PREFACE

Welcome to the *Oracle Insurance Insbridge Rating and Underwriting SoftRater Native Guide*. This guide describes how you can integrate and use Insbridge SoftRater Native (SoftRater Native).

AUDIENCE

This guide is intended for application developers, programmers and others tasked with configuring the SoftRater Native interface. Users should be familiar with Java IDE.

RELATED DOCUMENTS

For more information, refer to the following Oracle resources:

- The Oracle Insurance Insbridge Rating and Underwriting SR_Native_Help File.
- The Oracle Insurance Insbridge Rating and Underwriting Framework Administrator User Guide.
- You can view these guides in-line at this address:

<http://www.oracle.com/technetwork/documentation/insurance-097481.html>

CONVENTIONS

The following text conventions are used in this document:

Convention	Description
bold	Boldface type indicates graphical user interface elements associated with an action.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

SYSTEM REQUIREMENTS

For minimum operating system and hardware requirements, please see the Hardware Software requirements guide.

Oracle Insurance recommends the following system requirements for client workstations for optimal performance. Currently, Insbridge SoftRater Native only supports US English.

Insbridge SoftRater Native Client:

- Operating System – Windows XP, Windows 7
- Oracle Database 10g Express Edition (Oracle XE)
- Java Runtime 1.6

Manual History

New editions incorporate any updates issued since the previous edition.

Edition	Publication Number	Product Version	Publication Date	Comment
1 st Edition	P01-786-01	R 4.1	December 2010	Initial release
2 nd Edition	P01-786-02	R 4.5	May 2011	Update

INTRODUCTION TO SOFTRATER NATIVE

Oracle Insurance Insbridge Rating and Underwriting SoftRater Native provides the ability to execute rules and rating logic in environments where access via the SoftRater web-services is not desired or possible. For example, an agent's laptop that is not connected to the web, a network, or a legacy non-web enabled system.

SoftRater Native utilizes components from the Insbridge SDK and content produced through the Insbridge applications. These components and content are then integrated with a customer's application, such as an Agent desktop quoting application.

Figure 1 shows a typical use of SoftRater Native to provide quoting to an agent in the field who is not connected to the web. RateManager programs are deployed and promoted through the various SoftRater engine environments. An Environment Backup is created in the IBFA and included in a deployment kit along with the required SoftRater Native components. Finally, the SoftRater Native components are integrated with the customer's data capture user application to produce a stand-alone client environment for agents in the field.

SoftRater Native components can be found in the SDK directory on the system where IBFA has been installed. The components can be integrated into a customer supplied application interface layer. Once deployed, SoftRater Native can accept backup files from IBFA and act as a local rating engine.

SoftRater Native itself is not a web service. You will reference it in your applications and **consume it natively** as a Java Library.

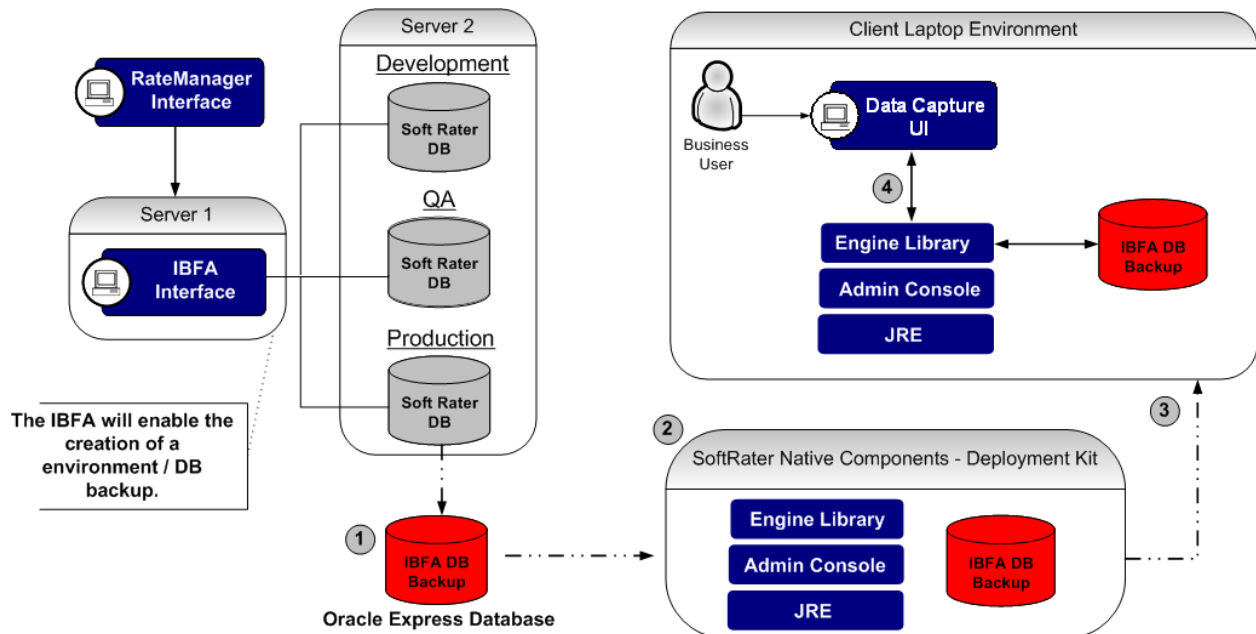

Figure 1 SoftRater Native Overview

SoftRater Native supports:

- Environment Management
- Processing Insbridge and custom XML requests
- Logging Activity
- Implementing SoftLibraries
- Accessing general engine information

Also included is a console application for the SoftRater Native allows for testing against the engine, such as:

- Loading and unloading environments
- Activate and deactivate environments
- View current environment information
- Execute Insbridge and custom XML requests
- Get the latest version information
- View the elements currently in cache
- Update logging
- Add and remove SoftLibraries

Functionality Highlights

- SoftRater Native is available on Insbridge Rating and Underwriting release 4.1 or later.
- An Oracle XE database is required. Oracle XE has a 4GB limit and allows for only 1 instance.
- When implementing SoftRater Native, an Oracle XE environment must be setup in IBFA. When you select an Oracle XE database server type the schema for the environment is changed to match the name of the environment. The schema information is needed to load environments. If unchanged, the default localhost may be used.
- Naming conventions must remain consistent. The environment name is the DBSchema name from IBFA. Entries are case sensitive.
- The SDK containing SoftRater Native will be loaded in the installation directory. To locate SoftRater Native, look under the Insbridge directory for the SDK/SoftRater Native file; [INSTALL_DIR]\Insbridge\SDK\SoftRater Native. Open zip file, SoftRater_Native_v04.05.00.zip. This file will contain three items:
 - javadoc folder (the API help file)
 - lib folder (all the libraries needed to run the Admin Console and develop application for SoftRater Native)
 - SoftRaterNativeAdminConsole.jar file (the SoftRater Native Admin Console)

NOTE: For further details, please see the *SoftRater Native javadoc folder*.

SOFTRATER NATIVE IN IBFA

SoftRater Native requires a setup in IBFA prior to implementing a client application. All setups can be done in the SoftRater Explorer Subscriber page. There are two tabs:

- **Settings:** This is where you set up and configure environments. You must complete this information prior to working on the Content tab. You will only need to set up the environment once. You can have as many XE environments as you want.
- **Content:** Once configured, SoftRater Explorer is where you will download, load, unload, move and delete packages to/from your SoftRater environments. This tab also is where you create backups for remote SoftRater environments.
 - An Oracle XE environment must be on the same server as IBFA. Oracle XE cannot be run through an application server, such as WebLogic.
 - Naming must be consistent. The names used in IBFA must be used in SoftRater Native. Oracle XE is case sensitive.

IBFA SETUP REQUIREMENTS

These steps must be performed in IBFA.

1. Set up an Oracle XE environment for use with SoftRater Native.
2. Configure the Oracle XE environment.

Step 1 Setting up an Environment for Use with SoftRater Native

1. To add an Oracle XE environment, click the **Add Environment** link on the Configuration subtab.

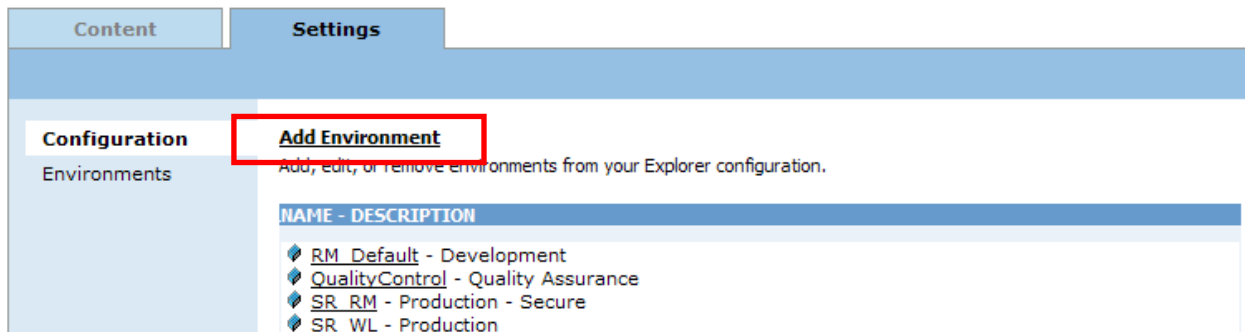

Figure 2 Environment Listing Subtab

2. This will open the **Add Environments** window.

Figure 3 Adding an Environment

3. Type in a name for your environment and select one of the three predefined types:
 - Development
 - Quality Assurance
 - Production
4. If you want to make the new environment secure, check the box next to **Secure**. A secure environment will be available to users who are logged into the Framework Administrator only.
5. Once you have entered the information, click **Save** to update the configuration file and return to the Configuration subtab.

Step 2 Configure the SoftRater Native Environment

1. On the Settings tab, select **Environments**.
2. This will open up the Environments subtab. The environments you previously setup will be listed. If your environment is missing, you must return to the Configuration subtab and add it.
3. Scroll to find the environment you created for SoftRater Native.

Figure 4 Configuring an Environment

4. The **Environment Name** will be complete. No changes are needed.
5. Enter in the file path where you want packages stored in the **Package Location**. The package location must be on the server where IBFA is located. Use the Test Environment option to have the location created for you. If you have not loaded a package to the XE environment, you may receive an error message instructing you to run the DDLs. DDLs will be run against an XE environment the first time you load a package. You do not need to run the DDLs prior to loading any packages.
6. Oracle XE must be on the same server as IBFA. The **DBServer** is **LOCALHOST**.
7. The **DB Server Type** will be **Oracle XE**. When you select an Oracle XE database server, an information screen will be displayed. The schema will be changed to match the name of the environment.
8. Click **OK**.

Figure 5 Oracle XE Message

9. The **DB Catalog** is the database name. If you are unsure of the name, you can view this information on the Oracle XE database Home Page. Home→Administration→About Database, select settings and click GO. The name will be listed in the database information window.
10. The **DB Catalog Type** is **SoftRater**.
11. **DB Query Buffer** and **DB Tablespace** are not required for an Oracle XE environment.
12. The **DB Schema** was set when you selected the DB Server Type. This information can only be changed if a different DB Server Type is selected.
13. Enter the **DB User** name and **Password**.
14. The **Engine Type** is **Windows**.
15. The **Engine Location** default is **LOCALHOST**. Oracle XE must be on the same machine as IBFA. If the IBFA engine location is not on the local machine, enter the server name or IP address where the IBFA engine is located. Do not change LOCALHOST to the name or IP address of the local machine.
16. The **Engine EnvDef** default is a blank field. Oracle XE must be on the same machine as IBFA. If the IBFA engine location is not on the local machine, enter the server name or IP address where the IBFA engine is located.
17. Click **SAVE** to save your entries.

MANAGING SOFTRATER NATIVE IN IBFA

Once your environments are set up, you will manage packages and backups from IBFA. These will be recurring steps that you will do each time you want to update your SoftRater Native environment.

1. Load packages to the SoftRater Native environment.
2. Create a Backup.
3. Save the backup to zip file.

Step 1 Loading Packages

Loading a package takes the logic stored in the package and places it in the database, so that it can be rated against. Packages can be loaded from any SoftRater environment into the SoftRater Native environment you created in IBFA. Any packages that you want to load to the remote SoftRater Native environment will need to be loaded into the SoftRater Native environment you created in IBFA first.

1. On **SoftRater Explorer**, select the appropriate subscriber.
2. The Packages subtab will automatically load the list of packages for the default environment. Select the SoftRater Native environment and click **Get Listing!** to update the list of packages.

ORACLE Insurance Insubridge Framework Administrator Version 04.01.00 (x86)

The screenshot shows the 'Content' tab of the Oracle Insurance Insubridge Framework Administrator. The interface includes a left-hand navigation pane with folders like 'Insubridge', 'SoftRater', 'Engine', 'Explorer', 'Alamere Insurance', 'SoftData', 'Services', 'Logs', 'Security', 'SoftLibraries', and 'Help'. The main area is titled 'Content' and has a 'Settings' sub-tab. Below the sub-tabs, there are controls for 'Environment' (set to 'SR_Native') and 'Remote' (set to 'NONE'). There are buttons for 'Get Listing!', 'Download', 'Load' (highlighted with a red box), and 'Delete'. A table of packages is displayed with columns for 'DESCRIPTION', 'LOB', 'RELEASE DATE', and 'SIZE'. The table contains five rows of package information, each with a checked checkbox in the left margin. At the bottom of the table, it says '5 Package(s) - 0 remote'.

DESCRIPTION	LOB	RELEASE DATE	SIZE
<input checked="" type="checkbox"/> Program:1 Version:1 Version Name:	Auto	11/19/2010 4:25:24 PM	5 KB
<input checked="" type="checkbox"/> Virginia Home Program:33 Version:1 Version Name:	Home	8/6/2010 2:19:21 PM	223 KB
<input checked="" type="checkbox"/> Kentucky Home Program:5 Version:2 Version Name:	Home	8/6/2010 2:17:47 PM	307 KB
<input checked="" type="checkbox"/> Kentucky Home Program:6 Version:1 Version Name:	Home	8/6/2010 2:15:58 PM	305 KB
<input checked="" type="checkbox"/> E01 Program:1 Version:1 Version Name:	ErrorsOmissions	8/6/2010 2:14:22 PM	5 KB

Figure 6 Selecting Packages

3. Select the package(s) you would like to load and click **LOAD** or right click and select **LOAD**.
4. This will open the **Load Packages** window where you can select options for loading the package(s).

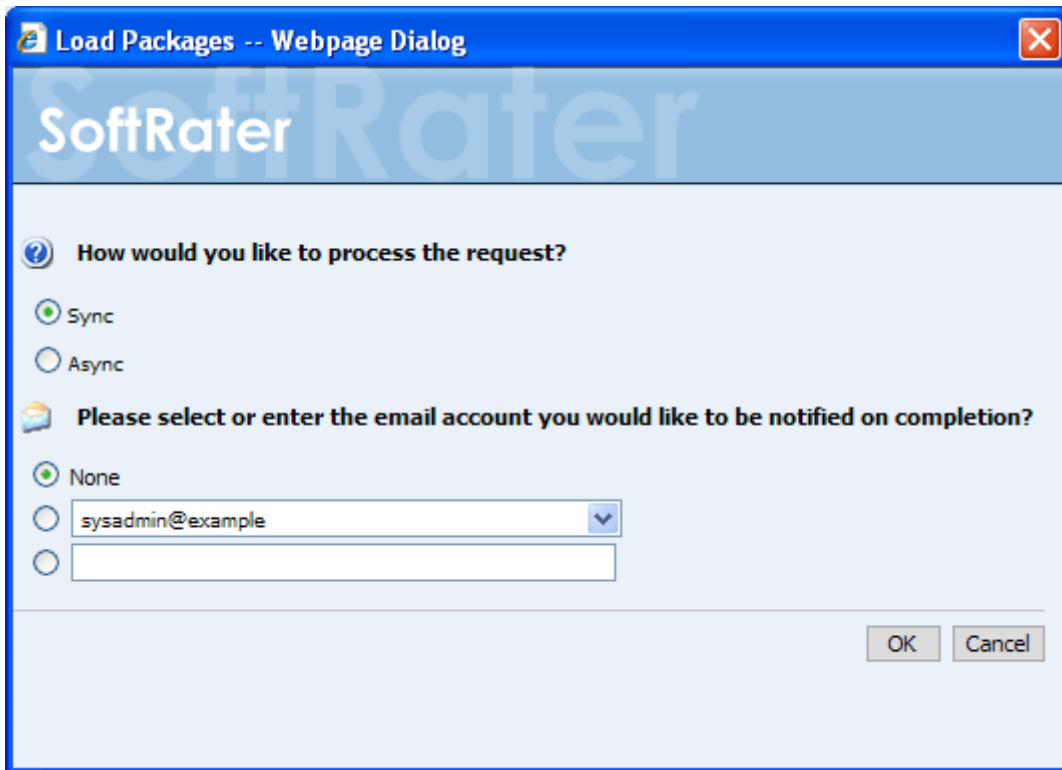

Figure 7 Loading a Package

5. When you have finished choosing your options, click **OK**.
 - If you chose the Sync load option, the package listing should refresh and an icon (📁) will appear next to the loaded package.
 - If you chose the Async load option, you should receive a message that the request was successful.

When the process finishes, if you elected to receive an email, you should receive an email with the results. If you elected not to receive an email, nothing will be sent to you.

If you receive error messages, check your configuration settings and try again.

To verify that the load request has or has not been processed, enter the Services page. Under the Insbridge Message Service→Message Process, select SoftRater – Package. Click View Messages. Any outstanding requests will be listed.

NOTE: Please make sure that the Insbridge Message Service is running. If the message service is not running, a message will be displayed at the top of the screen.

NOTE: If you load a package for a program that already has a package loaded, the original package will be unloaded and the new package will be loaded in its place. The old package will remain on disk until deleted and can be reloaded at any time.

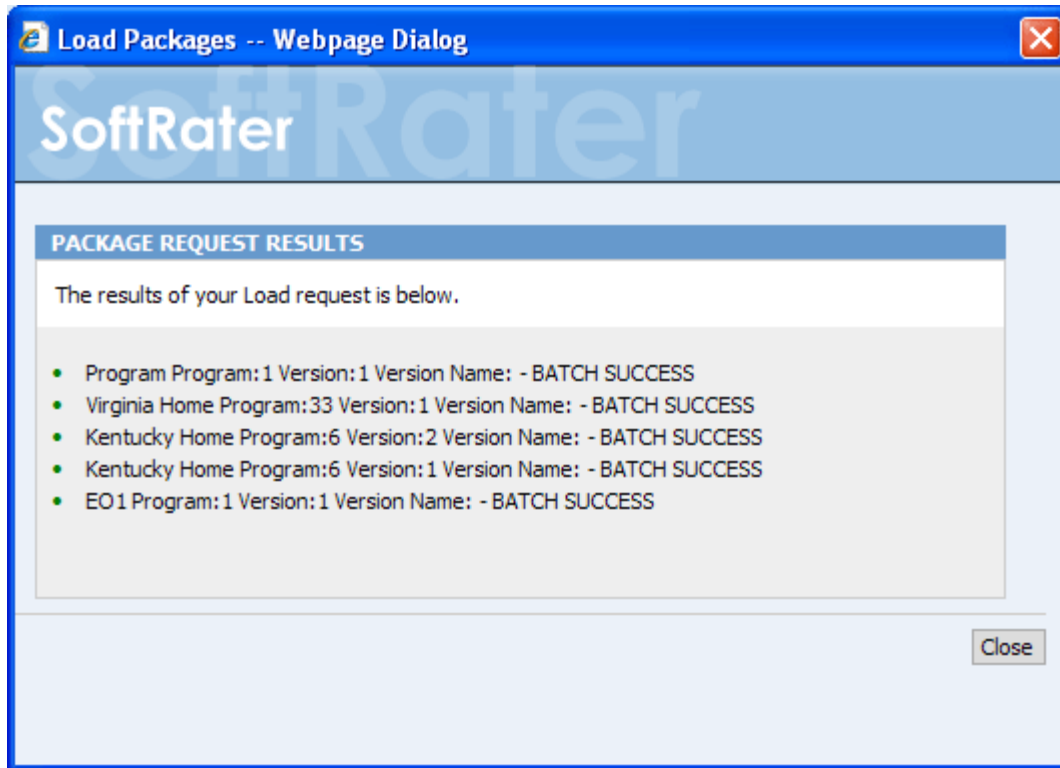

Figure 8 Load Packages Results

Figure 9 Environment with Loaded Packages

Refresh the listing and an icon (🔄) will appear next to the loaded packages.

Step 2 Creating an Environment Backup Zip File

An Instride Environment Backup zip file holds the current SRP information for the selected environment. For Oracle XE environments, a database dump file is also included. The Backups subtab is where you will manage environment backups.

When a backup is created, a file will be created in the package location where SRPs are located on disk. Once a backup is saved to disk, it becomes a SoftRater Desktop .SRB file. Each environment will have a folder where the backups for that environment will be placed. Each backup file on disk will be identified by the ID number of the backup. Backup IDs will not be duplicated.

Backups can be done against an environment that contains packages or does not contain packages. To verify package content, look at the environment report issued for the backup. An invalid database connection will not allow for a backup to be created. If you experience trouble creating a backup, please look in Logs→Error to see if an error has been recorded.

1. On **SoftRater Explorer**, select the appropriate subscriber.
2. Select the **Backups** subtab.
3. Select the **SoftRater Native environment** where you want to create a backup and click **GETLISTING!** The screen will refresh. Any backups will be listed. If not backups are found, a message will be displayed.

Figure 10 Creating a Backup

- Click **CREATE**. The create backup screen will be displayed.

Figure 11 Selecting Options when Creating a Backup

- Enter in a **Friendly name**. This is for identification purposes.
- Select how you would like to process the request.
 - If you chose the Sync option, the backup will be performed immediately and the backup listing should refresh with the backup.
 - If you chose the Async option, the backup will be performed in batch and if requested, you should receive a message that the request was successful.

When the process finishes, if you elected to receive an email, you should receive an email with the results. If you elected not to receive an email, nothing will be sent to you. Refresh the listing and the backup will be listed.

If you receive error messages, check your configuration settings and try again.

To verify that the backup request has or has not been processed, enter the Services page. Under the Insbridge Message Service→Message Process, select SoftRater – Package. Click View Messages. Any outstanding requests will be listed.

NOTE: Please make sure that the Insbridge Message Service is running. If the message service is not running, a message will be displayed at the top of the screen.

- Select or enter the email address to be notified when the request is processed. If you elect to enter an email address, this will be the Created By name.

- Click **OK**. The request will process.

The process request will come up as successful or not.

Step 3 Save to Zip File

Backup zip files are the only file type that can be used in a SoftRater Native instance.

The Save to File option is a right click menu choice that will create a backup zip file on your local hard drive or network. The zip file will be named using the friendly name. The file name cannot be changed at the time of creation but the zip file can be edited at any time.

Creating a Backup Zip File

- On **SoftRater Explorer** select the appropriate subscriber.
- Select the **Backups** subtab.
- Select the **SoftRater Native environment** where you want to create a backup and click **Get Listing!** The screen will refresh. Any backups will be listed. If not backups are found, a message will be displayed.
- Select the **backup** you want to save and right click.

Figure 12 Save To File Select

5. Select **Save to File** from the menu. The File Download dialogue will be displayed.

Figure 13 Creating a Backup Zip

6. Elect to **Save**. The Save As dialogue box will be displayed.

Open – will open the zip file in a separate window.

Cancel – will cancel the process, the dialogue will close and no file will be created or saved.

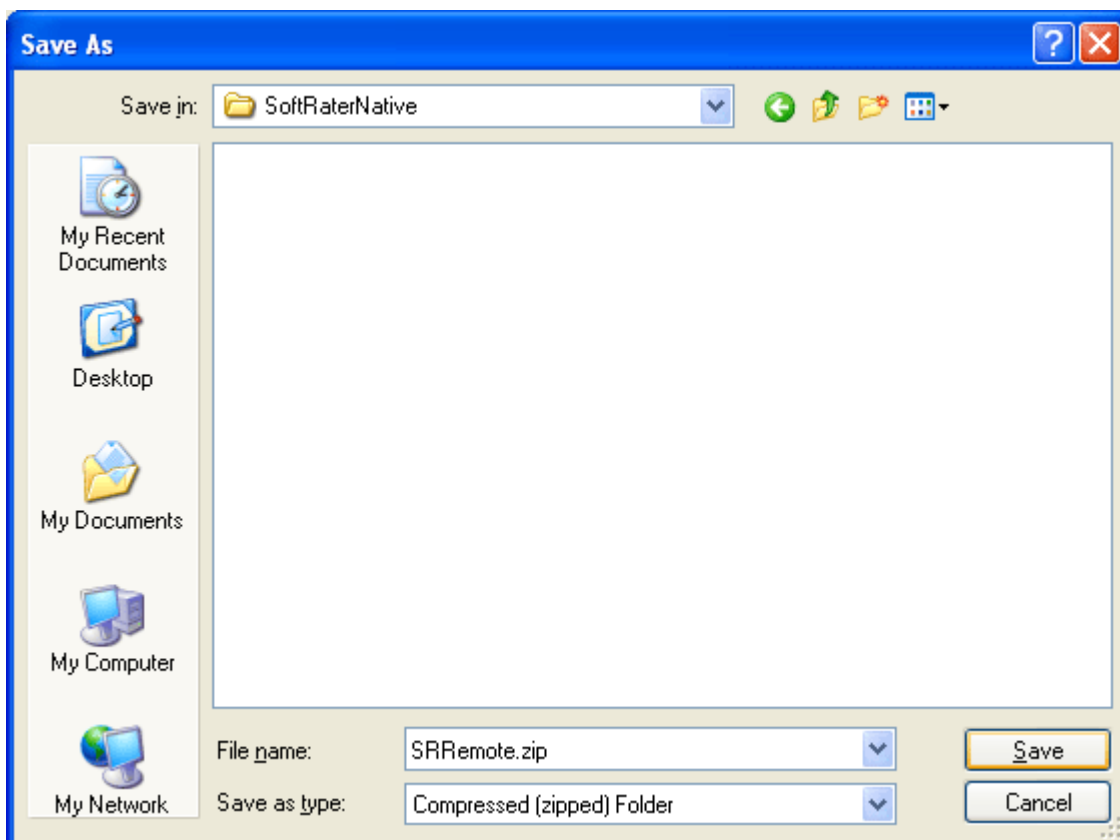

Figure 14 Saving a Backup Zip File

7. Select the location where you want to save the file. The name will default to the friendly name entered. You can change this name if needed.
8. Click **SAVE**. This will save the file to your local hard drive or network.

Backup Zip File Contents

A database backup will contain:

- An Environment Report
- Header XML information with what is contained in the backup
- The SRPs that are to be loaded or unloaded
- If included, custom XML and XSL mappings
- Database backup for the XE environments in 200mg increments

Figure 15 Backup File Contents

SOFTRATER NATIVE DEPLOYMENT

The environment backup zip file created in IBFA can be deployed to the remote Oracle XE database. Only a zip file can be used. Take note of the file path where you place the zip file. This information will be needed when you load the zip file.

Check to see if there are any SoftLibrary calls in the packages by looking over the program version report. SoftLibraries are not automatically loaded and must be added separately.

SoftRater Native Environments

A SoftRater Native environment is the rating environment that the local instance of SoftRater Native will use. This is the local engine that will execute the rating, rules and underwriting instructions defined within RateManager. Multiple environments can be loaded. Only one default environment will be allowed. The default environment is the environment that will be used to rate unless another environment is specified in the request XML.

The default environment can be changed by loading another environment as default or by activating another environment. If you want to utilize a different environment other than the default when rating, you will need to define the environment name in the Request XML.

Environments must be activated in order to be used. Deactivated environments will be unavailable for use but not removed. To remove an environment, use the “Unload Environment” option in the Admin Console or call unload Environment() API method in your application.

SOFRATER PROXY CLASS

SoftRater Native uses SoftRater Proxy classes. The SoftRater Proxy class is in StdSRProject.jar.

All the libraries in lib folder need to be added in your application's classpath. All of the other libraries are used by the SoftRater engine.

CLASS SOFRATERPROXY

```
java.lang.Object
└─ oracle.igbu.insbridge.softraternative.SoftRaterProxy
```

```
public class SoftRaterProxy
extends java.lang.Object
```

Constructor Summary

SoftRaterProxy() Constructor for SoftRaterProxy
--

Method Summary

boolean	activateEnvironment (java.lang.String aEnv, Boolean isDefaultEnv, java.lang.String aUser, java.lang.String aPassword) This method activates a deactivated environment so that the user can process request xml against it.
boolean	deactivateEnvironment (java.lang.String aEnv) This method deactivates an activated environment so that the user will not be able to process request against it.
java.lang.String[]	getCacheList () This method gets a list of cached programs.
java.lang.String	getDefaultPath () This method gets the default application path.
java.lang.String	getExistingEnvironments () This method gets a list of existing environments.
java.lang.String[]	getSoftLibraryList ()

	This method gets a list of existing softlibraries.
java.lang.String	getVersion() This method gets the SoftRater Native version.
boolean	isLoggingOn() This method checks if the system logging is turned on or not.
int	loadEnvironment (java.lang.String aFile, java.lang.String aServer, java.lang.String aPort, java.lang.String aUser, java.lang.String aPassword, boolean isDefaultEnv) This method creates a database schema in the database, loads an environment backup file to the database and create the environment on the local machine.
java.lang.String	processCustom (java.lang.String aXMLInput, Boolean aAddRoot, boolean aAddInputs, boolean aAddHeading, boolean aAddResultDesc, boolean aAddResultThatAreEmpty, boolean aDoDebugOutput, java.lang.String aTargetEnvironment, int aLOB, int aCompanyId, int aProgramId, float aProgramVersion, int aUseResultEncoding, java.lang.String aUseResultDefinition, short aInputMappingType, java.lang.String aInputMappingIdentifier, short aOutputMappingType, java.lang.String aOutputMappingIdentifier) This method processes a custom request xml.
java.lang.String	processIB (java.lang.String aXMLInput, boolean aAddRoot, boolean aAddInputs, boolean aAddHeading, boolean aAddResultDesc, boolean aAddResultThatAreEmpty, boolean aDoDebugOutput) This method processes an Insbridge request xml.
java.lang.String	removeSoftLibrary (java.lang.String aName) This method removes a softlibrary.
java.lang.String	saveSoftLibrary (java.lang.String aName, java.lang.String aClassName, java.lang.String aLogging, java.lang.String aActive, java.util.HashMap aArguments, java.lang.String aDateLastMod) This method adds a softlibrary.
void	unloadEnviornment (java.lang.String aEnv) This method deletes the schema from the database and remove the environment setting in the config xml.
void	updateLoggingOption (java.lang.String aOption) This method updates the logging option in the Insbridge SoftRater config xml.

USE CASE SUMMARY

The following table is a quick guide to the function available for SoftRater Native.

Business Use Case	Methods to Use	Result
Environments		
Activates an environment	<u>activateEnvironment</u>	Method activates a deactivated environment so that the user can process request XML against it.
Deactivates an environment	<u>deactivateEnvironment</u>	Method deactivates an environment. Users will not be able to process requests against it.
Returns a list of existing environments	<u>getExistingEnvironments</u>	Gets a list of existing environments.
Loads an environment backup	<u>loadEnvironment</u>	Creates a database schema in the database, loads an environment backup file to the database and creates the environment on the local machine.
Unload an environment	<u>unloadEnviornment</u>	Deletes the schema from the database and removes the environment setting in the config.xml.
Programs/Requests		
List cached programs	<u>getCacheList</u>	Gets a list of cached programs.
Process a custom request XML	<u>processCustom</u>	Processes a custom request XML.
Process an Insbridge request XML	<u>processIB</u>	Processes an Insbridge request XML.
Logging		
Checks if logging is on.	<u>isLoggingOn</u>	Checks if the system logging is turned on or not.
Updates the logging option	<u>updateLoggingOption</u>	Updates the logging option in the Insbridge SoftRater config XML.

SoftLibraries		
Returns a list of SoftLibraries	<u>getSoftLibraryList</u>	Gets a list of existing SoftLibraries.
Removes a SoftLibrary	<u>removeSoftLibrary</u>	Removes a SoftLibrary.
Adds a SoftLibrary	<u>saveSoftLibrary</u>	Adds a SoftLibrary.
General Application		
Returns the default application path	<u>getDefaultPath</u>	Gets the default application path.
Returns the current SoftRater Native version	<u>getVersion</u>	Gets the SoftRater Native version.

SOFRATER NATIVE ADMIN CONSOLE

An admin console is included in the SoftRater Native zip file that can assist with configuration and testing of the SoftRater Native engine.

Prior to running the console:

JRE6 must be installed. Verify the version with `Java -version`.

Oracle XE must be installed and started on the local machine where you want to run the Console.

Running the Console

1. SoftRater Native will be loaded with the IBFA installation. To locate SoftRater Native, look under the Insbridge directory for the SDK\SoftRater Native file; [INSTALL_DIR]\Insbridge\SDK\SoftRater Native. Locate zip file `SoftRater_Native_v04.01.00.zip`.
2. Unzip the zip file to a location on your local machine.
3. In a command prompt, change directories to the unzip location.
4. Enter: `Java -jar SoftRaterNativeAdminConsole.jar`

```
C:\Windows\system32\cmd.exe

C:\Insbridge>java -version
java version "1.6.0_22"
Java(TM) SE Runtime Environment (build 1.6.0_22-b04)
Java HotSpot(TM) Client VM (build 17.1-b03, mixed mode, sharing)

C:\Insbridge>java -jar SoftRaterNativeAdminConsole.jar_
```

Figure 16 Starting Admin Console

- This will open the console.

```

C:\Windows\system32\cmd.exe

C:\Insbridge>java -version
java version "1.6.0_22"
Java(TM) SE Runtime Environment (build 1.6.0_22-b04)
Java HotSpot(TM) Client VM (build 17.1-b03, mixed mode, sharing)

C:\Insbridge>java -jar SoftRaterNativeAdminConsole.jar

=====

```

Figure 17 Console Main

There are 13 options:

- Load Environment** – Loads an environment to the local Oracle XE.
- Execute Insbridge XML** – Executes Insbridge XML.
- Execute Custom XML** – Executes custom XML.
- View Cache** – Displays the programs in cache.
- Get Version** – Get the SoftRater Native version that is currently installed.
- View Existing Environments** – Lists the environments.
- Activate Environment** – Activates an environment.
- Deactivate Environment** – Deactivates an environment.
- Update Logging Option** – Displays the current logging status.
- Unload Environment** – Unloads an environment.
- Add Library** – Displays the current SoftLibraries.
- Remove Library** – Displays the current SoftLibraries.
- Exit** – Exits the console.

Load Environment

Use the Load Environment option when you want to load the SoftRater Native zip file in to the local Oracle XE. Oracle XE must be started. No configuration of XE is required. DDLs will be run when you load an environment. SoftRater Native will loop through a load using a single thread.

```

C:\Windows\system32\cmd.exe

C:\Insbridge>java -jar SoftRaterNativeAdminConsole.jar

=====
                Insbridge SoftRater Native Admin Console
=====
1. Load Environment                2. Execute Insbridge XML
3. Execute Custom XML              4. Uiew Cache
5. Get Version                      6. View Existing Environments
7. Activate Environment            8. Deactivate Environment
9. Update Logging Option          10. Unload Environment
11. Add Library                    12. Remove Library
13. Exit
=====
Please choose: 1
Please type in the full path of the environment backup file:
C:\Downloads\Insbridge\sr_native.zip
DB Server Name [default = localhost]:
Server Port [default = 1521]:
DBA Username: system
Password:
Do you want to make it the default environment? [y/n]
y
Loading environment...
Log file: C:\Insbridge\oracle\igbu\insbridge\files\IB12\Logs\IBFA_XE_EXPORT_9979787EA01.log
Environment loaded.

```

Figure 18 Loading an Environment

Prior to running this option: Place the SoftRater Native zip file from IBFA in a location on your local machine. You will need to enter the exact path.

1. To load an environment, enter 1 and complete the requested information.
2. Enter in the full path of the environment backup file.
3. It is recommended that you use the defaults for the DB Server and Server Port. The default Server Name is localhost. The default server port is 1521. If you have change the DB Server name or Server Port, you will need to enter that information.
4. The load command requires the XE database user name and password. The database user must have dba rights.
5. Select if this is to be the default environment. The default environment is the environment that will be used for rating.

Loading an environment will create a log in the same location as the SoftRater Native file. [unzip location]\Oracle\IGBU\Insbridge\files\[Environment]\Logs.

When you load the XE backup file, it will overwrite any previous file for the same environment.

Execute Insbridge XML

Use this option, which functions like SoftRater Test Interface, when you want to test Insbridge XML.

```

C:\Windows\system32\cmd.exe
=====
                Insbridge SoftRater Native Admin Console
=====
1. Load Environment                2. Execute Insbridge XML
3. Execute Custom XML              4. View Cache
5. Get Version                     6. View Existing Environments
7. Activate Environment            8. Deactivate Environment
9. Update Logging Option          10. Unload Environment
11. Add Library                   12. Remove Library
13. Exit
=====
Please choose: 2

Figure 19 Execute Insbridge XML

Custom XML Request

Use this option when you want to test custom XML. This option also will accept Insbridge XML.

1. To test Insbridge or Custom XML, enter 2 for Insbridge or 3 for custom.
2. Copy and paste the request XML.
3. Complete the requested information.

A response XML will be returned.

For more information on using Insbridge XML and Custom XML Requests, please see the IBFA User Guide, SoftRater Test Interface.

View Cache

Use this option when you want to see the cache programs.

```
C:\Windows\system32\cmd.exe

Environment unloaded.
```

Figure 26 Unloading an Environment

1. To unload an environment, enter 10.
2. Enter in the environment name. The environment name is case sensitive.
3. A warning message will ask if this is the action you want to take. Enter “y” or “n.”

A success or failure message will be returned.

Add a SoftLibrary

Use this option to add a SoftLibrary. A SoftLibrary is a specially developed program that performs a specific task. SoftLibraries may run their own code or call upon other systems to obtain information outside of the rating program, for example, obtaining a credit score.

SoftRater Native can use .jar files for SoftLibraries. Prior to working in the console you must place the .jar file and add to the class path.

```
java -classpath SoftRaterNativeAdminConsole.jar;lib\softlib\xxx.jar  
oracle.igbu.insbridge.softraternative.adminconsole.Main
```

Append all the softlibraries after SoftRaterNativeAdminConsole.jar in the command.

1. Open the console.

A screenshot of a Windows command prompt window titled "C:\Windows\system32\cmd.exe". The window displays the "Insbridge SoftRater Native Admin Console" menu with 13 options. Option 11, "Add Library", is selected. The user has entered the following information: "Random Number Generator" as the SoftLibrary name, "com.insbridge.softservices.rng.RNGSoftService" as the Java class name, "y" for "Turn on logging?", "y" for "Any arguments?", "2" for "How many arguments?", "min" for "Argument 1 Name", "1" for "Argument 1 Value", "max" for "Argument 2 Name", and "10" for "Argument 2 Value". The console concludes with the message "The softlibrary has been added.".

```
=====  
Insbridge SoftRater Native Admin Console  
=====  
1. Load Environment                2. Execute Insbridge XML  
3. Execute Custom XML             4. Uiew Cache  
5. Get Version                    6. Uiew Existing Environments  
7. Activate Environment            8. Deactivate Environment  
9. Update Logging Option          10. Unload Environment  
11. Add Library                   12. Remove Library  
13. Exit  
=====  
Please choose: 11  
There's no softlibrary configured.  
SoftLibrary name:  
Random Number Generator  
Java class name:  
com.insbridge.softservices.rng.RNGSoftService  
Turn on logging? [y/n]:  
y  
Any arguments? [y/n]:  
y  
How many arguments?  
2  
Argument 1 Name:  
min  
Argument 1 Value:  
1  
Argument 2 Name:  
max  
Argument 2 Value:  
10  
The softlibrary has been added.
```

Figure 27 Adding a SoftLibrary Using the Console

2. To add a SoftLibrary, enter 11.
3. Complete the requested information.
4. Enter SoftLibrary Name.
5. Enter Java Class Name.

6. Turn on logging? Enter “y” or “n.”
7. Any Arguments? Enter “y” or “n.”
8. For YES, enter how many arguments.
9. Enter argument name.
10. Enter argument value.

A success or failure message will be returned.

Remove a SoftLibrary

Use this option to remove a SoftLibrary. This only removes the configuration. It will not delete the JAR file.

```
ca. C:\Windows\system32\cmd.exe
=====
                Insbridge SoftRater Native Admin Console
=====
1. Load Environment                2. Execute Insbridge XML
