Preface

This book includes information about this release of Oracle Communications Billing and Revenue Management (BRM) Pipeline Configuration Center (PCC).

Audience

This book is intended for all PCC users.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Related Documents

For more information, see the following:

- *BRM PCC Installation and System Administration Guide* for detailed instructions on how to install and administer PCC.
- *BRM PCC Security Guide* for information about deployment configurations that enhance security.
- PCC Help for step-by-step instructions on using PCC to configure pipeline setup components.
- BRM documentation for information about BRM and Pipeline Manager.
Release Notes

This document provides the following information about Oracle Communications Billing and Revenue Management (BRM) Pipeline Configuration Center (PCC):

- Brief overview of the product with a list of documents to see for more information
- Known problems and workarounds for this release

About PCC

PCC is a Web-based application used to configure pipeline setup components for Pipeline Manager.

For information about pipelines and Pipeline Manager, see the BRM 7.4 documentation.

For information about installing and administering PCC, see BRM PCC Installation and System Administration Guide.

For information about using PCC to configure pipeline setup components, see the PCC Help.

For information about PCC security, see BRM PCC Security Guide.

Known Problems

This section describes known problems and workarounds for the following:

- PCC Installation
- PCC User Interface

PCC Installation

This section describes known installation problems and workarounds.

An Empty Error Message Appears

If an empty error message appears in the PCC installer’s WebLogic Administration Server Connection screen, it indicates that you selected the Use SSL? check box but did not enter the path of the client-side keystore file in the Keystore Location field.

To fix this problem, close the message, enter the keystore location in the Keystore Location field, and click Next.

See BRM PCC Installation and System Administration Guide for more information.
**Known Problems**

**Cannot Uninstall PCC in Silent Mode**
You cannot uninstall PCC in silent mode by using the response file template.

To work around this issue, use the PCC installer to uninstall PCC. See *BRM PCC Installation and System Administration Guide* for more information.

**Manual Cleanup Required If Incorrect WebLogic Password Is Used during Uninstall**
If you enter an incorrect WebLogic administrator password while uninstalling PCC, PCC is not completely uninstalled.

To complete the PCC uninstallation, manually delete the following items from the PCC domain WebLogic Server Administration Console:

- `oracle.communications.platform.cui.webapp` Java EE library
- `PipelineConfigurationCenter` enterprise application
- `PipelineDB JDBC` data source
- `Config Admin` group

For more information, see the Oracle WebLogic Server Administration Console Help.

---

**Note:** To view error messages regarding connectivity failure to the WebLogic server, check the log files in the `oraInventory/logs` directory. For more information about the `oraInventory` (Oracle Inventory) directory, see the Oracle documentation on the Oracle Technology Network Web site:

[http://docs.oracle.com](http://docs.oracle.com)

---

**PCC User Interface**
This section describes known UI problems and workarounds.

**Cannot Sort List in the Dialog Box That Opens by Clicking More**
When you click the More link in a list, a dialog box that contains arrows for sorting data appears. Clicking the arrows does not sort data in the list. No workaround exists.

**Help Window Displays Incorrect Message after It Times Out**
When the PCC Help window times out, it displays the following message after you click OK in the Page Expired message:

No config parameter specified in the url or invalid config parameter. Please contact your administrator for more information.

Do not contact your administrator. Just close the Help window.

**PCC Opens in a Dialog Box on Top of a Timed-Out Instance of PCC**
If PCC times out while a dialog box is displayed, a browser message similar to the following might appear:

Are you sure you want to navigate away from this page?
There are one or more dependent dialogs open.
Navigation from this page will invalidate any open dialogs.
Press OK to continue or Cancel to stay on the current page.
If you click **Cancel**, a new instance of PCC opens in the dialog box instead of in the main browser window. Do not work in the dialog box instance of PCC. Instead, close the main browser window, and log in to PCC in a new browser window.

To avoid this problem, click **OK** in the browser message.

**You Are Not Warned to Save Your Changes**

After modifying data, you are not warned that you have unsaved changes when you do the following:

- Close the tab
- Navigate to another tab
- Log out of PCC

If you perform any of those actions before saving your changes, the changes are lost.
