

Oracle® Configuration Manager

Support for Sun Oracle Database Machine

Release 10.3.3.2

E17872-01

July 2010

The Oracle Configuration Manager (OCM) provides better support experience through transparent and automatic upload of configuration information to Oracle. The OCM collector must be configured to upload this information.

Ensuring the OCM Collector Is Installed and Configured

The OCM Collector is deployed in both the grid home (default location: `/u01/app/11.2.0/grid`), as well as the Oracle Database home (`/u01/app/oracle/product/11.2.0/dbhome_1`).

Insure the OCM Collector is configured in both of the Oracle product homes:

- `/u01/app/11.2.0/grid`
- `/u01/app/oracle/product/11.2.0/dbhome_1`

The OCM Collector was configured if the utility `ccr/bin/configCCR` exists in the Oracle product home.

If the OCM collector is not configured, then refer to the steps in the *Oracle Configuration Manager Installation and Administration Guide* located at (<http://www.oracle.com/technology/documentation/ocm.html>) to configure the Oracle Configuration Manager.

For Oracle Real Application Cluster (Oracle RAC) database, all systems participating in the cluster must have the OCM Collector configured.

Updating to the Latest OCM Collector

The support for collections specific to Sun Oracle Database Machine require a manual upgrade of the software. To accomplish this upgrade, perform the following steps:

1. Log in to My Oracle Support (<http://support.oracle.com>).
2. Download the most current version of the Oracle Configuration Manager from My Oracle Support **Collector** tab.
3. For each of the product homes, run the command:

```
ccr/bin/emCCR update_components -distribution=<downloaded-update>
```

where `<downloaded-update>` is the distribution that was downloaded from the My Oracle Support Collector tab

Instrumenting the Database

The Oracle database instances running on the Sun Oracle Database Machine system require a one-time only instrumentation. Perform the instrumentation after the OCM Collector has been updated to the latest release.

The database instrumentation is performed by invoking the command:

```
ccr/admin/scripts/installCCRSQL.sh collectconfig -s <sid> -r <sysdba-account-pwd>
```

where

<sid> is a database instance

<sysdba-account-pwd> is the password for an account that holds SYSDBA privilege

For an Oracle RAC database, the instrumentation only needs to be performed on one instance.

Note: Instrumentation must be performed on each database for configuration collections to be performed.

Documentation Accessibility

Our goal is to make Oracle products, services, and supporting documentation accessible to all users, including users that are disabled. To that end, our documentation includes features that make information available to users of assistive technology. This documentation is available in HTML format, and contains markup to facilitate access by the disabled community. Accessibility standards will continue to evolve over time, and Oracle is actively engaged with other market-leading technology vendors to address technical obstacles so that our documentation can be accessible to all of our customers. For more information, visit the Oracle Accessibility Program Web site at <http://www.oracle.com/accessibility/>.

Accessibility of Code Examples in Documentation

Screen readers may not always correctly read the code examples in this document. The conventions for writing code require that closing braces should appear on an otherwise empty line; however, some screen readers may not always read a line of text that consists solely of a bracket or brace.

Accessibility of Links to External Web Sites in Documentation

This documentation may contain links to Web sites of other companies or organizations that Oracle does not own or control. Oracle neither evaluates nor makes any representations regarding the accessibility of these Web sites.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/support/contact.html> or visit <http://www.oracle.com/accessibility/support.html> if you are hearing impaired.
