The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS

Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

- Creating WebLogic User Accounts

Preface

This document contains information necessary for the installation and configuration of Oracle Documaker Enterprise onto a server environment. The main components of Oracle Documaker Enterprise are Oracle Documaker Document Factory and Documaker Interactive.

Audience

This document is intended for users who need to install Document Factory and Documaker Interactive.

Familiarity with Oracle Documaker configuration is also beneficial, see the Documaker Administration Guide for more information.

DOCUMENTATION ACCESSIBILITY

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

TTY Access to Oracle Support Services

Oracle provides dedicated Text Telephone (TTY) access to Oracle Support Services within the United States of America 24 hours a day, seven days a week. For TTY support, call 800.446.2398.

RELATED DOCUMENTS

For more information, refer to the following Oracle resources:

- The Oracle Documaker documentation set, specifically:
 - Documaker Enterprise Administration Guide
 - Documaker Installation Guide
 - Documaker Administration Guide

CONVENTIONS

The following text conventions are used in this document:

Convention	Description
italic	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands, URLs, code in examples, and information you enter.

Tips, Notes, and Warnings

- A *Tip* provides a better way to use the software.
- A *Note* contains special information and reminders.
- A *Warning* contains critical information that if ignored, may cause errors or result in the loss of information.

Chapter 1

Overview

This document describes how to install and configure Oracle Documaker Enterprise onto a server environment.

This chapter includes the following topics:

- *Product Overview* on page 14
- *Architecture Overview* on page 15
- *Installation Directories* on page 16

This table shows you where to go for information on the steps you take to install and maintain Oracle Documaker Enterprise Edition (ODEE):

For information on	Go to
System requirements	Documaker System Requirements Reference Guide
Installing the system on UNIX	Installing ODEE in a Unix Environment
Installing the system on Windows	Installing ODEE in a Windows Environment
Customizing the location of Help files	Maintaining Your System
Downloading patches	Maintaining Your System
Downloading documentation updates	Maintaining Your System
Deinstalling the software	Deinstalling the Software

PRODUCT OVERVIEW

The main components of Oracle Documaker Enterprise are:

- Oracle Documaker Document Factory
- Oracle Documaker Interactive
- Oracle Documaker Administrator

Oracle Documaker Document Factory

Oracle Documaker Document Factory is a document automation system that applies the assembly line concept from factory production to document production, delivery, and system monitoring.

Document Factory includes the Document Factory Dashboard, a web-based application that provides analytics, tracking, and insight into the jobs being processed within the Document Factory.

Oracle Documaker Interactive

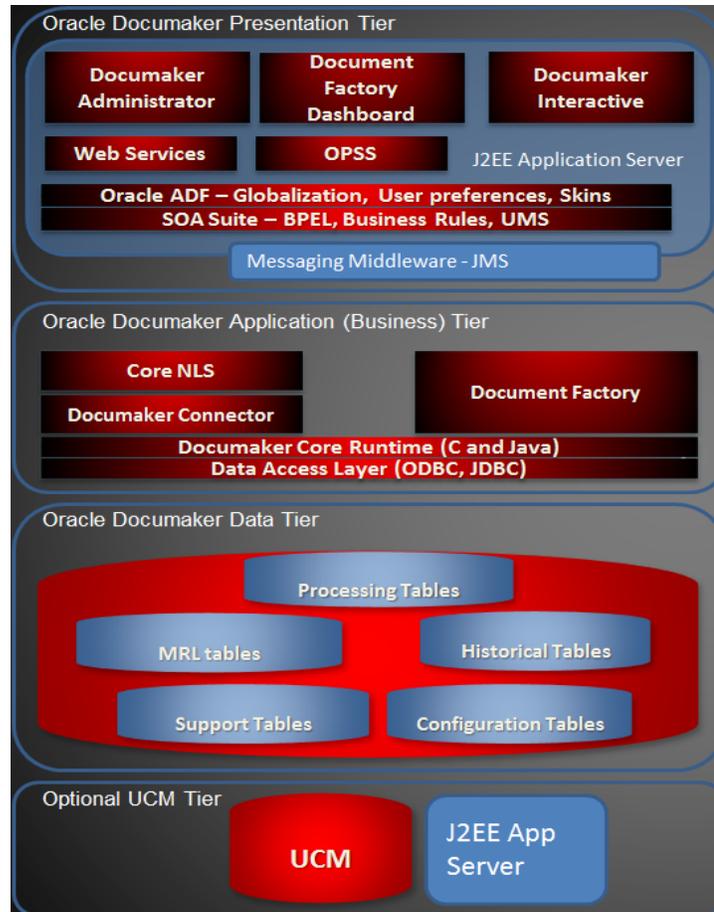

Oracle Documaker Interactive is a workflow-enabled, web-based application that lets you create personalized customer correspondence by choosing content from a pre-approved library of documents, graphics, and attachments.

Oracle Documaker Administrator

Oracle Documaker Administrator is a web-based application that lets system administrators view and edit Documaker Factory and Documaker Interactive configuration settings, and manage assembly lines.

ARCHITECTURE OVERVIEW

This illustration provides an architectural overview of Documaker Enterprise Edition:

INSTALLATION DIRECTORIES

By default, the Document Factory, Docupresentation, and Shared Objects are installed in the following directory structure.

documaker

This directory contains the following subdirectories and files:

Directory	Description
bin	Contains the DLL, EXE, and shared object files for Documaker server processing. Documaker Studio can be used from this location.
database	Contains the SQL script used during the post-setup process that creates the database tables and sample resources which are used to validate the installation.
docfactory	Contains the DLL, EXE, and Java archive (JAR) files needed for Document Factory processing. The subdirectories are: bin, config, deploy, global, internal-db, lib, logs, and temp. Note: There is a directory for each worker within the temp directory. You can find the log information for each worker in these directories, including worker activity and errors.
docupresentation	The directory where Docupresentation (IDS) is installed. This directory includes many files and subdirectories to support IDS processing. These include DAP.INI, LONGCONF.XML, DOCSERV.XML, WIPEDIT.INI (configure auto/default fields), and the following log and debugging files: DPRTRC.LOG, WATCHDOG-STDERR.TXT, and WATCHDOG-STDOUT.TXT.
filesystem-archive	This is the default location for archived documents when using the file system storage destination.
hotdirectory	This is the default location for archived documents when using the file system storage destination. The Receiver monitors this directory for files that it can accept as jobs into the Document Factory. Set up this directory as a networked or shared directory so it can be accessed by applications that submit jobs into the Document Factory. To change the location of the watched directory, update the Receiver's HotDirectories property within the Documaker Administrator web application after you install it.
j2ee	The parent directory for web applications and J2EEcomponents that support the Document Factory and Documaker Interactive: Correspondence processes. Contains the scripts used to create the required and sample users and groups.
jre	Contains the Java archive (JAR) files and resources needed to run the Document Factory workers.
mstres	Contains the sample resources, including a master resource library and supporting runtime files used with Document Factory and Documaker Interactive: Correspondence.
oracle_instantclient_11_2	(Windows only) This directory contains files used to communicate with the database.

documaker\j2ee

This directory contains the following sub directories and files in the WebLogic directory:

Directory	Description
bpel	The web service Java archive (JAR) files for processing Documaker Interactive: Correspondence requests for approval and rejection. It uses Oracle Business Rules to determine the next step in documents submitted within Documaker Interactive: Correspondence. See the <i>Documaker Enterprise Administration Guide</i> for more information.
dashboard	Contains the enterprise archive (EAR) file for the Document Factory Dashboard web application.
documaker_administrator	Contains the EAR file for the Documaker Administrator web application.
idocumaker_correspondence	Contains the EAR file for the Documaker Interactive: Correspondence web application. Also contains the pass-through web service that can be used to bypass the BPEL approval workflow within Documaker Interactive: Correspondence.
scripts	Contains the command scripts and associated files used to create the required and sample user accounts and establish the WebLogic/ WebSphere domains.

JAR files are used to distribute Java applications or libraries, in the form of Java class files and associated metadata and resources. JAR files are built on the ZIP file format.

An EAR file is a standard JAR file with an *ear* extension, with entries representing the modules of the application, and a metadata directory called META-INF which contains one or more deployment descriptors.

Chapter 2

Installing ODEE in a UNIX Environment

This chapter provides detailed information on how to install and configure Oracle Documaker Enterprise Edition (ODEE) in a UNIX environment.

The installation process consists of the following stages:

- *Stage 1: Pre-Installation Steps* on page 20
- *Stage 2: Running Setup* on page 24
- *Stage 3: Post-Setup* on page 30

STAGE 1: PRE-INSTALLATION STEPS

Before you install Oracle Documaker Enterprise Edition, make sure you have completed the following steps. Contact the appropriate system administrator for help with web application server details, database, email, and other connection information.

- *Checking Requirements* on page 20
- *Downloading the Software* on page 22

STEP A: CHECKING REQUIREMENTS

Note If you are using Linux, disable SE (Security Enabled) Linux. This lets the installation routine create the JRE.

1. Make sure you have met the required software and hardware as described in the [Documaker System Requirements Reference Guide](#). This includes having the following:
 - An installed database.
 - Oracle database 11g
 - An installed web application server.
 - WebLogic 10.3.4

Note Fusion Middleware will not install to a path with spaces so the web application should be installed in a path without spaces.

- On the web application server, you must have Oracle SOA Suite 11.1.1.4.0
2. Make sure you have the following information available during the installation process:
 - The location where you will be installing Documaker Enterprise. The default installation location is where the home directory is based on the user installing the system.

Note This is the default location unless there is already an ORACLE HOME directory, in which case the default is the existing ORACLE HOME location.

Keep in mind:

- The location path cannot contain spaces.
- The location path must be in lowercase.
- The display names for the Document Factory System and Assembly Line.
- The location of the hotdirectories where extract data files can be picked up by the Document Factory.

3. Make sure you have the necessary the database connection information, including the database host, port, and system ID (SID).
4. Make sure you have the necessary web application server connection information including the following:

For	Have this information
WebLogic	Protocol, host, port, user (principal) and password (credentials)

5. If you will be using email distribution or notifications, make sure you have the necessary connection information including the host, port, user name, password, and default sender address. The username/password comes from the LDAP system.
6. If you will be using Oracle Universal Content Management (UCM) for attachments, make sure you have the necessary connection information available including the user name, password, connection string, and document URL.
7. If you will be using Short Message System (SMS) notifications, make sure you have the necessary Unified Messaging Service (UMS) connection information including the user name, password, and endpoint.
8. Make sure you have the appropriate communication ports open between the servers and the appropriate permissions and rights on the servers. System components will use the credentials and ports entered during the installation; these ports may be blocked by default on servers with advanced security.

In addition, advanced security settings may prevent even administrative users from writing to some directories. Please contact your system administrator and security staff for confirmation.

Note Oracle recommends that you add a common user group for all Oracle installations so the installer files can be shared and recognized within the installed server. Run the installer as a user within this group.

STEP B: DOWNLOADING THE SOFTWARE

This section describes how to download Documaker Enterprise. Keep in mind:

- The media you will download is called the *Oracle Documaker Enterprise Edition media pack*. Be sure to select the media pack for the operating system you intend to run Documaker Enterprise on.
- For the Documaker Interactive portion, download the Oracle Documaker WIP Edit plug-in. You will find the plug-in listed under Microsoft Windows (32-bit) OS.

Oracle Documaker applications are available for download at the Oracle Software Delivery Cloud web site. The process includes:

- Logging in and agreeing to the terms and restrictions
- Searching for the applications you want to download
- Downloading those applications

Go to the Oracle Software Delivery Cloud web site to download Oracle Documaker applications:

<https://edelivery.oracle.com>

STEP C: LOGGING IN AS ROOT

Before you install the Oracle software, you must complete several tasks as the root user. To log in as the root user, complete one of these procedures:

- Installing from an X Window system workstation or terminal
- Installing from a system with X server software

Installing from an X Window system workstation or terminal

If you are installing the software from an X Window system workstation or X terminal, follow these steps:

1. Start a local terminal session, for example, an X terminal (xterm).
2. If you are not installing the software on the local system, then enter the following command to enable the remote host to display X applications on the local X server:

```
$ xhost fully_qualified_remote_host_name
```

Here is an example:

```
$ xhost somehost.us.acme.com
```

3. If you are not installing the software on the local system, then use the ssh, rlogin, or telnet command to connect to the system where you want to install the software:

```
$ telnet fully_qualified_remote_host_name
```

4. If you are not logged in as the root user, then enter the following command to switch user to root:

```
$ sudo sh
password:
#
```

Installing from a system with X server software

If you are installing the software from a PC or other system with X server software installed, follow these steps:

Note Refer to your X server documentation for more information about completing this task. Depending on the X server software you are using, you may need to complete the tasks in a different order.

1. Start the X server software.
2. Configure the security settings of the X server software to permit remote hosts to display X applications on the local system.
3. Connect to the remote system where you want to install the software and start a terminal session on that system, for example, an X terminal (xterm).
4. If you are not logged in as the root user on the remote system, enter this command to switch user to root:

```
$ sudo sh
password:
#
```

STAGE 2: RUNNING SETUP

In this stage, you run the setup application to install Documaker Enterprise. You will be prompted to enter the information listed on the previous topic.

During the initial installation, the system identifies the Oracle home directory. This directory is the location where Documaker Enterprise will be installed.

-
- Note** During the installation process:
- You are prompted to enter various required values. If you need help completing these values, contact the appropriate system administrator.
 - A set of sample resources will be provided. These resources let you access the sample Correspondence master resource library (MRL) and validate your configuration.
-

Follow these steps to run the setup application:

1. From the installation package, copy the ZIP file to the application server. Then unzip it.
2. Go to the disk1/install directory and enter this command:

```
./runInstaller.sh
```
3. The Welcome screen appears. Click Next.
4. In the Specify Inventory directory and on the Credentials window enter:
 - The full path of the inventory directory. Here is the default:

```
/home/username/orainventory
```

This directory houses installer files for all installs created by the Oracle Universal Installer (OUI).

Choose a shared oracle group and choose the shared location for inventory directory and credentials. If you are creating a directory, update the permissions to include the new oracle installer group.
 - Specify the Operating System group name. The default is the current user's GROUP name.

-
- Note** This window appears if no other Oracle-based installer using (OUI) has been installed on this application tier.
-

5. On the Specify Home Details window enter the name of the Oracle Home environment variable. The default is DocumakerHome1. For more information, click the Help button.

Then enter the complete installation path. Click Browse to select an installation directory. The default is `/home/user name/oracle/odee_1`.

Click Next to continue.

6. On the Specify Database Type window, indicate the database you will use.
Select
 - Oracle 11g
7. On the Database Information window, enter:

Field	Description
Host	The host name or static IP address of the database server. The default is the computer where the installation is running from.
Port	The port number of the database; the default is 1521.
SID	Choose Service Name or SID (system identifier).
Database	Name of the database to which ODEE will be connected; the default is IDMAKER
Advanced Compression	True * Enter False if you don't have a valid license for use.

* The scripts enable advanced compression on certain database columns. If you do not have an Advanced Compression Options license for Oracle 11g, please remove the COMPRESS DEDUPLICATE and COMPRESS HIGH DEDUPLICATE attributes from the scripts in dmkr_asline.sql.

8. The Registration/Administrator Database Schema window contains settings for the schema where the configuration tables are stored. In this window, enter:

Field	Description
DB Folder	The database folder location where the physical database files will be created. If blank, the database folder (directory) is created in the working directory of the database installation.
User	The schema user name the application will use to connect to the database for the administration layer. The default is dmkr_admin.
Password	The password for the user name the application will use to connect to the database. The default is Admin12.
System ID	A unique system ID for this Document Factory instance. If other Document Factory instances (not Assembly Lines) are installed, they also require a unique system ID. For initial installations, accept the default of one (1).
System Name	This is the display name for the Document Factory instance within the Documaker Administrator. The default is System 1. Change this name to reflect the Document Factory system in your organization.

Click Next to continue.

9. The Assembly Line Database Schema window contains settings for the schema where the assembly line processing tables are stored. In this window, make these entries:

Field	Description
DB Folder	The location where the physical database files will be created. If you leave this field blank, the database folder is created in the working directory of the database installation.
User	This is the name the application will use to connect to the database. The default is dmkr_asline. This user name is also used for the: <ul style="list-style-type: none"> • Database schema/owner • JDBC data source name • ODBC data source name • Name applied to the Docupresentation service (docupresentation dmkr_asline)
Password	This is the password for this assembly line database. The default is Asline12. This password is also the Documaker Studio password for the Docucorp user.
Assembly Line ID	This is the ID for this Assembly Line. If other assembly lines are installed, they require a unique Assembly Line ID. For initial installations, accept the default of one (1).
Assembly Line Name	The display name for the Assembly Line instance within the Documaker Administrator. The default is Assembly Line 1. Change this name to reflect the name of the assembly line in your organization.

When you finish, click Next to continue.

10. On the Specify Application Server Type window, choose the application server you will use. Select:

- WebLogic Server 10.3.4

If you are using the Oracle IDM for authentication, you have to provide a user known to WebLogic. This user is for the domain that will be created.

11. The JMS Setup window contains the JMS values. If you need help with these values, contact your administrator. In this window, make these entries:

Field	Description
Connection Class	The name of the Java class used to connect to the JMS queues. Always accept this default: oracle.documaker.ids.WebLogicJMSConnection
InitialContextFactory	A Java class used when connecting to the JMS queues. Always accept this default: weblogic.jndi.WLInitialContextFactory
Provider URL	The URL used to connect to the JMS queues. Default value is: t3://servername:7001. Update the servername but leave the protocol and port as defaulted.
Principal	The user name required to start the logical server instances. Enter weblogic.
Credentials	The password for the JMS Principal. Enter a password and use the same while creating the domain.

When you finish, click Next to continue.

12. On the Hot Folder window, enter the HotFolder path. This path can include more than one directory, each separated by a comma.

This hot directory location applies to the Assembly Line in the previous window. The default is:

```
[Install_Root]/documaker/hotdirectory
```

Note This directory is monitored for jobs that are waiting to be processed.

Click Next to continue.

13. On the optional SMTP Email Server window, make these entries:

Field	Description
SMTP Host	Enter the IP address or server name of the SMTP server.
SMTP Port	Enter the port number of the SMTP server.
SMTP User	Enter the user name for the SMTP server.
SMTP Password	Enter the password for the SMTP server.
SMTP Sender	Enter the email address the SMTP server uses as the sender for any email publication from the Documaker Document Factory. The default is admin@docfactory.com.

When you finish, click Next to continue.

14. In the Optional UCM Information window, enter the Universal Content Management settings:

Field	Description
Use UCM	Select True to enable documents to be archived to the UCM. The default is False.
UCM User	Enter the UCM user name.
UCM Password	Enter the UCM password.
UCM Connection String	Enter the connection string. Here is an example: idc://hostname:4444
UCM Document URL	Enter the document URL. Here is the default: http://hostname:port/cs/groups/secure/documents/document

When you finish, click Next to continue.

15. On the Optional Oracle (UMS) Information window, enter the User Messaging Services settings:

Field	Description
Use UMS	Select True to enable user messaging services. The default is False.

Field	Description
UMS User	Enter the UMS server user name.
UMS Password	Enter the UMS server user name.
UMS Endpoint	Enter the URL of the UMS server used for notifications.

When you finish, click Next to continue.

- On the Web Services window, enter these web services settings:

Field	Description
Documaker Web Server Endpoint	The location of the Documaker Composition Web Services. The default is <code>http://hostname:portnumber/DWS/CompositionService</code> where <i>hostname</i> is the name or IP address of the current server. Change the host name to reference the web application server. <i>portnumber</i> is the default port assigned to this web service. Use the default port.
Approval Process Endpoint	The location approval service. Only modify the default host name and port number. The default is <code>http://hostname:portnumber/soa-infra/services/default/iDMkr_Correspondence/correspondenceprocesses_client_ep?WSDL</code> where <i>hostname</i> is the name or IP address of the current server. Change the host name to reference the web application server. <i>portnumber</i> is the default port assigned to this web service. Use the default port.
Approval Business Rules Endpoint	The location of the approval business rules. Only modify the default host name and port number. The default is <code>http://hostname:portnumber/soa-infra/services/default/iDMkrApprovalRuleProj/iDMkrApprovalRules_DecisionService_ep</code> where <i>hostname</i> is the name or IP address of the current server. Change the host name to reference the WebApplication server. <i>portnumber</i> is the default port assigned to this web service. Use the default port.

When you finish, click Next to continue.

- On the Summary window, review your installation settings, space requirements, and availability. To make any changes, click Back.
- Click Install to begin the installation process.

The Install Status window indicates the progress of the installation. To stop the installation process, click Stop Installation.

Note The installation routine may display the Execute Configuration Scripts window. This window lists scripts you must run as the root user, specifically the `oraInstRoot.sh` script. If so, follow the instructions on the screen to run the scripts as a user with root permissions.

If errors occur during the installation, review the `installActions[date_and_time].log` file. This file is usually located in this directory:

```
/opt/dmoracle/oraInventory/logs
```

Note that these out files and error logs are also created during the installation process:

- `oraInstall[date_time].out`
 - `oraInstall[date_time].err`
-

19. When the installation process has completed, the End of Installation window appears. Click Exit to close this window.

Your ODEE system has now been installed and the initial configuration has been completed. Continue with *Stage 3: Post-Setup* on page 30 to finish the implementation of your ODEE system.

STAGE 3: POST-SETUP

After completing the setup process, complete these post-setup steps:

- *Step A : Running Database Scripts and Loading the MRL* on page 31
- *Step B : Creating the Web Environment* on page 33
- *Step C : Creating User Accounts* on page 34
- *Step D : Starting Services* on page 34
- *Step E : Starting Documaker Administrator and Dashboard* on page 35
- *Step F : Starting Documaker Interactive* on page 36
- *Step G : Restarting Servers and Deploying SOA* on page 37
- *Step H : Final Configuration and Validation* on page 38

STEP A : RUNNING DATABASE SCRIPTS AND LOADING THE MRL

Running the Oracle Database Scripts

Follow these steps to run the Oracle database scripts:

1. Run the scripts located in the `/documaker/database/oracle11g` directory. You may need to copy these files to the database server. To run these files, you must have permission to create tables and insert data into the database. These scripts create the required Document Factory administrative and processing database tables. Contact your database administrator (DBA) for assistance.

Script	Description
<code>dmkr_admin.sql</code>	Creates the configuration schema and populates the tables with the entries captured during setup.
<code>dmkr_asline.sql</code>	Creates the assembly line schema and the Documaker Studio default user accounts.

- Note**
- To change the Studio user passwords from the Assembly Line schema password, update this script before running it by modifying the Insert commands for the `DMRES_DMUSER` table.
 - The scripts enable advanced compression on certain database columns. If you do not have an Advanced Compression Options license for Oracle 11g, please remove the `COMPRESS DEDUPLICATE` and `COMPRESS HIGH DEDUPLICATE` attributes from the scripts in `dmkr_asline.sql`.

2. To create sample user accounts for demonstration purposes and to test the deployment, run the following as the `dmkr_admin` user:

```
dmkr_admin_correspondence_example.sql
```
3. (Optional) ODEE includes database entries that enable the ODEE web applications to be viewed in other languages. To add support for languages other than English, perform these steps:
 - a. Make sure the script is executed using UTF-8 encoding so the Unicode text within the script is put into the database properly.

If you are using	Then
SQL Developer to run the script	Change the file encoding option to UTF-8 by selecting the Tools, Preferences, Environment option and then setting the Encoding option to UTF8.
SQL Plus to run the script	Set this environment variable (for Windows): <code>NLS_LANG=AL32UTF8</code>

- b. Run the following scripts as the `dmkr_admin` user:
 - `dmkr_admin_xx.sql`

- `dmkr_asline_xx.sql`

Where `xx` is the two letter abbreviation for the desired language:

Languages	Abbreviation
Dutch	<code>nl</code>
French	<code>fr</code>
German	<code>de</code>
Japanese	<code>ja</code>
Portuguese	<code>pt</code>
Simplified Chinese	<code>zh</code>
Spanish	<code>es</code>

- c. Make sure the insert statements are committed to the database.
4. Run this script from the application server's `dmres` directory, to load the Correspondence MRL:

```
./deploysamplemrl.sh
```

Typically, this script will be in the `\documaker\mstrres\dmres\` directory.

This loads the MRL into the database, deploying the sample resources which are used to validate your Document Factory installation.

Note You can use SQL Plus and a client connection to validate database connectivity.

STEP B : CREATING THE WEB ENVIRONMENT

Creating and Deploying a WebLogic Domain

A WebLogic administrator for the WebLogic server needs to complete the following steps to create the WebLogic domain and deploy these web applications:

- Documaker Document Factory Dashboard
 - Documaker Administrator
 - Documaker Interactive
1. Copy the `[install_root]/documaker\j2ee` directory from the application (business) tier to the WebLogic server using the same structure as on the application tier server, assuming the application tier and weblogic deployment are on separate servers.
 2. Set the environment variables to define the location of the WebLogic installation by editing these files in the `documaker\j2ee\weblogic\oracle11g\scripts\` directory.

In this file	Make these changes
<code>set_middleware_env.sh</code>	Update these values: <code>export MW_HOME=\$MW_DRIVE\home\oracle\middleware</code> where <code>\$MW_DRIVE/home/oracle/middleware</code> is the location path to the Oracle middleware home
<code>weblogic_installation.properties</code>	Change the following software location values: <ul style="list-style-type: none"> • <code>dirWeblogicHome=/oracle/middleware</code> where <code>/oracle/middleware</code> is your Oracle middleware home directory • <code>dirDocumakerHome=/oracle/odee_1/documaker</code> where <code>/oracle/odee_1/</code> is the directory where the j2ee folder resides on the WebLogic server

3. To create the WebLogic domain for hosting the web applications and the supporting resources such as queues, database connections, and Java Naming and Directory Interface (JNDI) references, run this command:

```
.\create_wls_domain.sh
```

Note If you already have a domain on the server and you want to create a new domain, you can still use this script, just update the WebLogic domain name at the bottom of the file.

```
weblogicDomain=
```

4. Start the WebLogic AdminServer by running this command from the `[middleware home]\user_projects\domains\idocumaker_domain name\bin` directory:

```
.\startWebLogic.sh
```

5. Continue with the steps outlined in *Creating User Accounts*.

STEP C : CREATING USER ACCOUNTS

Creating WebLogic User Accounts

When the AdminServer is able to accept connections, the WebLogic server administrator needs to complete the following steps. You can find the shell scripts in the `documaker\j2ee\weblogic\oracle11g\scripts\directory`.

Note To change the web application user passwords from the WebLogic password, update the py files called by each script before running the script.

1. To install the standard user accounts, run this command:

```
.\create_users_groups.sh
```

This script creates the Documaker user account and the Documaker Administrators group. It adds this user to this group in WebLogic's default authenticator.

2. To install a set of users and groups to be used with the sample resources for Documaker Interactive: Correspondence, run this command:

```
.\create_users_groups_correspondence_example.sh
```

3. Link the new users and groups to the pre-configured entities in the Document Factory Administration registry database by going to the WebLogic server, opening a browser and going to this URL:

```
http://servername:7001/jpsquery
```

Note You may need to change *servername* to the name of your WebLogic server.

STEP D : STARTING SERVICES

. To start services, perform these steps on your application (business) tier:

1. Go to the `docpresentment` directory and run this command:

```
.\docserver.sh start
```

2. Then go to the `docfactory/bin` directory and run this command:

```
.\docfactory.sh start
```

Note To see if the services are running, run these commands:

```
.\docfactory.sh status
```

```
.\docserver.sh status
```

For Solaris installations only:

You must perform these steps on Sun Solaris installations if you need to attach files other than PDF files, such as doc, xls, xml, html, or txt files, from UCM or the Local File System.

On Solaris installations, make sure this file is available on your system (usually located in the `/usr/local/lib` directory):

```
libgcc_s.so.1
```

Add the full path of the directory that contains this file to the end of the LD_LIBRARY_PATH environment variable in the SPARC section of the Docupresentment startup script (docserver.sh). Then restart Docupresentment.

Note The script is located in the *[install_root]/docmaker/docupresentment* directory.

Here is an example from the docserver.sh script where */usr/local/lib* is the location of the library (add the path to the location of the library to the end of the LD_LIBRARY_PATH environment variable, located on approximately line 123):

```
SPARC )
# -----
# Java Rules setting for Docucorp JARs and JVM
# -----
JAVA_JRE=/opt/apps/factory/odee_121/docmaker/jre
JAVA_EXE=idswatchdog.exe
export JAVA_JRE JAVA_EXE

JAVALIBPATH=${JAVA_JRE}/lib:${JAVA_JRE}/lib/sparc/
server:${JAVA_JRE}/lib/ext:${JAVALIBPATH:-""}:
CLASSPATH=${CLASSPATH:-""}:${BASEINSTALLDIR:-""}/lib:
export JAVALIBPATH CLASSPATH

#LD_PRELOAD=${JAVA_JRE}/lib/sparc/server/libjsig.so
export LD_PRELOAD

PATH=${JAVA_JRE}/bin:${BASEINSTALLDIR:-
""}:${BASERPBRIDGEINSTALLDIR:-""}:${PATH:-""}:
LD_LIBRARY_PATH=${BASERPBRIDGEINSTALLDIR:-""}:${BASEINSTALLDIR:-
""}:${JAVALIBPATH:-""}/usr/lib:/opt/mqm/java/
lib:${LD_LIBRARY_PATH:-""}/usr/local/lib:
export PATH LD_LIBRARY_PATH
;;
```

STEP E : STARTING DOCUMAKER ADMINISTRATOR AND DASHBOARD

Starting with WebLogic

Note A WebLogic administrator should complete this step.

Start the Documaker Administrator and Documaker Document Factory Dashboard web applications by starting the WebLogic Managed Server (dmkr_server) as follows:

1. Go to the bin directory and run this command:

```
.\startManagedWebLogic.sh dmkr_server
```

2. When prompted, enter the WebLogic user name and password.

STEP F : STARTING DOCUMAKER INTERACTIVE

STARTING WITH WEBLOGIC

A WebLogic administrator should complete this step *only* if deploying Documaker Interactive.

1. Go to the bin directory and run this command (optional):

```
.\startManagedWebLogic.sh idm_server
```

2. When prompted, enter the WebLogic user name and password.

STEP G : RESTARTING SERVERS AND DEPLOYING SOA

Deploying Oracle Service-Oriented Architecture (SOA) for WebLogic servers:

1. Stop these WebLogic servers, in this order:

- idm_server
- dmkr_server
- admin_server

Note When the admin_server is stopped, the queues are no longer available for Document Factory to access and Document Factory will generate errors that it could not connect to the needed queues. So, when you stop the admin_server, be sure to stop the Oracle Documaker Document Factory service as well, and restart when admin_server is available.

2. Add SOA to the WebLogic domain:

a. From the MW_HOME \wlserver_10.3\common\bin\ directory, run this command:

```
.\config.sh
```

b. Choose Extend an existing WebLogic domain, then click Next.

c. Select the idocumaker_domain from the WebLogic Domain Directory window, then click Next.

d. On the Select Extension Source window, choose Oracle SOA Suite – 11.1.1.0, then click Next.

Note SOA may add the Oracle WSM Policy Manager Extension. If so, this is not an error.

e. View the Configure JDBC Data Sources options (do not change these values), then click Next.

The connection to the database is tested. When the test finishes, view the results, then click Next.

f. Update the Configure JDBC Component Schema window. This will configure the connections your SOA repository. Click Next.

The connection to the database is tested. When the test finishes, view the results, then click Next.

g. On the Select Optional Configuration window, click Next.

h. On the Configuration Summary window, click Extend and then Done.

i. To deploy the Oracle Business Rules into the SOA extension, run this command from the \documaker\j2ee\weblogic\oracle11g\bpel\ directory:

```
antbuild.sh
```

Note The antbuild.sh script includes the following path:

```
PATH=$MW_HOME/jdk160_21/bin:$PATH
```

This should be modified if the default JDK path was not selected.

3. Start these WebLogic servers (using the same commands as in the previous steps):
 - admin server
 - dmkr_server
 - idm_server

Note Restart Oracle Documaker Document Factory Service if you had previously stopped it.

4. From the bin directory, run this command:

```
.\startManagedWebLogic.sh soa_server1
```
5. Add soa_server1 as a target for the dmkr_admin data source as follows:
 - a. Make sure the AdminServer is ready to accept connections. Using a browser, log into the WebLogic console:

```
http://servername:7001/console
```

 where *servername* is name of the WebLogic server.
 - b. In the Domain Structure panel, expand Services, then JDBC, and select Data Sources.
 - c. In the Summary section of the JDBC Data Sources panel, click the dmkr_admin link. This is the name of the administrator schema.
 - d. Select the Targets tab then check the soa_server1 check box and click Save.
6. Once soa_server1 is ready to accept connections, deploy the Oracle Business Rule Composites by running this command from the \documaker\j2ee\weblogic\oracle11g\scripts directory:

```
.\deploy_soa.sh
```

STEP H : FINAL CONFIGURATION AND VALIDATION

1. Make sure you have a network accessible printer available for Document Factory publishing that supports the Multipurpose Internet Mail Extensions (MIME) types the system outputs when you are ready to generate printed output. For more information, see the [Documaker Enterprise Administration Guide](#).
2. Validate the installation of Documaker Administrator by accessing Documaker Administrator from the following link:

`http://servername:10001/DocumakerAdministrator`

where *servername* is the name of the web application server.

Use these credentials to log in:

For	Use
User name	documaker

For	Use
Password	The value entered in JMS Credentials during the installation process, unless it has been changed.

3. Download and configure the WIP Edit plug-in accessibility.

To edit documents within Documaker Interactive, you need the WIP Edit plug-in. You can download the plug-in from the Oracle Software Delivery Cloud web site and provide it to users by:

- Pushing the installation to your end users.
- Hosting the installation and allow the web application to provide a download link when requested. Make sure the installation is available on a static content server.

If you are hosting the WIP Edit plug-in installation, use Documaker Administrator to enter the location for the installation:

- In the left panel, click the Systems link. In the right panel, expand the System node, if it is not already expanded. Expand the Assembly Line node, if it is not already expanded.
- Select the row containing the newly-installed assembly line. Select the Correspondence application. Click Configure.
- On the Correspondence tab, select the ENTRY_ACTION_PLUGIN_INIT category within the ENTRY context and then select the group name, ENTRY_ACTION_PLUG_INIT.
- In the Properties panel, double-click the row containing the property named installer. Change the installer value to be the hosted location for the plug-in installation.
- Click Save.

4. Configure the WIP Edit plug-in communication.

To ensure the plug-in communicates to Documaker Interactive do the following in the Documaker Administrator:

- In the left panel, click the Systems link. In the right panel, expand the System node, if it is not already expanded. Expand the Assembly Line node, if it is not already expanded.
- Select the row containing the newly-installed assembly line. Select the Correspondence application. Click Configure.
- On the Correspondence tab, select the ENTRY_ACTION_PLUGIN_INIT category within the ENTRY context and then select the group name, ENTRY_ACTION_PLUG_INIT.
- In the Properties panel, double-click the row that contains the putURL property. Then change the putURL value to reflect the machine name:port or ipaddress:port of the server for the idm_server web application and click Save. This must be the secure port for Documaker Interactive. The default port is 9002.

- e. Click Save.

Note The machine name:port or ipaddress:port must match the browser's address bar when you access the application.

5. (Optional) To enable the Documaker Interactive attachment tab for UCM, see the [Documaker Enterprise Administrator Guide](#) topic on “Enabling UCM”.
6. Validate your Document Factory installation by performing these tasks:
 - a. Create a copy of the `extrfile.xml` file with the name `extrfile.tmp`. This file is located in the `\documaker\mstres\dmres\input` folder.
 - b. Move the `extrfile.tmp` file into the `hotdirectory` directory on the Document Factory server.
 - c. Rename the `extrfile.tmp` file to `extrfile.xml` in the `hotdirectory` directory.
 - d. Look at the JOB created in the Document Factory Dashboard application, see that it was created and generated 12 transactions, three of which are staged for Documaker Interactive editing and the other 9 of which are distributed and in a successfully completed state.

Note This step pushes documents through the system. Moving the file with a `tmp` extension makes sure the file is not processed by the Receiver before the file is copied to the `hotdirectory` directory.

7. Validate the web applications using these credentials:

For	Use
Documaker Document Factory Dashboard	
URL	http://servername:10001/dashboard
User name	documaker
Password	The value entered in JMS Credentials during the installation process, unless it has been changed.
Documaker Interactive (if installed)	
URL	http://servername:9001/idm When you access this link, you are redirected to the HTTPS port for a more secure connection.
User name	documaker
Password	The value entered in JMS Credentials during the installation process, unless it has been changed.

You have completed the installation and configuration of Document Factory and Documaker Interactive: Correspondence.

Note For information on customizing the location of Help files, downloading patches, and downloading documentation updates, see on page 53.

Chapter 3

Installing ODEE in a Windows Environment

This chapter provides detailed information on how to install and configure Oracle Documaker Enterprise Edition (ODEE) in a Windows environment.

The installation process consists of the following stages:

- *Stage 1: Pre-Installation Steps* on page 44
- *Stage 2: Running Setup* on page 47
- *Stage 3: Post-Setup* on page 53

STAGE 1: PRE-INSTALLATION STEPS

Before you install Oracle Documaker Enterprise Edition, make sure you have completed the following steps. Contact the appropriate system administrator for help with web application server details, database, email, and other connection information.

- *Checking Requirements* on page 44
- *Downloading the Software* on page 45

STEP A: CHECKING REQUIREMENTS

1. Make sure you have met the required software and hardware as described in the [Documaker System Requirements Reference Guide](#). This includes having the following:
 - An installed database.
 - Oracle database 11g
 - An installed web application server.
 - WebLogic 10.3.4

Note Fusion Middleware will not install to a path with spaces so the Web application should be installed in a path without spaces.

- On the web application server, you must have Oracle SOA Suite 11.1.1.4.0
 - Microsoft Visual C++ Redistributable Package (vcredist_x86.exe)
-

Note The installation routine checks for Visual C++ before beginning the installation and attempts to install the necessary run-time components if they are missing. If the installation routine is not able to install these run-time components, you must download and install the latest Microsoft Visual C++ 2008 Redistributable Package (x86) from Microsoft's Download Center:

<http://www.microsoft.com/downloads/>

You can confirm if the necessary Visual C++ run-time components were installed by checking the orainstall*.out log file.

2. Make sure you have the following information available during the installation process:

- The location where you will be installing ODEE. The default installation location is:

`c:\oracle\odee_1`

Note This is the default location unless there is already an ORACLE HOME directory, in which case the default is the existing ORACLE HOME location. The location path cannot contain spaces.

- The display names for the Document Factory System and Assembly Line.
 - The location of the hotdirectories where extract data files can be picked up by the Document Factory.
3. Make sure you have the necessary the database connection information, including the database host, port, and system ID (SID).
 4. Make sure you have the necessary web application server connection information including the following:

For	Have this information
WebLogic	Protocol, host, port, user (principal) and password (credentials)

5. If you will be using email distribution or notifications, make sure you have the necessary connection information including the host, port, user name, password, and default sender address. The username/password comes from the LDAP system.
6. If you will be using Oracle Universal Content Management (UCM) for attachments, make sure you have the necessary connection information available including the user name, password, connection string, and document URL.
7. If you will be using Short Message System (SMS) notifications, make sure you have the necessary Unified Messaging Service (UMS) connection information including the user name, password, and endpoint.
8. Make sure you have the appropriate communication ports open between the servers and the appropriate permissions and rights on the servers. System components will use the credentials and ports entered during the installation; these ports may be blocked by default on servers with advanced security.

In addition, advanced security settings may prevent even administrative users from writing to some directories. Please contact your system administrator and security staff for confirmation.

Note Add a common user group for all Oracle installations so the installer files can be shared and recognized within the installed server. Run the installer as a user within this group.

STEP B: DOWNLOADING THE SOFTWARE

This topic describes how to download ODEE. Keep in mind:

- The media you will download is called the *Oracle Documaker Enterprise Edition media pack* and should be selected based on your target operating system.
- For the Documaker Interactive portion, download the Oracle Documaker WIP Edit plug-in.

Oracle Documaker applications are available for download at the Oracle Software Delivery Cloud web site. The process includes:

- Logging in and agreeing to the terms and restrictions
- Searching for the applications you want to download
- Downloading those applications

Go to the Oracle Software Delivery Cloud web site to download Oracle Documaker applications:

<https://edelivery.oracle.com>

STAGE 2: RUNNING SETUP

In this stage, you run the setup application to install Documaker Enterprise. You will be prompted to enter the information listed on the previous topic.

During the initial installation, the system creates a registry setting that identifies the Oracle Home directory. This directory is the location of where Documaker Enterprise will be installed.

Note During the installation process:

- You are prompted to enter various required values. If you need help completing these values, contact the appropriate system administrator.
 - A set of sample resources will be provided. These resources let you access the sample Correspondence master resource library (MRL) and validate your configuration.
-

Follow these steps to run the setup application:

1. From the installation package, run the setup.exe file on the application tier. On the Welcome window, click Next.

Note The first time you run the Oracle Installation routine, the Specify Inventory Details Window appears. Review the information and click Next.

2. In the Specify Home Details window, enter:

- The name of the Oracle Home environment variable. The default is DocumakerHome1.
 - The complete installation path. Click Browse to select an installation directory. The default is c:\oracle\odee_1\documaker.
-

Note The name of the installation directory cannot exceed 44 characters. The Oracle limit is 64 characters, but Documaker appends 20 characters to the path.

Click Next to continue.

3. On the Specify Database Type window, indicate the database you will use. Select:

- Oracle 11g

4. On the Database Information window, enter:

Field	Description
Host	The host name or static IP address of the database server. The default is the computer where the installation is running from.
Port	The port number of the database; the default is 1521.
SID	Choose Service Name or SID (system identifier)
Database	Name of the database to which ODEE will be connected; the default is IDMAKER
Advanced Compression	True* Enter False if you don't have a valid license for use.

* The scripts enable advanced compression on certain database columns. If you do not have an Advanced Compression Options license for Oracle 11g, please remove the COMPRESS DEDUPLICATE and COMPRESS HIGH DEDUPLICATE attributes from the scripts in dmkr_asline.sql.

5. The Registration/Administrator Database Schema window contains settings for the schema where the configuration tables are stored. In this window, enter:

Field	Description
DB Folder	The database folder location where the physical database files will be created. If blank, the database folder (directory) is created in the working directory of the database installation.
User	The schema user name the application will use to connect to the database for the administration layer. The default is dmkr_admin.
Password	The password for the user name the application will use to connect to the database. The default is Admin12.
System ID	A unique system ID for this Document Factory instance. If other Document Factory instances (not Assembly Lines) are installed, they also require a unique system ID. For initial installations, accept the default of one (1).
System Name	This is the display name for the Document Factory instance within the Documaker Administrator. The default is System 1. Change this name to reflect the Document Factory system in your organization.

Click Next to continue.

6. The Assembly Line Database Schema window contains settings for the schema where the assembly line processing tables are stored. In this window, make these entries:

Field	Description
DB Folder	The location where the physical database files will be created. If you leave this field blank, the database folder is created in the working directory of the database installation.
User	This is the name the application will use to connect to the database. The default is dmkr_asline. This user name is also used for the: <ul style="list-style-type: none"> • Database schema/owner • JDBC data source name • ODBC data source name • Name applied to the Docupresentation service (docupresentation dmkr_asline)
Password	This is the password for this assembly line database. The default is Asline12. This password is also the Documaker Studio password for the Docucorp user.
Assembly Line ID	This is the ID for this Assembly Line. If other assembly lines are installed, they require a unique Assembly Line ID. For initial installations, accept the default of one (1).

Field	Description
Assembly Line Name	The display name for the Assembly Line instance within the Documaker Administrator. The default is Assembly Line 1. Change this name to reflect the name of the assembly line in your organization.

When you finish, click Next to continue.

- On the Specify Application Server Type window, choose the application server you will use. WebLogic Server 10.3.4
7. The JMS Setup window contains the JMS values. If you need help with these values, contact your web application server administrator. In this window, make these entries:

Field	Description
Connection Class	The name of the Java class used to connect to the JMS queues. Always accept this default: oracle.documaker.ids.JMSConnection
InitialContextFactory	A Java class used when connecting to the JMS queues. Always accept this default: weblogic.jndi.WLInitialContextFactory
Provider URL	The URL used to connect to the JMS queues. Default value is: t3://servername:7001. Update the servername but leave the protocol and port as defaulted.
Principal	The user name required to start the logical server instances. Enter weblogic.
Credentials	The password for the JMS Principal. Enter a password and use the same while creating the domain.

When you finish, click Next to continue.

8. On the Hot Directory window, enter the HotDirectory path. This path can include more than one directory, each separated by a comma.

This hot directory location applies to the Assembly Line in the previous window. The default is:

```
[install_root]\documaker\hotdirectory
```

Note This directory is monitored for jobs that are waiting to be processed.

Click Next to continue.

9. On the optional SMTP Email Server window, make these entries:

Field	Description
Host	Enter the IP address or server name of the SMTP server.

Field	Description
Port	Enter the port number of the SMTP server.
User	Enter the user name for the SMTP server.
Password	Enter the password for the SMTP server.
Sender	Enter the email address the SMTP server uses as the sender for any email publication from the Documaker Document Factory. The default is shown here: admin@docfactory.com

When you finish, click Next to continue.

10. In the Optional UCM Information window, enter the WebCenter Content Manager settings:

Field	Description
Enable	Select True to enable documents to be archived to the UCM. The default is False.
User	Enter the UCM user name.
Password	Enter the UCM password.
Connection String	Enter the connection string. Here is an example: idc://hostname:4444
Document URL	Enter the document URL. Here is the default: http://hostname:port/cs/groups/secure/documents/document

When you finish, click Next to continue.

11. On the Optional Oracle (UMS) Information window, enter the User Messaging Services settings:

Field	Description
Enable	Select True to enable user messaging services. The default is False.
User	Enter the UMS server user name.
Password	Enter the UMS server user password.
Endpoint	Enter the URL of the UMS server used for notifications. The default is: http://ipaddress of host:port/sdpMessaging/parlayx/SendMessageService

When you finish, click Next to continue.

12. On the Documaker Interactive Workflow window, enter these web services settings:

Field	Description
Documaker Web Server Endpoint	The location of the Documaker Composition Web Services. The default is <code>http://hostname:portnumber/DWSV0/CompositionService</code> where <i>hostname</i> is the name or IP address of the current server. Change the host name to reference the web application server. <i>portnumber</i> is the default port assigned to this web service. Use the default port.
Approval Process Endpoint	The location approval service. Only modify the default host name and port number. The default is <code>http://hostname:portnumber/soa-infra/services/default/iDMkr_Correspondence/correspondenceprocesses_client_ep?WSDL</code> where <i>hostname</i> is the name or IP address of the current server. Change the host name to reference the web application server. <i>portnumber</i> is the default port assigned to this web service. Use the default port.
Approval Business Rules Endpoint	The location of the approval business rules. Only modify the default host name and port number. The default is <code>http://hostname:portnumber/soa-infra/services/default/iDMkrApprovalRuleProj/iDMkrApprovalRules_DecisionService_ep</code> where <i>hostname</i> is the name or IP address of the current server. Change the host name to reference the web application server. <i>portnumber</i> is the default port assigned to this web service. Use the default port.

When you finish, click Next to continue.

13. On the Summary window, review your installation settings, space requirements, and availability. To make any changes, click Back.
14. Click Install to begin the installation process.

The Install Status window indicates the progress of the installation. To stop the installation process, click Stop Installation.

15. If errors occur during the installation, review the `installActions[date_and_time].log` file. This file is usually located in this directory:

```
[drive letter (usually C:)]\Program Files\Oracle\Inventory\logs\
```

Note that these standard out files and error logs are also created during the installation process:

- `oraInstall[date_time].out`
- `oraInstall[date_time].err`

16. When the installation process has completed, the End of Installation window appears. Click Exit to close this window.

Note If installing on Windows 2003 Server and the installer presents an error message “Exception: An error occurred during runtime” check the installer logs and the Installed Programs to validate if the VC Redistributable is installed. If not, install it or run the installation in Repair mode and then re-start the ODEE installation.

STAGE 3: POST-SETUP

After completing the setup process, complete these post-setup steps:

- *Step A : Running Database Scripts and Loading the MRL* on page 53
- *Step B : Creating the Web Environment* on page 55
- *Step C : Creating User Accounts* on page 56
- *Step D : Start Services* on page 56
- *Step E : Starting Documaker Administrator and Dashboard* on page 57
- *Step F : Starting Documaker Interactive* on page 57
- *Step G : Restarting Servers and Deploying SOA* on page 57
- *Step H : Final Configuration and Validation* on page 59

STEP A : RUNNING DATABASE SCRIPTS AND LOADING THE MRL

Running the Oracle Database Scripts

Follow these steps to run the Oracle database scripts:

1. Run the scripts located in the \documaker\database\oracle11g directory. You may need to copy these files to the database server. To run these files, you must have permission to create tables and insert data into the database. These scripts create the required Document Factory administrative and processing database tables. Contact your database administrator (DBA) for assistance.

Script	Description
dmrk_admin.sql	Creates the configuration schema and populates the tables with the entries captured during setup
dmkr_asline.sql	Creates the assembly line schema and the Documaker Studio default user accounts

- Note**
- To change the Studio user passwords from the Assembly Line schema password, update this script before running it by modifying the Insert commands for the DMRES_DMUSER table.
 - The scripts enable advanced compression on certain database columns. If you do not have an Advanced Compression Options license for Oracle 11g, please remove the *COMPRESS DEDUPLICATE* and *COMPRESS HIGH DEDUPLICATE* attributes from the scripts in dmkr_asline.sql.

2. To create sample user accounts for demonstration purposes and to test the deployment, run the following as the dmkr_admin user:

dmkr_admin_correspondence_example.sql

3. (Optional) ODEE includes database entries that enable the ODEE web applications to be viewed in other languages. To add support for languages other than English, perform these steps:
 - a. Make sure the script is executed using UTF-8 encoding so the Unicode text within the script is put into the database properly.

If you are using Then

SQL Developer to run the script	Change the file encoding option to UTF-8 by selecting the Tools, Preferences, Environment option and then setting the Encoding option to UTF8.
SQL Plus to run the script	Set this environment variable (for Windows): NLS_LANG=AL32UTF8

- b. Run the following scripts as the dmkr_admin user:
 - dmkr_admin_xx.sql
 - dmkr_asline_xx.sql

Where xx is the two letter abbreviation for the desired language:

Languages	Abbreviation
Dutch	nl
French	fr
German	de
Japanese	ja
Portuguese	pt
Simplified Chinese	zh
Spanish	es

- c. Make sure the insert statements are committed to the database.

Note Test your connection to the ODBC database to make sure the configuration is correct. Run the c:\windows\syswow64\odbcad32.exe program on the application tier, if running on a Windows 64-bit operating system, and then follow the prompts.

4. Run this batch file from the application server to load the Correspondence MRL:

```
\documaker\mstrres\dmres\deploysamplemrl.bat
```

This loads the MRL into the database, deploying the sample resources which are used to validate the Document Factory installation.
5. Continue with the steps outlined in *Creating the Web Environment* on page 83.

STEP B : CREATING THE WEB ENVIRONMENT

Creating and Deploying a WebLogic Domain

A WebLogic administrator for the WebLogic server needs to complete the following steps to create the WebLogic domain and deploy these web applications:

- Documaker Document Factory Dashboard
 - Documaker Administrator
 - Documaker Interactive
1. Copy the `\documaker\j2ee` directory from the application (business) tier to the WebLogic server using the same structure as on the application tier server, assuming the application tier and weblogic deployment are on separate servers.
 2. Set the environment variables to define the location of the WebLogic installation by editing these files in the `documaker\j2ee\weblogic\oracle11g\scripts\` directory:

In this file	Make these changes
<code>set_middleware_env.sh</code>	Update these values: <ul style="list-style-type: none"> • <code>SET MW_DRIVE=c:</code> where <code>c:</code> is the drive letter of your Oracle middleware home • <code>MW_HOME=%MW_DRIVE%\oracle\middleware</code> where <code>\oracle\middleware</code> is the path to the Oracle middleware home.
<code>weblogic_installation.properties</code>	Change the following software location values: <ul style="list-style-type: none"> • <code>dirWeblogicHome=c:\oracle\middleware</code> where <code>c:\oracle\middleware</code> is your Oracle middleware home directory • <code>dirDocumakerHome=c:\oracle\odee_1\documaker</code> where <code>c:\oracle\odee_1</code> is the directory where the <code>j2ee</code> folder resides on the WebLogic server. Be sure to include escaped backslashes (<code>\\</code>) for the directory separators.

3. To create the WebLogic domain for hosting the web applications and the supporting resources such as queues, database connections, and Java Naming and Directory Interface (JNDI) references, run this command:

```
documaker\j2ee\weblogic\oracle11g\scripts\create_wls_domain.sh
```

Note If you already have a domain on the server and you want to create a new domain, you can still use this script, just update the WebLogic domain name at the bottom of the file.

```
weblogicDomain=
```

4. Start the WebLogic AdminServer by running this command from the `[middleware home]\user_projects\domains\documaker_domain name\bin` directory:

```
start .\startWebLogic.sh
```

5. Continue with the steps outlined in *Step C : Creating User Accounts* on page 56.

STEP C : CREATING USER ACCOUNTS

Creating WebLogic User Accounts

When the AdminServer is able to accept connections, the WebLogic server administrator needs to complete these steps:

Note To change the web application user passwords from the WebLogic password, update the py files called by each script before running the script.

1. To install the standard user accounts, run this command:

```
documaker\j2ee\weblogic\oracle11g\scripts\create_users_groups.cmd
```

This script creates the Documaker user account and the Documaker Administrators group. It adds this user to this group in WebLogic's default authenticator.

2. To install a set of users and groups to be used with the sample resources for Documaker Interactive: Correspondence, run this command:

```
documaker\j2ee\weblogic\oracle11g\scripts\create_users_groups_correspondence_example.cmd
```

3. Link the new users and groups to the pre-configured entities in the Document Factory Administration registry database by going to the WebLogic server, opening a browser and going to this URL:

```
http://servername:7001/jpsquery
```

Note You may need to change *servername* to the name of your WebLogic server.

STEP D : START SERVICES

To start Windows services, perform these steps on your application (business) tier:

1. Choose the Start, Administrative Tools, Services option.
2. Start these Windows service

Service	Description
ODDF Supervisor <i>dmkr_asline</i>	The Document Factory Windows service.
Docupresentment <i>dmkr_asline</i>	The Docupresentment Windows service.

Where *dmkr_asline* is the schema or user name for the assembly line.

STEP E : STARTING DOCUMAKER ADMINISTRATOR AND DASHBOARD

Start the Documaker Administrator and Documaker Document Factory Dashboard web applications by starting the WebLogic Managed Server (dmkr_server) as follows:

1. Go to the bin directory and run this command:

```
.\startManagedWebLogic.sh dmkr_server
```
2. When prompted, enter the WebLogic user name and password.

STEP F : STARTING DOCUMAKER INTERACTIVE

A WebLogic administrator should complete this step *only* if deploying Documaker Interactive.

1. Go to the bin directory and run this command (optional):

```
.\startManagedWebLogic.sh idm_server
```
2. When prompted, enter the WebLogic user name and password.

STEP G : RESTARTING SERVERS AND DEPLOYING SOA

Deploying Oracle Service-Oriented Architecture (SOA) for WebLogic servers

Follow these steps to deploy Oracle Service-Oriented Architecture (SOA):

1. Stop these WebLogic servers, in this order:
 - idm_server
 - dmkr_server
 - admin_server

Note When the admin_server is stopped, the queues are no longer available for Document Factory to access and Document Factory will generate errors that it could not connect to the needed queues. So, when you stop the admin_server, be sure to stop the Oracle Documaker Document Factory service as well, and restart when admin_server is available.

2. Add SOA to the WebLogic domain:
 - a. From the MW_HOME \wlserver_10.3\common\bin\ directory, run this command:

```
config.cmd
```

- b. Choose Extend an existing WebLogic domain, then click Next.
- c. Select idocumaker_domain from the WebLogic Domain Directory window, then click Next.
- d. On the Select Extension Source window, choose Oracle SOA Suite – 11.1.1.0, then click Next.

Note SOA may add the Oracle WSM Policy Manager Extension. If so, this is not an error.

- e. View the Configure JDBC Data Sources options (do not change these values), then click Next.

The connection to the database is tested. When the test finishes, view the results, then click Next.

- f. Update the Configure JDBC Component Schema window. This will configure the connections your SOA repository. Click Next.

The connection to the database is tested. When the test finishes, view the results, then click Next.

- g. On the Select Optional Configuration window, click Next.

- h. On the Configuration Summary window, click Extend and then Done.

- i. To deploy the Oracle Business Rules into the SOA extension, run this command:

```
documaker\j2ee\weblogic\oracle11g\bpel\antbuild.cmd
```

Note The antbuild.sh script includes the following path:

```
PATH=$MW_HOME/jdk160_21/bin:$PATH
```

This should be modified if the default JDK path was not selected.

3. Start these WebLogic servers (using the same commands as in the previous steps):

- admin server
- dmkr_server
- idm_server

Note Restart Oracle Documaker Document Factory Service if you had previously stopped it.

4. From the *dirWeblogicHome*\user_projects\domains\idocumaker_domain directory, run this command:

```
start .bin\startManagedWeblogic.cmd soa_server1
```

5. Add soa_server1 as a target for the dmkr_admin data source as follows:

- a. Make sure the AdminServer is ready to accept connections. Using a browser, log into the WebLogic console:

```
http://servername:7001/console
```

where *servername* is name of the WebLogic server.

- b. In the Domain Structure panel, expand Services, then JDBC, and select Data Sources.
 - c. In the Summary section of JDBC Data Sources panel, click the dmkr_admin link. This is the name of the administrator schema.
 - d. Select the Targets tab then check the soa_server1 check box and click Save.
6. Once soa_server1 is ready to accept connections, deploy the Oracle Business Rule Composites by running this command:

```
documaker\j2ee\weblogic\oracle11g\scripts\deploy_soa.cmd
```

STEP H : FINAL CONFIGURATION AND VALIDATION

1. Make sure you have a network accessible printer available for Document Factory publishing that supports the Multipurpose Internet Mail Extensions (MIME) types the system outputs when you are ready to generate printed output. For more information, see the [Documaker Enterprise Administration Guide](#).
2. Validate the installation of Documaker Administrator by accessing Documaker Administrator from the following link:

```
http://servername:10001/DocumakerAdministrator
```

where *servername* is the name of the presentation tier.

Use these credentials to log in:

For	Enter
User name	documaker
Password	The value entered in JMS Credentials during the installation process, unless it has been changed.

3. Download and configure the WIP Edit plug-in accessibility.

To edit documents within Documaker Interactive, you need the WIP Edit plug-in. You can download the plug-in from the Oracle Software Delivery Cloud web site and provide it to users by:

- Pushing the installation to your end users.
- Hosting the installation and allow the web application to provide a download link when requested. Make sure the installation is available on a static content server.

If you are hosting the WIP Edit plug-in installation, use Documaker Administrator to enter the location for the installation:

- a. In the left panel, click the Systems link. In the right panel, expand the System node, if it is not already expanded. Expand the Assembly Line node, if it is not already expanded.

Note This step pushes documents through the system. Moving the file with a *tmp* extension makes sure the file is not processed by the Receiver before the file is copied to the hotdirectory directory.

7. Validate the web applications using these credentials:

For	Use
Documaker Document Factory Dashboard	
URL	http://servername:10001/dashboard
User name	documaker
Password	The value entered in JMS Credentials during the installation process, unless it has been changed.
Documaker Interactive (if installed)	
URL	http://servername:9001/idm When you access this link, you are redirected to the HTTPS port for a more secure connection.
User name	documaker
Password	The value entered in JMS Credentials during the installation process, unless it has been changed.

You have completed the installation and configuration of Document Factory and Documaker Interactive: Correspondence.

Note For information on customizing the location of Help files, downloading patches, and downloading documentation updates, see on page 63.

Chapter 4

Maintaining Your System

This chapter provides information on how to maintain your Oracle Documaker Enterprise Edition (ODEE) implementation.

This chapter describes:

- *Changing the Help Location* on page 64
- *Downloading Patches* on page 65
- *Downloading the Documentation* on page 66
- *Deinstalling the Software* on page 67

CHANGING THE HELP LOCATION

If you want to access the online Help from a location other than the default WebLogic installation, such as on a static content server or via the Oracle Technology Network (OTN), you can modify the online Help configuration as follows:

Note You can find the various Help files on OTN, on the following Web page:
<http://www.oracle.com/technetwork/documentation/insurance-097481.html>

Document Factory Dashboard Help

You must define the new location for the Document Factory Dashboard Help content. The Help content is provided with the installation within this file:

```
documaker\j2ee\weblogic\dashboard\ODDF_Dashboard.ear
```

Within the Administrator, set the helpLink property to the hosted Help location for the Document Factory Dashboard configuration within the All Assembly Line.

Note The configuration within the All Assembly Line applies to the system level applications. Here is the default:

```
http://servername/ODDF_Dashboard_Help/help.html
```

Documaker Interactive: Correspondence Help

You must define the new location for the Documaker Interactive: Correspondence Help content. The Help content is provided with the installation within this file:

```
documaker\j2ee\weblogic\idocumaker_correspondence\idm.ear
```

Within the Administrator, set the helpLink property to the hosted Help location for the SYSTEM_IDS group in the Correspondence application configuration in the deployed Assembly Line. Here is the default:

```
http://servername/idmhelp/help.html
```

DOWNLOADING PATCHES

You can download the latest Oracle software patches at the My Oracle Support web site. The process includes:

- Going to the My Oracle Support site (requires registration)
- Searching for the patches you want to download
- Downloading those patches

To download Oracle software patches, go to the My Oracle Support web site:

<https://support.oracle.com>

DOWNLOADING THE DOCUMENTATION

You can download the latest Oracle Documaker documentation at the Oracle Technology Network (OTN) web site. The process includes:

- Going to the applicable page on the OTN site
- Searching for the documentation you want to download
- Downloading that documentation

To download Oracle Documaker documentation, go to this page on OTN:

<http://www.oracle.com/technetwork/documentation/insurance-097481.html>

DEINSTALLING THE SOFTWARE

You can uninstall your Documaker software before making your selection of products to install or after a successful install. To remove Documaker software, follow these steps:

1. Start the Oracle Universal Installer:
 - On Windows, choose Start, Installation Products, Oracle Universal Installer.
 - On UNIX, run the *runInstaller* script from the directory it was installed in.
2. Click the Deinstall Products option on the Welcome window. The Inventory panel appears.
3. Check the products you want to remove and click Remove.
4. The Remove Confirmation window appears, asking if you want to remove the products and their dependent components. Click Yes.

The Oracle Universal Installer warns you of any product dependencies that might cause problems if particular products are removed, and prompts you to confirm the de-installation.

Pay special attention to the full list of products being deinstalled before proceeding. The Oracle Universal Installer computes this list based on the dependencies of each component.

Note You can also remove products by clicking the Installed Products button on the Oracle Universal Installer as long as this action is performed *before* you select products to install.
