Oracle Exadata Storage Server Software Collections

The Oracle Exadata Storage Server Software (Exadata Cell) collections include the following:

18.1 CELL Celldisk Configuration

Attribute	Description
Name	Unique name of the cell disk
Celldisk Comment	User comment for the cell disk
Creation Time	Time stamp when the cell disk was created
Device Name	Operating system device name of the LUN used by the cell disk
Device Partition	Operating system device name of the partition that is used by the cell disk
Error Count	Number of errors that occurred on the cell disk
Free Space (GB)	Amount of unused space available on the cell disk
ID	Global unique identifier (GUID) that is generated when the cell disk is created
LUN	ID of the LUN on which the cell disk is located
Raid Level	Value of the RAID level that is currently used on the LUN, for example, `RAID 0`.
Celldisk Size (GB)	Total size of the cell disk
Celldisk Status	Current status of the cell disk, such as `normal` or `importRequired`

18.2 CELL Griddisk Configuration

Attribute	Description
Griddisk Name	Unique name of the grid disk
Available To	Names of the clients that can access this grid disk
Cell Disk	Name of the cell disk that contains the grid disk
Griddisk Comment	User-supplied text string
Creation Time	Time stamp when the grid disk was created

Attribute	Description
Error Count	Count of hardware errors detected by the cell disk containing this grid disk
ID	Global unique identifier (GUID) that is generated when the grid disk is created
Lowest Offset (MB)	Lowest byte offset of the grid disk on the physical disk
Griddisk Size (MB)	Total size of the grid disk
Griddisk Status	Current status of the grid disk, such as `active`, `inactive`, `not present`, or `importRequired`

18.3 CELL IORM Configuration

Attribute	Description
IO Resource Plan Name	Unique name of the interdatabase plan. The name value is automatically set to `cellname_IORMPLAN`.
Category Plan	Allocation plan for the categories set up in the databases using the cell
DB Plan	Allocation plan for the databases using the cell
Status	Current status of the interdatabase plan, either `active` or `inactive`.

18.4 CELL LUN Configuration

Attribute	Description
LUN Name	Unique name assigned to the LUN. This might be different (or extended from) the LUN ID if the ID is not unique.
Cell Disk	Name of the cell disk associated with the LUN. This is empty if the LUN is not associated with a cell disk.
Device Name	Operating system device name for the LUN, for example, `/dev/cciss/c1d5`
ID	Identifier assigned by the system
System LUN	If value is `TRUE`, then the disk is a system disk. If the value is `FALSE`, then the disk is not a system disk, and only has data on it.
Auto Create	Indicator whether the LUN was automatically created. Values are `TRUE` or `FALSE`. Single-disk LUNs are automatically created when disks without LUNs are converted to cell disks. For example, `CREATE DISK ALL` creates single-disk LUNs for all physical disks without LUNs. These single-disk LUNs have this attribute set to `TRUE`.
LUN Size (GB)	Raw size of the LUN before being converted to a cell disk
Physical Devices	Physical disk names that form the LUN
Raid Level	Value of the RAID level that is used on the LUN, for example, `RAID 0`.
LUN Status	Status of the LUN, which can be `normal`, `warning`, or `critical`.

18.5 CELL Physical Disk Configuration

Attribute	Description
Physical Disk Name	Unique name of the physical disk
ID	Identifier assigned by the system
LUN	List of LUNs converted from this physical disk
Insert Time	Time that the disk was inserted
Disk Size (GB)	Size of the disk in bytes
Physical Disk Status	Status of the physical disk. Values can be `normal`, `warning`, or `critical`.

18.6 Exadata Bugs Fixed

Attribute	Description
ID	Identifier for Oracle Exadata Storage Server
Bug Number	Bug number for Oracle Exadata Storage Server

18.7 Oracle Cell Configuration

Attribute	Description
Cell Name	Unique name for the cell
BMC Type	Name and version of the BMC
Cell Version	Version of the cell software
CPU Count	Number of CPUs on the cell
Fan Count	Count of working fans and total fans, displayed as working/total
ID	Global unique identifier (GUID) supplied by the hardware vendor
Interconnect Count	Number of network interconnects
IORM Boost	Ratio of the cumulative number of positions in the I/O queue that were skipped because of IORM scheduling to the number of I/Os that where scheduled. This ratio is calculated by sampling the changes each minute in the two numbers.
IP Address 1	IP address 1 for the cell
IP Address 2	IP address 2 for the cell
IP Address 3	IP address 3 for the cell
IP Address 4	IP address 4 for the cell
Kernel Version	Version of the host kernel software
Make Model	Make and mode of the cell hardware supplied by the vendor
Metric History Days	Number of days that metric history, alert history, and ADR files are retained. The default is 7 days.
Power Count	Count of power supplies, displayed as working/total. Not available on HP hardware.

PeopleSoft Collections

Oracle Configuration Manager collects configuration data for multiple PeopleTools/application releases and the data described in this chapter may not be applicable to all combinations. Because of this restriction, configurations may not show all possible data to be collected.

User IDs and passwords are never intentionally captured as part of the collection process. A value of *empty* or *not empty* is returned when User IDs and passwords are evaluated.

The PeopleSoft collections include the following:

30.1 PeopleSoft Application Server

The configuration categories and their associated configuration items for the PeopleSoft Application Server target type follow.

30.1.29 Application Server Service Configuration

When an Application Server is configured, the features are captured in the psappserv.ubx file. The metric collects all the application server features/ processes and the enabled value during an application server configuration. The listing of all features allows GSC to analyze the features enabled and the process configurations that are active within the domain. The metric is a name value pair that lists all Application Server processes and whether the feature is enabled or not.

For example, the following features appear in a PeopleSoft 8.51 application server collection:

Feature Name	Enabled
Pub/Sub Servers	False
Quick Server	True
Query Servers	True
Jolt	True
Jolt Relay	False

Feature Name	Enabled
WSL	False
PC Debugger	True
Event Notification	True
MCF Servers	True
Perf Collator	True
Analytic Servers	True
Domains Gateway	True

The specific list for your version of PeopleTools may be different from this example.

30.1.30 Application Server Slave Parameters

This metric captures failover configuration for Integration Broker. Dynamic slaves are configured in conjunction with domain failover. If a slave domain has the highest priority within a failover group, it can dynamically change to a master during failover. Dynamic slaves can be configured in the Failover Configuration page in the Service Operations Monitor.

Siebel Collections

The Siebel collections include the following:

32.1 Siebel Component

The configuration categories and their associated configuration items for the Siebel Component target type follow.

32.1.1 Siebel Component Configuration

This metric captures details for the Siebel Component Configuration in parameter pairs of Property Name and Property Value. Not all Siebel components contain the same set of parameters so the actual output may vary from one component to another. For example, an Application Object Manager (AOM) component may have different parameters than a Transaction Router component. This generic pairing of Property Name and Property Value allows for any parameter to be captured for all Siebel components.

Following is an example of parameter pairs for the SCCObjMgr_enu component:

Property Name	Property Value
datasource	ServerDataSrc
host	sdchpi01
maxtasks	500
maxmtservers	10
SIEBEL_ENTERPRISE	sia80
SIEBEL_COMPNAME	SCCObjMgr_enu

32.2 Siebel Component Group

The configuration categories and their associated configuration items for the Siebel Component Group target type follow.

32.2.1 Siebel Component Group Configuration

This metric captures details for the Siebel Component Group Configuration in parameter pairs of Property Name and Property Value. This is similar in nature to the Siebel Component Configuration, however the Component Groups will have the same Property Names for all groups (though the Property Values may be different). A

Component Group Configuration is not the same as a Siebel component definition, although some of the same parameter names may appear.

Following is an example of parameter pairs for the Call Center component group:

Property Name	Property Value
SIEBEL_COMPGROUP	CallCenter
SIEBEL_ENTERPRISE	sia80
SIEBEL_GATEWAY	sdcp520a001

32.3 Siebel Enterprise

The configuration categories and their associated configuration items for the Siebel Enterprise target type follow.

32.3.1 Siebel Enterprise Configuration

This metric captures details for the Siebel Enterprise Configuration in parameter pairs of Property Name and Property Value. The Property Names are parameters that are appropriate for or affect the entire Siebel Enterprise. This would include Siebel Enterprise parameters as well as Siebel Named Subsystems. Named Subsystem Property Names are in the format of:

```
SubSys_<datasrc><parameter>
where
  <datasrc> is the Siebel data source name, and
  <parameter> is the parameter name in that Siebel data source
```

Following is an example of parameter pairs for a Siebel Enterprise:

Property Name	Property Value
filesystem	vol1/sia80ora/siebsrvr/fs
secadptmode	DB
secadptname	DBSecAdpt
SIEBEL_GATEWAY	sdchpi01
SubSys_DBSecAdptdatasourcename	ServerDataSrc
SubSys_GatewayDataSrcdsconnectstring	sdchpi01:3220
SubSys_ServerDataSrcdsmaxcursorsize	-1
tableowner	usia05

32.3.2 Siebel Upgrade

This metric represents a list and history of all Fix Packs and Quick Fixes that have been applied to the Siebel system. The upgrade.txt file that contains this information is located in the $SIEBEL_HOME directory and the data present in this file is collected using Perl file siebel_upgrade.pl.

UPGRADE_ NUMBER	ACTION	FIX_PACK_ VERSION	QUICK_FIX	DATA_TIME
1	INSTALLED	7.8.2.16	Not Applicable	Wed Feb 02 11:04:53 GMT-07:00 2011

UPGRADE_ NUMBER	ACTION	FIX_PACK_ VERSION	QUICK_FIX	DATA_TIME
2	INSTALLED	7.8.2.16	QFTEST	Wed Feb 09 11:04:53 GMT-07:00 2011

32.4 Siebel Gateway

The configuration categories and their associated configuration items for the Siebel Gateway target type follow.

32.4.1 Siebel Gateway Configuration

This metric captures details for the Siebel Gateway Configuration in parameter pairs of Property Name and Property Value. The Property Names are parameters that are appropriate for or affect the Siebel Gateway.

Following is an example of parameter pairs for a Siebel Gateway:

Property Name	Property Value
host	sdchpi01
SIEBEL_GATEWAY	sdchpi01

32.5 Siebel Server

The configuration categories and their associated configuration items for the Siebel Server target type follow.

32.5.1 Siebel Server System Configuration

This metric captures details for the Siebel Server System Configuration in parameter pairs of Property Name and Property Value. The Property Names gathered for this section contains the Siebel server parameter names while the Property Values are those specific to the settings for this Siebel server.

Following is an example of parameter pairs for a Siebel Server System Configuration:

Property Name	Property Value
host	sdchpi01
logdir	/vol1/sia80ora/siebsrvr/enterprises/sia80/srvr1/log
rootdir	/vol1/sia80ora/siebsrvr
SIEBEL_ENTERPRISE	sia80
SIEBEL_SERVER	srvr1

32.5.2 Siebel Server General Configuration

This metric captures details for the Siebel Server General Configuration in parameter pairs of Property Name and Property Value. The Property Names gathered for this section are not necessarily Siebel server parameter settings, but could contain applicable details for the Siebel server which might be found in other files on the server (such as base.txt). These Property Names would be associated with their corresponding Property Values.

Following is an example of parameter pairs for a Siebel Server General Configuration:

Property Name	Property Value
Base File Contents	8.0.0.2 SIA [20412] LANG_INDEPENDENT
Enabled Languages	enu;fra;
