plan file.</td>
</tr>
<tr>
<td>sar</td>
<td>Optional. The absolute path of the SAR file.</td>
</tr>
<tr>
<td>composite</td>
<td>Optional. The absolute path of the composite.xml file in the expanded (unzipped) SAR directory.</td>
</tr>
<tr>
<td>overwrite</td>
<td>Optional. Indicates whether to overwrite an existing configuration plan file:</td>
</tr>
<tr>
<td></td>
<td>■ false (default): Does not overwrite the plan.</td>
</tr>
<tr>
<td></td>
<td>■ true: Overwrites the plan.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Indicates whether to print more information about configuration plan validation.</td>
</tr>
<tr>
<td></td>
<td>■ true (default): Prints more information.</td>
</tr>
<tr>
<td></td>
<td>■ false: Does not print more information.</td>
</tr>
</tbody>
</table>

9.4.4.3 Examples

The following example validates the configplan.xml configuration plan file for the HelloWorld application.

```
wls:/mydomain/ServerConfig> sca_validatePlan("/tmp/myreport.xml", 
"/tmp/configplan.xml", sar="/tmp/sca_HelloWorld_rev1.0.jar")
```

The following example validates the configplan.xml configuration plan file for the HelloWorld application. The configplan.xml plan overwrites the existing plan.

```
wls:/mydomain/ServerConfig> sca_validatePlan("/tmp/myreport.xml", 
"/tmp/configplan.xml", composite="/tmp/HelloWorld_rev1.0/composite.xml", 
overwrite=true)
```

9.5 Task Validation Commands

Use the task validation command, listed in Table 9-5, to validate human workflow tasks.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>sca_validateTask</td>
<td>Validate a human workflow task.</td>
<td>Offline</td>
</tr>
</tbody>
</table>

9.5.1 sca_validateTask

Command Category: Task Validation Commands

Use with WLST: Offline
9.5.1.1 Description
Validates a human workflow task contained in the .task file that you created when designing a human task in the Human Task Editor.

9.5.1.2 Syntax
sca_validateTask(taskFile, outXml, [displayLevel])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>taskFile</td>
<td>Absolute path to the task definition file (.task).</td>
</tr>
<tr>
<td>outXml</td>
<td>Absolute path to an output XML file.</td>
</tr>
<tr>
<td>displayLevel</td>
<td>Optional. The level of information to display. The default value is 1.</td>
</tr>
</tbody>
</table>

9.5.1.3 Example
The following example validates the WFTaskDefinition.task file of the human task.

\texttt{wls:/mydomain/ServerConfig\> sca\_validateTask("/tmp/WFTaskDefinition.task", "/tmp/out.xml", displayLevel=2)}

9.6 SOA Composite Application Compilation Commands
Use the compilation commands, listed in Table 9–6, to compile SOA composite applications.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>sca_setProp</td>
<td>Set JVM system properties.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_compile</td>
<td>Compile a SOA composite application.</td>
<td>Offline</td>
</tr>
</tbody>
</table>

9.6.1 sca_setProp
Command Category: Application Compilation Commands
Use with WLST: Offline

9.6.1.1 Description
Sets JVM system properties. This command can also set secure socket layer (SSL) system properties before using sca_deploymentComposite and sca_undeploymentComposite over SSL.

9.6.1.2 Syntax
sca_setProp(propName, propValue)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>propName</td>
<td>Property name.</td>
</tr>
<tr>
<td>propValue</td>
<td>Property value.</td>
</tr>
</tbody>
</table>
9.6.1.3 Example
The following example sets the property name and property value.

```
ws:/mydomain/ServerConfig> sca_setProp("oracle.home",
"/scratch/myusername/beahome/AS11gR1SOA")
```

9.6.2 sca_compile
Command Category: Application Compilation Commands
Use with WLST: Offline

9.6.2.1 Description
Compiles a SOA composite application.

```
Note: The sca_compile command requires the oracle.home property to find the ant-sca-compile.xml script. This must be set once. You can use the scac_setProp command or the oracleHome property to set a value.
```

9.6.2.2 Syntax
```
sca_compile(composite, [outXml], [error], [appHome], [displayLevel], [oracleHome])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>composite</td>
<td>Absolute path of a composite file in the expanded (unzipped) SAR directory.</td>
</tr>
<tr>
<td>outXml</td>
<td>Optional. Absolute path of an output XML file.</td>
</tr>
<tr>
<td>error</td>
<td>Optional. Absolute path of an error file.</td>
</tr>
<tr>
<td>appHome</td>
<td>Optional. Absolute path of the application home directory. This property is required if you have shared data.</td>
</tr>
<tr>
<td>displayLevel</td>
<td>Optional. The level of information to display. The default value is 1.</td>
</tr>
<tr>
<td>oracleHome</td>
<td>Optional. The oracle.home property.</td>
</tr>
</tbody>
</table>

9.6.2.3 Examples
The following example compiles the FirstComposite application.

```
wls:/mydomain/ServerConfig> sca_compile("/tmp/FirstComposite_rev1.0/composite.xml", displayLevel=2)
```

The following example compiles the FirstComposite application and captures details in the myout.xml file. The error.out file captures any errors.

```
wls:/mydomain/ServerConfig> sca_compile("/tmp/FirstComposite_rev1.0/composite.xml", outXml="/tmp/myout.xml", error="error.out")
```

The following example compiles the FirstComposite application. The oracleHome property is set to find the ant-sca-compile.xml script.

```
wls:/mydomain/ServerConfig> sca_compile("/tmp/FirstComposite_rev1.0/composite.xml", displayLevel=2, oracleHome="/scratch/myusername/beahome/AS11gR1SOA")
```
9.7 SOA Composite Application Packaging Commands

Use the packaging command, listed in Table 9–7, to package SOA composite applications into a composite SAR file.

### Table 9–7 SOA Composite Application Packaging Command for WLST Configuration

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>sca_package</td>
<td>Package the SOA composite application files into a composite SAR file.</td>
<td>Offline</td>
</tr>
</tbody>
</table>

#### 9.7.1 sca_package

**Command Category:** Application Packaging Commands

**Use with WLST:** Offline

**Description**

Packages the SOA composite application files into a composite SAR file. This command performs the following operations:

- Calls `scaCompile` to compile the composite artifacts in `${compositeDir}`.
- Calls `javac` to compile any source code under `${compositeDir}/src`.
- Replaces the revision in `${compositeDir}/composite.xml`.
- Packages the artifacts to create `sca_${compositeName}_rev${revision}.jar` in `${compositeDir}/deploy`.

**Note:** The `sca_package` command requires `oracle.home` to find the `ant-sca-package.xml` script. This must be set once. You can use the `scac_setProp` command or `oracleHome` property to set this property.

### 9.7.2 Syntax

`sca_package(compositeDir, compositeName, revision, [appHome], [oracleHome])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>compositeDir</td>
<td>Absolute path of a directory that contains composite artifacts.</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the composite.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision ID of the composite.</td>
</tr>
<tr>
<td>appHome</td>
<td>Optional. Absolute path of the application home directory. This property is required if you have shared data.</td>
</tr>
<tr>
<td>oracleHome</td>
<td>Optional. The <code>oracle.home</code> property.</td>
</tr>
</tbody>
</table>

#### 9.7.3 Examples

The following example packages the `OrderBookingComposite` application. The `appHome` property is set because this application uses shared data.

```bash
wls:/mydomain/ServerConfig> sca_package("/tmp/app_data/OrderBookingComposite", "OrderBookingComposite", "1.0", appHome="/tmp/app_data")
```
9.8 SOA Composite Application Test Commands

Use the SOA composite application test command, listed in Table 9–8, to test a SOA composite applications.

**Table 9–8 SOA Composite Application Test Command for WLST Configuration**

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>sca_test</td>
<td>Test deployed SOA composite applications.</td>
<td>Offline</td>
</tr>
</tbody>
</table>

9.8.1 sca_test

Command Category: Application Test Commands

Use with WLST: Offline

**9.8.1.1 Description**

Tests deployed SOA composite applications prior to deployment in a production environment. You create suites of tests in Oracle JDeveloper. The `sca_test` command calls `ant-sca-test.xml`.

**9.8.1.2 Syntax**

```java
sca_test('compositeName', 'revision', 'testsuiteName', 'jndiPropFile', [oracleHome='oracleHome'], [javaHome='javaHome'])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>compositeName</td>
<td>Name of the SOA composite application.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision ID of the SOA composite application.</td>
</tr>
<tr>
<td>testsuiteName</td>
<td>Name of the test suite.</td>
</tr>
<tr>
<td>jndiPropFile</td>
<td>Absolute path to the JNDI property file.</td>
</tr>
<tr>
<td>oracleHome</td>
<td>Optional. The oracle.home system property.</td>
</tr>
<tr>
<td>javaHome</td>
<td>Optional. The java.passed.home system property.</td>
</tr>
</tbody>
</table>

9.8.1.3 Examples

The following example runs the `OrderBookingMainTestsuite` test suite.

```bash
wls:/mydomain/ServerConfig> sca_test('OrderBookingComposite', '1.0', 'OrderBookingMainTestsuite', '/tmp/tmp-jndi.properties', oracleHome='/scratch/<user>/beahome/AS11gR1SOA/', javaHome='/scratch/<user>/beahome/jdk160_05')
```
9.9 SOA Composite Application HTTP Client-Based Export and Import Commands

Use the SOA composite application commands, listed in Table 9–9, to export and import SOA composite applications based on the HTTP client. The SOA Infrastructure must be running to use these commands.

Table 9–9 SOA Composite Application Export and Import Commands for WLST Configuration

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>sca_exportComposite</td>
<td>Export a SOA composite application into a SAR file.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_exportUpdates</td>
<td>Export postdeployment changes of a SOA composite application into a JAR file.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_importUpdates</td>
<td>Import postdeployment changes of a SOA composite application.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_exportSharedData</td>
<td>Export shared data of a given pattern into a JAR file.</td>
<td>Offline</td>
</tr>
<tr>
<td>sca_removeSharedData</td>
<td>Removes a top-level shared data folder.</td>
<td>Offline</td>
</tr>
</tbody>
</table>

9.9.1 sca_exportComposite

Command Category: Application Export and Import Commands
Use with WLST: Offline

9.9.1.1 Description
Exports a SOA composite application into a SAR file.

9.9.1.2 Syntax

sca_exportComposite(serverURL, updateType, sarFile, compositeName, revision, [user], [password], [partition])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverURL</td>
<td>URL of the server that hosts the SOA Infrastructure application (for example, <a href="http://stabc:8001">http://stabc:8001</a>).</td>
</tr>
<tr>
<td>updateType</td>
<td>Type of postdeployment changes to be exported:</td>
</tr>
<tr>
<td></td>
<td>- all: Includes all postdeployment changes.</td>
</tr>
<tr>
<td></td>
<td>- property: Includes only property postdeployment changes (binding component properties, composite properties such as audit level settings and payload validation status, and policy attachments).</td>
</tr>
<tr>
<td></td>
<td>- runtime: Includes only runtime (rules dictionary and domain value maps (DVMs)) and metadata postdeployment changes.</td>
</tr>
<tr>
<td></td>
<td>- none: Exports the original composite without any postdeployment changes (including property changes and runtime changes).</td>
</tr>
<tr>
<td>sarFile</td>
<td>Absolute path of a SAR file to generate (a .jar file that begins with sca_).</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the composite to export.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision of the composite to export.</td>
</tr>
</tbody>
</table>
9.9.1.3 Examples
The following example exports the composite without including any postdeployment changes.

```
wlsc:/offline/mydomain/ServerConfig> sca_exportComposite('http://stabc:8001', 'none', '/tmp/sca_HelloWorld_rev1.0.jar', 'HelloWorld', '1.0')
```

The following example exports a composite with all postdeployment updates.

```
wlsc:/offline/mydomain/ServerConfig> sca_exportComposite('http://stabc:8001', 'all', '/tmp/sca_HelloWorld_rev1.0-all.jar', 'HelloWorld', '1.0')
```

The following example exports a composite with property postdeployment updates.

```
wlsc:/offline/mydomain/ServerConfig> sca_exportComposite('http://stabc:8001', 'property', '/tmp/sca_HelloWorld_rev1.0-prop.jar', 'HelloWorld', '1.0')
```

The following example exports a composite with runtime/metadata postdeployment updates.

```
wlsc:/offline/mydomain/ServerConfig> sca_exportComposite('http://stabc:8001', 'runtime', '/tmp/sca_HelloWorld_rev1.0-runtime.jar', 'HelloWorld', '1.0')
```

The following example exports a composite in the myPartition partition without including any postdeployment updates:

```
wlsc:/offline/mydomain/ServerConfig> sca_exportComposite('http://stabc:8001', 'none', '/tmp/sca_HelloWorld_rev1.0.jar', 'HelloWorld', '1.0', partition='myPartition')
```

9.9.2 sca_exportUpdates
Command Category: Application Export and Import Commands
Use with WLST: Offline

9.9.2.1 Description
Exports postdeployment changes of a SOA composite application into a JAR file.

9.9.2.2 Syntax
```
sca_exportUpdates(serverURL, updateType, jarFile, compositeName, revision, [user], [password], [partition])
```
9.9.2.3 Examples

The following example exports all postdeployment updates.

```
wls:/offline/mydomain/ServerConfig> sca_exportUpdates('http://stabc:8001', 'all', '/tmp/all-HelloWorld_rev1.0.jar', 'HelloWorld', '1.0')
```

The following example exports property postdeployment changes.

```
wls:/offline/mydomain/ServerConfig> sca_exportUpdates('http://stabc:8001', 'property', '/tmp/prop-HelloWorld_rev1.0.jar', 'HelloWorld', '1.0')
```

The following example exports runtime/metadata postdeployment changes.

```
wls:/offline/mydomain/ServerConfig> sca_exportUpdates('http://stabc:8001', 'runtime', '/tmp/runtime-HelloWorld_rev1.0.jar', 'HelloWorld', '1.0')
```

The following example exports postdeployment changes of a composite in the partition myPartition into a JAR file.

```
wls:/offline/mydomain/ServerConfig> sca_exportUpdates(serverURL, updateType, jarFile, compositeName, revision, user=None, password=None, partition='myPartition')
```

9.9.3 sca_importUpdates

Command Category: Application Export and Import Commands
Use with WLST: Offline

9.9.3.1 Description
Imports postdeployment changes of a SOA composite application.

9.9.3.2 Syntax
sca_importUpdates(serverURL, jarFile, compositeName, revision, [user], [password])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverURL</td>
<td>URL of the server that hosts the SOA Infrastructure application (for example, <a href="http://stabc:8001">http://stabc:8001</a>).</td>
</tr>
<tr>
<td>jarFile</td>
<td>Absolute path of a JAR file that contains postdeployment changes.</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the composite to which the postdeployment changes are imported.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision of the composite to which the postdeployment changes are imported.</td>
</tr>
<tr>
<td>user</td>
<td>Optional. The user name for accessing the server when basic configuration is configured. Use the following syntax for this argument: user='username'</td>
</tr>
<tr>
<td>password</td>
<td>Optional. The password for accessing the server when basic configuration is configured. Use the following syntax for this argument: password='password'</td>
</tr>
<tr>
<td>partition</td>
<td>Optional. The name of the partition in which the SOA composite application is located. The default value is default.</td>
</tr>
</tbody>
</table>

9.9.3.3 Examples
The following example imports postdeployment changes of a SOA composite application.

wls:/offline/mydomain/ServerConfig> sca_importUpdates('http://stabc:8001', '/tmp/all-HelloWorld_rev1.0.jar', 'HelloWorld', '1.0')

The following example imports postdeployment changes of a composite in the partition myPartition.

wls:/offline/mydomain/ServerConfig> sca_importUpdates(serverURL, jarFile, compositeName, revision, user=None, password=None, partition='myPartition')

9.9.4 sca_exportSharedData
Command Category: Application Export and Import Commands
Use with WLST: Offline

9.9.4.1 Description
Exports shared data of a given pattern into a JAR file.

9.9.4.2 Syntax
sca_exportSharedData(serverURL, jarFile, pattern, [user], [password])
The following example exports shared data of a given pattern into a JAR file.

```
wls:/offline/mydomain/ServerConfig> sca_exportSharedData('http://stabc:8001', '/tmp/MySharedData.jar', '/Project1/**')
```

### 9.9.5 `sca_removeSharedData`

**Command Category:** Application Export and Import Commands  
Use with WLST: Offline

**9.9.5.1 Description**
Removes a top-level shared data folder, even if there are composites deployed in the service engine.

**9.9.5.2 Syntax**

```
sca_removeSharedData(serverURL, folderName, [user], [password])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>serverURL</td>
<td>URL of the server that hosts the SOA Infrastructure application (for example, <a href="http://stabc:8001">http://stabc:8001</a>).</td>
</tr>
<tr>
<td>resourceName</td>
<td>The name of a top-level shared data folder to be removed.</td>
</tr>
<tr>
<td>user</td>
<td>Optional. The user name for accessing the server when basic configuration is configured. Use the following syntax for this argument: user='username'</td>
</tr>
<tr>
<td>password</td>
<td>Optional. The password for accessing the server when basic configuration is configured. Use the following syntax for this argument: password='password'</td>
</tr>
</tbody>
</table>
9.9.5.3 Examples
The following example removes the top-level shared data Project1 folder.

`sca_removeSharedData('http://stabc:8001', 'Project1')`

9.10 SOA Composite Application MBean-Based Export and Import Commands

Use the deployment commands, listed in Table 9–10, to export and import SOA composite applications on the server-based composite store MBean (CompositeStoreMXBean).

Table 9–10 SOA Composite Application Export and Import Commands for WLST Configuration

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>sca_exportCompositeMb</code></td>
<td>Export a SOA composite application into a SAR file.</td>
<td>Online</td>
</tr>
<tr>
<td><code>sca_exportUpdatesMb</code></td>
<td>Export postdeployment changes of a SOA composite application into a JAR file.</td>
<td>Online</td>
</tr>
<tr>
<td><code>sca_importUpdatesMb</code></td>
<td>Import postdeployment changes of a SOA composite application.</td>
<td>Online</td>
</tr>
<tr>
<td><code>sca_exportSharedDataMb</code></td>
<td>Export shared data of a given pattern into a JAR file.</td>
<td>Online</td>
</tr>
</tbody>
</table>

If you use this option, note that the file generated in the export commands and the file read in the import command must be on the host where the server is running (either an Oracle WebLogic Administration Server or a managed SOA server).

The composite store MBean is registered as both a server runtime MBean of the SOA server and as a domain runtime MBean of the Oracle WebLogic Administration Server, which allows the import and export to continue working while SOA servers are down. Only WLST commands are provided for using the composite store MBean; there are no ant commands.

You must run the `connect()` command to connect to either a SOA server or an Oracle WebLogic Administration Server.

`wls:offline>connect('weblogic', 'password', 't3://stabc:8001')`

If you use the domain runtime MBean while the SOA servers are down, you must run the `domainRuntime()` command.

`wls:offline>connect('weblogic', 'password', 't3://stabc:7001')
wls:/soainfra/serverConfig>domainRuntime()`

9.10.1 `sca_exportCompositeMb`

Command Category: Application Export and Import Commands

Use with WLST: Online

9.10.1.1 Description

Exports a SOA composite application into a SAR file.
9.10.1.2 Syntax
sca_exportCompositeMb(updateType, sarFile, compositeName, revision)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>updateType</td>
<td>Type of postdeployment changes to be exported:</td>
</tr>
<tr>
<td></td>
<td>all: All postdeployment changes are included.</td>
</tr>
<tr>
<td></td>
<td>property: Property changes are included (binding component properties,</td>
</tr>
<tr>
<td></td>
<td>composite properties such as audit level settings and payload validation</td>
</tr>
<tr>
<td></td>
<td>status, and policy attachments).</td>
</tr>
<tr>
<td></td>
<td>runtime: Postdeployment runtime changes are included (rules dictionary</td>
</tr>
<tr>
<td></td>
<td>and domain value maps (DVMs)).</td>
</tr>
<tr>
<td>sarFile</td>
<td>Absolute path of a SAR file to generate.</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the composite to export.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision of the composite to export.</td>
</tr>
</tbody>
</table>

9.10.1.3 Examples
This example exports composite without including any postdeployment changes.

```
wls:/mydomain/ServerConfig> sca_exportCompositeMb('none', '/tmp/sca_HelloWorld_rev1.0.jar', 'HelloWorld', '1.0')
```

This example exports a composite with all postdeployment updates.

```
wls:/mydomain/ServerConfig> sca_exportCompositeMb('all', '/tmp/sca_HelloWorld_rev1.0-all.jar', 'HelloWorld', '1.0')
```

This example exports a composite with property postdeployment changes.

```
wls:/mydomain/ServerConfig> sca_exportCompositeMb('property', '/tmp/sca_HelloWorld_rev1.0-prop.jar', 'HelloWorld', '1.0')
```

This example exports a composite with runtime/metadata postdeployment changes.

```
wls:/mydomain/ServerConfig> sca_exportCompositeMb('runtime', '/tmp/sca_HelloWorld_rev1.0-runtime.jar', 'HelloWorld', '1.0')
```

9.10.2 sca_exportUpdatesMb
Command Category: Application Export and Import Commands
Use with WLST: Online

9.10.2.1 Description
Exports postdeployment changes of a SOA composite application into a JAR file.

9.10.2.2 Syntax
sca_exportUpdatesMb(updateType, jarFile, compositeName, revision)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>updateType</td>
<td>Type of postdeployment changes to be exported: all,property, or runtime.</td>
</tr>
<tr>
<td>jarFile</td>
<td>Absolute path of a JAR file to generate.</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the composite to export.</td>
</tr>
</tbody>
</table>
9.10.2.3 Examples
The following example exports all postdeployment updates.

```
wls:/mydomain/ServerConfig> sca_exportUpdatesMb('all', '/tmp/all-HelloWorld_rev1.0.jar','HelloWorld', '1.0')
```

The following example exports property postdeployment updates.

```
wls:/mydomain/ServerConfig> sca_exportUpdatesMb('property', '/tmp/prop-HelloWorld_rev1.0.jar', 'HelloWorld', '1.0')
```

The following example exports runtime/metadata postdeployment updates.

```
wls:/mydomain/ServerConfig> sca_exportUpdatesMb('runtime', '/tmp/runtime-HelloWorld_rev1.0.jar', 'HelloWorld', '1.0')
```

9.10.3 sca_importUpdatesMb

Command Category: Application Export and Import Commands

Use with WLST: Online

9.10.3.1 Description
Imports postdeployment changes of a SOA composite application.

9.10.3.2 Syntax

```
sca_importUpdatesMb(jarFile, compositeName, revision)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>jarFile</td>
<td>Absolute path of a JAR file that contains postdeployment changes.</td>
</tr>
<tr>
<td>compositeName</td>
<td>Name of the composite to which the postdeployment changes are imported.</td>
</tr>
<tr>
<td>revision</td>
<td>Revision of the composite to which the postdeployment changes are imported.</td>
</tr>
</tbody>
</table>

9.10.3.3 Examples
The following example imports postdeployment changes of a SOA composite application.

```
wls:/mydomain/ServerConfig> sca_importUpdatesMb('/tmp/all-HelloWorld_rev1.0.jar', 'HelloWorld', '1.0')
```

9.10.4 sca_exportSharedDataMb

Command Category: Application Export and Import Commands

Use with WLST: Online

9.10.4.1 Description
Exports shared data of a given pattern into a JAR file.
9.10.4.2 Syntax

`sca_exportSharedDataMb(jarFile, pattern)`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>jarFile</code></td>
<td>Absolute path of a JAR file to generate.</td>
</tr>
<tr>
<td><code>pattern</code></td>
<td>The file pattern supported by MDS transfer APIs. Use the semicolon delimiter (;) if more than one pattern is specified. Exclude the shared data namespace <code>/apps</code> in the pattern. For example: <code>/Project1/**;/Project2/**</code> This example exports all documents under <code>/apps/Project1</code> and <code>/apps/Project2</code>.</td>
</tr>
</tbody>
</table>

9.10.4.3 Examples

This example exports shared data of given pattern into a JAR file.

`wls:/mydomain/ServerConfig> sca_exportSharedDataMb('/tmp/MySharedData.jar', '/Project1/**')`

9.11 SOA Composite Application Partition Management Commands

Use the deployment commands, listed in Table 9–11, to manage partitions. Partitioning enable you to logically group different revisions of your SOA composite applications into separate sections. This is similar to the concept of domains in the 10.1.x releases of Oracle BPEL Process Manager.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>sca_createPartition</code></td>
<td>Create a partition.</td>
<td>Online</td>
</tr>
<tr>
<td><code>sca_deletePartition</code></td>
<td>Undeploy all SOA composite applications in a partition before deleting the partition.</td>
<td>Online</td>
</tr>
<tr>
<td><code>sca_startCompositesInPartition</code></td>
<td>Start all SOA composite applications in a partition.</td>
<td>Online</td>
</tr>
<tr>
<td><code>sca_stopCompositesInPartition</code></td>
<td>Stop all SOA composite applications in a partition.</td>
<td>Online</td>
</tr>
<tr>
<td><code>sca_activateCompositesInPartition</code></td>
<td>Activate all SOA composite applications in a partition.</td>
<td>Online</td>
</tr>
<tr>
<td><code>sca_retireCompositesInPartition</code></td>
<td>Retire all SOA composite applications in a partition.</td>
<td>Online</td>
</tr>
<tr>
<td><code>sca_listPartitions</code></td>
<td>List all partitions in the SOA Infrastructure.</td>
<td>Online</td>
</tr>
<tr>
<td><code>sca_listCompositesInPartition</code></td>
<td>List all composites in a specific partition.</td>
<td>Online</td>
</tr>
</tbody>
</table>

9.11.1 `sca_createPartition`

Command Category: Application Partition Management Commands
9.11.1 **Description**
Creates a partition.

9.11.1.2 **Syntax**
```
sca_createPartition(partitionName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partitionName</td>
<td>The name of the partition.</td>
</tr>
</tbody>
</table>

9.11.1.3 **Examples**
This example creates a partition named `myPartition`.
```
wls:/mydomain/ServerConfig> sca_createPartition('myPartition')
```

9.11.2 **sca_deletePartition**

Command Category: Application Partition Management Commands

Use with WLST: Online

9.11.2.1 **Description**
Undeploys all composites in a partition before deleting the partition.

9.11.2.2 **Syntax**
```
sca_deletePartition(partitionName)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partitionName</td>
<td>The name of the partition.</td>
</tr>
</tbody>
</table>

9.11.2.3 **Examples**
This example undeploys all composites in the `myPartition` partition before deleting the partition.
```
wls:/mydomain/ServerConfig> sca_deletePartition('myPartition')
```

9.11.3 **sca_startCompositesInPartition**

Command Category: Application Partition Management Commands

Use with WLST: Online

9.11.3.1 **Description**
Starts all composites in a partition.

9.11.3.2 **Syntax**
```
sca_startCompositesInPartition(partitionName)
```
9.11.3.3 Examples
This example starts all composites in the myPartition partition.

```
wls:/mydomain/ServerConfig> sca_startCompositesInPartition('myPartition')
```

9.11.4 sca_stopCompositesInPartition
Command Category: Application Partition Management Commands
Use with WLST: Online

9.11.4.1 Description
Stops all composites in a partition.

9.11.4.2 Syntax
```
sca_stopCompositesInPartition(partitionName)
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partitionName</td>
<td>The name of the partition.</td>
</tr>
</tbody>
</table>

9.11.4.3 Examples
This example stops all composites in the myPartition partition.

```
wls:/mydomain/ServerConfig> sca_stopCompositesInPartition('myPartition')
```

9.11.5 sca_activateCompositesInPartition
Command Category: Application Partition Management Commands
Use with WLST: Online

9.11.5.1 Description
Activates all composites in a partition.

9.11.5.2 Syntax
```
sca_activateCompositesInPartition(partitionName)
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partitionName</td>
<td>The name of the partition.</td>
</tr>
</tbody>
</table>

9.11.5.3 Examples
This example activates all composites in the myPartition partition.

```
wls:/mydomain/ServerConfig> sca_activateCompositesInPartition('myPartition')
```

9.11.6 sca_retireCompositesInPartition
Command Category: Application Partition Management Commands

```
```
9.11.6.1 Description
Retires all composites in a partition.

9.11.6.2 Syntax
sca_retireCompositesInPartition(partitionName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partitionName</td>
<td>The name of the partition.</td>
</tr>
</tbody>
</table>

9.11.6.3 Examples
This example retires all composites in the myPartition partition.

wls:/mydomain/ServerConfig> scala_retireCompositesInPartition('myPartition')

9.11.7 sca_listPartitions
Command Category: Application Partition Management Commands
Use with WLST: Online

9.11.7.1 Description
Lists all partitions in the SOA Infrastructure.

9.11.7.2 Syntax
sca_listPartitions()

9.11.7.3 Examples
This example lists all partitions in the SOA Infrastructure.

wls:/mydomain/ServerConfig> scala_listPartitions()

9.11.8 sca_listCompositesInPartition
Command Category: Application Partition Management Commands
Use with WLST: Online

9.11.8.1 Description
Lists all composites in a partition.

9.11.8.2 Syntax
sca_listCompositesInPartition(partitionName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>partitionName</td>
<td>The name of the partition.</td>
</tr>
</tbody>
</table>

9.11.8.3 Examples
This example lists all composites in the myPartition partition.

sca_listCompositesInPartition('myPartition')
This chapter describes WebLogic Scripting Tool (WLST) commands for Oracle WebCenter. These commands enable you to configure WebCenter applications from the command-line. For additional details about WebCenter application configuration, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

Notes: To use these commands, you must invoke WLST from the Oracle home in which the component has been installed. See "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator’s Guide.

Most configuration changes made using WebCenter WLST commands are only effective after you restart the Managed Server on which the WebCenter application is deployed. The only exceptions are WLST commands for External Applications, Portlet Producers, and WebCenter Import and Export.

WebCenter WLST commands are described in the following sections:

- Section 10.1, "Oracle WebCenter WLST Command Categories"
- Section 10.2, "General"
- Section 10.3, "Analytics"
- Section 10.4, "Activity Graph"
- Section 10.5, "Activity Stream"
- Section 10.6, "Content Repository"
- Section 10.7, "Discussions and Announcements"
- Section 10.8, "External Applications"
- Section 10.9, "Instant Messaging and Presence"
- Section 10.10, "Mail"
- Section 10.11, "Notifications"
- Section 10.12, "Personal Events"
- Section 10.13, "Personalization"
- Section 10.14, "Portlet Producers"
- Section 10.15, "RSS News Feeds"
Oracle WebCenter WLST Command Categories

Oracle WebCenter WLST commands are grouped into the following categories (Table 10–1).

Most configuration changes made using WebCenter WLST commands are only effective after you restart the Managed Server on which the WebCenter application is deployed. The only exceptions are the External Applications, Portlet Producers, and WebCenter Import and Export WLST commands.

**Table 10–1 WLST Command Categories**

<table>
<thead>
<tr>
<th>Command Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>General</td>
<td>Manage WebCenter connections.</td>
</tr>
<tr>
<td>Analytics</td>
<td>Manage Analytics Collector connections and configure the Analytics Collector on WC_Utilities.</td>
</tr>
<tr>
<td>Activity Graph</td>
<td>Manage Activity Graph metadata and provider configuration (on WC_Utilities).</td>
</tr>
<tr>
<td>Activity Stream</td>
<td>Archive and restore activity stream data generated for a WebCenter application.</td>
</tr>
<tr>
<td>Content Repository</td>
<td>Manage content repository connections and configure the Documents service.</td>
</tr>
<tr>
<td>Discussions and Announcements</td>
<td>Manage discussions server connections and configure the Discussion and Announcement services.</td>
</tr>
<tr>
<td>External Applications</td>
<td>Manage external application connections.</td>
</tr>
<tr>
<td>Instant Messaging and Presence</td>
<td>Manage instant messaging and presence server connections and configure the Instant Messaging and Presence service.</td>
</tr>
<tr>
<td>Mail</td>
<td>Manage mail server connections and configure the Mail service.</td>
</tr>
<tr>
<td>Notifications</td>
<td>Manage settings for the Notifications service.</td>
</tr>
<tr>
<td>Personal Events</td>
<td>Manage personal event server connections.</td>
</tr>
<tr>
<td>Personalization</td>
<td>Manage personalization server connections.</td>
</tr>
<tr>
<td>Portlet Producers</td>
<td>Manage portlet producers.</td>
</tr>
<tr>
<td>RSS News Feeds</td>
<td>Manage proxy settings for the RSS service.</td>
</tr>
<tr>
<td>Search - Oracle SES Search</td>
<td>Manage Oracle Secure Enterprise Search (SES) connections and other search-related properties.</td>
</tr>
<tr>
<td>Search - Oracle SES Search Crawlers</td>
<td>Manage Oracle Secure Enterprise Search (SES) crawlers.</td>
</tr>
<tr>
<td>Search - WebCenter Search</td>
<td>Manage search crawlers for WebCenter Spaces.</td>
</tr>
</tbody>
</table>
10.2 General

Use the General commands, listed in Table 10–2, to manage WebCenter connections. Configuration changes made using these WebCenter WLST commands are only effective after restarting the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle Web Center.

Table 10–2 General WLST Commands

<table>
<thead>
<tr>
<th>Use This Command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>deleteConnection</td>
<td>Delete any WebCenter connection.</td>
<td>Online</td>
</tr>
<tr>
<td>setWebCenterServiceFrameworkConfig</td>
<td>Set WebCenter Service Framework configuration properties.</td>
<td>Online</td>
</tr>
<tr>
<td>getWebCenterServiceFrameworkConfig</td>
<td>Return WebCenter Service Framework configuration properties.</td>
<td>Online</td>
</tr>
<tr>
<td>webcenterErrorOccurred</td>
<td>Return status information for the last WebCenter command executed.</td>
<td>Online</td>
</tr>
<tr>
<td>getWebCenterConnectionTypes</td>
<td>List all the WebCenter connection types.</td>
<td>Online</td>
</tr>
<tr>
<td>cloneWebCenterManagedServer</td>
<td>Clone a WebCenter Managed Server.</td>
<td>Online</td>
</tr>
</tbody>
</table>

10.2.1 deleteConnection

Module: Oracle WebCenter

Use with WLST: Online

10.2.1.1 Description

Deletes a named WebCenter connection.

If you use deleteConnection to delete a WSRP or PDK-Java producer connection (instead of using deregisterWSRPProducer or deregisterPDKJavaProducer), unused secondary connections will remain, which you might want to remove. For example, when you delete a WSRP producer connection, its associated Web Service connection remains; when you delete a PDK-Java producer connection, its associated URL connection remains.

10.2.1.2 Syntax

deleteConnection(appName, name, [server, applicationVersion])
### 10.2.1.3 Example
The following example deletes a WebCenter connection.

```
<serverconfig> deleteConnection(appName='webcenter',
    name='MyConnection')
```

### 10.2.2 setWebCenterServiceFrameworkConfig

#### Module: Oracle WebCenter

#### Use with WLST: Online

#### 10.2.2.1 Description
Sets WebCenter Service Framework configuration properties, such as the Resource Action Handler class and display as popup properties.

#### 10.2.2.2 Syntax

```
setWebCenterServiceFrameworkConfig(appName, [resourceActionHandlerClassName], [resourceActionHandlerDisplayInPopup], [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>appName</strong></td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always <code>webcenter</code>.</td>
</tr>
<tr>
<td><strong>resourceActionHandlerClassName</strong></td>
<td>Optional. Class used by the Service Framework Resource Action Handler.</td>
</tr>
<tr>
<td><strong>resourceActionHandlerDisplayInPopup</strong></td>
<td>Optional. Indicates whether the Resource Action Handler displays resources in a popup or inline. Valid options are 1 (true) and 0 (false).</td>
</tr>
<tr>
<td><strong>server</strong></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, <code>WC_Spaces</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><strong>applicationVersion</strong></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

#### 10.2.2.3 Example
The following example sets the WebCenter Service Framework Resource Action Handler class to `my.company.ResourceActionHandler`.

General Oracle WebCenter Custom WLST Commands

10-5

ws://wc_domain/domainRuntime>

setWebCenterServiceFrameworkConfig(appName='webcenter',
resourceActionHandlerClassName='my.company.ResourceActionHandler')

Successfully set the WebCenter service framework configuration.
Resource Action Handler class: my.company.ResourceActionHandler
To effect connection changes, you must restart the managed server on which the
WebCenter application is deployed.

The following example sets only the WebCenter Service Framework Resource Action
Handler display as popup value to 1 (true):

ws://wc_domain/domainRuntime>

setWebCenterServiceFrameworkConfig(appName='webcenter',
resourceActionHandlerDisplayInPopup=1)

Successfully set the WebCenter service framework configuration.
Resource Action Handler Display In Popup: true
To effect connection changes, you must restart the managed server on which the
WebCenter application is deployed.

10.2.3 getWebCenterServiceFrameworkConfig

Module: Oracle WebCenter
Use with WLST: Online

10.2.3.1 Description
Returns WebCenter Service Framework configuration property settings, such as:
- resourceActionHandlerClassName: Class currently used by the WebCenter
  Service Framework Resource Action Handler
- resourceActionHandlerDisplayInPopup: Indicates whether the Resource
  Action Handler displays resources in a popup or inline. Valid options are 1 (true)
  and 0 (false).

10.2.3.2 Syntax
getWebCenterServiceFrameworkConfig(appName, [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.2.3.3 Example
The following example returns the service framework resource action handler class
and display as popup properties, for the named application.
10.2.4 **webcenterErrorOccurred**

Module: Oracle WebCenter

Use with WLST: Online

**10.2.4.1 Description**

Returns the status of last WebCenter command executed.

Use the `webcenterErrorOccurred` command to determine the status of the last WebCenter command executed. The command returns 1 if an error occurred or 0 otherwise.

**10.2.4.2 Syntax**

```
webcenterErrorOccurred ()
```

**10.2.4.3 Example**

The following example returns 1 an error occurred:

```
wls:/mydomain/serverConfig> webcenterErrorOccurred()
```
10.2.5.3 Example
The following example returns WebCenter connection types for an application named webcenter:

\[ \text{wls:/mydomain/serverConfig> getWebCenterConnectionTypes(appName='webcenter')} \]

10.2.6 cloneWebCenterManagedServer
Module: Oracle WebCenter
Use with WLST: Online

10.2.6.1 Description
Creates a new managed server with the same resources as a specified, base managed server.

10.2.6.2 Syntax
\[ \text{cloneWebCenterManagedServer(baseManagedServer, newManagedServer, newManagedServerPort, [verbose])} \]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>baseManagedServer</td>
<td>Name of the base managed server.</td>
</tr>
<tr>
<td>newManagedServer</td>
<td>Name for the new, clone managed server.</td>
</tr>
<tr>
<td>newManagedServerPort</td>
<td>Port number for the new managed server.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Creates the managed server in verbose mode. Valid values are 1 and 0. When set to 1, additional progress information displays during the creation process which is useful for diagnostic purposes. The default is 0.</td>
</tr>
</tbody>
</table>

10.2.6.3 Example
The following example creates a clone of the WC_CustomPortal managed server. The new managed server is named WC_CustomPortal2:

\[ \text{wls:/weblogic/serverConfig> cloneWebCenterManagedServer(baseManagedServer='WC_CustomPortal', newManagedServer='WC_CustomPortal2', newManagedServerPort=1234)} \]

10.3 Analytics

Analytics Collector Connections
Use the commands listed in Table 10–3 to manage Analytics Collector connections for a WebCenter application. Events raised in WebCenter applications using OpenUsage APIs can be sent to an Analytics Collector for use by Analytics and Activity Graph services.

Connection configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.
Analytics Collector and Cluster Configuration

Use the commands listed in Table 10–4 to configure event collection properties for the Analytics Collector that is deployed on the WC_Utilities managed server.

If you reconfigure the Analytics Collector or set up clustering, you must restart the managed server on which the Analytic Collector is deployed (WC_Utilities).

### Table 10–3 Analytics Collector Connection WLST Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>createAnalyticsCollectorConnection</td>
<td>Create a connection to an Analytics Collector for a WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>setAnalyticsCollectorConnection</td>
<td>Edit an existing Analytics Collector connection.</td>
<td>Online</td>
</tr>
<tr>
<td>listAnalyticsCollectorConnections</td>
<td>List all of the Analytics Collector connections that are configured for a WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>setDefaultAnalyticsCollectorConnection</td>
<td>Specify the default (or active) Analytics Collector connection for a WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>listDefaultAnalyticsCollectorConnection</td>
<td>Return connection details for the Analytics Collector being used by a WebCenter application.</td>
<td>Online</td>
</tr>
</tbody>
</table>

### Table 10–4 Analytics Collector Configuration WLST Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>setAnalyticsCollectorConfig</td>
<td>Set Analytics Collector options, and cluster options if operating a clustered environment.</td>
<td>Online</td>
</tr>
<tr>
<td>listAnalyticsCollectorConfig</td>
<td>Return Analytics Collector settings.</td>
<td>Online</td>
</tr>
<tr>
<td>listAnalyticsEventTypes</td>
<td>List events currently registered with the Analytics Collector.</td>
<td>Online</td>
</tr>
</tbody>
</table>

### 10.3.1 createAnalyticsCollectorConnection

Module: Oracle WebCenter

Use with WLST: Online

#### 10.3.1.1 Description

Creates a connection to an Analytics Collector for a named WebCenter application.

Events raised in WebCenter applications using OpenUsage APIs can be sent to an Analytics Collector for use by the Analytics and Activity Graph services.

While you can register multiple Analytics Collector connections for a WebCenter application, only one Analytics Collector connection is used - the default (or active) connection where default=1.

#### 10.3.1.2 Syntax

createAnalyticsCollectorConnection(appName, name, [isUnicast, collectorhost, clusterName, collectorPort, isEnabled, timeout, default, server, applicationVersion])
### Analytics

#### Oracle WebCenter Custom WLST Commands

**10.3.1.3 Example**

The following example creates a connection named `MyAnalyticsCollector` for a WebCenter application named `webcenter`. Events are sent to a single Analytics Collector using unicast communication:

```wls:/weblogic/serverConfig>createAnalyticsCollectorConnection(appName='webcenter',
connectionName='MyAnalyticsCollector', isUnicast=1,
collectorHost='myhost.com', collectorPort=31314, isEnabled=1, timeout=30,
default=1)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always <code>webcenter</code>.</td>
</tr>
<tr>
<td><code>connectionName</code></td>
<td>Connection name. The name must be unique across all connection types within the WebCenter application.</td>
</tr>
<tr>
<td><code>isUnicast</code></td>
<td>Optional. Specifies whether events are sent to a clustered Analytics Collector in multicast mode or whether a single Analytics Collector using unicast communication is required. Valid values are 1 (true) and 0 (false). The default value is 1 (unicast).</td>
</tr>
<tr>
<td><code>collectorHost</code></td>
<td>Optional. Host name where the Analytics Collector is running. The default value is <code>localhost</code>. Only required for unicast communication, that is, where <code>isUnicast='1'</code>.</td>
</tr>
<tr>
<td><code>clusterName</code></td>
<td>Optional. Name of the cluster where a clustered Analytics Collector is running. Only required for multicast communication, that is, where <code>isUnicast=0</code>.</td>
</tr>
<tr>
<td><code>collectorPort</code></td>
<td>Optional. Port on which the Analytics Collector listens for events. The default value is <code>31314</code>.</td>
</tr>
<tr>
<td><code>isEnabled</code></td>
<td>Optional. Specifies whether to send analytics events raised using OpenUsage APIs to the Analytics Collector. Valid values 1 (true) and 0 (false). The default value is 0. Analytics events are sent to the Analytics Collector when <code>isEnabled=1</code> and <code>default=1</code>.</td>
</tr>
<tr>
<td><code>timeout</code></td>
<td>Optional. Length of time (in seconds) to wait for a response from the Analytics Collector. Default value is <code>30</code>. Only required for multicast communication, that is, where <code>isUnicast=0</code>.</td>
</tr>
<tr>
<td><code>default</code></td>
<td>Optional. Indicates whether this connection is the default (or active) Analytics Collector connection for the WebCenter application. Valid values are 1 (true) and 0 (false). When set to 1, the WebCenter application sends events on this connection. When set to 0, the connection is not used. The default for this argument is 0. While you can register multiple Analytics Collector connections for a WebCenter application, only one connection is used by Analytics and Activity Graph services—the default (or active) connection.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, <code>WC_Spaces</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
The following example creates a connection named MyAnalyticsCollector for a WebCenter application named webcenter. Events are sent to a clustered Analytics Collector in multicast mode.

```wls:/weblogic/serverConfig>createAnalyticsCollectorConnection(appName='webcenter',
connectionName='MyAnalyticsCollector', isUnicast=0,
clusterName='collector-cluster',
collectorPort=31314, isEnabled=1, timeout=30, default=1)```

### 10.3.2 setAnalyticsCollectorConnection

**Module:** Oracle WebCenter

**Use with WLST:** Online

#### 10.3.2.1 Description

Edits an existing Analytics Collector connection for a named WebCenter application.

Events raised in WebCenter applications using OpenUsage APIs can be sent to an Analytics Collector for use by the Analytics and Activity Graph services.

While you can register multiple Analytics Collector connections for a WebCenter application, only one Analytics Collector connection is used - the default (or active) connection.

#### 10.3.2.2 Syntax

```python
setAnalyticsCollectorConnection(appName, name, [isUnicast, collectorHost, 
clusterName, collectorPort, isEnabled, timeout, default, server, 
anapplicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types within the WebCenter application).</td>
</tr>
<tr>
<td>isUnicast</td>
<td>Optional. Specifies whether events are sent to a clustered Analytics Collector in multicast mode or whether a single Analytics Collector using unicast communication is required.</td>
</tr>
<tr>
<td>collectorHost</td>
<td>Optional. Host name where the Analytics Collector is running. The default value is localhost. Only required for unicast communication, that is, where isUnicast=1.</td>
</tr>
<tr>
<td>clusterName</td>
<td>Optional. Name of the cluster where a clustered Analytics Collector is running. Only required for multicast communication, that is, where isUnicast=0.</td>
</tr>
<tr>
<td>collectorPort</td>
<td>Optional. Port on which the Analytics Collector listens for events. The default value is 31314.</td>
</tr>
<tr>
<td>isEnabled</td>
<td>Optional. Specifies whether to send analytics events raised using OpenUsage APIs to the Analytics Collector. Valid values 1 (true) and 0 (false). The default value is false. Analytics events are sent to the Analytics Collector when isEnabled=1 and default=1.</td>
</tr>
</tbody>
</table>
### 10.3.2.3 Example

The following example updates host and port details for an existing Analytics Collector connection named `MyAnalyticsCollector`. On this connection, events are sent to a single Analytics Collector in *unicast* mode:

```sh
wls:/weblogic/serverConfig> setAnalyticsCollectorConnection(appName='webcenter',
connectionName='MyAnalyticsCollector',
collectorHost='myhost.com',
collectorPort=31314)
```

The following example updates cluster, port, and timeout details for an existing Analytics Collector connection named `MyAnalyticsCollector`. On this connection, events are sent to a clustered Analytics Collector in *multicast* mode:

```sh
wls:/weblogic/serverConfig> setAnalyticsCollectorConnection(appName='webcenter',
connectionName='MyAnalyticsCollector',
clusterName='collector-cluster',
collectorPort=31314, timeout=60)
```

### 10.3.3 `listAnalyticsCollectorConnections`

**Module:** Oracle WebCenter  
**Use with WLST:** Online

#### 10.3.3.1 Description

Lists connection names and details for all Analytics Collector connections that are configured for a named WebCenter application.

#### 10.3.3.2 Syntax

```
listAnalyticsCollectorConnections(appName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, <code>WC_Spaces</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
### 10.3.3 Examples

The following example lists connection names and details for all the Analytics Collector connections that are currently configured for an application named webcenter.

```
wl:weblogic/serverConfig>listAnalyticsCollectorConnections(appName='webcenter')
```

### 10.3.4 setDefaultAnalyticsCollectorConnection

**Module:** Oracle WebCenter

**Use with WLST:** Online

#### 10.3.4.1 Description

Specifies the default Analytics Collector connection for a named WebCenter application.

The default Analytics Collector connection is used to send events raised in WebCenter applications using OpenUsage APIs to an Analytics Collector for use by Analytics and Activity Graph services.

While you can register multiple Analytics Collector connections for a WebCenter application, only one Analytics Collector connection is used - the default (or active) connection.

#### 10.3.4.2 Syntax

```
setDefaultAnalyticsCollectorConnection(appName, name, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing Analytics Collector connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

#### 10.3.4.3 Example

The following example configures the connection MyAnalyticsCollector for events raised in an application named webcenter:
setDefaultAnalyticsCollectorConnection
(appName='webcenter', name='myAnalyticsCollector')

10.3.5 listDefaultAnalyticsCollectorConnection
Module: Oracle WebCenter
Use with WLST: Online

10.3.5.1 Description
Return details about the Analytics Collector connection that is currently configured for a WebCenter application. While you can register multiple Analytics Collector connections for a WebCenter application, only one Analytics Collector connection is used—the default (or active) connection.

10.3.5.2 Syntax
listDefaultAnalyticsCollectorConnection(appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.3.5.3 Examples
The following example returns details about the Analytics Collector connection that is currently configured for a WebCenter application named webcenter:

wls:/weblogic/serverConfig> listDefaultAnalyticsCollectorConnection(appName='webcenter')

10.3.6 setAnalyticsCollectorConfig
Module: Oracle WebCenter
Use with WLST: Online

10.3.6.1 Description
Configure the Analytics Collector deployed on the WC_Utilities managed server. Additionally, in a clustered environment, use this commands to set cluster settings.

10.3.6.2 Syntax
setAnalyticsCollectorConfig(appName, [collectorHost, defaultPort, maxPort, broadcastType, clusterEnabled, clusterName, clusterBroadcastFrequency, server, applicationVersion])
### 10.3.6.3 Example

The following example changes the default port to 31315:

```bash
wls:/weblogic/serverConfig> setAnalyticsCollectorConnection(appName='analytics-collector', defaultPort=31315)
```

### 10.3.7 listAnalyticsCollectorConfig

**Module:** Oracle WebCenter

**Use with WLST:** Online

#### 10.3.7.1 Description

Returns Analytics Collector settings.
### 10.3.7.2 Syntax

```
listAnalyticsCollectorConfig(appName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Analytics Collector application.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the Analytics Collector is deployed. For example, WC_Utilities. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the application is deployed.</td>
</tr>
</tbody>
</table>

### 10.3.7.3 Examples

The following command lists current settings for the Analytics Collector that is configured for an application named `webcenter`:

```
wls:/weblogic/serverConfig> listAnalyticsCollectorConfig(appName='analytics-collector')
```

This is sample output for an Analytics Collector in a clustered environment:

```
CollectorHost = localhost
CollectorDefaultPort = 31314
CollectorMaximumPort = 31318
BroadcastType = Multicast
ClusterEnabled = 1
ClusterName = myCluster
ClusterBroadcastFrequency = 55
```

This is sample output for a standalone Analytics Collector:

```
CollectorHost = localhost
CollectorDefaultPort = 31314
CollectorMaximumPort = 31314
BroadcastType = Multicast
ClusterEnabled =
ClusterName =
ClusterBroadcastFrequency = 55
```

### 10.3.8 listAnalyticsEventTypes

Module: Oracle WebCenter

Use with WLST: Online

#### 10.3.8.1 Description

Lists all the events currently registered with the Analytics Collector.

#### 10.3.8.2 Syntax

```
listAnalyticsEventTypes(appName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Analytics Collector application.</td>
</tr>
</tbody>
</table>
### 10.3.8.3 Examples

The following command lists all the events currently registered with the Analytics Collector for use by a WebCenter application named `webcenter`:

```
wlcs:/weblogic/serverConfig> listAnalyticsEventTypes(appName='webcenter')
```

Sample output:

```
{HTTP://WWW.ORACLE.COM/ANALYTICS/WC}DISCUSSION_ANNOUNCEMENTEDIT
{HTTP://WWW.ORACLE.COM/ANALYTICS/WC}DISCUSSION_TOPICDELETE
{HTTP://WWW.ORACLE.COM/ANALYTICS/WC}PAGEEDIT
{HTTP://WWW.ORACLE.COM/ANALYTICS/WC}DOCLIB_DOCUMENTCREATE
{HTTP://WWW.ORACLE.COM/ANALYTICS/WC}LOGINS
```

### 10.4 Activity Graph

Use the commands listed in Table 10–5 to manage Activity Graph system properties and metadata.

Configuration changes made using the `setAGProperty` WLST command are only effective after you restart the managed server on which the Activity Graph application is deployed (`WC_Utilities`). For all other commands, configuration changes are effective immediately.

See also, "Managing the Activity Graph Service" in the Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

#### Table 10–5  Activity Graph WLST Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>exportAGMetadata</td>
<td>Export Activity Graph metadata definitions to an XML file.</td>
<td>Online</td>
</tr>
<tr>
<td>importAGMetadata</td>
<td>Import Activity Graph metadata definitions from an XML file.</td>
<td>Online</td>
</tr>
<tr>
<td>exportAGProviderConfiguration</td>
<td>Export provider configuration, for a given provider, to an Activity Graph metadata definition file.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteAllAGMetadata</td>
<td>Delete all the Activity Graph metadata that is defined for a WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteAGAction</td>
<td>Delete the metadata for an action registered with Activity Graph.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteAGNodeClass</td>
<td>Delete the metadata for a node class registered with Activity Graph.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteAGSimilarityCalculation</td>
<td>Delete the metadata for a similarity calculation registered with Activity Graph.</td>
<td>Online</td>
</tr>
</tbody>
</table>
### 10.4.1 exportAGMetadata

**Module:** Oracle WebCenter

**Use with WLST:** Online

#### 10.4.1.1 Description

Exports Activity Graph metadata definitions to an XML file.

#### 10.4.1.2 Syntax

```
exportAGMetadata(appName, directoryPath, definitionFileName, includeProviderConfigurations, [server, applicationVersion])
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td>directoryPath</td>
<td>Destination directory for the XML file that will be generated. If you specify a directory that does not exist then it will be created.</td>
</tr>
<tr>
<td>definitionFileName</td>
<td>Name for the XML file that will be generated. If a file with the same name exists in the destination directory then it will be overwritten.</td>
</tr>
<tr>
<td>includeProviderConfigurations</td>
<td>Determines whether the export includes provider configuration metadata. Valid values are 1 (true) and 0 (false). Provider configurations are a subset of Activity Graph metadata that you may want to manage separately from the other metadata.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the application is deployed. For example, WC Utilities. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
</tbody>
</table>
10.4.1.3 Example
The following example exports Activity Graph metadata definitions to an XML file named `ag-metadata.xml`, at the specified location:

```
exportAGMetadata(appName='activitygraph-engines',
directoryPath='/scratch/myAGmetadata', definitionFileName='ag-metadata.xml',
includeProviderConfigurations='1')
```

10.4.2 importAGMetadata

Module: Oracle WebCenter

Use with WLST: Online

10.4.2.1 Description
Imports Activity Graph metadata definitions from an XML file.

On import, new Activity Graph metadata definitions are created on the target and existing definitions are overwritten.

10.4.2.2 Syntax

```
importAGMetadata(appName, definitionFilePath, [server, applicationVersion])
```

10.4.3 exportAGProviderConfiguration

Module: Oracle WebCenter

Use with WLST: Online

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always <code>activitygraph-engines</code>.</td>
</tr>
<tr>
<td>definitionFilePath</td>
<td>Relative path to the XML file containing metadata definitions. For example, <code>metadata/import-metadata.xml</code>.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the application is deployed. For example, <code>WC_Utilities</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

10.4.3.3 Example
The following example exports Activity Graph metadata definitions to an XML file named `ag-metadata.xml`:

```
importAGMetadata(appName='activitygraph-engines',
definitionFilePath='metadata/import-metadata.xml')
```

10.4.3 exportAGProviderConfiguration

Module: Oracle WebCenter

Use with WLST: Online
10.4.3.1 Description
Exports provider configuration, for a given provider, to an Activity Graph metadata definition file.

10.4.3.2 Syntax

\[
\text{exportAGProviderConfiguration}(\text{appName}, \text{directoryPath}, \text{definitionFileName}, \text{urn}, [\text{server, applicationVersion}])
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td>directoryPath</td>
<td>Destination directory for the XML file that will be generated. If you specify a directory that does not exist, then it will be created.</td>
</tr>
<tr>
<td>definitionFilePath</td>
<td>Name for the XML file that will be generated. If a file with the same name exists in the destination directory then it will be overwritten. Example</td>
</tr>
<tr>
<td>urn</td>
<td>URN for the Activity Graph provider to export.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the application is deployed. For example, WC_Utilities. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

10.4.3.3 Example
The following example exports configuration information for the Activity Graph provider oracle.webcenter.activitygraph.analytics to an XML file named ag-provider-config.xml, at the specified location:

\[
\text{wls:\weblogic/serverConfig>}
\text{exportAGProviderConfiguration}(\text{appName}=\text{activitygraph-engines'},
\text{directoryPath}=/\text{scratch/myAGmetadata'},
\text{definitionFileName}=\text{ag-provider-config.xml'},
\text{urn}='\text{oracle.webcenter.activitygraph.analytics'})
\]

10.4.4 deleteAllAGMetadata
Module: Oracle WebCenter
Use with WLST: Online

10.4.4.1 Description
Deletes all the Activity Graph metadata that is defined for a WebCenter application. The delete operation is immediate and non-reversible.

You can use this command in conjunction with the WLST command importAGMetadata to completely re-install Activity Graph metadata.

Note: Any data in the relation store, similarity store, and rank store will be deleted the next time the Activity Graph engines run.

10.4.4.2 Syntax

deleteAllAGMetadata(appName, [server, applicationVersion])
### 10.4.4.3 Example

The following example deletes all existing Activity Graph metadata:

```
wls:/weblogic/serverConfig> deleteAllAGMetadata(appName='activitygraph-engines')
```

### 10.4.5 deleteAGAction

Module: Oracle WebCenter

Use with WLST: Online

#### 10.4.5.1 Description

Deletes the metadata for an action that is currently registered with Activity Graph. The delete operation is immediate and non-reversible.

**Note:** Any data in the relation store that is associated with the action will be deleted the next time the Activity Graph engines run.

#### 10.4.5.2 Syntax

```
deleteAGAction(appName, urn, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>appName</strong></td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td><strong>urn</strong></td>
<td>URN for the Activity Graph action to delete.</td>
</tr>
<tr>
<td><strong>server</strong></td>
<td>Optional. Name of the managed server where the application is deployed. For example, WC_Utilities. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><strong>applicationVersion</strong></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

#### 10.4.5.3 Example

The following example deletes Activity Graph metadata for the `connect` action:

```
wls:/weblogic/serverConfig> deleteAGAction(appName='activitygraph-engines', urn='connect')
```

### 10.4.6 deleteAGNodeClass

Module: Oracle WebCenter

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>appName</strong></td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td><strong>server</strong></td>
<td>Optional. Name of the managed server where the application is deployed. For example, WC_Utilities. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><strong>applicationVersion</strong></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

**Note:**

*Any data in the relation store that is associated with the action will be deleted the next time the Activity Graph engines run.*
Use with WLST: Online

10.4.6.1 Description
Deletes the metadata for a node class that is currently registered with Activity Graph. The delete operation is immediate and non-reversible.

Note: Any data in the relation store that is associated with the node class will be deleted the next time the Activity Graph engines run.

10.4.6.2 Syntax
```
deleteAGNodeClass(appName, urn, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td>urn</td>
<td>URN for the Activity Graph node class to delete.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the application is deployed. For example, WC_Utilities. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

10.4.6.3 Example
The following example deletes Activity Graph metadata for the node class WC.wiki-page action:
```
wlsh:/weblogic/serverConfig> deleteAGNodeClass(appName='activitygraph-engines', urn='WC.wiki-page')
```

10.4.7 deleteAGSimilarityCalculation
Module: Oracle WebCenter
Use with WLST: Online

10.4.7.1 Description
Deletes the metadata for a similarity calculation that is currently registered with Activity Graph. The delete operation is immediate and non-reversible.

10.4.7.2 Syntax
```
deleteAGSimilarityCalculation(appName, urn, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td>urn</td>
<td>URN for the Activity Graph similarity calculation to delete.</td>
</tr>
</tbody>
</table>
### 10.4.7.3 Example

The following example deletes Activity Graph metadata for the similarity calculation `item-edit`:

```
> deleteAGSimilarityCalculation(appName='activitygraph-engines', urn='item-edit')
```

### 10.4.8 deleteAGRankCalculation

**Module:** Oracle WebCenter  
**Use with WLST:** Online

#### 10.4.8.1 Description

Deletes the metadata for a rank calculation that is currently registered with Activity Graph. The delete operation is immediate and non-reversible.

#### 10.4.8.2 Syntax

`deleteAGRankCalculation(appName, urn, [server, applicationVersion])`

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the Activity Graph application in which to perform this operation—always <code>activitygraph-engines</code>.</td>
</tr>
<tr>
<td><code>urn</code></td>
<td>URN for the Activity Graph rank calculation to delete.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the application is deployed. For example, <code>WC_Utilities</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

#### 10.4.8.3 Example

The following example deletes Activity Graph metadata for the `activity-rank` calculation:

```
> deleteAGRankCalculation(appName='activitygraph-engines', urn='activity-rank')
```

### 10.4.9 deleteAGProviderAssignment

**Module:** Oracle WebCenter  
**Use with WLST:** Online
10.4.9.1 Description
Deletes the metadata for a provider assignment that is currently registered with 
Activity Graph, that is, a provider assignment defined by the unique triple 
combination \((\text{action}, \text{sourceClass}, \text{trgClass})\).

The delete operation is immediate and non-reversible.

10.4.9.2 Syntax
\[
\text{deleteAGProviderAssignment(appName, actionURN, srcClasURN, trgClassURN [server, applicationVersion])}
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td>actionURN</td>
<td>URN for the action.</td>
</tr>
<tr>
<td>srcClassURN</td>
<td>URN for the source node class.</td>
</tr>
<tr>
<td>trgClassURN</td>
<td>URN for the target node class.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the application is deployed. For example, WC Utilities. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

10.4.9.3 Example
The following example deletes Activity Graph metadata for the provider assignment specified:

\[
\text{wls:/weblogic/serverConfig> deleteAGRProviderAssignment(appName='activitygraph-engines', actionURN='connect', srcClassURN='WC.user', trgClassURN='WC.user')}
\]

10.4.10 deleteAGQRPPRegistration
Module: Oracle WebCenter
Use with WLST: Online

10.4.10.1 Description
Deletes the metadata for a QRPP (Query Result Post Processor) that is currently registered with Activity Graph.

The delete operation is immediate and non-reversible.

10.4.10.2 Syntax
\[
\text{deleteAGQRPPRegistration(appName, urn [server, applicationVersion])}
\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td>urn</td>
<td>URN for the QRPP to delete.</td>
</tr>
</tbody>
</table>
### 10.4.10.3 Example

The following example deletes Activity Graph metadata for a QRPP named Event store metadata QRPP:

```
ws:/weblogic/serverConfig>
deleteAGQRPPRegistration(appName='activitygraph-engines', urn='Event store metadata QRPP')
```

### 10.4.11 deleteAGProviderConfiguration

Module: Oracle WebCenter

Use with WLST: Online

#### 10.4.11.1 Description

Deletes the metadata for a provider configuration. The delete operation is immediate and non-reversible.

#### 10.4.11.2 Syntax

```
deleteAGProviderConfiguration(appName, urn [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the Activity Graph application in which to perform this operation—always <code>activitygraph-engines</code>.</td>
</tr>
<tr>
<td><code>urn</code></td>
<td>URN for the Activity Graph provider to delete.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the application is deployed. For example, <code>WC_Utilities</code>.</td>
</tr>
<tr>
<td></td>
<td>Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

#### 10.4.11.3 Example

The following example deletes configuration information for the Activity Graph provider `oracle.webcenter.activitygraph.analytics`:

```
ws:/weblogic/serverConfig>
deleteAGProviderConfiguration(appName='activitygraph-engines', urn='oracle.webcenter.activitygraph.analytics')
```

### 10.4.12 renameAGAction

Module: Oracle WebCenter

Use with WLST: Online

---

**Argument** | **Definition**
---|---
`server` | Optional. Name of the managed server where the application is deployed. For example, `WC_Utilities`. Required when applications with the same name are deployed to different servers and also when you have a cluster.

`applicationVersion` | Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.
10.4.12 Description
Changes the URN of an action that is currently registered with Activity Graph. Any data in the relation store that is associated with the action is preserved.

**Note:** This command does not delete the action and create an action with a different name as this causes data associated with the original action to be deleted.

10.4.12.2 Syntax

\[ \text{renameAGAction}(\text{appName}, \text{currentURN}, \text{newURN}, [\text{server}, \text{applicationVersion}]) \]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td>currentURN</td>
<td>Current action URN.</td>
</tr>
<tr>
<td>newURN</td>
<td>New action URN.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the application is deployed. For example, WC_Utilities. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

10.4.12.3 Example
The following example changes the connect action URN to people-connect:

\[ \text{wls:/weblogic/serverConfig> renameAGAction}(\text{appName}='activitygraph-engines', \text{currentURN}='connect', \text{newURN}='people-connect') \]

10.4.13 renameAGNodeClass
Module: Oracle WebCenter
Use with WLST: Online

10.4.13.1 Description
Changes the URN of a node class that is currently registered with Activity Graph. Any data in the relation store that is associated with the node class is preserved.

**Note:** This command does not delete the node class and create a node class with a different name as this would cause data associated with the original node class to be deleted.

10.4.13.2 Syntax

\[ \text{renameAGNodeClass}(\text{appName}, \text{currentURN}, \text{newURN}, [\text{server}, \text{applicationVersion}]) \]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
</tbody>
</table>
10.4.13.3 Example

The following example changes the WC.user node class URN to WC.people:

```
wls:/weblogic/serverConfig> renameAGNodeClass(appName='activitygraph-engines',
currentURN='WC.user', newURN='WC.people')
```

10.4.14 setAGProperty

Module: Oracle WebCenter

Use with WLST: Online

**10.4.14.1 Description**

Sets a system property for Activity Graph. This command sets a value based on the property’s datatype (String, Integer, Float, Boolean).

Activity Graph system properties include settings for:

- Oracle Secure Enterprise Search (SES) Admin API Web service connection
- Rank engine
- JNDI datasources
- Activity Graph database
- Analytics database
- Debugging and testing

See also, "Managing the Activity Graph Service" in the *Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter* for a list of system properties and their datatypes.

Configuration changes made using the `setAGProperty` WLST command are only effective after your restart the managed server on which the Activity Graph application is deployed (WC_Utilities).

**10.4.14.2 Syntax**

```
setAGProperty(appName, propertyName, propertyValue, propertyType, [server, applicationVersion] )
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>appName</strong></td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td><strong>propertyName</strong></td>
<td>Name of the Activity Graph property.</td>
</tr>
<tr>
<td><strong>propertyValue</strong></td>
<td></td>
</tr>
<tr>
<td><strong>propertyType</strong></td>
<td></td>
</tr>
<tr>
<td><strong>server</strong></td>
<td>Name of the managed server where the application is deployed. For example, WC_Utilities. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><strong>applicationVersion</strong></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>
10.4.14.3 Example
The following example enables the Rank Engine:

```bash
wls:/weblogic/serverConfig> setAGProperty(appName='activitygraph-engines',
propertyName='oracle.webcenter.activitygraph.rankengine.enabled',
propertyValue='true', propertyType='boolean')
```

10.4.15 getAGProperty

Module: Oracle WebCenter

Use with WLST: Online

10.4.15.1 Description

Returns the current setting for a given Activity Graph property.

See also, "Managing the Activity Graph Service" in the Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter for a list of valid system properties.

10.4.15.2 Syntax

```bash
getAGProperty(appName, propertyName, propertyType [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always <code>activitygraph-engines</code>.</td>
</tr>
<tr>
<td>propertyName</td>
<td>Name of the Activity Graph property.</td>
</tr>
<tr>
<td>propertyType</td>
<td>Datatype of the property. Valid values are: String, Int, Float or Boolean. Values are case sensitive.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the application is deployed. For example, <code>WC_Utilities</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>
10.4.15.3 Example

The following example returns the current value of the system property
oracle.webcenter.activitygraph.providers.datasources.ses.soap.admin.url:

```
wls:/weblogic/serverConfig> getAGProperty(appName='activitygraph-engines',
    propertyName='oracle.webcenter.activitygraph.providers.datasources.ses.soap.admin.url', propertyType='String')
```

10.4.16 setAGPasswordCredential

Module: Oracle WebCenter

Use with WLST: Online

10.4.16.1 Description

Sets credentials (user name and password) for an Activity Graph credential property.

See also, "Managing the Activity Graph Service" in the Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter for a list of properties with the PasswordCredential datatype, for example, oracle.webcenter.activitygraph.providers.datasources.ses.soap.admin.credential.

10.4.16.2 Syntax

```
setAGPasswordCredentialProperty(appName, propertyName, userName, password,[server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the Activity Graph application in which to perform this operation—always activitygraph-engines.</td>
</tr>
<tr>
<td>propertyName</td>
<td>Name of the Activity Graph property that specifies credentials (and has PasswordCredential datatype).</td>
</tr>
<tr>
<td>userName</td>
<td>User name associated with the credential property.</td>
</tr>
<tr>
<td>password</td>
<td>Password associated with the user name specified.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the application is deployed. For example, WC_Utilities. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the Activity Graph application is deployed.</td>
</tr>
</tbody>
</table>

10.4.16.3 Example

The following example sets user name and password credentials for the Oracle SES Admin tool:

```
wls:/weblogic/serverConfig> setAGProperty(appName='activitygraph-engines',
    propertyName='oracle.webcenter.activitygraph.providers.datasources.ses.soap.admin.credential',
    userName='myname', password='GuessWhat')
```
10.5 Activity Stream

Use the commands listed in Table 10–6 to archive and restore activity stream data generated for a WebCenter application.

Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

Table 10–6 Activity Stream WLST Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>archiveASByDate</td>
<td>Archive activity stream data that is older than a specified date.</td>
<td>Online</td>
</tr>
<tr>
<td>archiveASByDeletedObjects</td>
<td>Archive activity stream data associated with deleted objects.</td>
<td>Online</td>
</tr>
<tr>
<td>archiveASByClosedSpaces</td>
<td>Archive activity stream data associated with Spaces that are currently closed.</td>
<td>Online</td>
</tr>
<tr>
<td>archiveASByInactiveSpaces</td>
<td>Archive activity stream data associated with Spaces that have been inactive since a specified date.</td>
<td>Online</td>
</tr>
<tr>
<td>restoreASByDate</td>
<td>Restore archived activity stream data from a specified date into production tables.</td>
<td>Online</td>
</tr>
<tr>
<td>truncateASArchive</td>
<td>Truncates activity stream archive data.</td>
<td>Online</td>
</tr>
</tbody>
</table>

10.5.1 archiveASByDate

Module: Oracle WebCenter

Use with WLST: Online

10.5.1.1 Description

Archives activity stream data that is older than a specified date.

This command moves data from production tables to archive tables. Exceptions include WC_ACTOR_DETAIL and WC_OBJECT_DETAIL—data in these tables is copied to archive tables rather than moved.

Rows in WC_OBJECT_DETAIL that are not used by any activity element are deleted.

10.5.1.2 Syntax

archiveASByDate(appName, year, month, day, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>year</td>
<td>Year before which to archive activity stream data. For example, 2009.</td>
</tr>
<tr>
<td>month</td>
<td>Month before which to archive activity stream data. For example, enter 1 for January, 2 for February, and so on.</td>
</tr>
<tr>
<td>day</td>
<td>Day of the month before which to archive activity stream data.</td>
</tr>
</tbody>
</table>
10.5.1.3 Example
The following example archives activity stream data that is older than October 1, 2009:

```
$ wls:/weblogic/serverConfig> archiveASByDate(appName='webcenter', year=2009, month=10, day=1)
```

10.5.2 archiveASByDeletedObjects
Module: Oracle WebCenter
Use with WLST: Online

10.5.2.1 Description
Archives activity stream data associated with deleted objects.

This command moves data from production tables to archive tables, except for `WC_ACTOR_DETAIL`—data in this table is copied to the archive table rather than moved.

Rows in `WC_OBJECT_DETAIL` that satisfy the criteria (in this case, deleted objects) are deleted.

10.5.2.2 Syntax
```
archiveASByDeletedObjects(appName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.5.2.3 Example
The following example archives activity stream data associated with deleted objects:

```
$ wls:/weblogic/serverConfig> archiveASByDeletedObjects(appName='webcenter')
```

10.5.3 archiveASByClosedSpaces
Module: Oracle WebCenter
Use with WLST: Online
10.5.3.1 Description
Archives activity stream data associated with Spaces that are currently closed.

This command moves data from production tables to archive tables, except for WC_ACTOR_DETAIL—data in this table is copied to the archive table rather than moved. Rows in WC_OBJECT_DETAIL that satisfy the criteria (in this case, objects involved in activities of Spaces that are closed) are deleted.

10.5.3.2 Syntax
archiveASByClosedSpaces(appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.5.3.3 Example
The following example archives activity stream data associated with Spaces that are currently closed:

wls:/weblogic/serverConfig> archiveASByClosedSpaces(appName='webcenter')

10.5.4 archiveASByInactiveSpaces
Module: Oracle WebCenter
Use with WLST: Online

10.5.4.1 Description
Archives activity stream data associated with Spaces that have been inactive since a specified date. An inactive Space is an open or closed Space in which there has been no activity since the specified date.

This command moves data from production tables to archive tables, except for WC_ACTOR_DETAIL—data in this table is copied to the archive table rather than moved. Rows in WC_OBJECT_DETAIL that satisfy the criteria (in this case, objects involved in activities of Spaces that have been inactive since the specified date) are deleted.

10.5.4.2 Syntax
archiveASByInactiveSpaces(appName, year, month, day, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>year</td>
<td>Year the Space became inactive. For example, 2009.</td>
</tr>
<tr>
<td>month</td>
<td>Month the Space became inactive. For example, enter 1 for January, 2 for February, and so on.</td>
</tr>
</tbody>
</table>
10.5.4.3 Example
The following example archives activity stream data associated with Spaces that have been inactive (no activities have occurred, regardless of open or closed status) since October 1, 2009:

```
wlsc:weblogic/serverConfig> archiveASByInactiveSpaces(appName='webcenter',
year=2009, month=10, day=1)
```

10.5.5 restoreASByDate
Module: Oracle WebCenter
Use with WLST: Online

10.5.5.1 Description
Restores archived activity stream data from a specified date into production tables. This command moves data from archive tables to production tables, except for `WC_ACTOR_DETAIL`—data in this table is not restored because data is not deleted from this table during the archive process.

Rows that already exist in the production tables are not changed during the restore process.

10.5.5.2 Syntax
```
restoreASByDate(appName, year, month, day, [server, applicationVersion])
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>year</td>
<td>Year from which to restore activity stream data. For example, 2009.</td>
</tr>
<tr>
<td>month</td>
<td>Month from which to restore activity stream data. For example, enter 1 for January, 2 for February, and so on.</td>
</tr>
<tr>
<td>day</td>
<td>Day of the month from which to restore activity stream data.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, <code>WC_Spaces</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.5.5.3 Example
The following example restores activity stream data archived since October 1, 2009:

```wls:/weblogic/serverConfig>restoreASByDate(appName='webcenter', year=2009, month=10, day=1)```

10.5.6 truncateASArchive

Module: Oracle WebCenter

Use with WLST: Online

10.5.6.1 Description
Truncates activity stream archive data.

10.5.6.2 Syntax
```
truncateASArchive(appName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.5.6.3 Example
The following example truncates activity stream archive data:

```
wls:/weblogic/serverConfig>truncateASArchive(appName='webcenter')
```

10.6 Content Repository

Use the commands listed in Table 10–7 to manage content repository connections and configure the Documents service for a WebCenter application.

Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>createJCRContentServerConnection</td>
<td>Create an Oracle Content Server repository connection.</td>
<td>Online</td>
</tr>
<tr>
<td>setJCRContentServerConnection</td>
<td>Edit an existing Oracle Content Server connection.</td>
<td>Online</td>
</tr>
<tr>
<td>listJCRContentServerConnections</td>
<td>List individual or all Oracle Content Server connections that are configured for a WebCenter application.</td>
<td>Online</td>
</tr>
</tbody>
</table>
### 10.6.1 createJCRContentServerConnection

**Module:** Oracle WebCenter  
**Use with WLST:** Online

#### 10.6.1.1 Description

Creates an Oracle Content Server repository connection, for a named WebCenter application.

#### 10.6.1.2 Syntax

```java
createJCRContentServerConnection(appName, name, [socketType, [url, serverHost, serverPort, keystoreLocation, keystorePassword, privateKeyAlias, privateKeyPassword, webContextRoot, clientSecurityPolicy, cacheInvalidationInterval, binaryCacheMaxEntrySize, adminUsername, adminPassword, extAppId, timeout, isPrimary, server, applicationVersion]])
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
</tbody>
</table>
socketType

Specifies whether the Oracle Content Server connects on the content server listener port or the Web server filter, and whether the listener port is SSL enabled. Valid values are socket, web, and socketssl. This option has no default.

Choose from:

- socket—Use an intradoc socket connection to connect to the Oracle Content Server. The client IP address must be added to the list of authorized addresses in the Oracle Content Server. In this case, the client is the machine on which Oracle WebCenter is running.

- socketssl—Use an intradoc socket connection to connect to the Oracle Content Server that is secured using the SSL protocol. The client's certificates must be imported in the server's trust store for the connection to be allowed. Because this is the most secure option, this is the recommended option whenever identity propagation is required (for example, in WebCenter Spaces).

- web—Use an HTTP(S) connection to connect to the Oracle Content Server. Note that for WebCenter Spaces, this option is not suitable for the active connection, that is, the back-end Oracle Content Server repository that is being used to store Space documents and Home Space documents, because it does not allow identity propagation.

- jaxws—Use a Java API for XML Web Services connection to connect to the Oracle Content Server.

url

Optional. Oracle Content Server URL. Required only if socketType is set to web or jaxws. URL should be in the format: http://<hostname>:<port>/<web root>/<plugin root>

For example, http://mycontentserver/cms/idcplg.

serverHost

Optional. Host name of the machine where the Oracle Content Server is running. Required if socketType is set to socket or socketssl.

serverPort

Optional. Port on which the Oracle Content Server listens. Required if socketType is set to socket or socketssl:

- Socket—Port specified for the incoming provider in the server.

- Socket SSL—Port specified for the sslicoming provider in the server.

This property corresponds to the IntradocServerPort setting in the Content Server configuration file, which defaults to port 4444.

keystoreLocation

Optional. Location of key store that contains the private key used to sign the security assertions. Required only if socketType is set to socketssl.

The key store location must be an absolute path.

keystorePassword

Optional. Password required to access the key store. Required only if socketType is set to socketssl.

privateKeyAlias

Optional. Client private key alias in the key store. The key is used to sign messages to the server. The public key corresponding to this private key must be imported in the server keystore.

Required only if socketType is set to socketssl. The value for this argument must be a string that contains neither special characters nor white space.

privateKeyPassword

Optional. Password to be used with the private key alias in the key store. Required only if socketType is set to socketssl.
webContextRoot

Optional. Web server context root for Oracle Content Server. Use the format /<context_root>. For example, /cs.

When specified, several Oracle Universal Content Management (UCM) features based on iFrame are available in the WebCenter application. This includes:

- **Associating a content profile with files when uploading new or updated files to Oracle Content Server.**
  
  For more information, see "Uploading New Files" and "Uploading a New Version of an Existing File" in Oracle Fusion Middleware User's Guide for Oracle WebCenter.

- **Using the document review functionality available in Oracle AutoVue.**
  
  For more information, see "Reviewing and Collaborating on Documents Using AutoVue" in Oracle Fusion Middleware User's Guide for Oracle WebCenter.

- **Editing advanced document properties.**
  
  For more information, see "Working with File Properties" in Oracle Fusion Middleware User’s Guide for Oracle WebCenter.

- **Viewing folder and file workflow details.**
  
  For more information, see "Viewing Workflow Information" in Oracle Fusion Middleware User’s Guide for Oracle WebCenter.

- **Previewing files in a slide viewer.**
  
  For more information, see "Opening a File" in Oracle Fusion Middleware User’s Guide for Oracle WebCenter.

- **Site Studio integration**
  
  For more information, see Oracle Fusion Middleware User's Guide for Oracle WebCenter.

webContextRoot is only applicable when IDENTITY_PROPAGATION is used for authentication, that is, when extAppId is set to an empty string.

**Note:** To fully enable these UCM features you must access the WebCenter application through Oracle HTTPS Server (OHS) to expose Oracle Content Server and the WebCenter application under the same host and port. The WebCenter application and Oracle Content Server must also both use single sign on. For information about setting up OHS to front-end WebCenter applications, see "Oracle Content Server - Configuration" in Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

If your WebCenter application is connected to multiple UCM servers, Oracle recommends that each UCM server has a unique Web Server Context Root so that OHS re-direction works correctly.

clientSecurityPolicy

Optional. Client security policy to be used when the socketType is jaxws. For example: oracle/wss11_saml_token_with_message_protection_service_policy

cacheInvalidationInterval

Optional. Frequency between checks for external Oracle Content Server content changes (in minutes). WebCenter automatically clears items that have changed from the cache. Defaults to 0 which means that cache invalidation is disabled. The minimum interval is 2 minutes.

**Tune this value based on your machine's memory configuration and the types of binary documents that you expect to cache.**

binaryCacheMaxEntrySize

Optional. Maximum cacheable size (in bytes) for Oracle Content Server binary documents. Documents larger than this size are not cached by WebCenter. Defaults is 102400 bytes (100K).
10.6.1.3 Examples

The following example creates a socket-based connection to an Oracle Content Server running on myhost.com at port 4444. For authentication purposes, an existing external application named myExtApp is used. See also, createExtAppConnection.

```plaintext
wls:/weblogic/serverConfig> createJCRContentServerConnection(appName='webcenter', name='myContentServerConnection', socketType='socket', serverHost='myhost.com', serverPort='4444', extAppId='myExtApp', isPrimary=1)
```

The following example creates an SSL socket-based connection to an Oracle Content Server repository.

```plaintext
wls:/weblogic/serverConfig> createJCRContentServerConnection(appName='webcenter', name='myContentServerConnection', socketType='socketssl', serverHost='myhost.com', serverPort='4444', keystoreLocation='d:/keys/here', keystorePassword='AlphaSquad7', privateKeyAlias='enigma', privateKeyPassword='S0larPl3x1s', extAppId='myExtApp')
```

The following example creates a JAX-WS (Java API for XML Web Services) connection to an Oracle Content Server repository:

```plaintext
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>adminUsername</td>
<td>Optional. User name with administrative rights for this Oracle Content Server instance. This user will be used to fetch content type information based on profiles and track document changes for cache invalidation purpose. Defaults to sysadmin.</td>
</tr>
<tr>
<td>adminPassword</td>
<td>Optional. Password for the Oracle Content Server administrator specified in adminUsername. Required when socketType is set to web.</td>
</tr>
<tr>
<td>extAppId</td>
<td>Optional. External application used to authenticate WebCenter users against the Oracle Content Server. This value should match the name of an existing external application connection. See also listExtAppConnections. If extAppId is not set, no change is made to the authentication method or external application ID. If extAppId is set to an empty string, the authentication method used is IDENTITY_PROPAGATION. With this method, the WebCenter application and Oracle Content Server use the same identity store to authenticate users. Note that extAppId is mandatory when socketType is set to web.</td>
</tr>
<tr>
<td>timeout</td>
<td>Optional. Length of time allowed to log in to Oracle Content Server (in ms) before issuing a connection timeout message. If no timeout is set, there is no time limit for the login operation.</td>
</tr>
<tr>
<td>isPrimary</td>
<td>Optional. Valid string values are 1 (true) and 0 (false). 1 specifies that this connection is the primary connection used by the Documents service. This argument defaults to 0. In WebCenter Spaces, the primary connection is used to store Space content and Home Space content.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
wls:/weblogic/serverConfig> createJCRContentServerConnection(appName='webcenter',
name='myContentServerConnection', socketType='jaxws',
token_client_policy')

10.6.2 setJCRContentServerConnection

Module: Oracle WebCenter
Use with WLST: Online

10.6.2.1 Description
Edits an existing Oracle Content Server connection. This command requires that you
specify values for appName and name, plus one additional argument.

10.6.2.2 Syntax
setJCRContentServerConnection(appName, name, [socketType, url, serverHost,
serverPort, keystoreLocation, keystorePassword, privateKeyAlias,
privateKeyPassword, webContextRoot, clientSecurityPolicy,
cacheInvalidationInterval, binaryCacheMaxEntrySize, adminUsername, adminPassword,
extAppId, timeout, isPrimary, server, applicationVersion])

<td></td>
<td>running. Required if socketType is set to socket or socketssl.</td>
</tr>
</tbody>
</table>
### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| `serverPort`      | Optional. Port on which the Oracle Content Server listens. Required if `socketType` is set to `socket` or `socketssl`:
  - **Socket**—Port specified for the incoming provider in the server.  
  - **Socket SSL**—Port specified for the sslIncoming provider in the server.  
  For example, 4444 |
| `keystoreLocation`| Optional. Location of key store that contains the private key used to sign the security assertions. Required only if `socketType` is set to `socketssl`.  
  The key store location must be an absolute path. |
| `keystorePassword`| Optional. Password required to access the key store. Required only if `socketType` is set to `socketssl`. |
| `privateKeyAlias` | Optional. Client private key alias in the key store. Required only if `socketType` is set to `socketssl`. The value for this argument must be a string that contains neither special characters nor white space. |
| `privateKeyPassword` | Optional. Password to be used with the private key alias in the key store. Required only if `socketType` is set to `socketssl`. |
| `webContextRoot`  | Optional. Web server context root for Oracle Content Server. Use the format `/<context_root>`. For example, `/cs`.  
  When specified, several Oracle Universal Content Management (UCM) features based on iFrame, such as previewing files in a slide viewer, are available in the WebCenter application.  
  **Note:** To fully enable these UCM features you must access the WebCenter application through Oracle HTTPS Server (OHS) to expose Oracle Content Server and the WebCenter application under the same host and port. The WebCenter application and Oracle Content Server must also both use single sign on. For information about setting up OHS to front-end WebCenter applications, see "Oracle Content Server - Configuration" in Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.  
  `webContextRoot` is only applicable when `IDENTITY_PROPAGATION` is used for authentication, that is, when `extAppId` is set to an empty string. |
| `clientSecurityPolicy` | Optional. Client security policy to be used when the `socketType` is `jaxws`. For example: `oracle/wss11_saml_token_with_message_protection_service_policy` |
| `cacheInvalidationInterval` | Optional. Frequency between checks for external Oracle Content Server content changes (in minutes). WebCenter automatically clears items that have changed from the cache. Defaults to 0 which means that cache invalidation is disabled. The minimum interval is 2 minutes. |
| `binaryCacheMaxEntrySize` | Optional. Maximum cacheable size (in bytes) for Oracle Content Server binary documents. Documents larger than this size are not cached by WebCenter. Defaults is 102400 bytes (100K).  
  Tune this value based on your machine's memory configuration and the types of binary documents that you expect to cache. |
| `adminUsername`    | Optional. User name with administrative rights for this Oracle Content Server instance. This user will be used to fetch content type information based on profiles and track document changes for cache invalidation purpose. Defaults to `sysadmin`. |
| `adminPassword`    | Optional. Password for the Oracle Content Server administrator specified in `adminUsername`. Required when `socketType` is set to `web`. |
10.6.2.3 Examples

The following example edits a socket-based connection to an Oracle Content Server.

```wls:/weblogic/serverConfig> setJCRContentServerConnection(appName='webcenter', name='myContentServerConnection', socketType='socket', serverHost='myhost.com', serverPort='4444', extAppId='myExtApp', isPrimary=1)
```

The following example edits an SSL socket-based connection to an Oracle Content Server.

```wls:/weblogic/serverConfig> setJCRContentServerConnection(appName='webcenter', name='myContentServerConnection', socketType='socketssl', serverHost='myhost.com', serverPort='8443', keystoreLocation='d:/keys/here', keystorePassword='T0PS3CR3T', privateKeyAlias='TekJansen', privateKeyPassword='LadyNocturne', extAppId='myExtApp', isPrimary=1)
```

The following example edits a JAX-WS (Java API for XML Web Services) connection to an Oracle Content Server repository:

```wls:/weblogic/serverConfig> setJCRContentServerConnection(appName='webcenter', socketType='jaxws', url='http://myhost.com:9044/idcnativews', clientSecurityPolicy='oracle/wss10_saml_token_client_policy')
```

10.6.3 listJCRContentServerConnections

Module: Oracle WebCenter
Use with WLST: Online
10.6.3.1 Description
Without any arguments, this command lists all of the Oracle Content Server connections that are configured for a named WebCenter application.

10.6.3.2 Syntax
listJCRContentServerConnections(appName, [verbose], [name, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays content repository connection details in verbose mode. Valid options are 1 (true) and 0 (false). When set to 1, listJCRContentServerConnections lists all Oracle Content Server connections that are configured for a WebCenter application, along with their details. When set to 0, only connection names are listed. This argument defaults to 0.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing Oracle Content Server connection. When specified you can view connection details for a specific Oracle Content Server connection. If you supply a value for name, you must supply a value for verbose.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.6.3.3 Examples
The following example lists Oracle Content Server connections configured for an application named webcenter.

```bash
wls:/weblogic/serverConfig> listJCRContentServerConnections(appName='webcenter')
```

The following example lists all properties of the Oracle Content Server connection named myContentServerConnection1. The connection named myContentServerConnection1 must exist and be an Oracle Content Server connection. If, for example, you specify an Oracle Portal connection, the properties are not listed and an error is displayed.

```bash
wls:/weblogic/serverConfig> listJCRContentServerConnections(appName='webcenter', verbose=1, name='myContentServerConnection1')
```

10.6.4 createJCRPortalConnection
Module: Oracle WebCenter
Use with WLST: Online

10.6.4.1 Description
Creates an Oracle Portal repository connection.

10.6.4.2 Syntax
createJCRPortalConnection(appName, name, dataSource, [extAppId, isPrimary,
timeout, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
<tr>
<td>dataSource</td>
<td>JNDI DataSource location used to connect to the portal. For example: jdbc/portalDS. The datasource must be on the server where the WebCenter application is deployed.</td>
</tr>
<tr>
<td>extAppId</td>
<td>Optional. External application used to authenticate WebCenter users against Oracle Portal. This value should match the name of an existing external application connection. See also listExtAppConnections. If extAppId is not set, no change is made to the authentication method or external application ID. If extAppId is set to an empty string, the authentication method used is IDENTITY_PROPAGATION. With this method, the WebCenter application and Oracle Portal use the same identity store to authenticate users.</td>
</tr>
<tr>
<td>timeout</td>
<td>Optional. Length of time allowed to log in to Oracle Portal (in ms) before issuing a connection timeout message. If no timeout is set, there is no time limit for the login operation.</td>
</tr>
<tr>
<td>isPrimary</td>
<td>Optional. Valid string values are 1 (true) and 0 (false). 1 specifies that this connection is the primary connection used by the Documents service. This argument defaults to 0. In WebCenter Spaces, the primary connection must be an Oracle Content Server connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.6.4.3 Example
The following example creates a Oracle Portal connection named myPortalConnection using the data source jdbc/portalDS and specifies that an external application, named myExtApp, is used for authentication.

wls:/weblogic/serverConfig> createJCRPortalConnection(appName='myApp', name='myPortalConnection', dataSource='jdbc/portalDS', extAppId='myExtApp', isPrimary=1)

10.6.5 setJCRPortalConnection
Module: Oracle WebCenter
Use with WLST: Online

10.6.5.1 Description
Edits an existing Oracle Portal connection. This command requires that you specify values for either the dataSource or isPrimary argument.
10.6.5.2 Syntax

```java
setJCRPortalConnection(appName, name, [dataSource, extAppId, timeout, isPrimary, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing Oracle Portal connection.</td>
</tr>
<tr>
<td>dataSource</td>
<td>Optional. JNDI DataSource location used to connect to the portal. For example: jdbc/MyPortalDS. The datasource must be on the server where the WebCenter application is deployed.</td>
</tr>
<tr>
<td>extAppId</td>
<td>Optional. External application used to authenticate WebCenter users against Oracle Portal. This value should match the name of an existing external application connection. See also listExtAppConnections. If extAppId is not set, no change is made to the authentication method or external application ID. If extAppId is set to an empty string, the authentication method used is IDENTITY_PROPAGATION. With this method, the WebCenter application and Oracle Portal use the same identity store to authenticate users.</td>
</tr>
<tr>
<td>timeout</td>
<td>Optional. Length of time allowed to log in to Oracle Portal (in ms) before issuing a connection timeout message. If no timeout is set, there is no time limit for the login operation.</td>
</tr>
<tr>
<td>isPrimary</td>
<td>Optional. Valid string values are 1 (true) and 0 (false). 1 specifies that this connection is the primary connection used by the Documents service. When set to 0, and the specified connection is the primary connection used by the Documents service, the primary connection is reset. If this parameter is not set, the primary connection used by the Documents service does not change. This argument has no default. In WebCenter Spaces, the primary connection must be an Oracle Content Server connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.6.5.3 Example

The following example edits Oracle Portal repository connection details.

```bash
wls:/weblogic/serverConfig> setJCRPortalConnection(appName='webcenter', name='myPortalConnection', dataSource='/newPortalDS', extAppId='myExtApp', isPrimary=0)
```

10.6.6 listJCRPortalConnections

Module: Oracle WebCenter

Use with WLST: Online
10.6.6.1 Description
Without any arguments, this command lists all of the Oracle Portal connections that are configured for a named WebCenter application.

10.6.6.2 Syntax
listJCRPortalConnections(appName, [verbose, name, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays content repository connection details in verbose mode. Valid options are 1 (true) and 0 (false). When set to 1, listJCRPortalConnections lists all Oracle Portal connections that are configured for a WebCenter application, along with their details. When set to 0, only connection names are listed. This argument defaults to 0.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing Oracle Portal connection. When specified you can view connection details for a specific Oracle Portal connection. If you supply a value for name, you must supply a value for verbose.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.6.6.3 Example
The following example lists all of the Oracle Portal connections that are configured for a WebCenter application.

```wls/weblogic/serverConfig> listJCRPortalConnections(appName='webcenter', verbose=1, name='myPortalConnection')```

10.6.7 createJCRFileSystemConnection
Module: Oracle WebCenter
Use with WLST: Online

10.6.7.1 Description
Creates a connection to a file system repository.

**Note:** File system connections must not be used in production or enterprise application deployments. This feature is provided for development purposes only.

10.6.7.2 Syntax
createJCRFileSystemConnection(appName, name, path, [isPrimary, server, applicationVersion])
**10.6.7.3 Example**
The following example creates a connection to a file system repository.

```
wlst:/weblogic/serverConfig> createJCRFileSystemConnection(appName='webcenter',
name='FSAConnection', path='C:/ProjectDocuments')
```

**10.6.8 setJCRFileSystemConnection**

Module: Oracle WebCenter
Use with WLST: Online

**10.6.8.1 Description**
Edits an existing file system repository connection. This command requires that you specify values for either the `path` or `isPrimary` arguments.

**Note:** File system connections must not be used in production or enterprise application deployments. This feature is provided for development purposes only.

**10.6.8.2 Syntax**
```
setJCRFileSystemConnection(appName, name, [path, isPrimary, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Application name in which to set Document service properties.</td>
</tr>
</tbody>
</table>

**Argument Definitions**

<table>
<thead>
<tr>

</tbody>
</table>
10.6.8.3 Example
The following example edits connection details for a file system repository.

```
wlsl/weblogic/serverConfig> setJCRFileSystemConnection(appName='webcenter',
name='FSAConnection', path='C:/ProjectDocuments')
```

10.6.9 listJCRFileSystemConnections
Module: Oracle WebCenter
Use with WLST: Online

10.6.9.1 Description
Without any arguments, this command lists all of the file system connections that are configured for a named WebCenter application.

**Note:** File system connections must not be used in production or enterprise application deployments. This feature is provided for development purposes only.

10.6.9.2 Syntax
```
listJCRFileSystemConnections(appName, [verbose, name, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name for the connection to be used by the Documents service.</td>
</tr>
<tr>
<td>path</td>
<td>Optional. Full path to a folder whose contents you want to expose through this file system connection. For example, if you have a folder called C:\ProjectDocuments and you want to use that folder with the Documents service, you need to specify this folder as the path argument to this command.</td>
</tr>
<tr>
<td>isPrimary</td>
<td>Optional. Valid values are 1 (true) and 0 (false). When set to 1, specifies that this connection is the primary connection used by the Documents service. When set to 0, and when the specified connection is the primary connection used by the Documents service, the primary connection is reset. If this parameter is not set, the primary connection used by the Documents service does not change. This argument has no default. Note that in WebCenter Spaces, the primary connection must be an Oracle Content Server connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>

<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.6.9.3 Examples
The following example lists all of the file system connections that are configured for an application named webcenter.

```
> listJCRFileSystemConnections(appName='webcenter')
```

The following example lists all of the file system connections that are configured, in verbose mode.

```
> listJCRFileSystemConnections(appName='webcenter', verbose=1)
```

10.6.10 createJCRSharePointConnection
Module: Oracle WebCenter
Use with WLST: Online

10.6.10.1 Description
Creates a connection to a Microsoft SharePoint 2007 repository.

10.6.10.2 Syntax
```
createJCRSharePointConnection(appName, name, url, [likeLimit, extAppId, timeout, isPrimary, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
<tr>
<td>url</td>
<td>Web address of the SharePoint site to which you want to connect.</td>
</tr>
</tbody>
</table>

For example, if the SharePoint site address is http://mysharepoint.mycompany.com, enter this value for the url argument.
10.6.10.3 Example

The following example creates a connection to a Microsoft SharePoint site.

```
  wls:/weblogic/serverConfig> createJCRSharePointConnection(appName='webcenter',
                          name='MySPConnection', url='http://mysharepoint.mycompany.com',
                          extAppId='myExtApp')
```

10.6.11 setJCRSharePointConnection

Module: Oracle WebCenter

Use with WLST: Online
10.6.11.1 Description
Edits an existing Microsoft SharePoint 2007 repository connection. This command requires that you specify values for appName and name, plus at least one additional argument.

10.6.11.2 Syntax

```
setJCRSharePointConnection(appName, name, [url, likeLimit, extAppId, timeout, isPrimary, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing SharePoint connection.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. Web address of the SharePoint site to which you want to connect.</td>
</tr>
<tr>
<td>likeLimit</td>
<td>Optional. Number of characters the LIKE operator matches. The default is 64. The SharePoint query language can use a LIKE keyword to constrain URL queries (document paths) that match a search pattern. By default, the LIKE operator supports a pattern match on strings up to 64 characters. Use this argument to specify a different character limit (any positive integer between 1 and 64) or enter likeLimit=0 to disable the LIKE limit, that is, always send the full query string to the Microsoft SharePoint server. Oracle recommends the default value (64). The default is suitable in most instances so, typically, there is no need to set a new value. To reset the default, specify likeLimit='' or likeLimit=64. <strong>Note:</strong> Only specify a value above 64 if your SharePoint instance supports LIKE queries on URLs greater than 64 characters.</td>
</tr>
<tr>
<td>extAppId</td>
<td>Optional. External application used to authenticate WebCenter users against the SharePoint repository. This value should match the name of an existing external application connection. See also listExtAppConnections. If extAppId is not set, no change is made to the current external application ID. If no external application is set, the SharePoint connection will not work.</td>
</tr>
<tr>
<td>timeout</td>
<td>Optional. Length of time allowed to log in to the SharePoint repository (in ms) before issuing a connection timeout message. If no timeout is set, there is no time limit for the login operation.</td>
</tr>
<tr>
<td>isPrimary</td>
<td>Optional. Valid values are 1 (true) and 0 (false). 1 specifies that this connection is the primary connection used by the Documents service. When set to 0, and the specified connection is the primary connection used by the Documents service, the primary connection is reset. If this parameter is not set, the primary connection used by the Documents service does not change. This argument has no default. In WebCenter Spaces, the primary connection must be an Oracle Content Server connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
</tbody>
</table>
10.6.11.3 Example
The following example edits SharePoint repository connection details.

```
<wls:/weblogic/serverConfig> setJCRSharePointConnection(appName='webcenter',
    name='MySPConnection', url='http://mysharepoint.mycompany.com',
    extAppId='myExtApp')
```

10.6.12 listJCRSharePointConnections
Module: Oracle WebCenter
Use with WLST: Online

10.6.12.1 Description
Without any arguments, this command lists all of the SharePoint connections that are configured for a named WebCenter application.

10.6.12.2 Syntax
```
listJCRSharePointConnections(appName, [verbose, name, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays SharePoint connection details in verbose mode. Valid options are 1 (true) and 0 (false). When set to 1, listJCRSharePointConnections lists all SharePoint connections that are configured for a WebCenter application, along with their details. When set to 0, only connection names are listed. This argument defaults to 0.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing SharePoint connection. When specified you can view connection details for a specific SharePoint connection. If you supply a value for name, you must supply a value for verbose.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.6.12.3 Example
The following example lists the names of all the SharePoint connections that are configured for an application named webcenter.

```
<wls:/weblogic/serverConfig> listJCRSharePointConnections(appName='webcenter')
```

The following example lists connection details for all of the SharePoint connections that are configured.
10.6.13 listDocumentsSpacesProperties

Module: Oracle WebCenter
Use with WLST: Online

10.6.13.1 Description
Lists properties for the back-end Oracle Content Server repository that is being used by WebCenter Spaces to store Space documents and Home Space documents. This command is only valid for the WebCenter Spaces application.

10.6.13.2 Syntax
listDocumentsSpacesProperties(appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Spaces application in which to perform this operation—always 'webcenter'</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, 'WC_Spaces'. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.6.13.3 Example
The following example lists properties for the back-end Oracle Content Server repository that is being used by a WebCenter Spaces application (named 'webcenter') to store Space documents and Home Space documents.

wls:/weblogic/serverConfig> listDocumentsSpacesProperties(appName='webcenter')

The Documents Spaces container is "/WebCenter1109"
The Documents repository administrator is "sysadmin"
The Documents Spaces container is "/WebCenter1109"
The Documents primary connection is "myOCSConnection"

10.6.14 setDocumentsSpacesProperties

Module: Oracle WebCenter
Use with WLST: Online

10.6.14.1 Description
Modifies properties for the back-end Oracle Content Server repository that is being used by WebCenter Spaces to store Space-related data. This command is only valid for the WebCenter Spaces application.

10.6.14.2 Syntax
setDocumentsSpacesProperties(appName, [spacesRoot, adminUserName, applicationName, server, applicationVersion])
The following example modifies connection properties for the back-end Oracle Content Server repository that is being used by WebCenter Spaces to store Space documents and Home Space documents.

```
wlst:/weblogic/serverConfig> setDocumentsSpacesProperties(appName='webcenter',
spacesRoot='/AccountingSpaces', adminUserName='admin',
applicationName='WCAccounting')
```
The following example modifies the administrator’s user name for the back-end Oracle Content Server repository that is being used by WebCenter Spaces to store Space documents and Home Space documents.

```
wl:/weblogic/serverConfig> setDocumentsSpacesProperties(appName='webcenter',
adminUserName='sysadmin')
```

**10.6.15 deleteDocumentsSpacesProperties**

Module: Oracle WebCenter

Use with WLST: Online

**10.6.15.1 Description**

Deletes properties for the back-end Oracle Content Server repository used by WebCenter Spaces, that is the `adminUserName`, `applicationName`, and `spacesRoot`. This command is only valid for the WebCenter Spaces application.

**10.6.15.2 Syntax**

`deleteDocumentsSpacesProperties(appName, [server, applicationVersion])`

**10.6.15.3 Example**

The following example deletes connection properties (`adminUserName`, `applicationName`, `spacesRoot`) of the back-end Oracle Content Server repository that is being used by WebCenter Spaces.

```
wl:/weblogic/serverConfig> deleteDocumentsSpacesProperties(appName='webcenter')
```

**10.7 Discussions and Announcements**

Use the commands listed in Table 10–8 to manage discussions server connections for WebCenter applications.

Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see *Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter*.

**Table 10–8 Discussion and Announcement WLST Commands**

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>createDiscussionForumConnection</code></td>
<td>Create a new discussions server connection for a WebCenter application.</td>
<td>Online</td>
</tr>
</tbody>
</table>
10.7.1 `createDiscussionForumConnection`

Module: Oracle WebCenter

Use with WLST: Online

**10.7.1.1 Description**

Creates a new discussions server connection for a named WebCenter application.

The Discussions service and the Announcements service both require a discussions server connection. Both services use the same discussions server connection.
While you can register multiple discussions server connections for a WebCenter application, only one connection is used for discussion and announcement services - the default (or active) connection.

10.7.1.2 Syntax

```java
createDiscussionForumConnection(appName, name, url, adminUser,
    [timeout, default, policyURIForAuthAccess, policyURIForPublicAccess,
    recipientKeyAlias])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
<tr>
<td>url</td>
<td>URL of the discussions server hosting discussion forums and announcements. For example: <code>http://myhost:8888/owc_discussions</code>.</td>
</tr>
<tr>
<td>adminUser</td>
<td>Name of the discussions server administrator. This account is used by the Discussions and Announcements services to perform administrative operations on behalf of WebCenter users. This account is mostly used for managing discussions and announcements in WebCenter Spaces. It is not necessary for this user to be a super admin. However, the user must have administrative privileges on the current application root category for WebCenter Spaces, that is, the category (on the discussions server) under which all Space-related discussions and announcements are stored.</td>
</tr>
</tbody>
</table>
| policyURIForAuthAccess | Optional. URI to the SAML token based policy required for authenticated access to the discussions server Web service. The client policy specified must be compatible with the service policy that is configured for the OWCDiscussionsServiceAuthenticated endpoint in the discussions server. Out-of-the-box, the default service policy is WSS 1.0 SAML Token Service Policy (`oracle/wss10_saml_token_service_policy`). Valid client policy values include:  
  - `oracle/wss10_saml_token_client_policy` (WSS 1.0 SAML Token Client Policy)  
  - `oracle/wss11_saml_token_with_message_protection_client_policy` (WSS 1.1 SAML Token with Message Protection Client Policy)  
  - GPA (Global Policy Attachment) - Use GPA if your environment supports Global Policy Attachments. In addition, ensure that the default policy is detached from the OWCDiscussionsServiceAuthenticated endpoint in the discussions server using the WLST command `detachWebServicePolicy` or Enterprise Manager. See also "Managing the Announcements and Discussions Services" in the Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter. |
10.7.1.3 Example

The following example creates a discussions server connection for a WebCenter application.

```
wls:/weblogic/serverConfig> createDiscussionForumConnection(appName='webcenter',
name='MyDiscussionServer', url='http://myhost.com:8888/owc_discussions',
adminUser='admin', policyURIForAuthAccess='oracle/wss10_saml_token_client_policy',
default=0)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| policyURIForPublicAccess | Optional. URI to the policy required to enforce message security and integrity for public access to the discussions server Web service. Default value is oracle/no_authentication_client_policy. The client policy specified must be compatible with the service policy that is configured for the OWCDiscussionsServicePublic endpoint in the discussions server. Out-of-the-box, a service policy is not configured for public access (oracle/no_authentication_client_policy). Valid client policy values include:  
  ■ oracle/no_authentication_client_policy (None)  
  ■ oracle/wss11_with_message_protection_client_policy (WSS 1.1 Message Protection Client Policy)  
  ■ GPA (Global Policy Attachment) - Use GPA if your environment supports Global Policy Attachments. In addition, you must ensure that the default policy attached to the OWCDiscussionsServicePublic endpoint in the discussions server is set to oracle/no_authentication_service_policy.  
| recipientKeyAlias      | Optional. Recipient key alias to be used for message protected policies (applicable to the OWCDiscussionsServicePublic and OWCDiscussionsServiceAuthenticated endpoints). This is the alias to the certificate that contains the public key of the discussions server in the configured keystore. The default is null.  
See also “Configuring WS-Security for WebCenter Applications and Components” in the Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.  
| timeout                | Optional. Length of time (in seconds) the Discussions service waits for a response from the discussions server before issuing a connection timeout message. This argument defaults to -1. When set to -1, the service default (10 seconds) applies.  
| default                | Optional. Indicates that this connection is the default connection for the Discussions and Announcements services. Valid options are 1 (true) and 0 (false). When set to 1, the Discussions service and the Announcements service both use this connection. When set to 0, the connection is not used. The default is 0.  
| server                 | Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.  
| applicationVersion     | Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.  

10.7.2 setDiscussionForumConnection

Module: Oracle WebCenter
Use with WLST: Online

10.7.2.1 Description
Edits an existing discussions server connection. Use this command to update connection attributes.

The connection is created using the createDiscussionForumConnection command.

10.7.2.2 Syntax

setDiscussionForumConnection(appName, name, [url, adminUser, policyURIForAuthAccess, policyURIForPublicAccess, recipientKeyAlias, timeout, default, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing discussions server connection.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. URL to the discussions server.</td>
</tr>
<tr>
<td>adminUser</td>
<td>Optional. Name of the discussions server administrator. This account is used by the Discussions service to perform administrative operations on behalf of WebCenter users. This account is mostly used for managing discussions and announcements in WebCenter Spaces. It is not necessary for this user to be a super admin. However, the user must have administrative privileges on the current root category for WebCenter Spaces, that is, the category (on the discussions server) under which all WebCenter Spaces discussion forums are stored.</td>
</tr>
</tbody>
</table>
| policyURIForAuthAccess | Optional. URI to the SAML token based policy required for authenticated access to the discussions server Web service. The client policy specified must be compatible with the service policy that is configured for the OWCDiscussionsServiceAuthenticated endpoint in the discussions server. Out-of-the-box, the default service policy is WSS 1.0 SAML Token Service Policy (oracle/wss10_saml_token_service_policy). Valid client policy values include:  
  - oracle/wss10_saml_token_client_policy (WSS 1.0 SAML Token Client Policy)  
  - oracle/wss11_saml_token_with_message_protection_client_policy (WSS 1.1 SAML Token with Message Protection Client Policy)  
  - GPA (Global Policy Attachment) - Use GPA if your environment supports Global Policy Attachments. In addition, ensure that the default policy is detached from the OWCDiscussionsServiceAuthenticated endpoint in the discussions server using the WLST command detachWebServicePolicy or Enterprise Manager. See also "Managing the Announcements and Discussions Services" in the Oracle Fusion Middleware Administrator's Guide for Oracle WebCenter. |
| timeout            |                                                                                                                                           |
| default            |                                                                                                                                           |
| server             |                                                                                                                                           |
| applicationVersion |                                                                                                                                           |
### Argument | Definition
--- | ---
`policyURIForPublicAccess` | Optional. URI to the policy required to enforce message security and integrity for public access to the discussions server Web service. Default value is `oracle/no_authentication_client_policy`. The client policy specified must be compatible with the service policy that is configured for the `OWCDiscussionsServicePublic` endpoint in the discussions server. Out-of-the-box, a service policy is not configured for public access (`oracle/no_authentication_client_policy`). Valid client values include:
- `oracle/no_authentication_client_policy` (None)
- `oracle/wss11_with_message_protection_client_policy` (WSS 1.1 Message Protection Client Policy)
- GPA (Global Policy Attachment) - Use GPA if your environment supports Global Policy Attachments. In addition, you must ensure that the default policy attached to the `OWCDiscussionsServicePublic` endpoint in the discussions server is set to `oracle/no_authentication_service_policy`.

`recipientKeyAlias` | Optional. Recipient key alias to be used for message protected policy authentication. Only required when the discussion server connection is using a message protection-based security policy for authentication. The default is null. See also "Configuring WS-Security for WebCenter Applications and Components" in the Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

`timeout` | Optional. Length of time (in seconds) the Discussion and Announcement services wait for a response from the discussions server before issuing a connection timeout message. This argument defaults to -1. When set to -1, the service default (10 seconds) applies.

`default` | Optional. Indicates that this connection is the default connection for the Discussions and Announcements services. Required only if more than one connection is defined. Valid options are 1 (true) and 0 (false). When set to 1, the Discussion and Announcement services use this connection. When set to 0, the connection is not used. The default is 0.

To specify that the Discussion and Announcements services use this connection, change the value from 0 to 1.

To disable this connection, use the `removeDiscussionForumServiceProperty` command:
```
removeDiscussionForumServiceProperty('appName='webcenter', property='selected.connection')
```

**Note:** While you can register multiple discussions server connections for a WebCenter application, only one connection is used for discussion and announcement services—the default (or active) connection.

`server` | Optional. Name of the managed server where the WebCenter application is deployed. For example, `WC_Spaces`. Required when applications with the same name are deployed to different servers and also when you have a cluster.

`applicationVersion` | Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.
10.7.2.3 Example
The following example updates attributes for a secure discussions server connection named MyDiscussionsServer.

```shell
wls:/weblogic/serverConfig> setDiscussionForumConnection(appName='webcenter',
name='MyDiscussionsServer', url='http://myhost.com:7786/owc_discussions',
adminUser='admin', policyURIForAuthAccess='oracle/wss10_saml_token_client_policy',
default=1)
```

10.7.3 setDiscussionForumConnectionProperty

Module: Oracle WebCenter

Use with WLST: Online

10.7.3.1 Description
Sets a discussions server connection property. Use this command when additional parameters are required to connect to your discussions server.

This commands provides an extensible way to add any connection property using a key and a value. (You are not limited to connection properties specified by createDiscussionForumConnection and setDiscussionForumConnection.)

**Note:** Do not use the setDiscussionForumConnectionProperty to set connection properties available through createDiscussionForumConnection or setDiscussionForumConnection. Attempting to do so, has no effect.

All known, additional connection properties are listed in Table 10–9, "Additional Discussion Connection Properties".

**Table 10–9 Additional Discussion Connection Properties**

<table>
<thead>
<tr>
<th>Additional Connection Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>application.root.category.id</td>
<td>(WebCenter Spaces only) Application root category ID on the discussions server under which all discussion forums are stored. For example, if set to 3, then all forums are stored inside the category 3.</td>
</tr>
</tbody>
</table>

10.7.3.2 Syntax

```shell
setDiscussionForumConnectionProperty(appName, name, key, value, [secure, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing discussions server connection.</td>
</tr>
<tr>
<td>key</td>
<td>Name of the connection property.</td>
</tr>
<tr>
<td>value</td>
<td>Value for the property. Allows any property to be modified on the connection with a key and value.</td>
</tr>
</tbody>
</table>
10.7.3.3 Example

The following example configures the location of the keystore certificate for a
discussions server connection named MyDiscussionServer.

```shell
wls:/weblogic/serverConfig> setDiscussionForumConnectionProperty
(appName='webcenter', name='MyDiscussionServer',
key='application.root.category.id', value='3')
```

The following example adds a custom discussions server connection property called
myProperty1 with a value propertyValue1.

```shell
wls:/weblogic/serverConfig> setDiscussionForumConnectionProperty
(appName='webcenter', name='MyDiscussionServer', key='myProperty1',
value='propertyValue1')
```

The following example adds a secured discussions server connection property called
securedProperty with the value secureValue.

```shell
wls:/weblogic/serverConfig> setDiscussionForumConnectionProperty
(appName='webcenter', name='MyDiscussionServer', key='securedProperty',
value='secureValue', secure=1)
```

10.7.4 deleteDiscussionForumConnectionProperty

Module: Oracle WebCenter

Use with WLST: Online

10.7.4.1 Description

Deletes a discussions server connection property. Take care when deleting connection
properties because the connection may not work as expected if the configuration
becomes invalid as a result.

This command can only delete additional connection properties added using the
setDiscussionForumConnectionProperty command.

10.7.4.2 Syntax

`deleteDiscussionForumConnectionProperty(appName, name, key, [server, applicationVersion])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>secure</td>
<td>Optional. Indicates whether the property value must be stored securely using encryption. Valid options are 1 (true) and 0 (false). When 1, the value is encrypted. The default option is 0. Set to 1 if you are storing passwords.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.7.4.3 Example
The following example deletes a discussions server connection property named myProperty1.

\[\text{wls:/weblogic/serverConfig> deleteDiscussionForumConnectionProperty (appName='webcenter', name='MyDiscussionServer', key='myProperty1')}\]

10.7.5 listDiscussionForumConnections
Module: Oracle WebCenter
Use with WLST: Online

10.7.5.1 Description
Lists all of the discussions server connections that are configured for a named WebCenter application.

10.7.5.2 Syntax
\[\text{listDiscussionForumConnections(appName, [verbose, name, server, applicationVersion])}\]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Valid options are 1 (true) and 0 (false). When set to 1, listDiscussionForumConnections lists all of the discussions server connections that are configured for a WebCenter application, along with their details. When set to 0, only connection names are listed. This argument defaults to 0.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing discussions server connection. Use this argument to view connection details for a specific discussions server connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.7.5.3 Examples

The following example lists the names of all of the discussions server connections that are currently configured for an application named webcenter.

```
wls:/weblogic/serverConfig> listDiscussionForumConnections(appName='webcenter')
```

The following example lists connection names and details for all of the discussions server connections currently configured for an application named webcenter.

```
wls:/weblogic/serverConfig> listDiscussionForumConnections(appName='webcenter', verbose=1)
```

The following example lists connection details for a discussions server connection named myDiscussionsServer.

```
wls:/weblogic/serverConfig> listDiscussionForumConnections(appName='webcenter', name='myDiscussionsServer')
```

10.7.6 listDefaultDiscussionForumConnection

Module: Oracle WebCenter

Use with WLST: Online

10.7.6.1 Description

Names the discussions server connection that the Discussions service and the Announcements service are using, in a named WebCenter application. While you can register multiple discussions server connections for a WebCenter application, the Discussions/Announcements service only uses one connection—known as the default (or active) connection.

10.7.6.2 Syntax

```
listDefaultDiscussionForumConnection(appName, [verbose, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Valid options are 1 (true) and 0 (false). When set to 1, the name and details of the discussions server connections are listed. When set to 0, only the connection name displays. This argument defaults to 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.7.6.3 Examples

The following example names the discussions server connection that the Discussions/Announcements service are using, in an application named webcenter.

```
wls:/weblogic/serverConfig>
listDefaultDiscussionForumConnection(appName='webcenter')
```
The following example lists the name and details of the discussions server connection that the Discussions/Announcements service are using.

```wls:/weblogic/serverConfig>
listDefaultDiscussionForumConnection(appName='webcenter', verbose=1)
```

**10.7.7 setDefaultDiscussionForumConnection**

**Module:** Oracle WebCenter  
**Use with WLST:** Online

**10.7.7.1 Description**

Specifies the default discussions server connection for the Discussions service and the Announcements service, in a named WebCenter application.

While you can register multiple discussions server connections with a WebCenter application, the Discussions/Announcements services only uses one connection—this is known as the default (or active) connection.

**10.7.7.2 Syntax**

```python
setDefaultDiscussionForumConnection(appName, name, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing discussions server connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

**10.7.7.3 Example**

The following example makes a connection named myDiscussionServer the default (or active) connection for the Discussions and Announcement services.

```wls:/weblogic/serverConfig> setDefaultDiscussionForumConnection(appName='webcenter', name='myDiscussionServer')
```

**10.7.8 setDiscussionForumServiceProperty**

**Module:** Oracle WebCenter  
**Use with WLST:** Online

**10.7.8.1 Description**

Specifies default values for the Discussions service.

Configurable properties for the Discussions service are listed in Table 10–10, "Discussion Service Configuration Properties".
Table 10–10  Discussion Service Configuration Properties

<table>
<thead>
<tr>
<th>Configuration Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>topics.fetch.size</td>
<td>Maximum number of topics fetched by the Discussions service and displayed in the topics view.</td>
</tr>
<tr>
<td>forums.fetch.size</td>
<td>Maximum number of forums fetched by the Discussions service and displayed in the forums view.</td>
</tr>
<tr>
<td>recentTopics.fetch.size</td>
<td>Maximum number of topics fetched by the Discussions service and displayed in the recent topics view.</td>
</tr>
<tr>
<td>watchedTopics.fetch.size</td>
<td>Maximum number of topics fetched by the Discussions service and displayed in the watched topics view.</td>
</tr>
<tr>
<td>watchedForums.fetch.size</td>
<td>Maximum number of forums fetched by the Discussions service and displayed in the watched forums view.</td>
</tr>
<tr>
<td>application.root.category.id</td>
<td>Application root category ID on the discussions server under which all discussion forums are stored. For example, if set to 3, all forums are stored inside category 3.</td>
</tr>
<tr>
<td>ForumGatewayManager.AUTO_START</td>
<td>Communication through mail distribution lists can be published as discussion forum posts. This parameter starts or stops the gateway for this communication.</td>
</tr>
<tr>
<td></td>
<td>For WebCenter Spaces, the default value is 1, which means that as soon as you configure mail server settings through administration, the gateway starts. Set this to 0, and restart the managed server, to stop the gateway and disable this feature.</td>
</tr>
<tr>
<td></td>
<td>For WebCenter Portal applications, the default value is 0. Set this to 1, and restart the managed server, to start the gateway and enable this feature.</td>
</tr>
</tbody>
</table>

### 10.7.8.2 Syntax

`setDiscussionForumServiceProperty(appName, property, value, [server, applicationVersion])`

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>property</td>
<td>Name of the configuration property.</td>
</tr>
<tr>
<td>value</td>
<td>Value for the property.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

### 10.7.8.3 Example

The following example changes the default number of topics displayed in topics view.

```
wl cis/weblogic/serverConfig> setDiscussionForumServiceProperty
(appName='webcenter', property='topics.fetch.size', value='30')
```
10.7.9 removeDiscussionForumServiceProperty

Module: Oracle WebCenter
Use with WLST: Online

10.7.9.1 Description
Removes the current value that is set for a Discussions service property. Use this command to remove any of the properties listed in Table 10–10, "Discussion Service Configuration Properties".

Take care when using this command as removing values for these properties might cause unexpected behavior.

Note: Use this command syntax to disable the connection currently used for discussion and announcement services:

```java
removeDiscussionForumServiceProperty('appName='webcenter', property='selected.connection')
```

This command forces the default connection argument to 0. See also, setDiscussionForumConnection.

10.7.9.2 Syntax
removeDiscussionForumServiceProperty(appName, property, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>property</td>
<td>Name of the configuration property.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.7.9.3 Example
The following example clears the current topics.fetch.size property for the Discussions service, in an application named webcenter.

```java
wls:/weblogic/serverConfig> removeDiscussionForumServiceProperty
(appName='webcenter', property='topics.fetch.size')
```

10.7.10 listDiscussionForumServiceProperties

Module: Oracle WebCenter
Use with WLST: Online

10.7.10.1 Description
Lists all configurable properties for the Discussions service.
10.7.10.2 Syntax
listDiscussionForumServiceProperties(appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.7.10.3 Example
The following example lists configuration properties for the Discussions service, in an application named webcenter.

wls:/weblogic/serverConfig>
listDiscussionForumServiceProperties(appName='webcenter')

10.7.11 setAnnouncementServiceProperty
Module: Oracle WebCenter
Use with WLST: Online

10.7.11.1 Description
Specifies default values for the Announcements service.

Configurable properties for the Announcements service are listed in Table 10–11, “Announcements Service Configuration Properties”.

<table>
<thead>
<tr>
<th>Configuration Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>miniview.page_size</td>
<td>Maximum number of announcements displayed in the Announcements mini view.</td>
</tr>
<tr>
<td>mainview.page_size</td>
<td>Maximum number of announcements displayed in the Announcements main view.</td>
</tr>
<tr>
<td>linksview.page_size</td>
<td>Maximum number of announcements displayed in the Announcements links view.</td>
</tr>
<tr>
<td>announcements.expiration.days</td>
<td>Number of days that announcements display and remain editable.</td>
</tr>
</tbody>
</table>

10.7.11.2 Syntax
setAnnouncementServiceProperty(appName, property, value, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>property</td>
<td>Name of the configuration property.</td>
</tr>
</tbody>
</table>
10.7.11 Example

The following example changes the default number of days that announcements display, in an application named webcenter.

```
> wls:/weblogic/serverConfig> setAnnouncementServiceProperty(appName='webcenter', property='announcements.expiration.days', value='21')
```

10.7.12 removeAnnouncementServiceProperty

Module: Oracle WebCenter
Use with WLST: Online

10.7.12.1 Description

Removes the current value that is set for a Announcements service property. Use this command to remove any of the properties listed in Table 10–11, "Announcements Service Configuration Properties".

Take care when using this command as removing values for these properties might cause unexpected behavior.

10.7.12.2 Syntax

```
removeAnnouncementServiceProperty{appName, property, [server, applicationVersion]}
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>property</td>
<td>Name of the configuration property.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.7.12.3 Example

The following example clears the announcements.expiration.days property for the Announcements service, in an application named webcenter.

```
> wls:/weblogic/serverConfig> removeAnnouncementServiceProperty(appName='webcenter', property='announcements.expiration.days')
```
## 10.7.13 listAnnouncementServiceProperties

Module: Oracle WebCenter

Use with WLST: Online

### 10.7.13.1 Description

Lists all configurable properties for the Announcements service.

### 10.7.13.2 Syntax

```
listAnnouncementServiceProperties(appName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

### 10.7.13.3 Example

The following example lists configuration properties for the Announcements service, in an application named webcenter.

```
wls:/weblogic/serverConfig> listAnnouncementServiceProperties(appName='webcenter')
```

## 10.7.14 addDiscussionsServerAdmin

Module: Oracle WebCenter

Use with WLST: Online

### 10.7.14.1 Description

Grants system administrator permissions on the discussions server to a user or a group. This command is useful when you connect the discussions server to a new identity store that does not contain any of the current administrators.

### 10.7.14.2 Syntax

```
addDiscussionsServerAdmin(appName, name, [type, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the discussions server application in which to perform this operation. For example, owc_discussions.</td>
</tr>
<tr>
<td>name</td>
<td>Name of the user or group to add as an administrator on the discussions server.</td>
</tr>
<tr>
<td>type</td>
<td>Optional. Identifies the type of identity. Valid values are USER and GROUP. The default value is USER.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
Discussions and Announcements

Oracle WebCenter Custom WLST Commands

10.7.14.3 Example
The following example grants system administrator permissions on the discussions server to the user weblogic:

addDiscussionsServerAdmin(appName='owc_discussions', name='weblogic', type='USER')

The following example grants system administrator permissions on the discussions server to all users in the Administrators user group:

addDiscussionsServerAdmin(appName='owc_discussions', name='Administrators', type='GROUP')

10.7.15 syncDiscussionServerPermissions
Module: Oracle WebCenter
Use with WLST: Online

10.7.15.1 Description
(WebCenter Spaces only) Synchronizes discussion server permissions for Subspaces that inherit security from their parent.

When you update Discussions or Announcement permissions for Space hierarchies in WebCenter Spaces, the Subspaces do not automatically inherit the corresponding permission change on the Oracle WebCenter Discussions server. Therefore, whenever changes are made, you must run this command to synchronize Discussions and Announcement permissions within a Space hierarchy, such that Subspaces inherit the same Oracle WebCenter Discussions server permissions as their parent.

---

**Note:** To execute discussion server WLST commands, such as syncDiscussionServerPermissions, the user used to connect to the Admin Server must also have administrative privileges on the discussion server.

---

10.7.15.2 Syntax

syncDiscussionServerPermissions(appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Spaces application in which to perform this operation—always webcenter.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
</tbody>
</table>
Discussions and Announcements

10.7.15.3 Example
The following example synchronizes Discussions and Announcement permissions in WebCenter Spaces, that is, Subspaces inherit the same Oracle WebCenter Discussions server permissions as their parent:

```
wls:/weblogic/serverConfig> syncDiscussionServerPermissions(appName='webcenter')
```

10.7.16 setDiscussionsServerProperty
Module: Oracle WebCenter
Use with WLST: Online

10.7.16.1 Description
Sets a discussions server property.
Use this command to set a system property on the discussions server.

**Note:** To execute discussion server WLST commands, such as setDiscussionsServerProperty, the user used to connect to the Admin Server must also have administrative privileges on the discussion server.

10.7.16.2 Syntax
```
setDiscussionsServerProperty(appName, key, value, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the discussions server application in which to perform this operation. For example, owc_discussions.</td>
</tr>
<tr>
<td>key</td>
<td>Name of the discussions server property.</td>
</tr>
<tr>
<td>value</td>
<td>Value for the discussions server property.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the application is deployed. For example, WC_Collaboration. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the application is deployed.</td>
</tr>
</tbody>
</table>

10.7.16.3 Example
The following example sets properties that configures the discussions server for SSO, where example.com:8890/owc_discussions is the base URL of the webtier on which the discussions server is deployed:

```
wls:/weblogic/serverConfig>
setDiscussionsServerProperty(appName='owc_discussions', key='owc_discussions.sso.mode', value='true')
setDiscussionsServerProperty(appName='owc_discussions', key='jiveURL',
value='example.com:8890/owc_discussions')

10.7.17 getDiscussionsServerProperty
Module: Oracle WebCenter
Use with WLST: Online

10.7.17.1 Description
Returns the current value of a discussions server property.

Note: To execute discussion server WLST commands, such as getDiscussionsServerProperty, the user used to connect to the Admin Server must also have administrative privileges on the discussion server.

10.7.17.2 Syntax
getDiscussionsServerProperty(appName, key, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the discussions server application in which to perform this operation. For example, owc_discussions.</td>
</tr>
<tr>
<td>key</td>
<td>Name of the discussions server property. For example, owc_discussions.sso.mode, AuthFactory.className, UserManager.className, GroupManager.className, owc_discussions.setup.complete_11.1.1.2.0, and so on.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the application is deployed. For example, WC_Collaboration. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the application is deployed.</td>
</tr>
</tbody>
</table>

10.7.17.3 Example
The following example returns current values for some key discussions server properties:

```wls:/weblogic/serverConfig> getDiscussionsServerProperty (appName='owc_discussions', key='AuthFactory.className')
getDiscussionsServerProperty (appName='owc_discussions', key='UserManager.className')
getDiscussionsServerProperty (appName='owc_discussions', key='GroupManager.className')
getDiscussionsServerProperty (appName='owc_discussions', key=', )

10.7.18 removeDiscussionsServerProperty
Module: Oracle WebCenter
Use with WLST: Online
10.7.18.1 Description
Removes the current values that is set for a discussions server property.

---
**Note:** To execute discussion server WLST commands, such as `removeDiscussionsServerProperty`, the user used to connect to the Admin Server must also have administrative privileges on the discussion server.

---

10.7.18.2 Syntax
`removeDiscussionsServerProperty(appName, key, [server, applicationVersion])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the discussions server application in which to perform this operation. For example, <code>owc_discussions</code>.</td>
</tr>
<tr>
<td><code>key</code></td>
<td>Name of the discussions server property. For example, <code>owc_discussions.sso.mode</code>, <code>AuthFactory.className</code>, <code>UserManager.className</code>, <code>GroupManager.className</code>, <code>owc_discussions.setup.complete_11.1.1.2.0</code>, and so on.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the application is deployed. For example, <code>WC_Collaboration</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the application is deployed.</td>
</tr>
</tbody>
</table>

10.7.18.3 Example
The following example removes the current value for the ‘SSO mode’ property on the discussions server:

```
wls:/weblogic/serverConfig> removeDiscussionsServerProperty
(appName='owc_discussions', key='owc_discussions.sso.mode')
```

10.8 External Applications
Use the commands listed in Table 10–12 to manage external application connections for WebCenter applications.

Configuration changes made using these WebCenter WLST commands are immediately available in the WebCenter application.

<table>
<thead>
<tr>
<th>Table 10–12 External Application WLST Commands</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>createExtAppConnection</code></td>
<td>Online</td>
</tr>
<tr>
<td><code>setExtAppConnection</code></td>
<td>Online</td>
</tr>
<tr>
<td><code>listExtAppConnections</code></td>
<td>Online</td>
</tr>
<tr>
<td><code>addExtAppField</code></td>
<td>Online</td>
</tr>
</tbody>
</table>
**10.8.1 createExtAppConnection**

Module: Oracle WebCenter

Use with WLST: Online

**10.8.1.1 Description**

Creates an external application connection, for a named WebCenter application.

**10.8.1.2 Syntax**

createExtAppConnection(appName, name, [displayName, url, authMethod, userFieldName, pwdFieldName, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
<tr>
<td>displayName</td>
<td>Optional. External application display name. A user friendly name for the application that WebCenter users will recognize. The display name must be unique across all external applications within the WebCenter application.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. External application login URL.</td>
</tr>
<tr>
<td>authMethod</td>
<td>Optional. Authentication mechanism used by the external application. Valid options are GET, POST, and BASIC. This argument defaults to POST.</td>
</tr>
<tr>
<td>userFieldName</td>
<td>Optional. Name that identifies the user name or user ID field on the external application's login form. To find this name, look at the HTML source for the login page. This argument does not specify user credentials. Mandatory if authMethod is GET or POST and a login url is specified. Not required if BASIC authentication method is selected.</td>
</tr>
</tbody>
</table>
10.8.1.3 Example

The following example creates a connection for an external application named My Yahoo!, in a WebCenter application.

```
<wls:/weblogic/serverConfig> createExtAppConnection(appName='webcenter',
name='yahoo', displayName='My Yahoo!', url='http://login.yahoo.com/config/login',
authMethod='POST', userFieldName='login', pwdFieldName='passwd')
```

10.8.2 setExtAppConnection

Module: Oracle WebCenter

Use with WLST: Online

10.8.2.1 Description

Edits an existing external application connection.

10.8.2.2 Syntax

```
setExtAppConnection(appName, name, [displayName], [url], [authMethod],
[userFieldName], [pwdFieldName], [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing external application connection.</td>
</tr>
<tr>
<td>displayName</td>
<td>Optional. External application display name. A user-friendly name for the application that WebCenter users will recognize. The display name must be unique across all external applications within the WebCenter application.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. External application login URL. To determine an application's URL, navigate to the application's login page and note down the URL for that page.</td>
</tr>
<tr>
<td>authMethod</td>
<td>Optional. Authentication mechanism used by the external application. Valid options are GET, POST, and BASIC. This argument defaults to POST.</td>
</tr>
</tbody>
</table>
10.8.2.3 Example
The following example updates the display name attribute for an external application named yahoo.

```bash
wls:/weblogic/serverConfig> setExtAppConnection(appName='webcenter',
name='yahoo', displayName='My Favorite Yahoo!')
```

10.8.3 listExtAppConnections
Module: Oracle WebCenter
Use with WLST: Online

10.8.3.1 Description
When used with only the appName argument, this command lists the names of all the external applications currently configured for a specific WebCenter application.

10.8.3.2 Syntax
```
listExtAppConnections(appName, [verbose, name, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application for which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays external application details in verbose mode. Valid options are 1 (true) and 0 (false). When set to 1, listExtAppConnections lists all of the external applications that are configured for a WebCenter application, along with their details. When set to 0, listExtAppConnections lists only the names of the external applications. This argument defaults to 0. If you set this argument to 0, do not specify the name argument.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing external application connection. You can use this argument to view details about a specific connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
The following example lists the names of all the external applications currently used by a WebCenter application named `webcenter`.

```bash
wls:/weblogic/serverConfig> listExtAppConnections(appName='webcenter')
app1
app2
app3
```

The following example lists details for the external applications `app1`, `app2`, and `app3`.

```bash
wls:/weblogic/serverConfig> listExtAppConnections(appName='webcenter', verbose=1)
----
app1
----
Name: app1
Display Name: Application1
Login URL: http://app1
Authentication Method: POST
User Field Name: login
Password Field Name: passwd
Shared Credential: Disabled
Public Credential: Disabled
----
app2
----
Name: app2
Display Name: Application2
Login URL: http://app2
Authentication Method: POST
User Field Name: login
Password Field Name: passwd
Additional Fields: {Account1:1, Account2:DefVal:0}
Shared Credential: Disabled
Public Credential: Enabled
----
app3
----
Name: app3
Display Name: Application3
Authentication Method: POST
Shared Credential: Enabled
Public Credential: Enabled
```

The following example lists details for external application `app1` only.

```bash
wls:/weblogic/serverConfig> listExtAppConnections(appName='webcenter', verbose=1, name='app1')
----
```

### 10.8.3.3 Examples

The following example lists the names of all the external applications currently used by a WebCenter application named `webcenter`.

```bash
wls:/weblogic/serverConfig> listExtAppConnections(appName='webcenter')
app1
app2
app3
```

The following example lists details for the external applications `app1`, `app2`, and `app3`.

```bash
wls:/weblogic/serverConfig> listExtAppConnections(appName='webcenter', verbose=1)
----
app1
----
Name: app1
Display Name: Application1
Login URL: http://app1
Authentication Method: POST
User Field Name: login
Password Field Name: passwd
Shared Credential: Disabled
Public Credential: Disabled
----
app2
----
Name: app2
Display Name: Application2
Login URL: http://app2
Authentication Method: POST
User Field Name: login
Password Field Name: passwd
Additional Fields: {Account1:1, Account2:DefVal:0}
Shared Credential: Disabled
Public Credential: Enabled
----
app3
----
Name: app3
Display Name: Application3
Authentication Method: POST
Shared Credential: Enabled
Public Credential: Enabled
```

The following example lists details for external application `app1` only.

```bash
wls:/weblogic/serverConfig> listExtAppConnections(appName='webcenter', verbose=1, name='app1')
----
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
app1
----
Name: app1
Display Name: Application1
Login URL: http://app1
Authentication Method: POST
User Field Name: login
Password Field Name: passwd
Shared Credential: Disabled
Public Credential: Disabled

10.8.4 addExtAppField

Module: Oracle WebCenter
Use with WLST: Online

10.8.4.1 Description
Add another login field for a specific external application connection. For example, in addition to user name and password, an external application may require other login criteria such as Host and MailAddress.

Optionally, additional login fields can appear on the external application's login for a user to specify.

If you add another login field and the external application uses shared or public credentials, you can use the WLST commands addExtAppCredential and setExtAppCredential to update the shared/public credentials. See Section 10.8.7, "addExtAppCredential" and Section 10.8.8, "setExtAppCredential".

10.8.4.2 Syntax
addExtAppField(appName, name, fieldName, [fieldValue], [displayToUser], [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing external application connection.</td>
</tr>
<tr>
<td>fieldName</td>
<td>Login field name. The name that identifies the field on the HTML login form. This field is not applicable if the application uses BASIC authentication.</td>
</tr>
<tr>
<td>fieldValue</td>
<td>Optional. Login field value. Enter a default value for the login field or leave blank for a user to specify. This argument is blank by default.</td>
</tr>
<tr>
<td>displayToUser</td>
<td>Optional. Specifies whether the login field displays on the external application's login screen. Valid options are 1 (true) and 0 (false). This argument defaults to 0. Note that if you set this argument to 0, you must specify the fieldValue.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
</tbody>
</table>
10.8.4.3 Example

This example creates an additional field named `Account` with the default value `username.default.example` in an external application called `ABC`. This field will be displayed in `ABC`'s login screen.

```
wls:/weblogic/serverConfig> addExtAppField(appName='webcenter', name='ABC', fieldName='Account', fieldValue='username.default.example', displayToUser=1)
```

10.8.5 `setExtAppField`

Module: Oracle WebCenter

Use with WLST: Online

10.8.5.1 Description

Modifies the field value and display-to-user setting for one or more login fields currently configured for an external application. Either `fieldValue` or `displayToUser` must be specified along with the external application name and login field name. The `fieldValue` and `displayToUser` arguments are optional.

Using this command has implications on any shared or public credentials that you might have created for this external application. If you modify `displayToUser` to 1, you may also need to update existing shared user or public user credentials. See also Section 10.8.8, "setExtAppCredential".

10.8.5.2 Syntax

```
setExtAppField(appName, name, fieldName, [fieldValue], [displayToUser], [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>name</code></td>
<td>Name of an existing external application connection.</td>
</tr>
<tr>
<td><code>fieldName</code></td>
<td>Name of an existing login field.</td>
</tr>
<tr>
<td><code>fieldValue</code></td>
<td>Optional. New or changed login field value. Enter a default value for the login field or leave blank for a user to specify. This argument is blank by default.</td>
</tr>
<tr>
<td><code>displayToUser</code></td>
<td>Optional. Specifies whether the login field displays on the external application's login screen. Valid options are 1 (true) and 0 (false). If set to 0, <code>fieldValue</code> must be specified.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, <code>WC_Spaces</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.8.5.3 Example
The following example specifies a default value for a login field named Account and displays the field on the external application's credential provisioning screen.

```
wlst:/weblogic/serverConfig> setExtAppField(appName='webcenter', name='ABC',
fieldName='Account', fieldValue='admin', displayToUser=1)
```

10.8.6 removeExtAppField
Module: Oracle WebCenter
Use with WLST: Online

10.8.6.1 Description
Removes a login field from an external application connection.

This command has implications on any shared or public credentials that you may have created for this external application, that is, you may need to remove the login field from shared user or public user credentials.

You can use the `setExtAppCredential` command to remove a login field, if required. For example, external application `myApp` has an additional field called Account and public credentials were previously specified using:

```
addExtAppCredential(appName='webcenter', name='myApp', type='PUBLIC',
username='admin', password='mypublic.password', field='Account:admin@myhost.com')
```

If you remove the Account field, you can modify the credentials by running:

```
setExtAppCredential(appName='webcenter', name='myApp', type='PUBLIC',
username='admin', password='mypublic.password')
```

For details on using `setExtAppCredential`, see Section 10.8.8, "setExtAppCredential"

10.8.6.2 Syntax
```
removeExtAppField(appName, name, fieldName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>name</code></td>
<td>Connection name.</td>
</tr>
<tr>
<td><code>fieldName</code></td>
<td>Login field that you want to remove.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.8.6.3 Example
The following example removes the additional login field named Account from an external application named ABC.

```
wlst:/weblogic/serverConfig> removeExtAppField(appName='webcenter', name='ABC',
fieldName='Account')
```
10.8.7 addExtAppCredential

Module: Oracle WebCenter

Use with WLST: Online

10.8.7.1 Description

Configures shared user or public user credentials for a specific external application.

When shared credentials are specified, every user accessing the WebCenter application is authenticated using the user name and password defined here. WebCenter users are not presented with a login form.

Public users accessing this application through WebCenter are logged in using the public credentials defined here.

If credentials already exists, a warning indicates that the setExtAppCredential command should be used instead.

10.8.7.2 Syntax

addExtAppCredential(appName, name, type, username, password, [field, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing external application connection.</td>
</tr>
<tr>
<td>type</td>
<td>Credential type. Valid values are SHARED and PUBLIC.</td>
</tr>
<tr>
<td>username</td>
<td>Name of the shared or public user.</td>
</tr>
<tr>
<td>password</td>
<td>Password for the shared or public user.</td>
</tr>
<tr>
<td>field</td>
<td>Optional. Additional login field value. Use the format FieldName:FieldValue, where FieldName names an additional login field configured with displayToUser=1.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.8.7.3 Example

The following example specifies public credentials for an external application named ABC. The public user name is mypublic.username, the password is mypublic.password, and there is one additional field named Account.

```java
wls:/weblogic/serverConfig> addExtAppCredential(appName='webcenter', name='ABC', type='PUBLIC', username='mypublic.username', password='mypublic.password', field='Account:username.example')
```

10.8.8 setExtAppCredential

Module: Oracle WebCenter

Use with WLST: Online
10.8.8.1 Description
Modifies shared user or public user credentials currently configured for an external application. If the credential has already not been specified, then a warning indicates that `addExtAppCredential` needs to be used instead. See Section 10.8.7, "addExtAppCredential".

The arguments `username` and `password` are optional because `setExtAppCredential` only manipulates existing credentials. At least one of the parameters, `username`, `password` or `field`, must be specified.

You can use `setExtAppCredential` command to update passwords in systems that require changing passwords every few days.

10.8.8.2 Syntax
`setExtAppCredential(appName, name, type, [username], [password], [field], [server, applicationVersion])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>name</code></td>
<td>Name of an existing external application connection.</td>
</tr>
<tr>
<td><code>type</code></td>
<td>Credential type. Valid values are <code>SHARED</code> and <code>PUBLIC</code>.</td>
</tr>
<tr>
<td><code>username</code></td>
<td>Optional. User name of the shared or public user.</td>
</tr>
<tr>
<td><code>password</code></td>
<td>Optional. Password for the shared or public user.</td>
</tr>
<tr>
<td><code>field</code></td>
<td>Optional. Additional login field value. Use the format <code>FieldName:FieldValue</code>, where <code>FieldName</code> names an additional login field configured with <code>displayToUser=1</code>.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, <code>WC_Spaces</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.8.8.3 Example
The following example changes the public user's login credentials for an external application named ABC.

```
wlst:/weblogic/serverConfig> setExtAppCredential(appName='webcenter',name='ABC', type='PUBLIC', username='username.example', password='password.example', field='Account:username.example')
```

10.8.9 removeExtAppCredential
Module: Oracle WebCenter
Use with WLST: Online

10.8.9.1 Description
Removes shared user or public user credentials currently configured for an external application.

If credentials do not exist, an error displays.
10.8.9.2 Syntax

removeExtAppCredential(appName, name, type, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing external application connection.</td>
</tr>
<tr>
<td>type</td>
<td>Credential type. Valid values are SHARED and PUBLIC.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.8.9.3 Example

The following example removes shared credentials specified for an external application named ABC.

```
wlst:/weblogic/serverConfig> removeExtAppCredential(appName='webcenter', name='ABC', type='SHARED')
```

10.9 Instant Messaging and Presence

Use the commands listed in Table 10–13, to manage instant messaging and presence server connections.

Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>createIMPConnection</td>
<td>Create a new instant messaging and presence server connection for a WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>setIMPConnection</td>
<td>Edit an existing instant messaging and presence server connection.</td>
<td>Online</td>
</tr>
<tr>
<td>setIMPConnectionProperty</td>
<td>Modify instant messaging and presence server connection properties.</td>
<td>Online</td>
</tr>
<tr>
<td>deleteIMPConnectionProperty</td>
<td>Delete an instant messaging and presence server connection property.</td>
<td>Online</td>
</tr>
<tr>
<td>listIMPAdapters</td>
<td>List which presence servers the WebCenter application supports.</td>
<td>Online</td>
</tr>
<tr>
<td>listIMPCOnnections</td>
<td>List all of the instant messaging and presence server connections that are configured for an application.</td>
<td>Online</td>
</tr>
<tr>
<td>listDefaultIMPConnection</td>
<td>List the default instant messaging and presence server connection that is configured for an application.</td>
<td>Online</td>
</tr>
</tbody>
</table>
10.9.1 createIMPConnection

Module: Oracle WebCenter

Use with WLST: Online

10.9.1.1 Description

Creates an instant messaging and presence server connection for a named WebCenter application.

Use the listIMPAdapters command to find out which types of instant messaging and presence servers are supported. Out-of-the-box, WebCenter applications support Oracle WebLogic Communications Server (OWLCS), Microsoft Live Communications Server (LCS), and Microsoft Communications Server 2007 (OCS).

While you can register multiple presence server connections for a WebCenter application, only one connection is used for instant messaging and presence services—the default (or active) connection.

10.9.1.2 Syntax

createIMPConnection(appName, name, adapter, url, [domain, appId, poolName, policyURI, userDomain, timeout, default, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
<tr>
<td>adapter</td>
<td>Adapter name. Specify the adapter that matches your instant messaging and presence server. Valid values are LCS, OWLCS, and OCS. Choose OWLCS for Oracle WebLogic Communication Server. Choose LCS for Microsoft Live Communications Server. Choose OCS for Microsoft Office Communications Server 2007.</td>
</tr>
<tr>
<td>url</td>
<td>URL of the sever hosting instant messaging and presence services. For example: <a href="http://myowlcshost.com:8888">http://myowlcshost.com:8888</a></td>
</tr>
</tbody>
</table>
The following example creates an instant messaging and presence server connection to a Oracle WebLogic Communication Server named `myOWLCSPresenceServer`.

```wls:weblogic/serverConfig>createIMPConnection(appName='webcenter', name='myOWLCSPresenceServer', adapter='OWLCS', url='http://myowlcshost.com:8888')```

The following example also creates an instant messaging and presence server connection to a Oracle WebLogic Communication Server named `myOWLCSPresenceServer`.

### 10.9.1.3 Examples

The following example creates an instant messaging and presence server connection to a Oracle WebLogic Communication Server named `myOWLCSPresenceServer`.

```wls:weblogic/serverConfig>createIMPConnection(appName='webcenter', name='myOWLCSPresenceServer', adapter='OWLCS', url='http://myowlcshost.com:8888')```

The following example also creates an instant messaging and presence server connection to a Oracle WebLogic Communication Server named `myOWLCSPresenceServer`.

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain</td>
<td>Deprecated. Use the setIMPServiceProperty command to resolve IM addresses.</td>
</tr>
<tr>
<td>appId</td>
<td>Optional. External application associated with the presence server connection.</td>
</tr>
<tr>
<td></td>
<td>If specified, external application credential information is used to authenticate users against the LCS, OCS, or OWLCS server. This argument is mandatory for LCS and OCS server connections.</td>
</tr>
<tr>
<td></td>
<td>The external application you configure for instant messaging and presence services must use authMethod='POST', and specify an additional field with fieldName='Account' and displaytoUser=1. If an external application does not exist yet, use the WLST command <code>createIMPExtAppConnection</code> to create an external application that automatically has all the required additional fields.</td>
</tr>
<tr>
<td></td>
<td>See also <code>addExtAppField</code> and <code>setExtAppField</code>.</td>
</tr>
<tr>
<td>poolName</td>
<td>Optional. (LCS and OCS connections only.) Pool name that is required to create an LCS or OCS connection. Refer to Microsoft Live Communications Server or Microsoft Office Communications Server documentation for details on pool names. This argument is mandatory for LCS server and OCS server connections.</td>
</tr>
<tr>
<td>policyURI</td>
<td>Optional. (OWLCS connections only.) URI to the security policy that is required for authentication on the Oracle WebLogic Communication Server (OWLCS) server.</td>
</tr>
<tr>
<td>userDomain</td>
<td>Optional. (OCS connections only.) Active Directory domain on the OCS server. This argument is mandatory for OCS server connections.</td>
</tr>
<tr>
<td>timeout</td>
<td>Optional. Length of time (in seconds) that the Instant Messaging and Presence service waits for a response from the presence server before issuing a connection timeout message. This argument defaults to -1. When set to -1, the service default (10 seconds) applies.</td>
</tr>
<tr>
<td>default</td>
<td>Optional. Indicates whether this connection is the default connection for the Instant Messaging and Presence service. Valid values are 1 (true) and 0 (false). The default for this argument is 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

### 10.9.1.3 Examples

The following example creates an instant messaging and presence server connection to a Oracle WebLogic Communication Server named `myOWLCSPresenceServer`.

```wls:weblogic/serverConfig>createIMPConnection(appName='webcenter', name='myOWLCSPresenceServer', adapter='OWLCS', url='http://myowlcshost.com:8888')```

The following example also creates an instant messaging and presence server connection to a Oracle WebLogic Communication Server named `myOWLCSPresenceServer`.

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain</td>
<td>Deprecated. Use the setIMPServiceProperty command to resolve IM addresses.</td>
</tr>
<tr>
<td>appId</td>
<td>Optional. External application associated with the presence server connection.</td>
</tr>
<tr>
<td></td>
<td>If specified, external application credential information is used to authenticate users against the LCS, OCS, or OWLCS server. This argument is mandatory for LCS and OCS server connections.</td>
</tr>
<tr>
<td></td>
<td>The external application you configure for instant messaging and presence services must use authMethod='POST', and specify an additional field with fieldName='Account' and displaytoUser=1. If an external application does not exist yet, use the WLST command <code>createIMPExtAppConnection</code> to create an external application that automatically has all the required additional fields.</td>
</tr>
<tr>
<td></td>
<td>See also <code>addExtAppField</code> and <code>setExtAppField</code>.</td>
</tr>
<tr>
<td>poolName</td>
<td>Optional. (LCS and OCS connections only.) Pool name that is required to create an LCS or OCS connection. Refer to Microsoft Live Communications Server or Microsoft Office Communications Server documentation for details on pool names. This argument is mandatory for LCS server and OCS server connections.</td>
</tr>
<tr>
<td>policyURI</td>
<td>Optional. (OWLCS connections only.) URI to the security policy that is required for authentication on the Oracle WebLogic Communication Server (OWLCS) server.</td>
</tr>
<tr>
<td>userDomain</td>
<td>Optional. (OCS connections only.) Active Directory domain on the OCS server. This argument is mandatory for OCS server connections.</td>
</tr>
<tr>
<td>timeout</td>
<td>Optional. Length of time (in seconds) that the Instant Messaging and Presence service waits for a response from the presence server before issuing a connection timeout message. This argument defaults to -1. When set to -1, the service default (10 seconds) applies.</td>
</tr>
<tr>
<td>default</td>
<td>Optional. Indicates whether this connection is the default connection for the Instant Messaging and Presence service. Valid values are 1 (true) and 0 (false). The default for this argument is 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
The following example creates an external application suitable for an instant messaging and presence server connection and then creates a connection named myLCSPresenceServer to a Microsoft Live Communications Server:

```
createIMPExtApp(appName='webcenter', name='LCSExtApp',
displayName='IMP Ext App')
```

```
createIMPConnection(appName='webcenter',
name='myLCSPresenceServer', adapter='LCS', url='http://mylcshost.com/owc/lcs',
appId='LCSExtApp', poolName='pool1.myhost.com', timeout=60,
default=1)
```

The following example creates an instant messaging and presence server connection to a Microsoft Office Communications Server named myOCSPresenceServer.

```
createIMPConnection(appName='webcenter',
name='myOCSPresenceServer', adapter='OCS', url='http://myocshost.com/owc/ocs',
appId='OCSExtApp', userDomain='OCS', poolName='pool01.myocshost.com', timeout=60,
default=1)
```

### 10.9.2 setIMPConnection

Module: Oracle WebCenter

Use with WLST: Online

#### 10.9.2.1 Description

Edits an existing instant messaging and presence server connection. Use this command to update connection attributes.

The connection is created using the `createIMPConnection` command.

#### 10.9.2.2 Syntax

```
setIMPConnection(appName, name, [adapter, url, domain, appId, poolName, policyURI, userDomain, timeout, default, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing presence server connection.</td>
</tr>
<tr>
<td>adapter</td>
<td>Optional. Adapter name. Specify the adapter that matches your instant messaging and presence server. Valid values are LCS, OWLCS, and OCS. Choose OWLCS for Oracle WebLogic Communication Server. Choose LCS for Microsoft Live Communications Server. Choose OCS for Microsoft Office Communications Server.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. URL of the server hosting instant messaging and presence services.</td>
</tr>
<tr>
<td>domain</td>
<td>Deprecated. Use the <code>setIMPServiceProperty</code> command to resolve IM addresses.</td>
</tr>
</tbody>
</table>
The following example updates attributes for an existing instant messaging and presence server connection.

```
setIMPConnection(appName='webcenter',
    name='myOWLCSPresenceServer', adapter='OWCLS', url='http://myowlcshost.com:8888')
```

**Argument | Definition**
---|---
**appId** | Optional. External application associated with the presence server connection. If specified, external application credential information is used to authenticate users against the LCS, OCS, or OWLCS server. This argument is mandatory for LCS and OCS server connections. The external application you configure for instant messaging and presence services must use `authMethod=POST`, and specify an additional field with `fieldName='Account'` and `displaytoUser=1`. If an external application does not exist yet, use the WLST command `createIMPExtAppConnection` to create an external application that automatically has all the required additional fields.

See also `addExtAppField` and `setExtAppField`.

**poolName** | Optional. (LCS and OCS connections only.) Pool name that is required to create an LCS or OCS connection. Refer to Microsoft Live Communications Server or Microsoft Office Communications Server documentation for details on pool names. This argument is mandatory for LCS server and OCS server connections.

**policyURI** | Optional. (OWLCS connections only.) URI to the security policy that is required for authentication on the Oracle WebLogic Communication Server (OWLCS) server.

**userDomain** | Optional. (OCS connections only.) Active Directory domain on the OCS server. This argument is mandatory for OCS server connections.

**timeout** | Optional. Length of time (in seconds) that the Instant Messaging and Presence service waits for a response from the presence server before issuing a connection timeout message. This argument defaults to -1. When set to -1, the service default (10 seconds) applies.

**default** | Optional. Indicates whether this connection is the default connection for the Instant Messaging and Presence service. Valid values are 1 (true) and 0 (false). The default for this argument is 0. To specify that the Instant Messaging and Presence service uses this connection, change the value from 0 to 1. To disable this connection, use the `removeIMPServiceProperty` command:

```
removeIMPServiceProperty('appName='webcenter',
    property='selected.connection')
```

While you can register multiple presence server connections for a WebCenter application, only one connection is used for instant messaging and presence services—the default (or active) connection.

**server** | Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.

**applicationVersion** | Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.

### 10.9.2.3 Examples

The following example updates attributes for an existing instant messaging and presence server connection.

```
wls:/weblogic/serverConfig> setIMPConnection(appName='webcenter',
    name='myOWLCSPresenceServer', adapter='OWCLS', url='http://myowlcshost.com:8888')
```
The following example sets attributes on an existing instant messaging and presence server connection.

```
wis:/weblogic/serverConfig> setIMPConnection(appName='webcenter',
    name='myOWLCSPresenceServer', adapter='OWCLS', url='http://myowlcshost.com:8888',
    policyURI='oracle/wss11_saml_token_with_message_protection_client_policy',
    timeout=60, default=0)
```

The following example sets attributes on an existing instant messaging and presence server connection.

```
wis:/weblogic/serverConfig> setIMPConnection(appName='webcenter',
    name='myLCSPresenceServer', adapter='LCS', url='http://mylcshost.com/owc/lcs',
    appId='LCSExtApp', poolName='pool1.myhost.com', timeout=60,
    default=0)
```

### 10.9.3 setIMPConnectionProperty

Module: Oracle WebCenter

Use with WLST: Online

#### 10.9.3.1 Description

Sets an instant messaging and presence server connection property. Use this command if additional parameters are required to connect to your presence server. This is an extensible way to add any connection property using a key and a value. (You are not limited to connection properties specified by createIMPConnection and setIMPConnection.)

All known, additional connection properties are listed in Table 10–14, "Additional IMP Connection Properties".

### Table 10–14 Additional IMP Connection Properties

<table>
<thead>
<tr>
<th>Additional IMP Connection Property</th>
<th>Valid IMP Servers</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>presence.url</td>
<td>OWLCS</td>
<td>URL to the OWLCS Presence service. Required if the OWLCS Presence service is deployed on a separate node. When no value is specified, the connection <strong>url</strong> property is used.</td>
</tr>
<tr>
<td>contacts.url</td>
<td>OWLCS</td>
<td>URL to the OWLCS Contact Management service. Required if the OWLCS Contact Management service is deployed on a separate node. When no value is specified, the connection <strong>url</strong> property is used.</td>
</tr>
<tr>
<td>call.url</td>
<td>OWLCS</td>
<td>URL to the OWLCS Third Party Call service. Required if the OWLCS Third Party Call service is deployed on a separate node. When no value is specified, the connection's <strong>url</strong> property is used.</td>
</tr>
<tr>
<td>call.method</td>
<td>OWLCS</td>
<td>Third party call method. Valid values are: sip and pstn. When set to sip, third party calls are forwarded to Oracle Communicators. When set to pstn, calls are forwarded to PSTN telephones (<strong>contact.number.attribute</strong> provides the phone number).</td>
</tr>
</tbody>
</table>
Do not use the `setIMPConnectionProperty` to set connection properties available through `createIMPConnection` or `setIMPConnection`. Attempting to do so, has no effect.

### 10.9.3.2 Syntax

```
setIMPConnectionProperty(appName, name, key, value, [secure, server, applicationVersion])
```

### Table 10–14 (Cont.) Additional IMP Connection Properties

<table>
<thead>
<tr>
<th>Additional IMP Connection Property</th>
<th>Valid IMP Servers</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>call.domain</td>
<td>OWLCS</td>
<td>Domain name of the PSTN gateway. Required when the <code>call.method</code> is <code>pstn</code>. If no domain name is supplied, the connection's domain value is used.</td>
</tr>
<tr>
<td>contact.number.attribute</td>
<td>OWLCS</td>
<td>User profile attribute used to store users' phone numbers. The default attribute is <code>BUSINESS_PHONE</code>. Required when the <code>call.method</code> is <code>pstn</code>.</td>
</tr>
<tr>
<td>recipient.alias</td>
<td>OWLCS</td>
<td>Alias used to import the OWLCS certificate. The value must be unique and must not be used by another service. If no alias name is supplied, the application uses the default value <code>webcenter_owlcs</code>.</td>
</tr>
</tbody>
</table>

### 10.9.3.3 Example

The following example adds a custom instant messaging and presence server connection property called `admin.user` with a default value `admin`.

```
wls:/weblogic/serverConfig> setIMPConnectionProperty(appName='webcenter', name='MyLCSPresenceServer', key='admin.user', value='admin')
```

### 10.9.4 deleteIMPConnectionProperty

Module: Oracle WebCenter
Use with WLST: Online

10.9.4.1 Description
Deletes an instant messaging and presence server connection property. Use caution when deleting connection properties because the connection might not work as expected if the configuration becomes invalid as a result.

This command can only delete additional connection properties added using the setIMPConnectionProperty command.

10.9.4.2 Syntax
deleteIMPConnectionProperty(appName, name, key, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing presence server connection.</td>
</tr>
<tr>
<td>key</td>
<td>Name of the connection property you want to delete.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.9.4.3 Example
The following example deletes an instant messaging and presence server connection property named admin.user.

wls:/weblogic/serverConfig> deleteIMPConnectionProperty(appName='webcenter', name='MyLCSPresenceServer', key='admin.user')

10.9.5 listIMPAdapters
Module: Oracle WebCenter
Use with WLST: Online

10.9.5.1 Description
Lists which types of instant messaging and presence servers Oracle WebCenter supports. Out-of-the-box, WebCenter applications support Oracle WebLogic Communication Server (OWLCS), Microsoft Live Communications Server (LCS), and Microsoft Office Communications Server (OCS).

10.9.5.2 Syntax
listIMPAdapters()

10.9.5.3 Example
The following example lists which presence servers are supported.

wls:/weblogic/serverConfig> listIMPAdapters()
10.9.6 listIMPConnections

Module: Oracle WebCenter
Use with WLST: Online

10.9.6.1 Description
Lists all of the instant messaging and presence server connections that are configured for a named WebCenter application.

10.9.6.2 Syntax
listIMPConnections(appName, [verbose], [name], [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays presence server connection details in verbose mode. Valid values are 1 (true) and 0 (false). When set to 1, listIMPConnections lists all of the presence server connections that are configured for a WebCenter application, along with their details. When set to 0, only connection names are listed. This argument defaults to 0.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing presence server connection. Use this argument to view connection details for a specific presence server connection. Note that if you use the name argument when verbose argument set to 1, the verbose argument is ignored.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.9.6.3 Examples
The following example lists all of the instant messaging and presence server connections that are configured for an application named webcenter.

```
   wls:/weblogic/serverConfig> listIMPConnections(appName='webcenter')
```

The following example lists all of the instant messaging and presence server connections that are configured for the application in verbose mode.

```
   wls:/weblogic/serverConfig> listIMPConnections(appName='webcenter', verbose=1)
```

The following example lists connection details for an instant messaging and presence server connections named impConnection1.

```
   wls:/weblogic/serverConfig> listIMPConnections(appName='webcenter', name='impConnection1')
```

10.9.7 listDefaultIMPConnection

Module: Oracle WebCenter
Use with WLST: Online
10.9.7.1 Description
Lists the connection that the Instant Messaging and Presence service is using, in a
named WebCenter application. While you can register multiple presence server
connections for a WebCenter application, the Instant Messaging and Presence service
only uses one connection—the default (or active) connection.
If only one presence server connection is available, that connection is assumed to be
the default connection.

10.9.7.2 Syntax
listDefaultIMPConnection(appName, verbose, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays the default presence server connection in verbose mode, if available. Valid options are 1 (true) and 0 (false). When set to 1, the name and details of the presence server connection are listed. When set to 0, only the connection name displays. This argument defaults to 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.9.7.3 Example
The following example lists the name and details of the connection that the Instant
Messaging and Presence service is using, in an application named webcenter.
wls:/weblogic/serverConfig>listDefaultIMPConnection(appName='webcenter',
 verbose=1)

10.9.8 setDefaultIMPConnection
Module: Oracle WebCenter
Use with WLST: Online

10.9.8.1 Description
Specifies the default connection for the Instant Messaging and Presence service, in a
named WebCenter application. While you can register multiple presence server
connections with a WebCenter application, the Instant Messaging and Presence service
only uses one connection—the default (or active) connection.
If only one presence server connection is available, that connection is assumed to be
the default connection.

10.9.8.2 Syntax
setDefaultIMPConnection(appName, name, [server, applicationVersion])
### Instant Messaging and Presence

#### 10.9.8.3 Example

The following example makes a connection named `myPresenceServer` the default (or active) connection for the Instant Messaging and Presence service.

```plaintext
wls:/weblogic/serverConfig>setDefaultIMPConnection(appName='webcenter', name='myPresenceServer')
```

#### 10.9.9 setIMPServiceProperty

**Module:** Oracle WebCenter

**Use with WLST:** Online

**10.9.9.1 Description**

Specifies default values for the Instant Messaging and Presence service.

Configurable properties for the Instant Messaging and Presence service are listed in Table 10–15, "Instant Messaging and Presence Service Configuration Properties".

**Table 10–15 Instant Messaging and Presence Service Configuration Properties**

<table>
<thead>
<tr>
<th>Configuration Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>selected.connection</code></td>
<td>Connection used by the Instant Messaging and Presence service.</td>
</tr>
<tr>
<td><code>rtc.cache.time</code></td>
<td>Cache timeout for instant messaging and presence data. The default is 60 seconds.</td>
</tr>
<tr>
<td><code>resolve.display.name.from.user.profile</code></td>
<td>Determines what to display if user display names are missing. When set to 0, and display name information is unavailable, only the user name displays in the application. When set to 1, and display name information is unavailable, display names are read from user profile data. Setting this option to 1 will impact performance. The default setting is 0. Display names are not mandatory in presence data. If the WebCenter application does not always provide display names by default and you consider this information important, set <code>resolve.display.name.from.user.profile</code> to 1 so that display names always display.</td>
</tr>
</tbody>
</table>
### 10.9.9.2 Syntax

```
setIMPServiceProperty(appName, property, value, [server, applicationVersion])
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>property</td>
<td>Name of the configuration property.</td>
</tr>
<tr>
<td>value</td>
<td>Value for the property.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

### 10.9.9.3 Example

The following example changes the default cache timeout for instant messaging and presence data, in an application named `webcenter`.

```
wls:/weblogic/serverConfig> setIMPServiceProperty(appName='webcenter', property='rtc.cache.time', value='30')
```

### 10.9.10 removeIMPServiceProperty

Module: Oracle WebCenter

Use with WLST: Online

#### 10.9.10.1 Description

Removes the current value that is set for an Instant Messaging and Presence service property. Use this command to remove any of the properties listed in **Table 10–15, "Instant Messaging and Presence Service Configuration Properties"**.

Take care when using this command as removing values for these properties might cause unexpected behavior.
10.9.10.2 Syntax

```
removeIMPServiceProperty(appName, property, [server, applicationVersion])
```

**Argument** | **Definition**
---|---
app\*Name | Name of the WebCenter application in which to perform this operation.
property | Name of the configuration property.
server | Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.
applicationVersion | Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.

**Note:** Use this command syntax to disable the connection currently used by the Instant Messaging and Presence service:

```
removeIMPServiceProperty('appName='webcenter', property='selected.connection')
```

This command forces the default connection argument to 0. See also, setIMPConnection.

10.9.10.3 Example

The following example clears the cache expiration value for the Instant Messaging and Presence service, in an application named webcenter.

```
wls:/weblogic/serverConfig> removeIMPServiceProperty(appName='webcenter', property='rtc.cache.time')
```

10.9.11 listIMPServiceProperties

**Module:** Oracle WebCenter

**Use with WLST:** Online

10.9.11.1 Description

Lists all configurable properties for the Instant Messaging and Presence service.

10.9.11.2 Syntax

```
listIMPServiceProperties(appName, [server, applicationVersion])
```

**Argument** | **Definition**
---|---
app\*Name | Name of the WebCenter application in which to perform this operation.
server | Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.
applicationVersion | Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.
10.9.11.3 Example
The following example lists configuration properties for the Instant Messaging and Presence service, in an application named webcenter.

\texttt{wls:/weblogic/serverConfig> listIMPServiceProperties(appName='webcenter')}

10.9.12 createIMPExtAppConnection
Module: Oracle WebCenter
Use with WLST: Online

10.9.12.1 Description
Creates an external application suitable for instant messaging and presence server connections. The external application is configured with the required additional properties: authMethod=POST, and additional fields fieldName='Account' and displayToUser=1.

10.9.12.2 Syntax
createIMPExtAppConnection(appName, name, [displayName, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
<tr>
<td>displayName</td>
<td>Optional. External application display name. A user friendly name for the application that WebCenter users will recognize. The display name must be unique across all external applications within the WebCenter application.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.9.12.3 Example
The following example creates an external application named IMPxApp suitable for instant messaging and presence server connections.

\texttt{wls:/weblogic/serverConfig> createIMPExtAppConnection(appName='webcenter', name='IMPxApp', displayName='IMP Ext App')}

10.10 Mail
Use the commands listed in Table 10–16 to manage mail server connections for a WebCenter application.

You can register multiple mail server connections:
WebCenter Spaces supports multiple mail connections. The mail connection configured with default=1 is the default connection for mail services in WebCenter Spaces. All additional connections are offered as alternatives; WebCenter Spaces users can choose which one they want to use through user preferences.

WebCenter Portal applications only use one mail connection—the connection configured with default=1. Any additional connections are ignored.

Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

<table>
<thead>
<tr>
<th>Table 10–16</th>
<th>Mail WLST Commands</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Use this command...</strong></td>
<td><strong>To...</strong></td>
</tr>
<tr>
<td>createMailConnection</td>
<td>Create a mail server connection for a WebCenter application.</td>
</tr>
<tr>
<td>setMailConnection</td>
<td>Edit an existing mail server connection.</td>
</tr>
<tr>
<td>setMailConnectionProperty</td>
<td>Set mail server connection properties.</td>
</tr>
<tr>
<td>deleteMailConnectionProperty</td>
<td>Delete a mail server connection property.</td>
</tr>
<tr>
<td>listMailConnections</td>
<td>List all of the mail server connections that are configured for an application.</td>
</tr>
<tr>
<td>listDefaultMailConnection</td>
<td>List the default mail server connection that is configured for an application.</td>
</tr>
<tr>
<td>setDefaultMailConnection</td>
<td>Set a specified connection as the default mail server connection.</td>
</tr>
<tr>
<td>setMailServiceProperty</td>
<td>Specify defaults for the Mail service.</td>
</tr>
<tr>
<td>removeMailServiceProperty</td>
<td>Remove defaults for the Mail service.</td>
</tr>
<tr>
<td>listMailServiceProperties</td>
<td>List Mail service properties.</td>
</tr>
<tr>
<td>createMailExtApp</td>
<td>Create an external application suitable for mail connections.</td>
</tr>
</tbody>
</table>

10.10.1 createMailConnection

Module: Oracle WebCenter

Use with WLST: Online

10.10.1.1 Description

Creates a mail server connection for a WebCenter application.

WebCenter applications support the Microsoft Exchange Server or any mail server that supports IMAP4 and SMTP. The most important mail server connection attributes are: imapHost, imapPort, imapSecured, smtpHost, smtpPort, and smtpSecured

You can register multiple mail server connections:

- WebCenter Spaces supports multiple mail connections. The mail connection configured with default=1 is the default connection for mail services in
WebCenter Spaces. All additional connections are offered as alternatives; WebCenter Spaces users can choose which one they want to use through user preferences.

- **WebCenter Portal applications** only use one mail connection—the connection configured with `default=1`. Any additional connections are ignored.

### 10.10.1.2 Syntax

`createMailConnection(appName, name, [imapHost, imapPort, smtpHost, smtpPort, imapSecured, smtpSecured, appId, timeout, default, server, applicationVersion])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>name</code></td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
<tr>
<td><code>imapHost</code></td>
<td>Optional. Host name of the machine on which the IMAP service is running.</td>
</tr>
<tr>
<td><code>imapPort</code></td>
<td>Optional. Port on which the IMAP service listens.</td>
</tr>
<tr>
<td><code>smtpHost</code></td>
<td>Optional. Host name of the machine where the SMTP service is running.</td>
</tr>
<tr>
<td><code>smtpPort</code></td>
<td>Optional. Port on which the SMTP service listens.</td>
</tr>
<tr>
<td><code>imapSecured</code></td>
<td>Optional. Specifies whether the mail server connection to the IMAP server is SSL-enabled. Valid values are 1 (true) and 0 (false). The default for this argument is 0.</td>
</tr>
<tr>
<td><code>smtpSecured</code></td>
<td>Optional. Specifies whether the SMTP server is secured. Valid values are 1 (true) and 0 (false). The default for this argument is 0.</td>
</tr>
<tr>
<td><code>appId</code></td>
<td>External application associated with the mail server connection.</td>
</tr>
<tr>
<td><code>timeout</code></td>
<td>Optional. Length of time (in seconds) that the service waits to acquire a connection before terminating. This argument defaults to -1. When set to -1, the service default (10 seconds) applies.</td>
</tr>
</tbody>
</table>

External application credential information is used to authenticate users against the IMAP and SMTP servers. The same credentials are supplied to authenticate the user on both the IMAP and SMTP servers.

The external application you configure for the Mail service must use `authMethod=POST`, and specify several additional login fields:

- `fieldName='Email Address'` and `displayToUser=1`
- `fieldName='Your Name'` and `displayToUser=1`
- `fieldName='Reply-To Address'` and `displayToUser=1`

If an external application does not exist yet, use the WLST command `createMailExtApp` to create an external application that automatically has all the required additional fields.

See also `createExtAppConnection`. 

Oracle WebCenter Custom WLST Commands
The following example creates an external application suitable for a mail server connection, and then creates a mail server connection named `myMailConnection`:

```plaintext
wls:/weblogic/serverConfig> createMailExtApp(appName='webcenter', name='extApp_Mail', displayName='Mail Ext App')

wls:/weblogic/serverConfig> createMailConnection(appName='webcenter', name='myMailConnection', imapHost='myimaphost.com', imapPort=143, smtpHost='mysmtphost.com', smtpPort=25, imapSecured=0, smtpSecured=0, appId='extApp_Mail', timeout=60, default=1)
```

### 10.10.2 setMailConnection

**Module:** Oracle WebCenter

**Use with WLST:** Online

#### 10.10.2.1 Description

Edits an existing mail connection. Use this command to update connection attributes.

The connection is created using the `createMailConnection` command.

(WebCenter Spaces application only.) This command enables you to set additional, optional, LDAP server attributes that cannot be set using `createMailConnection`. When LDAP details are defined, the Mail service creates, edits, and deletes Space distribution lists for WebCenter Spaces. Distribution lists are named after their Space (excluding non-java identifiers) and assigned a domain (derived from the domain attribute, for example, `@mycompany.com`). If LDAP details are not provided, Space distribution lists are not created or maintained. The mail server must be a Microsoft Exchange Server.

#### 10.10.2.2 Syntax

```plaintext
setMailConnection(appName, name, [imapHost, imapPort, smtpHost, smtpPort, imapSecured, smtpSecured, appId, default, ldapHost, ldapPort, ldapBaseDN, ldapAdminUser, ldapAdminPassword, ldapSecured, domain, defaultUser, timeout, server, applicationVersion])
```
<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing mail server connection.</td>
</tr>
<tr>
<td>imapHost</td>
<td>Optional. Host name of the machine on which the IMAP service is running.</td>
</tr>
<tr>
<td>imapPort</td>
<td>Optional. Port on which the IMAP service listens.</td>
</tr>
<tr>
<td>smtpHost</td>
<td>Optional. Host name of the machine where the SMTP service is running.</td>
</tr>
<tr>
<td>smtpPort</td>
<td>Optional. Port on which the SMTP service listens.</td>
</tr>
<tr>
<td>imapSecured</td>
<td>Optional. Specifies whether the connection to the IMAP server is secured (SSL-enabled). Valid values are 1 (true) and 0 (false). The default for this argument is 0.</td>
</tr>
<tr>
<td>smtpSecured</td>
<td>Optional. Specifies whether the connection to the SMTP server is secured (SSL-enabled). Valid values are 1 (true) and 0 (false). The default for this argument is 0.</td>
</tr>
<tr>
<td>appId</td>
<td>Optional. External application associated with the mail server connection. External application credential information is used to authenticate users against the IMAP and SMTP servers. The same credentials are supplied to authenticate the user on both the IMAP and SMTP servers. The external application you configure for the Mail service must use authMethod=POST, and specify several additional login fields: fieldName='Email Address' and displaytoUser=1 fieldName='Your Name' and displaytoUser=1 fieldName='Reply-To Address' and displaytoUser=1 If an external application does not exist yet, use the WLST command createMailExtApp to create an external application that automatically has all the required additional fields. See also createExtAppConnection.</td>
</tr>
<tr>
<td>ldapHost</td>
<td>Optional. Host name of the machine where the LDAP directory server is running.</td>
</tr>
<tr>
<td>ldapPort</td>
<td>Optional. Port on which the LDAP directory server listens.</td>
</tr>
<tr>
<td>ldapBaseDN</td>
<td>Optional. Base distinguished name for the LDAP schema. For example, CN=Users, DC=oracle, DC=com.</td>
</tr>
<tr>
<td>ldapAdminUser</td>
<td>Optional. User name of the LDAP directory server administrator. A valid administrator with privileges to make entries into the LDAP schema.</td>
</tr>
<tr>
<td>ldapAdminPassword</td>
<td>Optional. Password for the LDAP directory server administrator. This password will be stored in a secured store.</td>
</tr>
<tr>
<td>ldapSecured</td>
<td>Optional. Specifies whether the connection to the LDAP server is secured (SSL enabled). Valid values are 1 (true) and 0 (false). The default for this argument is 0. Set this to 1 for all LDAP communications over SSL.</td>
</tr>
<tr>
<td>domain</td>
<td>Optional. Domain name appended to Space distribution lists. For example, if the domain attribute is set to mycompany.com, the Finance Project Space will maintain a distribution list named <a href="mailto:FinanceProject@oracle.com">FinanceProject@oracle.com</a>.</td>
</tr>
</tbody>
</table>
The following example sets individual attributes of a mail server connection.

```
setMailConnection(appName='webcenter',
  name='myMailConnection', imapHost='myimaphost.com', imapPort=143,
  smtpHost='mysmtphost.com', smtpPort=25, imapSecured=0, smtpSecured=0,
  appId='extApp_Mail', timeout=60, default=1)
```

The following example sets LDAP attributes for a mail server connection.

```
setMailConnection(appName='webcenter',
  name='myMailConnection', domain='ORACLE.COM', defaultUser='admin',
  imapHost='myimaphost.com', imapPort=143, smtpHost='mysmtphost.com',
  imapSecured=0, smtpSecured=0, smtpPort=25, appId='extApp_Mail',
  default=1, ldapHost='myldaphost.com', ldapPort=389,
  ldapBaseDN='CN=Users,DC=exchange,DC=uk,DC=com',
  ldapAdminUser='administrator',
  ldapAdminPassword='adminpswd', ldapSecured=0, timeout=60)
```
10.10.3 setMailConnectionProperty

Module: Oracle WebCenter
Use with WLST: Online

10.10.3.1 Description
Sets a mail server connection property. Use this command if additional parameters are required to connect to your mail server. This is an extensible way to add any connection property using a key and a value. (You are not limited to connection properties specified by createMailConnection and setMailConnection.)

All known, additional connection properties are listed in Table 10–17, "Additional Mail Connection Properties".

Table 10–17  Additional Mail Connection Properties

<table>
<thead>
<tr>
<th>Additional Connection Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>charset</td>
<td>Characterset used on the connection. The default charset is UTF-8. To use a different characterset, such as ISO-8859-1, set the charset connection property.</td>
</tr>
<tr>
<td>Various IMAP properties</td>
<td>Any valid IMAP connection property. For example, mail.imap.connectionpoolsize. A list of valid IMAP properties are available at: <a href="http://java.sun.com/products/javamail/javadocs/com/sun/mail/imap/package-summary.html">http://java.sun.com/products/javamail/javadocs/com/sun/mail/imap/package-summary.html</a></td>
</tr>
<tr>
<td>Various SMTP properties</td>
<td>Any valid SMTP connection property. For example, mail.smtp.timeout. A list of valid SMTP properties are available at: <a href="http://java.sun.com/products/javamail/javadocs/com/sun/mail/smtp/package-summary.html">http://java.sun.com/products/javamail/javadocs/com/sun/mail/smtp/package-summary.html</a></td>
</tr>
</tbody>
</table>

Note: Do not use the setMailConnectionProperty to set connection properties available through createMailConnection or setMailConnection. Attempting to do so, has no effect.

10.10.3.2 Syntax

setMailConnectionProperty(appName, name, key, value, [secure], [server], [applicationVersion])

Argument     | Definition |
-------------|------------|
appName      | Name of the WebCenter application in which to perform this operation. |
name         | Name of an existing mail server connection. |
key          | Name of the connection property. |
value        | Value for the property. Allows any property to be modified on the connection with a key and value. |
secure       | Optional. Indicates whether the property value must be stored securely using encryption. Valid options are 1 (true) and 0 (false). When 1, the value is encrypted. The default option is 0. |
**10.10.3.3 Example**
The following example adds a custom mail server connection property called myProperty1 with a default value propertyValue1.

```
$ wls:/weblogic/serverConfig> setMailConnectionProperty(appName='webcenter', name='myMailServer', key='myProperty1', value='propertyValue1')
```

**10.10.4 deleteMailConnectionProperty**
Module: Oracle WebCenter
Use with WLST: Online

**10.10.4.1 Description**
Deletes a mail server connection property. Take care when deleting connection properties because the connection may not work as expected if the configuration becomes invalid as a result.

This command can only delete additional connection properties added using the `setMailConnectionProperty` command.

**10.10.4.2 Syntax**
```
deleteMailConnectionProperty(appName, name, key, [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>name</code></td>
<td>Name of an existing mail server connection.</td>
</tr>
<tr>
<td><code>key</code></td>
<td>Name of the connection property you want to delete.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

**10.10.4.3 Example**
The following example deletes a mail server connection property named mailProperty1.

```
$ wls:/weblogic/serverConfig> deleteMailConnectionProperty(appName='webcenter', name='myMailServer', key='mailProperty1')
```
10.10.5 listMailConnections
Module: Oracle WebCenter
Use with WLST: Online

10.10.5.1 Description
Lists all of the mail server connections that are configured for a named WebCenter application.

10.10.5.2 Syntax
listMailConnection(appName, [verbose, name, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays mail server connection details in verbose mode.Valid options are 1 (true) and 0 (false). When set to 1, listMailConnections lists all of the mail server connections that are configured for a WebCenter application, along with their details. When set to 0, only connection names are listed. This argument defaults to 0.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing mail server connection. Use this argument to view connection details for a specific mail server connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.10.5.3 Example
The following example lists the names of mail server connections that are currently configured for an application named webcenter.

```
wlst:/weblogic/serverConfig> listMailConnections(appName='webcenter')
```

The following example lists connection names and details for all of the mail server connections that are currently configured for an application named webcenter.

```
wlst:/weblogic/serverConfig> listMailConnections(appName='webcenter', verbose=1)
```

The following example lists connection details for a mail server connection named mailConnection1.

```
wlst:/weblogic/serverConfig> listMailConnections(appName='webcenter', name='mailConnection1')
```

10.10.6 listDefaultMailConnection
Module: Oracle WebCenter
Use with WLST: Online
10.10.6.1 Description
Lists the default mail server connection that the Mail service is using, in a named WebCenter application.

You can register multiple mail server connections but there can only be one default connection:

- **WebCenter Spaces** supports multiple mail connections. The mail connection configured with `default=1` is the default connection for mail services in WebCenter Spaces. All additional connections are offered as alternatives; WebCenter Spaces users can choose which one they want to use through user preferences.

- **WebCenter Portal applications** only use one mail connection—the connection configured with `default=1`. Any additional connections are ignored.

10.10.6.2 Syntax
```
listDefaultMailConnection(appName,[verbose],[server],[applicationVersion])
```

10.10.6.3 Example
The following example lists the name and details of the mail server connection that the Mail service is using, in an application named `webcenter`.
```
wls:/weblogic/serverConfig> listDefaultMailConnection(appName='webcenter',
verbose=1)
```

10.10.7 setDefaultMailConnection
Module: Oracle WebCenter
Use with WLST: Online

10.10.7.1 Description
Specifies the `default` mail server connection for the Mail service, in a named WebCenter application.

You can register multiple mail server connections but there can only be one default connection:

- **WebCenter Spaces** supports multiple mail connections. The mail connection configured with `default=1` is the default connection for mail services in
WebCenter Spaces. All additional connections are offered as alternatives; WebCenter Spaces users can choose which one they want to use through user preferences.

- **WebCenter Portal applications** only use one mail connection—the connection configured with default=1. Any additional connections are ignored.

### 10.10.7.2 Syntax

```ruby
setDefaultMailConnection(appName, name, [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing mail connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

### 10.10.7.3 Example

The following example configures the Mail service to use a connection named myMailServer.

```bash
wls:/weblogic/serverConfig> setDefaultMailConnection(appName='webcenter', name='myMailServer')
```

### 10.10.8 setMailServiceProperty

Module: Oracle WebCenter

Use with WLST: Online

#### 10.10.8.1 Description

Specifies default values for the Mail service.

Configurable properties for the Mail service are listed in Table 10–18, "Mail Service Configuration Properties".

#### Table 10–18 Mail Service Configuration Properties

<table>
<thead>
<tr>
<th>Configuration Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>address.delimiter</code></td>
<td>Defines the delimiter that is used to separate multiple mail addresses. A comma is used by default. Some mail servers require mail addresses in the form lastname, firstname and, in such cases, a semi-colon is required.</td>
</tr>
</tbody>
</table>
Mail

Table 10–18  (Cont.) Mail Service Configuration Properties

<table>
<thead>
<tr>
<th>Configuration Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>mail.emailgateway.polling.frequency</td>
<td>The frequency, in seconds, that Space distribution lists are checked for new incoming emails. The default is 1800 seconds (30 minutes). Email communication through Space distribution lists can be published as discussion forum posts on a discussions server. For details, see “Publishing Space Mail in a Discussion Forum” in Oracle Fusion Middleware User’s Guide for Oracle WebCenter.</td>
</tr>
<tr>
<td>mail.messages.fetch.size</td>
<td>Maximum number of messages displayed in mail inboxes.</td>
</tr>
<tr>
<td>resolve.email.address.to.name</td>
<td>Determines whether user email addresses are resolved to WebCenter user names when LDAP is configured. Valid values are 1 (true) and 0 (false). The default value is 0. When set to 1, WebCenter user names display instead of email addresses in Mail task flows. Set this property to 1 if the Instant Messaging and Presence service requires user names to obtain presence status because presence information cannot be obtained when the Mail service provides email addresses. Setting this value to 1 does impact application performance so you must take this into consideration when setting this property.</td>
</tr>
</tbody>
</table>

10.10.8.2 Syntax

setMailServiceProperty(appName, property, value, [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>property</td>
<td>Name of the configuration property</td>
</tr>
<tr>
<td>value</td>
<td>Value for the property.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.10.8.3 Example

The following example increases the default number of messages displayed in mail inboxes to 100, in an application named webcenter.

wls:/weblogic/serverConfig>setMailServiceProperty(appName='webcenter', property='mail.messages.fetch.size', value='100')

10.10.9 removeMailServiceProperty

Module: Oracle WebCenter

Use with WLST: Online
10.10.9.1 Description
Removes the current value that is set for a Mail service property. Use this command to remove any of the properties listed in Table 10–18, "Mail Service Configuration Properties".

Take care when using this command as removing values for these properties might cause unexpected behavior.

**Note:** Use this command syntax to stop the Mail service from using the current default connection:

```
removeMailServiceProperty('appName='webcenter', property='selected.connection')
```

This command forces the `default.connection` argument to 0. See also, `setMailConnection`.

10.10.9.2 Syntax
```
removeMailServiceProperty(appName, property, [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>property</td>
<td>Name of the configuration property.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.10.9.3 Example
The following example clears the current `mail.messages.fetch.size` setting for the Mail service, in an application named `webcenter`.

```
wls:/weblogic/serverConfig>removeMailServiceProperty(appName='webcenter', property='mail.messages.fetch.size')
```

10.10 listMailServiceProperties
Module: Oracle WebCenter
Use with WLST: Online

10.10.10.1 Description
Lists all configurable properties for the Mail service.

10.10.10.2 Syntax
```
listMailServiceProperties(appName, [server], [applicationVersion])
```
The following example lists configuration properties for the Mail service, in an application named webcenter.

```
wls:/weblogic/serverConfig> listMailServiceProperties(appName='webcenter')
```

10.10.11 createMailExtApp

Module: Oracle WebCenter

Use with WLST: Online

10.10.11.1 Description

Creates an external application suitable for mail server connections. The external application is configured with the required additional properties: authMethod=POST, and specify several additional login fields:

- `fieldName='Email Address'` and `displaytoUser=1`
- `fieldName='Your Name'` and `displaytoUser=1`
- `fieldName='Reply-To Address'` and `displaytoUser=1`

10.10.11.2 Syntax

```
createMailExtAppConnection(appName, name, [displayName, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
<tr>
<td>displayName</td>
<td>Optional. External application display name. A user friendly name for the application that WebCenter users will recognize. The display name must be unique across all external applications within the WebCenter application.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.10.11.3 Example
The following example creates an external application named MailxApp suitable for mail server connections.

```
wlcs:/weblogic/serverConfig> createMailExtAppConnection(appName='webcenter',
name='MailxApp', displayName='Mail Ext App')
```

10.11 Notifications
Use the commands listed in Table 10–19 to manage settings for the Notifications service in a WebCenter application.

Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator's Guide for Oracle WebCenter.

**Table 10–19  Notifications WLST Commands**

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>setNotificationsConfig</td>
<td>Specify the connection used for routing</td>
<td>Online</td>
</tr>
<tr>
<td></td>
<td>notifications raised in a WebCenter</td>
<td></td>
</tr>
<tr>
<td></td>
<td>application.</td>
<td></td>
</tr>
<tr>
<td>getNotificationsConfig</td>
<td>Return details about the connection that is</td>
<td>Online</td>
</tr>
<tr>
<td></td>
<td>used to send notifications raised in a</td>
<td></td>
</tr>
<tr>
<td></td>
<td>WebCenter application.</td>
<td></td>
</tr>
</tbody>
</table>

10.11.1 setNotificationsConfig
Module: Oracle WebCenter
Use with WLST: Online

10.11.1.1 Description
Specifies the connection used for routing notifications raised in a WebCenter application.

Use an existing mail server or BPEL server connection. If the WebCenter application is connected to a BPEL server, the Oracle User Messaging Service (UMS) is available for routing notifications through multiple messaging channels, including mail, worklists, and SMS. If you configure the Notifications service to use a BPEL server connection, you may specify a sender 'From' address for each available messaging channel. That is, you can specify a sender mail address and an SMS address.

Alternatively, you can route notification messages through a mail server. If you configure the Notifications service to use a mail server connection, the external application associated with the mail server connection must contain shared credentials. Shared credentials are required for routing application-wide notifications.

10.11.1.2 Syntax
```
setNotificationsConfig(appName, type, name, [senderMailAddress, senderSMSAddress, server, applicationVersion])
```

**Argument** | **Definition**
---|---
appName | Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.
10.11.3 Example

The following example specifies that the Notifications service use a BPEL server connection named 'WebCenter-Worklist' and also defines the mail address and SMS address from which all notifications are sent:

```java
wls:/weblogic/serverConfig> setNotificationsConfig(appName='webcenter',
type='BPEL',
name='WebCenter-Worklist', senderMailAddress='WebCenter Notification<notifications@webcenter.com',
senderSMSAddress='28734')
```

10.11.2 getNotificationsConfig

Module: Oracle WebCenter

Use with WLST: Online
10.11.2.1 Description
Returns details about the connection that is used to send notifications raised in a WebCenter application.

10.11.2.2 Syntax
getNotificationsConfig(appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.11.2.3 Example
The following example returns details about the connection used by the Notifications service in WebCenter Spaces:

```wls:/weblogic/serverConfig>getNotificationsConfig(appName='webcenter')```

ConnectionType: BPEL
ConnectionName: WebCenter-Worklist
SenderMailAddress: notifications@webcenter.com
SenderSMSAddress: 28776

10.12 Personal Events
Use the commands listed in Table 10–20 to manage personal events server connections for a WebCenter application.

Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

Table 10–20 Personal Events WLST Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>createPersonalEventConnection</td>
<td>Create a personal events server connection for a named WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>setPersonalEventConnection</td>
<td>Edit an existing personal events server connection.</td>
<td>Online</td>
</tr>
<tr>
<td>listPersonalEventConnections</td>
<td>List all of the personal events server connections that are configured for a named WebCenter application</td>
<td>Online</td>
</tr>
</tbody>
</table>

10.12.1 createPersonalEventConnection
Module: Oracle WebCenter
Use with WLST: Online

10.12.1.1 Description
Creates a personal events server connection for a named WebCenter application.

While you can register multiple personal events connections for a WebCenter application, only one connection is used for personal events services - the default (or active) connection.

10.12.1.2 Syntax
createPersonalEventConnection(appName, name, webServiceUrl, adapterName, appId, [default, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types within the WebCenter application).</td>
</tr>
<tr>
<td>webServiceUrl</td>
<td>URL of the Web service exposing the event application. Use the format &lt;protocol&gt;://&lt;host&gt;:&lt;port&gt;/&lt;appWebServiceInterface&gt;/&lt;WSName&gt;</td>
</tr>
<tr>
<td>adapterName</td>
<td>Specify the adapter that matches the personal events server. Valid values are MSEx2003 and MSEx2007. Choose MSEx2003 for Microsoft Exchange Server 2003 and MSEx2007 for Microsoft Exchange Server 2007. Each adapter has its own mechanism of authenticating and exchanging data</td>
</tr>
<tr>
<td>appId</td>
<td>External application associated with the Microsoft Exchange Server providing personal events services. If specified, external application credential information is used to authenticate users against the Microsoft Exchange Server.</td>
</tr>
<tr>
<td>default</td>
<td>Optional. Indicates whether this connection is the default connection for the Personal Events service. Valid values are 1 (true) and 0 (false). The default for this argument is 0. To specify that the Personal Events service uses this connection, set the value to 1. While you can register multiple connections for a WebCenter application, only one connection is used for personal event services—the default (or active) connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.12.1.3 Example
The following example creates a connection named MyPEConnection for WebCenter Spaces (appName='webcenter'). The connection points to a Microsoft Exchange
Server 2007 and is designated as the default connection for the Personal Events service.

```
wls:/weblogic/serverConfig>createPersonalEventConnection(appName='webcenter',
name='MyPEConnection', webServiceUrl='http://myexchange.com/EWS/Services.wadl',
adapterName='MSEx2007', appId='ExtPEApp', default=1)
```

The following example creates a connection named MyPEConnection for a WebCenter Spaces. The connection points to a Microsoft Exchange Server 2003.

```
wls:/weblogic/serverConfig>createPersonalEventConnection(appName='webcenter',
name='MyPEConnection',webServiceUrl='http://myexchange.com/ExchangeWS/PersonalEventsWebService.asmx', adapterName='MSEx2003', appId='ExtPEApp')
```

### 10.12.2 setPersonalEventConnection

**Module:** Oracle WebCenter

**Use with WLST:** Online

#### 10.12.2.1 Description
Edits a personal events server connection for a named WebCenter application.

#### 10.12.2.2 Syntax

```
setPersonalEventConnection(appName, name, [webServiceUrl, adapterName, appId,
default, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing personal events server connection.</td>
</tr>
<tr>
<td>webServiceUrl</td>
<td>Optional. URL of the Web service exposing the event application. Use the format &lt;protocol&gt;://&lt;host&gt;:&lt;port&gt;/&lt;appWebServiceInterface&gt; /&lt;WSName&gt;</td>
</tr>
<tr>
<td>adapterName</td>
<td>Optional. Specify the adapter that matches the personal events server. Valid values are MSEx2003 and MSEx2007. Choose MSEx2003 for Microsoft Exchange Server 2003 and MSEx2007 for Microsoft Exchange Server 2007. Each adapter has its own mechanism of authenticating and exchanging data.</td>
</tr>
<tr>
<td>appId</td>
<td>Optional. External application associated with the Microsoft Exchange Server providing personal events services. If specified, external application credential information is used to authenticate users against the Microsoft Exchange Server.</td>
</tr>
<tr>
<td>default</td>
<td>Optional. Indicates whether this connection is the default connection for the Personal Events service. Valid values are 1 (true) and 0 (false). The default for this argument is 0. To specify that the Personal Events service uses this connection, set the value to 1. While you can register multiple connections for a WebCenter application, only one connection is used for personal event services—the default (or active) connection.</td>
</tr>
</tbody>
</table>
Personal Events

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

### 10.12.2.3 Example

The following example updates the Web service URL for a connection named MyPEConnection.

```
wlst:/weblogic/serverConfig> setPersonalEventConnection(appName='webcenter',
name='MyPEConnection', webServiceUrl='http://myexchange.com/EWS/Services.wsdl')
```

The following example makes a connection named MyPEConnection the default connection for personal events services in WebCenter Spaces.

```
wlst:/weblogic/serverConfig> setPersonalEventConnection(appName='webcenter',
name='MyPEConnection', default=1)
```

### 10.12.3 listPersonalEventConnections

Module: Oracle WebCenter

Use with WLST: Online

#### 10.12.3.1 Description

Lists all of the personal events server connections that are configured for a named WebCenter application.

#### 10.12.3.2 Syntax

```
listPersonalEventConnections(appName, [verbose, name, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays connection details for the Personal Events service in verbose mode. Valid options are 1 (true) and 0 (false). When set to 1, listPersonalEventConnections lists all of the personal events server connections that are configured for a WebCenter application, along with their details. When set to 0, only connection names are listed. This argument defaults to 0. When set to 0, do not specify the name argument.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing personal events connection. Use this argument to view connection details for a specific personal events server.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.12.3.3 Example

The following example lists connection names and details for all of the personal events server connections currently configured for WebCenter Spaces.

```
wls:/weblogic/serverConfig>listPersonalEventConnections(appName='webcenter', verbose=1)
```

The following example displays connection details for a personal events server connection named MyPEConnection.

```
wls:/weblogic/serverConfig>listPersonalEventConnections(appName='webcenter', verbose=1, name='MyPEConnection')
```

10.13 Personalization

Use the commands listed in Table 10–21 to manage WebCenter personalization connections for a WebCenter application.

Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which WebCenter Personalization Services is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

<table>

</tr>
</tbody>
</table>
10.13.1 createWCPSCMISConnection

Module: Oracle WebCenter
Use with WLST: Online

10.13.1.1 Description
Creates a CMIS (Content Management Interoperability Service) connection for the WebCenter Personalization service.

10.13.1.2 Syntax
createWCPSCMISConnection(name, repositoryId, host, port, [scheme, namespace, isDefault, path, pathPrepend, servletPathPart, rewriteUrls, pathTrim, timeoutInMillisecs, propagateTimeoutExceptions, server])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Connection name. The name must be unique for this connection type within a namespace.</td>
</tr>
<tr>
<td>repositoryId</td>
<td>CMIS repository ID. Typically, the name of the Oracle Content Server connection name.</td>
</tr>
<tr>
<td>host</td>
<td>Hostname of the server hosting the CMIS REST service. Typically, the machine name of the WC_Spaces managed server.</td>
</tr>
<tr>
<td>port</td>
<td>Port of the server hosting the CMIS REST service. Typically, the port number of the WC_Spaces managed server.</td>
</tr>
<tr>
<td>scheme</td>
<td>Optional. HTTP scheme for accessing the CMIS REST service. Valid options are http and https. Defaults to http.</td>
</tr>
<tr>
<td>namespace</td>
<td>Optional. WebCenter Personalization connection namespace for the connection. If not specified or set to none, the connection is available to all namespaces.</td>
</tr>
<tr>
<td>isDefault</td>
<td>Optional. Indicates whether this connection is the default CMIS connection. Valid values are 1 (true) or 0 (false). Defaults to 0.</td>
</tr>
<tr>
<td>path</td>
<td>Optional. CMIS service URL path. Defaults to /api/cmis/repository/&lt;repositoryId&gt;.</td>
</tr>
<tr>
<td>pathPrepend</td>
<td>Optional. Base CMIS service URL path to prepend to the servletPathPart and path. Defaults to /rest.</td>
</tr>
<tr>
<td>servletPathPart</td>
<td>Optional. Servlet section of the CMIS service URL path.</td>
</tr>
<tr>
<td>rewriteUrls</td>
<td>Optional. Specifies how to rewrite URLs returned from the CMIS REST service. Valid options are producer, consumer, and none. Defaults to none.</td>
</tr>
<tr>
<td>pathTrim</td>
<td>Optional. Specifies the path parts to trim from URLs returned from the CMIS REST service. Defaults to None.</td>
</tr>
<tr>
<td>timeoutInMillisecs</td>
<td>Optional. Timeout in milliseconds (as a string) to wait for CMIS calls to return, or None for no timeout. Defaults to None.</td>
</tr>
</tbody>
</table>
## Personalization

### Oracle WebCenter Custom WLST Commands

#### 10.13.1.3 Example

The following example creates a CMIS connection:

```sh
wls:/weblogic/serverConfig> createWCPSCMISConnection(name='Repos1CMISConnection', repositoryId='ucm11g-server', host='myhost.com', port=8888, scheme='http', isDefault=1)
```

### 10.13.2 createWCPSActivityGraphConnection

**Module:** Oracle WebCenter  
**Use with WLST:** Online

#### 10.13.2.1 Description

Creates an Activity Graph connection for the WebCenter Personalization service.

#### 10.13.2.2 Syntax

```sh
createWCPSActivityGraphConnection(name, host, port, [scheme], [namespace], [isDefault], [restResourceIndex], [rewriteUrls], [pathTrim], [server])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>propagateTimeoutExceptions</td>
<td>Optional. Valid values are 1 (true) and 0 (false). When set to 1, CMIS call timeouts raise an exception. When set to 0, exceptions are not raised.</td>
</tr>
</tbody>
</table>
| server              | Optional. Name of the Managed Server hosting the WebCenter Personalization service.  
                      | This parameter is only required in a nondefault deployment configuration. No value is required for a default deployment where the WC_Utilities server hosts Personalization services. |

#### 10.13.2.3 Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Connection name. Must be unique for this connection type within a namespace.</td>
</tr>
</tbody>
</table>
| host     | Hostname of the server hosting the Activity Graph REST service.  
                      | Typically, the machine name of the WC_Spaces managed server. |
| port     | Port of the server hosting the Activity Graph service.  
                      | Typically, the port number of the WC_Spaces managed server. |
| scheme   | Optional. HTTP scheme for accessing the Activity Graph service.  
                      | Valid options are http and https. Defaults to http. |
| namespace| Optional. WebCenter Personalization connection namespace for the connection. If not specified or set to none, the connection is available to all namespaces. |
| isDefault| Optional. Indicates whether this connection is the default Activity Graph connection. Valid values are 1 (true) or 0 (false). Defaults to 0. |
| restResourceIndex| Optional. URL path for the resourceIndex of the REST server. Defaults to /rest/api/resourceIndex. |
10.13.2 Example
The following example creates an Activity Graph connection in a particular namespace:

```
wlst:/weblogic/serverConfig> createWCPSActivityGraphConnection(name='AGConnection', host='myhost.com', port=8888, namespace='myNamespace')
```

10.13.3 createWCPSPeopleConnection
Module: Oracle WebCenter
Use with WLST: Online

10.13.3.1 Description
Creates a People connection for the WebCenter Personalization service.

10.13.3.2 Syntax
```
createWCPSPeopleConnection(name, host, port, [scheme], [namespace], [isDefault], [restResourceIndex], [rewriteUrls], [pathTrim], [server])
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Connection name. Must be unique for this connection type within a namespace.</td>
</tr>
<tr>
<td>host</td>
<td>Hostname of the server hosting the People Connection REST service. Typically, the machine name of the WC_Spaces managed server.</td>
</tr>
<tr>
<td>port</td>
<td>Port of the server hosting the People Connection service. Typically, the port number of the WC_Spaces managed server.</td>
</tr>
<tr>
<td>scheme</td>
<td>Optional. HTTP scheme for accessing the People Connection service. Valid options are http and https. Defaults to http.</td>
</tr>
<tr>
<td>namespace</td>
<td>Optional. WebCenter Personalization connection namespace for the connection. If not specified or set to none, the connection is available to all namespaces.</td>
</tr>
<tr>
<td>isDefault</td>
<td>Optional. Indicates whether this connection is the default People connection. Valid values are 1 (true) or 0 (false). Defaults to 0.</td>
</tr>
</tbody>
</table>

Optional. Specifies how to rewrite URLs returned from the Activity Graph REST service. Valid options are producer, consumer, and none. Defaults to none.

For more details, see ‘Managing WebCenter Personalization’ in the Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

Optional. Specifies the path parts to trim from URLs returned from the Activity Graph REST service. Defaults to None.

For more details, see ‘Managing WebCenter Personalization’ in the Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

Optional. Name of the Managed Server hosting the WebCenter Personalization service.

This parameter is only required in a nondefault deployment configuration. No value is required for a default deployment where the WC_Utilities server hosts Personalization services.
10.13.3 Example
The following example creates a People connection in the default namespace:

```
ws://weblogic/serverConfig> createWCPSPeopleConnection(name='PeopleConnection', host='myhost.com', port=8888)
```

10.13.4 createWCPSCustomConnection

Use with WLST: Online

10.13.4.1 Description
Creates a connection of a specific type for the WebCenter Personalization service.
Custom connection types are used with custom data providers and property locators.

10.13.4.2 Syntax
```
createWCPSCustomConnection(name, type, [namespace], [properties], [server])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Connection name. Must be unique for this connection type within a namespace.</td>
</tr>
<tr>
<td>type</td>
<td>Custom connection type specific to the custom data provider or property locator implementation.</td>
</tr>
<tr>
<td>namespace</td>
<td>Optional. WebCenter Personalization connection namespace for the connection. If not specified or set to none, the connection is available to all namespaces.</td>
</tr>
<tr>
<td>properties</td>
<td>Optional. Dictionary of connection properties and values. The set of properties is specific to the connection type. All values in the dictionary must be strings.</td>
</tr>
</tbody>
</table>
10.13.4.3 Example
The following example creates an Activity Graph connection in a particular namespace:

```
wl深厚的/weblogic/serverConfig> createWCPSCustomConnection(name='CustomConnection',
type='my.connection.type', properties={ 'prop1': 'value1', 'prop2', value2' })
```

10.13.5 listWCPSCMISConnection
Module: Oracle WebCenter
Use with WLST: Online

10.13.5.1 Description
Lists all CMIS (Content Management Interoperability Service) connections configured for the WebCenter Personalization service or lists a single connection.

10.13.5.2 Syntax
```
listWCPSCMISConnections([server], [verbose], [name], [namespace])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| server       | Optional. Name of the Managed Server hosting the WebCenter Personalization service.  
This parameter is only required in a nondefault deployment configuration. No value is required for a default deployment where the WC_Utilities server hosts Personalization services. |
| verbose      | Optional. Controls verbose or concise output. Valid options are 1 and 0. When set to 1, this command lists the CMIS connections and their properties. When set to 0, this command lists connection names only. Defaults to 1. |
| name         | Optional. Name of an existing connection. If not specified or set to None, then all connections are listed. |
| namespace    | Optional. WebCenter Personalization connection namespace for the connection you want to list. If not specified or set to none, this command lists connections configured to be available in all namespaces. |

10.13.5.3 Example
The following example lists the names of all the CMIS connections:

```
wls:/weblogic/serverConfig> listWCPSCMISConnections(verbos=0)
RepositoriesCMISConnection
Repositories2CMISConnection
```

The following example lists the details of one CMIS connection:

```
wls:/weblogic/serverConfig> listWCPSCMISConnections(name='Repos1CMISConnection')

----------------------
Repos1CMISConnection (type=cmis.provider.connection, namespace=*)
----------------------
host: myhost.com
isDefault: false
path: /api/cmis/repository/repo1
pathPrepend: /rest
port: 8888
repositoryId: ucm11g-server
rewriteUrls: none
scheme: http

10.13.6 listWCPSActivityGraphConnection
Module: Oracle WebCenter
Use with WLST: Online

10.13.6.1 Description
Lists all Activity Graph connections configured for the WebCenter Personalization service or lists a single connection.

10.13.6.2 Syntax
listWCPSActivityGraphConnections([server], [verbose], [name], [namespace])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>server</td>
<td>Optional. Name of the Managed Server hosting the WebCenter Personalization service. This parameter is only required in a nondefault deployment configuration. No value is required for a default deployment where the WC_Utilities server hosts Personalization services.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Controls verbose or concise output. Valid options are 1 and 0. When set to 1, this command lists the Activity Graph connections and their properties. When set to 0, this command lists connection names only. Defaults to 1.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing connection. If not specified or set to None, then all connections are listed.</td>
</tr>
<tr>
<td>namespace</td>
<td>Optional. WebCenter Personalization connection namespace for the connection you want to list. If not specified or set to none, this command lists connections configured to be available in all namespaces.</td>
</tr>
</tbody>
</table>

10.13.6.3 Example
The following example lists the names of all the Activity Graph connections:

wls:/weblogic/serverConfig> listWCPSActivityGraphConnections(verbos=0)

AG1Connection
AG2Connection

The following example lists the details of one Activity Graph connection:

wls:/weblogic/serverConfig> listWCPSActivityGraphConnections(name='AG1Connection')
10.13.7 listWCPSPeopleConnection

Module: Oracle WebCenter

Use with WLST: Online

10.13.7.1 Description

Lists all People connections configured for the WebCenter Personalization service or lists a single connection.

10.13.7.2 Syntax

listWCPSPeopleConnections([server], [verbose], [name], [namespace])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>server</td>
<td>Optional. Name of the Managed Server hosting the WebCenter Personalization service. This parameter is only required in a nondefault deployment configuration. No value is required for a default deployment where the WC_Utils server hosts Personalization services.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Controls verbose or concise output. Valid options are 1 and 0. When set to 1, this command lists the People connections and their properties. When set to 0, this command lists connection names only. Defaults to 1.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing connection. If not specified or set to None, then all connections are listed.</td>
</tr>
<tr>
<td>namespace</td>
<td>Optional. WebCenter Personalization connection namespace for the connection you want to list. If not specified or set to None, this command lists connections configured to be available in all namespaces.</td>
</tr>
</tbody>
</table>

10.13.7.3 Example

The following example lists the names of all the People connections:

```
> listWCPSPeopleConnections(verb=0)
```

People1Connection
People2Connection

The following example lists the details of one People connection:

```
> listWCPSPeopleConnections(name='PeopleConnection')
```

----------------------
PeopleConnection {type=people.service.connection, namespace=*}
----------------------
host: myhost.com
10.13.8 listWCPSCustomConnection

Module: Oracle WebCenter

Use with WLST: Online

10.13.8.1 Description

Lists all connections of a particular type configured for the WebCenter Personalization service or lists a single connection.

Custom connection types are used with custom data providers and property locators.

10.13.8.2 Syntax

listWCPSCustomConnections(type, [server], [verbose], [name], [namespace])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>type</td>
<td>Custom connection type specific to the custom data provider or property locator implementation.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the Managed Server hosting the WebCenter Personalization service. This parameter is only required in a nondefault deployment configuration. No value is required for a default deployment where the WC_Utils server hosts Personalization services.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Controls verbose or concise output. Valid options are 1 and 0. When set to 1, this command lists the connections and their properties. When set to 0, this command lists connection names only. Defaults to 1.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing connection. If not specified or set to None, then all connections are listed.</td>
</tr>
<tr>
<td>namespace</td>
<td>Optional. WebCenter Personalization connection namespace for the connection you want to list. If not specified or set to none, this command lists connections configured to be available in all namespaces.</td>
</tr>
</tbody>
</table>

10.13.8.3 Example

The following example lists the names of all connections with the type my.connection.type:

```bash
wls:/weblogic/serverConfig> listWCPSCustomConnections(type='my.connection.type', verbose=0)

Custom1Connection
Custom2Connection
```

The following example lists the details of one custom connection:

```bash
wls:/weblogic/serverConfig> listWCPSPeopleConnections(type='my.connection.type', name='CustomConnection')
```

----------
CustomConnection (type=my.connection.type, namespace=*)
----------------------
host: myhost.com
isDefault: false
port: 8888
customConnectionProperty: someValue
scheme: http

10.13.9 deleteWCPSCMISConnection
Module: Oracle WebCenter
Use with WLST: Online

10.13.9.1 Description
Deletes a CMIS (Content Management Interoperability Service) connection configured for the WebCenter Personalization service.

10.13.9.2 Syntax
deleteWCPSCMISConnection(name, [namespace, server])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Connection name.</td>
</tr>
<tr>
<td>namespace</td>
<td>Optional. WebCenter Personalization connection namespace for the connection you want to delete. If not specified or set to none, this command deletes connections configured to be available in all namespaces.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the Managed Server hosting the WebCenter Personalization service. This parameter is only required in a nondefault deployment configuration. No value is required for a default deployment where the WC_Utilities server hosts Personalization services.</td>
</tr>
</tbody>
</table>

10.13.9.3 Example
The following example deletes a CMIS connection:

```
wlst:/weblogic/serverConfig>deleteWCPSCMISConnection(name='ReposCMISConnection')
```

10.13.10 deleteWCPSActivityGraphConnection
Module: Oracle WebCenter
Use with WLST: Online

10.13.10.1 Description
Deletes an Activity Graph connection configured for the WebCenter Personalization service.

10.13.10.2 Syntax
deleteWCPSActivityGraphConnection(name, [namespace, server])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Connection name.</td>
</tr>
</tbody>
</table>
### 10.13.10 Example
The following example deletes an Activity Graph connection:
```
wlst:/weblogic/serverConfig> deleteWCPSActivityGraphConnection(name='AGConnection')
```

### 10.13.11 deleteWCPSPeopleConnection

Module: Oracle WebCenter

Use with WLST: Online

#### 10.13.11.1 Description
Deletes a People connection configured for the WebCenter Personalization service.

#### 10.13.11.2 Syntax
```
deleteWCPSPeopleConnection(name, [namespace, server])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Connection name.</td>
</tr>
<tr>
<td>namespace</td>
<td>Optional. WebCenter Personalization connection namespace for the connection you want to delete. If not specified or set to <code>none</code>, this command deletes connections configured to be available in all namespaces.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the Managed Server hosting the WebCenter Personalization service. This parameter is only required in a nondefault deployment configuration. No value is required for a default deployment where the <code>WC_Utilities</code> server hosts Personalization services.</td>
</tr>
</tbody>
</table>

#### 10.13.11.3 Example
The following example deletes a People connection:
```
wls:/weblogic/serverConfig> deleteWCPSPeopleConnection(name='PeopleConnection')
```

### 10.13.12 deleteWCPSCustomConnection

Module: Oracle WebCenter

Use with WLST: Online
10.13.12.1 Description
Deletes a custom connection configured for the WebCenter Personalization service.

10.13.12.2 Syntax
deleteWCPSCustomConnection(name, type, [namespace, server])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Connection name.</td>
</tr>
<tr>
<td>type</td>
<td>Custom connection type.</td>
</tr>
<tr>
<td>namespace</td>
<td>Optional. WebCenter Personalization connection namespace for the connection you want to delete. If not specified or set to none, this command deletes connections configured to be available in all namespaces.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the Managed Server hosting the WebCenter Personalization service. This parameter is only required in a nondefault deployment configuration. No value is required for a default deployment where the WC_Utilities server hosts Personalization services.</td>
</tr>
</tbody>
</table>

10.13.12.3 Example
The following example deletes a custom connection:

```
> wls:/weblogic/serverConfig>deleteWCPSCustomConnection(name='CustomConnection', type='my.connection.type')
```

10.13.13 setWCPSConnectionProperty
Module: Oracle WebCenter
Use with WLST: Online

10.13.13.1 Description
Add, modify, or delete properties of an existing connection for the WebCenter Personalization service. The properties supported by a connection are specific to the connection type:

- CMIS connections support the following properties: repositoryId, host, port, scheme, path, pathPrepend, servletPathPart, rewriteUrls, pathTrim, isDefault, timeoutInMillisecs, propagateTimeoutException
  
  See also, createWCPSCMISConnection.

- Activity Graph and People Connections support the following properties: host, port, scheme, restResourceIndex, rewriteUrls, pathTrim, isDefault
  
  See also, createWCPSActivityGraphConnection and createWCPSPeopleConnection.

10.13.13.2 Syntax
setWCPSConnectionProperty(connectionName, connectionType, propertyName, propertyValue, [namespace], [server])
10.13.13.3 Example
The following example changes or adds a property to a CMIS connection:

```
wlst:/weblogic/serverConfig>
setWCPSConnectionProperty(connectionName='reposCMISConnection',
connectionType=WCPS_CMIS_CONNECTION_TYPE,
propertyName='propagateTimeoutExceptions', propertyValue=0)
```

The following example removes a property from a custom connection:

```
wlst:/weblogic/serverConfig>
setWCPSConnectionProperty(connectionName='CustomConnection',
connectionType='my.connection.type', propertyName='prop2', propertyValue=None)
```

### 10.14 Portlet Producers

Use the commands listed in Table 10–22 to manage portlet producers used in WebCenter applications.

All configuration changes made using these WebCenter WLST commands are immediately available in the WebCenter application.

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>registerWSRPProducer</td>
<td>Create and register a WSRP producer.</td>
<td>Online</td>
</tr>
<tr>
<td>setWSRPProducer</td>
<td>Edit WSRP producer registration details.</td>
<td>Online</td>
</tr>
<tr>
<td>listWSRPProducers</td>
<td>List WSRP producer registration details.</td>
<td>Online</td>
</tr>
<tr>
<td>deregisterWSRPProducer</td>
<td>Deregister a WSRP producer, and delete the associated WSRP and Web Service connections.</td>
<td>Online</td>
</tr>
</tbody>
</table>
### Table 10–22  (Cont.) Producer WLST Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>listWSRPProducerRegistrationProperties</td>
<td>List registration properties supported by a WSRP producer.</td>
<td>Online</td>
</tr>
<tr>
<td>listWSRPProducerUserCategories</td>
<td>List any user categories that the WSRP producer might support.</td>
<td>Online</td>
</tr>
<tr>
<td>mapWSRPProducerUserCategory</td>
<td>Map a role that is defined in the specified application to a user category supported by a WSRP producer.</td>
<td>Online</td>
</tr>
<tr>
<td>registerPDKJavaProducer</td>
<td>Create and register an Oracle PDK-Java producer.</td>
<td>Online</td>
</tr>
<tr>
<td>setPDKJavaProducer</td>
<td>Edit PDK-Java producer registration details.</td>
<td>Online</td>
</tr>
<tr>
<td>listPDKJavaProducers</td>
<td>List registered Oracle PDK-Java producers.</td>
<td>Online</td>
</tr>
<tr>
<td>deregisterPDKJavaProducer</td>
<td>Deregister an Oracle PDK-Java producer, deleting the associated connection.</td>
<td>Online</td>
</tr>
<tr>
<td>registerPageletProducer</td>
<td>Create and register a WebCenter Pagelet producer.</td>
<td>Online</td>
</tr>
<tr>
<td>setPageletProducer</td>
<td>Edit WebCenter Pagelet producer registration details.</td>
<td>Online</td>
</tr>
<tr>
<td>listPageletProducers</td>
<td>List WebCenter Pagelet producer registration details.</td>
<td>Online</td>
</tr>
<tr>
<td>deregisterPageletProducer</td>
<td>Deregister a WebCenter Pagelet producer, deleting the associated connection.</td>
<td>Online</td>
</tr>
<tr>
<td>refreshProducer</td>
<td>Refresh the metadata stored for the named producer to reflect the portlets currently offered by that producer.</td>
<td>Online</td>
</tr>
<tr>
<td>registerOOTBProducers</td>
<td>Register out-of-the-box producers provided with Oracle WebCenter.</td>
<td>Online</td>
</tr>
<tr>
<td>deregisterOOTBProducers</td>
<td>Deregister out-of-the-box producers provided with Oracle WebCenter.</td>
<td>Online</td>
</tr>
<tr>
<td>registerSampleProducers</td>
<td>Register the sample producers provided with Oracle WebCenter.</td>
<td>Online</td>
</tr>
<tr>
<td>deregisterSampleProducers</td>
<td>Deregister sample producers.</td>
<td>Online</td>
</tr>
</tbody>
</table>

#### 10.14.1 registerWSRPProducer

Module: Oracle WebCenter

Use with WLST: Online

**10.14.1.1 Description**

Creates a connection to a WSRP portlet producer and registers the WRSR producer with a named WebCenter application. When you create a WSRP producer connection, a Web Service connection is also created named `<name>-wsconn` where `<name>` is the value specified for the name argument.

**10.14.1.2 Syntax**

```java
registerWSRPProducer(appName, name, url, [proxyHost], [proxyPort], [timeout], [externalApp], [registrationProperties], [tokenType], [issuer], [defUser], [keyStorePath], [keyStorePswd], [sigKeyAlias], [sigKeyPswd], [encKeyAlias], [encKeyPswd], [recptAlias], [enforcePolicyURI], [server], [applicationVersion])
```
<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application. The name you specify here will appear in the Oracle Composer (under the Portlets folder).</td>
</tr>
</tbody>
</table>
| url               | Producer WSDL URL. The syntax will vary according to your WSRP implementation, for example:  
|                   | http://host_name:port_number/context_root/portlets/wsrp2?WSDL  
|                   | http://host_name:port_number/context_root/portlets/wsrp1?WSDL  
|                   | http://host_name:port_number/context_root/portlets/?WSDL (WSRP 1.0 for backward compatibility)  
|                   | Where:  
|                   | ■ host_name is the server where your producer is deployed  
|                   | ■ port_number is the HTTP listener port number  
|                   | ■ context_root is the Web application's context root  
|                   | ■ portlets[/wsrp(1|2)]?WSDL is static text. The text entered here depends on how the producer is deployed.  
|                   | For example:  
| proxyHost         | Optional. Host name or IP address of the proxy server.                     |
| proxyPort         | Optional. Port number on which the proxy server listens.                   |
| timeout           | Optional. Timeout setting for communications with the producer, in seconds. For example, the maximum time the producer may take to register, deregister, or display portlets on WebCenter pages. This argument defaults to 30.  
|                   | Individual portlets may define their own timeout period, which takes precedence over the value expressed here. |
| registrationProperties | Optional. A list of registration properties and their values. The format of this argument must be a comma-separated list of valid registration properties, each followed by an equals symbol and the value. For example: name=Producer, key=123. The registration properties for a producer can be found using listWSRPProducerRegistrationProperties. See Section 10.14.5, "listWSRPProducerRegistrationProperties". |
**tokenType**

Optional. Type of token profile to use for authentication with this WSRP producer.

When the argument `enforcePolicyURI=1`, valid values are:

- **USERNAME_WITHOUT_PASSWORD**
  (oracle/wss10_username_id_propagation_with_msg_protection_client_policy)—This policy provides message protection (integrity and confidentiality) and identity propagation for outbound SOAP requests in accordance with the WS-Security 1.0 standard. Credentials (user name only) are included in outbound SOAP request messages through a WS-Security UsernameToken header. No password is included.

  Message protection is provided using WS-Security 1.0’s Basic128 suite of asymmetric key technologies. Specifically, RSA key mechanisms for message confidentiality, SHA-1 hashing algorithm for message integrity, and AES-128 bit encryption.

- **USERNAME_WITH_PASSWORD**
  (oracle/wss10_username_token_with_message_protection_client_policy)—This policy provides message protection (integrity and confidentiality) and authentication for outbound SOAP requests in accordance with the WS-Security v1.0 standard. Both plain text and digest mechanisms are supported.

  This policy uses WS-Security’s Basic 128 suite of asymmetric key technologies. Specifically, RSA key mechanism for message confidentiality, SHA-1 hashing algorithm for message integrity, and AES-128 bit encryption.

  Use this token profile if the WSRP producer has a different identity store. You will need to define an external application pertaining to the producer and associate the external application with this producer.

- **SAML_TOKEN_WITH_MSG_INTEGRITY**
  (wss10_saml_token_with_message_integrity_client_policy)—This policy provides message-level integrity protection and SAML-based authentication for outbound SOAP requests in accordance with the WS-Security 1.0 standard. A SAML token, included in the SOAP message, is used in SAML-based authentication with sender vouches confirmation.

  This policy uses WS-Security’s Basic 128 suite of asymmetric key technologies and SHA-1 hashing algorithm for message integrity. When this policy is selected, the recipient key alias (recptAlias) must be disabled.

- **SAML_TOKEN_WITH_MSG_PROTECTION**
  (oracle/wss10_saml_token_with_message_protection_client_policy)—This policy provides message-level protection (integrity and confidentiality) and SAML-based authentication for outbound SOAP requests in accordance with the WS-Security 1.0 standard. The Web service consumer includes a SAML token in the SOAP header and the confirmation type is sender-vouches.

  This policy uses WS-Security’s Basic 128 suite of asymmetric key technologies. Specifically, RSA key mechanisms for message confidentiality, SHA-1 hashing algorithm for message integrity, and AES-128 bit encryption. and SHA-1 hashing algorithm for message integrity.
**Argument** | **Definition**
--- | ---
**tokenType** | - **WSS11_SAML_TOKEN_WITH_MSG_PROTECTION** (oracle/wss11_saml_token_with_message_protection_client_policy)—This policy provides message-level protection (integrity and confidentiality) and SAML token population for outbound SOAP requests in accordance with the WS-Security 1.1 standard. A SAML token, included in the SOAP message, is used in SAML-based authentication with sender vouches confirmation. This policy uses the symmetric key technology for signing and encryption, and WS-Security’s Basic 128 suite of asymmetric key technologies for endorsing signatures.
- **WSS10_SAML_TOKEN_ONLY** (oracle/wss10_saml_token_client_policy)—This policy provides SAML-based authentication for outbound SOAP request messages in accordance with the WS-Security 1.0 standard. The policy propagates user identity and is typically used in intra departmental deployments where message protection and integrity checks are not required.

This policy does not require any keystore configuration.

If the argument `enforcePolicyURI=0`, you can specify any valid Oracle Web Services Manager (OWSM) policy URI for the `tokenType` argument.

**issuer** | Optional. Name of the issuer of the token. The issuer name is the entity that vouches for the verification of the subject. For example: www.oracle.com.

This argument only applies when the `tokenType` is: SAML_TOKEN_WITH_MSG_PROTECTION, SAML_TOKEN_WITH_MSG_INTEGRITY, WSS10_SAML_TOKEN_ONLY, WSS11_SAML_TOKEN_WITH_MSG_PROTECTION.

**defUser** | Optional. User name to assert to the remote producer when the user is not authenticated with the WebCenter application.

When unauthenticated, the identity *anonymous* is associated with the application user. The value *anonymous* may be inappropriate for the remote producer, so you may need to specify an alternative identity here. Keep in mind though, that in this case, the WebCenter application has not authenticated the user so the default user you specify should be a low privileged user in the remote producer. If the user has authenticated to the application, the user’s identity is asserted rather than the default user.

This argument only applies when the `tokenType` is: USERNAME_WITHOUT_PASSWORD, SAML_TOKEN_WITH_MSG_PROTECTION, SAML_TOKEN_WITH_MSG_INTEGRITY, WSS10_SAML_TOKEN_ONLY, WSS11_SAML_TOKEN_WITH_MSG_PROTECTION.

**extApp** | Optional. This argument applies when the `tokenType` is USERNAME_WITHOUT_PASSWORD. If this producer uses an external application to store and supply user credentials for authentication, use this argument to name the associated external application.

**keyStorePath** | Optional. Full path to the key store that contains the certificate and the private key that is used for signing some parts of the SOAP message, such as the security token and SOAP message body. The selected file should be a key store created with the Java keytool.

**keyStorePswd** | Optional. Password to the key store that was set when the key store was created.

**sigKeyAlias** | Optional. Identifier for the certificate associated with the private key that is used for signing.

**sigKeyPswd** | Optional. Password for accessing the key identified by the alias that is specified using the `sigKeyAlias` argument.
10.14.1 Examples

The following example registers a WSRP producer named WSRPSamples and registers the WSRP producer with an application named webcenter.

```
wsln/weblogic/serverConfig> registerWSRPProducer(appName='webcenter', name='WSRPSamples', url='http://myhost.com:9999/portletapp/portlets/wsrp2?WSDL')
```

The following example registers a secure WSRP producer.

```
wsln/weblogic/serverConfig> registerWSRPProducer(appName='webcenter', name='WSRPSamples2', url='http://myhost.com:8899/portletapp/portlets/wsrp2?WSDL',
tokenType='WSS11_SAML_TOKEN_WITH_MSG_PROTECTION', issuer='www.oracle.com', defUser='anonymous', keyStorePath='/keys/mykeystore.jks', keyStorePswd='Test1', sigKeyAlias='mysigalias', sigKeyPswd='mysigpswd', encKeyAlias='myencalias', encKeyPswd='myencpswd', recptAlias='myrcptalias')
```

10.14.2 setWSRPProducer

Module: Oracle WebCenter

Use with WLST: Online

10.14.2.1 Description

Edits registration details for an existing WSRP producer.

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>encKeyAlias</td>
<td>Optional. Key alias to be used for encryption. A valid value is one of the key aliases that is located in the specified key store.</td>
</tr>
<tr>
<td>encKeyPswd</td>
<td>Optional. Password for accessing the encryption key.</td>
</tr>
<tr>
<td>recptAlias</td>
<td>Optional. Key store alias that is associated with the producer's certificate. This certificate is used to encrypt the message to the producer. Do not specify a recipient key alias when the tokenType is SAML_TOKEN_WITH_MSG_INTEGRITY.</td>
</tr>
<tr>
<td>enforcePolicyURI</td>
<td>Optional. Valid values are 1 (true) and 0 (false). When set to 1, users must specify one of the following token profiles for the tokenType argument: USERNAME_WITHOUT_PASSWORD, USERNAME_WITH_PASSWORD, SAML_TOKEN_WITH_MSG_PROTECTION, SAML_TOKEN_WITH_MSG_INTEGRITY, WSS11_SAML_TOKEN_WITH_MSG_PROTECTION, WSS10_SAML_TOKEN_ONLY When set to 0, users can specify any Oracle Web Services Manager (OWSM) policy URI. The user must ensure that the OWSM policy specified is valid. The default value is 1.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
### 10.14.2.2 Syntax

```
setWSRPProducer(appName, name, [url], [proxyHost], [proxyPort], [timeout],
[externalApp], [tokenType], [issuer], [defUser], [keyStorePath], [keyStorePswd]
[sigKeyAlias], [sigKeyPswd], [encKeyAlias], [encKeyPswd], [recptAlias],
[enforcePolicyURI], [server], [applicationVersion])
```

<table>

<tr>
<td><code>proxyPort</code></td>
<td>Optional. Port number on which the proxy server listens.</td>
</tr>
<tr>
<td><code>timeout</code></td>
<td>Optional. Timeout setting for communications with the producer, in seconds. For example, the maximum time the producer may take to register, deregister, or display portlets on WebCenter pages.</td>
</tr>
<tr>
<td></td>
<td>This argument defaults to 30.</td>
</tr>
<tr>
<td></td>
<td>Individual portlets may define their own timeout period, which takes precedence over the value expressed here.</td>
</tr>
<tr>
<td><code>extApp</code></td>
<td>Optional. This argument applies when the <code>tokenType</code> is <code>USERNAME_WITH_PASSWORD</code>. If this producer uses an external application to store and supply user credentials for authentication, use this argument to name the associated external application.</td>
</tr>
<tr>
<td>Argument</td>
<td>Definition</td>
</tr>
<tr>
<td>------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><code>tokenType</code></td>
<td>Optional. Type of token profile to use for authentication with this WSRP producer. When the argument <code>enforcePolicyURI=1</code>, valid values are:</td>
</tr>
<tr>
<td></td>
<td>- <strong>USERNAME WITHOUT PASSWORD</strong></td>
</tr>
<tr>
<td></td>
<td>(oracle/wss10_username_id_propagation_with_msg_protection_client_policy)—This policy provides message protection (integrity and confidentiality) and identity propagation for outbound SOAP requests in accordance with the WS-Security 1.0 standard. Credentials (<code>username</code> only) are included in outbound SOAP request messages through a WS-Security UsernameToken header. No password is included. Message protection is provided using WS-Security 1.0's Basic 128 suite of asymmetric key technologies. Specifically, RSA key mechanisms for message confidentiality, SHA-1 hashing algorithm for message integrity, and AES-128 bit encryption.</td>
</tr>
<tr>
<td></td>
<td>- <strong>USERNAME WITH PASSWORD</strong></td>
</tr>
<tr>
<td></td>
<td>(oracle/wss10_username_token_with_message_protection_client_policy)—This policy provides message protection (integrity and confidentiality) and authentication for outbound SOAP requests in accordance with the WS-Security v1.0 standard. Both plain text and digest mechanisms are supported. This policy uses WS-Security's Basic 128 suite of asymmetric key technologies. Specifically, RSA key mechanism for message confidentiality, SHA-1 hashing algorithm for message integrity, and AES-128 bit encryption. Use this token profile if the WSRP producer has a different identity store. You will need to define an external application pertaining to the producer and associate the external application with this producer.</td>
</tr>
<tr>
<td></td>
<td>- <strong>SAML_TOKEN WITH MSG_INTEGRITY</strong></td>
</tr>
<tr>
<td></td>
<td>(wss10_saml_token_with_message_integrity_client_policy)—This policy provides message-level integrity and SAML-based authentication for outbound SOAP requests in accordance with the WS-Security 1.0 standard. A SAML token, included in the SOAP message, is used in SAML-based authentication with sender vouches confirmation. This policy uses WS-Security's Basic 128 suite of asymmetric key technologies and SHA-1 hashing algorithm for message integrity. When this policy is selected, the recipient key alias (recptAlias) must be disabled.</td>
</tr>
<tr>
<td></td>
<td>- <strong>SAML_TOKEN WITH MSG_PROTECTION</strong></td>
</tr>
<tr>
<td></td>
<td>(oracle/wss10_saml_token_with_message_protection_client_policy)—This policy provides message-level protection (integrity and confidentiality) and SAML-based authentication for outbound SOAP requests in accordance with the WS-Security 1.0 standard. The Web service consumer includes a SAML token in the SOAP header and the confirmation type is sender-vouches. This policy uses WS-Security's Basic 128 suite of asymmetric key technologies. Specifically, RSA key mechanisms for message confidentiality, SHA-1 hashing algorithm for message integrity, and AES-128 bit encryption. and SHA-1 hashing algorithm for message integrity.</td>
</tr>
</tbody>
</table>
### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| `tokenType`       |  **WSS11_SAML_TOKEN_WITH_MSG_PROTECTION**  
oracle/wss11_saml_token_with_message_protection_client_policy—This policy enables message-level protection (integrity and confidentiality) and SAML token population for outbound SOAP requests in accordance with the WS-Security 1.1 standard. A SAML token, included in the SOAP message, is used in SAML-based authentication with sender vouches confirmation. This policy uses the symmetric key technology for signing and encryption, and WS-Security’s Basic 128 suite of asymmetric key technologies for endorsing signatures.  
**WSS10_SAML_TOKEN_ONLY**  
oracle/wss10_saml_token_client_policy—This policy includes SAML-tokens in outbound SOAP request messages in accordance with the WS-Security 1.0 standard. The policy propagates user identity and is typically used in intra departmental deployments where message protection and integrity checks are not required. This policy does not require any keystore configuration.  
If the argument `enforcePolicyURI=0`, you can specify any valid Oracle Web Services Manager (OWSM) policy URI for the `tokenType` argument. |
| `issuer`          | Optional. Name of the issuer of the token. The issuer name is the entity that vouches for the verification of the subject. For example: www.oracle.com.  
This argument only applies when the `tokenType` is:  
SAML_TOKEN_WITH_MSG_PROTECTION, SAML_TOKEN_WITH_MSG_INTEGRITY, WSS10_SAML_TOKEN_ONLY, WSS11_SAML_TOKEN_WITH_MSG_PROTECTION. |
| `defUser`         | Optional. User name to assert to the remote producer when the user is not authenticated with the WebCenter application.  
When unauthenticated, the identity anonymous is associated with the application user. The value anonymous may be inappropriate for the remote producer, so you may need to specify an alternative identity here. Keep in mind though, that in this case, the WebCenter application has not authenticated the user so the default user you specify should be a low privileged user in the remote producer. If the user has authenticated to the application, the user's identity is asserted rather than the default user.  
This argument only applies when the `tokenType` is:  
USERNAME_WITHOUT_PASSWORD, SAML_TOKEN_WITH_MSG_PROTECTION, SAML_TOKEN_WITH_MSG_INTEGRITY, WSS10_SAML_TOKEN_ONLY, WSS11_SAML_TOKEN_WITH_MSG_PROTECTION. |
| `keyStorePath`    | Optional. Full path to the key store that contains the certificate and the private key that is used for signing some parts of the SOAP message, such as the security token and SOAP message body. The selected file should be a key store created with the Java keytool. |
| `keyStorePswd`    | Optional. Password to the key store that was set when the key store was created. |
| `sigKeyAlias`     | Optional. Identifier for the certificate associated with the private key that is used for signing. |
| `sigKeyPswd`      | Optional. Password for accessing the key identified by the alias that is specified using the `sigKeyAlias` argument. |
Portlet Producers

### 10.14.2.3 Example

This example increases the timeout, for the WSRPSamples producer, to 60 seconds.

```
wls:/weblogic/serverConfig> setWSRPProducer(appName='webcenter',
name='WSRPSamples', timeout=60)
```

This example updates security properties on a secure WSRP producer.

```
wls:/weblogic/serverConfig> setWSRPProducer(appName='webcenter',
name='WSRPSamples2', tokenType='WSS11_SAML_TOKEN_WITH_MSG_PROTECTION',
issuer='www.oracle.com', defUser='anonymous',
keyStorePath='/keys/mykeystore.jks', keyStorePswd='Test1',
sigKeyAlias='mysigalias', sigKeyPswd='mysigpswd', encKeyAlias='myencalias',
encKeyPswd='myencpswd', recptAlias='myrcptalias')
```

This example removes all the security properties set on a secure WSRP producer.

```
wls:/weblogic/serverConfig> setWSRPProducer(appName='webcenter',
name='WSRPSamples2', tokenType='')
```

### 10.14.3 listWSRPProducers

Module: Oracle WebCenter

Use with WLST: Online

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>encKeyAlias</code></td>
<td>Optional. Key alias used by the producer to encrypt the return message. A valid value is one of the key aliases that is located in the specified key store. If not specified, the producer uses the signing key for encrypting the return message.</td>
</tr>
<tr>
<td><code>encKeyPswd</code></td>
<td>Optional. Password for accessing the encryption key.</td>
</tr>
<tr>
<td><code>recptAlias</code></td>
<td>Optional. Key store alias that is associated with the producer’s certificate. This certificate is used to encrypt the outbound message to the producer. Do not specify a recipient key alias when the <code>tokenType</code> is SAML_TOKEN_WITH_MSG_INTEGRITY.</td>
</tr>
<tr>
<td><code>enforcePolicyURI</code></td>
<td>Optional. Valid values are 1 (true) and 0 (false). When set to 1, users must specify one of the following token profiles for the <code>tokenType</code> argument: USERNAME_WITHOUT_PASSWORD, USERNAME_WITH_PASSWORD, SAML_TOKEN_WITH_MSG_PROTECTION, SAML_TOKEN_WITH_MSG_INTEGRITY, WSS11_SAML_TOKEN_WITH_MSG_PROTECTION, WSS10_SAML_TOKEN_ONLY When set to 0, users can specify any Oracle Web Services Manager (OWSM) policy URI. The user must ensure that the OWSM policy specified is valid. The default value is 1.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.14.3.1 Description
Lists WSRP producer registration details.

10.14.3.2 Syntax
listWSRPProducers(appName, [name], [verbose], [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>The name of the application in which one or more WSRP producers is registered.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing WSRP producer. If omitted, connection details for all WSRP producers configured for this WebCenter application are listed.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays WSRP producer connection details in verbose mode. Valid options are 1 (true) and 0 (false). When set to 1, listWSRPProducers lists all connection properties. When set to 0, listWSRPProducers lists connection names only. This argument defaults to 1. If you set this argument to 0, do not specify the names argument.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.14.3.3 Example
wls:/weblogic/serverConfig> listWSRPProducers(appName='webcenter', name='WSRPSamples')

10.14.4 deregisterWSRPProducer
Module: Oracle WebCenter
Use with WLST: Online

10.14.4.1 Description
Deregisters a WSRP producer, and deletes the associated WSRP and Web Service connections.

10.14.4.2 Syntax
deregisterWSRPProducer(appName, name, [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application where the producer is registered.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing WSRP producer.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
</tbody>
</table>
10.14.4.3 Example
The following example deregisters the WSRPSamples producer in an application named webcenter.

```
wls:/weblogic/serverConfig> deregisterWSRPProducer(appName='webcenter', name='WSRPSamples')
```

10.14.5 listWSRPProducerRegistrationProperties
Module: Oracle WebCenter
Use with WLST: Online

10.14.5.1 Description
Lists registration properties supported by a WSRP portlet producer.

10.14.5.2 Syntax
```
listWSRPProducerRegistrationProperties(appName, url, [proxyHost, [proxyPort], [server], [applicationVersion]])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>url</td>
<td>WSRP producer URL. The syntax will vary according to your WSRP implementation, for example: http://host_name:port_number/context_root/portlets/wsrp2?WSDL http://host_name:port_number/context_root/portlets/wsrp1?WSDL http://host_name:port_number/context_root/portlets/?WSDL (WSRP 1.0 for backward compatibility) Where:</td>
</tr>
<tr>
<td>proxyHost</td>
<td>Optional. Host name or IP address of the proxy server. A proxy is required when the WebCenter application and the remote portlet producer are separated by a firewall and an HTTP proxy is needed to communicate with the producer.</td>
</tr>
<tr>
<td>proxyPort</td>
<td>Optional. Port number on which the proxy server listens.</td>
</tr>
</tbody>
</table>
Portlet Producers

Oracle WebCenter Custom WLST Commands

10.14.5.3 Example
The following example lists valid registration properties for the WSRP producer with the WSDL URL provided.

```
wls:/weblogic/serverConfig> listWSRPProducerRegistrationProperties
(appName='webcenter', url='http://myhost:9999/portletapp/portlets/wsrp2?WSDL')
Registration Property hint : hint text
Registration Property label : label text
Registration Property language : en
Registration Property name : {urn:xyz:wlp:prop:reg:registration}consumerRole
Registration Property value : None
```

10.14.6 listWSRPProducerUserCategories
Module: Oracle WebCenter
Use with WLST: Online

10.14.6.1 Description
Lists any user categories that a WSRP producer might support. WebCenter users can use the WLST command mapWSRPProducerUserCategory to map application roles to a producer's user category.

10.14.6.2 Syntax
```
listWSRPProducerUserCategories(appName, name, [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing WSRP producer.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.14.6.3 Example
The following example displays the categories associated with a WSRP producer named WSRPSamples.

```
wls:/weblogic/serverConfig> listWSRPProducerUserCategories(appName='webcenter',
name='WSRPSamples')
User Category Name : categoryTwo
User Category Description : Custom role two.
```
User Category Mapped Local Roles : None

User Category Name : categoryOne
User Category Description : Custom role one.
User Category Mapped Local Roles : None

10.14.7 mapWSRPProducerUserCategory
Module: Oracle WebCenter
Use with WLST: Online

10.14.7.1 Description
Maps a role that is defined in the specified WebCenter application to a user category supported by a WSRP producer. The user categories may be found using listWSRPProducerUserCategories.

10.14.7.2 Syntax
mapWSRPProducerUserCategory(appName, name, localRole, producerUserCategory, [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing WSRP producer.</td>
</tr>
<tr>
<td>localRole</td>
<td>Name of the WebCenter application role to be mapped.</td>
</tr>
<tr>
<td>producerUserCategory</td>
<td>WSRP producer user category to which the WebCenter role will be mapped.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.14.7.3 Example
The following example maps the application role admin to the WSRP user category wrsp-admin.

wls:/weblogic/serverConfig> mapWSRPProducerUserCategory(appName='webcenter', name='WSRPProducer1', localRole='admin', producerUserCategory='wrsp-admin')

10.14.8 registerPDKJavaProducer
Module: Oracle WebCenter
Use with WLST: Online

10.14.8.1 Description
Creates a connection to an Oracle PDK-Java portlet producer and registers the Oracle PDK-Java producer with a named WebCenter application.
10.14.8.2 Syntax
registerPDKJavaProducer{appName, name, url, [serviceId], [proxyHost, [proxyPort]], [subscriberId], [sharedKey], [timeout], [establishSession], [externalApp], [mapUser], [server], [applicationVersion]}

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application for which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
</tbody>
</table>
| url       | URL for the Oracle PDK-Java producer. Use the following syntax: http://host_name:port_number/context_root/providers  
  Where:  
  ■ host_name is the server where the producer is deployed  
  ■ port_number is the HTTP Listener port number  
  ■ context_root is the Web application’s context root.  
  ■ providers is static text. The text entered here depends on how the producer is deployed.  
  For example: http://myHost:7778/myEnterprisePortlets/providers |
| serviceId | Optional. Service ID of the producer.  
  PDK-Java enables you to deploy multiple producers under a single adapter servlet. Producers are identified by their unique service ID. A service ID is required only if the service ID is not appended to the URL end point.  
  For example, the following URL end point requires sample as the service ID:  
  http://domain.us.oracle.com:7778/axyz/providers  
  However, the following URL end point, does not require a service ID:  
  http://domain.us.oracle.com:7778/axyz/providers/sample  
  The service ID is used to look up a file called <service_id>.properties, which defines the characteristics of the producer, such as whether to display its test page. Use any value to create the service ID. |
| proxyHost | Optional. Host name or IP address of the proxy server.  
  A proxy is required if the WebCenter application and the remote portlet producer are separated by a firewall and an HTTP proxy is needed for communication with the producer. |
| proxyPort | Optional. Port number on which the proxy server listens. This argument defaults to 80. |
| sharedKey | Optional. Shared key used for message authentication with the remote producer. Message authentication ensures that the incoming messages are sent from a host with a shared key. This argument defaults to null.  
  The shared key can contain between 10 and 20 alphanumeric characters. |
### 10.14.8.3 Example
The following example creates and registers an Oracle PDK-Java producer named JPDKSamples, for an application named webcenter.

```

wls:/weblogic/serverConfig> registerPDKJavaProducer(appName='webcenter', name='JPDKSamples', url='http://myhost:9999/jpdk/providers/sample')
```

### 10.14.9 setPDKJavaProducer

Module: Oracle WebCenter

Use with WLST: Online

#### 10.14.9.1 Description
Edits registration details for an existing PDK-Java producer.

#### 10.14.9.2 Syntax

```

setPDKJavaProducer(appName, name, url, [serviceId], [proxyHost, [proxyPort]], [subscriberId], [sharedKey], [timeout], [establishSession], [externalApp],
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>subscriberId</td>
<td>Optional. Consumer’s identifier, if required. When a producer is registered with an application, a call is made to the producer. During the call, the consumer (WebCenter application in this instance) passes the value for subscriberId to the producer. The producer may be coded to use the subscriber ID.</td>
</tr>
<tr>
<td>timeout</td>
<td>Optional. Timeout setting for communications with the producer, in seconds. For example, the maximum time the producer may take to register, deregister, or display portlets on WebCenter pages. This argument defaults to 30. Individual portlets may define their own timeout period, which takes precedence over the value expressed here.</td>
</tr>
<tr>
<td>establishSession</td>
<td>Optional. Enable a user session when executing portlets from this producer. Valid values are 1 (true) and 0 (false). The default for this argument is 0. When sessions are enabled (1), the server maintains session-specific information, such as the user name. Message authentication uses sessions, so if a shared key is specified, this option should also be enabled. For sessionless communication between the producer and the server, specify 0.</td>
</tr>
<tr>
<td>externalApp</td>
<td>Optional. Name of the external application with which to associate the producer. Required if one of this producer's portlets requires authentication.</td>
</tr>
<tr>
<td>mapUser</td>
<td>Optional. Flag indicating whether the mapped user name from the external application should be passed to the producer. Valid values are 1 (true) and 0 (false). This argument defaults to 1.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
Portlet Producers

(mapUser), (server), (applicationVersion))

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing PDK-Java producer.</td>
</tr>
</tbody>
</table>
| url       | URL for the Oracle PDK-Java producer. Use the following syntax: http://host_name:port_number/context_root/providers  
Where:  
- host_name is the server where the producer is deployed  
- port_number is the HTTP Listener port number  
- context_root is the Web application's context root.  
- providers is static text. The text entered here depends on how the producer is deployed.  
For example: http://myHost:7778/myEnterprisePortlets/providers |
| serviceId | Optional. Service ID of the producer.  
PDK-Java enables you to deploy multiple producers under a single adapter servlet. Producers are identified by their unique service ID. A service ID is required only if the service ID is not appended to the URL end point.  
For example the following URL endpoint requires sample as the service ID: http://domain.us.oracle.com:7778/axyz/providers  
However, the following URL endpoint, does not require a service ID: http://domain.us.oracle.com:7778/axyz/providers/sample  
The service ID is used to look up a file called <service_id>.properties, which defines the characteristics of the producer, such as whether to display its test page. Use any value to create the service ID. |
| proxyHost | Optional. Host name or IP address of the proxy server.  
A proxy is required if the WebCenter application and the remote portlet producer are separated by a firewall and an HTTP proxy is needed for communication with the producer. |
| proxyPort | Optional. Port number on which the proxy server listens. |
| subscriberId | Optional. Consumer's identifier, if required.  
When a producer is registered with an application, a call is made to the producer. During the call, the consumer (WebCenter application in this instance) passes the value for Subscriber ID to the producer. If the producer does not see the expected value for Subscriber ID, it might reject the registration call. |
| sharedKey | Optional. The shared key is used for message authentication with the remote producer. Message authentication ensures that the incoming messages are sent from a host with a shared key. You should enable sessions using the sharedKey argument, as well as the establishSession argument. |
The following example changes a PDK-Java producer registered with MyApp to use a proxy server.

```
setPDKJavaProducer(appName='MyApp',
  name='MyProducer', url='http://myhost.com/jpdk/providers/sample',
  proxyHost='myproxy.com', proxyPort=80)
```

## 10.14.10 deregisterPDKJavaProducer

### 10.14.10.1 Description

Deregisters an Oracle PDK-Java producer and deletes the associated connection, for a named WebCenter application.

### 10.14.10.2 Syntax

```
deregisterPDKJavaProducer(appName, name, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing PDK-Java producer.</td>
</tr>
</tbody>
</table>
10.14.10 Example
The following example deregisters the `wc-WebClipping` producer, and deletes the associated connection.

```bash
wls:/weblogic/serverConfig> deregisterPDKJavaProducer(appName='webcenter', name='wc-WebClipping')
Already in Domain Runtime Tree
Producer wc-WebClipping has been deregistered.
Already in Domain Runtime Tree
'wc-WebClipping' successfully deleted
Already in Domain Runtime Tree
'wc-WebClipping-urlconn' successfully deleted
```

10.14.11 listPDKJavaProducers
Module: Oracle WebCenter
Use with WLST: Online

10.14.11.1 Description
Lists details for one or more Oracle PDK-Java producers registered with a named WebCenter application.

10.14.11.2 Syntax
`listPDKJavaProducers(appName, [name], [verbose], [server, applicationVersion])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>name</code></td>
<td>Optional. Name of an existing PDK-Java portlet producer. If omitted,</td>
</tr>
<tr>
<td></td>
<td>connection details for all PDK-Java producers configured for this WebCenter</td>
</tr>
<tr>
<td></td>
<td>application are listed.</td>
</tr>
<tr>
<td><code>verbose</code></td>
<td>Optional. Displays PDK-Java producer connection details in verbose mode.</td>
</tr>
<tr>
<td></td>
<td>Valid options are 1 (true) and 0 (false). When set to 1,</td>
</tr>
<tr>
<td></td>
<td><code>listPDKJavaProducers</code> lists all connection properties. When set to 0,</td>
</tr>
<tr>
<td></td>
<td><code>listPDKJavaProducers</code> lists connection names only. This argument defaults</td>
</tr>
<tr>
<td></td>
<td>to 1.</td>
</tr>
<tr>
<td></td>
<td>If you set this argument to 0, do not specify the name argument.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter</td>
</tr>
<tr>
<td></td>
<td>application is deployed. For example, <code>WC_Spaces</code>.</td>
</tr>
<tr>
<td></td>
<td>Required when applications with the same name are deployed to different</td>
</tr>
<tr>
<td></td>
<td>servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if</td>
</tr>
<tr>
<td></td>
<td>more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.14.11.3 Example
The following example lists all the connection properties (verbose mode) for the
JPDKSamples producer.

```bash
wls:/weblogic/serverConfig> listPDKJavaProducers(appName='webcenter',
name='JPDKSamples', verbose=1)
----------------------
wc-WebClipping
----------------------
Service Id: None
Shared Key: None
External Application Id: None
Subscriber Id: None
URL: http://myhost.com:9999/portalTools/webClipping/providers/webClipping
----------------------
wc-OmniPortlet
----------------------
Service Id: None
Shared Key: None
External Application Id: None
Subscriber Id: None
URL: http://myhost:9999/portalTools/omniPortlet/providers/omniPortlet
```

10.14.12 registerPageletProducer

Module: Oracle WebCenter

Use with WLST: Online

10.14.12.1 Description
Registers a WebCenter Pagelet producer with a named WebCenter application.

10.14.12.2 Syntax

```
registerPageletProducer(appName, name, url, [server, applicationVersion])
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application for which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application. The name you specify here appears in Oracle Composer under the Mash-ups &gt;Pagelet Producers folder (by default).</td>
</tr>
<tr>
<td>url</td>
<td>URL required to access the server providing WebCenter Pagelet producer services. Use the syntax: protocol://host.domain:port_number. The URL must include a fully-qualified domain name. For example: <a href="http://myhost.example.com:7778/">http://myhost.example.com:7778/</a> If pagelets carry secure data, the URL registered must use the https protocol. For example: <a href="https://myhost.com:7779/">https://myhost.com:7779/</a></td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
</tbody>
</table>
Portlet Producers

10.14.12.3 Example
The following example registers a WebCenter Pagelet Producer with an application named webcenter.

wls:/weblogic/serverConfig> registerPageletProducer(appName='webcenter', name='MyPageletProducer', url='http://myhost.com:7001')

10.14.13 setPageletProducer
Module: Oracle WebCenter
Use with WLST: Online

10.14.13.1 Description
Edits connection details for an existing WebCenter Pagelet producer.

10.14.13.2 Syntax
setPageletProducer(appName, name, [url, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing WebCenter Pagelet producer connection.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. URL required to access the server providing WebCenter Pagelet producer services. Use the syntax: protocol://host.domain:port_number The URL must include a fully-qualified domain name. For example: <a href="http://myhost.example.com:7778/">http://myhost.example.com:7778/</a></td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.14.13.3 Example
The following example updates administrator user name and password details for an existing WebCenter Pagelet producer named MyPageletProducer:

wls:/weblogic/serverConfig> setPageletProducer(appName='webcenter', name='MyPageletProducer', url='http://mypagelethost.com:7778')

10.14.14 listPageletProducers
Module: Oracle WebCenter
Use with WLST: Online
10.14.14.1 Description
Lists connection details for one or all WebCenter Pagelet producers registered with a named WebCenter application.

10.14.14.2 Syntax

```
listPageletProducers(appName, [name], [verbose], [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing WebCenter Pagelet producer connection. Use this argument to view connection details for a specific pagelet producer. If omitted, connection details for all WebCenter Pagelet producers configured for this WebCenter application are listed.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays WebCenter Pagelet producer connection details in verbose mode. Valid options are 1 (true) and 0 (false). When set to 1, <code>listPageletProducers</code> lists all connection properties. When set to 0, <code>listPageletProducers</code> lists connection names only. This argument defaults to 1. If you set this argument to 0, do not specify the name argument.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.14.14.3 Example

The following example lists connection names and details for all WebCenter Pagelet producers currently registered for a WebCenter application name `MyWebCenterApp`:

```
qls:/weblogic/serverConfig> listPageletProducers(appName='MyWebCenterApp', verbose=1)
----------------------
MyPageletProducer
----------------------
URL: http://myhost.com:7001
----------------------
TestPageletProducer
----------------------
URL: http://testhost.com:7002
```

The following example displays details for a single WebCenter Pagelet producer connection named `MyPageletProducer`:

```
qls:/weblogic/serverConfig> listPageletProducers(appName='webcenter', name='MyPageletProducer', verbose=1)
----------------------
MyPageletProducer
----------------------
URL: http://myhost.com:7001
```
10.14.15 **deregisterPageletProducer**

Module: Oracle WebCenter

Use with WLST: Online

10.14.15.1 **Description**

Deregisters a WebCenter Pagelet producer currently registered with a named WebCenter application.

10.14.15.2 **Syntax**

```plaintext
deregisterPageletProducer(appName, name, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing WebCenter Pagelet producer connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.14.15.3 **Example**

The following example deregisters a WebCenter Pagelet producer connection named MyPageletProducer currently configured for a WebCenter application name MyWebCenterApp:

```plaintext
wls:/weblogic/serverConfig> deregisterPageletProducer(appName='MyWebCenterApp', name='MyPageletProducer')
```

10.14.16 **refreshProducer**

Module: Oracle WebCenter

Use with WLST: Online

10.14.16.1 **Description**

Refreshes the metadata stored for a named producer to reflect the portlets that are currently offered by that producer.

10.14.16.2 **Syntax**

```plaintext
refreshProducer(appName, producerName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which the producer is registered.</td>
</tr>
<tr>
<td>producerName</td>
<td>Name of an existing producer.</td>
</tr>
</tbody>
</table>
10.14.16.3 Example
The following example refreshes the WSRPSamples producer in an application named webcenter.

```
$ wls:/weblogic/serverConfig> refreshProducer(appName='webcenter', 
        producerName='WSRPSamples')
Producer WSRPSamples has been refreshed.
```

10.14.17 registerOOTBProducers

Module: Oracle WebCenter

Use with WLST: Online

10.14.17.1 Description
Registers several out-of-the-box producers provided with Oracle WebCenter: OmniPortlet, Web Clipping, and WSRP Tools.

10.14.17.2 Syntax
```
registerOOTBProducers(producerHost, producerPort, appName, [server, 
applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>producerHost</td>
<td>Host name or IP address of the server hosting out-of-the-box producers.</td>
</tr>
<tr>
<td>producerPort</td>
<td>Port number for the server hosting out-of-the-box producers.</td>
</tr>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which the out-of-the-box producers are to be registered.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.14.17.3 Example
The following example registers out-of-the-box producers in a WebCenter application named myApp.

```
$ wls:/weblogic/serverConfig> registerOOTBProducers(producerHost='myhost.com', 
producerPort=9999, appName='myApp')
```

Registering Out-of-the-Box Producers
Registering producers at http://myhost.com:9999
10.14.18 deregisterOOTBProducers

Module: Oracle WebCenter

Use with WLST: Online

10.14.18.1 Description
Deregisters out-of-the-box producers provided with Oracle WebCenter: OmniPortlet, Web Clipping, and WSRP Tools.

10.14.18.2 Syntax
deregisterOOTBProducers(appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which the out-of-the-box producers are currently registered.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.14.18.3 Example
The following example deregisters out-of-the-box WebCenter producers, and deletes their associated connections, in an application named myApp.

wls:/weblogic/serverConfig> deregisterOOTBProducers(appName='myApp')

Deregistering Out-of-the-Box Producers

Deregistering OmniPortlet
Producer wc-OmniPortlet has been deregistered.
wc-OmniPortlet successfully deleted
wc-OmniPortlet-urlconn successfully deleted

Deregistering WebClipping
Producer wc-WebClipping has been deregistered.
w-WebClipping successfully deleted
wc-WebClipping-urlconn successfully deleted
Deregistering WSRP Tools
Producer wc-WSRPTools has been deregistered.
wc-WSRPTools successfully deleted
wc-WSRPTools-wsconn successfully deleted

10.14.19 registerSampleProducers

Module: Oracle WebCenter
Use with WLST: Online

10.14.19.1 Description
Registers the sample producers provided with Oracle WebCenter with a named WebCenter application. There are two sample producers — WSRP Samples and JPDK Samples.

10.14.19.2 Syntax
registerSampleProducers(producerHost, producerPort, appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>producerHost</td>
<td>Host name or IP address of the server hosting the sample producers.</td>
</tr>
<tr>
<td>producerPort</td>
<td>Port number for the server hosting the sample producers.</td>
</tr>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which the sample producers are to be registered.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.14.19.3 Example
The following example registers Oracle WebCenter sample producers in an application named myApp.

wls:/weblogic/serverConfig> registerSampleProducers(producerHost='myhost.com', producerPort=9999, appName='myApp')

10.14.20 deregisterSampleProducers

Module: Oracle WebCenter
Use with WLST: Online

10.14.20.1 Description
Deregisters the Oracle WebCenter sample producers (WSRP Samples and JPDK Samples) from a named WebCenter application.

10.14.20.2 Syntax
deregisterSampleProducers(appName, [server, applicationVersion])
RSS News Feeds

Oracle WebCenter Custom WLST Commands

10.14.20.3 Example
The following example deregisters sample producers from a WebCenter application named myApp.

wls:/weblogic/serverConfig> deregisterSampleProducers(appName='myApp')

10.15 RSS News Feeds
Use the commands listed in Table 10–23 to manage proxy settings for the RSS service. Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which the sample producers are currently registered. If a value is not specified, this argument defaults to webcenter.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

Table 10–23 RSS WLST Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>getRssProxyConfig</td>
<td>Return the proxy host and proxy port used by the RSS service.</td>
<td>Online</td>
</tr>
<tr>
<td>setRssProxyConfig</td>
<td>Specify the proxy host and proxy port used by the RSS service.</td>
<td>Online</td>
</tr>
<tr>
<td>unsetRssProxyConfig</td>
<td>Delete proxy host and proxy port settings.</td>
<td>Online</td>
</tr>
</tbody>
</table>

10.15.1 getRssProxyConfig
Module: Oracle WebCenter
Use with WLST: Online

10.15.1.1 Description
Returns the proxy host and proxy port used by the RSS service. Depending on your network configuration, proxy details may be required to display external RSS news feeds in your WebCenter application.

10.15.1.2 Syntax
getRssProxyConfig(appName, [server, applicationVersion])
### 10.15.1.3 Example

The following example returns the proxy host and proxy port used by the RSS service in a WebCenter application named `webcenter`.

```
wlsl/weblogic/serverConfig> getRssProxyConfig(appName='webcenter')
```

### 10.15.2 setRssProxyConfig

**Module:** Oracle WebCenter

**Use with WLST:** Online

#### 10.15.2.1 Description

Specifies the proxy host and port for the RSS service. Depending on your network configuration, proxy details may be required to display external RSS news feeds in your WebCenter application.

#### 10.15.2.2 Syntax

```
setRssProxyConfig(appName, proxyHost, proxyPort, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>proxyHost</code></td>
<td>Host name of the proxy server.</td>
</tr>
<tr>
<td><code>proxyPort</code></td>
<td>Port on which the proxy server is running.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

#### 10.15.2.3 Example

The following example sets the proxy host and proxy port used by the RSS service in a WebCenter application named `webcenter`.

```
wlsl/weblogic/serverConfig> setRssProxyConfig(appName='webcenter',
proxyHost='www-proxy.example.com', proxyPort='80')
```
10.15.3 unsetRssProxyConfig

Module: Oracle WebCenter
Use with WLST: Online

10.15.3.1 Description
Deletes the current proxy host and proxy port settings.

10.15.3.2 Syntax
unsetRssProxyConfig(appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.15.3.3 Example
The following example deletes the proxy host and proxy port settings used by the RSS service in a WebCenter application named webcenter.

wls:/weblogic/serverConfig> unsetRssProxyConfig(appName='webcenter')

10.16 Search - Oracle SES Search

Use the commands listed in Table 10–24 to manage Oracle Secure Enterprise Search (SES) connections and other Oracle SES search related properties for WebCenter applications.

Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

<table>
<thead>
<tr>
<th>Table 10–24 Search - Oracle SES WLST Commands</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use this command...</td>
</tr>
<tr>
<td>createSESConnection</td>
</tr>
<tr>
<td>setSESConnection</td>
</tr>
<tr>
<td>listSESConnections</td>
</tr>
<tr>
<td>setSearchSESConfig</td>
</tr>
<tr>
<td>listSearchSESConfig</td>
</tr>
</tbody>
</table>
createSESConnection

Module: Oracle WebCenter

Use with WLST: Online

10.16.1.1 Description

Creates a connection to an Oracle Secure Enterprise Search (SES) instance for a WebCenter application.

10.16.1.2 Syntax

createSESConnection(appName, name, url, appUser, appPassword,[default], [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
<tr>
<td>url</td>
<td>Web Services URL that Oracle Secure Enterprise Search exposes to enable Search requests. Use the format: http://&lt;host&gt;:&lt;port&gt;/search/query/OracleSearch</td>
</tr>
<tr>
<td>appUser</td>
<td>User name that the WebCenter application uses to authenticate itself as a trusted application to Oracle Secure Enterprise Search so that it may perform searches on behalf of WebCenter users. The specified user must be present in both the Oracle Identity Management server configured for the WebCenter application and the Oracle Identity Management server configured for Oracle SES.</td>
</tr>
<tr>
<td>appPassword</td>
<td>Password for the user name specified.</td>
</tr>
<tr>
<td>default</td>
<td>Optional. Configures WebCenter Search service to actively use the search connection. Valid options are 1 (true) and 0 (false). Setting to 1 replaces any other search connection that is being used. Setting to 0 does not change the current Search service configuration. This argument defaults to 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.16.1.3 Example
The following example creates a new search connection that points to the SES instance http://myhost.com:7777/search/query/OracleSearch and makes this connection the active SES search connection for a WebCenter application named app1.

    wls:/weblogic/serverConfig> createSESConnection(appName='app1', name='SESConn1', url='http://myhost.com:7777/search/query/OracleSearch', appUser='wpadmin', appPassword='password', default=1)

10.16.2 setSESConnection
Module: Oracle WebCenter
Use with WLST: Online

10.16.2.1 Description
Edits an existing Oracle Secure Enterprise Search (SES) search connection.

10.16.2.2 Syntax
setSESConnection(appName, name, [url], [appUser],[appPassword],[default], [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing search connection.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. Web Services URL that Oracle Secure Enterprise Search exposes to enable Search requests. Use the format: http://&lt;host&gt;:&lt;port&gt;/search/query/OracleSearch</td>
</tr>
<tr>
<td>appUser</td>
<td>Optional. User name that the WebCenter application uses to log in to Oracle Secure Enterprise Search so that it may perform searches on behalf of WebCenter users.</td>
</tr>
<tr>
<td>appPassword</td>
<td>Optional. Password that the WebCenter application uses to log in to Oracle Secure Enterprise Search so that it may perform searches on behalf of WebCenter users.</td>
</tr>
<tr>
<td>default</td>
<td>Optional. Configures WebCenter Search service to actively use the search connection. Valid options are 1 (true) and 0 (false). Setting to 1 replaces any other search connection that is being used. Setting to 0 does not change the current Search service configuration. This argument defaults to 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.16.2.3 Example
The following example modifies the URL of a search connection named SESConn1 and makes the connection the active SES search connection for a WebCenter application named app1.

    wls:/weblogic/serverConfig> setSESConnection(appName='app1', name='SESConn1', url='http://myhost.com:7777/search/query/OracleSearch', appUser='wpadmin', appPassword='password', default=1)
10.16.3 listSESConnections

Module: Oracle WebCenter

Use with WLST: Online

10.16.3.1 Description
Lists the names of all Oracle Secure Enterprise Search (SES) search connections configured for a WebCenter application.

10.16.3.2 Syntax
listSESConnections(appName, [verbose], [name], [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application for which to perform this operation.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays search connection details in verbose mode. Valid options are 1 (true) and 0 (false). When set to 1, listSESConnections lists all of the SES search connections that are configured for a WebCenter application, along with their details. When set to 0, listSESConnections lists connection names only. This argument defaults to 0. If you set this argument to 0, do not specify the name argument.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing search connection. You can use this argument to view details about a specific connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.16.3.3 Examples
The following example displays connection details for all SES search connections configured for a WebCenter application named WebCenterApp.

```
wls:/weblogic/serverConfig> listSESConnections(appName='WebCenterApp', verbose=1)
```

The following example displays connection details for an SES search connection named SESConn1.

```
wls:/weblogic/serverConfig> listSESConnections(appName='WebCenterApp', verbose=1, name='SESConn1')
```

10.16.4 setSearchSESConfig

Module: Oracle WebCenter

Use with WLST: Online
10.16.4.1 Description
Configures search settings for an existing Oracle Secure Enterprise Search (SES) search connection. If a parameter is not specified it is not modified.

10.16.4.2 Syntax
setSearchSESConfig(appName, [connectionName], [dataGroup], [topNRows], [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>connectionName</td>
<td>Optional. Names the search connection that the Search service must use.</td>
</tr>
<tr>
<td>dataGroup</td>
<td>Optional. Names the Secure Enterprise Search data group in which to search. If a value is not provided, everything in the Oracle Secure Enterprise Search instance will be searched.</td>
</tr>
<tr>
<td>topNRows</td>
<td>Optional. Number of top N rows of search results for gathering refinement data.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.16.4.3 Example
The following example specifies that the Search service must use the SES search connection named SESConn1, and to search the data group named group2.

```
wlsc:/weblogic/serverConfig> setSearchSESConfig
(appName='webcenter', connectionName='SESConn1', dataGroup='group2', topNRows=200);
```

The following example changes the maximum number of search results that the Search service returns. No connection name is specified, in this example, so this configuration change is applied to the current default (or active) search connection.

```
wlsc:/weblogic/serverConfig> setSearchSESConfig(appName='webcenter', topNRows=500);
```

10.16.5 listSearchSESConfig
Module: Oracle WebCenter
Use with WLST: Online

10.16.5.1 Description
Lists SES search settings for a WebCenter application.

10.16.5.2 Syntax
listSearchSESConfig(appName, [server, applicationVersion])
10.16.5.3 Example

The following example displays SES search configuration information for a WebCenter application named webcenter.

```
wlsc:/weblogic/serverConfig> listSearchSESConfig(appName='webcenter')
Already in Domain Runtime Tree
-----------------------------
Search SES Config
-----------------------------
connectionName:  SESConn1
dataGroup:  group2
topNRows:  200
```

10.16.6 createFederationTrustedEntity

Module: Oracle WebCenter

Use with WLST: Online

10.16.6.1 Description

Creates a federation trusted entity on an Oracle Secure Enterprise Search (SES) instance for a given entity name and password.

10.16.6.2 Syntax

createFederationTrustedEntity(appName, sesUrl, sesPassword, entityName, entityPassword, desc, [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application for which to perform this operation.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format:</td>
</tr>
<tr>
<td></td>
<td>http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td>entityName</td>
<td>Entity name.</td>
</tr>
<tr>
<td>entityPassword</td>
<td>Entity password.</td>
</tr>
<tr>
<td>desc</td>
<td>Short description of the entity. Alternatively, specify an empty string ' '</td>
</tr>
</tbody>
</table>

Argument Definition

appName Name of the WebCenter application for which to perform this operation.

server Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.

applicationVersion Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.
10.16.6.3 Example
The following example creates a federation trusted entity named `myentity` on the Oracle SES instance `http://myseshost.com:7777`:

```wls:/weblogic/serverConfig> createFederationTrustedEntity(appName='webcenter', sesUrl='http://myseshost.com:7777/search/api/admin/AdminService', sesPassword='password', entityName='myentity', entityPassword='password', desc='This is a sample entity')```

10.17 Search - Oracle SES Search Crawlers
Use the commands listed in Table 10–25 to manage Oracle Secure Enterprise Search (SES) crawlers for WebCenter applications.

There is no need to restart your WebCenter application after running crawler WLST commands.

**Table 10–25  Search - Oracle SES Crawler WLST Commands**

### 10.17.1 createSpacesCrawler

Module: Oracle WebCenter

Use with WLST: Online

#### 10.17.1.1 Description

Creates a crawler for WebCenter Spaces objects on an Oracle SES instance. The command creates a WebCenter datasource and specifies a schedule for crawling WebCenter Spaces objects (such as Spaces, lists, pages, and people).

#### 10.17.1.2 Syntax

```
createSpacesCrawler(appName, host, port, sesUrl, sesPassword, crawlUser, crawlPassword, scratchDir, authUserIdFormat, crawlingMode, recrawlPolicy, freqType, startHour, hoursBetweenLaunches, startDayOfWeek, startDayOfMonth, daysBetweenLaunches, weeksBetweenLaunches, monthsBetweenLaunches, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Spaces application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
<tr>
<td>host</td>
<td>Host name of the machine where the WebCenter application is running.</td>
</tr>
<tr>
<td>port</td>
<td>Port number used to access the WebCenter application.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format: http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td>crawlUser</td>
<td>Crawl administration user in WebCenter Spaces. This user must exist in WebCenter Spaces and in your back-end identity management server with appropriate permissions and roles. For example: mycrawladmin</td>
</tr>
</tbody>
</table>

stopSpacesCrawler Stop the WebCenter Spaces crawler configured for a WebCenter Spaces application, on an Oracle SES instance.

stopDocumentsCrawler Stop the documents crawler configured for a WebCenter application, on an Oracle SES instance.

stopDiscussionsCrawler Stop discussion and announcement crawlers configured for a WebCenter application, on an Oracle SES instance.

deleteSpacesCrawler Delete the WebCenter Spaces crawler configured for a WebCenter Spaces application, on an Oracle SES instance.

deleteDocumentsCrawler Delete the documents crawler configured for a WebCenter application, on an Oracle SES instance.

deleteDiscussionsCrawler Delete discussion and announcement crawlers configured for a WebCenter application, on an Oracle SES instance.
<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>crawlPassword</td>
<td>Password for the WebCenter Spaces user that is specified in the crawlUser argument.</td>
</tr>
<tr>
<td>scratchDir</td>
<td>Local directory where Oracle SES can write temporary status logs. The directory must be on the system where Oracle SES is installed.</td>
</tr>
<tr>
<td>authUserIdFormat</td>
<td>Format of the user ID in the active identity plug-in. For example, username, email, nickname, user_name.</td>
</tr>
<tr>
<td>crawlingMode</td>
<td>Mode for crawling URLs in the source. Valid values are: ACCEPT_ALL, INDEX_ONLY, EXAMINE_URL:</td>
</tr>
<tr>
<td></td>
<td>ACCEPT_ALL—Automatically Accept All URLs for Indexing: Crawls and indexes all URLs in the source. It also extracts and indexes any links found in those URLs. Previously crawled URLs are only reindexed if they have changed.</td>
</tr>
<tr>
<td></td>
<td>EXAMINE_URL—Examine URLs Before Indexing: Crawls but does not index any URLs in the source. It also crawls any links found in those URLs.</td>
</tr>
<tr>
<td></td>
<td>INDEX_ONLY—Index Only: Crawls and indexes all URLs in the source. It does not extract any links found in those URLs. Select this option for a source previously crawled using EXAMINE_URL.</td>
</tr>
<tr>
<td>recrawlPolicy</td>
<td>Specifies whether to crawl all documents or only documents that have changed. Valid values are PROCESS_ALL and PROCESS_CHANGED:</td>
</tr>
<tr>
<td></td>
<td>PROCESS_ALL—All documents are crawled. Use this option to force a full crawl.</td>
</tr>
<tr>
<td></td>
<td>PROCESS_CHANGED—Only crawl documents that have changed since the previous crawl. This setting can significantly speed up the crawling process.</td>
</tr>
<tr>
<td>freqType</td>
<td>Frequency of scheduled crawls. Valid values are: MANUAL, MONTHLY, WEEKLY, DAILY, HOURLY.</td>
</tr>
<tr>
<td></td>
<td>To schedule crawls MONTHLY, WEEKLY, DAILY, or HOURLY, specify additional arguments as follows:</td>
</tr>
<tr>
<td></td>
<td>MONTHLY: startHour, startDayOfWeek, monthsBetweenLaunches</td>
</tr>
<tr>
<td></td>
<td>WEEKLY: startHour, startDayOfWeek, weeksBetweenLaunches</td>
</tr>
<tr>
<td></td>
<td>DAILY: startHour, daysBetweenLaunches</td>
</tr>
<tr>
<td></td>
<td>HOURLY: hoursBetweenLaunches</td>
</tr>
<tr>
<td></td>
<td>If regular crawls are not required, choose MANUAL and then use the startSpacesCrawler command to initiate a crawl manually.</td>
</tr>
<tr>
<td>startHour</td>
<td>Time to start the crawl. Any number between 1 and 24. For example, enter 2 for 2:00am, 14 for 2:00pm, and so on.</td>
</tr>
<tr>
<td>hoursBetweenLaunches</td>
<td>Number of hours between crawls. Only valid when freqType='HOURLY'.</td>
</tr>
<tr>
<td>startDayOfWeek</td>
<td>Day on which to start a weekly crawl. For example, MONDAY, TUESDAY, and so on.</td>
</tr>
<tr>
<td></td>
<td>Only valid when freqType='WEEKLY'.</td>
</tr>
<tr>
<td>startDayOfMonth</td>
<td>Day of the month on which to start a monthly crawl. For example, enter 1 for 1st day of the month, 2 for 2nd day of the month, and so on.</td>
</tr>
<tr>
<td></td>
<td>Only valid when freqType='MONTHLY'.</td>
</tr>
<tr>
<td>daysBetweenLaunches</td>
<td>Number of days between crawls. Only valid when freqType='DAILY'.</td>
</tr>
</tbody>
</table>
### 10.17.1.3 Example

The following example creates a WebCenter Spaces crawler on the SES instance http://myseshost.com:7777 for a WebCenter Spaces application (webcenter) located at http://myhost.com:8888/webcenter/spaces:

```java
createSpacesCrawler(appName='webcenter', host='myhost.com', port='8888',
sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
sesPassword='sespassword', crawlUser='mycrawladmin', crawlPassword='password',
scratchDir='/tmp', authUserIdFormat='username', crawlingMode='ACCEPT_ALL',
recrawlPolicy= 'PROCESS_ALL', freqType='MANUAL', startHour=1,
hoursBetweenLaunches=1, startDayOfWeek='MONDAY', startDayOfMonth=1,
daysBetweenLaunches =1, weeksBetweenLaunches=1, monthsBetweenLaunches=1)
```

### 10.17.2 createDocumentsCrawler

**Module:** Oracle WebCenter

**Use with WLST:** Online

#### 10.17.2.1 Description

Creates a documents crawler for a WebCenter application, on an Oracle SES instance. The command creates an Oracle Content Server datasource and specifies a schedule for crawling documents in Oracle Universal Content Server (UCM).

#### 10.17.2.2 Syntax

```java
createDocumentsCrawler(appName, host, port, sesUrl, sesPassword, configUrl,
user, password, scratchDir, httpEndpoint, displayUrl, realm, authUserIdFormat,
pipelineName, crawlingMode, recrawlPolicy, freqType, startHour,
hoursBetweenLaunches, startDayOfWeek, startDayOfMonth,
daysBetweenLaunches, weeksBetweenLaunches, monthsBetweenLaunches,
[server, applicationVersion])
```

<table>

<td>Port number used to access the WebCenter application.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format:</td>
</tr>
<tr>
<td></td>
<td>http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>weeksBetweenLaunches</td>
<td>Number of weeks between crawls. Only valid when freqType='WEEKLY'.</td>
</tr>
<tr>
<td>monthsBetweenLaunches</td>
<td>Number of months between crawls. Only valid when freqType='MONTHLY'.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
<tr>
<td>Argument</td>
<td>Definition</td>
</tr>
<tr>
<td>--------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td>configUrl</td>
<td>URL of the XML configuration file providing details of the source, such as the data feed type, location, security attributes, and so on. Use the URL format: http://&lt;host&gt;:&lt;port&gt;/cs/idcplg?IdcService=SES_CRAWLER_DOWNLOAD_CONFIG&amp;source=&lt;sourcename&gt;</td>
</tr>
<tr>
<td>user</td>
<td>Administrative user for Oracle Content Server (OCS). For example, sysadmin. If the authentication type is Oracle SSO, then enter a user ID (and password) of a user in the identity management server fronted by Oracle SSO. This user must be granted the same permissions as sysadmin. If it is not possible to grant those permissions, then delete the &quot;remote&quot; user corresponding to this user in Oracle Content Server, and create a &quot;local&quot; version of the user (same name) in Oracle Content Server.</td>
</tr>
<tr>
<td>password</td>
<td>Password for the administrative OCS user specified.</td>
</tr>
<tr>
<td>scratchDir</td>
<td>Local directory where Oracle SES can write temporary status logs. The directory must be on the system where Oracle SES is installed.</td>
</tr>
<tr>
<td>httpEndpoint</td>
<td>HTTP endpoint for Oracle Content Server authorization. For example: http://&lt;host&gt;:&lt;port&gt;/idc/idcplg</td>
</tr>
<tr>
<td>displayUrl</td>
<td>HTTP host information string to prefix the relative access URL to form the complete display URL. For example: http://&lt;host&gt;:&lt;port&gt;/idc</td>
</tr>
<tr>
<td>realm</td>
<td>Realm of the application serving the control and data feed. This parameter is relevant when the feeds are accessed over HTTP and is mandatory when the authentication type is BASIC. For example, jazn.com</td>
</tr>
<tr>
<td>authUserIdFormat</td>
<td>Format of the user ID (in active identity plug-in) that is used by Oracle Content Server authorization API. For example, username, email, nickname, user_name.</td>
</tr>
<tr>
<td>pipelineName</td>
<td>Document service pipeline created for this source in Oracle SES.</td>
</tr>
<tr>
<td>crawlingMode</td>
<td>Mode for crawling URLs in the source. Valid values are: ACCEPT_ALL, INDEX_ONLY, EXAMINE_URL:  &lt;br&gt;  <strong>ACCEPT_ALL</strong>—Automatically Accept All URLs for Indexing: Crawls and indexes all URLs in the source. It also extracts and indexes any links found in those URLs. Previously crawled URLs are only reindexed if they have changed.  &lt;br&gt;  <strong>EXAMINE_URL</strong>—Examine URLs Before Indexing: Crawls but does not index any URLs in the source. It also crawls any links found in those URLs.  &lt;br&gt;  <strong>INDEX_ONLY</strong>—Index Only: Crawls and indexes all URLs in the source. It does not extract any links found in those URLs. Select this option for a source previously crawled using EXAMINE_URL</td>
</tr>
<tr>
<td>recrawlPolicy</td>
<td>Specifies whether to crawl all documents or only documents that have changed. Valid values are PROCESS_ALL and PROCESS_CHANGED:  &lt;br&gt;  <strong>PROCESS_ALL</strong>—All documents are crawled. This setting can significantly speed up the crawling process.</td>
</tr>
</tbody>
</table>
10.17.2.3 Example

The following example creates a documents crawler on the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application (webcenter) located at http://myhost.com:8888/webcenter/spaces:

```bash
createDocumentsCrawler(appName='webcenter', host='myhost.com', port='8888',
  sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
  sesPassword='password',
  user='adminuser', password='password', scratchDir='/scratch',
  httpEndpoint='http://myucmhost.com:9044/cs/idcplg',
  displayUrl='http://myucmhost:9044/cs', realm='jazn.com',
  authUserIdFormat='username',
  freqType='MONTHLY', startHour='2', startDayOfTheMonth='1', monthsBetweenLaunches='1',
  startDayOfWeek='MONDAY', weeksBetweenLaunches='1',
  startDayOfMonth='1', daysBetweenLaunches='1',
  server='WC_Spaces',
  applicationVersion='0.1.0',
)
```

daysBetweenLaunches=1, weeksBetweenLaunches=1, monthsBetweenLaunches=1)

10.17.3 createDiscussionsCrawler

Module: Oracle WebCenter

Use with WLST: Online

10.17.3.1 Description

Creates a discussion forum crawler and an announcements crawler for a WebCenter application, on an Oracle Secure Enterprise Search (SES) instance.

The command creates two Oracle SES database sources (one for discussion forums and one for announcements) and specifies a crawl schedule. The discussion forums source is named <appname_host_port>_forums with a view of FORUMCRAWLER_VW, and the announcements source is named <appname_host_port>_announcements with a view of ANNOUNCEMENTS_VW.

10.17.3.2 Syntax

createDiscussionsCrawler(appName,  host, port, sesUrl, sesPassword,
dbConnString, user, password, authUserIdFormat, crawlingMode,
recrawlPolicy, freqType, startHour, hoursBetweenLaunches, startDayOfWeek,
startDayOfMonth, daysBetweenLaunches, weeksBetweenLaunches,
monthsBetweenLaunches, [server, applicationVersion])

  - PROCESS_ALL—All documents are crawled. Use this option to force a full crawl.  
  - PROCESS_CHANGED—Only crawl documents that have changed since the previous crawl. This setting can significantly speed up the crawling process.                                                                 |
| freqType            | Frequency of scheduled crawls. Valid values are: MANUAL, MONTHLY, WEEKLY, DAILY, HOURLY.  
  To schedule crawls MONTHLY, WEEKLY, DAILY, or HOURLY, specify additional arguments as follows:  
  - MONTHLY: startHour, startDayOfTheMonth, monthsBetweenLaunches  
  - WEEKLY: startHour, startDayOfTheWeek, weeksBetweenLaunches  
  - DAILY: startHour, daysBetweenLaunches  
  - HOURLY: hoursBetweenLaunches  
  If regular crawls are not required, choose MANUAL and then use the startDiscussionsCrawler command to initiate a crawl manually. |
| startHour           | Time to start the crawl. Any number between 1 and 24. For example, enter 2 for 2:00am, 14 for 2:00pm, and so on.                                                                                                                                                                           |
| hoursBetweenLaunches| Number of hours between crawls. Only valid when freqType='HOURLY'.                                                                                                                                                                                                                                                                         |
| startDayOfWeek      | Day on which to start a weekly crawl. For example, MONDAY, TUESDAY, and so on. Only valid when freqType='WEEKLY'.                                                                                                                                                                   |
| startDayOfMonth     | Day of the month on which to start a monthly crawl. For example, enter 1 for 1st day of the month, 2 for 2nd day of the month, and so on. Only valid when freqType='MONTHLY'.                                                                                                                   |
| daysBetweenLaunches | Number of days between crawls. Only valid when freqType='DAILY'.                                                                                                                                                                                                               |
| weeksBetweenLaunches| Number of weeks between crawls. Only valid when freqType='WEEKLY'.                                                                                                                                                                                                               |
10.17.3.3 Example
The following example creates a discussion forum crawler and an announcements crawler on the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application (webcenter) located at http://myhost.com:8888/webcenter/spaces:

```python
createDiscussionsCrawler(appName='webcenter', host='myhost.com', port='8888', sesUrl='http://myseshost.com:7777/search/api/admin/AdminService', sesPassword='password', dbConnString='jdbc:oracle:thin:@myjivedbhost.com:1521/mysid', user='app_discussions_crawler', password='password', authUserIdFormat='nickname', crawlingMode='ACCEPT_ALL', recrawlPolicy='PROCESS_ALL', freqType='MANUAL', startHour=1, hoursBetweenLaunches=1, startDayOfWeek='MONDAY', startDayOfMonth=1, daysBetweenLaunches=1, weeksBetweenLaunches=1, monthsBetweenLaunches=1)
```

10.17.4 listSpacesCrawler

Module: Oracle WebCenter
Use with WLST: Online

10.17.4.1 Description
Returns the WebCenter Spaces crawler configured for a WebCenter Spaces application, on an Oracle SES instance.

10.17.4.2 Syntax

```
listSpacesCrawler(appName, sesUrl, sesPassword, host, port, [verbose], [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>monthsBetweenLaunches</td>
<td>Number of months between crawls. Only valid when freqType='MONTHLY'.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
Search - Oracle SES Search Crawlers

10.17.4.3 Example

The following example returns the WebCenter Spaces crawler configured in the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application named webcenter located at http://myhost.com:8888/webcenter/spaces:

```java
listSpacesCrawler(appName='webcenter',
sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
sesPassword='password', host='myhost.com', port='8888')
```

10.17.5 listDocumentsCrawler

Module: Oracle WebCenter

Use with WLST: Online

10.17.5.1 Description

Returns the document crawler configured for a WebCenter application, on an Oracle SES instance.

10.17.5.2 Syntax

```java
listDocumentsCrawler(appName, sesUrl, sesPassword, host, port, [verbose], [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format:</td>
</tr>
<tr>
<td></td>
<td>http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td>host</td>
<td>Host name of the machine where the WebCenter application is running.</td>
</tr>
<tr>
<td>port</td>
<td>Port number used to access the WebCenter application.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Valid options are 1 (true) and 0 (false). When set to 1, listDocumentsCrawler returns the documents crawler that is configured for a WebCenter application in Oracle SES, along with details. When set to 0, only source names are listed. This argument defaults to 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter Spaces application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.17.5.3 Example
The following example returns the documents crawler configured in the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application named webcenter located at http://myhost.com:8888/webcenter/spaces:

listDocumentsCrawler(appName='webcenter',
  sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
  sesPassword='password', host='myhost.com', port='8888')

10.17.6 listDiscussionsCrawler
Module: Oracle WebCenter
Use with WLST: Online

10.17.6.1 Description
Returns the discussion and announcement crawlers configured for a WebCenter application, on an Oracle SES instance.

10.17.6.2 Syntax
listDiscussionsCrawler(appName, sesUrl, sesPassword, host, port,
  [verbose],  [server], [applicationVersion]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format:</td>
</tr>
<tr>
<td></td>
<td>http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td>host</td>
<td>Host name of the machine where the WebCenter application is running.</td>
</tr>
<tr>
<td>port</td>
<td>Port number used to access the WebCenter application.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Valid options are 1 (true) and 0 (false). When set to 1,</td>
</tr>
<tr>
<td></td>
<td>listDocumentsCrawlers returns discussion and announcement crawlers that</td>
</tr>
<tr>
<td></td>
<td>are configured for a WebCenter application in Oracle SES, along with</td>
</tr>
<tr>
<td></td>
<td>details. When set to 0, only source names are listed. This argument</td>
</tr>
<tr>
<td></td>
<td>defaults to 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is</td>
</tr>
<tr>
<td></td>
<td>deployed. For example, WC_Spaces.</td>
</tr>
<tr>
<td></td>
<td>Required when applications with the same name are deployed to different</td>
</tr>
<tr>
<td></td>
<td>servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more</td>
</tr>
<tr>
<td></td>
<td>than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.17.6.3 Example
The following example returns discussion and announcement crawlers configured in
the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces
application named webcenter located at
http://myhost.com:8888/webcenter/spaces:

listDiscussionsCrawler(appName='webcenter',
sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
sesPassword='password', host='myhost.com', port='8888')

10.17.7 startSpacesCrawler
Module: Oracle WebCenter
Use with WLST: Online

10.17.7.1 Description
Starts the WebCenter Spaces crawler configured for a WebCenter Spaces application,
on an Oracle SES instance.

10.17.7.2 Syntax
startSpacesCrawler(appName, sesUrl, sesPassword, host, port, [server],
[applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format:</td>
</tr>
<tr>
<td></td>
<td>http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td>host</td>
<td>Host name of the machine where the WebCenter Spaces application is running.</td>
</tr>
<tr>
<td>port</td>
<td>Port number used to access WebCenter Spaces.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.17.7.3 Example
The following example starts the WebCenter Spaces crawler configured on the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application named webcenter located at http://myhost.com:8888/webcenter/spaces:

startSpacesCrawler(appName='webcenter',
sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
sesPassword='password', host='myhost.com', port='8888')
10.17.8 startDocumentsCrawler

Module: Oracle WebCenter

Use with WLST: Online

10.17.8.1 Description

Starts the documents crawler configured for a WebCenter application, on an Oracle SES instance.

10.17.8.2 Syntax

startDocumentsCrawler(appName, sesUrl, sesPassword, host, port, [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format: http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td>host</td>
<td>Host name of the machine where the WebCenter application is running.</td>
</tr>
<tr>
<td>port</td>
<td>Port number used to access the WebCenter application.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.17.8.3 Example

The following example starts the document crawler configured on the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application named webcenter located at http://myhost.com:8888/webcenter/spaces:

startDocumentsCrawler(appName='webcenter', sesUrl='http://myseshost.com:7777/search/api/admin/AdminService', sesPassword='password', host='myhost.com', port='8888')

10.17.9 startDiscussionsCrawler

Module: Oracle WebCenter

Use with WLST: Online

10.17.9.1 Description

Starts the discussion and announcement crawlers configured for a WebCenter application, on an Oracle SES instance.

10.17.9.2 Syntax

startDiscussionsCrawler(appName, sesUrl, sesPassword, host, port, [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format: http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td>host</td>
<td>Host name of the machine where the WebCenter application is running.</td>
</tr>
<tr>
<td>port</td>
<td>Port number used to access the WebCenter application.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
The following example starts the discussion and announcement crawlers configured on the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application named webcenter located at http://myhost.com:8888/webcenter/spaces:

```
startDiscussionsCrawler(appName='webcenter',
    sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
    sesPassword='password', host='myhost.com', port='8888')
```

### 10.17.10 stopSpacesCrawler

Module: Oracle WebCenter

Use with WLST: Online

#### 10.17.10.1 Description

Stops the WebCenter Spaces crawler configured for a WebCenter Spaces application, on an Oracle SES instance.

#### 10.17.10.2 Syntax

```
stopSpacesCrawler(appName, sesUrl, sesPassword, host, port, [server],
    [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
<tr>
<td><code>sesUrl</code></td>
<td>Web Service URL for the Oracle SES Administration API. Use the format: http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td><code>sesPassword</code></td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td><code>host</code></td>
<td>Host name of the machine where the WebCenter Spaces application is running.</td>

<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.17.10 Example

The following example stops the WebCenter Spaces crawler configured on the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application named webcenter located at http://myhost.com:8888/webcenter/spaces:

```
stopSpacesCrawler(appName='webcenter',
                  sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
                  sesPassword='password', host='myhost.com', port='8888')
```

10.17.11 stopDocumentsCrawler

Module: Oracle WebCenter
Use with WLST: Online

10.17.11.1 Description

Stops the documents crawler configured for a WebCenter application, on an Oracle SES instance.

10.17.11.2 Syntax

```
stopDocumentsCrawler(appName, sesUrl, sesPassword, host, port, [server],
                     [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>sesUrl</code></td>
<td>Web Service URL for the Oracle SES Administration API. Use the format:</td>
</tr>
<tr>
<td></td>
<td>http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td><code>sesPassword</code></td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td><code>host</code></td>
<td>Host name of the machine where the WebCenter application is running.</td>
</tr>
<tr>
<td><code>port</code></td>
<td>Port number used to access the WebCenter application.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.17.11.3 Example

The following example stops the document crawler configured on the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application named webcenter located at http://myhost.com:8888/webcenter/spaces:
10.17.12 stopDiscussionsCrawler

Module: Oracle WebCenter
Use with WLST: Online

10.17.12.1 Description
Stops the discussion and announcement crawlers configured for a WebCenter application, on an Oracle SES instance.

10.17.12.2 Syntax
stopDiscussionsCrawler(appName, sesUrl, sesPassword, host, port, [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format:</td>
</tr>
<tr>
<td></td>
<td>http://&lt;host&gt;[:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>

</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more</td>
</tr>
<tr>
<td></td>
<td>than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.17.12.3 Example
The following example stops the discussion and announcement crawlers configured on the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application named webcenter located at http://myhost.com:8888/webcenter/spaces:

stopDiscussionsCrawler(appName='webcenter',
sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
nenPassword='password', host='myhost.com', port='8888')

10.17.13 deleteSpacesCrawler

Module: Oracle WebCenter
Use with WLST: Online

10.17.13.1 Description
Deletes the WebCenter Spaces crawler configured for a WebCenter application, on an Oracle SES instance.
10.17.13.2 Syntax

```
deleteSpacesCrawler(appName, sesUrl, sesPassword, host, port, [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always <code>webcenter</code>.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format: <code>http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</code></td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td>host</td>
<td>Host name of the machine where the WebCenter Spaces application is running.</td>
</tr>
<tr>
<td>port</td>
<td>Port number used to access WebCenter Spaces.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, <code>WC_Spaces</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.17.13.3 Example

The following example deletes the WebCenter Spaces crawler configured on the Oracle SES instance `http://myseshost.com:7777` for a WebCenter Spaces application named `webcenter` located at `http://myhost.com:8888/webcenter/spaces`:

```
deleteSpacesCrawler(appName='webcenter', sesUrl='http://myseshost.com:7777/search/api/admin/AdminService', sesPassword='password', host='myhost.com', port='8888')
```

10.17.14 deleteDocumentsCrawler

Module: Oracle WebCenter

Use with WLST: Online

10.17.14.1 Description

Deletes the documents crawler configured for a WebCenter application, on an Oracle SES instance.

10.17.14.2 Syntax

```
deleteDocumentsCrawler(appName, sesUrl, sesPassword, host, port, [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format: <code>http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</code></td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
</tbody>
</table>

Oracle WebCenter Custom WLST Commands 10-177
10.17.14.3 Example

The following example deletes the document crawler configured on the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application named webcenter located at http://myhost.com:8888/webcenter/spaces:

```java
deleteDocumentsCrawler(appName='webcenter',
sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
sesPassword='password', host='myhost.com', port='8888')
```

10.17.15 deleteDiscussionsCrawler

Module: Oracle WebCenter

Use with WLST: Online

10.17.15.1 Description

Deletes the discussion and announcement crawlers configured for a WebCenter application, on an Oracle SES instance.

10.17.15.2 Syntax

```java
deleteDiscussionsCrawler(appName, sesUrl, sesPassword, host, port,  
[server],
[applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>sesUrl</td>
<td>Web Service URL for the Oracle SES Administration API. Use the format:</td>
</tr>
<tr>
<td></td>
<td>http://&lt;host&gt;:&lt;port&gt;/search/api/admin/AdminService</td>
</tr>
<tr>
<td>sesPassword</td>
<td>Password for the Oracle SES administrative user (eqsys).</td>
</tr>
<tr>
<td>host</td>
<td>Host name of the machine where the WebCenter application is running.</td>
</tr>
<tr>
<td>port</td>
<td>Port number used to access the WebCenter application.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.17.15.3 Example
The following example deletes the discussion and announcement crawlers configured on the Oracle SES instance http://myseshost.com:7777 for a WebCenter Spaces application named webcenter located at http://myhost.com:8888/webcenter/spaces:

```
deleteDiscussionsCrawler(appName='webcenter',
 sesUrl='http://myseshost.com:7777/search/api/admin/AdminService',
 sesPassword='password', host='myhost.com', port='8888')
```

10.18 Search - WebCenter Search
Use the commands listed in Table 10–26 to manage search settings and crawl options for WebCenter Spaces and other WebCenter portal applications.

Configuration changes made using these WebCenter WLST commands are effective immediately; no restart is required.

### Table 10–26 WebCenter Spaces Crawler WLST Commands

<table>
<thead>
<tr>
<th>Use This Command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>setSearchConfig</td>
<td>Modify search settings for a WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>listSearchConfig</td>
<td>List search properties for a WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>setSpacesCrawlProperties</td>
<td>Specify crawl properties for a WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>getSpacesCrawlProperties</td>
<td>Return the current crawl settings for a WebCenter application.</td>
<td>Online</td>
</tr>
</tbody>
</table>

10.18.1 setSearchConfig

Module: Oracle WebCenter
Use with WLST: Online

10.18.1.1 Description
Modifies search settings for a WebCenter application. If a parameter is not specified it is not modified.

10.18.1.2 Syntax
```
setSearchConfig(appName,[numSavedSearches],[numResultsRegion],[numResultsMain],
 [executionTimeout],[prepareTimeout],[showAllExecutionTimeout],
 [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>numSavedSearches</td>
<td>Optional. The number of saved searches to display in the Saved Searches drop down (on main search page).</td>
</tr>
<tr>
<td>numResultsRegion</td>
<td>Optional. The number of saved searches displayed in a Saved Search task flow.</td>
</tr>
<tr>
<td>numResultsMain</td>
<td>Optional. The number of search results displayed, per service, for searches submitted from the main search page.</td>
</tr>
</tbody>
</table>
The following example specifies that saved searches display five search results per service. Additionally, a seven second search execution timeout is required.

```
ws:/weblogic/serverConfig> setSearchConfig(appName='webcenter',
numResultsRegion=5, executionTimeout=7000);
```

The following example increases the number of saved searches in the Saved Searches drop down list to eight.

```
ws:/weblogic/serverConfig> setSearchConfig(appName='webcenter',
numSavedSearches=8);
```

The following example sets the search execution timeout to five seconds and allows each service fifteen seconds to display search results before timing out.

```
ws:/weblogic/serverConfig> setSearchConfig(appName='webcenter',
executionTimeout=5000, showAllExecutionTimeout=15000);
```

### 10.18.2 listSearchConfig

Module: Oracle WebCenter

Use with WLST: Online

#### 10.18.2.1 Description

Lists search settings for a WebCenter application.

#### 10.18.2.2 Syntax

```
listSearchConfig(appName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application for which to perform this operation.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
</tbody>
</table>
10.18.2.3 Example

The following example displays search configuration information for a WebCenter application named `webcenter`.

```
wlsc:/weblogic/serverConfig> listSearchConfig(appName='webcenter')
```

10.18.3 setSpacesCrawlProperties

Module: Oracle WebCenter
Use with WLST: Online

10.18.3.1 Description

Specifies crawl properties for WebCenter applications.

WebCenter applications can be crawled by Oracle SES to provide a faster, more unified search experience across WebCenter objects, specifically: Spaces, lists, pages, people (profiles), wikis, blogs, documents, discussions, and announcements. Three distinct crawlers make this possible:

- WebCenter Spaces Crawler (for Spaces, lists, pages, and people)
- Documents Crawler (for documents, wikis, blogs)
- Discussions Crawler (for discussions and announcements).

Use this command to enable or disable Oracle SES crawlers in WebCenter applications:

- **WebCenter Spaces**—To use Oracle SES crawlers in WebCenter Spaces, you *must* enable all three crawlers.
- **Other WebCenter Portal applications**—To use Oracle SES crawlers in WebCenter Portal applications, you *must* enable both the documents and discussions crawlers. The WebCenter Spaces crawler is not applicable.

(WebCenter Spaces only) You can also use this command to specify an interval between full crawls for the WebCenter Spaces crawler. During a full crawl, all of the WebCenter Spaces crawler content is re-read. Out-of-the-box, full crawls for the WebCenter Spaces crawler occur every seven days but you can specify a different frequency to suit your installation.

Note that incremental crawls, for all three crawlers, are initiated by a scheduler running from Oracle SES. During these incremental crawls, only content added or updated since the previous crawl is processed.

10.18.3.2 Syntax

```
setSpacesCrawlProperties(appName, [fullCrawlIntervalInHours, spacesCrawlEnabled, documentCrawlEnabled, discussionsCrawlEnabled, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
<tr>
<td><code>fullCrawlIntervalInHours</code></td>
<td>Optional. Number of hours between full crawls. The default is 168 hours or 7 days.</td>
</tr>
</tbody>
</table>
The following example enables Oracle SES crawlers in WebCenter Spaces and specifies that WebCenter Spaces runs a full crawl through the WebCenter Spaces Crawler every 8 days:

```wls:/weblogic/serverConfig> setSpacesCrawlProperties(appName='webcenter', fullCrawlIntervalInHours=192, spacesCrawlEnabled=1, discussionCrawlEnabled=1)```

### 10.18.4 getSpacesCrawlProperties

**Module:** Oracle WebCenter

**Use with WLST:** Online

#### 10.18.4.1 Description

Returns the current crawl settings for a WebCenter application, such as the number of hours between full crawls (WebCenter Spaces crawler), and whether Oracle SES crawlers are enabled.

#### 10.18.4.2 Syntax

```
getSpacesCrawlProperties(appName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
</tbody>
</table>
10.18.4.3 Example

The following example returns the current crawl settings for WebCenter Spaces.

```wls:/weblogic/serverConfig> getSpacesCrawlProperties(appName='webcenter')
```

WebCenter Spaces Crawl Properties:
-----------------
fullCrawlIntervalInHours: 124
spacesCrawlEnabled:       1
documentCrawlEnabled:     1
discussionsCrawlEnabled:  1

10.19 Worklists

Use the commands listed in Table 10–27 to manage BPEL server connections for WebCenter applications.

Configuration changes made using these WebCenter WLST commands are only effective after your restart the Managed Server on which the WebCenter application is deployed. For details, see Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.

Table 10–27 Worklist Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>createBPELConnection</td>
<td>Create a connection to a BPEL server for a WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>setBPELConnection</td>
<td>Edit an existing BPEL server connection.</td>
<td>Online</td>
</tr>
<tr>
<td>listBPELConnections</td>
<td>List all of the BPEL server connections that are configured for a WebCenter application.</td>
<td>Online</td>
</tr>
<tr>
<td>addWorklistConnection</td>
<td>Enable an existing BPEL server connection for the Worklist service.</td>
<td>Online</td>
</tr>
<tr>
<td>removeWorklistConnection</td>
<td>Disable a BPEL server connection currently used by the Worklist service.</td>
<td>Online</td>
</tr>
<tr>
<td>listWorklistConnections</td>
<td>List individual or all BPEL server connections configured for the Worklist service.</td>
<td>Online</td>
</tr>
</tbody>
</table>

10.19.1 createBPELConnection

Module: Oracle WebCenter

Use with WLST: Online

10.19.1.1 Description

Creates a connection to a BPEL server for a named WebCenter application. BPEL server connections can be used by the application’s Worklist service and WebCenter Spaces workflows.

To configure the Worklist service to actively use a new BPEL server connection, use the addWorklistConnection command. See Section 10.19.4, "addWorklistConnection".
To specify the BPEL server connection that WebCenter Spaces uses for its internal workflows, use the `setSpacesWorkflowConnectionName` command. See Section 10.20.2, "setSpacesWorkflowConnectionName".

### 10.19.1.2 Syntax

```java
createBPELConnection(appName, name, url, [policy, recipientKeyAlias, linkUrl, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>name</code></td>
<td>Connection name. The name must be unique (across all connection types) within the WebCenter application.</td>
</tr>
<tr>
<td><code>url</code></td>
<td>URL required to access the BPEL server.</td>
</tr>
<tr>
<td></td>
<td>Use the format: <code>protocol://host:port</code></td>
</tr>
<tr>
<td></td>
<td>The BPEL server URL must be unique within the WebCenter application.</td>
</tr>
<tr>
<td><code>policy</code></td>
<td>Optional. SAML token policy this connection uses for authentication.</td>
</tr>
<tr>
<td></td>
<td>Enter any valid policy. Valid values include:</td>
</tr>
<tr>
<td></td>
<td>- <code>oracle/wss10_saml_token_client_policy</code>—use to access the BPEL server with the default, non message protected policy.</td>
</tr>
<tr>
<td></td>
<td>- <code>oracle/wss10_saml_token_with_message_protection_client_policy</code>—use to access the BPEL server with a message protected policy. If selected, you must configure keys stores both in your WebCenter application and in the BPEL application.</td>
</tr>
<tr>
<td></td>
<td>- <code>GPA</code>—use if your environment supports Global Policy Attachments (GPA).</td>
</tr>
<tr>
<td></td>
<td>If you omit this argument, the connection defaults to <code>oracle/wss10_saml_token_client_policy</code>.</td>
</tr>
<tr>
<td><code>recipientKeyAlias</code></td>
<td>Optional. Recipient key alias to be used for message protected SAML policy authentication. Only required when the BPEL server connection is using a SAML token policy for authentication and the application’s Worklist service is using multiple BPEL server connections.</td>
</tr>
<tr>
<td></td>
<td>The default is null.</td>
</tr>
<tr>
<td></td>
<td>See also “Configuring WS-Security for WebCenter Applications and Components” in the Oracle Fusion Middleware Administrator’s Guide for Oracle WebCenter.</td>
</tr>
<tr>
<td><code>linkUrl</code></td>
<td>Optional. URL used to link to the BPEL server. Only required if it is different to the <code>url</code> argument. For example, when SSO or HTTPS is configured.</td>
</tr>
<tr>
<td></td>
<td>Use the format: <code>protocol://host:port</code></td>
</tr>
<tr>
<td></td>
<td>The default is null.</td>
</tr>
<tr>
<td></td>
<td>For performance reasons, in an HTTPS or SSO environment, <code>linkUrl</code> specifies user access to BPEL worklist items, through HTTPS or SSO Web servers, whereas <code>url</code> specifies direct access to BPEL Web services, without redirection through HTTPS or SSO Web servers.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, <code>WC_Spaces</code>.</td>
</tr>
<tr>
<td></td>
<td>Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
</tbody>
</table>
Worklists

Oracle WebCenter Custom WLST Commands

10.19.1.3 Examples
The following example creates a connection named WebCenter Worklist with the default security policy:

```
wls:/weblogic/serverConfig> createBPELConnection(appName='webcenter',
name='WebCenter Worklist', url='http://myhost.com:8001',
policy='oracle/wss10_saml_token_client_policy')
```

The following example creates a connection that uses a message protected security policy, and defines a specific link URL:

```
wls:/weblogic/serverConfig> createBPELConnection(appName='webcenter',
name='WebCenter Worklist', url='http://myhost.com:8001', policy='oracle/wss10_saml_token_with_message_protection_client_policy',
recipientKeyAlias='myalias', linkUrl='http://mySSO.com:7777')
```

The following example creates a connection to be used in an environment that supports Global Policy Attachments (GPA):

```
wls:/weblogic/serverConfig> createBPELConnection(appName='webcenter',
name='WebCenter Worklist', url='http://myhost.com:8001', policy='GPA')
```

10.19.2 setBPELConnection

Module: Oracle WebCenter

Use with WLST: Online

10.19.2.1 Description
Edits an existing BPEL server connection.

To configure the Worklist service to actively use an existing BPEL server connection, use the `addWorklistConnection` command. See Section 10.19.4, "addWorklistConnection".

To specify the BPEL server connection used for Webcenter Spaces workflows, use the `setSpacesWorkflowConnectionName` command. See Section 10.20.2, "setSpacesWorkflowConnectionName".

10.19.2.2 Syntax
```
setBPELConnection(appName, name, [url, policy, recipientKeyAlias, linkUrl, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Existing BPEL server connection name.</td>
</tr>
<tr>
<td>url</td>
<td>Optional. URL required to access the BPEL server.</td>
</tr>
<tr>
<td></td>
<td>Use the format: <code>&lt;protocol&gt;://&lt;host&gt;[:&lt;port&gt;]</code></td>
</tr>
<tr>
<td></td>
<td>The BPEL server URL must be unique within the WebCenter application.</td>
</tr>
</tbody>
</table>
The following example updates the BPEL server URL, security policy, recipient key alias, and link url for a connection named WebCenter Worklist.

```
wls:/weblogic/serverConfig> setBPELConnection(appName='webcenter', name='WebCenter Worklist', url='http://myhost.com:6666', policy='oracle/wss10_saml_token_with_message_protection_client_policy', recipientKeyAlias='myalias', linkUrl='http://mySSO.com:7777')
```

The following example changes the security policy to use Global Policy Attachments (GPA):

```
wls:/weblogic/serverConfig> setBPELConnection(appName='webcenter', name='WebCenter Worklist', policy='GPA')
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>policy</strong></td>
<td>Optional. SAML token policy this connection uses for authentication. Enter any valid policy. Valid values include:</td>
</tr>
<tr>
<td></td>
<td>- oracle/wss10_saml_token_client_policy—use to access the BPEL server with the default, non message protected policy.</td>
</tr>
<tr>
<td></td>
<td>- oracle/wss10_saml_token_with_message_protection_client_policy—use to access the BPEL server with a message protected policy. If selected, you must configure keys stores both in your WebCenter application and in the BPEL application.</td>
</tr>
<tr>
<td></td>
<td>- GPA—use if your environment supports Global Policy Attachments (GPA).</td>
</tr>
<tr>
<td></td>
<td>If you omit this argument, the connection defaults to oracle/wss10_saml_token_client_policy.</td>
</tr>
<tr>
<td><strong>recipientKeyAlias</strong></td>
<td>Optional. Recipient key alias to be used for message protected SAML policy authentication. Only required when the BPEL server connection is using a SAML token policy for authentication and the application's Worklist service is using multiple BPEL server connections.</td>
</tr>
<tr>
<td></td>
<td>The default is null.</td>
</tr>
<tr>
<td><strong>linkUrl</strong></td>
<td>Optional. URL used to link to the BPEL server. Only required if it is different to the url argument. For example, when SSO or https is configured. Use the format: protocol://host:port</td>
</tr>
<tr>
<td></td>
<td>For example, <a href="http://mySSO.host.com:7777">http://mySSO.host.com:7777</a></td>
</tr>
<tr>
<td></td>
<td>The default is null.</td>
</tr>
<tr>
<td></td>
<td>For performance reasons, in an HTTPS or SSO environment, the Link URL specifies user access to BPEL worklist items, through HTTPS or SSO Web servers, whereas the BPEL SOAP URL specifies direct access to BPEL Web services, without redirection through HTTPS or SSO Web servers.</td>
</tr>
<tr>
<td><strong>server</strong></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces.</td>
</tr>
<tr>
<td></td>
<td>Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><strong>applicationVersion</strong></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

### 10.19.2.3 Examples

The following example updates the BPEL server URL, security policy, recipient key alias, and link url for a connection named WebCenter Worklist.

```
wls:/weblogic/serverConfig> setBPELConnection(appName='webcenter', name='WebCenter Worklist', url='http://myhost.com:6666', policy='oracle/wss10_saml_token_with_message_protection_client_policy', recipientKeyAlias='myalias', linkUrl='http://mySSO.com:7777')
```

The following example changes the security policy to use Global Policy Attachments (GPA):

```
wls:/weblogic/serverConfig> setBPELConnection(appName='webcenter', name='WebCenter Worklist', policy='GPA')
```
10.19.3 listBPELConnections

Module: Oracle WebCenter
Use with WLST: Online

10.19.3.1 Description
Without any arguments, this command lists all the BPEL connections that are configured for a specific WebCenter application. All BPEL connections are listed, even connections not currently used.

10.19.3.2 Syntax
listBPELConnections(appName, [verbose], [name], [server], [applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application for which to list BPEL server connections.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays BPEL server connection details in verbose mode. Valid options are 1 (true) and 0 (false). When set to 1, listBPELConnections lists all of the BPEL server connections that are configured, along with their details. When set to 0, listBPELConnections lists connection names only. This argument defaults to 0. If you set this argument to 0, do not specify the name argument.</td>
</tr>
<tr>
<td>name</td>
<td>Optional. Name of an existing BPEL server connection. You can use this argument to view details about a specific connection. To list all the connections, omit the name argument.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.19.3.3 Examples
The following example lists the names of all the BPEL server connections that are configured for a WebCenter application.

```
wls:/weblogic/serverConfig> listBPELConnections(appName='webcenter')
------------------
WebCenter Worklist
------------------
------------------
Human Resources Worklist
------------------
```

The following example lists the names and details of all of the BPEL server connections that are configured for a WebCenter application.

```
wls:/weblogic/serverConfig> listBPELConnections(appName='webcenter', verbose=1)
------------------
WebCenter Worklist
------------------
-----------
Connection Name: WebCenter Worklist
PolicyURI:oracle/wss10_saml_token_client_policy
```
10.19.4  addWorklistConnection

Module: Oracle WebCenter

Use with WLST: Online

10.19.4.1 Description
Enable an existing BPEL server connection for Worklist services. The Worklist service supports multiple connections so that WebCenter users can monitor and manage assignments and notifications from a range of BPEL servers.

The name must specify an existing BPEL server connection.

10.19.4.2 Syntax
addWorklistConnection(appName, name,[verbose, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing BPEL server connection.</td>
</tr>
<tr>
<td>verbose</td>
<td>Optional. Displays output indicating whether a matching BPEL server connection exists and provides connection details. 1 turns verbose mode on; 0 turns verbose mode off. This argument defaults to 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.19.4.3 Examples
The following example enables the Human Resources Worklist connection for the Worklist service.

```bash
wls:/weblogic/serverConfig> addWorklistConnection(appName='webcenter',
name='Human Resources Worklist', verbose=1)
Human Resources Worklist successfully added to WorkList
```

URL:http://myhost.com:8001
------------------
Human Resources Worklist
------------------
Connection Name: Human Resources Worklist
PolicyURI:oracle/wss10_saml_token_client_policy
URL:http://myhost.com:8888
------------------
The following example also enables the Human Resources Worklist connection for the Worklist service.

```
   wls:/weblogic/serverConfig> addWorklistConnection(appName='webcenter',
          name='Human Resources Worklist', verbose=1)
   Human Resources Worklist successfully added to WorkList
```

<table>
<thead>
<tr>
<th>Connection Name: Human Resources Worklist</th>
</tr>
</thead>
<tbody>
<tr>
<td>PolicyURI: oracle/oracle/wss10_saml_token_client_policy</td>
</tr>
<tr>
<td>URL: <a href="http://myhost.com:8888">http://myhost.com:8888</a></td>
</tr>
</tbody>
</table>

### 10.19.5 removeWorklistConnection

Module: Oracle WebCenter
Use with WLST: Online

#### 10.19.5.1 Description

Disables a BPEL server connection that is currently used by the Worklist service. Connection details are retained but the Worklist service no longer uses the connection specified.

#### 10.19.5.2 Syntax

```
   removeWorklistConnection(appName, name, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing BPEL server connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

#### 10.19.5.3 Example

The following example disables the BPEL server connection named WebCenter Worklist for the Worklist service.

```
   wls:/weblogic/serverConfig> removeWorklistConnection(appName='webcenter',
          name='WebCenter Worklist')
   WebCenter Worklist successfully removed from WorkList
```

### 10.19.6 listWorklistConnections

Module: Oracle WebCenter
Use with WLST: Online
10.19.6.1 Description
Without any arguments, this command lists all of the BPEL server connections that are configured for the Worklist service, in a named WebCenter application.

10.19.6.2 Syntax
`listWorklistConnections(appName, [verbose], [name], [server], [applicationVersion])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application for which to perform this operation.</td>
</tr>
<tr>
<td><code>verbose</code></td>
<td>Optional. Displays BPEL server connection details in verbose mode. Valid options are 1 (true) and 0 (false). When set to 1, <code>listWorklistConnections</code> lists all of the BPEL server connections that are configured for the Worklist service, along with their details. When set to 0, <code>listWorklistConnections</code> lists connection names only. This argument defaults to 0. If you set this argument to 0, do not specify the <code>name</code> argument.</td>
</tr>
<tr>
<td><code>name</code></td>
<td>Optional. Name of an existing BPEL server connection. You can use this argument to view details about a specific connection. To list all connections, omit the <code>name</code> argument.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, <code>WC_Spaces</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.19.6.3 Examples
The following example lists the names of all of the BPEL server connections that are configured for the Worklist service.

```
wls:/weblogic/serverConfig> listWorklistConnections(appName='webcenter')
------------------
WebCenter Worklist
------------------
```

The following example lists both the names and connection details of all of the BPEL server connections that are configured for the Worklist service.

```
wls:/weblogic/serverConfig> listWorklistConnections(appName='webcenter', verbose=1)
------------------
WebCenter Worklist
------------------
Connection Name: WebCenter Worklist
PolicyURI: oracle/wss10_saml_token_client_policy
URL:http://myhost.com:8001
```

The following example lists connection details of a named BPEL server connection—`MyWorklist`. As the Worklist service is not currently configured to use `MyWorklist`, an appropriate message displays.

```
wls:/weblogic/serverConfig> listWorklistConnections(appName='webcenter', verbose=1, name='MyWorklist')
```
10.20 WebCenter Spaces

Use the commands listed in Table 10–28 to manage WebCenter Spaces workflow settings and metadata.

Table 10–28 WebCenter Spaces Workflow WLST Commands

<table>
<thead>
<tr>
<th>Use This Command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>getSpacesWorkflowConnectionName</td>
<td>Return the name of the BPEL server connection that WebCenter Spaces is using for internal workflows.</td>
<td>Online</td>
</tr>
<tr>
<td>setSpacesWorkflowConnectionName</td>
<td>Specify the BPEL server connection used for Webcenter Spaces workflows.</td>
<td>Online</td>
</tr>
<tr>
<td>refreshGroupSpaceCache</td>
<td>Migrate metadata for individual Spaces (in MDS) and Space security data to the 'WebCenter Spaces cache’.</td>
<td>Online</td>
</tr>
</tbody>
</table>

10.20.1 getSpacesWorkflowConnectionName

Module: Oracle WebCenter

Use with WLST: Online

10.20.1.1 Description

Returns the name of the BPEL server connection that WebCenter Spaces is currently using for internal workflows (Space membership notifications, Space subscription requests, and so on).

10.20.1.2 Syntax

getSpacesWorkflowConnectionName(appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Spaces application—always webcenter.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.20.1.3 Example

The following example names the BPEL server connection that WebCenter Spaces is currently using for internal workflow.

wls:/weblogic/serverConfig> getSpacesWorkflowConnectionName(appName='webcenter')
WorkflowConfigConnectionName: WebCenter-Worklist

10.20.2 setSpacesWorkflowConnectionName

Module: Oracle WebCenter

Use with WLST: Online
10.20.2.1 Description
Specifies the BPEL server connection that Webcenter Spaces uses for internal workflows. WebCenter Spaces uses a BPEL server included with the Oracle SOA Suite to host internal workflows, such as Space membership notifications, Space subscription requests, and so on. The connection name specified here must be a valid BPEL server connection.

**Note:** Configuration changes made using this WLST command are only effective after your restart the Managed Server on which the WebCenter Spaces deployed. For details, see *Oracle Fusion Middleware Administrator's Guide for Oracle WebCenter*.

10.20.2.2 Syntax
```
setSpacesWorkflowConnectionName(appName, name, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Spaces application—always webcenter.</td>
</tr>
<tr>
<td>name</td>
<td>Name of an existing BPEL connection.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.20.2.3 Example
The following example specifies that WebCenter Spaces uses the BPEL server connection named WebCenter-Worklist for its internal workflows.
```
wls:/weblogic/serverConfig> setSpacesWorkflowConnectionName(appName='webcenter', name='WebCenter-Worklist')
```

10.20.3 refreshGroupSpaceCache
Module: Oracle WebCenter
Use with WLST: Online

10.20.3.1 Description
Migrates metadata for individual Spaces (in MDS) and Space security data (in a policy store) to the 'WebCenter Spaces cache'.

WebCenter Spaces 11.1.1.2.0 (and later) uses tables (referred to as the WebCenter Spaces cache) to store Space metadata and security-related data. When you migrate from WebCenter Spaces 11.1.1.0 to 11.1.1.2.0, you must run the refreshGroupSpaceCache command so that all your existing Space data is migrated to the new 'WebCenter Spaces cache'.

10.20.3.2 Syntax
```
refreshGroupSpaceCache(appName, [spaceNames, syncMode, updateType, cleanCache])
```
The following examples update the cache to include all Space-related metadata (in MDS) and security data (in the policy store) in synchronous mode:

```
wls:/weblogic/serverConfig>refreshGroupSpaceCache(appName='webcenter', spaceNames=' ', syncMode=1, updateType='all', cleanCache=0)
wls:/weblogic/serverConfig>refreshGroupSpaceCache(appName='webcenter')
```

To refresh all the Spaces in MDS, enter `spaceNames= ''`

To refresh selective Spaces, enter one or more Space names separated with a comma, for example:
```
spaceNames='MyGroupSpace1,MyGroupSpace2'
```

**Argument Definition**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>appName</strong></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><strong>spaceNames</strong></td>
<td>Optional. Names of one or more Spaces (group spaces) that you want to refresh.</td>
</tr>
<tr>
<td></td>
<td>To refresh all the Spaces in MDS, enter <code>spaceNames= ''</code></td>
</tr>
<tr>
<td></td>
<td>To refresh selective Spaces, enter one or more Space names separated with a comma, for example: <code>spaceNames='MyGroupSpace1,MyGroupSpace2'</code></td>
</tr>
<tr>
<td><strong>updateType</strong></td>
<td>Optional. Indicates the type of data to refresh. Valid values are: security, metadata, all. The default value is security.</td>
</tr>
<tr>
<td></td>
<td>- <strong>security</strong> - Refreshes the cache with security data stored in the policy store. The security data that is stored includes member data for the Space, whether or not a Space is public, and whether or not a Space is accessible to users assigned the Authenticated-User role (in earlier releases this role was named Spaces-User).</td>
</tr>
<tr>
<td></td>
<td>- <strong>metadata</strong> - Refreshes the cache with Space-related metadata stored in MDS. The data that is stored includes metadata information such as the display name, keywords, icon, logo, and so on.</td>
</tr>
<tr>
<td></td>
<td>- <strong>all</strong> - Refreshes the cache with data stored in MDS and the policy store.</td>
</tr>
<tr>
<td><strong>syncMode</strong></td>
<td>Optional. Indicates whether to refresh the WebCenter Spaces in synchronous or asynchronous mode. Valid values are 1 and 0. The default value is 1.</td>
</tr>
<tr>
<td></td>
<td>- When set to 1, the refresh process runs in synchronous mode.</td>
</tr>
<tr>
<td></td>
<td>- When set to 0, the refresh is asynchronous, that is, a new thread is spawned for the refresh process.</td>
</tr>
<tr>
<td></td>
<td>Synchronous mode is recommended.</td>
</tr>
<tr>
<td><strong>cleanCache</strong></td>
<td>Optional. Indicates whether to clear the WebCenter Spaces cache. Valid values are 1 and 0. The default value is 0.</td>
</tr>
<tr>
<td></td>
<td>- When set to 0, the content of the WebCenter Spaces is not cleared during the refresh operation.</td>
</tr>
<tr>
<td></td>
<td>- Always set this value to 0 for migration.</td>
</tr>
<tr>
<td></td>
<td>- Use the 1 value only when importing an entire WebCenter application, in which case the entire data available in the WebCenter Spaces cache is overwritten.</td>
</tr>
</tbody>
</table>

### 10.20.3.3 Example

The following examples update the cache to include all Space-related metadata (in MDS) and security data (in the policy store) in synchronous mode:

```
wls:/weblogic/serverConfig>refreshGroupSpaceCache(appName='webcenter', spaceNames=' ', syncMode=1, updateType='all', cleanCache=0)
wls:/weblogic/serverConfig>refreshGroupSpaceCache(appName='webcenter')
```

The following example updates the WebCenter Spaces cache to include Space-related metadata (in MDS) and security data (in the policy store) for two Spaces MyGroupSpace1 and MyGroupSpace2. The cache refreshes in synchronous mode.

```
wls:/weblogic/serverConfig>refreshGroupSpaceCache(appName='webcenter', spaceNames='MyGroupSpace1,MyGroupSpace2')
```
10.21 WebCenter Identity Store

Use the commands listed in Table 10–29 to configure options for searching a WebCenter application’s identity store.

Table 10–29 WebCenter Identity Store WLST Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>setWebCenterIdStoreSearchConfig</td>
<td>Modify configuration options for searching a WebCenter application’s identity store.</td>
<td>Online</td>
</tr>
<tr>
<td>listWebCenterIdStoreSearchConfig</td>
<td>List current configuration options for searching a WebCenter application’s identity store.</td>
<td>Online</td>
</tr>
</tbody>
</table>

10.21.1 setWebCenterIdStoreSearchConfig

Module: Oracle WebCenter

Use with WLST: Online

10.21.1.1 Description

Modifies configuration options for searching a WebCenter application’s identity store. Use these settings to optimize identity store searches (for users and roles) in a WebCenter application.

Identity store search parameters are stored in adf-config.xml. If a search parameter is not specified, it is not modified.

10.21.1.2 Syntax

```
setWebCenterIdStoreSearchConfig(appName,[narrowSearchTimeout, broadSearchTimeout, maxSearchFilters, maxFetchRecords, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>narrowSearchTimeout</td>
<td>Optional. The maximum time allowed (in ms) for small, simple searches, such as fetching a single user from the identity store. The out-of-the-box default is 30000ms.</td>
</tr>
<tr>
<td>broadSearchTimeout</td>
<td>Optional. The maximum time allowed (in ms) to return large result sets, such as returning users and roles that match a name pattern. The out-of-the-box default is 60000.</td>
</tr>
<tr>
<td>maxSearchFilters</td>
<td>Optional. The number of search filters allowed for the WebCenter application’s identity store. The maximum allowed, out-of-the-box, is 100. Some identity store searches are executed using search filters which are converted into LDAP search calls. If your associated LDAP server limits the search condition, you can set the maxSearchFilters property to match your LDAP server setting.</td>
</tr>
</tbody>
</table>
10.21.1 Example
The following example increases both identity store search timeouts.

```wls:/weblogic/serverConfig>setWebCenterIdStoreSearchConfig(appName='webcenter', narrowSearchTimeout=60000, broadSearchTimeout=100000);
```

The following example limits the maximum number of records returned to 100.

```wls:/weblogic/serverConfig>setWebCenterIdStoreSearchConfig(appName='webcenter', maxFetchRecords=100);
```

10.21.2 listWebCenterIdStoreSearchConfig
Module: Oracle WebCenter
Use with WLST: Online

10.21.2.1 Description
Lists current configuration options for searching the WebCenter application's identity store.

Identity store search parameters are stored in `adf-config.xml`.

10.21.2.2 Syntax
`listWebCenterIdStoreSearchConfig(appName,[server, applicationVersion])`

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, <code>WC_Spaces</code>. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td><code>applicationVersion</code></td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.21.2.3 Example
The following example displays identity store search configuration information for a
WebCenter application named webcenter.

```
wlst:/weblogic/serverConfig>listWebCenterIdStoreSearchConfig(appName='webcenter');
```

----------------
User role search configuration parameters
----------------
Narrow search timeout : 30000
Broad search timeout  : 60000
Maximum search filters : 100
Maximum records to fetch: 200

10.22 WebCenter Import and Export

Use the commands listed in Table 10–30 to export and import WebCenter Spaces and
producer metadata associated with WebCenter Portal applications.

Table 10–30 Import and Export WLST Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>exportWebCenterApplication</td>
<td>Export WebCenter Spaces to a WebCenter export archive.</td>
<td>Online</td>

<tr>
<td>retryAllFailedProducerImports</td>
<td>Attempt to import outstanding producer metadata</td>
<td>Online</td>
</tr>
</tbody>
</table>
10.22.1 exportWebCenterApplication

Module: Oracle WebCenter
Use with WLST: Online

10.22.1.1 Description
(WebCenter Spaces only) Exports a WebCenter Spaces application to a WebCenter export archive (.EAR) using the filename provided.

10.22.1.2 Syntax

exportWebCenterApplication(appName, fileName, [exportCustomizations, exportSecurity, exportData, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Spaces application in which to perform this operation.</td>
</tr>
<tr>
<td>fileName</td>
<td>Name of the export archive EAR file to which you want the export to be written.</td>
</tr>
<tr>
<td>exportCustomizations</td>
<td>Optional. Valid values are 1 (true) and 0 (false). When set to 1, all application customizations are exported. When set to 0, application customizations are not exported, that is, default task flows are exported without any customizations. This argument defaults to 1.</td>
</tr>
<tr>
<td>exportSecurity</td>
<td>Optional. Valid values are 1 (true) and 0 (false). When set to 1, policy-store.xml contains application roles and permissions, as well as user details and their role assignments. When set to 0, policy-store.xml contains application roles and permissions only. User details are not exported. This argument defaults to 0.</td>
</tr>
<tr>
<td>exportData</td>
<td>Optional. Valid values are 1 (true) and 0 (false). When set to 1, data stored in the WebCenter Spaces database for lists, events, tags, and links is exported. When set to 0, this data is not exported. This argument defaults to 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.22.1.3 Examples

The following example exports a WebCenter Spaces application and all possible data to a file named myExport.ear.

wls:/weblogic/serverConfig> exportWebCenterApplication(appName='webcenter', fileName='myExport.ear', exportCustomizations=1, exportSecurity=1, exportData=1)

The following example exports a test application with the intention of importing the resultant EAR to an alternative system with a different user base. In this case, security policies (which might reference users or roles specific to the originating server) are not required. Additionally, data created during testing (such as lists, Space events, links, tags) is not required.

wls:/weblogic/serverConfig> exportWebCenterApplication(appName='webcenter', fileName='export.ear')
10.22.2 importWebCenterApplication

Module: Oracle WebCenter

Use with WLST: Online

10.22.2.1 Description
(WebCenter Spaces only) Imports a WebCenter Spaces application from a WebCenter export archive file to a server.

After importing WebCenter Spaces you will need to restart the managed server where the application is deployed.

10.22.2.2 Syntax
importWebCenterApplication(appName, fileName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Spaces application in which to perform this operation.</td>
</tr>
<tr>
<td>fileName</td>
<td>Name of the WebCenter export archive that you want to import.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.22.2.3 Example
The following example imports WebCenter Spaces from the export archive myExport.ear.

wls:/weblogic/serverConfig> importWebCenterApplication(appName='webcenter', fileName='myExport.ear')

10.22.3 exportGroupSpaces

Module: Oracle WebCenter

Use with WLST: Online

10.22.3.1 Description
(WebCenter Spaces only) Exports one or more Spaces to a WebCenter export archive (.EAR), using the filename specified.

All Space-related data, application customizations, and security information is included in the export archive.

You must take the Spaces offline, even if only temporarily, to prevent data conflicts during the export process.

Note: You cannot use this command to export Home Spaces.

10.22.3.2 Syntax
exportGroupSpaces(appName, fileName, names, [forceOffline, server,
The following example exports two Spaces (mySpace1 and mySpace2) from a WebCenter Spaces application named webcenter.

```
wlsh:/weblogic/serverConfig> exportGroupSpaces(appName='webcenter',
    fileName='myExport.ear', names='mySpace1, mySpace2')
```

The following example takes mySpace1 and mySpace2 offline and then exports both Spaces to myExport.ear:

```
wls:/weblogic/serverConfig> exportGroupSpaces(appName='webcenter',
    fileName='myExport.ear', names='mySpace1, mySpace2',
    forceOffline=1)
```

### 10.22.4 exportGroupSpaceTemplates

Module: Oracle WebCenter

Use with WLST: Online

#### 10.22.4.1 Description

(WebCenter Spaces only) Exports one or more Space templates to a WebCenter export archive (.EAR), using the filename specified.

#### 10.22.4.2 Syntax

```
exportGroupSpaceTemplates(appName, fileName, names, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Spaces application in which to perform this operation—always webcenter.</td>
</tr>
<tr>
<td>fileName</td>
<td>Name of the local file to which the export will be written.</td>
</tr>
<tr>
<td>names</td>
<td>Names of the Spaces that you want to export. Separate multiple Space names with a comma.</td>
</tr>
<tr>
<td>forceOffline</td>
<td>Optional. Specifies whether to take the Spaces offline before starting export process. Valid values are 1 and 0.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.22.4.3 Example

The following example exports two Space templates (mySpaceTemplate1 and mySpaceTemplate2) from a WebCenter Spaces application named webcenter.

```
wlsl:weblogic/serverConfig> exportGroupSpaceTemplates(appName='webcenter',
    fileName='myExport.ear', names='mySpaceTemplate1, mySpaceTemplate2')
```

10.22.5 importGroupSpaces

Module: Oracle WebCenter

Use with WLST: Online

10.22.5.1 Description

(WebCenter Spaces only) Imports one or more Spaces or Space templates from a WebCenter export archive.

10.22.5.2 Syntax

```
importGroupSpaces(appName, fileName, [importCustomizations, importSecurity, importData, parentSpace, forceOffline, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>names</td>
<td>Names of the Space templates that you want to export. Separate multiple template names with a comma.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Spaces application in which to perform this operation—always webcenter.</td>
</tr>
<tr>
<td>fileName</td>
<td>Name of the WebCenter archive file that you want to import.</td>
</tr>
<tr>
<td>importCustomizations</td>
<td>Optional. Indicates whether to import customizations from the WebCenter export archive. Valid values are 1 and 0. When set to 0, customizations are not imported, that is, default task flows are imported without any customizations and the default Space settings are used. This argument defaults to 1.</td>
</tr>
<tr>
<td>importSecurity</td>
<td>Optional. Indicates whether to import Space member details from the WebCenter export archive. Valid values are 1 and 0. When set to 1, roles and permissions for the Space, as well as member details and their role assignments are imported. When set to 0, only the roles and permissions are imported. This option is useful when migrating between stage and production environments and where member details, added during the testing phase, are no longer required. This argument defaults to 1.</td>
</tr>
</tbody>
</table>
10.22.5.3 Example

The following example imports Spaces or Space templates from a WebCenter archive named myExport.ear to a WebCenter Spaces application named webcenter.

```
> wls:/weblogic/serverConfig> importGroupSpaces(appName='webcenter',
> fileName='myExport.ear')
```

10.22.6 exportWebCenterResource

Module: Oracle WebCenter

Use with WLST: Online

10.22.6.1 Description

Exports a single portal resource to a WebCenter export archive (.EAR), using the filename specified.

10.22.6.2 Syntax

```
exportWebCenterResource(appName, fileName, resourceType, resourceGUID,
> [spaceName, server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
</tbody>
</table>

Oracle WebCenter Custom WLST Commands 10-201
10.22.6.3 Example
The following example exports a page template from MySpace to a local file named myPageTemplateExport.ear:

```bash
wls:/weblogic/serverConfig> exportWebCenterResource(appName='webcenter', fileName='myPageTemplateExport.ear', resourceType='pageTemplate', resourceGUID='gsr47d9a5ac_7398_439a_97d2_8b54ce905f7e, spaceName='MySpace')
```

The following example exports a skin from a WebCenter Portal application named myPortalApp to a local file named mySkinExport.ear:

```bash
wls:/weblogic/serverConfig> exportWebCenterResource(appName='myPortalApp', fileName='mySkinExport.ear', resourceType='skin', resourceGUID='gsr47d9a5ac_7398_439a_97d2_8b54ce905f7e')
```

10.22.7 importWebCenterResource
Module: Oracle WebCenter
Use with WLST: Online

10.22.7.1 Description
Imports a single portal resource from a WebCenter export archive (.EAR), using the filename specified.

10.22.7.2 Syntax
importWebCenterResource(appName, fileName, resourceType, [spaceName, server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation.</td>
</tr>
<tr>
<td>fileName</td>
<td>Name of the local file to which the export will be written.</td>
</tr>
<tr>
<td>resourceType</td>
<td>Type of resource to export. Valid values include: pageTemplate, contentPresenter, pageStyle, navigation, resourceCatalog, skin, taskFlow, mashupStyle.</td>
</tr>
<tr>
<td>resourceGUID</td>
<td>Unique ID (GUID) of the resource to export.</td>
</tr>
<tr>
<td>spaceName</td>
<td>Optional. (WebCenter Spaces only) Name of the Space containing the resource to export. Use this argument to export resources that are owned by a particular Space. Omit this argument if you want to export application-level resources for WebCenter Spaces or to export resources for a WebCenter Portal application. This argument defaults to null (application-level resources exported).</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
The following example imports a page template from a WebCenter archive named myPageTemplateExport.ear to MySpace in WebCenter Spaces:

```
wlsc:/weblogic/serverConfig> importWebCenterResource(appName='webcenter', fileName='myPageTemplateExport.ear', spaceName='MySpace', resourceType='pageTemplate')
```

The following example imports a skin from a WebCenter archive named mySkinExport.ear to a WebCenter Portal application named myPortalApp:

```
wlsc:/weblogic/serverConfig> importWebCenterResource(appName='myPortalApp', fileName='mySkinExport.ear', resourceType='skin')
```

## 10.22.7.3 Example

The following example imports a page template from a WebCenter archive named myPageTemplateExport.ear to MySpace in WebCenter Spaces:

```
wlsc:/weblogic/serverConfig> importWebCenterResource(appName='webcenter', fileName='myPageTemplateExport.ear', spaceName='MySpace', resourceType='pageTemplate')
```

The following example imports a skin from a WebCenter archive named mySkinExport.ear to a WebCenter Portal application named myPortalApp:

```
wlsc:/weblogic/serverConfig> importWebCenterResource(appName='myPortalApp', fileName='mySkinExport.ear', resourceType='skin')
```

## 10.22.8 exportPortletClientMetadata

### Module: Oracle WebCenter

### Use with WLST: Online

### 10.22.8.1 Description

Exports portlet client metadata and producer customizations and personalizations, for a WebCenter Portal application. This command exports metadata for all the application's producers to a named export archive (.EAR file). You cannot opt to export metadata for specific producers.

Only use this command to migrate producer data associated with WebCenter Portal applications. Do not use this command for WebCenter Spaces.

### 10.22.8.2 Syntax

```
exportPortletClientMetadata(appName, fileName, [exportPersonalizations, server, applicationVersion])
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Portal application in which to perform this operation.</td>
</tr>
</tbody>
</table>
10.22.8.3 Example

The following example exports portlet client metadata and producer customizations and personalizations to an export archive named `myExport.ear`. Personalizations are not exported.

```
wls:/weblogic/serverConfig> exportPortletClientMetadata(appName='myApp', fileName='myExport.ear', exportPersonalizations=0)
```

10.22.9 importPortletClientMetadata

Module: Oracle WebCenter

Use with WLST: Online

10.22.9.1 Description

Imports portlet client metadata and producer customizations and personalizations from a named WebCenter export archive.

Producer personalizations are optional on export. Producer personalizations are imported if the export archive specified includes personalizations.

Only use this command to migrate producer data for a WebCenter Portal application. Do not use this command for WebCenter Spaces.

10.22.9.2 Syntax

```
importPortletClientMetadata(appName, fileName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Portal application in which to perform this operation.</td>
</tr>
<tr>
<td>fileName</td>
<td>Name of the WebCenter export archive that you want to import.</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>
10.22.9.3 Example
The following example imports portlet client metadata and producer customizations and personalizations from a WebCenter export archive named myExport.ear.

```wls:/weblogic/serverConfig> importPortletClientMetadata(appName='app1',
fileName='myExport.ear')```

10.22.10 importWebCenterTranslations

Module: Oracle WebCenter
Use with WLST: Online

10.22.10.1 Description
WebCenter Spaces only. Imports translated content (XLF files) to MDS and the WebCenter repository for use in WebCenter Spaces.

10.22.10.2 Syntax

```importWebCenterTranslations(appName, server, mdsRootDir, [applicationVersion])``` 

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter Spaces application in which to perform this operation—always webcenter.</td>
</tr>
<tr>
<td>server</td>
<td>Name of the target managed server on which WebCenter Spaces is deployed. For example, WC_Spaces.</td>
</tr>
<tr>
<td>mdsRootDir</td>
<td>MDS root directory on the file system that contains translated XLF files.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.22.10.3 Example
The following example imports translated content in the directory /scratch/shared/newmd to MDS and the WebCenter repository:

```wls:/weblogic/serverConfig> importWebCenterTranslations(appName='webcenter',
server='WC_Spaces', mdsRootDir='/scratch/shared/newmd')```

10.22.11 setSpaceState

Module: Oracle WebCenter
Use with WLST: Online

10.22.11.1 Description
(WebCenter Spaces only) Takes a Space offline or brings a Space online.

10.22.11.2 Syntax

```setSpaceState(appName, spaceName, offline, [server, applicationVersion])``` 

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
</tbody>
</table>
WebCenter Import and Export

10.22.11.3 Example
The following example takes MySpace offline:

```
wls:/weblogic/serverConfig> setSpaceState(appName='webcenter',
spaceName='MySpace', offline=1)
```

10.22.12 showProducerImportFailures
Module: Oracle WebCenter
Use with WLST: Online

10.22.12.1 Description
Lists outstanding producer imports for a named WebCenter application.
Producer import fails if a producer used by the application is not available when the application first starts after deployment.

10.22.12.2 Syntax
```
showProducerImportFailures(appName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
<tr>
<td>server</td>
<td>Name of the managed server on which the application is deployed.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.22.12.3 Example
The following example shows import failures for an application named webcenter:

```
wls:/weblogic/serverConfig> showProducerImportFailures(appName='webcenter')
```

10.22.13 retryAllFailedProducerImports
Module: Oracle WebCenter
Use with WLST: Online

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>spaceName</td>
<td>Name of the Space you want to take offline or bring online.</td>
</tr>
<tr>
<td>offline</td>
<td>Specifies whether to take the Space offline or bring it back online. Valid values are 1 and 0: ■ 1 takes the Space offline ■ 0 brings the Space online</td>
</tr>
<tr>
<td>server</td>
<td>Optional. Name of the managed server where the WebCenter application is deployed. For example, WC_Spaces. Required when applications with the same name are deployed to different servers and also when you have a cluster.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.22.11.3 Example
The following example takes MySpace offline:

```
wls:/weblogic/serverConfig> setSpaceState(appName='webcenter',
spaceName='MySpace', offline=1)
```

10.22.12 showProducerImportFailures
Module: Oracle WebCenter
Use with WLST: Online

10.22.12.1 Description
Lists outstanding producer imports for a named WebCenter application.
Producer import fails if a producer used by the application is not available when the application first starts after deployment.

10.22.12.2 Syntax
```
showProducerImportFailures(appName, [server, applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
<tr>
<td>server</td>
<td>Name of the managed server on which the application is deployed.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.22.12.3 Example
The following example shows import failures for an application named webcenter:

```
wls:/weblogic/serverConfig> showProducerImportFailures(appName='webcenter')
```

10.22.13 retryAllFailedProducerImports
Module: Oracle WebCenter
Use with WLST: Online
10.22.13.1 Description
Imports outstanding producer metadata.

Producer import can fail if a producer used by the application is not available when
the application first starts after deployment. Use this command to import metadata for
any producers for which metadata import previously failed.

10.22.13.2 Syntax
retryAllFailedProducerImports(appName, [server, applicationVersion])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Name of the WebCenter application in which to perform this operation. For WebCenter Spaces, the name is always webcenter.</td>
</tr>
<tr>
<td>server</td>
<td>Name of the managed server on which the WebCenter application is deployed.</td>
</tr>
<tr>
<td>applicationVersion</td>
<td>Optional. Version number of the deployed application. Required if more than one version of the WebCenter application is deployed.</td>
</tr>
</tbody>
</table>

10.22.13.3 Example
The following example imports missing producer metadata for an application named webcenter:

wls:/weblogic/serverConfig> retryAllFailedProducerImports(appName='webcenter')

10.23 WebCenter Upgrade
Use the commands listed in Table 10–31 when upgrading from a previous WebCenter
release.

See also, Oracle Fusion Middleware Upgrade Guide for Oracle SOA Suite, WebCenter, and
ADF.

Table 10–31 WebCenter Upgrade WLST Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>upgradeWebCenterDomain</td>
<td>Upgrade a WebCenter domain.</td>
<td>Offline</td>
</tr>
<tr>
<td>upgradeWebCenterPermissions</td>
<td>Upgrade WebCenter permissions.</td>
<td>Online</td>
</tr>
<tr>
<td>upgradeWebCenterApplication</td>
<td>Upgrade a WebCenter application.</td>
<td>Online</td>
</tr>
</tbody>
</table>

10.23.1 upgradeWebCenterDomain
Module: Oracle WebCenter
Use with WLST: Offline

10.23.1.1 Description
Upgrades a WebCenter Domain from 11.1.1.2.0 or 11.1.1.3.0 to 11.1.1.4.0.

10.23.1.2 Syntax
upgradeWebCenterDomain(domainDirName, [oracleHome], [upgradeCustomSpaces])
### 10.23.1 Example
The following example upgrades a WebCenter domain named base_domain:

```
wls:/weblogic/serverConfig> upgradeWebCenterDomain(domainDirName='/mw_home/user_project/domains/base_domain');
```

### 10.23.2 upgradeWebCenterPermissions
Module: Oracle WebCenter
Use with WLST: Online

#### 10.23.2.1 Description
Upgrades WebCenter Spaces permissions.
This command creates additional application roles and grants some additional permissions that are requirement for WebCenter Spaces 11.1.1.4.0.

#### 10.23.2.2 Syntax
```
upgradeWebCenterPermissions()
```

#### 10.23.2.3 Example
The following example upgrades permissions for WebCenter Spaces:

```
wls:/weblogic/serverConfig> upgradeWebCenterPermissions();
```

### 10.23.3 upgradeWebCenterApplication
Module: Oracle WebCenter
Use with WLST: Online

#### 10.23.3.1 Description
Upgrades a WebCenter Spaces application from 11.1.1.2.0 or 11.1.1.3.0 to 11.1.1.4.0.

#### 10.23.3.2 Syntax
```
upgradeWebCenterApplication(appName, [server], [applicationVersion])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>domainDirName</td>
<td>Full path to the Domain’s home directory.</td>
</tr>
<tr>
<td></td>
<td>For example, /home/Oracle/Domains/wc_domain.</td>
</tr>
<tr>
<td>oracleHome</td>
<td>Optional. Path to WebCenter’s Oracle home directory.</td>
</tr>
<tr>
<td></td>
<td>For example, /home/Oracle/Middleware/Oracle_WC.</td>
</tr>
<tr>
<td>upgradeCustomSpaces</td>
<td>Optional. Determines whether to upgrade the custom.webcenter.spaces shared library. Valid values are 1 (true) and 0 (false).</td>
</tr>
<tr>
<td></td>
<td>Set to 1 if you customized WebCenter Spaces and you want your customizations to be included when you upgrade.</td>
</tr>
<tr>
<td></td>
<td>The default value is 0.</td>
</tr>
</tbody>
</table>
The following example upgrades WebCenter Spaces:

```
wlsc/weblogic/serverConfig> upgradeWebCenterApplication(appName='webcenter');
```
The following sections describe the WLST custom commands and variables in detail. Topics include:

- Section 11.1, "Overview of WLST Command Categories"
- Section 11.2, "ADF-Specific WLST Commands"

**Note:** To use these ADF custom WLST commands, you must invoke the WLST script from the Oracle Common home. See "Using Custom WLST Commands" in the *Oracle Fusion Middleware Administrator’s Guide*.

### 11.1 Overview of WLST Command Categories

Use the ADF-based URL Connections WLST commands to navigate the hierarchy of configuration or runtime beans and control the prompt display. Use the `getADFMArchiveConfig` command to manage the `ADFMArchiveConfig` object.

### 11.2 ADF-Specific WLST Commands

Use the commands in Table 11–1 to managing URL-based connections.

**Table 11–1  Browse Commands for WLST Configuration**

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>adf_createFileUrlConnection</code></td>
<td>Create a new ADF File connection.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td><code>adf_createHttpUrlConnection</code></td>
<td>Create a new ADF URL connection.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td><code>adf_setURLConnectionAttributes</code></td>
<td>Set or edit the attributes of a newly created or existing ADF connection.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td><code>adf_listUrlConnection</code></td>
<td>List a new URL connection.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td><code>getADFMArchiveConfig</code></td>
<td>Returns a handle to the <code>ADFMArchiveConfig</code> object for the specified archive.</td>
<td>Online or Offline</td>
</tr>
</tbody>
</table>
11.2.1 adf_createFileUrlConnection

Use with WLST: Online or Offline

11.2.1.1 Description
Use this command to create a new connection based on the oracle.adf.model.connection.url.FileURLConnection connection class.

11.2.1.2 Syntax
adf_createFileURLConnection(appName, name, URL)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Application name for which the connection that will be created.</td>
</tr>
<tr>
<td>name</td>
<td>The name of the new connection.</td>
</tr>
<tr>
<td>URL</td>
<td>The URL associated with this connection.</td>
</tr>
</tbody>
</table>

11.2.1.3 Example
adf_createFileURLConnection('myapp','tempDir','/scratch/tmp')

11.2.2 adf_createHttpUrlConnection

Use with WLST: Online or Offline

11.2.2.1 Description
Use this command to create a new connection based on the oracle.adf.model.connection.url.HttpURLConnection connection type class.

11.2.2.2 Syntax
adf.createHttpURLConnection(appName, name, [URL], [authenticationType], [realm], [user], [password])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appName</td>
<td>Application name for which the connection is to be created.</td>
</tr>
<tr>
<td>name</td>
<td>The name of the new connection.</td>
</tr>
<tr>
<td>url</td>
<td>(Optional) The URL associated with this connection.</td>
</tr>
<tr>
<td>authenticationType</td>
<td>(Optional) The default is basic.</td>
</tr>
<tr>
<td>realm</td>
<td>(Optional) If this connection deals with authentication, then this should be set. The default is basic.</td>
</tr>
<tr>
<td>user</td>
<td>(Optional)</td>
</tr>
<tr>
<td>password</td>
<td>(Optional)</td>
</tr>
</tbody>
</table>

11.2.2.3 Example
adf_createHttpURLConnection('myapp','cnn','http://www.cnn.com')
11.2.3 **adf_setURLConnectionAttributes**

Use with WLST: Online or Offline

11.2.3.1 **Description**

Use this command to set or edit the attributes of a newly created or existing ADF connection.

11.2.3.2 **Syntax**

```
adf_setURLConnectionAttributes(appname, connectionname, attributes)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appname</td>
<td>Application name for which the connection that will be created.</td>
</tr>
<tr>
<td>connectionname</td>
<td>The name of the new connection.</td>
</tr>
<tr>
<td>attributes</td>
<td>The array containing attributes to set in key/value pairs.</td>
</tr>
</tbody>
</table>

11.2.3.3 **Example**

```
adf_setURLConnectionAttributes('myapp','cnn', 'ChallengeAuthenticationType:digest', 'AuthenticationRealm:XMLRealm')
```

11.2.4 **adf_listURLConnection**

Use with WLST: Online or Offline

11.2.4.1 **Description**

Use this command to list the connections of the application.

11.2.4.2 **Syntax**

```
adf_listURLConnection(appname)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>appname</td>
<td>Application name</td>
</tr>
</tbody>
</table>

11.2.4.3 **Example**

```
adf_listURLConnection('myapp')
```

11.2.5 **getADFMArchiveConfig**

Use with WLST: Online or Offline.

11.2.5.1 **Description**

Returns a handle to the ADFMArchiveConfig object for the specified archive. The returned ADFMArchiveConfig object's methods can be used to change application configuration in an archive.

The ADFMArchiveConfig object provides the following methods:

- `setDatabaseJboSQLBuilder([value])`—Sets the Database jbo.SQLBuilder attribute.
ADF-Specific WLST Commands

- `getDatabaseJboSQLBuilder()` — Returns the current value of the `jbo.SQLBuilder` attribute.
- `setDatabaseJboSQLBuilderClass([value])` — Sets the Database `jbo.SQLBuilderClass` attribute. Value is the full name of the custom builder class.
- `getDatabaseJboSQLBuilderClass()` — Returns the current value of the `jbo.SQLBuilderClass` attribute.
- `setDefaultRowLimit([value])` — Sets the defaults `rowLimit` attribute. Value is a long specifying the row limit (Default -1).
- `getDefaultRowLimit()` — Returns the current value of the `rowLimit` attribute.
- `save([toLocation])` — If you specify the `toLocation`, then the changes will be stored in the target archive file and the original file will remain unchanged. Otherwise, the changes will be saved in the original file itself.

### 11.2.5.2 Syntax

```
archiveConfigObject = ADFMAdmin.getADFMArchiveConfig(fromLocation)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>fromLocation</code></td>
<td>The name of the ear file, including its complete path.</td>
</tr>
</tbody>
</table>

The syntax for `setDatabaseJboSQLBuilder([value])` is:

```
archiveConfigObject.setDatabaseJboSQLBuilder([value])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>value</code></td>
<td>The value of the <code>jbo.SQLBuilder</code> attribute. Valid values are: 'Oracle' (Default), 'OLite', 'DB2', 'SQL92', 'SQLServer', or 'Custom. If 'Custom' is specified, then the <code>jbo.SQLBuilderClass</code> attribute should also be set.</td>
</tr>
</tbody>
</table>

The syntax for `getDatabaseJboSQLBuilder()` is:

```
archiveConfigObject.getDatabaseJboSQLBuilder()
```

The syntax for `setDatabaseJboSQLBuilderClass([value])` is:

```
archiveConfigObject.setDatabaseJboSQLBuilderClass([value])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>value</code></td>
<td>The value of the <code>jbo.SQLBuilderClass</code> attribute.</td>
</tr>
</tbody>
</table>

The syntax for `getDefaultRowLimit()` is:

```
archiveConfigObject.getDefaultRowLimit()
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>value</code></td>
<td>The value of the <code>rowLimit</code> attribute.</td>
</tr>
</tbody>
</table>

The syntax for `setDefaultRowLimit([value])` is:

```
archiveConfigObject.setDefaultRowLimit([value])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>value</code></td>
<td>The value of the <code>rowLimit</code> attribute.</td>
</tr>
</tbody>
</table>
The syntax for `getDefaultRowLimit()` is:
```
archiveConfigObject.getDefaultRowLimit([value])
```

The syntax for `save([toLocation])` is:
```
archiveConfigObject.save([toLocation])
```

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>toLocation</td>
<td>The file name along with the absolute path to store the changes.</td>
</tr>
</tbody>
</table>

### 11.2.5.3 Example

In the following example, the `jbo.SQLBuilder` attribute is set to 'DB2'.
```
wls:/offline> archive = ADFMAdmin.getADFMArchiveConfig(fromLocation='/tmp/testArchive.ear')
wls:/offline> archive.setDatabaseJboSQLBuilder(value='DB2')
wls:/offline> archive.save()
```

In the following example, the `jbo.SQLBuilder` attribute is removed so that application default is used.
```
wls:/offline> archive = ADFMAdmin.getADFMArchiveConfig(fromLocation='/tmp/testArchive.ear')
wls:/offline> archive.setDatabaseJboSQLBuilder()
wls:/offline> archive.save(toLocation='/tmp/targetArchive.ear')
```

In the following example, the `jbo.SQLBuilder` attribute is set to 'Custom', and the `jbo.SQLBuilderClass` attribute is set to the class 'com.example.CustomBuilder'.
```
wls:/offline> archive = ADFMAdmin.getADFMArchiveConfig(fromLocation='/tmp/testArchive.ear')
wls:/offline> archive.setDatabaseJboSQLBuilderClass('com.example.CustomBuilder')
wls:/offline> archive.save(toLocation='/tmp/targetArchive.ear')
```

In the following example, the `rowLimit` attribute is set to 100.
```
wls:/offline> archive = getADFMArchiveConfig(fromLocation='/tmp/testArchive.ear')
wls:/offline> archive.setDefaultRowLimit(100)
wls:/offline> archive.save(toLocation='/tmp/targetArchive.ear')
```
Portal custom WLST commands are extensions to the WLST commands and are specific to Oracle Portal. Table 12–1 lists the Portal custom WLST command categories.

For additional information about administration and configuration of Portal, see the Oracle Portal Configuration Guide.

<table>
<thead>
<tr>
<th>Command category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Database Access Descriptor Commands</td>
<td>Create, edit, or delete a general DAD or Portal DAD.</td>
</tr>
</tbody>
</table>

### 12.1 Database Access Descriptor Commands

A Database Access Descriptor (DAD) is a set of values that specify how an application connects to an Oracle database to fulfill an HTTP request. The information in the DAD includes the user name (which also specifies the schema and the privileges), password, connect string, and globalization support language of the database.

There are two types of DADs: general DAD and portal DAD. An Oracle Portal middle tier uses a Portal DAD to access the Oracle Metadata Repository. For information about general DADs, refer to the Oracle Fusion Middleware Administrator’s Guide for Oracle HTTP Server.

Use the Database Access Descriptor commands listed in Table 12–2 to create, edit, or delete a Portal DAD from the WLST command-line scripting interface. Based on your actions, the portal_dads.conf file is updated.
### 12.1.1 listDads

Command Category: Database Access Descriptor Commands

Use with WLST: Online

#### 12.1.1.1 Description

Lists the parameters specified in all the Database Access Descriptors (both general DADs and Portal DADs).

#### 12.1.1.2 Syntax

```plaintext
listDads()
```

#### 12.1.1.3 Example

The following example lists the various DADs in the domain.

```plaintext
listDads()
------------
/pls/portal1
Schema: h1user
Connect String: foo.oracle.com:1521:orcl
NLS Language: "AMERICAN_AMERICA.AL32UTF8"
```

### 12.1.2 createPortalDad

Command Category: Database Access Descriptor Commands

Use with WLST: Online

#### 12.1.2.1 Description

Creates a Portal Database Access Descriptor.

#### 12.1.2.2 Syntax

```plaintext
createPortalDad (name, schema, password, [connect_string], nls_language)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the Database Access Descriptor.</td>
</tr>
<tr>
<td>schema</td>
<td>The Portal database account user name.</td>
</tr>
<tr>
<td>password</td>
<td>The Portal database account password.</td>
</tr>
</tbody>
</table>

---

**Table 12–2 Database Access Descriptor Commands for Portal WLST Configuration**

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>listDads</td>
<td>List the parameters used by the Database Access Descriptors for configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>createPortalDad</td>
<td>Create a Portal Database Access Descriptor.</td>
<td>Online</td>
</tr>
<tr>
<td>updatePortalDad</td>
<td>Update the attributes of a Portal Database Access Descriptor.</td>
<td>Online</td>
</tr>
<tr>
<td>deletePortalDad</td>
<td>Delete a Portal Database Access Descriptor.</td>
<td>Online</td>
</tr>
</tbody>
</table>
12.1.2.3 Example

The following example creates the portal1 Portal DAD based on the specified arguments.

```java
createPortalDad(name='portal1', schema='schema', password='welcome1', connect_string='foo.oracle.com:1521:orcl', nls_language='AMERICAN_AMERICA.AL32UTF8')
```

12.1.3 updatePortalDad

Command Category: Database Access Descriptor Commands

Use with WLST: Online

12.1.3.1 Description

Updates the attributes of the Portal Database Access Descriptor.

12.1.3.2 Syntax

```
updatePortalDad (name, [schema], [password], [connect_string], [nls_language])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the Database Access Descriptor. This name cannot be changed during update.</td>
</tr>
<tr>
<td>schema</td>
<td>Optional. The Portal database account user name.</td>
</tr>
<tr>
<td>password</td>
<td>Optional. The Portal database account password.</td>
</tr>
<tr>
<td>connect_string</td>
<td>Optional. The connection string used to connect to a remote database.</td>
</tr>
<tr>
<td>nls_language</td>
<td>Optional. The globalization support language of the Portal database that is represented by this DAD. This setting overrides the NLS_LANG environment variable for a database session and defines some important globalization support properties of the response, including the response character set. Make sure that this language setting matches the NLS_LANG of the back-end database.</td>
</tr>
</tbody>
</table>
### 12.1.3.3 Example

The following example updates the portal1 Portal DAD based on the specified arguments.

```
updatePortalDad(name='portal1', schema='user1', password='welcome2', connect_string='foo.oracle.com:1521:orcl', nls_language='AMERICAN_AMERICA.AL32UTF8')
```

### 12.1.4 deletePortalDad

**Command Category:** Database Access Descriptor Commands  
**Use with WLST:** Online

#### 12.1.4.1 Description

Deletes a Portal Database Access Descriptor.

#### 12.1.4.2 Syntax

```
deletePortalDad(name)
```

#### 12.1.4.3 Example

The following example deletes the portal1 Portal DAD entry from the portal_dads.conf file.

```
deletePortalDad(name='portal1')
```

### 12.2 Configuration Commands

Use the Configuration commands in Table 12–3 to view and configure Portal cache, WebCache, Oracle Internet Directory data and so on.

#### Table 12–3 Configuration Commands for the Portal WLST Configuration

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>configurePortalCache</td>
<td>Update the attributes of the Portal cache.</td>
<td>Online</td>
</tr>
<tr>
<td>configurePortalPageEngine</td>
<td>Update the attributes of the Portal mid-tier.</td>
<td>Online</td>
</tr>
<tr>
<td>listPortalWebcacheConfigAttributes</td>
<td>List the attributes of WebCache configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>listPortalSiteConfigAttributes</td>
<td>List the attributes of Portal site configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>listPortalOIDConfigAttributes</td>
<td>List the attributes of Oracle Internet Directory configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>setPortalWebcacheConfig</td>
<td>Update the attributes of the WebCache configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>setPortalOIDConfig</td>
<td>Update the attributes of the Oracle Internet Directory configuration.</td>
<td>Online</td>
</tr>
<tr>
<td>setPortalMidtierConfig</td>
<td>Update the attributes of the Portal mid-tier configuration.</td>
<td>Online</td>
</tr>
</tbody>
</table>
12.2.1 configurePortalCache

Command Category: Configuration Commands
Use with WLST: Online

12.2.1.1 Description
Portal cache is a file system-based cache for Oracle Portal pages and portlets. Portal cache supports validation-based caching and expiry-based caching. Portal cache consists of both Portal content cache and session cache.

This command updates the attributes of the Portal cache. These configuration details are maintained in the `<Middleware Home>/user_projects/domains/<DOMAIN_HOME>/servers/WLS_PORTAL/stage/portal/portal/configuration/portal_cache.conf` file.

12.2.1.2 Syntax
configurePortalCache(enable=[true|false], directory, total_size, max_size, cleanup_time, max_age)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable</td>
<td>Optional. Enables (On) or disables (Off) portal content and session caching.</td>
</tr>
<tr>
<td>directory</td>
<td>Optional. The directory where cached content is stored.</td>
</tr>
<tr>
<td></td>
<td>Make sure that this directory exists and has read-write access.</td>
</tr>
<tr>
<td>total_size</td>
<td>Optional. The total amount of disk space (in megabytes) that the Portal cache may use. The maximum value allowed is 4 GB.</td>
</tr>
<tr>
<td>max_size</td>
<td>Optional. The maximum size (in bytes) for all cached files. The maximum value allowed is 4 GB. Any dynamically generated content that exceeds this limit is not cached.</td>
</tr>
<tr>
<td>cleanup_time</td>
<td>Optional. The time at which to start the cleanup of the cache storage. Use the [Sunday-Saturday, Everyday, Everymonth][hh:mm] format to define the exact day and time in which cleanup should occur.</td>
</tr>
<tr>
<td>max_age</td>
<td>Optional. Maximum age of a single cached document. This setting ensures the cache system does not contain any old content. Old cache files are removed to make space for new cache files. The default is 30 days.</td>
</tr>
</tbody>
</table>

12.2.1.3 Example
The following example configures the Portal cache.

```
configurePortalCache(enable=true,directory='/scratch/user/installs/Inst_1/cache/PortalComponent/portal',total_size=10101010,max_size=12300033,cleanup_time='Everyday 11:00',max_age=20)
```

12.2.2 configurePortalPageEngine

Command Category: Configuration Commands
Use with WLST: Online
12.2.2.1 Description
The Oracle Fusion Middleware Portal architecture is designed around a three-tier architecture that allows any browser to connect to it. This flexible architecture allows each component (browser, Oracle HTTP Server listener, Oracle Database 11g, and Oracle Portal) to be upgraded individually as required.

A part of the Oracle Portal middle tier, the Parallel Page Engine (PPE) is a servlet that runs under Oracle Containers for J2EE and services page requests. The PPE reads page metadata, calls providers for portlet content, accepts provider responses, and assembles the requested page in the specified page layout.

This command updates the properties in the `appConfig.xml` file, the configuration file that is used by the Portal mid-tier repository servlet. This configuration file is located in the `$MWHOME/user_projects/domains/AllClassicDomain/servers/WLS_PORTALstage/portal/portal/configuration/` directory.

12.2.2.2 Syntax
```
configurePortalPageEngine([encrypt_key], [resource_url_key], [use_port], [use_scheme], [x509certfile])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>encrypt_key</td>
<td>Optional. Specifies the HMCA key to obscure the headers used for caching using WebCache. This allows for a more secure cache key, and makes retrieving a cached object by unwanted requests more difficult.</td>
</tr>
<tr>
<td>resource_url_key</td>
<td>Optional. This key, used by the PPE servlet, calculates checksums for URLs that are requested by WSRP and JPDK resource proxying. For WSRP resource proxying to work, the key must be set to an alpha-numeric value of 10 characters or more. In addition, for JPDK proxying, a JNDI environment variable, also called resourceUrlKey, must be set for the provider.</td>
</tr>
<tr>
<td>use_port</td>
<td>Optional. Overrides the port used when the PPE makes requests to the portal. The default, if not specified, is to always use the page request port. Note that if you set useScheme, you must also set the usePort argument. This may be used for other reasons, but mostly it is used when SSL is running between the browser and the PPE but not between the PPE and Portal. In this case, the non-SSL port for loop back requests will be different from the SSL port used by the browser.</td>
</tr>
<tr>
<td>use_scheme</td>
<td>Optional. Overrides the scheme (HTTP or HTTPS) used when the PPE makes requests to the Portal. The default, if not specified, is to always use the page request scheme. Note that if you set useScheme, you must also set the usePort argument.</td>
</tr>
<tr>
<td>x509certfile</td>
<td>Optional. Specifies a file containing a list of certificates to be implicitly trusted by HTTPClient. These certificates are added as trust points to all connections made by HTTPClient using SSL.</td>
</tr>
</tbody>
</table>

12.2.2.3 Example
The following example updates the Portal page engine based on the specified arguments.
```
configurePortalPageEngine(encrypt_key='encryption key',resource_url_key='foo.oracle.com',use_port=9999,use_scheme='page_engine_1', x509certfile='file')
```
12.2.3 listPortalWebcacheConfigAttributes

Command Category: Configuration Commands
Use with WLST: Online

12.2.3.1 Description
Lists the attributes of WebCache configuration used by the Portal repository.

12.2.3.2 Syntax
listPortalWebcacheConfigAttributes ([dad_name])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>dad_name</td>
<td>Optional. Name of the Database Access Descriptor. Default DAD name is 'portal'.</td>
</tr>
</tbody>
</table>

12.2.3.3 Example
The following example lists the WebCache configuration used by the Portal repository. The WebCache host name to which the invalidation messages are sent, the invalidation user name, password and the invalidation port to which the invalidation messages are sent are listed.

listPortalWebcacheConfigAttributes(dad_name='portal1')
listPortalWebcacheConfigAttributes('portal1')
---------------
WebCacheConfig
---------------
WebCache Host: foo.oracle.com
WebCache Invalidation Password: invalidator
WebCache Invalidation Port: 6523
WebCache Invalidation User: invalidator

12.2.4 listPortalSiteConfigAttributes

Command Category: Configuration Commands
Use with WLST: Online

12.2.4.1 Description
Lists the attributes of the Portal site configuration.

12.2.4.2 Syntax
listPortalSiteConfigAttributes ([dad_name])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>dad_name</td>
<td>Optional. Name of the Database Access Descriptor. Default DAD name is 'portal'.</td>
</tr>
</tbody>
</table>

12.2.4.3 Example
The following example lists the Portal site configuration. Site protocol can be true or false. HTTP is the protocol when site protocol is false and HTTPS is the protocol when the site protocol is true. The site host name and port number are also listed.

listPortalSiteConfigAttributes(dad_name='portal1')
```
listPortalSiteConfigAttributes('portal1')
```

-------------
SiteConfig
-------------
Site Protocol: false
Site Host: foo.oracle.com
Site Port: 8090

### 12.2.5 listPortalOIDConfigAttributes

Command Category: Configuration Commands

Use with WLST: Online

**12.2.5.1 Description**

Lists the attributes of the Oracle Internet Directory configuration.

**12.2.5.2 Syntax**

```
listPortalOIDConfigAttributes ([dad_name])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>dad_name</td>
<td>Optional. Name of the Database Access Descriptor. Default DAD name is 'portal'.</td>
</tr>
</tbody>
</table>

**12.2.5.3 Example**

The following example lists the Oracle Internet Directory data, which includes the Oracle Internet Directory host name and port number.

```
listPortalOIDConfigAttributes(dad_name='portal1')
listPortalOIDConfigAttributes('portal1')
```

-------------
OidConfig
-------------
OID Port: 13060
OID Host: foo.oracle.com

### 12.2.6 setPortalWebcacheConfig

Command Category: Configuration Commands

Use with WLST: Online

**12.2.6.1 Description**

WebCache offers caching, page assembly, and compression features. Oracle WebCache accelerates the delivery of both static and dynamic Web content, and provides load balancing and failover features for Oracle Fusion Middleware.

This command updates the WebCache configuration.

**12.2.6.2 Syntax**

```
setPortalWebcacheConfig([dad_name], [host], [inv_port], [inv_user], [inv_passwd])
```
12.2.6.3 Example
The following example updates the WebCache configuration based on the specified values.

```bash
setPortalWebcacheConfig(dad_name='portal1',host='foo.oracle.com',
inv_port='6523',inv_user='invalidator',inv_passwd='invalidator')
```

12.2.7 setPortalOIDConfig

Command Category: Configuration Commands
Use with WLST: Online

12.2.7.1 Description
Updates the attributes of the Oracle Internet Directory configuration.

12.2.7.2 Syntax

```bash
setPortalOIDConfig ([dad_name], [host], [port], [protocol], [admin_user],
[admin_passwd])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>dad_name</td>
<td>Optional. Name of the Database Access Descriptor. Default DAD name is 'portal'.</td>
</tr>
<tr>
<td>host</td>
<td>Optional. Oracle Internet Directory host name.</td>
</tr>
<tr>
<td>port</td>
<td>Optional. Oracle Internet Directory port number.</td>
</tr>
<tr>
<td>protocol</td>
<td>Optional. Oracle Internet Directory protocol.</td>
</tr>
<tr>
<td>admin_user</td>
<td>Optional. Oracle Internet Directory administrator's name.</td>
</tr>
<tr>
<td>admin_passwd</td>
<td>Optional. Oracle Internet Directory administrator's password.</td>
</tr>
</tbody>
</table>

12.2.7.3 Example
The following example updates the OID configuration based on the specified values.

```bash
setPortalOIDConfig(dad_name='portal1',
host='foo.oracle.com',port='13060',protocol=false,
admin_user='cn=orcladmin',admin_passwd='oracle1')
```

12.2.8 setPortalMidtierConfig

Command Category: Configuration Commands
Use with WLST: Online

12.2.8.1 Description
Updates the Portal repository with the latest Portal mid-tier configuration.

12.2.8.2 Syntax

```
setPortalMidtierConfig([dad_name], [ohs_host], [ohs_port], [ohs_protocol],
[webcache_host], [webcache_inv_user], [webcache_inv_port],
[webcache_inv_passwd])
```

12.2.8.3 Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>dad_name</td>
<td>Optional. Name of the Database Access Descriptor. Default DAD name is 'portal'.</td>
</tr>
<tr>
<td>ohs_host</td>
<td>Optional. Oracle HTTP Server host name.</td>
</tr>
<tr>
<td>ohs_port</td>
<td>Optional. Oracle HTTP Server port number.</td>
</tr>
<tr>
<td>ohs_protocol</td>
<td>Optional. Oracle HTTP Server protocol.</td>
</tr>
<tr>
<td>webcache_host</td>
<td>Optional. The name of the WebCache host to which invalidation messages are sent.</td>
</tr>
<tr>
<td>webcache_inv_user</td>
<td>Optional. The WebCache user name used for sending the invalidation messages.</td>
</tr>
<tr>
<td>webcache_inv_port</td>
<td>Optional. The WebCache port number to which invalidation messages are sent.</td>
</tr>
<tr>
<td>webcache_inv_passwd</td>
<td>Optional. WebCache invalidation password.</td>
</tr>
</tbody>
</table>

12.2.8.3 Example

The following example updates the Portal mid-tier configuration based on the specified values.

```
setPortalMidtierConfig(dad_name='portal1', ohs_host='foo.oracle.com',
ohs_port='8090', ohs_protocol=false, webcache_host='foo.oracle.com',
webcache_inv_user= 'invalidator', webcache_inv_port='6523',
webcache_inv_passwd='invalidator')
```
Java Required Files (JRF) consists of those components not included in the WebLogic Server installation that provide common functionality for Oracle business applications and application frameworks.

It consists of a number of independently developed libraries and applications that are deployed into a common location. The following components are considered part of Java Required Files: Oracle Application Development Framework, Oracle Fusion Middleware Audit Framework, Dynamic Monitoring Service, Fabric Common, HTTP Client, Infrastructure Security, Java Object Cache, JMX Framework, JPS, logging, MDS, OJSP, Next, Oracle Web Services, Oracle Web Services Manager, Oracle TopLink, UCP, XDK.

13.1 Java Required Files Commands

Use the commands in Table 13–1 to configure a Managed Server or cluster with Java Required Files (JRF) applications and services or to copy the applications and services from one Managed Server or cluster and apply them to another Managed Server or cluster.

In the Use with WLST column, online means the command can only be used when connected to a running server. Offline means the command can only be used when not connected to a running server. Online or offline means the command can be used in both situations.

---

**Note:** To use these JRF custom WLST commands, you must invoke the WLST script from the Oracle Common home. See "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator’s Guide.

---

**Table 13–1 JRF Commands**

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>applyJRF</td>
<td>Configures a Managed Server or cluster with Java Required Files applications and services.</td>
<td>Online or Offline</td>
</tr>
<tr>
<td>cloneDeployments</td>
<td>Copies the applications and services from Managed Server or cluster and applies them to another Managed Server or cluster.</td>
<td>Online or Offline</td>
</tr>
</tbody>
</table>
13.1.1 applyJRF

Use with WLST: Online or Offline

13.1.1.1 Description
Configures a Managed Server or cluster with Java Required Files (JRF). Managed Servers that are added by product templates during the template extension process do not need to be explicitly configured with JRF using this command.

Use the applyJRF command when additional Managed Servers or clusters are added to a domain after it is initially extended with a product template. The applyJRF command is required any time you add a Managed Server to a JRF-only domain, or if you add a Managed Server that has been configured for JRF to a domain that contains other Oracle products.

13.1.1.2 Syntax
applyJRF(target, [domainDir], [shouldUpdateDomain])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>target</td>
<td>The name of the Managed Server or cluster to be configured with JRF applications and services. A value of an asterisk (*) for the target indicates that all clusters and standalone Managed Servers should be configured with JRF.</td>
</tr>
<tr>
<td>domainDir</td>
<td>The absolute path of the WebLogic Server domain.</td>
</tr>
<tr>
<td>shouldUpdateDomain</td>
<td>An optional boolean flag that controls how domain updates are carried out. When you set it to true (the default), the function implicitly invokes the following offline commands: readDomain() and updateDomain(), or the online commands: edit(), startEdit(), save(), and activate(). When you set it to false, you must call WLST commands to update the domain.</td>
</tr>
</tbody>
</table>

13.1.1.3 Example
The following example configures the Managed Server server1 with JRF:

wls:/offline> applyJRF('server1', '/my_path/user_templates/domains/my_domain')

13.1.2 cloneDeployments

Use with WLST: Online or Offline

13.1.2.1 Description
Replicates all deployments targeted to a particular Managed Server or cluster on a second Managed Server or cluster. This command is provided as a convenience to configure a new Managed Server or cluster so that it has the same deployments as a pre-existing Managed Server or cluster.

The cloneDeployments command does not create new Managed Servers, and it does not copy properties other than deployment information to the target Managed Server.

13.1.2.2 Syntax
cloneDeployments(domain, source, target, [shouldUpdateDomain])
13.1.2.3 Example

The following example replicates the deployments from sourceServer to destinationServer:

```java
wls:/offline> cloneDeployments( '/my_path/user_templates/domains/my_domain',
    'sourceServer','destinationServer', 'false')
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>domain</td>
<td>The absolute path of the WebLogic Server domain. Ignored if the domain has been read, or if connected in online mode.</td>
</tr>
<tr>
<td>source</td>
<td>The name of the Managed Server or cluster from which you want to clone deployments. This must be the name of a valid Managed Server or cluster.</td>
</tr>
<tr>
<td>target</td>
<td>The target Managed Server or cluster that will receive the source server’s applications and services. The target Managed Server must already exist.</td>
</tr>
<tr>
<td>shouldUpdateDomain</td>
<td>An optional boolean flag that controls how domain updates are carried out. When you set it to true (the default), the function implicitly invokes the following offline commands: readDomain() and updateDomain(), or online commands: edit(), startEdit(), save(), and activate(). When you set it to false, you must call WLST commands to update the domain.</td>
</tr>
</tbody>
</table>
14

Web Services Custom WLST Commands

The following sections describe the WebLogic Scripting Tool (WLST) commands for Oracle Fusion Middleware Infrastructure Web services, which includes SOA composites, ADF Business Components, and WebCenter services. You can use these commands to manage Web services from the command line.

Topics in this chapter include:

- Section 14.1, "Overview of Web Services WLST Commands"
- Section 14.2, "Web Service and Client Management Commands"
- Section 14.3, "Policy Management Commands"
- Section 14.4, "Policy Set Management Commands"
- Section 14.5, "Oracle WSM Repository Management Commands"
- Section 14.6, "Deployment Descriptor Migration Commands"

For additional details about using these WLST commands for Web services, see the Security and Administrator’s Guide for Web Services.

---

Note: To use the Web Services custom WLST commands, you must invoke WLST from the Oracle Common home directory. See "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator’s Guide.

---

14.1 Overview of Web Services WLST Commands

You can use the Web services WLST commands, in online mode, to:

- Perform Web service configuration and Oracle WSM policy management tasks
- Upgrade the Oracle WSM Repository with new predefined policies with each release
- Migrate post-deployment policy changes persisted in proprietary deployment descriptor (PDD) files for ADF Business Components and WebCenter services and propagate policy changes to all server instances in a domain.

The Web services WLST commands manage deployed, active, and running Web services applications. They can be executed everywhere in WLST online mode, for example:

```plaintext
wls:/domain/serverConfig
wls:/domain/domainRuntime
```
The Web services WLST configuration and policy management commands perform many of the same management functions that you can complete using Fusion Middleware Control. When using the WLST commands to manage a Web service of an ADF or WebCenter application, you can apply the change only to a Web service deployed in an application on a specific server. If the application is deployed in a cluster or multi-server environment, you need to make the same change to each of the servers to which the application is deployed. Additionally, when you set or change an attached policy in ADF and WebCenter Web service and client applications, you must restart the application for the changes to take effect.

In contrast, if you are using the WLST commands to manage a SOA composite, you only need to issue the command once, and the change is propagated to all the server instances in the composite. When you set or change an attached policy in a SOA composite, you do not need to restart it. The SOA fabric runtime engine internally implements all of the policy management changes.

### 14.1.1 Specifying Application and Composite Names

The Web service WLST commands configure a Web service for a specific application. Therefore, the application path name has to uniquely identify the application and the server instance to which it is deployed.

**Specifying a Web Service Application Name**

To specify a Web service application in a WLST command, use the following format:

```
[/domain/server/]application[#version_number]
```

Parameters shown in brackets [ ] are optional. The following examples show the sample format for a Web service application name:

```
/soainfra/AdminServer/HelloWorld#1_0
/soainfra/server1/HelloWorld#1_0
```

If there is only one deployed instance of an application in a domain, you may omit the domain/server parameter, as shown in the following example:

```
HelloWorld#1_0
```

In all other instances, the domain/server parameter is required. If it is not specified and WLST finds more than one deployment of the same application on different servers in the domain, you are prompted to specify the domain and the server names.

Oracle Infrastructure Web Services client applications are deployed directly to WebLogic Server server instances. Each client application is managed separately. For example, if the application `myapp` is deployed to both the AdminServer and server1 instances in the domain `mydomain`, then you need to issue configuration commands to each of the servers using the appropriate application path name:

```
/mydomain/AdminServer/myapp#1_0
/mydomain/server1/myapp#1_0
```

**Specifying a SOA Composite Name**

When there are multiple SOA partition folders in a domain, you must specify the partition name and the composite name using the following format:

```
partition/composite[version]
```
The following example shows the sample format for a SOA composite application name:

default/myComposite[1.0]

If there is a single SOA server (non-clustered) and only one SOA partition folder in a domain, you may omit the `partition` parameter, as shown in the following example:

myComposite[1.0]

### 14.1.2 Web Services WLST Command Categories

Web services WLST commands are divided into the categories described in Table 14–1.

<table>
<thead>
<tr>
<th>Command Category</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Section 14.2, &quot;Web Service and Client Management Commands&quot;</td>
<td>View and manage Web services for the service and client.</td>
</tr>
<tr>
<td>Section 14.3, &quot;Policy Management Commands&quot;</td>
<td>View and manage directly-attached policies for the service and client.</td>
</tr>
<tr>
<td>Section 14.4, &quot;Policy Set Management Commands&quot;</td>
<td>View and manage globally-available policy sets within repository sessions.</td>
</tr>
<tr>
<td>Section 14.5, &quot;Oracle WSM Repository Management Commands&quot;</td>
<td>Manage the Oracle WSM repository with new predefined policies provided in the latest installation of the software, as well as import and export documents into and from the repository.</td>
</tr>
<tr>
<td>Section 14.6, &quot;Deployment Descriptor Migration Commands&quot;</td>
<td>Migrate proprietary deployment descriptors for scaling post-deployment policy configuration changes in a cluster or propagating the changes to all server instances of the application in the domain.</td>
</tr>
</tbody>
</table>

### 14.2 Web Service and Client Management Commands

Use the WLST commands listed in Table 14–2 to view and manage Web services for deployed, active, and running Web service applications.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>listWebServices</td>
<td>List the Web service information for an application, composite, or domain.</td>
<td>Online</td>
</tr>
<tr>
<td>listWebServicePorts</td>
<td>List the Web service ports for a Web service application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>listWebServiceConfiguration</td>
<td>List Web services and port configuration for an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>setWebServiceConfiguration</td>
<td>Set or change the Web service port configuration for a Web service application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>listWebServiceClients</td>
<td>List Web service client information for an application, SOA composite, or domain.</td>
<td>Online</td>
</tr>
</tbody>
</table>
14.2.1 listWebServices

Command Category: Web Service and Client Management

Use with WLST: Online

14.2.1.1 Description

Lists the Web service information for an application, SOA composite, or domain. If you don't specify a Web service application or a SOA composite, the command lists all services in all applications and composites for every server instance in the domain. You can specify the amount of information to be displayed using the `detail` argument.

The output is listed by each application deployed as shown in the following example:

```
/domin/server/application#version_number:
    serviceName=service, moduleType=web, moduleName=helloModule
/soainfra/AdminServer/soa-infra:
    serviceName=service, moduleType=soa, compositeName=default/HelloWorld[1.0]
```

Note: The `listWebServices` command output does not include details on SOA components, including policy attachments.

14.2.1.2 Syntax

```
listWebServices {application, composite, [detail]}
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>application</code></td>
<td>Name and path of the application for which you want to list the Web services. For example, <code>/domain/server/application#version_number</code></td>
</tr>
<tr>
<td></td>
<td>If specified, all Web services in the application are listed.</td>
</tr>
<tr>
<td><code>composite</code></td>
<td>Name of the SOA composite for which you want to list the Web services. For example, <code>default/HelloWorld[1.0]</code></td>
</tr>
<tr>
<td></td>
<td>If specified, all Web services in the composite are listed.</td>
</tr>
</tbody>
</table>
14.2.1.3 Examples

The following example lists all the Web services in all applications and composites in the domain. Sample output is also shown in this example.

```
wls:/soainfra/serverConfig> listWebServices()

/soainfra/AdminServer/soa-infra :
  serviceName=service, moduleType=soa, compositeName=default/HelloWorld[1.0]
  serviceName=bpelprocess1_client_ep, moduleType=soa, compositeName=default/Project1[1.0]

/soainfra/AdminServer/HelloWorld#1_0 :
  serviceName=WssUsernameService, moduleType=web, moduleName=j2wbasicPolicy
```

The following example sets the `detail` argument to `true`. The output from this command provides endpoint (port) and policy details for all applications and composites in the domain, and indicates if the endpoints are secure. Sample output is also shown in this example.

```
wls:/jrfServer_domain/serverConfig> listWebServices(detail='true')

/jrfServer_domain/jrfServer/jaxws-sut-no-policy :
  moduleName=jaxws-service, moduleType=web, serviceName=TestService
  enableTestPage: true
  enableWSDL: true
  TestPort
  http://host.us.oracle.com:7010/jaxws-service/TestService
  enable: true
  enableREST: false
  enableSOAP: true
  maxRequestSize: -1
  loggingLevel: NULL
  No policies attached; endpoint is not secure.

/jrfServer_domain/jrfServer/jaxws-sut :
  moduleName=jaxws-sut-service, moduleType=web, serviceName=TestService
  enableTestPage: true
  enableWSDL: true
  TestPort
  http://host.us.oracle.com:7010/jaxws-sut-service/TestService
  enable: true
  enableREST: false
  enableSOAP: true
  maxRequestSize: -1
  loggingLevel: NULL
  management : oracle/log_policy, enabled=true
  security: oracle/wss_username_token_service_policy, enabled=true
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| `detail` | Optional. Specifies whether to list port and policy details for the Web service. Valid values are:  
  - true—Output includes details about the service, the port, and the policies.  
  - false—Output lists only the services. The default is false. |
security: oracle/binding_authorization_denyall_policy,
enabled=true
(global) security: oracle/wss10_message_protection_service_policy,
enabled=true
/policysets/global/global_app_mess_prot:
Application("jaxws-sut")
Attached policy or policies are valid; endpoint is secure.

14.2.2 listWebServicePorts
Command Category: Web Service and Client Management
Use with WLST: Online

14.2.2.1 Description
List the Web service port names and the endpoint URLs for a Web service application or SOA composite.
The output will display the port name and endpoint URL of the Web service port. For example:
JRFWssUsernamePort http://localhost:7001/j2wbasicPolicy/WssUsername

14.2.2.2 Syntax
listWebServicePorts(application,moduleOrCompName,moduleType,serviceName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application for which you want to list the Web services port information. For example, /domain/server/application#version_number To list the port information for an application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to list the Web services port information. To list the port information for a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
<tr>
<td>moduleType</td>
<td>Module type. Valid options are: web—Use with Web modules (including EJB Web services.) soa—Required for a SOA composite.</td>
</tr>
<tr>
<td>serviceName</td>
<td>Name of the Web service in the application or SOA composite for which you want to list the port information.</td>
</tr>
</tbody>
</table>

14.2.2.3 Example
The following example lists the Web service ports and endpoint URLs for the j2wbasicPolicy service in the soainfra/AdminServer/HelloWorld#1_0 application. Note that the WssUsernameService module name is specified, and the moduleType is set to web.

wls:/soainfra/serverConfig> listWebServicePorts
( '/soainfra/AdminServer/HelloWorld#1_0',
'WssUsernameService','web','j2wbasicPolicy')
14.2.3 listWebServiceConfiguration

Command Category: Web Service and Client Management
Use with WLST: Online

14.2.3.1 Description
List the Web service port configuration for a Web service application or SOA composite.

The output will display the configuration information for the Web service port. For example:

```
enableREST: false
maxRequestSize: -1
```

14.2.3.2 Syntax

```
listWebServiceConfiguration(application,moduleOrCompName,moduleType,serviceName,[subjectName])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application for which you want to list the Web services port configuration. For example, /domain/server/application/version_number To list the port configuration for a Web service application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to list the Web services port configuration. To list the port configuration for a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
<tr>
<td>moduleType</td>
<td>Module type. Valid options are: web—Use with Web modules (including EJB Web services.). soa—Required for a SOA composite.</td>
</tr>
<tr>
<td>serviceName</td>
<td>Name of the Web service in the application or SOA composite for which you want to list the port configuration.</td>
</tr>
<tr>
<td>subjectName</td>
<td>Optional. Policy subject, port, or operation for which you want to list configuration information.</td>
</tr>
</tbody>
</table>

14.2.3.3 Example

The following example lists the Web service and port configuration information for the application HelloWorld#1_0 for the server soa1 in the domain soainfra. In this example, the Web module name is j2wbasicPolicy, the service name is WssUsernameService, and the subject is a port named JRFWssUsernamePort.

```
wls:/wls-domain/serverConfig>listWebServiceConfiguration('/soainfra/soa1/HelloWorld#1_0','j2wbasicPolicy','web','WssUsernameService','JRFWssUsernamePort')
```
14.2.4 **setWebServiceConfiguration**

Command Category: Web Service and Client Management

Use with WLST: Online

14.2.4.1 **Description**
Set or change the Web service port configuration for a Web service application or SOA composite.

Additional information about using this command is provided in "Configuring the Web Service Endpoint" in *Security and Administrator’s Guide for Web Services.*

14.2.4.2 **Syntax**

```plaintext
setWebServiceConfiguration(application, moduleOrCompName, moduleType, serviceName, subjectName, itemProperties)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| application       | Name and path of the application for which you want to set or change the Web services port configuration. For example, /domain/server/application#version_number.  
                        To set or change the port configuration for a Web service application, this argument is required. |
| moduleOrCompName  | Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to set or change the Web services port configuration.  
                        To set or change the port configuration for a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa. |
| moduleType        | Module type. Valid options are:  
                        ■ **web**—Use with Web modules (including EJB Web services.).  
                        ■ **soa**—Required for a SOA composite. |
| serviceName       | Name of the Web service in the application or SOA composite for which you want to set or change the port configuration. |
| subjectName       | Policy subject, port or operation name for which you want to set or change the configuration information. |
14.2.4.3 Example

The following example enables the port JRFWssUsernamePort for the service WssUsernameService in the Web module j2wbasicPolicy. The service is in the application HelloWorld#1_0 for the server soa1 in the domain soainfra.

```
wlst:/wls-domain/serverConfig> setWebServiceConfiguration ('/soainfra/soa1/HelloWorld#1_0','j2wbasicPolicy','web','WssUsernameService','JRFWssUsernamePort',[['enable', 'true']])
```

14.2.5 listWebServiceClients

Command Category: Web Service and Client Management

Use with WLST: Online

14.2.5.1 Description

List Web service clients information for an application, SOA composite, or domain. If neither an application nor a composite is specified, the command lists information about all Web service clients in all applications and composites for every server instance in the domain. You can specify the amount of information to be displayed using the optional detail argument.

The output is listed by each application deployed as shown in the following examples:

This example shows the output of an unsecured endpoint:
This example shows the output for secured endpoints:

```
/soa_domain/soa_server1/AsynchronizedBC_asyncbc :
    moduleName=Asynchronized-AsynchronizedBC-context-root, moduleType=web,
    serviceRefName=callback
    owsm.qa.server.serviceinterface.AppModule_asyncServiceImpl/_
    oracleAsyncResponseClient
      {global} security : oracle/wss_username_token_client_policy,
      enabled=true

/policysets/global/web_callback_add_1 : Module("**")
Attached policy or policies are valid; endpoint is secure.
```

```
/soa_domain/soa_server1/ADF_DC_4 :
    moduleName=wsdl, moduleType=wsconn, serviceRefName=TestService
    TestPort
    serviceWSDLURI=http://host.us.oracle.com:12345/jaxws-sut-service/TestService?wsdl
    security : oracle/wss_username_token_client_policy, enabled=true
    Attached policy or policies are valid; endpoint is secure.
```

```
/soa_domain/AdminServer/adf_dc_to_bc :
    moduleName=ADF_BC, moduleType=wsconn, serviceRefName=AppModuleService
    AppModuleServiceSoapHttpPort
      {global} security : oracle/wss11_username_token_with_message_protection_client_policy, enabled=true

/policysets/global/web_reference_add_1 : Domain("soa_domain")
    Attached policy or policies are valid; endpoint is secure.
```

### 14.2.5.2 Syntax

```
listWebServiceClients(application,composite,[detail])
```
### 14.2.5.3 Examples

The following example lists information for all Web service clients in the domain.

```
wlst:/wls-domain/serverConfig> listWebServiceClients()
```

The following example lists the Web service clients for the application `jwsclient_1#1.10` for the server `soa1` in the domain `soainfra`.

```
wlst:/wls-domain/serverConfig> listWebServiceClients('soainfra/soa1/jwsclient_1#1.10')
```

The following example lists the Web service clients for the SOA composite `default/HelloWorld[1.0]`.

```
wlst:/wls-domain/serverConfig> listWebServiceClients(None,'default/HelloWorld[1.0]')
```

The following example lists details for all of the Web service clients in the domain.

```
wlst:/wls-domain/serverConfig> listWebServiceClients(None,None,true)
```

### 14.2.6 listWebServiceClientPorts

**Command Category:** Web Service and Client Management  
**Use with WLST:** Online

#### 14.2.6.1 Description

List the Web service port names and the endpoint URLs for Web service clients in an application or SOA composite.

The output will display the name of the Web service client/reference port. For example:

```
AppModuleServiceSoapHttpPort
```

#### 14.2.6.2 Syntax

```
listWebServiceClientPorts(application,moduleOrCompName,moduleType,serviceRefName)
```
### 14.2.6.3 Examples

The following example lists the client ports for the WssUsernameClient Web module in the /soainfra/soa1/jwsclient_1#1.1.0 application. Note that the moduleType is set to wsconn, and the serviceRefName is set to WssUsernameClient.

```bash
wls:/soainfra/serverConfig> listWebServiceClientPorts
('/soainfra/soa1/jwsclient_1#1.1.0','WssUsernameClient','wsconn','WssUsernameClient')
```

The following example lists the client ports in the default/HelloWorld[1.0] SOA composite. Note that the moduleType is set to soa, and the serviceRefName is set to client.

```bash
wls:/soainfra/serverConfig> listWebServiceClientPorts(None, 'default/HelloWorld[1.0]', 'soa', 'client')
```

### 14.2.7 listWebServiceClientStubProperties

**Command Category:** Web Service and Client Management

**Use with WLST:** Online

#### 14.2.7.1 Description

List Web service client port stub properties for an application or SOA composite.

#### 14.2.7.2 Syntax

```
lisitWebServiceClientStubProperties(application, moduleOrCompName, moduleType, serviceRefName, portInfoName)
```
14.2.7.3 Example

The following example lists the client port stub properties for the JRFWssUsernamePort port of the WssUsernameClient Web module in the /soainfra/soa1/jwsclient_1#1.1.0 application. Note that the moduleType is set to wsconn, and the serviceRefName is set to WssUsernameClient.

```bash
wls:/soainfra/serverConfig> listWebServiceClientStubProperties
('/soainfra/soa1/jwsclient_1#1.1.0','WssUsernameClient','wsconn','WssUsernameClient','JRFWssUsernamePort')
```

14.2.8 setWebServiceClientStubProperty

Command Category: Web Service and Client Management

Use with WLST: Online

14.2.8.1 Description

Set, change, or delete a single stub property of a Web service client port for an application or SOA composite.

14.2.8.2 Syntax

```java
setWebServiceClientStubProperty(application, moduleOrCompName, moduleType, serviceRefName, portInfoName, propName, [propValue])
```
14.2.8.3 Example

The following example sets the client port stub property `keystore.recipient.alias` to the value `oracle` for the client port `JRFWssUsernamePort`. The port is a client port of the `WssUsernameClient` Web module in the `/soainfra/soa1/jwsclient_1#1.1.0` application. Note that the `moduleType` argument is set to `wsconn`.

```
ws:/soainfra/serverConfig> setWebServiceClientStubProperty
('/soainfra/soa1/jwsclient_1#1.1.0', 'WssUsernameClient', 'wsconn', 'JRFWssUsernamePort', 'keystore.recipient.alias', 'oracle')
```

14.2.9 setWebServiceClientStubProperties

Command Category: Web Service and Client Management

Use with WLST: Online

14.2.9.1 Description

Configure the set of stub properties of a Web service client port for an application or SOA composite.

This command configures or resets all of the stub properties for the Oracle WSM client security policy attached to the client. Each property that you list in the command is set to the value you specify. If a property that was previously set is not explicitly specified
in this command, it is reset to the default for the property. If no default exists, the property is removed.

### 14.2.9.2 Syntax

```
setWebServiceClientStubProperties(application, moduleOrCompName, moduleType, serviceRefName, portInfoName, properties)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application for which you want to reset the Web services client port stub properties. For example, /domain/server/application#version_number. To configure or reset the client port stub properties for an application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to reset the Web services client port stub properties. To configure or reset client port stub properties for a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
</tbody>
</table>
| moduleType           | Module type. Valid options are:  
  - web—Use with asynchronous Web service callback client.  
  - soa—Required for a SOA composite.  
  - wsconn—Use with a connection-based Web service client such as an ADF DC Web service client, ADF JAX-WS Indirection Proxy, or WebCenter client. |
| serviceRefName       | Service reference name of the application or SOA composite for which you want to reset the Web service client port stub properties. |
| portInfoName         | The name of the client port for which you want to reset the stub properties. |
14.2.9.3 Example

The following example resets the client port stub properties `wsat.flowOption` and `wsat.Version` to SUPPORTS and DEFAULT, respectively. Any other properties that were previously set for this client port are either reset to the default or removed. The client port is `JRFWssUsernamePort` of the `WssUsernameClient` Web module in the `/soainfra/soa1/jwsclient_1#1.1.0` application. Note that the `moduleType` is set to `wsconn`, and the `serviceRefName` is set to `WssUsernameClient`.

```
wlst:/soainfra/serverConfig> setWebServiceClientStubProperties('/soainfra/soa1/jwsclient_1#1.1.0',
  'WssUsernameClient','wsconn','WssUsernameClient','JRFWssUsernamePort',
  ["wsat.flowOption","SUPPORTS"],
  ["wsat.Version","DEFAULT"])
```

14.3 Policy Management Commands

Use the WLST commands listed in Table 14–3 to manage directly-attached Oracle WSM Web service and client policies.

When you set or change an attached policy in ADF and WebCenter Web service and client applications, you must restart the application for the changes to take effect. After the policy change is completed, a reminder message is displayed prompting you to restart the application. You can stop and restart the application using the standard `stopApplication` and `startApplication` WLST commands. For more information about these commands, see "Deployment Commands" on page 3-19.
### Table 14–3  Web Services WLST Directly-attached Policy Management Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>listAvailableWebServicePolicies</td>
<td>Display a list of all the available Oracle Web Services Manager (WSM) policies by category or subject type.</td>
<td>Online</td>
</tr>
<tr>
<td>listWebServicePolicies</td>
<td>List Web service port policy information for a Web service in an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>attachWebServicePolicy</td>
<td>Attach a policy to a Web service port of an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>attachWebServicePolicies</td>
<td>Attach multiple policies to a Web service port of an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>enableWebServicePolicy</td>
<td>Enable or disable a policy attached to a port of a Web service application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>enableWebServicePolicies</td>
<td>Enable or disable multiple policies attached to a port of a Web service application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>detachWebServicePolicy</td>
<td>Detach an Oracle WSM policy from a Web service port of an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>detachWebServicePolicies</td>
<td>Detach multiple Oracle WSM policies from a Web service port of an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>listWebServiceClientPolicies</td>
<td>List Web service client port policies information for an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>attachWebServiceClientPolicy</td>
<td>Attach an Oracle WSM policy to a Web service client port of an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>attachWebServiceClientPolicies</td>
<td>Attach multiple policies to a Web service client port of an application or SOA composite.</td>
<td>Online</td>

<tr>
<td>enableWebServiceClientPolicies</td>
<td>Enable or disable multiple policies of a Web service client port of an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>detachWebServiceClientPolicy</td>
<td>Detach a policy from a Web service client port of an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>detachWebServiceClientPolicies</td>
<td>Detach multiple policies from a Web service client port of an application or SOA composite.</td>
<td>Online</td>
</tr>
<tr>
<td>setWebServicePolicyOverride</td>
<td>Configure the Web service port policy override properties of an application or SOA composite.</td>
<td>Online</td>
</tr>
</tbody>
</table>

### 14.3.1 listAvailableWebServicePolicies

Command Category: Policy Management
14.3.1.1 Description
Display a list of all the available Oracle Web Services Manager (WSM) policies by category or subject type.

14.3.1.2 Syntax
listAvailableWebServicePolicies([category],[subject])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>category</td>
<td>Optional. The policy category, for example: 'security', 'management'.</td>
</tr>
<tr>
<td>subject</td>
<td>Optional. The policy subject type, for example: 'server' or 'client'.</td>
</tr>
</tbody>
</table>

14.3.1.3 Example
The following example lists all the available Oracle WSM server security policies in the domain.

```
wlst:/wls-domain/serverConfig> listAvailableWebServicePolicies('security','server')
```

14.3.2 listWebServicePolicies
Command Category: Policy Management

Use with WLST: Online

14.3.2.1 Description
List Web service port policy information for a Web service in an application or SOA composite.

The output will display the Web service port name, the OWSM policies it has attached to it, and if applicable, any policy override properties. For example:

```
HelloWorldPort:
security : oracle/wss_username_token_service_policy , enabled=true
```

14.3.2.2 Syntax
listWebServicePolicies(application,moduleOrCompName,moduleType,serviceName,subjectName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application for which you want to list the Web services port policy information. For example, /domain/server/application#version_number</td>
</tr>
<tr>
<td></td>
<td>To list the port policy information for a Web service application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to list the Web services port policy information.</td>
</tr>
<tr>
<td></td>
<td>To list the port policy information for a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
</tbody>
</table>
14.3.2.3 Examples
The following example lists the Web service port policy information for the application HelloWorld#1_0 for the server soa1 in the domain soainfra. In this example, the Web module name is j2wbasicPolicy, the service name is WssUsernameService, and the subject is a port named JRFWssUsernamePort.

```bash
wls:/wls-domain/serverConfig> listWebServicePolicies
('soainfra/soa1/HelloWorld#1_0', 'j2wbasicPolicy', 'web', 'WssUsernameService', 'JRFWssUsernamePort')
```

The following example lists the port policy information for the SOA composite default/HelloWorld[1.0]. Note that the moduleType is set to SOA, the service name is HelloService, and the subject is a port named HelloWorld_pt.

```bash
wls:/wls-domain/serverConfig> listWebServicePolicies
(None, 'default/HelloWorld[1.0]', 'soa', 'HelloService', 'HelloWorld_pt')
```

14.3.3 attachWebServicePolicy
Command Category: Policy Management
Use with WLST: Online

14.3.3.1 Description
Attach a policy to a Web service port of an application or SOA composite.

The policyURI is validated through the Oracle WSM Policy Manager APIs if the wsm-pm application is installed on WebLogic Server and is available. If the PolicyURI that you specify in this command already is attached or exists, then this command enables the policy if it is disabled.

If the wsm-pm application is not installed or is not available, this command is not executed.

**Note:** Policy changes made using this WLST command are only effective after you restart your application. For ADF and WebCenter applications, a message is displayed to remind you to restart your application.

14.3.3.2 Syntax
```
attachWebServicePolicy(application, moduleOrCompName, moduleType, serviceName, subjectName, policyURI, [subjectType=None])
```
### 14.3.3.3 Examples

The following example attaches the policy oracle/wss_username_token_service_policy to the port JRFWssUsernamePort of the Web module WssUsernameService. The Web service is part of the application HelloWorld#1_0 for the server soainfra.

```
wls:/wls-domain/serverConfig>attachWebServicePolicy
('/soainfra/soa1/HelloWorld#1_0','j2wbasicPolicy','web',
'WssUsernameService','JRFWssUsernamePort','oracle/wss_username_token_service_policy')
```

The following example attaches the policy oracle/log_policy to the port HelloWorld_pt of the service HelloService in the SOA composite default/HelloWorld[1.0].

```
wls:/wls-domain/serverConfig>attachWebServicePolicy(None,
'default/HelloWorld[1.0]',
'soa','HelloService','HelloWorld_pt','oracle/log_policy')
```

### 14.3.4 attachWebServicePolicies

Command Category: Policy Management

Use with WLST: Online

#### 14.3.4.1 Description

Attach multiple policies to a Web service port of an application or SOA composite.
The policyURIs are validated through the Oracle WSM Policy Manager APIs if the wsm-pm application is installed on WebLogic Server and is available. If any of the policies that you specify in this command are already attached or exist, then this command enables the policies that are already attached (if they are disabled), and attaches the others.

If the wsm-pm application is not installed or is not available, this command is not executed.

**Note:** Policy changes made using this WLST command are only effective after you restart your application. For ADF and WebCenter applications, a message is displayed to remind you to restart your application.

### 14.3.4.2 Syntax

```
attachWebServicePolicies(application, moduleOrCompName, moduleType, serviceName, subjectName, policyURIs, [subjectType=None])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>application</strong></td>
<td>Name and path of the application to which you want to attach the Web service policies. For example, /domain/server/application#version_number</td>
</tr>
<tr>
<td></td>
<td>To attach the policies to a port of a Web service application, this argument is required.</td>
</tr>
<tr>
<td><strong>moduleOrCompName</strong></td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) to which you want to attach Web service policies.</td>
</tr>
<tr>
<td></td>
<td>To attach the policies to a port of a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
<tr>
<td><strong>moduleType</strong></td>
<td>Module type. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ web—Use with a Web service application (including EJB Web services).</td>
</tr>
<tr>
<td></td>
<td>■ soa—Required for a SOA composite.</td>
</tr>
<tr>
<td><strong>serviceName</strong></td>
<td>Name of the Web service in the application or SOA composite.</td>
</tr>
<tr>
<td><strong>subjectName</strong></td>
<td>Name of the policy subject, port, or operation.</td>
</tr>
<tr>
<td><strong>policyURIs</strong></td>
<td>List of Oracle WSM policy name URIs, for example</td>
</tr>
<tr>
<td></td>
<td>[&quot;oracle/log_policy&quot;,&quot;oracle/wss_username_token_service_policy&quot;]</td>
</tr>
<tr>
<td></td>
<td>If any of the policies that you specify are already attached or exist, then this command enables the policies that are already attached (if they are disabled), and attaches the others.</td>
</tr>
<tr>
<td><strong>subjectType</strong></td>
<td>Optional. Policy subject type. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ P—Port. The default is P.</td>
</tr>
<tr>
<td></td>
<td>■ O—Not supported in this release.</td>
</tr>
</tbody>
</table>

### 14.3.4.3 Example

The following example attaches the policies "oracle/log_policy", "oracle/wss_username_token_service_policy" to the port JRFWssUsernamePort of the Web module WssUsernameService. The Web service
is part of the application HelloWorld#1_0 for the server soa1 in the domain soainfra.

```bash
wls:/wls-domain/serverConfig>attachWebServicePolicies
('/soainfra/soa1/HelloWorld#1_0','j2wbasicPolicy','web', 'WssUsernameService','JRFWssUsernamePort','"oracle/log_policy","oracle/wss_username_token_service_policy")
```

### 14.3.5 enableWebServicePolicy

Command Category: Policy Management

Use with WLST: Online

#### 14.3.5.1 Description

Enable or disable a policy attached to a port of a Web service application or SOA composite.

If the policy that you specify in this command is not attached to the port, an error message is displayed and/or an exception is thrown.

**Note:** Policy changes made using this WLST command are only effective after you restart your application. For ADF and WebCenter applications, a message is displayed to remind you to restart your application.

#### 14.3.5.2 Syntax

```bash
enableWebServicePolicy(application, moduleOrCompName, moduleType, serviceName, subjectName, policyURI, [enable], [subjectType=None] )
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application for which you want to enable a Web service policy. For example, /domain/server/application#version_number. To enable a policy that is attached to a port of a Web service application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to enable a Web service policy. To enable a policy that is attached to a port of a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
</tbody>
</table>
| moduleType     | Module type. Valid options are:  

- **web**—Use with a Web service application (including EJB Web services).
- **soa**—Required for a SOA composite. |
| serviceName    | Name of the Web service in the application or SOA composite.                                                                                     |
| subjectName    | Name of the policy subject, port, or operation.                                                                                                   |
14.3.5.3 Examples

The following example enables the policy oracle/wss_username_token_service_policy attached to the port JRFWssUsernamePort of the Web module WssUsernameService. The Web service is part of the application HelloWorld#1_0 for the server soa1 in the domain soainfra.

```
wls:/wls-domain/serverConfig>enableWebServicePolicy('/soainfra/soa1/HelloWorld#1_0','j2wbasicPolicy','web','WssUsernameService','JRFWssUsernamePort','oracle/wss_username_token_service_policy',true)
```

The following example enables the policy oracle/log_policy attached to the port HelloWorld_pt for the service HelloService in the SOA composite default/HelloWorld[1.0].

```
wls:/wls-domain/serverConfig>enableWebServicePolicy(None,'default/HelloWorld[1.0]','soa','HelloService','HelloWorld_pt','oracle/log_policy')
```

The following example disables the policy oracle/log_policy attached to the port HelloWorld_pt for the service HelloService in the SOA composite default/HelloWorld[1.0].

```
wls:/wls-domain/serverConfig>enableWebServicePolicy(None,'default/HelloWorld[1.0]','soa','HelloService','HelloWorld_pt','oracle/log_policy',false)
```

### 14.3.6 enableWebServicePolicies

**Command Category:** Policy Management

**Use with WLST:** Online

#### 14.3.6.1 Description

Enable or disable multiple policies attached to a port of a Web service application or SOA composite.

If the policyURIs that you specify in this command are not attached to the port, an error message is displayed and/or an exception is thrown.

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| policyURI    | Oracle WSM policy name URI, for example 'oracle/log_policy'
|              | If the policy that you specify is not attached, an error message is displayed and/or an exception is thrown. |
| enable       | Optional. Specifies whether to enable or disable the policy. Valid options are: |
|              | ■ true—Enables the policy. The default is true. |
|              | ■ false—Disables the policy. |
|              | If you omit this argument, the policy is enabled. |
| subjectType  | Optional. Policy subject type. Valid options are: |
|              | ■ P—Port. The default is P. |
|              | ■ 0—Not supported in this release. |
14.3.6.2 Syntax

```
enableWebServicePolicies{application, moduleOrCompName, moduleType, serviceName, subjectName, policyURIs,[enable],[subjectType=None] })
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application for which you want to enable the Web service policies. For example, /domain/server/application#version_number To enable policies that are attached to a port of a Web service application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to enable Web service policies. To enable policies that are attached to a port of a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
<tr>
<td>moduleType</td>
<td>Module type. Valid options are: ■ web—Use with a Web service application (including EJB Web services). ■ soa—Required for a SOA composite.</td>
</tr>
<tr>
<td>serviceName</td>
<td>Name of the Web service in the application or SOA composite.</td>
</tr>
<tr>
<td>subjectName</td>
<td>Name of the policy subject, port, or operation.</td>
</tr>
<tr>
<td>policyURIs</td>
<td>List of Oracle WSM policy name URIs, for example &quot;oracle/log_policy&quot; ,&quot;oracle/wss_username_token_service_policy&quot; ] If the policyURIs that you specify are not attached, an error message is displayed and/or an exception is thrown.</td>
</tr>
<tr>
<td>enable</td>
<td>Optional. Specifies whether to enable or disable the policies. Valid options are: ■ true—Enables the policies. The default is true. ■ false—Disables the policies. If you omit this argument, the policies are enabled.</td>
</tr>
<tr>
<td>subjectType</td>
<td>Optional. Policy subject type. Valid options are: ■ P—Port. The default is P. ■ O—Not supported in this release.</td>
</tr>
</tbody>
</table>

14.3.6.3 Example

The following example enables the policies ["oracle/log_policy","oracle/wss_username_token_service_policy"] attached to the port JRFWssUsernamePort of the Web module WssUsernameService. The Web service is part of the application HelloWorld#1_0 for the server soa1 in the domain soainfra.
14.3.7 detachWebServicePolicy

Command Category: Policy Management
Use with WLST: Online

14.3.7.1 Description
Detach an Oracle WSM policy from a Web service port of an application or SOA composite.

---

**Note:** Policy changes made using this WLST command are only effective after you restart your application. For ADF and WebCenter applications, a message is displayed to remind you to restart your application.

---

14.3.7.2 Syntax

detachWebServicePolicy(application, moduleOrCompName, moduleType, serviceName, subjectName, policyURI, [subjectType=None])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application from which you want to detach a Web service policy. For example, /domain/server/application#version_number</td>
</tr>
<tr>
<td></td>
<td>To detach a policy from a port of a Web service application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) from which you want to detach a Web service policy.</td>
</tr>
<tr>
<td></td>
<td>To detach a policy from a port of a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
<tr>
<td>moduleType</td>
<td>Module type. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ web—Use with a Web service application (including EJB Web services).</td>
</tr>
<tr>
<td></td>
<td>■ soa—Required for a SOA composite.</td>
</tr>
<tr>
<td>serviceName</td>
<td>Name of the Web service in the application or SOA composite.</td>
</tr>
<tr>
<td>subjectName</td>
<td>Name of the policy subject, port, or operation.</td>
</tr>
<tr>
<td>policyURI</td>
<td>Oracle WSM policy name URI, for example 'oracle/log_policy'</td>
</tr>
<tr>
<td></td>
<td>If the policy specified is not attached, an error message is displayed and/or an exception is thrown.</td>
</tr>
<tr>
<td>subjectType</td>
<td>Optional. Policy subject type. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ P—Port. The default is P.</td>
</tr>
<tr>
<td></td>
<td>■ 0—Not supported in this release.</td>
</tr>
</tbody>
</table>
14.3.7.3 Examples

The following example detaches the policy oracle/wss_username_token_service_policy from the port JRFWssUsernamePort of the Web module WssUsernameService. The Web service is part of the application HelloWorld#1_0 for the server soa1 in the domain soainfra.

```
wlst:/wls-domain/serverConfig> detachWebServicePolicy
('soainfra/soa1/HelloWorld#1_0','j2wbasicPolicy','web','WssUsernameService','JRFWssUsernamePort','oracle/wss_username_token_service_policy')
```

The following example detaches the policy oracle/log_policy from the port HelloWorld_pt of the service HelloService in the SOA composite default/HelloWorld[1.0].

```
wls:/wls-domain/serverConfig> detachWebServicePolicy(None,'default/HelloWorld[1.0]', 'soa','HelloService','HelloWorld_pt','oracle/log_policy')
```

14.3.8 detachWebServicePolicies

Command Category: Policy Management

Use with WLST: Online

14.3.8.1 Description

Detach multiple Oracle WSM policies from a Web service port of an application or SOA composite.

If the wsm-pm application is not installed or is not available, this command is not executed.

---

**Note:** Policy changes made using this WLST command are only effective after you restart your application. For ADF and WebCenter applications, a message is displayed to remind you to restart your application.

---

14.3.8.2 Syntax

```
detachWebServicePolicies(application, moduleOrCompName, moduleType, serviceName, subjectName, policyURIs, [subjectType=None])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application from which you want to detach the Web service policies. For example, /domain/server/application#version_number To detach policies from a port of a Web service application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) from which you want to detach the Web service policies. To detach policies from a port of a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
</tbody>
</table>
14.3.8.3 Example
The following example detaches the policies "oracle/log_policy", "oracle/wss_username_token_service_policy" from the port JRFWssUsernamePort of the Web module WssUsernameService. The Web service is part of the application HelloWorld#1_0 for the server soa1 in the domain soainfra.

```
wls:/wls-domain/serverConfig> detachWebServicePolicies
('/soainfra/soa1/HelloWorld#1_0','j2wbasicPolicy','web',
'WssUsernameService','JRFWssUsernamePort',
['"oracle/log_policy","oracle/wss_username_token_service_policy"'])
```

14.3.9 listWebServiceClientPolicies
Command Category: Policy Management
Use with WLST: Online

14.3.9.1 Description
List Web service client port policies information for an application or SOA composite. The output will display the Web service client/reference port name and the Oracle WSM policies it has attached to it. For example:

```
test-port:
security: oracle/wss_username_token_client_policy, enabled=true
```

14.3.9.2 Syntax
```
listWebServiceClientPolicies(application, moduleOrCompName, moduleType,
serviceName, subjectName, policyURIs, subjectType)
```
14.3.9.3 Example

The following example lists the Web service client port policy information for the application jwsclient_1#1.1.0 for the server soa1 in the domain soainfra. In this example, the Web module name is WssUsernameClient, the module type is wsconn, the service reference name is WssUsernameClient, and the client port name is JRFWssUsernamePort.

```
wls:/wls-domain/serverConfig>listWebServiceClientPolicies
('/soainfra/soa1/jwsclient_1#1.1.0','WssUsernameClient','wsconn','WssUsernameClient','JRFWssUsernamePort')
```

14.3.10 attachWebServiceClientPolicy

Command Category: Policy Management

Use with WLST: Online

14.3.10.1 Description

Attach a Oracle WSM policy to a Web service client port of an application or SOA composite.

The policyURI is validated through the Oracle WSM Policy Manager APIs if the wsm-pm application is installed on WebLogic Server and is available. If the PolicyURI that you specify in this command already is attached or exists, then this command enables the policy if it is disabled.

If the wsm-pm application is not installed or is not available, this command is not executed.
### 14.3.10.2 Syntax

`attachWebServiceClientPolicy(application, moduleOrCompName, moduleType, serviceRefName, portInfoName, policyURI, [subjectType=None])`

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| **application** | Name and path of the application for which you want to attach a policy to the Web service client port. For example, `/domain/server/application#version_number`
|                | To attach a policy to a client port of a Web service application, this argument is required. |
| **moduleOrCompName** | Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to attach the policy to the client port. |
|                | To attach a policy to a client port of a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the `moduleType` argument must be set to `soa`. |
| **moduleType** | Module type. Valid options are:
|                | ■ `web`—Use with asynchronous Web service callback client.
|                | ■ `soa`—Required for a SOA composite.
|                | ■ `wsconn`—Use with a connection-based Web service client such as an ADF DC Web service client, ADF JAX-WS Indirection Proxy, or WebCenter client. |
| **serviceRefName** | The service reference name of the application or composite. |
| **portInfoName** | The client port to which you want to attach the Oracle WSM client policy. |
| **policyURI** | The Oracle WSM policy name URI, for example `oracle/wss_username_token_client_policy"`
|                | If the policy that you specify is already attached or exists, then this command enables the policy if it is disabled. |
| **subjectType** | Optional. Policy subject type. Valid options are:
|                | ■ `P`—Port. The default is `P`.
|                | ■ `O`—Not supported in this release. |

### 14.3.10.3 Examples

The following example attaches the client policy `oracle/wss_username_token_client_policy` to the port `JRFWssUsernamePort` of the Web module `WssUsernameClient`. The Web service is part of the application `jwsclient_1#1.1.0` for the server `soa1` in the domain `soainfra`.

```
ws://wls-domain/serverConfig>attachWebServiceClientPolicy
('/soainfra/soa1/jwsclient_1#1.1.0','WssUsernameClient','wsconn',
 'WssUsernameClient','JRFWssUsernamePort','oracle/wss_username_token_client_policy")
```
The following example attaches the client policy oracle/log_policy to the client port HelloWorld_pt in the SOA composite default/HelloWorld[1.0].

```wls:/wls-domain/serverConfig>attachWebServiceClientPolicy
(None, 'default/HelloWorld[1.0]', 'soa', 'client', 'HelloWorld_pt', 'oracle/log_policy')
```

### 14.3.11 attachWebServiceClientPolicies

Command Category: Policy Management

Use with WLST: Online

#### 14.3.11.1 Description

Attach multiple policies to a Web service client port of an application or SOA composite.

The policyURIs are validated through the Oracle WSM Policy Manager APIs if the wsm-pm application is installed on WebLogic Server and is available. If the policies that you specify in this command are already attached or exist, then this command enables the policies that are already attached (if they are disabled), and attaches the others.

If the wsm-pm application is not installed or is not available, this command is not executed.

---

**Note:** Policy changes made using this WLST command are only effective after you restart your application. For ADF and WebCenter applications, a message is displayed to remind you to restart your application.

---

#### 14.3.11.2 Syntax

```
attachWebServiceClientPolicies(application, moduleOrCompName, moduleType, serviceRefName, portInfoName, policyURIs, [subjectType=None] )
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application for which you want to attach Oracle WSM client policies to the Web service client port. For example, /domain/server/application#version_number. To attach policies to a client port of a Web service application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to attach the policies to the client port. To attach policies to a client port of a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
<tr>
<td>moduleType</td>
<td>Module type. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>- web—Use with asynchronous Web service callback client.</td>

<tr>
<td></td>
<td>- soa—Required for a SOA composite.</td>
</tr>
<tr>
<td></td>
<td>- wsconn—Use with a connection-based Web service client such as an ADF DC Web service client, ADF JAX-WS Indirection Proxy, or WebCenter client.</td>
</tr>
<tr>
<td>serviceRefName</td>
<td>The service reference name of the application or composite.</td>
</tr>
</tbody>
</table>
14.3.11.3 Examples

The following example attaches the policy `oracle/wss_username_token_client_policy` to the port `JRFWssUsernamePort` of the Web module `WssUsernameClient` for the application `jwsclient_1#1.1.0` and the server `soa1` in the domain `soainfra`.

```
wls:/wls-domain/serverConfig> attachWebServiceClientPolicy('/soainfra/soa1/jwsclient_1#1.1.0','WssUsernameClient','wsconn', 'WssUsernameClient','JRFWssUsernamePort','oracle/wss_username_token_client_policy')
```

The following example attaches the policy `oracle/log_policy` to the client port `HelloWorld_pt` in the SOA composite `default/HelloWorld[1.0]`.

```
wls:/wls-domain/serverConfig> attachWebServiceClientPolicy(None, 'default/HelloWorld[1.0]','soa','client','HelloWorld_pt','oracle/log_policy')
```

### 14.3.12 enableWebServiceClientPolicy

**Command Category:** Policy Management

**Use with WLST:** Online

**14.3.12.1 Description**

Enable or disable a policy of a Web service client port of an application or SOA composite.

**Note:** Policy changes made using this WLST command are only effective after you restart your application. For ADF and WebCenter applications, a message is displayed to remind you to restart your application.

**14.3.12.2 Syntax**

```
enableWebServiceClientPolicy(application,moduleOrCompName,moduleType, serviceRefName,portInfoName,policyURI,[enable],[subjectType=None] )
```
The following example enables the client policy oracle/wss_username_token_client_policy of the port JRFWssUsernamePort of the Web module WssUsernameClient. The Web service is part of the application jwsclient_1#1.1.0 for the server soa1 in the domain soainfra.

```
wls:/wls-domain/serverConfig>enableWebServiceClientPolicy('/soainfra/soa1/jwsclient_1#1.1.0','WssUsernameClient','wsconn','WssUsernameClient','JRFWssUsernamePort', "oracle/wss_username_token_client_policy",true)
```

The following example enables the client policy oracle/log_policy of the client port HelloWorld_pt in the SOA composite default/HelloWorld[1.0].

```
wls:/wls-domain/serverConfig>enableWebServiceClientPolicy(None, 'default/HelloWorld[1.0]', 'soa', 'client', 'HelloWorld_pt', 'oracle/log_policy')
```

The following example disables the client policy oracle/log_policy of the client port HelloWorld_pt in the SOA composite default/HelloWorld[1.0].

```
wls:/wls-domain/serverConfig>disableWebServiceClientPolicy(None, 'default/HelloWorld[1.0]', 'soa', 'client', 'HelloWorld_pt', 'oracle/log_policy')
```
14.3.13 enableWebServiceClientPolicies

Command Category: Policy Management
Use with WLST: Online

14.3.13.1 Description
Enable or disable multiple policies of a Web service client port of an application or SOA composite.

Note: Policy changes made using this WLST command are only effective after you restart your application. For ADF and WebCenter applications, a message is displayed to remind you to restart your application.

14.3.13.2 Syntax
enableWebServiceClientPolicies(application, moduleOrCompName, moduleType, serviceRefName, portInfoName, policyURIs, [enable], [subjectType=None] )

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application for which you want to enable or disable multiple policies of a Web service client port. For example, /domain/server/application#version_number To enable or disable multiple policies of a client port of a Web service application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to enable or disable multiple policies of a client port. To enable or disable multiple policies of a client port for a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
</tbody>
</table>
| moduleType   | Module type. Valid options are:  
|              |  ■ web—Use with asynchronous Web service callback client.  
|              |  ■ soa—Required for a SOA composite.  
|              |  ■ wsconn—Use with a connection-based Web service client such as an ADF DC Web service client, ADF JAX-WS Indirection Proxy, or WebCenter client. |
| serviceRefName | The service reference name of the application or composite. |
| portInfoName | The name of the client port to which you want to attach the Oracle WSM client policies. |
| policyURIs   | The list of Oracle WSM policy name URIs, for example ["oracle/log_policy","oracle/wss_username_token_client_policy"]. |
14.3.13.3 Example
The following example enables the client policies `oracle/log_policy` and `oracle/wss_username_token_client_policy` of the port `JRFWssUsernamePort` of the Web module `WssUsernameClient`. The Web service is part of the application `jwsclient_1#1.1.0` for the server `soa1` in the domain `soainfra`.

```
wlst:/wls-domain/serverConfig>enableWebServiceClientPolicies
('/soainfra/soa1/jwsclient_1#1.1.0','WssUsernameClient','wsconn','$WssUsernameClient','JRFWssUsernamePort',
["oracle/log_policy", "oracle/wss_username_token_client_policy"], true )
```

14.3.14 detachWebServiceClientPolicy
Command Category: Policy Management

Use with WLST: Online

14.3.14.1 Description
Detach a policy from a Web service client port of an application or SOA composite.

**Note:** Policy changes made using this WLST command are only effective after you restart your application. For ADF and WebCenter applications, a message is displayed to remind you to restart your application.

14.3.14.2 Syntax
```
detachWebServiceClientPolicy(application, moduleOrCompName, moduleType,
serviceRefName, portInfoName, policyURI, [subjectType=None] )
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application for which you want to detach a policy from a Web service client port. For example, /domain/server/application#version_number. To detach a policy from a client port of a Web service application, this argument is required.</td>
</tr>
</tbody>
</table>
14.3.14.3 Examples

The following example detaches the client policy oracle/wss_username_token_client_policy from the port JRFWssUsernamePort of the Web module WssUsernameClient. The Web service is part of the application jwsclient_1#1.1.0 for the server soa1 in the domain soainfra.

```sh
wls:/wls-domain/serverConfig> detachWebServiceClientPolicy('/soainfra/soa1/jwsclient_1#1.1.0','WssUsernameClient','wsconn','WssUsernameClient','JRFWssUsernamePort','oracle/wss_username_token_client_policy')
```

The following example detaches the client policy oracle/log_policy from the client port HelloWorld_pt in the SOA composite default/HelloWorld[1.0].

```sh
wls:/wls-domain/serverConfig> detachWebServiceClientPolicy(None, 'default/HelloWorld[1.0]', 'soa', 'client', 'HelloWorld_pt', 'oracle/log_policy')
```

14.3.15 detachWebServiceClientPolicies

Command Category: Policy Management

Use with WLST: Online

14.3.15.1 Description

Detach multiple policies from a Web service client port of an application or SOA composite.

---

### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>

<tr>
<td></td>
<td>- O—Not supported in this release.</td>
</tr>
</tbody>
</table>
### 14.3.15.2 Syntax

```
detachWebServiceClientPolicies(application, moduleOrCompName, moduleType, serviceRefName, portInfoName, policyURIs, [subjectType=None] )
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>application</strong></td>
<td>Name and path of the application for which you want to detach multiple policies from a Web service client port. For example, /domain/server/application#version_number. To detach multiple policies from a client port of a Web service application, this argument is required.</td>
</tr>
<tr>
<td><strong>moduleOrCompName</strong></td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to detach multiple policies from a client port. To detach multiple policies from a client port for a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
</tbody>
</table>
| **moduleType** | Module type. Valid options are:  
  - **web**—Use with asynchronous Web service callback client.  
  - **soa**—Required for a SOA composite.  
  - **wsconn**—Use with a connection-based Web service client such as an ADF DC Web service client, ADF JAX-WS Indirection Proxy, or WebCenter client. |
| **serviceRefName** | The service reference name of the application or composite. |
| **portInfoName** | The client port from which you want to detach the Oracle WSM client policy. |
| **policyURI** | The Oracle WSM policy name URI, for example oracle/wss_username_token_client_policy".  
  If the policy specified is not attached, an error message is displayed and/or an exception is thrown. |
| **subjectType** | Optional. Policy subject type. Valid options are:  
  - **P**—Port. The default is P.  
  - **O**—Not supported in this release. |

### 14.3.15.3 Example

The following example detaches the client policies oracle/log_policy and oracle/wss_username_token_client_policy from the port JRFWssUsernamePort of the Web module WssUsernameClient. The Web service is part of the application jwsc1ent_1#1.1.0 for the server soa1 in the domain soainfra.

```
  wls:/wls-domain/serverConfig> detachWebServiceClientPolicies('/soainfra/soa1/jwsc1ent_1#1.1.0','WssUsernameClient','wsconn','WssUsernameClient','JRFWssUsernamePort','["oracle/log_policy","oracle/wss_username_token_client_policy"]
```

**Note:** Policy changes made using this WLST command are only effective after you restart your application. For ADF and WebCenter applications, a message is displayed to remind you to restart your application.
### 14.3.16 setWebServicePolicyOverride

**Command Category:** Policy Management  
**Use with WLST:** Online

#### 14.3.16.1 Description

Configure the Web service port policy override properties of an application or SOA composite.

#### 14.3.16.2 Syntax

```
setWebServicePolicyOverride(application, moduleOrCompName, moduleType, serviceName, portName, policyURI, properties)
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Name and path of the application for which you want to override the Web service port policy. For example, /domain/server/application#version_number. To override properties on a policy attached to a port of a Web service application, this argument is required.</td>
</tr>
<tr>
<td>moduleOrCompName</td>
<td>Name of the Web module or SOA composite (for example HelloWorld[1.0]) for which you want to override a Web service port policy. To override properties on a policy attached to a SOA composite, the composite name is required (for example default/HelloWorld[1.0]), and the moduleType argument must be set to soa.</td>
</tr>
</tbody>
</table>
| moduleType       | Module type. Valid options are:  
|                  | • web—Use with a Web service application.  
|                  | • soa—Required for a SOA composite. |
| serviceName      | Name of the Web service in the application or SOA composite.                                                                 |
| subjectName      | Name of the policy subject, port, or operation.                                                                                           |
| policyURI        | Oracle WSM policy name URI, for example 'oracle/log_policy' to which the override properties will be applied. If the policy specified is not attached, an error message is displayed and/or an exception is thrown. |
| properties       | Policy override properties. Properties must be specified using the following format:  
|                  | [{"name": "value"}]  
|                  | For example: [{"myprop": "myval"}]  
|                  | If this argument is set to None, then all policy overrides are removed.                                                                    |

#### 14.3.16.3 Examples

The following example configures the override properties for the policy oracle/wss10_message_protection_service_policy for the port JRFWssUsernamePort of the Web module WssUsernameService for the port of the Web service HelloWorld of the application HelloWorld#1_0 for the server soa1 in the domain soainfra.

```
wls:/wls-domain/serverConfig> setWebServicePolicyOverride('/soainfra/soa1/HelloWorld#1_0','j2wbasicPolicy',
```

---

14-37
'web', 'WssUsernameService', 'JRFWssUsernamePort',
"oracle/wss10_message_protection_service_policy",
["keystore.sig.csf.key","sigkey"]

14.4 Policy Set Management Commands

Policy sets enhance the security and manageability of an enterprise by providing a mechanism to globally attach one or more policies to a subject type. Using policy sets, an administrator can specify a default set of policies to be enforced even if none are directly attached. For detailed information about determining the type and scope of resources a policy set can be attached to, see “Creating and Managing Policy Sets” in the Security and Administrator’s Guide for Web Services.

All policy set creation, modification, or deletion commands must be performed in the context of a repository session. A repository session can only act on a single document.

Note: The procedures in this chapter apply to Oracle Infrastructure Web Services only.

To view the help for the WLST commands described in this chapter, connect to a running instance of the server and enter help('wsmManage').

Use the WLST commands listed in Table 14–4 to manage globally-available WSM Web service policy sets.

Table 14–4 Web Services WLST Globally-available Policy Set Management Commands

<table>
<thead>
<tr>
<th>Use this command...</th>

</tbody>
</table>
14.4.1 beginRepositorySession
Command Category: Policy Set Management
Use with WLST: Online

14.4.1.1 Description
Begin a session to modify the Oracle WSM Repository. A repository session can only act on a single document. An error will be displayed if there is already a current session.

14.4.1.2 Syntax
beginRepositorySession()

14.4.1.3 Example
The following example begins an Oracle WSM Repository modification session.
```
wls:/wls-domain/serverConfig>beginRepositorySession()
```

14.4.2 commitRepositorySession
Command Category: Policy Set Management
Use with WLST: Online

14.4.2.1 Description
Write the contents of the current session to the Oracle WSM Repository. Messages are displayed that describe what was committed. An error will be displayed if there is no current session.

14.4.2.2 Syntax
commitRepositorySession()

14.4.2.3 Example
The following example commits the current repository modification session.
Policy Set Management Commands

14.4.3 **describeRepositorySession**
Command Category: Policy Set Management
Use with WLST: Online

14.4.3.1 **Description**
Describe the contents of the current session. This will either indicate that the session is empty or list the name of the document that is being updated, along with the type of update (create, modify, or delete). An error will be displayed if there is no current session.

14.4.3.2 **Syntax**
describeRepositorySession()

14.4.3.3 **Example**
The following example describes the current repository modification session.
wls:/wls-domain/serverConfig>describeRepositorySession()

14.4 **abortRepositorySession**
Command Category: Policy Set Management
Use with WLST: Online

14.4.4.1 **Description**
Abort the current Oracle WSM Repository modification session, discarding any changes that were made to the repository during the session.

14.4.4.2 **Syntax**
abortRepositorySession()

14.4.4.3 **Example**
The following example aborts the current Oracle WSM Repository session.
wls:/wls-domain/serverConfig>abortRepositorySession()

14.4.5 **createPolicySet**
Command Category: Policy Set Management
Use with WLST: Online

14.4.5.1 **Description**
Create a new, empty policy set within a repository session. When creating a new policy set, you must specify the type of policy subject that the policy set will apply to, and a supported expression that defines a valid resource scope in a supported format. Issuing this command outside of a repository session will result in an error.
14.4.5.2 Syntax

createPolicySet(name, type, attachTo, [description=None], [enable='true'])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the new, empty policy set.</td>
</tr>
</tbody>
</table>
| type       | The type of policy subject that the new policy set applies to. The type of policy subject must be one of the following values:  
  - sca-component—SOA Component  
  - sca-reference—SOA Reference  
  - sca-service—SOA Service  
  - ws-service—Web Service Endpoint  
  - ws-client—Web Service Client  
  - ws-connection—Web Service Connection  
  - ws-callback—Asynchronous Callback Client  
| attachTo   | Expression that attaches the policy set to the specified resource scope.     |
| description| Optional. Description of the new policy set. If no description is specified, then the description for a new policy set will be "Global policy attachments for <type>", where <type> is the subject type. |
| enable     | Optional. Specifies whether to enable or disable the new policy set. Valid options are:  
  - true—Enables the new policy set. The default is true.  
  - false—Disables the new policy set.  
  If you omit this argument, the policy set is enabled. |

14.4.5.3 Example

The first example creates a new policy set and specifies the resource scope to only ws-service types (Web Service Endpoint) in the base_domain domain. The second example creates a new policy set, but also narrows the resource scope to only sca-service types (SOA Service) in the soa_server1 server in the domain.

```sh
wls:/wls-domain/serverConfig> createPolicySet('myPolicySet', 'ws-service', 'Domain("base_domain")')
wls:/wls-domain/serverConfig> createPolicySet('myPolicySet', 'sca-service', 'Server("soa_server1")', 'My policySet')
```

14.4.6 listPolicySets

Command Category: Policy Set Management

Use with WLST: Online

14.4.6.1 Description

Lists the policy sets in the repository. This command will also display a policy set that is being created, modified, or deleted within the current session. You can list all the policy sets or limit the display to include only those that apply to specific policy subject resource types.

14.4.6.2 Syntax

listPolicySets([type=None])
### 14.4.6.3 Example
The first two examples list policy sets by either the `sca-reference` or `ws-client` resource types. Whereas, the third example lists all the policy sets stored in the repository.

```bash
wls:/wls-domain/serverConfig> listPolicySets('sca-reference')
wls:/wls-domain/serverConfig> listPolicySets('ws-client')
wls:/wls-domain/serverConfig> listPolicySets()
```

### 14.4.7 clonePolicySet

**Command Category:** Policy Set Management  
**Use with WLST:** Online

#### 14.4.7.1 Description
Within a repository session, clone a new policy set from an existing policy set. When cloning an existing policy set, all values and attachments in the source policy set are copied into the new policy set, although you can supply a different expression identifying the resource scope. The expression must define a valid resource scope in a supported format.

Issuing this command outside of a repository session will result in an error.

#### 14.4.7.2 Syntax
```
clonePolicySet(name, source,[attachTo=None],[description=None],[enable='true'])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the new policy set clone.</td>
</tr>
<tr>
<td>source</td>
<td>Name of the source policy set that will be cloned.</td>
</tr>
</tbody>
</table>
| attachTo=None | Optional. Expression that attaches the policy set to the specified resource scope.  
|               | If this argument is set to None, then the expression used in the source policy set to identify the scope of resources is retained. |
| description=| Optional. Description for the new policy set.                              |
|               | If this argument is set to None, then the description used in the source policy set is retained. |
14.4.7.3 Example
The first example creates a policy set by cloning the existing `myPolicySet` policy set to create a new `myNewPolicySet`. The second example also creates a policy set, but narrows the resource scope to policy subjects in the specified `soa_server1` server in the domain.

```
  wls:/wls-domain/serverConfig> clonePolicySet('myNewPolicySet','myPolicySet')
  wls:/wls-domain/serverConfig> clonePolicySet('myNewPolicySet','myPolicySet','Server("soa_server1")')
```

### 14.4.8 displayPolicySet

#### Command Category: Policy Set Management

#### Use with WLST: Online

#### 14.4.8.1 Description

Display the configuration of a specified policy set. If the policy set is being modified in the current session, then that version will be displayed; otherwise, the latest version in the repository will be displayed. An error will display if the policy set does not exist.

This command can be issued outside of a repository session.

#### 14.4.8.2 Syntax

```
displayPolicySet([name])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Optional. Name of the policy set to be displayed. If a name is not specified, the configuration of the policy set, if any, in the current session is displayed or an error message is displayed.</td>
</tr>
</tbody>
</table>

#### 14.4.8.3 Example

The following example displays the configuration of the `myPolicySet` policy set.

```
  wls:/wls-domain/serverConfig> displayPolicySet('myPolicySet')
```

### 14.4.9 modifyPolicySet

#### Command Category: Policy Set Management

#### Use with WLST: Online

#### 14.4.9.1 Description

Specify a policy set for modification in the current repository session. The latest version of the named policy set will be loaded into the current session. If the session already contains a different policy set, then an error will be displayed; if the session
already contains the named policy set, then no action will be taken. Subsequent attempts to modify the named policy set will show the current version in the session. Issuing this command outside of a repository session will result in an error.

14.4.9.2 Syntax
modifyPolicySet(name)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the policy set to be modified in the current session.</td>
</tr>
</tbody>
</table>

14.4.9.3 Example
The following example opens the myPolicySet policy set for modification in the current session.

wls:/wls-domain/serverConfig> modifyPolicySet('myPolicySet')

14.4.10 enablePolicySet
Command Category: Policy Set Management
Use with WLST: Online

14.4.10.1 Description
Enable or disable the current policy set within a repository session. If not specified, this command enables the policy set.

Issuing this command outside of a repository session containing a policy set that is being created or modified will result in an error.

14.4.10.2 Syntax
enablePolicySet([enable=True])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
</table>
| enable       | Optional. Specifies whether to enable or disable the policy set. Valid options are:
  ■ true—Enables the policy set. The default is true.
  ■ false—Disables the policy set.
  If you omit this argument, the policy set is enabled. |

14.4.10.3 Example
The following example enables the current policy set.

wls:/wls-domain/serverConfig> enablePolicySet(true)

14.4.11 enablePolicySetPolicy
Command Category: Policy Set Management
Use with WLST: Online
14.4.11.1 Description
Within a repository session, enable or disable the policy attachment, which is identified by the provided URI in the current policy set. If not specified, this command enables the policy set. An error displays if the identified policy is not currently attached to the policy set.

Issuing this command outside of a repository session containing a policy set that is being created or modified will result in an error.

14.4.11.2 Syntax

enablePolicySetPolicy(uri, [enable=true])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>uri</td>
<td>URI specifying the policy attachment within the policy set.</td>
</tr>
<tr>
<td>enable</td>
<td>Optional. Specifies whether to enable or disable the policy attachment specified by the URI in the policy set. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ true—Enables the specified policy attachment in the policy set.</td>
</tr>
<tr>
<td></td>
<td>The default is true.</td>
</tr>
<tr>
<td></td>
<td>■ false—Disables specified policy attachment in the policy set.</td>
</tr>
<tr>
<td></td>
<td>If you omit this argument, the policy set attachment is enabled.</td>
</tr>
</tbody>
</table>

14.4.11.3 Example
The following example disables the specified logging policy attachment within the current policy set.

wls:/wls-domain/serverConfig> enablePolicySetPolicy('/oracle/log_policy',false)

14.4.12 setPolicySetDescription

Command Category: Policy Set Management

Use with WLST: Online

14.4.12.1 Description
Specify a description for a policy set selected within a session.

Issuing this command outside of a repository session containing a policy set that is being created or modified will result in an error.

14.4.12.2 Syntax

setPolicySetDescription(description)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>description</td>
<td>Describes a policy set.</td>
</tr>
</tbody>
</table>

14.4.12.3 Example
The following example creates a description for a policy set.

wls:/wls-domain/serverConfig> setPolicySetDescription('PolicySetDescription')
14.4.13 validatePolicySet

Command Category: Policy Set Management

Use with WLST: Online

14.4.13.1 Description
Validates an existing policy set. If a policy set name is provided, the command will validate the specified policy set. If no policy set name is specified, the command will validate the policy set in the current repository session.

An error message displays if the policy set does not exist, or a name is not provided and the session is not active, or if the Oracle WSM Repository does not contain a suitable policy set.

14.4.13.2 Syntax
validatePolicySet([name=None])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Optional. Name of the policy set to validate. If a name is not provided then the command will validate the policy set being created or modified in the current session.</td>
</tr>
</tbody>
</table>

14.4.13.3 Example
The first example validates the policy set in the current session. The second example validates the specified myPolicySet policy set.

```
wls:/wls-domain/serverConfig>validatePolicySet()
wls:/wls-domain/serverConfig>validatePolicySet('myPolicySet')
```

14.4.14 deletePolicySet

Command Category: Policy Set Management

Use with WLST: Online

14.4.14.1 Description
Delete a specified policy set within a repository session. If the session already contains a different policy set, an error will display. If the session already contains the named policy set, then a creation will be undone or a modification will be converted into a deletion.

Issuing this command outside of a repository session will result in an error.

14.4.14.2 Syntax
deletePolicySet(name)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>Name of the policy set to be deleted.</td>
</tr>
</tbody>
</table>

14.4.14.3 Example
The following example deletes a specified myPolicySet policy set.

```
wls:/wls-domain/serverConfig>deletePolicySet('myPolicySet')
```
14.4.15 attachPolicySet

Command Category: Policy Set Management

Use with WLST: Online

14.4.15.1 Description
Within a repository session, set an expression that attaches a policy set to the specified resource scope. The expression must define a valid resource scope in a supported format.

Issuing this command outside of a repository session containing a policy set that is being created or modified will result in an error.

14.4.15.2 Syntax
attachPolicySet(expression)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>expression</td>
<td>Expression that attaches the policy set to the specified resource scope.</td>
</tr>
</tbody>
</table>

14.4.15.3 Example
The following example attaches a policy set to the specified base_domain resource.

```
wls:/wls-domain/serverConfig>attachPolicySet('Domain("base_domain")')
```

This example attaches a policy set to the specified base_domain and managed_server resources.

```
wls:/wls-domain/serverConfig>attachPolicySet('Domain("base_domain") and Server("managed_server")')
```

14.4.16 attachPolicySetPolicy

Command Category: Policy Set Management

Use with WLST: Online

14.4.16.1 Description
Within a repository session, attach a policy, identified by a specified URI, to the current policy set.

Issuing this command outside of a repository session containing a policy set that is being created or modified will result in an error.

14.4.16.2 Syntax
attachPolicySetPolicy(uri)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>uri</td>
<td>URI specifying the policy to attach to the current policy set. For example, 'oracle/log_policy'.</td>
</tr>
</tbody>
</table>

14.4.16.3 Example
The following example attaches the Oracle WSM logging policy to the current policy set.
14.4.17 detachPolicySetPolicy

Command Category: Policy Set Management
Use with WLST: Online

14.4.17.1 Description
Within a repository session, detach a policy, identified by a specified URI, from the current policy set.

Issuing this command outside of a repository session containing a policy set that is being created or modified will result in an error.

14.4.17.2 Syntax
detachPolicySetPolicy(uri)

14.4.17.3 Example
The following example detaches the Oracle WSM logging policy from the current policy set.

wls:/wls-domain/serverConfig> detachPolicySetPolicy('oracle/log_policy')

14.4.18 migrateAttachments

Command Category: Policy Set Management
Use with WLST: Online

14.4.18.1 Description
Migrates direct (local) policy attachments that are identical to the external global policy attachments that would otherwise be attached to each policy subject in the current domain. You can specify whether to force the migration, prompt for confirmation before each migration, or simply list the migrations that would occur. A direct policy attachment is identical if its URI is the same as one provided by a global policy attachment, and if it does not have any scoped configuration overrides.

Note: A direct attachment with an unscoped override will be migrated but an attachment with a scoped override will not. This is because after running the migrateAttachments() command, the enforcement of the policies on all subjects remains the same, even though some policies are globally attached.

Whether forced or prompted, the command lists each direct policy attachment that is migrated. This output will identify the policy subject that was modified, the URI of the identical policy reference, and the name of the global policy attachment document that duplicated the direct attachment.
14.4.18.2 Syntax

migrateAttachments([mode])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>mode</td>
<td>The action to be taken for each policy attachment that can be migrated. Valid options are:</td>
</tr>
<tr>
<td></td>
<td>■ force—Automatically migrate all identical policy attachments without prompting.</td>
</tr>
<tr>
<td></td>
<td>■ preview—List all policy attachments that can be migrated, but does not perform any migration.</td>
</tr>
<tr>
<td></td>
<td>■ prompt—Request user confirmation before migrating each policy attachment.</td>
</tr>
<tr>
<td></td>
<td>If no mode is specified, this argument defaults to prompt mode.</td>
</tr>
</tbody>
</table>

14.4.18.3 Example

The following examples describe how to use the repository attachment migration modes.

```
wlsl/wls-domain/serverConfig>migrateAttachments()
wlsl/wls-domain/serverConfig>migrateAttachments('force')
wlsl/wls-domain/serverConfig>migrateAttachments('preview')
wlsl/wls-domain/serverConfig>migrateAttachments('prompt')
```

14.5 Oracle WSM Repository Management Commands

Use the commands listed in Table 14–5 to manage the WSM documents stored in the Oracle WSM Repository. For additional information about upgrading or migrating documents in an Oracle WSM Repository, see "Upgrading the Oracle WSM Policies in the Repository" in the Security and Administrator’s Guide for Web Services.

Additional MDS WLST commands are described in Chapter 8, "Metadata Services (MDS) Custom WLST Commands."

Table 14–5  Policy Repository Management Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>upgradeWSMPolicyRepository</td>
<td>Upgrade the Oracle WSM predefined policies stored in the Oracle WSM Repository with any new predefined policies that are provided in the latest installation of the Oracle Fusion Middleware software.</td>
<td>Online</td>
</tr>
<tr>
<td>resetWSMPolicyRepository</td>
<td>Delete the existing policies stored in the Oracle WSM Repository and refresh it with the latest set of predefined policies that are provided in the new installation of the Oracle Fusion Middleware software.</td>
<td>Online</td>
</tr>
<tr>
<td>exportRepository</td>
<td>Export a set of documents from the repository into a supported ZIP archive. If the specified archive already exists, you can choose whether to overwrite the archive or merge the documents into the existing archive.</td>
<td>Online</td>
</tr>
</tbody>
</table>
### 14.5.1 `upgradeWSMPolicyRepository`

**Command Category:** Policy Repository Management  
**Use with WLST:** Online

#### 14.5.1.1 Description
Upgrade the Oracle WSM predefined policies stored in the Oracle WSM Repository with any new predefined policies that are provided in the latest installation of the Oracle Fusion Middleware software. If the repository is empty, all of the predefined policies included in the installation are loaded into the repository.

This command does not remove any existing predefined and user-defined custom policies in the repository. If a predefined policy has been modified or discontinued in a subsequent release, one of the following occurs:

- For policies that have been discontinued, a message is displayed listing the discontinued policies. In this case, Oracle recommends that you no longer reference the policies and remove them using Oracle Enterprise Manager.
- For policies that have changed in the subsequent release, a message is displayed listing the changed policies. Oracle recommends that you import the latest version of the policies using Oracle Enterprise Manager.

#### 14.5.1.2 Syntax
```
upgradeWSMPolicyRepository()
```

#### 14.5.1.3 Example
The following example upgrades the existing installation with policies provided in the latest release:
```
wls:/wls-domain/serverConfig>upgradeWSMPolicyRepository()
```

### 14.5.2 `resetWSMPolicyRepository`

**Command Category:** Policy Repository Management  
**Use with WLST:** Online

#### 14.5.2.1 Description
Delete the existing policies stored in the Oracle WSM Repository and refresh it with the latest set of predefined policies that are provided in the new installation of the Oracle Fusion Middleware software. You can use the `clearStore` argument to specify whether to delete all policies, including custom user policies, from the Oracle WSM Repository before loading the new predefined policies.
14.5.2.2 Syntax
resetWSMPolicyRepository([clearStore='false'])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>clearStore='false'</td>
<td>Policies to be deleted. Valid values are:</td>
</tr>
<tr>
<td></td>
<td>- true—All policies in the repository, including custom user policies, are deleted.</td>
</tr>
<tr>
<td></td>
<td>- false—Only the predefined policies supplied by Oracle are deleted. The default is false.</td>
</tr>
</tbody>
</table>

14.5.2.3 Example
The following example deletes all the policies in the repository, including user policies, and adds the predefined policies provided in the current product installation:

wls:/wls-domain/serverConfig>resetWSMPolicyRepository(true)

14.5.3 exportRepository
Command Category: Policy Repository Management
Use with WLST: Online

14.5.3.1 Description
Export a set of documents from the Oracle WSM Repository into a supported ZIP archive. If the specified archive already exists, the following options are presented:

The specified archive already exists. Update existing archive?
Enter 'yes' to merge documents into existing archive, "no" to overwrite, or 'cancel' to cancel the operation.

You can also specify a list of the documents to be exported, or use a search expression to find specific documents in the repository.

14.5.3.2 Syntax
exportRepository(archive,[documents=None],[expandReferences='false'])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>archive</td>
<td>Name of the archive file. If the specified archive already exists, you can choose whether to overwrite the archive or merge the documents into the existing archive. During override, the original archive is backed up and a message describes the location of the backup archive.</td>
</tr>
<tr>
<td>documents=none</td>
<td>Optional. The documents to be exported to the archive. If no documents are specified, then all assertion templates, intents, policies, and policy sets will be exported. You can specify a list of the documents to be exported, or use a search expression to find specific documents in the repository.</td>
</tr>
<tr>
<td>expandReferences='false'</td>
<td>Optional. Specifies whether the policy references should be expanded during export.</td>
</tr>
</tbody>
</table>

14.5.3.3 Example
The following examples describe repository export sessions. The first example exports all Oracle WSM documents to the policies.zip file.
This example exports only the `sca-component`, `sca-reference`, and `sca-service` policy sets to the `policies.jar` file, and also expands the all policy references output during the export process.

```
wls:/wls-domain/serverConfig> exportRepository("/tmp/policies.zip")
```

This example exports policy sets using wildcards to the `some_global_with_noreference_2` file.

```
wls:/wls-domain/serverConfig> exportRepository('./export/some_global_with_noreference_2', 
['policysets:global/web_%', 'policysets:global/web_ref%', 'policysets:global/web_call%'], false)
```

### 14.5.4 importRepository

Command Category: Policy Repository Management

Use with WLST: Online

#### 14.5.4.1 Description

Import a set of documents from a supported ZIP archive into the Oracle WSM Repository. You can use the `map` argument to provide the location of a file that describes how to map physical information from the source environment to the target environment. For example, you can use the map file to ensure that the attachment expression in a policy set document is updated to match the target environment, such as `Domain("foo")=Domain("bar")`

#### 14.5.4.2 Syntax

```
importRepository(archive, [map=None], [generateMapFile='false'])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>archive</td>
<td>Name of the archive file.</td>
</tr>
<tr>
<td>map=none</td>
<td>Optional. Location of a sample map file that describes how to map physical information from the source environment to the target environment. You can generate a new map file by setting the <code>generateMapFile</code> argument to <code>true</code>. If you specify a map file without setting the <code>generateMapFile</code> argument to <code>true</code>, and the file does not exist, the operation fails and an error is displayed.</td>
</tr>
<tr>
<td>generateMapFile=false</td>
<td>Optional. Specify whether to create a sample map file at the location specified by the map argument. No documents are imported when this argument is set to <code>true</code>. The default is <code>false</code>. After the file is created you can edit it using any text editor. The <code>attachTo</code> values can be updated according to the new environment details. If there is no update required for any document name, that entry may be either deleted or commented using the character (<code>#</code>).</td>
</tr>
</tbody>
</table>

#### 14.5.4.3 Example

The following examples describe repository import sessions.

The first example imports the contents of the `policies.zip` file into the repository.
This example uses the `generateMapFile` argument to generate a map file.

```
ws:/wls-domain/serverConfig>importRepository("./export/some_global_with_noreference_2', map="/export/some_global_with_noreference_2_map', generateMapFile=true)
```

Here is an example of a generated map file:

This is an auto generated override file containing the document names given in the archive file and their corresponding attachTo values. The attachTo value can be updated according to the new environment details. If there is no update required for any document name, that entry may be either deleted or commented using the character ("#")

```
[Resource Scope Mappings]

sca_component_add_1=Composite("*Async*")
sca_reference_add_1=Composite("*Basic_SOAgetClient")
sca_reference_no=Server("*")
sca_service_add_1=Composite("*Basic_SOA_service")
web_callback_add_1=Application("*")
web_client_add_1=Module("*")
web_reference_add_1=Domain("*")
web_service_add_1=Domain("*domain*" ) and Server("*soa*") and Application("*ADF*")
ws_service_no_1=Server("*Admin*")
```

This example illustrates how to import documents using a generated map file: `/some_global_with_noreference_2_map`

```
ws:/wls-domain/serverConfig>importRepository('..:/export/export_all', 'export_all_map')
```

## 14.6 Deployment Descriptor Migration Commands

Use the commands listed in Table 14–6 to migrate the ADF Business Components and WebCenter services proprietary deployment descriptor (PDD) files between environments, such as from test to production.

For additional information about using these commands, see "Managing Application Migration Between Environments" in the *Security and Administrator’s Guide for Web Services*.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>exportJRFWSApplicationPDD</code></td>
<td>Export an ADF Business Control or WebCenter application deployment descriptor to a Java Archive (JAR) file.</td>
<td>Online</td>
</tr>
<tr>
<td><code>importJRFWSApplicationPDD</code></td>
<td>Import an ADF Business Control or WebCenter Web service application deployment descriptor from the exported JAR file into a new environment, for example, a production environment or a scaled server instance in a cluster.</td>
<td>Online</td>
</tr>
</tbody>
</table>
### 14.6.1 `exportJRFWSApplicationPDD`

Command Category: Deployment descriptor migration

Use with WLST: Online

#### 14.6.1.1 Description

Export an ADF Business Control or WebCenter application deployment descriptor to a Java Archive (JAR) file. If you do not specify a name for the JAR file, the output displays the default name and path to the JAR file.

#### 14.6.1.2 Syntax

```
exportJRFWSApplicationPDD(application,pddJarFileName=None)
```

#### Argument Definition

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>application</code></td>
<td>Name and path of the application for which you want to export the configuration information. For example, <code>/domain/server/application#version</code></td>
</tr>
<tr>
<td><code>pddJarFileName</code></td>
<td>Optional. User-specified name for the JAR file. The default is <code>None</code>. For example, <code>/tmp/myPDD.jar</code>.</td>
</tr>
</tbody>
</table>

#### 14.6.1.3 Example

The following example exports the Web service PDD for the application `ADFBCHelloWorld` into a JAR file named `exportPDD.jar`.

```
exportJRFWSApplicationPDD('/wls-domain/ManagedServer/ADFBCHelloWorld','/tmp/exportPDD.jar')
```

```
/tmp/exportPDD.jar
```

### 14.6.2 `importJRFWSApplicationPDD`

Command Category: Deployment descriptor migration

Use with WLST: Online

#### 14.6.2.1 Description

Import an ADF Business Control or WebCenter Web service application deployment descriptor from the exported JAR file into a new environment, for example, a production environment or a scaled server instance in a cluster.
14.6.2.2 Syntax

importJRFWSApplicationPDD(application, pddJarFileName)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>application</td>
<td>Fully qualified path and name of the application to which you want to import the configuration information. For example, /domain/server/application#version</td>
</tr>
<tr>
<td>pddJarFileName</td>
<td>Name of the JAR file that contains the PDD file to be imported. For example, /tmp/myPDD.jar</td>
</tr>
</tbody>
</table>

14.6.2.3 Example

The following example imports the Web service application deployment descriptor for the ADFBCHelloWorld application that has been migrated to the server ManagedServer2. The command uses the name of the JAR file that was generated when the exportJRFWSApplicationPDD command was executed.

```bash
wls:/wls-domain/serverConfig> importJRFWSApplicationPDD
   ('/wls-domain/ManagedServer2/ADFBCHelloWorld', '/tmp/exportPDD.jar')
```

Application /wls-domain/ManagedServer2/ADFBCHelloWorld PDD has been reset, please restart application now to uptake changes!

14.6.3 savePddToAllAppInstancesInDomain

Command Category: Deployment descriptor migration
Use with WLST: Online

14.6.3.1 Description

Import and save the ADF BC or WebCenter Web service application deployment descriptor from the exported JAR file into all of the server instances in the connected domain. You can also use the optional restartApp argument to restart the application automatically.

14.6.3.2 Syntax

savePddToAllAppInstancesInDomain(applicationName, pddJarFileName, restartApp=true)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>applicationName</td>
<td>Name of the application to which you want to import the configuration information. For example, application#version</td>
</tr>
<tr>
<td>pddJarFileName</td>
<td>Name of the JAR file that contains the PDD file to be imported. For example, /tmp/myPDD.jar</td>
</tr>
<tr>
<td>restartApp</td>
<td>Optional. Restart the application. Valid values are:</td>
</tr>
<tr>
<td></td>
<td>- true—Restart the application automatically. The default is true.</td>
</tr>
<tr>
<td></td>
<td>- false—Do not restart the application automatically.</td>
</tr>
</tbody>
</table>
14.6.3.3 Example

The following example imports the Web service application deployment descriptor for the ADFBCHelloWorld application that was previously exported into all of the servers in the domain, and restarts the application.

`wls:/wls-domain/serverConfig>` `savePddToAllAppInstancesInDomain` `'ADFBCHelloWorld', '/tmp/exportPDD.jar', true`

saving pdd to  com.bea:ServerRuntime=ManagedServer,Name=ADFBCHelloWorld, Location=ManagedServer,Type=ApplicationRuntime
saving pdd to  com.bea:ServerRuntime=ManagedServer2,Name=ADFBCHelloWorld, Location=ManagedServer2,Type=ApplicationRuntime
restarting application ADFBCHelloWorld
Stopping application ADFBCHelloWorld.
.Completed the stop of Application with status completed
Current Status of your Deployment:
Deployment command type: stop
Deployment State   : completed
Deployment Message : no message
Starting application ADFBCHelloWorld.
.Completed the start of Application with status completed
Current Status of your Deployment:
Deployment command type: start
Deployment State   : completed
Deployment Message : no message

The following example imports the Web service application deployment descriptor for the ADFBCHelloWorld application that was previously exported into all of the servers in the domain, but does not restart the application automatically. This example shows the commands you need to enter to restart the application manually.

`wls:/wls-domain/serverConfig>` `savePddToAllAppInstancesInDomain` `'ADFBCHelloWorld', '/tmp/exportPDD.jar', false`

saving pdd to  com.bea:ServerRuntime=ManagedServer,Name=ADFBCHelloWorld, Location=ManagedServer,Type=ApplicationRuntime
saving pdd to  com.bea:ServerRuntime=ManagedServer2,Name=ADFBCHelloWorld, Location=ManagedServer2,Type=ApplicationRuntime
application  ADFBCHelloWorld  PDD has been reset, please restart application now to uptake changes!

`wls:/wls-domain/serverConfig>` `stopApplication('ADFBCHelloWorld')`
`wls:/wls-domain/serverConfig>` `startApplication('ADFBCHelloWorld')`
The Diagnostic Framework aids in capturing relevant and timely diagnostics for critical errors. The diagnostics can be sent to Oracle Support for further analysis. Use the Diagnostic Framework commands to generate incidents, query existing incidents and execute individual diagnostics dumps to gather specific diagnostics data.

For additional information about using the Diagnostic Framework, see "Diagnosing Problems" in the Oracle Fusion Middleware Administrator’s Guide.

**Note:** To use the Diagnostic Framework custom WLST commands, you must invoke the WLST script from the Oracle Common home. See "Using Custom WLST Commands" in the Oracle Fusion Middleware Administrator’s Guide.

Table 15–1 lists the different categories of Diagnostic Framework commands.

<table>
<thead>
<tr>
<th>Command Category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incident Commands</td>
<td>View problems and incidents and to create incidents.</td>
</tr>
<tr>
<td>Diagnostic Dump Commands</td>
<td>Display information about dumps and to execute dumps.</td>
</tr>
</tbody>
</table>

### 15.1 Incident Commands

Use the commands in Table 15–2 to view problems and incidents and to create incidents.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>createIncident</td>
<td>Create a diagnostic incident.</td>
<td>Online</td>
</tr>
<tr>
<td>getIncidentFile</td>
<td>Retrieves the contents of the specified incident file.</td>
<td>Online</td>
</tr>
<tr>
<td>listADRHome</td>
<td>List the set of ADR Home paths.</td>
<td>Online</td>
</tr>
<tr>
<td>listIncidents</td>
<td>List a set of diagnostic incidents.</td>
<td>Online</td>
</tr>
<tr>
<td>listProblems</td>
<td>List a set of diagnostic problems.</td>
<td>Online</td>
</tr>
<tr>
<td>showIncident</td>
<td>Show the details of a specified incident.</td>
<td>Online</td>
</tr>
</tbody>
</table>
15.1.1 createIncident

Use with WLST: Online

15.1.1.1 Description
Creates a diagnostic incident, using the specified information to determine the set of diagnostic rules and actions to execute.

15.1.1.2 Syntax
createIncident([adrHome] [,incidentTime] [,messageId] [,ecid] [,appName]
[,description] [,server])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>adrHome</td>
<td>The path for the ADR Home in which to create the incident. The ADR Home must exist. If this argument is not specified, the default ADR Home is used. The default ADR Home is the following location: ADR_BASE/diag/OFM/domain_name/server_name</td>
</tr>
</tbody>
</table>
| incidentTime | The timestamp at which the incident occurred. If this not specified, the current time is used. You can specify the following:  
  - The time of the current day, in the format HH:MM. For example: 19:45  
  - The date and time, in the format MM/DD/YYYY HH:MM |
| messageId | The ID of the error message. For example, MDS-50400. |
| ecid     | The Execution Context ID for the error message. |
| appName  | The name of the deployed application for which the diagnostics are being gathered. For example, if you have multiple ADF applications deployed, each may register a dump called adf.dump. To execute this command for a specific application, you must specify the application name. |
| description | Descriptive text to associate with the incident. This is useful when reviewing the incident at a later time. |
| server   | The name of the Managed Server from which to collect information. This argument is valid only when you are connected to the Administration Server. |

15.1.1.3 Example
The following example creates an incident that is related to messages with the ID MDS-50400:

createIncident(messageId="MDS-50400", description="sample incident")

Incident Id: 55  
Problem Id: 4  
Problem Key: MDS-50400 [MANUAL]  
Incident Time: 25th March 2010 11:55:45 GMT  
Error Message Id: MDS-50400  
Flood Controlled: false

15.1.2 getIncidentFile

Use with WLST: Online
15.1.2.1 Description
Retrieves the contents of the specified incident file.

15.1.2.2 Syntax
getIncidentFile(id, name [, outputFile] [,adrHome] [,server])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>The ID of the incident that you want to retrieve.</td>
</tr>
<tr>
<td>name</td>
<td>The name of the file to retrieve. To find the name of the file, use the showIncident command.</td>
</tr>
<tr>
<td>outputFile</td>
<td>The name of the file to which to write the output.</td>
</tr>
<tr>
<td>adrHome</td>
<td>The path for the ADR Home from which to retrieve the information. If this argument is not specified, the default ADR Home will be queried. The default ADR Home is the following location: ADR_BASE/diag/OFM/domain_name/server_name</td>
</tr>
<tr>
<td>server</td>
<td>The name of the Managed Server from which to collect information. This argument is valid only when you are connected to the Administration Server.</td>
</tr>
</tbody>
</table>

15.1.2.3 Example
The following example writes the contents of the incident dms_metrics3_i1.dmp to the specified output file:

getIncidentFile(id='1', name='dms_metrics3_i1.dmp', outputFile='/tmp/incident1_dms.txt')

The content of 'dms_metrics3_i1.dmp' is written to /tmp/incident1_dms.txt

15.1.3 listADRHomes
Use with WLST: Online

15.1.3.1 Description
Lists the paths of all of the ADR Homes for the server.

15.1.3.2 Syntax
listADRHomes([server])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>server</td>
<td>The name of the Managed Server from which to collect information. This argument is valid only when you are connected to the Administration Server.</td>
</tr>
</tbody>
</table>

15.1.3.3 Example
The following example lists the paths of the ADR homes:

listADRHomes()
diag/ofm/base_domain/WLS_Spaces
diag/ofm/fusionapps/GeneralLedger
15.1.4 listIncidents

Use with WLST: Online

15.1.4.1 Description
Lists the set of diagnostic incidents for the given problem ID, if specified, or all available incidents.

15.1.4.2 Syntax

listIncidents([id] [, adrHome] [, server])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>The ID of the problem for which you want to list the set of diagnostic incidents.</td>
</tr>
<tr>
<td>adrHome</td>
<td>The path for the ADR Home from which to query incidents. If this argument is not specified, the default ADR Home will be queried. The default ADR Home is the following location: ADR_BASE/diag/OFM/domain_name/server_name</td>
</tr>
<tr>
<td>server</td>
<td>The name of the Managed Server from which to collect information. This argument is valid only when you are connected to the Administration Server.</td>
</tr>
</tbody>
</table>

15.1.4.3 Example
The following example lists the incidents associated with the problem with the ID 1:

listIncidents(id="1")

<table>
<thead>
<tr>
<th>Incident Id</th>
<th>Problem Key</th>
<th>Incident Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>24</td>
<td>MDS-50300 [WLS_Spaces] [oracle.mds.repos]</td>
<td>Thu Mar 11 15:11:35 PDT</td>
</tr>
</tbody>
</table>

15.1.5 listProblems

Use with WLST: Online

15.1.5.1 Description
Lists the set of diagnostic problems associated with the specified ADR Home.

15.1.5.2 Syntax

listProblems([adrHome], [server])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>adrHome</td>
<td>The path for the ADR Home from which to query problems. If this argument is not specified, the default ADR Home will be queried. The default ADR Home is the following location: ADR_BASE/diag/OFM/domain_name/server_name</td>
</tr>
<tr>
<td>server</td>
<td>The name of the Managed Server from which to collect information. This argument is valid only when you are connected to the Administration Server.</td>
</tr>
</tbody>
</table>
15.1.5.3 Example
The following example lists the diagnostic problems in the default ADR home:

```java
listProblems()
```

<table>
<thead>
<tr>
<th>Problem Id</th>
<th>Problem Key</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>MDS-50300 [WLS_Spaces] [oracle.mds.repos]</td>
</tr>
<tr>
<td>2</td>
<td>JOC-38922 [AdminServer] [oracle.cache.network]</td>
</tr>
</tbody>
</table>

15.1.6 showIncident
Use with WLST: Online

15.1.6.1 Description
Shows the details of the specified incident.

15.1.6.2 Syntax

```
showIncident(id, [adrHome][, server])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>The ID of the incident that you want to view.</td>
</tr>
<tr>
<td>adrHome</td>
<td>The path for the ADR Home from which to query the incident. If this argument is not specified, the default ADR Home will be queried. The default ADR Home is the following location:</td>
</tr>
<tr>
<td></td>
<td>ADR_BASE/diag/OFM/domain_name/server_name</td>
</tr>
<tr>
<td>server</td>
<td>The name of the Managed Server from which to collect information. This argument is valid only when you are connected to the Administration Server.</td>
</tr>
</tbody>
</table>

15.1.6.3 Example
The following example displays information about the incident with the ID 10:

```java
showIncident(id="10")
```

Incident Id: 10
Problem Id: 1
Problem Key: MDS-50300 [WLS_Spaces] [oracle.mds.repos]
Incident Time: 25th March 2010 10:12:15 GMT
Error Message Id: MDS-50300
Execution Context: 0000ICK4rbVC8t6uBf9EH1AX1gF000000
Flood Controlled: false
Dump Files :
  dms_ecidctx1_i1.dmp
  jvm_threads2_i1.dmp
  dms_metrics3_i1.dmp
  odl_logs4_i1.dmp
  diagnostic_image_AdminServer_2010_03_25_11_12_15.zip
  readme.txt

15.2 Diagnostic Dump Commands
Use the commands in Table 15–3 to display information about dumps and to execute dumps.
15.2.1 describeDump

Use with WLST: Online

15.2.1.1 Description
Displays a description of the specified diagnostic dump.

15.2.1.2 Syntax
describeDump(name [,appName] [.server])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>name</td>
<td>The name of the dump for which to display information.</td>
</tr>
<tr>
<td>appName</td>
<td>The name of the deployed application for which information is gathered.</td>
</tr>
</tbody>
</table>
| server        | The name of the Managed Server from which to collect information. This argument is valid only when you are connected to the Administration Server.

15.2.1.3 Example
The following example displays information about the dump with the name odl.logs. You use the listDumps command to retrieve the list of available dumps.

describeDump(name="odl.logs")
Name: odl.logs
Description: Dumps recent ODL logs, or logs correlated by ECID

<table>
<thead>
<tr>
<th>Argument</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ECID</td>
<td>String</td>
<td>Execution Context Id to correlate log entries with</td>
</tr>
<tr>
<td>timestamp</td>
<td>String</td>
<td>Timestamp to query logs 5 minutes before/after</td>
</tr>
</tbody>
</table>

15.2.2 executeDump

Use with WLST: Online

15.2.2.1 Description
Executes the specified diagnostic dump.

15.2.2.2 Syntax
executeDump(name [,args] [,outputFile] [,id] [,adrHome] [,server])
Arguments that are either required or are optional can be specified using the "args" keyword. For example:

```
executeDump("java.sysprops", args={"prop" : "os.name"})
```

### 15.2.3 Examples

The following example executes the dump with the name jvm.threads and writes it to the file dumpout.txt:

```
executeDump(name="jvm.threads", outputFile="/tmp/dumpout.txt")
```

Diagnosis dump jvm.threads output written to /tmp/dumpoutput.txt

The following example executes the dump with the name jvm.threads and the Incident ID for 33 and writes it to the file dumpout.txt:

```
executeDump(name="jvm.threads", outputFile="/tmp/dumpout.txt", id="33")
```

Diagnosis dump jvm.threads output associated with incident 33 in ADR Home diag/ofm/base_domain/AdminServer

The following example executes a dump with the argument prop set to the value os.name:

```
executeDump("java.sysprops", args={"prop" : "os.name"})
```

### 15.2.3 listDumps

Use with WLST: Online

#### 15.2.3.1 Description
Displays the set of diagnostic dumps that can be executed.

#### 15.2.3.2 Syntax

```
listDumps([appName] [,server])
```
### 15.2.3.3 Example

The following example lists all of the available dumps.

```plaintext
listDumps()
  dms.metrics
dsMetrics
  jvm.classhistogram
defClassHist
  jvm.threads
  odl.threads
  odl.logs
```

Use the command `describeDump(name=<dumpName>)` for help on a specific dump.

**Argument Definition**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>appName</code></td>
<td>The name of a deployed application for which diagnostics are being gathered. For example, if you have multiple ADF applications deployed, each may register a dump called adf.dump. To execute this command for a specific application, you must specify the application name. If you specify this argument, the command returns the dumps for the specified application. If you do not specify this argument, the command returns the system dumps.</td>
</tr>
<tr>
<td><code>server</code></td>
<td>The name of the Managed Server from which to collect information. This argument is valid only when you are connected to the Administration Server.</td>
</tr>
</tbody>
</table>
The following sections describe the Oracle Fusion Middleware Information Rights Management custom WLST commands in detail. Topics include:

- **Section 16.1, "Overview of WLST IRM Commands"
- **Section 16.2, "General Server Commands"
- **Section 16.3, "Migration Commands"
- **Section 16.4, "Test Content Commands"
- **Section 16.5, "Languages Support Commands"
- **Section 16.6, "Oracle IRM Desktop Installers Commands"

For additional information about Oracle Information Rights Management, see *Oracle IRM Administrator's Guide*.

---

**Note:** To use these commands, you must invoke WLST from the Oracle home in which the component has been installed. See "Using Custom WLST Commands" in the *Oracle Fusion Middleware Administrator’s Guide*.

### 16.1 Overview of WLST IRM Commands

WLST IRM commands are divided into the following categories:

<table>
<thead>
<tr>
<th>Table 16–1</th>
<th>WLST IRM Command Categories</th>
</tr>
</thead>
<tbody>
<tr>
<td>Command Category</td>
<td>Description</td>
</tr>
<tr>
<td>General Server Commands</td>
<td>Make general changes to Oracle IRM Server settings.</td>
</tr>
<tr>
<td>Migration Commands</td>
<td>Back up and migrate Oracle IRM Server user data.</td>
</tr>
<tr>
<td>Test Content Commands</td>
<td>Set up test content for users of Oracle IRM Desktop.</td>
</tr>
<tr>
<td>Languages Support Commands</td>
<td>Set up languages support for users of Oracle IRM Server.</td>
</tr>
<tr>
<td>Oracle IRM Desktop Installers Commands</td>
<td>Set up software installation support for Oracle IRM Desktop.</td>
</tr>
</tbody>
</table>
16.2 General Server Commands

Use the WLST commands listed in Table 16–2 to make general changes to Oracle IRM Server settings.

**Table 16–2 WLST General Server Commands**

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>addIRMRefreshPeriod</td>
<td>Create a new refresh period.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMRefreshPeriod</td>
<td>Display an existing refresh period.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMRefreshPeriods</td>
<td>Display all the refresh periods.</td>
<td>Online</td>
</tr>
<tr>
<td>removeIRMRefreshPeriod</td>
<td>Remove an existing refresh period.</td>
<td>Online</td>
</tr>
<tr>
<td>updateIRMRefreshPeriod</td>
<td>Update an existing refresh period.</td>
<td>Online</td>
</tr>
<tr>
<td>addIRMSyncWindow</td>
<td>Create a new sync window.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMSyncWindow</td>
<td>Display an existing sync window.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMSyncWindows</td>
<td>Display all the sync windows.</td>
<td>Online</td>
</tr>
<tr>
<td>removeIRMSyncWindow</td>
<td>Remove an existing sync window.</td>
<td>Online</td>
</tr>
<tr>
<td>updateIRMSyncWindow</td>
<td>Update an existing sync window.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMCryptoSchema</td>
<td>Display the cryptography algorithm.</td>
<td>Online</td>
</tr>
<tr>
<td>setIRMCryptoSchema</td>
<td>Set the cryptography algorithm.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMDeviceCount</td>
<td>Display the device count.</td>
<td>Online</td>
</tr>
<tr>
<td>setIRMDeviceCount</td>
<td>Set the device count.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMJournalCleanUp</td>
<td>Display the current report record clean-up values.</td>
<td>Online</td>
</tr>
<tr>
<td>setIRMJournalCleanUp</td>
<td>Set report record clean-up values.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMLicenseStateCleanUp</td>
<td>Display the license state clean-up frequency.</td>
<td>Online</td>
</tr>
<tr>
<td>setIRMLicenseStateCleanUp</td>
<td>Set the license state clean-up frequency.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMPrivacyURL</td>
<td>Display the URL of the privacy statement page.</td>
<td>Online</td>
</tr>
<tr>
<td>setIRMPrivacyURL</td>
<td>Set the URL of the privacy statement page.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMKeyStore</td>
<td>Display the type and location of the Oracle IRM keystore.</td>
<td>Online</td>
</tr>
<tr>
<td>setIRMKeyStore</td>
<td>Set the type and location of the Oracle IRM keystore.</td>
<td>Online</td>
</tr>
</tbody>
</table>

16.2.1 addIRMRefreshPeriod

Online command that creates a new refresh period.

16.2.1.1 Description

This command creates a refresh period. A refresh period is the maximum length of time that a user can use rights before the rights are refreshed from the server.

16.2.1.2 Syntax

```text
addIRMRefreshPeriod(duration,dtype)
```
<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>duration</td>
<td>Specifies the value of the refresh period. Integer.</td>
</tr>
<tr>
<td>dtype</td>
<td>Specifies the unit of the refresh period. 'MINUTES', 'HOURS', 'DAYS', 'MONTHS', 'YEARS'.</td>
</tr>
</tbody>
</table>

### 16.2.1.3 Examples

The following example creates a refresh period of 5 hours:

```
wlsc:/base_domain/serverConfig> addIRMRefreshPeriod(5,"HOURS")
```

The following example creates a refresh period of 50 minutes:

```
wls:/base_domain/serverConfig> addIRMRefreshPeriod(50,"MINUTES")
```

### 16.2.2 getIRMRefreshPeriod

Online command that displays an existing refresh period.

#### 16.2.2.1 Description

This command displays the refresh period that is present at the specified index. A refresh period is the maximum length of time that a user can use rights before the rights are refreshed from the server.

#### 16.2.2.2 Syntax

```
getIRMRefreshPeriod(pindex)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>pindex</td>
<td>Specifies the index of the refresh period.</td>
</tr>
</tbody>
</table>

#### 16.2.3 Examples

The following example displays the refresh period that is present at index zero:

```
wls:/base_domain/serverConfig> getIRMRefreshPeriod(0)
```

The following example displays the refresh period that is present at index one:

```
wls:/base_domain/serverConfig> getIRMRefreshPeriod(1)
```

### 16.2.3 getIRMRefreshPeriods

Online command that displays all existing refresh periods.

#### 16.2.3.1 Description

This command displays all existing refresh periods. A refresh period is the maximum length of time that a user can use rights before the rights are refreshed from the server.

#### 16.2.3.2 Syntax

```
getIRMRefreshPeriods()
```

#### 16.2.3.3 Example

```
wls:/base_domain/serverConfig> getIRMRefreshPeriods()
```
16.2.4 removeIRMRefreshPeriod

Online command that removes an existing refresh period.

16.2.4.1 Description
This command removes a refresh period that is present at the specified index. A refresh period is the maximum length of time that a user can use rights before the rights are refreshed from the server.

16.2.4.2 Syntax
removeIRMRefreshPeriod(pindex)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>pindex</td>
<td>Specifies the index of the refresh period.</td>
</tr>
</tbody>
</table>

16.2.4.3 Examples
The following example removes the refresh period that is present at index zero:
```
wls:/base_domain/serverConfig> removeIRMRefreshPeriod(0)
```
The following example removes the refresh period that is present at index one:
```
wls:/base_domain/serverConfig> removeIRMRefreshPeriod(1)
```

16.2.5 updateIRMRefreshPeriod

Online command that updates an existing refresh period.

16.2.5.1 Description
This command updates an existing refresh period. A refresh period is the maximum length of time that a user can use rights before the rights are refreshed from the server.

16.2.5.2 Syntax
updateIRMRefreshPeriod(pindex,duration,dtype)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>pindex</td>
<td>Specifies the index of the refresh period.</td>
</tr>
<tr>
<td>duration</td>
<td>Specifies the value of the refresh period. Integer.</td>
</tr>
<tr>
<td>dtype</td>
<td>Specifies the unit of the refresh period. 'MINUTES', 'HOURS', 'DAYS', 'MONTHS' or 'YEARS'.</td>
</tr>
</tbody>
</table>

16.2.5.3 Examples
The following example updates the refresh period at index zero to have a duration of 5 hours:
```
wls:/base_domain/serverConfig> updateIRMRefreshPeriod(0,5,"HOURS")
```
The following example updates the refresh period at index zero to have a duration of 50 minutes:
```
wls:/base_domain/serverConfig> updateIRMRefreshPeriod(0,50,"MINUTES")
```
16.2.6 addIRMSyncWindow

Online command that creates a sync window.

16.2.6.1 Description
This command creates a sync window. A sync window is a period during which Oracle IRM Desktop will attempt to contact the server to synchronize rights.

16.2.6.2 Syntax
addIRMSyncWindow(day, stHrs, stMins, endHrs, endMins)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>day</td>
<td>Specifies the weekday. 'MONDAY', 'TUESDAY', etc.</td>
</tr>
<tr>
<td>stHrs</td>
<td>Specifies the start hours. Integer.</td>
</tr>
<tr>
<td>stMins</td>
<td>Specifies the start minutes. Integer.</td>
</tr>
<tr>
<td>endHrs</td>
<td>Specifies the end hours. Integer.</td>
</tr>
<tr>
<td>endMins</td>
<td>Specifies the end minutes. Integer.</td>
</tr>
</tbody>
</table>

16.2.6.3 Example
The following example creates a sync window that will result in Oracle IRM Desktop attempting to contact the server between 9.30am and 6.30pm on Mondays:

wls:/base_domain/serverConfig> addIRMSyncWindow("MONDAY", 9, 30, 6, 30)

16.2.7 getIRMSyncWindow

Online command that displays an existing sync window.

16.2.7.1 Description
This command displays a sync window that is present at the specified index. A sync window is a period during which Oracle IRM Desktop will attempt to contact the server to synchronize rights.

16.2.7.2 Syntax
getIRMSyncWindow(sindex)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>sindex</td>
<td>Specifies the index of the sync window.</td>
</tr>
</tbody>
</table>

16.2.7.3 Examples
The following example displays the sync window at index zero:

wls:/base_domain/serverConfig> getIRMSyncWindow(0)

The following example displays the sync window at index one:

wls:/base_domain/serverConfig> getIRMSyncWindow(1)

16.2.8 getIRMSyncWindows

Online command that displays all existing sync windows.
16.2.8.1 Description
This command displays all existing sync windows. A sync window is a period during which Oracle IRM Desktop will attempt to contact the server to synchronize rights.

16.2.8.2 Syntax
getIRMSyncWindows()

16.2.8.3 Example
wls:/base_domain/serverConfig> getIRMSyncWindows()

16.2.9 removeIRMSyncWindow
Online command that removes an existing sync window.

16.2.9.1 Description
This command removes a sync window that is present at the specified index. A sync window is a period during which Oracle IRM Desktop will attempt to contact the server to synchronize rights.

16.2.9.2 Syntax
removeIRMSyncWindow(sindex)

16.2.9.3 Examples
The following example removes the sync window at index zero:
wls:/base_domain/serverConfig> removeIRMSyncWindow(0)
The following example removes the sync window at index one:
wls:/base_domain/serverConfig> removeIRMSyncWindow(1)

16.2.10 updateIRMSyncWindow
Online command that updates an existing sync window.

16.2.10.1 Description
This command updates an existing sync window. A sync window is a period during which Oracle IRM Desktop will attempt to contact the server to synchronize rights.

16.2.10.2 Syntax
updateIRMSyncWindow(indexOfDay, day, stHrs, stMins, endHrs, endMins)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>sindex</td>
<td>Specifies the index of the sync window.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>indexOfDay</td>
<td>Specifies the index of the sync window. Integer.</td>
</tr>
<tr>
<td>day</td>
<td>Specifies the weekday. 'MONDAY', 'TUESDAY', etc.</td>
</tr>
<tr>
<td>stHrs</td>
<td>Specifies the start hours. Integer.</td>
</tr>
<tr>
<td>stMins</td>
<td>Specifies the start minutes. Integer.</td>
</tr>
</tbody>
</table>
16.2.10.3 Example
The following example updates the sync window at index zero so that Oracle IRM Desktop will attempt to contact the server between 9.30am and 5.30pm on Mondays:

```
wls:/base_domain/serverConfig> updateIRMSyncWindow(0, "MONDAY", 9, 30, 5, 30)
```

16.2.11 getIRMCryptoSchema

Online command that displays the cryptography algorithm.

### 16.2.11.1 Description
This command displays the cryptography algorithm currently applied to files that are sealed using Oracle IRM.

### 16.2.11.2 Syntax
```
getIRMCryptoSchema()
```

### 16.2.11.3 Example
```
wls:/base_domain/serverConfig> getIRMCryptoSchema()
```

16.2.12 setIRMCryptoSchema

Online command that sets the cryptography algorithm.

### 16.2.12.1 Description
This command sets the cryptography algorithm that will be applied to files that are sealed using Oracle IRM. The default of AES128 is recommended.

### 16.2.12.2 Syntax
```
setIRMCryptoSchema(cryptID)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>cryptID</td>
<td>Specifies the name of the cryptography algorithm. Possible algorithm names are AES128, AES256, AES128-FIPS, AES256-FIPS, DES3-FIPS.</td>
</tr>
</tbody>
</table>

### 16.2.12.3 Example
The following example sets the cryptography algorithm used for Oracle IRM communications to AES128:

```
wls:/base_domain/serverConfig> setIRMCryptoSchema("AES128")
```

16.2.13 getIRMDeviceCount

Online command that displays the device count.
16.2.13 Description
This command displays the maximum number of devices on which a user can open a sealed document at one time. The value applies to all users, and does not differ for individual users.

16.2.13.2 Syntax
getIRMDeviceCount()

16.2.13.3 Example
wls:/base_domain/serverConfig> getIRMDeviceCount()

16.2.14 setIRMDeviceCount
Online command that sets the device count.

16.2.14.1 Description
This command sets the maximum number of devices on which a user can open a sealed document at one time. The value applies to all users. The device count is normally kept low (1 or 2) to make it difficult to circumvent document access restrictions by sharing passwords.

16.2.14.2 Syntax
setIRMDeviceCount(devCount)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>devCount</td>
<td>Specifies the device count value (the number of devices). Integer.</td>
</tr>
</tbody>
</table>

16.2.14.3 Example
The following example sets the device count to 2:

wls:/base_domain/serverConfig> setIRMDeviceCount(2)

16.2.15 getIRMJournalCleanUp
Online command that displays the current report record clean-up values.

16.2.15.1 Description
This command displays the report record clean-up values. The values show how often report record clean-ups are performed, and the maximum age of the report records before they are deleted.

16.2.15.2 Syntax
getIRMJournalCleanUp()

16.2.15.3 Example
wls:/base_domain/serverConfig> getIRMJournalCleanUp()

16.2.16 setIRMJournalCleanUp
Online command that sets report record clean-up values.
16.2.16.1 Description
This command sets how often report record clean-ups are performed, and the maximum age of report records before they are deleted.

16.2.16.2 Syntax
setIRMJournalCleanUp(clDuration, clUnitType, retDuration, retUnitType)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>clDuration</td>
<td>Specifies the value for how often report record clean-ups are performed. Integer.</td>
</tr>
<tr>
<td>clUnitType</td>
<td>Specifies the unit for how often report record clean-ups are performed. 'MINUTES', 'HOURS', 'DAYS', 'MONTHS', 'YEARS'.</td>
</tr>
<tr>
<td>retDuration</td>
<td>Specifies the value for the maximum age of report records before they are deleted. Integer.</td>
</tr>
<tr>
<td>retUnitType</td>
<td>Specifies the unit for the maximum age of report records before they are deleted. 'MINUTES', 'HOURS', 'DAYS', 'MONTHS', 'YEARS'.</td>
</tr>
</tbody>
</table>

16.2.16.3 Example
The following example runs report record clean-ups every 5 days, and deletes report records that are 6 months old:

```
wls:/base_domain/serverConfig> setIRMJournalCleanUp(5, "DAYS", 6, "MONTHS")
```

16.2.17 getIRMLicenseStateCleanUp
Online command that displays the license state clean-up frequency.

16.2.17.1 Description
This command displays the license state clean-up frequency (the frequency at which license records will be deleted).

16.2.17.2 Syntax
getIRMLicenseStateCleanUp()

16.2.17.3 Example
```
wls:/base_domain/serverConfig> getIRMLicenseStateCleanUp()
```

16.2.18 setIRMLicenseStateCleanUp
Online command that sets the license state clean-up frequency.

16.2.18.1 Description
This command sets the license state clean-up frequency (the frequency at which license records will be deleted).

16.2.18.2 Syntax
setIRMLicenseStateCleanUp(duration, unitType)
16.2.18.3 Examples
The following example sets the frequency at which license records will be deleted to 10 hours:

```
setIRMLicenseStateCleanUp(10,"HOURS")
```

The following example sets the frequency at which license records will be deleted to 50 minutes:

```
setIRMLicenseStateCleanUp(50,"MINUTES")
```

16.2.19 getIRMPrivacyURL
Online command that displays the URL of the privacy statement page.

16.2.19.1 Description
This command displays the URL of the privacy statement page. The privacy statement page displays a statement that users must accept before viewing sealed content.

16.2.19.2 Syntax
```
getIRMPrivacyURL()
```

16.2.19.3 Examples
```
getIRMPrivacyURL()
```

16.2.20 setIRMPrivacyURL
Online command that sets the URL of the privacy statement page.

16.2.20.1 Description
This command sets the URL of a privacy statement that users must accept before viewing sealed content.

16.2.20.2 Syntax
```
setIRMPrivacyURL(privacyURL)
```

16.2.20.3 Example
The following example sets the URL of the privacy policy page to "http://irm.example.com/":

```
setIRMPrivacyURL("http://irm.example.com/")
```
16.2.21 getIRMKeyStore
Online command that displays the type and location of the Oracle IRM keystore.

16.2.21.1 Description
This command displays the type and location of the Oracle IRM keystore.

16.2.21.2 Syntax
getIRMKeyStore()

16.2.21.3 Examples
wls:/base_domain/serverConfig> getIRMKeyStore()

16.2.22 setIRMKeyStore
Online command that sets the type and location of the Oracle IRM keystore.

16.2.22.1 Description
This command sets the type and location of the Oracle IRM keystore. You should not normally need to change the keystore type and location from the default (type JKS at location ${domain.home}/config/fmwconfig/irm.jks).

16.2.22.2 Syntax
setIRMKeyStore()

You will be prompted to provide the following arguments:

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>KeyStore Type</td>
<td>Specifies the type of the keystore.</td>
</tr>
<tr>
<td>KeyStore Location</td>
<td>Specifies the location of the keystore.</td>
</tr>
</tbody>
</table>

16.2.22.3 Example
The following example sets the keystore type to JCEKS and the keystore location to D:/exampledir:/

wls:/base_domain/serverConfig> setIRMKeyStore()
Enter KeyStore Type: JCEKS
Enter KeyStore Location: D:/exampledir/

16.3 Migration Commands
Use the WLST commands listed in Table 16–3 to set up import and export of user data between instances of Oracle IRM Server.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>setIRMExportFolder</td>
<td>Set or clear the data export folder location.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMExportFolder</td>
<td>Display the value for the data export folder.</td>
<td>Online</td>
</tr>
<tr>
<td>setIRMImportFolder</td>
<td>Set or clear the data import folder location.</td>
<td>Online</td>
</tr>
</tbody>
</table>
16.3.1 setIRMExportFolder

Online command that sets or clears the data export folder location.

16.3.1.1 Description
This command sets or clears the location of the folder used for data export.

16.3.1.2 Syntax

\[
\text{setIRMExportFolder}(\text{folder})
\]

16.3.1.3 Example

\[
wls:/\text{base\_domain/\text{serverConfig}} \rightarrow \text{setIRMExportFolder}(\text{"export"})
\]

16.3.2 getIRMExportFolder

Online command that displays the value of the data export folder.

16.3.2.1 Description
This command displays the location of the folder used for data export.

16.3.2.2 Syntax

\[
\text{getIRMExportFolder}()
\]

16.3.2.3 Example

\[
wls:/\text{base\_domain/\text{serverConfig}} \rightarrow \text{getIRMExportFolder}()
\]

16.3.3 setIRMImportFolder

Online command that sets or clears the data import folder location.

16.3.3.1 Description
This command sets or clears the location of the folder used for data import.

16.3.3.2 Syntax

\[
\text{setIRMImportFolder}(\text{folder})
\]

Argument Definition

\[
\begin{array}{ll}
\text{folder} & \text{Specifies the import folder value.}
\end{array}
\]

Table 16–3: WLST Commands for Import and Export of Oracle IRM user data

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>getIRMImportFolder</td>
<td>Display the value for the data import folder.</td>
<td>Online</td>
</tr>
</tbody>
</table>

**Argument Definition**

| folder | Specifies the data export folder value. |
16.3.3 Example
wls:/base_domain/serverConfig> setIRMImportFolder("import")

16.3.4 getIRMImportFolder
Online command that displays the value of the data import folder.

16.3.4.1 Description
This command displays the location of the folder used for data import.

16.3.4.2 Syntax
getIRMImportFolder()

16.3.4.3 Example
wls:/base_domain/serverConfig> getIRMImportFolder()

16.4 Test Content Commands
Use the WLST commands listed in Table 16–4 to set up test content for users of Oracle IRM Desktop.

Table 16–4  WLST Commands for Test Content

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>addIRMTestContent</td>
<td>Create a new test content instance.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMTestContent</td>
<td>Display details for an existing test content instance.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMTestContents</td>
<td>Display details of all existing test content instances.</td>
<td>Online</td>
</tr>
<tr>
<td>removeIRMTestContent</td>
<td>Remove an existing test content instance.</td>
<td>Online</td>
</tr>
<tr>
<td>updateIRMTestContent</td>
<td>Update an existing text content instance.</td>
<td>Online</td>
</tr>
</tbody>
</table>

16.4.1 addIRMTestContent
Online command that creates a new test content instance.

16.4.1.1 Description
This command creates a test content instance. Test content instances identify an item of test content, usually an image file. Test content is shown in a sealed document when Oracle IRM Desktop successfully connects to Oracle IRM Server through the client test facility.

16.4.1.2 Syntax
addIRMTestContent(uri,localeKeys,testNames)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>uri</td>
<td>Specifies the URI of the test content (for example, an image file).</td>
</tr>
</tbody>
</table>
## Test Content Commands

### 16.4.1 Examples

The following example creates a test content instance comprising an image named exampleImage.jpg at http://irm.example.com, for use with English installations, and showing the name 'Test Content':

```
wls:/base_domain/serverConfig>
addIRMTestContent("http://irm.example.com/exampleImage.jpg","en","Test Content")
```

The following example creates a test content instance comprising an image named exampleImage.jpg at http://irm.example.com, for use with English and French installations, and showing the names 'Test Content (en)' and 'Test Content (fr)':

```
wls:/base_domain/serverConfig>
addIRMTestContent("http://irm.example.com/exampleImage.jpg","en,fr","Test Content (en),Test Content (fr)")
```

### 16.4.2 getIRMTestContent

Online command that displays the details of an existing test content instance.

#### 16.4.2.1 Description

This command displays the details of the test content instance that is present at the specified index. Test content instances identify an item of test content, usually an image file. Test content is shown in a sealed document when Oracle IRM Desktop successfully connects to Oracle IRM Server through the client test facility.

---

### Table 16–5 Language codes (ISO 639-1 "two-letter codes")

<table>
<thead>
<tr>
<th>Language/Code</th>
<th>Language/Code</th>
<th>Language/Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arabic: ar</td>
<td>Greek: el</td>
<td>Romanian: ro</td>
</tr>
<tr>
<td>Brazilian Portuguese: pt-BR</td>
<td>Hebrew: iw</td>
<td>Russian: ru</td>
</tr>
<tr>
<td>Czech: cs</td>
<td>Hungarian: hu</td>
<td>Simplified Chinese: zh-CN</td>
</tr>
<tr>
<td>Danish: da</td>
<td>Italian: it</td>
<td>Slovak: sk</td>
</tr>
<tr>
<td>Dutch: nl</td>
<td>Japanese: ja</td>
<td>Spanish: es</td>
</tr>
<tr>
<td>English: en</td>
<td>Korean: ko</td>
<td>Swedish: sv</td>
</tr>
<tr>
<td>Finnish: fi</td>
<td>Norwegian: no</td>
<td>Thai: th</td>
</tr>
<tr>
<td>French: fr</td>
<td>Polish: pl</td>
<td>Traditional Chinese: zh-TW</td>
</tr>
<tr>
<td>German: de</td>
<td>Portuguese: pt</td>
<td>Turkish: tr</td>
</tr>
</tbody>
</table>

---

### Argument Definition

- **localeKeys**: Specifies the locale(s) associated with this test content instance. Must be from the list of two-letter language codes given in Table 16–5 (for example, 'fr' for French). If there is more than one supported locale for an instance, the two-letter codes must be listed as comma-separated values.

- **testNames**: Specifies the name(s) associated with this test content instance. If there is more than one name for a URI, they must be specified as comma-separated values.
16.4.2.2 Syntax
getIRMTestContent(tindex)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>tindex</td>
<td>Specifies the index of the test content instance.</td>
</tr>
</tbody>
</table>

16.4.2.3 Examples
The following example displays the details of the test content instance at index zero:

```
wlst:/base_domain/serverConfig> getIRMTestContent(0)
```

The following example displays the details of the test content instance at index one:

```
wlst:/base_domain/serverConfig> getIRMTestContent(1)
```

16.4.3 getIRMTestContents
Online command that displays all the test content instances.

16.4.3.1 Description
This command displays all the test content instances. Test content instances identify an item of test content, usually an image file. Test content is shown in a sealed document when Oracle IRM Desktop successfully connects to Oracle IRM Server through the client test page.

16.4.3.2 Syntax
getIRMTestContents()

16.4.3.3 Example

```
wls:/base_domain/serverConfig> getIRMTestContents()
```

16.4.4 removeIRMTestContent
Online command that removes an existing test content instance.

16.4.4.1 Description
This command removes the test content instance that is present at the specified index. Test content instances identify an item of test content, usually an image file.

16.4.4.2 Syntax
removeIRMTestContent(tindex)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>tindex</td>
<td>Specifies the index of test content.</td>
</tr>
</tbody>
</table>

16.4.4.3 Examples
The following example removes the test content instance at index zero:

```
wls:/base_domain/serverConfig> removeIRMTestContent(0)
```

The following example removes the test content instance at index one:
16.4.5 updateIRMTestContent

Online command that updates an existing test content instance.

16.4.5.1 Description
This command updates an existing test content instance. Test content instances identify an item of test content, usually an image file. Test content is shown in a sealed document when Oracle IRM Desktop successfully connects to Oracle IRM Server through the client test facility.

16.4.5.2 Syntax
updateIRMTestContent(tindex, uri, localeKeys, testNames)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>tindex</td>
<td>Specifies the index of the test content instance. Integer.</td>
</tr>
<tr>
<td>uri</td>
<td>Specifies the URI of the test content (for example, an image file).</td>
</tr>
<tr>
<td>localeKeys</td>
<td>Specifies the locale(s) associated with this test content instance. Must be from the list of two-letter language codes given in Table 16–5 (for example, 'fr' for French). If there is more than one supported locale for an instance, the two-letter codes must be listed as comma-separated values.</td>
</tr>
<tr>
<td>testNames</td>
<td>Specifies the name(s) associated with this test content instance. If there is more than one name for a URI, they must be specified as comma-separated values.</td>
</tr>
</tbody>
</table>

16.4.5.3 Examples
The following example updates a test content instance by changing the image to exampleImage.jpg at http://irm.example.com, for use with English installations, and showing the name 'Test Content':

wls:/base_domain/serverConfig> updateIRMTestContent(0, "http://irm.example.com/exampleImage.jpg", "en", "Test Content")

The following example updates a test content instance by changing the image to exampleImage.jpg at http://irm.example.com, for use with English and French installations, and showing the names 'Test Content (English)' and 'Test Content (French)':

wls:/base_domain/serverConfig> updateIRMTestContent(0, "http://irm.example.com/exampleImage.jpg", "en,fr", "Test Content (English), Test Content (French)")

16.5 Languages Support Commands
Use the WLST commands listed in Table 16–6 to set up languages support for users of Oracle IRM Server.
### 16.5.1 addIRMTranslation

Online command that creates a new language support instance.

#### 16.5.1.1 Description
This command creates a new language support instance. Each language support instance provides the facility in Oracle IRM Server to add names and descriptions in one or more languages (in addition to the default language).

#### 16.5.1.2 Syntax

```plaintext
addIRMTranslation(transList)
```

**Argument Definition**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>transList</td>
<td>Specifies the supported language(s). Must be from the list of two-letter language codes given in Table 16–5 (for example, 'fr' for French). If there is more than one supported language for an instance, the two-letter codes must be listed as comma-separated values.</td>
</tr>
</tbody>
</table>

#### 16.5.1.3 Examples
The following example creates a language support instance that will enable users of Oracle IRM Server to add names and descriptions in French (in addition to their default language):

```plaintext
wls:/base_domain/serverConfig> addIRMTranslation("fr")
```

The following example creates a language support instance that will enable users of Oracle IRM Server to add names and descriptions in French and Arabic (in addition to their default language):

```plaintext
wls:/base_domain/serverConfig> addIRMTranslation("fr,ar")
```

### 16.5.2 getIRMDefaultTranslation

Online command that displays the default language.

#### 16.5.2.1 Description
This command displays the default language.
16.5.2.2 Syntax
getIRMDefaultTranslation()

16.5.2.3 Example
wls:/base_domain/serverConfig> getIRMDefaultTranslation()

16.5.3 getIRMTranslations
Online command that displays all the language support instances.

16.5.3.1 Description
This command displays all the language support instances. Each language support instance provides the facility in Oracle IRM Server to add names and descriptions in one or more languages (in addition to the default language).

16.5.3.2 Syntax
getIRMTranslations()

16.5.3.3 Example
wls:/base_domain/serverConfig> getIRMTranslations()

16.5.4 removeIRMTranslation
Online command that removes an existing language support instance.

16.5.4.1 Description
This command removes the language support instance that is present at the specified index. Each language support instance provides the facility in Oracle IRM Server to add names and descriptions in one or more languages (in addition to the default language).

16.5.4.2 Syntax
removeIRMTranslation(tindex)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>tindex</td>
<td>Specifies the index of the language support instance.</td>
</tr>
</tbody>
</table>

16.5.4.3 Examples
The following example removes the language support instance at index zero:

wls:/base_domain/serverConfig> removeIRMTranslation(0)

The following example removes the language support instance at index one:

wls:/base_domain/serverConfig> removeIRMTranslation(1)

16.5.5 setIRMTranslations
Online command that sets the default language, and sets a language support instance for one or more languages in addition to the default language.
16.5.5.1 Description
This command sets the default language, and sets a language support instance for one or more languages in addition to the default language. Each language support instance provides the facility in Oracle IRM Server to add names and descriptions in one or more languages (in addition to the default language).

16.5.5.2 Syntax
setIRMTranslations(defaultTrans,transList)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>defaultTrans</td>
<td>Specifies the default language. Language code (for example, 'en' for English).</td>
</tr>
<tr>
<td>transList</td>
<td>Specifies the supported language(s). Must be from the list of two-letter language codes given in Table 16–5 (for example, 'fr' for French). If there is more than one supported language for an instance, the two-letter codes must be listed as comma-separated values.</td>
</tr>
</tbody>
</table>

16.5.5.3 Examples
The following example enables users of Oracle IRM Server to enter names and descriptions in English as the default language, and additionally to enter names and descriptions in French:

```
wlst:/base_domain/serverConfig> setIRMTranslations("en","fr")
```

The following example enables users of Oracle IRM Server to enter names and descriptions in English as the default language, and additionally to enter names and descriptions in French and Arabic:

```
wlst:/base_domain/serverConfig> setIRMTranslations("en","fr,ar")
```

16.6 Oracle IRM Desktop Installers Commands
Use the WLST commands listed in Table 16–7 to set up installation support for Oracle IRM Desktop software.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>addIRMDownload</td>
<td>Create a new installer.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMDownload</td>
<td>Display the details for an existing installer.</td>
<td>Online</td>
</tr>
<tr>
<td>getIRMDownloads</td>
<td>Display the details for all installers.</td>
<td>Online</td>
</tr>
<tr>
<td>removeIRMDownload</td>
<td>Remove an existing installer.</td>
<td>Online</td>
</tr>
<tr>
<td>updateIRMDownload</td>
<td>Update an existing installer.</td>
<td>Online</td>
</tr>
</tbody>
</table>

16.6.1 addIRMDownload
Online command that creates a new installer.
16.6.1 Description
This command creates a new installer. Each installer identifies the locale and URI of software for installing Oracle IRM Desktop, and displays a name and version number that enables users of Oracle IRM Server to select the installer.

16.6.1.2 Syntax
addIRMDownload(locale, name, version, uri)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>locale</td>
<td>Specifies the locale of the installer. Must be from the list of two-letter language codes given in Table 16–5 (for example, 'en' for English).</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name for the installer.</td>
</tr>
<tr>
<td>version</td>
<td>Specifies the version of the installer. This is a label for the installer, and is not verified against the associated installation software.</td>
</tr>
<tr>
<td>uri</td>
<td>Specifies the URI of Oracle IRM Desktop installation software.</td>
</tr>
</tbody>
</table>

16.6.1.3 Example
The following example creates an installer for English language installation software at http://irm.example.com/, with the name 'Oracle IRM Desktop' and the version number 11.1.1.1.0.0 visible to users of Oracle IRM Server when they select this installer:

```
wls:/base_domain/serverConfig> addIRMDownload("en","Oracle IRM Desktop","11.1.1.1.0.0","http://irm.example.com/")
```

16.6.2 getIRMDownload
Online command that displays the details for an existing installer.

16.6.2.1 Description
This command displays the details for an installer that is present at the specified index. Each installer identifies the locale and URI of software for installing Oracle IRM Desktop, and displays a name and version number that enables users of Oracle IRM Server to select the installer.

16.6.2.2 Syntax
getIRMDownload(dindex)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>dindex</td>
<td>Specifies the index of the download.</td>
</tr>
</tbody>
</table>

16.6.2.3 Examples
The following example displays the details for the installer at index zero:

```
wls:/base_domain/serverConfig> getIRMDownload(0)
```

The following example displays the details for the installer at index one:

```
wls:/base_domain/serverConfig> getIRMDownload(1)
```

16.6.3 getIRMDownloads
Online command that displays the details of all installers.
16.6.3.1 Description
This command displays the details of all installers. Each installer identifies the locale and URI of software for installing Oracle IRM Desktop, and displays a name and version number that enables users of Oracle IRM Server to select the installer.

16.6.3.2 Syntax
getIRMDownloads()

16.6.3.3 Example
wls:/base_domain/serverConfig> getIRMDownloads()

16.6.4 removeIRMDownload
Online command that removes an existing installer.

16.6.4.1 Description
Removes the installer that is present at the specified index. Each installer identifies the locale and URI of software for installing Oracle IRM Desktop, and displays a name and version number that enables users of Oracle IRM Server to select the installer.

16.6.4.2 Syntax
removeIRMDownload(dindex)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>dindex</td>
<td>Specifies the index of the download.</td>
</tr>
</tbody>
</table>

16.6.4.3 Examples
The following example removes the installer at index zero:

wls:/base_domain/serverConfig> removeIRMDownload(0)

The following example removes the installer at index one:

wls:/base_domain/serverConfig> removeIRMDownload(1)

16.6.5 updateIRMDownload
Online command that updates an existing installer.

16.6.5.1 Description
This command updates an existing installer. Each installer identifies the locale and URI of software for installing Oracle IRM Desktop, and displays a name and version number that enables users of Oracle IRM Server to select the installer.

16.6.5.2 Syntax
updateIRMDownload(dindex,locale,name,version,uri)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>dindex</td>
<td>Specifies the index of the installer. Integer.</td>
</tr>
</tbody>
</table>
**Oracle IRM Desktop Installers Commands**

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>

</thead>
<tbody>
<tr>
<td>locale</td>
<td>Specifies the locale of the download. Must be from the list of two-letter language codes given in Table 16–5 (for example, 'en' for English).</td>
</tr>
<tr>
<td>name</td>
<td>Specifies the name for the installer.</td>
</tr>
<tr>
<td>version</td>
<td>Specifies the version of the installer. This is a label for the installer, and is not verified against the associated installation software.</td>
</tr>
<tr>
<td>uri</td>
<td>Specifies the URI for the Oracle IRM Desktop installation software.</td>
</tr>
</tbody>
</table>

### 16.6.5.3 Example

The following example updates the installer for index zero. After the update, the installation software is English language and is located at http://irm.example.com/. The name 'Oracle IRM Desktop (English)' and the version number 11.1.1.0.0 will be visible to users of Oracle IRM Server when they select this installer.

```
wlS:/base_domain/serverConfig> updateIRMDownload(0,"en","Oracle IRM Desktop (English)","11.1.1.0.0","http://irm.example.com/")
```
The following sections describe the WLST commands that are specific to Oracle Imaging and Process Management. Topics include:

- Section 17.1, "Overview of Oracle I/PM WLST Command Categories"
- Section 17.2, "Diagnostic Commands"
- Section 17.3, "Oracle I/PM Configuration Commands"

### 17.1 Overview of Oracle I/PM WLST Command Categories

WLST commands specific to Imaging and Process Management are divided into the following categories.

<table>
<thead>
<tr>
<th>Command category</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diagnostic Commands</td>
<td>Return workflow agent and other processing information.</td>
</tr>
<tr>
<td>Oracle I/PM Configuration Commands</td>
<td>Configure settings specific to Imaging and Process Management.</td>
</tr>
</tbody>
</table>

### 17.2 Diagnostic Commands

Use the Oracle I/PM WLST diagnostic commands, listed in table Table 17–2, to list and organize processing failures during workflow processes.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>clearIPMWorkflowFaults</td>
<td>Clear processing failures that occurred during workflow agent processing.</td>
<td>Online</td>
</tr>
<tr>
<td>listIPMWorkflowFaults</td>
<td>Provide details of processing failures that occurred during workflow agent processing.</td>
<td>Online</td>
</tr>
<tr>
<td>repairIPMWorkflowFaults</td>
<td>Repair processing failures that occurred during workflow agent processing.</td>
<td>Online</td>
</tr>
<tr>
<td>sumIPMWorkflowFaults</td>
<td>Count processing failures during workflow agent processing, grouped by choice of date, application ID, or batch ID.</td>
<td>Online</td>
</tr>
<tr>
<td>resetIpmDMSMetrics</td>
<td>Reset DMS metrics to zero.</td>
<td>Online</td>
</tr>
</tbody>
</table>
17.2.1 clearIPMWorkflowFaults

Command Category: Diagnostic Commands

Use with WLST: Online

17.2.1.1 Description
Clear processing failures that have occurred during workflow agent processing.

17.2.1.2 Syntax

clearIPMWorkflowFaults([startDate], [endDate], [appId], [batchId])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>startDate</td>
<td>Optional. The start of the date range for which error details should be</td>
</tr>
<tr>
<td></td>
<td>repaired, in yyyy-MM-dd format.</td>
</tr>
<tr>
<td>endDate</td>
<td>Optional. The end of the date range for which error details should be</td>
</tr>
<tr>
<td></td>
<td>repaired, in yyyy-MM-dd format.</td>
</tr>
<tr>
<td>appId</td>
<td>Optional. The application ID for which error details should be repaired, in</td>
</tr>
<tr>
<td></td>
<td>yyyy-MM-dd format.</td>
</tr>
<tr>
<td>batchId</td>
<td>Optional. The batch ID for which error details should be repaired.</td>
</tr>
</tbody>
</table>

17.2.1.3 Example
The following example clears the faults within the specified parameters.

clearIPMWorkflowFaults(startDate="2009-06-01", endDate="2009-06-02")
clearIPMWorkflowFaults(appId=3)
clearIPMWorkflowFaults(batchId=15)
clearIPMWorkflowFaults(startDate="2009-06-01", endDate="2009-06-02", appId=3)

17.2.2 listIPMWorkflowFaults

Command Category: Diagnostic Commands

Use with WLST: Online

17.2.2.1 Description
List details on processing failures that have occurred during workflow agent processing.

17.2.2.2 Syntax

listIPMWorkflowFaults([startDate], [endDate], [appId], [batchId])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>startDate</td>
<td>Optional. The start of the date range for which error details should be</td>
</tr>
<tr>
<td></td>
<td>repaired, in yyyy-MM-dd format.</td>
</tr>
<tr>
<td>endDate</td>
<td>Optional. The end of the date range for which error details should be</td>
</tr>
<tr>
<td></td>
<td>repaired, in yyyy-MM-dd format.</td>
</tr>
<tr>
<td>appId</td>
<td>Optional. The application ID for which error details should be repaired.</td>
</tr>
<tr>
<td>batchId</td>
<td>Optional. The batch ID for which error details should be repaired.</td>
</tr>
</tbody>
</table>
17.2.2.3 Example

The following example lists the faults within the specified parameters.

```java
listIPMWorkflowFaults(startDate="2009-06-01", endDate="2009-06-02")
listIPMWorkflowFaults(appId=3)
listIPMWorkflowFaults(batchId=15)
listIPMWorkflowFaults(startDate="2009-06-01", endDate="2009-06-02", appId=3)
```

17.2.3 repairIPMWorkflowFaults

Command Category: Diagnostic Commands

Use with WLST: Online

17.2.3.1 Description

Repair processing failures that have occurred during workflow agent processing.

17.2.3.2 Syntax

```java
repairIPMWorkflowFaults([startDate], [endDate], [appId], [batchId])
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>startDate</td>
<td>Optional. The start of the date range for which error details should be repaired, in yyyy-MM-dd format.</td>
</tr>
<tr>
<td>endDate</td>
<td>Optional. The end of the date range for which error details should be repaired, in yyyy-MM-dd format.</td>
</tr>
<tr>
<td>appId</td>
<td>Optional. The application ID for which error details should be repaired.</td>
</tr>
<tr>
<td>batchId</td>
<td>Optional. The batch ID for which error details should be repaired.</td>
</tr>
</tbody>
</table>

17.2.3.3 Example

The following example repairs the faults within the specified parameters.

```java
repairIPMWorkflowFaults(startDate="2009-06-01", endDate="2009-06-02")
repairIPMWorkflowFaults(appId=3)
repairIPMWorkflowFaults(batchId=15)
repairIPMWorkflowFaults(startDate="2009-06-01", endDate="2009-06-02", appId=3)
```

17.2.4 sumIPMWorkflowFaults

Command Category: Diagnostic Commands

Use with WLST: Online

17.2.4.1 Description

Provides a count of processing failures that have occurred during workflow agent processing. The results are grouped by date, application ID, or batch ID.

17.2.4.2 Syntax

```java
sumIPMWorkflowFaults(group)
```
### 17.2.4.3 Example
The following example returns all workflow faults grouped first by date, then by applications ID, then again grouped by batch ID.

```
sumIPMWorkflowFaults(group="DATE")
sumIPMWorkflowFaults(group="APPID")
sumIPMWorkflowFaults(group="BATCHID")
```

### 17.2.5 resetIpmDMSMetrics

**Command Category: Diagnostic Commands**

Use with WLST: Online

**17.2.5.1 Description**
Resets all Dynamic Monitoring Server (DMS) metrics associated with I/PM to zero. This is generally done if the administrator finds that historical performance data is skewing the current results.

**17.2.5.2 Syntax**

```
resetIpmDMSMetrics()
```

**17.2.5.3 Example**
The following example resets all DMS metrics to zero.

```
resetIpmDMSMetrics()
```

### 17.3 Oracle I/PM Configuration Commands

Use the Oracle I/PM configuration commands, listed in Table 17–3, to list and set configuration values specific to Oracle I/PM.

#### Table 17–3 Configuration Commands for Oracle I/PM

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>createIPMConnection</code></td>
<td>Creates a new Oracle I/PM connection from a connection definition file.</td>
<td>Online</td>
</tr>
<tr>
<td><code>getIPMConfig</code></td>
<td>Get an Oracle I/PM configuration setting value, similar to navigating to the custom Oracle I/PM config mbean and using the standard WLST <code>set</code> command.</td>
<td>Online</td>
</tr>
<tr>
<td><code>grantIPMCredAccess</code></td>
<td>Grants CredentialAccessPermissions to Oracle I/PM when Oracle I/PM managed servers are in a separate domain home from the admin server.</td>
<td>Online</td>
</tr>
</tbody>
</table>
17.3.1 createIPMConnection

Command Category: Oracle I/PM Configuration Commands

Use with WLST: Online

17.3.1.1 Description

Creates a new Oracle I/PM connection from a connection definition file. The connection definition file is an XML file that describes a single Oracle I/PM connection definition using the Connection element type from the Oracle I/PM ConnectionService web services API schema definition. This schema is available from a running Oracle I/PM server using the following URL:

http://ipm_server_machine:ipm_server_port/imaging/ws/ConnectionService?xsd=1

For more information about the connection definition file format, see the Oracle Fusion Middleware Administrator’s Guide for Imaging and Process Management.

17.3.1.2 Syntax

createIPMConnection(connectionFile)

17.3.1.3 Example

The following example creates a connection based on the specified attribute.

createIPMConnection(connectionFile="/home/ipmuser/localCSConnection.xml")

17.3.2 getIPMConfig

Command Category: Oracle I/PM Configuration Commands

Table 17–3 (Cont.) Configuration Commands for Oracle I/PM

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>importIPMApplication</td>
<td>Imports an application definition from a previously exported definition file.</td>
<td>Online</td>
</tr>
<tr>
<td>importIPMInput</td>
<td>Imports an input definition from a previously exported definition file.</td>
<td>Online</td>
</tr>
<tr>
<td>importIPMSearch</td>
<td>Imports a search definition from a previously exported definition file.</td>
<td>Online</td>
</tr>
<tr>
<td>listIPMConfig</td>
<td>Lists Oracle I/PM configuration mbeans.</td>
<td>Online</td>
</tr>
<tr>
<td>listIPMExportFile</td>
<td>Lists the contents of an exported Oracle I/PM definitions file.</td>
<td>Online</td>
</tr>
<tr>
<td>refreshIPMSecurity</td>
<td>Refresh security items currently stored in the Oracle I/PM database.</td>
<td>Online</td>
</tr>
<tr>
<td>setIPMConfig</td>
<td>Sets an Oracle I/PM configuration value.</td>
<td>Online</td>
</tr>
<tr>
<td>submitIPMToWorkflow</td>
<td>Submits a document to the workflow agent.</td>
<td>Online</td>
</tr>
</tbody>
</table>
17.3.2.1 Description
Gets an Oracle I/PM configuration setting value. The command is equivalent to browsing the custom mbean hierarchy to the Oracle I/PM config mbean and using the standard WLST `set` command to set an mbean attribute.

17.3.2.2 Syntax
getIPMConfig(attrName)

**Argument** | **Definition**
--- | ---
attrName | Required. Name of the attribute to be read. Must be enclosed in single or double quotes.

17.3.2.3 Example
The following example returns the value for the specified attribute names.
```
geIPMConfig('AgentUser')
geIPMConfig('CheckInterval')
```

17.3.3 grantIPMCredAccess
Grants CredentialAccessPermissions to Oracle I/PM so that it can read credentials from the credential store. This command is required in configurations where Oracle I/PM managed servers are in a separate domain home from the admin server. When at least one Oracle I/PM managed server is in the same domain home as the admin server, this command is not required, as CredentialAccessPermissions are granted during Oracle I/PM startup.

When the Oracle I/PM managed server is not in the same domain home as the admin server, however, the Oracle I/PM startup grant only affects the local settings. Local settings get overwritten when the admin server synchronizes its copy as the domain wide configuration, so this command updates the admin server configuration such that permissions are distributed correctly to all domain nodes.

17.3.3.1 Syntax
grantIPMCredAccess()

17.3.3.2 Example
The following example returns a list of all Oracle I/PM configuration mbeans.
```
grantIPMCredAccess()
```

17.3.4 importIPMApplication
Imports an application definition from a previously exported definition file.

17.3.4.1 Syntax
importIPMApplication(exportFile, action, name, repository, securityOption, securityMember, docSecurityOption, docSecurityGroup, storageOption, storageVolume)
<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>exportFile</code></td>
<td>Required. A full path to the export definition file's location on the Oracle I/PM server node. Must be enclosed in single or double quotes.</td>
</tr>
<tr>
<td><code>action</code></td>
<td>Required. The action to be performed. Available actions are:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Add</strong>: Creates a new input. Fails if an application with the same name already exists.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Update</strong>: Modifies and existing input. Fails if an application with the same name does not exist.</td>
</tr>
<tr>
<td></td>
<td>- <strong>AddOrUpdate</strong>: Creates a new application if it does not already exist or updates one that does.</td>
</tr>
<tr>
<td><code>name</code></td>
<td>Required. The name of the application being imported from the exported definitions file.</td>
</tr>
<tr>
<td><code>repository</code></td>
<td>The name of the repository in which to create the application. Required when adding an application, ignored when updating or modifying an application.</td>
</tr>
<tr>
<td><code>securityOption</code></td>
<td>Optional. Specifies how to define security for the imported application as follows:</td>
</tr>
<tr>
<td></td>
<td>- <strong>Existing</strong>: Uses application security as defined in the existing definition. Valid only for an update action.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Imported</strong>: Attempts to use application security as defined in the import file. Fails if any members defined in the import file are invalid.</td>
</tr>
<tr>
<td></td>
<td>- <strong>ValidOnly</strong>: Uses application security as defined in the import file and filters out any invalid members.</td>
</tr>
<tr>
<td></td>
<td>- <strong>CurrentUser</strong>: Sets full permissions to the user used to connect to the server.</td>
</tr>
<tr>
<td></td>
<td>- <strong>User</strong>: Sets full permissions to the user name provided in the securityMember parameter.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Group</strong>: Sets full permissions to the group name provided in the securityMember parameter.</td>
</tr>
<tr>
<td><code>securityMember</code></td>
<td>Name of the user or group given full permissions to the application. Valid only when securityOption is set to either <code>User</code> or <code>Group</code>, otherwise it is ignored.</td>
</tr>
<tr>
<td><code>docSecurityOption</code></td>
<td>Optional. Specifies how to define document security for the imported application.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Existing</strong>: Uses document security as defined in the existing application. Valid only for an update action.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Imported</strong>: Attempts to use document security as defined in the import file. Fails if any members defined in the import file are invalid.</td>
</tr>
<tr>
<td></td>
<td>- <strong>ValidOnly</strong>: Uses document security as defined in the import file and filters out any invalid members.</td>
</tr>
<tr>
<td></td>
<td>- <strong>Group</strong>: Sets full permissions to the group name provided in the docSecurityGroup parameter.</td>
</tr>
<tr>
<td><code>docSecurityGroup</code></td>
<td>Name of group given full permissions to document security. Valid only when docSecurityOption is set to <code>Group</code>, otherwise it is ignored.</td>
</tr>
</tbody>
</table>
17.3.4.2 Example
The following example updates an existing application named *Invoices*. Note that the repository is listed as *None* because the update action uses the repository specified in the original application.

```
importIPMApplication(exportFile="/home/ipmuser/exportdefinitions.xml",
action="Update", name='Invoices', repository=None, securityOption="Existing")
```

17.3.4.3 Example
The following example creates a new application named *Receipts*. Note that the repository is explicitly named because the add action requires a valid repository be named.

```
importIPMApplication(exportFile="/home/ipmuser/exportdefinitions.xml",
action="Add", name='Receipts', repository="LocalCS", securityOption="ValidOnly")
```

17.3.5 importIPMInput
Imports an input definition from a previously exported definition file.

17.3.5.1 Syntax
```
importIPMInput(exportFile, action, name, securityOption, securityMember)
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>exportFile</td>
<td>Required. A full path to the export definition file's location on the Oracle I/PM server node. Must be enclosed in single or double quotes.</td>
</tr>
<tr>
<td>action</td>
<td>Required. The action to be performed. Available actions are:</td>
</tr>
<tr>
<td></td>
<td>■ <strong>Add</strong>: Creates a new input. Fails if an input with the same name already exists.</td>
</tr>
<tr>
<td></td>
<td>■ <strong>Update</strong>: Modifies an existing input. Fails if an input with the same name does not exist.</td>
</tr>
<tr>
<td></td>
<td>■ <strong>AddOrUpdate</strong>: Creates a new application if it does not already exist or updates one that does.</td>
</tr>
</tbody>
</table>

- **storageOption**
  - Optional. Specifies how to define the storage policy for the imported application.
  - **Existing**: Uses the document storage policy as defined in the existing application. Valid only for an update action.
  - **Imported**: Attempts to use storage policy as defined in the import file.
  - **Volume**: Uses the specific volume named in the storageVolume parameter.
  - **Default**: Sets up the storage policy to use the system default volume.

- **storageVolume**
  - Required. Volume for setting storage policy. Valid only when a storageOption of *Volume* is used. Ignored otherwise.
17.3.5.2 Example

The following example updates an existing input named *Invoices*. Note that the repository is listed as *None* because the update action uses the repository specified in the original application.

```java
importIPMInput(exportFile="/home/ipmuser/exportdefinitions.xml", action="Update", name="Invoices", securityOption="Existing")
```

17.3.5.3 Example

The following example creates a new input named *Receipts*. Note that the repository is explicitly named because the add action requires a valid repository be named.

```java
importIPMInput(exportFile="/home/ipmuser/exportdefinitions.xml", action="Add", name="Receipts", securityOption="ValidOnly")
```

17.3.6 importIPMSearch

Import a search definition from a previously exported definition file.

17.3.6.1 Syntax

```java
importIPMSearch(exportFile, action, name, securityOption, securityMember)
```
**Oracle I/PM Configuration Commands**

## 17.3.6.2 Example

The following example updates an existing search named *Invoices*. Note that the repository is listed as **None** because the update action uses the repository specified in the original application.

```java
importIPMSearch(exportFile="/home/ipmuser/exportdefinitions.xml", action="Update", name="Invoices", securityOption="Existing")
```

## 17.3.6.3 Example

The following example creates a new search named *Receipts*. Note that the repository is explicitly named because the add action requires a valid repository be named.

```java
importIPMSearch(exportFile="/home/ipmuser/exportdefinitions.xml", action="Add", name="Receipts", securityOption="ValidOnly")
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>exportFile</code></td>
<td>Required. A full path to the export definition file's location on the Oracle I/PM server node. Must be enclosed in single or double quotes.</td>
</tr>
<tr>
<td><code>action</code></td>
<td>Required. The action to be performed. Available actions are:</td>
</tr>
<tr>
<td></td>
<td>■ Add: Creates a new search. Fails if a search with the same name already exists.</td>
</tr>
<tr>
<td></td>
<td>■ Update: Modifies an existing search. Fails if a search with the same name does not exist.</td>
</tr>
<tr>
<td></td>
<td>■ AddOrUpdate: Creates a new search if it does not already exist or updates one that does.</td>
</tr>
<tr>
<td><code>name</code></td>
<td>Required. The name of the search being imported from the exported definitions file.</td>
</tr>
<tr>
<td><code>repository</code></td>
<td>The name of the repository in which to create the application. Required when adding an application, ignored when updating or modifying an application.</td>
</tr>
<tr>
<td><code>securityOption</code></td>
<td>Optional. Specifies how to define security for the imported application as follows:</td>
</tr>
<tr>
<td></td>
<td>■ Existing: Uses search security as defined in the existing definition. Valid only for an update action.</td>
</tr>
<tr>
<td></td>
<td>■ Imported: Attempts to use search security as defined in the import file. Fails if any members defined in the import file are invalid.</td>
</tr>
<tr>
<td></td>
<td>■ ValidOnly: Uses search security as defined in the import file and filters out any invalid members.</td>
</tr>
<tr>
<td></td>
<td>■ CurrentUser: Sets full permissions to the user used to connect to the server.</td>
</tr>
<tr>
<td></td>
<td>■ User: Sets full permissions to the user name provided in the securityMember parameter.</td>
</tr>
<tr>
<td></td>
<td>■ Group: Sets full permissions to the group name provided in the securityMember parameter.</td>
</tr>
<tr>
<td><code>securityMember</code></td>
<td>Name of the user or group given full permissions to the search. Valid only when securityOption is set to either <strong>User</strong> or <strong>Group</strong>, otherwise it is ignored.</td>
</tr>
</tbody>
</table>
17.3.7 listIPMConfig

Command Category: Oracle I/PM Configuration Commands

Use with WLST: Online

17.3.7.1 Description
Provides a listing of Oracle I/PM configuration mbeans. The command is equivalent to browsing the custom mbean hierarchy and listing the Oracle I/PM mbean attributes.

17.3.7.2 Syntax
listIPMConfig()

17.3.7.3 Example
The following example returns a list of all Oracle I/PM configuration mbeans.
listIPMConfig()

17.3.8 listIPMExportFile

Lists the contents of an exported Oracle I/PM definitions file.

17.3.8.1 Syntax
listIPMExportFile(exportFile="<path to file>")

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>exportFile</td>
<td>Required. A full path to the export definition file's location on the Oracle I/PM server node. Must be enclosed in single or double quotes.</td>
</tr>
</tbody>
</table>

17.3.8.2 Example
The following example returns the contents of an Oracle I/PM definitions file.
listIPMExportFile(exportFile="/home/ipmuser/exportdefinitions.xml")

17.3.9 refreshIPMSecurity

Command Category: Oracle I/PM Configuration Commands

Use with WLST: Online

17.3.9.1 Description
Refreshes security items currently stored in the Oracle I/PM database. This is typically done when migrating security to a different policy store and only updates security items found in the new policy store.

17.3.9.2 Syntax
refreshIPMSecurity()

17.3.9.3 Example
The following example refreshes the security items stored in the Oracle I/PM database.
refreshIPMSecurity()

17.3.10 setIPMConfig

Command Category: Oracle I/PM Configuration Commands

Use with WLST: Online

17.3.10.1 Description

Sets an Oracle I/PM configuration setting value. The command is equivalent to browsing the custom mbean hierarchy to the Oracle I/PM config mbean and using the standard WLST 'set' command to set an mbean attribute.

17.3.10.2 Syntax

setIPMConfig(attrName, value)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>attrName</td>
<td>Required. Name of the attribute to be set. Must be enclosed in single or double quotes.</td>
</tr>
<tr>
<td>value</td>
<td>Required. Value of the attribute to be set. Only enclosed in single or double quotes if value is a string literal.</td>
</tr>
</tbody>
</table>

17.3.10.3 Example

The following example sets the specified values for the specified attribute names.

setIPMConfig('AgentUser', 'agentadmin')
setIPMConfig('CheckInterval', 30)

17.3.11 submitIPMToWorkflow

Submits a document to the workflow agent. Note that a confirmation message is displayed stating that the document has been submitted, however if the document is stored in an application that is not configured with a workflow, no action is taken.

17.3.11.1 Syntax

submitIPMToWorkflow(documentId)

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>documentId</td>
<td>Required. The unique document ID of the submitted document.</td>
</tr>
</tbody>
</table>

17.3.11.2 Example

The following example submits a document to a workflow.

submitIPMToWorkflow(documentId='2.IPM_12345')
This chapter lists and describes the custom WLST commands for Oracle Business Process Management.

18.1 BPMLifecycleAdmin Command Group

Table 18–1 lists and describes the BPMLifecycleAdmin commands for project lifecycle administration.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>create_public_share</td>
<td>Create a public share</td>
<td>Offline</td>
</tr>
<tr>
<td>delete_public_share</td>
<td>Delete a public share</td>
<td>Offline</td>
</tr>
<tr>
<td>export_public_share</td>
<td>Export a public share to the file system</td>
<td>Offline</td>
</tr>
<tr>
<td>export_template</td>
<td>Export a template to the file system</td>
<td>Offline</td>
</tr>
<tr>
<td>publish_template</td>
<td>Publish a template to MDS</td>
<td>Offline</td>
</tr>
<tr>
<td>unlock_public_share</td>
<td>Unlock a public share</td>
<td>Offline</td>
</tr>
</tbody>
</table>

18.1.1 create_public_share

Command Category: BPMLifecycleAdmin Commands

Use with WLST: Offline

18.1.1.1 Description

Use this command to create a public share from a template. The template must exist in MDS.

18.1.1.2 Syntax

create_public_share{templateName, publicshareName, mdsconfigLocation, [Override], [oracleHome]}

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>templateName</td>
<td>Name of the template in MDS</td>
</tr>
<tr>
<td>publicshareName</td>
<td>Name of the public share to be created</td>
</tr>
</tbody>
</table>
18.1.1.3 Examples
The following example creates a public share named Sample_PublicShare. It is based on the template with name Sample_Template. The name of the public share is Sample_PublicShare, and the location of the mds-config.xml file is /tmp/mds-config.xml.

```bash
create_public_share('Sample_Template', 'Sample_PublicShare','/tmp/mds-config.xml')
```

The following example creates a public share named Sample_PublicShare. It is based on the template named Sample_Template that exists in MDS. The public share, not the template, is overridden. The location of the mds-config.xml file is /tmp/mds-config.xml.

```bash
create_public_share('Sample_Template', 'Sample_PublicShare','/tmp/mds-config.xml','true')
```

18.1.2 delete_public_share

Command Category: BPMLifecycleAdmin Commands
Use with WLST: Offline

18.1.2.1 Description
Use this command to delete a public share from MDS. Executing this command requires that the public share is not locked.

18.1.2.2 Syntax
```
delete_public_share(publicshareName, mdsconfigLocation, [releaseLock], [oracleHome] )
```

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>publicshareName</td>
<td>Name of the public share to be deleted</td>
</tr>
<tr>
<td>mdsconfigLocation</td>
<td>Location of the mds-config.xml to be used to connect to MDS</td>
</tr>
<tr>
<td>releaseLock</td>
<td>Optional. If the public share is locked, this lock can be released and the delete operation completed. You can set this attribute to either true or false. If not specified, default value is false.</td>
</tr>
<tr>
<td>oracleHome</td>
<td>Optional. The Oracle home to be used</td>
</tr>
</tbody>
</table>

18.1.2.3 Examples
The following example specifies the name and location of a public share to be deleted.

```
delete_public_share('Sample_PublicShare','/tmp/mds-config.xml')
```

The following example specifies the name and location of a public share to be deleted, and that the public share should be deleted even if locked.
delete_public_share('Sample_PublicShare', '/tmp/mds-config.xml', 'true')

18.1.3 export_public_share

Command Category: BPMLifecycleAdmin Commands
Use with WLST: Offline

18.1.3.1 Description
Use this command to export the public share from MDS to the file system.

18.1.3.2 Syntax
export_public_share(publicshareName, fsLocation, mdsconfigLocation, [oracleHome])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>publicshareName</td>
<td>Name of the public share to be exported</td>
</tr>
<tr>
<td>fsLocation</td>
<td>File system location where the project is to be downloaded</td>
</tr>
<tr>
<td>mdsconfigLocation</td>
<td>Location of the mds-config.xml to be used to connect to MDS</td>
</tr>
<tr>
<td>oracleHome</td>
<td>Optional. The Oracle home to be used</td>
</tr>
</tbody>
</table>

18.1.3.3 Example
The following example specifies the public share name as Sample_PublicShare, the file system location as /tmp, and the location of the mds-config.xml file as /tmp/mds-config.xml.

export_public_share('Sample_PublicShare', '/tmp', '/tmp/mds-config.xml')

18.1.4 export_template

Command Category: BPMLifecycleAdmin Commands
Use with WLST: Offline

18.1.4.1 Description
Use this command to export the template from MDS to the file system.

18.1.4.2 Syntax
export_template(templateName, fsLocation, mdsconfigLocation, [oracleHome])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>templateName</td>
<td>Name of the template to be exported</td>
</tr>
<tr>
<td>fsLocation</td>
<td>File system location where the project is to be downloaded</td>
</tr>
<tr>
<td>mdsconfigLocation</td>
<td>Location of the mds-config.xml to be used to connect to MDS</td>
</tr>
<tr>
<td>oracleHome</td>
<td>Optional. The Oracle home to be used</td>
</tr>
</tbody>
</table>

18.1.4.3 Example
The following example specifies the template name as Sample_Template, the file system location as /tmp, and the location of the mds-config.xml file as /tmp/mds-config.xml.
export_template('Sample_Template', '/tmp', '/tmp/mds-config.xml')

18.1.5 publish_template

Command Category: BPMLifecycleAdmin Commands
Use with WLST: Offline

18.1.5.1 Description
Use this command to publish the template from the file system to MDS.

18.1.5.2 Syntax
publish_template(templateName, fsLocation, mdsconfigLocation, [Override], [oracleHome])

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>templateName</td>
<td>Name of the template to be published</td>
</tr>
<tr>
<td>fsLocation</td>
<td>File system location of the template project</td>
</tr>
<tr>
<td>mdsconfigLocation</td>
<td>Location of the mds-config.xml to be used to connect to MDS</td>
</tr>
<tr>
<td>Override</td>
<td>When you publish a template in MDS, this attribute enables you to override an existing template with the same name. Can either be 'true' or 'false'. If not specified, default value is 'false'.</td>
</tr>
<tr>
<td>oracleHome</td>
<td>Optional. The Oracle home to be used</td>
</tr>
</tbody>
</table>

18.1.5.3 Example
The following example publishes a template named Sample_Template_Name_MDS. The template project is located in the directory /tmp/Sample_Template_name_FS. The file mds-config.xml that is used to connect to MDS is located at /tmp/mds-config.xml.

```
publish_template('Sample_Template_Name_MDS', '/tmp/Sample_Template_name_FS', '/tmp/mds-config.xml')
```

18.1.6 unlock_public_share

Command Category: BPMLifecycleAdmin Commands
Use with WLST: Offline

18.1.6.1 Description
Use this command to unlock a public share. For example, when you create project by using the Ant task create_public_share command, the project is created as locked. You can then unlock it by using the unlock_public_share command.

A lock is also set by enabling or disabling the check box enable sharing in the project creation page in Oracle Business Process Composer.

It is also released when the user publishes a project from Business Process Composer. The public share must exist in MDS.

18.1.6.2 Syntax
unlock_public_share(publicshareName, mdsconfigLocation, [oracleHome])
18.1.6.3 Example

The following example unlocks a public share named Sample_PublicShare. The location of the mds-config.xml file is /tmp/mds-config.xml.

unlock_public_share('Sample_PublicShare', '/tmp/mds-config.xml')

<table>
<thead>
<tr>
<th>Argument</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>publicshareName</td>
<td>Name of the public share to be unlocked</td>
</tr>
<tr>
<td>mdsconfigLocation</td>
<td>Location of the mds-config.xml to be used to connect to MDS</td>
</tr>
<tr>
<td>oracleHome</td>
<td>Optional. The Oracle home to be used</td>
</tr>
</tbody>
</table>
The following sections describe the custom WLST commands for Oracle Universal Content Management (Oracle UCM). These commands enable you to configure and monitor the Oracle Universal Content Management server and Content Server instance from the command line. Topics include:

- Section 19.1, "Overview of WLST UCM Command Categories"
- Section 19.2, "WLST UCM Help"
- Section 19.3, "Getter and Setter Methods Implementation"
- Section 19.4, "Server Configuration Commands"
- Section 19.5, "E-Mail Configuration Commands"
- Section 19.6, "Additional Commands"

For additional information about Oracle UCM and Oracle Content Server administration and configuration, see *Oracle Fusion Middleware System Administrator’s Guide for Oracle Content Server*.

**Note:** To use the Oracle Universal Content Management custom commands, you must invoke the WLST script from the Oracle Common home in which the component has been installed. See "Using Custom WLST Commands" in the *Oracle Fusion Middleware Administrator’s Guide*.

## 19.1 Overview of WLST UCM Command Categories

WLST UCM commands are divided into the following categories:

<table>
<thead>
<tr>
<th>Table 19–1</th>
<th>WLST Oracle UCM Command Categories</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Command Category</strong></td>
<td><strong>Description</strong></td>
</tr>
<tr>
<td>Server Configuration Commands</td>
<td>View and manage configuration for the Oracle Content Server instance.</td>
</tr>
<tr>
<td>E-Mail Configuration Commands</td>
<td>View and manage configuration for Oracle Content Server e-mail.</td>
</tr>
<tr>
<td>Additional Commands</td>
<td>View status information for the Oracle Content Server instance.</td>
</tr>
</tbody>
</table>
19.2 WLST UCM Help

To view the Oracle UCM commands that can be invoked from WLST, enter the following command at the WLST prompt:

`help('UCM')`

To view help for a specific Oracle UCM command, replace the ‘UCM’ with the name of the command; for example:

`help('getUCMServerPort')`

19.3 Getter and Setter Methods Implementation

The WLST component for Oracle UCM uses getter and setter methods to handle a situation where multiple applications register their corresponding Mbeans on a managed server, but WLST can talk to only one application.

**Getter Method**

The getter method is designed to handle zero or one argument.

If you do not provide an argument to an WLST Oracle UCM command, then one of two things occurs:

- If only one application has registered its Mbean on the server, then the WLST Oracle UCM command should work successfully and display the output.
- If multiple applications have registered Mbeans on the server, then an error message is displayed to prompt you to enter the specific application name in the argument.

If there is one argument to an WLST Oracle UCM command, then the following occurs:

- You must enter the correct application name when entering an argument. If the name is not entered properly, then an error message is displayed to prompt you to enter the valid application name in the argument.

**Setter Method**

The setter method is designed to handle one or two arguments.

- The first argument is the value to which you want to set the parameter.
- The second argument is the application name, which can be null or a string.

19.4 Server Configuration Commands

Use the commands in Table 19–2 to configure the Oracle UCM Oracle Content Server instance.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>getUCMHttpServerAddress</code></td>
<td>Display the HTTP Server Address value.</td>
<td>Online</td>
</tr>
<tr>
<td><code>setUCMHttpServerAddress</code></td>
<td>Set the HTTP Server Address value.</td>
<td>Online</td>
</tr>
</tbody>
</table>
### 19.4.1 getUCMHttpServerAddress

Use with WLST: Online

**19.4.1.1 Description**

Gets the HTTP Server Address value from the `config.cfg` file and displays it.

**19.4.1.2 Syntax**

```
getUCMHttpServerAddress()
```

or

```
getUCMHttpServerAddress(application_name)
```

**19.4.1.3 Example**

The following command displays the Oracle UCM HTTP server address for the application "Oracle Content Server":

```
getUCMHttpServerAddress('Oracle Content Server')
```

```
server.mycompany.com
```

### 19.4.2 setUCMHttpServerAddress

Use with WLST: Online

**19.4.2.1 Description**

Sets the HTTP Server Address value in the `config.cfg` file. The HTTP Server Address can be of the form `abc.xyz.def` or an IP address with port number.

The HTTP Server Address is used to formulate full URLs in the Oracle Content Server user interface.

**19.4.2.2 Syntax**

```
setUCMHttpServerAddress()
```

or

```
setUCMHttpServerAddress(value,application_name)
```

**19.4.2.3 Example**

The following command sets the Oracle UCM HTTP server address for the application "Oracle Content Server":

```
setUCMHttpServerAddress()
```

```
server.mycompany.com
```
setUCMHttpServerAddress('server.mycompany.com','Oracle Content Server')

19.4.3 getUCMServerPort
Use with WLST: Online

19.4.3.1 Description
Gets the Intradoc Server Port configuration parameter from the config.cfg file and displays it.

19.4.3.2 Syntax
getUCMServerPort()

or

getUCMServerPort(application_name)

19.4.3.3 Example
The following command displays the Intradoc Server Port value for the application "Oracle Content Server":
getUCMServerPort('Oracle Content Server')
4442

19.4.4 setUCMServerPort
Use with WLST: Online

19.4.4.1 Description
Sets the Server Port configuration parameter. The Server Port must be a positive integer between 0 and 65535.

19.4.4.2 Syntax
setUCMServerPort(value)

or

setUCMServerPort(value,application_name)

19.4.4.3 Example
The following command sets the Server Port configuration parameter for the application "Oracle Content Server":
setUCMServerPort(4442,'Oracle Content Server')

19.4.5 getUCMIPAddressFilter
Use with WLST: Online

19.4.5.1 Description
Gets the IP Address Filter value from the config.cfg file and displays it.

19.4.5.2 Syntax
getUCMIPAddressFilter()
or
getUCMIPAddressFilter(application_name)

19.4.5.3 Example
The following command displays the IP address filter value for the application "Oracle
Content Server":

getUCMIPAddressFilter('Oracle Content Server')
10.131.123.*

19.4.6 setUCMIPAddressFilter
Use with WLST: Online

19.4.6.1 Description
Sets the Oracle UCM IP Address Filter value, which must be of "*.*.*.*" format or IPV6
Format. The value must be taken from a list of IP Addresses allowed to communicate
with the Content Server instance through the Intradoc Server Port.

19.4.6.2 Syntax
setUCMIPAddressFilter(value)

or
setUCMIPAddressFilter(value,application_name)

19.4.6.3 Example
The following command sets the value for the Oracle UCM IP address filter for the
application "Oracle Content Server":

setUCMIPAddressFilter(10.131.123.*, 'Oracle Content Server')

19.4.7 getUCMUseSSL
Use with WLST: Online

19.4.7.1 Description
Gets the Use SSL value from the config.cfg file and displays it. The value can be
True or False.

19.4.7.2 Syntax
getUCMUseSSL()

or
getUCMUseSSL(application_name)

19.4.7.3 Example
The following command displays the Use SSL value for the application "Oracle
Content Server":

getUCMUseSSL('Oracle Content Server')
True
19.4.8 setUCMUseSSL
Use with WLST: Online

19.4.8.1 Description
Sets the Use SSL value in the config.cfg file. The value can be True or False.

19.4.8.2 Syntax
setUCMUseSSL(value)

or

setUCMUseSSL(value,application_name)

19.4.8.3 Example
The following command sets the Use SSL value for the application "Oracle Content Server":

setUCMUseSSL(True,'Oracle Content Server')

19.5 E-Mail Configuration Commands
Use the commands in Table 19–3 to configure e-mail for the Oracle UCM Oracle Content Server instance.

Table 19–3  WLST E-Mail Configuration Commands

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>getUCMMailServer</td>
<td>Display the Mail Server value.</td>
<td>Online</td>
</tr>
<tr>
<td>setUCMMailServer</td>
<td>Set the Mail Server value.</td>
<td>Online</td>
</tr>
<tr>
<td>getUCMSmtpPort</td>
<td>Display the SMTP Port value.</td>
<td>Online</td>
</tr>
<tr>
<td>setUCMSmtpPort</td>
<td>Set the SMTP Port value.</td>
<td>Online</td>
</tr>
<tr>
<td>getUCMSysAdminAdress</td>
<td>Display the Admin Address value.</td>
<td>Online</td>
</tr>
<tr>
<td>setUCMSysAdminAdress</td>
<td>Set the Admin Address value.</td>
<td>Online</td>
</tr>
</tbody>
</table>

19.5.1 getUCMMailServer
Use with WLST: Online

19.5.1.1 Description
Gets the Mail Server value from the config.cfg file and displays it.

19.5.1.2 Syntax
getUCMMailServer()

or

getUCMMailServer(application_name)
19.5.1.3 Example
The following command displays the Mail Server value for the application "Oracle
Content Server":

getUCMMailServer('Oracle Content Server')
mymailserver.mycompany.com

19.5.2 setUCMMailServer
Use with WLST: Online

19.5.2.1 Description
Sets the Mail Server value in the config.cfg file. The Mail Server value is the name
of the mail server that the Oracle Content Server instance uses to send SMTP based
e-mail.

19.5.2.2 Syntax
setUCMMailServer(value)
or
setUCMMailServer(value, application_name)

19.5.2.3 Example
The following command sets the value for the Mail Server for the application "Oracle
Content Server":

setUCMMailServer(mymailserver.mycompany.com, 'Oracle Content Server')

19.5.3 getUCMSsmtpPort
Use with WLST: Online

19.5.3.1 Description
Gets the SMTP Port value in the config.cfg file and displays it.

19.5.3.2 Syntax
getUCMSsmtpPort()
or
getUCMSsmtpPort(application_name)

19.5.3.3 Example
The following command displays the SMTP port value for the application "Oracle
Content Server":

getUCMSsmtpPort('Oracle Content Server')
4055

19.5.4 setUCMSsmtpPort
Use with WLST: Online
19.5.4.1 Description
Sets the SMTP Port value in the config.cfg file. The SMTP Port must be a positive integer between 1 and 65535. To reset the port to null, enter None for the value:
setUCMSsmtpPort(None)

19.5.4.2 Syntax
setUCMSsmtpPort(value)
or
setUCMSsmtpPort(value, application_name)

19.5.4.3 Example
The following command sets the SMTP port value for the application "Oracle Content Server":
setUCMSsmtpPort(4055, 'Oracle Content Server')

19.5.5 getUCMSysAdminAddress
Use with WLST: Online

19.5.5.1 Description
Gets the Admin Address value from the config.cfg file and displays it. The value can be of the form abc@xyz.def.

19.5.5.2 Syntax
getUCMSysAdminAddress()
or
getUCMSysAdminAddress(application_name)

19.5.5.3 Example
The following command displays the Admin Address value for the application "Oracle Content Server":
getUCMSysAdminAddress('Oracle Content Server')
mymail@mycompany.com

19.5.6 setUCMSysAdminAddress
Use with WLST: Online

19.5.6.1 Description
Sets the Admin Address value in the config.cfg file. The Admin Address can be of the form abc@xyz.def.

19.5.6.2 Syntax
setUCMSysAdminAddress(value)
or
setUCMSysAdminAddress(value, application_name)
19.5.6.3 Example
The following command sets the Admin Address value for the application "Oracle Content Server":

```
setUCMSysAdminAddress(mymail@mycompany.com,'Oracle Content Server')
```

### 19.6 Additional Commands

Use the commands in Table 19–4 to configure additional settings to monitor the Oracle UCM Oracle Content Server instance.

<table>
<thead>
<tr>
<th>Use this command...</th>
<th>To...</th>
<th>Use with WLST...</th>
</tr>
</thead>
<tbody>
<tr>
<td>getUCMCSVersion</td>
<td>Display the version number.</td>
<td>Online</td>
</tr>
<tr>
<td>getUCMServerUptime</td>
<td>Display the uptime value.</td>
<td>Online</td>
</tr>
</tbody>
</table>

#### 19.6.1 getUCMCSVersion

Use with WLST: Online

19.6.1.1 Description

Gets the version number of the Oracle Content Server running instance.

19.6.1.2 Syntax

```
getUCMCSVersion()
```

or

```
getUCMCSVersion(application_name)
```

19.6.1.3 Example

The following command displays the version number of the active instance of the application "Oracle Content Server":

```
getUCMCSVersion('Oracle Content Server')
```

11g R1

#### 19.6.2 getUCMServerUptime

Use with WLST: Online

19.6.2.1 Description

Gets the amount of time the Oracle Content Server instance has been up.

19.6.2.2 Syntax

```
getUCMServerUptime()
```

or

```
getUCMServerUptime(application_name)
```
19.6.2.3 Example

The following command displays the amount of time the application "Oracle Content Server" has been up:

```java
getUCMServerUptime('Oracle Content Server')
```

00H:01 Min:12 Sec:255 MilliSeconds
