License Restrictions Warranty/Consequential Damages Disclaimer

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

Warranty Disclaimer

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

Restricted Rights Notice

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

Hazardous Applications Notice

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate failsafe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Third Party Content, Products, and Services Disclaimer

This software or hardware and documentation may provide access to or information on content, products and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Contents

Preface

PeopleSoft Payables Preface	xxxvii
PeopleSoft Products	xxxvii
PeopleSoft Application Fundamentals	xxxviii
Pages With Deferred Processing	xxxviii
PeopleBooks and the PeopleSoft Online Library	xxxviii
Common Elements Used in This PeopleBook	xxxix

Part 1

General Setup

Chapter 1

Getting Started with PeopleSoft Payables	3
PeopleSoft Payables Overview	3
PeopleSoft Payables Business Processes	3
PeopleSoft Payables Integration Touchpoints	4
PeopleSoft Payables Implementation Tasks	10

Chapter 2

Navigating in PeopleSoft Payables	15
Navigating in PeopleSoft Payables	15
Pages Used to Navigate in PeopleSoft Payables	15

Chapter 3

Understanding PeopleSoft Payables Implementation	17
Implementation Considerations	17
Definition of the Business Units	18
General Ledger Distribution Considerations	18

PeopleSoft Payables Control Hierarchy	19
Business Units	20
Voucher Origins	20
Control Groups	21
Vendors	21
Vouchers	22
Definition of the Accounting Environment	22
ChartField Combination Editing	22
Voucher and Payment Processing	23
Voucher Processing	23
Payment Processing	25
Establishing FTP Servers for Attachments	26
Page Used to Set Up Attachments for Transactions	26
Setting Up File Attachments	26

Chapter 4

Setting Up PeopleSoft Payables Business Units	29
Understanding PeopleSoft Payables Business Units	29
PeopleSoft Payables Business Unit Overview	29
Responsibilities	30
PeopleSoft General Ledger Business Unit Considerations	30
TableSets	30
PeopleSoft Payables Control Hierarchy	31
Questions to Ask	31
PeopleSoft Payables Business Unit Setup Steps	32
Defining Procurement Controls for General Ledger Business Units	32
Understanding Discount Accounting Controls	33
Prerequisites	37
Pages Used to Define Procurement Controls for General Ledger Business Units	37
Selecting General Controls	38
Setting Up Nonmerchandise Charges	42
Defining General Ledger Templates	45
Selecting ERS Options	46
Selecting Withholding Options	47
Specifying Withholding ChartFields	48
Defining PeopleSoft Payables Business Units	50
Pages Used to Define PeopleSoft Payables Business Units	50
Creating a New Business Unit	51
Linking PeopleSoft Payables Business Units with General Ledger Business Units	53
Updating Open Periods	56
Establishing Tax Options	58
Setting Voucher Build Options	61

Establishing Matching Options	63
Defining Payment Options	65
Setting Up Numbering	67
Defining Summary Invoice Controls	69
Defining PeopleSoft Payables Business Unit Options by SetID	70
Understanding PeopleSoft Payables Business Unit Setup by SetID	71
Pages Used to Define PeopleSoft Payables Business Unit Options by SetID	71
Establishing Accounting Date Options	72
Defining the Voucher Approval Rules, Default Currency, and Single Payment Master Vendor	73
Defining Voucher Error-Handling Options	75
Selecting Payment Options	77
Selecting Tax Options	82

Chapter 5

Organizing Vouchers with Origins and Control Groups	87
Understanding Voucher Origins and Control Groups	87
Voucher Origins	87
Control Groups	87
Common Elements Used in This Chapter	89
Defining Voucher Origins	89
Prerequisites	89
Pages Used to Define Voucher Origins	90
Specifying Accounting and Payment Options	90
Specifying Voucher Approval, Matching, Currency, and Document Sequencing Settings	92
Specifying Duplicate Invoice Checking, ChartField Editing, and Voucher Balancing Options	93
Setting Tax Options	93
Defining Voucher Control Groups	94
Pages Used to Define Voucher Control Groups	95
Assigning Control Groups	96
Defining Accounting Options	99
Establishing Vouchering Options	101
Reviewing Vouchers	102
Setting Tax Options	103
Checking the Status of a Control Group	104
Posting Control Groups	106
Deleting Control Groups	106

Chapter 6

Setting Up Payment Formats and Payment Forms	109
Understanding PeopleSoft Payables Payment Formats	109

Available PeopleSoft Payables Payment Formats	110
System and Manual Checks	110
Wire Transfers	112
EFT and ACH Payments	112
Drafts	115
Giros	119
Letters of Credit	121
Direct Debits	123
Deciding Which Payment Forms You Need	123
Understanding Which Payment Forms You Need	124
Deciding Payment Form Layouts	124
Selecting and Configuring Payment Forms	125
Specifying Payment Form Attributes	125
Understanding Payment Form Attribute Specifications	125
Pages Used to Specify Payment Form Attributes	126
Setting Form and Advice Attributes to Link Payment Layouts to Data	126
Selecting Payment Sort Fields	130
Assigning Payment Forms to Bank Accounts	130
Page Used to Assign Payment Forms to Bank Accounts	130
Specifying Payment Form IDs for Bank Accounts	131
Modifying Payment Forms	132
Understanding Payment Form Modifications	132
Modifying a Payment Form	132
Specifying MICR Fonts	133
Printing Logos and Signatures with BI Publisher Checks	133
Testing Checks	133

Chapter 7

Configuring the PeopleSoft Payables Payment Interface	135
Understanding the PeopleSoft Payables Payment Interface	135
Common Elements Used in This Chapter	135
Setting Up the PeopleSoft Payables Payment Interface	136
Pages Used to Set Up the PeopleSoft Payables Payment Interface	136
Defining Payment Sources	137
Entering Source Search Definitions	138
Setting Up Pay Cycle Mapping	139
Mapping Fields	140

Chapter 8

Establishing Pay Cycles	143

Understanding Pay Cycle Processing	143
Payment Process Flow	144
Creating a Pay Cycle	147
Understanding Pay Cycle Configuration	147
Pages Used to Create a Pay Cycle	148
Defining Pay Cycle Steps	148
Defining Step Groups	149
Adding User-Defined Pay Cycle Steps	150
Defining Bank Replacement Rules	152
Understanding Bank Replacement Processing	152
Prerequisites	157
Page Used to Define Bank Replacement Rules	158
Defining Bank Replacement Rules	158
Creating, Updating, and Reusing Pay Cycles	162
Understanding Pay Cycle Definition	162
Prerequisites	165
Pages Used to Create, Update, and Reuse Pay Cycles	166
Defining Pay Cycle Date Criteria	167
Setting Pay Cycle Preferences	170
Specifying Source Criteria	177
Specifying Bank and Payment Methods Criteria	178
Specifying Pay Group and Netting Criteria	180
Setting Pay Cycle Draft Options	181
Configuring Pay Cycles for PeopleSoft Financial Gateway Processing	184
Understanding Pay Cycle and PeopleSoft Financial Gateway Integration	184
Pages Used to Configure Pay Cycles for PeopleSoft Financial Gateway Processing	185
Defining PeopleSoft Financial Gateway Mapping Details	185

Chapter 9

Setting Up Draft, Payment, and Voucher Processing	187
Setting Up Bank Transfer Charges	187
Understanding Bank Transfer Charge Setup	188
Pages Used to Set Up Bank Transfer Charges	188
Enabling Bank Transfer Charge Processing at the Bank Level	189
Defining Bank Charge Options at the Vendor Level	190
Setting Up Payment Rescheduling	191
Pages Used to Set Up Payment Rescheduling	191
Setting Up the Reschedule Payments Conditions	191
Setting Up Reschedule Options for Vendors	194
Setting Up Aging Categories for Vendor Liability Aging Reports	194
Pages Used to Set Up Aging Categories for Vendor Liability Aging Reports	195
Setting Up Aging Categories for Vendor Liability Aging Reports	195

Setting Up Draft Processing	197
Common Elements Used in This Section	197
Pages Used to Set Up Draft Processing	197
Creating Draft Sight Codes	198
Creating Stamp Tax Definition	199
Specifying Stamp Tax Minimization Rules	199
Setting Up Multicurrency Tables	200
Pages Used to Set Up Multicurrency Tables	201
Assigning Gain or Loss ChartFields	202
Specifying a Journal Template	202
Setting Up Multiple Currencies in PeopleSoft Payables Control Tables	203
Pages Used to Set Up Multiple Currencies in PeopleSoft Payables Control Tables	203
Defining Currency Options for PeopleSoft General Ledger Business Units	204
Defining Currency Options for PeopleSoft Payables Business Units	204
Defining Currency Options for Voucher Origins	205
Defining Currency Options for Control Groups	205
Defining Currency Options for Vendors	206
Defining Currency Options for Banks	206
Setting Up the PeopleSoft Payables Revaluation Process	206
Understanding the PS/AP Revaluation Process	207
Prerequisite	207
Pages Used to Setup the PeopleSoft Payables Revaluation Process	207
Selecting a Reversal Code	207
Specify PeopleSoft Payables Journal Templates	208
Selecting a Revaluation Posting Option	208
Setting Up the PeopleSoft Financial Gateway Integration	210
Understanding PeopleSoft Financial Gateway Integration Setup	210
Prerequisite	211
Pages Used to Set Up the PeopleSoft Financial Gateway Integration	211
Registering PeopleSoft Payables with PeopleSoft Financial Gateway	212
Establishing Payment Errors Email Notification	213
Setting Up Inquiry Search Criteria	214
Page Used to Set Up Inquiry Search Criteria	214
Defining Inquiry Search Criteria	214

Chapter 10

Setting Up PeopleSoft Payables Accounting	217
Understanding the Accounting Environment Setup	217
Interunit Accounting Setup in PeopleSoft Payables	217
Posting Method Definition	221
ChartFields Definitions in the Accounting Entry Template	228
ChartFields Definitions for PeopleSoft General Ledger Business Units	229

Prerequisites	229
Setting Up ChartField Inheritance Options	230
Understanding ChartField Inheritance Setup	230
Pages Used to Set Up Inheritance Options	231
Defining Non Bank-Related ChartField Inheritance Options	231
Defining Bank-Related ChartField Inheritance Options	234
Validating Posting Setup	235

Chapter 11

(USF) Setting Up PeopleSoft Payables for U.S. Federal Agencies	237
Setting Up EFT and ACH Payment Formats	237
Understanding EFT and ACH Payment Format Setup	237
Pages Used to Set Up EFT and ACH Payment Formats	239
Defining Agency Location Codes	239
Understanding Agency Location Codes	240
Pages Used to Set Up Agency Location Codes	241
Defining Agency Location Codes	241
Specifying GWA Reporting Options	241
Setting Up Vendors for Federal Payment Processing	243
Defining Federal Spending Regions	244
Prerequisite	244
Pages Used to Define Federal Spending Regions	244
Specifying the Federal Spending Region Chartfield and Processing Options	245
Defining Spending Region ChartField Values	246
Associating Spending Region Codes with States	246
Defining Regional Financial Codes	247
Understanding Regional Finance Code Definition	247
Page Used to Define Regional Financial Codes	247
Specifying Restrictions for Federal Payment Schedules	248
Understanding Federal Payment Schedule Restrictions	248
Page Used to Specify Restrictions for Federal Payment Schedules	248
Specifying Federal Payment Schedule Restrictions	248
Configuring Workstations for IPAC Inbound Processing	249
Configuring Workstations for IPAC Inbound Processing	249
Setting Up CCR Processing	250
Understanding CCR Processing Setup	251
Pages Used to Set Up CCR Processing	251
Enabling CCR Processing	252
Maintaining CCR Codes	253
Defining CCR Registration Status and Dun & Bradstreet Suffixes	253
Defining CCR ID Numbers	254

Chapter 12

Setting Up Sales and Use Taxes and Value-Added Taxes (VAT)	255
Establishing PeopleSoft-Only Sales and Use Tax Processing	255
Understanding PeopleSoft-Only Sales and Use Tax Processing	255
Setting Up PeopleSoft-Only Sales and Use Tax Processing Options	260
Establishing Taxware and Vertex Sales and Use Tax Processing	262
Setting Up Taxware and Vertex Processing Options	262
Establishing the PeopleSoft Payables VAT Default Hierarchy	266
Setting Up the PeopleSoft Payables VAT Default Hierarchy	266

Chapter 13

Setting Up PeopleSoft Payables Withholding	271
Setting Up the PeopleSoft Payables Withholding Environment	271
Understanding Withholding Entity Setup	272
Pages Used to Set Up the PeopleSoft Payables Withholding Environment	275
Defining Withholding Rules	277
Defining Withholding Types and Classes	279
Defining Withholding Jurisdictions	279
Defining Business Unit Categories	280
Defining Vendor Categories	280
Defining Withholding Entities	280
Defining Withholding Options	286
Defining Vendor Information for the Entity	287
Defining Business Unit Information for the Entity	287
Setting Up Withholding at the General Ledger Business Unit Level	288
Defining Withholding Codes	288
Setting Up PeopleSoft Payables Withholding Reports	289
Pages Used to Set Up PeopleSoft Payables Withholding Reports	289
Specifying Withholding Report Selection Criteria	290
Specifying Process Type and Name	290

Part 2

Basic Voucher and Payment Processing

Chapter 14

Entering and Processing Vouchers Online: General Voucher Entry Information	293
Understanding Voucher Processing and the Voucher Life Cycle	294
Voucher Process Flow	294
Voucher Life Cycle	296
Voucher Styles	298
Voucher Validation	299
Voucher Session Defaults	301
Processing That Is Initiated by the Voucher Component	301
(USA) Vouchers for HIPAA Payments	302
Prerequisites	303
Entering Invoice Information for Online Vouchers	303
Understanding Voucher Dependencies and Balancing Functionality	304
Pages Used to Enter Invoice Information for Online Vouchers	305
Accessing the Voucher Component	308
Creating Vouchers Online	309
Defining Payment Terms	330
Entering Nonmerchandise Charge Details	332
Reviewing Nonmerchandise Charges	333
Viewing Purchase Order and Receiver References	334
Associating Receivers with Voucher Lines	335
Associating Receiver Lines with Voucher Lines for Matching	336
Entering Sales and Use Tax Summary Information	337
Entering Voucher Line Tax Information	338
Entering Session Defaults	340
Copying Source Documents to Create Vouchers Online	342
Understanding Source Document Copy Functionality	342
Pages Used to Copy Source Documents to Create Vouchers Online	346
Copying Purchase Order Information	347
Copying Receiver Information	350
Copying Voucher Information	354
Copying Template Information	356
Scheduling and Creating Voucher Payments for Online Vouchers	357
Pages Used to Schedule and Create Voucher Payments for Online Vouchers	357
Entering Payment Information for Vouchers	359
Defining Holiday Processing and Currency Options	368

Overriding Late Charge Information	369
Entering Draft Settings for Draft Payments	370
Entering Layout Information	371
(USA) Entering HIPAA Information	371
Completing Voucher Attributes	373
Page Used to Complete Voucher Attributes	373
Viewing and Modifying Voucher Attributes	373
Viewing Voucher Summary Information	380
Page Used to View Voucher Summary Information	380
Viewing Voucher Summary Information	380
Viewing Related Documents Information	383
Page Used to View Related Documents Information	383
Viewing Related Documents Information	383
Viewing Voucher Error Information	385
Pages Used to View Voucher Error Information	386
Viewing Voucher Errors Using the Voucher Component	387
Viewing Voucher Approval Summary Information	388
Page Used to View Voucher Approval Summary Information	389
Running On-Demand Voucher Processes as a Batch Request	389
Page Used to Run On-Demand Voucher Processes as a Batch Request	389
Running Batch On-Demand Voucher Processes	389

Chapter 15

Entering and Processing Vouchers Online: Specific Voucher Styles	391
Entering Regular Vouchers	392
Entering Adjustment Vouchers	392
Understanding Adjustment Vouchers	392
Pages Used to Enter Adjustment Vouchers	393
Creating Adjustment Vouchers	393
Creating Credit Memo Adjustment Vouchers	394
Adjusting Matched Values	394
Reversing Quantities or Amounts for Purchase Order Information	395
Reversing Quantities or Amounts for Receipt Information	396
Modifying Claim Vouchers	396
Understanding Claim Vouchers	396
Pages Used to Modify Claim Vouchers	398
Entering Journal Vouchers	399
Understanding Journal Vouchers	399
Pages Used to Create Journal Vouchers	399
Creating Journal Vouchers	399
Entering Prepaid Vouchers	400
Entering Registered Vouchers	400

Understanding Registered Vouchers	400
Prerequisites	401
Pages Used to Enter and Complete Registered Vouchers	401
Creating Registered Vouchers	402
Unposting Registered Vouchers	402
Completing Registered Vouchers	403
Entering Reversal Vouchers	403
Understanding Reversal Vouchers	403
Pages Used to Enter Reversal Vouchers	405
Creating Reversal Vouchers	405
Entering Single Payment Vouchers	406
Understanding Single Payment Vouchers	406
Prerequisites	408
Pages Used to Enter Single Payment Vouchers	408
Entering Vendor Information for a Single Payment Voucher	409
Completing the Single Payment Voucher	410
Entering Template Vouchers	411
Understanding Template Vouchers	411
Pages Used to Enter Template Vouchers	411
Creating Template Vouchers	411
Entering Third-Party Vouchers	412
Understanding Third-Party Vouchers	412
Pages Used to Enter Third-Party Vouchers	412
Creating Third-Party Vouchers	412

Chapter 16

Processing Batch Vouchers	415
Understanding Voucher Build Processing	415
Voucher Build Process Flow	415
Tables That Are Accessed by the Voucher Build Process	418
Voucher Build Process Errors	421
Understanding Voucher Build Source Transactions	422
Claims Management Data	423
Consigned Inventory	423
Customer Refunds from PeopleSoft Receivables	425
Debit Memo Vouchers	425
EDI Records	426
ERS Vouchers	430
Interunit Invoices from PeopleSoft Billing	431
Invoices from Spreadsheet Vouchers	431
Invoices from Summary Invoices	431
Invoices from Quick Invoice Entry	432

PeopleSoft Pay/Bill Management Transactions	432
Procurement Cards	432
PeopleSoft Promotions Management Data	433
PeopleSoft Real Estate Management Data	433
Recurring Voucher Contracts	434
RTV Adjustments	434
Self-Service Invoices from PeopleSoft eSettlements	436
Voucher EIP	436
XML Invoices	438
Prerequisites	439
Running the Voucher Build Process and Reviewing Messages	440
Common Elements Used in This Section	440
Pages Used to Run the Voucher Build Process and Review Messages	440
Running the Voucher Build Process	441
Reviewing Process Messages	445
Reviewing Vouchers with Errors	446
Reviewing Voucher Build Process Errors	446
Understanding Voucher Build Error Review	447
Pages Used to Review Voucher Build Process Errors	448
Reviewing Voucher Build Process Error Details	448

Chapter 17

Using Quick Invoices	451
Understanding Quick Invoices and Summary Invoices	451
Quick Invoice Overview	451
Purchase Order and Receiver Copy Functionality for Quick Invoices	453
Summary Invoice Processing	454
Voucher Build Processing Logic for Associating Voucher Lines with Purchase Order and Receiver Lines	455
Quick Invoice Entry Component Configuration	457
Prerequisites	457
Entering and Updating Quick Invoices	457
Common Elements Used in This Section	458
Pages Used to Enter and Update Quick Invoices	459
Entering Quick Invoices Using the Complete Worksheet	461
Entering Distribution Line Information	467
Entering Quick Invoices Using the Simple Worksheet	468
Overriding Defaults	470
Entering Payment Information	471
Entering Prepayment Vouchers Using the Quick Invoice Entry Component	472
Reviewing and Updating Quick Invoices, Staged Vouchers, and Vouchers with Pre-Edit Errors	473
Entering Summary Invoices	475

Page Used to Enter Summary Invoices	475
Entering Summary Invoices	476

Chapter 18

Entering and Importing Spreadsheet Vouchers	479
Understanding Spreadsheet Vouchers	479
Spreadsheet Voucher Processing	479
Spreadsheet Voucher Flow	480
Spreadsheet Voucher Data Fields	481
Spreadsheet Voucher Process Edits	482
Prerequisites	484
Setting Up Spreadsheet Vouchers	484
Entering and Importing Spreadsheet Vouchers	487
Reviewing Spreadsheet Vouchers	488
Understanding How to Review Spreadsheet Vouchers	489
Pages Used to Review Spreadsheet Vouchers	489

Chapter 19

Managing Vouchers	491
Understanding Voucher Management	491
Voucher Approval	492
Voucher Deletion, Closure, and Unposting	492
Voucher Correction and Mass Maintenance	492
OpenItem Accounting	493
Approving Vouchers	493
Understanding Voucher Approval	494
Prerequisites	499
Pages Used to Approve Vouchers	500
Running the Voucher Approval Workflow Process	501
Using the Voucher Approval Component to Approve Vouchers	501
Using the Approval Framework - Vouchers Component to Approve Vouchers	503
Approving Multiple Vouchers	504
Unposting Individual Vouchers	504
Pages Used to Unpost Individual Vouchers	505
Unposting Vouchers	505
Closing Individual Vouchers	508
Understanding Voucher Close Functionality	508
Pages Used to Close Individual Vouchers	512
Closing Vouchers	513
Restoring Encumbrances	516

Deleting Individual Vouchers	516
Pages Used to Delete Individual Vouchers	517
Deleting Vouchers	517
Searching for and Correcting Individual Vouchers	518
Understanding the Voucher Maintenance Search and Voucher Maintenance Components	518
Common Elements Used in This Section	519
Pages Used to Search for and Correct Individual Vouchers	519
Searching for Vouchers Needing Correction or Updating	521
Viewing Voucher Summary Information	524
Viewing and Modifying Voucher Header Information	524
Searching for and Modifying Voucher Lines	525
Searching for and Modifying Distribution Lines	528
Searching for and Modifying Scheduled Payments	530
Viewing Summarized Voucher Errors	532
Modifying, Unposting, Deleting, and Closing Multiple Vouchers	532
Understanding Voucher Mass Maintenance	533
Common Elements Used in This Section	540
Pages Used to Modify, Unpost, Delete, and Close Multiple Vouchers	541
Searching for Vouchers and Selecting the Maintenance Operation	541
Performing Mass Field Replacement	543
Performing Mass Voucher Closure	545
Performing Mass Voucher Unposting	546
Performing Mass Voucher Deletion	548
Viewing Voucher Mass Maintenance Request Information	549
Using OpenItem Accounting in PeopleSoft Payables	549
Understanding OpenItem Accounting	549
Pages Used with OpenItem Accounting in PeopleSoft Payables	553
Entering OpenItem Accounts	553
Entering OpenItem Transactions on Vouchers	555
Tracking OpenItem Accounts	556

Chapter 20

Running the Matching Process	559
Understanding the Matching Process	559
Matching Types	560
Matching Process Flow	561
Matching Options with Purchase Orders	563
Matching Tolerances	565
Matching Workflow	567
Delivered Document Association Group	568
Delivered Document Association Rules	568
Delivered Match Rule Types	568

Delivered Match Rules	569
Delivered Match Rule Controls	581
Matching Examples	594
Prerequisites	598
Initiating the Matching Application Engine Process	600
Understanding the Matching Engine	600
Pages Used to Initiate the Matching Process	603
Running the Matching Process in Batch	604
Running the Matching Process from the Voucher Component	605
Running the Matching Process from the Match Workbench	605
Managing Matches and Match Exceptions	605
Understanding the Match Workbench	606
Pages Used to Manage Matches and Match Exceptions	607
Searching for Vouchers To Be Matched	610
Searching for Matched Vouchers	612
Searching for Match Exceptions	615
Searching for Match Disputes	616
Searching for Manually Overridden Vouchers	618
Undoing Matched Vouchers	618
Reviewing Matches	619
Reviewing Match Exceptions	621
Reviewing Overridden Match Exceptions	625
Reviewing Suppliers Disputed Vouchers and Match History	627
Processing Debit Memo Adjustment Vouchers	627
Understanding Debit Memo Processing	628
Pages Used to Process Debit Memo Adjustment Vouchers	633
Dispatching Debit Memo Information	635

Chapter 21

Processing Pay Cycles	637
Understanding Pay Cycle Manager	637
Pay Cycle Process Flow	638
Pay Cycle Statuses	640
Pay Cycle Exceptions	641
Draft Payments	641
Payment Formatting	642
Separate Payments	643
Payment Sorting	644
Check Payments That Never Reach the Banking System	645
Pay Cycle Processing Using the PeopleSoft Payables Payment Interface	645
Pay Cycle Processing Using the PeopleSoft Financial Gateway	646
Common Elements Used in This Chapter	650

Running and Managing Pay Cycles	650
Page Used to Run and Manage a Pay Cycle	651
Processing and Managing Pay Cycles	651
Reviewing Vouchers Selected for Payment	659
Pages Used to Review Vouchers Selected for Payment	660
Reviewing Pay Cycle Data	661
Reviewing Summary Data	664
Reviewing a Pay Cycle Summary Data Chart	664
Handling Pay Cycle Exceptions and Alerts	665
Understanding Pay Cycle Alerts	666
Understanding Financial Sanctions Validation	666
Pages Used to Handle Pay Cycle Exceptions and Alerts	668
Handling Potential Lost Discounts	669
Handling Denied Discounts	671
Viewing Withholding Alerts	672
Viewing Pay Cycle Errors	673
Viewing Bank Replacement Exceptions	675
Viewing Financial Sanctions Exceptions	676
Reviewing Draft Payments	677
Pages Used to Review Draft Payments	677
Approving Staged Draft Payments	678
Viewing Details About Draft Payments	679
Viewing Details About Draft Vouchers	679
Viewing the Trial Register	680
Page Used to View the Trial Register	680
Using a Trial Register	680
Approving the Pay Cycle	681
Page Used to Approve the Pay Cycle	681
Approving the Pay Cycle	681
Verifying Payment References	683
Understanding Payment Reference Verification	683
Page Used to Verify Payment References	684
Confirming Payment References	684
Unconfirming Payment References	685
Producing Manual Positive Payment Files	685
Understanding How to Produce Manual Positive Payment Files	685
Page Used to Produce Manual Positive Payment Files	685
Producing Positive Payment Files	685
Restarting Pay Cycles and Re-creating Checks	686
Understanding Pay Cycle Restart	686
Pages Used to Restart Pay Cycles and Re-create Checks	687
Re-creating and Reprinting Checks	687
Resending Payment Advices	689
Running the Pay Cycle Job	690
Page Used to Run the Pay Cycle Job	690

Running the Pay Cycle Job	690
 Chapter 22	
Using Additional Payment Processing Options	693
Understanding Additional Payment Processing Options	693
Express Payments	694
Manual Payments	694
Manual Payment Eligibility Requirements	697
Payment Cancellation	698
Payment Escheatment	699
Payment Forecasting	700
Bank Transfer Charge Process	700
Reschedule Payments Process	702
Using Express Payments	705
Pages Used to Create and Review Express Payments	705
Creating Express Payments	705
Reviewing Express Payments	709
Recording Manual Payments	712
Page Used to Record Manual Payments	712
Recording Manual Payments	712
Assigning Special Check Numbers to Manual Payments	713
Creating Manual Payments	714
Pages Used to Create Manual Payments	714
Setting Auto-Numbering for Manual Payments	715
Building Manual Payment Worksheets	715
Entering Manual Payments	717
Applying Vouchers to Manual Payments	719
Deleting Manual Payment Worksheets	722
Canceling Individual Payments	723
Understanding Payment Cancellation With Associated Liabilities	723
Page Used to Cancel Individual Payments	727
Canceling a Payment	728
Escheating Individual Payments	731
Page Used to Escheat Individual Payments	731
Escheating a Payment	731
Canceling and Escheating Multiple Payments	733
Understanding Mass Payment Cancellation and Escheatment Processing	733
Pages Used to Cancel and Escheat Multiple Payments	737
Performing Mass Payment Cancellation and Escheatment	737
Reviewing Mass Payment Cancellation Information	741
Forecasting Payments	741
Pages Used to Forecast Payments	742

Defining Forecast Cycles	742
Reviewing Forecast by Bank Account	744
Resetting the Forecast Cycle	745
Performing the Bank Transfer Charge Process	745
Pages Used to Perform the Bank Transfer Charge Process	745
Performing Bank Transfer Charge Autoduction	746
Processing Reschedule Payments	747
Pages Used to Process Reschedule Payments	747
Running the Reschedule Payments Process	747
Inquiring About Reschedule Payments Errors	749
Canceling the Reschedule Payments Process	750

Chapter 23

Running Voucher and Payment Posting	751
Understanding the Voucher Posting and Payment Posting Processes	751
Accounting Methods for Nonmerchandise Charges	753
Running the Voucher Posting Process	754
Page Used to Run the Voucher Posting Process	755
Defining a Voucher Posting Request	755
Running the Payment Posting Process	756
Page Used to Run the Payment Posting Process	757
Creating Payment Accounting Entries	757
Running the Cash Clearing Process	758
Understanding the Cash Clearing Process in PeopleSoft Payables	758
Page Used to Enter a Cash Clearing Request	759
Entering Cash Clearing Requests	759
Reviewing Posted Accounting Entries	760
Pages Used to Review Posted Accounting Entries	761
Reviewing Posted Accounting Entries	761
Reviewing Journal Detail for a General Ledger Journal	764

Chapter 24

Reviewing PeopleSoft Payables Accounting Entries Examples	767
PeopleSoft Payables Accounting Entries	767
Common Elements Used in This Chapter	768
Accounting Entries for Standard Vouchers	769
Accounting Entries for Debit Memo Adjustment Vouchers	770
Accounting Entries for Prepayments	771
Accounting Entries for Draft Payments	773
Accounting Entries for Letter of Credit Payments	775

Accounting Entries for Withholding Payments	776
Accounting Entries for Period End Accruals	779
Accounting Entries for Vouchers with Multiple Freight Charges	782
Accounting Entries for Claim Vouchers	783
Accounting Entries for Voucher Closure	784
Accounting Entries for Unposted Vouchers	785
Accounting Entries for Canceled or Voided Payments	786
Accounting Entries for Interunit Vendors	787
Accounting Entries for VAT Transactions	787
Accounting Entries for Vouchers with Recoverable VAT Calculated at Gross	789
Accounting Entries for Vouchers with Non-Recoverable VAT Calculated at Gross	791
Accounting Entries for Vouchers with Recoverable VAT Calculated at Net	793
Accounting Entries for Vouchers with Recoverable Inclusive VAT	795
Accounting Entries for Vouchers with Recoverable Inclusive VAT Calculated at Net	796

Chapter 25

Managing Accruals for PeopleSoft Payables	799
Understanding Payables Accrual Processing	799
Eligibility for Accrual Processing	799
Understanding Payables Accrual Entries	800
Commitment Control Entries for Accruals	800
Processing Accruals for PeopleSoft Payables	801
Prerequisites	801
Pages Used for Processing Accruals for PeopleSoft Payables	801
Processing Accruals	802
Reviewing Period End Accrual Summary Information	803
Deleting Accruals for PeopleSoft Payables	804

Chapter 26

Reporting and Reconciling Open Liabilities	805
Understanding Open Liability and Reconciliation Reporting	805
Creating Open Liability Reports	806
Pages Used to Create Open Liability Reports	807
Generating Open Liability Reports	807
Generating Vendor Liability Aging Reports	811
Creating Reconciliation Reports	812
Pages Used to Create Reconciliation Reports	812
Generating Payables Open Liability Reconciliation Reports	813
Generating Payables and General Ledger Account Reconciliation Reports	814
Generating Payables and General Ledger Journal Reconciliation Reports	814

Chapter 27

Reviewing Voucher, Payment, and Vendor Information	817
Understanding Voucher, Payment, and Vendor Inquiries	817
Common Elements Used in This Chapter	818
Reviewing Voucher Information	819
Pages Used to Review Voucher Information	819
Searching for Vouchers	820
Reviewing Voucher Details	820
Reviewing Voucher Payment Details	826
Reviewing Scheduled Payment Information	826
Reviewing Payment Information	830
Pages Used to Review Payment Information	830
Reviewing Payment Information	831
Reviewing Payment Voucher Details	834
Reviewing Replaced Payments	835
Reviewing Scheduled Payments on Hold	836
Reviewing Overdue Scheduled Payments	837
Locating Related Procurement Documents	838
Pages Used to Locate Related Procurement Documents	838
Locating Documents from a Voucher ID	839
Locating Documents From a Purchase Order Number	841
Locating Documents from a Payment ID	842
Reviewing Vendor Information	843
Pages Used to Review Vendor Information	844
Reviewing Vendor Aging	844
Reviewing Past Due Aging	847
Reviewing Scheduled Due Aging	848
Reviewing Current Vendor Balances	849

Part 3

Additional Processing Options

Chapter 28

Budget-Checking PeopleSoft Payables Transactions Using Commitment Control	855
Understanding the Commitment Control Feature in PeopleSoft Payables	855
PeopleSoft Payables Transactions Subject to Budget Checking	856

Budget-Checking Vouchers	857
Document Tolerances	858
Exception Handling	858
Prerequisites	860
Budget-Checking During Online Voucher Entry	861
Budget-Checking in Batch Mode	863
Understanding Batch Mode Budget-Checking	863
Page Used to Budget-Check in Batch Mode	863
Running Budget Processor in Batch Mode	863
Performing Partial and Final Liquidations	866
Handling Budget-Checking Exceptions	867
Common Elements Used in This Section	867
Pages Used to Handle Budget-Checking Exceptions	869
Handling Voucher Header Exceptions	871
Posting Vouchers After Budget Checking	873
Modifying, Deleting, and Closing Vouchers After Budget Checking	873
Modifying Vouchers After Budget Checking	873
Deleting Vouchers After Budget Checking	874
Closing Vouchers After Budget Checking	874
Making Payments After Budget Checking	874

Chapter 29

Running Document Tolerances	877
Understanding Document Tolerances	877
Setting Up Document Tolerances	878
Running Document Tolerances with Budget Checking	878
Understanding Including Multiple Processes With the Document Tolerances Checking Process	878
Pages Used to Run Document Tolerances with Budget Checking	878
Running the Document Tolerance Checking Process from the Invoice Information Page	879
Verifying the Document Tolerance Status on the Summary Page	879
Running Document Tolerances Without Budget Checking	880
Page Used to Run Document Tolerances Without Budget Checking	880
Reviewing Document Tolerance Exceptions and Overrides	880
Pages Used to Review Document Tolerance Exceptions and Overrides	880
Viewing and Overriding Document Tolerance Exceptions	881
Viewing Document Tolerance Override History	883

Chapter 30

Processing Prepayments	885
Understanding Prepayment Processing	885

Prepayment Overview	886
Prepayment Application and Payment	887
Prepayment Posting	887
Prepaid and Regular Voucher Cross-Reference Record	889
Discounts and Prepayment Application	890
Prepayment Cancellation	890
Prepaid and Applied Voucher Closure	890
Manual Prepayment Application Example	891
Accounting Entry Example 1: Prepayment Without VAT or Withholding	891
Accounting Entry Example 2: Prepayment with 100% VAT on Regular Voucher	892
Accounting Entry Example 3: Prepayment with 100% VAT on Payment	894
Accounting Entry Example 4: Prepayment with 5% Prorated, Nonrecoverable VAT	896
Accounting Entry Example 5: Prepayment with Withholding	897
Recurring Prepayment Vouchers	899
Prerequisites	900
Entering Prepaid Vouchers Online	900
Pages Used to Enter Prepaid Vouchers Online	901
Creating Prepaid Vouchers	901
Setting Batch Prepayment Processing Options	902
Specifying VAT and Withholding on Prepayments	904
Scheduling and Recording Prepayments	905
Applying Final Invoices to Prepayments	906
Pages Used to Apply Final Invoices to Prepayments	906
Applying Prepaid Vouchers Manually	906
Searching for Eligible Vouchers	909
Generating Final Payments	910
Pages Used to Generate Final Payments	911
Reviewing Prepayments	912
Pages Used to Review Prepayments	912
Inquiring on Prepayments	913
Reporting on Prepayment Settlements	914

Chapter 31

Processing Drafts	915
Understanding Draft Processing	915
Draft Payment Process Flow	916
Sight Codes	918
Vendor-Initiated Draft Process	918
Customer-Initiated Draft Process	919
Customer-Initiated EFT Draft Process	919
Draft Numbering	920
Draft Maturity Date Calculation and Processing	920

Draft Staging Process	922
Draft Rounding Calculation	922
Draft Optimization (Stamp Tax Minimization)	924
Stamp Tax Calculation	924
Draft Approval	927
Draft Bank Reconciliation and Approval	928
Draft EFT Bank Files and EFT Answer Files	929
Draft Statuses	930
Draft Accounting Entries	931
Draft Accounting Entries for VAT	932
Draft Write-Offs	933
Draft Processing Limitations	933
Common Elements Used in This Chapter	933
Creating Drafts Manually	935
Understanding Manual Draft Creation	935
Pages Used to Create Drafts Manually	936
Creating Draft Payments Manually	937
Reviewing Manually Created Drafts	940
Applying Vouchers to Manual Drafts	941
Managing Drafts	943
Pages Used to Manage Drafts	943
Canceling Manual Drafts	944
Deleting Posted Manual Draft Worksheets	946
Approving Unposted Draft Payments	946
Updating Draft Information	948
Writing Off Draft Payments	948
Entering Draft Write-Off Details	949
Reconciling and Approving Drafts	950
Pages Used to Reconcile and Approve Drafts	951
Reconciling Drafts	952
Approving Drafts During Reconciliation	952
Reviewing Payment and Bank Details	954
Reviewing Draft Payment Exceptions	955
Reviewing Draft Payment Totals	955
Preparing Bank Answer Files	956
Deleting Imported Bank Data	956
Reviewing Drafts	957
Common Elements Used in This Section	957
Pages Used to Review Drafts	958
Searching for Draft Payments	960
Viewing Detail Information for Draft Payments	962
Viewing Details for Canceled or Deleted Drafts Payments	962
Viewing a Summary of Draft Payments	963

Chapter 32

Sending Information to PeopleSoft Asset Management	965
Understanding the Asset-Loading Process	965
Eligibility Criteria for Distribution to PeopleSoft Asset Management	966
Interface Types	967
Discounts Earned or Lost	967
Technical Details of the Payables to Assets Interface Process	969
Return to Vendor Transaction Processing	975
Creating Asset-Applicable Vouchers	975
Understanding Asset-Applicable Vouchers	975
Pages Used to Create Asset-Applicable Vouchers	976
Using the Assets Tab to Create Asset-Applicable Vouchers	976
Copying Asset-Applicable Vouchers from Purchase Orders and Receivers	977
Sending Voucher Information to PeopleSoft Asset Management	978
Pages Used to Send Voucher Information to PeopleSoft Asset Management	978
Running the Payables to Assets Interface Process	978

Chapter 33

Processing Self-Billed Invoices	981
Understanding SBI Processing	981
SBI Numbering Options	982
ERS Vouchers for SBI Vendors	984
SBI Voucher Status Summary	984
Prerequisites	984
Performing SBI Processing	985
Pages Used to Perform SBI Processing	986
Running SBI Process in Selection Mode	986
Reviewing Selected SBI Data	988
Rolling Back SBI Data	989
Running SBI Process in Commit Mode	990
Printing Self-Billed Invoices	991
Reviewing SBIs	991
Pages Used to Review SBIs	992
Reviewing SBIs	992

Chapter 34

Processing Landed Cost Transactions	995

Understanding the Landed Cost Extraction Process	995
Prerequisites	1000
Entering Landed Cost Transactions Online	1000
Running the Landed Cost Extraction Process	1001
Pages Used to Run the Landed Cost Extraction Process	1001
Running the Landed Cost Extraction Process	1001
Reviewing Landed Cost Exceptions	1002
Page Used to Review Landed Cost Exceptions	1002
Reviewing Landed Cost Extract Exceptions	1002

Chapter 35

Processing Multiple Currencies in PeopleSoft Payables	1005
Understanding Multiple Currencies in PeopleSoft Payables	1005
Multicurrency Terminology in PeopleSoft Payables	1005
Voucher Processing in a Multicurrency Environment	1007
Payment Processing in a Multicurrency Environment	1008
PeopleSoft Payables Revaluation Processing	1010
Multibook in PeopleSoft Payables	1011
Performing the PS/AP Revaluation Process	1012
Pages Used to Perform the PS/AP Revaluation Process	1012
Marking Vouchers for Revaluation	1013
Running the Revaluation Process	1013
Reviewing the Revaluation Process	1015

Chapter 36

Processing Document Sequencing in PeopleSoft Payables	1017
Understanding Document Sequencing	1017
Document Sequence Header Table (VCHR_DOCSEQ_HDR)	1018
Prerequisites	1019
Defining and Assigning Document Types	1020
Pages Used to Define and Assign Document Types	1020
Defining PeopleSoft Payables Document Sequencing	1021
Assigning Document Types to Journals	1022
Assigning Document Types to Accounting Entry Types	1022
Assigning Default Document Types for Payment Methods	1022
Using Document Sequencing with Various Transactions	1023
Pages Used to Create Document Sequencing with Various Transactions	1023
Entering Vouchers with Document Sequencing	1026
Closing Vouchers with Document Sequencing	1026
Unposting and Reposting Vouchers with Document Sequencing	1027

Deleting Vouchers with Document Sequencing	1028
Creating Payments with Document Sequencing	1028
Creating Manual Payments with Document Sequencing	1028
Canceling Payments with Document Sequencing	1029
Creating Manual Drafts with Document Sequencing	1029
Writing Off Drafts with Document Sequencing	1030
Using Document Sequencing with Interunit Transactions	1030
Processing Cash Clearing Entries with Document Sequencing	1031
Using Document Sequencing with Revaluation Entries	1031
 Chapter 37	
(USF) Processing PeopleSoft Payables for U.S. Federal Agencies	1033
Understanding Federal Payment Processing	1033
Overview of Federal Payment Schedule Processing	1034
Federal Payment Schedule Processing	1034
Other Options for Federal Payment Schedule Processing	1036
CCR Voucher and Vendor Processing	1036
Prerequisites	1037
Applying Prompt Payment Protocols	1040
Understanding Prompt Payment Protocols	1040
Prerequisites	1041
Pages Used to Apply Prompt Payment Protocols	1043
Applying Prompt Payment Calculation Rules for Vouchers	1043
Calculating Late Interest Charges	1044
Enforcing Valid Reimbursable Periods for Project-Related Vouchers	1045
Page Used to Enforce Valid Reimbursable Periods for Project-Related Vouchers	1045
Enforcing Valid Reimbursable Periods	1045
Certifying Federal Payment Schedules	1045
Understanding Federal Payment Schedule Certification	1046
Page Used to Certify Federal Payment Schedules	1046
Certifying Payment Schedules	1046
Creating ECS Bulk Payment Summary Certification Files	1049
Understanding ECS Summary File Creation	1049
Pages Used to Create ECS Bulk Payment Summary Certification Files	1050
Entering ECS Summary Information	1050
Creating SPS Payment Summary Files	1052
Understanding SPS Summary File Creation	1052
Pages Used to Create SPS Payment Summary Files	1052
Entering SPS Summary Information	1053
Reclassifying Federal Cash Transactions for Partial 224 Reporting	1055
Understanding Cash Reclassification Reporting	1055
Page Used to Reclassify Federal Cash Transactions	1056

Managing Cash Reclassification Transactions	1056
Canceling Federal Payment Schedules	1058
Understanding Payment Schedule Cancellation	1058
Pages Used to Cancel Federal Payment Schedules	1059
Canceling Payment Schedules	1059
Inquiring and Reporting on Federal Payment Schedules	1061
Understanding Federal Payment Schedule Inquiries and Reports	1061
Pages Used to Inquire and Report on Federal Payment Schedules	1062
Inquiring on Federal Payment Schedules	1062
Inquiring on Federal Payment Schedule Processing and Transmittal Data	1063
Processing Outbound IPAC Transactions	1064
Understanding Outbound IPAC Processing in PeopleSoft Payables	1064
Prerequisites	1065
Pages Used to Process Outbound IPAC Transactions	1066
Creating Outbound IPAC Vouchers	1068
Entering Outbound IPAC Information	1069
Entering Additional IPAC Information	1074
Running the Pay Cycle Process for Outbound IPAC Payments	1075
Performing Schedule Reconciliation for IPAC Payments	1075
Canceling IPAC Payments	1075
Inquiring on IPAC Transactions	1076
Processing Inbound IPAC Transactions	1076
Understanding Inbound IPAC Processing and Setup	1076
Prerequisites	1078
Pages Used to Process Inbound IPAC Transactions	1078
Loading Inbound IPAC Files	1079
Reviewing Staged Inbound IPAC Files	1079
Creating the Inbound IPAC Voucher and Recording the Payment	1082
Inquiring on Inbound IPAC Payments	1084
Handling Advances for Federal Agencies	1084
Processing Federal Registry Data	1085
Understanding Processing Federal Registry Data	1085
Pages Used to Process Federal Registry Data	1086
Accessing Federal Registry Data	1086
Inquiring on the Federal Registry Load Process	1087
Maintaining Federal Entities	1088
Creating Vendors from Federal Registry Data	1090
Processing CCR Inbound Files	1091
Understanding CCR Inbound Files Processing	1091
Pages Used to Process CCR Inbound Files	1092
Loading Registry Files	1092
Reviewing File Load Status	1093
Creating CCR Vendors Using Staged Data	1093
Pages Used to Create CCR Vendors Using Staged Data	1094
Reviewing Contractor Information	1094

Running the Vendor Build Process	1094
Creating CCR Payment Holds	1095
Understanding CCR Payment Holds	1095
Pages Used to Create CCR Payment Holds	1095
Creating CCR Payment Holds	1095

Chapter 38

Using Entry Events in PeopleSoft Payables	1097
Understanding Entry Events in PeopleSoft Payables	1097
Upward and Downward Adjustment Entry Event Entries for PeopleSoft Payables Transactions Subject to Commitment Control	1097
Generating Accounts Payable Entry Events	1098
Pages Used to Generate Accounts Payable Entry Events	1098
Generating Voucher Entry Events	1099
Generating Payment Entry Events	1100
Generating Cash Clearing Entry Events	1100
Drilling Down to Entry Event Journal Lines	1100
Understanding How to Drill Down from Journal Lines	1101
Pages Used to Drill Down to Entry Event Journal Lines	1101
Linking the PeopleSoft Payables Entry Event Journal Drill Down Page with Accounting Entry Definitions	1102

Chapter 39

Archiving Transactions	1103
Understanding Data Types Available for Archiving	1103
Archiving General Overview	1103
Archiving Business Process	1104
Archiving Business Rules	1104
Understanding Archive Objects Definitions, Query Definitions, and Template Definitions	1106
Archiving Data	1108
Understanding the Archive Process Flow	1108
Understanding History Tables	1109
Pages Used to Archive Data	1112
Restoring Archived Data	1112
Understanding Data Restoration	1113
Page Used to Restore Archived Data	1113

Part 4

Taxes and Withholding

Chapter 40

Managing Voucher Line Tax Information with Taxware and Vertex	1117
Managing Voucher Line Tax Information with Taxware and Vertex	1117
Understanding Voucher Unposting When Using Taxware and Vertex	1117
Pages Used to Manage Voucher Line Tax Information with Taxware and Vertex	1117
Reviewing and Modifying Tax Summary Information for a Voucher	1118
Reviewing and Modifying Voucher Line Tax Information	1119
Overriding a Tax Location on the Voucher	1121

Chapter 41

Processing Value Added Tax (VAT) in PeopleSoft Payables	1123
Understanding VAT Processing in PeopleSoft Payables	1123
Common Elements for This Chapter	1123
Understanding Accounts Payable VAT Calculations and Accounting Entries	1124
VAT Calculations in PeopleSoft Payables	1124
VAT Accounting Entries in PeopleSoft Payables	1125
Entering Online Vouchers With VAT	1126
Pages Used to Enter Online Vouchers With VAT	1127
Reviewing and Overriding Voucher Header VAT Defaults	1128
Reviewing and Overriding Voucher Line VAT Defaults	1135
Reviewing and Overriding Voucher Distribution Line VAT Defaults	1139
Reviewing VAT Summary Information for a Voucher	1143
Entering Third-Party, VAT-Only Invoices	1146
Understanding Third-Party, VAT-Only Invoices	1146
(CAN) Entering Vouchers with VAT and Sales Tax	1149
Entering Vouchers With VAT and Withholding	1150

Chapter 42

Processing Withholding in PeopleSoft Payables	1151
Understanding the Withholding Process	1151
Common Elements Used in This Chapter	1155

Reviewing and Entering Withholding Information for Vouchers	1155
Prerequisites	1156
Page Used to Review and Override Withholding on Vouchers	1156
Reviewing and Overriding Withholding Information on a Voucher	1156
Reviewing Withholding Calculations	1158
Understanding Withholding Calculation	1158
Understanding Hold Payment Options for Withholding	1160
Page Used to Review Withholding Calculations	1161
Creating Withholding Accounting Entries	1161
Understanding Withholding Accounting Entries	1161
Posting Withholding Transactions	1163
Page Used to Post Withholding Transactions	1164
Running the Withholding Mismatch Report	1164
Page Used to Run the Withholding Mismatch Report	1165
Entering the Withholding Mismatch Parameters	1165
Adjusting Withholding Manually	1165
Page Used to Adjust Withholding Manually	1166
Manually Adjusting Posted Withholding Transactions	1166
Processing Withholding Updates	1168
Understanding the Withholding Update Process	1168
Common Elements Used in This Section	1170
Pages Used to Process Withholding Updates	1170
Updating Individual Voucher Lines	1171
Updating all Voucher Lines for a Vendor	1173
Running the Withholding Update Process	1174
Generating Withholding Reports	1174
Pages Used to Generate Withholding Reports	1175
Entering Transmitter and Payor Data	1177
Selecting Vendors and Business Units	1179
(USA) Entering States for the Combined Federal and State Filing Program	1180
Running the Withholding Reporting Application Engine Process (AP_WTHDRPT)	1181
Reviewing Withholding Report Information	1183
Running Withholding Reports	1183
Reviewing Withholding Information	1184
Pages Used to Review Withholding Information	1185
Reviewing Payments to Withholding Vendors	1185

Chapter 43

Resolving Complex Withholding Scenarios	1189
Exonerating Vendors from Withholding	1189
Using Tiered-Based Withholding	1190
Using Period-Based Withholding	1191

Setting Up Period-Based Withholding	1191
Calculating Period-Based Withholding	1192
Comparing Credit Notes for Period-Based and Voucher Withholding	1192
Managing Period-Based Withholding	1194
Pages Used to Manage Period-Based Withholding	1194
Updating Period-Based Withholding	1194
Reviewing Period-Based Withholding	1196
Calculating Withholding on Prepayments	1197
Applying Withholding to First Payment Only	1200
Calculating Withholding on Payment Cancellations	1201
Payment Cancellation Example	1201
Further Considerations for Canceling Payments with Withholding	1203
Grouping Withholding for Payment Posting	1204

Chapter 44

Processing Special Withholding Requirements	1209
Common Elements Used in This Chapter	1209
Processing U.S. Withholding	1209
Understanding 1099 Withholding	1210
Prerequisites	1212
Common Elements Used in This Section	1212
Pages Used to Process U.S. Withholding	1213
Generating the 1099 Report Post, Report, and Copy B Processes	1214
Running the 1099 Withholding to Send Detail Report	1217

Index 1311

PeopleSoft Payables Preface

This preface discusses:

- PeopleSoft products.
- PeopleSoft application fundamentals.
- Pages with deferred processing.
- Common elements used in this PeopleBook.

Note. This PeopleBook documents only page elements that require additional explanation. If a page element is not documented with the process or task in which it is used, then it either requires no additional explanation or is documented with the common elements for the section, chapter, or PeopleBook.

PeopleSoft Products

This PeopleBook refers to these Oracle products:

- PeopleSoft Asset Management.
- PeopleSoft Billing.
- PeopleSoft Cost Management.
- PeopleSoft eSettlements.
- PeopleSoft Expenses.
- PeopleSoft General Ledger.
- PeopleSoft Inventory.
- PeopleSoft PeopleTools Integration Broker.
- PeopleSoft Pay/Bill Management.
- PeopleSoft Payroll.
- PeopleSoft Project Costing.
- PeopleSoft Promotions Management.
- PeopleSoft Purchasing.
- PeopleSoft Real Estate Management.
- PeopleSoft Receivables.
- PeopleSoft Student Administration Solutions.

- PeopleSoft Treasury Management.
- PeopleSoft PeopleTools Workflow Technology.

PeopleSoft Application Fundamentals

The *PeopleSoft Payables PeopleBook* provides you with implementation and processing information for your PeopleSoft Payables system. However, additional, essential information describing the setup and design of your system resides in companion documentation. The companion documentation consists of important topics that apply to many or all Oracle's PeopleSoft applications across the Financials, Enterprise Service Automation, and Supply Chain Management product lines. You should be familiar with the contents of these PeopleBooks.

The following companion PeopleBooks apply specifically to PeopleSoft Payables.

- *PeopleSoft Application Fundamentals PeopleBook*
- *PeopleSoft Bank Setup and Processing PeopleBook*
- *PeopleSoft Commitment Control PeopleBook*
- *PeopleSoft Financial Gateway PeopleBook*
- *PeopleSoft General Ledger PeopleBook*
- *PeopleSoft Global Options and Reports PeopleBook*
- *PeopleSoft Managing Items PeopleBook*
- *PeopleSoft Source to Settle Common Information PeopleBook*
- *PeopleSoft Supply Chain Management Integration PeopleBook*

Pages With Deferred Processing

Several pages in PeopleSoft Payables operate in deferred processing mode. Most fields on these pages are not updated or validated until you save the page or refresh it by clicking a button, link, or tab. This delayed processing has various implications for the field values on the page—for example, if a field contains a default value, any value you enter before the system updates the page overrides the default. Another implication is that the system updates quantity balances or totals only when you save or otherwise refresh the page.

PeopleBooks and the PeopleSoft Online Library

A companion PeopleBook called *PeopleBooks and the PeopleSoft Online Library* contains general information, including:

- Understanding the PeopleSoft online library and related documentation.
- How to send PeopleSoft documentation comments and suggestions to Oracle.
- How to access hosted PeopleBooks, downloadable HTML PeopleBooks, and downloadable PDF PeopleBooks as well as documentation updates.
- Understanding PeopleBook structure.
- Typographical conventions and visual cues used in PeopleBooks.
- ISO country codes and currency codes.
- PeopleBooks that are common across multiple applications.
- Common elements used in PeopleBooks.
- Navigating the PeopleBooks interface and searching the PeopleSoft online library.
- Displaying and printing screen shots and graphics in PeopleBooks.
- How to manage the locally installed PeopleSoft online library, including web site folders.
- Understanding documentation integration and how to integrate customized documentation into the library.
- Application abbreviations found in application fields.

You can find *PeopleBooks and the PeopleSoft Online Library* in the online PeopleBooks Library for your PeopleTools release.

Common Elements Used in This PeopleBook

As of Date	The last date for which a report or process includes data.
Business Unit	An identification code that represents a high-level organization of business information. You can use a business unit to define regional or departmental units within a larger organization.
Description	Freeflow text up to 30 characters.
Effective Date	Date on which a table row becomes effective; the date that an action begins. For example, if you want to close out a ledger on June 30, the effective date for the ledger closing would be July 1. This date also determines when you can view and change the information. Pages or panels and batch processes that use the information use the current row.
EmplID (employee ID)	Unique identification code for an individual associated with your organization.

Gross Amount	The full amount of the voucher, including merchandise and service amounts (entered on the voucher line), freight, sales tax, and inclusive VAT.
Invoice ID or Invoice Number	Typically, this is the invoice number or some other control number from the voucher's supporting document. The system uses this number as a reference for duplicate invoice checking if you have selected it as one of your match criteria.
Invoice Date	The vendor's invoice date.
Language or Language Code	The language in which you want the field labels and report headings of your reports to print. The field values appear as you enter them. Language also refers to the language spoken by an employee, applicant, or non-employee.
Location	A vendor location is not a physical address. It is a default set of rules, or attributes, which define how you conduct business with a particular vendor. A vendor's location comprises information such as procurement options (including payment terms, currency information, shipping method), VAT options, payment options, withholding options, pay to bank accounts, and so on.
Process Frequency	Designates the appropriate processing frequency: <i>Once:</i> Executes the request the next time the batch process runs. After the batch process runs, the process frequency is automatically set to <i>Don't Run</i> . <i>Always:</i> Executes the request every time the batch process runs. <i>Don't Run:</i> Ignores the request when the batch process runs.
Report ID	The report identifier.
Report Manager	This button takes you to the Report List page, where you can view report content, check the status of a report, and see content detail messages (which show you a description of the report and the distribution list).
Payment Count	For each voucher you can have multiple payments. For example, let's say you have one voucher for 1000.00 USD and you split the payments into 600.00 USD and 400.00 USD. The 600.00 USD would have a payment count of 1 and the 400.00 USD would have a payment count of 2. Also, if the payment is cancelled and reissued, the system assigns a payment count of 3, and so on.
Process Monitor	This button takes you to the Process List page, where you can view the status of submitted process requests.
Run	This button takes you to the Process Scheduler request page, where you can specify the location where a process or job runs and the process output format.
Run Control ID	An identification code that identifies the run parameters for a report or process.

SetID	An identification code that represents a set of control table information or TableSets. A TableSet is a group of tables (records) necessary to define your company's structure and processing options.
Short Description	Freeflow text up to 15 characters.
Status	Indicates whether a row in a table is <i>Active</i> or <i>Inactive</i> . You cannot display inactive rows on transaction pages or use them for running batch processes. Inactivate rather than delete data you no longer use in order to maintain an audit trail.
User ID	The system identifier for the individual who generates a transaction.
Vendor ID	The system-assigned or user-defined identification number given to a vendor when it is created.
Voucher ID	The system-assigned or user-defined identification number given to a voucher when it is created.

Chapter 1

Getting Started with PeopleSoft Payables

This chapter provides an overview of PeopleSoft Payables and discusses:

- PeopleSoft Payables business processes.
- PeopleSoft Payables integration touchpoints.
- PeopleSoft Payables implementation tasks.

PeopleSoft Payables Overview

Efficient and effective cash management is more than just paying bills. PeopleSoft Payables provides the integration and flexibility you need to optimize your accounts payable process.

PeopleSoft Payables enables you to:

- Create vouchers and payments using manual and automatic processes.
- Establish country-specific tax and withholding requirements.
- Match vouchers with purchase orders and receipts.
- Post vouchers and payments.
- Maintain vouchers throughout their life cycle.
- Create drafts, single voucher payment, prepayments, and self-billed invoices.

Optionally, send electronic payments to PeopleSoft Financial Gateway.

- Analyze accounts payable information using online inquiries and by generating reports.
- Archive accounts payable data.

PeopleSoft Payables Business Processes

The following diagram lists PeopleSoft Payables business processes. We discuss these business processes in the business process chapters in this PeopleBook.

PeopleSoft Payables business processes

PeopleSoft Payables Integration Touchpoints

To fully take advantage PeopleSoft Payables, you need to understand the points of integration between PeopleSoft Payables and the other PeopleSoft applications from Oracle that you have purchased, such as:

- PeopleSoft Asset Management.
- PeopleSoft Billing.
- PeopleSoft Claims Management.
- PeopleSoft Cost Management.
- PeopleSoft eSettlements.
- PeopleSoft Expenses.
- PeopleSoft General Ledger.
- PeopleSoft Inventory.
- PeopleSoft Pay/Bill Management.
- PeopleSoft Payroll.
- PeopleSoft Project Costing.
- PeopleSoft Promotions Management.

- PeopleSoft Purchasing.
- PeopleSoft Real Estate Management.
- PeopleSoft Receivables.
- PeopleSoft Student Administration.
- PeopleSoft Treasury Management.
- PeopleSoft Work Order Management.

Because applications share information, you must plan to work closely with the implementation teams that install other PeopleSoft applications to ensure that these applications provide the full functionality and efficiency that your company requires.

We discuss integration considerations in the implementation chapters in this PeopleBook. Supplemental information about third-party application integrations is on Oracle's My Oracle Support website.

The following diagram illustrates how PeopleSoft Payables integrates with other PeopleSoft products:

PeopleSoft Payables integrations with other PeopleSoft products

Important! You should disable products that you don't have installed on the system using the Installed Products page. Disabling products that you do not have installed on the system improves performance.

PeopleSoft Asset Management

Along with PeopleSoft Purchasing, PeopleSoft Payables is a key collection point for asset information that flows into PeopleSoft Asset Management. This flow of asset information from vouchers works hand-in-hand with the flow of information from receiving documents that is recorded in PeopleSoft Purchasing to ensure accurate and up-to-date records.

See *PeopleSoft Asset Lifecycle Management Fundamentals 9.1 PeopleBook*, "Integrating PeopleSoft Asset Management with Other Products," Processing Purchasing and Payables Transactions with Asset Management.

PeopleSoft Billing

PeopleSoft Billing uses PeopleSoft Payables to process interunit invoices.

See [Chapter 16, "Processing Batch Vouchers," page 415](#).

See *PeopleSoft Billing 9.1 PeopleBook*, "Integrating with PeopleSoft Receivables, General Ledger, and Accounts Payable," Running the Generate AP Vouchers Process (BIGNAP01).

PeopleSoft Claims Management

PeopleSoft Payables integrates with the Claims Management feature and PeopleSoft Receivables to generate claimbacks. You use claimback vouchers to adjust VAT amounts for specific settlement methods.

See [Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Modifying Claim Vouchers, page 396](#).

PeopleSoft Cost Management

PeopleSoft Payables sends purchase price variance and exchange rate variance for matched material and miscellaneous charges to PeopleSoft Cost Management, where they are associated with the appropriate inventory transactions.

See [Chapter 34, "Processing Landed Cost Transactions," page 995](#).

PeopleSoft eSettlements

PeopleSoft eSettlements leverages nearly 80 percent of its functionality from the PeopleSoft Payables and Purchasing business processes.

Whether capturing an XML invoice or creating an invoice through PeopleSoft eSettlements, you run the PeopleSoft Payables Voucher Build Application Engine process (AP_VCHRBLD) to create invoices in PeopleSoft eSettlements. Next, run the PeopleSoft Payables Matching Application Engine process (AP_MATCH) against your vouchers, purchase orders, and receipts to ensure accurate payments. Finally, use the PeopleSoft Payables Pay Cycle Application Engine process (AP_APY2015) for generating those payments.

See *PeopleSoft eSettlements 9.1 PeopleBook*, "Understanding PeopleSoft eSettlements."

PeopleSoft Expenses

The PeopleSoft Payables payment interface enables you to produce payments for PeopleSoft Expenses transactions.

See [Chapter 7, "Configuring the PeopleSoft Payables Payment Interface," page 135.](#)

PeopleSoft General Ledger

PeopleSoft Payables sends accounting entries to PeopleSoft General Ledger through the Journal Generator Application Engine process (FS_JGEN).

PeopleSoft Payables interfaces with PeopleSoft General Ledger for budget checking and commitment control.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Using Journal Generator."

See *PeopleSoft Commitment Control 9.1 PeopleBook*, "Understanding Commitment Control Integration with PeopleSoft and Third-Party Applications," Integration of Commitment Control with PeopleSoft Applications.

PeopleSoft Inventory

PeopleSoft applications support consignment inventory, the practice whereby a supplier stores goods at a customer's location without receiving payment until after the goods are consumed. The PeopleSoft Consignment Inventory feature, which enables you to implement this strategy across your entire enterprise, integrates a variety of functions within the PeopleSoft Purchasing, Inventory, Production Management, Cost Management, and Payables applications.

See [Chapter 16, "Processing Batch Vouchers," page 415.](#)

See *PeopleSoft Inventory 9.1 PeopleBook*, "Managing Consigned Purchases Inventory."

PeopleSoft Pay/Bill Management

PeopleSoft Pay/Bill Management generates payable time information for contractors that the PeopleSoft Payables Voucher Build process can build into vouchers. The Front Office to AP Application Engine process (FO_TO_AP) submits contractors' payable time to the voucher staging tables for voucher build processing.

See *PeopleSoft Pay/Bill Management 9.1 PeopleBook*, "Working With Staffing Vendors."

PeopleSoft Payroll

The practice of payroll deductions being paid through an accounts payable system is standard. PeopleSoft Payables enables you to accept third-party payments from PeopleSoft Payroll.

See [Chapter 16, "Processing Batch Vouchers," page 415.](#)

PeopleSoft Project Costing

When you enter voucher information in PeopleSoft Payables, you can also enter information that is picked up by PeopleSoft Project Costing. A project manager using PeopleSoft Project Costing can review costs to keep complete financial control of a project.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293.](#)

PeopleSoft Promotions Management

PeopleSoft Promotions Management enables a salesperson to authorize a scheduled payment or issue a field draft—or manual check—to customers who are established vendors in PeopleSoft Payables. PeopleSoft Promotions Management sends voucher transactions to the Voucher Staging tables, from which the PeopleSoft Payables Voucher Build process selects data and processes it.

See *PeopleSoft Promotions Management 9.1 PeopleBook*, "Processing Payments for Promotional Activity."

PeopleSoft Purchasing

Vouchers can be built from various sources in PeopleSoft Purchasing, including purchase order and receiver lines, evaluated receipt settlement (ERS) vouchers, return to vendor (RTV) transactions, and procurement card system vouchers. You can perform matching among vouchers, purchase orders, receivers, and inspection status to improve control and accuracy. The system can automatically create debit memos to handle discrepancies between vouchers, purchase orders, and receivers. You view related documents across the entire procure-to-pay process. Using PeopleSoft Payables integration with PeopleSoft Purchasing, you can process vendor rebates using the rebate calculation functionality, which also integrates with PeopleSoft Receivables.

See Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293.

See Chapter 16, "Processing Batch Vouchers," page 415.

See Chapter 20, "Running the Matching Process," page 559.

See *PeopleSoft Purchasing 9.1 PeopleBook*, "Understanding Vendor Rebates," Understanding Vendor Rebates.

PeopleSoft Real Estate Management

PeopleSoft Real Estate Management generates information that the PeopleSoft Payables Voucher Build process can build into lease payment vouchers, and the PeopleSoft Payables inquiry functionality can use for inquiries.

See Chapter 16, "Processing Batch Vouchers," PeopleSoft Real Estate Management Data, page 433.

See *PeopleSoft Real Estate Management 9.1 PeopleBook*, "Processing Payments for Payables Leases," Running the Interface to AP/Billing Process.

PeopleSoft Receivables

The refund process in PeopleSoft Receivables adds rows to tables that are used by PeopleSoft Payables to build a voucher.

See *PeopleSoft Receivables 9.1 PeopleBook*, "Maintaining Customer Account Balances," Processing Refunds.

PeopleSoft Student Administration

PeopleSoft Payables generates refund tuition checks for PeopleSoft Student Administration.

See Chapter 16, "Processing Batch Vouchers," page 415.

PeopleSoft Treasury Management

The PeopleSoft Payables payment interface enables you to produce payments for PeopleSoft Treasury settlement transactions. And the integration with the PeopleSoft Financial Gateway feature enables you to submit electronic payments to a financial institution for settlement, without the need of a third-party integration tool.

PeopleSoft Payables also integrates with PeopleSoft Cash Management through the Treasury Netting Center. You must use PeopleSoft Cash Management with PeopleSoft Receivables to use the bilateral netting functionality that offsets open items with open vouchers in PeopleSoft Payables. This functionality is useful when you have customers that are also vendors.

See [Chapter 7, "Configuring the PeopleSoft Payables Payment Interface," page 135.](#)

See *PeopleSoft Cash Management 9.1 PeopleBook*, "Managing Bilateral Netting."

See [Chapter 21, "Processing Pay Cycles," Pay Cycle Processing Using the PeopleSoft Financial Gateway, page 646.](#)

PeopleSoft Work Order Management

PeopleSoft Payables vouchers record the actual procurement cost of external resources. You transmit this cost data back to Work Order Management for work order completion and analysis.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Understanding Source Document Copy Functionality, page 342.](#)

PeopleSoft Payables Implementation Tasks

PeopleSoft Setup Manager enables you to review a list of setup tasks for your organization for the products that you are implementing. The setup tasks include the components that you must set up, listed in the order in which you must enter data into the component tables, and links to the corresponding PeopleBook documentation.

PeopleSoft Payables also provides component interfaces to help you load data from your existing system into PeopleSoft Payables tables. Use the Excel to Component Interface utility with the component interfaces to populate the tables.

Other Sources of Information

In the planning phase of your implementation, take advantage of all PeopleSoft sources of information, including the installation guides and troubleshooting information. A complete list of these resources appears in the preface in *PeopleTools PeopleBooks: PeopleBooks and the PeopleSoft Online Library*, with information about where to find the most current version of each.

Navigating in PeopleSoft Payables

This chapter discusses how to navigate in PeopleSoft Payables.

Navigating in PeopleSoft Payables

PeopleSoft Payables provides custom navigation center pages that contain groupings of folders that support a specific business process, task, or user role.

Note. In addition to the PeopleSoft Payables custom navigation center pages, PeopleSoft provides menu navigation and standard navigation pages.

See Also

PeopleTools PeopleBook: PeopleSoft Applications User's Guide

Pages Used to Navigate in PeopleSoft Payables

This table lists the Custom Navigation Center pages that are used to navigate in PeopleSoft Payables.

Page Name	Navigation	Usage
Accounts Payable Center	Accounts Payable, Accounts Payable Center	Access the Accounts Payable Center.
Vouchers	Click the Vouchers link on the Accounts Payable Center page.	Add, maintain, and approve vouchers.
Review	Click the Review link on the Accounts Payable Center page.	Run inquiries on vendors, vouchers, payments, integrations, and metrics.
1099	Click the 1099 link on the Accounts Payable Center page.	Configure, maintain, review, post and report on 1099 withholding.
Vendors	Click the Vendors link on the Accounts Payable Center page.	Add, maintain, and approve vendors.
Reports	Click the Reports link on the Accounts Payable Center page.	Run reports on vendors, vouchers, payments, reconciliation.

Page Name	Navigation	Usage
Global Withholding	Click the Global Withholding link on the Accounts Payable Center page.	Configure, maintain, review, post and report on global withholding.
Payments	Click the Payments link on the Accounts Payable Center page.	Create and manage the pay cycle.
Definitions	Click the Definitions link on the Accounts Payable Center page.	Define and maintain data and options for the PeopleSoft Payables system.
Batch Processes	Click the Batch Processes link on the Accounts Payable Center page.	Process vouchers, payments, accounting entries, clearing, and revaluation.
Archiving	Click the Archiving link on the Accounts Payable Center page.	Archive payment, voucher, and vendor information.
Control Groups	Click the Control Groups link on the Accounts Payable Center page.	Add, review, and maintain control groups.
Related Pages	Click the Related Pages link on the Accounts Payable Center page.	Access pages in General Ledger, Purchasing, Treasury, and eSettlements.

Chapter 3

Understanding PeopleSoft Payables Implementation

This chapter discusses:

- Implementation considerations.
- Definition of the business units.
- PeopleSoft Payables control hierarchy.
- Definition of the accounting environment.
- Voucher and payment processing.
- Setting up File Attachments.

Implementation Considerations

To implement a PeopleSoft application for an organization, you design the system's business structure and then you apply that structure to the system. Before you can do that, you must determine the best way to map the new system to the business structures, practices, and procedures.

Begin by examining the organization's needs thoroughly before entering data and transactions. You should:

- Analyze the payables processing requirements according to the business and organizational needs.
- Review the current environment and consider the changes that might be made now and in the future.

Because PeopleSoft Payables is sophisticated and configurable, there are a number of steps involved in implementing a new system. These are the key steps:

1. Determine the organization's payables requirements.
2. Configure PeopleSoft Payables to meet those requirements.
3. Set up the control tables.
4. Set up PeopleSoft security.
5. Convert data from existing systems.
6. Process vouchers and payments.
7. Generate reports and inquiries.

Definition of the Business Units

In PeopleSoft applications, a *business unit* is an organization or organizational subset that is independent with regard to one or more accounting or operational functions. Business units are flexible structural devices that you can use to implement PeopleSoft products based on how a business is organized. In PeopleSoft Payables, a business unit is defined as an independent transaction-processing entity.

When deciding on the business units for the organization, take a close look at the existing structure of the system. Examine the organizational elements (such as company codes, organization codes, and division codes) and relate them to business units. Consider whether you can simply map existing structures to business units or whether you need to modify structures to make the best use of PeopleSoft Payables.

For example, suppose that an organization has multiple subsidiaries. Each subsidiary operates as a separate entity with its own payables department and its own rules for invoicing and for tracking payables transactions. In such a case, it makes sense to set up separate payables business units for each subsidiary.

First, determine how many business units to use for the organization. Then consider the various payables processing rules and reporting requirements of the organization. Ask yourself whether you need to report some transactions separately from others. Also, consider whether some transactions must be reported together.

As you determine the optimal business unit structure for the organization, keep in mind that certain features such as the Interunit Accounting feature require multiple business units. You may decide to set up separate business units even if you do not need them for processing reasons. For example, you may want to maintain accounting control and balances at a level lower than the company level.

See Also

[Chapter 4, "Setting Up PeopleSoft Payables Business Units," page 29](#)

General Ledger Distribution Considerations

Be sure to consider general ledger distribution as you determine how many business units you need. Before establishing payables business units, you must establish general ledger business units. If you use only Oracle's PeopleSoft financial applications, generally the PeopleSoft Payables business units are the same as the PeopleSoft General Ledger business units. You set up the general ledger first and then set up PeopleSoft Payables to mirror the general ledger. If you use a different general ledger system, then you cannot use business units. In that case, you must carefully consider how to distribute from PeopleSoft Payables to the general ledger.

Once you create your business units, you then associate the payables business units with the general ledger business units. The association does not need be one-to-one; you can consolidate multiple payables business units in one general ledger business unit. However, you cannot associate a single payables business unit with multiple general ledger business units. That is, you cannot have one payables business unit that distributes to multiple general ledger business units (with the exception of interunit accounting entries). This diagram illustrates this concept:

Payables and General Ledger Business unit relationships

PeopleSoft Payables Control Hierarchy

In PeopleSoft Payables, business units are the highest level of a hierarchy of defaults, called the *control hierarchy*, which facilitates both voucher entry and payment processing. As you formulate the PeopleSoft Payables structure, consider the five components of the control hierarchy that are key to PeopleSoft Payables:

Levels of the PeopleSoft Payables control hierarchy

Default values entered at the business unit level appear automatically at the voucher level, unless you override the defaults with values stored at an intermediate level (namely, the voucher origin, control group, or vendor level). This hierarchy provides increased flexibility and control to fit unique business needs. For example, instead of requiring a PeopleSoft Payables user to enter the same default values repeatedly on vouchers, the system uses the control hierarchy to enter the predetermined values automatically. Then the user can override these values on the voucher.

When you enter default values and select processing rules at the levels that govern the control hierarchy, the system initially validates the information for you. The system then validates the data again during transaction processing to verify that it has the correct values assigned at the level that you designate.

This section reviews the components of the control hierarchy and their role in a PeopleSoft Payables implementation. As you set up control tables and prepare to process vouchers and payments, you need to understand how the control hierarchy works.

This section discusses:

- Business units
- Voucher origins
- Control groups
- Vendors
- Vouchers

Business Units

A PeopleSoft Payables business unit is an independent processing entity. Each business unit acts as a separate area of control, representing the primary level at which system tables can be controlled independently.

Depending on the business requirements, you can set up business units to share core control tables such as calendars, payment terms, and vendors. In the PeopleSoft system, TableSet processing handles this setup for you automatically, eliminating the need to maintain multiple sets of data for each business unit.

See Also

PeopleTools PeopleBook: PeopleSoft Application Designer

Chapter 4, "Setting Up PeopleSoft Payables Business Units," page 29

Voucher Origins

Each transaction entered into PeopleSoft Payables must have a valid origin, such as online or batch processing, that you define in the Voucher Origin table. You must have at least one origin, and each user must be associated with an origin. You can set up control values at the voucher origin level to override business unit defaults and automatically appear lower levels in the control hierarchy.

For example, if you have automated systems that pass information to PeopleSoft Payables—such as an electronic data interchange (EDI) interface—you might define an origin specific to those systems. Or you might set up and assign particular origins to individual data entry clerks, associating each voucher origin with a specific group of approved vendors and allowing each data entry clerk to create vouchers for those vendors only. For example, suppose that certain foreign invoices have distinct payment terms and other processing rules; you could set up a voucher origin with those default values and assign the origin to the data entry clerk who handles foreign vendors.

See Also

Chapter 5, "Organizing Vouchers with Origins and Control Groups," Defining Voucher Origins, page 89

Control Groups

Use control groups to maintain control over vouchers. Control groups enable you to:

- Post several groups of vouchers in one step.
- Divide large numbers of vouchers among data entry clerks while retaining centralized control over voucher processing.
- Use separate processing rules for a particular vendor's vouchers within a business unit.

See Also

Chapter 5, "Organizing Vouchers with Origins and Control Groups," Defining Voucher Control Groups, page 94

Vendors

You can define a set of vendors for each business unit or share vendors across multiple business units. You can also associate vendors with other vendors in the system and—if you use PeopleSoft Receivables—associate a PeopleSoft Payables vendor with a PeopleSoft Receivables customer for reporting purposes.

Vendors can have multiple addresses and multiple locations. *Addresses* are the physical addresses of the vendor; a *location* corresponds to a unique way of doing business.

You use the location level to:

- Define payment terms and banking information for the vendor.
- Define a number of payment parameters that are used during payment processing.
- Generate separate checks for each voucher at the location level.
- Specify matching options if matching is used to approve vouchers for payment.

At the location level, for example, you specify the number of days to delay discounted payment after the discount payment date has been reached—as well as the number of days to delay net payment after the net due date has been reached. This provides additional payment flexibility based on how well you know vendors. For example, you can indicate how long a vendor typically waits for payment while still giving a discount.

Maintaining vendor data is simple with PeopleSoft Payables. You can:

- Approve, inactivate, and reactivate vendors.
- Record vendor information and conversations.
- Report on vendor activity and outstanding payment balances, as well as withholding and value-added tax (VAT) information.

Vouchers

The lowest level of the control hierarchy is vouchers. Vouchers are supplier invoices with system applied defaults. You can enter them either manually using the online pages or automatically using the Voucher Build Application Engine process (AP_VCHRBLD). Each voucher is assigned a unique identifier—a voucher ID—either automatically or manually; the voucher ID provides a means for tracking all invoices, adjustments, and payments through the system.

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293

Chapter 16, "Processing Batch Vouchers," page 415

Chapter 17, "Using Quick Invoices," page 451

Definition of the Accounting Environment

PeopleSoft Payables uses tables to store not only the data for business transactions but also the accounting environment and processing rules that drive the system and provide consistency while minimizing data entry. Before you can begin processing vendors, vouchers, and payments, you must set up the accounting framework, which includes calendars, ChartFields, ChartField values, currency types, user profiles, general ledger journal information, and so on.

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining Procurement Controls for General Ledger Business Units, page 32

ChartField Combination Editing

You track payables transactions based on the ChartField combinations that you define when you set up ChartField combination editing in PeopleSoft General Ledger. PeopleSoft General Ledger uses your accounts in combination with other ChartFields to create journal entries. In PeopleSoft Payables, ChartField combination editing provides a method to validate online and batch voucher entry accounting distribution information.

By defining valid combinations, you can filter entries before you post them to ledgers, saving time and effort during reconciliation and closing. Although you employ ChartField combination editing rules during online and batch voucher entry, the PeopleSoft General Ledger Journal Editing Application Engine process (GL_JEDIT) performs the final validation of journal entries before you post them to the ledger.

You can set up ChartField combination editing to reject vouchers with ChartField combination editing errors, recycle them, provide a warning, or perform no ChartField combination editing at all. You can set these options at the business unit, origin, control group, and vendor levels of the PeopleSoft Payables control hierarchy.

Voucher and Payment Processing

This section discusses:

- Voucher processing.
- Payment processing.

Voucher Processing

PeopleSoft Payables provides control over voucher processing and enables you to control voucher header information. The system:

- Checks for duplicate invoices.
- Calculates and confirms taxes.
- Converts the transaction currency to the base currency.
- Assigns default payment terms and calculates the payment due dates.
- Validates your vendors against financial sanctions lists if financial sanctions validation is required.

You also have control over voucher line items. The system assigns numeric line numbers for you to ensure that each has a unique identifier. When you enter merchandise amounts on voucher lines, the sum of the line amounts must equal the gross voucher amount less the sum of freight, sales tax, and VAT entered on the voucher header. You can also define the sales and use tax and VAT at the voucher line level. In the event of an imbalance, you determine how the system responds—either rejecting or recycling vouchers until they are correct.

Approving Vouchers

All vouchers must be approved before they can be paid. There are three ways to approve vouchers:

- Matching vouchers to purchase order, receiver, and inspection information.

Matching occurs automatically based on the match rules—a set of rules and tolerances—that you define for a purchase order transaction. If the voucher successfully matches, it is available for payment. If the voucher does not successfully match and requires an adjustment, the system can automatically create a debit memo.

If a voucher does not pass matching, you can still pay it if you have selected the Pay Unmatch Voucher option on the User Preference - Procurement: Payables page for your user ID. If do not select the Pay Unmatch Voucher option, you can only pay vouchers with a *Matched* or *No Match* match status.

- Routing vouchers through worklists and email using Workflow.

Workflow approval is most often used for vouchers that are not related to purchase orders, but it is not limited to that use. If you want, you can record a voucher as *preapproved*. The voucher is not routed for approval, and it is available for payment immediately—provided that it has been matched or that matching is not necessary.

- Manually approving individual vouchers online.

Posting Vouchers

The Voucher Posting Application Engine process (AP_PSTVCHR) creates balanced accounting entries for vouchers. The system combines information entered for a voucher with other control information—offset accounts stored on the accounting entry templates and ChartField inheritance rules—to create the balanced entries. Vouchers do not have to be approved for accounting entries to be created.

You post vouchers through a batch process that you run periodically using Process Scheduler. You can continue to process new transactions online during posting.

PeopleSoft Payables also enables you to unpost vouchers—that is, you can back out the accounting entries made to accrue the liability and reopen the vouchers for amendment or closure.

Once vouchers are posted, the information created is available for distribution to other business processes, such as the Journal Generator Application Engine process (FS_JGEN), which converts payables accounting entries to general ledger journal entries.

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Invoice Information for Online Vouchers, page 303](#)

[Chapter 19, "Managing Vouchers," Approving Vouchers, page 493](#)

[Chapter 23, "Running Voucher and Payment Posting," Running the Voucher Posting Process, page 754](#)

Payment Processing

The payment processing included in PeopleSoft Payables enables you to create disbursements for transactions that flow through PeopleSoft Payables.

PeopleSoft Payables supports a number of payment formats: system check, automated clearing house (ACH), electronic funds transfers (EFTs), wire transfers, giros, drafts, direct debits, and letters of credit. The system is delivered with several, ready-to-use EFT formats particular to local needs.

The PeopleSoft Payables Payment Interface also supplies a means for processing payments for transactions outside the PeopleSoft Payables system. This interface is used by PeopleSoft Treasury to make settlement payments and by PeopleSoft Expenses to make expense payments. The interface integrates with the PeopleSoft Financial Gateway functionality, enabling another means of electronic payment processing for EFT, ACH, and wire transfers. You can also use the interface to process payments for other in-house systems.

As part of the voucher entry process, the system schedules vouchers to be paid based on the pay terms and holiday options. If pay terms include discounts, the system also calculates a discount due date. You create pay cycles to group types of vouchers to be paid in a single payment run. For example, you might want to have one payment cycle for regular vendors and another for employee reimbursements or check requests.

Each pay cycle that you create is essentially a reusable payment selection template that specifies the selection criteria the system uses to determine which approved vouchers should be paid. For example, you can select payments based on business unit, bank and bank account, vendor pay group, pay through date, and payment method, among others.

Note. During payment processing the system validates your vendors against financial sanctions lists if financial sanctions validation is required. The system does not allow payments to vendors who are potential matches to the financial sanctions lists.

Payment Posting

The creation of accounting entries for payments occurs during payment posting. As you post payments, the system generates corresponding accounting entries to relieve the liability, account for discounts earned (or lost), and generate an offset either to the designated cash account or to a PeopleSoft Payables clearing account if so designated at the bank account level. Like the Voucher Posting process, the Payment Posting Application Engine process (AP_PSTPYMNT) is a batch process that runs in the background.

Establishing FTP Servers for Attachments

To set up attachments to use with customers, products, buying agreements, sales orders, quotes, and RMAs, use the File att. admin (file attachments administration) component.

This section discusses how to set up file attachment servers.

Page Used to Set Up Attachments for Transactions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Administer File Attachments	SAC_ATT_ADMIN	Set Up Financials/Supply Chain, Common Definitions, File Attachments, Administer File Attachments	Identify servers on which to store attachments and define component names and paths where the attachments are stored.

Setting Up File Attachments

Access the Administer File Attachments page (Set Up Financials/Supply Chain, Common Definitions, File Attachments, Administer File Attachments).

Attachments to PeopleSoft Payables transactions are stored and retrieved from the locations defined here. System administrators can configure one or more servers to store attachments.

Using this page, system administrators can set up new servers and identify the active server. Administrators can add or modify the FTP root folder and the component specific subfolder for FTP servers.

Note. Users using an FTP server for attachment should keep in mind that upload time will be affected by both the connection from the file location to the database, and the connection from the database to the FTP server. The number of possible simultaneous connections is limited, which will increase the upload time for any upload that has to wait.

File Attachment Servers

Pick Active Server

Select the server ID of the active (or default) server where all newly created attachments are stored. You can switch the active server at any time. All previously created attachments are still retrieved from the server where they were originally stored. The attachments keep a reference to the original server. This field is required.

Add FTP Server (add file transfer protocol server)

Click to insert a new row in the grid to define a new FTP server for attachments.

Add Database Server

Click to insert a new row in the grid to define a new database server for attachments.

ID	Displays the system-assigned ID number for each server on this page. When an attachment is stored to the server, the server ID is inserted into the attachment record. When you give a request to download (view) this attachment, the system retrieves it from the original server based on this server ID.
Attachment Server Type	Identifies the type of server based on whether you click the Add FTP Server button or the Add Database Server button. Once you save the row and exit the component, you cannot change the server type. Values are: • <i>FTP</i>: (file transfer protocol server) • <i>DB</i>: (database server)
Login	Enter or change the login name. This value is required for FTP servers only.
Password	Enter or change the password corresponding to the Login Name. The password is required for FTP servers only.
Server Name/Record Name	Enter the machine name for the FTP server. Once you save the information, change the machine name only if the same FTP server is renamed. To add a different FTP server, click the Add FTP Server button to insert a new row into the grid and define the new server. You cannot delete servers because attachments could already be stored on them.
Path	Enter the subdirectory path under the root of the server FTP, where all attachments are to be stored. This value is required for FTP servers only.

Note. You cannot delete a server after you save the row and exit the component. After you exit the component, the system assumes that attachments can be stored at this server location.

Component Subdirectories

System administrators use this page to specify a subdirectory under the FTP root for any component. When uploading files, the system looks to this record and uses any subdirectory defined. The component subdirectory can be modified at any time. Define the component (in the installed applications) with a subdirectory under the FTP root (FTP servers only).

Component	Enter the component for the installed application.
Subdirectory	Enter the subdirectory path.

Chapter 4

Setting Up PeopleSoft Payables Business Units

This chapter provides an overview of PeopleSoft Payables business units and discusses how to:

- Define procurement controls for general ledger business units.
- Define PeopleSoft Payables business units.
- Define PeopleSoft Payables business unit options by setID.

Understanding PeopleSoft Payables Business Units

This section discusses:

- PeopleSoft Payables business unit overview.
- Responsibilities.
- PeopleSoft General Ledger business unit considerations.
- TableSets.
- PeopleSoft Payables control hierarchy.
- Questions to ask.
- PeopleSoft Payables business unit setup steps.

PeopleSoft Payables Business Unit Overview

In a PeopleSoft system, a *business unit* is an operational subset of an organization that enables you to plan operations based on the way the organization functions.

Before you implement an application for an organization, determine how the business operates. To make the most of the PeopleSoft system's flexibility, you have to decide how to map operational business structures to the PeopleSoft application.

Some of the characteristics of PeopleSoft Payables business units can affect how you define them in the implementation of the application. This section discusses some of these key traits of business units so that you can decide the best way to use them.

See Also

Chapter 3, "Understanding PeopleSoft Payables Implementation," page 17

Responsibilities

You can set up separate business units even if you don't need them for processing. For example, one department in an organization may be responsible for a particular group of vendors, or particular types of vouchers, and you might want a separate business unit for that department. Alternatively, you might group certain types of vendors for analytical reasons, even though the vendors' payables are processed in the same way as other vendors' payables. Or you might want to maintain control and balances at a lower level than the entire organization level.

PeopleSoft General Ledger Business Unit Considerations

You must define each business unit in PeopleSoft Payables and in PeopleSoft General Ledger or the third-party general ledger system that you use. A PeopleSoft Payables business unit must be associated with a general ledger business unit.

- General ledger business units define the accounting processing for their associated PeopleSoft Payables business units.
- PeopleSoft Payables business units have few accounting controls; they have mostly operational defaults and controls.

The association does not need to be one-to-one; you can consolidate multiple PeopleSoft Payables business units in one general ledger business unit. However, you cannot have a single PeopleSoft Payables business unit that is associated with multiple general ledger business units.

Depending on the operating, accounting, and reporting requirements, you may want to have PeopleSoft Payables business units that are defined differently from the general ledger business units. Nevertheless, when you determine how many business units you need, be sure to consider the general ledger.

TableSets

Before you set up the business units, decide on the TableSet structure and establish setIDs.

When you plan the business unit structure, you need to understand TableSets, which are used in all PeopleSoft Financials applications.

The accounting structure and processing rules for each PeopleSoft application that you use are defined in a series of control tables. A TableSet is a group of rows shared across control tables and identified by the same setID, on which you define the accounting structure for each business unit. For a business unit to process transactions, it *must* have an associated TableSet.

Several business units can share the control data in a TableSet; for example, vendors are defined by setID, and you can set up any number of business units to share the vendors in a setID.

Consider this relationship in simplified terms: the business unit contains all the actual data, and the TableSet contains the rules by which the data is processed. A setID identifies each TableSet. You can have as many setIDs as you like, but having numerous setIDs makes TableSet sharing more complex. Create at least one setID even if you do not take advantage of TableSet sharing. Some organizations need only one setID.

Warning! In general, create setIDs and business unit names that are five characters long. Performance degradation can occur (depending on the operating system) if setIDs or business units have fewer than five characters.

PeopleTools PeopleBook: PeopleSoft Application Designer

PeopleSoft Payables Control Hierarchy

A business unit is the broadest element in the PeopleSoft Payables system. All other entities fall beneath it in the control hierarchy. It is therefore the highest level from which default information can be derived. The system automatically uses the information that you specify at the business unit level unless you override it at lower levels in the application, such as the origin, control group, vendor, or voucher levels.

As you set up processing options at levels below the business unit level, notice that the first option for most functions is *Default*. Selecting this option points the PeopleSoft Payables system to the next higher level in the control hierarchy to obtain the value. For example, when you define voucher and payment options for voucher origins, you can have each category obtain the default values from the rules that are already defined at the business unit level.

See Also

[Chapter 3, "Understanding PeopleSoft Payables Implementation," PeopleSoft Payables Control Hierarchy, page 19](#)

Questions to Ask

Every organization has different requirements. However, after you review this chapter, you must examine the organization's existing structures and determine how many business units you need. Then ask yourself the following questions:

- Is there any reason why the proposed business unit structure cannot work?
- Does this structure preclude the organization from using any functionality?
- Does the structure restrict reporting capabilities?
- Does the structure require too much data to be processed on a given night?
- Is the level of data processing acceptable?

PeopleSoft Payables Business Unit Setup Steps

Use the following steps to set up PeopleSoft Payables business units:

1. Define general ledger business units.

(This is a prerequisite; consequently, it is not discussed in this chapter.)

See *PeopleSoft General Ledger 9.1 PeopleBook*, "Defining Your Operational Structure," Defining General Ledger Business Units.

2. Set up procurement accounting controls for general ledger business units using the Procurement Controls component (BUS_UNIT_INTFC2).

See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining Procurement Controls for General Ledger Business Units, page 32.

3. Define the PeopleSoft Payables business unit in the Payables Definition component (BUS_UNIT_TBL_AP).

See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining PeopleSoft Payables Business Units, page 50.

4. Define Payables options for PeopleSoft Payables business units by setID in the Payables Options component (BU_CTLB).

See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining PeopleSoft Payables Business Unit Options by SetID, page 70.

Defining Procurement Controls for General Ledger Business Units

Once you have defined the general ledger business units, you must define the procurement accounting controls for each general ledger business unit that is associated with the PeopleSoft Payables business units. These settings determine how the PeopleSoft Payables business units interfaces with the general ledger. You define these controls in the Procurement Control component.

To set up your procurement controls, use the Procurement Control component (BUS_UNIT_INTFC2).

To load data into the tables for the Procurement Control component, use the EM_BUS_UNIT_INTFC component interface.

This section provides an overview of discount accounting controls, lists prerequisites, and discusses how to:

- Select general controls.
- Set up nonmerchandise charges.
- Define general ledger templates.
- Select evaluated receipt settlement (ERS) options.
- Select withholding options.

- Specify withholding ChartFields.

Note. The Document Types page appears only if document sequencing is enabled for the general ledger business unit.

Understanding Discount Accounting Controls

The General Controls page in the Procurement Control component contains numerous options for setting up accounting controls for discounts lost. This section discusses how to use some of these options.

Discount Lost Accrual

The Accrue Discounts Lost check box on the General Controls page in the Procurement Control component enables you to accrue at net but also to accrue the potential discount lost. If you take the discount later, the system reverses the discount lost.

When accounting at net in PeopleSoft Payables, you can account for lost discounts in one of two ways:

- Account for lost discounts during payment posting.
- Account for lost discounts during voucher posting.

If you account for lost discounts during payment posting, both the accounts payables offset account and the expense distribution accounts are recorded during the accrual entry net of discount. When the payment is made for this voucher, if the discount is still available, no additional entries are necessary beyond the normal payment entries. If the discount is not taken, a discount lost is recorded to a discount lost control account. The system creates accounting entries as follows:

<i>Event</i>	<i>Account</i>	<i>Debit Amount</i>	<i>Credit Amount</i>
Voucher Entry	Accounts Payables		1,080
	Expense	1,080	
Payment with discount taken	Accounts Payables	1,080	
	Cash		1,080
Payment without discount	Accounts Payables	1,080	
	Cash		1,100
	Discount Lost (Expense)	20	

If you account for lost discounts during voucher posting, the accounts payable offset account is booked at the gross amount, while the expense distribution accounts are booked at the net amount. This method of accounting is specifically designed to meet German and Austrian accounting requirements, but other countries may need to use it as well. The difference is booked to the discount lost control account. If the discount is not taken, no additional entries are necessary beyond the normal payment entries, because the discount lost has already been booked. If the discount is taken, then an offset to the discount lost must be created to ensure that no discount lost has been booked. The system creates accounting entries as follows:

Event	Account	Debit Amount	Credit Amount
Voucher Entry	Accounts Payables		1,100
	Expense	980	
	VAT Input	100	
	Discount Lost (Expense)	20	
Payment without discount	Accounts Payables	1,100	
	Cash		1,100
Payment with discount taken	Accounts Payables	1,100	
	Cash		1,078
	Discount Expense		22
	VAT Adjustment (VIDR)		2
Discount Adjustment (VIDA)		2	

Discount Memo Account

The Record Discount Memo Account check box on the General Controls page in the Procurement Control component enables you to set up the system to post discount entries at the time of payment using memo accounts. Using this method, if users accrue at gross but later lose the discount, the system generates entries to the discount lost and discount lost memo accounts. You can set up the system to generate similar entries to the discount earned and discount earned memo accounts when accruing at net.

You can post discount entries using memo accounts in one of two ways:

- Accounting at gross.

- Accounting at net.

If you account at gross for a general ledger business unit (using the vouchering general ledger business unit) the system creates accounting entries as follows:

Event	Account	Debit Amount	Credit Amount
Voucher Entry	Accounts Payables		1,000
	Expense	1,000	
Payment without discount	Accounts Payables	1,000	
	Cash		1,000
	Discount Lost	20	
	Discount Lost Memo		20
Payment with discount taken	Accounts Payables	1,000	
	Cash		980
	Discount Earned		20

If you select accounting at net for a general ledger business unit (using the vouchering general ledger business unit), the system uses the Record Discount Memo option in conjunction with the Accrue Discount Lost option to determine the accounting entries:

Example 1: Voucher Entered at Net with 2 Percent Discount:

In this scenario, it is assumed that the Accrue Discount Lost check box is not selected.

Event	Account	Debit Amount	Credit Amount
Voucher Entry	Accounts Payables		980
	Expense	980	
Payment without discount	Accounts Payables	980	
	Cash		1,000

Event	Account	Debit Amount	Credit Amount
	Discount Lost	20	
Payment with discount taken	Accounts Payables	980	
	Cash		980
	Discount Earned		20
	Discount Earned Memo	20	

Example 2: Voucher Entered at Net with 2 Percent Discount:

In this scenario, it is assumed that the Accrue Discount Lost check box is selected.

Event	Account	Debit Amount	Credit Amount
Voucher Entry	Accounts Payables		1,000
	Expense	980	
	Discount Lost	20	
Payment without discount	Accounts Payables	1,000	
	Cash		1,000
Payment with discount taken	Accounts Payables	1,000	
	Cash		980
	Discount Lost		20
	Discount Earned		20
	Discount Earned Memo	20	

Note. This method of accounting is specifically designed to meet German and Austrian accounting requirements, but other countries may need to use it as well.

Prerequisites

Before defining procurement accounting controls for PeopleSoft Payables business units, you must:

- Define a posting method on the Installation Options - Payables page.
- Define journal templates on the Journal Generator Templates pages.
- Define a combination edit template for vouchers and set up ChartField combination editing.
- Define standard cost charges on the Misc Charge / Landed Cost Defn (miscellaneous charge/landed cost definition) page.
- Set up withholding entities, types, and jurisdictions, as well as withholding business unit categories

Procurement Control – General Controls page

Early Payment Discount and Late Payment Charges

All of the fields in this group box are used during posting and none can be overridden, except the accounting policy, which you can override when you create a voucher.

Accounting Policy

Select an option to use as a default for vouchers. You can override the accounting policy when you create a voucher. Options are:

Gross: The system uses the gross amount of vouchers as the basis for accounting; any discounts taken are recognized as discounts earned.

Net: The system uses the net amount of vouchers as the basis for accounting. Any discounts that you lose are recognized as discounts lost.

Accrue Discounts Lost

Select to account at net per German and Austrian requirements. If you select this option, the system accounts for lost discounts during voucher posting. If you don't select this option, the system accounts for lost discounts during payment posting.

Record Discount Memo Account

Select this option to record both discount earned and discount lost at payment creation regardless of whether you account at net or gross.

See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Understanding Discount Accounting Controls, page 33.

Discount Allocation Policy

Use the fields in this group box to determine how discounts are charged.

Allocate Discounts

Select to have the system use the account from the accounting entry template and create all other ChartFields based on the inheritance rule for the setID associated with the general ledger business unit of the distribution line. (The system uses the PeopleSoft Payables distribution-level entries inheritance group).

The discount lines inherit the general ledger business unit of the distribution lines.

Prorate Discounts

Select to have the system create discount entries on separate lines using the account and all other ChartFields on the distribution lines for the voucher.

The discount lines inherit the general ledger business unit of the distribution lines.

Expense Discounts

Select to have the system use the account from the accounting entry template and create all other ChartFields based on the inheritance rule for the setID associated with the general ledger business unit of the vouchering business unit. (The system uses the PeopleSoft Payables header-level entries inheritance group).

The discount line uses the general ledger business unit of the vouchering business unit.

Note. This option is available only if you use the summary control posting method.

Late Payment Allocation Policy

Use the fields in this group box to determine how late charges are applied.

Allocate Late Charges

Select to allocate late interest charges.

If you select this option, the system uses the late interest charges account from the accounting entry template and creates all other ChartFields based on the inheritance rule for the setID associated with the general ledger business unit of the distribution line. (The system uses the PeopleSoft Payables distribution-level entries inheritance group).

The late charge lines inherit the general ledger business unit of the distribution lines.

Prorate Late Charges

Select to prorate late interest charges.

If you select this option, the system creates late interest charge entries on separate lines using the account and all other ChartFields on the distribution lines for the voucher.

The late interest lines inherit the general ledger business unit of the distribution lines.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options," Defining Late Interest Charges.

Document Tolerance

Enable Document Tolerance Select to enable document tolerance checking for the selected general ledger business unit.

See [Chapter 29, "Running Document Tolerances," page 877.](#)

Combination Edit Template

Template Select the combination edit template that the Voucher Build Application Engine process (AP_VCHRBLD) uses. This is used only for batch voucher editing and is not necessary for online voucher entry because the system handles combination editing for online entry differently.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Editing ChartField Combinations," Setting Up Combination Editing.

Accounting Controls

Accounting Date Edit Option Specify whether future-dated accounting entries are allowed. Options are:

Error Message: Select to control which users have the authority to enter accounting dates beyond the current date for vouchers.

No Message: Select to enable all users to enter accounting dates beyond the current date for vouchers without receiving a warning or error message.

Warning Message: Select to display a warning message when users enter accounting dates beyond the current date for voucher.

Allow Unpost Paid Vouchers Select to enable users to unpost vouchers that have been partially or fully paid.

See [Chapter 19, "Managing Vouchers," Unposting Vouchers, page 505.](#)

Period End Accruals

Accrued Unprocessed Vouchers at Period End Select this check box to enable the system to accrue documents that have not been posted during the normal accounting flow.

If the user enables this option, they must also select a journal generator template for period end accruals.

Enable Commitment Control for Accruals Select this check box to enable accrual documents created during the Period End Accrual process and that impact encumbrance to be budget checked by PeopleSoft Commitment Control.

VAT Non Recoverable Policy									
VAT Non-Recovery Charge:	NRVATPR		Non Recoverable VAT Prorated					☐ Allocate Non-Recoverable VAT	

Procurement Control - Non-Merch Charges page

Proration and Allocation of Nonmerchandise Charges

To understand the options on this page, you need to understand how proration and allocation of nonmerchandise amounts work.

During voucher entry, nonmerchandise amounts are prorated to each distribution line based on some ratio of total expense to the merchandise or other value on the distribution lines of the voucher, or they are not prorated. This depends on the charge code, which you set up in the Misc Charge/Landed Cost Defn (miscellaneous charge/landed cost definition) component (CM_LC_COMPONENT). If non merchandise amounts are not prorated, you can specify on the Procurement Control - Non-Merch Charges page whether to allocate them to separate accounting lines or to record them to summary expense accounts. This table describes what happens when you prorate, allocate, or expense (neither prorate or allocate) nonmerchandise charges:

Action	Result
Prorate	Records the prorated amount along with the merchandise amounts on the distribution line. If you prorate nonmerchandise amounts, the amounts charged to the distribution lines are added to merchandise amounts on the distribution lines, and the total is posted to the distribution ChartFields.
Allocate	Creates separate accounting entries for the nonmerchandise amount for the distribution line. If you allocate nonmerchandise amounts, the amounts charged to the distribution lines are posted to the appropriate nonmerchandise accounts from the accounting template, and the other ChartField values are based on the inheritance rules. ChartField inheritance is defined at the ledger group level and on the ChartField Inheritance page.
Expense (non-prorate/non-allocate)	Records the amounts to summary expense accounts. If you use summary control posting, you have two options for nonprorated charges. You can either expense the charges at the header, or allocate them to the distribution lines. You allocate them by selecting the Allocate check box on the Non-Merch Charges page in the Procurement Accounting Controls component. If you use detail offset posting, you have only one option for nonprorated charges. You must allocate them. For this reason, the Allocate check box is selected and unavailable for entry on the Non-Merch Charges page in the Procurement Accounting Controls component.

Default Nonmerchandise Charge Codes

Use the fields in this group box to set the defaults for the nonmerchandise charges on the voucher. The charge codes that you select here are automatically populated in the vouchers that you create for the business unit. They determine where the nonmerchandise amounts are charged.

Each of the fields in this group box has a drop-down list box that displays the available charge codes for that nonmerchandise charge. You define the codes for these nonmerchandise charges on the Misc Charge/Landed Cost Definition page. When you select a charge code, you define the proration. The available charge codes are prorated (*PR*) or not prorated (*NP*), unless you have defined more charge codes on the Misc Charge/Landed Cost Definition page.

Note. The charge codes that you select here are only defaults. You can override these charge codes on the voucher itself.

Non-Prorated Allocation Policy

The fields in this group box determine whether a nonprorated nonmerchandise charge is allocated or charged as a nonprorated expense for a particular general ledger business unit.

If you use detail offset posting, this check box is automatically selected and display-only because you cannot expense nonmerchandise amounts with detail offset posting.

If you use summary control posting, you can select this check box to allocate the nonmerchandise charges to the distribution line, or you can deselect the check box to expense the charges to the header.

Note. Unlike the charge codes, the allocation options *cannot* be overridden at voucher creation time. If you select a nonprorate option as the default here or on the voucher, the system uses the allocation option that you select here to either allocate or expense the nonmerchandise amount.

Allocate Sales Tax	Select to have the system create separate accounting entries for nonprorated sales tax amounts for the distribution line; the appropriate ChartFields are inherited.
Allocate Use Tax	Select to have the system create separate accounting entries for nonprorated use tax amounts for the distribution line; the appropriate ChartFields are inherited.
Allocate Freight	Select to have the system create separate accounting entries for nonprorated freight amounts for the distribution line; the appropriate ChartFields are inherited.
Allocate Miscellaneous Charges	Select to have the system create separate accounting entries for nonprorated miscellaneous charge amounts for the distribution line; the appropriate ChartFields are inherited.

VAT Non Recoverable Policy

Use the fields in this group box to set the defaults for the nonrecoverable VAT charges on the voucher. The charge code that you select here automatically appears on the vouchers that you create for the business unit. You can override it on the voucher.

VAT Non-Recovery Charge	Select from the delivered options or additional charge codes that you define on the Misc Charge/Landed Cost Definition page. Options are: <i>NRVATNP</i> (do not prorate nonrecoverable VAT): Nonrecoverable (taxable) VAT is not prorated to the distribution line ChartFields. <i>NRVATPR</i> (prorate nonrecoverable VAT): Nonrecoverable VAT is prorated to the ChartFields on the distribution line.

Allocate Non-Recoverable VAT

Select to have the system create separate accounting entries for the nonrecoverable VAT amount for the distribution line. This check box applies only to nonprorated nonrecoverable VAT charge codes.

The VAT nonrecoverable amount is posted to the account defined on the VAT accounting template (VAT Code - Accounting Information page), and the other ChartField values appear automatically based on the ChartField inheritance rules.

If you are using summary control posting and you want to expense nonprorated nonrecoverable VAT charges at the voucher header, then do not select this check box.

You can override this option when creating vouchers.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Defining Procurement Options," Defining Miscellaneous Charges and Landed Costs

Defining General Ledger Templates

Access the Procurement Control - GL Templates page (Set Up Financials/Supply Chain, Business Unit Related, Procurement, Procurement Control, GL Templates).

The screenshot displays the 'Procurement Control - GL Templates' page. At the top, there are five tabs: 'General Controls', 'Non-Merch Charges', 'GL Templates' (which is the active tab), 'ERS Options', and 'Withholding'. Below the tabs is a 'Business Unit Interface' section showing 'Unit: US001 US001 NEW YORK OPERATIONS'. The main content area is divided into two sections: 'Payables Journal Templates' and 'Purchasing Journal Templates'. The 'Payables Journal Templates' section contains seven rows of fields: 'Accruals' with value 'ACCRUAL', 'Payments' with 'PAYMENT', 'Cancels' with 'CANCEL', 'Period End Accruals' with 'AP_PACCRUE', 'Closes' with 'CLOSURE', 'Revaluations' with 'AP_REVALUE', and 'Cash Clearings' with 'CASH_CLRG'. Each field has a magnifying glass icon to its right. The 'Purchasing Journal Templates' section contains one row: 'Receipt Accrual' with value 'REC_ACCRUE' and a magnifying glass icon.

Procurement Control - GL Templates page

Payables Journal Templates

Specify the PeopleSoft Payables journal templates to use for the general ledger business unit. These templates define the summarization rules for creating journals that are passed to the general ledger. The PeopleSoft Payables system creates one journal each for accruals, payments, payment cancellations, manual closures, revaluations, and cash clearings; you must specify a different journal template for each.

Purchasing Journal Templates

Receipt Accrual Select the journal template to use for receipt accrual in PeopleSoft Purchasing. The standard template that is provided for receipt accrual is REC_ACCRUE.

Selecting ERS Options

Access the Procurement Control - ERS Options page (Set Up Financials/Supply Chain, Business Unit Related, Procurement, Procurement Control, ERS Options).

Business Unit Interface			
Unit:	US001	US001 NEW YORK OPERATIONS	
Evaluated Receipt Settlement			
*ERS Option:	Allow ERS	*SBI Numbering Options:	Individual Voucher (Auto-Num)
*ERS Invoice Date Option:	Recv Date	ERS Tax Type:	

Procurement Control - ERS Options page

ERS Option

ERS is a process by which the Voucher Build process builds vouchers from procurement receipt records. If you plan to use the Voucher Build process to create ERS vouchers for business units associated with this general ledger business unit, then you need to set the ERS option to *Allow ERS*.

ERS Invoice Date Option	Select the method that the system uses to create the ERS voucher invoice date. Options are: <i>Frt Terms</i> (freight terms): The freight terms determine whether to use the receipt or the shipment date as the invoice date. <i>Recv Date</i> (receiver date): The system uses the receiver data.
SBI Numbering Options	Select to define how the system groups SBIs. Options are: <i>Group Vouchers (Auto-Num)</i> (group [auto-number]): The system groups ERS vouchers in a single SBI voucher. <i>Individual Vchr - Invoice Number</i> (individual voucher - invoice number): The SBI contains information from only a single voucher. The system generates the SBI number by combining the invoice number with the ERS sequence number. <i>Individual Voucher (Auto-Num)</i> (individual voucher [auto-number]): The SBI contains information from only a single voucher. The system assigns the next available SBI number based on the invoicing location.
ERS Tax Type	Select to indicate the type of tax to which the vouchers are subject. Options are <i>No Taxes</i>, <i>Sales Tax</i>, <i>Use Tax</i>, and <i>VAT</i>.

Procurement Control - Withholding page

Specify the general ledger business unit's relationship to the various withholding entities for whom you withhold. These tax authorities use this information to determine your relationship with them. Enter the applicable information for each combination of withholding entity, type, jurisdiction, and business unit category.

Note. The withholding entity and class information is related to the information defined on the Withholding Entity page. Therefore, the effective date used on this page must be greater than or equal to the effective date on the Withholding Entity page.

- Collection Agent Flag

Select if you are a collection agent for the entity.
- Last Certificate Number

Enter the last certificate number for the entity.
- (ARG) Codigo DGR

Used exclusively in Argentina. This field is for information purposes only and does not trigger any action.
- ChartFields

Click to access the Withholding ChartFields page to set up accounting parameters.

Chapter 42, "Processing Withholding in PeopleSoft Payables," page 1151

Specifying Withholding ChartFields

Access the Withholding ChartFields page (click the ChartFields link on the Procurement Control - Withholding page).

Withholding Chartfields													
Business Unit:		US001		Effective Date:		01/01/1900							
Withholding Entity:		IRS		Withholding Type:		1099G		Withholding Jurisdiction:					FED
	*Withholding Class	*Account	Alternate Account	Oper Unit	Fund	Department	Program	Class	Bud Ref	Product	Project		
1	01	100004											
2	02	100004											
3	04	100004											
4	06	100004											
5	07	100004											

Withholding ChartFields page

Because withholding ChartFields are defined at the business unit level, you can specify ChartFields for every withholding entity, type, and jurisdiction.

Note. For each withholding class, you must specify the account ChartField. The system displays an error message upon saving if you have not populated the Account field.

Withholding Class

Displays the withholding classes defined for the withholding entity, type, and jurisdiction. The system automatically populates this field based on what you define on the Withholding Entity page. You can delete a withholding class if you have deleted the class on the Withholding Entity page. Otherwise, the delete button is not available.

Note. When you add a new withholding class for an entity on the Withholding Entity page, the system populates this page with the new withholding class. The system populates the Account field with the account for the minimum withholding class of the entity. If the system is unable to determine a valid account, you must manually insert the account on this page. For example, you define account 230000 for withholding class 01 and account 235000 for withholding class 02. When you add a new withholding class 03 on the Withholding Entity page, the system populates the account with 230000 for the withholding class 03 on the Withholding ChartFields page (the account defined for the minimum withholding class, in this example, 01).

When you delete a withholding class for an entity on the Withholding Entity page, the system displays a warning message stating that you must delete the withholding class from the Procurement Control - Withholding page as well.

Account

Select the account to be used as the withholding liability account in general ledger. This field is required. You can also select the ChartFields associated with the account you selected, as appropriate.

Note. The account is based on the TableSet control of the business unit rather than the setID of the withholding entity.

Defining PeopleSoft Payables Business Units

To set up your PeopleSoft Payables business units, use the Payables Definition component (BUS_UNIT_TBL_AP).

To load data into the tables for the Payables Definition component, use the EM_BUS_UNIT_AP component interface.

This section describes how to:

- Create a new PeopleSoft Payables business unit.
- Link PeopleSoft Payables business units with general ledger business units.
- Update open periods.
- Establish tax options.
- Set voucher build options.
- Establish matching options.
- Define payment options.
- Set up numbering.
- Define summary invoice controls.

Payables Definition – Definition page

To create a new PeopleSoft Payables business unit:

1. On the Add Search page in the Payables Definition component, enter the business unit ID for the PeopleSoft Payables business unit that you want to create, and click Add.

Note. Use business unit IDs that are five characters long to optimize system performance.

2. Enter a description and short description of the business unit and specify a default setID.

The setID can be the value of another existing business unit whose setID you want to copy for the business unit that you are adding. Alternatively, by entering the ID of the new business unit that you are creating, you can also establish a new empty setID having the same name as the business unit.

See [Chapter 4, "Setting Up PeopleSoft Payables Business Units," TableSets, page 30.](#)

Note. Most other fields on the page are unavailable and must be completed after you have finished creating the business unit.

3. Click Create BU to create the PeopleSoft Payables business unit and, if applicable, the new setID.

The system automatically creates the business unit. If you have completed the general ledger business unit setup, the procurement controls, and other relevant control table data, you can continue to complete the business unit definition.

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Understanding PeopleSoft Payables Business Units, page 29

Linking PeopleSoft Payables Business Units with General Ledger Business Units

Access the Payables Definition - Definition page (Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Definition).

Enter the general ledger business unit information on the Payables Definition - Definition page.

Accounting Information

GL Business Unit (general ledger business unit)

Select the general ledger business unit to which you want to assign the PeopleSoft Payables business unit.

Each line of distribution that you enter for a voucher can be charged to this general ledger business unit—the *charge to* business unit. The charge to business unit automatically appears as the general ledger business unit associated with the PeopleSoft Payables business unit that owns the voucher. You can charge vouchers to general ledger business units other than the default of the vouching business unit for a given distribution line.

When the charge to general ledger business unit differs from the general ledger business unit of the vouching business unit, PeopleSoft Payables automatically creates interunit payables and receivables entries to reflect the business transaction. ChartField values on the distribution line that you enter are validated against the ChartField tables valid for the charge to general ledger business unit.

For payment accounting, each bank account has a cash and cash clearing account associated with it. These accounts are tied to a particular general ledger business unit. The system enables you to pay vouchers of multiple PeopleSoft Payables business units from one bank account. If you do this, the system creates interunit payables and receivables automatically based on the payment interunit account on the general ledger business unit.

Accounting Entry Template

Select the template to associate with the PeopleSoft Payables business unit. The accounting entry template identifies the offset accounts that the system uses to balance payables transactions. It also identifies the accounts that the system uses to allocate nonmerchandise charges. You set it up on the Accounting Entry Template page. Other ChartField values can be inherited from the accounting entry template depending on the ChartField inheritance setup.

Ship To	Enter the default ship to location. The ship to location determines how the sales and use tax appear by default on the voucher in a sales and use tax environment, and how the VAT appears by default on the voucher in a VAT environment. You define ship to locations in the Ship To Locations component. You can override this default at lower levels in the PeopleSoft Payables control hierarchy.
Update Open Periods	Click to access the Open Periods Update page, where you can specify open and closed periods for this business unit that differ from that of the general ledger business unit. See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Updating Open Periods, page 56.
Copy PO Option	
Accounting Template	If you select this check box then, when you copy purchase orders onto vouchers, the accounting template is copied from the Payables business unit. Deselect this check box to copy the accounting information from the purchase order.
Payment Terms	If you select this check box then, when you copy purchase orders onto vouchers, the payment terms are copied from the vendor. Deselect this check box to copy the payment terms information from the purchase order.
Vendor Location	If you select this check box then, when you copy purchase orders onto vouchers, the accounting template is copied from the purchase order. Deselect this check box to copy the vendor location information from the vendor default location.

Note. The default value of these checkboxes is deselected.

Posting Option

Post Date Indicator	Select to identify which transactions are eligible for posting. Options are: <i>Post All Transactions:</i> The system posts all transactions eligible for posting. <i>Use Accounting Date:</i> The system selects transactions for posting based on the accounting date option specified on the Payables Options - Payables Options Page. <i>Use Current Date:</i> The system selects transactions for posting based on the date of the transaction. <i>Use Specific Date:</i> The system uses the date that you enter on this page to select transactions for posting. Keep in mind that if you enter a specific date here, all voucher transactions entered for business units using this setID have the same accounting date.

Open for Voucher Posting	Select to post any vouchers or payments in the business unit.
Post Unapproved Vouchers	Select to post vouchers regardless of their approval status. If you do not want to post vouchers before they have been approved, you must deselect this check box.
Post Unmatched Vouchers	Select to post vouchers regardless of their matching status. If you do not want to post vouchers before they have been successfully matched, you must deselect this check box.

Miscellaneous

Location	Enter a code to indicate which address defined on the Location Definition page prints on payment forms for the business unit.
ID Numbers	Click to access the Business Unit ID Numbers page, where you can associate various ID numbers with the PeopleSoft Payables business unit. You select an identifier type, such as <i>Dun & Bradstreet Number</i>, from a drop-down list in the Standard ID Qualifier field, and enter the ID number for each identifier type that you select.

Revaluation Posting Option

Revalue Option	Select to specify the level of detail for revaluation entries. Options are: <i>Unit:</i> The system groups entries by business unit. There is only one entry for the business unit. <i>Vendor:</i> The system groups entries by business unit and vendor. There are entries for each business unit and vendor combination. <i>Voucher:</i> There is an entry for each voucher.

PeopleSoft Product: AP Business Unit: US001

☐ Show all transaction types

Open Period(s)

Customize | Find | 1 of 1 | First | Last

From Year	From Period	Begin Lag	First Open	To Year	To Period	End Lag	Last Open
1998	1	0	01/01/1998	2020	12	0	12/31/2020

Open Period Update page

The normal default open period dates for each PeopleSoft Payables business unit are the same as the dates for the general ledger business unit with which it is associated. Use this page when you want an accounting period in PeopleSoft Payables to open or close at a different time from that of an accounting period in PeopleSoft General Ledger.

- From Year and To Year** Define the open period dates by entering a fiscal year (or fiscal year calendar ID number) in the From and To fields.
- From Period and To Period** Define the open periods by entering an accounting period in both the From Period and To Period fields.

Begin Lag and End Lag

Enter the lag days for the beginning and end of the open periods. Lag days must be entered as a negative number.

To understand how PeopleSoft Payables calculates lag days, assume that period 2 begins February 1, 2006, and you enter -3 in the Begin Lag field. The system calculates the first open date to be January 29, 2006. If you were to define your lag days in this way, a voucher entered into the system on January 29, 2006 would get a default accounting date of February 1, 2006 instead of January 29, 2006. If you really want it to be January 29, you can override the default at entry time. The accounting date on the voucher is the accounting date the Voucher Posting Application Engine process (AP_PSTVCHR) and the Journal Generator Application Engine process (FS_JGEN) will use to calculate the accounting period. The system uses the end lag days to close the open period prior to the actual end of the period. Use lag days to close the accounts payable month to transactions before you close the general ledger month. Lag days only apply to the first and last open accounting periods.

Important! Lag days functionality only applies when you use a voucher's current date as the accounting date. If you override the current date on a voucher, lag days functionality is disabled for that transaction. Likewise, if you select a specific accounting date at any of the following PeopleSoft Payables hierarchy levels—business unit (Payables Options), voucher origin, or control group—and that specific date prepopulates the voucher, lag days functionality is disabled for that voucher.

First Open and Last Open

The system calculates these dates based on the beginning and end of the open periods and the lag days. The system uses these dates to determine the first and last valid dates for transactions for the period.

The first open date is based on the beginning date for the from year and from period, plus lag days. For example, suppose that the period starts April 1 and you specify -3 as the Begin Lag value, the system calculates the first open date of the period to be March 29. The last open date is calculated similarly.

You can override the first open and last open dates. Changing the date does not change the lag days. This enables you to override the calculated period start date for one time only. When the next mass update occurs, the first open date is calculated as defined.

Warning! The system issues a warning message if you select a closing date for the PeopleSoft Payables business unit that is later than the closing date for the general ledger business unit. If you do select a closing date for the PeopleSoft Payables business unit that is later than the closing date for the general ledger business unit, any transactions entered after the general ledger business unit closing date is not transferred to the general ledger.

Payables Definition – Tax Options page

Sales and Use Taxes

Hide Sales Use Tax

Select to prevent the sales and use tax fields from appearing on any vouchers for the business unit. You can use this option if this business unit does not process sales and use tax transactions.

Sales and Use Tax Edit Message

This message appears if there is a discrepancy between entered and calculated sales tax amounts on the voucher. Options are:

Error: The system displays an error message describing the exceeded tolerance amounts and the calculated sales tax amount, and it places the voucher in a recycle status. You must accept the calculated amount.

No Message: No message appears. You can save the voucher, but tolerance checking is not performed.

Warning: The system displays an informational message when sales tax tolerances have been exceeded, but you can still save the voucher with the exceeded amount.

You set up sales tax tolerance amounts or percentages on the Payables Options - Tax Options page.

Difference Option

Select to specify how discrepancies are addressed between tax amounts that are entered by users and tax amounts that are calculated by the system. Options are:

Accrue: The system creates use tax charges for the voucher line whenever the calculated sales tax is greater than the sales tax input. This option enables both sales tax and use tax to be applied to a voucher line.

N/A (not applicable): If sales tax is applicable, the sales tax amount that is entered on the voucher is applied to the voucher line, even if the amount is different from the calculated sales tax. The system does not calculate use tax. If you use Taxware or Vertex software, you must select this option.

Ultimate Use Code

Enter a code to override the default tax rate that is based on the ship to location. Entering a value indicates that the final use of the taxed item results in a different tax rate within the same ship to or usage destination.

Value Added Tax**Hide Value Added Tax**

Select to prevent the VAT fields from appearing on any vouchers for the business unit. You can use this option if the business unit does not process VAT transactions.

Note. Leave this check box deselected for all PeopleSoft Payables business units that are VAT-enabled by virtue of being mapped to a PeopleSoft General Ledger business unit that is part of a VAT entity.

Value Added Tax Edit Message

Select to determine whether a message appears when tolerances set at the payables options level are exceeded. Options are:

Error Msg (error message): An error message appears when you save the voucher.

None: No message appears, and you can save the voucher.

Warning: A warning message appears, but you can save the voucher.

VAT Default

Click to access the VAT Defaults Setup page.

The VAT Defaults Setup page is a common page used to set up VAT defaults for all PeopleSoft applications that process VAT transactions. You can define PeopleSoft Payables VAT business unit defaults, specifically, VAT apportionment control.

Note. These settings can also be set by accessing the VAT Defaults component directly and selecting the AP Business Unit driver.

Note. There is also VAT default setup by setID on the Payables Options - Tax Options page.

Taxware or Vertex

If you have installed a third-party tax application, the Sales and Use Taxes group box contains a Tax Vendor check box. If you select this option, an additional group box appears, labeled either Taxware or Vertex, depending on the third-party application that you have installed and selected on the Installation Options - Overall page.

Account	Alternate Account	Operating Unit	Fund Code	Department	Program	Class
1						

Payables Definition – Tax options page with Taxware enabled

The Taxware or Vertex group box enables you to enter tax application data. In addition, a row of use tax liability ChartFields also appears. The values that you enter in these group boxes are passed to Taxware or Vertex and used in their respective tax calculation algorithms.

Company and Division

Enter the business unit in these fields. You must ensure that the business unit in the PeopleSoft system is identical to the company and division in Taxware or Vertex.

Posting Option	Select to designate which transactions are posted to the register in Taxware or Vertex. Options are: <i>Accrued Transactions Only:</i> Use tax transactions. <i>All Transactions:</i> All taxable and exempt transactions. <i>Taxable Transactions Only:</i> Sales and use tax transactions.
Freight Terms Code	Select to determine the point of order origin. This field is used only by Taxware. These codes are defined by the user on the Freight Terms page. You must ensure that the freight terms code is identical in Taxware and in the PeopleSoft system.
Ship Via Code	These codes are defined by the user on the Ship Via Codes page and are used by both Taxware and Vertex. You must ensure that the PeopleSoft code is identical to the code in Taxware or Vertex.
Use Freight Product Code	Select only if the tax vendor is Taxware. This field indicates that Taxware uses a freight product code from the Taxware application.
Freight Product Code	Enter a value only if the tax vendor is Vertex. Enter a code from the Vertex application.

Use Tax Liability

This is used only when PeopleSoft Payables is integrated with Taxware or Vertex. All accrued use taxes are posted to one account, and you determine which tax agencies to pay by using the register in Taxware or Vertex. Enter the ChartField values that define the accounting distribution line for use tax.

Setting Voucher Build Options

Access the Payables Definition - Voucher Build page (Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Definition, Voucher Build).

Definition	Tax Options	Voucher Build	Matching	Payments	Numbering	Summary Invoice
Business Unit: US001 US001 NEW YORK OPERATIONS						
Recurring Voucher Release Date						
*Contract Release Date Option: No Date Contract Release Date:						
Evaluated Receipt Settlement						
*ERS Option: Default *SBI Numbering Option: Default						
*ERS Invoice Date: Default *ERS Tax Type: Default						
Adjustments						
☐ RTV Debit Memo *RTV Adjustment Option: No Adj						

Payables Definition – Voucher Build page

Recurring Voucher Release Date

Contract Release Date Option Select to specify which date the system uses to determine whether to build vouchers for contracts. The Voucher Build process builds vouchers for contracts with dates on or before the date generated by the contract date option.

Options are:

Curr Dt (current date): Use the current date.

No Date: Do not use any date option.

Specify: Specify a date in the Contract Release Date field.

Evaluated Receipt Settlement

You can override the default ERS settings for the business unit. The defaults are set on the Procurement Control - ERS Options page for the general ledger business unit associated with the PeopleSoft Payables business unit.

Adjustments

RTV Debit Memo (return to vendor debit memo)

Select to indicate how return to vendor debit adjustments are handled for the business unit.

If you select this check box, specify one of the following options in the RTV Adjustment Option field:

Create: Automatic RTV adjustments are made and vouchers are created in the voucher tables. The RTV vouchers are then available for payment as a credit with all of the other vouchers.

No Adj (no adjustment): No automatic adjustments are created. You must manually create a voucher to create a credit payment.

Stage: Vouchers with automatic adjustments are first staged in the quick invoice tables, enabling you to review the voucher for pre-edit errors prior to actual voucher creation.

Note. With the Commitment Control feature enabled and the RTV Debit Memo check box selected, you cannot select *No Adj* (no adjustment). Doing so causes the system to generate an invalid combination warning message.

Selecting options here also determines how the PeopleSoft Purchasing's RTV Reconciliation Application Engine process (PO_RTVRECON) handles asset retirement transactions to the Asset Management interface. If you select *No Adj* (no adjustment option), the RTV Reconciliation process generates the asset retirement transactions received by Asset Management. However, if you select *Create* (create adjustment) or *Stage* (stage to pending file), PeopleSoft Payables generates the asset retirement transactions received by Asset Management.

Establishing Matching Options

Access the Payables Definition - Matching page (Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Definition, Matching).

Definition Tax Options Voucher Build **Matching** Payments Numbering Summary Invoice

Business Unit: US001 US001 NEW YORK OPERATIONS

Matching Criteria

Document Association: STANDARD  Standard Association Rules

Match Delay Days: 0

☐ Matching for Voucher Approval

☒ Copy Gross Amount to Voucher

Payables Definition – Matching page

Note. You must establish document association criteria on the Document Association Rules page before you can select options here.

Matching Criteria

Document Association

Enter a value to determine how the system associates purchase orders and receipts to vouchers. Set up the document association criteria on the Document Association Rules page.

Match Delay Days

Enter the number of days the system waits to include EDI and XML invoices in the Matching Application Engine process (AP_MATCH). The system adds the number of match delay days to the entry date to determine the match due date. The Matching process selects only the vouchers that are ready to be matched as of that date.

Note. Match delay days are only applicable to EDI and XML invoices. Override the number of match delay days at the origin, control group, vendor, or voucher level.

Matching for Voucher Approval

Select to have the Matching process set matched vouchers to *Approved* and bypass the voucher approval process.

Note. If you undo a matched voucher with this option selected, the Matching process updates the approval status on that voucher to *Pending*.

Additional Page Elements

Copy Gross Amount to Voucher

Select to have the system copy the total merchandise amount from a purchase order or receiver to the gross amount field on the voucher when you use a copy worksheet or the Copy PO function to copy a purchase order or receiver to a voucher.

By selecting this option, you indicate that, for all vouchers in the business unit, the system displays in the voucher header the corresponding total merchandise amount for the receiver or purchase order lines copied to the voucher lines. If you deselect this check box, the gross amount is blank for vouchers in this business unit after you copy predecessor documents to the voucher. In that case, you enter the gross amount from the vendor's invoice.

Note. Sales tax, use tax, and VAT amounts are not included in the total amount copied to the voucher's gross amount field.

Defining Payment Options

Access the Payables Definition - Payments page (Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Definition, Payments).

Definition	Tax Options	Voucher Build	Matching	Payments	Numbering	Summary Invoice
Business Unit: US001 US001 NEW YORK OPERATIONS						
Payment Calendar ☐ Specify Calendar at Bank level ☒ Specify Calendar NY						
Schedule Pay Date Validation ☐ Use Business Day *Go Next or Prior Business Day: Prior			Payment Options ☒ Do Not Mix with other Units *Payment Terms Basis Date Type: Inv Date			
Late Interest Charges *Late Charge Option: Compute Charges Late Charge Code: LATE Early Payment Reason Code: ES Late Payment Reason Code: LS						

Payables Definition – Payments page

Payment Calendar

Specify Calendar at Bank Level

Select to have the system use the payment calendar specified at the bank level to process all vouchers for the business unit. If you process payments for the business unit from multiple banks that use different calendars, this option provides more flexibility than specifying a calendar.

Specify Calendar

Select to have the system use the calendar that you specify here to process all payments for the business unit.

Schedule Pay Date Validation

Use Business Day

Select to enable the Go Next or Prior Business Day option.

Go Next or Prior Business Day

Select *Next* or *Prior* to have the system schedule the date as the next or prior day if the scheduled due date of a voucher for the business unit falls on a nonbusiness day in the business calendar. Then, if the holiday option is also enabled, the system schedules the date as due after the holiday or due before the holiday, according to the holiday option that you select.

When the Use Business Day check box is not selected but the holiday option is enabled, if the scheduled due date of a voucher in this business unit falls on a holiday, the system schedules the date as the next or prior business day according to the holiday option only.

Payment Options

Do Not Mix with other Units

Select to keep the business unit separate from other business units when you make payments to vendors.

If you *do not* select this option, the PeopleSoft Payables system enables you to combine payments for vouchers that originate in multiple business units. In other words, you can print one check to a vendor to satisfy multiple vouchers from multiple business units.

Important! This option applies *only* to payments handled through the regular pay cycle processes. During the Payment Selection process, the system checks for items marked with this option. As such, this option does not apply to express payments as they are created outside of the regular pay cycle schedule.

Payment Terms Basis Date Type

Specify a date that the system uses in conjunction with the voucher payment terms to calculate the net due date, discount due date (if applicable), and the scheduled due date.

Options are:

- *Acct Date* (accounting date).
- *Doc Date* (document date—date voucher is entered).
- *Inv Date* (invoice date).
- *Recpt Date* (receipt date).
- *Ship Date*.
- *User Date* (user-specified date).

Note. The system populates the appropriate date on the Payment Terms page. However, you are required to enter a basis date if you select *User Date*.

Late Interest Charges**Late Charge Option**

Select to determine whether late charges are applied. Options are:

Compute Charges: The system calculates late charges.

Not Applicable: The system does not calculate late charges.

Late Charge Code

Select a late charge code. The system uses the code you select here as the basis for calculating late charges.

Early Payment Reason Code and Late Payment Reason Code

Select an early and late payment reason code. You set these up on the Payment Reason Code page.

Group ID last assigned: 0000000000

Payables Definition – Numbering page

Voucher Numbering

Voucher Numbering	Select to have the system number all vouchers automatically. When you add a voucher, the ID field appears automatically as <i>NEXT</i> ; when you save the voucher, the system assigns the next sequential number.
Control Group Numbering	Select this option to have the system number all control groups automatically. When you add a control group, the ID field appears automatically as <i>NEXT</i> ; when you save the control group, the system assigns the next sequential number.

Last Voucher Number

Last Voucher Number	Displays the last voucher number assigned in the PeopleSoft Payables system.
Group ID last assigned	Displays the last control group ID assigned in the PeopleSoft Payables system.

Note. Suppose that you have a legacy system, and you want to adjust the auto-numbering to begin at a specific ID to accommodate this. To do so, write-enable the Last Voucher Number field, the Group ID last assigned field, or both. Use PeopleSoft Application Designer to open the BUS_UNIT_TBL_AP6 page and use the Change Use dialog box to deselect Display Only. Save the changes. Return to the Payables Definition - Numbering page, and enter the number or numbers at which you want the system to start auto-numbering. Return to PeopleSoft Application Designer and reselect Display Only. The auto-numbering function begins at the number that you entered, and the system increments it by one for the next voucher or control group that you enter.

(USF) Treasury Symbol Attribute

Treasury Symbol Attribute

Enter the treasury symbol ChartField attribute to associate treasury account symbols with specific fund codes. Use the ChartField Attribute and ChartField Attribute Values pages to define the treasury account symbols. When you perform this setup, treasury account symbols are stored for all transactions that are associated with fund codes.

Treasury account symbols represent summary accounts established by the U.S. Treasury Department for each appropriation and fund showing transactions to such accounts. Each account provides the framework for establishing a set of balanced accounts on the books of the respective federal agency.

Defining Summary Invoice Controls

Access the Payables Definition - Summary Invoice page (Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Definition, Summary Invoice).

Payables Definition – Summary Invoice page

- Tolerance Percent Over**

Specify the percent acceptable for the input merchandise amount to exceed the merchandise amount copied from the source document.
- Tolerance Percent Under**

Specify the percent acceptable for the input merchandise amount to be less than the merchandise amount copied from the source document.
- Tolerance Amount Over**

Specify the amount acceptable for the input merchandise amount to exceed the merchandise amount copied from the source document.
- Tolerance Amount Under**

Specify the amount acceptable for the input merchandise amount to be less than the merchandise amount copied from the source document.

Tolerance Currency Code	Specify the currency code for the tolerance amounts. Foreign currency transactions will be converted to the specified currency for tolerance comparison.
Rate Type	Specify the currency rate type to use for converting foreign currency transactions to the specified tolerance currency code.
Tolerance Misc Charge Code (tolerance miscellaneous charge code)	Specify the miscellaneous charge code to use for applying differences that are within tolerance. The miscellaneous charge code defines whether the tolerance amount is a nonprorated charge or prorated to the expense distribution lines.

Note. You must define a unique miscellaneous charge code on the Misc Charge/Landed Cost Defn page prior to specifying the tolerance miscellaneous charge code. If you define the miscellaneous charge code as nonprorated, define the ChartField to distribute the tolerance amounts on the Accounting Template Entry page.

Defining PeopleSoft Payables Business Unit Options by SetID

To set up your PeopleSoft Payables business unit options by SetID, use the Payables Options component (BU_CTLB).

To load data into the tables for the Payables Options component, use the EM_BU_CTLB component interface.

This section provides an overview of payables business unit setup by setID and discusses how to:

- Establish accounting date options.
- Define the voucher approval rules, default currency, and single payment master vendor.
- Define voucher error-handling options.
- Selecting payment options.
- Selecting tax options.

Understanding PeopleSoft Payables Business Unit Setup by SetID

You continue the business unit setup by defining business unit parameters in the Payables Options component, which defines the defaults at the setID level. All business units assigned to the setID use the defaults that you specify in this component.

Note. Before you can complete the business unit setup in the Payables Options component, you must set up the control tables common to all PeopleSoft applications and use the Payables Definition component to establish the PeopleSoft Payables business units.

Note. You must also define processing options for the PeopleSoft Payables business units.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options."

Pages Used to Define PeopleSoft Payables Business Unit Options by SetID

Page Name	Definition Name	Navigation	Usage
Payables Options - Payables Options	BU_AP_OPT_ACCTG	Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Options	Define accounting date options for PeopleSoft Payables business units sharing the setID.
Payables Options - Vouchering Options 1	BU_AP_OPT_VCHR1	Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Options, Vouchering Options 1	Enter the voucher approval rules, currencies, and single payment master vendor for the setID.
Payables Options - Vouchering Options 2	BU_AP_OPT_VCHR2	Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Options, Vouchering Options 2	Specify the actions that the system takes when it encounters duplicate invoices, incorrect ChartFields, and vouchers with unbalanced lines.

Accounting Date Indicator

☒ Use Current Date

☐ Use Specific Date

Payables Options – Payables Options page

Specify the accounting date option that the system uses for the setID. This setting controls default values (through the default hierarchy) on individual vouchers. The accounting date controls the period in which the accounting entry information appears in the general ledger. It largely determines when an accounting entry is selected for journal generation.

Use Current Date

Select to have the system apply the date of the transaction as the accounting date.

Use Specific Date

Select to have the system use the date that you enter on this page to determine which period to use for posting the transactions. Keep in mind that if you enter a specific date here, all voucher transactions entered for business units using the setID will have the same accounting date.

Defining the Voucher Approval Rules, Default Currency, and Single Payment Master Vendor

Payables Options – Vouchering Options 1 page

Voucher Approval

- *Approval Framework:* Select to implement voucher approval using PeopleSoft Approval Framework. If you select this option, you can use the business processes and rule sets supplied with the system. However, you may need to modify the rules, roles, and routings to suit your organization. The set up of business processes, rule sets, and routings is completed using the Approval Framework feature.
- *Pre-Approved:* Select to implement voucher pre-approval at the business unit level. Any voucher entered for a business unit assigned to a setID with *Pre-Approved* as the approval rule is automatically approved for payment. You can override this setting at the origin, control group, or vendor level of the control hierarchy.
- *Virtual Approver:* Select to implement voucher approval using PeopleSoft Virtual Approver. If you select this option, you can use the business processes and rule sets supplied with the system. However, you may need to modify the rules, roles, and routings to suit your organization. The set up business processes, rule sets, and routings is completed using the Virtual Approver feature.

Business Process	Enter a business process name to identify the purpose of the workflow; for example, <i>Process Voucher Approval</i> .
Rule Set	Enter a rule set name to identify the steps of the process that a voucher undergoes as it is processed by workflow for approval; for example, <i>Payment Approval Rule Set 1</i> .
Route Denials To	Enter the roles to which denied vouchers are routed through workflow.
Currency	Enter the default voucher currency for the business units assigned to this setID. This is the transaction currency that the system uses by default on vouchers for these business units. You can select alternate currencies when you enter vouchers if you have multicurrency bank accounts. You can also select alternate currencies when you enter vendor information. The vendor currency then appears by default on vouchers that are entered into the system for a particular vendor.
Rate Type	Enter the rate type that the system uses for all vouchers generated for business units using the setID. Rate types are defined on the Market Rate Type page.
Single Payment Vendor ID	Enter the single payment vendor ID, or master vendor, that the business units using the setID use on vouchers for one-time vendors who are not set up in the system. You set up the single payment vendor by setID in the Vendor Information component (VNDR_ID). This single-payment vendor defaults onto the voucher. For online vouchers, you can override it when you enter the voucher. For vouchers processed by the Voucher Build process, you can override it by specifying a single payment master vendor ID as the vendor in the source data that you stage be processed.

You can override most of these options throughout the control hierarchy at the origin, control group, vendor, and voucher level.

Defining Voucher Error-Handling Options

Access the Payables Options - Vouchering Options 2 page (Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Options, Vouchering Options 2).

The screenshot displays the 'Payables Options - Vouchering Options 2' page. At the top, there are tabs for 'Payables Options', 'Vouchering Options 1', 'Vouchering Options 2' (selected), 'Payment Options', and 'Tax Options'. Below the tabs, the 'SetID' is 'SHARE' and 'CORPORATE SETID'. The main section is 'Voucher Error Options', which includes a search bar with 'Find | View All' and a pagination indicator '1 of 1'. The 'Effective Date' is '01/01/1900' and the 'Status' is 'Active'. There are three main sections for error handling options:

- Duplicate Invoice Checking:**
 - Checkboxes: ☒ Invoice Number, ☐ Gross Amount, ☒ Invoice Date, ☒ Business Unit, ☒ Vendor ID.
 - Radio buttons: ☒ Reject, ☐ Recycle, ☐ Warning.
- ChartField Editing:**
 - Radio buttons: ☒ Reject, ☐ Recycle, ☐ Warning, ☐ No Edits.
 - Checkbox: ☐ Edit Combinations.
- Voucher Balancing:**
 - Radio buttons: ☒ Reject, ☐ Recycle.

Payables Options – Vouchering Options 2 page

Select one of the following actions to indicate how the system handles errors when checking for duplicate information, validating ChartFields and ChartField combinations, or balancing vouchers:

Reject

Select to have the system reject the voucher; you cannot save the voucher until the error is fixed.

Note. The Voucher Build process treats rejected vouchers as recycle vouchers.

Recycle

Select to save your work without enabling the voucher to be posted until the error is corrected. The system displays a message to this effect.

Note. You can search for and correct vouchers in recycle status in both the online Voucher component (VCHR_EXPRESS) and the Voucher Maintenance component (VCHR_CORRECTION).

Warning

The system issues a warning but enables you to save, post, and pay the voucher.

Note. The Voucher Build process passes vouchers that fail warning edits without providing a warning.

No Edits Select to bypass ChartField editing.

Duplicate Invoice Checking

Depending on the options that you select here, the system checks each voucher that is entered for a business unit for duplicates. It can check for duplicate invoice numbers, invoice dates, or any combination of the options listed here.

If you select multiple options, the system performs an AND check. For example, if you select invoice number and invoice date, the system finds a duplicate if the invoice number *and* invoice date are the same. The system does not find a duplicate, however, if the invoice number is the same but not the date. The more variables that you select, the less likely it is that the system will identify duplicate vouchers.

If any of these variables are found to have values that already exist in the voucher tables, you can have the system reject, recycle, or issue a warning when the voucher is saved.

In addition, if you enable duplicate invoice checking for a business unit, the system also performs a preliminary check when you add vouchers. The system checks against the voucher table to see if any existing vouchers already contain the entered invoice number. If it finds any that do, it issues a warning message before displaying the Invoice Information page. This preliminary check ensures that you do not discover a duplicate invoice number after you enter all of the voucher information.

Note. Duplicate invoice checking is *not* case-sensitive when matching invoice IDs.

Note. Duplicate invoice checking only looks for duplicates within the same voucher style. For example, if the voucher style is *Regular Voucher*, then duplicate invoice checking only considers vouchers that have a voucher style of *Regular Voucher* as possible duplicates. If the voucher had a reversal, it would not consider that a duplicate, because the voucher style is *Reversal Voucher*.

ChartField Editing

Select the appropriate ChartField editing options to determine the action that the system takes when a voucher's ChartFields do not match the ChartFields available to the business unit.

Edit Combinations Select to use ChartField combination editing.

Note. If you plan to use ChartField combination editing, it is important that you select the Edit Combinations check box in addition to one of the ChartField editing options. Selecting this option enables ChartField combination editing to validate against the ChartFields that you define during setup. If this option is not selected, and you have only selected the reject, recycle or warning option, ChartField combination editing checks only that you entered valid, single ChartField values on the vouchers.

Voucher Balancing

Specify whether the system should reject or recycle vouchers that are not in balance.

Payables Options – Payment Options page

Holiday Options

Click to open the Holiday Processing Options page, where you can establish bank holiday processing for this setID.

The system calculates bank holidays using the business calendar defined on the Business Calendars page. Options for holiday processing are:

- *Due After Holiday:* The system takes any bank holidays into consideration when it calculates the scheduled due date and delays payment until after the bank holiday. Use the Days field to enter the number of days after the holiday that the payment can be made.
- *Due Before Holiday:* The system takes any bank holidays into consideration when it calculates the scheduled due date and makes the payment before the bank holiday. Use the Days field to enter the number of days before the holiday that the payment can be made.
- *Not Applicable:* The PeopleSoft Payables system does not take bank holidays into consideration when it calculates payment due dates.

If you select the *Due After Holiday* option, you can also select the *Allow due date in next month* option to enable a payment to be made in the next month. If you don't select this option and the payment date after a holiday does fall in the next month, the system schedules the payment before the holiday. For example, you would not select this option if you want payments to be made after a holiday but not in the next month when a holiday falls at the end of a month.

Note. Normally, holiday options appear by default from the PeopleSoft Payables business unit level and are carried over to the vendor level and then to the voucher level. However, if a user specifies holiday options during the bank account setup, the bank account options override the default value on the voucher.

Terms

Select the default payment terms ID and payment method for the setID. The preferred payment method options are:

Automated Clearing House

Select to create an electronic file containing the required clearinghouse information. You send all applicable payments in one file to a clearinghouse. The clearinghouse then sends the payments to the vendor's bank.

Direct Debit

Select to make a payment directly to the vendor's bank account through electronic transfers for specific goods or services. While contractual, the payments can be for different amounts and can vary over periodic intervals.

Draft - Customer EFT (draft - customer electronic funds transfer)

Select to create EFT files instead of printed drafts. You send the file to your bank when the draft payment is due.

<i>Draft - Customer Initiated</i>	Select to have the system produce a draft before the draft due date. It details the draft identification number, the draft amount, and the draft maturity date, and you send it to the vendor. About 10 days before the draft maturity date, the vendor submits the draft to its bank for collection. The vendor's bank asks your bank to honor the draft. The vendor submits the draft to your bank for verification. Once your bank verifies the funds, it pays the draft.
<i>Draft - Vendor Initiated</i>	Select to have the vendor initiate payment and have the draft drawn against your bank account with a future due date. Upon the settlement date of the draft, you can assume that the whole amount of the draft has been withdrawn from your account.
<i>Electronic Funds Transfer (EFT)</i>	Select to create an electronic file containing the required bank and payment information. You send all applicable payments in one file to your bank for payment. The bank then sends the payments to your vendor's bank
<i>Giro - EFT</i>	Select to create an output data file containing the payment information. You send the output data file to the bank electronically or on taped media. This payment method is primarily used in Singapore.
<i>Giro - Manual</i>	Select to use a type of remittance slip that is handled as a manual payment. Accept Giro is a standard format used in the Netherlands that has an invoice with a tear-off portion. The tear-off section displays all of the information necessary to execute a payment. You detach the tear-off portion and send it to your bank for payment to the vendor. Your bank sends payment to the vendor's bank, and the vendor's account information is updated.
<i>Letter of Credit</i>	Select to use an agreement issued by a bank at the request of its client and add the bank's promise of payment to your promise. The letter of credit frequently requires congruity with a number of terms, conditions, or events before the vendor can collect payment. All vouchers that have the same letter of credit ID are grouped in a single payment. Only those payments for which you have selected the L/C Advice option on the Preferences page of the Payment Selection Criteria component (PYCYCL_DEFN) have a printed letter of credit advice.
<i>Manual Check</i>	Select to use the manual payment functionality, which records into the system a check that was typed or handwritten outside of the system.
<i>System Check</i>	Select to use scheduled payments that require a printed paper check and remittance advice.
<i>Wire Transfer</i>	Select to create an electronic payment from your bank account to the vendor's bank account. Wires can be created by running pay cycle processes to process your wire transfer payments and also by Pay Cycle Manager using PeopleSoft Financial Gateway.

See [Chapter 6, "Setting Up Payment Formats and Payment Forms," page 109.](#)

Discount Delay Days

Discount delay days enable you to specify extra days to process checks when you know that most or all of the vendors for these business unit are lenient with due dates. In calculating the due date for discount and net, the system checks the payment terms and payment terms basis date. Based on the terms, it calculates the discount and net date. It adds the discount and net delay days, as specified by the control hierarchy, to yield the updated discount date and net date.

Net Enter the number of delay days for net payment. A delay of 5 days provides extra time to make the net payment.

Discount Enter the number of delay days for discount payment. If you enter 2 delay days, you can process payments two days later than the discount due date and still have the PeopleSoft Payables system take the discount.

You define payment terms on the Payment Terms page.

Prepay/Third/Claim Pay Terms

Prepay/Third/Claim Pay Terms Specify the default prepayment, third-party, or claim (claimback) payment terms ID for the setID.

Automatically Apply Prepayment Select this check box to enable the system to apply unapplied vouchers to prepayments automatically during the Voucher Posting process.

Prepayments and claimbacks have some restrictions on payment terms. For example, you cannot use discounts or multiple payment terms with prepayments or claimbacks. If you select an invalid value from the list of available options, the system issues an error message indicating that the selected terms cannot be used.

Note. If you do not populate this field, the payment terms for prepaid vouchers for the setID appear as blank in the Voucher component. You can enter or override payment terms for prepaid vouchers at the voucher level.

Payment terms for third-party vouchers cannot include a discount.

Draft Sight

Draft Sight Enter the sight code. This code references the agreed upon payment terms between you and the vendor for draft payments. It is similar to accounts payable and accounts receivable payment terms, such as NET30, except that it does not use discounts. Use the Sight Codes page to establish sight codes.

Draft Issue Approval Required

Select to specify that the status *Approved* is required before accounting entries can be generated for drafts using the Payment Posting Application Engine process (AP_PSTPYMNT).

If you select this check box, approval is required before accounting entries can be generated. All payments must have DFT_STATUS = 'A' (approved). If you do not select this check box, approval is not required for payment posting, and payments can have draft status of either *C* (created) or *A* (approved).

Payment Bank Options

Select a default payment bank, bank account, and handling code for the setID. You define these codes on the Payment Handling Codes page. Some examples are:

<i>Handling Code</i>	<i>Name</i>	<i>Short Name</i>
<i>HD</i>	High Dollar Payment	High \$
<i>IN</i>	Internal Distribution	Internal
<i>PO</i>	Route to Purchasing	Purchasing
<i>RE</i>	Regular Payments	Regular

(USF) Pay Sched/Date Calculation**Pay Schedule Type**

Select the default schedule payment type for the business units sharing the setID. You can override this setting at the origin, vendor, and voucher levels of the control hierarchy. Options are:

Manual: Indicates that the agency can cut checks to pay the vendor directly. If you select this option, the Pay Cycle Application Engine process (AP_APY2015) does not process payment schedules for this business unit.

Other: Indicates that the payments cover nontransportation expenses.

Transport: Indicates that the payments cover transportation expenses.

Date Calculation Basis

Specify whether the system calculates the payment date using the federal prompt payment criteria. The following values are delivered with the system:

- *(none)*
- *Agricultural Commodities*
- *Dairy*
- *Meat*
- *Poultry*
- *Prompt Pay Basis*

Tax Options Find | View All First 1 of 1 Last

Effective Date: 01/01/1900 Status: Active

Sales Tax Tolerance

Percent: 0.00 Currency Code:

Amount: 0.000 Rate Type:

VAT

Physical Nature: Physical Goods Where Service Performed: Ship To Location

[VAT Default](#) [VAT Service Treatment Setup](#)

Payables Options – Tax Options page

The sales tax tolerance determines the allowable difference between the sum of the sales tax calculated for each voucher line and the total amount entered in the voucher header. If there is a discrepancy, the system compares the amount of difference against the sales tax tolerance rules that you specify here. You determine how the system handles such discrepancies for a PeopleSoft Payables business unit on the Payables Definition - Tax Options page. On the same page, you can also determine whether to handle any discrepancy in entered and calculated sales tax by accruing the difference as use tax.

Percent Enter a value to define the tolerance as a percent of the gross amount. Enter a percent value in this field.

Amount Enter a value to define the tolerance as a fixed amount. Enter an amount in this field.

The system checks against the percentage first, and if it is out of tolerance, it then checks against the amount. If both are exceeded, a warning or error is issued (according to the discrepancy handling that you set up on the Payables Definition - Tax Options page). If the percent is exceeded and the amount is not—as in the case of a low voucher amount—the tolerance is met and the voucher is saved without issuing a warning.

Currency Code and Rate Type Enter the currency code and rate type for the tolerance amount.

VAT Options

In this group box, you establish the following defaults for all PeopleSoft Payables business units that share the setID:

- Physical nature (whether the default is for goods or services).
- Where services performed (the country in which services purchased by the business unit are most often performed).

Physical Nature

Select the default physical nature for transactions. Options are *Intangible/Services* and *Physical Goods*. For many countries, you must report the sale or purchase of goods separately from services.

Where Service Performed

Enter the default location for where a service is most often performed; that is, the place at which the VAT liability is incurred. Options are *Buyer's Location*, *Ship From Location*, *Ship To Location*, and *Supplier's Location*.

VAT Default

Click to access the VAT Defaults Setup page.

The VAT Defaults Setup page is a common page used to set up VAT defaults for all PeopleSoft applications that process VAT transactions. On this page, you can define PeopleSoft Payables VAT defaults for the business units sharing the setID (as applicable).

In PeopleSoft Payables, several of these defaults can be overridden at the voucher origin level, control group level, vendor level, and the voucher itself. Defaults are defined by VAT reporting country and defaulting state. These defaults include:

- VAT applicability.
- VAT declaration point
- Goods declaration point.
- Services declaration point.
- VAT use type.
- VAT tolerance currency, rate, amount, percentage.
- VAT calculation type.
- VAT transaction type defaults.
- VAT code defaults.

Other options can only be overridden at certain points in the control hierarchy:

- The VAT tolerance check indicator parameters can be overridden at the voucher origin level, control group level, and vendor level, but not on the voucher itself.
- The allow override recovery/rebate parameters cannot be overridden at any lower level in the hierarchy.

Note. These settings can also be set by accessing the VAT Defaults component directly and selecting the AP Options driver.

VAT Service Treatment Setup

Click to access the Services VAT Treatment Drivers Setup page.

The Services VAT Treatment Drivers Setup page is a common page used to set up VAT services treatment for all PeopleSoft applications that process VAT transactions. If you are required to implement special handling for services, you can specify PeopleSoft Payables VAT service treatment defaults on this page (as applicable).

Establish the following PeopleSoft Payables VAT defaults for the business units shared by the setID:

- VAT service type (freight or other).
- VAT place of supply driver.

Services VAT defaults are defined by the seller's location country and state.

Note. These settings can also be set by accessing the VAT Service Treatment Setup component directly and selecting the AP Options driver.

Chapter 5

Organizing Vouchers with Origins and Control Groups

This chapter provides an overview of voucher origins and control groups, lists common elements, and discusses how to:

- Define voucher origins.
- Define voucher control groups.

Understanding Voucher Origins and Control Groups

Voucher origins and control groups enable you to group vouchers to meet your business requirements.

This section discusses:

- Voucher origins.
- Control groups.

Voucher Origins

Each voucher entered into PeopleSoft Payables must come from a valid origin. An origin identifies a specific entry point for online or batch entry, such as a department, division, company, or specific user. An origin also stores validation rules and default information, which provide additional voucher entry controls. In PeopleSoft Payables, each user ID is associated with a valid origin.

For example, if you have automated systems that pass information to PeopleSoft Payables, you might set up different duplicate-invoice criteria from the criteria that you use for vouchers entered online. Likewise, you might set up the payroll department as a separate origin so that users can add only vouchers for employees.

Each PeopleSoft Payables user must be associated with an origin in order to process vouchers. When you set up processing options in levels below the business units, the first option for most functions is *default*. Selecting this option directs the system to the next higher level in the control hierarchy to obtain the value.

Control Groups

Control groups are not a required component of the control hierarchy. They can, however, provide security options and determine workloads for data entry operators. You can set up the system to process vouchers in groups to:

- Establish separate processing rules (different from those set up at the business unit and voucher origin levels).
- Specify when groups of vouchers should be posted or paid.
- Determine whether vouchers should be balanced or verified before they can be posted or paid.
- Divide vouchers among data entry clerks, including assigning a block of voucher numbers.
- Post several of these groups in one easy step.

If you set up control groups, the system can:

- Check for control groups assigned for each user's ID.
- Select the earliest group in the queue for multiple groups.

(You can override this feature if necessary by selecting the lookup button to the right of the Control Group field.)

- Track running totals.
- Automatically set the balanced group to *Ready for Review* status.

The system displays a message offering to automatically update the status to *Ready for Review* when a group is in balance and the user saves the last voucher. Clicking *Yes* selects this option. Clicking *No* enables the user to manually update the status on the Control Group Update Status page.

- Select the next group in the queue each time that users finish a group.
- Provide auto-numbering.

The system displays *NEXT* in the Group field until you save the page, and then the system increments by one the last ID number used to create the new control group ID.

Note. The system assigns control group IDs automatically if you select this option for the business unit. Alternatively, you can enter them manually. You set up control group auto-numbering on the Payables Definition - Numbering page. You can enter combinations of letters and numbers to provide additional identification for groups.

Supervisors can:

- Use the Run a Tape feature to ascertain the gross total and the number of invoices.
- Restrict PeopleSoft Payables users so that they can only enter vouchers in control groups.

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Setting Up Numbering, page 67

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Defining User Preferences," Defining Payables User Preferences

Common Elements Used in This Chapter

Default	Select to have the system inherit the value from the next higher level in the control hierarchy.
Specify	Select to have the system override the value from the next higher level in the control hierarchy with the option that you specify at this level.
SetID	Displays the setID that you entered to access the page. Each origin belongs to a setID.
Unit	Displays the business unit that you entered to access the page. Each control group belongs to a PeopleSoft Payables business unit.

Defining Voucher Origins

To define your voucher origins, use the Voucher Origin component (ORIGIN1).

This section lists prerequisites and discusses how to:

- Specify accounting and payment options.
- Specifying voucher approval, matching, currency, and document sequencing settings.
- Specify duplicate invoice checking, ChartField editing, and voucher balancing options.
- Set tax options.

Prerequisites

Before you can complete the voucher origin setup, you must complete the following tasks:

- Define the accounting and pay options, including accounting templates, banks, payment terms, payment handling codes, and draft sight codes.
- Define the vouchering option details, including voucher approval processes, match delay days for EDI and spreadsheet vouchers, currencies, and document sequencing.
- Define the tax options, including ship to locations, ultimate use codes, sales tax tolerances, and value-added tax (VAT) setup.
- Complete the PeopleSoft Payables business unit setup.

Pages Used to Define Voucher Origins

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher Origin - Accounting and Pay Options	ORIGIN_VCHR1	Set Up Financials/Supply Chain, Product Related, Procurement Options, Vouchers, Voucher Origin, Accounting and Pay Options	Specify accounting and payment options for the voucher origin.
Voucher Origin - Vouchering Options 1	ORIGIN_VCHR2	Set Up Financials/Supply Chain, Product Related, Procurement Options, Vouchers, Voucher Origin, Vouchering Options 1	Specify voucher approval, match delay days, voucher currency, and document sequencing settings for the voucher origin.
Voucher Origin - Vouchering Options 2	ORIGIN_VCHR4	Set Up Financials/Supply Chain, Product Related, Procurement Options, Vouchers, Voucher Origin, Vouchering Options 2	Specify duplicate invoice checking, ChartField editing, and voucher balancing processing settings for the voucher origin.
Voucher Origin - Tax Options	ORIGIN_VCHR_TAX	Set Up Financials/Supply Chain, Product Related, Procurement Options, Vouchers, Voucher Origin, Tax Options	Specify sales and use tax and VAT processing options for the voucher origin.
Voucher Origins	RUN_APY0000	Set Up Financials/Supply Chain, Product Related, Procurement Options, Reports, Voucher Origins	Define run parameters for the List of Voucher Origins report (APY0000). Use this report to view the current options by the as of date for each voucher origin in the setID.

Specifying Accounting and Payment Options

Access the Voucher Origin - Accounting and Pay Options page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Vouchers, Voucher Origin, Accounting and Pay Options).

Specifying Duplicate Invoice Checking, ChartField Editing, and Voucher Balancing Options

Access the Voucher Origin - Vouchering Options 2 page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Vouchers, Voucher Origin, Vouchering Options 2).

The screenshot shows the 'Vouchering Options 2' page. At the top, there are tabs: 'Accounting and Pay Options', 'Vouchering Options 1', 'Vouchering Options 2' (selected), and 'Tax Options'. Below the tabs, the 'SetID' is 'SHARE', 'Origin' is 'ONL', and 'Online Entry' is selected. The main section is 'Vouchering Option Details', which includes a 'Find | View All' link and a '1 of 1' indicator. The 'Effective Date' is '01/01/1900' and the 'Status' is 'Active'. There are three main sections: 'Duplicate Invoice Checking', 'ChartField Editing', and 'Voucher Balancing'. Each section has radio buttons for 'Default', 'Reject', 'Recycle', and 'Warning'. The 'Duplicate Invoice Checking' section also has checkboxes for 'Invoice Number', 'Vendor Number', 'Gross Amount', 'Business Unit', and 'Invoice Date'. The 'ChartField Editing' section has a checkbox for 'Edit Combinations'.

Voucher Origin - Vouchering Options 2 page

The options on this page are the same as those defined in the Payables Options component. In the Payables Options component, you define these options for the business unit; here, you define them for the voucher origin.

Defining Voucher Control Groups

To set up your voucher control groups, use the Group Information component (GRP_AP_CTL).

This section discusses how to:

- Assign control groups.
- Define accounting options.
- Establish vouchering options.
- Review vouchers.

- Set tax options.
- Check the status of a control group.
- Post control groups.
- (Optional) Delete control groups.

Pages Used to Define Voucher Control Groups

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Group Information - Assignment	GRP_AP_HDR	Accounts Payable, Control Groups, Group Information, Assignment	Enter control totals to verify that users enter all vouchers for a group. Assign a specific user and a status to the control group.
Group Information - Accounting	GRP_AP_ACCTG_OPT	Accounts Payable, Control Groups, Group Information, Accounting	Define accounting options—for example, the accounting date and the accounting entry template—at the control group level. Specify posting and payment timing and actions.
Search Audit Logs	FS_AUDITLOG_SEARCH	Click the Audit Logs link on the Group Information - Accounting page. Click the Audit Logs link on the Delete Control Group page.	View audit logs for control groups.
Group Information - Vouchering Options	GRP_AP_VCHR_OPT1	Accounts Payable, Control Groups, Group Information, Vouchering Options	Establish approval option, currency, and balancing for vouchers. Establish matching options, document sequencing, ChartField editing, and duplicate-invoice checking at the control group level.
Group Information - Vouchers	GRP_AP_VCHR_STATUS	Accounts Payable, Control Groups, Group Information, Vouchers	Review vouchers and change control totals. Important! Anyone who has access to this page can change the values on this page.
Group Information - Tax Options	GRP_AP_VCHR_TAX	Accounts Payable, Control Groups, Group Information, Tax Options	Set sales and use tax and VAT processing options at the control group level.

Page Name	Definition Name	Navigation	Usage
Control Group Update Status	GRP_AP_STATUS_DE	Accounts Payable, Control Groups, Update Status, Control Group Update Status	Check the status of groups, mark groups as ready for review, or set a group aside.
Post Control Group	GRP_AP_POST	Accounts Payable, Control Groups, Post Control Group	View a list of all the control groups that are postable for a particular business unit. The system displays only control groups that are verified.
Delete Control Group	GRP_AP_DELETE	Accounts Payable, Control Groups, Delete Control Group	Delete control group IDs if you no longer want to track them as a group after they are entered or if you entered a control group inadvertently. You can also delete all or individual vouchers within a control group.
Control Group Register	RUN_APY1011	Accounts Payable, Reports, Vouchers, Control Group Register	Define run parameters for the Control Group Register report (APY1011). Use the report to view vouchers by business unit, control group ID, date entered, and voucher ID.

Assigning Control Groups

Access the Group Information - Assignment page (Accounts Payable, Control Groups, Group Information, Assignment).

Assignment	Accounting	Vouchering Options	Vouchers	Tax Options				
Unit: US001 Group: NEXT								
Control Totals ☐ Run a Tape Gross Amt: 0.00 Nbr of Vouchers: 0			Actual Totals <table border="1"> <thead> <tr> <th>Gross Amt</th> <th>Nbr of Vouchers</th> </tr> </thead> <tbody> <tr> <td>0.00</td> <td>0</td> </tr> </tbody> </table>		Gross Amt	Nbr of Vouchers	0.00	0

Group Information - Assignment page

Control Totals and Adding Tape

Run a Tape

Select to obtain a running gross amount total and have the system count the number of vouchers.

To run the total offline, deselect this check box and enter the totals in the Gross Amt (gross amount) and Nbr of Vouchers (number of vouchers) fields.

Adding Tape

Enter values in this group box, which appears after selecting the Run a Tape check box. The total appears in the Gross Amt (gross amount) field.

Note. If you select the Run a Tape check box, you cannot access the Nbr of Vouchers and Gross Amt fields on the Group Information - Vouchers page. After you total all the vouchers for the group, you can deselect the Run a Tape check box, and simply store the totals in the database. This action deletes the detail entries in the tape and enables the Control Totals edit boxes. To run the voucher amounts again, you can erase the existing totals by deselecting the Run a Tape check box and then selecting it again.

Actual Totals

Gross Amt (gross amount)

Displays the real-time amount totals that have been entered into the system for the control group.

Nbr of Vouchers (number of vouchers)

Displays the real-time total number of vouchers that have been entered into the system for the control group.

Differences

Gross Amount Difference	Displays the amount by which the control and actual totals differ. A control group is in balance when the gross amount difference and voucher totals difference both equal 0.
Voucher Totals Difference	Displays the number of vouchers by which the control and actual totals differ. A control group is in balance when the gross amount difference and voucher totals difference both equal 0.

Status

When a group is in balance and the data-entry user saves the last voucher, the system displays a message offering to automatically update the status to *Ready for Review*. Clicking *Yes* selects this option. Clicking *No* enables the user to manually update the status on the Control Group Update Status page.

Status	Control groups can have the following status values: <i>Assigned</i> : The control group is ready for the assigned user to enter vouchers. For a user to enter vouchers into the control group, you must set the status of the control group to <i>Assigned</i> . <i>Entry Set Aside</i> : The assigned user has placed the group on standby to work on other groups in the queue. Users use the Control Group Update Status page to set their groups aside. <i>Open</i> : The control group is in the process of being created, and it can be assigned. <i>Ready for Review</i> : The group is ready to be reviewed. <i>Supervisor Set Aside</i> : The supervisor has placed the group on standby so that the assigned user can work on other groups in the queue. <i>Verified</i> : The supervisor has verified that the group has been entered correctly.

Assignment

Assigned To	Enter the user ID of the user to which this control group is assigned. You can assign multiple control groups to one user simultaneously.
Assigned	Override the system-recorded date and time by entering a different date and time before you save the control group. If you assign a user to the group but you do not change the status to <i>Assigned</i> , the system prompts you whether to change the status of the group to <i>Assigned</i> when you save it.

Due	Override the system-specified due date by entering a new date and time before saving the control group. If you enter a due time before saving, the system accepts it and does not overwrite it. By default, the system allows six minutes for each voucher in the control group.
Completed	Enter the date and time the voucher group was completed. You can use this information for user performance analysis.

Voucher Numbering

When you create a control group for a batch of vouchers, you can have the system allocate a series of voucher numbers in consecutive order for the group. By reserving groups of consecutive numbers, you can easily file and retrieve the paper voucher documents that you have grouped together. This capability is available only if you have selected auto-numbering for the business unit for which you are creating a control group.

Reserve Voucher Numbers	Select to display a field for the next auto-number available for the business unit. When you save the page, the system uses the number of vouchers in the Control Totals group box to reserve an equal number of voucher numbers. If users continue to enter vouchers for a control group after the last reserved number is assigned, the system uses the next available number, which may not follow consecutively after the preceding voucher number. The system displays an informational message alerting you to the discontinuity. If you increase the number of vouchers in the control group after it is saved, the system warns you that the added voucher IDs might not be in consecutive order. If you decrease the number of vouchers, the system does not reclaim the unused numbers. However, you can enter the unused numbers manually.

Starting From	Displays the beginning voucher number for this group.

Audit Logs

Audit Logs	Click to access the Search Audit Logs page and view audits associated with the control group.

Defining Accounting Options

Access the Group Information - Accounting page (Accounts Payable, Control Groups, Group Information, Accounting).

Group Information - Accounting page

Accounting Date

The options in this group box are the same as those defined in the Payables Options component. In the Payables Options component, you define these options for the business unit; here, you define them for the control group.

Accounting Entry Template

The options in this group box are the same as those defined in the Payables Options component. In the Payables Options component, you define these options for the business unit; here, you define them for the control group.

Posting Timing

Posting timing determines when to allow accounting entries to be generated for the vouchers that comprise a control group. Options are:

Post Vouchers Individually Vouchers can be posted as soon as each one is complete.

Post Only when Group Balanced The group of vouchers can be posted once the entire group is balanced.

Payment Timing

Payment timing determines when to pay the vouchers that comprise a control group. Options are:

Pay Vouchers Individually Vouchers can be paid as soon as each one is complete.

Pay Only when Group Balanced

Vouchers in the group can be paid after the entire group is balanced.

Actions

Use the options in the Actions group box to specify whether vouchers in the control group as a whole can be posted or paid. The options that you select override the options that you select in the Posting Timing and Payment Timing group boxes.

Post Group

Deselect to prevent the system from posting this control group, regardless of whether the control group is in balance or whether individual vouchers in the control group are ready to post.

Only Pay Verified Groups

Select to have the payment process pays vouchers in this control group only if they have been verified on the Group Information - Assignment page, regardless of whether the control group is in balance or whether individual vouchers in the control group are ready to be paid.

Supervisors can use the following options to monitor posting in the system:

- Deselect the Post Group check box so that the control groups cannot post without approval.
- Review each group for completeness, update the status of each group to *Verified* (on the Group Information - Assignments page), and then select the Post Group option as you sign off on each control group.

To allow control groups to post as they balance, set the posting timing to *Post Only when Group Balanced* and select the Post Group check box. The Voucher Posting Application Engine process (AP_PSTVCHR) detects groups that are verified and in balance and posts all vouchers in those groups.

If you use control groups strictly as a means of equally dividing up work, select a posting timing of *Post Vouchers Individually* and select the Post Group check box. If a voucher in the group is postable, it posts regardless of the condition of other vouchers in the group or of the group as a whole.

Note. You can also set control groups to post on the Post Control Group page.

Control Group Update Status page

Date Displays the date that the control group was created.

Total

Group Total Displays the control total gross amount for the group and the control total number of vouchers in the group. This information comes from the Control Totals group box on the Group Information - Assignment page.

Voucher Total Displays the gross amount total for the vouchers that have been entered into the group and the total number of vouchers that have been entered into the group. This information comes from the Actual Totals group box on the Group Information - Assignment page.

Difference Difference between the Group Total and the Voucher Total.

Status

The options here are a subset of the status options available on the Group Information - Assignment page. Most users cannot access that page, so this page is the equivalent page for them. It displays only the options that users have the authority to select.

Assigned Indicates assignment status by default from the Group Information - Assignment page after the control group has been assigned to a user.

Ready for Review	Select to place the group in the supervisor's review queue. When the supervisor opens the Group Information - Assignment page, this group is ready for approval.
Entry Set Aside	Select to place this group temporarily on hold to prevent the system from automatically assigning it during voucher entry.

Assignment

Assigned To	Displays the user ID and description of the user to whom this group is assigned.
Assigned	Displays the date and time that the group was assigned to the user.
By	Displays the user ID and description of the supervisor who assigned this group to the user.
Due	Displays the date and time by which this group must be processed.
Completed	Displays the date and time that the group was processed.

Delete Control Group page

Totals

Control Totals

Displays the control total gross amount for the group, and the control total number of vouchers in the group. This information comes from the Control Totals group box on the Group Information - Assignment page

Voucher Totals

Displays the gross amount total for the vouchers that have been entered into the group, and the total number of vouchers that have been entered into the group. This information comes from the Actual Totals group box on the Group Information - Assignment page.

Difference

Displays the difference between the control totals and the voucher totals.

At the bottom of the page, view the vouchers that have been processed for the control group. Vouchers entered through the Quick Invoice Entry component (VCHR_QUICK_PNL) have an entry status of *blank*.

Also, review the control total for the control group, the actual total based on the vouchers entered, and the difference between the two totals.

Select All ☒

Click to select all the vouchers in the control group for deletion.

Deselect All ☐

Click to deselect all selected check boxes for the vouchers listed in the group

Delete Vouchers in Group Select to delete all vouchers or only specified vouchers. To delete specified vouchers, individually select the check boxes for those vouchers.

Delete Control Group Record Select to delete the control group from the database and remove the control group ID from each of the vouchers listed on this page. You can reuse a deleted control group ID if you enter it manually as you create a new control group. However, the system does not automatically assign a control group number that has already been used, even if you have deleted it.

Delete Click to delete vouchers after you've selected the Select All, Delete Vouchers in a Group, or Delete Control Group Record option. The system then prompts you to continue or cancel with the specified deletion. If you select OK to continue the deletion, the system automatically saves the page information. You must use the Delete button to perform the specified delete action in the system. Selecting a delete option and clicking the Save button does not perform a delete action.

Note. The system sets the build status to *To Delete* for quick invoice vouchers. You must run the Voucher Build Application Engine process (AP_VCHRBLD) to delete the voucher from the quick invoice voucher tables.

Audit Logs Click to access the Search Audit Logs page and view audits associated with the control group.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Defining Financials and Supply Chain Management Common Definitions," Setting Up Financials Audit Framework (Audit Logging).

Note. You cannot delete posted vouchers, vouchers that are in the process of posting, or those that have been partially paid.

To delete vouchers that have been budget-checked, use the Delete Voucher page.

Chapter 6

Setting Up Payment Formats and Payment Forms

This chapter provides an overview of PeopleSoft Payables payment formats and discusses how to:

- Decide which payment forms you need.
- Specify payment form attributes.
- Assign payment forms to bank accounts.
- Modify payment forms.
- Specify magnetic ink character recognition (MICR) fonts.
- Print logos and signatures with BI Publisher checks.
- Set up workstations to view BI Publisher checks and drafts from the process monitor using the web function.
- Test checks.

Understanding PeopleSoft Payables Payment Formats

This section discusses:

- Available PeopleSoft Payables payment formats.
- System and manual checks.
- Wire transfers.
- Electronic funds transfer (EFT) and automated clearinghouse (ACH) payments.
- Drafts.
- Giros.
- Letters of credit.
- Direct debits.

Available PeopleSoft Payables Payment Formats

Vendors might require specific methods of making payments, such as issuing a check or sending payments electronically using a specific electronic file format. PeopleSoft Payables currently supports the following payment methods and formats:

System and manual check	Printed payment format for regularly scheduled payments.
Wire transfer	A transaction that you initiate through your bank. Printed remittance advice is the only format available for paying by wire.
EFT and ACH	Electronic payment file formats for regularly scheduled payments.
Draft	Internationally accepted printed and electronic payment format that adheres to a specific maturity date agreement between the buyer and vendor.
Giro	Printed and electronic payment format primarily used in the Netherlands and Singapore for regularly scheduled payments.
Letter of credit	Electronic payment format for scheduled payments that is supported by a signed agreement between you, your bank, and your vendor.
Direct debit	Payment method in which the buyer and vendor create a contract that enables the vendor to collect an amount due for specific goods or services directly from the buyer's bank through EFT.

Before you can use a payment format, you must associate it with a bank account. You specify the payment method on the Payables Options - Payment Options page, the Additional Payables Options collapsible region on the Vendor Information - Payables Options page, or the Vendor Bank Account page.

You must also set up payment relationships when you define vendors.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information"

System and Manual Checks

In PeopleSoft Payables, system and manual checks require a printed paper check and remittance advice. System checks are scheduled payments that you generate and print online. At voucher entry, indicate that the payment is a system check. During the next pay cycle, PeopleSoft Payables selects the payment and creates system checks. You can select to have the system generate a positive pay file and report for the system checks.

Manual checks are usually issued for payments that you have already made by physically writing a check. You create a voucher and indicate that the payment is a manual check. PeopleSoft Payables immediately marks your the payment as paid but does not print a paper check because you have previously created and issued the check.

After you create system and manual payments, you can run the payment posting process to create accounting entries and then run the Journal Generator Application Engine process (FS_JGEN) to pass the accounting entries to the general ledger. After you create system or manual checks, you can view inquiries for the payments by vendor, bank or bank account, payment method, reference number, or voucher number.

This diagram shows the process flow for system and manual checks:

System and Manual Checks process flow

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Using Journal Generator"

Wire Transfers

A wire transfer is a transaction that you initiate through your bank. You can create a manual payment and run pay cycle processes to process your wire transfer payments. During pay cycle processing, you can generate a remittance advice only report (WIRE1) for paying by wire.

Wires can also be processed through Pay Cycle Manager using the PeopleSoft Financial Gateway functionality.

As with system and manual checks, after you create your wire payments, you can run the payment posting process to create accounting entries and then run the Journal Generator process to pass the accounting entries to the general ledger.

[Chapter 9, "Setting Up Draft, Payment, and Voucher Processing," Setting Up the PeopleSoft Financial Gateway Integration, page 210](#)

[Chapter 21, "Processing Pay Cycles," Pay Cycle Processing Using the PeopleSoft Financial Gateway, page 646](#)

EFT and ACH Payments

Both EFT and ACH payments are paperless formats. Both require that you create an electronic file that contains the necessary bank or clearinghouse information. The electronic layout and data requirements for EFT and ACH payments are set up for PeopleSoft Payables when you set up banks and counterparties.

Note. Before sending EFT or ACH payments, you can establish a prenote test to verify that the data is received in the correct format.

EFT and ACH Payment Processing

EFT and ACH payments differ primarily with regard to the party who processes the payments.

- EFT payments involve the electronic movement of funds usually through a payment system such as the ACH network or Fedwire. The four largest EFT systems are Fed Wires, ACHs, Swift, and Chips. For EFT payments, you send all applicable payments in one file to your bank for payment. The bank then sends the payments through the appropriate ACH payment system to the vendor's bank.
- For ACH payments, you send all applicable payments in one file to your financial institution. If the financial institution is a member of a clearinghouse, then the clearinghouse sends the payments to the vendor's bank for payment.

EFT and ACH payments can also be processed through Pay Cycle Manager using PeopleSoft Financial Gateway functionality. In this case, PeopleSoft Financial Gateway functionality sends the payment to the applicable party for processing.

After payment files are sent to a bank or clearinghouse, the payments are posted and the accounting entries are generated and sent to the general ledger.

This diagram shows the process flow for EFT and ACH payments:

EFT and ACH Payments process flow

Note. If you run PeopleSoft Payables on a DB2 database on a Windows NT or OS390 server, you must manually insert an owner ID parameter into the list of parameters for the process definition before you can run the Format EFT Files SQR process (FIN2025) to create EFT files.

To do so, select PeopleTools, Process Scheduler, Processes. On the search page, enter FIN2025 for the Process Name. On the Override Options tab, under the *Prepend* Parameter List, add the following text to the beginning of the list of parameters: `%%OWNERID%%`. Be sure to leave a space between the owner ID parameter and `:EFT_WRK_PARM1`.

EFT and ACH Prenotes

This PeopleSoft application provides the availability of prenote verification for EFT and ACH payments. Your bank can verify the accuracy of the electronic payment data (for example, bank transit number and account number) in a test transaction before the actual transaction occurs. Prenotes are available for PPD, CCD+, and CTX payment formats.

You can use either the Pay Cycle Manager or the PeopleSoft Financial Gateway for formatting the prenote output file to the bank. If you generate the output file using pay cycle, the bank does not issue a prenote error notification. If you generate the output file using PeopleSoft Financial Gateway, you receive a prenote error notification from the bank if an error exists. PeopleSoft Financial Gateway creates a prenote error message and sends it to PeopleSoft Payables, which then:

1. Inserts the prenote error into the Pay Cycle Error table (PYCYCL_ERR_TMP).
2. Updates the prenote status in the Vendor Pay table (VENDOR_PAY) from *P* (pending) to *R* (rejected).
3. Sends an email notification to the user.

This function requires that you specify a user ID on the Payment Selection Criteria - Preferences page as well as define a valid email address on the User Preference page.

PeopleTools PeopleBook: PeopleSoft Process Scheduler

Drafts

Drafts are used throughout the world in commercial transactions for which a customer or vendor agrees to pay a specified amount on a certain day. Drafts are payments that are dated for a time in the future—usually 20, 60, 90, or 120 days later. PeopleSoft Payables currently supports vendor-initiated drafts, customer-initiated drafts, and customer-initiated EFT drafts, enabling you to manage and process these draft payments efficiently.

Vendor-Initiated Drafts

You manually create bills of exchange (BOE), which are vendor-initiated draft payments. After you record the draft information, the PeopleSoft Payables system creates the draft payment and generates the accounting entries.

This diagram shows the process flow for vendor-initiated drafts:

Vendor-initiated Draft Payment process flow

Customer-Initiated Drafts

Bills of order (BOO), which are customer-initiated draft payments, are usually created during an automatic batch process. If stamp tax minimization is applicable, PeopleSoft Payables splits the draft master and assigns sibling system draft identification numbers.

You can also create customer-initiated drafts manually.

Customer-Initiated EFT Drafts

Customer-initiated EFT drafts are processed in PeopleSoft Payables much the same way as customer-initiated drafts, except that you send an EFT file to your bank when the draft payment is due. You do not print the drafts. Your bank pays the draft on the draft maturity date.

This diagram shows the process flow for customer-initiated EFT drafts:

Customer-initiated Draft Payment process flow

[Chapter 21, "Processing Pay Cycles," Reviewing Draft Payments, page 677](#)

Giros

The giro is a common international payment method prevalent in the customer-to-business relationship because it provides efficiency with high volumes of transactions. In PeopleSoft Payables, the giro is similar to manual and EFT payment methods, but it is uniquely identified for reporting and analytical purposes.

Manual Giro Payments

In PeopleSoft Payables, the *giro* payment method (*GM-Manual*) is a type of remittance slip that is handled like a manual payment. The *Accept Giro* is a standard format used in the Netherlands that has an invoice with a tear-off portion. The tear-off section displays the information necessary to process a payment. You detach the tear-off portion and send it to your bank for payment to the vendor. Your bank sends payment to the vendor's bank, and the vendor's account information is updated. You do not need to run the Pay Cycle Application Engine process (AP_APY2015) because you use the information on the tear-off section to record the payment on the Payments page of the Voucher component.

In some instances, you may send an electronic payment file to your bank.

EFT Giro Payments

In PeopleSoft Payables, the EFT giro payment method (*GE-EFT*) is handled like an EFT payment. This standard payment format is used in Singapore for performing direct debits and credits. It is often used to make payments that recur within a set time period and has been used to make direct deposits of employee payroll checks and expense reimbursements. The EFT giro file layout is formatted when you set up banks and counterparties, and it is set up according to the local requirements of the vendor. For EFT giro payments in Singapore, you can use the sample file layout called FEDI. Giro authorizations are specific to a particular vendor, containing standard data elements according to the giro requirements. They contain your bank account information and the vendor's account information.

For the EFT giro, the vendor directly debits your bank account for remittances. During voucher entry, you specify a bank account sequence number to associate the vendor's bank information with the voucher.

In the Payment Selection Criteria component (PYCYCL_DEFN), you specify Giro - EFT on the Bank/Method page. During the Pay Cycle process, PeopleSoft Payables collects all EFT giro transactions and creates an output data file containing the payment information. You send the output data file to the bank electronically or on taped media.

This diagram shows the process flow for giro payments:

Giro Payment process flow

Chapter 8, "Establishing Pay Cycles," Specifying Bank and Payment Methods Criteria, page 178

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up Files for Electronic Funds Transfers," Setting Up EFT Processing

Letters of Credit

Letters of credit are commonly used in international trade as one of the safest means for establishing payment terms. It is an agreement issued by a bank at the request of its client and adds the bank's promise of payment to the client's promise. The letter of credit frequently requires congruity with a number of terms, conditions, or events before the vendor can collect payment.

Because most invoices are sent directly to your bank and the bank handles approval and electronic fund transfers directly to the vendor's bank, your bank often pays invoices before you receive them. When you select the letter of credit payment method, the letter of credit identification number is added to the L/C ID (letter of credit ID) field on the Payments page in the Voucher component (VCHR_EXPRESS). The letter of credit ID can also be copied from a purchase order at voucher entry. If the letter of credit ID appears on a purchase order, it is carried over to the Invoice Information page in the Voucher component when you select the worksheet copy option *PO Receipt*.

Because you might sometimes remit vouchers to multiple vendors, the letter of credit identification number is validated when you change the Remit to field on the Payments page. During voucher entry, PeopleSoft Payables validates the letter of credit ID against the PeopleSoft Treasury table (LC_HDR) to make sure that the identification number exists and that the status is open. After you select a payment scheduled for the Pay Cycle process, you cannot edit the letter of credit identification number on the Payments page in the Voucher component.

Note. All details pertaining to the letter of credit terms, agreements, expiration date, and related bank documents are maintained in PeopleSoft Treasury documentation.

This diagram shows the process flow for letters of credit:

Letter of Credit Payment process flow

Letter of Credit Details

Letters of credit can contain multiple vouchers; therefore, you might need to view the specific details regarding a particular voucher to which a letter of credit pertains. You view these details by clicking the related links button next to the L/C ID field on the Payments page in the Voucher component and clicking the Letter of Credit Doc (letter of credit document) link or the Letter of Credit Details link.

Letter of Credit Advice

During the Pay Cycle process, all vouchers that have the same letter of credit ID are grouped, and a single payment is issued. A printed letter of credit advice is created for payments for which you have selected the L/C Advice option on the Payment Selection Criteria - Preference page. The letter of credit advice shows vouchers paid under a specific letter of credit identification number.

Letter of Credit Inquiry

Because letters of credit can comprise many vouchers, you may need to review the details for individual vouchers paid by one letter of credit. You use the L/C Inquiry page to verify payment entries, payment totals, and the payment status of vouchers associated with a letter of credit. You can obtain more information about vouchers and payments from the L/C Inquiry page by clicking the related links button and selecting the Voucher Inquiry option or the Payment Inquiry option.

Letter of Credit Accounting Entries

At payment posting, only letter of credit payments that have a valid letter of credit ID and status are posted. During payment posting, the following accounting entries are generated:

- DR AP Liability (APA)
- CR L/C Payable (LCP)

When the letter of credit payment is made, you must manually enter the following journal entries in PeopleSoft General Ledger:

- DR L/C Payable (LCP)
- CR Cash (CAS)

Note. PeopleSoft Treasury Management does not perform any accounting calculations for PeopleSoft Payables letter of credit payments, regardless of whether you have or have not installed PeopleSoft Treasury Management. The PeopleSoft Treasury Management system only retains PeopleSoft Payables letter of credit entry definitions as data items for inquiries.

PeopleSoft General Ledger 9.1 PeopleBook, "Making General Ledger Journal Entries"

Direct Debits

Direct debits are a contractual method for collecting payment and receipts. You and your vendor set up a contract that enables the vendor to collect an amount due for specific goods or services directly from your bank through EFT. Some banks require a cover letter for the EFT files that they receive. The direct debit is entered as a manual payment in PeopleSoft Payables. Once you create the manual payment, you can run the payment posting process to create the accounting entries, then run the Journal Generator process to pass the accounting entries to the general ledger.

Deciding Which Payment Forms You Need

This section provides an overview of the available payment forms and discusses how to:

- Decide payment form layouts.
- Select and configure payment forms.

Understanding Which Payment Forms You Need

Payment formatting capabilities provide a variety of payment form layouts. You can use the delivered forms, modify the delivered forms, or build your own payment forms; however, creating a new form requires in-depth knowledge of Crystal Reports software and PeopleSoft Query. Typically, you select one of the delivered forms and use it as is, or you modify it according to the guidelines in this chapter.

The PeopleSoft system comes with the following basic payment form types:

<i>Form Type</i>	<i>Description</i>
ASCII file	Used for electronic payments, such as EFT, EFT draft, or EFT giro. Also used for positive payment files.
Prenumbered form	Used for printed payments on custom or standard check stock that have preprinted identification numbers.
Remittance advice only	Used for EFT, wire transfer, and printed payments.
System-numbered form	Used for drafts and checks printed on plain check stock for which PeopleSoft Payables assigns an identification number.

With magnetic toner in a laser printer and MICR fonts, you can print checks that magnetic scanners can process.

Note. PeopleSoft Payables does not deliver MICR fonts.

For electronic payments, transmit payment data to the vendor's bank in a flat file or print a remittance advice and send it to the vendor. The payment form for the remittance advice and the overflow or the separate remittance advice is the same as for printed payments.

Deciding Payment Form Layouts

View the delivered layouts on the Form Information page. To make decisions about payment form parameters, consider the following questions:

- Do you want to print checks and advices on the same page or on separate pages?
- How many detail lines do you want an advice to display?
- How will you manage detail line overflow?

Do you want to void the next check and use its advice or generate a separate print file for advices on a different paper stock?

- Do you want to use your own preprinted forms, deselect check formatting so that only the data prints, and then customize the Crystal Reports layout to position the fields on the form?

- Do you need to add new fields to the checks or change formulas that determine how data is printed?
- Do you need to print checks at all?

You may decide to make all payments electronically.

- If you do not send a printed check, do you need to supply your vendor with an advice?

Note. If you modify the delivered payment forms extensively in Crystal Reports, strictly follow the local rules for check layout. You must follow field dimensions, such as bank account MICR lines, exactly so that banks can successfully process your forms. In the U.S., refer to the document *Understanding and Designing Checks* by the X9-Financial Services Standards Committee for more details. Always have your custom forms approved by your banks before using them. Because customizing forms can be a lengthy process, you should do it early in an implementation.

Selecting and Configuring Payment Forms

To set up payment forms:

1. Specify the attributes of each payment form, such as how the advice is handled and how the payments are sorted for printing.
2. Specify the payment form to use for each bank account.
3. (Optional) Modify BI Publisher Reports for any delivered payment forms that do not meet your needs.
4. (Optional) Add signatures or logos to BI Publisher Reports checks.
5. Test the checks.

Specifying Payment Form Attributes

To specify payment forms attributes, use the Payments Forms component (PYMNT_FORM_PYMNT).

This section provides an overview of payment form attribute specifications and discusses how to:

- Set form and advice attributes to link payment layouts to data.
- Select payment sort fields.

Understanding Payment Form Attribute Specifications

To link the layout of a payment form to the data that the Pay Cycle - Payment Creation subprocess (AP_APY2015) generates, you must specify attributes for each payment form ID that determine, for example, whether the payment prints on check stock or is an electronic file, and whether the advice starts directly after the check or on another page. These attributes do not control the actual printing of the payment form, but rather the formatting of the query that extracts information from the payment tables. During payment creation, the system assigns payment reference numbers, counts advice lines on each page, and applies other format controls. The associated BI Publisher layout (such as CHECK1.RPT) controls how the formatted payment information is laid out on the printed page.

You can also specify the payment fields, such as the Bank Code field and the Payment Method field, that determine the order in which the Pay Cycle - Payment Creation subprocess generates payment forms.

Pages Used to Specify Payment Form Attributes

Page Name	Definition Name	Navigation	Usage
Form Information	PYMNT_FORM	Banking, Banks and Branches, Payment Forms, Form Information	Set form and advice attributes and add payment forms. Link the layout of a payment form to the data that the Pay Cycle - Payment Creation subprocess generates.
Sort Fields	PYMNT_FORM_SORT	Banking, Banks and Branches, Payment Forms, Sort Fields	Indicate the sort level that determines the order in which payments and advices print.

Setting Form and Advice Attributes to Link Payment Layouts to Data

Access the Form Information page (Banking, Banks and Branches, Payment Forms, Form Information).

The screenshot shows the 'Form Information' page with the following details:

- Form ID:** DRAFT1
- Description:** Sample Draft Format
- Form Attributes:**
 - Form Type:** System-numbered form
 - Form Alignment Count:** 0
- Advice Attributes:**
 - Advice Location:** Same report as check
 - Overflow Location:** Separate advice report
 - Advice Lines:** 30
 - Advice Layout:** Stub over check
- Preview Image:** A visual representation of the payment form layout, showing a table structure with a green shaded area at the bottom.

Form Information page

Form Attributes

After you enter a form ID and description, select a form type to define during file creation if the BI Publisher layout prints check numbers and advices or only an ASCII file.

Form Type

Select the form type. Options are:

ASCII file: Use for EFT or positive payment files.

Pre-numbered form: The check stock has preprinted check numbers. The system does not generate check numbers, but it tracks the payment references and can warn you of any discontinuity in reference numbers.

Remittance Advice only: Use for WIRE (wire transfer) reports and letters of credit.

System-numbered form: The system generates check numbers to print on the payment forms.

Note. You must customize the Crystal Reports or BI Publisher layout to match the form type that you specify if it differs from the form type that comes with PeopleSoft Payables.

Form Alignment Count

Select to align the printer head with the first row of the form so that checks and advices print correctly. You use this field with system-numbered forms only.

Advice Attributes**Advice Location**

Select the location of the advice. Options are:

No advice: No advice lines print.

Same report as check: The advice prints below or above the check on the same form.

Separate advice report: The advice prints in a separate job from the check. You need to load two different forms: one for the checks and one for the advices. You can also select this option to create an advice report for EFT payments.

Overflow Location

Select to indicate where any information that does not fit on one page prints. Options are:

No advice report: No advice lines are printed.

Same report as check: If more advice lines are required than the number of lines on the check form, a second check form is used for advice lines, and the check is voided.

Separate advice report: A separate advice form is used for overflow. You need to load two forms: one for the checks and one for the advices. Separate reports are created. You can also select this option to create an advice form for overflow for EFT payments.

Advice Lines

Enter the total number of lines available for the advice. This differs depending on whether the advice is on the same report as the check or on a separate report. The information that you assign must fit on the Crystal Reports check space.

Note. If the first invoice has payment messages that exceed the number that you enter, voucher information prints on both the regular check and the overflow advice. The system, however, sets the payment amount to 0 on the overflow advice.

Note. Advice lines only apply to checks and are not applicable to EFTs.

Advice Layout

Select to indicate where the check and advice are positioned on the printed page. Match the description to how you define the Crystal Reports layout. This field is informational only. Options are:

Check over stub: Position the check over the advice.

Full page: Send the advice lines to a separate page from the check and a separate file.

Stub over check: Position the advice over the check.

Preview Image

As you select attributes for the form, the Preview Image group box displays a representation of the layout.

Description	Format Name and Layout
Draft EFT file	BEF1 generates an ASCII file that your bank uses to make the appropriate EFTs for vendor payments. This format is used with the draft payment method.
Draft EFT file with advice	BEF2 generates an ASCII file for the bank and a separate advice report that you can send to vendors. This format is used with the draft payment method.
Stub over check with advice	CHECK1 prints the remittance advice block followed by the check. If more advice lines are included within the payment than can fit on the remittance advice, a separate file is created that prints advice overflow.
Check with separate advice	CHECK2 prints a check for payment to a vendor and prints the remittance advice on a separate advice form. The file is set up to print three checks on one form. The system generates two separate files, one for the checks and one for the advices.

Description	Format Name and Layout
Check over stub with overflow	CHECK3 prints the check followed by a remittance advice block. If more advice lines are included within the payment than can fit on the remittance advice, the next check is voided, and its remittance advice is used for overflow lines.
File copy	COPY1 prints the check followed by a remittance advice block. If more advice lines are included within the payment than can fit on the remittance advice, the next check is voided, and its remittance advice is used for overflow lines. This format creates a backup file only. No negotiable checks are created.
Stub over draft with advice	DRAFT1 prints the remittance advice block followed by the draft. If more advice lines are included within the payment than can fit on the remittance advice, a separate file is created that prints the advice overflow.
EFT file	EFT1 generates an ASCII file that your bank uses to make the appropriate transfers for vendor payments. This format is used with the EFT payment method.
EFT file with advice	EFT2 generates a file for the bank and a separate advice report that you can send to vendors. This format is used with the EFT payment method.
Check file layout	FILE1 prints the check followed by a remittance advice block. If more advice lines are included within the payment than can fit on the remittance advice, the next check is voided, and its remittance advice is used for overflow lines. This format creates a backup file only. No negotiable checks are created.
Giro-EFT file	GE1 generates an ASCII file that your bank uses to make the appropriate electronic funds transfers for vendor payments. This format is used with the giro payment method.
Giro-EFT file with advice	GE2 generates a file for the bank and a separate advice report that you can send to vendors. This format is used with the giro payment method.
Letter of credit advice	LC1 generates a remittance advice only, which you can send to vendors. This format is used with the letter-of-credit payment method.
Positive payment form	POS1 file generates an ASCII file that contains payment information for checks that can be paid. You send the file to your bank. The bank compares the data on the file against the data on the checks that your vendors submit. Only checks that match are paid.
Wire report	WIRE1 generates a remittance advice only for paying by wire.

Selecting Payment Sort Fields

Access the Sort Fields page (Banking, Banks and Branches, Payment Forms, Sort Fields).

Activate each sort field that you want to use to sort the check output. For each sort field that you select, enter a unique sort sequence number.

Payment handling codes take priority over the sort sequence; the sort order is the handling code followed by the sort fields that you specify on this page.

Assigning Payment Forms to Bank Accounts

To assign payment forms to bank accounts, use the following components:

- External Bank Accounts (BANK_EXTERNAL)
- Netting Accounts (BANK_PNLNET)

Each bank account that you use to pay vendors must have a specified payment form.

This section discusses how to specify payment form IDs for bank accounts.

Page Used to Assign Payment Forms to Bank Accounts

Page Name	Definition Name	Navigation	Usage
Payment Methods	PYMNT_BANK	• Banking, Bank Accounts, External Accounts, Payment Methods • Banking, Bank Accounts, Netting Accounts, Payment Methods	Specify the payment form to use for each bank account.

Specifying Payment Form IDs for Bank Accounts

Access the Payment Methods page (Banking, Bank Accounts, External Accounts, Payment Methods).

Modifying Payment Forms

This section provides an overview of payment form modifications and discusses how to modify a payment form.

Understanding Payment Form Modifications

To configure the payment forms that come with PeopleSoft Payables to meet your specific needs, you must modify the Crystal Reports layout for the form and ensure that the form ID matches the output configuration.

A payment form consists of these sections:

- Page header
- Check body (group header #1 for the payment ID reference (PYMNT_ID_REF))
- Details
- Group footer #1
- Page footer

View the payment form fields in Crystal Reports layouts by opening the appropriate check and selecting View.

Modifying a Payment Form

To modify a form:

1. Copy the form (CHECK2.RPT, for example).
2. Rename it (CHECK5.RPT, for example).
3. Use Crystal Reports to modify the form.
4. Open the Banks and Branches, Payment Forms component in Add mode to add the name of a new payment form.

Specifying MICR Fonts

To use the PeopleSoft Payables MICR font printing capability, make sure that the MICR fonts are loaded on the workstations where you use Crystal Reports to print payment forms. Then, the specified check lines will print correctly when you print payment forms through Crystal Reports. To make the forms machine-readable, use special magnetic toner in the laser printer. (You can order the toner from most standard toner suppliers.)

Note. Work with your bank to make sure that the check formatting and magnetic readability are acceptable before you start printing large numbers of checks.

Note. PeopleSoft Payables does not deliver MICR fonts.

Printing Logos and Signatures with BI Publisher Checks

With BI Publisher checks, you can easily add a check signature or any other graphic, such as a company logo. Signature fonts and logos are not provided with the PeopleSoft system. Typically, you purchase them separately from a third party, such as Hewlett-Packard. For information about implementing and troubleshooting signature fonts and logos, please consult the vendor from which they were purchased.

Testing Checks

The two methods for testing check printing are:

- Create an express payment by adding a voucher in the Voucher component and clicking the Express Payment link on the Payment page.

This action opens the Express Payment Manager page.

- Run a pay cycle to test the sorting and printing for a batch of checks.

After testing vouchers, test overflows (advice lines are too long to fit on one form).

Chapter 7

Configuring the PeopleSoft Payables Payment Interface

This chapter provides an overview of the PeopleSoft Payables Payment Interface feature, lists common elements, and discusses how to set up the PeopleSoft Payables Payment Interface feature.

Understanding the PeopleSoft Payables Payment Interface

As delivered, the Payment Interface feature supports these payments:

- PeopleSoft Payables vouchers.
- PeopleSoft Expenses expense sheet and cash advance payments.
- PeopleSoft Treasury settlement payments.

In addition, the Payment Interface feature enables you to produce payments from other sources (either PeopleSoft applications or third-party products). By using the Payment Interface feature to make payments from other sources, you can ensure consistent processing of all payments. You can also take advantage of the Pay Cycle Manager component (PYCYCL_MGR) in PeopleSoft Payables, which enables you to view all payments in one place, regardless of the source system of the transaction.

To process payments, PeopleSoft Payables needs certain information—for example, the recipient and the date of the payment. The PeopleSoft system must also indicate whether a payment has been made and, if so, how much was paid. You enable the system to do this by creating a mapping definition that maps the data between the source system of the transaction and PeopleSoft Payables.

For all source definitions that come with the PeopleSoft system, the necessary mapping has already been performed to support the required system functions. When you create new mapping definitions, you map the fields in a staging table to the corresponding fields in the PeopleSoft Payables PS_PYCYCL_DATA table using the Pay Cycle Mapping - Mapping Detail page.

Common Elements Used in This Chapter

Source Transaction	Select the source of the transaction that you are defining; for example, refunds, accounts payable vouchers, expense sheets, and so on.
Map Type	Select the type of map that you are creating for the source transaction.

Setting Up the PeopleSoft Payables Payment Interface

To set up PeopleSoft Payables to process payments from another source, use the Payment Source component (PYMNT_SOURCE) to define the payment source.

To process payments for any new payment source that you define, the Pay Cycle Manager component needs information about where the payment data is staged and how to map the data to the corresponding table in PeopleSoft Payables. You define this information using the Pay Cycle Mapping component (PYCYCL_MAP_DEFN).

After mapping the pay cycle, you can define the pay cycle in the Payment Selection Criteria component (PYCYCL_DEFN).

To set up the PeopleSoft Payables Payment Interface feature, use these components:

- Payment Source (PYMNT_SOURCE).
- Pay Cycle Mapping (PYCYCL_MAP_DEFN).

This section discusses how to:

1. Define payment sources.
2. Enter source search definitions.
3. Set up pay cycle mapping.
4. Map fields.

[Chapter 21, "Processing Pay Cycles," page 637](#)

Pages Used to Set Up the PeopleSoft Payables Payment Interface

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Payment Source	PYMNT_SOURCE_DEFN	Accounts Payable, Payments, Pay Cycle Definition, Payment Source	Add a new payment source.
Source Search Definition	PYMNT_SOURCE_DEFN2	Accounts Payable, Payments, Pay Cycle Definition, Payment Source, Source Search Definition	Enter the search record for the inquiry page that you specify on the Payment Source Definition page.
Paycycle Map	PYCYCL_MAP	Accounts Payable, Payments, Pay Cycle Definition, Mapping, Paycycle Map	Set up the pay cycle mapping for the payment source.

Page Name	Definition Name	Navigation	Usage
Mapping Detail	PYCYCL_MAP_DTL	Accounts Payable, Payments, Pay Cycle Definition, Mapping, Mapping Detail	Specify the mapping of the fields in the staging table to the corresponding fields in the PeopleSoft Payables PS_PYCYCL_DATA table.

Defining Payment Sources

Access the Payment Source page (Accounts Payable, Payments, Pay Cycle Definition, Payment Source).

Payment Source page

Important! Before you establish sources, disable products that you don't have installed on the system on the Installed Products page. Disabling products that you do not have installed on the system improves performance.

Source Type

Select the origin for the source transaction. Options are:

External: A third-party product. This identifies the payment source as external to the PeopleSoft system. Use this setting to configure the payment process for source-specific processing needs.

PeopleSoft: A supported PeopleSoft product.

Product

Select the applicable PeopleSoft product from the drop-down list if you select *PeopleSoft* as the source type.

Business Unit Table

Enter a value to set up a business unit table record. To process payments, you must set up a business unit table record before you can add the payment source. This is a required field.

Only three fields are required for the business unit table record:

- BUSINESS_UNIT

The value that is used to select the data. For example, in PeopleSoft Payables, this is the accounts payable business unit.

- LOCATION

Contains the address information for the business unit.

- BUSINESS_UNIT_GL

The general ledger business unit.

Menu Name

Enter the menu name for the page that you use to run inquiries on payments if you process payments from another PeopleSoft application or if you use the same database as PeopleSoft Payables.

The system uses this field in conjunction with the Menu Bar Name, Item Name, and Page Name fields to identify the page where users can run inquiries on payments for the source transactions.

Accounts Payable Vouchers

Record (Table) Name:

VCHR_SRCH_VW1

Business Unit Field:

BUSINESS_UNIT

Payment Document ID Field:

VOUCHER_ID

Payment Document Seq Field:

Source Search Definition page

You can define a search definition on this page only if you have entered a menu name, menu bar name, item name, and page name on the Payment Source page. To create a search definition, define the fields on this page.

If you use the source search definition default values for PeopleSoft Payables vouchers, the search is based on the business unit and voucher ID.

Note. You only need to add a Payment Document Seq (payment document sequence) field if you are using the Document Sequencing feature.

Setting Up Pay Cycle Mapping

Access the Paycycle Map page (Accounts Payable, Payments, Pay Cycle Definition, Mapping, Paycycle Map).

Paycycle Map

Mapping Detail

Source Transaction:

VCHR

Accounts Payable Vouchers

Description:

Pay Cycle Data Mapping Defn

*Input Record:

*Output Record:

PYMNT_VCHR_XRE

*Intermediate Record for Copy:

PYMNT_VCHX_TMP

Select Where Clause:

Paycycle Map page

Input Record	Specify the staging table for the payment data. This is the table from which PeopleSoft Payables selects the payment data.
Output Record	Enter the name of the table that PeopleSoft Payables updates with payment information after the system completes payment processing. You can enter the same table name that you specified in the Record (Table) Name field.
Intermediate Record for Copy	Specify a name for a copy of the output record table. PeopleSoft Payables uses this table to process the updates to the output record table.
Select Where Clause	If the staging table contains transaction records that can be selected for payment as well as transactions that cannot be selected, specify a Where clause to select paying transactions that you want to pay.
Note. You are advised to move only selectable data to your staging table, in which case you do not need to enter a where clause.	

Note. Once you set up pay cycle mapping for the source, you can use the payment source at any time without having to redefine it.

Mapping Fields

Access the Mapping Detail page (Accounts Payable, Payments, Pay Cycle Definition, Mapping, Mapping Detail).

ADDRESS4	Input	Field	ADDRESS4	Chara			☐

Pay Cycle Mapping - Mapping Detail page

Pay Cycle Data Element	Displays the name of the field being mapped.

Mapping Action	Specify the mapping action for each PeopleSoft Payables field name. Options are: <i>Both</i>: Select if the field is both an input and output field. Selecting this option enables you to complete values in both the Input Fieldname and Output Fieldname fields. Any field marked <i>Both</i> is selected into the pay cycle record and included in the output record. <i>Input</i>: Select if the field is an input field, and specify a corresponding value in the Input Fieldname field. Any field marked <i>Input</i> is selected into the pay cycle record. <i>None</i>: Select if the field isn't mapped. <i>Output</i>: Select if the field is an output field, and specify a corresponding value in the Output Fieldname field. Any field marked <i>Output</i> is included in the output record.
Input Map Type	Select from the following options: <i>Constant</i>: Enables you to specify a constant field name. You must select a value from the constant type list and enter a value in the Input Constant field. <i>Field</i>: Select the appropriate field from the record (table) name that you entered on the Pay Cycle Map page. You must enter a value in the Input Fieldname field.
Input Fieldname	Specify the appropriate field name from the staging table if you select the <i>Input</i> mapping action value and also the <i>Field</i> input map type value.
Const Type (constant type)	Specify the type of data that the field contains. Options are: <i>Character</i>: The values entered into the field are characters. <i>Numeric</i>: The values entered into the field are numbers.
Input Constant	Enter the constant value that the field displays if you select <i>Constant</i> as the input map type.
Output Field Name	Specify the appropriate output field name from the output record that you specified on the Pay Cycle Map page. You must complete this field when you specify either the <i>Both</i> or <i>Output</i> field values from the Mapping Action field.
Key Field	Select to indicate if the mapped field is a key field in the source system. When you save the mapping, the system generates SQL statements that update the unique key field source information.

Chapter 8

Establishing Pay Cycles

This chapter provides an overview of pay cycle processing and discusses how to:

- Create a pay cycle.
- Define bank replacement rules.
- Create, update, and reuse pay cycles.
- Configure pay cycles for PeopleSoft Financial Gateway processing.

Understanding Pay Cycle Processing

The Pay Cycle process is a flexible tool. You can review payments after specific processing steps—such as after payment selection and before payment creation—and correct exceptions before proceeding to the next step. Or you can run the Payment Selection and Payment Creation processes together if you do not need to review the payments after selection. If you have a large payment run and only a very small percentage of exceptions, you do not have to delay payment processing—you can continue the current pay cycle, resolve exceptions, and then process the payments in a different pay cycle run.

The centerpiece of payment processing in PeopleSoft Payables is the Pay Cycle Application Engine process (AP_APY2015), which creates the payments. Various output processes then transform these payments to flat files that are sent to the financial institution for settlements.

Pay Cycle is also integrated with PeopleSoft Financial Gateway processing. PeopleSoft Financial Gateway handles electronic settlements between PeopleSoft Payables and financial institutions, formatting payments, and sending acknowledgement messages between the systems.

Setup for pay cycle processing comes in two stages:

1. Optionally, you tailor your Pay Cycle processing to your needs by defining processing steps that you can administer separately.

Although the delivered steps satisfy most users' needs, you can also configure and add your own user-defined steps to the Pay Cycle process.

2. You create reusable sets of payment selection criteria, called pay cycles.

Note. If you want the Pay Cycle process to process payment information from sources other than PeopleSoft Payables, you perform an additional setup step: configuring the PeopleSoft Payables payment interface to accept those outside payment sources.

If you want the Pay Cycle process to replace bank accounts automatically for payments that meet certain selection criteria, you must define bank replacement rules.

Positive Payment is not supported by the Pay Cycle Job process.

Chapter 7, "Configuring the PeopleSoft Payables Payment Interface," page 135

Chapter 21, "Processing Pay Cycles," page 637

Payment Process Flow

To understand how to set up the Pay Cycle process to meet your organization's needs, you should see how the Pay Cycle process fits in the larger PeopleSoft Payables payment process flow:

Payment process flow

Payment Process Steps

To give you maximum control over which vouchers to pay and when, the payment process has several steps.

1. Scheduling payments.

You can configure the system to automatically select scheduled payments, or you can manually select them any time. You provide necessary information, such as vendor payment terms, due dates, and business calendar, as part of the control hierarchy or at voucher entry. If the voucher is to be paid in one payment, the system automatically schedules the payment. If you decide to pay the voucher in multiple payments, you can apply split payment terms to the voucher, and the system automatically creates multiple payment schedules. You can also schedule the payments manually using the Payments page.

2. Selecting payments.

You create, run, and update pay cycles that select vouchers for payment. Pay cycles are payment selection templates that store the criteria that the system uses to select vouchers for payment. These are some of the criteria:

- Pay through date.
- Vendor pay group.
- Business unit.
- Bank account.
- Payment method.
- Netting options.
- Draft options.

If you want to schedule a pay cycle to run automatically, use the Payment Selection Criteria component (PYCYCL_DEFN) to set up the criteria and schedule the process. After you set up your standard pay cycles, you can run them repeatedly by manually or automatically updating the pay through and payment dates.

3. Reviewing payments.

You can review payments online on the Pay Cycle Manager page after payment selection before you create the actual checks and payment advice. During this review process, you evaluate whether any payments should be put on hold, determine how to deal with payments that require special handling, and schedule multiple payments for each invoice. You also analyze potential vendor issues by monitoring the payment statuses. PeopleSoft Payables alerts you to potential lost discounts if you leave a voucher payment schedule unpaid until the next payment run.

4. Creating payments.

After you define your pay cycle criteria, you run the Pay Cycle process from the Pay Cycle Manager to select eligible payments and generate the required payment records. This process enables you to flag vouchers as paid and then run the print job separately. In addition, if something does go wrong with your printer, you can elect to restart the check run at a specific number. If you are using preprinted check stock, void any numbered checks that were mangled and renumber the check run starting at the next available check. For system-numbered checks, select the Re-Print using the same reference radio button to reuse the check numbers.

5. Posting payments.

You run the Payment Posting Application Engine process (AP_PSTPYMNT) on the Payment Posting Request page to create accounting entries based on your payments.

6. Reconciling payments.

Bank account reconciliation supports both manual and electronic entry of bank reconciliation data. Transactions can be automatically matched and reconciled, or you can manually match and force them to reconcile. Online inquiries and reports are available to review the results of the reconciliation process. You initiate the Reconciliation Application Engine process (FSPRECON) from the Process Reconciliation page.

7. Cash clearing.

Use cash clearing to track cleared and uncleared amounts in the banking system. The more often you reconcile payment information from your bank, the more accurate your cash account balances are. To use this feature, define a cash clearing account and a cash account for each bank account. Payment posting creates accounting entries that credit the cash clearing account. You run the Cash Clearing Application Engine process (AP_APCSHCLR) from the Cash Clearing Request page.

Creating a Pay Cycle

Use the following components to set up your pay cycle:

- Pay Cycle Step Definition (PYCYCL_STEP_DFN).
- Pay Cycle Step Table (PYCYCL_STEP_TBL).

This section provides an overview of pay cycle configuration and discusses how to:

- Define pay cycle steps.
- Define step groups.
- Add user-defined pay cycle steps.

Understanding Pay Cycle Configuration

You can create your Pay Cycle processing by:

- Dividing the Pay Cycle process into functions, or steps, such as processing, approval, and exception processing, which can be administered separately.

The manner in which you arrange the steps determines which process is available for processing at any given time during the Pay Cycle process.

- Adding user-defined steps to the Pay Cycle process.

Pages Used to Create a Pay Cycle

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Pay Cycle Step Definition	PYCYCL_STEP_DFN	Accounts Payable, Payments, Pay Cycle Definition, Step, Pay Cycle Step Definition	Update or add process steps to a pay cycle.
Pay Cycle Step Table	PYCYCL_STEP_TBL	Accounts Payable, Payments, Pay Cycle Definition, Step Table, Pay Cycle Step Table	Define step groups. A step group contains all the possible steps that might be run during Pay Cycle processing. Each step is associated with a pay cycle status that indicates the order in which the steps are run.

Defining Pay Cycle Steps

Access the Pay Cycle Step Definition page (Accounts Payable, Payments, Pay Cycle Definition, Step, Pay Cycle Step Definition).

Pay Cycle Step Definition

Step Name: Giro EFT Format

Job Type: Process 

Process Schedule Definition

Process Type: SQR Process 

Process Name: FIN2025 

Pay Cycle Step Definition page

Step Name

Describes what the process performs during this stage of the pay cycle. For example, the Payment Selection and Creation step runs both the Payment Selection and Payment Creation processes. When a process is eligible or required to run, the step name appears in the Pay Cycle Manager. Associate step names with pay cycle status on the Pay Cycle Step Table page to define the order in which each process runs.

Job Type

Select from the following options:

Info (information): Defines the step as an informational type of process that links the Pay Cycle Manager to other pay cycle components for additional processing. For example, Payment Reference Confirmation is a required pay-cycle step, but not an actual Process Scheduler-defined process, that links the Pay Cycle Manager to the Payment Reference Confirmation component.

Process: Defines the step as a Process Scheduler-defined process.

Process Schedule Definition**Process Type**

Enter the type of process. The delivered pay cycle steps use PeopleSoft Application Engine, Structured Query Reports (SQR) processes, and Crystal check process types. You must define this information in the Process Scheduler Manager tables before creating a pay cycle step process.

Process Name

Enter a description of the process type. You must define this information in the Process Scheduler tables before creating a pay cycle step process.

Defining Step Groups

Access the Pay Cycle Step Table page (Accounts Payable, Payments, Pay Cycle Definition, Step Table, Pay Cycle Step Table).

Pay Cycle Step Table

Step Group: Model Description: All pay cycle steps [Copy Step Group](#)

Pay Cycle Step Definition				Find	View All	First	1-8 of 34	Last
*Step Name	*Status	*Run Level	Document					
Draft Staging	Exceptions found	Pay Cycle						+ -

Pay Cycle Step Table page

A step group contains all the possible steps that might occur during processing. Each step is associated with a pay cycle status that indicates the order in which the steps are run.

Copy Step Group	Click to copy another step group. Copying step groups deletes the current step group and replaces all existing steps.
Step Name	Enter the step name defined on the Pay Cycle Step Definition page.
Status	Represents each possible state of the pay cycle. The statuses are provided with the system. A typical check-only pay cycle follows this sequence of statuses: <i>Completed, New, Selected, Created, Confirmed, Completed</i> .
Run Level	Determines whether the job affects the entire pay cycle or just an output process (specific bank, account, and payment method combination). For instance, Payment Creation affects the entire pay cycle, but Print Checks affects only one bank, account, and payment method combination at a time. These are the available options: <i>Pay Cycle</i>: Processes all transactions associated with the pay cycle, depending on the date selection criteria, payment source, business unit, bank account, and payment method. The Pay Cycle Manager processes the pay cycle-level processes until the payments are created and approved. Then the user can choose the output processes to create all files and documents for the pay cycle. If you select the pay cycle run level, the Document field does not apply and is unavailable. <i>Bank</i>: Processes the created payments for a specific bank account only. This process creates negotiable documents and payment files for bank processing.
Document	This option is applicable only for step names defined with a run level of <i>Bank</i> . This option identifies specifically what payment method and document type combination is processed. Available options are a combination of all the document types for all payment methods defined in the system, such as <i>Check, EFT Advice</i> (electronic funds transfer advice), <i>Draft, ACH</i> (automated clearing house), and <i>Letter of Credit advices</i> .

Adding User-Defined Pay Cycle Steps

Pay Cycle Manager enables you to insert custom processes into the Pay Cycle process using the Pay Cycle Step Definition and Pay Cycle Step Table pages. Consider the following questions before configuring the process:

- When does the process need to run?
- Is the process required or optional?
- Is the process applicable to a reusable pay cycle or only specific pay cycle processing instances?

Identify the pay cycle status at which your custom job is eligible to execute. The Pay Cycle process requires that the pay cycle status be set to specific values when processing specific steps. Because of this requirement, adding a new status—for example, between the Payment Selection and Payment Creation steps—requires that you modify the Application Engine program.

Important! If you add a custom process that is run at a pay cycle level, Oracle *strongly* recommends that you create a link or button on the Pay Cycle Manager page. A link can transfer you to a custom run control record, or you can create PeopleCode that enables the button to initiate the process. Use the PYCYCL_WORK.TRIAL_REGISTER_PB field as an example. Also, you should perform comprehensive testing to ensure that no data or processes are compromised.

Adding a custom process at the bank account level is a bit more involved, because the Pay Cycle Manager component is doing most of the status progression for the overall pay cycle. Processes are directly linked to a specific button in the Pay Cycle Manager component. Therefore, you can associate only one process with a bank account and payment method combination for each bank status. Because of the way that the processes are associated with a particular pay cycle status, the simplest way to create a new process in the payment cycle is to create a new status and associate your custom process with the new status.

To add a new status to the Pay Cycle process, review and modify the PeopleCode behind the Pay Cycle Manager component. You should consider the new status in relation to the overall progression of the pay cycle status.

To create a new pay cycle status:

1. Analyze your existing implementation and determine all affected PeopleCode and PeopleCode objects.
2. Modify all affected PeopleCode and PeopleCode objects.
3. Create a new translate value for the field PAY_RUN_AP_STATUS.
4. Create a new pay cycle step definition.
5. Add the new pay cycle step to a pay cycle step group.
6. Associate the step with a particular bank account status, payment method, and document type.
7. Review the Pay Cycle Manager page PeopleCode to determine whether modifications are required to advance the pay cycle bank account statuses in accordance with your new pay cycle status.
8. Perform comprehensive testing of the new pay cycle status working within the pay cycle process to ensure processing validity.

Important! These sorts of modifications should be made only by PeopleTools experts who are proficient in PeopleCode.

Defining Bank Replacement Rules

Use the Bank Replacement Rules component (BANK_RPL_RULE_DEFN) to define bank replacement rules.

This section provides an overview of bank replacement processing, lists prerequisites, and discusses how to define bank replacement rules.

Understanding Bank Replacement Processing

PeopleSoft Payables enables you to use alternate bank accounts to replace the original bank accounts defined for a pay cycle according to bank replacement rules that you define on the Bank Replacement Rules page and select for a pay cycle on the Payment Selection Criteria - Preferences page.

Note. If financial sanctions are enabled at the bank level, you could replace a bank that does not require financial sanctions validation with one that does require validation. Because bank replacement occurs after the Payment Selection process, the system could select payments for vendors that were not validated, even though the replacement bank does require financial sanctions validation. If you are using bank replacement processing, and you enable financial sanctions at the bank level, you should run the Financial Sanctions Validation Application Engine process (AP_SDN_VAL) prior to running the Pay Cycle process.

The replacement options that can make up a bank replacement rule are of five different types:

1. *Replace All Payments:* Replace the original bank accounts for all payments in a pay cycle with one alternate bank account.

This option also allows all payments to be reassigned to an alternate currency and payment method.

2. *Replace Bank with Another Bank:* Replace a particular original bank account or payment method with an alternate bank account or payment method.
3. *Replace by Currency:* Assign an alternate bank account, payment method, and currency to all payments scheduled to be made with a particular original currency.
4. *Replace by Individual Payment Limit:* Assign an alternate bank account to any individual payment that exceeds a monetary amount limit that is predefined for the original bank account.

5. *Replace by Bank Maximum Limit:* Assign an alternate bank account to any payments that remain after the monetary total of accumulated payments from a single bank account exceeds a defined monetary limit for that bank account. Note that the Pay Cycle process processes payments in order of amount, with the highest amount payments processed first.

For example, assume that you have ten payments in a pay cycle that are scheduled to be drawn from bank account A, as illustrated in the following table:

No.	Payment Amount	Bank Account
1	30,000.00 EUR	A
2	20,000.00 EUR	A
3	20,000.00 EUR	A
4	20,000.00 EUR	A
5	20,000.00 EUR	A
6	20,000.00 EUR	A
7	20,000.00 EUR	A
8	20,000.00 EUR	A
9	20,000.00 EUR	A
10	20,000.00 EUR	A

Assume further that you have defined a limit for bank account A of 100,000.00 EUR. You define a bank replacement rule dictating that when the accumulated payments in a single pay cycle exceed that amount, then all remaining payments scheduled to be paid out of that account will now be paid by bank account B. Because the fifth payment would bring the payment total to 110,000.00 EUR—over that 100,000.00 EUR limit—only the first four payments will be paid out of bank account A and the remaining six will be paid out of bank account B, as illustrated in this table:

No.	Payment Amount	Bank Account
1	30,000.00 EUR	A
2	20,000.00 EUR	A
3	20,000.00 EUR	A
4	20,000.00 EUR	A
5	20,000.00 EUR	B
6	20,000.00 EUR	B

No.	Payment Amount	Bank Account
7	20,000.00 EUR	B
8	20,000.00 EUR	B
9	20,000.00 EUR	B
10	20,000.00 EUR	B

You can indicate more than one alternate bank account to replace a bank account that reaches its maximum payment total for a pay cycle. You establish a priority for each alternate bank, such that when the first-priority replacement bank reaches its maximum payment total, the Pay Cycle process turns to the second priority replacement bank to pay the remaining payments, and so forth until all the payments have been made.

For example, assume that bank account B in the preceding scenario was the first priority replacement bank and had a maximum payment total of 80,000.00 EUR, and you also included a second priority replacement bank account C in your rule, with a maximum of 100,000.00 EUR. Your first four payments, totalling 90,000.00 EUR, would be made from the original bank, with its 100,000.00 EUR maximum, and the next four payments, totalling 80,000.00 EUR, would be made from bank account B, for which the maximum would then be reached exactly. The remaining two payments, totalling 40,000.00 EUR, would be paid from bank account C, as shown in this table:

No.	Payment Amount	Bank Account
1	30,000.00 EUR	A
2	20,000.00 EUR	A
3	20,000.00 EUR	A
4	20,000.00 EUR	A
5	20,000.00 EUR	B
6	20,000.00 EUR	B
7	20,000.00 EUR	B
8	20,000.00 EUR	B
9	20,000.00 EUR	C
10	20,000.00 EUR	C

The fact that the Pay Cycle processes highest-amount payments first means that it sometimes uses a lower priority replacement bank account before it uses a first priority replacement bank account—or even before it uses the original bank account. For example, if we change the preceding scenario to add a payment in the amount of 10,000.00 EUR, then that eleventh payment would be processed last because it is least, but would be paid out of bank account B—the first priority replacement bank account—because bank account

B still has 10,000.00 EUR available before it reaches its maximum.

Note. The maximum amount defined for a bank account decreases with each pay cycle run that creates payments from that bank account, but you can adjust the maximum amount definition for a bank account at any time.

Note. The Pay Cycle process does not split a payment among multiple banks when performing bank replacement.

Processing Order When a Bank Replacement Rule Includes Multiple Bank Replacement Options

You can define a bank replacement rule that combines more than one of these five bank replacement option types, subject to the following conditions.

1. If you select *Replace All Payments* to replace the original bank accounts for all payments in a pay cycle with one alternate bank account, you cannot select any of the other four bank replacement option types.

This replacement occurs during the Payment Selection subprocess.

2. The other four—options 2 through 5 in the preceding list—are processed in order (2 through 5).

This processing occurs during the Payment Creation subprocess.

Here's an example of processing if your bank replacement rule has definitions for options 2 through 5. Assume that you have the following bank replacement rule (the example is an unlikely one in actual practice, but it is designed to demonstrate the point simply):

<i>Option type</i>	<i>Condition</i>
Replace bank with another bank.	Replace bank account A with bank account B.
Replace by currency.	Assign payments in Swedish kronor (SEK) to bank account C.
Replace by individual payment limit.	Assign any payment in bank account C over 10,000.00 SEK to bank account D. Assign any payment in bank account B over 5,000.00 EUR to bank account E.
Replace by bank maximum limit.	Assign any payment that causes bank account D to go over a 100,000.00 SEK threshold for the pay cycle to bank account F.

Now assume that you have two vouchers with the following payment amount and bank account information:

1. 7,000.00 EUR, Bank account A.
2. 11,000.00 SEK, Bank account A.

The first voucher would be paid out of bank account E, because the replacement processing would happen in the following order:

1. Replace by bank account: bank account A replaced by bank account B.
2. Replace by currency: no action.
3. Replace by individual payment limit: 7,000.00 EUR is over the individual payment limit for bank account B, so bank account B is replaced by bank account E.

The second voucher would be paid out of bank account D, because the replacement processing would happen in the following order:

1. Replace by bank account: bank account A replaced by bank account B.
2. Replace by currency: because the payment is in SEK, bank account B is replaced by bank account C.
3. Replace by individual payment limit: 10,000.00 SEK is over the individual payment limit for bank account C, so bank account C is replaced by bank account D.

Now, if voucher 2 were one of ten vouchers in SEK in the pay cycle that together totalled over 100,000 SEK, and if it were processed by the pay cycle after the 100,000.00 SEK threshold was reached, then it would be paid out of bank account F.

Payment Method Replacement Considerations

When you replace the bank for all payments, replace a bank with another bank, or replace the bank for payments with a particular currency, you can specify the payment method for the payments drawn on the replacement bank account. If the original *and* replacement payment methods are one of the following, then Pay Cycle applies the replacement payment method to the payments:

- System check.
- Electronic funds transfer (EFT).
- Giro electronic funds transfer (Giro EFT).
- Automated Clearing House (ACH).
- Wire.

Scheduled payments with a payment method other than these four will *not* be assigned a replacement payment method, but will keep the original payment method, regardless of the replacement payment method indicated in the bank replacement rule. For example, if the payment method for a voucher is Draft-Customer EFT and the bank rule specifies a replacement payment method of EFT, the pay cycle still generates a Draft-Customer EFT payment for that voucher, even if the bank account is slated for replacement. If the replacement bank does not support the original payment method in these cases, then the payment generates a bank replacement exception.

If the replacement payment method is EFT, ACH, or Giro EFT and the original payment method on a voucher is System Check, then the Payment Selection subprocess validates that a remit-to bank account exists and routing information is set up for the remit to vendor for the voucher. If not, the payment generates a bank replacement exception.

Note. The Pay Cycle process does not recalculate payment dates when payment methods are replaced. The original scheduled payment date remains the payment date, regardless of any new payment method.

Currency Considerations

If the default currency for an original bank account is different from that of the replacement bank account, then the Pay Cycle process converts the original currency into the replacement bank account's default currency when it is comparing payment amounts to bank account maximum amounts. The exchange rate is based on the payment date.

If a replacement bank does not have a valid payment currency, the Pay Cycle process drops the payment and generates a bank replacement exception.

Bank Replacement Exceptions

Any voucher payments that fail bank replacement processing during pay cycle processing are logged on the Bank Replacement Exceptions page. These vouchers return to their original state, with their original bank account, payment methods, and payment currency intact, waiting to be run in the next pay cycle.

When processing pay cycles through the PeopleSoft Financial Gateway functionality, the system verifies that a payment's layout code is valid for the replacement bank. If the layout code is not valid, the system logs a bank replacement exception. You can resolve or avoid exceptions in the following way:

- To resolve these exception types, add the appropriate layout code to the replacement bank external account definition (on the External Accounts – Payment Methods page). Then rerun the Pay Cycle process.
- To avoid these exception types, confirm that the origin bank and the replacement bank are defined with the appropriate layouts before processing pay cycles.

Prerequisites

To use the Replace by Individual Payment Limit and Replace by Bank Maximum Limit options, you must define individual payment limits and bank account maximums in the PayCycle Amount Limits group box on the External Accounts - Account Information page when you set up bank accounts.

Bank Replacement Rule page

Use the Select check box to select the bank replacement options that you want to include in the bank replacement rule.

Replace All Payments**Bank SetID, Bank Code, and Bank Account**

Enter the identifying information for the bank account from which you want to pay all payments in the pay cycle. This bank account will replace all original bank accounts for the payments selected to run in the pay cycle.

Pay Method

(Optional) Select a replacement payment method. Available payment methods include:

- System Check
- EFT
- ACH
- Giro-EFT
- Wire

This payment method will replace the original payment method on all payments selected for the pay cycle, as long as the original payment method is System Check, EFT, ACH, or Giro-EFT. Payments with any other original payment method specified will still be paid in that original payment method.

If you do not specify a payment method, the payments will be made using the payment method specified on the voucher.

Note. If the payment will be made using the original payment method, and that payment method is not available for the replacement bank, the system will generate a bank replacement exception and the payment will be dropped from the pay cycle.

See [Chapter 8, "Establishing Pay Cycles," Specifying Bank and Payment Methods Criteria, page 178.](#)

Currency

(Optional) Specify a replacement currency. This currency will replace the original currencies specified on all payments selected for the pay cycle. The currency conversion uses the payment date to determine the exchange rate.

If you do not specify a currency, the payments will be made in the currency specified on the voucher.

Note. If you do not specify a replacement currency and the currency on the voucher is not valid for the replacement bank, the system will generate a bank replacement exception and the payment will be dropped from the pay cycle.

Note. You cannot select any other replacement options when you select Replace All Payments.

Replace Bank with Another Bank

Select to have all payments from a specified bank account (and optionally, payment method) paid from a replacement bank account (and optionally, payment method).

In the Replace row, enter the identifying information for the original bank account that you want to replace. Do the same in the With row for the replacement bank account.

The bank setID, bank code, and bank account are required, but the payment method is optional. If you opt to replace the payment method, the same conditions apply as when you specify a replacement payment method for the Replace All Payments option.

Note. The replacement bank account must support the currencies supported by the original bank account. If the original currency on a voucher is not valid for the replacement bank, the system generates a bank replacement exception and the payment is dropped from the pay cycle.

Replace by Currency

Select to have all payments in a specified currency paid from a replacement bank account.

Enter the currency and the identifying information for the replacement bank account. Payment method is optional, and if you opt to replace the payment method, the same conditions apply as when you specify a replacement payment method for the Replace All Payments option.

Note. The currency must be valid for the replacement bank account.

Replace by Individual Payment Limit

Select to assign an alternate bank account to any individual payment that exceeds a monetary amount limit that is predefined for the original bank account.

Enter the identifying information for the original bank account in the Replace row, and enter the identifying information for the replacement bank account in the With row.

Note. You set up the maximum amount for an individual payment from a bank account on the External Accounts - Account Information page.

Replace by Bank Maximum Limit

Select to assign an alternate bank account to any payments that remain after the monetary total of accumulated payments from a single bank account exceeds a defined monetary limit for that bank account.

Enter the identifying information for the original bank account in the Replace row, and enter the identifying information for the replacement bank accounts in the With grid. You can enter multiple replacement bank accounts for each original bank account that you specify. The Pay Cycle process assigns payments to each replacement bank account in the order that you add them to the grid, moving on to the next replacement bank account when an earlier bank account in the order has reached its maximum payment limit.

When you save or refresh the page, the Priority field is populated with a number indicating the processing order. The first row has priority 1, the second has priority 2, and so forth.

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts," Defining Account Information

Creating, Updating, and Reusing Pay Cycles

Use the Payment Selection Criteria component (PYCYCL_DEFN) to define pay cycles.

This section provides an overview of pay cycle definition, lists prerequisites, and discusses how to:

- Define pay cycle date criteria.
- Set pay cycle preferences.
- Specify source criteria.
- Specify bank and payment methods criteria.
- Specify pay group and netting criteria.
- Set pay cycle draft options.

Understanding Pay Cycle Definition

This section provides an overview of pay cycle creation and discusses:

- Other payment options.
- Payment forecasting.
- Netting.
- Lost discount alert dates.

Pay Cycle Creation

In PeopleSoft Payables, a pay cycle is a set of payment selection criteria that you use to pay groups of vouchers that share certain characteristics. You can run the Pay Cycle process repeatedly, using the same pay cycle criteria to select payments, by updating the date information. Think of a pay cycle as a payment selection criteria template.

For example, you might want to create two types of pay cycles: one for regular vendors, the other for employees set up as vendors. Or you might want to create checks for each of your business units separately. In this case, you could set up a separate pay cycle for each business unit. PeopleSoft Payables creates payments only for the business unit or units specified in the pay cycle. You can also select payments based on bank information, vendor pay groups, or payment method.

Your pay cycle definition controls the scheduled payments that are eligible for payment in each cycle. Each individual voucher scheduled for payment within the cycle contains information that ultimately determines its selection. To create or update a pay cycle, you use the Payment Selection Criteria component. Each page of the Payment Selection Criteria component defines different aspects of the payment selection cycle.

Other Payment Options

After you have gone through the payment processing routine a few times, you will find that it runs easily. However, occasionally you might have payments that need to be paid outside of the regular payment processing routine. You can use the manual Payment Creation process or express payments to create manual payments, or you can create record-only payments on the Voucher - Payments page.

See [Chapter 22, "Using Additional Payment Processing Options,"](#) page 693.

Payment Forecasting

To see the expected cash requirements for upcoming payment cycles, go to the Forecast by Bank Account page. You can also see the different time intervals for payments on the Forecast Cycle page. You can run the Payment Forecast report (APY2040), which enables you to see your cash requirements by business unit, vendor, bank, or payment method.

See [Chapter 22, "Using Additional Payment Processing Options,"](#) Forecasting Payments, page 741.

Netting

When you create a pay cycle, you can specify to use the netting process to offset accounts receivable and accounts payable transactions for a customer who is also a vendor. Netting decreases the number of transactions between you and your customer or vendor and, by reducing banking fees, saves you business costs. The Netting Bank is a virtual bank account, meaning that no funds are actually paid into or out of the netting account. It is debited and credited by the netted amount of the accounts payable and accounts receivable transactions.

For example, suppose that you are both a customer and vendor to company A and that you set up a contractual netting relationship. You agree on certain intervals to conduct netting and zero out your respective accounts. At netting closing time, you might have the following transactions:

<i>Accounts Payable Transactions (in USD)</i>	<i>Accounts Receivable Transactions (in USD)</i>
100.00	150.00
200.00	50.00
Total: 300.00	Total: 200.00
<200.00>	None
Net: 100.00	None

Instead of performing three accounts payable transactions and two accounts receivable transactions after the netting closing process, you pay a single outstanding payment of 100.00 USD to balance your account. In this example, the books for both you and company A mirror each other.

Netting closing can be run manually from the Manual Select Netting component (NET_MANUAL_SELECT), or it can be run automatically during Pay Cycle. You specify the automatic netting parameters in the Automatic Netting Selection component (NET_AUTO_SELECTION).

Enter the netting reference ID to specify which vendor accounts to run the netting process on. The system creates the netting reference ID when you define your PeopleSoft Payables netting relationship with your vendor. The netting reference ID is a unique identifier that contains information such as the netting date, status, bank, and settlement information.

The Netting Closing Application Engine processes (TR_NET_CLOSE and TR_NET_ARCLS), which are launched by the Pay Cycle process, base the settlement on information contained in the netting contract, maintained in PeopleSoft Cash Management. All balanced payments go through the normal Payment Selection process and are consolidated as a single payment. The netting payment currency and rate are automatically set to match the transaction currency and rate type.

Important! You must have PeopleSoft Cash Management and Receivables installed to use the netting functionality. However, if your organization is *not* using the PeopleSoft Payables netting functionality, you generally do not need PeopleSoft Cash Management installed on your system. Confirm that your implementation does not need PeopleSoft Cash Management installed, and then disable it on the Installed Products page. Disabling products that you do not have installed on the system improves performance.

Note. You can exclude certain vouchers from netting by setting up netting exclusion rules on the Netting Exclusion Parameters page in PeopleSoft Cash Management. The parameters that can determine exclusion include vendor ID, vendor location, vendor classification, and ChartField value.

See *PeopleSoft Cash Management 9.1 PeopleBook*, "Managing Bilateral Netting."

Lost Discount Alert Dates

When you create a pay cycle, you can use the Include Lost Discounts option on the Payment Selection Criteria - Preferences page to elect to include in the current pay cycle any payments that would potentially lose discounts if paid in the next pay cycle. If you do not select the Include Lost Discounts option, the system alerts you to lost discounts using the Lost Discount Alert page when you run the pay cycle, after you run Payment Selection. You can use the Lost Discount Alert page only if you run Payment Selection and Payment Creation separately. Using the Lost Discount Alert page, you can manually include payments with potential lost discounts in the pay cycle before you run Payment Creation. Selecting the Include Lost Discounts option, however, is the only way to include payments with potential lost discounts in a pay cycle if you run Payment Selection and Payment Creation together.

The system calculates whether a discount was potentially lost by comparing the discount terms on the voucher to the next payment through date (the last scheduled payment date that will be included in the next pay cycle) and next payment date (the actual payment date that will be recorded for the payments made in the next pay cycle) that you enter on the Payment Selection Criteria - Dates page. If the following criteria are met for a voucher, then the system includes the payment in the current pay cycle (if you selected the Include Lost Discounts check box) or lists it on the Lost Discount Alerts page (if you didn't select Include Lost Discounts and you run Payment Selection separately from Payment Creation):

- The payment due date on a voucher is greater than the pay through date for the current pay cycle, and indicates that it should be included in a later pay cycle.

- The discount terms on the voucher are such that the discount due date is earlier than the next payment due date, and thus a payment made in the next pay cycle would cause a lost discount.
- The potential lost discount outweighs the potential interest earned on the payment amount if the payment is paid on the due date rather than the discount due date.

You set up discount evaluation criteria, including interest percentage, when you set up bank accounts.

If you lose discounts by not selecting Include Lost Discounts and not manually including payments with potential lost discounts in the pay cycle after running Payment Selection separately, the lost discounts are reported on the Discounts Denied page.

Note. Rebate terms on a voucher are evaluated in the same way as discount terms. However, vouchers that would lose rebates if they aren't paid in the current pay cycle (and pass the interest amount versus rebate amount evaluation) are always automatically taken during Pay Cycle processing, irrespective of whether you select Include Lost Discounts. Rebates are not tracked and don't appear on the Lost Discount Alert page.

The following example illustrates how the system handles potential lost discounts:

Suppose that a voucher has a discount due date of March 21. The pay cycle has a pay through date of March 15 and a pay date of March 18. The following pay cycle has a pay through date of March 31 with a pay date of April 15.

- If you selected the Include Lost Discount option, the system automatically includes the item for payment in the current pay cycle.
- If you deselected the Include Lost Discount option, the system alerts you on the Lost Discount Alerts page that you have a potential lost discount.

Chapter 21, "Processing Pay Cycles," Understanding Pay Cycle Alerts, page 666

Prerequisites

Before you can create pay cycles using the Payment Selection Criteria component, you must:

- Set up banks and bank accounts.
- (Optional) Define bank replacement rules.
- (Optional) Set up vendor pay groups.
- (Optional) Set up netting reference codes and exclusion parameters.
- (Optional) Tailor your pay cycle definition.

Before you use a pay cycle, you must complete all PeopleSoft Payables setup and create vouchers with scheduled payments or define payment sources for the PeopleSoft Payables payment interface.

☐ Use Holiday Calendar:

Payment Selection Criteria - Dates page

Pay Cycle	Enter a description for the pay cycle.
Go To Pay Cycle Manger	Click to save the pay cycle and open the Pay Cycle Manager, where you initiate and control processing for the pay cycle.

Pay Cycle Selection Dates

Pay From Date	Enter the beginning date of the pay cycle. The system compares this date to the scheduled pay date for the voucher payment schedule. If the scheduled pay date is equal to or greater than the pay from date, the voucher payment schedule can be paid in the current pay cycle if the schedule meets the other payment selection criteria.
Pay Through Date	Enter the ending date of the pay cycle. The system compares this date to the scheduled pay date for the voucher payment schedule. If the scheduled pay date is on or before the pay through date, the voucher payment schedule can be paid in the current pay cycle if the schedule meets the other payment selection criteria.
Payment Date	Enter the payment date. The system tags all payments created in the pay cycle with this date and prints it on checks or shows it on other payment methods. It can differ from the pay through date. The scheduled pay date has to be between the pay from date and the pay through date so that it is included in the pay cycle.
Next Pay Through Date	Enter the estimated end date for the next pay cycle payment period. This estimate is used to help determine whether discounts will be lost if a payment is made in the next pay cycle.
Next Payment Date	Enter the estimated payment date for the next scheduled pay cycle. This estimate is used to help determine whether discounts will be lost if a payment is made in the next pay cycle. <u>See Chapter 8, "Establishing Pay Cycles," Understanding Pay Cycle Definition, page 162.</u>
Change Selection Dates	Change the specified payment dates by <i>Day(s)</i> , <i>Month(s)</i> or <i>Week(s)</i> . Click Increment to advance all dates by that amount, or click Decrement to decrease all dates by that amount.

Accounting Date and Withholding Date

Accounting Date

Determines the fiscal year and period to which the payment accounting entries are posted. Three options are available for the date that the system uses as the accounting date for the payments created in the pay cycle:

Current: The current date.

Payment: The value in the Payment Date field.

Specific: The specific value that you enter. When you select this option, the date field next to the Accounting Date field is activated. Enter the specific date in the date field.

Withholding Date

Enter the date that determines the reporting period in which a withholding amount is reported for a vendor. Three options are available for the date that the system uses as the withholding date for withholdings associated with payments created in the pay cycle:

Current: The current date.

Payment: The value in the Payment Date field.

Specific: The specific value that you enter. When you select this option, the date field next to the Withholding Date field is activated. Enter the specific date in the date field.

For example, you could be running a pay cycle for December 31 but actually want the withholdings to be reported for the following year. To accomplish this, you would specify January 1 as the Withholding Date and the withholdings would be declared the following year. This date is also used on period-based withholdings to determine which period is going to be used to properly calculate withholdings.

Business Day Validation

Business calendars enable you to verify that transaction processing dates are valid working days. The business calendar is used throughout PeopleSoft applications to define nonworking days and holidays.

Select from the following options:

No Validation

Select when no holidays or weekends are considered when determining payment and discount due dates.

Use Standard Week

Select to use business days from Monday through Friday to determine valid payment dates. You can select Validate Pay Through Dates and Validate Payment Dates if you select this option.

Use Holiday Calendar

Select to use both business days and holidays to determine valid discount and payment dates. If you select this option, you must select an appropriate holiday business calendar from the Holiday List ID field. You can select Validate Pay Through Dates and Validate Payment Dates if you select this option.

Validate Pay Through Dates Select to validate the pay through date that you enter, ensuring that the date falls on a valid business day.

Validate Payment Dates Select to validate the payment date that you enter, ensuring that the date falls on a valid business day.

Payment Selection Criteria - Preferences page

General Options

Use Vendor Pay Group

Select to include vendor pay group information as part of your pay cycle selection criteria. Selecting this check box makes the vendor pay group information available for entry on the Pay Group/Netting page. The fields on the Pay Group/Netting page are not enabled unless you select this check box. Also, if you deselect this check box after specifying vendor pay groups, the system does not select the pay groups, even if you have pay groups defined for the pay cycle.

Note. The Pay Cycle process uses vendor pay groups as selection criteria only for vouchers that were entered through PeopleSoft Payables. The Pay Cycle process ignores any vendor pay group selection criteria when selecting payments from non-PeopleSoft Payables sources that are integrated through the PeopleSoft Payables Payment Interface, such as PeopleSoft Expenses.

Process EFT/ACH Pre-Note (process electronic funds transfer/automated clearing house prenote)

Select to include any EFT or ACH prenotes in this pay cycle.

Note. The system generates prenotes only if there is a payment selected in the pay cycle. To avoid generating prenotes for a bank that may not be set up for EFT or ACH and also does not have any EFT or ACH vouchers in that pay cycle, the system creates prenotes for all of the vendors from the first bank that the pay cycle processes that has an EFT or ACH payment created. If there are no EFT or ACH vouchers in the pay cycle, the prenotes will be created for the first bank that the pay cycle processes. In addition, the system generates a prenote only if the remit location for the vendor is the same as its main vendor location.

Print LC Advice (print letter- of-credit advice)

Select to enable a process that prints advices for letter-of-credit payments.

Automatic Increment Dates

Select to enable a process that automatically advances the Pay From Date, Pay Through Date, Payment Date, Next Pay Through Date, and Next Payment Date fields on the Dates page. The new dates are validated, based upon the calendar and validation options set on the Dates page. Pay through dates automatically advance, taking into account non-work days (holidays, weekends) when such days immediately follow the calculated pay through date. The next pay cycle run date advances to the next working day. The increment is controlled on the Dates page and may be any number of days, weeks, or months.

Email Payment Advice

Select to enable the system to send an email payment advice to vendors that have this option enabled.

Financial Sanctions list edit

Select to validate the vendors against financial sanctions lists (for example, the Specially Designated Nationals (SDN) list) during the Payment Selection process of the pay cycle. If financial sanctions validation is enabled at the installation level, all remit vendors selected for this pay cycle are validated. If financial sanctions validation is enabled at the bank level, only selected remit vendors whose banks are enabled for financial sanctions validation are validated. The system updates the vendor's financial sanctions status on the Vendor Information component (VNDR_ID).

If you do not select this option, the system does not validate the vendors during the Payment Selection process, but uses the existing financial sanctions status to determine whether the vendor is selected for payment.

The system does not select payments for a vendor with a financial sanctions status of *Blocked*. The system also does not select payments for a vendor with a financial sanctions status of *Review* unless financial sanctions validation is enabled at the bank level and that vendor's bank does not require financial sanctions validation. If the system validates the vendors during the Payment Selection process and the vendor's financial sanctions status changes to *Review*, the system creates payment validation errors for this vendor's payments. You can view these payment validation errors on the Pay Cycle Financial Sanction Warnings page.

Note. Financial sanctions validation is performed only on remit vendors with a source transaction of *VCHR* (Accounts Payable transactions).

See [Chapter 21, "Processing Pay Cycles," Understanding Financial Sanctions Validation, page 666.](#)

(USF) Workflow Certification

For U.S. federal agencies only. Select to enable workflow notification of payment schedules requiring certification. Select *Certifier* as the approval option and enter the user ID of the certifier.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Certifying Federal Payment Schedules, page 1045.](#)

Include Lost Discount

Select to process scheduled payments automatically if you will earn a discount for the payment in the current pay cycle but might lose it if the payment is processed in the next pay cycle, as indicated by the next pay through date and the next payment date specified on the Dates page.

See [Chapter 8, "Establishing Pay Cycles," Understanding Pay Cycle Definition, page 162.](#)

Process Bank Charges

If this option is selected, the system calculates the actual payment amount by deducting the bank transfer charge from the payment amount when the charge is to be paid by the vendor. The operation takes place during the Pay Cycle process and only applies to EFT payments.

Calculate Value Date

Select to enable value dates.

You can choose to select a date a few days before or after the actual transfer date to make funds available. The date on which funds are available (either as a deposit or a settlement) is known as the *value date* of a transaction.

Banks negotiate the value date to be a specified number of days before or after the business date of a transaction. For payments or settlements, set the value date to a specified number of days *before* the business date. This means that the check must clear the bank prior to settling with the individual beneficiary. For deposits, set the value date to a specified number of days *after* the business date. This is similar to the concept of *float* used in the United States.

The decisions that you make about value dates, coupled with holiday options, influence your cash flow.

You set up value date calculation for bank accounts on the External Accounts - Payment Methods page.

See *PeopleSoft Banks Setup and Processing 9.1 PeopleBook*, "Setting Up External, Internal, and Netting Accounts," Defining Payment Methods.

Use Recipient's Pref. Lang.

Sends payments in the vendor's preferred language. If it is not selected, the payments are sent in the language selected in the Preferred Language field in this pay cycle.

Suppress Zero Amount Check (use recipient's preferred language)

Select to process zero-amount checks without attaching a payment reference ID (check number).

Note. The payment will have a payment ID (system identifier) associated with it.

Report Output

Select the format you want to use when printing checks. Options are *Crystal Check*, *Crystal and BI Publisher*, or *BI Publisher*.

Crystal Check is the default value.

Preferred Language

Select the language to use when printing checks. When printing checks from pay cycle, the system will use the language selected here even if the Use Recipient's Pref. Lang. field is selected.

Approval

Identify whether approvals are necessary and if so, by whom, the *User* or *Certifier*. Values are *Certifier*, *None*, or *User*. Selecting *Certifier* or *User* makes the pay cycle remain in unapproved status until the pay cycle is approved on the Pay Cycle Approval page. If you do not select this option, the pay cycle advances to *Approved* status without requiring approval. The *Certifier* option is for U.S. federal agencies only.

Note. Payments for pay cycles with *User* as the approval option selected are not eligible for posting until the pay cycle has been approved.

See [Chapter 21, "Processing Pay Cycles," Approving the Pay Cycle, page 681.](#)

(USF) Certifier

Designate a user to certify payment schedules. This field appears only if you enable federal payment schedules on the installment options.

Note. The certifier cannot be the same user as the initiator of the pay cycle.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Certifying Federal Payment Schedules, page 1045.](#)

Netting Option

Enables you to include the Payables and Receivables Netting Closing processes in this pay cycle. Values are:

N: Not Applicable. The netting close processes don't run.

A: Process All Netting IDs. The netting close processes run for all vendors and customers.

S: Specify Netting ID. Runs the netting close processes based on the netting ID that you specify on the Pay Group/Netting page. Selecting this option activates the fields in the Netting Group group box on the Pay Group/Netting page.

See *PeopleSoft Cash Management 9.1 PeopleBook*, "Managing Bilateral Netting."

Step Group

Select which group of steps to use for this pay cycle. You must define these groups beforehand on the Pay Cycle Step Table page.

Note. Oracle supplies a standard step group, or you can create your own pay cycle step group.

Credit Options

Define processing options for credit vouchers.

Credit Vouchers

Select from the following values:

- *Do Not Process Credit Vouchers*: Select to prevent the Pay Cycle process from including credit vouchers when creating payments. The system issues payments for outstanding debit vouchers even though you may have a credit balance with a vendor.
- *Process Credit Vouchers*: Select to apply credit vouchers automatically during the Pay Cycle process. The system applies the credits by amount from greatest to smallest. If credits exceed debits, the system issues a zero-amount check and, on the check advice, identifies the debit vouchers applied against the credit. The system reschedules any unapplied credit for the next pay cycle. Credit vouchers grouped without any debit vouchers will be flagged as negative payment exceptions.

Debit and credit vouchers must have the same:

- Transaction currency.
- Pay-from bank and account.
- Remit-to vendor (must have same location and address).
- Payment method.
- Payment handling.
- Business Unit (only when Do Not Mix with other Units is selected in the AP BU definition).
- *Process When DRs >= CRs*: Select to apply credit vouchers only if the sum of debit voucher amounts equals or exceeds the sum of credit voucher amounts for the payments selected in the pay cycle. If credits exceed debits, no payment is issued. If credits equal debits, a zero-amount payment is issued. Debit and credit vouchers must match according to the criteria listed for the *Process Credit Vouchers* option.
- *Process When DRs Exceed CRs*: Select to apply credit vouchers only if the sum of debit voucher amounts exceeds the sum of credit voucher amounts for the payments selected in the pay cycle. If credits equal or exceed debits, no payment is issued. Debit and credit vouchers must match according to the same criteria listed for the *Process Credit Vouchers* option.

Date Limit

Select from the following values:

No Date Limit: The system applies all outstanding credit vouchers, regardless of date.

Pay Cycle Selection Dates: Limits the search for credit vouchers to the pay cycle dates.

Notification**Payment Error User ID**

Enter the user ID that the system uses to route PeopleSoft Financial Gateway payment errors email notification. This field is part of the PeopleSoft Financial Gateway integration functionality. If the PeopleSoft Financial Gateway encounters errors when processing payments, defined users receive an email containing payment error summary information and a link to the Pay Cycle Errors page.

Note. To select a user ID here, you must first enter a valid email address on the User Preferences - PayCycle page.

Payment Advice User ID

When the user selects the Email Payment Advice option, the current user ID will be entered by default into this field; you can select a different user ID, if necessary.

See [Chapter 9, "Setting Up Draft, Payment, and Voucher Processing," Setting Up the PeopleSoft Financial Gateway Integration, page 210.](#)

Bank Replacement Rules**SetID**

Select a bank replacement setID for this pay cycle.

Rule Name

Select a bank replacement rule name for this pay cycle.

Bank replacement rules identify alternate bank accounts to replace the bank account specified on the voucher. They also identify the criteria that must be met for bank replacement to occur. You define bank replacement rules on the Bank Replacement Rules page.

Note. If financial sanctions are enabled at the bank level, you could replace a bank that does not require financial sanctions validation with one that does require it. Because bank replacement occurs after the Payment Selection process, the system could select payments for vendors that were not validated, even though the replacement bank does require financial sanctions validation. If you are using bank replacement processing, and you enable financial sanctions at the bank level, you should run the Financial Sanctions Validation process prior to running the Pay Cycle process.

☒	VCHR	Accounts Payable Vouchers			
Business Unit Customize Find View All First 1-3 of 6 Last					
Process	*Business Unit	Description			
☒	US001	US001 NEW YORK OPERATIONS			
☒	US002	US002 MASSACHUSETTS OPERATIONS			
☒	US003	US003 CALIFORNIA OPERATIONS			

Source / BU page

Source

The source transactions define the types of payments processed in a pay cycle. You set up new or review delivered source transaction definitions on the Payment Source and Payment Source Search Definition pages, and source transaction mapping detail on the Pay Cycle Mapping and Pay Cycle Mapping Detail pages. If you set up a new payment source, you must map it to the payables payment tables using the mapping pages.

Select or deselect each source transaction by selecting or deselecting the Process check box next to the appropriate source transaction. These are the delivered values:

EXAD	Employee Advances Definition.
EXPN	Employee Expense Sheet Definition.
TR	Treasury Settlement Payments.
TRET	Treasury EFT Settlement Payments.
VCHR	Accounts Payable Vouchers.

Note. You must select a least one source. At a minimum, you should select the Accounts Payable Vouchers source transaction.

Note. If you create a new payment source, you must map it in the Pay Cycle Mapping component.

Business Unit

You can select multiple business units. For example, your regular pay cycle can include all business units. Select the Process check box for each business unit that you want to include during the pay cycle to narrow the selection criteria. Only vouchers for the business units that you specify are included in the pay cycle. The system uses the vendor and voucher information at the business unit level unless you override that information. If you do not want to process a particular business unit during a specific run of the Pay Cycle process, deselect the Process check box for that business unit.

Note. You must select at least one business unit for the pay cycle to create any payments.

Process	*Payment Method		
☒	System Check	▼	+ -

Bank / Method page

Bank Account

Enter banks and bank accounts from which to draw payments in the pay cycle. Every voucher that has a scheduled payment from a bank, bank account, and payment method that matches the ones you specify here becomes eligible for payment in this pay cycle. You can enter multiple banks and accounts.

Note. You can specify replacement bank accounts for a pay cycle if a voucher or set of vouchers meet certain criteria by selecting a bank replacement rule on the Payment Selection Criteria - Preferences page. You set up bank replacement rules on the Bank Replacement Rules page.

Process Selects vouchers with scheduled payments drawn on the specified bank account for pay cycle processing.

Currency Shows the default currency for the bank account.

Pay Method

If the payment method for a voucher's scheduled payments is the same as the pay cycle payment method, the voucher is a candidate for selection. For each bank account, you can specify multiple payment methods. Specify the payment methods to be processed during the pay cycle by selecting the Process check box next to the appropriate payment method. These are the available payment method values:

<i>Automated Clearing House</i>	The Pay Cycle process creates an electronic file containing the required clearinghouse information. You send all applicable payments in one file to a clearinghouse. The clearinghouse then sends the payments to your vendor's bank.
<i>Draft-Customer EFT</i> (draft-customer electronic funds transfer)	The Pay Cycle process creates an EFT file instead of printed drafts. You send the file to your bank when the draft payment is due.
<i>Draft-Customer Initiated</i>	The Pay Cycle process creates customer-initiated draft payments before the draft due date that details the draft identification number, the draft amount, and the draft maturity date. You send the draft to your vendor.
<i>Electronic Funds Transfer</i>	The Pay Cycle process creates an electronic file containing the required bank and payment information. You send all applicable payments in one file to your bank for payment. The bank sends the payments to your vendor's bank.
<i>Giro-EFT</i>	The Pay Cycle process collects all EFT Giro transactions and creates an output data file containing the payment information. You send the output data file to the bank electronically or on taped media. This payment method is primarily used in Singapore.
<i>Letter of Credit</i>	The Pay Cycle process groups all vouchers that have the same letter of credit ID into a single payment. Only those payments for which you have selected the L/C Advice option on the Preference page have a printed letter of credit advice.
<i>System Check</i>	The system checks are scheduled payments that require a printed paper check and remittance advice. At voucher entry, indicate that the payment is a system check. When you run the Pay Cycle process, it creates system checks.
<i>Wire Transfer</i>	During the Pay Cycle process, the Wire Transfer payment method generates a remittance advice for paying by wire.

Chapter 6, "Setting Up Payment Formats and Payment Forms," page 109

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts"

Specifying Pay Group and Netting Criteria

Access the Pay Group / Netting page (Accounts Payable, Payments, Pay Cycle Processing, Payment Selection Criteria, Pay Group/Netting).

You must select the Use Vendor Pay Group check box or enter a netting option on the Preferences page to enter values on this page.

Pay Group

Enter the setID and pay group code for each pay group that you want to process. Select or deselect the Process check box, depending on whether you want to include the pay group in the current cycle. If you have pay groups selected, only scheduled payments that contain one of the selected pay groups are paid. Use the row insert function to add more pay groups to the pay cycle.

Note. If you deselect the Use Vendor Pay Group option on the Preferences page for a pay cycle, any information that you enter in this grid will not apply as payment selection criteria for that pay cycle.

Note. The Pay Cycle process uses vendor pay groups as selection criteria only for vouchers that were input through PeopleSoft Payables. The Pay Cycle process ignores any vendor pay group selection criteria when selecting payments from non-PeopleSoft Payables sources that are integrated through the PeopleSoft Payables Payment Interface, such as PeopleSoft Expenses.

Netting

For each qualified netting reference ID, the Pay Cycle process processes netting closing for both accounts payable and accounts receivable transactions. Select the Process option to indicate that the Pay Cycle process needs to run the Netting Closing processes. During the Pay Cycle process, the Payables Netting Closing process starts and selects those vouchers that fall within the netting date range with a netting status of A (approved). The system then launches the Receivables Netting Closing process. After processing the PeopleSoft Receivables transactions, the process returns to the Payables netting process, which updates the netting status to C (closed).

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Defining Procurement Options," Defining Vendor Pay Group Codes

PeopleSoft Cash Management 9.1 PeopleBook, "Managing Bilateral Netting"

Setting Pay Cycle Draft Options

Access the Draft Options page (Accounts Payable, Payments, Pay Cycle Processing, Payment Selection Criteria, Draft Options).

Dates	Preferences	Source / BU	Bank / Method	Pay Group / Netting	Draft Options
Pay Cycle: DAILY		DAILY PAYMENT RUN			
Pay From Date: 01/02/1900		Pay Through Date: 08/10/2000		Payment Date: 08/10/2000	
Draft Options ☐ Process Optimization Max # of Drafts: (use as pay cycle default) ☐ Process Draft Rounding Rounding Position: (use as pay cycle default) *Remaining Amount Action: Do not issue Draft ▼ Payment Method: ▼ ☐ Preapprove					

Draft Options page

Draft optimization, or stamp tax minimization, in PeopleSoft Payables is primarily applied to Japanese domestic drafts that are created during the customer-initiated Draft Staging Application Engine process (AP_DFT_PROC). Draft rounding enables you to control at what point a draft is issued for payment and what alternate payment method is used for those payments that do not meet your specifications.

Process Optimization

Select to enable draft optimization processing for the pay cycle.

Max # of Drafts

If you selected Process Optimization, you can either leave this blank to have the system use the default specified at the vendor, or you can specify the maximum number of drafts that are created during the pay cycle by entering a value in this field.

Note. At the vendor level, you can either specify a maximum number of drafts or select the *Pay Cycle Default* value. If you select *Pay Cycle Default* for a vendor, then Pay Cycle processing uses the value of the maximum number of drafts that you enter here. If you enter a maximum number of drafts for the vendor and leave the Max # of Drafts field blank on this page, then Pay Cycle processing uses the number for the vendor.

Process Draft Rounding

Select to enable draft rounding for the pay cycle.

Rounding Position

If you selected Process Draft Rounding, you can either leave this blank to have the system use the default specified at the vendor, or specify the rounding position used during the pay cycle by entering a value in this field.

The rounding position rounds the draft payment amount down to the whole value that you set. For example, if you enter 4, then the draft payment must be equal to or greater than 1,000 before a draft is created. All amounts above 1,000 are rounded down to the nearest 1,000, and the remaining amount is handled according to the remaining amount action that you specify.

Note. At the vendor level, you can either specify a rounding position or select the *Pay Cycle Default* value. If you select *Pay Cycle Default* for a vendor, then Pay Cycle processing uses the value of rounding position that you enter here. If you enter a rounding position value for the vendor and leave the Rounding Position field blank on this page, then Pay Cycle processing uses the rounding position value for the vendor.

Remaining Amount Action

Specifies the handling of the remaining draft amount after draft rounding is complete. These are the available values:

Alternate Pay Mthd (alternate pay method): You use the Payment Method field to specify by what payment method the remaining draft amount is paid.

Do not issue Draft: Holds the remaining draft amount and adds it to the next draft payment. A draft payment for the remaining amount is not issued. Because the remaining draft amount is not paid on this pay cycle, it is available for payment in the next pay cycle, provided that the selection criteria are met.

Payment Method

Select the payment methods by which the amount left after rounding calculation is paid. You can select a payment method only if you specify *Alternate Pay Mthd* in the Remaining Amount Action field.

Preapprove

Creates draft payments with a status of *Approved*. If this check box is deselected, draft payments are created with a status of *Created*. If the status is *Created*, then you must either manually approve drafts on the Draft Approval page or run the Draft Recon and Approval (draft reconciliation and approval) process. Depending on the Payables Definition setup, a status of *Approved* may be required before accounting entries can be generated in the Payment Posting process.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Defining Procurement Options," Establishing Additional Payment Processing Options

Configuring Pay Cycles for PeopleSoft Financial Gateway Processing

Use the following components to set up your pay cycles for PeopleSoft Financial Gateway processing:

- Pay Cycle Step Definition (PYCYCL_STEP_DFN).
- Pay Cycle Map Definition (PYCYCL_MAP_DEFN).

This section provides an overview of pay cycle for PeopleSoft Financial Gateway processing and discusses how to define PeopleSoft Financial Gateway mapping details.

Understanding Pay Cycle and PeopleSoft Financial Gateway Integration

During pay cycle processing, PeopleSoft Payables communicates with the PeopleSoft Financial Gateway to process the specific payments marked for PeopleSoft Financial Gateway processing. However, you must first configure the pay cycle functionality to enable this process.

To enable pay cycles for PeopleSoft Financial Gateway functionality, you:

1. Access the Source Registration page in the PeopleSoft Financial Gateway functionality.
2. Enter Payables (*AP*) as source system, and verify that the correct setup appears (such as dispatch status and last payment number). If you want the PeopleSoft Financial Gateway functionality to handle expense payments, you must also verify the Expense (*EX*) source system.
3. Access the External Bank Account page, and define the Settle By and Layout code for a bank account's electronic payment method.
4. (Optional) Set up the EFT vendor with the correct default EFT layout.
5. Enter a voucher with an EFT scheduled payment, and ensure that the PeopleSoft Financial Gateway functionality settles the scheduled payment.
6. (Optional) On the Payment Selection Criteria page, specify an user ID for payment error notification.

A valid email address is required in the User Preferences - PayCycle page.

7. Run the Pay Cycle process to verify that the configuration works properly.

Chapter 9

Setting Up Draft, Payment, and Voucher Processing

This chapter discusses how to:

- Set up bank transfer charges.
- Set up payment rescheduling.
- Set up aging categories for vendor liability aging reports.
- Set up draft processing.
- Set up multicurrency tables.
- Set up multiple currencies in PeopleSoft Payables control tables.
- Set up the PeopleSoft Payables revaluation process.
- Set up the PeopleSoft Financial Gateway integration.
- Set up inquiry search criteria.

Setting Up Bank Transfer Charges

To set up your bank transfer charges, use the following components:

- Bank Transfer Charge Code (BCH_CHARGE_CD).
- Bank Transfer Charge (BCH_BANK_CHRG).
- External Accounts (BANK_EXTERNAL).
- Vendor Information (VNDR_ID).

This section provides an overview of bank transfer charge setup and discusses how to:

- Enable bank transfer charge processing at the bank level.
- Define bank charge options at the vendor level.

Understanding Bank Transfer Charge Setup

To set up bank transfer charge processing:

1. Create bank transfer charge codes (which are used to create the Bank Transfer Charge table) on the Bank Transfer Charge Code page.
2. Define charge codes according to the interbank and intrabank remittance on the Bank Transfer Charge page.
3. Define the processing options at the external bank account level.
4. Define the processing options at the vendor location level.

Pages Used to Set Up Bank Transfer Charges

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Bank Transfer Charge Code	BCH_CHARGE_CD	Banking, Banks and Branches, Bank Transfer Charge Code	Define a set of bank charge amounts to be used in the Bank Transfer Charge table. The bank charge amounts are set up according to the bank account of the addressee and the range of payment amounts. <i>See PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up Additional Banking Information," Defining Bank Transfer Charges.</i>
Bank Transfer Charge	BCH_BANK_CHRG	Banking, Banks and Branches, Bank Transfer Charge	Define the bank charge code according to the interbank and intrabank remittance. <i>See PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up Additional Banking Information," Defining Bank Transfer Charges.</i>
External Accounts	BANK_PNL2	Banking, Bank Accounts, External Accounts	Set up external accounts.

Page Name	Definition Name	Navigation	Usage
Vendor Information - Location: Payables Options	VNDR_PAY_OPT_SEC	Vendors, Vendor Information, Add/Update, Vendor, Location Click the Payables link on the Vendor Information - Location page and expand the Electronic File Options section.	Define the party to whom the bank transfer charge is charged.

Enabling Bank Transfer Charge Processing at the Bank Level

Access the External Accounts page (Banking, Bank Accounts, External Accounts).

External Accounts page

External Accounts page

To enable bank transfer charge processing:

1. Select the TRF Charge check box in the Account Use group box.

The system inserts a new row in the Chartfields tab.

2. *Bank Charge* (bank charge) appears by default as the account type in the Acct Type (account type) field in the Chartfields tab.

3. Enter the account code for suspense accounting for the bank transfer charge in the Account field in the Chartfields tab.

During payment posting, the system uses this code to hold the bank transfer charge deducted from the vendor payment.

See Also

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts," Defining External Account Information

Defining Bank Charge Options at the Vendor Level

Access the Vendor Information - Location: Payables Options page (click the Payables link on the Vendor Information - Location page and expand the Electronic File Options section).

Expand the Electronic File Options collapsible section.

Use this page to define the party to whom the bank transfer is charged. Bank transfer charges are based on either the Classified Charge Amount table or a user-specified amount.

Transfer Cost Code

Select from the following options:

Payee: If you select this option, one of two things happens depending on the option you select in the Bank Charge source field.

Payer: If you select this option, this function is not activated regardless of the Bank Charge source. The bank transfer charge is not considered during payment processing, and no accounting entry for the bank transfer charge is generated.

Bank Charge source

Select from the following options:

Table: If you select this field in conjunction with the *Payee* option in the Transfer Cost Code field, the system looks for the amount of charge defined in the table based on the payment condition and deducts that amount from the payment. The system also creates an accounting entry for this charge at the time of payment posting.

User: If you select this field in conjunction with the *Payee* value in the Transfer Cost Code field, the system deducts the amount that you entered in the Amount field.

Warning! When the bank charge source is *User*, the bank transfer charge setting is not mandatory because the payment process does not access the Bank Transfer Charge table. However, the system uses the table to output the difference between the assumable charge, which is calculated from the table, and the actual deducted amount of the payment. For reporting purposes, the Bank Transfer Charge table must exist even though the bank charge source is *User*. Otherwise, the assumable charge amount appears as 0.

Note. Within the pay cycle, the system does not select scheduled payment when the amount of the charge exceeds the amount of the remittance.

Defining Vendor Bank Accounts

Setting Up Payment Rescheduling

To set up your payments rescheduling, use the Reschedule Payments component (SMT_SPLIT_CDTN_COM).

This section discusses how to:

- Set up the reschedule payments conditions.
- Set up reschedule payments options for vendors.

Pages Used to Set Up Payment Rescheduling

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Reschedule Payments	SMT_SPLIT_CDTN	Set Up Financials/Supply Chain, Product Related, Procurement Options, Payments, Reschedule Payment Conditions, Reschedule Payments	Add, update, and correct reschedule conditions that define agreements with your vendors.
Vendor Information - Location: Payables Options	VNDR_PAY_OPT_SEC	Vendors, Vendor Information, Add/Update, Vendor, Location Click the Payables link on the Vendor Information - Location page and expand the Additional Payables Options section.	Access reschedule payment option.

Setting Up the Reschedule Payments Conditions

Access the Reschedule Payments page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Payments, Reschedule Payment Conditions, Reschedule Payments).

Reschedule Payments

Details Bank Account

Reschedule Percentage	SetID	Terms	SetID	Draft Sight	Reusable	
100.00000000	SHARE	00	SHARE	MONT3	☐	

Reschedule Payments page

- Amount** Enter the amount. The system applies the condition in the Maintain Reschedule ID group box, if the total amount of vouchers is less than or equal to this amount. Otherwise, the system applies the conditions in the Reschedule ID Control group box.
- Terms SetID** Displays the setID for payment terms.
- Sight SetID** Displays the setID for draft sight code. You can only modify this field when any kind of draft, such as *BEF* (customer-initiated EFT draft), *BOO* (customer-initiated draft), or *DFT* (vendor-initiated draft), is specified as payment method that requires draft sight code.
- Draft Sight** Select the draft sight code when the payment method is *BEF*, *BOO*, or *DFT*. This field is disabled when the specified payment method is nondraft. It is enabled and also becomes required when any kind of draft (*BEF*, *BOO*, or *DFT*) is specified as payment method.
- Payment Method** Select the payment method, such as *ACH* (automated clearing house), *EFT* (electronic funds transfer), or *Manual*.

Using the example in the screen shot, the following conditions apply:

- When the total amount of vouchers in a certain period of time is less than or equal to 10,000,000 JPY, pay the full amount with EFT at the end of month.
- When the total amount of vouchers in a certain period of time is over 10,000,000 JPY and the basis date is between the 1st and the 15th, pay for 60 percent of the total in EFT at the end of the month and pay for 40 percent of the total in customer initiated draft with draft sight three months at the end of the month.

Notice that in this screen shot, the Reusable check box is selected for the 40 percent line. That means that the system evaluates scheduled payments every time that you run the Reschedule Payments process.

- When the total amount of vouchers in a certain period of time is over 10,000,000 JPY and the basis date is between the 16th and the 31st, pay for 50 percent of the total with a check on the 10th of the next month and pay for 50 percent of the total in customer initiated draft with draft sight 3 months on the 10th of the next month.

Reschedule ID Control

Select the Details tab.

Basis From Day and Basis To Day	Enter the range of dates for conditions. When the Reschedule Payments Application Engine process (AP_SMT_SPLIT) refers to conditions in the Reschedule ID Control group box, it refers to a reschedule condition that the base date on the Reschedule Payments Request page is between the Basis From Day and Basis To Day that you enter here. For example, suppose three conditions are specified in the Reschedule ID Control group box with the following Basis From Day and Basis To Day values: 1st to 10th, 11th to 20th, and 21st to 31st. If the base date on the Reschedule Payments Request page is January 5, the system refers a condition with Basis From Day and Basis To Day of 1st to 10th.
Reschedule Percentage	To reschedule payments into parts, enter the percentage of the total amount of vouchers.
SetID	Select the setID of the payment terms for the reschedule ID control.
Terms	Select the payment terms for the reschedule ID control.
SetID	Displays the setID of the draft sight for the reschedule ID control. You can only modify this field when the payment method is <i>BEF</i> , <i>BOO</i> , or <i>DFT</i> .
Draft Sight	Select the draft sight when the payment method is <i>BEF</i> , <i>BOO</i> , or <i>DFT</i> .
Reusable	Select this check box if you run the Reschedule Payments process several times in a certain period and want to process the vouchers each time that you run the process. Once the process generates vouchers, the system does not typically process the vouchers again. This option enables you to process the vouchers at another time.

Select the Bank Account tab.

Bank SetID, Bank Code, and Bank Account

Enter information in these fields to replace the payment bank and account information on the selected scheduled payment information. When you run the Reschedule Payment process, the system replaces the bank account information on scheduled payments with the bank account information that you specify here.

Note. You can specify only one reschedule payment code per vendor.

Payment Method

Select the payment method for the reschedule ID control.

Setting Up Reschedule Options for Vendors

Access the Vendor Information - Location: Payables Options page (click the Payables link on the Vendor Information - Location page and expand the Additional Payables Options section).

Expand the Additional Payables Options collapsible section.

Additional Payment Information

Reschedule ID

Enter the reschedule ID to apply to this vendor location. Entering an ID here enables the Reschedule Payments process to process the vendor location. The Reschedule Payments process processes vouchers of only those vendor locations with an ID in this field.

Note. If you select the Withholding check box on the Identifying Information page, the Reschedule Payments process does not process vouchers for the vendor even if you enable reschedule options.

Setting Up Aging Categories for Vendor Liability Aging Reports

To set up your aging categories for vendor liability aging reports, use the AP Aging Cycle component (AP_AGING_CYCLE).

This section discusses how to set up aging categories for vendor liability aging reports.

Pages Used to Set Up Aging Categories for Vendor Liability Aging Reports

Page Name	Definition Name	Navigation	Usage
AP Aging Cycle (accounts payable aging cycle)	AP_AGING_CYCLE	Set Up Financials/Supply Chain, Product Related, Procurement Options, Payments, Define Aging Categories, AP Aging Cycle	Define aging cycles with aging time periods that specify a numerical range representing days, weeks, and so forth. Aging cycles are used in Vendor Liability Aging (APY1408) reports.

Setting Up Aging Categories for Vendor Liability Aging Reports

Access the AP Aging Cycle page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Payments, Define Aging Categories, AP Aging Cycle).

AP Aging Cycle

Aging Cycle: MONTH 03/19/1998 SAMPLE

Aging Time Periods				Find View All First 1-3 of 3 Last
*Category	From	To	Description	
1	1	30	1 - 30 days	+ -
2	31	60	31 - 60 days	+ -
3	61	90	61 - 90 days	+ -

***Held Items Aging Option:** Normal
 Held Items Aging Bucket:

AP Aging Cycle page

Category

Enter a category number. Each category number relates to a time period that classifies invoices that are due for payment. An aged liability report includes a column for invoices that are not yet due followed by four columns, which are classified by aging category for overdue amounts. Each of the four overdue columns corresponds to an aging category.

For example, define the following three aging categories:

- Category 1 = 1 to 30 days.
- Category 2 = 31 to 60 days.
- Category 3 = 61 to 90 days.

When the aged liability report is generated, it includes the following five columns:

- Invoices not yet due.
- Invoices overdue from 1 to 30 days.
- Invoices overdue from 31 to 60 days.
- Invoices overdue from 61 to 90 days.
- Invoices overdue more than 90 days.

From

Enter the beginning value for the category aging period. All invoices that are overdue as of the date that is specified in this field are printed in the corresponding aging category column of the aged liability report.

To

Enter an ending value for the category aging period. All invoices that are overdue up to the date specified in this field are printed in the corresponding aging category column of the aged liability report.

Held Items Aging Option

Select to determine how invoices that are on hold for payment appear on the aged liability report. Options are:

Categorize: Select to specify where held invoices are printed in the aged liability report. For example, you might print all held invoices in the fourth aging category column. If this option is selected, the Held Items Aging Bucket field becomes active. Enter the aging category that you want to contain held invoice amounts.

Exclude: Select to exclude held invoices on the aged liabilities report.

Normal: Select to have all invoices on hold classified by aging categories in exactly the same way as invoices that are not on hold. All invoices on hold are printed in the appropriate aging category column in the aged liability report.

Held Items Aging Bucket

Enter the aging category number into which you want held items to appear on the aged liabilities report. This field is available only if you select *Categorize* in the Held Items Aging Option field.

Setting Up Draft Processing

To set up your draft processing, use the following components:

- Draft Sight Codes (APD_SIGHT_CODE_COM)
- Stamp Tax (APD_STAMP_TAX_COM)

This section lists common elements and discusses how to:

- Create draft sight codes.
- Create stamp tax definition.
- Specify stamp tax minimization rules.

Stamp Tax Minimization Rules

During the Draft Staging Application Engine process (AP_DFT_PROC), the values in the Stamp Tax table determine where the draft payment is split.

Split

Selecting this check box activates the Draft Split Amount field, where you enter the maximum value that the draft in the selected draft amount range should reach before it is split.

Setting Up Multicurrency Tables

The pages that define the currency codes, rate types, and exchange rates that are used for currency conversion are common to all financial, manufacturing, and distribution applications. Set up the currency tables once for use by all applications.

To set up your multicurrency tables, use the following components:

- Currency Code (CURRENCY_CD_TABLE).
- Accounting Entry Template (ACCOUNTINGENTRY).
- Accounting Entry Definition (JRN LGEN_DEFN).

This section discusses how to:

- Assign gain or loss ChartFields.
- Specify a journal template.

See Also

PeopleSoft Global Options and Reports 9.1 PeopleBook, "Processing Multiple Currencies"

Pages Used to Set Up Multicurrency Tables

Page Name	Definition Name	Navigation	Usage
Currency Code	CURRENCY_CD_TABLE	Set Up Financials/Supply Chain, Common Definitions, Currency, Currency Code	Add or update a currency code, and confirm that the currencies that you use in your business are already defined. PeopleSoft Payables uses currency codes in reporting and displays them on pages throughout the system to identify the currency of vouchers, payment, and base currency amounts. PeopleSoft populates this table with many of the common currencies in use, using the International Standards Organization (ISO) code as the identifier. The system also uses currency codes to determine precision for rounding. Note. If you change the number of decimal places for a currency code definition—for example, three decimal places instead of two decimal places—you must also restart the Application Server to see this change on the voucher component. See <i>PeopleSoft Global Options and Reports 9.1 PeopleBook, "Processing Multiple Currencies," Maintaining Currency Tables</i>.
Accounting Entry Template	ACCTG_TEMPLATE_AP	Set Up Financials/Supply Chain, Common Definitions, Accounting Entry Templates, Templates, Accounting Entry Template	Define or modify an accounting entry template.

Page Name	Definition Name	Navigation	Usage
Accounting Entry Definition	JRNL_GEN_ACCTG_DEF	General Ledger, Journals, Subsystem Journals, Accounting Entry Definition	Identify the system source that distributes data to your general ledger and the record and field names for the Accounting Entry table.

Assigning Gain or Loss ChartFields

Access the Accounting Entry Template page (Set Up Financials/Supply Chain, Common Definitions, Accounting Entry Templates, Templates, Accounting Entry Template).

Assign ChartFields for realized gain, realized loss, unrealized gain, and unrealized loss to each PeopleSoft Payables business unit.

Unique account numbers enable the PS/AP Revaluation Application Engine process (AP_REVALUE) to post gains and losses to separate accounts.

Note. Because you associate each vendor with a different accounting template, each vendor can have a different set of accounts for posting gains and losses.

See Also

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Defining Financials and Supply Chain Management Common Definitions," Creating Accounting Entry Templates

Specifying a Journal Template

Access the Accounting Entry Definition page (General Ledger, Journals, Subsystem Journals, Accounting Entry Definition).

Specify the journal template to use when transferring revaluation information to general ledger for each PeopleSoft Payables business unit.

See Also

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Using Journal Generator," Defining Accounting Entries

Setting Up Multiple Currencies in PeopleSoft Payables Control Tables

Set up your PeopleSoft Payables control tables before you can process vouchers and payments in multiple currencies. Among other things, the control tables that you establish in PeopleSoft Payables define currency codes, rate types, and exchange rates for multicurrency processing.

To set up your multiple currencies in PeopleSoft Payables control tables, use the following components:

- General Ledger Definition (BUS_UNIT_TBL_GL).
- Payables Options (BU_CTLB).
- Voucher Origin (ORIGIN1).
- External Accounts (BANK_EXTERNAL).

This section discusses how to:

- Define currency options for PeopleSoft General Ledger business units.
- Define currency options for PeopleSoft Payables business units.
- Define currency options for voucher origins.
- Define currency options for control groups.
- Define currency options for vendors.
- Define currency options for banks.

Pages Used to Set Up Multiple Currencies in PeopleSoft Payables Control Tables

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
General Ledger Definition - Definition	BUS_UNIT_TBL_GL1	Set Up Financials/Supply Chain, Business Unit Related, General Ledger, General Ledger Definition, Definition	Define currency options for the PeopleSoft General Ledger business unit.
Payables Options - Vouchering Options 1	BU_AP_OPT_VCHR1	Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Options, Vouchering Options 1	Define currency options for the PeopleSoft Payables business unit.

Page Name	Definition Name	Navigation	Usage
Voucher Origin - Vouchering Options 1	ORIGIN_VCHR2	Set Up Financials/Supply Chain, Product Related, Procurement Options, Vouchers, Voucher Origin, Vouchering Options 1	Define currency options for the voucher origin.
Group Information - Vouchering Options	GRP_AP_VCHR_OPT1	Accounts Payable, Control Groups, Group Information, Vouchering Options	Define currency options for the control group.
Vendor Information - Location: Procurement Options	VNDR_PROC_OPT_SEC	Vendors, Vendor Information, Add/Update, Vendor, Vendor Information, Location Click the Procurement link on the Vendor Information - Location page and expand the Additional Procurement Options section.	Define currency options for the vendor. Override the voucher transaction currency and rate type in the control hierarchy that is applied during voucher entry.
External Accounts	BANK_PNL2	Banking, Bank Accounts, External Accounts	Define currency options for the bank.

Defining Currency Options for PeopleSoft General Ledger Business Units

Access the General Ledger Definition - Definition page (Set Up Financials/Supply Chain, Business Unit Related, General Ledger, General Ledger Definition, Definition).

Assign a base currency to the PeopleSoft General Ledger business units with which your PeopleSoft Payables business units is associated. The base currency for a PeopleSoft Payables business unit is defined by the PeopleSoft General Ledger business unit with which it is associated and cannot be changed.

PeopleSoft Payables processing supports interunit accounting, which enables you to track accounting transactions among PeopleSoft General Ledger business units with different base currencies. You can separate distribution and payment interunit entries.

See Also

[Chapter 10, "Setting Up PeopleSoft Payables Accounting," Understanding the Accounting Environment Setup, page 217](#)

PeopleSoft General Ledger 9.1 PeopleBook, "Defining Your Operational Structure," Defining General Ledger Business Units

Defining Currency Options for PeopleSoft Payables Business Units

Access the Payables Options - Vouchering Options 1 page (Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Options, Vouchering Options 1).

Designate a default transaction currency and rate type for vouchers. The currency that you select here can be different from the PeopleSoft General Ledger business unit base currency, if necessary.

Note. Currency option rules follow the PeopleSoft Payables control hierarchy. Default values that you enter at the business unit level automatically change to the transaction level, unless you override the defaults with values stored at an intermediate level, such as voucher origin, control group, or vendor.

See Also

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining the Voucher Approval Rules, Default Currency, and Single Payment Master Vendor, page 73

Defining Currency Options for Voucher Origins

Access the Voucher Origin - Vouchering Options 1 page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Vouchers, Voucher Origin, Vouchering Options 1).

Override the business unit default currency and rate type. The control hierarchy is applied during voucher entry. Using this capability, you can define an origin, such as a user in a foreign subsidiary, to enter vouchers in a currency different from the business unit's normal default transaction currency.

You can enter a rate type directly when specifying a voucher currency that is different from the control hierarchy default.

See Also

Chapter 5, "Organizing Vouchers with Origins and Control Groups," Specifying Voucher Approval, Matching, Currency, and Document Sequencing Settings, page 92

Defining Currency Options for Control Groups

Access the Group Information - Vouchering Options page (Accounts Payable, Control Groups, Group Information, Vouchering Options).

Override the default voucher entry transaction currency code for a group of vouchers. You can use control groups to group together vouchers of like currencies to ensure that the user applies the proper currency code.

You can also use control groups to create groups of vouchers for data entry purposes. The key control elements on the record are the control amount and the control totals. Control amount totals are not sensitive to the transaction currency; you can enter vouchers of different currencies in the same control group. The system tallies the transaction amounts of all vouchers in the control group to determine whether the group is in balance.

Note. The control group total adds amounts only and does not convert currencies.

The Control Group Register report displays currency information for individual vouchers in the control group.

See Also

Chapter 5, "Organizing Vouchers with Origins and Control Groups," Establishing Vouchering Options, page 101

Defining Currency Options for Vendors

Access the Vendor Information - Location: Procurement Options page (Click the Procurement link on the Vendor Information - Location page and expand the Additional Procurement Options section).

Expand the Additional Procurement Options collapsible section to override the default currency and rate type.

See Also

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information," Specifying High-Level Procurement Processing Options

Defining Currency Options for Banks

Access the External Accounts page (Banking, Bank Accounts, External Accounts).

Each bank code can cover multiple bank accounts, and each bank account can have multiple currencies. All payments from a specific bank account must be made in one of the valid currencies that is set up for that bank account. During payment selection, the system alerts you if you have scheduled payments on a bank account in a currency other than the valid bank account currencies. You'll also receive an error message when you save a voucher online.

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts," Defining External Account Information

Setting Up the PeopleSoft Payables Revaluation Process

To set up your PeopleSoft Payables revaluation process, use the following components:

- Accounting Entry Template (ACCOUNTINGENTRY).
- Journal Generator Template (JRNLCEN_APPL_ID).
- Procurement Control (BUS_UNIT_INTFC2).
- Payables Definition (BUS_UNIT_TBL_AP).

This section provides an overview of the PS/AP Revaluation process, lists prerequisites, and discusses how to:

- Select a reversal code.
- Specify PeopleSoft Payables journal templates.
- Select a revaluation posting option.

Understanding the PS/AP Revaluation Process

The PS/AP Revaluation process finds all unpaid, posted vouchers for the specified business units as of the specified date whose transaction currency is not the same as the base currency of the general ledger business unit. For each unpaid voucher, it uses the specified exchange rate and calculates a revaluation amount. The accounting entry consists of an unrealized gain or loss entry with a matching offset on the payables account.

Prerequisite

Specify account numbers on the accounting entry template for unrealized gain and loss.

Pages Used to Setup the PeopleSoft Payables Revaluation Process

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Journal Generator Template - Defaults	JRNL_GEN_DEFAULTS	General Ledger, Journals, Subsystem Journals, Journal Generator Template, Defaults	Select a reversal code.
Procurement Control - GL Templates	BUS_UNIT_INTFC6	Set Up Financials/Supply Chain, Business Unit Related, Procurement, Procurement Control, GL Templates	Attach PeopleSoft Payables journal generator templates to PeopleSoft General Ledger business units.
Payables Definition - Definition	BUS_UNIT_TBL_AP1	Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Definition, Definition	Select a revaluation posting option.

Selecting a Reversal Code

Access the Journal Generator Template - Defaults page (General Ledger, Journals, Subsystem Journals, Journal Generator Template, Defaults).

Select a reversal code.

PeopleSoft General Ledger uses the Journal Generator template to handle reversals. The PeopleSoft Payables revaluation routing does not reverse entries because of document sequencing. Therefore, you must select one of these PeopleSoft General Ledger reversal codes: Beginning of Next Period, End of Next Period, or Next Day.

You should not select Do Not Generate Reversal, or your revaluation will be overstated.

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining General Ledger Templates, page 45

Selecting a Revaluation Posting Option

Access the Payables Definition - Definition page (Set Up Financials/Supply Chain, Business Unit Related, Payables, Payables Definition, Definition).

Select a revaluation posting option to determine how the transactions that you are revaluing are grouped.

Unit (business unit)	The PS/AP Revaluation process creates one accounting entry for each business unit/transaction currency combination.
Vendor	The PS/AP Revaluation process creates one accounting entry for each vendor/business unit/transaction currency combination. Grouping does not cross business units. For a vendor that has both gains and losses, only the net gain or loss is posted to PeopleSoft Payables and then to PeopleSoft General Ledger.
Voucher	The PS/AP Revaluation process creates one accounting entry for each voucher.

Example: Defining Revaluation Posting Options

This table lists sample data for our example:

<i>Business Unit</i>	<i>Vendor</i>	<i>Voucher</i>	<i>Loss/Gain</i>	<i>Transaction Currency</i>
GBR01	VND1	VCHR1	100	GBP
GBR01	VND2	VCHR2	(50)	GBP
GBR01	VND2	VCHR3	25	GBP

Depending on the revaluation option that you select, the system generates the following entries:

1. For the business unit.

There is one balanced entry per business transaction currency combination. In our example, both vendors have the same currency so there is only one entry. If they had different currencies, there would have been two entries.

<i>Business Unit</i>	<i>Vendor</i>	<i>Voucher</i>	<i>Loss/Gain</i>	<i>Transaction Currency</i>
GBR01			75	GBP

2. For the vendor.

There is one balanced entry per vendor, business unit, currency combination. The summation does not cross business units.

<i>Business Unit</i>	<i>Vendor</i>	<i>Voucher</i>	<i>Loss/Gain</i>	<i>Transaction Currency</i>
GBR01	VND1		100	GBP
GBR01	VND2		(25)	GBP

3. For the voucher.

Each voucher creates a set of accounting entries; there is no summation.

<i>Business Unit</i>	<i>Vendor</i>	<i>Voucher</i>	<i>Loss/Gain</i>	<i>Transaction Currency</i>
GBR01	VND1	VCHR1	100	GBP
GBR01	VND2	VCHR2	(50)	GBP
GBR01	VND2	VCHR3	25	GBP

Setting Up the PeopleSoft Financial Gateway Integration

To set up your PeopleSoft Financial Gateway integration, use the following components:

- Source Registration (PMT_REGISTRATION).
- User Preferences (OPR_DEFAULT).
- Payment Selection Criteria (PYCYCL_DEFN).

This section provides an overview of the PeopleSoft Financial Gateway integration setup, lists prerequisites, and discusses how to:

- Register PeopleSoft Payables with PeopleSoft Financial Gateway.
- Establish payment errors email notification.

Understanding PeopleSoft Financial Gateway Integration Setup

PeopleSoft Payables integrates with the PeopleSoft Financial Gateway functionality as an alternate electronic payment processing method. PeopleSoft Financial Gateway acts as a broker between PeopleSoft Payables and a financial institution, formatting payments and managing payment messages between the systems.

For PeopleSoft Payables, integration with the PeopleSoft Financial Gateway functionality involves the following steps:

1. Registering PeopleSoft Payables as a source subsystem with PeopleSoft Financial Gateway.
2. (Optional) Defining payment errors email notification defaults.

Source registration is a required implementation step. Once registered as a source subsystem, PeopleSoft Payables uses the existing PeopleSoft Financial Gateway infrastructure during pay cycle processing to settle PeopleSoft Financial Gateway-specific payments.

Registering PeopleSoft Payables also enables PeopleSoft eSettlements to integrate with PeopleSoft Financial Gateway. PeopleSoft eSettlements leverages both the PeopleSoft Financial Gateway and Payables infrastructures to manage PeopleSoft Financial Gateway-specific payments. As PeopleSoft eSettlements uses the existing architecture, it does not need to be registered as an independent source.

We deliver default source registration data, applicable to most organization's needs.

Important! You should carefully analyze the delivered data with your organization's business needs before changing any values. Editing certain registration values might adversely affect payments' settlement through the applications. Also, system administrators should configure the appropriate security for this page, limiting user access to avoid accidental edits.

After registering as a source, you can optionally set up payment errors email notifications. This alerts designated users when payments cannot be settled through PeopleSoft Financial Gateway.

[Chapter 21, "Processing Pay Cycles," Pay Cycle Processing Using the PeopleSoft Financial Gateway, page 646](#)

Prerequisite

To process payments through the PeopleSoft Financial Gateway, you must correctly configure and activate payments' bank accounts using the External Accounts - Payment Methods page. On the page, you must specify at least one layout that is settled by PeopleSoft Financial Gateway.

-  Move Selected Lines Down

Select fields and click this button to remove fields from the Selected fields region; this removes them from the inquiry search criteria.

Chapter 10

Setting Up PeopleSoft Payables Accounting

This chapter provides an overview of the PeopleSoft Payables accounting environment, lists prerequisites, and discusses how to set up ChartField inheritance options.

Understanding the Accounting Environment Setup

This section discusses:

- Interunit accounting setup in PeopleSoft Payables.
- Posting method definition.
- ChartFields definitions in the accounting entry template.
- ChartFields definitions for PeopleSoft General Ledger business units.
- Period end accruals set up.

Interunit Accounting Setup in PeopleSoft Payables

Interunit transactions enable you to balance by the PeopleSoft General Ledger business unit. The system generates interunit due-to and due-from entries with respect to an anchor business unit. PeopleSoft Payables derives the anchor business unit from the context of the transaction.

Intraunit transactions enable you to balance on ChartFields other than the PeopleSoft General Ledger business unit. You can select how many and which ChartFields require balancing. You can achieve Intraunit balancing through inheritance or due-to and due-from balancing.

PeopleSoft Payables uses the Centralized Inter/IntraUnit Application Engine process (IU_PROCESSOR) to process intraunit and interunit accounting. This central processor generates interunit and intraunit accounting entries for all PeopleSoft financial products. In PeopleSoft Payables, both the Voucher Posting and Payment Posting Application Engine processes (AP_PSTVCHR and AP_PSTPYMNT, respectively) call the central processor to process the interunit and intraunit accounting entries. To enable PeopleSoft Payables to call the Centralized Inter/IntraUnit processor, you must complete several set up pages in the Inter/IntraUnits component.

Interunit accounting tracks interunit payables and receivables among PeopleSoft General Ledger business units. Interunit accounting occurs at the PeopleSoft General Ledger business unit level, independent of the PeopleSoft Payables business unit definition.

PeopleSoft Payables:

- Does not require netted interunit distribution and payments within the same general ledger account.
- Separates distribution and payment interunit entries.
- Supports interunit accounting among PeopleSoft General Ledger business units with different base currencies.

When you enter invoices for a vouchering (PeopleSoft Payables) business unit, the charged-to distribution (PeopleSoft General Ledger) business unit associated with that vouchering business unit appears by default in the GL Unit field on the distribution lines of the voucher. You can override that PeopleSoft General Ledger business unit. The PeopleSoft Payables business unit is the entity to which the vendor liability is recorded. The PeopleSoft General Ledger business unit is the entity to which the distribution line is recorded.

Note. When you enter interunit vouchers on the Invoice Information page, the header budget status changes from *Valid* to *Not Chck'd* (not checked). Run the Budget Processor COBOL process (FSPKBDP) to reset the status to *Valid* to make the voucher eligible for the Voucher Posting process.

If you prorate or allocate the nonmerchandise items, the system charges the PeopleSoft General Ledger business unit with both the merchandise costs and the nonmerchandise costs. If you do not prorate or allocate, the system charges all nonmerchandise items to the PeopleSoft Payables business unit and the merchandise to the PeopleSoft General Ledger business unit.

Balancing ChartFields and their relationship to a balanced set of accounts or books is central to interunit and intraunit processing, as well as ChartField inheritance. You can set up direct, indirect, or pairs balancing methods. If you use the direct balancing method, the system retrieves the due-to and due-from ChartFields that are used to balance each business unit in the transaction are retrieved the business unit's own inter/intraunit template definition. If you use the indirect balancing method, the system retrieves the due-to and due-from ChartFields from the affiliate business unit's inter/intraunit template definition. If you use the pairs balancing method, the system retrieves the due-to and due-from ChartFields from a definition for the pair of business units that are involved in the transaction. Pairs are defined on the InterUnit Pair Maintenance page.

Note. If your environment uses alternate accounts, use the direct balancing method.

Voucher Accounting Entries

The Affiliate ChartField displays the affiliate business unit that has been charged. If you change the PeopleSoft General Ledger business unit on the distribution line on the Invoice Information page, the system populates the Affiliate ChartField during the Voucher Posting process.

This table lists accounting entries for the voucher when you are using the direct balancing method:

<i>Descr</i>	<i>Ledger</i>	<i>GL Unit</i>	<i>Affiliate</i>	<i>Acct</i>
Expense Distribution	ACTUAL	US001		631000
InterUnit Payable	ACTUAL	US001	US003	100103

<i>Descr</i>	<i>Ledger</i>	<i>GL Unit</i>	<i>Affiliate</i>	<i>Acct</i>
InterUnit Receivable	ACTUAL	US003	US001	100105
Accounts Payable	ACTUAL	US003		200000

In the direct balancing method, the system charges the business unit's ChartFields. In the previous table, PeopleSoft General Ledger business unit US001 uses account 100103 as its interunit payable account. In the direct balancing method, the system charges account 100103 (its own account).

This table lists the accounting entries for the voucher when you are using the indirect balancing method:

<i>Descr</i>	<i>Ledger</i>	<i>GL Unit</i>	<i>Affiliate</i>	<i>Acct</i>
Expense Distribution	ACTUAL	US001		631000
InterUnit Payable	ACTUAL	US001	US003	100105
InterUnit Receivable	ACTUAL	US003	US001	100103
Accounts Payable	ACTUAL	US003		200000

When you use indirect balancing method, the system charges the affiliate business unit's ChartFields instead of the business unit's ChartFields.

This table lists the accounting entries for the voucher when you are using the pairs balancing method:

<i>Descr</i>	<i>Ledger</i>	<i>GL Unit</i>	<i>Affiliate</i>	<i>Acct</i>
Expense Distribution	ACTUAL	US001		631000
InterUnit Payable	ACTUAL	US001	US003	100103
InterUnit Receivable	ACTUAL	US003	US001	100105
Accounts Payable	ACTUAL	US003		200000

In the pairs balancing method, the system charges the business units that are defined for the pair of business units involved in the transaction. In the previous table, the interunit payable account is defined as account 100103 for the US001:US003 pair, and the interunit receivable account is defined as account 100105.

Payment Accounting Entries

This table lists the accounting entries for the payments when you are using the direct balancing method:

<i>Descr</i>	<i>Ledger</i>	<i>GL Unit</i>	<i>Affiliate</i>	<i>Acct</i>
Accounts Payable	ACTUAL	US001		200000
InterUnit Payment Due To	ACTUAL	US001	US003	100103
InterUnit Payment Receivable	ACTUAL	US003	US001	100105
Cash Distribution	ACTUAL	US003		100041

This table lists the accounting entries for the payments when you are using the indirect balancing method:

<i>Descr</i>	<i>Ledger</i>	<i>GL Unit</i>	<i>Affiliate</i>	<i>Acct</i>
Accounts Payable	ACTUAL	US001		200000
InterUnit Payment Due To	ACTUAL	US001	US003	100105
InterUnit Payment Receivable	ACTUAL	US003	US001	100103
Cash Distribution	ACTUAL	US003		100041

This table lists the accounting entries for the payments when you are using the pairs balancing method:

<i>Descr</i>	<i>Ledger</i>	<i>GL Unit</i>	<i>Affiliate</i>	<i>Acct</i>
Expense Distribution	ACTUAL	US001		631000
InterUnit Payable	ACTUAL	US001	US003	100103

Descr	Ledger	GL Unit	Affiliate	Acct
InterUnit Receivable	ACTUAL	US003	US001	100105
Accounts Payable	ACTUAL	US003		200000

Chapter 23, "Running Voucher and Payment Posting," Reviewing Posted Accounting Entries, page 760

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Setting Installation Options for PeopleSoft Applications," Setting Up Payables Installation Options

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Using Interunit and Intraunit Accounting and ChartField Inheritance"

Posting Method Definition

PeopleSoft Payables supports two posting methods of balancing voucher accruals and payments entries. These flexible posting methods define which ChartField values are inherited from the corresponding accounting entries. Define a posting method on the Installation Options - Payables page. The two posting methods are:

- Summary Control posting method.
- Detail Offset posting method.

Summary Control Posting Method

The Summary Control posting method balances vouchers at the voucher header level, rather than the individual lines, with summary control accounts such as the accounts payable accrual account for each voucher. It also creates summary expense accounts for nonmerchandise expenses like freight and sales and use tax if you elect not to prorate or allocate these nonmerchandise amounts to the voucher distribution lines. The Summary Control posting method creates one summary accounts payables accrual entry for all of the distribution lines.

The Summary Control posting method creates one summary cash distribution entry for each cash account defined on the External Banks page.

Note. The Payment Posting process is not dependent on the Voucher Posting process.

Detail Offset Posting Method

The Detail Offset posting method balances each individual voucher distribution line. During the posting processes, offsets to the distribution lines and cash entries inherit the nonaccount ChartField values based on the established inheritance rules.

Offsets to the distribution lines inherit the nonaccount ChartField values and any other balanced ChartField values from the distribution line. Nonbalancing and nonaccount ChartFields also follow inheritance rules. The Detail Offset posting method creates accounts payable accrual entries for each distribution line.

Because each distribution line is balanced with an offsetting accounts payable accrual account, payments must be allocated to the distribution lines to properly relieve the accounts payable liability. This is done during the Payment Posting process.

Note. The Payment Posting process does not depend on the Voucher Posting process.

The Detail Offset posting method does not support the expensing of nonmerchandise charges, early payment discounts, or discounts earned or lost. These charges are allocated, or prorated, back to the distribution line rather than being posted to summary accounts.

Using ChartField Inheritance with Posting Methods

The Detail Offset posting method can inherit header level ChartField values from the distribution line because each distribution line has its own accounts payable accrual (APA) entry.

The Summary Control posting method cannot use inheritance for header level ChartFields. Because the system creates only one APA entry for multiple distribution lines, it does not know from which distribution line to inherit the ChartField values.

Example 1: Summary Control Posting Inheritance (Allocate Freight)

This scenario assumes:

- Allocate freight.
- Only the fund code is balanced.
- No interunit accounting.
- PeopleSoft Payables header level entries, such as APA, inheritance options:

<i>Field</i>	<i>Inheritance Option</i>
FUND_CODE	<i>Use Unit Definition</i>
DEPTID	<i>Use Unit Definition</i>
PRODUCT	<i>Use Unit Definition</i>
All Others	<i>Do Not Inherit</i>

- PeopleSoft Payables distribution level entries, such as freight (FRG), inheritance options:

Field	Inheritance Option
OPERATING_UNIT	<i>Always Inherit</i>
FUND_CODE	<i>Always Inherit</i>
DEPTID	<i>Use Unit Definition</i>
PRODUCT	<i>Inherit Within Unit</i>
All Others	<i>Do Not Inherit</i>

This table illustrates the accounting results after running the Voucher Posting process:

Vchr/Distr Line Num	Distr Acct Type	Acct	Op Unit	Fund Code	DeptID	Product	Others
1 / 1	DST	621100	Inherits from voucher distribution line.	Inherits from voucher distribution line.	Inherits from voucher distribution line.	Inherits from voucher distribution line.	Inherits from voucher distribution line.

Inherits from Inter/IntraU nit page in the General Ledger Definition component.	Inherits from Inter/IntraU nit page in the General Ledger Definition component.	Inherits from accounting entry template.

Example 3: Detail Offset Posting Inheritance

This scenario assumes:

- Allocate freight.
- No interunit accounting.
- PeopleSoft Payables header level entries, such as APA, inheritance options:

<i>Field</i>	<i>Inheritance Option</i>
FUND_CODE	<i>Always Inherit</i>
DEPTID	<i>Inherit Within Unit</i>
PRODUCT	<i>Use Unit Definition</i>
All Others	<i>Do Not Inherit</i>

- PeopleSoft Payables distribution level entries, such as FRG, inheritance options:

Field	Inheritance Option
OPERATING_UNIT	<i>Always Inherit</i>
FUND_CODE	<i>Always Inherit</i>
DEPTID	<i>Use Unit Definition</i>
PRODUCT	<i>Inherit Within Unit</i>
All Others	<i>Do Not Inherit</i>

The accounting results after running the Voucher Posting process:

Vchr/Distr Line Num	Distr Acct Type	Acct	Op Unit	Fund Code	DeptID	Product	Others

ChartFields Definitions for PeopleSoft General Ledger Business Units

When setting up inheritance for PeopleSoft Payables, if you select *Use Unit Default* as the inheritance option for an inheritance group, the system uses the ChartField values that were established on the PeopleSoft General Ledger business unit to generate the appropriate accounting entry lines.

If you select *Inherit Within Unit* as the inheritance value and the entries are for different PeopleSoft General Ledger business units, the system also uses the ChartField values that were established on the PeopleSoft General Ledger business unit to generate the appropriate accounting entry lines.

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Using Interunit and Intraunit Accounting and ChartField Inheritance," Specifying Interunit and Intraunit Settings for General Ledger Business Units

Prerequisites

Before you can use the Voucher and Payment Posting processes, you must:

1. Complete general ledger setup.

Before you set up inheritance in PeopleSoft Payables, define setIDs, ledgers, and PeopleSoft General Ledger business units. Non bank-related inheritance options are maintained by setID and inheritance group. Bank inheritance options are maintained by bank account.

2. Set up interunit accounting.
3. Define a posting method on the Installation Options - Payables page.
4. Define accounting entry templates on the Accounting Entry Template page.
5. Define ChartFields for PeopleSoft General Ledger business units.
6. Define inheritance options.

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Defining Financials and Supply Chain Management Common Definitions," Creating Accounting Entry Templates

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Using Interunit and Intraunit Accounting and ChartField Inheritance," Specifying Interunit and Intraunit Settings for General Ledger Business Units

Setting Up ChartField Inheritance Options

This section provides an overview of ChartField inheritance setup and discusses how to:

- Define non bank-related ChartField inheritance options.
- Define bank-related ChartField inheritance options.
- Validate posting setup.

See Also

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Using Interunit and Intraunit Accounting and ChartField Inheritance," Using ChartField Inheritance

Understanding ChartField Inheritance Setup

Inheritance refers to the process by which transactions are forced to balance by automatically copying, or inheriting, ChartField values from one entry in the transaction to other entries in the transaction. Values for nonbalancing ChartFields can also be inherited to provide additional detail for financial analysis. You can specify which ChartFields are automatically inherited for PeopleSoft Payables.

ChartField inheritance means that any offset entries created for distribution lines or payment entries inherit nonaccount ChartFields when they are created. ChartField inheritance enables the user to select the source of certain ChartField values on certain system-generated accounting entries.

For example, when posting PeopleSoft Payables vouchers, the user can choose to have the fund code on the vendor liability entry come from either the voucher distribution line, the PeopleSoft General Ledger business unit default values, or the accounting entry template.

Important! When balancing by ChartFields, you must first establish inheritance options for each ChartField during implementation. Doing this prevents the system from posting the balancing entries to a rounding account. To correct entries posted to a rounding account, you must manually create PeopleSoft General Ledger journal entries to the appropriate ChartField accounts.

See [Chapter 10, "Setting Up PeopleSoft Payables Accounting," Defining Bank-Related ChartField Inheritance Options, page 234.](#)

Note. If you implement the PeopleSoft Project Costing application, the system displays an additional six project that are related ChartFields. If you do not install PeopleSoft Project Costing, only the Project ChartField appears.

Pages Used to Set Up Inheritance Options

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
ChartField Inheritance	CF_INHERIT	Setup Financials/Supply Chain, Common Definitions, Design ChartFields, ChartField Inheritance, ChartField Inheritance	Specify inheritance options for all non bank-related accounting entries, such as vendor liabilities, customer receivables, VAT, expenses, and so on.
External Accounts	BANK_PNL2	Banking, Bank Accounts, External Accounts	Define each bank and its general characteristics.
ChartField Options	BNK_CF_OPTIONS_SEC	 Click the Edit Inheritance Options button next to an account type field on the External Accounts page.	Specify inheritance options for PeopleSoft Payables bank-related accounting entries, such as cash, cash clearing, draft control, and so on.
Posting Setup Validation	AP_VAL_INHRIT_RQST	Accounts Payable, Batch Processes, Validate Posting Set Up, Posting Setup Validation	Run the Validate Posting Setup Application Engine process (AP_VALCFINH) to verify that you have set up inheritance correctly and completely for PeopleSoft Payables. This process also validates correct allocation policies in the Procurement Accounting Controls page.

Defining Non Bank-Related ChartField Inheritance Options

Access the ChartField Inheritance page (Setup Financials/Supply Chain, Common Definitions, Design ChartFields, ChartField Inheritance, ChartField Inheritance).

ChartField Inheritance

SetID: SHARE

Inheritance Group: Payables Header Level Entries

ChartField	*Inheritance Option
Operating Unit	Do Not Inherit
Fund Code	Do Not Inherit
Department	Do Not Inherit
Program Code	Do Not Inherit
Class Field	Do Not Inherit
Budget Reference	Do Not Inherit
Product	Do Not Inherit
Project	Do Not Inherit

ChartField Inheritance page

Inheritance Group

PeopleSoft Payables is delivered with three inheritance groups:

Payables Header Level Entries: Defines the inheritance to use when generating entries for the vouchering PeopleSoft General Ledger business unit. The PeopleSoft Payables liability entry uses this inheritance group.

Payables Distrib Level Entries (payables distribution level entries): Defines the inheritance to use when generating entries for the distribution line PeopleSoft General Ledger business unit. Allocated freight uses this inheritance group.

Payables VAT Non-Recoverable: Defines the inheritance to use in generating nonrecoverable VAT entries.

Note. To fully understand how these inheritance groups work, you must also understand how allocation and proration work in PeopleSoft Payables.

Inheritance Option

Select an inheritance option for each ChartField within each of the three PeopleSoft Payables inheritance groups. Values are:

Always Inherit: The ChartField value is always inherited from the distribution entries on the transaction, regardless of whether the ChartField value is in the same PeopleSoft General Ledger business unit. Select this value only if all business units share the same ChartField values; otherwise, the inherited value could be invalid.

Do Not Inherit: The ChartField value is inherited from the accounting template for that distribution account type (DST_ACCT_TYPE), not from the transaction itself.

Inherit Within Unit: The ChartField value is inherited from the distribution entries on the transaction, but only if the other entry is in the same PeopleSoft General Ledger business unit. Otherwise, the system uses the business unit default (of the nondistribution PeopleSoft General Ledger business unit).

Use Unit Definition: The ChartField value is the default value that is associated with the PeopleSoft General Ledger business unit. Default values come from the values on the Inter/IntraUnit page in the General Ledger Definition component (BUS_UNIT_TBL_GL).

Setting Up Inheritance Options

For inheritance to generate the appropriate accounting entry lines, set up your inheritance options using the following guidelines.

This table lists the options for balanced and nonbalanced ChartFields for each inheritance group when you use the Summary Control posting method:

<i>Inheritance Group</i>	<i>Balance ChartField</i>	<i>Nonbalanced ChartField</i>
Payables header level entries	<i>Use Unit Definition</i>	<i>Use Unit Definition, Do Not Inherit</i>
Payables distribution level entries	<i>Always Inherit</i>	Any of the four options
Payables VAT nonrecoverable	<i>Always Inherit, Inherit Within Unit</i>	Any of the four options

This table lists the options for balanced and nonbalanced ChartFields for each inheritance group when you use the Detail Offset posting method:

<i>Inheritance Group</i>	<i>Balance ChartField</i>	<i>Nonbalanced ChartField</i>
Payables header level entries	<i>Always Inherit, Inherit Within Unit</i>	Any of the four options
Payables distribution level entries	<i>Always Inherit</i>	Any of the four options

<i>Inheritance Group</i>	<i>Balance ChartField</i>	<i>Nonbalanced ChartField</i>
Payables VAT nonrecoverable	<i>Always Inherit, Inherit Within Unit</i>	Any of the four options

Define ChartFields as balanced or nonbalanced in the Detail Ledger Group component (DETAIL_LEDGER_GROU).

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Using Interunit and Intraunit Accounting and ChartField Inheritance," Using ChartField Inheritance

Defining Bank-Related ChartField Inheritance Options

Access the ChartField Options page (click the Edit Inheritance Options button next to an account type field on the External Accounts page).

The ChartField Options page is similar to the ChartField Inheritance page except that you specify options for bank-related accounting entries.

Acct Type (account type)

You must set up bank-related ChartField inheritance options for three account types (setID, bank, and account) for payment posting. Use the same inheritance options for all three of these account types:

Payables Cash Account: The ChartFields used to process cash entries.

Payables Control Account: The ChartFields used with cash clearing and disbursements in transit.

Payables Draft Account: The ChartFields used to process drafts.

Inheritance Option

Select an inheritance option for each ChartField name within each of the three PeopleSoft Payables account types:

Always Inherit: Cash ChartFields come from the offsetting accounts payable accrual entry.

Do Not Inherit: This is the default value. ChartField values are explicitly defined on the ChartFields tab of the External Accounts page by the user. If you change from *Do not Inherit* to another value, when you click OK and return to the External Accounts page, the ChartField that you changed is no longer available for entry. When creating the cash clearing entries during the Payment Posting process, the system uses the default values from the External Account page for that setID, bank, account, and distribution account type.

Inherit Within Unit: Cash ChartFields come from the offsetting entry if the ChartField is within the same business unit. If the entry is not from the same PeopleSoft General Ledger business unit, values come from the business unit that appears by default for the PeopleSoft General Ledger business unit that is associated with the bank.

Use Unit Definition: Default values come from the values on the Inter/IntraUnit page in the General Ledger Definition component, regardless of the offsetting transaction. This is based on the PeopleSoft General Ledger business unit of the bank.

Validating Posting Setup

Access the Posting Setup Validation page (Accounts Payable, Batch Processes, Validate Posting Set Up, Posting Setup Validation).

Use this page to run the Validate Posting Setup Application Engine process (AP_VALCFINH), which verifies that you have set up your ChartField inheritance correctly. This process finds any set up issues that might cause problems for the PeopleSoft Payables Voucher and Payment Posting processes and posts them to the Process Message Log. Potential issues include:

- Any SetID/AP inheritance group combinations in which ChartField inheritance has not been defined.
- Any bank ChartField inheritance that has not been defined for banks with PeopleSoft Payables setup.
- Any SetID/AP inheritance group that has been defined but has an invalid option.
- Any procurement accounting controls for business units with invalid allocations.

To view the error messages:

1. Click the Process Monitor link on the Posting Setup Validation page.
2. Click the Details link on the Process List page.

3. Click the Message Log link on the Process Details page.
4. Click the Explain button on the Message Log page.

Explain

Message:

SQL Object 'FS_CFI_FLST_CONSL_APCA' does not exist. Please setup Inheritance for SETID 'CONSL' and Inheritance Group 'APCA'.

Description:

Posting may possibly fail without this setup.

Please go to the Inheritance Setup page:

Setup Financials/Supply Chain -> Common Definitions -> Design Chartfields -> ChartField Inheritance

and setup the Inheritance options for the SETID and Inheritance Group listed before running Posting.

INHERITANCE GROUP KEY:

APCA = Payables Header Level Entries
APEA = Payables Distrib Level Entries
APVN = Payables VAT Non-Recoverable

Viewing posting setup issues on the Explain page (PMN_MSG_EXPLAIN)

Chapter 11

(USF) Setting Up PeopleSoft Payables for U.S. Federal Agencies

This chapter discusses how to:

- Set up electronic funds transfer (EFT) and automated clearing house (ACH) payment formats.
- Define agency location codes.
- Set up vendors for federal payment processing.
- Define federal spending regions.
- Define regional financial codes.
- Specify restrictions for federal payment schedules.
- Configure workstations for Intra-governmental Payment and Collection System (IPAC) inbound processing.
- Set up Central Contractor Registry (CCR) processing.

Setting Up EFT and ACH Payment Formats

To set up EFT and ACH payment formats, use the following components:

- EFT Layout (EFT_LAYOUT).
- ACH Layout (ACH_LAYOUT).

This section provides an overview of EFT and ACH payment format setup and lists the pages used to set up EFT and ACH Payment formats.

Understanding EFT and ACH Payment Format Setup

The PeopleSoft system provides a number of EFT and ACH layouts for transmitting U.S. federal payments:

<i>Format</i>	<i>Layout Name</i>
CTX (Corporate Trade Exchange) flat file payment order	CTX
CTX ASC X12 820 payment order	CTX820FED
ECS vendor check payment	ECSCCHK
ECS vendor ACH payment (CCD+)	ECSVNDR
ECS travel ACH payment (PPD+)	ECSTRVL
SPS vendor check payment	SPSCHK
SPS vendor ACH payment (CCD+)	SPSVNDR
SPS travel ACH payment (PPD+)	SPSTRVL
ECS same day payment request (SDPR)	SDPR
Bulk vendor check payment	SF1166SCHK
Bulk vendor ACH payment (CCD+)	SF1166VNDR
Bulk travel ACH payment (PPD+)	SF1166TRVL
IPAC (Intra-Governmental Payment and Collections)	IPAC

Note. The U.S. Treasury is phasing out the Electronic Certification System (ECS) and replacing it with the Secure Payment System (SPS). PeopleSoft Payables provides both the ECS and the SPS summary files for payments. You need to determine when your organization begins utilizing the SPS Summary generation based on the timing of the U.S. Treasury turning off the ECS system.

When you set up each format on the EFT File Layouts and ACH File Layout pages, you can indicate if the payment format applies to employee payments, non-employee payments, or both. This allows an edit upon saving a voucher that enforces the following U.S. federal rules:

- Employee ACH payments are generated as PPD or PPD+ payments only.
- Non-employee ACH payments are generated as CCD, CCD+, or CTX payments only.

Note. It is up to you to select whether a payment format applies to employee payments, non-employee payments, or both, but you should select these values based on the requirements laid out by the U.S. Department of Treasury

PeopleSoft Payables also enforces that all EFT/ACH payments contain a bank ID, bank routing number (DFI ID), and bank account number.

See Also

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up Files for Electronic Funds Transfers," (USF) U.S. Federal ACH and EFT Layouts

Pages Used to Set Up EFT and ACH Payment Formats

Page Name	Definition Name	Navigation	Usage
EFT File Layouts	EFT_LAYOUT	Set Up Financials/Supply Chain, Common Definitions, EFT, EFT File Layout, EFT File Layouts	View, modify, and add any EFT layouts. See <i>PeopleSoft Banks Setup and Processing 9.1 PeopleBook</i> , "Setting Up Files for Electronic Funds Transfers," Managing EFT File Layouts.
ACH File Layout	ACH_LAYOUT	Set Up Financials/Supply Chain, Common Definitions, EFT, ACH Layout, ACH File Layout	Create identifying information for ACH files. See <i>PeopleSoft Banks Setup and Processing 9.1 PeopleBook</i> , "Setting Up Files for Electronic Funds Transfers," Defining ACH Layouts.

Defining Agency Location Codes

To set up agency location codes, use the Agency Location component (AGENCY_LOC_CD).

This section provides an overview of agency location codes and discusses how to:

- Define agency location codes.
- Specify government wide accounting (GWA) reporting options.

Understanding Agency Location Codes

If you represent a U.S. federal agency, you probably pay your vendors through a Treasury Disbursing Office (TDO). You identify your TDOs with Agency Location Codes (ALC). Define an eight-digit ALC for each TDO you set up and assign it to the TDO on the Bank Information page. If you represent a U.S. federal agency that does not disburse through a TDO, you can set up ALCs that bypass the voucher save edit that enforces eight-digit ALCs.

If you represent a U.S. federal agency that uses the Intra-Governmental Payment and Collection System (IPAC), then you must also define an ALC for each of the vendors you pay through IPAC.

The business activity you define for your ALCs on the GWA Reporting Options page determines what type of cash transaction activity you report on the SF224 Statement of Cash Transactions report. The business activity and reporter category combination you define for your ALCs determines what cash reclassification transactions you report on the Partial 224 report. The Partial 224 report is an effort by the U.S. Treasury to ultimately phase out the SF224 Statement of Cash Transactions report over the next several years by having agencies report collection and disbursement activity with a new Business Event Type Code (BETC). Once the cash activity includes the BETC you only need to report cash reclassifications via the Partial 224 report. The U.S. Treasury is taking a phased approach to modify financial systems that agencies interface with today to include the BETC code. These systems include IPAC for collections and payments, CashLink for collections, and Electronic Certification System (ECS) or Secure Payment System (SPS) for payments. The U.S. Treasury requires systems to accommodate future implementation of BETC and therefore, exclude activity from the Partial 224 report that includes the BETC code.

Warning! The reporting of cash reclassifications for the new Partial 224 report is not applicable until the U.S. Treasury completes their requirements for Business Event Type Codes (BETC). The U.S. Treasury plans on phasing the BETC requirements towards the end of 2006. Please contact the U.S. Treasury for more information.

Note. The U.S. Treasury is phasing out the Electronic Certification System (ECS) and replacing it with the Secure Payment System (SPS). PeopleSoft Payables provides both the ECS and the SPS summary files for payments. You need to determine when your organization begins utilizing the SPS Summary generation based on the timing of the U.S. Treasury turning off the ECS system.

[Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Creating ECS Bulk Payment Summary Certification Files, page 1049](#)

Pages Used to Set Up Agency Location Codes

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Agency Location Code	AGENCY_LOC_CD	Set Up Financials/Supply Chain, Common Definitions, Agency Location Codes, Agency Location, Agency Location Code	Create agency location codes for federal payment schedules.
GWA Reporting Options	AGENCY_LOC_CD2	Set Up Financials/Supply Chain, Common Definitions, Agency Location Codes, Agency Location, GWA Reporting Options	Specify the business activity and reporter category combination for the agency location code to be used for federal reporting.

Defining Agency Location Codes

Access the Agency Location Code page (Set Up Financials/Supply Chain, Common Definitions, Agency Location Codes, Agency Location, Agency Location Code).

Enter agency name and address information for the ALC.

Non-Treasury Disbursed ALC

Select if this ALC does not disburse payments through a U.S. Federal TDO. This enables the vouchers paid from this ALC to bypass the edit for an eight-digit numeric ALC, which means that you can enter an ALC of one to eight alphanumeric values.

See Also

PeopleSoft General Ledger 9.1 PeopleBook, "Setting Up and Generating Federal Government and Statutory Reports," Defining Agency Location Codes

Specifying GWA Reporting Options

Access the GWA Reporting Options page (Set Up Financials/Supply Chain, Common Definitions, Agency Location Codes, Agency Location, GWA Reporting Options).

Agency Location Code		GWA Reporting Options	
SetID:	SHARE	Agency Location Code:	06180701
		*Business Activity:	No Business Activity Type
Effective Date Customize Find First 1 of 1 Last			
*Effective Date	*Status	*Reporter Category	
10/09/2009	Active	Non Reporter	

GWA Reporting Options page

The business activity you define for your ALCs on this page determines what type of cash transaction activity you report on the SF224 Statement of Cash Transactions report. The business activity and reporter category combination you define determines what cash reclassification transactions you report on the Partial 224 report.

Business Activity

Enter the business activity type for the agency location code. The business activity type identifies the types of transactions an ALC reports on the SF224 Statement of Cash Transactions report. The business activity type specifies which systems the ALC utilizes at the U.S. Treasury to process cash transactions. Options include:

CashLink Only.

IPAC Only.

IPAC and CashLink.

IPAC and TDO Payments.

IPAC, CashLink and TDO Payments.

No Business Activity Type.

TDO Payments Only (treasury disbursing office payments).

TDO Payments and CashLink.

Status

Select *Active* or *Inactive*. Enter an effective date for the status and reporter category.

Reporter Category

Enter a GWA reporter category code. The reporter category code identifies which systems are supporting the BETC code for detailed transactions. This also drives whether an ALC is ready to use the Partial 224 reporting capabilities. Options include:

CashLink Only.

IPAC Only.

IPAC and CashLink.

IPAC and TDO Payments.

IPAC, CashLink and TDO Payments.

Non Reporter.

TDO Payments Only.

TDO Payments and CashLink.

Warning! Select *Non Reporter* as the option until the Partial 224 report is applicable. The reporting of cash reclassifications for the new Partial 224 report is not applicable until the U.S. Treasury completes their requirements for Business Event Type Codes (BETC). The U.S. Treasury plans on phasing the BETC requirements towards the end of 2006. Please contact the U.S. Treasury for more information.

See Also

PeopleSoft General Ledger 9.1 PeopleBook, "Setting Up and Generating Federal Government and Statutory Reports," Defining GWA Reporting Options

Setting Up Vendors for Federal Payment Processing

When you, as a U.S. federal agency, set up vendors for payment processing, you may want to specify the default payment schedule type and date basis calculation type for the vendor, along with the standard vendor setup. You can also set up these options at other levels in the PeopleSoft Payables control hierarchy: business unit, origin, and control group.

For vendors, you enter this information on the Federal page in the Vendor Information component, which is available only when you have Enable Federal Payments selected on the Installation Options - Payables page.

When you set up other U.S. federal agencies as vendors, you may also identify the vendors as federal agencies and enter the vendor's ALC and trading partner code. The ALC is required if the vendor is used for inbound or outbound IPAC processing. You enter this information on the Vendor Information - Federal page, as well.

Specific federal payment processes may require particular vendor setup. See the sections of this book that discuss those processes.

See Also

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information"

Defining Federal Spending Regions

To define federal spending regions, use the following components:

- Spending Region Installation (SPNDNG_REG_INST).
- ChartField Values (FS_CF_VALUE_HOME).
- Spending Region Definition (SPNDNG_REG_DFN).

This section lists a prerequisite and discusses how to:

- Specify the federal spending region ChartField and processing options.
- Define spending region ChartField values.
- Associate spending region codes with states.

Prerequisite

To define spending region ChartField values, you must first define them on the ChartField Attributes page.

See Also

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Defining and Using ChartFields," Creating Generic ChartField Attributes

Pages Used to Define Federal Spending Regions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Spending Region Install Option	SPNDNG_REG_INST	Set Up Financials/Supply Chain, Product Related, Procurement Options, Federal Spending Region, Spending Region Installation, Spending Region Install Option	Specify the ChartField to be used for spending region codes and select processing options.

Page Name	Definition Name	Navigation	Usage
ChartField Values	FS_CF_VALUE_HOME	Set Up Financials/Supply Chain, Common Definitions, Design ChartFields, Define Values, ChartField Values	Access ChartFields to define spending region codes for your established spending region ChartField.
Chartfield Attributes	CF_ATTRIB_VALUES	Click the Attributes link on one of the applicable ChartField pages you accessed from the ChartField Values page.	Select user-defined values to support intraunit consolidations and Federal requirements for reporting and payment processing.
Spending Region Definition	SPNDNG_REG_DFN	Set Up Financials/Supply Chain, Product Related, Procurement Options, Federal Spending Region, Spending Region Definition	Link spending region codes to the appropriate state. You set up one spending region definition (with one or many spending region codes) for each state. You must enter the country and state codes to access the page.

Specifying the Federal Spending Region Chartfield and Processing Options

Access the Spending Region Install Option page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Federal Spending Region, Spending Region Installation, Spending Region Install Option).

Spending Region

Enter the ChartField that will store your spending region codes. This should be a ChartField that is not used for other types of values. For example, you should not select *Account*.

**Purchasing/Accts. Payable
Edit group box** (purchasing
and accounts payable edit
group box)

Select the option to use for validating spending regions on purchase orders and vouchers:

- *No Edit:* The system does not edit for the correct spending region ChartField value on purchase orders or vouchers.
- *Required:* The system performs an edit requiring that you enter a spending region ChartField value on the distribution lines and that this value matches a spending region defined for the state indicated on the address for the vendor location.

If the spending region ChartField value is not one of those defined for the state and setID, then you can save the voucher but the system displays an error message and the voucher is placed in *Recycle* status until you correct it.

- *Optional:* The system edits for the correct spending region ChartField value (as with the *Required* option) only if you enter one.
- *Prohibited:* The system validates that no spending region ChartField value is entered in the document. If a value is present, then you can save the document but the system displays an error message and the document is placed on hold until you correct it.

Defining Spending Region ChartField Values

Access the ChartField Values page (Set Up Financials/Supply Chain, Common Definitions, Design ChartFields, Define Values, ChartField Values).

To define spending region ChartField values:

1. Select your spending region ChartField on the ChartField Values page.

This is the ChartField you defined on the Spending Region Installation page.

2. Access the respective ChartField definition page, and click Attributes.
3. Select the appropriate ChartField attributes and ChartField attribute values for the spending regions.

Associating Spending Region Codes with States

Access the Spending Region Definition page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Federal Spending Region, Spending Region Definition).

Enter a setID and spending region ChartField value for each spending region code you want to associated with the state. You can link multiple spending regions codes to a state, and link the same spending region code to multiple states.

Note that each spending region ChartField value row is keyed by setID. Therefore, if your vendor-to-ChartField relationships involve multiple setIDs, you should add a row for each setID and spending region code combination. For example, assume you are setting up a spending region definition for the state of Alaska, and you have one spending region code—6—for the state. If the vendors in setID US001 share access to one set of ChartField values and the vendors in setID US002 share access to another set of ChartField values, then you should enter two rows:

1. Set ID US001; spending region code 6.
2. Set ID US002; spending region code 6.

Defining Regional Financial Codes

To set up regional financial codes, use the Regional Financial Code component (RFC_CODE).

This section provides an overview of regional finance code definitions and lists a page used to define regional financial codes.

See Also

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts," Defining External Account Information

[Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Creating ECS Bulk Payment Summary Certification Files, page 1049](#)

Understanding Regional Finance Code Definition

You define regional financial codes to produce federal ECS or SPS summary data files. First you create a regional financial code, then specify it on the External Accounts page. Next, on the ECS Summary Total (electronic certification system summary total) page or the SPS Summary Totals (secure payment system summary totals) page, you specify the code before generating the summary data file to send to the Department of Treasury.

Page Used to Define Regional Financial Codes

Page Name	Definition Name	Navigation	Usage
Regional Financial Code	RFC_CODE_TBL	Set Up Financials/Supply Chain, Product Related, Procurement Options, Management, Regional Financial Code	Define regional finance codes.

Specifying Restrictions for Federal Payment Schedules

To set up federal payment schedule restrictions, use the Payment Schedule component (SCHD_PYMNT_MTHD).

This section provides an overview of federal payment schedule restrictions and discusses how to specify federal payment schedule restrictions.

Understanding Federal Payment Schedule Restrictions

If you use federal payment schedules you must define the maximum number of payments and maximum number of appropriations you want included on each payment schedule. When the maximum number of payments or appropriations is reached, the system assigns the remaining payments in a pay cycle to a new Treasury schedule ID.

Page Used to Specify Restrictions for Federal Payment Schedules

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Payment Schedule Restrictions	SCHD_PYMNT_MTHD	Set Up Financials/Supply Chain, Product Related, Procurement Options, Payments, Federal Payment Schedule, Payment Schedule Restrictions	Apply restrictions to the number of payments and appropriations per federal payment schedule for each payment method and EFT layout combination that will use federal payment schedules. Note. In add mode, if you enter an EFT or ACH payment method, you must also enter an EFT layout code. You are not required to enter an EFT layout code if you enter a non-EFT payment method.

Specifying Federal Payment Schedule Restrictions

Access the Payment Schedule Restrictions page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Payments, Federal Payment Schedule, Payment Schedule Restrictions).

Apply Restriction

Check to restrict the number of payments and appropriations per payment schedule.

Payments Per Schedule

Enter the maximum number of payments you want included on each payment schedule. PeopleSoft Payables refers to this setting during the Pay Cycle selection process as it creates schedules. Once the number of payments reaches the number you set, the system generates a new schedule ID.

Appropriations per Schedule

Enter the maximum number of appropriations the system may generate on a payment schedule.

Configuring Workstations for IPAC Inbound Processing

This section discusses how to configure workstations for IPAC inbound processing.

Configuring Workstations for IPAC Inbound Processing

To configure a workstation for IPAC inbound processing:

1. On the workstation, go to Windows Start, Settings, System, Advanced, and click the Environment Variables button to access the Environment Variables dialog box.
2. In the Environment Variables dialog box, enter a new user variable of *PS_FILEDIR* with a value of *c:\temp*.

Although the value is *c:\temp*, the flat file does not need to be located in the *c:\temp* file.

3. Click OK.

See the following screenshot:

Configuring a workstation for loading inbound IPAC flat files to PeopleSoft Payables

Setting Up CCR Processing

To set up CCR processing, use the following components:

- Installation (INSTALLATION).
- Maintain CCR Codes (MAINTAIN_CCR_CODE).
- Vendor Information (VNDR_ID).

This section provides an overview of CCR processing setup, and discusses how to:

- Enable CCR processing.
- Maintain CCR codes.
- Define CCR registration status and Dun & Bradstreet suffixes.
- Define CCR ID numbers.

Understanding CCR Processing Setup

The CCR database is a common vendor database used for the U.S. Federal Government.

Note. While CCR is used by many federal agencies, some agencies do not use CCR.

Setting up PeopleSoft Payables for CCR processing involves:

- Establishing CCR and related CCR codes as an installation to the system.
- Establishing vendors as CCR vendors.

PeopleSoft Payables currently supports the use of SIC (Standard Industrial Classification) and NAICS (North American Industry Classification System) codes. However, it is critical for CCR processing that these codes are updated and kept current. Codes that are not maintained can cause processing problems between the PeopleSoft Payables system and the CCR database. We have added functionality to automatically add updated code information when this information is not regularly maintained. To ensure that the system uses the updated code information, leave the applicable check boxes deselected on the Installation Options - Payables page.

After you have established the installation options, you can establish CCR vendor information and assign one of four status values, depending on each vendor's registration status with the government. This status determines if vendors can submit CCR vouchers.

Chapter 37, "(USF) Processing PeopleSoft Payables for U.S. Federal Agencies," CCR Voucher and Vendor Processing, page 1036

Pages Used to Set Up CCR Processing

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Installation Options - Payables	INSTALLATION_AP	Set Up Financials/Supply Chain, Install, Installation Options Click the Payables link.	Activate CCR and related installation options.
Maintain CCR Codes	CCR_CD_TBL	Vendors, Central Contractor Registry, Maintain CCR Codes	Maintain government mandated code types with the corresponding CCR code and description for your installation.

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Vendor - Identifying Information	VNDR_ID1	Vendors, Vendor Information, Add/Update, Vendor, Identifying Information Click to expand the Additional ID Numbers region on the Vendor - Identifying Information page.	Define CCR registration status and applicable CCR codes for a vendor. Also add Dun & Bradstreet suffix information for a vendor.
Central Contractor Registry Id Numbers	CCR_VNDR_CD_SEC	Vendors, Vendor Information, Add/Update, Vendor, Identifying Information Click the Review CCR Information link on the Vendor - Identifying Information page. This link appears only for active CCR vendors.	Define all valid ID numbers for a vendor. The system uses these numbers to classify vendors for informational purposes only.

Enabling CCR Processing

Access the Installation Options - Payables page (click the Payables link on the Installation Options page).

Enable CCR (enable Central Contractor Registration)

Select to enable CCR processing for the implementation, and optionally enable the Use SIC Code Functionality and the Use NAICS Code Functionality check boxes.

Use SIC Code Functionality (Standard Industrial Classification)

Select to indicate that your PeopleSoft Payables implementation already has updated SIC codes, and that the system should use these updated codes for CCR processing. When this check box is enabled, the system retrieves the updated SIC codes from existing vendor information. If you do not select this option, the system adds the correct, updated code information directly to the Central Contractor Registry ID Numbers page.

Use NAICS Code Functionality (North American Industry Classification System)

Select to indicate that your PeopleSoft Payables implementation already has updated NAICS codes, and that the system should use these updated codes for CCR processing. This field's functionality is similar to the Use SIC Code Functionality field.

Note. Failure to maintain your implementation's SIC and NAICS codes can cause synchronization problems between the system and the CCR database. Select the check boxes only when you are certain your organization regularly maintains the implementation's SIC and NAICS codes. If you are uncertain, leave these check boxes deselected, as the system will automatically implement and use the correct, updated codes.

Maintaining CCR Codes

Access the Maintain CCR Codes page (Vendors, Central Contractor Registry, Maintain CCR Codes).

Code Type

Select a code type from the following, and enter the corresponding CCR code and description:

- *BUS*: Business Types
- *FSC*: Federal Supply Class
- *ORG*: Organization Codes
- *PSC*: Public Service Codes
- *SIC*: Standard Industry Codes
- *USA*: NAICS Code

Defining CCR Registration Status and Dun & Bradstreet Suffixes

Access the Additional ID Numbers collapsible region on the Vendor - Identifying Information page (click to expand the Additional ID Numbers region on the Vendor - Identifying Information page).

CCR Status

Select the applicable registration status:

- *Active*: Select if the vendor has an active CCR registration.
- *Exempt*: Select if the vendor is exempt from CCR registration requirements.
- *Expired*: Displays when the CCR sets a vendor's status to expired.

The system automatically updates this field during the inbound CCR file update process.

- *UnReg* (unregistered): Select if this vendor is pending registration with CCR.

This status is for CCR vendors created in the system using staged data.

Review CCR Information

Click to access the Central Contractor Registry Id Numbers page, and define valid CCR codes for a vendor.

DUNS Number

Select the ID number type *DP4* to store the Dun & Bradstreet +4 suffix. The system uses this number to identify different CCR records for the same vendor at the same physical location; for example, in identifying two separate bank accounts.

Defining CCR ID Numbers

Access the Central Contractor Registry Id Numbers page (click the Review CCR Information link on the Vendor - Identifying Information page. This link appears only for active CCR vendors).

To define CCR ID numbers for a vendor:

1. Select a Code Type value and corresponding CCR Vendor Code field value.
2. Add rows to establish all applicable ID numbers for the vendor.

Chapter 12

Setting Up Sales and Use Taxes and Value-Added Taxes (VAT)

This chapter discusses how to:

- Establish PeopleSoft-only sales and use tax processing.
- Establish Taxware and Vertex sales and use tax processing.
- Establish the PeopleSoft Payables VAT default hierarchy.

Establishing PeopleSoft-Only Sales and Use Tax Processing

This section provides an overview of PeopleSoft-only sales and use tax processing, and discusses how to set up PeopleSoft-only sales and use tax processing options.

Understanding PeopleSoft-Only Sales and Use Tax Processing

This section discusses:

- Default logic for tax applicability and codes.
- Sales and use tax calculations.
- Calculation examples.

Tax applicability and tax codes are derived by ship to location, item, ultimate use code, and vendor. The value of the Tax Destination field is used to look up default values. The default values for tax applicability and tax codes are defined with ship to locations on the Ship To Locations page.

Default Logic for Tax Applicability and Codes

The following table describes the logic that the system uses to populate the tax applicability and tax codes onto the voucher line. You can override these default values at any time, and the system recalculates the values based on your new choices rather than the original defaults.

This defaulting logic is the only mechanism for defaulting tax applicability and tax codes.

When the system finds a match, it uses the matching row and exits the routine. If no match is found, the routine continues to the next step.

Condition	Logic
If voucher line has an item, ultimate use code, and category:	1. Looks for match in default table with the vendor ID and vendor location on the voucher header. 2. Looks for match on vendor only.
If voucher line has an item and ultimate use code:	1. Looks for match in default table with the vendor ID and vendor location on the voucher header. 2. Looks for match on vendor only.
If voucher line has a category and ultimate use code:	1. Looks for match in default table with the vendor ID and vendor location on the voucher header. 2. Looks for match on vendor only.
If voucher line has an item and category:	1. Looks for match in default table with the vendor ID and vendor location on the voucher header. 2. Looks for match on the vendor only.
If voucher line has an item:	1. Looks for match in default table with the vendor ID and vendor location on the voucher header. 2. Looks for match on vendor only.
If voucher line has a category:	1. Looks for match in default table with the vendor ID and vendor location on the voucher header. 2. Looks for match on vendor only.
If voucher line has an ultimate use code:	1. Looks for match in default table with the vendor ID and vendor location on the voucher header. 2. Looks for match on vendor only.
Action:	1. Match on vendor ID and vendor location on voucher header. 2. Match on vendor ID on voucher header.
If voucher line has an item, ultimate use code, and category:	Looks for match in default table with no vendor and vendor location.
If voucher line has an item and ultimate use code:	Looks for match in default table with no vendor and vendor location.
If voucher line has a category and ultimate use code:	Looks for match in default table with no vendor and vendor location.

Condition	Logic
If voucher line has an item and category:	Looks for match in default table with no vendor and vendor location.
If voucher line has an item:	Looks for match in default table with no vendor and vendor location.
If voucher line has a category:	Looks for match in default table with no vendor and vendor location.
If voucher line has an ultimate use code:	Looks for match in default table with no vendor and vendor location.
Action:	1. Match on all default rules for the ship to location. 2. Set voucher line to exempt if no default row found.

Sales and Use Tax Calculations

The system calculates sales and use tax by applying the tax rate for the tax code on each voucher line against the taxable basis amount. After the system calculates all of the voucher lines, it compares the calculated sales tax amount against the amount of sales tax input on the Voucher Invoice Information page. When there is a difference between calculated sales tax and input sales tax, the system prorates the sales tax amount on the voucher across voucher lines that are sales tax applicable.

When the calculated sales tax amount is zero, the system prorates sales tax on the voucher by the percentage of each voucher line's basis amount, divided by the total sales tax basis amount of all voucher lines that have been designated as sales tax applicable. If a sales tax amount is calculated using the applicable tax rate, the sales tax input on the voucher is prorated by the percentage of the calculated sales tax for that line, divided by the total calculated sales tax amount for the voucher.

The system accrues the difference between calculated sales tax and the voucher sales tax amount as use tax if the Sales and Use Tax Edit Message field on the Payables Definition - Tax Options page is set to *Warning* and the sales tax tolerance levels are exceeded. The system processes accrued use tax entries in the same way as calculated use tax charges. No amount is accrued if the sales tax tolerance levels are not exceeded.

Calculation Examples

This section discusses:

- Example 1
- Example 2

The following examples are based upon certain assumptions.

Tax codes and rates include:

Tax Code	Tax Rate
Sales1	2%

Tax Code	Tax Rate
Sales2	4%
Sales3	6%
Sales4	8%
Use1	1%

Ship to A:

Appl	Sales Tax Code	Use Tax Code	Ultimate Use Code	Category	Item	Vendor	Location
Taxable	Sales1	Use1					
Direct Pay	Sales2	Sales2	MFG				
Exempt			RSCH		ItemA		
Taxable	Sales3	Sales3				VendorA	Main
Exempt			RSL				
Taxable	Sales4	Sales4			ItemA	VendorA	Main

Ship to B:

Appl	Sales Tax Code	Use Tax Code	Ultimate Use Code	Category	Item	Vendor	Location
Exonerated							

Example 1

This example is based upon the following assumptions:

- Accrue difference is not applicable.
- Tolerance checking is not performed.

Vchr ID	Total	Entered Tax	Vendor	Loc	Ship To	Item	Use Code	Tax Code	Calc Sales Tax	Calc Use Tax
A	1000	10	Vendor B	Main	A			Sales1	20.00	0.00
B	1000		Vendor B	Main	A		MFG	Sales2	0.00	40.00*

<i>Vchr ID</i>	<i>Total</i>	<i>Entered Tax</i>	<i>Vendor</i>	<i>Loc</i>	<i>Ship To</i>	<i>Item</i>	<i>Use Code</i>	<i>Tax Code</i>	<i>Calc Sales Tax</i>	<i>Calc Use Tax</i>
C	1000		Vendor B		A	ItemA	RSCH		0.00	0.00
D	1000	10	Vendor A	Main	A			Sales3	60.00	0.00
E	1000		Vendor B		A		RSL		0.00	0.00
F	1000	10	Vendor A		A	ItemA		Sales4	80.00	0.00
G	1000		Vendor B		B				0.00	0.00**

* The direct pay certificate is copied onto the voucher. The sales tax rate is used and the use tax is calculated.

** The exoneration certificate is copied onto the voucher. No tax is calculated.

Note. It is your organization's responsibility to provide the appropriate certificates when claiming an exemption. The system only displays a warning message if this field is left blank in the shipping information group box.

Example 2

This example is based upon the following assumptions:

- Accrue difference is selected.
- Tolerance checking is not performed or set to warning.

If tolerance checking is not performed, the system accrues use tax charges whenever the sales tax calculated on the voucher is greater than the sales tax amount input by the user. If tolerance checking is set to warning and the sales tax tolerance levels are exceeded, the system accrues the difference as use tax charges.

<i>Vchr ID</i>	<i>Total</i>	<i>Ent Tax</i>	<i>Vendor</i>	<i>Loc</i>	<i>Ship To</i>	<i>Item</i>	<i>Use Code</i>	<i>Tax Code</i>	<i>Calc Sales Tax</i>	<i>Calc Use Tax</i>
A	1000	10	Vendor B	Main	A	N/A	N/A	Sales1	20.00	10.00
B	1000	N/A	Vendor B	Main	A	N/A	MFG	Sales2	0.00	40.00*
C	1000	N/A	Vendor B		A	ItemA	RSCH		0.00	0.00

Vchr ID	Total	Ent Tax	Vendor	Loc	Ship To	Item	Use Code	Tax Code	Calc Sales Tax	Calc Use Tax
D	1000	10	Vendor A	Main	A	N/A	N/A	Sales3	60.00	50.00
E	1000		Vendor B	N/A	A	N/A	RSL	N/A	0.00	0.00
F	1000	10	Vendor A	N/A	A	ItemA	N/A	Sales4	80.00	70.00
G	1000	N/A	Vendor B	N/A	B	N/A	N/A	N/A	0.00	0.00**

* The direct pay certificate is copied onto the voucher. The sales tax rate is used and the use tax is calculated.

** The exoneration certificate is copied onto the voucher. No tax is calculated.

Note. You must accept the calculated tax amount if tolerance checking is set to error.

Setting Up PeopleSoft-Only Sales and Use Tax Processing Options

In PeopleSoft Payables, sales and use tax data elements are defaulted from the control tables to minimize repetitive data entry. After the setup, you only enter exceptions to the default rules that you have defined. Sales and use tax default rules follow the PeopleSoft Payables control hierarchy. Values at the business unit level default to the transaction level unless you override the defaults with values stored at an intermediate level, such as voucher origin, control group, or vendor. Sales and use tax defaults and calculations depend on how you set up the following data elements in the table below:

Task	PeopleSoft Page	Comments	Hierarchy Level
1. Define tax authority codes.	Tax Authorities page	See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i> , "Defining Financials and Supply Chain Management Common Definitions," Defining Sales and Use Tax Authorities and Codes.	N/A

Task	PeopleSoft Page	Comments	Hierarchy Level
2. Define sales and use tax codes.	Tax Codes page	See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i> , "Defining Financials and Supply Chain Management Common Definitions," Defining Sales and Use Tax Authorities and Codes.	N/A
3. Define Ultimate Use codes (optional).	Ultimate Use Codes page	See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i> , "Defining Financials and Supply Chain Management Common Definitions," Defining Ultimate Use Codes.	N/A
4. Define sales and use tax defaults for ship to locations.	Ship To Locations page Click the Sales/Use Tax link to access the Sales and Use Tax Defaults page.	See <i>PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook</i> , "Defining Procurement Options," Specifying Ship To Location Sales and Use Tax Defaults and Exceptions.	N/A
5. Define sales and use tax options for the business unit.	Payables Definition - Tax Options page	See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Establishing Tax Options, page 58.	Business unit
6. Specify sales tax tolerances for the business unit.	Payables Options - Tax Options page	See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Selecting Tax Options, page 82.	Business unit
7. Specify sales and use tax parameters for voucher origins.	Voucher Origin – Tax Options page	See Chapter 5, "Organizing Vouchers with Origins and Control Groups," Setting Tax Options, page 93.	Voucher origin

Task	PeopleSoft Page	Comments	Hierarchy Level

Establishing Taxware and Vertex Sales and Use Tax Processing

This section discusses setting up Taxware and Vertex processing options.

Setting Up Taxware and Vertex Processing Options

Taxware and Vertex are third-party applications that calculate sales and use tax with procurement data from PeopleSoft. PeopleSoft Payables integration makes it possible for these applications to use the same hierarchical default structure that is applied to PeopleSoft processing. To successfully implement a third-party application with the PeopleSoft Payables system, you must complete setup tasks in addition to the setup tasks for PeopleSoft-only sales and use tax processing. These tasks are also in addition to installing Taxware or Vertex:

Task	PeopleSoft Page	Comments	Hierarchy Level
1. Enable Taxware or Vertex for your PeopleSoft system.	Installation Options - Overall page Tax Provider Installation page	See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i> , "Setting Installation Options for PeopleSoft Applications," Setting Overall Installation Options. See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i> , "Setting Installation Options for PeopleSoft Applications," Defining Tax Provider Installation Options.	N/A
2. Assign geocodes to location codes.	Location Definition page Click the Lookup link to select a geocode on the Tax GeoCode Selection page.	You must select a geocode for each location definition. Geocodes are only required for locations that will interface with Taxware and Vertex. See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i> , "Defining Financials and Supply Chain Management Common Definitions," Setting Up Locations.	N/A
3. Define Ultimate Use codes (optional).	Ultimate Use Codes page	See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i> , "Defining Financials and Supply Chain Management Common Definitions," Defining Ultimate Use Codes.	N/A

Task	PeopleSoft Page	Comments	Hierarchy Level
4. Define sales and use tax defaults for ship to locations.	Ship To Locations page Click the Sales/Use Tax link to access the Sales and Use Tax Defaults page. Calculation parameters are only applicable to Taxware and Vertex.	See <i>PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook</i> , "Defining Procurement Options," Specifying Ship To Location Sales and Use Tax Defaults and Exceptions.	N/A
5. Define Taxware and Vertex options for the business unit.	Payables Definition - Tax Options page Select the Tax Vendor option to display additional fields for specifying Taxware or Vertex defaults.	See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Establishing Tax Options, page 58.	Business unit
6. Specify sales tax tolerances for the business unit.	Payables Options - Tax Options page	See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Selecting Tax Options, page 82.	Business unit
7. Specify sales and use tax parameters for voucher origins.	Voucher Origin – Tax Options page	See Chapter 5, "Organizing Vouchers with Origins and Control Groups," Setting Tax Options, page 93.	Voucher origin
8. Specify sales and use tax parameters for control groups.	Group Information – Tax Options page	See Chapter 5, "Organizing Vouchers with Origins and Control Groups," Setting Tax Options, page 103.	Control group

Task	PeopleSoft Page	Comments	Hierarchy Level
9. Define sales and use tax defaults for vendors.	Vendor Information - Address page Click the Lookup link to select a geocode on the Tax GeoCode Selection page. Geocodes are only required for addresses that will interface with Taxware and Vertex. Vendor Information - Location page Click the Procurement link to define Ordering and Ship From location addresses. Click the Sales/Use Tax link to define sales and use tax options.	See <i>PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook</i> , "Maintaining Vendor Information," Defining Sales and Use Tax Options.	Vendor
10. Specify sales and use tax parameters for a voucher line.	Invoice Information page Click the Sales/Use Tax link to access the Invoice Line Tax Information page. Additional fields appear depending on if you have installed and enabled Taxware or Vertex. GeoCodes and Addresses page Click the Override Tax Location link on the Invoice Line Tax Information page. Fields vary depending on if you use Taxware or Vertex.	See Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Invoice Information for Online Vouchers, page 303.	Voucher
11. Run the GeoCode Update Application Engine process (PO_UPDGEO) to populate the geocodes for locations and addresses.	Geo Code Update page	See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i> , "Defining Financials and Supply Chain Management Common Definitions," Updating Geo Codes for Locations and Addresses.	N/A

Establishing the PeopleSoft Payables VAT Default Hierarchy

This section discusses setting up the PeopleSoft Payables VAT default hierarchy.

Setting Up the PeopleSoft Payables VAT Default Hierarchy

Setting up VAT for PeopleSoft Payables involves first establishing the general VAT environment, then establishing the PeopleSoft Payables VAT default hierarchy.

To set up a VAT environment for PeopleSoft Payables, you need to access pages in the Set Up Financials/Supply Chain, Common Definitions, VAT and Intrastat menu. These pages, the VAT components, and VAT setup are described in detail in the *PeopleSoft Global Options and Reports 9.1 PeopleBook*. It is essential that you read the information in this PeopleBook prior to setting up your VAT environment.

After you set up your VAT environment, you set up VAT defaults and options throughout the PeopleSoft Payables control hierarchy to determine how to process PeopleSoft Payables VAT transactions. At the top of the control hierarchy are the VAT entity and VAT country. From there, you set the processing options according to the following hierarchy:

- PeopleSoft General Ledger business unit.
- PeopleSoft Payables business unit.
- Voucher origin.
- Control group.
- Vendor.
- Vendor location.
- Inventory item.
- Voucher.
- Voucher line.

At each of these levels, you might be required to specify values for certain VAT options and you will also have access to the VAT Defaults and Services VAT Treatment Setup pages. Use these pages to specify values for both required and optional VAT defaults for that level. Note that the fields available on the VAT Defaults and Services VAT Treatment Setup pages vary by the level in the hierarchy from which you access them. The VAT Defaults and Services VAT Treatment Setup pages are documented in full in the *PeopleSoft Global Options and Reports 9.1 PeopleBook*.

The following tables lists the pages on which you establish VAT options and from which you access the VAT Defaults Setup and Services VAT Treatment Drivers Setup components.

PeopleSoft Payables Hierarchy	VAT Options Pages or Defaults Links	Usage
General Ledger business unit	Procurement Control - Non-Merch Charges See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Setting Up Nonmerchandise Charges, page 42.	On the Procurement Control - Non Merch Charges page, you establish the non-recoverable VAT prorate policy by PeopleSoft General Ledger business unit. The prorate policy that you establish here defaults to all PeopleSoft Payables business units that are mapped to this general ledger business unit.
Payables business unit	Payables Options - Tax Options See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Selecting Tax Options, page 82. See <i>PeopleSoft Global Options and Reports 9.1 PeopleBook</i>, "Working with VAT," Establishing VAT Defaults. Payables Definition - Tax Options See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Establishing Tax Options, page 58. See <i>PeopleSoft Global Options and Reports 9.1 PeopleBook</i>, "Working with VAT," Establishing VAT Defaults.	You set up VAT options for PeopleSoft Payables business units by setID on the Payables Options – Tax Options page and by business unit on the Payables Definition - Tax Options page. You also use the VAT Defaults and Services VAT Treatment Setup components, either by accessing them from the Payables Options – Tax Options page and Payables Definition - Tax Options page or by accessing them directly from the menu, selecting the AP Options and AP Business Unit drivers. On the Payables Definition - Tax Options page, you complete the PeopleSoft Payables business unit VAT definition by selecting the type of VAT edit message that is to appear when the tolerances set on the Payables Options - Tax Options page are exceeded.
Voucher origin	Voucher Origin - Tax Options See Chapter 5, "Organizing Vouchers with Origins and Control Groups," Setting Tax Options, page 103.	You can establish default VAT physical nature and service location performance defaults on this page for the PeopleSoft Payables control hierarchy. These defaults can be overridden at the voucher origin level.
Control group	Group Information – Tax Options See Chapter 5, "Organizing Vouchers with Origins and Control Groups," Setting Tax Options, page 103.	You can establish default VAT physical nature and service location performance defaults on this page for the PeopleSoft Payables control hierarchy. These defaults can be overridden at the control group level.

PeopleSoft Payables Hierarchy	VAT Options Pages or Defaults Links	Usage
Vendors and Vendor Locations	Enter VAT for vendors on the following pages: • Vendor Information – Identifying Information • VAT Registration Details • VAT Default Setup • Service VAT Treatment Drivers Setup See <i>PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook</i>, "Maintaining Vendor Information," Entering Vendor Identifying Information. Vendor Information – Location See <i>PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook</i>, "Maintaining Vendor Information," Entering High-Level Information for Vendor Locations.	You can set up VAT options at the vendor and vendor location levels of the PeopleSoft Payables control hierarchy. Most of these options can in turn be overridden on the voucher.
Inventory Item	Inventory Definition - Business Unit Definition See <i>PeopleSoft Inventory 9.1 PeopleBook</i>, "Defining Your Operational Structure in PeopleSoft Inventory," Defining Basic Business Unit Attributes.	You can establish default VAT options for inventory items.
Vouchers and Voucher Lines	Enter VAT for vouchers and voucher lines on the following pages accessed from the Voucher – Invoice Information page: • VAT Header • VAT Summary • Voucher Distribution Line VAT Information See Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Creating Vouchers Online, page 309.	You can set up VAT options at the voucher and voucher line levels of the PeopleSoft Payables control hierarchy. Most of these options can in turn be overridden on the voucher.

Note. Vouchers that are created through the Voucher Build Application Engine process (AP_VCHRBLD) apply the VAT defaults populated by the PeopleSoft Payables control hierarchy, unless VAT information is specified on the staged source transaction. For quick invoices, you can specify VAT apportionment control on the delivered Quick Invoice complete worksheet page.

Chapter 13

Setting Up PeopleSoft Payables Withholding

This chapter discusses how to:

- Set up the PeopleSoft Payables withholding environment.
- Set up PeopleSoft Payables withholding reports.

Setting Up the PeopleSoft Payables Withholding Environment

To set up your withholding environment, use the following components:

- Rules (WTHD_RULE).
- Types and Classes (WTHD_TYPE).
- Jurisdictions (WTHD_JURISDICTION).
- Business Unit Categories (WTHD_BU_CAT).
- Vendor Categories (WTHD_VNDR_CAT).
- Withholding Entities (WTHD_ENTITY).
- Procurement Control (BUS_UNIT_INTFC2).
- Withd Code (withholding code) (WTHD_CODE).

This section provides an overview of setting up withholding entities and discusses how to:

- Define withholding rules.
- Define withholding types and classes.
- Define withholding jurisdictions.
- Define business unit categories.
- Define vendor categories.
- Define withholding entities.
- Define withholding options.

- Define vendor information for the entity.
- Define business unit information for the entity.
- Set up withholding at the general ledger business unit level.
- Define withholding codes.

Understanding Withholding Entity Setup

This section discusses:

- Withholding vendors for withholding entity setup.
- Withholding classes for withholding entity setup.
- Withholding categories for withholding entity setup.

Withholding Vendors for Withholding Entity Setup

Based on your withholding environment, you can define a single withholding remit vendor or multiple withholding remit vendors to submit withholding payments. This enables you to associate multiple setIDs and vendors with any given withholding entity.

The Withhold Calculation Application Engine process (AP_WTHDCALC) retrieves the correct vendor ID for the given setID based on the TableSet control value for the PeopleSoft Payables business unit. For example:

1. Create multiple withholding remit vendors for a withholding entity.

Withholding vendor 1 setID and vendor ID = SHARE and IRS.

Withholding vendor 2 setID and vendor ID = SHR03 and WTHD000002.

2. Create a voucher in the FED01 PeopleSoft Payables business unit for a vendor who is set up for withholding with this withholding entity.

The TableSet control for this PeopleSoft Payables business unit is SHR03.

3. Run the Withhold Calculation process.

The system looks at the TableSet control for the PeopleSoft Payables business unit (SHR03) and retrieves the withholding remit vendor defined for SHR03 for this withholding entity. The system selects vendor 2 (WTHD000002).

Note. This example is intended to illustrate how the system determines the withholding remit vendor and does not represent the entire set up and process flow for withholding.

Withholding Classes for Withholding Entity Setup

Setting up withholding entities require you to define the withholding types, jurisdictions, and classes (or activities) associated with your entity. The withholding entity defined on the Withholding Entity page works closely with the information you define at the business unit level on the Procurement Control - Withholding and Withholding ChartFields pages.

Because of the close association between the withholding entity and business unit, any additions, deletions, and changes you make at the withholding entity level need to be made at the business unit level as well. For example:

- When you add a new withholding class for an entity on the Withholding Entity page, the system automatically adds the class to the Withholding ChartFields page.

The system populates the Account field on the Withholding ChartFields page with the account for the minimum withholding class of the entity. The system displays a warning stating that you should verify the information on the procurement control (Procurement Control - Withholding and Withholding ChartFields pages).

See [Chapter 4, "Setting Up PeopleSoft Payables Business Units," Specifying Withholding ChartFields, page 48.](#)

- When you delete a withholding class for an entity on the Withholding Entity page, the system displays a warning message indicating that you must delete the withholding class from the procurement control (Withholding ChartFields page) as well.

See [Chapter 4, "Setting Up PeopleSoft Payables Business Units," Selecting Withholding Options, page 47.](#)

Withholding Categories for Withholding Entity Setup

The withholding percentage depends on the withholding entity, type, jurisdiction, and class for a given transaction. Furthermore, the withholding percentage depends on the relationship that exists between you (your business unit) and your vendor. In some countries, whether or not your vendor is registered through the proper authorities may influence the withholding percentage for a given transaction. Also, the way you operate your business (from your tax authority's point of view) further influences what percentage you use for withholding purposes.

Taking Ganancias (an Argentine withholding type) as an example, there are several different possible withholding percentages that you may use for an activity, depending on the relationship you have with your vendor:

- Business unit centralized and vendor registered.
- Business unit centralized and vendor not registered.
- Business unit decentralized and vendor registered.
- Business unit decentralized and vendor not registered.

For Ganancias, those four different possibilities need to be accounted for and each may have different withholding rules associated with them.

To accommodate these possibilities, we provide two tables (WTHD_BU_CAT and WTHD_VNDR_CAT). The first one represents the possible business unit categories for withholding taxes, and the second one represents the possible vendor categories for those same withholding taxes.

For each business unit, you can define the possible categories that would yield different withholding calculation. Here are some example categories that could be set up for Ganancias:

<i>Withholding Entity</i>	<i>BU Category</i>
Ganancias	Centralized
Ganancias	Decentralized

For each vendor, you can define the possible categories that would yield different withholding calculations. Here are some categories that could be set up for Ganancias:

<i>Withholding Entity</i>	<i>Vendor Category</i>
Ganancias	Registered
Ganancias	Not Registered

You can define these categories at the business unit and vendor level, and can set up withholding entities with different withholding rules for each permutation of those categories.

We have created a child table to the current WTHD_ENTITY_DTL record called WTHD_CATEGORY for this purpose. Here is a depiction of this record:

<i>Entity</i>	<i>Type</i>	<i>Jurisdiction</i>	<i>Class</i>	<i>BU Category</i>	<i>Vendor Category</i>	<i>Wthd Rule</i>
Arg. Govt	Ganancias	Buenos Aires	Lawyer fees	Centralized	Registered	10%Rule
N/A	N/A	N/A	N/A	Centralized	Not Registered	12%Rule
N/A	N/A	N/A	N/A	Decentralized	Registered	5%Rule
N/A	N/A	N/A	N/A	Decentralized	Not Registered	7%Rule

Pages Used to Set Up the PeopleSoft Payables Withholding Environment

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Withhold Rule	WTHD_RULE	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Rules, Withhold Rule	Establish rules that determine the actions to be taken during withholding. For example, you can create rules to define the amount of withholding and to determine different percentages based on the size of the transaction amount. You can also create tiered-based withholding on this page.
Withhold Rule request	RUN_APY7010	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Rules Report, Withhold Rule	Define run parameters for the Withholding Rules Report (APY7010). Use this report to review withholding rules by as of date.
Withhold Type	WTHD_TYPE	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Types and Classes, Withhold Type	Define withholding at the highest level. For example, in the U.S. 1099 is a withholding type. For each withholding type, you can define subdivisions or classes, such as rent or royalties.
Withhold Type request	RUN_APY7020	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Types Report, Withhold Type	Define run parameters for the Withholding Types report (APY7020). Use this report to review withholding types and classes.
Withhold Jurisdiction	WTHD_JURISDICTION	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Jurisdictions, Withhold Jurisdiction	Define withholding jurisdictions for a withholding type. Jurisdictions introduce an additional level of classification between the withholding type and class. Jurisdiction also enables you to define different withholding percentages based on where the vendor is located as well as on the classification (or activity) of a given transaction.

Page Name	Definition Name	Navigation	Usage
Business Unit Categories	WTHD_BU_CAT	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Business Unit Categories	Define the relationship that exists between you (your business unit) and your withholding entity. As with jurisdiction and classification, this relationship affects your withholding percentages.
Vendor Categories	WTHD_VNDR_CAT	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Vendor Categories	Define the relationship that exists between the withholding entity and your vendor. As with jurisdiction and classification, this relationship affects your withholding percentages.
Withholding Entity	WTHD_ENTITY	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Entities, Withholding Entity	Define your withholding entities (tax authorities). Enter the withholding entity information including vendor, class, and category information for the entity. The withholding entity component ties the withholding information together.
Withholding Options	WTHD_FLAGS	Click the Misc. Setup (miscellaneous setup) link on the Withholding Entity page.	Determine what constitutes the basis for your withholding, and specify how to apply the withholding balance.
Entity Fields - Vendor	WTHD_ENTITY_FIELDS	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Entities, Entity Fields - Vendor	Indicate which information the tax authority (entity) requires for your vendors.
Entity Fields - Business Unit	BU_WTHD_ENT_FLDS	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Entities, Entity Fields - Business Unit	Indicate which information the tax authority (entity) wants to know about your business units.
Withholding Entity request	RUN_APY7030	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Entities Report, Withholding Entity	Define run parameters for the Withholding Entity report (APY7030). Use this report to review withholding entities you have set up.

Page Name	Definition Name	Navigation	Usage
Procurement Control - Withholding	BU_WTHD_JUR	Set Up Financials/Supply Chain, Business Unit Related, Procurement, Procurement Control, Withholding	Set up withholding options at the general ledger business unit level.
Withholding ChartFields	WTHD_BU_CF	Click the ChartFields link on the Procurement Control - Withholding page.	Set up accounting ChartField parameters. Specify general ledger information for each withholding class; indicate where the withholding amounts are going with respect to general ledger. See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Specifying Withholding ChartFields, page 48.
Withhold Code	WTHD_CODE	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Codes, Withhold Code	Create withholding codes. A withholding code represents a set of withholding entity types, jurisdictions, and classes that you want to apply to a voucher at the same time. For example, you may want to apply both a federal and local withholding. In this case, you can define a withholding code to combine the two withholding entities and use this code when you override withholding information at the voucher line level.
Withhold Code request	RUN_APY7040	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Codes Report, Withhold Code	Define run parameters for the Withholding Codes report (APY7040). Use this report to review withholding codes.

Defining Withholding Rules

Access the Withhold Rule page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Rules, Withhold Rule).

Withhold Rule page

(IND) SurCharge %
(surcharge percent)

Enter any surcharge percentage as applicable. Surcharges are for Indian withholding and represent a percentage of the calculated tax amount which is added to the calculated tax amount for withholding.

(IND) Additional SurCharge %
(additional surcharge percent)

Enter an additional surcharge percent that is to be used for calculating the Education Cess tax levy, if required.

(IND)Additional Cess %

Enter any additional Cess charge to be used for calculating the Higher Education Cess tax levy, if required.

You can use the Rule Details group box to define the withholding percentage within specific amount ranges, enabling you to specify tiered withholding.

From Basis Amount

Enter the lower amount of a range for which you want to define a percentage to be withheld.

To Basis Amount

Enter the upper amount of a range for which you want to define a percentage to be withheld.

Percent Withheld

Enter the percentage to be withheld for the range you defined.

Additional Amount

Enter any additional amount to be added to the withholding calculation, as appropriate. This field is used for tier-based withholding.

Defining Withholding Types and Classes

Access the Withhold Type page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Types and Classes, Withhold Type).

Withhold Type

Withholding Type: WHT

Description:

Withholding Class					
Customize Find View All  First 1-4 of 39 Last					
*Class	Description	Contract Reference	Active		
01	Manuscripts fee	☐	☒	+	-
02	Illustrations fee	☐	☒	+	-
03	Music compositions fee	☐	☒	+	-
04	Recording fee	☐	☒	+	-

Withhold Type page

Use the Withholding Class grid to specify the withholding classes.

- Class and Description** Specify any classes that belong to this withholding type, and enter a description for each class that you add.
- (IND) Contract Reference** Select to require a contract reference when creating a voucher with this withholding class. This feature is for Indian withholding only.
- Active** Select to indicate withholding class is active. The withholding class is available immediately for you to use to define your withholding entity options.

Defining Withholding Jurisdictions

Access the Withhold Jurisdiction page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Jurisdictions, Withhold Jurisdiction).

When you access the page, select the withholding type for which you are defining the jurisdiction.

- Withholding Jurisdiction and Description** Specify any withholding jurisdictions that belong to this withholding type, and enter a description for each jurisdiction that you add.

Defining Business Unit Categories

Access the Business Unit Categories page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Business Unit Categories).

When you access the page, select the withholding type for which you want to define business unit categories.

Category	Specify any category that belong to this withholding type, and enter a description for each category you add.

Defining Vendor Categories

Access the Vendor Categories page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Vendor Categories).

When you access the page, select the withholding type for which you want to define vendor categories.

Vendor Category	Specify any vendor categories that belong to this withholding type, and enter a description for each vendor category that you add.

Default Flag	Select to have the vendor category or categories appear as defaults for the Withhold Status field on the Withholding Vendor Information page.

Defining Withholding Entities

Access the Withholding Entity page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Entities, Withholding Entity).

Main Information

Additional Info

*Business Unit Category	*Vendor Category	Create Withholding Payment	*Withholding Rule	Description	*Hold Payment		
NONE	NONE	☒	CIS0	CIS Non-Deduction	No Hold	+	-

Withholding Entity page

Note. You must define the vendor information for the withholding vendor or vendors in the Vendor Information component before you can complete the Withholding Entity page.

Withholding Entity

Apply Withholding

Use this field to determine whether the withholding calculation for any withholding belonging to this entity should occur at *Payment* or at *Vchr Post* (voucher post).

If you select *Payment* as the withholding calculation setting, this setting can be overridden by users with the appropriate authority on the voucher Withholding Information page provided the voucher has not been posted and a payment has not been made.

Note. You set up the security for overriding withholding calculation using the User Preferences component.

Currency Code and Rate Type

Specify the reporting currency code and exchange rate type for the entity.

File Layout

Select the appropriate reporting file layout.

Round Option

Select the appropriate rounding option:
Down: Round all decimals down to the next whole number.
Natural: Round normally. If the calculated withholding amount is less than five, round down; if it is five or above, round up.
(IND) *NRR* (Nearest Rupee Rounding): Select to round to the nearest Rupee. If an amount contains a part of a rupee consisting of paise then, if such part is fifty paise or more, it will be increased to one rupee and if such part is less than fifty paise, it will be ignored.
TDS: Selecting this value rounds decimal amounts to the appropriate zero decimal, regardless of the installed currency configuration.
Up: Round all decimals up to the next whole number.

Withholding Vendor

Use this group box to define all applicable withholding remit vendors for this entity. You can associate one or multiple setID and vendor combinations with the withholding entity.

SetID, Vendor, and Location

Select the setID, vendor, and location associated with the withholding entity. The Withhold Calculation process retrieves the withholding vendor ID for the corresponding setID based on the TableSet control value for the PeopleSoft Payables business unit of the vendor used during voucher entry. For example, for a PeopleSoft Payables business unit that uses SHARE as the set ID for vendors, the Withhold Calculation process selects the withholding vendor ID defined for the SHARE setID on the Withholding Entity page.

See Chapter 13, "Setting Up PeopleSoft Payables Withholding," Understanding Withholding Entity Setup, page 272.

Withholding Class

Use this group box to specify all the possible combinations of withholding types, jurisdictions, and classes for this entity.

Note. For the sake of brevity, we sometimes refer to the combination of withholding entity, type, class, and jurisdiction as a *withholding class combination*.

Misc. Setup (miscellaneous setup)	Click to access the Withholding Options page, where you can select options that determine what constitutes the basis for your withholding.
Min Amt to Rpt (minimum amount to report)	Enter a minimum withheld amount above which you create reporting information for a vendor.

Note. When you add a new withholding class for an entity, the system automatically adds the class and account ChartField on the Withholding ChartFields page. The system displays a warning stating that you should verify the information on the procurement control (Procurement Control - Withholding and Withholding ChartFields pages).

When you delete a withholding class for an entity on the Withholding Entity page, the system displays a warning message stating that you must delete the withholding class from the procurement control (Withholding ChartFields page) as well.

See [Chapter 13, "Setting Up PeopleSoft Payables Withholding," Understanding Withholding Entity Setup, page 272.](#)

Withholding Categories

Use this group box to tie any business unit and vendor categories to your withholding rules. Different combinations of business unit and vendor categories may require different withholding rules.

Entities may categorize your business units differently. For example, in Argentina, one business unit may be considered *centralized* while another is considered *decentralized*. Different withholding parameters may be offered for each based on the type of business unit. Likewise, your vendors may also be categorized differently, depending on whether the vendors are *registered* or *non-registered*. Again, their withholding parameters may vary depending on the type of vendor with which you conduct transactions. The fields in the Withholding Categories group box enable you to capture all of the different possible relationships you may have with your entities and your vendors, and the resultant withholding percentages, or rules which apply when you transact with them.

See [Chapter 13, "Setting Up PeopleSoft Payables Withholding," Understanding Withholding Entity Setup, page 272.](#)

Main Information Tab

Business Unit Category Select the business unit category for this entity, as applicable.

Vendor Category Select the vendor category for this entity, as applicable.

Create Withholding Payment Select if you want to create separate payments for the withholding.
Otherwise, withholding is not calculated, although basis amounts are reported.

Note. Creating a zero percent withholding rule accomplishes the same result.

Withholding Rule Select the withholding rule to which these categories apply.

Hold Payment

Select to hold these payments. The available options are:

Hold All: Hold both the payment and the withholding amount.

No Hold: Do not hold the payment or withholding amount.

Withd Only (withhold only): Hold the withholding amount only.

You can override the option you select here at the vendor level on the Withholding Vendor Information page.

Note. If you wish to hold the vendor's payment, you can set the rule at zero percent and set the hold option to *Hold All*.

See [Chapter 42, "Processing Withholding in PeopleSoft Payables," Understanding Hold Payment Options for Withholding, page 1160.](#)

Additional Info Tab**Min Basis** (minimum basis)

Indicate the minimum accumulated withholding basis amount below which no withholding will be processed. If the accumulated withholding basis amount during a withholding period (identified by the calendar ID you enter) is less than this amount, the system does not create withholding.

Let's say, for example, that you have withholding at 10% and have your minimum basis amount set at 1000 USD. The first voucher you enter is for 700 USD, so no withholding is calculated. The second voucher is for 400 USD. The accumulated total is now 1100 USD, so backup withholding is now calculated at 110 (10% of the accumulated amount) for the second voucher.

Note. If you do not specify a calendar ID (or you do not use period based withholding), the current withholding basis amount is used instead of the accumulated total. For example, if the minimum basis is 1000 USD and period based withholding is not used, every voucher whose calculated withhold basis amount is less than 1000 USD will have no withholding. The same rules apply to the minimum withhold amount explained below.

Note. The amount you enter here is assumed to be in the currency of the entity to which you report withholding.

Min Withhold (minimum withhold)

Indicate the minimum accumulated withholding amount below which no withholding will be processed. If the accumulated withholding amount during a certain period is less than this amount, the system does not create withholding.

Let's say, for example, that you have withholding at 10% and your minimum withhold amount set at 1000 USD. The first voucher you enter is for 9000 USD and the system calculates 900 USD for the withholding. 900 is less than 1000, so no withholding is applied to this voucher. The second voucher you enter is for 2000 USD and the system calculates 200 USD for the withholding. Now, the accumulated withholding is 1100 USD (900 + 200). Therefore, withholding will be applied to the second voucher at 1100.

Note. With period-based withholdings, it is possible that the withholding can exceed the payment amount.

Note. The amount you enter here is assumed to be in the currency of the entity to which you report withholding.

Appl. 1st Pmnt (apply first payment)

Select if you want to apply the entire withholding amount to the first payment when the payments are split up into multiple installments.

If you do not select this check box, the system treats each payment separately and splits the withholding across the payments.

Here's an example of applying the entire withholding amount to the first payment:

Withholding is at 10%. Voucher #1 is scheduled to be paid in two equal installments of 500.00 USD each. In this case, the payment of both installments would be as follows:

- January 2006. First payment is made to the vendor.

Vendor payment is for 400 USD and withholding is for USD 100 (10% of the whole transaction).
- January 2006. Second payment is made to the vendor.

Vendor payment is for 500 USD and no withholdings occur.

Note. Whenever you apply this method, you run the risk that the withholding will be greater than the payment amount, in which case the system rejects the transaction by throwing an exception. You then have to increase the size of the first payment manually so that the transaction can be processed.

Note. Some tax types specify that the full amount of the withholding (for a given voucher) be paid entirely on the first installment paid to the vendor.

Calendar SetID and Calendar ID

Select the setID and ID of the calendar you want to use if you are using period-based withholding.

Payment Terms ID

Specify the payment terms for creating the withholding payment schedule.

(IND) Cumulative

For Indian withholding only.

See [Chapter 46, "\(IND\) Setting Up and Processing Tax Deducted at Source for India," page 1259.](#)

See Also

[Chapter 43, "Resolving Complex Withholding Scenarios," Using Period-Based Withholding, page 1191](#)

Defining Withholding Options

Access the Withholding Options page (click the Misc. Setup (miscellaneous setup) link on the Withholding Entity page).

Withd Basis Amt Determination (Withholding Basis Amount Determination)

Select the appropriate amount check boxes to apply these amounts to the withholding basis amount.

Apply Net	Applies the merchandise amount to the withholding basis amount.
Apply Sales Tax	Applies the sales tax amount to the withholding basis amount.
Apply Freight	Applies the freight amount to the withholding basis amount.
Apply Excise Tax	Applies excise tax to the withholding basis amount for the TDS withholding amount calculation.
Apply Misc Chg (apply miscellaneous charges)	Applies the miscellaneous charge amount to the withholding basis amount.
Apply Discount	Applies the discount amount to the withholding basis amount.
Note. Withholding is calculated as the payment occurs (or when the voucher is posted, depending on the Apply Withholding option on the Withholding Entity page) and the system calculates withholding when discounts are taken, if the Apply Discount check box is selected.	
Apply VAT	Applies the VAT amount to the withholding basis amount.

Apply Withholding Balance To

Remit to vendor or Invoicing Vendor	Select to determine the proper vendor during reporting and also to determine the vendor for whom you accumulate basis amounts and withholdings on period-based withholding.

Note. Some countries report withholding according to their remit-to vendors, while other countries report withholding according to the invoicing vendor. On a voucher, the withholding information is always defaulted from the invoice vendor setup; using the remit vendor options is not recommended because you will have to remember to modify the withholding information on a voucher if the remit vendor has a different withholding treatment than the invoice vendor. Also, the invoice vendor determines the withholding applicability of a voucher. This means that both vendors must be defined as withholding vendors and have the same classes set up on the Withholding Information page.

Note. Do not use the remit vendor option if you are calculating withholding at voucher posting. Using this option will create unexpected results if you try to change remit vendors on a voucher after posting.

Defining Vendor Information for the Entity

Access the Entity Fields - Vendor page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Entities, Entity Fields - Vendor).

Entity: HMRC HM Revenue & Customs			
Vendor Fields			
	Required	Optional	Withhold
Date of Birth	☐	☐	☐
Birth Location	☐	☐	☐
Certificate Expiration	☐	☐	☐
Certificate Number	☐	☐	☐
Certificate type	☐	☐	☐
Company	☐	☐	☐
Country Paid	☐	☐	☐
Direct Sales of \$5000 or More	☐	☐	☐
Foreign Tax Paid	☐	☐	☐

Entity Fields - Vendor page

For each of the vendor fields listed you can select whether it is Required or Optional when users enter vendor information.

The Withhold field is delivered as a non functional field. You may want to configure it to your particular withholding requirements.

Defining Business Unit Information for the Entity

Access the Entity Fields - Business Unit page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Entities, Entity Fields - Business Unit).

There is only one field delivered on this page (for Argentine purposes), but you can add your own fields here if you find information which tax authorities in the countries you do business with may want to know about your business units. Adding new fields requires that you add the field to the BU_WTHD_FLD_SBR and BU_WTHD_JUR page as well as building the WTHD_BU_JUR table.

Note. This information appears on the Procurement Control – Withholding Page for the general ledger business unit.

See Also

[Chapter 43, "Resolving Complex Withholding Scenarios," Using Period-Based Withholding, page 1191](#)

Setting Up Withholding at the General Ledger Business Unit Level

Access the Procurement Control - Withholding page (Set Up Financials/Supply Chain, Business Unit Related, Procurement, Procurement Control, Withholding).

Here you define the information for the tax authorities on behalf of whom you withhold. For each combination of withholding entity, type, jurisdiction, and business unit category, you provide a tax ID number and specify whether or not you are a collecting agent for them.

You also define ChartFields for each withholding class for the withholding combination by using the Withholding ChartFields page. This page is accessible from the Procurement Control - Withholding page. For each withholding class, you must specify at least the account ChartField.

When you enter a voucher in PeopleSoft Payables, the system determines for which charges the vendor is withholdable, and also checks to see for whom (which tax authorities/entities) the general ledger business unit is a collection agent. When you post the voucher, the system creates the withholding liability entry using the procurement control ChartField definition for the general ledger business unit.

See Also

[Chapter 4, "Setting Up PeopleSoft Payables Business Units," Selecting Withholding Options, page 47](#)

Defining Withholding Codes

Access the Withhold Code page Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Codes, Withhold Code).

The withholding code represents combinations of withholding entities, types, jurisdictions, and classes that you want to apply to a voucher to override the withholding information that defaults from the vendor. You can include multiple withholding class combinations.

You can select the withholding codes that you create here on the Withholding Information page for a voucher. Withholding codes are *not* used to specify withholding information for vendors.

See Also

Chapter 42, "Processing Withholding in PeopleSoft Payables," Reviewing and Entering Withholding Information for Vouchers, page 1155

Setting Up PeopleSoft Payables Withholding Reports

Withholding reporting is processed from the Withholding Report table. We deliver with the system a number of predefined reports for use with various types of withholding. You can access these reports via the Report Definition component.

Note. (USA) Do not modify delivered U.S. 1099 reports.

To set up withholding reporting, use the Report Definition component (WTHD_RPT_DFN).

This section discusses how to:

- Specify withholding report selection criteria.
- Specify process type and name.

Entering and Processing Vouchers Online: General Voucher Entry Information

This chapter provides an overview of voucher processing and the voucher life cycle, lists prerequisites, and discusses how to:

- Enter invoice information for online vouchers.
- Copy source documents to create vouchers online.
- Schedule and create voucher payments for online vouchers.
- Complete voucher attributes.
- View voucher summary information.
- View related documents information.
- View voucher error information.
- View voucher approval summary information.
- Run on-demand voucher processes as a batch request.

Note. Because the online voucher component is used to enter all voucher styles, but acts differently depending on the voucher style, this chapter provides sections that discuss how the Voucher (VCHR_EXPRESS) component works generally. Discussions about how to enter and update each voucher style specifically are provided in other chapters in this PeopleBook.

Understanding Voucher Processing and the Voucher Life Cycle

After you have set up all your control information, established your PeopleSoft Payables control hierarchy, and entered approved vendors in the system, you are ready to enter vouchers into the system.

This section discusses one method of entering vouchers into the system: using the online Voucher component. The pages in this component are the equivalent of electronic voucher forms on which you can record invoice information from your vendors in the PeopleSoft Payables database. You can also quickly copy line item information from purchase orders and receivers from PeopleSoft Purchasing tables.

We also provide the Voucher Build Application Engine (AP_VCHRBLD) process for creating vouchers. This process builds and edits voucher records from various sources, including the Quick Invoice Entry (VCHR_QUICK_PNL) component, the Summary Invoice Entry (VCHR_SUMM_PNL) component, and the Spreadsheet Voucher workbook. The Voucher Build process, the Quick Invoice Entry component, and the Spreadsheet Voucher feature are discussed elsewhere in this PeopleBook.

This section discusses:

- Voucher process flow.
- Voucher life cycle.
- Voucher styles.
- Voucher validation.
- Voucher session defaults.
- Processing that is initiated by the Voucher component.
- (USA) Vouchers for Health Insurance Portability and Accountability Act of 1996 (HIPAA) payments.

Voucher Process Flow

The following flowchart illustrates the processing routes that a voucher can follow. It includes optional stages of voucher processing, such as creating control groups and applying matching rules to approve a voucher:

Voucher processing flow

Voucher Life Cycle

Vouchers go through several stages from initial entry to payment to posting. PeopleSoft Payables tracks these stages using various statuses for the following status types that relate to various actions and processes that can be run on a voucher:

- Entry status.
- Match status.
- Approval status.
- Budget status.
- Document Tolerance status.
- Post status.
- Payment status.
- Payment Post status.

This table illustrates the values for each voucher status, before and after processing:

Status Type	Process	Initial Status	Post-Processing Statuses
Entry Status	Voucher Entry	Open	Deleted Recycle Postable
Match Status	Matching	To Be Matched	Exception Manually Overridden Manually Set to Credit Note Matched Match - Dispute No Match
Approval Status	Voucher Approval	To Be Approved	Pending Approval Approved Denied
Budget Status	Budget Processor (Budget checking)	Not Checked	Valid Error
Document Tolerance Status	Document Tolerance Checking	Not Checked	Valid Error
Post Status	Voucher Posting	Not Posted	Posted

Status Type	Process	Initial Status	Post-Processing Statuses
Payment Status	Pay Cycle Payment Selection subprocess	Not Selected	Selected for Payment
Payment Status	Pay Cycle Payment Creation subprocess	Selected for Payment	Paid
Payment Post Status	Payment Posting	Not posted	Posted

When you first enter a voucher into PeopleSoft Payables, it has an entry status of *Open*. When you save the voucher for the first time, the system validates the input with information that is provided by default from the control hierarchy to ensure correct entries. If the voucher passes all validations, it goes into a *Postable* state. The system generates accounting entries when the Voucher Posting Application Engine (AP_PSTVCHR) process selects the voucher for posting. At this time, the voucher is available for distribution to the general ledger using the Journal Generator Application Engine (FS_JGEN) process.

If one or more of the validations fail, a couple of events can happen. For some edits, the system does not allow you to save the voucher until the error condition is corrected. For example, if you do not enter a date on the voucher header, you cannot save the voucher.

For other edits, you can choose less restrictive error handling, such as *Recycle*, which lets you save the voucher. However, you cannot post or pay the voucher until you correct the error. You set these rules at the business unit level of the control hierarchy and can override them at other levels: voucher origin, control group, vendor, and voucher. With duplicate invoice checking, for example, you can choose recycle error handling, which means that the system accepts the suspect vouchers but does not enable them to be posted or paid. To post and pay these vouchers, you must update the voucher with correct information.

Until a voucher has been reviewed for approval, or unless it is preapproved, it has an approval status of *Pending*. After that, a voucher can be approved or denied. A voucher cannot be paid unless it has been approved. However, if your business unit definitions enable you to, you can post a voucher even though it has not been approved for payment.

When you post a voucher in PeopleSoft Payables, the system creates balanced accounting entries to record the liability and sets the post status to *Posted*. When a voucher is in a posted state, you can make only limited changes to it. Essentially, you can change only descriptive information that does not affect the numbers on the voucher. To change the numbers on a posted voucher, you must first unpost the voucher to create reversing entries. This action puts the voucher back into a postable state, as if it had never been posted. You can then change the necessary fields.

A voucher can have one or more payment records selected for payment based on their scheduled pay date and other parameters. The payment status is *Unselected*, *Selected for Payment*, or *Paid*.

Note. If you are using budget checking (through the Commitment Control feature), you cannot post or pay a voucher until it has successfully passed budget checking.

Voucher Styles

PeopleSoft Payables provides various voucher styles, each of which addresses a particular objective:

Adjustments

Enter adjustment vouchers for credit or debit memos, or for relating one voucher to another. This style is also used for debit memo adjustment vouchers that are created by the Matching Application Engine process (AP_MATCH).

See [Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Adjustment Vouchers, page 392.](#)

See [Chapter 20, "Running the Matching Process," Processing Debit Memo Adjustment Vouchers, page 627.](#)

Journal Voucher

Enter vouchers for adjusting accounting entries.

See [Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Journal Vouchers, page 399.](#)

Prepaid Voucher

Enter prepayments (down payments, progress payments, or deposits).

See [Chapter 30, "Processing Prepayments," page 885.](#)

Register Voucher

Accrue an individual voucher for which the expense distribution is not known or not yet approved.

See [Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Registered Vouchers, page 400.](#)

Regular Voucher

Enter standard vouchers (this is the default setting). This style is also used to enter purchase order vouchers and vouchers that require matching to purchase orders and receiving documents.

Reversal voucher	Create a new voucher with reversal accounting entries and back out encumbrances. <u>See Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Reversal Vouchers, page 403.</u>
Single Payment Voucher	Enter a voucher for a one-time vendor without having to define the vendor in the system. <u>See Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Single Payment Vouchers, page 406.</u>
Template Voucher	Create a voucher that can be used as a template for generating regular vouchers that share voucher data. <u>See Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Template Vouchers, page 411.</u>
Third Party Voucher	Enter vouchers for charges other than merchandise charges, for example, freight-only vouchers. <u>See Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Third-Party Vouchers, page 412.</u>

This chapter describes the online voucher pages and how to enter regular vouchers online. The other methods of voucher entry and voucher styles are described in separate chapters of this PeopleBook.

Chapter 18, "Entering and Importing Spreadsheet Vouchers," page 479

Voucher Validation

When you save vouchers, many edits and processes occur automatically. Any problems that PeopleSoft Payables detects with a voucher are brought to your attention so that you can fix them immediately.

Other edits that are specific to particular voucher styles, payment terms, and other circumstances are discussed in the sections or chapters about those styles and circumstances.

This section discusses:

- Voucher field validation.
- Financial sanctions validation.

Voucher Field Validation

The system performs a series of validation checks to ensure that you have completed all the fields correctly. Some of the validations that occur are:

- Duplicate invoice checking.
- Verifying the existence of a vendor ID.
- Verifying the existence of an invoice date and invoice ID.
- Balancing header amounts against voucher line amounts for both transaction and base currency amounts.
- Balancing voucher line amounts against distribution line amounts for both transaction and base currency amounts.
- Ensuring that the user ID that is approving the voucher is the same as the user who is signed in.
- Validating accounting distribution field values and combinations and error processing.
- Where appropriate, validating the calculation and proration of nonmerchandise charges, such as sales and use taxes, value-added taxes (VAT), freight charges, and miscellaneous charges.
- Validating the bank ID, bank account number, and DFI ID.

Financial Sanctions Validation

PeopleSoft provides validation of your vendors against financial sanctions lists (for example, the Specially Designated Nationals [SDN] list) at the vendor level, voucher level, and payment level. At the voucher level, if financial sanctions validation is enabled at the installation level, the invoicing vendor and remit vendor or vendors, if different from the invoicing vendor, are validated. If financial sanctions validation is enabled at the bank level, no validation of the vendor is done during voucher processing unless you specify a bank for the remit vendor and the bank requires financial sanctions validation. The system updates the vendor's financial sanctions status on the Vendor Information (VNDR_ID) component.

At the voucher level, the system validates your vendors upon:

1. Saving the voucher if financial sanctions validation is enabled at the installation level, or if financial sanctions validation is enabled at the bank level, you specify a bank for the remit vendor and the bank requires financial sanctions validation.

The system displays a warning message that the vendor is currently under financial sanctions review. You can proceed with saving the voucher; however, the system does not allow payments to vendors with a financial sanctions status of *Review* or *Blocked*.

At the time of voucher entry, if financial sanctions validation is enabled and the vendor that you entered has a financial sanctions status of *Review* or *Blocked*, the system displays a warning message that the vendor that is selected is currently under financial sanctions review. You can proceed with adding or updating the voucher for this vendor.

Note. You cannot record a manual payment on the Voucher - Payments page if the vendor has a financial sanctions status of *Review* or *Blocked*. The system does not allow you to select *Record* as the payment action.

You cannot create an express payment on the Voucher - Payments page if the vendor has a financial sanctions status of *Review* or *Blocked*. The system does not allow you to click the Express Payment link.

2. Running the Financial Sanctions Validation Application Engine (AP_SDN_VAL) process.

You can schedule the Financial Sanctions Validation process to run on a predefined schedule using the Process Scheduler, or you can run it on an ad hoc basis.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

Voucher Session Defaults

You can define voucher defaults that automatically populate voucher fields for an entire session, and you can override those defaults for a particular voucher. These defaults override the defaults that the system applies using the PeopleSoft Payables control hierarchy. To set up voucher defaults, you can:

- Predefine session defaults using the Session Defaults (AP_VCHR_DFLT_PG) page.

The system saves these defaults that you can apply to vouchers that you enter using the Voucher component or the Quick Invoice Entry component. You define session defaults for all users, for users with the same primary permission list, or for specific users.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options," Defining Voucher Session Defaults.

- Define ad hoc session defaults using the Session Defaults (AP_SESSN_DFLT_SEC) page within the Voucher and Quick Invoice Entry components.

The system does not save the defaults and only applies them during the current session.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Session Defaults, page 340.](#)

Note. Session defaults can be applied only to vouchers with a voucher style of *Journal Voucher*, *Regular Voucher*, *Single Payment Voucher*, and *Template Voucher*.

Processing That Is Initiated by the Voucher Component

Processing steps that occur when you save a voucher include:

- Assigning a voucher ID for auto-numbered vouchers.

You can preassign voucher IDs on the add search page, as long as they are unique. In fact, if the auto-numbering option is disabled for the business unit, using the add search page is the only way to enter vouchers. Only the auto-numbered vouchers are assigned a voucher ID at save time.

- Determining whether the status of the control group should be updated.
- Setting one-time vendors to inactive status.
- Calculating and prorating the discount amount, if any.
- Prorating sales tax, use tax, freight, and miscellaneous charges, as applicable.
- Calculating and prorating VAT and sales and use tax (SUT) amounts.
- Converting the transaction amount to the base currency.
- Determining payment net and discount due dates.
- Determining the scheduled payment date.

- Creating payment records.
- Performing withholding processing, as applicable.
- Creating payment records for manual payments that are recorded on the voucher.
- Checking the voucher match status.
- Validating your vendors if financial sanctions validation is enabled.

Voucher component-initiated processing that is specific to particular circumstances (such as integration with third-party tax applications or federal payment schedule processing) is discussed in the chapters that cover those circumstances.

(USA) Vouchers for HIPAA Payments

The Health Insurance Portability and Accountability Act of 1996 (HIPAA) is a set of regulations from the U.S. Department of Health and Human Services. One of the primary concerns of HIPAA is to restrict the use of individually identifiable health information to protect the privacy of healthcare consumers. In addition to the privacy rules, HIPAA includes regulations that establish national standards for the format and structure of electronic communications between covered entities.

PeopleSoft Payables generates HIPAA payments for only two transaction handling codes: Payment Only and Payment + Advice.

HIPAA entails communication protocol and standards for several business documents. PeopleSoft Payables supports Electronic Data Interchange (EDI) Format 820 (OUTBOUND), specifically designed for HIPAA required fields and values. To fully employ HIPAA functionality, you must use a third-party vendor to process the generated electronic funds transfer (EFT) file and transform it to the HIPAA 820 EDI format.

The HIPAA information that you define at the vendor level (in the HIPAA Information collapsible region on the Vendor Information - Payables Options page) appears by default on the HIPAA page in the Voucher component if the payment method for the voucher has an EFT layout of *HIPAA*. The system performs validation during online voucher entry and as part of the Voucher Build process, which checks for the HIPAA payment designation and marks such vouchers as *Payment Separate*.

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts," Bank Account Payment Methods

Prerequisites

Before entering vouchers into the system, you must:

- Set up all control information.
- Establish your PeopleSoft Payables control hierarchy.
- Enter approved vendors in the system.
- Specify user preferences for online voucher entry on the Define User Preferences - Payables Online Vouchering page.

Entering Invoice Information for Online Vouchers

This section provides an overview of voucher dependencies and balancing functionality and discusses how to:

- Access the Voucher component.
- Create vouchers online.
- Define payment terms.
- Enter nonmerchandise charge details.
- Review nonmerchandise charges.
- View purchase order and receiver references.
- Associate receivers with voucher lines.
- Associate receiver lines with voucher lines for matching.
- Enter SUT summary information.
- Enter voucher line tax information.
- Enter session defaults.

Understanding Voucher Dependencies and Balancing Functionality

This section discusses:

- The dependencies of the Voucher component on voucher style and other factors.
- Voucher balancing.

The Dependencies of the Voucher Component on Voucher Style and Other Factors

The Voucher component looks and acts differently for each voucher style. It also displays different fields and provides different processing depending on:

- Tax environment (SUT, VAT, Indian excise and customs duty, installed third-party tax applications, and so forth).
- Your installation options (such as whether you are a U.S. federal agency, for example).
- Various processing and display options that you can select at each level of the PeopleSoft Payables control hierarchy.

For this reason, the description of the Voucher component that follows here includes page elements that you may not see or use for a particular voucher style or that you may not see or use in your implementation of PeopleSoft Payables. Whenever a page element has such dependencies, these are documented, except in the case of tax environment. The tax environment—whether VAT, SUT, Indian excise tax, sales tax, or customs duty—is usually reflected in the field labels themselves.

For discussions of specific voucher styles, see the chapters that discuss those styles.

Voucher Balancing

The Voucher component has various functions that enable you to view and correct balance discrepancies. These include:

- Displays of totals for separate voucher regions— lines, charges and taxes—enabling you to quickly identify the unbalanced area.
- Calculate button: Located at the header level, this button enables you to perform on-demand balance calculations.
- Highlighted fields: Displays out-of-balance information highlighted in red.

When the voucher is in balance, the system displays an amount of 0.00 in the Difference field.

We discuss three common out-of-balance scenarios:

- The first scenario is a regular voucher with the header out of balance to the distribution lines.

In this example, a regular voucher has a header total of 1,500.00 USD, but distribution lines totaling 1,505.00 USD. The system displays discrepancies between the header and the lines in the Difference field at the header level.

- The next scenario is a regular voucher with the distribution lines out of balance to the invoice line.

This regular voucher has a header total of 2,000.00 USD and an invoice line total of 2,000.00 USD, but the distribution lines total 2,002.00 USD. When the invoice lines and distribution lines are out of balance, the system displays the discrepancy in the Difference field.

- The third scenario is a purchase order voucher with distributions that balance to the line, but the voucher has multiple lines that do not balance to the header.

The purchase order voucher has a header total of 2,100.00 USD, but the invoice line total and the distribution lines total 500.00 USD. The Difference field at the header level displays the 1,600.00 USD discrepancy between the header amount and the lines amount. The Difference field at the invoice and distribution line level displays a 0.00 USD discrepancy between the merchandise amount and the distributed amount, but it appears highlighted in red, because the voucher is out of balance.

Pages Used to Enter Invoice Information for Online Vouchers

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Invoice Information	VCHR_EXPRESS1	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information	Enter or view invoice information, including invoice header information, nonmerchandise charges, and voucher line and distribution information.
Vendor Lookup	VNDR_LOOKUP_WRK	Click the Advanced Vendor Search link on the Invoice Information page.	Enter search criteria to retrieve vendor address information. Note. Selecting an address here does not automatically change the vendor location to any default location that is associated with the address. The system uses different defaults for the vendor location value. Change the default location value using the Location field on the Invoice Information page.

Page Name	Definition Name	Navigation	Usage
Contract Line Info	VCHR_LN_CNTRCT_SEC	Click the View Contract ID Line link on the Invoice Information page	View contract ID, line and release number information for recurring vouchers. This link only appears for recurring vouchers.
Voucher Comments	VCHR_COMMENTS_TXT	Click the Comments link on the Invoice Information page.	Enter internal voucher comments.
Voucher Header Attachments	VCHRHDR_ATT_SEC	Click the Voucher link on the Invoice Information page.	View or attach documents related to the voucher.
Date Calculation	VCHR_DT_CALC_SBP	Click the Calc Basis Date link on the Invoice Information page.	(USF) Define the date calculation basis for U.S. federal prompt payment due date requirements and enable enforcement of valid reimbursable periods for project-related vouchers.
Search Audit Logs	FS_AUDITLOG_SEARCH	Click the View Audit Logs link on the Invoice Information page.	Search for and view audit logs.
Payment Terms	VCHR_TERMS_EXP	Click the Transfer to Pay Terms Detail button on the Invoice Information page.	View or change the default payment and discount terms for the voucher.
Freight Charges	VCHR_FRGHT_SEC	Enter a freight amount and click the Transfer to Freight Detail button on the Invoice Information page.	Allocate the freight charges for the voucher at a more detailed level.
Miscellaneous Charges	VCHR_MISC_SEC	Enter a miscellaneous charge amount and click the Transfer to Misc Chrgs Detail (transfer to miscellaneous charges detail) button on the Invoice Information page.	Allocate the miscellaneous charges for the voucher at a more detailed level.
Sales Tax Charges	VCHR_SALETX_SEC	Enter a sales tax amount and click the Transfer to Sales Tax Detail button on the Invoice Information page.	Allocate the sales tax amount at a more detailed level.
Use Tax Charges	VCHR_USETAX_SEC	Click the Transfer to Use Tax Detail button on the Invoice Information page.	Specify the use tax to apply to this voucher.

Page Name	Definition Name	Navigation	Usage
Non Merchandise Charges Summary Information	VCHR_LINE_MISC_CHG	Click the Non Merchandise Summary link on the Invoice Information page.	View the miscellaneous amounts that are allocated to each voucher line. On this page, you can also change the allocation for a particular voucher.
Sales/Use Tax Summary	AP_SUT_SUMM_PG	Click the Sales/Use Tax Summary link on the Invoice Information page.	Review the sales and use tax information for all the voucher lines, and if applicable, modify tax information.
Session Defaults	AP_SESSN_DFLT_SEC	Click the Session Defaults link on the Invoice Information page.	Enter voucher defaults for an ad hoc session, or use an existing available session default. These defaults override the values that the system applies using the PeopleSoft Payables control hierarchy.
Invoice VAT Summary Information	VCHR_VAT_SM_EXP	Click the VAT Summary link on the Invoice Information page.	Review the VAT amounts summarized by VAT rate. This page provides a preliminary view of the VAT calculations based on the parameters that have been supplied by default (or have been manually updated), as well as the amounts that are entered. You can also link from this page to the VAT header, line, and distribution line defaults pages.
Invoice Header VAT Information	VCHR_VAT_HD_EXP	Click the VAT Summary link on the Invoice Information page. Click the Transfer to VAT Header link on the Invoice VAT Summary Information page.	Review and, if applicable, override the voucher's VAT settings.
Invoice Line VAT Information	VCHR_LINE_VAT_SEC1	Click the Invoice Line VAT link in the Distribution Lines scroll area on the Invoice Information page.	Review and, if applicable, override VAT defaults for the distribution line.
Voucher Distribution Line VAT Information	DISTRIB_LN_VAT_SEC	Click the VAT link on the VAT tab in the Distribution Lines scroll area on the Invoice Information page.	Review and, if applicable, override VAT defaults for the distribution line.

Page Name	Definition Name	Navigation	Usage
View Source PO/Receiver Information	VCHR_PO_INFO	Click the Purchase Order & Receiver Info link in the Invoice Lines group box on the Invoice Information page.	View references to purchase orders and receivers. View any comments that are associated with the purchase order or receiver header or line from which the voucher and voucher line information have been copied.
Associate Receiver	VCHR_RECV_MTCH	Click the Associate Receiver(s) link in the Invoice Lines group box on the Invoice Information page.	Edit any of the receiver lines that are associated with the voucher line and delete a receiver line.
Associate Receiver Lines	RECEIVER_LOOKUP	Click the Associate Receiver Lines link on the Associate Receiver page.	Manually associate receiver lines with the voucher line for matching.
Invoice Line Tax Information	VCHR_LINE_TAX	Click the Sales/Use Tax link in the Invoice Lines group box on the Invoice Information page.	Review and, if applicable, override tax settings for the voucher line.
GeoCodes and Addresses	VCHR_LINE_TXGEO	Click the Override Tax Location link on the Invoice Line Tax Information page.	Define a new tax location for vouchers. (Taxware or Vertex users only.)

Accessing the Voucher Component

The Voucher component in PeopleSoft Payables uses deferred processing. If you are adding a new voucher, you can use the fields on the add search page for the component to prepopulate the new voucher and reduce the amount of prompting and editing that you need to do on the new voucher. Note also that:

- The voucher style that you select on the add search page determines how the system displays, edits, and processes the voucher.

The default voucher style is *Regular Voucher*.

The selected voucher style also determines what nonmerchandise and tax-exempt fields appear on the add search page. These fields are Miscellaneous Amount, Freight Amount, Sales Tax Amount, Tax Exempt, and VAT Amount. The selected business unit determines whether the latter three fields appear.

Important! When copying purchase order vouchers, *do not* enter gross, nonmerchandise, and tax-exempt amount information in the fields on the add search page. Be sure to use the Copy PO functionality on the Invoice Information page, which ensures that the system provides these amounts by default into the appropriate fields and creates the correct voucher lines.

- The system prepopulates the control group on the add search page with the earliest assigned group for the business unit and user ID.

- PeopleSoft Payables functionality performs duplicate invoice checking using the information that you add on the add search page.

If the system finds any vouchers that appear to be duplicates, it issues a warning before you enter the Invoice Information page. It also performs duplicate invoice checking when you save a voucher. However, the more information that you enter on the add search page, the more likely you will catch a duplicate invoice before you create another duplicate voucher.

- PeopleSoft Payables uses default information from the voucher origin table and information from other default levels to determine how the system processes the voucher.

Each user who enters vouchers must be assigned to an active voucher origin. If the user is not assigned to a voucher origin or the voucher origin is inactive, the user cannot save the voucher. Also, you cannot change the voucher origin of a voucher after it is entered into the system.

- The system automatically populates ChartField values that are defined at the vendor location level into the voucher distribution lines.
- Entering the estimated number of invoice lines in the Estimated No. of Invoice Lines (estimated number of invoice lines) field enables you to enter lines on the Invoice Information page without repeatedly needing to click the Add button in the Invoice Lines scroll area.

Any lines that you leave blank are automatically deleted when you save.

- When you enter gross amount and nonmerchandise amount values on the add search page, the system supplies the difference by default on the first voucher line and distribution line.

Note. If you are adding a voucher, the Invoice Information page appears when you have entered data on the add search page and clicked Add. If you are accessing a voucher that already exists in the system, then the Voucher - Summary page appears when you have entered the search information and clicked Search.

Invoice Information page for regular voucher style, add mode (2 of 2)

Note. If financial sanctions validation is enabled at the installation level, the system validates the vendor against financial sanctions lists upon saving the voucher. If financial sanctions validation is enabled at the bank level, no validation of the vendor is done during voucher processing unless you specify a bank for the remit vendor and the bank requires financial sanctions validation. The system updates the vendor's financial sanctions status on the Vendor Information component.

If the system determines that the vendor is a potential match to a financial sanctions list, the system displays a warning message that the vendor is currently under financial sanctions review. You can proceed with saving the voucher; however, the system does not allow payments to vendors with a financial sanctions status of *Review* or *Blocked*.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

Related Content

Click and choose a link to view information related to this vendor and business unit combination. The system displays information from today's date to one year prior, allowing you to see at a glance information in a graphical format. You can expand the viewing area by clicking on the box above the frame and dragging it up. You can also close the viewing area by clicking the X in the upper right corner of the viewing area. Information available for viewing is:

- *Match Exceptions*: Displays totals for vouchers that are in a match exception for this vendor and business unit combination.
- *Prepayment Pending*: Displays the total prepayments that are pending for this vendor and business unit combination.
- *Recycled Vouchers*: Displays the total vouchers that are in a recycled status for this vendor and business unit combination.

Invoice Number

Enter the invoice number or some other control number from the voucher's supporting document. The system uses this number as a reference for duplicate invoice checking if you have selected it to be one of your match criteria.

Note. For evaluated receipt settlement (ERS) vouchers that were built by the Voucher Build process, the invoice number is appended with the ERS invoice sequence number suffix.

Invoice Date

Enter the date that appears on the invoice.

Accounting Date

Displays the accounting control date, which is based on the settings that are defined in the PeopleSoft Payables default hierarchy. You can override it here on the voucher.

Changing this date also changes the VAT declaration date on the Invoice Header VAT Information page if the declaration point is *Accounting Date*.

Note. If *Current Date* is selected as the accounting date option in the PeopleSoft Payables hierarchy, and the current date is not in an open PeopleSoft General Ledger period, the system uses the first available date in an open PeopleSoft General Ledger period as the accounting date.

Tax Exempt

Select if you want to override the default sales and use tax setup for this voucher and make it exempt from taxation.

Print Invoice

Click to create the invoice in a PDF file format. The system opens a new window where you can view and print the invoice.

Calculate (calculate on-demand balancing)

Click to perform on-demand balancing calculations and check whether the voucher is in or out of balance. The system displays an amount of *0.00* in the Difference field when the voucher is in balance.

Vendor and Name

Select the vendor by entering the vendor ID or short name.

After you press Tab to exit either field, the system retrieves and populates the voucher with the full vendor name, primary address, default location information, and payment terms. In addition, the system uses default information from the vendor table in conjunction with information from other default levels (business unit, origin, and control group) to determine how the system processes this voucher.

Note. If financial sanctions validation is enabled and the vendor has a financial sanctions status of *Review* or *Blocked*, the system displays a warning message that the vendor that is selected is currently under financial sanctions review. You can proceed with adding or updating the voucher for this vendor.

Location

Override the default location by selecting a new location. The vendor location controls much of the default voucher processing.

Address

Override the default address by selecting a new address.

Advanced Vendor Search

Click to search for vendors using partial names and wildcard symbols.

Note. If you find that the referenced vendor does not exist on the vendor table and you want to add the vendor, you do not have to cancel the voucher on which you are working. Access the Vendor Search page by clicking the vendor link and then clicking the Add Vendor button. This takes you to the Vendor Information component, enabling you to add the vendor to the system. After saving the new vendor, close the newly opened browser session to return to the Vendor Search page. When you are back on the Vendor Search page, select the new vendor.

Control Group

Select a control group for the voucher if applicable. The default is the earliest assigned group for the business unit and user ID. If no groups are assigned for your user ID, the Group field does not appear.

Miscellaneous Freight, and Sales Tax

Enter any miscellaneous charge amount, freight amount, or sales tax amount. To allocate these charges at a more detailed level, click the icons next to these fields to access detail pages (the Miscellaneous Charges, Freight Charges, and Sales Tax Charges pages).

You should enter any amounts on the voucher page first before accessing the detail page. When you save the voucher, the system allocates the charges that you enter to the voucher lines based on the defaults that you set in the Procurement Control (BUS_UNIT_INTFC2) component for the PeopleSoft Payables business unit.

Note. If you override the default tax information on the Invoice Line Tax Information page and then change the sales tax amount in this field, the overridden tax information will revert to the default. Enter a tax amount here before you update any tax information on the Invoice Line Tax Information page.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Nonmerchandise Charge Details, page 332.](#)

See [Chapter 45, "\(IND\) Processing Excise Duty, Sales Tax, VAT, and Customs Duty for India in PeopleSoft Payables," page 1249.](#)

Transfer to Misc Chrgs Detail (transfer to miscellaneous charges detail page)

Click to access the Miscellaneous Charges page and define miscellaneous charges.

Transfer to Freight Detail

Click to access the Freight Charges page and define freight charges.

Transfer to Sales Tax Detail

Click to access the Sales Tax Charges page and define sales tax charges.

Use Tax

Displays the calculated use tax. The system calculates the use tax either from:

- A use tax code that is entered on the Invoice Line Tax Information page.
- The difference between the sales tax that is entered on the voucher header and the sales tax that is entered or calculated for the voucher lines if the voucher lines are tax applicable but the header sales tax amount is less than the total for the lines.

Click the Transfer to Use Tax Detail icon to access the Use Tax Charges page, where you can specify how to allocate the use tax charges.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Nonmerchandise Charge Details, page 332.](#)

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Voucher Line Tax Information, page 338.](#)

 Transfer to Use Tax Detail

Click to access the Use Tax Charges page and define prorated or nonprorated use tax charges.

 Transfer to VAT Header

Click to access the Invoice Header VAT Information page and define VAT default information for this voucher.

Total and Currency

Enter the full amount of the voucher, including merchandise and service amounts (entered on the voucher lines), freight, and tax. Enter the gross amount to ensure balancing between the voucher header and voucher lines. You can enter gross amounts only up to the limit that is specified on your PeopleSoft Payables user profile.

Difference

Displays the amount that you are currently out of balance. To arrive at this figure, the system compares the sum of the invoice lines plus the applicable charge amounts and the entered gross amount.

Pay Terms

Select the payment terms. These terms are supplied from the PeopleSoft Payables default hierarchy. Click the Transfer to Pay Terms Detail button to access the Payment Terms page, where you can override the defaults or change associated information.

Basis Date Type

Displays the basis date type which controls the basis date on which the payment terms are based. You can override the basis date type on the Payment Terms page.

(USF) Pay Schedule

Indicate a federal payment schedule type for this voucher. The system uses this information to group this voucher with others and assign it to the appropriate payment schedule. Select from:

- *Manual*
- *Other*
- *Transport* (transportation)

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," page 1033.](#)

Non Merchandise Summary

Click to access the Non Merchandise Charges Summary Information page, where you can view the miscellaneous amount that is allocated to each voucher line for each charge code. This page is useful only after you enter or copy voucher line information.

Session Defaults

Click to access the Session Defaults page, where you can select existing available session defaults or set ad hoc default values for all of the invoices that you enter in the current session. These defaults override the defaults that the system applies using the PeopleSoft Payables control hierarchy.

(USF) Calc Basis Date

Click to access the Date Calculation page, where you can enter information that enables you to schedule the payment for this voucher on a U.S. federal prompt payment basis. You can also use the Date Calculation page to enable enforcement of valid reimbursable periods for project-related vouchers.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Applying Prompt Payment Protocols, page 1040.](#)

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Enforcing Valid Reimbursable Periods for Project-Related Vouchers, page 1045.](#)

Attachments (n)

Click to add or view attachments related to this voucher.

The system displays the number of attachments attached to the voucher. If no attachment is attached, the system displays (0).

If you have enabled the Approval Framework, you can decide if you want to allow approvers to view the attachments on this page.

Comments (n)

Click to enter comments for a voucher to explain payment schedules, issues with the vendor, or anything else that you need to document the invoice. Any comments that you enter in this field are meant for your reference only. You can enter up to 254 characters for a comment. If you exceed 254 characters, the system displays a warning message that it can save only 254 characters and truncates the message.

The system displays the number of comments attached to the voucher. If no comment is attached, the system displays (0).

Warning! For claim vouchers, the system populates this field with identification information that is necessary for processing. Do not edit or delete any existing information in this field.

Approval History

Click this link to access the Approval History page and view the approval history for the voucher.

Note. This link is only available for vouchers that are submitted for approval in the Approval Framework.

View Audit Logs

Click to access the Search Audit Logs page and view audits associated with this voucher.

Note. This link is only available if you enable audit logs. Information displayed depends on the events selected for auditing.

Submit for Approval

Click to submit the voucher for approval.

Note. This button only appears if the voucher is enable for approvals in the Approval Framework.

Sales/Use Tax Summary

Click to access the Sales/Use Tax Summary page, where you can review and modify, if applicable, the SUT information for all the voucher lines.

Invoice Information**Related Voucher**

Journal vouchers only.

Use this field to associate the journal voucher with the voucher for which you are correcting accounting entries.

Click the Finalize Document icon to finalize the predecessor PO. This icon also appears in the Invoice Lines group box as the Finalize Line icon, which you can click to finalize the predecessor PO line.

Click the Undo Finalize icon to undo the finalization of the predecessor PO. This icon also appears in the Invoice Lines group box as the Undo Finalize Line icon, which you can click to undo finalization of the predecessor PO line.

See [Chapter 28, "Budget-Checking PeopleSoft Payables Transactions Using Commitment Control," Performing Partial and Final Liquidations, page 866.](#)

Dispatch Method

Debit memo adjustment vouchers only.

Select a dispatch method for this debit memo adjustment voucher. This field is available only if the voucher style is *Adjustment* and the voucher source is *Match Adjustment*. You can override the dispatch method that is defined in the Debit Memo Options collapsible region on the Vendor Information - Payables Options page. Values include *Blank*, *EDI/XML*, *Email*, *Fax*, *Phone*, and *Print*.

See [Chapter 20, "Running the Matching Process," Processing Debit Memo Adjustment Vouchers, page 627.](#)

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Specifying Debit Memo Options.

VAT Amount (value-added tax amount)

If this is a VAT-applicable voucher that is subject to exclusive VAT, enter the gross VAT amount. Click the Transfer to VAT Header icon to access the Invoice Header VAT Information page if you need to review and override the voucher's default VAT settings. When you click this icon, the system retrieves the VAT defaults based on your VAT setup and entered vendor and vendor location information.

Note. If your voucher is in a VAT environment and you do not enter any of the VAT pages for your voucher before saving it, the process to retrieve the VAT defaults is triggered automatically at save time.

See [Chapter 41, "Processing Value Added Tax \(VAT\) in PeopleSoft Payables," Entering Online Vouchers With VAT, page 1126.](#)

The Action Field

When you have finished entering your voucher and saved it, you have three options for processing your voucher:

1. Perform budget-checking, matching, document tolerance checking, asset loading, posting, and journal generation on this and other vouchers in batch from the batch request pages for those processes.
2. Process the voucher on demand, directly from the Invoice Information page, using the Action field.
3. Process this and other vouchers in batch from the Voucher On-Demand Processes batch request page using on-demand process groups.

The first option is generally the most efficient, but the second option is useful when you must process a voucher immediately, on demand. The third option is convenient when you want to perform multiple sequential processes, such as matching, asset loading, voucher posting, and journal generation, on a batch of vouchers.

If you want to process a voucher on demand from the Invoice Information page:

1. Save the voucher.
2. Select an on-demand process group in the Action field.
3. Click Run to initiate processing.

While the voucher is being processed, the fields on the Voucher component are unavailable for entry. Click Refresh to view the processing status of the voucher on the Voucher Summary page.

The process groups that are available depend on whether you have on-demand processing enabled, your user ID, and whether your voucher requires the processing. If budget-checking isn't applicable to a voucher, for example, the Budget Checking process group will not be available. Process groups that may be available include:

- Budget Checking (BUDGET_CHK).
- Document Tolerance (DOC_TOL).
- Matching (MATCHING).
- Matching, Doc Tolerance, Budget Check (MTCH_DT_BC).
- Voucher Post (PST_VCHR).
- Journal Generate (PST_VCHRGL).
- Voucher Post Load AM (POSTAPAM).
- Journal Gen, Load AM (POSTAPGLAM).

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Setting Up On-Demand Processing."

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Running On-Demand Voucher Processes as a Batch Request, page 389.](#)

Other Header Information

Document Sequencing

Click to access the Document Sequence page, where you can view or override the document sequencing settings. This link appears only if you have implemented document sequencing.

See [Chapter 36, "Processing Document Sequencing in PeopleSoft Payables," page 1017.](#)

Withholding

Click to access the Withholding Information page, where you can view or override the default withholding details for the voucher. This link appears only if the voucher is associated with a vendor that is set up for withholding. If you are adding a voucher and enter the vendor on this page rather than the add search page, the link appears when you press Tab to move out of the Vendor field.

See [Chapter 42, "Processing Withholding in PeopleSoft Payables," Reviewing and Entering Withholding Information for Vouchers, page 1155.](#)

VAT Summary

Click to access the Invoice VAT Summary Information page, where you can view the calculated VAT totals for the invoice by VAT code.

You can also link from the Invoice VAT Summary Information page to the VAT default pages if you need to review or override VAT defaults for the voucher.

Note. If the voucher is in a VAT environment and you do not enter any of the VAT default pages for the voucher before you save it, the process to retrieve VAT defaults is triggered automatically at save time.

See [Chapter 41, "Processing Value Added Tax \(VAT\) in PeopleSoft Payables," Reviewing VAT Summary Information for a Voucher, page 1143.](#)

(USF) Advance Payment Option

If you are creating a prepayment voucher and you are a U.S. federal agency with Enable Federal Payment selected on the Installation Options - Payables page, the Advance Payment Option group box appears. When you select Use Advance Payment in that group box, you are required to associate the prepayment with a purchase order.

Note. The voucher component does not copy lines from the associated purchase order when you enter the PO number here.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Handling Advances for Federal Agencies, page 1084.](#)

Copy from a Source Document

Use the following fields for copying from a source document. The voucher style determines which fields appear here:

PO Unit (PeopleSoft
Purchasing business unit) and
PO Number

If you want to copy all of the lines from a purchase order into the voucher, enter the PeopleSoft Purchasing business unit and the PO ID for the purchase order that you want to copy. Then click the Copy PO (copy purchase order) button.

This option is available only if you are creating a regular voucher, template voucher, or third-party voucher.

Important! When copying a purchase order into a voucher, *do not* begin by entering nonmerchandise and tax-exempt information on the add search page. Use the Copy PO button to ensure that the system provides these amounts by default to the appropriate fields.

Voucher ID

If you want to copy all of the lines from another voucher into the voucher, enter the voucher ID number that you want to copy. Then click the Copy to Voucher button.

To copy individual voucher lines, enter a vendor and click the Copy from Worksheet link.

This option is available only if you are creating an adjustment or third-party voucher.

Voucher to be Reversed

If you want to reverse a voucher, select the voucher ID number of the voucher you want to reverse, and click the Copy to Voucher button. The system copies all information that is related to the selected voucher (such as voucher lines, distribution lines, freight, miscellaneous charges, and sales tax, and VAT information) into the reversal voucher.

This option is available only if you are creating a reversal voucher.

**Reverse Remaining Vchr
Balance** (reverse remaining
voucher balance)

Select to reverse only the unpaid voucher balance.

This option is available only if you are creating a reversal voucher.

**Adjust PO/Restore
Encumbrance** (adjust purchase
order/restore encumbrance)

Select to restore the encumbrance and to adjust the purchase order matched quantity or amount.

This option is available only if you are creating a reversal voucher, and if the related purchase order has not been reconciled.

If the related purchase order on the voucher line has been reconciled, this check box is deselected and unavailable for entry on the voucher line of the Invoice Information page.

Copy From

If you want to search for individual source documents to copy, to select a range of source documents, or to review individual source documents, select one of the values in this field to access the appropriate Copy Worksheet:

- *Non PO Receipt*
- *None*
- *PO Receipt*
- *Purchase Order Only*
- *Template*
- *Voucher*

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Copying Source Documents to Create Vouchers Online, page 342.](#)

Invoice Lines

Use the Invoice Lines scroll area to enter information for each line on the invoice: the merchandise amount, unit price, quantity, and description. Initially, at least one line appears automatically; enter as many additional lines as needed. The system assigns a line number to each voucher line that you add to ensure that each voucher line is unique.

Note. Rebalancing and calculations are affected by deferred processing.

You cannot enter or adjust voucher lines after a voucher has been payment posted.

You cannot combine replacement type return-to-vendor (RTV) vouchers with credit or exchange type RTV vouchers (vouchers having credit and replacement type lines, or exchange and replacement type lines). Doing so causes match exceptions, because these differing voucher types are created with dissimilar statuses. The Voucher Build process builds replacement RTV debit memos with a *To Be Matched* status so that the Matching process correctly updates the matched amounts between the purchase order, the receiver, and the voucher. However, the system receives credit and exchange RTV vouchers that are already configured with a *Matched* status. They do not need to be run through the Matching process as their totals do not affect quantities that need to be matched.

Distribute by

Select a distribution method:

Amount: You must enter the merchandise extended amount for the voucher line. You can also enter the quantity, unit price, and unit of measure (UOM) on the voucher line and a quantity on the distribution line for informational purposes only.

If you change the value in the merchandise Extended Amount field, the Unit Price field is recalculated.

Note. Any changes in the extended amount will be reflected in the distribution. The system adjusts the distribution line that has the maximum distribution line number. If you reduce the amount below the original PO amount, then the only adjustment is to set the amount to zero on the distribution line that has the maximum distribution line number. In this case, you must still adjust the distribution amounts so that they tie back to the voucher line amount. In addition, any change to the merchandise amount will be accompanied by a corresponding change to unit price. If the original distribution method on the purchase order was quantity and you change the method to amount, then the distribution as well as the voucher line information remains unchanged. Even under the amount distribution method, the voucher line quantity should equal the sum of the distribution line quantity. If they are not equal, then an error message is issued.

Quantity: The system calculates the merchandise amount on the invoice lines and distribution lines based on the quantity and unit price. You must enter the quantity, unit price, and UOM. The Extended Amount field is not available for entry.

Select the Force Price option if you want to force the unit price based on the entered merchandise amount. This option is described subsequently.

Note. If you change voucher line quantity, the system does not adjust the distribution lines in response. Therefore, if you change the voucher line quantity, you must adjust the corresponding distribution level quantity. A validation exists to check whether the voucher line quantity is equal to the sum of distribution quantities. In addition, if you change the quantity on the copy worksheet (either PO or receiver), then the changed quantity is copied onto the voucher line, whereas the distribution still retains the original PO quantity. You should manually adjust the distribution quantity such that the sum of the distribution quantity equals the voucher line quantity. If the original distribution method on the purchase order was amount and if you change the method to quantity, then the system recalculates the distribution amounts using the quantity on the distribution line and the unit price on the voucher line. An option also exists of forcing the price that is available under this method. Selecting this option will force the system to calculate the price based on the extended amount. When you select this option, the unit price field is not available.

SpeedChart

Enter a SpeedChart. When you press Tab to move out of the edit box, prorated amounts and distribution ChartFields appear on the voucher distribution lines. If the SpeedChart was defined with no proration percentages, you must enter the distribution amounts yourself.

SpeedChart is not available on the reversal or prepaid voucher, as these voucher styles do not enable you to add voucher lines.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options," Defining SpeedCharts.

Work Order Resources

If the invoice line is for a Maintenance Management external resource, use these fields to enter the actual resource procurement cost. You then transfer the information back to Maintenance Management to help determine the actual cost.

These fields appear only if your organization has installed the Work Order component in PeopleSoft Maintenance Management. If the system populates these fields with data that is copied from a purchase order, you cannot edit the information.

Important! If you are creating a non-purchase order voucher for items that are *already entered* in the Inventory application, *do not* enter work order information here. Doing so creates a duplicate charge situation, because PeopleSoft Payables and Inventory individually send work order charges for the same item to Maintenance Management.

If you create new (that is, not already entered in Inventory) non-purchase order vouchers that are associated with a work order, you can choose to distribute the invoice line by quantity or amount, but you must specify values for the Quantity, UOM (unit of measure), and Unit Price fields on the related invoice lines.

Maintenance Work Order

Select the specific work order for the invoice line.

Task Number

Select a work order task for the invoice line. Available tasks depend on the selected maintenance work order.

Resource Type

Select *Labor*, *Material*, or *Tools*.

Resource Line No (resource line number)

Select a specific resource line number for this invoice line. Available resource line numbers depend on the selected resource type.

Item

Enter an item ID reference code and a line item description of up to 30 characters. If you also have PeopleSoft Purchasing installed, you can use an existing item from the PeopleSoft Purchasing item table. When you press Tab to move out of this field, the system populates the Description field with the associated description.

Related Voucher

For reversal and adjustment vouchers, displays the voucher ID of the voucher line that is being reversed or adjusted.

Use One Asset ID

Select to override all assets on the voucher line to use the same asset ID.

Selecting this option causes the system to update all of the asset IDs for all asset-applicable distribution lines under the voucher line to *NEXT*, each sequence number to *1*, and the profile ID to the profile ID of the first distribution line.

You can override these values on individual distribution lines.

See *PeopleSoft Asset Management 9.1 PeopleBook*, "Adding and Maintaining Assets."

Force Price

Select if you want to force a change to the unit price to achieve the entered extended amount. Use when the sum of the merchandise amounts on the distribution lines does not match, usually because of rounding. Selecting Force Price enables you to change the extended amount and have the unit price recalculated to achieve that extended amount.

Note. This check box is available only if you are distributing by quantity and copying from either a purchase order or a receiver. You must refresh the page to enable the Force Price check box.

Override PO Pct(override purchase order percentage)

Click this button to override the purchase order percentages. After clicking the button, the Percentage column becomes available for edit. The totals entered must equal 100. Once reallocated, click the Allocate by Pct button to reallocate the expenses.

This button only appears for vouchers created from purchase orders or receipts.

Allocate by Pct(allocate by percentage)

Click this button to reallocate the voucher line's quantity and amount over the distributions by the percentage copied forward from the purchase order.

This button only appears for vouchers created from purchase orders or receipts.

Sales/Use Tax

Click to access the Invoice Line Tax Information page, where you can override the default tax settings for the voucher line.

Purchase Order & Receiver Info (purchase order and receiver information)

Click to access the View Source PO/Receiver Information page, where you can view information about the source purchase order or receiver, including comments of various types, including header, line, and ship-to comments. This link appears only if you have PeopleSoft Purchasing installed on the same database.

Associate Receiver(s)

Click to access the Associate Receiver page and Associate Receiver Lines page, where you can manually associate individual receivers with the voucher line for three-way matching. This link is active only if you have copied purchase order or receiver information onto the voucher using the Copy Worksheet Option field and the purchase order requires matching, or if the vendor is set up for receipt-only matching.

See [Chapter 20, "Running the Matching Process," page 559](#).

Invoice Line VAT or VAT and Intrastat

Click to access the Invoice Line VAT Information page if you need to review and override the default VAT and Intrastat settings for the voucher line. The VAT and Intrastat link appears only on VAT-applicable adjustment vouchers.

Note. If your voucher is in a VAT environment and you do not enter any of the VAT pages for your voucher before saving it, the VAT default process is triggered automatically at save time.

See [Chapter 41, "Processing Value Added Tax \(VAT\) in PeopleSoft Payables," Reviewing and Overriding Voucher Line VAT Defaults, page 1135.](#)

View Contract ID Line

Click to access the Contract Line Info page and view the contract ID, contract line and release number.

Note. This link is only available for vouchers with a contract ID value.

Distribution Lines

For each voucher line that you enter, you must also enter the distribution information in the Distribution Lines grid. Each voucher line must have one or more distribution lines. You can select the Copy Down check box on a distribution line to copy that line's general ledger business unit and ChartField values to new distribution lines.

Note. You cannot enter or adjust distribution lines after a voucher has been payment posted.

You can enter project information on distribution lines, and the project information that you capture on vouchers is available to PeopleSoft Project Costing. By entering multiple distribution lines, you can add multiple project lines for each voucher line to categorize project costs. If you have implemented PeopleSoft Project Costing during installation and add project information to a distribution line, you need at minimum to add the project business unit, project ID, activity ID, and resource type. The other fields are optional. If you have not installed PeopleSoft Project Costing, you are not required to enter a project business unit.

See *PeopleSoft Project Costing 9.1 PeopleBook*, "Tracking Procurement Costs," Understanding Integration with PeopleSoft Payables.

GL Chart Tab

Fields on this tab that are not documented here are optional ChartFields that are delivered with PeopleSoft Payables. They share the same validation error processing when you save the voucher as do the fields described here.

Important! ChartFields that appear here depend on how you configure options on the Standard Chartfield Configuration page.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Configuring ChartFields," Completing the Standard ChartField Configuration Page.

Copy Down

Select the check box on a distribution line and click the Insert Row button to copy that line's general ledger business unit and ChartField values to new distribution lines. If multiple distribution lines are selected, the system will issue a warning and arbitrarily select the ChartField values from one of the selected lines to populate the new lines. If no line is selected, only the default general ledger business unit will be populated.

PO Percent

This field appears only if the voucher was created by copying a purchase order into the voucher.

Percent

If the user removes distributions or reallocates the distribution amounts, the Percent column will update with the changes to reflect the actual percentage (Distribution Amount / Line Amount).

Note. This field appears only if the voucher was created by copying a purchase order into the voucher.

Merchandise Amt
(merchandise amount)

Enter the amount that you want to charge to the ChartField values that follow. The total of all amounts that you enter on the distribution lines for a voucher line must equal the merchandise amount on the parent voucher line. An error message appears if an imbalance occurs.

Quantity

Enter the number of units purchased that should be associated with the distribution line. This field is required if you are distributing by quantity. It is optional if you are distributing by amount. If you have entered a quantity on the voucher line, the total of all quantities entered on the distribution lines for that voucher line must equal the quantity on the parent voucher line. If you are entering a voucher line for a fixed asset that you will send to PeopleSoft Asset Management, you must enter a quantity for the asset.

GL Unit (general ledger business unit)

Identifies the general ledger business unit that will be charged with the expense that is coded on the distribution line.

The default value is the general ledger business unit of the PeopleSoft Payables business unit under which the voucher is being entered. If you change the value to charge a different PeopleSoft General Ledger business unit, the system creates interunit accounting entries. This occurs during voucher and payment posting. In this case, ChartField validation occurs based on the ChartFields of the PeopleSoft General Ledger business unit.

Note. When you enter interunit vouchers on the Invoice Information page, the value for the Budget Status field on the Voucher Summary page changes from *Valid* to *Not Budget Checked*. You must run the budget checking process to reset the status to *Valid* to make the voucher eligible for posting during voucher post.

Entry Event	Enter the entry event code for the voucher if applicable. The system displays this field if you have enabled entry events. See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i>, "Using Entry Events," Processing Vouchers, Payments, and Cash Clearing Transactions with Entry Events. See <u>Chapter 38, "Using Entry Events in PeopleSoft Payables," page 1097.</u>
Account	Enter an account. When you save the voucher, the system validates the account that you enter along with any other ChartField values. If the account that you select has been set up as a statistical account, the Amount and Quantity fields on the invoice line become inactive and any values that you may have already entered are deleted. If the Installation option is enabled, the Altacct (alternate account) field appears next to the Account field in the grid.
OpenItem	If the account that you enter has been set up as an OpenItem account, you must enter an open item reference. Select a reference by prompting. If you enter a reference for an account that is not an open item account, an error message appears when you attempt to save the voucher. You must remove the invalid reference before you can save the voucher. See <u>Chapter 19, "Managing Vouchers," Using OpenItem Accounting in PeopleSoft Payables, page 549.</u>
Project ID	Enter a project identifier. This field appears if you do not have PeopleSoft Project Costing installed on your database.
Budget Date	Displays the budget date of the distribution line if the Commitment Control feature is enabled. You define which field the system uses for the budget date on a voucher in the Source Transactions component when you set up the Commitment Control feature in PeopleSoft General Ledger. You can also specify at the installation options whether the default budget date is the accounting date of the voucher or of the predecessor document (purchase order). See <i>PeopleSoft Commitment Control 9.1 PeopleBook</i>, "Setting Up Commitment Control Source Transaction Types." See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i>, "Setting Installation Options for PeopleSoft Applications," Defining Options for Installed PeopleSoft Applications.
Affiliate	If the vendor is an interunit vendor, this field is not editable and the affiliate code appears by default.

Exchange Rate Tab

GL Unit (general ledger business unit) and Currency	Identifies the general ledger business unit that is charged with the expense that is coded on the distribution line, as well as the currency in which it will be charged.
Exchange Rate	Appears automatically based on the default rate type from the market rate tables. You can override this value on the Voucher Attributes page. This field appears only when the distribution general ledger business unit is different from the voucher's general ledger business unit, or when the voucher is saved.

Statistics Tab

This page displays statistical quantity information.

If you are distributing by quantity, you can distribute that quantity using a statistics code. The system converts the distribution line quantity from the distribution line UOM to the standard UOM that is associated with the Statistics Code field. The converted quantity is stored in the Statistic Amount field. The Statistic Amount and Unit of Measure fields are inactive.

If you enter a statistic account on a voucher line, you must refresh the page by clicking the Refresh button (access key: Alt+0) so that the merchandise amount and quantity fields on the invoice line are unavailable and blank. You must enter a statistic amount. You can enter the statistic amount in a UOM that is different from the standard UOM that is associated with the statistic account. After you enter the statistic amount, enter the corresponding UOM. The system converts the statistic amount that you enter back to the standard UOM that is associated with the statistic account. The Statistics Code field becomes unavailable for entry.

Whether you are using a statistic account or a statistics code, if the system cannot find a conversion formula between the two UOMs in the UOM conversion table, an error message appears. For example:

- If you are using a statistic account, the system resets the UOM to the standard UOM for the account, and you must modify the Statistic Amount field manually so that it corresponds to the standard unit of measure.
- If you are using a statistics code, the system does not calculate a statistic amount; you must delete the Statistic Code field value or enter another one.

Assets Tab

Asset	Select to enter asset information for the distribution line. All the fields on this tab become active when you select the Asset check box.

Business Unit (PeopleSoft Asset Management business unit) and **Profile ID**

Enter a business unit and a profile ID to indicate that the distribution line is related to an asset. These fields are required.

Note. You cannot assign the same asset ID to different profile IDs.

After the voucher has been sent to PeopleSoft Asset Management, you cannot change the PeopleSoft Asset Management business unit or Profile ID fields unless you unpost the voucher.

Asset ID

Enter an asset ID. Otherwise, the field value *NEXT* appears by default. This value indicates that the next asset ID value in the PeopleSoft Asset Management system is assigned automatically. When you accept *NEXT* as the default, you can use the Sequence Number field to make more than one distribution line share the same automatically incremented asset ID.

The system validates that a unique asset ID has only one profile ID associated with it for a given voucher line.

Note. You cannot perform asset transfers in PeopleSoft Payables. You can make ChartField changes in PeopleSoft Payables, but you must also have your asset manager make a corresponding change in the appropriate PeopleSoft Asset Management page.

Sequence Number

If you have accepted the default asset ID value of *NEXT*, you can enter a sequence number to indicate an asset grouping of voucher distribution lines.

If the asset ID is *NEXT*, you can enter any numeric value in this field. The unique combination of *NEXT* in the Asset ID field and the sequence number that you enter here cause a unique asset ID to be generated when the information is processed by PeopleSoft Asset Management.

For example, if you have four distribution lines for assets that you want to assign to two separate asset IDs, you can specify an asset ID of *NEXT* and a sequence number of 1 for the first two lines and an asset ID of *NEXT* and a sequence number of 2 for the next two. Each group of two lines is assigned its own asset ID number.

Leave this field blank if you entered a known asset ID. If the asset ID is *NEXT* and the *Sequence Number* field is blank, the system generates a unique number.

If you selected the Use One Asset ID check box for the voucher line, the system populates the Asset ID field with *NEXT* and the Sequence Number field with 1 for each asset-applicable distribution line, and causes PeopleSoft Asset Management to assign all distribution lines to the same asset ID.

Cost Type

Select the cost type for the asset. Values are:

A: Allowance for ADV depreciation.

C: Cost type.

G: Grant reimbursements.

I: Impairment loss.

M: Margin.

P: Scrap on asset.

R: Revaluation.

S: Sale of assets.

V: Reserve for ADV depreciation.

W: Depreciation write-off.

X: Revaluation reversal.

Y: Impairment reversal.

See [Chapter 32, "Sending Information to PeopleSoft Asset Management,"](#) page 965.

VAT Tab

This page appears only for business units that are enabled for VAT.

Click the VAT link to access the Invoice Distribution Line VAT Information page if you need to review or update the VAT control settings for the distribution line.

Note. If your voucher is in a VAT environment and you do not enter any of the VAT pages for your voucher before saving it, the VAT default process is triggered automatically at save time.

See [Chapter 41, "Processing Value Added Tax \(VAT\) in PeopleSoft Payables,"](#) [Reviewing and Overriding Voucher Distribution Line VAT Defaults,](#) page 1139.

Balancing

The system automatically enters default values that are entered for miscellaneous charges, freight charges, VAT, and taxes on the add search page into the appropriate fields. You can edit these amounts.

In addition, field display in this group box varies depending on add search page values that are entered. For example, when you use a *Prepaid* voucher style, the system disables the Misc Charge Amount (miscellaneous charge amount), Freight Amount, and Sales Tax Amount fields. And if you select a VAT-applicable business unit, the system enables VAT fields on the voucher.

Note. The system acts differently when calculating VAT depending on whether you are in the Add mode or the Update/Display mode. When you enter a VAT amount using the add search page, the system supplies the VAT line amount on the Invoice Information page, and if the amount is edited, correctly recalculates this amount. However, when you modify an existing voucher VAT amount using the Update/Display mode, the system *does not* recalculate the VAT line amount. Instead, it displays the difference between the header and line amounts in the Difference Amount field.

Defining Payment Terms

Access the Payment Terms page (click the Transfer to Pay Terms Detail button on the Invoice Information page).

Payment Terms page

Payment Terms ID

Controls how the voucher is paid, including the discount date and discount amount. PeopleSoft Payables supports both single and multipayment (installment) terms. You define payment terms on the Payment Terms - Multi Payment page or the Payment Terms - Single Payment page. The default setting on the voucher is based on the payment terms that are established for the vendor location for this voucher.

Multipayment terms generate multiple scheduled payment records when you save the voucher by allocating the total payment amount for the voucher over these scheduled payments, according to the percentages that are established in the terms definition.

With multipayment terms, you can also generate installment payment records (and review them and edit them, if necessary) in advance of committing them by saving the voucher. You can always edit the voucher immediately after saving, but this alternate method may offer more peace of mind.

Click the Schedule Payments icon to generate payment records in advance of saving the voucher. For multipayment terms, this prepopulates multiple schedule payment records (installments). For single payment terms, this calculates and supplies the net due date, the discount amount, and the discount due date if the terms are discount-applicable. You can also do this by clicking the Schedule Payment button on the Payments page.

Due Date Control

Either accept the default due dates, or enter user-specified amounts. Select from:

Terms: This is the default setting. When you select this value, the Basis Dt Type (basis date type) field is available for entry, but the Discount Due Date and Due Date fields are not. If the Due Date Control field is specified as *Terms*, then the scheduled due dates and net due dates are determined by the payment term specified.

User: When you select this value, the Discount Due Date and Due Date fields are available for entry and you can modify them. The Basis Dt Type field is unavailable for entry. If the Due Date Control field is set to *User*, then the date is derived from the Due Date field.

Basis Dt Type (basis date type) Enter the date for the system to use to calculate the discount due date and payment due date for the voucher. This field controls the basis date on which the payment terms are based.

Values are:

Acct Date (account date): The accounting date determines the payment basis date.

Doc Date (document date): The date that the voucher is entered, which determines the payment basis date. If you select this value, the document date appears in the Basis Date field.

Inv Date (invoice date): The invoice date determines the payment basis date.

Recpt Date (receipt date): The receipt date determines the payment basis date.

Ship Date: The ship date determines the payment basis date.

User Date: The user-defined date that is entered in the Basis Date field determines the payment basis date.

Note. Just because you can select an alternate basis date source does not necessarily guarantee that the particular date is currently available for the voucher. For example, the receipt date and ship date values would typically be available only if the invoice had first been matched to the purchase order, the receiver, or both. If you select a basis date value for which no corresponding date value is populated, a warning appears asking whether you want to use the invoice date as the override basis date. If you select *Yes*, you can save the voucher and generate scheduled payment data. Until a voucher is posted or paid, you can always update the voucher for the intended basis date if it becomes available.

Basis Date

Displays the date used to calculate the discount due date and payment due date for the voucher. The system populates the date based on the basis date type. If the basis date type is *User Date*, this field is available and the system requires that you enter a date.

This basis date is not the same as the federal payment basis date on the Date Calculation page.

Discount Due Date

If you select *User* in the Due Date Control field, enter a discount due date.

Due Date	If you select <i>User</i> in the Due Date Control field, enter a due date.
Discount Amount Control	Accept the default discount amounts or enter user-specified amounts. Values are: <i>Terms:</i> This is the default setting. When you select this value, the Account At field is available for entry but the Discount Amount field is not. <i>User:</i> When you select this value, the Discount Amount field is available for entry and you can enter the amount for the discount in the Discount Amount field.
Account At	Determines whether the discount is accounted at gross or net. Values are: <i>Net:</i> Any discounts not taken are accounted for as discounts lost. <i>Gross:</i> Any discounts taken are accounted for as discounts earned.
Basis Amt (basis amount)	Displays the amount upon which the discount is calculated. This amount is the total of the merchandise amount for each line with the Apply Discount check box selected.
Discount Amount	If you select <i>User</i> in the Discount Amount Control field, enter a discount amount.
Apply Discount	Select to make individual voucher lines discount-applicable.

Note. Payment terms for a third-party voucher cannot include a discount. For third-party vouchers, the payment terms are supplied by default from the Prepay/Third/Claim Pay Terms option that is selected for the setID on the Payables Options - Payment Options page.

Entering Nonmerchandise Charge Details

Access the Miscellaneous Charges page. (enter a miscellaneous charge amount and click the Transfer to Misc Chrgs Detail (transfer to miscellaneous charges detail) button on the Invoice Information page).

Note. The fields on this and the other nonmerchandise charges detail pages (Freight Charges page, Sales Tax Charges page, and Use Tax Charges page) are similar. Rather than documenting all four pages, we have documented the Miscellaneous Charges page as an example of these detail pages.

Use this page to allocate your miscellaneous charges to multiple charge codes. The total of the separate miscellaneous charges that you enter must equal the total miscellaneous amount that is entered on the Invoice Information page.

Note. You can add multiple charge codes on the freight and miscellaneous charges detail pages, but you can enter only one charge code on the sales tax and use tax detail pages.

Prorate	The charge code appears based on the defaults that you have set on the Procurement Control - Non-Merch Charges page. If the default is to prorate the freight, the Prorate check box is selected. This field is unavailable for entry.
Charge Type	Select a charge code for each miscellaneous charge amount that you add. You define these codes on the Misc Charge/Landed Cost Defn page and set up the default charge codes for the PeopleSoft Payables business unit on the Procurement Control - Non-Merch Charges page. If you select a nonprorate charge code, the system uses the allocation option that you selected on the Procurement Control - Non-Merch Charges page to either allocate the charge to the distribution line or expense it to the header.
Account and other ChartFields	If you add a prorated charge code, no ChartFields appear on this page. If you add a nonprorated charge code and allocate the charge, the system requires an account. The value appears by default from the Accounting Entry Template. You can override the account. If you are expensing, the account and other ChartField values appear by default based on the inheritance rules. You cannot modify balanced ChartFields.

Sales/Use Tax Summary page

The Sales/Use Tax Summary page provides tax details by line for the voucher. The fields on this page display values that are either passed to the voucher line through the PeopleSoft Payables default hierarchy or inherited from the purchase order. You can enter override tax values for each voucher line or you can access the Invoice Line Tax Information page to view additional details and override tax values.

This page includes different fields from those described here if you have installed and enabled a third-party tax application, such as Taxware or Vertex.

See [Chapter 40, "Managing Voucher Line Tax Information with Taxware and Vertex," Reviewing and Modifying Tax Summary Information for a Voucher, page 1118.](#)

SUT Amounts

Displays the merchandise amount and calculated tax amounts for each line.

Click to access the Invoice Line Tax Information page to review detailed tax information for this voucher line.

SUT Apply (apply sales and use tax)	Indicates the tax that applies to the tax destination. Values are: <i>Direct Pay:</i> Select if you do not want sales tax calculated. The system treats a direct pay line as a use tax line, except that it uses a different value for tax applicability. <i>Item is Exempt:</i> Select if the line is exempt from sales and use tax. <i>Purchaser is Exonerated:</i> Select if the purchaser does not have to pay sales or use tax. <i>Sales Tax Appl</i> (sales tax applicable): Select to calculate and apply sales tax to the line. Enter the gross sales tax amount on the voucher header. <i>Use Tax Appl</i> (use tax applicable): Select to calculate and apply use tax to the line. Do not enter the tax amount on the voucher header.
Ultimate Use Code	Enter an ultimate use code to override the default tax rate for a line.
Tax Code SUT (sales and use tax code)	Enter the tax code for the line. A tax code consists of a group of tax authorities. For example, if a certain locality has a city tax, county tax, and state tax, you can create three tax authorities and group them into a single tax code.

Tax Parameters

Fields displayed when you select the Tax Parameters tab are discussed in detail in the following section.

Use Tax Amount:63.75

Invoice Line Tax Information page

Similar to the Sales/Use Tax Summary page, the fields on this page display values that are passed to the voucher line through the PeopleSoft Payables default hierarchy. If the voucher was created by copying a purchase order, purchase order values override the PeopleSoft Payables default hierarchy, so the voucher inherits sales and use tax data from the purchase order. When you create a new voucher, all of the fields on this page can be overridden for the voucher line.

This page includes different fields from those described here if you have installed and enabled a third-party tax application, such as Taxware or Vertex.

See [Chapter 40, "Managing Voucher Line Tax Information with Taxware and Vertex," Managing Voucher Line Tax Information with Taxware and Vertex, page 1117.](#)

Sales/Use Tax Destination	Indicates the location for which a sales or use tax is applicable. This value is defined as a ship to location, but it does not have to be the same as the ship to location that is defined in the PeopleSoft Payables control hierarchy.
Sales/Use Tax Applicability	Indicates the tax that applies to the tax destination. Values are: <i>Direct Pay:</i> The system handles a direct pay line as a use tax line, except that it uses a different value for tax applicability. <i>Exempt:</i> The line is exempt from sales tax. <i>Exonerated:</i> The purchaser is exonerated from sales tax. <i>Sales Tax:</i> Apply sales tax. Enter the gross sales tax amount on the voucher header. Note. If you copy a single purchase order line that has use tax applicability, and you enter sales tax on the voucher header, the system automatically changes the tax applicability for that voucher line to sales tax. <i>Use Tax:</i> Apply use tax. Do not enter the tax amount on the voucher header. Note. If you copy purchase order lines with sales tax applicability, and you do not enter sales tax on the voucher header, the system automatically changes the tax applicability for those voucher lines to use tax.
Ultimate Use Code	Enter a code to override the default tax rate that is based on the ship to location. This field is available for entry only if an ultimate use code is defined for the ship to location on the Ship To Sales/Use Tax Default page. See <i>PeopleSoft Application Fundamentals 9.1 PeopleBook</i>, "Defining Financials and Supply Chain Management Common Definitions," Defining Ultimate Use Codes.
Tax Code SUT (sales and use tax code)	Enter the tax code that applies to this voucher line. A tax code consists of a group of tax authorities. The tax code that is supplied by default here depends on a number of factors. See Chapter 12, "Setting Up Sales and Use Taxes and Value-Added Taxes (VAT)," Understanding PeopleSoft-Only Sales and Use Tax Processing, page 255.

Calculation Parameters

Include Misc Charges (include miscellaneous charges)	Select to indicate that any additional charges must be taxed and added to the net-extended amount before the system calculates SUT.
Include Discount	Select to have the system calculate any applicable discount and subtract it from the net-extended amount before calculating SUT. Note. If the discount is lost, the system <i>does not</i> automatically recalculate and adjust any tax amounts.
Include Freight	Select to indicate that any freight amount must be taxed and added to the net-extended amount before the system calculates SUT.
Include VAT	Select to indicate that any VAT amount must be taxed and added to the net-extended amount before the system calculates SUT.

Note. The values in these fields are supplied by default from the tax code in a PeopleSoft-only tax calculation environment and from the ship to location if you are using a third-party tax application.

Session Defaults page

Session defaults are available for the *Journal Voucher*, *Regular Voucher*, *Single Payment Voucher*, and *Template Voucher* styles.

This page is similar to the page that you use to predefine session defaults. You can select existing available session defaults or set ad hoc default values for all of the invoices that you enter in the current session. These defaults override the defaults that the system applies using the PeopleSoft Payables control hierarchy. Only fields that are particular to this page or act in ways that are particular to this page are documented here.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options," Defining Voucher Session Defaults.

Available Session Defaults

Select an existing session default to use in the current session. When you select an option, the system supplies the predefined default attributes and the Apply button is activated.

Note. You can use the predefined attributes or modify them. However, if you modify the attributes, they are available only for the current session. To retain these attributes, you must use the Session Defaults page. Select Set Up Financials/Supply Chain, Product Related, Procurement Options, Vouchers, Session Defaults.

Apply

Click to apply the predefined session default attributes in your current session. This button is active if you select an available session default.

Ad Hoc

Enter default attributes, and then click the Ad Hoc button to apply these default attributes in your current session. Also, click this button if you select an existing session default and modify the attributes.

Clear

Click to deselect the current session defaults. This applies only to the ad hoc default attributes. You cannot clear the predefined session defaults from this page.

Note. You must click either the Apply button or the Ad Hoc button to use session defaults in your current session. Your session remains current until you sign out.

Copying Source Documents to Create Vouchers Online

This section provides an overview of source document copy functionality and discusses how to:

- Copy purchase order information.
- Copy receiver information.
- Copy voucher information.
- Copy template information.

Understanding Source Document Copy Functionality

This section discusses:

- Source document copy functionality.
- Default logic.
- Copying sales and use tax information from source documents.
- Procurement card settlement method considerations.
- Work order data integration.

Source Document Copy Functionality

Depending on your setup and business needs, you can create online vouchers by entering invoice information manually. In some cases, you may also want to copy existing information (from a purchase order, receiver, or another voucher) into the voucher that you are creating. PeopleSoft Payables enables you to copy entire source documents, or portions of them, saving data entry time and reducing potential input errors.

The types of documents that you can copy depend on the voucher style that you select. The Copy from a Source Document group box on the Invoice Information page changes depending on the voucher style that you select. The group box offers only the types of source documents that you are allowed to copy for that voucher style.

This table lists source transactions that are available for a particular voucher style:

<i>Voucher Style</i>	<i>Source Transactions Available to Copy</i>
Regular	• <i>Non PO Receipt</i> (non purchase order receipt). • <i>PO Receipt</i> (purchase order receipt). • <i>Purchase Order Only</i>. • <i>Template</i>.
Adjustments	<i>Voucher</i>. Note. The nonmerchandise charges are copied into the voucher only if you copy the entire voucher. They are not copied if you copy select lines.
Claim Note. You cannot manually create claim vouchers, but you can update existing claim vouchers.	• <i>Non PO Receipt</i>. • <i>PO Receipt</i>. • <i>Purchase Order Only</i>. • <i>Template</i>. • <i>Voucher</i>.
Journal	None.
Prepaid	None.
Register	None.
Reversal	<i>Voucher</i> .
Single-payment	None.

<i>Voucher Style</i>	<i>Source Transactions Available to Copy</i>
Template	• <i>Non PO Receipt.</i> • <i>PO Receipt.</i> • <i>Purchase Order Only.</i> • <i>Template.</i> • <i>Voucher.</i> Note. When you copy a voucher into the template voucher, the nonmerchandise charges are copied only if you copy the entire voucher. They are not copied if you copy select lines.
Third-party	• <i>Non PO Receipt.</i> • <i>PO Receipt.</i> • <i>Purchase Order Only.</i> • <i>Voucher.</i>

Default Logic

When you copy individual source documents to a voucher, the voucher inherits the source document header, line, and distribution information. When you copy multiple purchase orders or multiple receipts to a voucher, the voucher inherits the first instance of the source document's header information. As an example, if you copy multiple lines from different purchase orders to a voucher, the first purchase order's header information is copied to the voucher.

Note. The match rule control and accounting template from the purchase order are copied to the voucher similar to other header fields.

Copying Sales and Use Tax Information from Source Documents

Whenever you copy purchase order information to a voucher, you copy only the sales and use tax codes and other processing parameters, not the calculated amounts. The calculated amounts on the voucher may therefore differ from those on the purchase order if, for example, a tax rate has changed for a tax code between the time that a purchase order was entered and the time that you copy it to the voucher.

If you copy a single purchase order line that is created with use tax applicability, and you enter sales tax on the voucher header, the system automatically changes the tax applicability for that voucher line from *Use Tax* to *Sales Tax* on the Sales/Use Tax Summary and Invoice Line Tax Information pages.

Note. When you copy multiple lines from a purchase order and enter sales tax on the voucher header, the system does not automatically apply the tax applicability as *Sales Tax* for all voucher lines. This is to maintain the integrity of the purchase order because you can enter a purchase order with lines specifically for sales tax applicability and lines for use tax applicability.

If you copy a purchase order that is created with a single line or multiple lines that indicate sales tax applicability, and you do not enter sales tax on the voucher header, the system automatically changes the tax applicability for those voucher lines from *Sales Tax* to *Use Tax* on the Sales/Use Tax Summary and Invoice Line Tax Information pages.

See [Chapter 12, "Setting Up Sales and Use Taxes and Value-Added Taxes \(VAT\)," page 255.](#)

Procurement Card Settlement Method Considerations

Procurement cards (PCards) are used by authorized staff to buy small purchases of regularly consumed supplies and services, such as supplies (office, maintenance, computer), conference and registration fees, subscriptions, repairs, services, and so on. The card provider makes settlements for all transactions that are made with PCards directly to suppliers. The organization then makes a single monthly payment to the card provider.

PeopleSoft Purchasing has added PCards settlement functionality to requisitions and their associated purchase orders, enabling organizations to streamline the payment process. Using PCards reduces the amount of paperwork that is involved in receiving invoices, creating vouchers, and mailing or dispatching payments individually to suppliers.

PeopleSoft Payables handles PCard transaction settlements differently than other payments. The system processes PCard settlements through the PCard interface in the following way:

1. The card provider is paid immediately by a prepayment voucher.
2. Each cardholder's individual transactions are then paid by a regular voucher that clears the outstanding prepayment.
3. The prepayments are submitted monthly; one or more regular vouchers will clear the prepayment.

Because PCard settlements must be processed through the PCard interface, the system prevents purchase orders or receivers that are marked with this payment method from being copied to a voucher or a quick invoice, or from being selected by the voucher build association logic. The system excludes purchase orders and their associated receivers that are marked for PCard settlement from displaying on these pages:

- Associate Receiver Lines (RECEIVER_LOOKUP).
- Copy Worksheet for purchase orders (VCHR_LINE_PO_WRK).
- Copy Worksheet for receiver lookup criteria (VCHR_LINE_RECV_WRK).
- Invoice Information (VCHR_EXPRESS1).
- Quick Invoice (VCHR_HEADER_QV).

Work Order Data Integration

PeopleSoft Payables integrates with Maintenance Management to record the actual cost of external resources. If your organization installs the Work Order component in PeopleSoft Maintenance Management, this integration occurs during the following scenarios:

- When you copy a purchase order or receiver that is associated with a work order into a regular voucher or a quick invoice voucher.
- When you manually enter work order data into a regular voucher.

- When the Voucher Build process creates vouchers with copied work order-associated purchase orders from the following voucher sources:
 - EDI.
 - ERS.
 - Quick Invoice.
 - RTV.
 - XML.

At voucher save, the system retrieves default distribution data from Maintenance Management and automatically populates the distribution line level. This information includes Project ChartField information, and is not editable.

If you are associating a non-purchase order voucher with a work order, enter the work order data using the Invoice Information or Quick Invoice pages.

Important! If you are creating a non-purchase order voucher for items that are already entered in the Inventory application, *do not* enter work order information on these pages. Doing so creates a duplicate charge situation, because PeopleSoft Payables and Inventory will individually send work order charges for the same item to Work Order Management.

Run the Payables to Projects Cost Collection Application Engine (PC_AP_TO_PC) program, which retrieves the distribution and line information from the Voucher Line table and creates entries in the Project Transactions (PROJ_RESOURCE) table.

Copy Worksheet (purchase order) page

To copy a purchase order, you can enter the PO unit and purchase order on the Invoice Information page and click Copy PO, or you can select *Purchase Order Only* in the Worksheet Copy Option field to access the Copy Worksheet page for purchase orders.

Note. You cannot copy from a purchase order that is associated with a PCard transaction.

When you use the PO worksheet copy functionality, the system always uses the first listed PO to derive payment term information, regardless of whether you define only one PO or multiple POs. It does not derive payment term information from the PeopleSoft Payables default hierarchy.

PO Lookup Criteria

- PO Business Unit** (PeopleSoft Purchasing business unit)

Search for purchase orders by PeopleSoft Purchasing business unit. You must enter a PeopleSoft Purchasing business unit.
- View Matched/Cancelled Only**

Select to limit the search to include matched and canceled purchase orders only.

You must have authority to copy matched and canceled purchase orders. You set this up in Defining User Preferences.

Note. When you copy the PO to the voucher using this option and Commitment Control is enabled for Purchasing, only PO lines with a *not finalized* status (KK_CLOSE_FLAG <> "Y" on the purchase order distributions) are available to be copied to the voucher.
- PO Number From** (purchase order number from) and **PO Number To** (purchase order number to)

Enter a PO number in the PO Number From field to search for individual purchase orders. Search for a range of purchase orders by entering PO numbers in the PO Number From and the PO Number To fields. You must also enter a PeopleSoft Purchasing business unit.

PO Line Number From (purchase order line number from) and PO Line Number To (purchase order line number to)	Enter a PO line number in the PO Line Number From field to search for individual purchase order lines. Search for a range of purchase order lines by entering PO line numbers in the PO Line Number From and the PO Line Number To fields. You must also enter a PO number. These fields are not available if you select a range of PO numbers.
PO Date Option (purchase order date option) and PO Date (purchase order date)	Complete the PO Date Option field in conjunction with the PO Date field to limit your search to purchase orders that fall within a selected date range.

Additional Search Criteria

This section initially appears as collapsed; you must expand it to access these optional fields. You can specify additional criteria with PO lookup criteria or with only the PO business unit defined. However, any information that you define in this group box overrides the values that are specified in the PO Lookup Criteria group box.

Get only the PO lines that contain the following information	Select to include only the PO lines that contain the data that is specified in the additional search criteria. This field is set as the default.
Get all PO lines for any PO that contains the following information	Select to include all purchase order lines for purchase orders that contain the data that is specified in the additional search criteria.
Item ID, Item Description, Quantity, Unit Price, Merch Amt (merchandise amount), Vendor Item ID, Mfg Item ID (manufacturing item identification), Contract ID, Contract Line, or Release Number	Enter data to further refine your search. You can enter data in more than one field. When you search for quantity, unit price, or merchandise amount, you should also enter at least one of the following fields: Item ID or Item Description.

Search and Copy

Search	Click Search to populate the Select PO Lines scroll area with the purchase orders that match your search criteria. This button is not available until you enter a PeopleSoft Purchasing business unit.
Copy Selected Lines	Click Copy Selected Lines to copy selected purchase-order lines onto the voucher. This field is not available until you select Search to display PO lines.

Note. If the Copy Matched and Closed PO option is selected for your user preferences and you create a voucher that references a PO that has a matched line (because an earlier voucher also referenced the PO) and an unmatched line, then when you copy the PO to the voucher, the matched PO line will be copied with both the amount and the quantity at zero.

Reset	Click to remove the Select PO Lines scroll area and clear selection criteria.
Select All	Click to select all of the lines for all purchase orders that are displayed.
Clear All	Click to clear all of the lines for all purchase orders that are displayed.

Select PO Lines

Select	Select individual purchase order lines by selecting this check box in the appropriate row.
Quantity Vouchered	Displays the quantity on the PO line. This field can be modified if the PO line is not an amount-only PO line. If you change the quantity that is vouchered, this value and the extended amount (quantity × unit price) are carried forward to the voucher line. However, you must change the distribution line manually on the Invoice Information page to match both the quantity and the extended amount.
Merchandise Amt (merchandise amount)	Displays the merchandise amount on the PO line. This field can be modified if the PO line is an amount-only PO line.
Select All	Click to select all of the lines for a single purchase order. Each purchase order that the system returns has a Select All button. You must click the button for each purchase order to select its lines.
Clear All	Click to deselect all of the lines for a single purchase order. Each purchase order that the system returns has a Clear All button. You must click the button for each purchase order to deselect its lines.

Note. You cannot copy from a receipt on a purchase order that is associated with a PCard transaction.

Receiver Lookup Criteria

PO Business Unit (PeopleSoft Purchasing business unit)

Search for purchase orders by PeopleSoft Purchasing business unit. You must enter a PeopleSoft Purchasing business unit, a receiving business unit, or both.

Note. This field appears only if you selected *PO Receipt* in the Worksheet Copy Option field on the Invoice Information page.

PO Number

Enter a PO number to search for individual purchase orders. You must also enter a PeopleSoft Purchasing business unit.

Note. This field appears only if you selected *PO Receipt* in the Worksheet Copy Option field on the Invoice Information page.

PO Dt Opt (purchase order date option) and PO Date	Enter the PO date option in conjunction with the PO Date field to limit your search to purchase orders that fall within a selected date range. Note. This field appears only if you selected <i>PO Receipt</i> in the Worksheet Copy Option field on the Invoice Information page.
Receipt Unit	Search for the receipts by receiving business unit. You must enter a PeopleSoft Purchasing business unit, a receiving business unit, or both.
Receipt Number From and Receipt Number To	Enter a receipt number in the Receipt Number From field to search for individual receipts. Search for a range of receipts by entering receipt numbers in the Receipt Number From and Receipt Number To fields. You must also enter a receiving business unit.
Receiver Line From and Line	Enter a receiver line number in the Receiver Line From field to search for individual receiver lines. Search for a range of receiver lines by entering receiver line numbers in the Receiver Line From and Line fields. You must also enter a receipt number. These fields are not available if you select a range of receipt numbers.
Receipt Date Option and Receipt Date	Enter the Receipt Date Option field in conjunction with the PO Date field to limit your search to receipts that fall within a selected date range.
Ship To, Packing Slip, Pro Number, Bill of Lading, and Carrier ID	Enter data in these fields to further refine your search. You can enter data in more than one field. You must enter a receipt unit if you use these fields to limit your search results.

Additional Search Criteria

This section initially appears as collapsed; you must expand it to access these optional fields. You can specify additional criteria with receiver lookup criteria or with only the receipt unit defined. However, any information that you define in this group box overrides the values that are specified in the Receiver Lookup Criteria group box.

Get only the Receipt lines that contain the following information	Select to include only the receiver lines that contain the data that is specified in the additional search criteria. This field is set as the default.
Get all Receipt lines for any Receipt that contains the following information	Select to include all receiver lines for receipt orders that contain the data that is specified in the additional search criteria.
Item ID, Item Description, Quantity, Unit Price, Merch Amt (merchandise amount), Vendor Item ID, Mfg Item ID (manufacturing item identification), Contract ID, Contract Line, or Release Number	Enter data to further refine your search. You can enter data in more than one field. When you search for quantity, unit price, or merchandise amount, you should also enter at least one of the following fields: Item ID or Item Description.

Search and Copy

Search	Click to populate the Select Receiver Lines scroll area with the purchase orders that match your search criteria. This button is not available until you enter a purchasing or receiving business unit.
Copy Selected Lines	Click to copy selected receiver lines onto the voucher. This field is not available until you select Search to display receiver lines.
Reset	Click to remove the Select Receiver Lines scroll area and clear selection criteria.
Select All	Click to select all of the lines for all receipts displayed.
Clear All	Click to deselect all of the lines for all receipts displayed.

Select Receiver Lines

If you are searching for purchase order receipts, you can view both purchase order and receiver information for each receiver that is returned by your search. If you are searching for non-purchase order receipts, only the receiver information appears.

Note. If copying a PO receipt with a serialized asset, the system will display the tag number, serial number, receipt sequence number and Previously Invoiced flag on the Asset tab of the distribution line. The Previously Invoice field indicates if the line has been previously applied to a voucher.

Select	Select individual receiver lines by selecting this check box in the appropriate row.
Quantity	Displays the unmatched quantity (in the voucher unit of measure) on the receiver line. This field can be modified if the receiver line is not an amount-only line. If you change the quantity, this value and the extended amount (quantity × unit price) are carried forward to the voucher line. However, you must change the distribution line manually on the Invoice Information page to match both the quantity and the extended amount.
Merchandise Amount	Displays the merchandise amount on the receiver line. This field can be modified if the receiver line is an amount-only line.
Select All	Click to select all of the lines for a single receipt. Each receipt that the system returns has a Select All button. You must click the button for each receipt to select its lines.
Clear All	Click to deselect all of the lines for a single receipt. Each receipt that the system returns has a Clear All button. You must click the button for each receipt to deselect its lines.

Voucher Worksheet page

- Vendor ID

Search for vouchers by vendor. The vendor's short name appears when you select the vendor.

Note.

For third-party vouchers, an edit check ensures that you do not enter the same vendor that you entered on the Invoice Information page.
- Voucher ID

Search for individual vouchers. The voucher's invoice number appears when you select the voucher ID.
- From Voucher Line and To Voucher Line

Enter a voucher line number in the From Voucher Line field to search for individual voucher lines. Search for a range of voucher lines by entering voucher line numbers in the From Voucher Line and To Voucher Line fields. You must also enter a voucher ID.

Voucher Date Option and Voucher Date	Complete the Voucher Date Option field in conjunction with the Voucher Date field to limit your search to vouchers that fall within a selected date range.
Currency	Search for vouchers by voucher currency.

Additional Search Criteria

This section initially appears as collapsed; you must expand it to access these optional fields. You can specify additional criteria with receiver lookup criteria or with only the receipt unit defined. However, any information that you define in this group box overrides the values that are specified in the Voucher Lookup Criteria group box.

Get only the Voucher lines that contain the following information	Select to include only the voucher lines that contain the data that is specified in the additional search criteria. This field is set as the default.
Get all Voucher lines for any Voucher that contains the following information	Select to include all voucher lines for vouchers that contain the data that is specified in the additional search criteria.
Item ID, Item Description, Quantity, Unit Price, and Merchandise Amount	Enter data to further refine your search. You can enter data in more than one field. When you search for quantity, unit price, or merchandise amount, you should also enter at least one of the following fields: Item ID or Item Description.

Search and Copy

Search	Click to populate the Voucher Information scroll area with the voucher lines that match your search criteria.
Copy Selected Lines or Copy Entire Document	Click to copy voucher information onto the voucher. This button is not available until you select Search to display returned voucher information results. When the system retrieves multiple vouchers, you can copy selected voucher lines. When the system retrieves only one document, you can copy the entire document.
Reset	Click Reset to remove the Voucher Information scroll area and clear selection criteria.
Select All	Click to select all of the lines for all vouchers displayed.
Clear All	Click to deselect all of the lines for all vouchers displayed.

Voucher Information

Unpaid	Displays the unpaid balance of the voucher that is being adjusted. This field is displayed only if you are creating an adjustment voucher. The system issues a warning if the adjustment amount is greater than the unpaid balance of the voucher that is being adjusted.
Reverse Qty/Amt (reverse quantity/amount)	If the voucher that you are adjusting references a purchase order, select this check box to reverse matched quantities or amounts for the purchase order. This field is available only if you are creating an adjustment voucher. See Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Adjustment Vouchers, page 392.
Select	Select individual voucher lines by selecting this check box in the appropriate row.
Adjust Matched Values, Restore Encumbrance, or Adjust Mtch Value/Encumbrance (adjust matched value and encumbrance)	This field is available only if you are creating an adjustment voucher and the original voucher has an unreconciled related purchase order. The field label and action of this field change depending on the following factors: • Adjust Matched Values: Control is not enabled for the business unit, and the purchase order that is copied to the voucher requires matching. Select to adjust the matched value on the purchase order. • Restore Encumbrance: Commitment Control is enabled for the business unit, and the purchase order that is copied to the voucher does not require matching. Select to have the Budget Processor process restore or liquidate the encumbrance budget. • Adjust Mtch Value/Encumbrance: Commitment Control is enabled for the business unit, and the purchase order that is copied to the voucher requires matching. Select to restore or liquidate the encumbrance budget and to adjust the matched value on the purchase order. See Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Adjustment Vouchers, page 392.
Select All	Click to select all of the lines for a voucher. Each voucher that the system returns has a Select All button. You must click the button for each voucher to select its lines.
Clear All	Click to deselect all of the lines for a voucher. Each voucher that the system returns has a Clear All button. You must click the button for each voucher to select its lines.

Copying Template Information

Access the Voucher Template page (select Template in the Worksheet Copy Option field on the Invoice Information page).

Note. You must enter a vendor ID on the Invoice Information page before you can access the Voucher Template page by selecting the Worksheet Copy option.

Template ID	Select a template ID. If only one template ID is defined for the vendor, that template ID will be entered in this page field.
Copy from Template	Click Copy from template to copy the appropriate invoice header, line, and distribution information from the source template voucher onto the voucher you are adding. This action returns you to the Invoice Information page.

Scheduling and Creating Voucher Payments for Online Vouchers

This section discusses how to:

- Enter payment information for vouchers.
- Define holiday processing and currency options.
- Override late charge information.
- Enter draft settings for draft payments.
- Entering layout information.
- (USA) Enter HIPAA information.

Pages Used to Schedule and Create Voucher Payments for Online Vouchers

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher - Payments	VCHR_PAYMENT_PNL	Accounts Payable, Vouchers, Add/Update, Regular Entry, Payments	View the payment schedule for a voucher and override payment settings. On this page, you can change the payment schedule, schedule multiple payments, schedule direct payments to an alternate vendor or vendor location, record a manual payment, and create an express payment.
Holiday/Currency Options	PAY_OPT_SEC	Click the Holiday/Currency Options link on the Voucher - Payments page.	Override the default bank holiday processing options and currency options for the payment.

Page Name	Definition Name	Navigation	Usage
Vendor Bank Account	PAY_TO_BANK_SCHED	Click the Vendor Bank link on the Voucher - Payments page.	Set the pay to bank account for the remit to vendor. After selecting the account, bank information is displayed on the page.

Voucher - Payments page, add mode (2 of 2)

PeopleSoft Payables schedules payments for a voucher when you save the voucher. At that time, the system processes the voucher fields against the Payment Terms table to determine the net due, discount due, and scheduled due dates for the payment.

Note. Remember that if the vendor is on hold, the system does not select the voucher for payment until you remove the payment hold status for the vendor.

If a payment has been reconciled, the fields on this page are unavailable.

Header

Pay Terms

Modify the payment terms.

Schedule Payments

Click to schedule the payment before you save the voucher. This function enables you to preview the payment due dates and discount (if any). With multipayment terms, you can also generate installment payment records (and review and edit them, if necessary) in advance of committing them when saving the voucher. You can always edit the voucher immediately after saving, but this alternate method may offer more peace of mind.

HIPAA

Click to access the HIPAA page, where you can enter HIPAA information for the voucher.

This link appears only if the payment method for the voucher has an EFT layout of *HIPAA*.

The Action field appears on this page as well as other pages in the Voucher component. This field is discussed in detail in a previous section.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Creating Vouchers Online, page 309.](#)

Payment Information

Scheduled Payment

Displays the scheduled payment number.

Remit to, Location, and Address

Displays the appropriate remit to vendor for the payment based on the remit to vendor that is established for the vendor on the Invoice Information page. This value is supplied by default from values that are established at the vendor location level. Whereas in most cases you remit directly to the vendor that sent you the voucher, the system enables you to override the default choices for remit to vendor, location, and address.

For example, if a vendor requires that payments be sent to its company corporate office rather than to a local office address, you can select the location to which the payment should be sent. You can also change the remit to vendor to pay one vendor for the vouchers of another, as is the case with factoring relationships, for example.

Click the Alternate Names icon to enter alternate names for the remit-to vendor.

(USF) Schedule ID

U.S. federal payment schedule ID. This field is populated only after you have run the Pay Cycle Application Engine (AP_APY2015) process for the payment.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," page 1033.](#)

Gross Amount

Enter the payment amount for the scheduled payment if you do not take a discount. If you have multiple payments scheduled for the voucher, the sum of the gross amounts for each of these payments must equal the gross amount of the voucher on the Invoice Information page.

Discount

Enter the amount of the discount that can be taken on the scheduled payment. If you have multiple payments scheduled for the voucher, the sum of all the discount amounts must equal the total discount amount that is available for the voucher. If you miss the discount due date and elect not always to take the discount, you cannot take advantage of this discount amount unless you reschedule the payment with new dates.

Scheduled Due

Determines when to pay the scheduled payment. During the payment selection step of the Pay Cycle process, the system compares the pay through date (entered as part of your payment selection criteria) to the scheduled pay date. If the scheduled pay date is less than or equal to the pay through date, the scheduled payment is a candidate for payment.

When PeopleSoft Payables automatically schedules payments, the scheduled due date is set to one of these values:

- Discount due date: When a discount is available and the discount due date is later than the current date.
- Net due date: When no discount is available or the discount due date has passed.
- Current date: If the net due date has passed.

Users who are authorized to schedule payments manually can manipulate these dates and amounts to tailor the voucher's scheduled payments to meet your organization's cash flow requirements.

Note. When bank holiday processing is enabled, the system adjusts the scheduled due date forward or backward according to whether the due date falls on a work day, weekend, or holiday, depending on the parameters that are in effect.

When the scheduled due date has been populated for a payment (either by calculation or by direct user entry), that payment is considered *scheduled*. The payment schedule is not updated for any subsequent changes in payment terms or basis date or amount data. You must first remove the date from the Scheduled Due field if you want to *reschedule* an already scheduled payment.

Net Due	Displays the net due date. When PeopleSoft Payables automatically schedules payments, the system calculates the net due date by applying the appropriate net payment terms timing calculation for the payment terms on the Invoice Information page. If you have specified net delay days for the vendor or for the PeopleSoft Payables business unit, the system adds that number of days to the date that is calculated from the payment terms to determine the net due date when the gross amount for the scheduled payment is due.
Discount Due	The system calculates the discount due date by applying the appropriate discount payment terms timing calculation for the payment terms on the Invoice Information page. If you have specified discount delay days for the vendor or for the PeopleSoft Payables business unit, the system adds that number of days to the date that is calculated from the payment terms to determine the latest date that you can legitimately retain the discount amount for the scheduled payment.
Accounting Date	The accounting date is based on the settings that are defined in the PeopleSoft Payables default hierarchy.
Payment Inquiry	Click to access the Payment Inquiry page to view payment information. This link is active only if the voucher has been paid. <u>See Chapter 27, "Reviewing Voucher, Payment, and Vendor Information," Reviewing Payment Information, page 831.</u>
Holiday/Currency Options	Click to access the Holiday/Currency Options page, where you can change the default bank holiday processing and currency options for the payment.
Discount Denied	This check box is display-only and is set by the Pay Cycle process. When the Evaluate Discount Rate feature is enabled at the Installation Options level, the Pay Cycle process determines whether the discount should be taken. If the discount is not taken, the Discount Denied check box is selected.
Late Charge	Click to access the Late Charge Information page, where you can review and override the system-assigned payment reason code and the late charge information that appears by default through the PeopleSoft Payables control hierarchy. You can override the payment reason code after you have paid the voucher, but you cannot change the Late Charge Option or the Late Charge Code fields after payment. Only user-defined codes appear. Note. This page is available only if you have enabled late charge calculation on the Installation Options - Payables page.

Express Payment

Click to access the Express Payment page, where you can create an express payment. The system copies all relevant information on the voucher to the payment fields for creating an express payment.

Note. You cannot create an express payment if the vendor has a financial sanctions status of *Review* or *Blocked*. The Express Payment link is not available.

See [Chapter 22, "Using Additional Payment Processing Options," Using Express Payments, page 705.](#)

Prepayment

Click to search for and apply eligible regular vouchers to a prepaid voucher. This link is active only if you are entering a prepaid voucher.

See [Chapter 30, "Processing Prepayments," page 885.](#)

Payment Options**Bank and Account**

Select the bank and bank account from which the payment is issued. This appears by default from the control hierarchy, but you can override these settings.

Method

Select a payment method. Values are:

ACH: Automated Clearing House.

BEF: Customer-initiated EFT draft.

BOO: Customer-initiated draft.

CHK: System check.

DD: Direct debit.

DFT: Vendor-initiated draft.

EFT: Electronic Funds Transfer.

GE: Giro EFT.

GM: Manual giro.

LC: Letter of credit.

MAN: Manual check.

WIR: Wire report.

Drafts

Click to access the Draft Maturity Dates page, where you can specify the draft maturity date options for the payment. This link is active only if you select a draft payment method.

See [Chapter 31, "Processing Drafts," page 915.](#)

Pay Group

Select the pay group for this payment, where applicable. Pay groups are used as part of the pay cycle selection criteria. You can use them to better control which payment schedules are selected. You define vendor pay groups on the Vendor Pay Group Codes page.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options," Defining Vendor Pay Group Codes.

Handling

Displays the payment handling code, which appears by default from the PeopleSoft Payables control hierarchy. Each payment handling code has a sort sequence related to it that determines the order in which it prints. Checks are printed according to the sort sequence in ascending order: the lower the sort sequence number, the higher the sort priority. You must always have a payment handling code on a scheduled payment. You define payment handling codes on the Payment Handling Codes page.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options," Defining Payment Handling Codes.

Netting

Displays the status for the Automatic Netting Selection Application Engine (TR_NET_ASEL) process:

H (hold): Net payment is on hold for the Automatic Netting Selection process in Treasury. This payment schedule is available for the netting selection process to select it.

N (not applicable): Netting does not apply to this payment. This vendor is not a netting vendor

S (selected): Net payment is selected for payment. Payment has been processed by the Automatic Netting Selection process and is now ready to be processed by the Netting Closing Application Engine (TR_NET_CLOSE and TR_NET_ARCLS) processes in pay cycle processing.

See *PeopleSoft Cash Management 9.1 PeopleBook*, "Managing Bilateral Netting."

Hold Reason

Select a code to explain the payment hold. Values are:

- *ACC*: Accounting in Dispute.
- *AMT*: Amount in Dispute.
- *CCR*: CCR Expired.
- *CRT*: Contract Retention.

Note. Retention from a recurring voucher contract is automatically placed on hold.

- *EFT*: EFT Incomplete or Not Prenoted.
- *FNS*: Financial Sanctions.
- *GDS*: Goods in Dispute.
- *IPC*: Inbound IPAC Required.
- *OTH*: Other.
- *QTY*: Quantity in Dispute.
- *WTH*: Withhold Hold.

Note. A payment can be automatically placed on Withhold Hold, depending on the withholding setup.

The reason codes are stored in a translate table. You can add more codes to the translate table using PeopleTools.

Messages

Enter a payment message of up to 70 characters to appear on the remittance advice (check stub). You can also click the [Messages](#) link to access the Payment Message page, where you can select message codes for predefined messages to appear on the remittance advice and specify the order in which they appear. You can repeat this for each scheduled payment.

You define message codes on the Payment Messages page which you access from the Procurement Options menu.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options," Establishing Standard Payment Messages.

Vendor Offset TOP(vendor offset Treasury Offset Program)

The value entered for the vendor provides the default for TOP eligibility at the voucher payment level. When using the SPSMISC EFT file format, the system will automatically populate this field based on settings at the vendor level.

Vendor Bank Account

Click to access the Vendor Bank Account page, where you can select the bank account sequence number.

Letter of Credit

Displays the ID for the letter of credit. This field is active only for a payment method of *LC*.

Click the View Related Links icon to view the Letter of Credit Details page and the Letter of Credit document page.

See [Chapter 6, "Setting Up Payment Formats and Payment Forms," Letters of Credit, page 121.](#)

Hold Payment

Select this option to place a payment on hold. The system stores the scheduled payment but the Pay Cycle process does not pay it.

When you are ready to take the payment off hold, deselect the check box.

Separate Payment

Select this check box if you do not want this payment to be grouped with other payments for the remit to vendor.

(USF) Inbound IPAC
(inbound intra-governmental payment and collection transaction)

Select to indicate that this voucher is to be applied to an inbound IPAC transaction. This places the voucher payment on hold with a hold reason of *IPC*, IPAC hold, until the inbound IPAC data has been staged and is ready for you to associate with the voucher.

This field is available only if you have enabled federal payments on the Installation Options - Payables page.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Processing Inbound IPAC Transactions, page 1076.](#)

(USF) Select IPAC (select intra-governmental payment and collection transaction)

Click to access the Inbound IPAC Stage Selection page, where you can search for and select staged inbound IPAC transactions to associate with the voucher.

This field is available only if you have enabled federal payments on the Installation Options - Payables page.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Processing Inbound IPAC Transactions, page 1076.](#)

(USF) IPAC (intra-governmental payment and collection transaction)

Click to access the IPAC page, where you can enter and review IPAC information for the voucher. This link is active only if you have enabled federal payments on the Installation Options - Payables page and the payment method that you selected is defined as an IPAC EFT layout for the bank that you have selected.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Processing Outbound IPAC Transactions, page 1064.](#)

Schedule Payment

Action

Select the payment action. Values are:

- *Cancelled*: Indicates that this payment has been canceled. This value is display-only; you cannot select it.
- *Escheated*: Indicates that this payment has been escheated. This value is display-only; you cannot select it.
- *Prepaid*: Indicates that this payment schedule was paid by a prepayment. This value is display-only; you cannot select it.
- *Record*: Select to record a manual payment.

Today's date is populated in the Payment Date field. You can also create manual payments using the Manual Payment Creation page.

Note. You cannot record a manual payment if the vendor has a financial sanctions status of *Review* or *Blocked*. The system does not allow you to select this option.

- *Schedule*: This is the default value for scheduled payments.

See [Chapter 22, "Using Additional Payment Processing Options," page 693.](#)

See [Chapter 30, "Processing Prepayments," page 885.](#)

Pay

This field is enabled only if you have set the payment action to *Record*. This field enables you to indicate that either the *Full* amount or the *Discounted* amount is being paid.

(USF) Reference Voucher and Reference Payment

Enter the original voucher (reference voucher) in the Reference Voucher field and the schedule payment number of the canceled payment in the Reference Payment field. This creates a relationship between the source voucher and the reference voucher for reclassification purposes. These fields are available only if you have enabled federal payments on the Installation Options - Payables page.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Understanding Cash Reclassification Reporting, page 1055.](#)

Payment Date

The default is today's date. You can change it to reflect the date of the manual payment.

Reference

Enter a reference number when recording a manual payment.

Applied Voucher

Displays the voucher ID of the prepaid voucher to which this regular voucher was applied. This field appears only on regular vouchers that are applied to prepayments.

See [Chapter 30, "Processing Prepayments," page 885.](#)

Payment Amounts Other Than Gross or Discount

If you want to enter a payment that differs from the gross or discount amounts, you must enter additional payment schedules that add up to one of those amounts. Do this by inserting new rows for the payment and scheduling those payments for a later date.

For example, if the gross amount is 100.00 EUR, and you want to enter a manual payment of 70.00 EUR, you must create two payment schedules for the voucher:

1. One for 70.00 EUR.
2. One for 30.00 EUR.

Change the gross amount on the existing payment schedule to 70.00 EUR, and then insert a new payment schedule row and enter a payment of 30.00 EUR to equal the gross amount of the voucher. The system does not allow you to save the manual payment of 70.00 EUR until the voucher balances to either the gross or discount amount.

Vouchers with Payment Terms That Include Rebate Processing

Some vendors provide a rebate rather than a discount for payments that are made early. You can set up such payment term on the Payment Terms - Single Payment page.

When the Voucher component processes vouchers with rebate terms, it performs the following validations:

- Accounting policy must be gross.
- Discount due date and scheduled due date must be today's date.
- All voucher lines must be set to discount applicable.
- Only one scheduled payment per voucher is allowed.

No discount calculation is applied when you save the voucher. Rebate calculation takes place in the payment selection step of the Pay Cycle process.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options," Defining Single Payment Terms.

Defining Holiday Processing and Currency Options

Access the Holiday/Currency Options page. (click the Holiday/Currency Options link on the Voucher - Payments page).

Holiday Processing Options

The system calculates bank holidays using the business calendar.

Holiday Options

Select from the following values:

Due After Holiday: The system takes any bank holidays into consideration when it calculates the payment due date and delays payment until after the bank holiday.

If you select this value, you can also select the Allow due date in next month check box to enable the payment to be made in the next month. If you don't select this check box, and the payment date after a holiday does fall in the next month, the system schedules the payment before the holiday. For example, you would not select this value if you generally want payments to be made after a holiday but not in the next month when a holiday falls at the end of a month.

Due Before Holiday: The system takes any bank holidays into consideration when it calculates the payment due date and makes the payment before the bank holiday.

Not Applicable: The system does not take bank holidays into consideration when it calculates the payment due dates.

Days

Enter the number of days after or before the holiday that the payment can be made.

Currency Options**Payment Currency**

Select the currency in which the payment is made.

Rate Type

Select the rate type for converting the invoice currency to the payment currency.

Specify Rate

Select if you want to enter a specific rate for converting the invoice currency to the payment currency in the Exchange Rate field.

Paid

If you enter a specific exchange rate, the amount in the payment currency is calculated and reported here.

Note. This field is in deferred processing mode and a trip to the server is required to calculate the paid amount. You can invoke a trip to the server by clicking the Refresh button.

Overriding Late Charge Information

Access the Late Charge Information page (click the Late Charge link on the Voucher - Payments page).

Payment Reason Code	Displays the system-assigned payment reason code; you can override this value after you have paid the voucher. You set up payment reason codes on the Payment Reason Codes page. The system-applied reason code that you attach to the setID for this business unit on the Payables Definition - Payments page appears as default in this field.
Late Charge Option	Select either <i>Compute Charges</i> to have the system calculate late charges, or <i>Not Applicable</i>. You cannot change this value after the voucher has been paid.
Late Charge Code	If you choose to compute late charges at the voucher level, set the value here. You cannot change this value after the voucher has been paid. You set up late charge codes on the Late Interest Charges page.
Late Charge Amount	Displays the amount of the late charge to be paid.
Late Charge Denied	If the system-calculated late charge is below the minimum pay amount (as defined during late charge setup), the system does not pay the late charge. The late charge is denied. The system displays the denied amount in the Late Charge Denied field, and the late charge amount becomes zero. When the late charge is above the minimum pay amount, it appears in the Late Charge Amount field and the Late Charge Denied field becomes zero.

Entering Draft Settings for Draft Payments

Access the Draft Maturity Dates page (click the Drafts link on the Voucher - Payments page).

Draft Sight	References the agreed-upon payment terms between you and your vendor. These terms are similar to accounts payable and accounts receivable payment terms, except that they do not use discounts. You maintain your default sight codes at the business unit, voucher origin, and vendor levels of the control hierarchy. The system uses the draft sight code to calculate the maturity date.
Maturity Date	When you save a voucher with a payment method of draft, the system calculates the draft maturity date and the scheduled maturity date using the scheduled due date, draft sight code, and bank holiday processing options. You can override the Maturity Date field here, but the schedule due date for the voucher payment must be before or equal to the maturity date.

Scheduled Maturity Date	When you save a voucher with a payment method of draft, the system calculates the draft maturity date and the scheduled maturity date using the scheduled due date, draft sight code, and bank holiday processing options. You can override the Scheduled Maturity Date field here, but the schedule due date for the voucher payment must be before or equal to the maturity date.
Group Code	Use to group payment schedules manually into one draft.
See Also	
<u>Chapter 31, "Processing Drafts," page 915</u>	

Entering Layout Information

Access the Layout page (click the Layout link on the Voucher - Payments page).	
To enable editing of the Layout fields, you must first specify a payment method of <i>ACH</i> : Automated Clearing House, <i>BEF</i> : Customer-initiated EFT draft, <i>EFT</i> : Electronic Funds Transfer, <i>GE</i> : Giro EFT, or <i>WIR</i> : Wire report.	
Layout	Select an applicable layout code. The system displays codes depending on the bank code, bank account, and payment method that are defined on the Payments page. When you click Save, the system validates layout codes against those defined at the bank account level.
Settle by	Displays the settlement method of the selected layout, either <i>Financial Gateway</i> or <i>Pay Cycle Manager</i> .
Note. You must select layouts that are settled through Pay Cycle Manager for federal payments, single payment vouchers, and (USA) HIPAA payments.	

(USA) Entering HIPAA Information

Access the HIPAA page (click the HIPAA link on the Voucher - Payments page).

HIPAA page

- Entity Identified Code

Enter a code to identify the organizational entity, physical location, property, or individual: *3rd Party* or *Payer*.
- Reference Identifier Qualifier and Reference Identifier

Enter a qualifier against which to indicate that the payment is to be applied —*Invoice*, *Master*, or *Plan*— and a corresponding identifier number from the agency that is authorizing the payment.
- Identification Code Qualifier and Identification Code

Enter a qualifier to indicate the code structure method of the identification code—*D&B* (Dun and Bradstreet), *D&B + Sfx* (Dun and Bradstreet plus 4-character suffix), *Insurance*, *Plan ID*, or *Tax ID*—and enter the corresponding code.
- Policy Information Type and Policy Information

Enter *Account*, *Contract*, *Invoice*, or *Policy* to define the policy type, and enter additional information, such as the policy number.
- Contact Method and Contact Name

Enter the preferred contact method: *Email*, *Fax*, or *Telephone*. Also enter the contact person's name.
- Contact Information

Enter specific contact information, such as email address.
- Start Date and End Date

Enter the dates to define the duration of the policy.

The Action field and Print Invoice button appear on this page as well as other pages in the Voucher component. These fields are discussed in detail in a previous section.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Creating Vouchers Online, page 309.](#)

Voucher Processing

The fields in the Voucher Processing group box enable you to select various voucher processing options. Depending on the status of the voucher and its stage in the voucher life cycle, not all of these options may be available.

Post Voucher

Select to allow the voucher to post. The default for a voucher is derived from the control hierarchy: control group, origin, business unit. If the default is post, the check box is selected and the voucher is available to the Voucher Posting process, assuming that all other edit, approval, and control group criteria are met.

To prevent the voucher from posting during the next Voucher Posting process, deselect this check box.

If the voucher has been posted, this check box is selected and display-only.

Revalue Voucher

Displays as selected by default. This check box must be selected if the voucher is to be picked up by the PS/AP Revaluation Application Engine (AP_REVALUE) process.

See [Chapter 35, "Processing Multiple Currencies in PeopleSoft Payables," Performing the PS/AP Revaluation Process, page 1012.](#)

Packing Slip

Enter a packing slip number from the supplier's invoice. The packing slip number can be used by the Matching Application Engine (AP_MATCH) process to associate the voucher with the receiver if the document association rule is set up to use this criteria.

This field also appears for vouchers with the ERS or Quick Invoice source type.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options," Viewing and Updating Document Association Rules.

See [Chapter 16, "Processing Batch Vouchers," ERS Vouchers, page 430.](#)

Close Voucher

This field is display-only. It displays as selected if the voucher has been selected for closure using the Close Voucher page. The system closes the voucher during the next Voucher Posting process.

Delete Voucher

Select to delete a voucher from PeopleSoft Payables. For control purposes, you can do this only if the voucher is in an unposted state and no portion of the voucher has ever been paid. When you save the voucher, the system prompts you to confirm your action.

Note. This checkbox is only available when adding a new voucher. If you need to delete a voucher after adding it, you must use the Delete Voucher page.

See [Chapter 23, "Running Voucher and Payment Posting," page 751.](#)

Accounting Instructions

The values appear by default based on the PeopleSoft Payables control hierarchy. You can override them.

Account At

Determines how you view discounts. Select from:

Gross: If you account at gross, the discount is earned when you are able to take it.

Net: Accounting at net assumes that you will always take a discount. If you do not, the discount is lost.

Template

Identifies the Accounting Entry Template that is associated with this voucher. The Accounting Entry Template controls the offset accounts, for example, the sales tax, freight, and discount accounts.

Match Action

Status

Displays the current matching status of the voucher. You can change the match status, but what you can change varies depending on where the voucher is in the Matching process.

For example, before running the Matching process, you can change the matching status to *No Match* on a line-by-line basis; that is, you can indicate which lines require matching and which lines do not.

The user ID does not require match override authority to switch between a matching status of *Ready* and a status of *No Match*.

The match status values are:

CreditNote: Marks the voucher as being matched with a credit memo adjustment voucher.

Dispute: Indicates that the voucher is on hold from further matching processing.

Exceptions: A voucher that fails the Matching process initially has a status of *Exceptions*. In this case, you can select the *Exceptions* link on the Voucher - Summary page to transfer to the Match Exception Workbench Details page. Or you can override the match status here, provided that your user ID has match override authority.

Matched: Indicates that the voucher has successfully passed the Matching process.

No Match: Indicates that all voucher lines are flagged as *Do Not Match*.

If no lines are flagged for matching, the system sets voucher matching to *No Match*. The system sets this value automatically when it copies voucher information from a purchase order or receiver.

You can set this value manually as well.

Overridden: Enables the voucher to pass matching by setting the match status to *Matched*, even though the voucher does not match specified purchase orders or receivers.

If you had previously set the status to *Overridden*, you can change it back to *Exceptions*.

Ready: Marks the voucher as ready for matching so that it can be processed the next time the Matching process is run.

If voucher lines exist that have been flagged as full match, the system sets the voucher matching status to *Ready* before the voucher can be saved. The system sets this value automatically when it copies voucher information from a purchase order or receiver.

You can set this value manually as well. The user ID does not require match override authority to switch between a matching status of *Ready* and a status of *No Match*.

Match Due Date

Edit the match due date for this specific voucher. The Matching process selects only the vouchers that are ready to be matched as of that date.

Pay UnMatched	Select to pay an unmatched voucher. You must have authority, defined in user preferences, to do this.

See [Chapter 20, "Running the Matching Process," page 559](#).

Transaction Currency

The fields in the Transaction Currency group box enable you to view and override the default voucher transaction currency and the rate type (or user-defined exchange rate) that is used to convert the voucher transaction currency into the business unit's base currency when you post the voucher. You can override the default settings before posting the voucher.

Note. The exchange rate that you view or enter here has no effect on the payment currency. To convert the invoice currency to a different payment currency, use the Holiday/Currency Options page, accessed from the Voucher - Payments page.

Source	Select the source of the currency exchange rate: <i>Tables:</i> The system determines the currency exchange rate automatically using the PeopleSoft Financials exchange rate table. If the system is assigning the exchange rate using the PeopleSoft Financials exchange rate tables, then the voucher transaction currency, rate type, and invoice date determine which rate the system uses to convert amounts to the business unit's base currency. <i>User:</i> Enter your own exchange rate (independent of the tables) in the Exchange Rate field.

Currency, Rate Type, and Exchange Rate	The currency and rate type appear by default from the control hierarchy of business unit, origin, control group, and vendor. You can override these settings here on the voucher.

Tax Group

Tax Group and Tax Pmnt Type (tax payment type)	PeopleSoft Payables uses these fields to create payments, for example garnishment payments, for PeopleSoft Payroll.

Workflow Approval

Approval

Set the approval status of the voucher:

Approval Framework: Select to use the Approval Framework for voucher approval routing.

Pre-Approved: The voucher's approval status is set to approved. The voucher is not routed for approval and is immediately available for payment.

Virtual Approver: Specify the business process and approval rule set to use for approving the voucher using the Virtual Approver.

Bus Proc(business process)

If you select *Virtual Approver* for the approval type, you must enter a business process for the approval process.

Appr Rule(approval rule)

If you select *Virtual Approver* for the approval type, you must enter an approval rule for the approval process.

Note. A voucher must be approved before it can be paid.

See [Chapter 19, "Managing Vouchers," Approving Vouchers, page 493.](#)

Letter of Credit

L/C ID(letter of credit ID)

Select the letter of credit ID for the payment. This field is populated during voucher save based on the value in the L/C ID field on the Payments page.

Click the View Related Links icon to view the Letter of Credit Details page and the Letter of Credit Doc (letter of credit document) page.

See [Chapter 6, "Setting Up Payment Formats and Payment Forms," Letters of Credit, page 121.](#)

Self Billing Invoice

Enter a self-billing invoice number option and number.

See [Chapter 33, "Processing Self-Billed Invoices," page 981.](#)

Prepayment

Enter prepayment information.

See [Chapter 30, "Processing Prepayments," page 885.](#)

Lease Key

Enter the lease number for a lease payment voucher. This field appears only when you have also installed the Real Estate Management module.

Viewing Voucher Summary Information

This section discusses how to view voucher summary information.

Page Used to View Voucher Summary Information

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher - Summary	VCHR_SUMMARY_PG	Accounts Payable, Vouchers, Add/Update, Regular Entry, Summary	View important voucher information, summarized from the other three primary pages, such as voucher header information, various statuses, and payment terms. Also view voucher entry information, such as the voucher source, the date entered, the user ID that entered the voucher, and the date on which the voucher was last updated. Note. This page appears only after you save the voucher.

Viewing Voucher Summary Information

Access the Voucher - Summary page (Accounts Payable, Vouchers, Add/Update, Regular Entry, Summary).

Voucher - Summary page

Contract ID

Displays the contract ID that is associated with this voucher.

Entry Status

Displays the phase of the voucher's processing. Values include *Recycled*, *Approved*, *Open*, and *Postable*.

Match Status

Values include *Exception*, *Manually Overridden*, *Manually Set to Credit Note*, *Matched*, *Match - Dispute*, *No Match*, and *To Be Matched*.

If match exceptions exist, click the Exceptions link to access the Match Exception Workbench Details page.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Completing Voucher Attributes, page 373.](#)

See [Chapter 20, "Running the Matching Process," page 559.](#)

Post Status

Voucher posting status:

Posted: The Voucher Posting process has run successfully.

Unposted: The Voucher Posting process has not been run.

See [Chapter 23, "Running Voucher and Payment Posting," page 751.](#)

Document Tolerance Status	If Document Tolerance checking is enabled, the system displays the Document Tolerance Status field. Values are: <i>Valid:</i> The voucher has passed document tolerance checking. <i>Not Chk'd</i> (not checked): The voucher requires document tolerance checking. If any amounts, quantities, or ChartFields are modified after the document tolerance is checked, the system resets the document tolerance status to <i>Not Checked</i>. <i>Error:</i> Exceptions were generated for the voucher during document tolerance checking. Click the link to access the Document Tolerance page, and override document tolerance exceptions. See Chapter 29, "Running Document Tolerances," page 877.
Budget Status and Budget Misc Status (budget miscellaneous status)	Displays the budget checking status of the voucher total amount and nonprorated miscellaneous charges, respectively, if you are using Commitment Control. Values include: <i>Error:</i> When this value appears, the Budget Check Exception link also appears. Click the link to access one of the following two exception pages and review the error: • When budget header status is in error, the link accesses the Voucher Exceptions page. • When the budget miscellaneous status is in error, the link accesses the Voucher (NP) Exceptions (voucher nonprorated exceptions) page. <i>Not Chk'd</i> (not budget checked). <i>Valid.</i> See Chapter 28, "Budget-Checking PeopleSoft Payables Transactions Using Commitment Control," page 855.
Voucher Source	Indicates the source that is used to create this voucher. See Chapter 16, "Processing Batch Vouchers," Understanding Voucher Build Processing, page 415.
Origin	Displays the voucher origin. See Chapter 5, "Organizing Vouchers with Origins and Control Groups," page 87.
ERS Type	Indicates the source for the ERS (evaluated receipt settlement) voucher. See Chapter 16, "Processing Batch Vouchers," ERS Vouchers, page 430.

View Related

Select from the following values and click Go to view related invoice information. The system opens the inquiry pages in new browser windows, so you can review both the invoice and the related information at the same time.

Accounting Entries Inquiry: Select to access the Voucher Accounting Entries inquiry page and view accounting entries for posted vouchers. If a voucher has not yet been posted, the page does not display accounting entries.

Payment Inquiry: Select to access the Payment Inquiry page and search for related payments.

Purchase Order Inquiry: Select to access the Purchase Order Inquiry page and search for related purchase orders.

Voucher Document Status: Select to access the Voucher Document Status inquiry page to view related documents.

Voucher Inquiry: Select to access the Voucher Inquiry page and search for related vouchers.

Viewing Related Documents Information

This section discusses how to view related documents information.

Voucher - Related Documents page

The Voucher - Related Documents page appears when you save the voucher. It displays related payment, purchase order, receiver, and adjustment information. The system:

- Displays PO information when you copy from the purchase order or purchase order receipt.
- Displays receiver information when you copy from the purchase order receipt or associate the receiver with the voucher.
- Displays voucher adjustment information when you create an adjustment voucher that is related to this voucher.

The Action field and Print Invoice button appear on this page as well as other pages in the Voucher component. These fields are discussed in detail in a previous section.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Creating Vouchers Online, page 309.](#)

Payment Details

Displays payment information, including the status, scheduled pay date, payment method, and paid amount.

Click to access the Voucher - Payments page to view additional payment details.

Payment Reference

Displays the payment reference number when the voucher is paid.

Remit Vendor

Displays the remit vendor number. Click the View Related Links icon to access additional vendor information.

Voucher Line - PO Information

Displays purchase order information for a voucher line, including match option, purchase order number, item ID, quantity, unit of measure, and unit price.

Click to access the Purchase Order Inquiry - Purchase Order page to view additional purchase order details.

Invoice Line

Click to access the Voucher - Invoice Information page to view additional voucher line details.

Voucher Line - Receiver Information

Displays receiver information for a voucher line, including receipt number, quantity entered, and merchandise amount.

Click to access the Receipts page to view additional receipt details.

Invoice Line

Click to access the Voucher - Invoice Information page to view additional voucher line details.

Voucher Adjustments

Displays adjustment information, including the related voucher ID and whether it is a debit memo adjustment.

Click to access the Voucher - Invoice Information page for the adjustment voucher to view additional voucher details.

Viewing Voucher Error Information

PeopleSoft Payables logs errors for any vouchers in recycle status, regardless of whether you entered the voucher online or built it through the Voucher Build process, and lists them on the Error Summary page in the voucher component. To find vouchers with errors, enter *Recycle* in the Entry Status field on the add search page. You can also use the Voucher Maintenance (VCHR_CORRECTION) component to review and correct voucher errors and the Voucher Mass Maintenance (VCHR_MASS_MAINT) component to correct batches of vouchers that share the same error. These components are designed expressly for voucher error review or modification.

This section discusses how to view voucher errors using the Voucher component.

View a graphical summary of the approval process. Note. This page only appears after submitting a voucher for approval in the Approval Framework.

Running On-Demand Voucher Processes as a Batch Request

If your user ID has access to the appropriate on-demand process group, you can process a voucher on demand, directly from the Invoice Information page, after you save the voucher. You also can run on-demand voucher processes from a batch request page. The advantage of this option over regular batch processing is that you can run a sequential group of processes on a batch of vouchers without having to enter multiple batch requests.

This section discusses how to run batch on-demand voucher processes.

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Setting Up On-Demand Processing"

Page Used to Run On-Demand Voucher Processes as a Batch Request

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher On-Demand Processes	VCHR_STM_RQST	Accounts Payable, Batch Processes, Vouchers, Voucher On-Demand Process	Run on-demand process groups (predefined groups of multiple, sequential voucher processes) for a batch of vouchers.

Running Batch On-Demand Voucher Processes

Access the Voucher On-Demand Processes page (Accounts Payable, Batch Processes, Vouchers, Voucher On-Demand Process).

Voucher Process Option

Select from the following values:

Process All Units: Process all available vouchers in all business units.

Process Business Unit: Process all available vouchers in a specific business unit, which you enter in the Business Unit field.

Process Voucher: Process a specific voucher, which you enter in the Voucher field.

Initiate Entry Event Generator

Select to initiate the FS_EVENTGEN Application Engine process, also called the Entry Event Generator, to generate entry events when you run the on-demand process group.

See [Chapter 38, "Using Entry Events in PeopleSoft Payables," page 1097](#).

Action

Select one of the following on-demand process groups:

- *Journal Gen, Load AM* (POSTAPGLAM).
- *Journal Generate* (PST_VCHRGL).
- *Voucher Post* (PST_VCHR).
- *Voucher Post Load AM* (POSTAPAM).

Note. The process groups that are available depend on your user ID.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Setting Up On-Demand Processing."

Chapter 15

Entering and Processing Vouchers Online: Specific Voucher Styles

When you enter specific voucher styles, you use the same pages as regular vouchers, with some different secondary pages, fields, field values, and processing.

This chapter discusses how to:

- Enter regular vouchers.
- Enter adjustment vouchers.
- Modify claim vouchers.
- Enter journal vouchers.
- Enter prepaid vouchers.
- Enter registered vouchers.
- Enter reversal vouchers.
- Enter single payment vouchers.
- Enter template vouchers.
- Enter third-party vouchers.

Note. If financial sanctions validation is enabled at the installation level or the bank level, the system handles specific voucher styles similarly to how it handles regular vouchers. Validating vendors against financial sanctions lists (for example, the Specially Designated Nationals (SDN) list) is discussed in other chapters in this PeopleBook and in the *PeopleSoft Source to Settle Common Information 9.1 PeopleBook*.

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Voucher Validation, page 299](#)

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information," Understanding Financial Sanctions Validation

Entering Regular Vouchers

Follow the instructions provided for entering vouchers in the "Entering and Processing Vouchers Online: General Voucher Entry Information" chapter. Unless a page element, edit, or process is explicitly described as applying only to another voucher style, you can assume that it applies to the regular voucher style.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293](#).

Entering Adjustment Vouchers

This section provides an overview of adjustment vouchers and discusses how to:

- Create adjustment vouchers.
- Create credit memo adjustment vouchers
- Adjust matched values.
- Reverse quantities or amounts for purchase order information.
- Reverse quantities or amounts for receipt information.

Understanding Adjustment Vouchers

Use adjustment vouchers to adjust existing vouchers or to relate two vouchers to each other. You can manually enter adjustment vouchers or automatically create a debit memo adjustment voucher through the Matching Application Engine process (AP_MATCH). Enter adjustment vouchers to capture credits or to increase the initial voucher.

This section discusses entering adjusting information manually or copying the voucher that you want to adjust into the adjustment voucher. PeopleSoft Payables also provides the use of the Matching process to automatically create debit memos to resolve matching exceptions between the voucher and the purchase orders and receivers. The debit memo adjustment voucher is discussed elsewhere in this PeopleBook.

Note. If you are manually creating a credit memo adjustment for matching exceptions, use the copy function to copy the original voucher into the adjustment voucher. Run the Matching process to properly match the credit memo to the original voucher. This results in the credit memo adjustment voucher having a match status of *Matched*.

See Also

[Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Creating Credit Memo Adjustment Vouchers, page 394](#)

[Chapter 20, "Running the Matching Process," Processing Debit Memo Adjustment Vouchers, page 627](#)

Pages Used to Enter Adjustment Vouchers

Adjustment vouchers use the same pages as regular vouchers, although the pages contain some different fields, field values, and processing.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293.](#)

Creating Adjustment Vouchers

To create adjustment vouchers:

1. Select *Adjustments* in the Voucher Style field on the add search page for the Voucher component (VCHR_EXPRESS), and click Add.
2. (Optional) On the Invoice Information page, in the Copy from a Source Document group box, enter the voucher ID of the voucher that you want to reverse in the Voucher ID field, and click the Copy to Voucher button to copy the entire voucher.

These fields appear only for adjustment vouchers.

Note. Source vouchers are regular vouchers and must have the same business unit, vendor setID, and vendor ID as the adjustment voucher that you are creating.

3. (Optional) To copy individual voucher lines, enter a vendor on the Invoice Information header, and click the Copy From Worksheet link in the unlabeled group box above the Invoice Lines scroll area.

This accesses the Voucher Worksheet page, where you can search for and copy voucher lines to your adjustment voucher.

If you are adjusting a voucher that references a purchase order, you can update the prior quantity and amount matched against the purchase order by selecting the Reverse Qty/Amt field on the Voucher Worksheet page. You can also have the Budget Processor restore or liquidate the encumbrance budget by selecting Adjust Matched Values on the Voucher Worksheet page.

Click Copy to Voucher to copy selected voucher lines to the adjustment voucher and return to the Invoice Information page.

Note. You can create an adjustment voucher by copying a regular voucher, regardless of the match status on the regular voucher.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Copying Voucher Information, page 354.](#)

4. On the Invoice Information page, whether you use the Copy to Voucher button or the Voucher Worksheet page to copy voucher information to the adjustment voucher, the system populates the Related Voucher field on the invoice line with the adjusted voucher's voucher ID to link the adjustment voucher lines to the voucher that you are adjusting.

Note. Copying source vouchers or voucher lines is optional. You can enter an adjustment voucher with no reference to another voucher. In that case, you do not have to enter a related voucher.

5. On the Invoice Information page, enter positive or negative adjustment lines as appropriate.

6. Access additional information for your adjustments on the remaining pages in the Voucher component.

These pages are the same as those for regular voucher entry.

See Also

Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Reversal Vouchers, page 403

Creating Credit Memo Adjustment Vouchers

To manually create a credit memo adjustment for matching exceptions:

1. Place the original voucher on match hold by selecting *Match Dispute* in the Voucher Match Action field on the Match Exception Workbench Details page.

No further match processing is done on this voucher until you change the match status.

See Chapter 20, "Running the Matching Process," Reviewing Match Exceptions, page 621.

2. Create an adjustment voucher for the credit memo invoice that you received from your vendor by copying the original voucher on the Voucher component.

See Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Creating Adjustment Vouchers, page 393.

3. Override the original voucher with a credit memo by selecting *Credit Note* in the Voucher Match Action field on the Match Exception Workbench Details page.

See Chapter 20, "Running the Matching Process," Reviewing Match Exceptions, page 621.

4. Run the Matching process.

The Matching process applies the match status of *Matched* and the match type of *Auto - Matched* to the credit memo adjustment voucher if no other match exceptions exist. The Matching process applies the match status of *Matched* and the match type of *Matched With Credit Note* to the original voucher.

See Chapter 20, "Running the Matching Process," Initiating the Matching Application Engine Process, page 600.

Adjusting Matched Values

If you select the Adjust Matched Values check box on the Voucher Worksheet page for any copied voucher lines when you create adjustment vouchers, here is what happens:

- Any adjustment line with the Adjust Matched Values check box selected forces the match status of the adjustment vouchers (MATCH_STATUS_VCHR) to be set to *T* for ready, even if the voucher total gross adjustment is negative.
- Adjustment lines have MATCH_LINE_OPT set to *F* for full match.

A full match adjustment voucher goes through matching, which performs purchase order adjustments for the credit lines and performs regular matching for the positive adjustment lines.

If the check box is labeled Restore Encumbrance, then you are in a Commitment Control environment, and a related, unreconciled purchase order exists. If you select it, the system restores or liquidates the encumbrance amount in the budget ledger by the amount of the adjustment. The Budget Status field is changed to *Not Checked*.

If the check box is labeled Adjust Mtch Value/Encumbrance, then the voucher is subject to matching and Commitment Control, and selecting it causes both the matching status adjustment and the encumbrance restoration to occur.

See Also

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Copying Voucher Information, page 354

Reversing Quantities or Amounts for Purchase Order Information

If you select the Reverse Qty/Amt (reverse quantity/amount) check box on the Voucher Worksheet for any vouchers when you create adjustment vouchers, here is what happens when the copied voucher is related to a purchase order:

1. The Matching process or Voucher Posting Application Engine process (AP_PSTVCHR) verifies that the credit adjustment of a voucher line does not exceed the purchase order schedule line total matched quantity (QTY_MATCHED and AMT_MATCHED in PS_PO_LN_SHIP_MTCH).
2. If the adjustments were to reduce the total purchase order matched quantities or amounts below zero, a system match exception occurs: the RTV/credit adjustments are greater than the purchase order matched quantity or amounts.
3. After the adjustments are validated against purchase order matched quantities or amounts, the following processing occurs:
 - a. New rows are inserted into PS_PO_LINE_MATCHED with purchase order, receiver, and voucher line information, as well as credit adjustment values.
 - b. PS_PO_LN_SHIP_MTCH is deleted for the same purchase order schedule line that was referenced on the credit voucher line.
 - c. An insert is performed to PS_PO_LN_SHIP_MTCH by the addition of the matched quantity and amount for the same purchase order schedule line from PS_PO_LINE_MATCHED.
 - d. Purchase order header match status (MATCH_STATUS_PO) for the same purchase order is updated to *P* for partial.

See Also

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Copying Voucher Information, page 354

Reversing Quantities or Amounts for Receipt Information

If you select the Reverse Qty/Amt check box on the Voucher Worksheet for any vouchers when you create adjustment vouchers, here is what happens when the copied voucher is related to a receipt. If any receiver information was found on the credit voucher lines, the system also adjusts receiver matched quantities or amounts:

1. The Matching process or the Voucher Posting process verifies the credit adjustment if a voucher line does not exceed the receiver ship line total matched quantity (QTY_MATCHED and AMT_MATCHED in PS_RECV_LN_SHP_MTH).
2. If the adjustments were to reduce the total receiver ship line matched quantities or amounts below zero, a system match exception occurs: RTV/credit adjustments are greater than the receiver ship line matched quantity or amounts.
3. After the adjustments are validated against receiver ship line matched quantities or amounts, the following processing occurs:
 - a. New rows are inserted into PS_RECV_VCHR_MTCH with purchase order, receiver, and voucher lines information, as well as credit adjustment values.

Note. If you undo matching for an adjustment voucher, the rows in PS_VCHR_RECV_MTCH are not deleted. The receipt information is still associated with the adjustment voucher.

- b. PS_RECV_LN_SHP_MTH is deleted for the same receiver ship line that was referenced on the credit voucher line.
- c. An insert is performed on PS_RECV_LN_SHP_MTH by the addition of the matched quantity and amount for the same receiver ship line from PS_RECV_VCHR_MTCH.
- d. Receiver header match status (MATCH_STATUS_RECV) for the same receiver is updated to *P* for partial.

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Copying Voucher Information, page 354

Modifying Claim Vouchers

This section provides an overview of claim vouchers and the pages used to modify claim vouchers.

Understanding Claim Vouchers

PeopleSoft Payables integrates with the Claims Management feature and PeopleSoft Receivables to process claim vouchers. Claims are used to adjust value-added tax (VAT) accounting entries for the following settlement methods: checks, drafts, electronic funds transfers (EFTs), and direct debits. Claims vouchers are posted but not paid.

Claims are first processed between PeopleSoft Receivables and Claims Management. Claims Management then populates PeopleSoft Payables staging tables (VCHR_HDR_STG, VCHR_LINE_STG and VCHR_DIST_STG) with the claim voucher information for the Voucher Build Application Engine process (AP_VCHRBLD), using the Claims Management Process Claims Application Engine program (PO_PRCSCCLAIM). The Voucher Build process performs various edits to ensure that the claim voucher is in compliance (such as verifying that the VAT Declaration Point field is set for *Invoice*, and that only one payment schedule exists). If the process builds the voucher with a *Recycle* status, the claim appears on the Voucher Build Error component. Correct recycled claims by using the Voucher component. If a pre-edit error exists on this voucher (for example, an invalid vendor), you can access and correct it on the complete worksheet of the quick invoice.

Note. You cannot create or import claim vouchers. They can enter the PeopleSoft Payables system only through Claims Management, which transmits information to the PeopleSoft Payables staging tables.

You can perform the following edits to claim vouchers in the Update/Display mode:

- Edit the VAT amount.
- Adjust the line and distribution line amounts to remain in balance with the total amount.
- Change VAT parameters on the header, line, and distribution line.
- Add additional voucher comments.

Warning! The system populates the Comments field with identification information necessary for processing. Do not edit or delete any existing information in this field.

You can approve, close, delete, and archive claims. In addition, the system includes claims in the budget-checking document-sequence numbering processes, per established parameters for the transaction business unit. You can also use the on-demand processing functionality, located on the Voucher component.

When posting claims, the system uses the PeopleSoft Receivables Rebate Control account to post the accounting entries. Review the following example:

Voucher Header: 220 EUR as gross amount and 20 EUR of VAT.

Voucher Line 1: 200 EUR and 20 EUR of VAT, distributed as shown in this table:

<i>Lines</i>	<i>Merchandise</i>	<i>VAT</i>
Distribution 1: Rebate Account 1	60 EUR	6 EUR
Distribution 2: Rebate Account 2	40 EUR	4 EUR
Distribution 3: Rebate Account 3	100 EUR	10 EUR

PeopleSoft Payables posts the following accounting entries:

<i>Account</i>	<i>Debit</i>	<i>Credit</i>
AR Rebate Control		220
Rebate Account 1	60	

Account	Debit	Credit
Rebate Account 2	40	
Rebate Account 3	100	
VAT Input	20	

With claims, you cannot perform the following functions and processes:

- Association with a purchase order or receipt.
- Application to an advance payment.
- Copying into another voucher style (for example, third-party vouchers, reversal vouchers, and adjustment vouchers).
- Matching.
- Modification on the voucher mass maintenance or voucher maintenance component.
- Unposting.
- Withholding.

In addition, you can view claim information only on these inquiries and reports:

- Rejected Vouchers (VNDR_PAYINQ_RJCT).
- Voucher Accounting Entries (VCHR_ACTG_ENTRIES).
- Voucher Detail Lines Display (AP_VCHR_LN_DET_DSP).
- Voucher Inquiry (AP_VOUCHER_INQUIRY).
- Voucher Register (APY1010)
- Posted Voucher Listing (APY1020).

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Selecting Payment Options, page 77

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Defining User Preferences," Defining Payables User Preferences

PeopleSoft Purchasing 9.1 PeopleBook, "Using Vendor Rebates"

Pages Used to Modify Claim Vouchers

You modify claim vouchers using the same pages as regular vouchers, although the pages contain some different fields, field values, and processing. Use the Complete Worksheet of the Quick Invoice feature to correct pre-edit errors.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information,"](#) page 293.

See [Chapter 17, "Using Quick Invoices,"](#) [Entering Quick Invoices Using the Complete Worksheet,](#) page 461.

Entering Journal Vouchers

This section provides an overview of journal vouchers and discusses how to create journal vouchers.

Understanding Journal Vouchers

Journal vouchers are used to adjust accounting entries for vouchers that have been posted and paid and for vouchers for which payments have also been posted.

For example, suppose a voucher has been entered using expense account 123000. The voucher has been posted and paid, and the payment has been posted, when you discover that the expense should have used account 456000. To avoid making a manual general ledger entry, which would cause PeopleSoft General Ledger and Payables to get out of sync, and to avoid unposting the voucher, which involves correcting the voucher and then reposting it for payment, you simply enter a journal voucher. On the journal voucher, you reverse the amount to account 123000 and add the amount to account 456000, keeping PeopleSoft General Ledger and Payables in sync. Then you post the journal voucher without having to post a payment.

Note. Only when you use the summary control posting method can you use journal vouchers to correct voucher accounting entries. For vouchers posted by means of the detail offset method, you must use a manual journal entry in the general ledger to correct accounting entries. You set up the posting method on the Installation Options - Payables page.

See Also

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Setting Installation Options for PeopleSoft Applications," Setting Up Payables Installation Options

Pages Used to Create Journal Vouchers

Journal vouchers use the same pages as regular vouchers—with the exception of some secondary pages—although some fields, field values, and processing are different.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information,"](#) page 293.

Creating Journal Vouchers

To create a journal voucher:

1. Select *Journal Voucher* as the voucher style on the add search page for the Voucher component and click Add.

2. Enter your new distribution lines.

Journal vouchers are zero-amount vouchers; you cannot copy any source documents.

Do not change any of the amounts on a journal voucher. You are using the journal voucher to back out accounting entries that were entered incorrectly.

3. (Optional) To link this voucher to the voucher that you are adjusting, enter a voucher ID in the Related Voucher field in the Invoice Information page header.

Use the Related Voucher field to associate the journal voucher with the voucher for which accounting entries were entered incorrectly.

4. Access additional information for your journal vouchers on the remaining pages in the Voucher component.

Entering Prepaid Vouchers

Prepaid vouchers are discussed in the "Processing Prepayments" chapter.

See [Chapter 30, "Processing Prepayments," page 885](#).

Entering Registered Vouchers

This section provides an overview of registered vouchers, lists prerequisites, and discusses how to:

- Create registered vouchers.
- Unpost registered vouchers.
- Complete registered vouchers.

Understanding Registered Vouchers

Generally, the practice of registering a voucher is required for goods or services that are purchased without generating a purchase order, in which case payment authorization is required. In the case of a good or services that are VAT-applicable, for example, you may need to report the VAT amounts on the correct month's VAT report before you receive distribution line information. Registered vouchers enable you to do this.

You register a voucher in the system when it is received, not when the account distribution is known. You record it against a suspense account for tracking purposes and send it to the approval officer. When accounting entries for the registered voucher have been generated and posted, the accounting transactions are created. By registering the voucher, you post the payables accrual, any tax, and any other nonmerchandise charges as early as possible in the processing cycle.

When the approval officer has authorized the voucher and provided you with the ChartFields, you unpost the voucher and use the Complete Register Voucher component (VCHR_CMPL_UNPST_LC) to enter the correct voucher costing details. The system generates entries to reverse the suspense account and to charge the appropriate expense account.

Prerequisites

You must define a Voucher Registration suspense account on the Accounting Entry Template page.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Defining Financials and Supply Chain Management Common Definitions," Creating Accounting Entry Templates.

Pages Used to Enter and Complete Registered Vouchers

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Invoice Information	VCHR_EXPRESS1	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information	Create a registered voucher by entering the voucher using a voucher style of <i>Register Voucher</i> .
UnPost Voucher	VCHR_UNPST1	Accounts Payable, Vouchers, Maintain, UnPost Voucher, UnPost Voucher	View a listing of registered vouchers for unposting. Unpost applicable register vouchers to reverse the entry against the suspense account.
Registered Voucher Listing	RUN_APYVR_LC	Accounts Payable, Reports, Vouchers, Registered Voucher, Registered Voucher Listing	Define run parameters for the Registered Voucher Listing report (APYCR_LC). Use this report to review all registered vouchers that have not been completed—that is, those that have been posted but not unposted so that the distribution has not been adjusted to reflect the correct ChartField distribution.
Complete Register Voucher - Invoice Information	VCHR_HDR_CMP	Accounts Payable, Vouchers, Add/Update, Complete Register Voucher, Invoice Information	Complete registered vouchers. This page has most of the same fields as the Voucher - Invoice Information page. The remainder of the Complete Register Voucher component is identical to the Voucher component.

See Also

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293](#)

Creating Registered Vouchers

To create a registered voucher:

1. Select *Register Voucher* as the voucher style on the add search page for the Voucher component and click Add.
2. Enter the appropriate information for the registered voucher.

The Account field on the distribution lines is prepopulated with the Voucher Registration suspense account from the accounting entry template. You can override this value.

Note. If you are creating a registered a voucher for a vendor that requires matching, you must disable matching on the Voucher Attributes page.

Note. The VAT declaration point for a registered voucher is usually at *Invoice. Acctg Date* (accounting date) is also appropriate to use for the VAT declaration point.

3. Save the voucher.
4. Use the on-demand or batch processing functionality to process the registered voucher.
 - Select to run the *Voucher Post* or *Journal Generator* process on demand from the Action field.
 - Click Yes at the prompt to run the process in the active window.
 - Click No to run the process in the background; a new window appears when the process is complete.
 - Post the voucher using the Voucher Posting batch process.

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293](#)

[Chapter 23, "Running Voucher and Payment Posting," page 751](#)

Unposting Registered Vouchers

Access the UnPost Voucher page (Accounts Payable, Vouchers, Maintain, UnPost Voucher, UnPost Voucher).

Once the authorization officer returns the authorized registered voucher with the correct ChartField distribution, you must unpost the registered voucher to reverse the entry against the suspense account.

Enter *Register Voucher* on the add search page to select only registered vouchers for unposting.

See Also

[Chapter 19, "Managing Vouchers," Unposting Individual Vouchers, page 504](#)

Completing Registered Vouchers

To complete a registered voucher:

1. Access the Complete Register Voucher - Invoice Information page for the registered voucher (Accounts Payable, Vouchers, Add/Update, Complete Register Voucher, Invoice Information).

Only registered vouchers that have been unposted are available for selection.

2. Update the distribution lines to record account distribution as it has been approved on the invoice.

Because the registered voucher has been unposted, you can modify any other appropriate fields on the voucher as well, using this and the remaining pages in the Complete Register Voucher component. These pages are essentially the same as those in the Voucher component.

Note. If the registered voucher has been payment-posted, any updates that you make to distribution lines may result in incorrect payment accounting entries. Verify the accounting entries that were created during the Payment Posting Application Engine process (AP_PSTPYMNT) and correct them with a journal entry, if necessary.

3. Save the voucher.

Important! After you enter VAT information for a registered voucher on the Voucher component, you cannot edit VAT-related fields using the Complete Register Voucher component. However, you can edit certain fields on registered vouchers. To do this, first unpost the voucher, then access the voucher using the Complete Register Voucher component. To inquire on registered vouchers, use the Complete Register Voucher component or the Scheduled Payment Inquiry page.

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293](#)

Entering Reversal Vouchers

This section provides an overview of reversal vouchers and discusses how to create reversal vouchers.

Understanding Reversal Vouchers

Reversal vouchers enable you to do several things. Primarily, reversal vouchers let you back out incorrect vouchers and start over. Suppose that you inadvertently enter the wrong amount on the voucher or reference the wrong purchase order. Rather than unposting, undoing the match, and closing the voucher, you can simply enter a reversal voucher, and the system does the rest of the work for you. You can even enter a reversal voucher for a voucher that has already been paid.

Important! Normally, you should use the PO voucher close functionality instead of the reversal voucher functionality, because the PO voucher close functionality is more sophisticated and efficient. In general, use the Reversal Voucher feature only when your organization has existing reversal vouchers to manage.

Reversal vouchers also enable you to restore the encumbrance for actuals and budgets and reduce the purchase order's matched quantity or amount. If you are using the Commitment Control feature to check transactions against control budgets, you can use a reversal voucher to reinstate encumbrances, though using the PO voucher close functionality is more efficient.

If you use Matching and you opt to restore the encumbrance and reduce the purchase order's matched quantity or amount, the Matching process updates the purchase order and the receiver match status changes to *Partial*.

Note. The system provides a warning when you attempt to restore the encumbrance on a voucher that you have partially paid.

Reversal vouchers are similar to adjustment vouchers in all aspects except that:

- Reversal vouchers are designed to correct only a single voucher.
- When you create reversal vouchers by copying from a regular voucher, the freight, miscellaneous, sales tax/use tax, and VAT-related information from the regular voucher is copied to the reversal voucher.
- Reversal vouchers are always credit vouchers.

All voucher lines and distribution lines of correction vouchers must have the reverse sign of the original voucher, and all voucher lines that reference a purchase order must be less than zero.

- The transaction currency of the reversal voucher must be equal to the source voucher.

Note. The system does not prevent users from reversing the voucher line, distribution line, or quantity and amount more than the original value, and no validation exists to check the reversal voucher gross amount. You can, however, enable security such that only authorized users can add and update reversal vouchers.

When the Commitment Control feature is not enabled, you can close both regular and purchase order-related vouchers using the Voucher Mass Maintenance component, the PO voucher close functionality, or a reversal voucher. Once the vouchers are marked for closure, you must repost them to create the closure entries.

Note. The PO voucher close functionality is integrated with the Voucher Posting process. When you close and post vouchers using this functionality, the Voucher Posting process can activate the Undo Matching process, which unmatches purchase order-related vouchers that meet certain criteria. The Reversal Voucher feature does not have this functionality.

When the Commitment Control feature is enabled, you can create a reversal voucher to close purchase order-related vouchers so that the system can restore the encumbrance. However, using the PO voucher close functionality here is more efficient.

See Also

Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Adjustment Vouchers, page 392

Chapter 19, "Managing Vouchers," Closing Vouchers, page 513

Pages Used to Enter Reversal Vouchers

Reversal vouchers use the same pages as regular vouchers, although the pages contain some different fields, field values, and processing.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information,"](#) page 293.

Creating Reversal Vouchers

To create a reversal voucher:

1. Select *Reversal Voucher* as the voucher style on the add search page for the Voucher component and click Add.
2. Enter the voucher ID of the voucher that you want to reverse in the Voucher To Be Reversed field.

This field is located on the Invoice Information page in the Copy from a Source group box.

Note. Source vouchers must have the same business unit, vendor setID, and vendor ID as the reversal voucher that you are creating. They must also be successfully budget checked and matched.

You also can:

- Select the Reverse Remaining Vchr Balance (reverse remaining voucher) check box to reverse the remaining voucher balance.

This field is used with partially paid vouchers. For example, suppose a voucher of 1000.00 EUR is to be paid in two installments of 700.00 EUR and 300.00 EUR, and the first installment has been paid. By selecting the Reverse Remaining Vchr Balance check box, you reverse the remaining 300.00 EUR. This is similar to closing the remaining balance; however, it also reverses the related encumbrance, unmatched the voucher, and so on.

If you do not select the Reverse Remaining Vchr Balance check box, the system reverses the entire voucher.

- If the voucher that you are reversing references a purchase order, and you are using Commitment Control, select the Adjust PO Amounts/Encumbrances check box to restore the encumbrance.
3. Click the Copy to Voucher button.
 4. Save the reversal voucher.

When you save the reversal voucher, the system automatically populates the Related Voucher field (in the Invoice Lines region) with the original voucher ID.

5. (Optional) Run the Budget Processor and Matching processes.

If you have enabled Commitment Control or matching, you must run these processes after creating reversal vouchers.

Note. The reversal voucher goes through the Pay Cycle Application Engine process (AP_APY2015) as a credit memo. The offset is settled during payment creation. The referenced voucher and the reversal voucher zero out.

If you use reversal vouchers to close a voucher, the system does not create closure entries for the original voucher. The reversal voucher entries should be sufficient for accounting purposes.

Entering Single Payment Vouchers

This section provides an overview of single payment vouchers, lists prerequisites, and discusses how to:

- Enter vendor information for a single payment voucher.
- Complete the single payment voucher.

See Also

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information,"
Entering Single Payment Vendors

Understanding Single Payment Vouchers

When you must make a payment for a one-time vendor without having to create and store the vendor in the system—such as when you want to pay a rebate or refund—you can create a single payment vendor voucher. The system uses the settings that you establish for the single payment vendor to supply default information such as payment terms and taxes onto the voucher.

These are the basic setup and processing steps:

1. Set up a single payment vendor as a master vendor ID in the Vendor Information component (VNDR_ID).
2. Specify the default single payment vendor ID for your business unit on the Payables Options - Voucher Options 1 page.
3. Enable single payment vendor processing for users on the Define User Preferences - Payables Online Vouchering page.

4. Select a voucher style of *Single Payment Voucher* and enter the single payment vendor ID in the Vendor ID field on the add search page when you enter the Voucher component.

Note. If financial sanctions validation is enabled at the installation level, the system validates the vendor upon saving the voucher. If financial sanctions validation is enabled at the bank level, the system validates the vendor upon saving the voucher only if you specify a bank for the remit vendor and the bank requires financial sanctions validation. If the system determines that the vendor has a potential match on a financial sanctions list, you can save the voucher and put the payment on hold, save the voucher and not put the payment on hold, or not save the voucher.

The system does not update the single payment vendor's financial sanctions status on the Vendor Information component, because it is only a template for single payment vendors.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

5. Enter the vendor details on the Single Payment Vendor page.
6. Complete the voucher using the Invoice Information, Payments, and Voucher Attributes pages.

Single payment vendor vouchers have some restrictions:

- No prepayment.
- No receivables/payables netting.
- No copying from a source.
- No withholding.
- No matching.
- No document tolerance checking.
- Only one payment schedule per voucher.
- Amount must be positive.
- No late charge calculation, but discount evaluation is supported.
- You cannot apply single payment vendor vouchers to manual payments using the manual payment worksheet, but you can use the Voucher component to record a manual payment to single payment vendor.
- (USF) Checks are the only payment method available for U.S. federal agencies.
- (JPN) No bank load or alternate character enabled functionality.

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining the Voucher Approval Rules, Default Currency, and Single Payment Master Vendor, page 73

Prerequisites

To set up your system to create vouchers for single payment vendors:

- Perform all setup required for regular vouchers.
- Enable single payment voucher processing in the user preferences for your user ID.
- Set up a single payment vendor to use as a blank master vendor ID.
- Set up the default single payment vendor ID for your business units.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information," Understanding Single Payment Vendors

Completing the Single Payment Voucher

Access the Invoice Information, Payments, and Voucher Attributes pages to complete the voucher. These pages operate just as they do for regular vouchers, within the restrictions described in another section of this chapter.

If financial sanctions validation is enabled at the installation level, the system validates the vendor upon saving the voucher. If financial sanctions validation is enabled at the bank level, the system validates the vendor upon saving the voucher only if you specify a bank for the remit vendor and the bank requires financial sanctions validation. The system does not update the single payment vendor's financial sanctions status on the Vendor Information component, because it is only a template for single payment vendors.

If the system determines that the vendor has a potential match on a financial sanctions list, you can:

- Click *Yes*, which saves the voucher and puts the payment on hold with *Financial Sanctions* as the hold reason.
- Click *No*, which saves the voucher and does not put the payment on hold.

Note. Selecting this option is similar to clearing the financial sanctions status of the vendor. The system can select this single payment voucher for payment.

- Click *Cancel* which does not save the voucher.

Note. Selecting this option is similar to the vendor having a financial sanctions status of blocked.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

Entering Template Vouchers

This section provides an overview of template vouchers and discusses how to create template vouchers.

Understanding Template Vouchers

If you receive multiple similar vouchers from a vendor, you can set up a template voucher to improve data entry efficiency. Use a voucher for a particular vendor as a model for other vouchers that you will enter in the future for that same vendor by creating a template voucher. You can also update this voucher as necessary. A template voucher is never paid or posted; it is used only as a model for other vouchers.

Once you have created and saved the template voucher, it is available for use during the entry of other vouchers for the specific vendor. When you create the new voucher, select *Template* in the Worksheet Copy Option field on the Invoice Information page. Click the Copy from template link to copy the appropriate invoice header, line, and distribution information from the source template voucher onto the voucher that you are adding.

See Also

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Copying Template Information, page 356

Pages Used to Enter Template Vouchers

Template vouchers use the same pages as regular vouchers, although the pages contain some different fields, field values, and processing.

See Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293.

Creating Template Vouchers

To create a template voucher:

1. Select *Template Voucher* as the voucher style on the add search page for the Voucher component and click Add.
2. On the Invoice Information page, enter a Template ID and description.

These fields appear only if you are creating a template ID.
3. (Optional) Click the Copy PO button or select the Worksheet Copy Option field below the Invoice Information page header to copy information from the appropriate voucher, purchase order, receiver, or other template.
4. Enter the remaining information for the template voucher that you are creating, using the Invoice Information and remaining Voucher component pages.

5. Save the voucher.

Entering Third-Party Vouchers

This section provides an overview of third-party vouchers and discusses how to create third-party vouchers.

Understanding Third-Party Vouchers

PeopleSoft Payables supports third-party vouchers, which are invoices that you receive that contain charges other than merchandise charges. No charges for merchandise are on these invoices. The merchandise is billed separately on another invoice. Typically, these types of invoices occur for:

- Freight charges.
- Miscellaneous charges, such as insurance.
- VAT-only invoices.
- (IND) Customs duty (India only).

By using third-party vouchers for these types of invoices, you can link the charges on the invoices to a merchandise invoice and prorate them across the voucher lines of the merchandise invoice. Linking these freight and miscellaneous charges to the merchandise invoice enables the system to compute the landed cost for the merchandise.

Note. We recommend that you define a VAT transaction type code for third-party VAT vouchers and that you manually override this value on the third-party voucher to ensure that the third-party voucher can be identified on VAT reports.

Pages Used to Enter Third-Party Vouchers

Third-party vouchers use the same pages as regular vouchers, although the pages contain some different fields, field values, and processing.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293](#).

Creating Third-Party Vouchers

To enter third-party vouchers:

1. Select *Third Party Voucher* as the voucher style on the add search page for the Voucher component and click Add.
2. Either on the add page or the Invoice Information page, enter the vendor that is to be paid.

This vendor cannot be the same as the vendor for the source document that you copy in the next step.

3. Click the Copy PO button or use the Worksheet Copy Option field below the Invoice Information page header to copy information from the appropriate voucher, purchase order, or receiver.

Note. To get vouchered amounts for third-party charges into PeopleSoft Inventory, you must copy these charges from a receiver. Otherwise, the charges will not be picked up by the Landed Cost Extract Application Engine process (LC_EXTRACT).

4. Enter additional voucher lines for the purpose of prorating the third-party charge to the distribution lines.
5. Complete the voucher using the remaining pages in the Voucher component.

Chapter 16

Processing Batch Vouchers

This chapter provides overviews of voucher build processing and voucher build source transactions, lists prerequisites, and discusses how to:

- Run the Voucher Build Application Engine process (AP_VCHRBLD) and review messages.
- Review Voucher Build process errors.

Understanding Voucher Build Processing

PeopleSoft Payables provides the Voucher Build process to build vouchers in batch from various source transactions, including transactions originating from third-party systems.

Due to the scope of the voucher build functionality, PeopleSoft Payables does not deliver all online voucher entry functionality as part of the Voucher Build process. Therefore, not all voucher fields are part of the staging and quick invoice tables.

Warning! If you add voucher fields to the staging or quick invoice tables, you must add the associated logic to the Voucher Build process code line. Also, you must modify non-accounts payable voucher source transactions, for example, procurement card invoices and XML invoices, to account for the new field.

This section discusses:

- Voucher Build process flow.
- Tables that are accessed by the Voucher Build process.
- Voucher Build process errors.

Voucher Build Process Flow

The Voucher Build process comprises two subprocesses, pre-edit and voucher edit. The pre-edit subprocess builds skeleton voucher record sets from limited information that you enter online using the Quick Invoice Entry component (VCHR_QUICK_PNL) or the Summary Invoice Entry component (VCHR_SUMM_PNL), or that it retrieves from other sources. After the pre-edit subprocess builds voucher record sets successfully, it calls the voucher edit subprocess to complete these record sets.

Note. If financial sanctions validation is enabled, the Voucher Build process does not consider the financial sanctions status of the vendor, nor does it validate the vendor against any financial sanctions lists (for example, the Specially Designated Nationals (SDN) list). Therefore, you can build vouchers for any vendor with a financial sanctions status of *Review* or *Blocked*. However, the Pay Cycle Application Engine process (AP_APY2015) does not select vouchers for a vendor that has a financial sanctions status of *Review* or *Blocked*. You cannot pay these vouchers until the financial sanctions status of the vendor is set to *Cleared* or *Valid*.

See [Chapter 21, "Processing Pay Cycles," Understanding Financial Sanctions Validation, page 666.](#)

Pre-Edit Process Flow

The pre-edit subprocess works in the following way:

1. It accesses and retrieves invoice data from the source transaction tables or staging tables, and it uses the data to populate the Voucher Build temporary tables.

Note. The specific source tables and data that the subprocess retrieves depends on the run control selection criteria that you specify on the Voucher Build Request page.

Vouchers from prior Voucher Build process instances that have been staged for review and released for processing, as well as vouchers with corrected pre-edit errors, can also be selected for reprocessing and are inserted into the temporary tables with the new transactions.

When loading invoices into the Voucher staging tables using an external source (for example: from a legacy or third-party system) any extra spaces at the end of character fields need to be trimmed, otherwise this extra space can cause a voucher edit error and the voucher will be created in a *Recycle* status.

See [Chapter 16, "Processing Batch Vouchers," Tables That Are Accessed by the Voucher Build Process, page 418.](#)

2. It performs header error processing by checking for a valid business unit, invoice ID, invoice date, vendor ID, vendor location, address sequence number, and voucher origin.

The invoice data from some source transactions receive additional error checks.

See [Chapter 16, "Processing Batch Vouchers," Voucher Build Process Errors, page 421.](#)

3. The subprocess verifies that voucher headers have voucher lines and that voucher lines have distribution lines.

If applicable, the subprocess creates control groups, builds miscellaneous charge records if absent (based on business unit defaults), and creates payment records.

Note. The pre-edit subprocess can create payment schedule records only if payment schedule information such as the bank or a payment message is entered through the source transaction component. Quick invoices and voucher data that is staged to the voucher staging tables enable the entry of payment schedule information. For all other source transaction types, the payment records must be created by the voucher edit subprocess using the PeopleSoft Payables control hierarchy defaults.

4. The subprocess copies purchase order and receiver fields to voucher lines and creates distribution lines, based on either the default voucher build criteria or the voucher build code that is specified in the voucher header.

This applies when voucher lines reference a purchase order, receiver, packing slip, or bill of lading, and contain no distribution lines.

If a voucher line has ChartField information and no associated distribution lines, the subprocess creates distribution lines for the voucher line.

You define voucher build codes in the Voucher Build Criteria component (VCHR_BLD_DEFN).

See [Chapter 17, "Using Quick Invoices," Voucher Build Processing Logic for Associating Voucher Lines with Purchase Order and Receiver Lines, page 455.](#)

5. It stores successfully built voucher record sets in the voucher build temporary tables and calls the voucher edit subprocess.

If the skeleton voucher fails any of the header error checks, or if the purchase order and receiver association for a quick invoice, summary invoice, or spreadsheet voucher fails, the subprocess marks the voucher as having a *pre-edit error*. Such errors prevent the vouchers from being processed by the voucher edit subprocess, and the pre-edit subprocess writes these vouchers with pre-edit errors to the quick invoice tables.

You can review vouchers with pre-edit errors using the Build Errors page and the Voucher Build Error Detail page. From these pages you can link directly to the Quick Invoice Entry component, where you can correct the vouchers and release them for reprocessing.

Voucher contracts, evaluated receipt settlement (ERS) vouchers, and return to vendor (RTV) vouchers can be designated as *staged for review*. The pre-edit subprocess also writes these to the quick invoice tables instead of passing them to the voucher edit subprocess. You review and release these vouchers for further voucher build processing by using the Quick Invoice Entry component.

Voucher Edit Process Flow

The voucher edit subprocess works in the following way:

1. It loads newly built voucher data from the Voucher Build temporary processing tables to the Voucher Edit work tables.

If specifically requested on the run control, the voucher edit subprocess also loads any vouchers in the online voucher tables that match the run control criteria. These could be recycled vouchers or vouchers that were modified using the Voucher Mass Maintenance component (VCHR_MASS_MAINT) or the Voucher Maintenance component (VCHR_CORRECTION).

2. It performs the following tasks:

- Uses the PeopleSoft Payables control hierarchy to determine the default values with which to populate voucher fields that don't contain data.
- Performs field-level, relational, and balancing edits for the voucher header, voucher line, voucher distribution line, and scheduled payment records.
- Calculates net payment due dates, discount due dates, and discount amounts according to the payment terms.
- Prorates freight, miscellaneous charges, sales tax, use tax, value-added tax (VAT), and discounts across distribution lines for applicable voucher lines.
- Schedules one or more payments according to payment terms and user-entered control data.
- Validates the vouchers, assigning document sequencing numbers and updating the status of one-time vendors, where appropriate.

3. It moves the voucher data from the voucher edit work tables to the online voucher tables.

At the end of the voucher edit subprocess, error-free vouchers are set to the status *Postable*. Vouchers that are flagged with errors during the voucher edit subprocess are assigned the status *Recycle*. You can inquire on and correct batch-processed vouchers with voucher edit errors by using the Build Errors page, the Voucher Build Error Detail page, the Voucher Maintenance Search component, the Voucher Maintenance component, and the Voucher component.

4. It publishes an XML message with voucher details if you select the Publish Voucher Messages option on the Voucher Build page.

You can notify vendors that you have received their invoices for any sources transactions. The XML message structure is defined in the message AP_VCHR_MESSAGE_OUT.

Voucher Build Process Errors

The Voucher Build process can result in pre-edit errors, which are stored in the quick invoice tables, or vouchers in recycle status, which are stored in the online voucher tables.

Pre-edit Errors

Pre-edit errors prohibit the transaction from being processed by voucher edit processing. For example, if the transaction has an invalid vendor ID, the voucher edit subprocess cannot process default values correctly, because vendor ID is part of the PeopleSoft Payables control hierarchy. The following general conditions result in pre-edit errors:

- Invalid business unit.
- Invalid vendor.
- No default location for vendor.
- Blank invoice ID, and auto-assign option is not selected on the run control page.
- No invoice date, and auto-assign option is not selected on the run control page.
- Invalid vendor location (if specified).
- Invalid vendor address (if specified).
- Invalid voucher origin (if specified).
- No association of purchase order or receiver lines with voucher lines, and distribution information is absent.
- No voucher line information.

The following pre-edit error conditions are specific to Promotions Management transactions:

- Payment action is *Record*, and no payment reference (check number) exists.
- Payment action is *Record*, and the payment method is not manual payment.
- Payment action is *Record*, and bank information is missing or invalid.
- Payment action is *Record*, and a duplicate payment reference exists.

Recycled Vouchers

Vouchers without pre-edit errors pass to the voucher edit subprocess. The voucher edit subprocess marks any vouchers that fail its edits as *Recycled*. The edits that are performed by the voucher edit process are essentially the same as those that are performed by the Voucher component.

Note. Any voucher validations that you can set up to pass and provide a warning during online voucher entry, such as duplicate invoice checking or sales tax tolerance, pass the voucher edit process without warning.

Any voucher validations that you set up to *reject* an online voucher that fails, such as duplicate invoice checking or ChartField editing, are set to *recycle* by the Voucher Build process. If the Voucher Build process finds duplicate vouchers, it sets both to recycle status.

Note. Because VAT calculation, rebate, and recovery details for procurement card vouchers are maintained in PeopleSoft Purchasing, procurement card vouchers in a VAT environment can produce Voucher Build process errors. These are reported on the Build Errors and Voucher Build Error Detail pages like other Voucher Build process errors. However, unlike other Voucher Build process errors, you correct procurement card voucher errors using the Reconcile Statement page in PeopleSoft Purchasing.

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining Voucher Error-Handling Options, page 75

Understanding Voucher Build Source Transactions

The Voucher Build process creates voucher record sets from the following sources:

- Claims Management data.
- Consigned inventory items.
- Customer refunds from PeopleSoft Receivables.
- Debit memo vouchers that were created by the Matching Application Engine process (AP_MATCH).
- EDI-formatted transactions.
- ERS transactions that are based on PO receipts and non-PO receipts.
- Interunit invoices from PeopleSoft Billing.
- Invoices that you enter in the Spreadsheet Voucher worksheet.
- Invoices that you enter in the Summary Invoice Entry component.
- Invoices that you enter in the Quick Invoice Entry component.
- PeopleSoft Pay/Bill Management contractor payment transactions.

- Procurement cards.
- PeopleSoft Promotions Management field drafts and scheduled payments.
- PeopleSoft Real Estate Management lease payment data.
- Recurring contract vouchers and PO contract vouchers.
- RTV credit memos.
- Self-Service invoices from PeopleSoft eSettlements.
- Voucher EIP application messages (including voucher data from PeopleSoft Payroll, Student Administration, and any other sources connected through the Voucher EIP).
- XML invoices.

These source transactions are discussed in detail in the following sections.

Important! If your organization is not using certain types of source transactions (for example, claim transactions from PeopleSoft Order Management), you should disable the respective applications that you don't have installed on the system on the Installed Products page. Disabling products that you do not have installed on the system improves performance.

Claims Management Data

Use the PeopleSoft Purchasing vendor rebate functionality to create and manage rebate claims with vendors. Then use PeopleSoft Payables to settle the claim vouchers for PeopleSoft Order Management and Receivables.

The PeopleSoft Purchasing Process Claims Application Engine process (PO_PRCSCCLAIM) initiates the Claim Settlement Process for AP Application Engine process (PO_CLMSETTLE_AP), which in turn populates the voucher staging tables with claim voucher data for processing by the Voucher Build process.

See Also

[Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Modifying Claim Vouchers, page 396](#)

PeopleSoft Purchasing 9.1 PeopleBook, "Using Vendor Rebates"

Consigned Inventory

Consignment inventory is a supply chain management strategy in which you store goods in a business unit without paying the vendor until after the goods are consumed. The Consignment Inventory feature, which enables you to implement this strategy across an entire enterprise, integrates a variety of functions within PeopleSoft Purchasing, Inventory, Production Management, Cost Management, and Payables.

In PeopleSoft Payables, the Voucher Build process creates voucher record sets for consigned items that have been consumed and costed. It does this by:

- Extracting data from the Depletion Accounting Entry table (CM_DEplete).

- Selecting rows for which the Voucher Build status is *T* (to be vouchered) or *E* (error).
- Processing these rows according to the processing option that is set for vendor location (using the Consign Voucher field on the Vendor Information - Procurement Options page at the vendor location level).

Processing options are:

Auto	The Voucher Build process automatically creates vouchers (assuming that no Voucher Build errors occurred).
Manual	The Voucher Build process sets the status of affected data on the Depletion Accounting Entry table to <i>N</i> (never to be vouchered). The Voucher Build process does not process these vouchers because, in the case of rows with a Voucher Build status of <i>M</i> (manual), usage reports are provided to the vendor, and the invoice is not finalized until an invoice is received from the vendor.
Stage	The Voucher Build process creates vouchers and places them in the quick invoice entry tables for further user review.

When the Voucher Build process finishes processing a row in the Depletion Accounting Entry table by creating or staging a voucher, the process updates the status of that row to *V* (vouchered). If an error occurs during processing, the Voucher Build process changes the status to *E*.

Voucher details come from these sources:

- The price is extracted from the purchase order, or the receipt if no purchase order exists.
- Distribution information is extracted from the distribution lines on the receipt.
- Order detail is extracted from the IN_DEMAND table.

Other voucher data that is extracted from the purchase order or receipt includes:

- Unit of measure (UOM) and UOM conversion rate.

Note. The Depletion Accounting Entry table stores data in the item's standard UOM; the Voucher Build process converts this to the receipt vendor's UOM.

- Invoice ID from the packing slip number that is referenced on the original receiver.
- Vendor and vendor location.
- PeopleSoft Payables business unit.

The CM_ACTUAL_COST table identifies the receipt with the depleted transaction. For the same receiver line or distribution, it is summed for one voucher or distribution line.

The Voucher Build process assigns voucher IDs for each voucher based on the next voucher ID that is available from the PeopleSoft Payables business unit. The process uses the packing slip number on the receiver as the invoice ID. To prevent duplicate invoice IDs, the process increments the ERS_INV_SEQ number field by one each time a packing slip is used as the invoice ID.

Voucher Build pre-edit errors for Consigned Inventory vouchers are logged on the Consigned Inventory Voucher Exceptions page.

PeopleSoft Inventory 9.1 PeopleBook, "Managing Consigned Purchases Inventory"

Customer Refunds from PeopleSoft Receivables

PeopleSoft Payables generates refund checks for PeopleSoft Receivables. The Receivables Refund Application Engine process (AR_REFUND) populates the voucher staging tables with refund voucher data for processing by the Voucher Build process.

See Also

PeopleSoft Receivables 9.1 PeopleBook, "Maintaining Customer Account Balances," Processing Refunds

Debit Memo Vouchers

The Matching process calls the Voucher Build process to automatically create debit memo adjustment vouchers to resolve matching exceptions between the amount on a voucher and the purchase orders and receivers that are associated with that voucher. You can dispatch debit memo information to the vendor using print, phone, fax, email, or electronic data exchange (EDX). The creation of the debit memo voucher requires:

- An agreement with the vendor that allows the adjustment to the voucher.

You define this agreement on the Vendor component (VNDR_ID).

- A match rule that allows debit memo vouchers.

Match rules are defined on the Match Rule Type page, the Match Rules page, and the Match Rule Control page.

- The Matching process to be run.

You can run the Matching process in batch or you can initiate the Matching process from the Match Workbench.

Note. You cannot select debit memos as a voucher build interface from the Voucher Build page. The Matching process calls the Voucher Build process to create the debit memo adjustment vouchers.

When the Voucher Build process is initiated, debit memo adjustment vouchers are handled similarly to other voucher build source transactions.

Chapter 20, "Running the Matching Process," Processing Debit Memo Adjustment Vouchers, page 627

EDI Records

The Voucher Build process provides support for data that is connected through EDI. This flowchart illustrates how the EDI Manager integrates with the Voucher Build process:

EDI Manager and Voucher Build process flow

Typically, you use a private value-added network (VAN) to exchange EDI transactions. However, you can also use the internet, a dedicated link, or a sole-source provider.

EDI Transaction Processing

To process EDI transactions:

1. Translate the EDI file.

The translator converts the EDI transactions into a PeopleSoft business document format. A PeopleSoft business document is a layout that describes the fields—including name, type, length, format, short name, and long name—that make up the EDI file.

To translate a data file into a PeopleSoft business document, use a translation tool that prepares, parses, and maps the flat file into the PeopleSoft business document format. You can develop this tool yourself, or you can use third-party tools that are readily available.

2. Use EDI Manager to load the business document.

EDI Manager uses a supplied EDI agent Structured Query Report (SQR) to import the electronic data flat file, translate the data using the PeopleSoft business document layout, and stage the data in the Voucher Staging tables in the PeopleSoft database.

Use the Schedule Inbound EC Agent - Run Control Parameters page in EDI Manager to load the flat file with the invoice data into the staging tables.

3. Confirm that the data loaded into the staging tables successfully.

Use the Business Document Summary page in EDI Manager to confirm that the status is *Loaded*.

4. Run the Voucher Build process to create voucher records and load them in the Voucher tables.

Use the outbound AP_VCHR_MESSAGE_OUT EIP that was initiated in the Voucher Build process to send verification messages to the sender.

Note. In addition to delivering the outbound AP_VCHR_MESSAGE_OUT EIP as an application message, PeopleSoft also delivers it as a web service (VoucherOut). Enabling web services is discussed in the *PeopleTools PeopleBook: Integration Broker*.

See *PeopleTools PeopleBook: Integration Broker*

Invoices that are entered into the system through EDI Manager might contain a blank space or the word *Next* in the Voucher ID field. The system automatically assigns voucher IDs for these vouchers during the Voucher Build process regardless of whether the PeopleSoft Payables business unit is set up for auto-numbering.

The Voucher Build process assigns match delay days to EDI transactions that require matching based on the PeopleSoft Payables hierarchy, business unit, origin, control group, vendor, and the ability to override on the voucher. If you do not define match delay days on the PeopleSoft Payables hierarchy, the Voucher Build process will not assign match delay days. As an example, if the match delay days are five days, the system adds five days to the entry date to determine the match due date. On the Match Request page, enter a date in the As of Date field to work in conjunction with the match due date. The Matching process selects only the vouchers that are ready to be matched as of that date. Match delay days are applicable only to EDI transactions and XML transactions. These types of transactions usually are processed in the system before the lines are received. Using match delay days enables you to wait to include these transactions in the Matching process.

When EDI transactions have been processed, they are deleted from the voucher staging tables. The Voucher Build process places any vouchers that receive pre-edit validation errors in the quick invoice entry tables for review and correction using the Quick Invoice Entry component.

Voucher Build Minimum Data Requirements for EDI

The following lists show the minimum sets of fields that the Voucher Build process requires when you supply the voucher header, voucher line, and distribution line information:

- Voucher header:
 - ROW_ID
 - BUSINESS_UNIT
 - INVOICE_ID
 - INVOICE_DT
 - VENDOR_ID
 - OPRID
 - GROSS_AMT
- Voucher line:
 - ROW_ID
 - BUSINESS_UNIT
 - MERCHANDISE_AMT
 - VOUCHER_LINE_NUM
- Distribution line:
 - ROW_ID
 - BUSINESS_UNIT
 - VOUCHER_LINE_NUM
 - DISTRIB_LINE_NUM
 - ACCOUNT
 - MERCHANDISE_AMT

The particular fields that are required for any given run of the Voucher Build process can vary depending on the following circumstances:

- When you are trying to associate invoice lines to a purchase order, the vendor ID is optional and the distribution line should be absent.

The rest of the required fields vary depending on the Voucher Build code.

- When you are trying to associate invoice lines to a receiver, the distribution line should be absent and the rest of the required fields vary depending on the Voucher Build code.

You can build distribution lines from voucher line information without associating purchase order or receiver lines by specifying the general ledger business unit and account, at a minimum, along with any additional ChartField information, on the voucher line.

PeopleTools PeopleBook: Supported Integration Technologies

ERS Vouchers

The Voucher Build process creates ERS vouchers from procurement receipt records. The receipts must be priced and have extended merchandise amounts.

The Voucher Build process creates ERS vouchers from receipts that reference a purchase order, as well as receipts that do not (non-PO receipts). For non-PO receipts, the process creates ERS vouchers only for receipt lines that have unit prices (priced receipts). These unit prices can be populated online from the item master or supplied by an external receipt load interface module.

To create ERS vouchers, you must identify the vendor location as an ERS vendor and set up the PeopleSoft Payables business unit (on the Payables Definition - Voucher Build page) to allow ERS transactions. You establish ERS options on the Procurement Control - ERS Options page, but you can also override them on the Payables Definition - Voucher Build page.

The Voucher Build process creates separate ERS vouchers for each packing slip that is referenced on a single receipt and multiple ERS vouchers from a single receipt, as receipt lines are marked as received. You can either create the ERS voucher invoice date from the receipt date or let the freight terms on the ERS receipt determine whether to use the receipt of the shipment date as the invoice date.

If the same packing slip number is used as the invoice number on multiple ERS vouchers (because an ERS receipt was partially invoiced), the pre-edit subprocess adds an ERS sequence number (ERS_INV_SEQ) to the ERS voucher header. This prevents the Duplicate Invoice Checking feature from rejecting ERS vouchers that have the same packing slip number and have been built from the same receipt.

You can search using packing slip number information on two voucher entry pages:

- Regular voucher entry, on vouchers with an ERS source type.
- Summary Invoice Entry voucher.

Note. Matching does not create ERS vouchers in PeopleSoft Payables. However, on the receiver you can require that ERS vouchers be matched after they pass the voucher edit subprocess. If you do not require matching, the voucher edit subprocess flags the receipts as approved for payment.

Interunit Invoices from PeopleSoft Billing

The Billing Generate AP Vouchers SQR process (BIGNAP01) initiates the creation of PeopleSoft Payables vouchers for interunit bills. The process takes interunit billing information from the PeopleSoft Billing tables and populates the PeopleSoft Payables voucher staging tables with voucher data for processing by the Voucher Build process.

See Also

PeopleSoft Billing 9.1 PeopleBook, "Integrating with PeopleSoft Receivables, General Ledger, and Accounts Payable," Running the Generate AP Vouchers Process (BIGNAP01)

Invoices from Spreadsheet Vouchers

The Spreadsheet Voucher feature provides an offline entry component that you use to enter invoice data. The Voucher Build process handles the defaults and edit processing, similarly to quick invoice processing. PeopleSoft provides you with an Microsoft Excel file that you can use to create multiple voucher entry worksheets.

The Voucher Build process assigns match delay days to XML transactions that require matching based on the PeopleSoft Payables hierarchy, business unit, origin, control group, vendor, and the ability to override on the voucher. As an example, if the match delay days are five days, the system adds five days to the entry date to determine the match due date. If you do not define match delay days on the PeopleSoft Payables hierarchy, the Voucher Build process will not assign match delay days and use the entry date as the match due date. On the Match Request page, enter a date in the As of Date field to work in conjunction with the match due date. The Matching process selects only the vouchers that are ready to be matched as of that date. Match delay days are applicable only to EDI transactions and XML transactions. These types of transactions usually are processed in the system before the purchase order lines are received. Using match delay days enables you to wait to include these transactions in the Matching process.

Chapter 20, "Running the Matching Process," Initiating the Matching Application Engine Process, page 600

Chapter 18, "Entering and Importing Spreadsheet Vouchers," page 479

Invoices from Summary Invoices

The Summary Invoice Entry component enables you to enter minimal invoice and purchase order information, such as vendor, PO number, invoice number, invoice date, nonmerchandise amounts, and gross amount, to create a voucher. The Voucher Build process builds the voucher, including the voucher lines and distribution lines, from the selected purchase order and associated receipts.

See Also

Chapter 17, "Using Quick Invoices," Entering Summary Invoices, page 475

Invoices from Quick Invoice Entry

The Quick Invoice Entry component provides efficient data entry for large volumes of similar invoices or invoices for which you can rely on defaults to complete most of the voucher details. The Quick Invoice Entry component contains minimal online edits; default and edit processing is handled by the Voucher Build process.

See Also

[Chapter 17, "Using Quick Invoices," page 451](#)

PeopleSoft Pay/Bill Management Transactions

PeopleSoft Pay/Bill Management generates payable time information for contractors that the Voucher Build process can build into vouchers. The Front Office to AP Application Engine process (FO_TO_AP) submits contractors' payable time to the voucher staging tables for voucher build processing.

See Also

PeopleSoft Pay/Bill Management 9.1 PeopleBook, "Working With Staffing Vendors"

Procurement Cards

As a part of the procurement card reconciliation process, PeopleSoft Purchasing stages PCard prepayment voucher and regular voucher data in the voucher staging tables. The Voucher Build process then creates payments and accounting entries for the PCard transactions. You can create both the expense and payment accounting entries from the PCard transactions in PeopleSoft Payables, and you can process PCard transactions against purchase orders.

For purchase order-related transactions, the merchandising vendor is retained on the voucher line to support the matching process, if applicable.

Note. The PCard interface between PeopleSoft Purchasing and Payables supports encumbrance accounting and Commitment Control budget-checking.

Note. Because VAT calculation, rebate, and recovery details for PCard vouchers are maintained in PeopleSoft Purchasing, PCard vouchers in a VAT environment can produce Voucher Build process errors. These are reported on the Build Errors page and the Voucher Build Error Detail page in a similar way as other Voucher Build process errors. However, unlike other Voucher Build process errors, you correct PCard voucher errors using the Reconcile Statement page in PeopleSoft Purchasing.

PCard vouchers are excluded from these Voucher Build process pages:

- Voucher Build (VCHR_BATCH_RQST).
- Voucher Build Application Engine Process (AP_VCHRBLD).

See Also

Chapter 16, "Processing Batch Vouchers," Voucher Build Process Errors, page 421

PeopleSoft Purchasing 9.1 PeopleBook, "Managing Procurement Cards," Loading Procurement Card Statements to Application Tables

PeopleSoft Promotions Management Data

PeopleSoft Promotions Management enables a salesperson to authorize a scheduled payment or issue a field draft, or manual check, to customers who are established vendors in PeopleSoft Payables. PeopleSoft Promotions Management sends voucher transactions to the Voucher Staging tables, from which the Voucher Build process selects data and processes it.

To process manual payments from PeopleSoft Promotions Management using the Voucher Build process, you must specify a valid bank code, bank account, and check number on the accompanying payment record.

PeopleSoft Payables online voucher processing does not allow recorded payment transactions to be saved with the status *Recycle*. If a recorded payment transaction passes the Voucher Build process pre-edit validation and receives an error such as an invalid ChartField combination, the transaction is modified from a recorded payment to a scheduled payment, with the payment placed on hold. You must correct this error in the online Voucher component, or delete the voucher from PeopleSoft Payables and resubmit it with valid information from PeopleSoft Promotions Management.

See Also

Chapter 22, "Using Additional Payment Processing Options," Recording Manual Payments, page 712

PeopleSoft Promotions Management 9.1 PeopleBook, "Processing Payments for Promotional Activity"

PeopleSoft Real Estate Management Data

PeopleSoft Real Estate Management generates lease payment information that the Voucher Build process can build into vouchers. The Voucher Build - Staged Voucher Selection process (AP_VB_STGVCH) transmits the lease payment data to voucher staging tables. The process applies PeopleSoft Payables defaulting logic, and then calculates the appropriate VAT and sales and use taxes. Though the process can create positive or negative vouchers, it does not create prepayment vouchers.

If the real estate transaction is withholding applicable but the vendor is not configured for withholding, the process generates an exception. You must correct the errors, by defining withholding values for the vendor and the voucher, to continue processing the voucher.

The Voucher Build process also updates the detailed lease payment transactions with the associated voucher ID after this ID has been assigned by the Voucher Build process. PeopleSoft Real Estate Management appends a three-digit sequence number to the lease payment number. This number is handled by the system as a voucher ID number, not as an invoice number. Because of this functionality, you must ensure that the Assign Invoice ID option is selected for these vouchers so that the system assigns the voucher ID number as the invoice ID number.

See Also

PeopleSoft Real Estate Management 9.1 PeopleBook, "Processing Payments for Payables Leases," Running the Interface to AP/Billing Process

Recurring Voucher Contracts

The Voucher Build process creates vouchers from recurring voucher contracts that were established using the contracts functionality in PeopleSoft Purchasing.

The Voucher Build process controls the release of the vouchers based on the contract release date option that is specified for the PeopleSoft Payables business unit on the Payables Definition - Voucher Build page.

The Voucher Build process selects contract data that is staged to the contract staging tables. In addition to the general Voucher Build edits, the process also ensures that the total gross amount does not exceed the maximum limit for the contract. If the voucher exceeds the limit, the Voucher Build process logs an error in the contract tables and does not process the voucher. When Voucher Build processes the staged contracts, it increases the cumulative total for the contract by the total gross amount for the new vouchers and registers the contract lines by sending data to the CNTRCT_EVT_VCHR table.

The Voucher Build process builds the associated nonmerchandise charge records for miscellaneous, freight, and tax charges that are associated with the recurring contract voucher.

If the contract has some retention amounts, the Voucher Build process creates a voucher with two scheduled payment records, one for the amount to be paid now and one for the retention amount that is created and placed on hold.

PO Voucher Contracts

For recurring PO voucher contracts, which reference purchase orders, the Voucher Build process also accesses the PO tables in addition to the contract staging tables.

See Also

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Setting Voucher Build Options, page 61

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Using Voucher and Order Contracts"

RTV Adjustments

The Voucher Build process creates adjustment vouchers for RTV transactions that are created in Purchasing. If an RTV adjustment does not reference a receipt, it is treated as a nonmatch RTV. Through the PeopleSoft Payables default hierarchy, you can either create automatic adjustments for RTV transactions that require credit memos or pass those transactions to the Quick Invoice Entry tables for review before further processing. You can maintain pending adjustment transactions by adding a reference to vendor credit memo documents or by making other adjustments before having the Voucher Build process turn them into adjustment vouchers. The RTV transactions have a Vendor RTV action code that indicates whether the credit memo should be generated and the nature of the RTV transaction. This table lists the RTV action codes:

Action Code	Description
Issue Credit Only	The vendor issues a credit memo only.
Replace and Invoice	The vendor issues a credit memo and reinvoices for replaced merchandise that was shipped against the original PO schedule. RTV credit vouchers for replacements are deducted from the matched quantities on the PO so that the replacements can be received against the original PO. These deductions occur from the Matching process. All replace and invoice RTV vouchers are created as requiring matching.
Exchange and Invoice	The vendor exchanges for like merchandise, issues credit for the returned merchandise, and reinvoices for the new merchandise against the original PO. A change order is created against the original PO to add the new item that the vendor ships.

Before processing RTV transactions, you must enable RTV credit memo processing for PeopleSoft Payables business units on the Payables Definition - Voucher Build page and specify the voucher adjustment option.

The Voucher Build process accesses the RTV tables to obtain the information that is required to create adjustment vouchers and creates miscellaneous charges for any RTV fees. Sales tax and VAT applicability codes are taken from the original voucher, if they are available. The Voucher Build process accesses the RTV records that require vouchers to be created and assigns the voucher ID number.

When the Voucher Build process creates an RTV credit voucher that must be rematched, the following fields or sets of fields in the Voucher component are unavailable for modification:

- Advanced Vendor Search.
- Invoice Number.
- Invoice Date.
- Pay Terms.
- Vendor.
- Voucher line amount.

If the RTV credit voucher does not have to be rematched, the Invoice ID and Invoice Date fields are available for edit.

The following Voucher component fields or sets of fields are always available for modification, regardless of whether the RTV credit voucher needs to be rematched:

- Voucher header amounts, including freight, miscellaneous, sales and use tax, and VAT, when applicable.
- Invoice Number.
- Invoice Date.

- Distribution line amounts.

Self-Service Invoices from PeopleSoft eSettlements

PeopleSoft eSettlements loads self-service invoices to the quick invoice entry tables for processing by the Voucher Build process.

See Also

PeopleSoft eSettlements 9.1 PeopleBook, "Processing Invoices"

Voucher EIP

PeopleSoft Payroll, Student Administration, and other external systems can process vendor payments, such as payroll deductions, through PeopleSoft Payables using the inbound Voucher EIP. The Voucher EIP uses Application Messaging and the VOUCHER_BUILD message definition to populate the voucher staging tables with the necessary information for building voucher record sets.

Note. In addition to delivering the inbound VOUCHER_BUILD EIP as an application message, PeopleSoft also delivers it as a web service (Voucher). Enabling web services is discussed in the *PeopleTools PeopleBook: Integration Broker*.

Note. Integration Point (IP) and Enterprise Integration Point (EIP) refer to the same functionality. You might see both used interchangeably.

This flowchart illustrates the VOUCHER_BUILD message subscription process:

VOUCHER_BUILD message subscription inbound process flow

To view the VOUCHER_BUILD application message definition in detail, see the Enterprise Integration Point Catalog.

PeopleSoft Payroll and Student Administration, as well as third-party applications, publish voucher data to the application message, and PeopleSoft Payables subscribes to it. The subscription process transfers the contents of the message to the inbound voucher staging tables. The Voucher Build process then builds voucher records from the staged data and writes them to the PeopleSoft Payables voucher tables.

If external parties send bad data (for example, an invalid business unit) as part of the message, the subscription process flags the message as being in error. You must intervene manually using the application messaging error correction feature to correct the data before the message can be processed successfully. When you save the message after correcting the data, the message status is automatically set to *Reprocess*.

The Voucher Build process assigns voucher IDs if they aren't passed by the application message. When the Voucher Build process finishes processing a staged record, the record is deleted from the staging table.

Note. The subscription process accepts data for new vouchers only. Vouchers that already exist in the PeopleSoft Payables voucher tables must be updated online using the Voucher component or the Voucher Maintenance component.

Note. You can use the outbound AP_VCHR_MESSAGE_OUT EIP to dispatch voucher and debit memo adjustment voucher information to vendors.

In addition to delivering the outbound AP_VCHR_MESSAGE_OUT EIP as an application message, PeopleSoft also delivers it as a web service (VoucherOut). Enabling web services is discussed in the *PeopleTools PeopleBook: Integration Broker*.

Note. You use the Vendor EIP to transfer vendor information to PeopleSoft Payables from PeopleSoft Payroll, Student Administration, and other external systems.

In addition to delivering the Vendor EIP as application messages, PeopleSoft also delivers it as a web service (Vendor). Enabling web services is discussed in the *PeopleTools PeopleBook: Integration Broker*.

PeopleSoft Integration Point Catalogue

PeopleTools PeopleBook: Integration Broker

XML Invoices

Two ways are available to integrate XML invoices with the Voucher Build process:

- Using XML invoices that are mapped to the VOUCHER_BUILD message definition for integrating with the Voucher Staging tables using Application Messaging.

This process is also known as the Voucher EIP.

Note. The Spreadsheet Voucher feature uses the Voucher EIP process (VOUCHER_BUILD) to import files to the PeopleSoft systems.

- Using XML invoices that are defined in the Open Applications Group (OAG) standardized format, which are handled in Integration Broker, mapped to the PeopleSoft invoice structures by the Transform OAG to PSFT Invoice Application Engine process (EM_INV_OAG), and connected to the quick invoice tables using the EM_VOUCHER_IN application message definition.
-

Important! When you are building XML invoices using Integration Broker, the date format must be YYYY/MM/DD, or the subscription process fails.

The OAG XML invoice interface with the Voucher Build process is discussed in full in separate documentation.

See *PeopleSoft eSettlements 9.1 PeopleBook*, "Processing Invoices."

Note. In addition to delivering the VOUCHER_BUILD and EM_VOUCHER_IN EIPs as application messages, PeopleSoft also delivers them as web services (Voucher and SelfServiceInvoice, respectively). Enabling web services is discussed in the *PeopleTools PeopleBook: Integration Broker*.

PeopleSoft Payables users should also know that:

- PeopleSoft Payables users may need to define codesets in Integration Broker that differ from those that are used by eSettlements.
- OAG XML invoices must use the GL_Element tag to identify the Account ChartField if the invoice includes distribution information.
- The Voucher Build process assigns match delay days to XML transactions that require matching based on the PeopleSoft Payables hierarchy, business unit, origin, control group, vendor, and the ability to override on the voucher.

If you do not define match delay days on the PeopleSoft Payables hierarchy, the Voucher Build process will not assign match delay days. As an example, if the match delay days are five days, the system adds five days to the entry date to determine the match due date. On the Match Request page, enter a date in the As of Date field to work in conjunction with the match due date. The Matching process selects only the vouchers that are ready to be matched as of that date. Match delay days are applicable only to EDI transactions and XML transactions. These types of transactions usually are processed in the system before the lines are received. Using match delay days enables you to wait to include these transactions in the Matching process.

PeopleTools PeopleBook: Integration Broker

Prerequisites

Before using the Voucher Build process, you must set up the standard procurement control tables and establish the PeopleSoft Payables control hierarchy, including entering approved vendors in the system. In addition, you:

- (Optional) Define Voucher Build criteria on the Voucher Build Code Definition page if you want to use voucher build codes.
- Define Voucher Build options for PeopleSoft Payables business units on the Payables Definition - Voucher Build page.
- (Optional) Define the business unit combination edit template for the Voucher Build process on the Procurement Control - General Controls page if you want to use ChartField combination editing.

Setup that is specific to each source transaction is discussed in the source transaction overviews.

Running the Voucher Build Process and Reviewing Messages

This section lists common elements and discusses how to:

- Run the Voucher Build process.
- Review process messages.
- Review vouchers with errors.

See Also

[Chapter 16, "Processing Batch Vouchers," Understanding Voucher Build Processing, page 415](#)

Common Elements Used in This Section

Request ID and Description Identifies the current run of the run control.

Pages Used to Run the Voucher Build Process and Review Messages

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher Build	VCHR_BATCH_RQST	Accounts Payable, Batch Processes, Vouchers, Voucher Build, Voucher Build	Create a run control and request a run of the Voucher Build process.
Process Messages	VCHR_EDIT_REQUEST3	Accounts Payable, Batch Processes, Vouchers, Voucher Build, Process Messages	Monitor a voucher build processing run.

Page Name	Definition Name	Navigation	Usage
Build Errors	VCHR_EDIT_REQUEST4	Accounts Payable, Batch Processes, Vouchers, Voucher Build, Build Errors	Review a log of any voucher errors that occur during a voucher build processing run. Link to pages where you can view error details and correct errors. Errors that are logged include both pre-edit errors and recycled vouchers.

Running the Voucher Build Process

Access the Voucher Build page (Accounts Payable, Batch Processes, Vouchers, Voucher Build, Voucher Build).

The screenshot shows the 'Voucher Build' page with the following sections:

- Navigation:** Voucher Build, Process Messages, Build Errors.
- Run Control ID:** LBM. Buttons: Report Manager, Process Monitor, Run.
- Run Control Options:**
 - *Request ID: LBM
 - Description: Claimback Adjustment Voucher
 - From Date: [Calendar Icon] ☒ Assign Invoice ID
 - To Date: [Calendar Icon] ☒ Assign Invoice Date
 - *Process Option: Process All Units
 - *Voucher Sources: New Voucher Data
- Selection Parameters:** Business Unit [Field]
- Interfaces:**

*Voucher Build Interfaces	Publish Voucher Messages
Vendor Rebates/Claimbacks	☐

Voucher Build page

Run Control Options

From Date and To Date

Enter dates to have the Voucher Build process select vouchers for which invoices are dated within the specified range.

Assign Invoice ID

Select to have the Voucher Build process assign an invoice ID to vouchers that were built from voucher sources that have no invoice ID or an invoice ID value of *NEXT*. The process assigns the voucher ID as the invoice ID.

Note. You must select this option when the Invoice ID field on Real Estate Management invoices is blank to prevent the Voucher Build process from having build errors.

Assign Invoice Date

Select to have the Voucher Build process assign the current date as the invoice date to vouchers that are built from voucher sources that have no invoice date.

Process Option

Select the level at which to process vouchers. Depending on the option that you select, different fields become available in the Selection Parameters group box. Values are:

Business Unit: The system processes vouchers that belong to the business unit that you enter in Selection Parameters.

Process All Units: The system processes all business units. No fields are available in Selection Parameters.

Process Contract: The system processes vouchers that belong to the contract ID that you enter in Selection Parameters. You must also enter a business unit.

Process Group: The system processes vouchers that belong to the control group ID that you enter in Selection Parameters. You must also enter a business unit.

Process Origin: The system processes vouchers that belong to the origin that you enter in Selection Parameters. You must also enter a setID.

Process Vendor: The system processes vouchers that belong to the vendor ID that you enter in Selection Parameters. You must also enter a business unit.

Process Voucher: The system processes the voucher with the voucher ID that you enter in Selection Parameters. You must also enter a business unit. This value is valid only for quick invoices and transactions in the online voucher tables. This value does not appear if you have selected a Voucher Edit Source of *All*.

Voucher Sources

Select the status of the sources that you want to process. Values are:

All (Unrestricted): Both new and recycled vouchers.

Errors/Staged Vouchers: Only vouchers that have pre-edit errors from prior Voucher Build process runs or that were staged for review during a prior run.

New Voucher Data: New transactions from selected interface sources.

Recycled Vouchers: Recycled vouchers in the online voucher tables.

Voucher Maintenance: Vouchers that have been modified using the Voucher Maintenance component.

Voucher Mass Maintenance: Vouchers that have been modified using the Voucher Mass Maintenance component.

See Chapter 19, "Managing Vouchers," page 491.

Interfaces

Voucher Build Interfaces

Select a source from which to create vouchers. Values are:

All Interfaces: All sources.

Asset Lease Payments: PeopleSoft Asset Management lease payments.

Billing Vouchers: Source transactions that are created through the Billing Generate AP Vouchers SQR process (BIGNAP01).

Consignment Inventory: Consignment inventory source transactions.

Contracts: Source transactions that are created through the Purchasing voucher contracts functionality.

Custom: Voucher EIP source transactions from customized external interfaces. This value is delivered as inactive and must be activated to appear.

Debit Memo from Matching: Source transactions that are created from the Matching process.

EDI: EDI source transactions.

Evaluated Receipts (ERS): ERS source transactions.

Lease Payments: Real Estate Management lease payment transactions.

Pay/Bill Management: Contractors' payable time transactions from Pay/Bill Management.

Payroll Interface: Voucher EIP source transactions from Payroll.

Procurement Card: Procurement card source transactions from Purchasing.

Promotions Management: Promotions Management source transactions.

Quick Invoice: Quick invoice entry source transactions. The system considers summary invoices as quick invoices after they are saved.

Receivables Customer Refunds: Refund source transactions that are created in Receivables.

Return to Vendor: RTV source transactions.

Self Service Invoices: Self-service invoice transactions from eSettlements.

Services Procurement: Services Procurement transactions.

Student Administration: Voucher EIP source transactions from Student Administration.

Vendor Rebates/Claimbacks: Voucher source transactions and claim vendor rebate transactions from Purchasing, and indirectly from Receivables.

XML Invoice: Spreadsheet vouchers and XML invoices that are interfaced using the EM_VOUCHER_IN application message definition or the SelfServiceInvoice web service.

Publish Voucher Messages

Select to publish the voucher message in XML format when the Voucher Build process successfully creates the voucher and the data exists in the PS_VOUCHER table. The outbound AP_VCHR_MESSAGE_OUT EIP application message or the VoucherOut web service dispatches the voucher information to a predefined location that the vendor can access to retrieve their voucher information.

See *PeopleSoft Integration Point Catalogue*

See *PeopleTools PeopleBook: Integration Broker*

Contract Voucher Action

This field is enabled when you select *All Interfaces* or *Contracts* in Voucher Build Interfaces. The default is to stage contract vouchers. Values are:

Build Voucher: Create vouchers for all contracts that are processed and successfully pass all Voucher Build process editing requirements.

Stage Voucher: Stage all contract vouchers that have been created in the pre-edit step of the Voucher Build process in the quick invoice entry tables for user review. Before you can run the voucher edit step of the Voucher Build process for these vouchers, you must release them by reviewing them in the Quick Invoice Entry component, modifying them as needed, and setting their build status to *To Build*.

Important! You can specify up to a maximum of 27 business units to run in a single run control; to process more than 27 business units, create additional run controls. You can process multiple run controls concurrently.

After saving the run control, editing the business units (such as deleting business units and adding new business units) may cause display issues. Click the Refresh button or quit the page and access it again to avoid this display issue.

See Also

Chapter 16, "Processing Batch Vouchers," Understanding Voucher Build Processing, page 415

Reviewing Process Messages

Access the Process Messages page (Accounts Payable, Batch Processes, Vouchers, Voucher Build, Process Messages).

Review the messages that the Voucher Build process produces. These are the same messages that appear in the Process Monitor.

The Request Status group box shows the current status of the request. A process instance number appears after you run the request. The Details group box shows the time, severity, and text of the message. Click Refresh Log to display the messages that the run generated.

Reviewing Vouchers with Errors

Access the Build Errors page (Accounts Payable, Batch Processes, Vouchers, Voucher Build, Build Errors).

Refresh Log

Click to display the messages that the run generated.

When you run the Voucher Build process for all business units, if there are any vouchers in stage that have invalid business units, the Vouchers in Stage with Invalid Business Unit grid will appear and show all vouchers with an invalid business unit.

Insert icon picture here

Click this icon to delete individual vouchers. The deleted row will be removed from staging table after clicking save.

Delete All

Click this button to delete all returned rows from the staging table. After delete, this grid will become invisible.

Click the Examine Error Messages button to access the Voucher Build Error Detail page, where you can view Voucher Build process error details for the voucher and transfer to the appropriate error correction component:

- Quick Invoice Entry component for vouchers with pre-edit errors.
- Voucher component for vouchers in recycle status.

Click the Correct Errors button to access the appropriate error correction component directly.

Reviewing Voucher Build Process Errors

This section provides an overview of voucher build error review and discusses how to review Voucher Build process error details.

Understanding Voucher Build Error Review

Two kinds of Voucher Build process errors exist: pre-edit errors for vouchers that cannot be passed to the voucher edit subprocess, and recycle status for vouchers that have gone through the voucher edit subprocess but failed at least one validation. You correct pre-edit errors in the Quick Invoice Entry component and vouchers that are in recycle status in the online Voucher component or the Voucher Maintenance component.

Note. You correct Voucher Build errors for procurement card vouchers in a VAT environment on the Reconcile Statement - Procurement Card page in Purchasing.

Several ways are available to search for and review vouchers with Voucher Build process errors:

- You can view a list of vouchers with pre-edit errors and vouchers in recycle status for a particular processing run of the Voucher Build process on the Build Errors page, which is included in the Voucher Build run control component.

The Recycle Vouchers page contains links to the Voucher Build Error Detail page, where you can view error details and access the appropriate voucher correction component or page: the Quick Invoice Entry component, the online Voucher component, or the Reconcile Statement - Procurement Card page. The Build Errors page also contains direct links to the appropriate voucher correction component.

- You can use the Voucher Build Error Detail page to search for vouchers with Voucher Build errors and link from there to the appropriate voucher correction component.
- You can use the Voucher Maintenance Search page to search for vouchers in recycle status and correct them in the Voucher Maintenance component.

Note. Consigned Inventory vouchers with Voucher Build errors do not appear in the pages and components that are described here. You can view them on the Consigned Inventory Voucher Exceptions page and correct them in PeopleSoft Supply Chain Management.

Chapter 17

Using Quick Invoices

This chapter provides an overview of quick invoices and summary invoices, lists prerequisites, and discusses how to:

- Enter and update quick invoices.
- Enter summary invoices.

Understanding Quick Invoices and Summary Invoices

This section discusses:

- Quick invoice overview.
- Purchase order and receiver copy functionality for quick invoices.
- Summary invoice processing.
- Voucher build processing logic for associating voucher lines with purchase order and receiver lines.
- Quick Invoice Entry component configuration.

Quick Invoice Overview

The Quick Invoice Entry component (VCHR_QUICK_PNL) provides efficient data entry for large volumes of similar invoices and invoices for which you can use defaults to complete most of the voucher details. The Quick Invoice Entry component contains minimal online edits; default and edit processing are handled by the Voucher Build Application Engine process (AP_VCHRBLD). This makes the component easy to configure and upgrade and offers improved performance when saving data.

The Quick Invoice Entry component enables you to enter minimal invoice information, such as the business unit, vendor ID, invoice ID, invoice date, and merchandise amount. The Voucher Build process completes the other required fields for the voucher records using defaults from the PeopleSoft Payables control hierarchy. You can also use the Quick Invoice Entry component to copy purchase order and receiver information to create vouchers—either by copying purchase orders and receivers directly to the quick invoice at the time of entry, or by specifying key field information for the Voucher Build process to use in associating voucher lines with specific purchase order or receiver schedule lines. You can also set up session defaults that automatically populate voucher fields for an entire session, and you can override those defaults for a particular voucher.

The Quick Invoice Entry component comes with two templates: the complete worksheet and the simple worksheet.

The add and search page of both worksheets display the Freight Amount, Misc Charge Amount (miscellaneous charge amount) and Sales Tax Amount fields. When you complete these fields, the system uses the values to automatically populate the worksheet's Balancing region.

Both worksheets display four invoice lines by default; the system automatically deletes any unused lines when you click Save. Use the Session Defaults page to modify the number of lines that display.

The complete worksheet enables you to enter more voucher line information than the simple worksheet. If you have a purchase order-related voucher and want to copy from a purchase order or receiver, select the complete worksheet. On the complete worksheet, you can enter multiple invoice and distribution lines. In addition, you can copy purchase orders (POs) and receivers to the voucher lines or specify PO and receiver default information for the Voucher Build process to use in locating POs and receivers for completing the voucher. The complete worksheet also enables you to limit the number of voucher lines and distribution lines called up when you open a quick invoice voucher in update mode.

The simple worksheet is the default worksheet. It provides minimal voucher header and voucher line entry, leaving it up to the Voucher Build process to use the session defaults and the PeopleSoft Payables control hierarchy to fill in the rest. The combined voucher line and distribution line facilitate data entry for supplier invoices that have a limited number of ChartField distributions requiring entry. You should use the simple worksheet for vouchers with no associated purchase order. The simple worksheet also has these restrictions:

- A single distribution line per voucher line.
- No copying of purchase orders or receivers.

Both simple and complete worksheets enable you to:

- Enter and apply prepayment vouchers.
- Use on-demand processing functionality, running on-demand processes such as Voucher Build, Matching, Document Tolerance, Budget Checking, Voucher Post, and Journal Generate.
- Perform on-demand combination-edit and balancing functions above and below the invoice line level.

You can configure either worksheet to your organization's particular needs.

You also use the Quick Invoice Entry component in the update/display mode for reviewing vouchers staged by the Voucher Build process to PeopleSoft Payables from external sources, as well as for correcting Voucher Build process pre-edit errors.

Note. If financial sanctions validation is enabled at the installation level, and the vendor has a financial sanctions status of *Review* or *Blocked*, the system displays a warning message that the vendor is under financial sanctions review. You can save the voucher, however, the system does not allow payments to vendors with a financial sanctions status of *Review* or *Blocked*.

If you enable financial sanctions at the installation level, the system validates the vendor against financial sanctions lists (for example, the Specially Designated Nationals (SDN) list) when you attempt to save the quick invoice. The system does not perform validation during quick invoice entry if you enable financial sanctions at the bank level.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Financial Sanctions Validation and Transaction Processing.

[Chapter 17, "Using Quick Invoices," Entering Quick Invoices Using the Complete Worksheet, page 461](#)

[Chapter 17, "Using Quick Invoices," Entering Quick Invoices Using the Simple Worksheet, page 468](#)

[Chapter 16, "Processing Batch Vouchers," page 415](#)

Purchase Order and Receiver Copy Functionality for Quick Invoices

There are two ways to use purchase order and receiver information to complete quick invoice vouchers:

- Copy information directly to the quick invoice.
- Specify information for the Voucher Build process to use in building voucher lines.

Copy Purchase Orders or Receivers to the Quick Invoice

To copy a purchase order or receiver directly to the quick invoice voucher at the time of entry, use the Copy PO or Copy Worksheet feature, just as you would in the Voucher component (VCHR_EXPRESS). You must use the complete worksheet.

Note. If you voucher only a partial quantity of a purchase order line that you have copied, the Voucher Build process prorates the partial quantity down to the voucher distribution lines.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Copying Source Documents to Create Vouchers Online, page 342.](#)

Specify Purchase Order and Receiver Information for the Voucher Build Process to Use in Building Voucher and Distribution Lines

To specify purchase order and receiver field values for the Voucher Build process to use in locating and copying purchase order and receiver lines to the voucher:

1. Enter a voucher in the Quick Invoice Entry component using the complete worksheet, and specify identifying information about the purchase order or receiver (or both) on the voucher line and in the PO/Receiver defaults fields, ignoring the distribution information.

See [Chapter 17, "Using Quick Invoices," Voucher Build Processing Logic for Associating Voucher Lines with Purchase Order and Receiver Lines, page 455.](#)

2. Save the voucher.

3. Run the Voucher Build process.

The Voucher Build process attempts to find the purchase order or receiver line.

If it finds the information, the process retrieves the additional line information from the purchase order or receiver, as well as default voucher header data.

If the voucher has multiple purchase orders, the Voucher Build process uses the information from the purchase order on the first voucher line to populate voucher header information.

The system uses similar copy logic when copying purchase order payment terms and accounting template information. When you select multiple lines from different purchase order at the same time, the data (payment term and/or accounting entry template data values) from the first purchase order is copied into voucher. However, for any subsequently copied purchase order lines, the data values of the first purchase order line overwrites the existing data (payment terms and/or accounting entry template) in the voucher.

If the Voucher Build process fails to match the voucher line to a purchase order or receiver line, the process generates a pre-edit error, which you can review on the Voucher Build Error Detail page.

The process copies the distribution information from the purchase order or the receiver. The process then prorates the distributions from the amount on the invoice line.

See Also

[Chapter 16, "Processing Batch Vouchers," page 415](#)

Summary Invoice Processing

The Summary Invoice Entry component (VCHR_SUMM_PNL) enables you to enter minimal invoice and purchase order information, such as vendor, PO number, invoice number, invoice date, nonmerchandise amounts, and gross amount, to create a voucher. You do not enter voucher line or distribution line information. The Voucher Build process builds the voucher from the selected purchase order and associated receipts.

Establish tolerance levels to validate the source document's merchandise amount against the invoice's merchandise amount. If the differences falls within the tolerance levels, the system applies the difference to a tolerance miscellaneous charge code specified on the Payables Definition - Summary Invoice page. This reconciliation allows the summary invoice to be balanced and the Voucher Build process to create a voucher. If the difference falls outside the tolerance levels, the system assigns the summary invoice a voucher build status of *Tolerance*. The Voucher Build process does not select invoices with a voucher build status of *Tolerance*. Use the Quick Voucher Entry component to resolve these differences.

To create a voucher using the Summary Invoice Entry component:

1. Enter invoice and purchase order information in the add and search page or the Summary Invoice Entry page.
2. Copy receiver or purchase order information to the summary invoice.

The system first searches for receiver information to copy. If it cannot locate this information, it then searches for and copies purchase order information.

3. Compare input invoice information with the purchase order and receiver information.

4. Save the voucher.

Once you save the summary invoice, access the summary invoice using the Quick Invoice Entry component for further updating before the Voucher Build process creates the voucher.

5. Run the Voucher Build process.

The Voucher Build process uses the same logic for copying a single purchase order and receiver information to the voucher as the it does for creating vouchers from the Quick Invoice Entry component.

Note. The system does not copy sales tax, use tax, and value-added tax (VAT) amounts from the purchase order. You must enter these amounts. Also, if you enter freight and miscellaneous amounts, these amounts override any amounts that were entered on the purchase order.

See Also

[Chapter 17, "Using Quick Invoices," Entering Summary Invoices, page 475](#)

Voucher Build Processing Logic for Associating Voucher Lines with Purchase Order and Receiver Lines

When the Voucher Build process builds voucher records from purchase orders and receivers, it uses default processing logic to match the voucher line information it has received with purchase orders and receivers. When you use the Quick Invoice Entry component to enter basic voucher information for the Voucher Build process to build into voucher records, you can accept this default processing logic or specify a voucher build code that identifies special processing logic for the Voucher Build process to follow. These voucher build codes specify how the Voucher Build process finds matches between voucher line information and receivers or purchase orders. You define voucher build codes using the Voucher Build Criteria component (VCHR_BLD_DEFN).

There are two ways of building vouchers from purchase orders or receivers:

- You can copy purchase orders or receivers directly to the voucher, either by using the Copy PO function or a copy worksheet.
- You can enter identifying information about the purchase order or receiver (or both) in the other PO/Receiver default fields (and on the voucher header and lines).

The Voucher Build process uses this information to locate purchase order and receiver lines and builds the voucher from them. The fields required to successfully build voucher lines from receiver and purchasing order lines depend on the processing logic used by the Voucher Build process—either the logic defined by the voucher build code that you enter or, if you don't enter a voucher build code, the default processing logic.

Note. You copy and associate purchase order and receiver information to the summary invoice using the Summary Invoice Entry component.

If you do not specify a voucher build code for the quick invoice, the following default association criteria apply:

1. The Voucher Build process attempts to match voucher lines to receivers before purchase orders:
 - The voucher line matches if the receiver business unit, receiver ID, and receiver line number are specified on the voucher and match the receiver.
 - If no receiver line number is specified on the voucher line, the voucher line can still match to a receiver if the receiver business unit, receiver ID, inventory item ID, and quantity are specified and match.
 - If no receiver ID or receiver line number is specified on the voucher line, the voucher line can still match to a receiver if the packing slip, carrier ID, bill of lading, or invoice ID from the voucher header is specified and matches the receipt line *and both* the inventory item ID and quantity are specified and match.
 - If the quantity is specified on the voucher line, it must match the quantity on the receiver line.
 - If a unit of measure is specified on the voucher line, it must match the receiver line.
2. If there is no match to a receiver, the Voucher Build process attempts to match a purchase order:
 - The voucher line matches if the PO business unit, PO ID, PO line number, and PO schedule are specified on the voucher and match the purchase order.
 - If no PO line number or PO schedule is specified on the voucher line, the voucher line can still match a purchase order if the PO business unit, PO ID, inventory item ID, and quantity are specified and match.
 - If the quantity is specified on the voucher line, it must match the quantity on the PO schedule.
 - If a unit of measure is specified on the voucher line, it must match the PO schedule.

Note. Purchase orders and their associated receivers that are marked with the procurement card (PCard) settlement method cannot be processed through Voucher Build association logic.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Understanding Source Document Copy Functionality, page 342.](#)

If this default association logic does not meet the organization's needs and you do not want to rely solely on voucher build codes to override the logic, you can modify it by using these tools:

- To deactivate the default logic, make section AP_VB_BLD CD.XUSRDFLTStep01 active.
- To have separate default logic for receivers, make section AP_VB_BLD CD.XUSRDFLTStep02 active and populate the PeopleCode clauses by using dynamic SQL code.
- To have separate default logic for POs, make section AP_VB_BLD CD.XUSRDFLTStep03 active and populate the PeopleCode clauses by using dynamic SQL code.

Note. Test any new dynamic SQL thoroughly.

Quick Invoice Entry Component Configuration

Configuring the Quick Invoice Entry component is relatively simple. For example, there are fields in the table structure underlying the component (such as VAT-related fields) that are not included in the component but which you can easily add if they suit your business requirements.

Component configuration should only be performed by persons with PeopleTools training and experience.

Prerequisites

Before entering and processing quick invoices and summary invoices, you must set up the standard procurement control tables and establish the PeopleSoft Payables control hierarchy, including entering approved vendors in the system. In addition, you:

- (Optional) Define summary invoice tolerance levels on the Payables Definition - Summary Invoice page.
- (Optional) Define tolerance miscellaneous charge codes on the Misc Charge/Landed Cost Defn (miscellaneous charge/landed cost definition) page if you use summary tolerances.
- (Optional) Define tolerance ChartFields on the Accounting Entry Template page for nonprorated tolerance miscellaneous charge codes.
- (Optional) Define voucher build criteria on the Voucher Build Code Definition page if you want to use voucher build codes.
- (Optional) Define the business unit combination edit template for the Voucher Build process on the Procurement Control - General Controls page, if you want to use ChartField combination editing.

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Selecting General Controls, page 38

Entering and Updating Quick Invoices

This section lists common elements and discusses how to:

- Enter quick invoices using the complete worksheet.
- Enter distribution line information.
- Enter quick invoices using the simple worksheet.
- Override defaults.
- Enter payment information.

- Enter prepayment vouchers using the Quick Invoice Entry component.
- Review and update quick invoices, staged vouchers, and vouchers with pre-edit errors.

Common Elements Used in This Section

Action

Select to run an on-demand Application Engine process after you have saved the quick invoice.

Processes are numbered to indicate the order of how the processes run. For example, if you select 3. Doc Tolerance (document tolerance), the system automatically initiates the number 1 and 2 processes (in this example, 1. Voucher Build then 2. Matching), and then the number 3 process (in this example, 3. Doc Tolerance).

Note. Available processes depend on your implementation and the quick invoice's processing status. Therefore, the numbers may be different than those listed below.

Select from the following:

1. *Voucher Build*: Select this option to launch the Voucher Build process (APVCHR_BLD).

2. *Matching*: Select this option to run the Voucher Build and Matching (MATCHING) processes.

Note. This option always appears. However, the system runs the Matching Application Engine process (AP_MATCH) only when the quick invoice voucher includes copied purchase order information.

3. *Doc Tolerance* (document tolerance): Select this option to run the Voucher Build, Matching, and Document Tolerance (DOC_TOL) processes. This option displays only if you activate it at the installation level.

4. *Budget Checking*: This option appears only when the Commitment Control feature is enabled. Select this option to run the Voucher Build, Matching, Document Tolerance, and Budget Checking (BUDGET_CHK) processes.

5. *Voucher Post*: Select this option to run the Voucher Build, Matching, Document Tolerance, Budget Checking, and Voucher Post (PST_VCHR) processes.

6. *Journal Generate*: Select this option to run the Voucher Build, Matching, Document Tolerance, Budget Checking, Voucher Posting, and Journal Generator (PST_VCHRG) processes.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Setting Up On-Demand Processing."

Pages Used to Enter and Update Quick Invoices

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Quick Invoice (complete worksheet)	VCHR_HEADER_QV	- Accounts Payable, Vouchers, Add/Update, Quick Invoice Entry, Quick Invoice Select <i>Complete</i> in the Quick Invoice Template field on the Add Search page. - Click the Examine Error Messages button for a voucher with Voucher Build pre-edit errors on the Build Errors page to access the Quick Invoice page in update/display mode. - Click the Correct Errors link on the Voucher Build Error Detail page to access the Quick Invoice page in update/display mode.	Enter and update invoice header, line, and distribution information, along with PO and receiver details for the Voucher Build process to use in building a voucher. When you enter the page in update/display mode from the Find an Existing Value page, you can search for vouchers by build status, including vouchers that have been staged for review by the Voucher Build process, vouchers with Voucher Build process pre-edit errors, or vouchers to be built.
Copy Worksheet (purchase order)	VCHR_QVLN_PO_WRK	Select <i>PO Only</i> in the Worksheet Opt (worksheet option) field on the Quick Invoice page (complete worksheet).	Enter PO search criteria and select the lines from one or more purchase orders for copying to the Quick Invoice page (complete worksheet).
Copy Worksheet (receiver)	VCHR_QVLN_RECV_WRK	Select <i>PO Receipt</i> or <i>Recp Only</i> (receipt only) in the Worksheet Opt (worksheet option) field on the Quick Invoice page (complete worksheet).	Enter receipt search criteria and select the lines from one or more receivers for copying onto the Quick Invoice page (complete worksheet).

Page Name	Definition Name	Navigation	Usage
Quick Invoice Entry - Miscellaneous Charges	VCHR_MISC_QV	- Click the Miscellaneous Charges link on the invoice header on the Quick Invoice complete worksheet page to access the Miscellaneous Charges page for the invoice header. - Click the Miscellaneous Charges link on an invoice line on the Quick Invoice complete worksheet page to access the Miscellaneous Charges page for invoice lines. - The link appears only if you have copied a purchase order with freight or miscellaneous charges.	This page applies only when you have copied a purchase order with freight or miscellaneous charges. For invoice headers, review or override the miscellaneous charge codes, accounting entry type, and charge amounts for the invoice. For invoice lines, select whether or not to apply the miscellaneous charges to the line.
Quick Invoice Entry – Review Errors	VCHR_PREEDERR_PG	Click the Review Errors link on the complete or simple worksheet. This link appears only when the worksheet has build errors.	Review and correct worksheet errors.
Distribution Lines	VCHR_QUICK_SBP2	Click the Distribution button on an invoice line on the Quick Invoice page (complete worksheet).	Enter distribution information for a specific invoice line.
Quick Invoice (simple worksheet)	VCHR_HEADER_QV2	Accounts Payable, Vouchers, Add/Update, Quick Invoice Entry, Quick Invoice Entry, Quick Invoice Select <i>Simple</i> in the Quick Invoice Template field on the Add Search page.	Enter and update invoice header, line, and distribution information for the Voucher Build process to build into a voucher. The simple worksheet requires minimal voucher data entry. You can only enter the simple worksheet in update/display mode if you have not yet run the Voucher Build process for the voucher.

Page Name	Definition Name	Navigation	Usage
Session Defaults	AP_SESSN_DFLT_SEC	Click the Session Defaults link on the Quick Invoice page (complete or simple worksheet).	Enter voucher defaults for an adhoc session or use an existing available session default. These defaults override the values that the system applies using the PeopleSoft Payables control hierarchy. See Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Session Defaults, page 340.
Override Session Default	VCHR_HDR_QV_SEC	Click Override Session Default on the Quick Invoice page (complete or simple worksheet).	Override optional voucher header defaults for the current quick invoice.
Quick Invoice Entry - Payment Details	VCHR_PYMNT_QV_SEC	Click Payments on the Quick Invoice page (complete or simple worksheet).	Enter and update specific payment information for a quick invoice.

Entering Quick Invoices Using the Complete Worksheet

Access the Quick Invoice page for complete worksheets (Accounts Payable, Vouchers, Add/Update, Quick Invoice Entry, Quick Invoice).

Quick Invoice page for complete worksheets

General Invoice Information

You must enter a vendor ID, invoice number, invoice date, and total amount. Other fields are optional. If you leave the optional fields blank, the Voucher Build process completes the voucher according to the defaults that you set up in the PeopleSoft Payables control hierarchy or the session defaults.

Note. If financial sanctions validation is enabled at the installation level, and the vendor has a financial sanctions status of *Review* or *Blocked*, the system displays a warning message that the vendor selected is currently under financial sanctions review. You can save the quick invoice, however, the system does not allow payments to vendors with a financial sanctions status of *Review* or *Blocked*.

Print Invoice

Click to create the invoice in a PDF file format. The system opens a new window where you can view and print the invoice.

Calculate (calculate on-demand balancing) and Difference	Click to perform on-demand balancing validation, which calculates the difference between the invoice lines plus the applicable charge amounts (miscellaneous, freight, and tax amounts) and the gross invoice amount. This amount appears in the Difference field when the voucher is out of balance. The system populates the Difference field with <i>0.00</i> when the voucher is in balance.
Edit Combinations	Click to perform on-demand combination edit validation, which audits ChartField combinations.
Attachments (n)	Click to add or view attachments related to this quick invoice. Attachments are available after the quick invoice becomes a regular voucher.
Comments (n)	Click to enter comments for a quick invoice to explain payment schedules, issues with the vendor, or anything else that you need to document the invoice. Any comments that you enter in this field are meant for your reference only. You can enter up to 254 characters for a comment. If you exceed 254 characters, the system displays a warning message that it can save only 254 characters and truncates the message. Comments are available after the quick invoice becomes a regular voucher. The system displays (0) if no comment is attached to this voucher. The system displays a number if there is one or more comments associated to this quick invoice.
Line Amount	Displays the combined total of the invoice line amounts.
Misc Amount (miscellaneous amount)	Displays the miscellaneous charge amount.
Freight	Displays the freight charge amount.
Entered VAT Amount	Displays the entered VAT amount. This field only displays if the invoice is VAT applicable.
Sales Tax	Displays the sales tax charge amount.
Total	Displays the combined total of the invoice lines and the miscellaneous, freight, and tax charge amounts.
Tax Exempt	Select to override the default sales and use tax setup for the voucher and make it exempt from sales and use tax.
Payments	Click to access the Quick Invoice - Payment Details page, where you can enter payment information for the voucher.

Session Defaults

Click to access the Session Defaults page, where you can select existing available session defaults or set adhoc default values for all of the invoices that you enter in the current session. These defaults override the defaults that the system applies using the PeopleSoft Payables control hierarchy.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Session Defaults, page 340.](#)

Override Session Defaults

Click to access the Override Session Default page, where you can override the session defaults for the current invoice and specify optional voucher header field values.

Miscellaneous Charges

Click to access the Quick Invoice Entry - Miscellaneous Charges page for the voucher header, where you can review or override the miscellaneous charge codes, accounting entry type, and charge amounts for the invoice.

Note. This field appears only if you have copied a purchase order with freight or miscellaneous charges.

Note. You can click the Miscellaneous Charges link on each voucher line to access the voucher line Quick Invoice Entry - Miscellaneous Charges page, where you can select whether or not to apply the miscellaneous charges to the line.

Copy From a Source Document

In add mode, this group box provides fields for indicating purchase orders or receivers that you want to copy to the voucher or that you want the Voucher Build process to build into a voucher.

In update/display mode, this group box also includes fields for delimiting the number of voucher lines that appear in the Voucher Lines scroll area.

See [Chapter 17, "Using Quick Invoices," Reviewing and Updating Quick Invoices, Staged Vouchers, and Vouchers with Pre-Edit Errors, page 473.](#)

Important! If you intend to copy information from a purchase order or a receiver, *do not* begin by entering information on the add and search page. Leave these fields blank. Also ensure that the line entry default is one (1).

Note. The fields in this group box are not available for entry if the voucher style is *Prepaid*. You cannot copy a purchase order or receiver to a prepaid voucher.

Any values that you enter in this group box are copied to the voucher and distribution lines, where you can override them.

See [Chapter 17, "Using Quick Invoices," Voucher Build Processing Logic for Associating Voucher Lines with Purchase Order and Receiver Lines, page 455.](#)

PO Unit (purchasing business unit) and **PO Number** (purchase order number)

Enter a PeopleSoft Purchasing business unit and PO ID. You can either copy the purchase order information onto the voucher lines by clicking Copy PO, or you can let the Voucher Build process use the PO business unit and PO ID (along with appropriate PO information you enter on the voucher lines) to locate the purchase order lines and build the voucher and distribution lines from them.

If you enter a PO business unit only, the Voucher Build process uses the PO IDs that you enter on the voucher lines to locate the purchase order lines.

Copy PO (copy purchase order)

Enter a PO business unit and PO ID in the PO Unit and PO No fields and click this button to copy purchase order fields onto the voucher. If you don't know the PO business unit, use the Copy information from a worksheet into this invoice field to access the appropriate copy worksheet, where you can search for a purchase order to copy.

Note. The system behaves differently when you have one (1) or multiple lines specified on the search dialogue. After entering the PO values and clicking the Copy button, when there is only one line, the functionality copies the PO into the quick invoice. When the number of lines on the search dialogue is greater than one, the system accesses the Copy Worksheet page. If you primarily use the quick invoice to copy POs into vouchers, consider defining a one line default in your session defaults for efficiency's sake.

Copy From

Select a value and click the Go link to access the appropriate copy worksheet for copying purchase orders and receivers onto a voucher. The copy worksheets enable you to search for purchase orders and receivers and select the lines that you want to copy to the voucher. Options are:

None: Do not copy information.

Purchase Order Only: Access the copy worksheet for purchase orders (that is, the Copy Worksheet - PO Lookup Criteria page).

PO Receipt: Access the copy worksheet for receivers (that is, the Copy Worksheet - Receiver Lookup Criteria page). When you select this option, you can search for receivers by purchase order and receiver information and the system returns only receivers that reference purchase orders.

Non PO Receipt (non purchase order receipt): Access the copy worksheet for receivers (that is, the Copy Worksheet - Receiver Lookup Criteria page). When you select this option, you can search for receivers by receiver information only, and the system returns only receivers that do not reference purchase orders.

These copy worksheets function as they do in the Voucher component.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Copying Source Documents to Create Vouchers Online, page 342.](#)

Voucher Build Association

Build Code

Enter a voucher build code, which defines how the Voucher Build process associates invoice lines for the voucher with a PO or receiver. Once the process finds an association, it uses the PO and receiver lines to complete the voucher line and accounting distributions.

If you don't enter a voucher build code, default association processing logic applies. The processing logic—whether defined by a voucher build code or by default—determines the fields that you are required to enter in this group box and on the voucher lines in order for the Voucher Build process to locate a purchase order or receiver and build a voucher from it.

You set up voucher build codes on the Voucher Build Code Definition page.

Recv Unit (receiving business unit) and Recv No (receiver number)

Enter a PeopleSoft Purchasing receiving business unit and receiver ID. The Voucher Build process uses these values, along with the other receiver information that you enter in this group box and on the voucher lines, to locate the receiver lines and build the voucher and distribution lines from them.

If you enter a receiving business unit only, the Voucher Build process uses the receiver IDs that you enter on the voucher lines to locate the purchase order lines.

Packing Slip, Bill of Lading, and Carrier ID

Enter the relevant receiver data. The Voucher Build process uses these values, along with the other receiver information you enter in this group box and on the voucher lines, to locate receiver lines and build the voucher and distribution lines from them.

Invoice Lines

Most of the fields in this scroll area are identical to those in the Invoice Lines scroll area on the Invoice Information page in the Voucher component. Any differences are documented here.

Note. The purchase order- and receiver-related fields in this scroll area are not available for entry if the voucher style is *Prepaid*.

Distribute By

Select to distribute by either *Amt* (amount) or *Qty* (quantity).

Item ID and Description

If you enter an item ID reference code, the Voucher Build process uses this value to match voucher lines to receiver and purchase order lines.

Merchandise Amount

Displays the merchandise amount for the voucher line. The Voucher Build process computes this value if you enter the quantity and unit price or copy the voucher line from a purchase order or receiver.

PO Business Unit, PO Number, Line Number and Schedule Number

Enter values to identify the related purchase order. The Voucher Build process uses this information to locate the purchase order line and build the voucher and distribution lines from it.

Receiving Business Unit Receipt Number, and Receipt Line (receiver line number)	Enter values to identify the related receiver. The Voucher Build process uses this information to locate the receiver line and build the voucher and distribution lines from it.
Line Match Opt (line match option)	Select whether to use matching. Options are: • <i>Full Match</i> • <i>No Match</i> See Chapter 20, "Running the Matching Process," page 559.
Miscellaneous Charges	Click to access the Quick Invoice Entry - Miscellaneous Charges page for the voucher line, where you can select whether or not to apply the miscellaneous charges to the line.
Discount	Select to make the voucher line discount-applicable. By default, this check box is selected.
Distributions	Click to access the Distribution Lines page, where you can enter distribution information and copy down distribution lines.

See Also

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information," Understanding Financial Sanctions Validation

Entering Distribution Line Information

Access the Distribution Lines page (click the Distribution button on an invoice line on the Quick Invoice page).

Use the Distributions scroll area to enter multiple distribution lines for each voucher line. You can select the Copy Down check box on a distribution line to copy that line's general ledger business unit and ChartField values to new distribution lines. To avoid recycle status, you must enter at least an account if the voucher is not associated with a PO or receiver. For prepayment vouchers, you can leave the Account field blank, and the Voucher Build process will supply the prepayment account from the Accounting Entry Template.

Most of the fields are identical to those on the Invoice Information page in the Voucher component, except that there are no edits against these fields in the Quick Invoice Entry component. Any other differences are documented here.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information,"](#) *Creating Vouchers Online*, page 309.

Note. The system does not recalculate balancing differences when exiting the page; you must click the Calculate button to refresh the totals. For example, if you short distribution line field amounts here, they remain out of balance on the Quick Invoice page until you click the Calculate button.

Important! ChartFields that display here depend on how you configure options on the Standard ChartField Configuration page.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Configuring ChartFields," Completing the Standard ChartField Configuration Page.

VAT Apport CF (VAT apportionment ChartField)

If you use VAT apportionment to track the organization's recoverability, select the business unit whose ChartField values the system uses for VAT apportionment control:

Dist GL BU (distribution general ledger business unit): The system uses the general ledger business unit on the voucher distribution line to determine the VAT apportionment.

Txn BU (transaction business unit): The system uses the PeopleSoft Payables business unit in which the voucher is entered to determine the VAT apportionment.

Txn GL BU (transaction general ledger business unit): The system selects the general ledger business unit to which the PeopleSoft Payables business unit is mapped to determine the VAT apportionment.

See [Chapter 12, "Setting Up Sales and Use Taxes and Value-Added Taxes \(VAT\)," Establishing the PeopleSoft Payables VAT Default Hierarchy, page 266.](#)

See *PeopleSoft Global Options and Reports 9.1 PeopleBook*, "Working with VAT," Defining VAT Use Types and Apportionment.

Entering Quick Invoices Using the Simple Worksheet

Access the Quick Invoice page for simple worksheets (Accounts Payable, Vouchers, Add/Update, Quick Invoice Entry, Quick Invoice Entry, Quick Invoice).

Quick Invoice page for simple worksheets

Note. Descriptions of many of the fields on this page can be found in the discussion of the Quick Invoice complete worksheet page and in other chapters in this PeopleBook.

See [Chapter 17, "Using Quick Invoices," Entering Quick Invoices Using the Complete Worksheet, page 461.](#)

You must enter a vendor ID, invoice number, invoice date, and total amount. Other fields are optional. If you leave the optional fields blank, the Voucher Build process completes the voucher according to the defaults that you set up in the PeopleSoft Payables control hierarchy or the session defaults.

Note. If financial sanctions validation is enabled at the installation level, and the vendor has a financial sanctions status of *Review* or *Blocked*, the system displays a warning message that the vendor selected is currently under financial sanctions review. You can save the quick invoice, however, the system does not allow payments to vendors with a financial sanctions status of *Review* or *Blocked*.

Prepaid Ref (prepaid reference) and **Auto Apply** (automatically apply payment)

Enter a prepayment reference and select to have the system automatically apply the payment to a subsequent invoice with that prepayment reference.

See [Chapter 17, "Using Quick Invoices," Entering Prepayment Vouchers Using the Quick Invoice Entry Component, page 472.](#)

Invoice Lines

Enter the extended amount and distribution information for each voucher line. You can enter one combined distribution line per voucher line. You can select the Copy Down check box on a distribution line to copy that line's General Ledger business unit and ChartField values to new distribution lines.

The Miscellaneous Charge, Freight Charge, and Sales Tax Charge fields do not appear if you are entering a prepaid voucher.

470

Copyright © 1992, 2012, Oracle and/or its affiliates. All Rights Reserved.

Discount Terms

Discount Amount Control

Specify whether or not to accept the default payment terms or to enter your own due date and discount information. Values are:

Terms: The system uses the calculated discount amount. The system calculates the discount amount according to the payment terms, due date, and discount due date that you enter here. If you leave these blank, the system calculates the discount amount according to the payment terms that are populated by default through the PeopleSoft Payables control hierarchy.

User: The system uses the discount amount that you enter in the Discount Amounts field.

Note. The system does not use any discount amount you enter here if you select *Terms* as the discount amount control value.

Note. Discount terms fields are grayed out if you are entering a prepaid voucher. If you enter discount terms or multipayment terms in the Terms field for a prepaid voucher, the voucher will fail voucher build processing.

Entering Payment Information

Access the Quick Invoice - Payment Details page (click Payments on the Quick Invoice page).

Note. Each row in the Payment Details scroll region is a payment schedule, and each schedule can be defined with only one payment message. When you add rows in this area, this indicates that the system (during the Voucher Build process) should create additional payment schedules, which can each have a different payment message. Remember that even though each payment schedule can be defined with one message, you can create and use payment message codes defined with multiple messages. This enables you to have multiple payment messages display on the check advice.

Most of the fields on this page are identical to those on the Payments page in the Voucher component. Only fields that differ are discussed here.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Payment Information for Vouchers, page 359.](#)

Payment Message

Enter a payment message of up to 70 characters to appear on the remittance advice (check stub), or select a message code for a predefined message to appear on the remittance advice.

You define message codes on the Payment Messages page.

See Also

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Defining Procurement Options," Establishing Standard Payment Messages

Entering Prepayment Vouchers Using the Quick Invoice Entry Component

Access the Quick Invoice page for a complete or simple worksheet (Accounts Payable, Vouchers, Add/Update, Quick Invoice Entry, Quick Invoice Entry, Quick Invoice).

You can enter and apply prepayment vouchers using either the complete or simple worksheets.

Entering Prepayments

To enter prepayment vouchers using the complete worksheet:

1. Select a voucher style of *Prepaid* on the add search page.
2. Enter your voucher information, session defaults, and session default overrides.

Note. You cannot copy POs or receivers. Nor can you enter nonmerchandise amounts (except VAT), discount terms, or multipayment terms.

3. (Optional) Enter a prepayment reference in the Prepaid Ref (prepaid reference) field.
4. Select or deselect the Auto Apply option.

- The Auto Apply option is selected and grayed out by default.

If you enter a prepayment reference and select Auto Apply, then, if the next entered invoice with that prepayment reference has a total amount less than the prepayment amount, the system automatically applies the remaining amount of the prepayment voucher to a subsequent invoice with that prepayment reference.

If you enter no prepayment reference and select the Auto Apply option, then the next invoices from the vendor on the prepayment voucher are applied to the prepayment until the prepayment amount is fully applied.

- To deselect the Auto Apply option, click the Refresh button after you enter the prepayment reference to make the field enterable, and deselect it.

If you enter a prepayment reference and deselect the Auto Apply option, then only the next entered invoice that references the prepayment will have the prepayment applied. The prepayment will not be applied to any subsequent invoices. You must use the Prepayments Inquiry page to handle any remaining unapplied prepayment amounts.

To enter prepayment vouchers using the simple worksheet:

1. Select a voucher style of *Prepaid* on the add search page.
2. Enter your voucher information, session defaults, and session default overrides, as necessary.
3. (Optional) Enter a prepayment reference in the Prepaid Ref field.

Note. You can also enter prepayment references and select the Auto Apply option on the Override Session Default page, as you do for the complete worksheet.

4. Select or deselect the Automatically Apply Prepayment option.

This option functions the same way as the Auto Apply option on the Override Session Default page for the complete worksheet.

Applying Prepayments

To apply regular vouchers to a prepayment using the complete or simple worksheets if you entered a prepayment reference on the prepayment voucher, enter a prepayment reference for the regular voucher. The regular voucher will be applied to the prepayment, subject to the conditions described in the discussion of entering prepayment vouchers.

To apply regular vouchers to a prepayment using the complete or simple worksheets if you did not enter a prepayment reference on the prepayment voucher, you do not need to enter a prepayment reference for the regular voucher.

Reviewing and Updating Quick Invoices, Staged Vouchers, and Vouchers with Pre-Edit Errors

Access the Quick Invoice page for a complete or simple worksheet in update/display mode (Accounts Payable, Vouchers, Add/Update, Quick Invoice Entry, Quick Invoice Entry, Quick Invoice).

Note. All quick invoice vouchers staged by the Voucher Build process appear in the complete worksheet. Those entered in the Quick Invoice Entry component and not yet processed by Voucher Build appear in the worksheet of entry.

Quick Invoice page for a complete worksheet in update/display mode, before inserting or fetching voucher lines

The Quick Invoice Entry component is used for reviewing and updating vouchers staged for review by the Voucher Build process, as well as for correcting vouchers that have Voucher Build process pre-edit errors. For this reason, the Quick Invoice Entry component provides the following special functions when accessed in update/display mode:

- When you access the page, voucher lines are not called up and the Invoice Lines scroll area does not appear; this enables you to open a voucher with a large number of lines without taking unnecessary processing time.
 - To view existing voucher lines, enter a range of voucher lines in the From Vchr Line and To Voucher Line fields and click the Search button to view and update the lines in the Voucher Lines scroll area.
 - The default from and to values are the first and last lines in the voucher; to view all lines in a voucher, simply click Search.
 - To insert a voucher line without calling up existing lines, click the Insert button to display the Invoice Lines scroll area, where you can add voucher line information.

Note. Once you've inserted a voucher line, you must save the voucher and access it again through the search page to fetch additional voucher lines.

- You can change the build status of the voucher:
 - When you have reviewed and, if necessary, updated a voucher that has been staged for review, you can change the build status from *Staged* to *To Build* to mark the voucher for another run of the Voucher Build process.
 - When you have corrected a voucher with pre-edit errors, you can change the build status from *Error* to *To Build* to mark the voucher for another run of the Voucher Build process.
 - To mark a voucher for deletion the next time you run the Voucher Build process, select *To Delete* as the build status.

Note. Quick invoices created with the simple worksheet are converted to complete worksheets by the Voucher Build process.

Note. In all other respects, the Quick Invoice page and the other pages in the Quick Invoice Entry component—the Session Defaults page, the Override Session Default page, the Quick Invoice Entry - Payment Details page, and the Quick Invoice Entry - Miscellaneous Charges page—function the same way in update/display mode and add mode.

Summary Invoice Entry page

When you are adding a new voucher, you can use the fields on the add and search page for the Summary Invoice Entry component to prepopulate the new voucher.

Business Unit	Displays the PeopleSoft Payables business unit. You must enter the PeopleSoft Payables business unit on the add and search page.
Vendor ID	Select the vendor by entering the vendor ID or short vendor name. The system populates the transaction currency from the vendor. Selecting a vendor filters the selection of a purchase order.

Note. If financial sanctions validation is enabled at the installation level, and the vendor has a financial sanctions status of *Review* or *Blocked*, the system displays a warning message that the vendor selected is currently under financial sanctions review.

PO Unit (purchasing business unit)	Enter a PeopleSoft Purchasing business unit. This field is required in order to display a list of available purchase orders.
PO No (purchase order number)	Enter a purchase order number to be copied into the summary invoice.

Freight Amount	Enter the freight charges from the invoice. This amount overrides the freight amount from the purchase order.
Misc Amt (miscellaneous amount)	Enter the miscellaneous charges from the invoice. This amount overrides the miscellaneous amount from the purchase order.
Sales Tax, Use Tax, and VAT (value added tax)	Enter the applicable tax charges from the invoice. The PeopleSoft Payables business unit's settings determine what tax fields are displayed.
Gross Amt (gross amount)	Enter the total invoice amount.
Packing Slip	Enter the packing slip number to further limit possible receipts for copying.
Build Status	Displays the build status after you save the summary invoice. The system assigns the summary invoice a voucher build status of <i>Build</i> if the difference between the document source merchandise amount and the invoice merchandise amount is within the tolerance levels or if tolerance levels are not defined. The system assigns the summary invoice a voucher build status of <i>Tolerance</i> if the difference falls outside the tolerance levels. The Voucher Build process does not select invoices with a voucher build status of <i>Tolerance</i> .
Source Document	Displays the source document that is being copied. Options include <i>Purchase Order</i> or <i>Receipt</i> .
Source Doc Freight Amount (source document freight amount)	Displays the freight amount on the source document. If you do not enter a freight amount on the summary invoice, the system copies the freight amount from the source document.
Source Doc Misc Amount (source document miscellaneous amount)	Displays the miscellaneous amount on the source document. If you do not enter a miscellaneous amount on the summary invoice, the system copies the miscellaneous amount from the source document.
Source Doc Merch Amount (source document merchandise amount)	Displays the merchandise amount on the source document.
Invoice Merchandise Amt (invoice merchandise amount)	Displays the merchandise amount on the invoice. The system subtracts the freight amount, miscellaneous amount, and the tax amount from the gross amount to determine the merchandise amount.
Difference	Displays the difference between the source document merchandise amount and the invoice merchandise amount. The system compares the difference with the tolerance levels established and determines whether to apply the difference to miscellaneous charges or put the voucher in a <i>Tolerance</i> voucher build status for further review.

After you save the summary invoice, access the Quick Invoice Entry component for further updating.

Note. If financial sanctions validation is enabled at the installation level, and the vendor has a financial sanctions status of *Review* or *Blocked*, the system displays a warning message that the vendor is under financial sanctions review. You can save the summary invoice, however, the system does not allow payments to vendors with a financial sanctions status of *Review* or *Blocked*.

If you enable financial sanctions at the installation level, the system validates the vendor against financial sanctions lists (for example, the SDN list) when you attempt to save the summary invoice. The system does not perform validation during summary invoice entry if you enable financial sanctions at the bank level.

Chapter 18

Entering and Importing Spreadsheet Vouchers

This chapter provides an overview of spreadsheet vouchers, lists prerequisites, and discusses how to:

- Set up spreadsheet vouchers.
- Enter and import spreadsheet vouchers.
- Review spreadsheet vouchers.

Understanding Spreadsheet Vouchers

This section discusses:

- Spreadsheet voucher processing.
- Spreadsheet voucher flow.
- Spreadsheet voucher data fields.
- Spreadsheet voucher process edits.

Spreadsheet Voucher Processing

The Spreadsheet Voucher workbook lets you enter vouchers offline using Microsoft Excel and then import the vouchers into your PeopleSoft database. It supports regular voucher additions. Once you import the spreadsheet vouchers, the Voucher Build Application Engine process (AP_VCHRBLD) builds and edits the vouchers.

Note. The spreadsheet voucher process supports Microsoft Excel formats as input. If you use a non-Excel spreadsheet, you must convert the data file to a Microsoft Excel format before importing.

PeopleSoft Voucher Workbook: ExcelUploadforVoucher.xls

The ExcelUploadforVoucher.xls workbook is the PeopleSoft Spreadsheet Voucher Import user interface. You use it to prepare and enter vouchers and import them into your PeopleSoft database.

The ExcelUploadforVoucher.xls workbook comprises two worksheets, the Template worksheet and the Data Sheet worksheet. The Template worksheet contains all of the available fields that you can configure for data entry. You can configure the spreadsheet for simple one line express vouchers to complex multiple line purchase order (PO) related vouchers. You enter the transaction data on the Data Sheet worksheet. You can create multiple versions of the Microsoft Excel spreadsheet, all with different templates if required.

Note. Users uploading vouchers with Microsoft Excel 2007 must use the file with the .xlsm file type.

Spreadsheet Voucher Flow

To create spreadsheet vouchers:

1. Enter the data into the spreadsheet voucher using a format that includes the minimum data requirements for a PeopleSoft Payables voucher.
2. Generate the XML and post the file from the spreadsheet voucher options.

A Visual Basic (VB) macro built in the spreadsheet converts the spreadsheet data into an XML format that is readable by the Integration Broker. Also, a VB macro posts the file to a URL available to PeopleSoft systems.

3. Enter a valid user ID and password.

Users are prompted to enter a valid user ID and password before the macro posts the file to the PeopleSoft system.

After you generate the XML and post your file, PeopleSoft systems:

1. Retrieves the data from the XML file and validates the data.

If there are errors in the data the VOUCHER_BUILD message flags the data as being in error. You must correct the data using the application messaging error correction feature before the data can be processed successfully.

2. Copies the data into the voucher staging tables if there are no data errors.
3. Selects the vouchers based on the Voucher Build process run control parameters and builds and edits them.
4. Updates the voucher transaction tables.
5. Deletes the record from the voucher staging tables.

The following graphic illustrates the flow for processing spreadsheet vouchers.

Spreadsheet voucher process flow

Spreadsheet Voucher Data Fields

All data fields in the regular voucher entry process are included in the spreadsheet voucher. You can configure the voucher spreadsheet for the appropriate data entry required. However, certain fields must contain data in order to properly convert the data into an XML file.

The fields requiring data are:

Record Type	Field
Voucher Header	• BUSINESS_UNIT • INVOICE_ID • INVOICE_DT • VENDOR_ID • GROSS_AMT
Voucher Line	• BUSINESS_UNIT • VOUCHER_LINE_NUM • MERCHANDISE_AMT
Voucher Distribution	• BUSINESS_UNIT • VOUCHER_LINE_NUM • DISTRIB_LINE_NUM • ACCOUNT • MERCHANDISE_AMT

Note. You do not have to enter voucher line numbers or distribution line numbers. VB macros generate that data based on the location of the data.

Spreadsheet Voucher Process Edits

Spreadsheet voucher edits exist in the spreadsheet, the VOUCHER_BUILD application message, and the Voucher Build process. Valid data must exist in each stage of the process before further processing is performed.

Spreadsheet Voucher Edits

The spreadsheet voucher does not perform major editing. In addition to basic Microsoft Excel spreadsheet validation edits, the spreadsheet voucher edits include:

- Control Group ID always defaults to *NEXT*.
- Voucher Style always defaults to *REG* (regular).
- Voucher Source always defaults to *XML*.
- Voucher ID always defaults to *NEXT*.

- Required fields contain data.

See [Chapter 18, "Entering and Importing Spreadsheet Vouchers," Spreadsheet Voucher Data Fields, page 481.](#)

- Voucher comments are 254 characters or less. (optional)
- All date fields are either empty or contain a valid date. (optional)
- Chartfields do not have a trailing space. For example, "DEPT ". (optional)

If one of these validations fails, the generate XML will stop immediately, and the error message will indicate you where and why the validation failed. The optional validations can be turned on or off on the Template page.

VOUCHER_BUILD Message Edits

You must correct VOUCHER_BUILD message errors before the data passes to the Voucher Build process. Edits include data type validations (for example, format, field characters, and file length). The VOUCHER_BUILD message also validates that the business unit entered on the spreadsheet is a valid PeopleSoft Payables business unit.

Voucher Build Process Edits

The Voucher Build process can result in pre-edit errors or vouchers in recycle status. Pre-edit errors prohibit the transaction from being processed by voucher edit processing. Vouchers without pre-edit errors pass to the voucher edit subprocess. The voucher edits are the same edits performed by the Voucher component (VCHR_EXPRESS).

Some of the pre-edits include:

- Valid business unit.
- Valid vendor.
- Valid default location for vendor.
- Invoice ID required.
- Invoice date required.
- Voucher line information present.
- Distribution information present.

[Chapter 16, "Processing Batch Vouchers," Voucher Build Process Errors, page 421](#)

[Chapter 16, "Processing Batch Vouchers," Understanding Voucher Build Processing, page 415](#)

Prerequisites

Before you can enter and import spreadsheet vouchers, you must:

- Copy the voucher workbook file (ExcelUploadforVoucher.xls) to a folder on your workstation.

The Microsoft Excel file is located in the core\build\excel folder of the shipped PeopleSoft software.

- Install MicroSoft delivered XML library file MSXML.DLL on your workstation.
- Set up your Microsoft Excel to accept macros.
- Configure Integration Broker for the Voucher EIP.

The web server and the application server should be configured for setting up the Integration Gateway. Also, the application server should be configured to have the Pub/Sub servers established before bringing up the application server.

Determine your default local node for the Integration Broker to receive the data and run the application message. PeopleSoft defines the default local node as PSFT_EP, but you can change it to your default local node.

Configure your browser to automatically detect LAN settings. From your browser, navigate to Tools > Internet Options. Select the Connections tab and click the LAN Settings button. Select Automatically detect settings in the Automatic configuration group box.

- Create a Voucher Build process run control and request a run of the Voucher Build process.

[Chapter 16, "Processing Batch Vouchers," Running the Voucher Build Process and Reviewing Messages, page 440](#)

PeopleTools PeopleBook: Integration Broker

Setting Up Spreadsheet Vouchers

This section discusses how to set up spreadsheet vouchers.

Access the Spreadsheet Voucher - Template worksheet by clicking the ExcelUploadforVoucher.xls file delivered with your PeopleSoft products. You set the defaults and set up your voucher spreadsheets for importing into PeopleSoft Payables on the Template worksheet.

Spreadsheet Voucher - Template worksheet

The Template worksheet contains all the available fields that you can input to populate the voucher data.

Machine Name, Integration Gateway, From Node, and To Node

Enter machine name, integration gateway, and the from and to nodes. The data entered in these fields create a URL string.

Note. PeopleSoft delivers the From Node as *PSFT_AP_VCHR_XML*. The Integration Broker subscribes only to a single default local node. PeopleSoft delivers the To Node as *PSFT_EP*. You can change it to your default local node.

See *PeopleTools PeopleBook: Integration Broker*

Generated URL

Displays URL generated from the host name, integration gateway, and node entered. The XML file created is posted to the defined URL.

Record

Displays the staging table record associated with the field.

Record Type	Displays the record type associated with the field: • <i>000</i> - voucher header. The voucher header fields are highlighted in blue. • <i>001</i> - voucher line. The voucher line fields are highlighted in yellow. • <i>002</i> - voucher distribution. The voucher distribution fields are highlighted in purple. • <i>003</i> - voucher payment. The voucher payment fields are highlighted in green. Voucher header, line, distribution, and payment fields are color coded to differentiate the various sets of data.
Field	Displays the name of the field.
Label	Displays the label of the field.
Field Type	Displays the type of the field. Types include <i>Character</i> , <i>Date</i> , and <i>Number</i> .
Field Length	Displays the length of the field.
Required	Displays a value of <i>Yes</i> or <i>No</i> depending on if the field is required during data entry.
Default Value	Enter the default value for the field. The value entered in the Template worksheet will be the field value displayed on the Data Sheet worksheet. You can override the default value on the Data Sheet worksheet. Note. You can enter default values for fields not included in the Data Sheet worksheet. The default values will become part of the transaction data, but will not be visible on the Data Sheet worksheet.
Add to Data Sheet	Select the check box to include the field on the Data page. Note. You must enter minimal information, such as the business unit, vendor ID, invoice ID, invoice date, and merchandise amount in order to properly convert the data to XML and build the voucher in the Voucher Build process.
Update Data Sheet	Click to update the Data Sheet worksheet with the selected fields.

Set Password

Click to enter or change a password associated with this spreadsheet file.

Hide Template

Click to hide the Template worksheet for this spreadsheet file. You will be prompted to enter a password if one has not been defined. You can navigate back to the Template worksheet by selecting from your Microsoft Excel Tools menu, Macro, Macros. A window pops up listing all the macros. Select the *ShowAdminSheet* macro and click Run. The system prompts you for a password before displaying the Template worksheet.

Do Validations

Select this checkbox to enable validations of the comment length, date fields and ChartField values. If you do not select this check box, the spreadsheet will only validate that the required fields contain data.

Entering and Importing Spreadsheet Vouchers

This section discusses how to enter and import spreadsheet vouchers

Access the Spreadsheet Voucher - Data Sheet worksheet by clicking the ExcelUploadforVoucher.xls file delivered with your PeopleSoft products. You use the Data Sheet worksheet to create and import voucher data.

	C	F	G	H	R	DE	GD	GK
1	Generate XML and Post	Generate XML						
2	000	000	000	000	000	001	002	002
3	Business Unit	Invoice Number	Invoice Date	Vendor ID	Amount	Merchandise Amt	Account	Merchandise Amt
4	US001	AP-001	2004-10-19	USA0000001	100	50	630000	25
5							631000	25
6							50	655000
7								50
8								
9								
10								

Spreadsheet Voucher - Data Sheet worksheet

Enter voucher data and import the voucher data into PeopleSoft Payables using the Data Sheet worksheet. The Data Sheet worksheet is designed to display only the fields selected in the Template worksheet. You can use Microsoft Excel functionality to populate data in the Data Sheet worksheet. For example, you can enter a formula in the gross amount field in the voucher header that sums up the amount fields on the voucher distribution line.

Note. You are required to enter data in at least one row in the voucher header and the voucher distribution line. If no data is entered in the voucher line, VB macros create data from the fields entered in the voucher header. You should not enter the same voucher header data for multiple voucher lines. Also, you should not enter the same voucher line data for multiple distribution lines.

Record Type(line 2)

Displays the record type associated with the field:

- 000 - voucher header. The voucher header fields are highlighted in blue.
- 001 - voucher line. The voucher line fields are highlighted in yellow.
- 002 - voucher distribution. The voucher distribution fields are highlighted in purple.
- 003 - voucher payment. The voucher payment fields are highlighted in green.

Voucher header, line, distribution, and payment fields are color coded to differentiate the various sets of data.

Description (line 3)

Displays the description of the field.

Generate XML and Post

Click to create an XML file and instantly post the file to the URL defined in the Template worksheet. The Microsoft Excel Save As window appears when you click the Generate XML and Post button. Save the XML file with the default file name to the same folder where the actual spreadsheet resides to instantly post the XML file to the URL.

Note. For the VB macro to post your file to the URL available to the Integration Broker, you must use the default file name and save the file in the same directory and folder that contains the source Microsoft Excel file (for example, the ExcelUploadforVoucher.xls file).

Note. The URL string must be valid to post the XML data. The VOUCHER_BUILD message retrieves the XML data from the URL site once it is posted.

Generate XML

Click to create an XML file. The Microsoft Excel Save As window appears when you click the Generate XML button. Indicate the file name and where you want to save it.

As an example, you can write the data to an FTP site and create another process to post the XML file to the URL separately. When the Integration Broker is active, the VOUCHER_BUILD message picks up the XML data.

Note. You can save the file using a different file name and folder than the default file name and folder if you are using another process to post your file to the URL available to the Integration Broker.

Reviewing Spreadsheet Vouchers

This section provides an overview of how to review spreadsheet vouchers and lists the pages used to review spreadsheet vouchers.

Understanding How to Review Spreadsheet Vouchers

Use the Quick Invoice Entry component (VCHR_QUICK_PNL) to review and update vouchers staged for review by the Voucher Build process, as well as to correct vouchers that have Voucher Build process pre-edit errors.

Use the Voucher component to review and update spreadsheet vouchers with no pre-edit errors and recycle errors. Correct any errors resulting from voucher edit processing in the Voucher component. Once imported, you handle spreadsheet vouchers similarly to regular vouchers entered in the Voucher component.

You can view all corrected spreadsheet vouchers using the various online inquires and reports.

[Chapter 27, "Reviewing Voucher, Payment, and Vendor Information," page 817](#)

Pages Used to Review Spreadsheet Vouchers

Page Name	Definition Name	Navigation	Usage
Quick Invoice	VCHR_HEADER_QV	- Accounts Payable, Vouchers, Add/Update, Quick Invoice Entry, Quick Invoice Entry - Accounts Payable, Vouchers, Maintain, Voucher Build Error Detail Click the Correct Errors link on the Voucher Build Error Detail page. - Accounts Payable, Batch Processes, Vouchers, Voucher Build, Build Errors  Click the Correct Errors button on the Build Errors page.	Review and update voucher header, line, and distribution information. When you enter the page in update/display mode from the Add Search page, you can search for vouchers by build status, including vouchers that have been staged for review by the Voucher Build process and vouchers with Voucher Build process pre-edit errors. See Chapter 17, "Using Quick Invoices," Reviewing and Updating Quick Invoices, Staged Vouchers, and Vouchers with Pre-Edit Errors, page 473.

Page Name	Definition Name	Navigation	Usage
Voucher - Summary	VCHR_SUMMARY_PG	Accounts Payable, Vouchers, Add/Update, Regular Entry, Summary	View voucher information, summarized from the three primary pages, such as header information, various statuses, and payment terms. Also view voucher entry information, such as the voucher source, the date entered, the user ID, and the date that the voucher was last updated. See Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Viewing Voucher Summary Information, page 380.
Voucher - Error Summary	VCHR_ERRORSMMRY_PG	Accounts Payable, Vouchers, Add/Update, Regular Entry, Error Summary	View any Voucher Build processing errors. See Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Viewing Voucher Error Information, page 385.

Chapter 19

Managing Vouchers

This chapter provides an overview of voucher management and discusses how to:

- Approve vouchers.
- Unpost individual vouchers.
- Close individual vouchers.
- Delete individual vouchers.
- Search for and correct individual vouchers.
- Modify, unpost, delete, and close multiple vouchers.
- Use OpenItem accounting in PeopleSoft Payables.

See Also

[Chapter 27, "Reviewing Voucher, Payment, and Vendor Information," page 817](#)

Understanding Voucher Management

Entering vouchers online or in batch mode is only the first part of the payables life cycle. The full flexibility of PeopleSoft Payables comes into play as you manage approval processing, error correction, and OpenItem accounting for vouchers on their way to payment.

This section discusses:

- Voucher approval.
- Voucher deletion, closure, and unposting.
- Voucher correction and mass maintenance.
- OpenItem accounting.

Voucher Approval

You can approve vouchers manually, or you can approve them through workflow. If your organization has a single approver, you may want to approve vouchers by accessing the Voucher Approval component (VCHR_APPROVE) directly. If your organization has multiple levels of approval, you probably want to use workflow.

See Also

[Chapter 19, "Managing Vouchers," Approving Vouchers, page 493](#)

Voucher Deletion, Closure, and Unposting

You can delete, close, and unpost individual vouchers using the Delete Voucher, Close Voucher, and Unpost Voucher pages. Deleting a voucher removes the voucher from your system irreversibly (although the voucher remains in the voucher tables marked as deleted, and thus available only for audit trail purposes). Closing a voucher "writes off" the remaining liability on a voucher that you are not going to pay. And unposting a voucher reverses the accounting entries that have been posted to the voucher accounting entry tables so that you can modify the voucher (usually just distribution line information) and repost.

To unpost, close, and delete a selected set of multiple vouchers at once, use the Voucher Mass Maintenance component (VCHR_MASS_MAINT).

Note. When you close vouchers that are associated with purchase orders, and/or you have installed Commitment Control, the system performs specific closure logic that can also restore encumbrances for fully paid vouchers. This functionality exists only for the voucher close component; you cannot restore encumbrances for vouchers closed with the mass maintenance component.

See Also

[Chapter 19, "Managing Vouchers," Unposting Individual Vouchers, page 504](#)

Voucher Correction and Mass Maintenance

PeopleSoft Payables provides two methods for correcting unpaid vouchers:

1. The Voucher Maintenance Search component (VCHR_CORRECT_SRCH) and Voucher Maintenance component (VCHR_CORRECTION).

These components enable you to search for vouchers by a number of voucher fields and error criteria, and then search for the exact voucher lines, distribution lines, or scheduled payments that you want to correct.

The Voucher Maintenance component enables you to handle modifications and add voucher and distribution lines to unposted vouchers of any size, without the burden of calling up the entire voucher. It is particularly useful for modifying large vouchers with many voucher or distribution lines.

2. The Voucher Mass Maintenance component.

This component enables you to search for vouchers by a number of voucher fields and then update specific fields across all of the vouchers that meet your criteria.

You can also use the Voucher Mass Maintenance component to close, delete, and unpost multiple vouchers that share particular field values.

The Voucher Mass Maintenance component is ideal for situations such as a reorganization that results in a department ID change: you search for all unpaid vouchers with distribution lines that include the old department ID and update them all at once with the new department ID.

See Also

[Chapter 19, "Managing Vouchers," Searching for and Correcting Individual Vouchers, page 518](#)

[Chapter 19, "Managing Vouchers," Modifying, Unposting, Deleting, and Closing Multiple Vouchers, page 532](#)

OpenItem Accounting

OpenItem accounting enables you to efficiently define, control, and maintain open accounts until all transactions for an OpenItem cause it to reach a zero balance. You can set up many types of OpenItem accounts when you define accounts on the Account page. Common examples of OpenItem accounts are employee advances, suspense accounts, and interunit accounts. Once an OpenItem account is established, you can keep track of the PeopleSoft Payables transactions that are posted to this account using the OpenItem Update page.

See Also

[Chapter 19, "Managing Vouchers," Using OpenItem Accounting in PeopleSoft Payables, page 549](#)

Approving Vouchers

This section provides an overview of voucher approval, lists prerequisites, and discusses how to:

- (Optional) Run the Voucher Approval Workflow Application Engine process (VCHR_APRV_WF).
- Use one of the Voucher Approval components (VCHR_APPROVE if you use Virtual Approver or VCHR_APPROVE2 if you use Approval Framework).
- Approve multiple vouchers.

Understanding Voucher Approval

You can approve vouchers manually, or you can approve them through workflow. If your business has a single approver, you may want to approve vouchers by accessing the Voucher Approval component directly. If your business has multiple levels of approval, you probably want to use workflow.

Workflow Approval

Voucher approval through workflow uses PeopleSoft Virtual Approver or Approval Framework. Both watch for transactions that require approval before they can move on to the next step in a business process—such as purchase requisitions awaiting approval before they can become purchase orders or vouchers awaiting approval before they can be posted or paid. An application engine process routes lists of such transactions to PeopleSoft Component Interfaces, which perform the processing to prepare the transactions for interaction with a user through the worklists. As users select transactions to work on in their worklists, they are presented with transaction data on the appropriate pages. Approving a transaction sends it on to the next step (such as acquiring additional user approvals) or on to a final process (such as posting).

Using workflow in approval processing has these advantages:

- Multilevel parallel and sequential approval rules provide extensive processing flexibility.
- Integration with worklists and email systems automates the approval process and ensures timely actions.
- Common objects across applications decrease the learning curve and time needed for implementation.
- Efficient separation of data entry and approval tasks provides control where and when you need it.
- Adaptability enables you to modify your processes as your business rules—and people—change.

Basic Components of the Workflow Approval Process

PeopleSoft Payables delivers a model (or example) of how you might set up your own voucher approval workflow using the PeopleSoft Virtual Approver. This model provides a starting point for your project team to understand and modify the approval process workflow to meet your needs.

Voucher approval process flow

To adapt the PeopleSoft Virtual Approver model to fit your organization's business processes, a thorough understanding of PeopleSoft Application Designer and Workflow Administrator is necessary. This includes the ability to carefully analyze the fundamental rules, roles, and routings that your departments use to carry out their day-to-day business routines, such as approving requisitions, purchase orders, and vouchers in the procurement cycle—processes you'll want to automate using the Virtual Approver.

Workflow Approval During Voucher Entry and Update

During transaction entry, the system refers to the approval rules that govern processing for the different types of transactions. Voucher approval rules are stored on several levels of the control hierarchy: the business unit, origin, control group, vendor, and the voucher itself.

When a voucher is saved during initial entry and is not preapproved, its status is set such that it is selected by the Voucher Approval Workflow process to go through approval processing.

If a voucher has been approved but not paid, and changes are made to the following fields, the voucher is returned to a pending status—unless it was preapproved—and is sent back through the approval processing workflow. This is also true if any new voucher lines or distribution lines are inserted.

- Voucher
 - Invoice ID
 - Invoice Date
 - Vendor ID
 - Total Amount
 - Currency
 - Sales Tax Amount
 - Vat Amount
 - Freight Amount
 - Miscellaneous Amount
 - Payment Terms

- Voucher line
 - PO Business Unit
 - PO ID
 - PO Line
 - Po Schedule
 - Merchandise Amount
 - Item ID
 - Quantity
 - Unit of Measure
 - Unit Price
 - Discount Applicable
 - Withhold
 - Vat Tax Code
 - Vat Recovery Pct
 - Receiver Business Unit
 - Receiver ID
 - Receiver Line
 - Receiver Schedule
 - Match Line Option
 - Distribution Method
 - Shipto ID
 - Tax Destination
 - Sales Tax Code
 - Ultimate Use Code
 - SUT Applicability

- Distribution Line
 - GL Business Unit
 - Statistics Code
 - Quantity
 - Merchandise Amount
 - Asset
 - Asset Management Business Unit
 - Asset ID
 - Profile ID
 - Vat Transaction Type
 - all Chartfields
- Scheduled Payments
 - Remit Vendor
 - Remit Address Sequence

The approval process establishes that the voucher has been approved for payment processing in the system. The approval process picks up a voucher after it has been edited online or through the Voucher Build Application Engine process (AP_VCHRBLD) and is in a postable status. A voucher that does not require matching can be in one of two postable states:

Preapproved The voucher is automatically approved upon balancing and validation and is ready for payment processing.

Requires Payment Approval The voucher must be manually approved for payment.

If you have the authority to approve vouchers, you can do so using the pages in the Voucher Approval component.

A voucher that requires matching must also go through the Matching Application Engine process (AP_MATCH) to qualify as ready for payment. After the voucher has successfully passed the matching requirements, it is approved for payment. If a voucher does not pass matching, you can still pay it if you have selected the Pay Unmatch Voucher option on the User Preferences - Procurement: Payables page for your user ID, or by overriding the match exceptions.

Workflow Approval After Voucher Entry

You should have the Voucher Approval Workflow process scheduled to run regularly. After you have saved a voucher, the Voucher Approval Workflow process determines the current approval status for the voucher by calling the Virtual Approver routine. The status of the voucher is updated based on what Virtual Approver concludes according to the approval rules defined in Workflow Administrator.

The Voucher Approval Workflow process uses PeopleSoft Component Interfaces then determines which users (if any) to notify, through workflow worklists or email forms, of the pending approval. Workflow routing is initiated by calling the Virtual Router routine that performs the needed action. You can access the Voucher Approval page from your worklists, manually inspect the voucher information, and either approve or reject a voucher for payment.

When you enter the Voucher Approval component, the voucher is typically presented in a pending status—payment has not been approved or denied.

Note. The Voucher Approval page displays vouchers whose approval status is *Pending* and whose match status is *Matched*.

In the Voucher Approval Workflow process, both worklists and emails are generated as follows:

- If additional approvals are required, based on what the Virtual Approver concludes, the system generates appropriate worklists for the roles that are eligible to approve the voucher.
- If a voucher is denied, the system sends an email with voucher details to the role you define on the Payables Options - Vouchering Options 1 page.

The person you define as the one to whom all rejection emails should be forwarded receives these voucher details. You can choose not to use email for rejections but to instead create an additional worklist to use for routing. We defined an email for rejections to provide examples of both worklists (approved vouchers are sent to a worklist) and emails (denials are sent by email).

See [Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining the Voucher Approval Rules, Default Currency, and Single Payment Master Vendor, page 73.](#)

- If the voucher passes all approvals, its comprehensive approval status is set to *Approved*, and you can select it for payment.

Worklists for Voucher Approval

Your worklist displays all items that have been routed to you to work on. In PeopleSoft Payables, use the workflow worklist to navigate to the Voucher Approval pages to inspect and take action on vouchers that must be approved for payment.

See Also

[Chapter 20, "Running the Matching Process," page 559](#)

PeopleTools PeopleBook: Workflow Technology

PeopleSoft 9.1 PeopleBook: Approval Framework, "Defining the Approval Transaction Registry," Registering Approval Transactions

PeopleSoft 9.1 PeopleBook: Approval Framework, "Using the Approval Monitor"

Prerequisites

You must perform the following setup before using voucher approval:

- (For workflow approval only) Set up Virtual Approver for voucher approval.

PeopleSoft delivers business process definitions, rule sets, and approver roles, but you may need to modify these or add your own.

- Set up voucher approval rules for PeopleSoft Payables business units and, as necessary, at lower levels in the PeopleSoft Payables control hierarchy.

Voucher Approval - Approval page

Note. The Voucher Approval page displays vouchers whose approval status is *Pending* and whose match status is *Matched*.

You can use the Voucher Approval component as part of workflow, or you can use it to approve vouchers manually. Approval processing steps are the same, regardless of whether you arrived there through the worklist or by navigating through the menus manually.

Approval Information

The Approval Information group box displays the current approval status of the voucher: Pending, Approved, or Denied.

Note. If you have the authority, you can deny or approve vouchers. Vouchers do not display on this page after you have approved and saved them. Also, if you do not have the authority to change voucher status, you can only route vouchers to an authorized approver.

Before you approve a voucher, you can also view voucher line and distribution line information on the Voucher Approval - Line Information page and the Voucher Approval - Charge Information page.

Voucher Details

The Voucher Details group box displays voucher header totals.

Details

The Details group box displays vendor details.

Click the View Related Links button to access the Remit Vendor Address page, where you can view the vendor's address.

Using the Approval Framework - Vouchers Component to Approve Vouchers

Access the Approval Framework - Vouchers – Approval page (Accounts Payable, Vouchers, Approve, Approval Framework - Vouchers, Approval).

Unpost			

UnPost Voucher page

After a voucher is posted using the Voucher Posting Application Engine process (AP_PSTVCHR), PeopleSoft Payables prevents you from changing distribution line fields by disabling those fields on the online Voucher component (VCHR_EXPRESS). If you must update distribution line information after posting, you must first unpost the voucher.

Unposting a voucher instructs the PeopleSoft Payables system to create reversing entries that undo the effects of the posting. Unposting happens immediately when you save the UnPost Voucher page.

Note. Any unpaid voucher can be unposted. Fully or partially paid vouchers can be unposted only if you select Allow Unpost Paid Vouchers on the Procurement Controls - General Controls page for the related general ledger business unit.

Update Voucher

Accounting Date Override the accounting date, which defaults from the original voucher. This field is required.

Reversal Accounting Date

Business Unit Default Select this option to accept the business unit default as the date of the accounting reversal. The system checks the accounting date indicator on the Payables Options page and uses the specified accounting date.

Use Current Date Select this option to make the current date the date of the accounting reversal.

Use Specific Date Select this option if you want to enter the accounting date to which the reversals will post.

Document Sequencing Links

The following links appear only if document sequencing is enabled for the business unit.

Unpost Document Sequencing Click to access the Document Sequence page, where you can specify document sequencing information for the unposting transaction.

Repost Document Sequencing Click to access the Document Sequence page, where you can specify document sequencing information for the reposting transaction.

Unposting Action

Unpost Click to start the unposting process. The system issues a message prompting you to confirm the unpost. If you want to continue with the unpost, click OK.

Before you unpost the voucher, view voucher details on the Voucher Details page.

Once you have unposted the voucher, you can update it using the Voucher component or the Voucher Maintenance component and repost it. If the voucher is unpaid, then all voucher fields are available for updating (unless it is a register voucher, in which case only voucher line and distribution lines fields can be updated). However, if the voucher has been paid or partially paid, all fields are completely unavailable for edit.

Note. The unposting process is not integrated with Vertex and Taxware tax functionality, and the process does not call the Vertex or Taxware functionality to recalculate sales and use tax amounts. This means if you have these third party tax applications installed and create a voucher with erroneous tax amounts, you *cannot* unpost the voucher, correct the tax amounts, and repost the voucher. Instead, you must create a reversal voucher to reverse all the accounting entries in the system, then recreate the voucher with the correct tax amounts.

Closing Individual Vouchers

This section gives an overview of voucher close functionality discusses how to:

- Close vouchers.
- Restore encumbrances.

Understanding Voucher Close Functionality

This section discusses:

- Voucher close functionality.
- PO voucher close functionality with no Commitment Control integration
- PO voucher close functionality and Commitment Control integration.
- Voucher closure processing sequence.

Voucher Close Functionality

You close vouchers when you want the remaining liability to be "written off" the vendor balance and the voucher to be considered complete. For example, when you have items in dispute that you and the vendor have agreed that you will not make a payment on these items. Close the voucher to credit the expense accounts and debit the liability accounts for the portion of the voucher that remains unpaid.

To close a voucher, the voucher must be:

- Posted.
- Not selected for payment.
- Not fully paid.

To close vouchers:

1. Create the vouchers.
2. Run the Budget Processor Application Engine process (FSPKBDP3).
3. Run the Matching process.
4. Run the Document Tolerance Application Engine process (FS_DOC_TOL).
5. Run the Voucher Posting process.
6. Close vouchers after the system completes the Voucher Posting process.

For matched vouchers, the Voucher Posting process reverses the matching, provided the voucher meets certain requirements.

PeopleSoft Payables voucher close logic handles increasingly complex voucher close scenarios, such as the following:

- Basic voucher closures.
- Voucher closures involving associated purchase orders (PO).

The PO voucher close functionality gives you the option to unmatched vouchers.

- Voucher closures involving associated purchase orders and Commitment Control integration.

The PO voucher close functionality gives you options by which to make further adjustments to a PO voucher transaction after it has been matched, budget checked, and posted. The PO voucher close functionality enables you to either restore the encumbrance and reopen a purchase order (PO) or to liquidate the remaining liability on a purchase order.

The PO voucher close functionality offers greater flexibility with exception processing of PO vouchers. For example, if you match a PO voucher to the wrong purchase order or PO line/schedule, the PO Voucher Close option enables you to restore the encumbrance back to the purchase order. However, if you do not want to pay the remaining unpaid amount of a PO voucher, you can close the voucher without restoring the purchase order encumbrance.

After closing the PO voucher, you must run the Voucher Posting process, as running this process triggers the system to concurrently run the Budget Processor process.

The system performs various edits when you save voucher closures. Note the following restrictions for vouchers with associated purchase orders:

- You cannot close PO vouchers when the voucher is associated with a debit memo or reversal voucher.
- You cannot reverse encumbrances on partially paid vouchers. You must either cancel the payment or close only the remaining liability.
- You cannot reverse encumbrances if the associated purchase order has been reconciled.

For vouchers without associated purchase orders, you cannot close non-PO vouchers when the voucher is associated with an adjustment voucher or reversal voucher. Vouchers associated with adjustment vouchers cannot be closed unless all related vouchers are closed first.

Note the following limitations for voucher payments:

- You cannot close vouchers having multiple payment schedules, with one of the schedules already paid.
- You cannot cancel a voucher payment if the voucher is associated with a debit memo or a reversal voucher.

Similar functionality exists in the payment cancellation and payment schedule cancellation functionality for payments associated with PO vouchers. This functionality enables you to cancel payments with associated liabilities.

See [Chapter 22, "Using Additional Payment Processing Options," Understanding Payment Cancellation With Associated Liabilities, page 723.](#)

PO Voucher Close Functionality With No Commitment Control Integration

When the closure includes purchase orders associated with vouchers, but Commitment Control is not enabled, the system provides you with the option of unmatching the voucher, in addition to closing the liability. The system:

- Determines if the matched voucher is associated to a closed receiver line.
- Provides you with the option for unmatching the voucher if there is no association to a closed receiver line.

The system generates a new message asking if you wish to unmatch the voucher. Select Yes to unmatch the voucher and close the liability. Select No to only close the liability.

- Provides you with the option for unmatching the voucher if there is an association to a closed receiver line.

The system generates a new message asking if you wish to unmatch the voucher. Select Yes to unmatch the voucher and close the liability. Note that the system unmatches the closed receiver line as well. Select No to only close the liability.

- Determines if the voucher is partially paid.

If so, the system displays a warning message that the voucher cannot be unmatched because it has been partially paid. You can continue with closing the voucher, however, the system does not unmatch the voucher.

PO Voucher Close Functionality and Commitment Control Integration

If purchase orders are associated with a voucher marked for closure, the system gives you the option of restoring encumbrance to the purchase order. If you choose to restore the encumbrance, the system automatically unmatches the voucher. If you choose not to restore the encumbrance, the system does not unmatch the voucher.

When the voucher is associated with purchase orders, and Commitment Control is enabled, the system:

- Determines if the encumbrance can be restored to the purchase order.

The system generates a message asking if you wish to restore the encumbrance and reopen the purchase order. Select Yes to restore the encumbrance and reopen the purchase order. Select No and the system only liquidates the liability.

If you use matching and you opted to restore the encumbrance and reopen the purchase order, the system automatically unmatches the voucher after the Voucher Posting process, which updates the purchase order and the receiver match statuses to *Partial*.

- Determines if the purchase order has been reconciled and finalized, and if encumbrances are established.

If all purchase orders have been reconciled, then the system prevents you from reopening the purchase orders and restoring the encumbrances and the system advises you that only the remaining liability can be restored.

- Determines if the PO voucher has no associated partial payments.

If associated partial payments exist, the system does not perform the undo matching functionality.

The system uses these results to ensure field value synchronization between source transactions and referenced transactions, which are used in the Budget Processor process.

The following diagram illustrates the PeopleSoft Payables voucher closure processing logic for scenarios involving associated purchase orders and Commitment Control integration:

PeopleSoft Payables voucher close processing logic, for scenarios involving associated purchase orders and Commitment Control integration

See *PeopleSoft Commitment Control 9.1 PeopleBook*, "Processing Source Transactions Against Control Budgets."

Voucher Closure Processing Sequence

The following is the sequence of processes you perform to successfully close a PO voucher that has not been paid:

1. Create a PO voucher.
2. Run the Budget Processor process.
3. Run the Matching process.
4. Run the Voucher Posting process.
5. Close the voucher.
6. Run the Voucher Posting process again to unmatched any matched items.

Pages Used to Close Individual Vouchers

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Close Voucher	VCHR_CLOSE1	Accounts Payable, Vouchers, Add/Update, Close Voucher, Close Voucher	Mark a voucher for closure by the Voucher Posting process. You can close vouchers associated with POs or not associated with POs.
Document Sequence (Close)	DOC_SEQ_CLOSE_SEC	Click the Document Sequencing link on the Close Voucher page.	Specify document sequencing information for the voucher closing transaction.
Voucher Details	VOUCHER_DETAILS	Accounts Payable, Vouchers, Add/Update, Close Voucher, Voucher Details	Confirm that you have selected the correct voucher for unposting, closing, or deletion. View the voucher details, including payment terms, discount information, amount of voucher, and tax information

Page Name	Definition Name	Navigation	Usage
PO Associated with a Voucher	AP_VCLOSE_PO_DET	Click the Associated POs link on the Close Voucher page.	View purchase orders associated with the selected voucher. This link is conditional, and the page appears only when the following three conditions exist: • The voucher is associated with a PO. • You have enabled Commitment Control. • You close the voucher with liabilities.
PO Schedules tied to the Voucher	AP_VCLOSE_PO_DET1	Click the Associated PO Schedules link on the Close Voucher page.	View purchase order schedules associated with the selected voucher, and determine if you want to restore its encumbrance. The system displays purchase order and voucher quantities and amounts in the Purchase Order Schedule group box and PO ChartFields in the PO Distribution group box. This link is conditional, and the page appears only when the following three conditions exist: • The voucher is associated with a PO. • You have enabled Commitment Control. • You close the voucher with liabilities.
Voucher Inquiry	AP_VOUCHER_INQUIRY	Accounts Payable, Review Accounts Payable Info, Vouchers, Voucher, Voucher Inquiry	Search for and review status of a voucher and any payment information.

Mark Voucher for Closure

Select to indicate that this voucher is to be closed with the next posting run for this business unit.

- If the voucher is a direct voucher, no further change is needed.
- If the voucher is a PO voucher and Commitment Control is not enabled, the system displays a message regarding unmatching the voucher. If the voucher is associated to a closed receiver line, this message also contains a reminder that unmatching the voucher also unmatches the closed receiver line.

Select Yes to unmatch the voucher. The system determines if there are any partial payments. If there are partial payments, the system does not unmatch the voucher, but only closes the liability.

Select No and the system only closes the liability.

- If the voucher is a PO voucher and Commitment Control is enabled, the system displays a message regarding reversing encumbrances.

Select Yes to restore the encumbrance and reopen the purchase order. When you select Yes to restore the encumbrance, the system determines if the purchase order linked to the voucher is reconciled. If the purchase order is reconciled, the PO Voucher Close feature prevents you from reopening the purchase order and restoring the encumbrance; the system liquidates only the remaining liability on the PO voucher. If the PO is not reconciled, the system displays the PO Associated with the Voucher page.

Select No and the system only liquidates the liability.

Note. Once you mark a voucher for closure and save the voucher, you must run the Voucher Posting process to create the accounting entries to relieve the liability and activate the Budget Processor process. The amount relieved is applied against the original accounts.

Important! If your organization uses Commitment Control, saving a voucher marked for closure is irreversible; you cannot undo this action. You should carefully review all vouchers marked for closure before saving.

Reinvoice ERS Receipt Lines?

Select this checkbox to create new invoices from the ERS receipt lines attached to this voucher. New invoices will be created when voucher build is run for ERS vouchers.

Close Reopened Receipts?

This checkbox is not visible if the voucher is not from ERS. If the box is checked, the receipt lines will be updated so that they are in a state where they will be processed by Voucher Build creating ERS vouchers again. If it is not checked, the receipt lines will remain as they are and will not be eligible to be processed by Voucher Build again.

Action

Select to run one of the following processes, after dating and marking the voucher for closure. Options are:

Voucher Post: Run this process to create the accounting entries to relieve the liability.

Voucher Post and GL: (Voucher Posting process and Journal Generator Application Engine process (FS_JGEN). Run this process to perform the actions of the Voucher Posting process and create PeopleSoft General Ledger journal entries.

Before saving the page, you can go to the Voucher Details page to view the details for the voucher.

See Also

Chapter 23, "Running Voucher and Payment Posting," page 751

Restoring Encumbrances

Access the PO Associated with a Voucher page (click the Associated POs link on the Close Voucher page).

The system lists all purchase orders linked to the PO voucher on this page, including reconciled purchase orders, which are unavailable for selection.

Reverse Enc (reverse encumbrance)

Select the check box for the purchase orders that you want to restore the encumbrance on. The system updates Commitment Control field flags for the POs you selected in the DISTRIB_LINE, DISTRIB_LINE_NP, and PO_LINE_DISTRIB tables, depending on whether the PO line distribution has been finalized, or closed or cancelled. The Budget Processor and Voucher Posting processes then use these flag values to generate the appropriate budget and actuals entries.

Note. Be aware that if the selected purchase order has a status of *Finalized*, the system changes the status to *Partial* and adds the delta amount to the encumbrance.

Also, if you use matching and you opted to restore the encumbrance and reopen a completely closed purchase order (one without partial payments), then the Voucher Posting process automatically invokes the undo matching process, which reopens the PO Line/Schedule for further invoicing.

Deleting Individual Vouchers

This section discusses how to delete vouchers.

Pages Used to Delete Individual Vouchers

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Delete Voucher	VCHR_DELETE1	Accounts Payable, Vouchers, Add/Update, Delete Voucher, Delete Voucher	Delete vouchers.
Voucher Details	VOUCHER_DETAILS	Accounts Payable, Vouchers, Add/Update, Delete Voucher, Voucher Details	Confirm that you have selected the correct voucher for unposting, closing, or deletion. View the voucher details, including payment terms, discount information, amount of voucher, and tax information.

Deleting Vouchers

Access the Delete Voucher page (Accounts Payable, Vouchers, Add/Update, Delete Voucher, Delete Voucher).

Note. PeopleSoft Payables enables you to select only those vouchers that are eligible for deletion. The vouchers cannot have been posted or selected for payment, nor can any portion of the vouchers ever have been paid.

PO vouchers with the Finalize checkbox selected cannot be deleted.

Delete

Click to delete the voucher. The system prompts you to confirm your action. If document sequencing is enabled for the business unit, the system also prompts you to enter a deletion reason. If you choose to continue, the voucher is deleted from the database, and you receive another message verifying this.

If you are using the Commitment Control feature, the Budget Processor process is automatically invoked after you confirm deletion.

Before saving the page, you can go to the Voucher Details page to view the details for the voucher.

Warning! Once you delete a voucher, you cannot retrieve it or undo the deletion. The data rows that are associated with the voucher remain in the tables so that you cannot reuse the voucher number.

Note. If you delete a voucher that was entered as a manual payment, the payment is *not* deleted; it remains in the system and can be applied to other vouchers.

Vouchers associated with debit memo adjustment vouchers cannot be deleted unless all related vouchers are deleted first.

Searching for and Correcting Individual Vouchers

This section provides an overview of the Voucher Maintenance Search and Voucher Maintenance components, lists common elements, and discusses how to:

- Search for vouchers needing correction or updating.
- View voucher summary information.
- View and modify voucher header information.
- Search for and modify voucher lines.
- Search for and modify distribution lines.
- Search for and modify scheduled payments.
- View summarized voucher errors.

Understanding the Voucher Maintenance Search and Voucher Maintenance Components

The Voucher Maintenance Search component enables you to search for unpaid and unposted vouchers by a variety of criteria. When the component retrieves the vouchers that meet your criteria, you can link directly from the search results grid to the Voucher Maintenance component for the voucher you want. On that component, you can use various search tools to identify the voucher header, line, distribution, and scheduled payment information you want to modify, as well as view error summaries for the whole voucher.

If you know the voucher you want to modify, you can skip the Voucher Maintenance Search component and go directly to the Voucher Maintenance component to perform the modification.

You can also use the search page for the Voucher component to find vouchers in recycle status and correct errors on a voucher; the advantage of the Voucher Maintenance component is that it enables you to view only the voucher lines, distribution lines, or scheduled payments that have the errors you want to update or the field values you want to modify. It also allows you to add voucher or distribution lines without opening the entire voucher. For vouchers with multiple voucher lines and distribution lines, this can save time.

Errors That You Can View and Correct in the Voucher Maintenance Component

The Voucher Maintenance component displays the following types of voucher errors:

- Matching errors.
- ChartField and combination edit errors.
- Out of balance errors.
- Duplicate invoice errors.

Restrictions on Vouchers That You Can View and Correct in the Voucher Maintenance Component

The following factors restrict the vouchers that you can access through the Voucher Maintenance component:

- Vouchers must be unpaid and unposted.
- Vouchers entered within control groups must be in *Assigned* or *Ready for review* status.
- Template and third-party vouchers are not accessible.
- Registered vouchers cannot be in *Complete* status.
- Vouchers must be of a voucher style accessible to your user ID.

Search Reset Criteria

Voucher Maintenance Search page, with search results (2 of 2)

Entering Your Search Criteria

Enter your search criteria and click Search to retrieve a list of vouchers that meet your criteria. Click Reset Criteria to clear the search results and enter new search criteria.

Most of these search fields enable you to search by a specific value or a range of values (in the From and To fields), but not both. Select the radio button next to the field name (such as Business Unit) to enter a specific value. Select the radio button next to the From field (such as From Business Unit) to enter a range of values using the From and To fields. The page also allows open-ended ranges using either From or To values.

Search fields without radio buttons allow specific values only.

Note. Restrict your search as narrowly as possible to increase the speed with which you retrieve your search.

Voucher Lookup Criteria	There are some dependencies between search fields: • You must enter a business unit before you can specify voucher IDs or invoice numbers. • You must enter a business unit and user ID before you can specify control groups. • You must enter an Origin SetID before you can specify voucher origins.
Date Lookup Criteria	Enter date ranges of various types to restrict your search. To specify a range that is up to and including the current date, you need only enter the From date. To specify a single date, enter it in the From and To fields.
Vendor Lookup Criteria	There are some dependencies between search fields: • You must enter a SetID before you can specify vendor search criteria. • You must enter a single Vendor ID or a single Vendor Name before you can specify a vendor location.
Error Lookup Criteria	Select the error types you want to see.
Schedules Lookup Criteria	Select vouchers with scheduled payments on hold.

Viewing the Search Results

Each voucher that meets your search criteria appears in the Search Results grid. To clear the grid and perform a new search, click Reset Criteria.

Vouchers	Displays basic voucher information. Click the voucher ID to access the Voucher Maintenance component for the voucher in a new browser window, where you can view and modify the voucher. Return to the original browser window to select any other vouchers you want to view and modify.
Vendors	Displays vendor information for the voucher.
Status	Displays the following statuses for the voucher: approval status, match status, entry status (overall voucher status), and duplicate invoice status.

Viewing Voucher Summary Information

Access the Voucher Maintenance - Summary page (Accounts Payable, Vouchers, Maintain, Voucher Maintenance, Summary).

This page is identical to the Summary page in the Voucher component.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Viewing Voucher Summary Information, page 380.](#)

Viewing and Modifying Voucher Header Information

Access the Voucher Maintenance - Invoice Header page (Accounts Payable, Vouchers, Maintain, Voucher Maintenance, Invoice Header).

	Distrib Line	Extended Amount	Quantity Vouchered	GL Business Unit	Account	OpenItem	Operating Unit	Department	Progr Code
+	1								

Voucher Maintenance - invoice Lines page, after clicking the Go button for All invoice lines with an error (2 of 2)

Entering Your Search Criteria

Enter your search criteria and click the associated Go button to display the voucher lines you want to modify. The voucher lines appear in the Correct Invoice Lines scroll area.

There is a Go button for each field or set of related fields that constitutes a mutually exclusive set of search criteria. In other words, you can search by any *one* of the following fields or set of fields:

- Invoice Line.
- From Invoice Line and To Invoice Line.
- All invoice lines with an error.
- All invoice lines.
- All invoice lines that contain the following values:
 - Distribute by
 - Item ID
 - Item Description
 - Quantity
 - UOM
 - Unit Price
 - Extended Amount
- Invoice lines that contain the following purchase order/receipt values:
 - PO Unit.
 - PO Number.
 - Receipt Unit.
 - Receipt Number.
 - From Line Number (from PO line number).
 - To Line Number (to PO line number).
 - From Recv Line (from receiver line).
 - To Recv Line (to receiver line).
 - From Sched# (from PO schedule number).
 - To Sched# (to PO schedule number).

Viewing and Correcting Selected Invoice Lines

The fields in the Correct Invoice Lines scroll area also appear on the Invoice Lines scroll area on the Invoice Information page in the Voucher component, with the following exception:

Click the Review Errors button to access the Errors for Invoice Line x page, where you can view voucher line error messages by field.

Note. If you search for voucher lines with errors, the Correct Invoice Lines scroll area displays only voucher lines with voucher line-level errors. For example, if a voucher line has distribution line errors but no voucher line-level errors, it will not appear here if you search by invoice line with errors. And if you search by other criteria and the voucher line does appear here, there will be no Review Errors button for the voucher line, even if it has distribution line errors. You must use the Voucher Maintenance - ChartFields page to search for and correct distribution line errors.

Note. If you modify, add, or delete a voucher or distribution line on this page, you must save your changes before you can make modifications on the Voucher Maintenance - Chartfields page. If you do not save first, the ChartFields page appears in display-only mode and you will be prompted to save your changes. The same is also true if you made modifications to the distribution lines retrieved on the Voucher Maintenance - ChartFields page and you attempt to make changes using the Voucher Maintenance - Invoice Lines page.

Modifying, Unposting, Deleting, and Closing Multiple Vouchers

This section provides an overview of voucher mass maintenance, lists common elements, and discusses how to:

- Search for vouchers and select the maintenance operation.
- Perform mass field replacement.
- Perform mass voucher closure.
- Perform mass voucher unposting.
- Perform mass voucher deletion.
- View mass maintenance request information.

Understanding Voucher Mass Maintenance

The Voucher Mass Maintenance component enables you to search for vouchers by a number of voucher fields and then update specific fields across all of the vouchers that meet your criteria.

Note. You can filter vouchers based on the vendor's financial sanctions status if financial sanctions validation is enabled at the installation level or the bank level.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Financial Sanctions Validation and Transaction Processing.

You can also use the Voucher Mass Maintenance component to close, delete, and unpost multiple vouchers that share particular field values.

These mass changes are performed in real time by the Voucher Mass Maintenance Application Engine process (APVCHMASSMNT) when you save the component. For field-changed vouchers, you must then run the Voucher Build process to validate those changes and make the vouchers available for further processing.

Note. The Voucher Mass Maintenance component is intended as a safer alternative to using a database tool to make mass row updates to the voucher tables. By running all field-changed vouchers through the Voucher Build process, you ensure the integrity of your data. Still, we recommend that you provide access to this component only to system administrators or other users, and that users with access to this component also have access to *all voucher styles*.

This section discusses:

- Voucher mass maintenance processing of field replacement.
- Voucher mass maintenance processing of voucher closure.
- Voucher mass maintenance processing of voucher unposting.
- Voucher mass maintenance processing of voucher deletion.
- Fields to search by and replace.
- Eligibility for voucher mass maintenance.

Voucher Mass Maintenance Processing of Field Replacement

The Voucher Mass Maintenance process performs the following processing for field replacement:

- Selects and updates voucher tables with the new field values.
- Sets the voucher entry status to *M* or modified.
- Resets budget checking status to *Not Budget Checked* (only when Commitment Control is enabled).
- Resets the document tolerance status to *Not Checked* (only when document tolerance checking is enabled).
- Deletes scheduled payments records (only for a Payment Terms field replacement).

You must run the Voucher Build process to edit the replaced field values and complete the vouchers.

Voucher Mass Maintenance Processing of Voucher Closure

The Voucher Mass Maintenance process calls the Voucher Close Application Engine process (APVCHRCLOSE) to perform the following processing:

- Updates the voucher close status to closed and updates manual close date entered on the Voucher Mass Maintenance - Close page for the selected vouchers.
- Updates document sequencing numbers (only if document sequencing is enabled).

You must run the Voucher Posting process to create the closure accounting entries.

Note. For performance reasons, it is not recommended to run the Journal Generator process when you are closing more than five vouchers.

Voucher Mass Maintenance Processing of Voucher Unposting

The Voucher Mass Maintenance process calls the Voucher UnPost Application Engine process (APVCHRUNPOST) to perform the following processing:

- Updates voucher status to unposted and updates the accounting date.
- Posts reversal entries (with the reversal accounting date selected on the Voucher Mass Maintenance - UnPost page) to the voucher accounting tables.
- Updates the ENTRY_STATUS from *D* or Defaulted to *M* or Modified.
- Updates document sequencing numbers (only if document sequencing is enabled).
- Updates Entry Event codes (only if Entry Event processing is enabled).

Note. For performance reasons, it is not recommended to run the Journal Generator process when you are unposting more than five vouchers.

Voucher Mass Maintenance Processing of Voucher Deletion

The Voucher Mass Maintenance process calls the Voucher Delete Application Engine process (APVCHRDELETE) to perform the following processing:

- Deletes vouchers from the voucher tables.

The voucher row remains in the voucher tables, but the voucher ID is marked as unavailable. This is irreversible.
- Deletes corresponding match exceptions and match details records.
- Deletes corresponding duplicate invoice records.
- Deletes corresponding doc sequencing records (only if document sequencing is enabled).
- Resets the budget checking status of the voucher to *Not Checked* (only if Commitment Control is enabled).

The voucher is backed out of the budget ledger upon the next run of the Budget Processor.

See [Chapter 19, "Managing Vouchers," Unposting Individual Vouchers, page 504.](#)

Fields to Search By and Replace

Not all search fields are available for replacement, including key fields, processing status fields, critical date fields, and other fields that affect defaulting. The following table lists the voucher fields you can search by and indicates which of these are available for replacement:

<i>Search-by Field</i>	<i>Replace?</i>
Account	Y
Accounting Date	Y
Address Sequence Number	Y
Affiliate	Y
Alternate Account	Y

Voucher Style	N

Eligibility for Voucher Mass Maintenance

The following table lists the eligibility criteria for each voucher mass maintenance operation:

Mass Maintenance Operation	Eligibility Requirements
All operations	The following vouchers are excluded: • Vouchers currently in process. • Vouchers with an entry status of <i>Scheduled</i> or <i>Modified</i> (the status after field replacement is performed but before the Voucher Build process successfully builds the modified voucher). • Template vouchers.
Field replacement	The following vouchers are excluded: • Vouchers that have been approved, posted, selected for payment, or paid, fully or in part. • Third Party Vouchers. • Uncompleted registered vouchers. • Vouchers in a control group in <i>Verified</i> status.
Closure	Vouchers must meet the following requirements: • Vouchers must be posted, <i>not</i> matched, and <i>not</i> yet selected for payment or fully paid. • Vouchers cannot have a manual closed date assigned (cannot be marked for closure manually, but not yet posted). • Vouchers cannot have document sequencing enabled, if the default <i>Close</i> document type (at the voucher header's general ledger business unit) has not been set up for auto-number assignment. • Vouchers enabled for Commitment Control cannot reference a receiver. With Commitment Control enabled, you can close PO vouchers with the Mass Maintenance functionality, but you cannot restore encumbrances. • Vouchers cannot be associated with a debit memo adjustment voucher if the debit memo adjustment voucher has not been closed.

Mass Maintenance Operation	Eligibility Requirements
Deletion	The following vouchers are excluded: • Vouchers that are posted, selected for payment, or paid in part or full. • Vouchers in <i>Matched</i> status. • Vouchers having any scheduled payments selected by the Pay Cycle process or on hold for netting processing. • Vouchers currently being processed in a workflow worklist. • Vouchers that are associated with a debit memo adjustment voucher if the debit memo adjustment voucher has not been deleted.
Unposting	Vouchers must meet the following requirements: • Vouchers must be posted; approval and payment status are not a factor. • Vouchers cannot have document sequencing enabled, if the default <i>Accrual</i> or <i>Voucher Unpost</i> document type (at the voucher header's general ledger business unit) has not been set up for auto-number assignment, or if the <i>Interunit</i> document type (at a distribution line's general ledger business unit, if different from the voucher header general ledger business unit) has not been set up for auto-number assignment.

User voucher style restrictions are also enforced for field replacement, but not for closure, deletion, or unposting.

Note. You can perform only one mass maintenance operation on a voucher until it has gone through all post-maintenance operations (such as running the Voucher Posting process or the Voucher Build process).

On-Demand Processing

Use the on-demand processing functionality to perform Application Engine processes. The following on-demand processes are available to the Voucher Mass Maintenance component:

Field Value Displays As	Name	Application Engine Program
<i>Mass Maintenance</i>	Voucher Mass Maintenance Application Engine process Note. This application engine only applies the changes to the record. Vouchers with these field values are in a modified status and unavailable for any other processes except the Voucher Build process.	APVCHMASSMNT
<i>Voucher Build</i>	Voucher Build Application Engine process	AP_VCHRBLD
<i>Voucher Post</i>	Voucher Posting Application Engine process	AP_PSTVCHR
<i>Journal Generator</i>	Journal Generator Application Engine process	FS_JGEN

Displayed processes depend on the selected mass maintenance operation. For example, if you select the Field Replace button, the 1. *Mass Maintenance*, and 2. *Voucher Build* options appear.

Processes are numbered to indicate the order of how the processes run. For example, if you select 2. *Voucher Build*, the system automatically initiates the number 1 process (in this example, 1. *Mass Maintenance*), and then the number 2 process (in this example, 2. *Voucher Build*).

Field Replace Close UnPost Delete

Voucher Mass Maintenance page: search results (2 of 2)

To select vouchers for mass maintenance:

1. Enter one or more voucher field values or ranges of values.

Note. Restrict your search as narrowly as possible to increase the speed with which you retrieve your search.

Note. You can filter vouchers based on the vendor's financial sanctions status if financial sanctions validation is enabled at the installation level or the bank level.

2. Click the Search button to retrieve the vouchers that meet your search criteria. The vouchers appear in the Search Results grid.

Select the Reset Criteria link to clear the search results and enter new search criteria.

3. (Optional) In the Step 2 region of the page, which appears after you click Search, you can filter the retrieved vouchers by the following Filter Criteria:

- *All Vouchers.*
- *Vchrs that can be Fld Replaced* (vouchers that can be field replaced).
- *Vouchers that can be Closed.*
- *Vouchers that can be Deleted.*
- *Vouchers that can be UnPosted.*

Each of these filter criteria is associated with its own set of eligibility requirements.

See [Chapter 19, "Managing Vouchers," Understanding Voucher Mass Maintenance, page 533.](#)

Note. If you do not apply filter criteria here, the system still filters out the vouchers by the appropriate eligibility criteria when you select the maintenance operation and open the page for that operation. The filter criteria here enable you to filter the vouchers before you begin selecting them individually.

Note also that the vouchers available for field replacement depend on the voucher styles you have access to, as defined for your user preferences. If you select a filter criterion of *All Vouchers*, the results grid shows vouchers of all styles, regardless of your voucher style access. When you select field replacement as the maintenance operation to perform on your selected vouchers, however, only the vouchers whose style you have access to will be available on the Field Replace page.

4. Select the vouchers you want to perform maintenance on by selecting or deselecting the Sel (select) options.
5. Click the button for the maintenance operation you want to perform:
 - The Field Replace button accesses the Voucher Mass Maintenance - Field Replace page.
 - The Close button accesses the Voucher Mass Maintenance - Close page.
 - The UnPost button accesses the Voucher Mass Maintenance - UnPost page.
 - The Delete button accesses the Voucher Mass Maintenance - Delete page.

Performing Mass Field Replacement

Access the Voucher Mass Maintenance - Field Replace page (select vouchers on the Voucher Mass Maintenance page and click the Field Replace button).

Field Replace

Voucher Mass Maintenance

4 voucher(s) selected for this action. 4 voucher(s) eligible for processing.

Step 3: Specify a new value for each voucher field you want to update. For future reference, identify and describe this voucher maintenance request. Select Action and Click the Run button to initiate the update.

Action:

Voucher Mass Maintenance - Field Replace page

Note. If you did not use the appropriate filter criteria on the Voucher Mass Maintenance search page, some of the vouchers you selected may be ineligible for field replacement. The page informs you of the number of vouchers you selected and the number of these which are eligible for field replacement.

To replace fields on the selected vouchers:

1. (Optional) Identify and describe the field replacement request.
2. Enter the fields whose values you want to replace and the new values.

There are selection fields that are not available for replacement.

See [Chapter 19, "Managing Vouchers," Understanding Voucher Mass Maintenance, page 533.](#)

Note. The only online validation of field values is for field length and data type. The Voucher Build process edits field values for field-replaced vouchers.

3. Select to run one of the following on-demand processes.
 - Select 1. *Mass Maintenance*, which performs the Voucher Mass Maintenance process to update the voucher tables and sets the voucher entry status to *M* or modified.
 - Select 2. *Voucher Build*, which performs the Voucher Mass Maintenance process tasks, and also runs the Voucher Build process to edit the vouchers and update the voucher tables.

[Chapter 16, "Processing Batch Vouchers," Running the Voucher Build Process and Reviewing Messages, page 440](#)

Performing Mass Voucher Closure

Access the Voucher Mass Maintenance - Close page (select vouchers on the Voucher Mass Maintenance page and click the Close button).

Close

Voucher Mass Maintenance

21 voucher(s) selected for this action. 21 voucher(s) eligible for processing.
Journal Generation is not recommended for more than 5 vouchers, due to degradation in performance.

Step 3: Specify the Manual Close Date. For future reference, identify and describe this voucher maintenance request. Select Action and Click the Run button to initiate the close.

Request ID:

Request Description:

Close Criteria

Manual Close Date: 10/15/2009

Cancel

Action:

Run

Voucher Mass Maintenance - Close page

Note. If you did not use the appropriate filter criteria on the Voucher Mass Maintenance search page, some of the vouchers you selected may be ineligible for closure. The page informs you of the number of vouchers you selected and the number of these which are eligible for closure.

To close the eligible vouchers:

1. (Optional) Identify and describe the closure request.
2. Accept today's date, which is the default, or enter another date as the Manual Close Date.

The system validates that the close date occurs in an open accounting period.

3. (Optional) Review any associated purchase orders.

With Commitment Control enabled, you can close PO vouchers with the Mass Maintenance functionality, but you cannot restore encumbrances.

4. Select to run one of the following on-demand processes.

- Select *1. Mass Maintenance*, which performs the Voucher Mass Maintenance process to update the voucher tables and mark the vouchers for closure.
- Select *2. Voucher Post*, which performs the Voucher Mass Maintenance process tasks, and also run the Voucher Posting process to close the vouchers and update the voucher tables.
- Select *3. Journal Generator*, which performs the Voucher Mass Maintenance and the Voucher Posting processes tasks, and also run a process that creates PeopleSoft General Ledger journal entries.

Note. For performance reasons, it is not recommended to run *3. Journal Generator* when you are processing more than five vouchers.

After the process completes, a message appears informing you that it was successful.

Note. For document sequence-enabled vouchers, the system uses the default document type of *Close* to auto-generate a new document sequence number.

Performing Mass Voucher Unposting

Access the Voucher Mass Maintenance - UnPost page (select vouchers on the Voucher Mass Maintenance page and click the UnPost button).

UnPost

Voucher Mass Maintenance

38 voucher(s) selected for this action. 1 voucher(s) eligible for processing.

Step 3: Specify the new accounting date for the unposted vouchers, and specify the accounting date default to be used for reversing previously recorded accounting entries. For future reference, identify and describe this voucher maintenance request. Click the Apply button to initiate the unposting.

Request ID: Request Description:

UnPost Criteria

Update Voucher	Reversal Accounting Date
Accounting Date: 08/30/2009 	☒ Business Unit Default ☐ Use Current Date ☐ Use Specific Date
	Reversal:

[Cancel](#) Action: 

Voucher Mass Maintenance - UnPost page

Note. If you did not use the appropriate filter criteria on the Voucher Mass Maintenance search page, some of the vouchers you selected may be ineligible for unposting. The page informs you of the number of vouchers you selected and the number of these which are eligible for unposting.

To unpost the eligible vouchers:

1. (Optional) Identify and describe the unposting request.
2. Select a new accounting date for the unposted vouchers in the Update Voucher group box.

The system validates that the date occurs in an open accounting period.

3. Select the accounting date for the reversal accounting entries in the Reversal Accounting Date group box.

This group box appears only if:

- One of the vouchers you are unposting has had its accounting entries journal-generated to the general ledger, loaded to asset management, distributed to the Project Costing tables, or distributed to the VAT subsystem.
- One of the vouchers is enabled for document sequencing.

If there are any vouchers that are ineligible for the reversal accounting date option that you select, the system will apply the original voucher accounting date to the reversal entries.

If you select either the *Use Current Date* or *Use Specific Date* option, the system validates that the date occurs in an open accounting period.

The business unit default accounting date is set up on the Payables Options - Payables Options page.

4. Select to run one of the following on-demand processes.

- Select *1. Mass Maintenance*, which performs the Voucher Mass Maintenance process to update the voucher tables and unpost the vouchers.
- Select *2. Journal Generator*, which performs the Voucher Mass Maintenance process tasks, and also run a process that creates PeopleSoft General Ledger journal entries.

Note. For performance reasons, it is not recommended to run *2. Journal Generator* when you are processing more than five vouchers.

After the process completes, a message appears informing you that it was successful.

Performing Mass Voucher Deletion

Access the Voucher Mass Maintenance - Delete page (select vouchers on the Voucher Mass Maintenance page and click the Delete button).

Delete

Voucher Mass Maintenance

38 voucher(s) selected for this action. 36 voucher(s) eligible for processing.

Step 3: This action cannot be undone. Select Action and Click the Run button to delete the selected vouchers, or click the Cancel hyperlink to return to the search criteria page. For future reference, identify and describe this voucher maintenance request.

Request ID: Request Description:

[Cancel](#) Action:

Voucher Mass Maintenance - Delete page

Note. If you did not use the appropriate filter criteria on the Voucher Mass Maintenance search page, some of the vouchers you selected may be ineligible for deletion. The page informs you of the number of vouchers you selected and the number of these which are eligible for deletion.

To delete the eligible vouchers:

1. (Optional) Identify and describe the deletion request.

This is required if any of the vouchers on your list are enabled for document sequencing.

2. Select *1. Mass Maintenance*, which performs the Voucher Mass Maintenance process to update the voucher tables and delete the vouchers.

Warning! Once you click this button, the vouchers will be deleted immediately from the system.

After the process completes, a message appears informing you that it was successful.

Viewing Voucher Mass Maintenance Request Information

When you perform a voucher mass maintenance operation, the system logs your User ID, the Request ID and description you entered on the Voucher Mass Maintenance operation page, the date, and the time that you requested the operation.

To view this audit information, run a query on the VCHR_MMT_RQS_HT table.

Using OpenItem Accounting in PeopleSoft Payables

This section provides an overview of OpenItem accounting and discusses how to:

- Enter OpenItem accounts.
- Enter OpenItem transactions on vouchers.
- Track OpenItem accounts.

See Also

PeopleSoft General Ledger 9.1 PeopleBook, "Using Open Item Accounting"

Understanding OpenItem Accounting

OpenItem accounting enables you to efficiently define, control, and maintain open accounts until all transactions for an OpenItem cause it to reach a zero balance. You can set up many types of OpenItem accounts on the Account page in the ChartField Values component (GL_ACCOUNT). Common examples of OpenItem accounts are employee advances, suspense accounts, and interunit accounts. Once an OpenItem account is established, you can keep track of the PeopleSoft Payables transactions that are posted to this account using the Open Item Update page.

OpenItem Accounting Terms

The following terms are used with OpenItem accounting:

OpenItem Account	Specifies the account that requires OpenItem accounting, such as Employee Advances, CFO Suspense, and Due From/Due To Subsidiary. You set up OpenItem accounts on the Account page in the ChartField Values component.
OpenItem Key	Determines the identifying or search key for open items in an OpenItem account. For an Employee Advances account, the OpenItem key field would typically be the Employee ID or Social Security Number. This means that any voucher distribution that posts to the Employee Advances account would also carry an employee ID or social security number. This search key is required by the system and enables the association of multiple vouchers with the open item.
OpenItem	Each transaction that affects an OpenItem account remains an open item until all transactions for a given OpenItem key add up to 0. For example, the first open item in the Employee Advances account is normally the issuance of an advance. Vouchers entered against the initial advance become open items also, until a final voucher brings the balance for a particular employee ID to 0, at which point all open items for the employee ID are closed.
Closed Item	Transactions for an OpenItem key become closed items when the total for the OpenItem key is 0.

Note. The PeopleSoft Payables system does not automatically mark the OpenItem as closed in the distribution line table once the OpenItem balance reaches zero. However, you can manually change the status on the OpenItem transaction from *Open* to *Closed* on the Open Item Update page.

OpenItem Accounting Setup and Processing

To use OpenItem accounting:

1. Set up an OpenItem account on the Account page in the ChartField Values component.

For example, you could set up an employee advance account as an OpenItem account, using the Employee ID field (EMPLID) from the PERSONAL_DATA table as the open item key.

See [Chapter 19, "Managing Vouchers," Entering OpenItem Accounts, page 553.](#)

2. Create an advance voucher.

On the distribution line, enter the employee ID (the open item key value) in the OpenItem field. In our example, we'll enter a voucher for an advance in the amount of 1000 EUR.

See [Chapter 19, "Managing Vouchers," Entering OpenItem Transactions on Vouchers, page 555.](#)

3. Post the advance voucher and journal-generate it.

Here are the accounting entries for an advance in the amount of 1000 EUR.

Account	Debit	Credit
Emp Adv	1000.00	
APA		1000.00

4. (Optional) View the OpenItem account using the Open Item Update page.

In our example, one line for the advance voucher, in the amount of 1000 EUR, appears.

You can also view the OpenItem account in PeopleSoft General Ledger using the Open Items - Review Status Online page.

See [Chapter 19, "Managing Vouchers," Tracking OpenItem Accounts, page 556.](#)

See *PeopleSoft General Ledger 9.1 PeopleBook*, "Using Open Item Accounting," Reviewing Reconciled Open Items.

5. Run the Pay Cycle process or create a manual payment to pay the advance:

Account	Debit	Credit
APA	1000.00	
CASH		1000.00

6. Enter a voucher for an expense against the advance.

Again, enter the employee ID in the OpenItem field on the distribution line for the open item account.

In this example, we enter an expense of 1100 EUR and schedules a payment of 100 EUR.

See [Chapter 19, "Managing Vouchers," Entering OpenItem Transactions on Vouchers, page 555.](#)

7. Post the voucher and journal-generate it.

Here are the accounting entries for the expense voucher:

Account	Debit	Credit
Emp Adv		1000.00
EXP	1100.00	
APA		100.00

8. Create a payment for any remaining expense amount.

In this case, we create a payment of 100 EUR.

Account	Debit	Credit
APA	100.00	
CASH		100.00

9. View the OpenItem account balance using the Open Item Update page.

In our example, the OpenItem balance is zero, as the expense entry has balanced out the advance entry, and the OpenItem is closed in PeopleSoft Payables.

10. Run the PS/GL Open Item Reconciliation process (GLPPOITM) or perform open item reconciliation manually in PeopleSoft General Ledger to reconcile and close open items in the general ledger.

The PeopleSoft Payables system does not automatically mark the OpenItem as closed in the distribution line table once the OpenItem balance reaches zero. Since OpenItem accounting is ultimately a general ledger function, no automatic processing is done in PeopleSoft Payables. However, you can manually change the status on the OpenItem transaction from *Open* to *Closed* on the Open Item Update page.

Note. OpenItem transactions are passed to PeopleSoft General Ledger when they are journal-generated, and can be viewed on the OpenItems - Review Status Online page. However, PeopleSoft General Ledger updates the status of OpenItems independently of PeopleSoft Payables. PeopleSoft Payables reconciles open items by open item key reference and account, while the PS/GL Reconciliation process in PeopleSoft General Ledger reconciles by account. An OpenItem that is balanced and closed in PeopleSoft Payables can, therefore, remain open in PeopleSoft General Ledger if OpenItem transactions for another open item key reference on the account remain open. Likewise, an OpenItem that is closed in PeopleSoft General Ledger does not automatically update the OpenItem as closed in PeopleSoft Payables.

Tracking OpenItem Accounts

Access the Open Item Update page (Accounts Payable, Vouchers, Add/Update, Update Open Item, Open Item Update).

Note. Multiple views of this page are available by clicking the tabs in the scroll area. We document the fields that are common to all views first.

Common Page Information

Open Item Key

Displays the OpenItem key reference. In the case of an employee advance, the OpenItem key might be an employee's social security number or employee ID.

Currency

Displays the base currency for the OpenItem key reference.

Total Open Amount

Amount

Displays the open balance amount for the OpenItem reference.

Lines Displays the number of voucher lines that comprise the open item balance.

Total Closed Amount

Amount Displays the closed balance amount for the OpenItem reference.

Lines Displays the number of voucher lines that comprise the closed item balance.

Scroll Control - Open Items

Select one of the following to control which items appear in the Open Item Update scroll area:

- Show All Items.
- Show Only Open Items.
- Show Only Closed Items.

Open Item Update

The Open Item Update scroll area lets you view the various OpenItem accounts for the OpenItem reference, including the total open and closed amounts for the account.

Account Displays the OpenItem account number and description.

OpenItem Displays the OpenItem key field that for the open item. The most common values are *Employee ID* and *Social Security Number*. You define the OpenItem key field when you define the OpenItem account on the Account page in the ChartField Values component.

Details

The Details group box displays voucher line details for each line item under the OpenItem account, including the following.

Status View or change the open or closed status of the item. When you update the status, the system updates the running totals fields.

Note. The PeopleSoft Payables system does not automatically mark the OpenItem as closed in the distribution line table once the OpenItem balance reaches zero. Use this field to manually change the status to *Closed*.

Reference View or update the OpenItem key reference associated with this voucher line.

Line Displays the voucher line number.

Description

Displays the description that was entered for the voucher line. Use this field, along with the Amount field, to match open items to one another in order to close them.

Chapter 20

Running the Matching Process

This chapter provides an overview of the matching process, lists prerequisites, and discusses how to:

- Initiate the Matching Application Engine process (AP_MATCH).
- Manage matches and match exceptions.
- Process debit memo adjustment vouchers.

Understanding the Matching Process

Use the Matching process to compare vouchers with purchase orders and receiving documents. That way, you can ensure that you pay for only the goods and services that you order and receive. To run the Matching process, you must have installed PeopleSoft Payables and PeopleSoft Purchasing. The system automatically performs the required matching based on the document characteristics. Users simply select a match rule control ID; the system handles all of the comparison. Use the matching exceptions workflow, provided with PeopleSoft Payables, to route match exceptions to specified users. PeopleSoft eSettlements also uses the Matching process to compare invoices with purchase orders and receipts.

Note. If you enable the Commitment Control feature and you want to use the voucher match status as a prerequisite for budget-checking transactions, you must modify the Selection Criteria page in the Source Transactions component (KK_SOURCE_TRAN) to include the MATCH_STATUS_VCHR field as part of the PeopleSoft Payables transactions. Select *MATCH_STATUS_VCHR* in the Field Name field, and select *M* in the Field Value field.

This section discusses:

- Matching types.
- Matching process flow.
- Matching options with purchase orders.
- Matching tolerances.
- Matching workflow.
- Delivered document association groups.
- Delivered document association rules.
- Delivered match rule types.
- Delivered match rules.

- Delivered match rule controls.
- Matching examples.

See Also

PeopleSoft Commitment Control 9.1 PeopleBook, "Setting Up Commitment Control Source Transaction Types"

[Appendix B, "Delivered Workflows for PeopleSoft Payables," page 1285](#)

Matching Types

The system performs several types of matching:

- Two-way matching compares vouchers and purchase orders if the Receiving Required option for the purchase order is *Do Not Receive* or *Optional*.
- Three-way matching compares vouchers, purchase orders, and receipts if the Receiving Required option is *Required* and the Inspection Required option is not selected for the receiver.
- Four-way matching compares vouchers, purchase orders, receivers, and inspections if receiving is required and inspection is required.
- Receipt-only matching compares vouchers to non-purchase order receipts.

This flowchart provides an example of the three-way matching process, illustrating how the Matching process compares the entered voucher to the purchase order and receiving documents:

Three-way matching process example

Matching Process Flow

After you set up the Matching process and create vouchers to be matched:

1. Specify the matching run control options and run the process on the Match Request page, from the Action field on the Invoice Information page in the Voucher component (VCHR_EXPRESS), or from the Match Workbench.
 - a. If vouchers match successfully, the system sets the status of these vouchers to *Matched* and the voucher is available for payment.
 - b. If vouchers do not pass the Matching process, the system flags them as exceptions.

The system logs each match rule exception for the voucher in a voucher match exception log table that you can view using the Match Workbench. You can access the Match Workbench from the Match Request page, by clicking the Exceptions link on the Voucher Summary page in the Voucher component, or through general navigation.

2. View the exceptions on the Match Exception Workbench Details page, where you can set the vouchers that have match exceptions to *Credit Note*, *Match Dispute*, or *Override*.

You can also select a match rule action of *Debit Memo* if you specified it as an action on the Match Rule Type page and associated it to the match rule. The Matching process creates a debit memo adjustment voucher to resolve the matching exception.

Note. Users need to have authority to override match exceptions to select match actions of *Credit Note*, *Match Dispute*, or *Override*. Define authority to override match exceptions on the User Preference - Procurement: Payables Online Vouchering page.

- Vouchers with a match status of *Match Dispute* are not paid and remain in an unpayable state until you delete or correct them.
- The next time that the Matching process runs, the system bypasses the individual match rules that you override.
- Overridden vouchers are available for payment and are paid the next time the pay cycle is run.

Note. Organizations typically correct a problem instead of overriding it. In general, it is best to rectify and reprocess incorrect associations and vendor differences rather than override them.

Note. You can pay unmatched vouchers at the user ID level if you select the Pay Unmatch Voucher option on the User Preference - Procurement: Payables Online Vouchering page.

- PeopleSoft Workflow notifies the appropriate user about the match exception, based on the route that you specify for the exception on the Match Rule Type page or the Match Rules - Workflow page.
3. Correct the errors and rerun the Matching process.

4. (Optional) You can undo selected matched vouchers after you run the Matching process.

When you undo a matched voucher, you reset the match status of any purchase orders and receivers that are associated with and matched to a voucher. This enables you to match these purchase orders and receivers to other vouchers.

- You can undo a matched voucher only if you have not yet paid or posted it.
- You cannot undo a credit or exchange return to vendor (RTV) matched voucher.
- You cannot undo a matched voucher if the related purchase order is closed.
- You cannot undo a matched voucher if one of the receipts is associated with a voucher that is closed.
- You cannot undo a matched voucher that is related to another voucher, unless the original voucher has been deleted.
- You can undo a matched voucher and associated debit memo adjustment voucher if the vouchers have not been paid or posted and they do not require budget-checking.

Note. If you try and undo a matched voucher that requires budget-checking, the system displays an error message indicating that you need to delete the debit memo adjustment voucher before you undo the matched voucher.

Matching Options with Purchase Orders

This section discusses:

- Line level matching.
- Purchase order matching defaults.

Line Level Matching

The flexibility of match rules and match rule controls enable you to use line level matching.

For example, suppose that you buy computer equipment and the services to install the equipment, and you want to generate one purchase order for both items using line level matching.

- Line 1: Expense or inventory item; receiving required.

- Line 2: Service item; no receiving required.

Here is the sequence of events in this example:

1. The purchase order header sets the match control for all applicable lines.

The match control option (for example, standard) appears by default from the vendor table, but you can override the default.

2. At the purchase order line schedule level, you can specify whether matching is required (by using the Details for Schedule page).

The line schedule level matching options are:

Full Match

The system matches the line based on the purchase order header match control. (*Full Match* is the default.)

No Match

The system does not match the line.

ERS (evaluated receipt settlement)

The system matches the line based on the purchase order header match control.

Note. The Voucher Build Application Engine process (AP_VCHRBLD) creates ERS vouchers from receipts.

See [Chapter 33, "Processing Self-Billed Invoices," Understanding SBI Processing, page 981.](#)

3. At the purchase order line level, you specify whether receiving is required, not required, or optional (by using the Line Details page).

The Receiving Required option appears by default from the item definition. If you have set the match control at the purchase order header for matching, the match rules then determines whether receiving is required for the purchase order line. If receiving is not required, as in the case of service items, the Receiving Required matching rules apply to other lines; however, the particular line is still matched based on the comparison of the purchase order to the voucher. Similarly, if receiving is optional, the Receiving Required matching rules do not apply.

Purchase Order Matching Defaults

Define matching rule controls at the business unit and vendor level. You can override these matching defaults at the purchase order header level or purchase order schedule level in the Maintain Purchase Orders component (PURCHASE_ORDER).

Select the Matching link on the Purchase Order - Form page to access the PO Matching page, where you can change the type of match action and the match rules.

You can also change the Match Action field on the Details for Schedule page. You can select either a full match or no match for the schedule. The Match Action field value appears by default from the overall matching setup on the Purchase Order Header page.

You can also change the price and tolerances (upper and lower limits) for matching in the Price Tol (unit price tolerance), Ext Tol (total amount tolerance), and Pct (percentage) fields. The values for these fields appear by default from the item definition.

See Also

PeopleSoft Purchasing 9.1 PeopleBook, "Creating Purchase Orders Online"

Matching Tolerances

You can define value and percent tolerances to override exceptions generated by the match rules. The Matching process uses match tolerances when comparing the prices and amounts. If a match exception exists, and the voucher is within the tolerances established in these components, the Matching process automatically overrides the exception. There are two ways you define match tolerances, they are:

- On the match rule.
- On the purchase order.

Define the value or percent match tolerances for each match rule on the Match Rule Control page. In order to define match tolerances, you must first indicate on the Match Rules - Rule Definition page to use match tolerances at the match rule control level.

Define value or percent match tolerances at the purchase order level on the Item Categories component (ITEM_CATEGORIES) and the Purchasing Attributes component (PURCH_ITEM_ATTR). These match tolerances can be overridden on the Maintain Purchase Orders component.

PeopleSoft delivers match rule controls that apply matching tolerances either at the PO level or at the match rules level. You should apply tolerances at the PO level or at the match rule level, but not both. To modify or add match rule controls with tolerances, you must understand the Matching process and how tolerances work.

- The *Standard Match Rules Using PO Tolerances* match rule control applies matching tolerances at the PO level.
- The *Standard Match Rules Using Rules Tolerances* match rule control applies matching tolerances at the match rules level.
- The *Standard* match rule control applies matching tolerances at the PO level.
- The *Debit Memo* match rule control applies matching tolerances at the match rules level.
- The *Basic* match rule control applies matching tolerances at the PO level.

Note. For example, you may use a match rule tolerance if you have a simple organization policy that states specific tolerance on all purchases. If tolerances vary by item category or item, then consider using tolerances at the PO level.

See the following scenarios that illustrate how the two matching tolerances are applied:

Scenario	PO	Voucher	Match Rule Control	Expected Result
PO tolerance	- Item 10000 has a unit price tolerance of 2.00 USD. - PO has a quantity of 1.00 and unit price of 100.00 USD.	- The voucher is entered by copying from the PO. - The unit price is changed to 103.00 USD.	The match rule control uses PO tolerances.	The voucher fails matching because the unit price is greater than the PO unit price + PO tolerance (100.00 + 2.00).
Match rule tolerance	- Item 10000 has a unit price tolerance of 2.00 USD. - PO has a quantity of 1.00 and unit price of 100.00 USD.	- The voucher is entered by copying from the PO. - The unit price is changed to 103.00 USD.	- The match rule control uses match rule tolerances. - The match rule unit price tolerance is 5.00 USD.	The voucher successfully matches because the unit price is less than the PO unit price + match rule tolerance (100.00 + 5.00).

This diagram illustrates the matching tolerance default logic. The scenario displays using either the tolerances defined at the match rule level or at the PO level.

Matching tolerance defaults diagram

Matching Workflow

You can access match exceptions using the Match Workbench. You can also use workflow worklists and email notifications to route the match exceptions to the user or users specified on the Match Rules Type and Match Rules - Workflow pages.

Workflow parameters are defined at the match rules type level and they can be overridden at the match rules level. You define workflow parameters by:

1. Selecting the Workflow Flag field or the Send Email Notification field or both fields on the Match Rules Type page.
2. Defining the User List Source fields on the Match Rules Type page.
3. (Optional) Overriding the email notification parameters and user lists on the Match Rules - Workflow page.

Create workflow worklists and email notifications by selecting *Workflow/Email Notify* as the Match Action on the Match Request page or by selecting *Send Notification* as the Action on the Match Workbench. When you initiate these actions, the system:

1. Executes the Matching process which calls the Matching Notification Application Engine process (AP_MTH_NOTFY) to create email notifications.
2. Calls the Process Match Exceptions Application Engine process (MTCH_ERR_WF) from the Matching Notification process to create workflow worklist items.

Note. Set up users to receive worklist items or email notifications or both on the User Profiles - Workflow page before you route match exceptions to them.

Note. The Process Match Exceptions process and the Matching Notification process still generate worklist items and workflow notifications for exceptions to users even if they do not have authority to override the exception. The user is not able to override the exception, but is notified of the exception.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Defining Procurement Options," Establishing Matching and Document Association Options

Chapter 20, "Running the Matching Process," Initiating the Matching Application Engine Process, page 600

Delivered Document Association Group

The document association group defines the types of match associations and the sequence that the Matching process performs. PeopleSoft delivers three document associations that include:

- Voucher and PO matching (VP).
- Voucher and receiver matching (VR).
- Voucher, PO, and receiver matching (VPR).

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Defining Procurement Options," Viewing and Updating the Document Association Group

Delivered Document Association Rules

The document association rules defines how the Matching process associates purchase orders and receivers to vouchers. PeopleSoft delivers Standard and Receipt document association rules.

- The Standard document association rules associate vouchers and receivers based on exact and summed quantities.
- The Receipt document association rules associate vouchers and receivers based on exact and summed quantities using the invoice number equal to the packing slip number.

Delivered Match Rule Types

Match rule types are categories that determine the match actions that can be performed. Since these match rule types are set up at the system level, they are not tied to any setID or business unit. You can create new match rule types or modify delivered match rule types. PeopleSoft delivers the following match rule types:

- Data Entry
- Merchandise - Amount
- Merchandise - Quantity
- Merchandise - Unit Price
- Summary/Global Match Only
- System

Delivered Match Rules

PeopleSoft delivers match rules that most organizations need. Use the match rule set that best meets your organization's requirements. You can also create new match rules or modify delivered match rules.

Match rules are applied at either the header summary level or the line summary level. Define what level to apply the match rule on the Match Rules - Rule Definition page.

System Match Rules

System errors indicate that data is missing and prevents the system from retrieving all of the voucher, purchase order, and receiver data. If no system errors exist, the system applies matching rules.

This table describes the system match rules delivered with the system:

Rule ID	Description	Long Description
RULE_S100	Invalid Match Control ID.	Invalid Match Control ID.
RULE_S110	Credit Adjustment Quantity > PO Matched Quantity.	RTV/Credit Adjustment Quantity is greater than the PO Matched Quantity.
RULE_S111	Credit Adjustment Amount > PO Matched Amount.	RTV/Credit Adjustment Amount is greater than the PO Matched Amount.
RULE_S120	Credit Adjustment Quantity > Receiver Match Qty.	RTV/Credit Adjustment Quantity is greater than the Receiver Matched Quantity.
RULE_S121	Credit Adjustment Amount > Receiver Match Amount.	RTV/Credit Adjustment Amount is greater than the Receiver Matched Amount.
RULE_S122	Credit Adjustment Quantity > Receiver Match Qty.	RTV/Credit Adjustment Quantity is greater than the Receiver Matched Quantity.

Rule ID	Description	Long Description
RULE_S123	Credit Adjustment Amount > Receiver Match Amount.	RTV/Credit Adjustment Amount is greater than the Receiver Matched Amount.
RULE_S200	Invalid PO ID exists not set for match.	Invalid PO ID exists but not set for matching.
RULE_S201	Invalid Receiver exists but not set for matching.	Invalid Receiver exists but not set for matching.
RULE_S210	Invalid PO Status.	Invalid PO Status.
RULE_S300	Invalid UOM conversion for PO.	Invalid UOM conversion for PO.
RULE_S400	Invalid currency exchange rate for PO.	Invalid currency exchange rate for PO.
RULE_S500	Invalid UOM conversion for Receipt.	Invalid UOM conversion for receipt.
RULE_S600	Invalid currency exchange rate for Receipt.	Invalid currency exchange rate for receipt.
RULE_S700	Invalid Global exchange rate conversion error.	Invalid Global exchange rate conversion error.

Standard Match Rules

PeopleSoft delivers standard match rules that are similar to the match rules delivered in previous releases.

This table describes the standard match rules delivered with the system:

Rule ID	Description	Long Description
RULE_E100	Extended Price Tolerance.	The voucher extended price exceeds the purchase order extended price plus or minus (+/-) the extended price tolerance, <i>and</i> the tolerance is not equal to (<>) 0.

Rule ID	Description	Long Description
RULE_E200	Extended Price % Tolerance.	The voucher extended price exceeds the purchase order extended price plus or minus the extended price percentage tolerance, <i>and</i> the tolerance does not equal 0.
RULE_E250	Voucher Ext Amt <> PO Ext Amt (No Tolerances).	The voucher extended price does not equal the purchase order extended price when the extended percentage and price tolerances are 0.
RULE_H100	Voucher Pay Terms <> PO Pay Terms.	The payment terms code on the purchase order does not equal the payment terms code on the voucher.
RULE_H200	Voucher Vendor/Loc<>PO Vendor/Loc.	The vendor on the purchase order does not equal the vendor on the voucher.
RULE_H400	Voucher Vendor/Loc<>Receiver Vendor/Loc.	The vendor on the voucher does not equal the vendor on the receipt.
RULE_I100	Inspection Required but not Complete.	The item ordered requires inspection but inspection has not been completed.
RULE_L100	Voucher item <> PO item.	The item on the voucher line does not equal the item on the purchase order line.
RULE_L200	Voucher item <> Receiver item.	The item on the voucher line does not equal the item on the receiver line.
RULE_P100	Voucher Unit Price <> PO Unit Price (No Tolerance).	The voucher price does not equal the purchase order price when the unit price percentage and price amount tolerances are 0.

Rule ID	Description	Long Description
RULE_P400	Voucher Unit Price <> PO Unit Price + % Unit Tol.	The price percentage tolerance does not equal 0, and the voucher price (converted to the purchase order UOM) does not fall within the purchase order price range (calculated using price percentage tolerance). The rule does not generate an exception for an amount-only purchase order and a non-purchase order receipt.
RULE_P500	Voucher Unit Price <> PO Unit Price + Unit Price Tolerance.	The unit price tolerance does not equal 0, and the voucher price does not fall within the purchase order price range (calculated using unit price tolerance).
RULE_R500	No receipts found.	The Matching process could not find any receipts for the purchase order specified on the voucher line that were available for matching (for example not matched, not on hold, and not canceled).
RULE_R600	No receipt found, but unmatched ones exist.	The Matching process found receipts for this purchase order that were available for matching (for example not matched, not on hold, and not canceled) but could not make an association to the voucher line using any of the document association criteria.
RULE_R650	Voucher line amt > Sum of received amount.	Voucher line amt > Sum of associated receiver line amt (Amount Only Matching)
RULE_R651	Voucher line amt > Sum of received amount.	Voucher line amt > Sum of associated receiver line amt (Amount Only Matching).
RULE_R900	Total voucher received quantity > Accepted Qty	The total quantity received (including across all voucher lines and previously matched receivers) exceeds the accepted quantity on the receiver.

Rule ID	Description	Long Description
RULE_R901	Total voucher received quantity > Accepted Qty.	The total quantity received (including across all voucher lines and previously matched receivers) exceeds the accepted quantity on the receiver.
RULE_R950	Voucher Quantity greater than Assoc. Receipt Qty.	The quantity on the voucher line exceeds the remaining unmatched quantity on the associated receipt(s).
RULE_R951	Voucher Quantity greater than Assoc. Receipt Qty.	The quantity on the voucher line exceeds the remaining unmatched quantity on the associated receipt(s) (non-PO Receipt).
RULE_R960	Invoiced Line Qty <> Sum of Assoc. Receipt Qty.	Voucher line invoiced total quantity is not equal to the sum of all receiver accepted quantities that are associated with this voucher line.
RULE_V200	Life to Date Voucher Qty > PO Qty.	The total quantity vouchered (including previously matched vouchers) exceeds the quantity on the purchase order plus the allowed over-receiving quantity.
RULE_V250	Life to Date Voucher Qty > PO Qty.	The receiving percentage tolerance does not equal 0, and the total quantity vouchered (including previously matched vouchers) exceeds the quantity on the purchase order plus the allowed over-receiving quantity.
RULE_V300	Life to Date Voucher Amount > PO Amount.	The receiving tolerance is 0 and the total quantity vouchered (including previously matched vouchers) exceeds the quantity on the purchase order. An exception is not generated for an amount-only purchase order or non-purchase order receipt.

Rule ID	Description	Long Description
RULE_V400	Life to Date > Sched Amt + % ext tol.	The extended price percentage tolerance is not 0, and the total amount vouchered (including amounts on previously matched vouchers) exceeds the purchase order amount (calculated using extended price percentage tolerance).
RULE_V500	Life to Date > Sched Amt + ext amt tol.	The extended price tolerance is not 0, and the total amount vouchered (including amounts on previously matched vouchers) exceeds the purchase order amount (calculated using extended price tolerance).

Merchandise Match Rules

Merchandise match rules verify that the organization receives the goods or services and that the price matches the price on the purchase order.

This table describes the merchandise match rules delivered with the system:

Rule ID	Description	Long Description
200	Merch amt = PO merch amt with rule amt tol.	Compare the total voucher merchandise amount (gross amount less miscellaneous charges and tax) to the total merchandise amount on the POs less any previously matched amounts. Include amount tolerances from the rule, if any, when comparing the amounts.
210	Merch amount = PO merch amt with rule % tol.	Compare the total voucher merchandise amount (gross amount less miscellaneous charges and tax) to the total merchandise amount on the POs less any previously matched amounts. Include percent tolerance from the rule.

Rule ID	Description	Long Description
220	Merch amount = recv merch amt with rule amt tol.	Compare the total voucher merchandise amount (gross amount less miscellaneous charges and tax) to the total merchandise amount on the receipts less any previously matched amounts. Include amount tolerances from the rule, if any, when comparing the amounts.
221	Merch amt = non PO recv merch amt w rule amt tol.	For non PO receipts, compare the total voucher merchandise amount (gross amount less miscellaneous charges and tax) to the total merchandise amount on the non PO receipts less any previously matched amounts. Include amount tolerances from the rule, if any, when comparing the amounts.
230	Merch amount = recv merch amt with rule % tol.	Compare the total voucher merchandise amount (gross amount less miscellaneous charges and tax) to the total merchandise amount on the receipts less any previously matched amounts. Include percent tolerances from the rule, if any, when comparing the amounts.
231	Merch amt = non PO recv merch amt w rule % tol.	For non PO receipts, compare the total voucher merchandise amount (gross amount less miscellaneous charges and tax) to the total merchandise amount on the non PO receipts less any previously matched amounts. Include percent tolerances from the rule, if any, when comparing the amounts.
240	Merch amount not = PO merch amt with rule amt tol.	Compare the total voucher merchandise amount (gross amount less miscellaneous charges and tax) to the total merchandise amount on the POs. Include amount tolerance from the rule and create an exception when the difference exceeds the tolerance.

Rule ID	Description	Long Description
250	Line amount not = PO line amt with PO amt tol.	Compare the voucher line amount to the PO line schedule amount less any previously matched amounts. Include amount tolerances from the PO, if any, when comparing the amounts.
260	Line amount not = PO line amt with PO % tol.	Compare the voucher line amount to the PO line schedule amount less any previously matched amounts. Include percent tolerances from the PO, if any, when comparing the amounts.
270	Line amount not = recv line amt with PO amt tol.	Compare the voucher line amount to the receipt line amount less any previously matched amounts. Include amount tolerances from the PO, if any, when comparing the amounts.
280	Line amount not = recv line amt with PO % tol.	Compare the voucher line amount to the receipt line amount less any previously matched amounts. Include percent tolerances from the PO, if any, when comparing the amounts.
290	Line amount not = PO line amt with rule amt tol.	Compare the voucher line amount to the PO line schedule amount less any previously matched amounts. Include amount tolerances from the rule, if any, when comparing the amounts.
300	Line amount not = PO line amt with rule % tol.	Compare the voucher line amount to the PO line schedule amount less any previously matched amounts. Include amount tolerances from the rule, if any, when comparing the amounts.
310	Line amount not = recv line amt with rule amt tol.	Compare the voucher line amount to the receipt line amount less any previously matched amounts. Include amount tolerances from the rule, if any, when comparing the amounts.

Rule ID	Description	Long Description
311	Line amt not = non PO recv line amt w rule amt tol.	For non PO receipts, compare the voucher line amount to the non PO receipt line amount less any previously matched amounts. Include amount tolerances from the rule, if any, when comparing the amounts.
320	Line amount not = recv line amt with rule % tol.	Compare the voucher line amount to the receipt line amount less any previously matched amounts. Include percent tolerances from the rule, if any, when comparing the amounts.
321	Line amt not = non PO rec line amt with rule % tol.	For non PO receipts, compare the voucher line amount to the non PO receipt line amount less any previously matched amounts. Include percent tolerances from the rule, if any, when comparing the amounts.
330	LTD vchr qty greater than PO qty with receipt tol.	Current voucher quantity plus previously matched voucher quantities, if any, greater than PO line schedule quantity. Include quantity received percent over, if any, from the PO when comparing the values.
335	LTD vchr qty greater than PO qty with receipt tol.	Current voucher quantity plus previously matched voucher quantities, if any, greater than PO line schedule quantity. Include quantity received percent over, if any, from the PO when comparing the values.
340	LTD vchr amt greater than PO amt with PO amt tol.	Current voucher line amount plus previously matched voucher line amounts, if any, greater than PO line schedule amount. Include amount tolerances from the PO, if any, when comparing the values.

Rule ID	Description	Long Description
350	LTD vchr amt greater than PO amt with PO % tol.	Current voucher line amount plus previously matched voucher line amounts, if any, greater than PO line schedule amount. Include percent tolerances from the PO, if any, when comparing the values.
380	LTD vchr amt greater than PO amt with rule amt tol.	Current voucher line amount plus previously matched voucher line amounts, if any, greater than PO line schedule amount. Include amount tolerances from the rule, if any, when comparing the values.
390	LTD vchr amt greater than PO amt with rule % tol.	Current voucher line amount plus previously matched voucher line amounts, if any, greater than PO line schedule amount. Include percent tolerances from the rule, if any, when comparing the values.
450	LTD vchr amt greater than recv amt.	Current voucher line amount plus previously matched voucher line amounts, if any, greater than receipt line amount.
470	Line price not = PO price with PO price amt tol.	Compare voucher price with PO price. Include price amount tolerances, if any, from the PO when comparing the values.
480	Line price not = PO price with PO price % tol.	Compare voucher price with PO price. Include price percent tolerances, if any, from the PO when comparing the values.
490	Line price not = PO price + rule amt tol.	Compare voucher price with PO price. Include price amount tolerances, if any, from the rule when comparing the values.
500	Line price not = PO price with rule % tol.	Compare voucher price with PO price. Include price percent tolerances, if any, from the rule when comparing the values.

Rule ID	Description	Long Description
510	Line price not = receipt price with rule amt tol.	Compare voucher price with receipt price. Include price amount tolerances, if any, from the rule when comparing the values.
520	Line price not = receipt price with rule % tol.	Compare voucher price with receipt price. Include price percent tolerances, if any, from the rule when comparing the values.
550	Line qty not = PO line qty with PO received % tol.	Compare voucher quantity with PO line schedule quantity. Include quantity received percent over, if any, from the PO when comparing the values.
580	Line qty not = recv qty with PO received % tol.	Compare voucher quantity with receipt line quantity. Include quantity received percent over, if any, from the PO when comparing the values.

Nonmerchandise Match Rules

Nonmerchandise match rules verify nonmerchandise data, such as freight, on the purchase order.

Note. The system assumes that for Match Rule ID 700, Freight not Allowed but Included on Voucher, the freight terms are configured and used properly on the purchase order.

This table describes the nonmerchandise match rules delivered with the system:

Rule ID	Description	Long Description
700	Freight not allowed.	PO freight terms = paid by seller but voucher includes freight cost.
710	Vendor's Financial Sanctions Status.	Check whether Vendor is on a Financial Sanctions Listing.

Data Accuracy Match Rules

Data accuracy match rules verify data entry accuracy. These match rules include comparisons on vendor IDs and item IDs.

This table describes the data accuracy match rules delivered with the system:

Rule ID	Description	Long Description
100	No Receipts Found.	No available receipts (not matched, not on hold, and not canceled) were found for the purchase order specified on the voucher line.
120	Pay terms not = PO pay terms.	The payment terms code on the purchase order does not equal the payment terms code on the voucher.
130	Vendor/Loc not = PO Vendor/Loc.	The vendor or vendor location on the purchase order does not equal the vendor or vendor location on the voucher.
140	Voucher item not = PO item.	The item on the voucher line does not equal the item on the purchase order line.
150	Inspection required but not completed.	The item ordered requires inspection but inspection has not been completed.
160	Vendor/Loc not = Receiver Vendor/Loc.	The vendor or vendor location the voucher does not equal the vendor or vendor location on the receipt.
170	Voucher item not = receiver item.	The item on the voucher line does not equal the item on the receiver line.

Organization Limits and Global Tolerances Match Rules

The organization limits match rules applies tolerances to successfully match exceptions.

Note. To successfully match vouchers based on organization limits, match rules 800, 810, or 811 should follow system rules in the rule order of the match rule control.

This table describes the organization limits and global tolerances match rules delivered with the system:

Rule ID	Description	Long Description
800	Small dollar purchase; match automatically.	For small amount purchases, automatically match the voucher.
810	Cost exception less than minimum rule tol.	Ignore exceptions when the exception amount is less than the cost of processing the exception.
811	Cost exception less than min rule tol non PO recv.	For non PO receipts, ignore exceptions when the exception amount is less than the cost of processing the exception.

Rule ID	Description	Long Description
820	Global Amount Tolerance.	Match when voucher line amount greater than or equal to PO line amount - rule under amount and less than or equal to PO line amount + rule over amount.
830	Global Percent Tolerance.	Match when voucher line amount greater than or equal to PO line amount - rule under % and less than or equal to PO line amount + rule over %.

Delivered Match Rule Controls

PeopleSoft delivers different match controls to handle your organization's requirements. You can create new match rule controls or modify delivered match rule controls.

Standard Match Rule Control

PeopleSoft delivers a standard match rule control that are similar to the match rule control delivered in previous releases.

This table describes the standard match rule control delivered with the system:

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
1	RULE_S100	Invalid Match Control ID	Exception	Continue If False
2	RULE_S110	Credit Adjustment Quantity > PO Matched Quantity	Exception	Continue If False
3	RULE_S111	Credit Adjustment Amount > PO Matched Amount	Exception	Continue If False
4	RULE_S120	Credit Adjustment Quantity > Receiver Match Qty	Exception	Continue If False

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
5	RULE_S121	Credit Adjustment Amount > Receiver Match Amount	Exception	Continue If False
6	RULE_S122	Credit Adjustment Quantity > Receiver Match Qty	Exception	Continue If False
7	RULE_S123	Credit Adjustment Amount > Receiver Match Amount	Exception	Continue If False
8	RULE_S200	Invalid PO ID exists not set for match	Exception	Continue If False
9	RULE_S201	Invalid Receiver exists but not set for matching	Exception	Continue If False
10	RULE_S210	Invalid PO Status	Exception	Continue If False
11	RULE_S300	Invalid UOM conversion for PO	Exception	Continue If False
12	RULE_S400	Invalid currency exchange rate for PO	Exception	Continue If False
13	RULE_S500	Invalid UOM conversion for Receipt	Exception	Continue If False
14	RULE_S600	Invalid currency exchange rate for Receipt	Exception	Continue If False
15	RULE_S700	Invalid Global exchange rate conversion error	Exception	Continue If False
16	710	Vendor's Financial Sanctions Status	Exception	Continue If False
17	RULE_E100	Extended Price Tolerance	Exception	Always Continue
18	RULE_E200	Extended Price % Tolerance	Exception	Always Continue
19	RULE_E250	Voucher Ext Amt <> PO Ext Amt (No Tolerances)	Exception	Always Continue

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
20	RULE_H100	Voucher Pay Terms <> PO Pay Terms	Exception	Always Continue
21	RULE_H200	Voucher Vendor/Loc <> PO Vendor/Loc	Exception	Always Continue
22	RULE_H400	Voucher Vendor/Loc <> Receiver Vendor/Loc	Exception	Always Continue
23	RULE_I100	Inspection Required but not Complete	Exception	Always Continue
24	RULE_L100	Voucher item <> PO item	Exception	Always Continue
25	RULE_L200	Voucher item <> Receiver item	Exception	Always Continue
26	RULE_P100	Voucher Unit Price <> PO Unit Price (No tolerance)	Exception	Always Continue
27	RULE_P400	Voucher Unit Price <> PO Unit Price + % Unit Tol	Exception	Always Continue
28	RULE_P500	Voucher Unit Price <> PO Unit Price + Unit Tol	Exception	Always Continue
29	RULE_R500	No receipts found	Exception	Always Continue
30	RULE_R600	No receipt found, but unmatched ones exist	Exception	Always Continue
31	RULE_R650	Voucher line amt > Sum of received amount	Exception	Always Continue
32	RULE_R651	Voucher line amt > Sum of received amount	Exception	Always Continue
33	RULE_R900	Total voucher received quantity > Accepted Qty	Exception	Always Continue
34	RULE_R901	Total voucher received quantity > Accepted Qty	Exception	Always Continue

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
35	RULE_R950	Voucher Quantity greater than Assoc. Receipt Qty	Exception	Always Continue
36	RULE_R951	Voucher Quantity greater than Assoc. Receipt Qty (non PO receipt)	Exception	Always Continue
37	RULE_V200	Life to Date Voucher Qty > PO Qty	Exception	Always Continue
38	RULE_V300	Life to Date Voucher Amount > PO Amount	Exception	Always Continue
39	RULE_V400	Life to Date > Sched Amt + % ext tol	Exception	Always Continue
40	RULE_V500	Life to Date > Sched Amt + ext amt tol	Exception	Always Continue

Basic Match Rule Control

Enable merchandise matching using the minimum number of match rules with the basic match rule control. Match rule IDs 250 and 260 allow for non-receipt required matching. Delete these match rules if you require all purchase orders to be received.

This table describes the basic match rule control delivered with the system:

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
1	RULE_S100	Invalid Match Control ID	Exception	Continue If False
2	RULE_S110	Credit Adjustment Quantity > PO Matched Quantity	Exception	Continue If False
3	RULE_S111	Credit Adjustment Amount > PO Matched Amount	Exception	Continue If False
4	RULE_S120	Credit Adjustment Quantity > Receiver Match Qty	Exception	Continue If False

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
5	RULE_S121	Credit Adjustment Amount > Receiver Match Amount	Exception	Continue If False
6	RULE_S122	Credit Adjustment Quantity > Receiver Match Qty	Exception	Continue If False
7	RULE_S123	Credit Adjustment Amount > Receiver Match Amount	Exception	Continue If False
8	RULE_S200	Invalid PO ID exists not set for match	Exception	Continue If False
9	RULE_S201	Invalid Receiver exists but not set for matching	Exception	Continue If False
10	RULE_S210	Invalid PO Status	Exception	Continue If False
11	RULE_S300	Invalid UOM conversion for PO	Exception	Continue If False
12	RULE_S400	Invalid currency exchange rate for PO	Exception	Continue If False
13	RULE_S500	Invalid UOM conversion for Receipt	Exception	Continue If False
14	RULE_S600	Invalid currency exchange rate for Receipt	Exception	Continue If False
15	RULE_S700	Invalid Global exchange rate conversion error	Exception	Continue If False
16	710	Vendor's Financial Sanctions Status	Exception	Continue If False
17	100	No receipts found	Exception	Continue If False
18	250	Line amount not = PO line amt with PO amt tol	Exception	Continue If False
19	260	Line amount not = PO line amt with PO % tol	Exception	Continue If False

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
20	270	Line amount not = recv line amt with PO amt tol	Exception	Continue If False
21	280	Line amount not = recv line amt with PO % tol	Exception	Continue If False
22	340	LTD vchr amt greater than PO amt with PO amt tol	Exception	Continue If False
23	350	LTD vchr amt greater than PO amt with PO % tol	Exception	Continue If False
24	410	LTD vchr amt greater than rec amt with PO amt tol	Exception	Always Continue
25	420	LTD vchr amt greater than recv amt with PO % tol	Exception	Always Continue

Standard Match Rules Using Rules Tolerances Match Rule Control

PeopleSoft delivers a complete match rule control that includes all match rules using tolerances from the match rules.

This table describes the standard match rules using rules tolerances match rule control delivered with the system:

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
1	RULE_S100	Invalid Match Control ID	Exception	Continue If False
2	RULE_S110	Credit Adjustment Quantity > PO Matched Quantity	Exception	Continue If False
3	RULE_S111	Credit Adjustment Amount > PO Matched Amount	Exception	Continue If False
4	RULE_S120	Credit Adjustment Quantity > Receiver Match Qty	Exception	Continue If False

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
5	RULE_S121	Credit Adjustment Amount > Receiver Match Amount	Exception	Continue If False
6	RULE_S122	Credit Adjustment Quantity > Receiver Match Qty	Exception	Continue If False
7	RULE_S123	Credit Adjustment Amount > Receiver Match Amount	Exception	Continue If False
8	RULE_S200	Invalid PO ID exists not set for match	Exception	Continue If False
9	RULE_S201	Invalid Receiver exists but not set for matching	Exception	Continue If False
10	RULE_S210	Invalid PO Status	Exception	Continue If False
11	RULE_S300	Invalid UOM conversion for PO	Exception	Continue If False
12	RULE_S400	Invalid currency exchange rate for PO	Exception	Continue If False
13	RULE_S500	Invalid UOM conversion for Receipt	Exception	Continue If False
14	RULE_S600	Invalid currency exchange rate for Receipt	Exception	Continue If False
15	RULE_S700	Invalid Global exchange rate conversion error	Exception	Continue If False
16	710	Vendor's Financial Sanctions Status	Exception	Continue If False
17	100	No receipts found	Exception	Continue If False
18	120	Pay terms not = PO pay terms	Exception	Continue If False
19	130	Vendor/Loc not = PO Vendor/Loc	Exception	Continue If False

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
20	140	Voucher item not = PO item	Exception	Continue If False

40	580	Line qty not = recv qty with PO received % tol	Exception	Always Continue
41	700	Freight not allowed	Exception	Always Continue

Standard Match Rules Using PO Tolerances Match Rule Control

PeopleSoft delivers a complete match rule control that includes all match rules using tolerances from POs.

This table describes the standard match rules using PO tolerances match rule control delivered with the system:

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
1	RULE_S100	Invalid Match Control ID	Exception	Continue If False
2	RULE_S110	Credit Adjustment Quantity > PO Matched Quantity	Exception	Continue If False
3	RULE_S111	Credit Adjustment Amount > PO Matched Amount	Exception	Continue If False

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
4	RULE_S120	Credit Adjustment Quantity > Receiver Match Qty	Exception	Continue If False
5	RULE_S121	Credit Adjustment Amount > Receiver Match Amount	Exception	Continue If False
6	RULE_S122	Credit Adjustment Quantity > Receiver Match Qty	Exception	Continue If False
7	RULE_S123	Credit Adjustment Amount > Receiver Match Amount	Exception	Continue If False
8	RULE_S200	Invalid PO ID exists not set for match	Exception	Continue If False
9	RULE_S201	Invalid Receiver exists but not set for matching	Exception	Continue If False
10	RULE_S210	Invalid PO Status	Exception	Continue If False
11	RULE_S300	Invalid UOM conversion for PO	Exception	Continue If False
12	RULE_S400	Invalid currency exchange rate for PO	Exception	Continue If False
13	RULE_S500	Invalid UOM conversion for Receipt	Exception	Continue If False
14	RULE_S600	Invalid currency exchange rate for Receipt	Exception	Continue If False
15	RULE_S700	Invalid Global exchange rate conversion error	Exception	Continue If False
16	710	Vendor's Financial Sanctions Status	Exception	Continue If False
17	100	No receipts found	Exception	Continue If False
18	120	Pay terms not = PO pay terms	Exception	Continue If False

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
19	130	Vendor/Loc not = PO Vendor/Loc	Exception	Continue If False
20	140	Voucher item not = PO item	Exception	Continue If False
21	150	Inspection required but not completed	Exception	Continue If False
22	160	Vendor/Loc not = Receiver Vendor/Loc	Exception	Continue If False
23	170	Voucher item not = receiver item	Exception	Continue If False
24	200	Merch amt = PO merch amt with rule amt tol	Match	Continue If False
25	210	Merch amount = PO merch amt with rule % tol	Match	Continue If False
26	220	Merch amount = recv merch amt with rule amt tol	Match	Continue If False
27	230	Merch amount = recv merch amt with rule % tol	Match	Continue If False
28	240	Merch amount not = PO merch amt with rule amt tol	Exception	Always Continue
29	250	Line amount not = PO line amt with PO amt tol	Exception	Always Continue
30	260	Line amount not = PO line amt with PO % tol	Exception	Always Continue
31	270	Line amount not = recv line amt with PO amt tol	Exception	Always Continue
32	280	Line amount not = recv line amt with PO % tol	Exception	Always Continue

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
33	330	LTD vchr qty greater than PO qty with receipt tol	Exception	Always Continue
34	340	LTD vchr amt greater than PO amt with PO amt tol	Exception	Always Continue
35	350	LTD vchr amt greater than PO amt with PO % tol	Exception	Always Continue
36	400	LTD vchr qty greater than receipt qty with PO % to	Exception	Always Continue
37	410	LTD vchr amt greater than rec amt with PO amt tol	Exception	Always Continue
38	420	LTD vchr amt greater than recv amt with PO % tol	Exception	Always Continue
39	470	Line price not = PO price + PO price amt tol	Exception	Always Continue
40	480	Line price not = PO price with PO price % tol	Exception	Always Continue
41	510	Line price not = receipt price with rule amt tol	Exception	Always Continue
42	520	Line price not = receipt price with rule % tol	Exception	Always Continue
43	580	Line qty not = recv qty with PO received % tol	Exception	Always Continue
44	700	Freight not allowed	Exception	Always Continue

Debit Memo Match Rule Control

Use the debit memo match rule control to allow the system to create debit memo adjustment vouchers for match exceptions.

This table describes the debit memo match rule control delivered with the system:

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
1	RULE_S100	Invalid Match Control ID	Exception	Continue If False
2	RULE_S110	Credit Adjustment Quantity > PO Matched Quantity	Exception	Continue If False
3	RULE_S111	Credit Adjustment Amount > PO Matched Amount	Exception	Continue If False
4	RULE_S120	Credit Adjustment Quantity > Receiver Match Qty	Exception	Continue If False
5	RULE_S121	Credit Adjustment Amount > Receiver Match Amount	Exception	Continue If False
6	RULE_S122	Credit Adjustment Quantity > Receiver Match Qty	Exception	Continue If False
7	RULE_S123	Credit Adjustment Amount > Receiver Match Amount	Exception	Continue If False
8	RULE_S200	Invalid PO ID exists not set for match	Exception	Continue If False
9	RULE_S201	Invalid Receiver exists but not set for matching	Exception	Continue If False
10	RULE_S210	Invalid PO Status	Exception	Continue If False
11	RULE_S300	Invalid UOM conversion for PO	Exception	Continue If False
12	RULE_S400	Invalid currency exchange rate for PO	Exception	Continue If False
13	RULE_S500	Invalid UOM conversion for Receipt	Exception	Continue If False
14	RULE_S600	Invalid currency exchange rate for Receipt	Exception	Continue If False

Rule Order	Match Rule ID	Description	If Rule is True Take Action	Continue to Next Rule
15	RULE_S700	Invalid Global exchange rate conversion error	Exception	Continue If False
16	710	Vendor's Financial Sanctions Status	Exception	Continue If False
17	100	No receipts found	Exception	Continue If False
18	490	Line price not = PO price + rule amt tol	Debit Memo	Always Continue
19	500	Line price not = PO price with rule % tol	Debit Memo	Always Continue
20	400	LTD vchr qty greater than receipt qty with PO % to	Debit Memo	Always Continue

Matching Examples

The document association and matching examples provided here are based on the following assumptions:

- The delivered Standard document association group is used.
- The delivered Standard document association rules is used for all business units.
- The document source is the voucher and the association document is the receiver for document association examples.
- The delivered Basic match rule control is used unless otherwise specified.
- The voucher is created by copying from the purchase order (with no changes to the unit price or unit of measure).
- The purchase order, receiver, and voucher are in the same business unit.
- The received quantity and accepted quantity on the receiver are the same (unless otherwise noted).
- The Matching process is run for all business units.

Document Association Examples

This table represents various document association scenarios and associated receipt results. Scenarios are at the line summary level unless otherwise specified.

Scenario	Document Association Algorithm	Voucher	Receiver	Associated Receipt?
Voucher / Receiver	Sum Up To	Voucher 1 = 100	Receiver 1 = 100	Receiver 1: Yes
Voucher / Multiple Receivers	Sum Up To	Voucher 1 = 100	Receiver 1 = 70 Receiver 2 = 30	Receiver 1: Yes Receiver 2: Yes
Voucher / Receiver	Sum Up To	Voucher 1 = 100	Receiver 1 = 90	Receiver 1: Yes
Voucher / Receiver	Sum Up To	Voucher 1 = 100	Receiver 1 = 110	Receiver 1 = 100: Yes Receiver 1 = 10: No
Voucher / Receiver	Equal	Voucher 1 = 100	Receiver 1 = 100	Receiver 1: Yes
Voucher / Receiver	Equal	Voucher 1 = 100	Receiver 1 = 110	Receiver 1: No
Voucher / Receiver	Equal	Voucher 1 = 100	Receiver 1 = 90	Receiver 1: No
Voucher / Multiple Receivers	Equal	Voucher 1 = 100	Receiver 1 = 100 Receiver 2 = 100 Receiver 3 = 100	Receiver 1: Yes Receiver 2: No Receiver 3: No
Voucher / Multiple Receivers	Equal Sum	Voucher 1 = 100	Receiver 1 = 70 Receiver 2 = 30	Receiver 1: Yes Receiver 2: Yes
Voucher / Multiple Receivers	Equal Sum	Voucher 1 = 100	Receiver 1 = 70 Receiver 2 = 40	Receiver 1: No Receiver 2: No
Voucher / Receiver	Equal Sum	Voucher 1 = 100	Receiver 1 = 100	Receiver 1: No Receiver 1 is associated using <i>Equal</i> algorithm.
Voucher / Receiver	Select All	Voucher 1 = 100	Receiver 1 = 1000	Receiver 1: Yes
Voucher / Multiple Receivers	Select All	Voucher 1 = 100	Receiver 1 = 70 Receiver 2 = 30 Receiver 3 = 90	Receiver 1 = Yes Receiver 2 = Yes Receiver 3 = Yes
Voucher / Receiver	Select All	Voucher 1 = 100	Receiver 1 = 10	Receiver 1: Yes

Scenario	Document Association Algorithm	Voucher	Receiver	Associated Receipt?
Voucher / Receiver	Select If One	Voucher 1 = 100	Receiver 1 = 100	Receiver 1: Yes
Voucher / Multiple Receivers	Select If One	Voucher 1 = 100	Receiver 1 = 50 Receiver 2 = 50	Receiver 1: No Receiver 2: No

Matching Examples

This table represents various matching scenarios and expected results. Scenarios are at the line summary level unless otherwise specified.

Scenario	Data	Document Association Results	Matching - Expected Results
Purchase Order / Voucher	- PO quantity = 1000. - No receiver required on PO line. - Voucher quantity = 1000.	Purchase order and voucher associated. Tables updated.	Purchase order and voucher matched after all match rules applied.
Purchase Order / Receiver / Multiple Vouchers	- PO quantity = 1000. - Receiver quantity = 1000. - Voucher 1 quantity = 500. - Voucher 2 quantity = 500.	No association performed. No tables updated.	Exception created for match rule 100 - no receipts found. No further match rules are applied. Solution: Manually associate receiver to the vouchers.
Purchase Order / Multiple Receivers / Voucher	- PO quantity = 1000. - Receiver 1 quantity = 300. - Receiver 2 quantity = 100. - Voucher quantity = 400.	Purchase order is partially associated. Voucher and both receivers associated. Tables updated.	Purchase order is partially matched and voucher and receivers are fully matched after all match rules applied.

Scenario	Data	Document Association Results	Matching - Expected Results
Purchase Order / Voucher	- PO amount = 100. PO matching tolerance is 10%. - No receiver required on PO line. - Voucher amount = 120.	Purchase order and voucher associated. Tables updated.	Exception created for match rule 260 - line amount not = PO line amount with PO % tolerance. No further match rules are applied.
Purchase Order / Multiple Receivers / Multiple Vouchers	- PO amount = 1000. - Receiver 1 amount = 800. - Receiver 2 amount = 200. - Voucher 1 amount = 800. - Voucher 2 amount = 220. - Match rule tolerance amount is 10.	Purchase order and Receiver 1 associated to Voucher 1. No purchase order and receiver association for Voucher 2. Tables updated.	Purchase order is partially matched. Voucher 1 and Receiver 1 are fully matched after all match rules applied. Exception created for Voucher 2 for match rule 100 - no receipts found. No further match rules are applied.
Purchase Order / Receiver / Voucher (header summary level)	- The delivered Standard Match Rules Using Rules Tolerance match rule control is used. - PO merchandise amount = 2000. - Receiver amount = 2000. - Voucher merchandise amount = 1900.	No association performed. No tables updated.	Exception created for match rule 100 - no receipts found. No further match rules are applied.

Scenario	Data	Document Association Results	Matching - Expected Results
Purchase Order / Voucher (header summary level)	- The delivered Standard Match Rules Using Rules Tolerance match rule control is used. - PO merchandise amount = 2000. - No receiver required. - Voucher merchandise amount = 1900. - Match rule tolerance is 10%.	Purchase order and voucher associated. Tables updated.	Purchase order and voucher matched after applying match rule 210 - merchandise amount = PO merchandise amount with rule % tolerance. No further match rules are applied.

Prerequisites

To run the Matching process, you must have installed PeopleSoft Payables and PeopleSoft Purchasing and you must complete the following setup:

1. View and define new match rule types if necessary on the Match Rule Type page.

Use workflow user lists to specify the routing recipients of any exceptions.

Indicate that the match rule type allows debit memo creation to have the system automatically create debit memo adjustment vouchers for match exceptions.

2. View, clone, and create new match rules on the Match Rules component (AP_MTCH_RULES).

Override the workflow user lists defined at the match rule type level for individual match rules.

Specify amount or percent tolerances at the match rule control level.

3. View and define new match rule controls if necessary on the Match Rule Control page.

Each match rule control has the applicable match rules for the vendor or PeopleSoft Purchasing business unit.

Specify amount or percent tolerances for individual match rules. These tolerances appear by default on the purchase order line, and the Matching process uses them. You can also include matching tolerances in the SQL statement at the match rule level, or define matching tolerances at the purchase order level.

4. View and add document association criteria on the Document Association Rules page.

The rules determine how the system associates receivers with purchase orders and vouchers.

Specify that the document association criteria applies to amount only purchase orders.

5. View and modify the document association group on the Document Association Group page.

6. Specify the document association group to use in the Matching process on the Installation Options - Payables page.
7. Establish the matching options, document association rules, and enable posting of unmatched vouchers for a business unit on the Payables Definition component (BUS_UNIT_TBL_AP).
8. (Optional) Override the match delay days defined at the PeopleSoft Payables business unit level on the Voucher Origin - Vouchering Options 1 page or the Group Information - Vouchering Options page.
9. Specify matching options and enable the Matching process on the Matching/Approval Options collapsible region on the Vendor Information - Payables Options page.

If applicable, you can also use this page to enable receipt-only matching for the vendor location.

Override the match delay days defined at the PeopleSoft Payables business unit level, the voucher origin level, or the group level.

10. (Optional) Specify debit memo options for vendor locations on the Debit Memo Options collapsible region on the Vendor Information - Payables Options page.
11. (Optional) Define price and receiving tolerances at the purchase order level on the Item Categories component and the Purchasing Attributes component.

You can do this by item or by item category.

12. (Optional) Configure Integration Broker for the AP_VCHR_MESSAGE_OUT EIP (enterprise integration point).

Use the AP_VCHR_MESSAGE_OUT EIP to publish debit memo and voucher information to a predefined site where the vendors can access the information. The web server and the application server should be configured for setting up the Integration Gateway. Also, the application server should be configured to have the Pub/Sub servers established before bringing up the application server.

Note. In addition to delivering the AP_VCHR_MESSAGE_OUT EIP as an application message, PeopleSoft also delivers it as a web service (VoucherOut). Enabling web services is discussed in the *PeopleTools PeopleBook: Integration Broker*.

13. (Optional) Install Merkur DeliveryWare and Merkur Connector software for fax and email notification.

Merkur Group provides Merkur DeliveryWare and Merkur Connector, third-party software applications that are required for dispatching debit memo and voucher information via fax or email. Please consult with Merkur Group for installation instructions.

Initiating the Matching Application Engine Process

This chapter provides an overview of the matching engine and discusses how to:

- Run the Matching process in batch.
- Run the Matching process from the Voucher component.
- Run the Matching process from the Match Workbench.

Understanding the Matching Engine

The Matching process runs through various steps. These steps are part of the Matching engine and include:

- Match run control.
- Document association module.
- Rule application processor.
- Status update validation.
- Final update maintenance engine.
- Notification and routing.

These steps are discussed in detail in the sections that follow.

Match Run Control

The first step in the Matching process is the match run control. The match run control uses the criteria defined on the Match Request page, on the Match Workbench, or on the Voucher component, to select vouchers. The match run control:

1. Selects vouchers based on the selection parameters specified by the user.

2. Populates the voucher match table (AP_MTVCHR_T) with all eligible vouchers selected for the Matching process.

Document Association Module

The next step in the Matching process is the document association module. When the Matching process runs, the document association module finds receipts automatically for vouchers that have a purchase order reference. The document association module uses the criteria you define on the Document Association page to associate receivers to voucher lines. In addition to defining document association rules to handle exact matches, you can define rules to handle non exact match and amount only purchase order scenarios.

The document association module steps are included in the AP_DAM Application Engine library which is called from the Matching process. The AP_DAM library calls the AP_DAM_ALG library which contains all of the necessary steps for algorithms that are specified on the document association rule.

Prior to associating documents, the system deletes records from the following tables: AP_MTCH_EXCPTN, VCHR_MTCH_DETLS, AP_VCHR_LN_SUM, AP_VCHR_HDR_SUM, TSE_VCHRLN_FLD, TSE_VCHR, and VCHR_RECV_MTCH.

Note. The system deletes the records from the VCHR_RECV_MTCH table only if they were associated earlier by the document association process. If you manually associated the receipts, the system does not delete those records.

Document association is comprised of three major functions:

1. Association preprocessing populates the voucher, purchase order, and receiver match temporary tables (AP_DAMVLN_T, AP_DAMPOLN_T, and AP_DAMRCVLN_T).
2. Unit of measure and currency conversion logic converts voucher data to the purchase order unit of measure and currency or to the receiver unit of measure and currency for non purchase order receipts.

Note. These steps are contained in the AP_MTCHCOM library since unit of measure and currency conversions are common activities.

3. Document association rules logic associates the voucher, purchase order, and receiver lines and populates header and line level summary tables (AP_VCHR_HDR_SUM and AP_VCHR_LN_SUM) and the voucher match details table (VCHR_MTCH_DETLS).

Once the system finds an association the process is complete. If the document association functionality does not associate a receipt with a voucher line, you can use the Voucher component to manually associate the receipt with the voucher line by:

- Using the Copy from a Source Document option on the Invoice Information page to copy a PO receipt or a non PO receipt.
- Manually associating individual receivers with the voucher line by using the Associate Receivers page.

Rule Application Processor

Following the document association module step in the Matching process is the rule application processor. During the rule application processor step, the Matching process determines if the voucher lines and their associated purchase orders and receivers satisfy all the match conditions.

The rule application processor steps are included in the AP_MATCH_RAP Application Engine library which is called from the Matching process.

Prior to applying match rules, the system populates header summary and line summary temporary tables (AP_VCHRHSUM_T and AP_VCHRLSUM_T). These temporary tables contain the copy of all vouchers selected in the current match run control.

The rule application processor:

1. Determines the match rule level.

If the match rule level is at the header summary level, the system inserts all the records from the AP_VCHRHSUM_T table into the AP_MTHSUM_T table for the condition specified on the match rule.

If the rule is at the line summary level, the system inserts all the records from the AP_VCHRLSUM_T table into the AP_MTLSUM_T table for the condition specified on the match rule.

2. Determines the action applicable to the match rule.

If the action is *Debit Memo*, the system sets DBMEMO_FLAG to Y, and either DMEMO_CAT_PRICE to Y, or DMEMO_CAT_QTY to Y on the AP_VCHRLSUM_T table.

If the action is *Exception*, the system sets EXCEPTION_FLAG to Y on the AP_VCHRHSUM_T table or the AP_VCHRLSUM_T table depending on the level of the match rule. The system retrieves the necessary fields based on the fields that are specified on the Match Rules - Workbench page for the Match Workbench and populates the AP_MTCH_EXCPTN table.

Status Update Validation

Following the rule application processor is the status update validation step. The status update validation step determines the match action applicable to the voucher line.

The status update validation steps are also included in the AP_MATCH_RAP Application Engine library which is called from the Matching process.

Status update validation applies the final match action to the voucher line. Final match actions include *Debit Memo*, *Exception*, *Match*, *Override*, and *Warning*.

Note. If the action is *Debit Memo*, the Matching process determines if the vendor is set up for debit memo processing. If so, the system creates a debit memo adjustment voucher. If not, the system sets the debit memo flags to N and no debit memo adjustment voucher is created.

Final Update Maintenance Engine

After the status update validation step, the final update maintenance engine populates the appropriate voucher, purchase order, and receiver tables.

The final update maintenance engine steps are in the AP_MTCH_FUME Application Engine library which is called from the Matching process. The AP_MTCH_FUME library calls the AP_MTCH_DM library which contains all of the necessary steps to perform debit memo processing.

The final update maintenance engine:

1. Populates the voucher information in the voucher table (VOUCHER)

2. Populates the purchase order information in the PO line ship table (PO_LINE_SHIP) and the PO header table (PO_HDR).
3. Populates the receiver information in the receiver line ship table (RECV_LN_SHIP) and the receiver header table (RECV_HDR).
4. Populates the matching information in the receiver voucher match table (RECV_VCHR_MTCH), the receiver line ship match table (RECV_LN_SHP_MTH), the PO line match table (PO_LINE_MATCHED), and the PO line ship match table (PO_LINE_SHIP_MTCH).
5. Populates the debit memo information in the VCHR_HDR_STG, VCHR_LINE_STG, VCHR_DIST_STG, and VCHR_PYMT_STG staging tables.

Notification and Routing

As a final step, notification and routing use the workflow parameters defined at the match rule type and match rule levels to generate worklist entries and email notifications.

Note. You can also dispatch debit memo information to notify your vendors that adjustments were made to their invoices. Dispatch debit memo information from the Dispatch Debit Memo page or the Voucher component.

Pages Used to Initiate the Matching Process

Page Name	Definition Name	Navigation	Usage
Match Request	MTCH_RUN_CNTRL	Accounts Payable, Batch Processes, Vouchers, Matching, Match Request	Define the run control for the Matching Application Engine process (AP_MATCH).
Messages	AP_MESSAGE_LOG	Accounts Payable, Batch Processes, Vouchers, Matching, Match Request - Messages	View messages generated during the Matching process. The Message Log page displays messages by process instance.
Invoice Information	VCHR_EXPRESS1	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information	Enter voucher information.
Match Workbench	AP_MTCH_WB	Accounts Payable, Review Accounts Payable Info, Vouchers, Match Workbench, Match Workbench	View a list of vouchers and match information, according to specified search criteria. You can override exceptions, correct errors, create debit memos, put vouchers on a match hold, initiate the Matching process, undo matched vouchers, and send notifications.

Running the Matching Process in Batch

Access the Match Request page (Accounts Payable, Batch Processes, Vouchers, Matching, Match Request).	
Match Workbench	Click to access the Match Workbench page to view voucher match information. You can override exceptions, correct errors, create debit memos, put vouchers on a match hold, initiate the Matching process, undo matched vouchers, and send notifications.
Match Action	Select a match action to run. Options include: <i>Matching:</i> Runs the Matching process and matching is performed. No email notification or workflow worklist items are created. <i>Workflow/Email Notify:</i> Runs the Matching process only to call the Matching Notification process. The Matching Notification process calls the Process Match Exceptions process if workflow worklist items exist. No matching is performed. <i>Matching & Workflow/Email:</i> Runs the Matching process and sends email notifications and creates worklist items. Note. The Matching Notification and Process Match Exceptions processes generate workflow notifications and worklist items based on the workflow parameters defined on the Match Rule Type and Match Rules - Workflow pages. You can also run these processes from the Match Workbench.
Options	Select the level at which the system runs the Matching process. Options are <i>All Business Units, Business Unit, Control Group, Origin, and Voucher</i> .
As of Date	Enter the date for which the Matching process includes data. The system selects vouchers with a match due date on or before the as of date. Note. If you enter an as of date, the Matching process uses that date until you manually change it. If you leave the As of Date field blank, the system uses the current date every time you run the Matching process, but the system does not actually populate the field.
Run Document Association Only	Click to run the document association subprocess only. Note. For improved efficiency, you should run the document association subprocess more frequently than the entire Matching process.

Note. Do not run more than one Matching process simultaneously unless the data is organized so that neither Matching process needs the other's purchase orders or receivers.

When you click Run, the matching processing option appears on the Process Scheduler Request page:

AP_MATCH (accounts payable matching)	Select to run the Matching process and all associated subprocesses.

[Chapter 20, "Running the Matching Process," Managing Matches and Match Exceptions, page 605](#)

Managing Matches and Match Exceptions

This chapter provides an overview of the Match Workbench and discusses how to:

- Search for vouchers to be matched.
- Search for matched vouchers.
- Undo matched vouchers.
- Review matches.
- Review match exceptions.

- Review suppliers disputed vouchers and match history.

Understanding the Match Workbench

The Match Workbench comprises of various associated pages that enable you to query match information, override exceptions, correct errors, create debit memos, put vouchers on a match hold, and initiate the Matching process on demand. Configure the Match Workbench according to your business requirements:

- Specify what match actions are allowed on the Match Workbench on the Match Rule Type page.
- Define the workbench details for each match rule on the Match Rules - Workbench page.
- Define the match rule processing order on the Match Rule Control page which is the order match rules are displayed on the Match Workbench.
- Create personalized search parameters that you can use to query match information.

Match Workbench Search Fields

You can create personalized search parameters from the fields in the following list:

- *Business Unit* (required)
- *Match Status* (required)
- *Buyer ID*
- *Approval Status*
- *Control Group ID*
- *Entered on*
- *Gross Invoice Amount*
- *Invoice Date*
- *Invoice Number*
- *Item ID*
- *Item SetID*
- *Last User to Update*
- *Match Due Date*
- *Match Rule ID*
- *Match Type*
- *Origin*
- *Packing Slip Number*
- *Voucher ID*

- *PO Business Unit*
- *PO Number*
- *Receiving Business Unit*
- *Receipt Number*
- *Scheduled to Pay*
- *Vendor SetID*

Note. Certain fields have other field dependencies. As an example, if you select *Vendor ID* the system warns you that *Vendor SetID* is a prerequisite field for *Vendor ID* and requires you to also select it.

Pages Used to Manage Matches and Match Exceptions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Match Workbench	AP_MTCH_WB	Accounts Payable, Review Accounts Payable Info, Vouchers, Match Workbench, Match Workbench	View a list of vouchers and match information, according to specified search criteria. This page and the pages accessible from it enable you to override exceptions, correct errors, create debit memos, put vouchers on a match hold, initiate the Matching process, undo matched vouchers, and send notifications.
Matched Vouchers	AP_MTCH_WB_SUCCESS	Click a Matched link for a match type of Auto - Matched on the Match Workbench page.	View match information for associated vouchers, purchase orders, and receipts. You can initiate the Matching process to undo a matched voucher.

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Match Exception Workbench Details	AP_MTCH_WB_EXCPTN	Click a Match Exceptions Exist or a Match Dispute link on the Match Workbench page.	View match information for associated vouchers, purchase orders, and receipts. You can override exceptions, correct errors, create debit memos, put vouchers on a match hold, initiate the Matching process.
Match Overridden Workbench Details	AP_MTCH_WB_OVRD	Click a Manually Overridden or Overridden - Credit Note link on the Match Workbench page.	View match override information for associated vouchers, purchase orders, and receipts. You can indicate an override reason and initiate the Matching process. Note. The voucher displayed on this page has not gone through the Matching process.
Match Overridden Workbench Details	AP_MTCH_WB_MOVRD	Click a Matched link for a match type of Matched with Override, Matched with Debit Memo, Matched with Credit Note on the Match Workbench page.	View match override information for associated vouchers, purchase orders, and receipts. Note. The voucher displayed on this page has gone through the Matching process and resulted in a successful match.
Header Match Rules	AP_WB_HDRRULE_SEC	Click the Header Match Rules link on the Matched Vouchers page.	View all the header match rules applied to the voucher. Also view voucher, purchase order, and receiver information associated with each header match rule.
Header Match Rules	AP_WB_HEADER_EXPTN	Click the Header Match Rules link on the Match Exception Workbench Details page.	View all the header match rules applied to the voucher. Also view voucher, purchase order, and receiver information associated with each header match rule.
Header Match Rules	AP_WB_HDR_OVRD_SEC	Click the Header Match Rules link on the Match Overridden Workbench Details page.	View all the header match rules applied to the voucher. Also view voucher, purchase order, and receiver information associated with each header match rule.

Page Name	Definition Name	Navigation	Usage
Header Match Rules	AP_WB_HD_MOVRD_SEC	Click the Header Match Rules link on the Match Overridden Workbench Details page.	View all the header match rules applied to the voucher. Also view voucher, purchase order, and receiver information associated with each header match rule.
Match Exception Workbench Summary	AP_WB_EXCPTN_SUM	Click the Match Exception Summary link on the Match Exception Workbench Details page.	View all invoice line errors.
Match Override Workbench Summary	AP_WB_EXCPTN_OVRD	Click the Match Override Summary link on the Match Overridden Workbench Details page.	View voucher information for match exceptions that are overridden. Also view the match rule ID, match rule, and the override reason associated with the match exception. To use this page, you must have overridden match exceptions on the Match Exception Workbench Details page.
Match Rule Details	AP_WB_RULE_SEC	 Click the details button on the Matched Vouchers page, the Match Exception Workbench Details page, or the Match Overridden Workbench Details page.	Displays the full description of the match rule.
Associated Document Information	AP_WB_VCHRLNPO_SEC	Click the Document Details link on the Matched Vouchers page, the Match Exceptions Workbench Details page, or the Match Overridden Workbench Details page.	View voucher, purchase order, and receiver attributes for all lines.
Associated Document Information	AP_WB_ASSTNLN_SEC	Click the Line Document Details link on the Matched Vouchers page, the Match Exceptions Workbench Details page, or the Match Overridden Workbench Details page.	View voucher, purchase order, and receiver attributes for a specific line.

Page Name	Definition Name	Navigation	Usage
Match Exceptions	RUN_APY1090	Accounts Payable, Reports, Vouchers, Match Exceptions	Define run parameters for the Match Exceptions report (APY1090). Use the report to review match exceptions with voucher, purchase order, and receiver information, and match error information.
Vendor Match Metrics	AP_VCHR_MATCH_INQ	Accounts Payable, Review Accounts Payable Info, Vendor, Vendor Match Metrics, Vendor Match Metrics	Define parameters to create Excel download reports for analyzing vouchers with various match statuses.

Override Match Due Date:

Action:

Match Workbench page - To Be Matched selection (2 of 2)

Match Status

Select *To Be Matched* to include in the search results only vouchers that have not been matched.

Personalize Search

Click to access search fields that you can select for display on the Match Workbench page. Warnings appear if you select fields that have other field dependencies that have not been selected. You can save your search criteria and use it again by selecting it from the saved search list.

Enter search criteria for vouchers that you want to view.

Search Results

Displays voucher information for selected unmatched vouchers.

Note. Security controls access to associated inquiry pages.

Vouchers

Displays the voucher ID. Click the link to access the voucher using the Voucher component.

Vendor ID

Displays the vendor ID. Click the View Related Links button to access the Vendor Information page, the Conversations page, or the Contact page.

Financial Sanctions Status

Displays the financial sanctions status of the vendor. Financial sanctions statuses include *Blocked*, *Cleared*, *Review*, and *Valid*.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

Match Due Date

Displays the match due date for the voucher. If you click the Select check box, the Match Due Date field becomes available. Enter a date and click the Save button to override the match due date. Use this field to individually override match due dates.

Note. Match delay days are only applicable to EDI and XML invoices. You usually receive electronic invoices prior to receiving items purchased. Using match delay days allow for this timing difference so receipt not found match exceptions are reduced. The system uses the entry date as the match due date for all other invoices.

Override Match Due Date

Enter a date to use as the Match Due Date for vouchers selected. The match due dates change accordingly when you save the Match Workbench page. Use this field to override several match due dates with the same date.

Action

Select the process to be run on-demand for vouchers selected. For vouchers to be matched, the option is *Matching*. When you click the Run button, the Matching process runs.

Searching for Matched Vouchers

☒ Select All ☐ Clear All

Action:

Run

Match Workbench page - Matched selection (2 of 2)

Match Status

Select a match status to include only vouchers with that status in the search results. Match statuses include *Manually Overridden*, *Match Dispute*, *Match Exceptions Exist*, *Matched*, *Overridden - Credit Note*, and *To Be Matched*.

Note. The search results appear in different formats depending on the match status you select.

See Chapter 20, "Running the Matching Process," *Searching for Vouchers To Be Matched*, page 610.

Personalize Search

Click to access search fields that you can select for display on the Match Workbench page. Warnings appear if you select fields that have other field dependencies that have not been selected. You can save your search criteria and use it again by selecting it from the saved search list.

Enter search criteria for vouchers that you want to view.

Search Results

Displays voucher information for selected vouchers that have gone through the Matching process.

Note. Security controls access to associated inquiry pages.

Undo Match

Select the check box to mark the voucher to be unmatched. This option appears only when you select *Matched* in the Match field.

When you select the check box to undo a matched voucher, the system verifies whether the voucher is available to be unmatched. If the voucher is not available to undo a match, an error message appears. Because the verification occurs when you select the check box, you may need to wait a few seconds before proceeding. Select the *Undo Matching* option in the Action field and click the Run button to initiate the Matching process to undo the match. Undoing a matched voucher resets all statuses on the voucher, receiver, and purchase order.

Select

Select the check box to mark the voucher for further processing. This option appears when you select *Manually Overridden*, *Match Dispute*, *Match Exceptions Exist*, and *Overridden - Credit Note*.

Choose an option in the Action field to apply to the vouchers selected.

Match

Displays the match status of the voucher. Match statuses include:

Manually Overridden: You manually assign this status on the Match Exception Workbench Details page to indicate that the match exception has been overridden. Click the *Manually Overridden* status link to access the Match Overridden Workbench Details page.

Match Dispute: You manually assign the Match Dispute status to vouchers on the Match Exception Workbench Details page. No further match processing is done on these vouchers until you change the match status. Click the *Match Dispute* status link to access the Match Exception Workbench Details page.

Match Exceptions Exist: Exceptions occurred when applying the match rules to the voucher. Click the *Match Exceptions Exist* status link to access the Match Exception Workbench Details page.

Matched: The voucher is successfully matched. Click the *Matched* status link to access the Matched Vouchers page.

Overridden - Credit Note: You manually assign this status on the Match Exception Workbench Details page to indicate that the voucher has been matched with a credit memo adjustment voucher. Click the *Overridden - Credit Note* status link to access the Match Overridden Workbench Details page.

To Be Matched: Vouchers have not gone through the Matching process or vouchers have been unmatched.

Match Type

Displays further details of the match status. This option appears only when you select *Matched* in the Match Status field. Match types include *Auto - Matched*, *Matched with Debit Memo*, *Matched with Override*, *Matched with Credit Note*.

Vouchers

Displays the voucher ID. Click the link to access the Voucher component.

Vendor ID

Displays the vendor ID. Click the icon to access the Vendor Information page, the Conversations page, or the Contact page.

Action

Select the process to be run on-demand for vouchers selected. Options depend on the match status you selected:

Undo Matching: This option is available only for vouchers with a match status of *Matched*.

Matching: This option is available for vouchers with a match status of *Manually Overridden*, *Match Exceptions Exist*, and *Overridden - Credit Note*.

Send Notification: This option is available for vouchers with a match status of *Match Dispute* and *Match Exceptions Exist*.

Voucher Match Action:

Action:

Match Workbench page - Match Exceptions Exist selection (2 of 2)

Voucher Match Action

Credit Note: Changes the match status on the voucher to *Overridden - Credit Note*. Once the Matching process runs, the system changes the match status to *Matched* and the match type to *Matched with Credit Note*.

When you click the Apply button, the system applies *Credit Note* to the header level and *Override* to the line and match rule levels. The override reason indicates it is a credit note from a higher level.

Match Dispute: Places the entire voucher on hold. No further match processing is done on these vouchers until you change the match status to *Override* or *To Be Matched*.

Override: Changes the match status on the voucher to *Manually Overridden*. Once the Matching process runs, the system changes the match status to *Matched* and the match type to *Matched with Override*.

Action:

Run

Match Exception Workbench Details page (2 of 2)

Displays voucher information for the selected voucher.

Header Match Rules

Click to access the Header Match Rules page to view all the header match rules applied to the voucher, purchase order, and receiver. This link appears if there are summary level match rules applied to the voucher.

Match Exception Summary

Click to access the Match Exception Workbench Summary page. You can view all header level exceptions associated with this voucher.

Document Details

Click to access the Associated Document Information page to view voucher, purchase order, and receiver attributes. This link accesses the first line of the voucher. All lines are available for viewing.

Voucher Match Action

Select an option to apply a voucher match option to the header level. Click the Apply button to apply the action to the header, line, and match rule levels. Options include:

Credit Note: Changes the match status on the voucher to *Overridden - Credit Note*. Once the Matching process runs, the system changes the match status to *Matched* and the match type to *Matched with Credit Note*.

When you click the Apply button, the system applies *Credit Note* to the header level and *Override* to the line and match rule levels. The override reason indicates it is a credit note from a higher level.

Note. To properly match the credit memo to the original voucher, you should use the adjustment voucher style and copy the original voucher. This results in the credit memo adjustment voucher with a match status of *Matched* and the match type of *Auto - Matched* if there are no other match exceptions.

Match Dispute: Places the entire voucher on hold. No further match processing is done on these vouchers until you change the match status to *Override* or *To Be Matched*.

When you click the Apply button, the system applies *Match Dispute* to the header level and no action to the line and match rule levels.

Override: Changes the match status on the voucher to *Manually Overridden*. Once the Matching process runs, the system changes the match status to *Matched* and the match type to *Matched with Override*.

When you click the Apply button, the system applies *Override* to the header, line, and match rule levels. The override reason indicates it is overridden from a higher level.

Note. You can override header level match options at the line level and the match rule level. If you select only a voucher match action at the header level, the system overrides all exceptions at the header level and the line level.

Line Details

Voucher Line Match Action

Select to apply *Override* at the line level.

Note. You can override line level match actions at the match rule level. Voucher match actions at the line level override voucher match actions set at the header level.

View Document and Document ID	Select the type of document, the document ID, and click Go to access detailed information for the associated document. Options appear if documents exist and include: <i>Purchase Order:</i> Select to access the Purchase Order Inquiry - Purchase Order page. <i>Receiver:</i> Select to access the Receipts page. <i>Voucher:</i> Select to access the Voucher component.
Line Document Details	Click the link to access the Associated Document Information page to view voucher, purchase order, and receiver attributes. This link accesses the specific voucher line.
Match Rules	
	Indicates that the voucher line has a match exception.
	Click the match details button to access the Match Rule Details page to view a detailed description of the match rule.
Match Rule	Displays the match rule in the order match rules are defined in the match rule control.
Action	Select an option to apply at the match rule level. Options available are dependant on the actions specified on the Match Rule Type page and associated to the match rule. They include: <i>Debit Memo:</i> The Matching process creates a debit memo adjustment voucher to resolve the matching exception. The Matching process changes the match status on the original voucher to <i>Matched</i> and the match type to <i>Matched with Debit Memo</i>. The Matching process creates the debit memo adjustment voucher with a match status of <i>Matched</i> and the match type with <i>Auto - Matched</i>. <i>Override:</i> Overrides the match exception and the Matching process changes the match status on the voucher to <i>Matched</i> and the match type to <i>Matched with Override</i>. Select the reason for overriding the match exception using the Override Reason field's drop down list. Click the Comments button to access the Match Rule Override Reason page where you can enter a free-form override reason. Note. For new override reasons, add translate values to the OVRD_REASON field. Note. Voucher match actions at the match rule level override voucher match actions set at the header level and the line level.
Action	Select the <i>Matching</i> option to run the process on-demand. When you click the Run button, the Matching process runs.

Reviewing Overridden Match Exceptions

Access the Match Overridden Workbench Details page (click a Manually Overridden or Overridden - Credit Note link on the Match Workbench page).

Match Overridden Workbench Details page

Displays voucher information for the selected voucher.

Note. There are two versions of the Match Overridden Workbench Details page. One displays voucher information for a voucher that has gone through the Matching process. The Match Status field displays *Matched*. The other version displays voucher information for a voucher that has not gone through the Matching process. The Match Status field displays *Manually Overridden*. The *Manually Overridden* match status is a temporary status until the Matching process changes it to *Matched*.

- Header Match Rules

Click the link to access the Header Match Rules page to view all the header match rules applied to the voucher, purchase order, and receiver. This link appears if there are summary level match rules applied to the voucher.
- Match Override Summary

Click the link to access the Match Override Workbench Summary page to view voucher information for match exceptions that are overridden.
- Document Details

Click the link to access the Associated Document Information page to view voucher, purchase order, and receiver attributes. This link accesses the first line of the voucher. All lines are available for viewing.

Line Details

View Document and Document ID	Select the type of document, the document ID, and click Go to access detailed information for the associated document. Options appear if documents exist and include: <i>Debit/Credit:</i> Select to access the related debit memo or credit memo adjustment voucher using the Voucher component. Note. This option appears only for a voucher with a match status of <i>Matched</i> and the match type of <i>Matched with Debit Memo</i> or <i>Matched with Credit Note</i>. <i>Purchase Order:</i> Select to access the Purchase Order Inquiry - Purchase Order page. <i>Receiver:</i> Select to access the Receipts page. <i>Voucher:</i> Select to access the Voucher component.

Line Document Details	Click the link to access the Associated Document Information page to view voucher, purchase order, and receiver attributes. This link accesses the specific voucher line.

Match Rules

	Indicates that the voucher line match exception was overridden.
	Click the match details button to access the Match Rule Details page to view a detailed description of the match rule.
Match Rule	Displays the match rule in the order match rules are defined in the match rule control.
Override Reason	Displays the reason for overriding the match exception. The system also displays who it was overridden by, if it was a debit memo, and the date it was overridden.
Action	Select the <i>Matching</i> option to run the process on-demand. When you click the Run button, the Matching process runs. This field is available if the voucher has not gone through the Matching process and the voucher is in the match status of <i>Manually Overridden</i> or <i>Overridden - Credit Note</i>. Note. You manually assign the match statuses of <i>Manually Overridden</i> and <i>Overridden - Credit Note</i>. Once you run the Matching process against these vouchers, the system changes the match status to <i>Matched</i>. The system assigns the match type to <i>Matched with Override</i> and <i>Matched with Credit Note</i>, respectively.

Vendor Match Metrics page

This page is similar to the search parameters on the Match Workbench page. The following fields are unique to the Vendor Match Metrics page.

See [Chapter 20, "Running the Matching Process," Searching for Matched Vouchers, page 612.](#)

Report Manager	Click to access the Microsoft Excel file that the query generates. Only Excel files are generated from the data retrieval process. No search results are listed.
Server	Select the server to process the query.
Export to Excel	Click to create the Microsoft Excel file containing voucher information from the parameters defined.
Note. The system generates an error message if the row count exceeds Excel's limit of 65000.	

Processing Debit Memo Adjustment Vouchers

This section provides an overview of debit memo processing and discusses how to dispatch debit memo information.

Understanding Debit Memo Processing

The Matching process calls the Voucher Build Application Engine process (AP_VCHRBLD) to automatically create debit memo adjustment vouchers to resolve matching exceptions between the amount on a voucher and the purchase orders and receivers associated with that voucher. The Matching process determines if a debit memo should be created based on the match rule or rules applied to the voucher.

Note. Debit memo adjustment vouchers are created for credit adjustments only.

The Matching process creates the debit memo as an adjustment voucher style and links it to the original voucher using the voucher related field (VOUCHER_ID_RELATED) on the voucher line record (VOUCHER_LINE). The debit memo inherits the purchase order lines or the receiver lines depending on the match rules. Debit memo adjustment vouchers include adjustments to the merchandise amount and adjustments to sales or use tax or VAT amounts based on the tax code specified on the original voucher. The system does not include any adjustments for freight and miscellaneous charges from the original voucher. Manually enter any freight and miscellaneous adjustments using the Voucher component before the Matching process runs. The system creates the debit memo adjustment voucher with a match status of *Ready*.

Note. The Landed Cost Extraction Application Engine process (LC_EXTRACT) includes debit memo adjustment vouchers after they are matched and posted.

Because debit memos adjust the amounts paid to vendors, you can dispatch debit memo information to the vendors via print, phone, fax, email, or electronic data exchange (EDX).

Debit Memo Adjustment Vouchers

Debit memo adjustment vouchers are handled similar to other vouchers that the Voucher Build process creates. In addition, debit memo adjustment vouchers inherit the associated vouchers' processing. For example, if budget-checking is required for the original voucher, budget-checking is required for the debit memo adjustment voucher.

This table discusses various processes and the actions you take with debit memo adjustment vouchers.

Process	Debit Memo Action
Voucher build and pre-edit	Use the Quick Invoice Entry component (VCHR_QUICK_PNL) to review and correct debit memo adjustment vouchers with pre-edit errors. See Chapter 16, "Processing Batch Vouchers," Reviewing Voucher Build Process Errors, page 446. See Chapter 17, "Using Quick Invoices," Reviewing and Updating Quick Invoices, Staged Vouchers, and Vouchers with Pre-Edit Errors, page 473.
Voucher edit	Use the Voucher component (VCHR_EXPRESS) to review and update debit memo adjustment vouchers with no pre-edit errors. You can override the dispatch method on the Voucher Information page. See Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Creating Vouchers Online, page 309.

Process	Debit Memo Action
Budget-checking	The debit memo voucher requires budget-checking if the associated voucher requires budget-checking. The voucher header and distribution line records are flagged as not budget-checked. If the purchase order distribution line is finalized the expense ledger is affected. There is no impact on the encumbrance ledger. If the purchase order distribution line is not finalized the encumbrance ledger is affected. See Chapter 28, "Budget-Checking PeopleSoft Payables Transactions Using Commitment Control," page 855.
Voucher close	The process of closing debit memo adjustment vouchers is similar to closing other vouchers. However, you cannot close vouchers associated with debit memo adjustment vouchers unless you close all related vouchers first. The process of closing debit memo adjustment vouchers associated with PO vouchers is similar to closing regular PO vouchers. You cannot close PO vouchers or debit memo adjustment vouchers if they are partially paid. See Chapter 19, "Managing Vouchers," Closing Individual Vouchers, page 508.
Voucher delete	A warning message appears when you delete a debit memo adjustment voucher informing you that the debit memo is tied to a regular voucher. You cannot delete vouchers associated with debit memo adjustment vouchers unless you delete all related vouchers first. See Chapter 19, "Managing Vouchers," Deleting Individual Vouchers, page 516.
Voucher mass maintenance	Close or delete debit memo adjustment vouchers using the voucher mass maintenance functionality. Vouchers associated with the debit memo adjustment vouchers are excluded from the selection when you use voucher mass maintenance to close or delete debit memo adjustment vouchers. See Chapter 19, "Managing Vouchers," Modifying, Unposting, Deleting, and Closing Multiple Vouchers, page 532.
Tax calculation	The Voucher Build process calculates sales and use tax and VAT amounts based on the tax code specified on the original voucher.
Discount, freight, and miscellaneous charge calculations	Debit memo adjustment vouchers do not contain payment terms with discount terms or freight and miscellaneous charges.

Process	Debit Memo Action
Undo voucher match	If you undo matching on a regular voucher, the system deletes the debit memo adjustment voucher provided the debit memo adjustment voucher has not gone through the Matching process. If the regular voucher requires budget-checking, the system does not delete the debit memo adjustment voucher. You need to manually delete the debit memo adjustment voucher before undoing the regular voucher match. If the debit memo adjustment voucher has gone through the matching, payment, or posting processes, you must reverse those processes and then undo the regular voucher match. See Chapter 20, "Running the Matching Process," Undoing Matched Vouchers, page 618.
Payment selection	The payment process includes debit memo adjustment vouchers if the match status on the voucher is <i>Matched</i> and the AP match type is <i>Auto - Matched</i>. Also, you can pay debit memo adjustment vouchers manually or with drafts. See Chapter 21, "Processing Pay Cycles," Processing and Managing Pay Cycles, page 651.
Archiving	The archival process includes debit memo adjustment vouchers. See Chapter 39, "Archiving Transactions," Archiving Data, page 1108.
Asset Management interface	The process of handling debit memo adjustment vouchers is similar to adjustment vouchers. See Chapter 32, "Sending Information to PeopleSoft Asset Management," Sending Voucher Information to PeopleSoft Asset Management, page 978.

Debit Memo Notification

It may be necessary to notify your vendors that adjustments were made to their invoices. The Dispatch Debit Memo Application Engine process (AP_DM_DSP) produces a paper or electronic document that contains the reason and the amount of the adjustment. You can dispatch debit memo information to the vendors via print, phone, fax, email, or electronic data exchange (EDX). You can dispatch debit memo information from the Dispatch Debit Memo page or the Voucher component.

Use third-party applications, Merkur DeliveryWare and Merkur Connector, to fax or email information to your vendors. Merkur DeliveryWare and Merkur Connector are products of the Merkur Group. The Dispatch Debit Memo Application Engine process (AP_DM_DSP) creates the Dispatch Memo report (APY1100) in addition to four hidden fields that Merkur DeliveryWare uses. The Dispatch Memo process populates:

- The #PHONE_MERKUR field based on the delivery method.

The field contains the email address, the fax number, or a blank. You define the email address and fax number on the Vendor component (VNDR_ID). The Dispatch Memo process creates a print file if data is missing in the appropriate field.

- The #USER_MERKUR field with the assigned operator ID.

You can set up rules to determine how system notifies the assigned operator in case of a failed fax transmission, invalid email address, or a successful transmission.

- The #TITLE_MERKUR field with *Debit Memo Notification* that becomes the subject line for the email or the header page for the fax.
- The #EndofDoc_MERKUR field with #LAST_DOCPAGE# indicating the end of the document.

Note. To print to the Merkur printer, you must ensure that the windows service BEA ProcMGR's Log On value is *This Account*. The specified windows user account should then have printing permission to the printer where the reports are printed. You also must define the appropriate paper size in the process type definition.

PeopleSoft Payables delivers the Dispatch Memo report as a template report that you can use to provide debit memo information to vendors. You can modify the report using Crystal Reports software. PeopleSoft Payables also provides an output file in the PS_VCHR_EIP_OUT staging record that you can use to electronically send debit memo information to vendors. You can modify the output file using PeopleTools.

This graphic illustrates the notification process for debit memo adjustment vouchers.

Debit memo notification process

Pages Used to Process Debit Memo Adjustment Vouchers

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Match Request	MTCH_RUN_CNTRL	Accounts Payable, Batch Processes, Vouchers, Matching, Match Request	Define the run control for the Matching Application Engine process (AP_MATCH). You can also use the Match Workbench to initiate the Matching process. The Matching process calls the Voucher Build Application Engine process (AP_VCHRBLD) to automatically create debit memo adjustment vouchers based on the match rules applied to the voucher.
Match Workbench	AP_MTCH_WB	Accounts Payable, Review Accounts Payable Info, Vouchers, Match Workbench, Match Workbench	View a list of vouchers and match information, according to specified search criteria. This page and the pages accessible from it enable you to override exceptions, correct errors, create debit memos, put vouchers on a match hold, initiate the Matching process, undo matched vouchers, and send notifications.

Page Name	Definition Name	Navigation	Usage
Quick Invoice	VCHR_HEADER_QV	- Accounts Payable, Vouchers, Add/Update, Quick Invoice Entry, Quick Invoice Entry - Accounts Payable, Vouchers, Maintain, Voucher Build Error Detail Click the Correct Errors link on the Voucher Build Error Detail page. - Accounts Payable, Batch Processes, Vouchers, Voucher Build, Build Errors  Click the Correct Errors icon on the Build Errors page.	Use the Quick Invoice component to correct vouchers that have Voucher Build process pre-edit errors. Review and update debit memo adjustment voucher header, line, and distribution information. When you enter the page in update/display mode from the Add Search page, you can search for vouchers by build status, including vouchers that have been staged for review by the Voucher Build process and vouchers with Voucher Build process pre-edit errors.
Invoice Information	VCHR_EXPRESS1	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information	Use the Voucher component to review and update debit memo adjustment vouchers with no pre-edit errors. Correct any errors resulting from voucher edit processing in the Voucher component. Use the Invoice Information page to override the dispatch method for providing vendors with debit memo information.
Voucher - Summary	VCHR_SUMMARY_PG	Accounts Payable, Vouchers, Add/Update, Regular Entry, Summary	View voucher information, summarized from the three primary pages, such as header information, various statuses, and payment terms. Also view voucher entry information, such as the voucher source, the date entered, the user ID, and the date the voucher was last updated.
Voucher - Error Summary	VCHR_ERRORSMMRY_PG	Accounts Payable, Vouchers, Add/Update, Regular Entry, Error Summary	View any Voucher Build processing errors.

Page Name	Definition Name	Navigation	Usage
Dispatch Debit Memos	RUN_DBMEMO_DSP	Accounts Payable, Batch Processes, Vouchers, Dispatch Debit Memos, Dispatch Debit Memos	Define run control parameters for the Dispatch Debit Memo Application Engine process (AP_DM_DSP) and the Dispatch Memo Report (APY1100). Use the report to provide debit memo information to vendors.

Dispatch Methods to Include

☐ Print ☐ FAX ☐ EDX ☐ E-Mail ☐ Phone

ReDispatch Option

☐ Include Dispatched Debit Memos

Dispatch Debit Memos page

Specify the report request parameters.

Dispatch Methods to Include

You can select more than one dispatch method option.

Print

Select to create the Dispatch Memo report that can be mailed to the vendor. Define the output format on the Job Detail page.

FAX

Select to create the Dispatch Memo report that you can fax to the vendor. The Dispatch Debit Memo process interfaces with Merkur DeliveryWare software to transmit the information via fax. Define the output format on the Job Detail page.

Note. To interface with Merkur DeliveryWare software select *Printer* as the Type and enter the Merkur printer information in the Output Destination field for the APY1100 process.

EDX (electronic data exchange)

Select to create a debit memo message that the system publishes to the vendor using the AP_VCHR_MESSAGE_OUT EIP or the VoucherOut web service.

E-Mail

Select the email option to create the Dispatch Memo report that can be emailed to the vendor. The Dispatch Debit Memo process interfaces with Merkur DeliveryWare software to transmit the information via email. Define the output format on the Job Detail page.

Note. To interface with Merkur DeliveryWare software select *Printer* as the Type and enter the Merkur printer information in the Output Destination field for the APY1100 process.

Phone

Select the phone option to create the Dispatch Memo report that you can use to call the vendor with the debit memo details.

To access the Job Detail page select the Debit Memo dispatch job link on the Process Scheduler Request page.

ReDispatch Option**Include Dispatched Debit Memos**

Select to include previously dispatched debit memos for the parameters specified in this run control. You can use this option to recreate debit memo information.

Note. Depending on how you define your report request parameters, including already dispatched debit memos could result in a significant amount of records.

Chapter 21

Processing Pay Cycles

This chapter provides an overview of pay cycle manager, lists common elements, and discusses how to:

- Run and manage pay cycles.
- Review vouchers selected for payment.
- Handle pay cycle exceptions and alerts.
- Review draft payments.
- View the trial register.
- Approve the pay cycle.
- Verify payment references.
- Produce manual positive payment files.
- Restart pay cycles and re-create checks.
- Run the Pay Cycle job.

Understanding Pay Cycle Manager

This section discusses:

- Pay Cycle process flow.

- Pay Cycle statuses.
- Pay Cycle exceptions.
- Draft payments.
- Payment formatting.
- Separate payments.
- Payment sorting.
- Check payments that never reach the banking system.
- Pay Cycle processing using the PeopleSoft Payables Payment Interface.
- Pay Cycle processing using the PeopleSoft Financial Gateway.

Pay Cycle Manager is the focal point for managing payments in PeopleSoft Payables. From the Pay Cycle Manager page, you process each of the Pay Cycle Application Engine process (AP_APY2015) steps necessary to turn bank account, vendor, voucher, and business unit information into actual payments. Use Pay Cycle Manager to initiate the Pay Cycle process, view and send payments to a printer or a file, and create automated clearing house (ACH) files, drafts, electronic funds transfer (EFT) files, wire transfer reports, and positive payment files.

The Pay Cycle Manager integrates much of the data entered into PeopleSoft Payables and uses this payment data not only to create the negotiable documents but also to provide information for reports. Many of the activities of PeopleSoft Payables lead to or come from the Pay Cycle Manager.

Pay Cycle Process Flow

The individual processes—such as payment selection, payment creation, EFT formatting, printing checks, and creating positive payment files—that turn vouchers into payments are referred to collectively as the pay cycle and are all processed by the Pay Cycle process. Here is a diagram of the process flow for the Pay Cycle process (not all of the processes indicated would necessarily be included in a single pay cycle):

Pay cycle process flow

Chapter 8, "Establishing Pay Cycles," page 143

Pay Cycle Statuses

The Pay Cycle Manager is the place to go any time during this process of creating payments. It tells you exactly where your payments are in the payment process and keeps you informed of the current status of a pay cycle.

Status	Meaning
Approved	Pay cycle has been approved.
Certified	(USF) Pay cycle has been approved by an authorized certifier. For U.S. federal agencies only.
Completed	The Pay cycle is finished. You can start payment selection again using the next payment dates.
Confirmed	You have successfully confirmed that the payment references are correct on the Confirm Payment Reference page.
Created	Payments are ready to print. If EFT payments are being processed, the files are ready to format or be sent through the approval process.
Exceptions	Pay cycle exceptions have been found.
Formatted	The formatting process for the positive payment file has finished successfully.
New	When you create a pay cycle, its status is New.
No work	No payments have been selected or created for processing.
Printed	Payments are printed or data has been written to a file.
Rejected	Pay cycle has been rejected.
Reset	Pay cycle has been reset. Payment Selection can be run again.

Status	Meaning
Restarted	Pay cycle has been restarted and is ready for Payment Creation.
Running	One of the Pay Cycle processes is currently running.
Selected	Payment selection has finished successfully.
Staged	Payment selection has finished successfully and Draft payments have been successfully staged.
To Be Certified	(USF) Pay cycle is awaiting approval by authorized certifier. U.S. federal agencies only.

Pay Cycle Exceptions

The Pay Cycle Manager page notifies you of any exceptions that might occur during processing and transfers you to the appropriate page so that you can decide how best to handle these conditions. These exceptions pages include:

- Pay Cycle Errors page.
- Lost Discount Alert page.
- Discounts Denied page.
- Withholding exception page.
- Bank Replacement Exceptions page.
- Pay Cycle Financial Sanction Warnings page.

See Also

[Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," page 1033](#)

Draft Payments

During the Pay Cycle process, draft payments go through three steps:

Payment Selection

You select draft payments when you define your payment selection criteria. The batch process sequentially evaluates the vouchers and selects the payment schedules to be processed using the criteria that you established.

Draft Staging

The Draft Staging Application Engine process (AP_DFT_PROC) is called by the Pay Cycle process and creates a temporary or virtual view of split draft payments. After payment selection, drafts are created and grouped by draft ID. If you select draft optimization or draft rounding, the system creates a Draft Master ID for all split payments. The system assigns sibling Draft Create keys and groups all split payments under the draft master ID. You approve or reject scheduled draft payments in Draft Staging Approval before they are created on the Draft Staging Approval page at the draft master ID level.

Payment Creation

After you approve the drafts, the Payment Creation process creates draft payments. You can then print draft payments or generate EFT drafts before the draft due date. Drafts contain the draft identification number, the draft amount, and the draft maturity date.

Payment Formatting

PeopleSoft Payables provides powerful payment formatting capabilities that let you build a variety of payment forms to meet your business needs. The following table lists the standard payment forms that PeopleSoft Payables provides, along with the output processes called by the Pay Cycle process to produce the payment file:

<i>Description</i>	<i>Output Process Name</i>	<i>Type of Process</i>
Draft EFT file	FIN2025	SQR
Draft EFT file with advice	APY207 APX207	Crystal Check BI Publisher
Stub over check with advice	APY201 APY201X1	Crystal Check BI Publisher
Check with separate advice	APY201 APY201X1	Crystal Check BI Publisher
Check over stub with overflow	APY201 APY201X1	Crystal Check BI Publisher

<i>Description</i>	<i>Output Process Name</i>	<i>Type of Process</i>
File copy	APY2021 APX2021	Crystal Check BI Publisher
Stub over draft with advice	APY2021 APX2021	Crystal Check BI Publisher
EFT file	FIN2025	SQR (Structured Query Report)
EFT file with advice	APY2027 APX2027	Crystal Check BI Publisher
Check file layout	APY2021 APX2021	Crystal Check BI Publisher
Giro-EFT file	APY2021 APX2021	Crystal Check BI Publisher
Giro-EFT file with advice	APY2027 APX2027	Crystal Check BI Publisher

Positive payment form	APY2055	Crystal Check
Wire report	APY2027 APX2027	Crystal Check BI Publisher

See Also

Chapter 6, "Setting Up Payment Formats and Payment Forms," page 109

Separate Payments

Typically, multiple scheduled payments to one vendor in a pay cycle are bundled into one payment. This is not the case when the vendor payment options specify separate payments for each scheduled payment,

You can specify:

- Separate payments for a scheduled payment upon voucher entry.
- Separate payments for a scheduled payment on the Pay Cycle Data Details page after Payment Selection processing.
- That the scheduled payments have different payment handling codes. In this scenario, the system produces one payment for each handling code.

Payment Sorting

PeopleSoft Payables sorts payments at two hierarchical levels, payment handling code sequence and sort field sequence.

The first in priority is the payment handling code sequence, which you set up on the Payment Handling Codes page. If you give a high sequence number (the delivered number is 99) to the payment handling code *HD* or *High Dollar Payment* (which is applicable not just to dollars, but to any large amount payment), then any payment that is assigned a payment handling code of *HD* will be among the last to be produced by your output process (that is, printed last), and will therefore be at the top of your pile of checks, ready for any special handling, such as special signatures. This functionality works in conjunction with your bank account setup; when you set up bank accounts, you can select to override the payment handling code on a voucher with the *High Dollar Payment* code for any voucher that exceeds a specified amount.

The second in priority is the sort sequence by payment field that you define for each form ID on the Sort Fields page. You can define check sorting sequence by any of the following payment fields:

- Remit Zip Code
- Payment Handling
- Bank SetID
- Bank Code
- Bank Account
- Payment Method
- Remit SetID
- Remit Vendor
- Name 1

Note. To print payments in dollar amount order, you must first run a script and configure fields on the Sort Fields page. This is fully discussed in the documentation for Specifying Payment Form Attributes.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Defining Procurement Options," Defining Payment Handling Codes

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up Banks," Establishing Payment Sort Fields

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts," Defining Account Information

Check Payments That Never Reach the Banking System

After the system creates payments, it automatically marks as reconciled those check payments that never reach the banking system, such as:

- Voided checks.
- Alignment checks.
- Overflow checks.

Pay Cycle Processing Using the PeopleSoft Payables Payment Interface

When you process pay cycles that include payments imported through the PeopleSoft Payables Payment Interface, such as payments sourced from PeopleSoft Expenses and PeopleSoft Treasury, you must process the pay cycles serially, one pay cycle at a time. If multiple pay cycles that include imported payments from the same source are run at the same time, payments may be generated more than once for the same source document.

If you are using PeopleSoft Expenses to generate cash advance and expense report payments, after Pay Cycle Manager has finished, you can also perform the PeopleSoft Expenses' Consolidate Vendor Payment process. This process includes the following tools that enable you to review and manage the vendor consolidated payment reconciliation process:

- Vendor Payments Crystal report (EXC9000) that contains summarized information of payments for corporate card vendors.
- Vendor Payments Export to File Application Engine process (EX_VNDPT_EXP) that creates a flat file of corporate card vendors payments, which can be saved as a spreadsheet.

Pay Cycle Processing Using the PeopleSoft Financial Gateway

This section discusses:

- Pay Cycle processing through PeopleSoft Financial Gateway.
- Payment cancellation.
- Payments in error.

Pay Cycle Processing Through PeopleSoft Financial Gateway

You can submit approved payments electronically through the PeopleSoft Financial Gateway, using Pay Cycle Manager. The PeopleSoft Financial Gateway can be considered a web service agent or service oriented architecture (SOA). It provides certain PeopleSoft financial applications with payment processing capabilities, such as formatting payments, message acknowledgement, security features, and direct communication to financial institutions.

The Pay Cycle Manager settles only payments of EFT, ACH, and WIR payment methods through PeopleSoft Financial Gateway.

For wires, how you settle wires causes different results. When the system settles wires through Pay Cycle Manager, it results in the Pay Cycle process producing just an advice. If the system settles wires through PeopleSoft Financial Gateway, the system uses the defined form ID and layout for the electronic settlement. In addition, the system changes the wire label from *wire report* to *wire* because it is no longer simply producing a hard-copy report.

Note. You control whether an approved payment is processed through the PeopleSoft Financial Gateway by selecting a check box on the External Accounts - Payment Methods page. If you do not want a payment settled through PeopleSoft Financial Gateway, you should deselect this check box prior to scheduling payments on the voucher.

Certain PeopleSoft Payables processes help create the PeopleSoft Financial Gateway specific payments:

- During the Pay Cycle payment selection and creation processes, the system flags all payments marked for Financial Gateway settlement. This process also:
 - Groups payments based on certain criteria, which includes layout code and settle through field information.
 - Validates that the correct payment layout code is used if the bank replacement functionality is used.
- During the Voucher Build Application Engine process (AP_VCHRBLD), the system validates the correct layout code.
 - If the layout code is undefined on the Vendor Pay table (VENDOR_PAY), the process retrieves the default value from the Bank Payment Layout table (BANK_PYMNT_LYT).
 - If the layout code is defined on the Vendor Pay table, the process validates this value against values stored in the Bank Payment Layout table and ensures that the layout can be settled by PeopleSoft Financial Gateway.

After payment selection and creation, the system inserts these Financial Gateway specific payments into a new pay cycle process row in the pay cycle result grid (PYCYCL_STATRPT) in Pay Cycle Manager. Clicking the Process button causes the system to:

1. Invoke the Payables Financial Gateway Application Engine process (AP_FG_PROC), which creates payment messages. Payment messages hold both the general settlement information (such as bank, routing, vendor bank, and payment advice information) and payment information. In addition to exchanging messages with the PeopleSoft Financial Gateway, the Payables Financial Gateway process and the AP Payment online Application Class handle various background processing tasks for payments; for example, they populate temporary and staging tables with payment data and update payment statuses.
2. Assign a unique Financial Gateway payment ID number.
 - Based on the number defined in maximum transactions per message in the Financial Gateway Installation table (INSTALLATION_FG), the system limits the number of payments held in each payment message. Exceeding this limit triggers the creation of the next payment ID.
 - You set the payment ID on the Source Registration page in the PeopleSoft Financial Gateway functionality. The batch name is an identification number to represent all the payments for a pay cycle, consisting of a concatenated string of the pay cycle ID number and the pay cycle sequence number.
3. Load payments to PeopleSoft Financial Gateway tables for further processing and transmittal to the bank after PeopleSoft Financial Gateway receives the payment message from PeopleSoft Payables.
4. Send acknowledgement messages to PeopleSoft Payables indicating whether the payment dispatch process is successful.
 - If successful, PeopleSoft Payables updates the payments' status to *Loaded*. When requested by the PeopleSoft Financial Gateway, the status is then updated.
 - If unsuccessful, PeopleSoft Financial Gateway sends error messages to PeopleSoft Payables. PeopleSoft Payables consolidates the messages before sending error notification to the user through email (you enable the error notification function by entering a user ID on the Payment Selection Criteria page).
5. Schedule and transmit the payments to the bank, sending asynchronous acknowledgement messages back to PeopleSoft Payables containing payment information. PeopleSoft Payables uses this information to update the payments' status to *Paid*, *Error*, or other statuses. During this part of the process, the Financial Gateway payment information appears on various PeopleSoft Financial Gateway and PeopleSoft Payables inquiry pages.

This diagram shows the integrations between PeopleSoft Payables and PeopleSoft Financial Gateway:

PeopleSoft Payables and PeopleSoft eSettlements payment processing with PeopleSoft Financial Gateway

Note. If the Financial Gateway Application Engine process ends abnormally during processing, you can restart the process using the Process Monitor in the Process Scheduler. The process begins again from where it ended.

When the payment processing is complete, you can use the following pages to review information:

PeopleSoft Payables pages:

- Pay Cycle Details (PYCYCL_DATA_INQ).
- Pay Cycle Approval (PYCYCL_APPROVAL).
- Payment Inquiry (PYMNT_INQ_SRCH).

PeopleSoft Financial Gateway pages:

- Review Payments (PMT_INQUIRY).
- Review Payment Details (PMT_LIFE_CYCLE_INQ).
- Review Payment Files (PMT_FILE_DEFN).
- Review Acknowledgement Files (PMT_FILE_ACK_DEFN).

Payment Cancellation

You can cancel payments that display a settlement status of *Loaded*, *Hold*, or *Error*. Canceling a Financial Gateway payment triggers the following system actions:

1. The system sends a cancel message to PeopleSoft Financial Gateway.

When you use the Mass Payment Cancellation component (AP_PMT_MASS_CNL) to cancel multiple payments, the system sends multiple cancel payments in a message to PeopleSoft Financial Gateway.

2. PeopleSoft Financial Gateway receives the message, and manages the cancel request depending on the settlement status.

- *Loaded*: Payments with a loaded status may be on the staging table and pending transmission to the bank, or they may be in active transmission to the bank.

If the payment is still pending transmission, PeopleSoft Financial Gateway removes the payment from the staging tables and sends an acknowledgement message back to PeopleSoft Payables. PeopleSoft Payables then updates the payment's status to *Canceled*.

If the payment is in active transmission, PeopleSoft Financial Gateway prohibits the cancellation and sends an error message to PeopleSoft Payables. For these situations, you must wait for PeopleSoft Payables to display a payment status of *Paid*, and then cancel the payment.

- *Hold*: For held payments, PeopleSoft Financial Gateway removes the payment from the staging tables and sends an acknowledgement message to PeopleSoft Payables. PeopleSoft Payables then updates the payment's status to *Canceled*.
- *Error*: PeopleSoft Financial Gateway holds payments on the staging tables due to errors encountered during PeopleSoft Financial Gateway or bank processing. To cancel payments in error, PeopleSoft Financial Gateway updates the staging and update error tables and sends an acknowledgement message to PeopleSoft Payables. PeopleSoft Payables then updates the payment's status to *Canceled*.

When you cancel multiple payments, use the Mass Cancellation Job page to view errors encountered through the PeopleSoft Financial Gateway.

In some cases, payment statuses may be out of synchronicity between PeopleSoft Payables and PeopleSoft Financial Gateway. When a payment has a *Canceled* status in PeopleSoft Payables, no messages are transmitted between PeopleSoft Payables and PeopleSoft Financial Gateway. "Out of sync" payment statuses generally occur when users reverse and save a canceled payment. At Save, the system displays a warning message stating that saving the reverse canceled payment may disrupt the synchronization between the two systems.

Payments in Error

During processing through the PeopleSoft Financial Gateway functionality, the system marks payments that have processing errors, and sends individual or batch messages to PeopleSoft Payables that the payments cannot be settled. The system then sends payment error notification emails to specified user IDs if you define the required notification parameters, such as user's email address in user preference and user ID in the payment selection criteria. This payment error notification email contains payment error summary information and a link to the Pay Cycle Error page for error correction.

As error payments can be related to different pay cycles, the system first determines if the payment requires email notification, then bundles those errors requiring notification together into a single email.

See [Chapter 9, "Setting Up Draft, Payment, and Voucher Processing," Setting Up the PeopleSoft Financial Gateway Integration, page 210.](#)

Common Elements Used in This Chapter

Pay Cycle	Displays the ID and description of the pay cycle that is being processed.
Remit Vendor	Displays the remit vendor number.
Total	Displays the total dollar amount of the selected payments.
Voucher	Displays the voucher ID.
Sched Pymnts (scheduled payments)	Displays the total number of scheduled payments.
Seq Number (sequence number)	Displays the pay cycle sequence number. Each time you process a pay cycle, it is assigned the next sequence number.
Status	Displays the status of the pay cycle.

Running and Managing Pay Cycles

This section discusses how to process and manage pay cycles.

Pay Cycle Manager page after processing payment selection and creation and before processing output processes

Starting the Pay Cycle

Start the pay cycle by clicking the Process button for either Payment Selection or Payment Selection & Creation. The Pay Cycle Manager searches for all banks and payment methods defined for the pay cycle. Each type of output is placed in a row in the Pay Cycle Results grid after the Payment Creation process has finished. You can enter an output destination for each row or accept the output destination that is supplied by default from the User Preferences.

Pay Cycle Processes and Output Processes

Pay cycle processes are the applications that must run before you start receiving output from each bank account or payment method. These processes can consist of Payment Selection, Draft Staging, and Payment Creation, individually. You can run them all together by selecting Payment Selection & Creation. Click the Process button next to the process that you want to perform.

After all pay cycle processes are run, the pay status changes to *Created* or *Approved*, depending on whether user approval is required. If approval is required, you perform approval at this point. You are now ready to produce an output file. All output processes are listed in the Pay Cycle Results grid near the bottom of the page. A process button exists for each output process that can be generated for the pay cycle (for example, printing a check for a different bank account, printing an advice, or generating EFT files). After you have run the output process once, the Process button changes to Recreate, which links you to the Recreate Checks page, where you can re-create payments. The Pay Cycle status does not change to *Complete* until you have finished running all output processes.

Note. (USF) If you are a U.S. federal customer who requires payment schedule certification, this certification must occur after Payment Selection. This means that you must run Payment Selection and Payment Creation separately.

Note. When you run multiple pay cycles in parallel and in large volume, Oracle recommends that you set up different business units and banks in pay cycles to avoid contention issues. Running several pay cycles in parallel for the same bank may cause processing issues.

Common Page Information

Selection Criteria	Click to access the Payment Selection Criteria component (PYCYCL_DEFN) where you can create or update a pay cycle.
Approve	Click to access the Pay Cycle Approval component (PYCYCL_APPROVAL). The link is active when the pay cycle requires user approval and the pay cycle status is <i>Created</i> .
Trial Register	Click to access the Register run control component (RUN_APY2030). This link is active after you run both the Payment Selection and Payment Creation subprocesses.
Reference Confirmation	Click to access the Payment References page, where you can confirm that the system reference number matches the reference number on your preprinted check stock.
Draft Staging Approval	Click to access the Draft Staging Approval page, where you can approve or reject a draft payment before running Payment Creation. The link is active after you process Draft Staging.
(USF) Pay Cycle Certification	Click to access the Pay Cycle Certification page, where you can certify or reject a payment schedule before running Payment Creation. For U.S. federal agencies only. You must enable certification for the pay cycle on the Payment Selection Criteria - Preferences page. See Appendix B, "Delivered Workflows for PeopleSoft Payables," page 1285

Pay Cycle Status

Status	Displays the current status of the pay cycle. A <i>New</i> status indicates that this is the first time that the pay cycle is being run. See Chapter 21, "Processing Pay Cycles," Pay Cycle Statuses, page 640 .
Pay Through Date	Displays the last scheduled payment date that a voucher can have to be included for payment in the pay cycle.
Payment Date	Displays the date that prints on checks or shows on other payment methods in the pay cycle. It can differ from the pay through date.
Schedule Payments Selected	Displays the number of scheduled payments to be processed.
Refresh	Refreshes the Pay Cycle Manager page, displaying the most current status. Some Pay Cycle processes must be complete before the next process can start. While these processes are running, the status for the pay cycle is <i>Running</i> . Clicking the Refresh link updates the page so that you can see whether the pay cycle is ready to advance to the next step.
Update Payment Advice	This button appears if you run a pay cycle with <i>EXPN</i> defined as a source. Clicking this button will encrypt the credit card number for <i>EXPN</i> transactions listed in the payment advice table and remove any related information from the temp table. After you click this button, a message will appear. Click OK to update the Payment Advice table with encrypted credit card numbers, if any, and remove any related information from the temp table. After you click the Update Payment Advice button, it will no longer appear on the page. If you do not click this button, the unencrypted credit card data will be saved to the Payment Advice table. When this paycycle is run again, users can click the button to clean all of the current and previous data.
Summary	Click to transfer to the Pay Cycle Summary page, where you can view payment information about scheduled payments, summarized by bank account and payment method. This link becomes available after Payment Selection is complete.
Details	Click to transfer to the Pay Cycle Details page, where you can search scheduled payments by various search criteria, such as business unit, invoice, or vendor ID. You can also hold individual scheduled payments, exempt them from pay cycle processing, or flag them as separate payments. This link becomes available after Payment Selection is complete.

Process

Each row contains a Process button, a Server field, and a display-only description of an available pay cycle process. Some processes are available only if you are creating certain types of payments. For example, Draft Staging is available only if you are processing draft payments.

Processes are not available and no longer appear after they have been completed.

To run a process, select a server and click the process button for the process row. The server drop-down list box shows only servers that have a status of *Running* on the Process Monitor Server List page. The system performs validation before a process is initiated to ensure that the Process Scheduler server is currently running.

The standard processes are:

Payment Selection

Runs the Payment Selection process only, so that you can review and handle pay cycle exceptions, take action on individual scheduled payments using the Pay Cycle Details page, and certify payment schedules (for U.S. federal agencies only) before you run the Payment Creation process.

If you are processing drafts, run the Payment Selection process alone to enable you to then run the Draft Staging process alone. This enables you to use Draft Staging Approval before you run the Payment Creation process.

Payment Selection & Creation

Runs all processes in one step, including Payment Selection, Draft Staging (if necessary), and Payment Creation. You cannot perform any exception handling, take action on individual scheduled payments, certify payment schedules (U.S. federal only), or use draft staging approval.

Note. This option is unavailable for U.S. federal agencies or for PeopleSoft eSettlements users if Pay Cycle Payment Approval is enabled at buyer registration.

Draft Staging

Runs the Draft Staging process. Draft staging groups the draft payments, then performs draft rounding and draft optimization, according to your payment selection criteria. You can approve or reject the draft payments on the Draft Staging Approval page. You must either approve or reject draft payments before the Payment Creation process. This option is active only if you are processing draft payments and you have run the Payment Selection process.

Payment Creation

Runs the Payment Creation process to prepare payments for output processing. This option is available only after you have run the Payment Selection process—or, if draft payments are in your pay cycle, after you have run the Draft Staging process.

Pay Cycle Reset

Server

Select a server on which to run the pay cycle reset process.

Reset

Click to initiate a process to clear all of the scheduled payments currently being processed in the pay cycle. This button is active during Payment Selection if the pay cycle is rejected or if a system error occurs, such as a server running out of storage memory or a power failure. The button remains active until the Pay Cycle status is *Approved*.

Pay Cycle Exceptions

The links in this group box become active only if pay cycle exceptions exist after the Payment Selection, Payment Creation processes, or both have been run. If a payment is marked with an exception (except for discounts lost exceptions), it is rejected for further processing within the pay cycle. You must either correct or override the exception and run the payment as part of another pay cycle.

Pay Cycle Error	Click to access the Pay Cycle Error page, where you can view errors encountered during this pay cycle run.
Discount Lost	Click to access the Lost Discount Alert page, where you can review and handle potential lost discounts calculated during the Payment Selection process.
Discount Denied	Click to access the Discounts Denied page, where you can review discounts that were not taken because they failed discount evaluation (that is, the bank interest earned on the net voucher amount is greater than the amount of the discount that you would gain by paying early).
Withholding	Click to access the Withholding Exception page so that you can review and handle withholding exceptions generated during pay cycle processing.
Bank Replacement	Click to access the Bank Replacement Exceptions component, where you can review bank replacement exceptions generated during pay cycle processing. Some bank replacement exceptions appear after Payment Selection; others appear only after Payment Creation.
Financial Sanctions Exceptions	Click to access the Pay Cycle Financial Sanction Warnings page, where you can review financial sanctions exceptions generated during pay cycle processing. If the system validates the vendors during the Selection process and the vendor's financial sanctions status changes to <i>Review</i> , the system creates payment validation errors for this vendor's payments. The system also adds this vendor to the Financial Sanctions Validation Log page. <u>See Chapter 21, "Processing Pay Cycles," Viewing Financial Sanctions Exceptions, page 676.</u>

Pay Cycle Results - Main Information tab

When the Payment Creation process is complete, the Pay Cycle Results grid displays a row of data for each output process that must be run to generate payment files and negotiable documents. For EFT payments, because all payments regardless of bank account run as one output process, only one EFT row can appear. For checks, advices, positive payment files, and file copies, each bank account and payment method combination runs as a separate output process. This means that multiple check rows, positive payment rows, and so forth can appear in the grid.

Process	Click to initiate an output process, such as creating an EFT file or printing checks or advices. Note. Depending on the output process, you may need to click the Process button repeatedly when each subprocess within the output process is run.
Recreate	Click to access the Recreate Checks page, where you can re-create an EFT file or reprint checks. When the button is labeled Recreate Positive Pay, you can click it to re-create a positive payment file.
Server Name	Select a specific Process Scheduler server from which to run the pay cycle output process.
Output Type	Displays the resulting output type. Values are: <i>File:</i> Specifies that the pay cycle output is created in a file format. This is used for electronic payment formats, such as EFT or ACH payments. <i>Printer:</i> Specifies that the output is printed on the selected printer. This is used for printed payment formats, such as for system checks or advices. <i>Web:</i> Specifies that the output file is sent to the Report Repository and authorized users can download the output file using the Report Manager. You do not need to specify an output destination if you select this option. If you distribute output files using the <i>Web</i> option, you must set up distribution options using the Process Schedule Manager. When the report or output file is generated in the report repository, select the View link on the Report List page in the Report Manager to access the Report/Log Viewer. Click the report link on the Report/Log Viewer and you will have the option to open the file online or download the report file.
Output Destination	Specifies the output file directory or the printer name for the output file creation. If <i>File</i> is selected, the Output Destination value is supplied by default from the server file destination specified on the User Preferences - PayCycle page. You can override the default with a valid directory path, but remember that a meta string (such as %%OutputDirectory%%) is not permitted. You must specify a full directory path with a backslash at the end (for example: C:\TEMP\).

Pay Cycle Results - Additional Info tab

Instance	Displays the process instance for the latest process that you initiated for the row.
Payment File	Displays the name of the payment output file that is created.
Form ID	Displays the form ID specified on the bank account definition for the document formatting.

Positive Pymnt (positive payment)	Specifies the positive payment form ID on the bank account definition for formatting the positive payment file. This applies only to system checks.
File Copy Form	Displays the form ID specified on the bank account definition for formatting check copy files. You enable file copying and specify the file copy form ID on the External Accounts - Payment Methods page.
First Payment	Displays the beginning payment reference number for the pay cycle.

Resetting Pay Cycles

You can reset a payment cycle in the Pay Cycle Manager if you decide against creating any payments for the selected vouchers. This option enables you to deselect vouchers for payment after you run a pay cycle, but before you print the checks. You can reset a pay cycle after Payment Selection, but to reset after Payment Creation requires extra steps. To reset after Payment Creation, go through Pay Cycle Approval to reject the pay cycle. Then perform the reset.

Note. PeopleSoft Payables marks vouchers as selected when Payment Selection runs. No other transactions can occur on the selected vouchers. If you decide not to produce payment files or print checks for these vouchers, reset the selection so that a later pay cycle can reselect the vouchers.

Note. Resetting a pay cycle that is using bank account replacement reverses the bank replacement. For example, assume that a payment is coming from bank account A, and that during the pay cycle, bank account B replaces bank account A. If you reset the pay cycle for this payment, the payment reverts to the original account, which is bank account A.

Note. If EFT and ACH prenotes are included in the pay cycle, the system reverses the prenote status on the Vendor Information component (VNDR_ID) from *Pending* to *New* when you reset a pay cycle.

Completing the Pay Cycle

When you have successfully selected your payments, viewed and processed any exceptions, generated payments, approved the pay cycle, produced payment outputs, confirmed payment reference numbering, and formatted and produced the positive payment file (if required), the Pay Cycle Manager shows a status of *Completed*.

Reviewing Vouchers Selected for Payment

This section discusses how to:

- Review pay cycle data.
- Review summary data.
- Review a pay cycle summary data chart.

After you complete the Payment Selection process, you might need to review the voucher payments that have been selected for payment, place certain payments on hold, temporarily exclude some from the pay cycle, enforce separate payments for some, or review total payment amounts for the pay cycle by various criteria before you proceed with the Payment Creation process and your output processes.

Pay Cycle Details page (2 of 2)

Select a pay cycle and click the Search button to view all scheduled voucher payments selected for your current pay cycle. You can limit your search using the other fields. For example, you might want to limit your search to a certain business unit.

Scheduled Payments

You can view selected scheduled payments and take action to hold, exempt, flag as a separate payment, or hold and flag as separate.

Voucher ID

Click to access the Voucher Inquiry page, where you can view details for the voucher.

Action

Select an action to perform on a selected scheduled payment. This field is available only after you run Payment Selection and before you run Payment Creation. Actions include:

Exclude: Excludes the scheduled payment from the pay cycle. Unless you run a future pay cycle with a pay-from date that precedes the payment date on the excluded scheduled payment (and the payment meets the other selection criteria), this payment will not be picked up by a pay cycle again.

Hold: Holds the payment from continued processing by the pay cycle. This payment will not be selected by a pay cycle again until you release the hold.

Hold & Separate: Places the scheduled payment on hold and separate from any other payments to be paid to the same vendor from the same bank account and payment method.

None: Takes no action. The payment remains selected and subject to processing in the current pay cycle run.

Separate: Marks the scheduled payment to be paid separately from any other payments to this vendor from this bank account and payment method.

Note. The system automatically sets all prepayment vouchers with an action value of *None* to ensure correct processing. You cannot change this default setting.

Payment Details

This section displays general payment information, such as bank, account, payment method, and payment date.

Additional Details

This section displays additional payment information, such as pay group ID, EFT layout, and settle by method.

Action Buttons**Hold All**

Click to hold all scheduled payments in the pay cycle. These payments will not be selected by a pay cycle until you release the hold.

Exclude All

Click to exclude all scheduled payments in the pay cycle. These payments will not be selected by a pay cycle unless that pay cycle has a pay-from date that precedes the payment date on the excluded scheduled payment (and the payment meets the other selection criteria).

Separate All

Click to mark all payments in the pay cycle for separate payment.

Click the payment method code to transfer to the Pay Cycle Details page, where you can view the selected scheduled payments for this payment method.
- Totals

Click to transfer to the Pay Cycle Details page and display all the scheduled payments paid from this bank account.

Reviewing a Pay Cycle Summary Data Chart

Access the Pay Cycle Summary Metric page (Accounts Payable, Review Accounts Payable Info, Payments, Summary Metric, Pay Cycle Summary Metric).

Pay Cycle Summary Metric page

The Payments by Bank and Method chart is available for a pay cycle when Payment Selection has run, and displays all payment amounts for a single currency in the pay cycle, summarized by bank account and payment method. Clicking a bar on the chart displays the list of vouchers that are summarized and represented on the chart.

Pay Cycle	Select a pay cycle to display its summary data in a chart.
Currency Code	Select the currency of the pay cycle payments that you want to view. Only one currency can be displayed at a time.
Chart Type	Select what kind of chart to display. The options are <i>Bar Chart</i> , <i>Horizontal Bar</i> , <i>Horizontal Stacked Bar</i> , <i>Percentage Stacked Bar</i> , and <i>Stacked Bar</i> . After the chart appears, you can change this option and click the Draw Chart button to display the new chart type.
Draw Chart	Click to display the Pay Cycle Summary chart using the parameters that you specified.

Handling Pay Cycle Exceptions and Alerts

This section provides overviews of pay cycle alerts and financial sanctions validation and discusses how to:

- Handle potential lost discounts.
- Handle denied discounts.
- View withholding alerts.
- View Pay Cycle errors.
- View bank replacement exceptions.

- View financial sanctions exceptions.

Understanding Pay Cycle Alerts

This section discusses:

- General pay cycle alerts.
- Discount evaluation alerts.

General Pay Cycle Alerts

After you run the Payment Selection and Payment Creation processes, you may find that one or more of the links in the Pay Cycle Exceptions group box in Pay Cycle Manager becomes available. This means that you have an exception or an alert to view and handle. Some of these exceptions are logged after Payment Selection has finished; you can usually take immediate action to handle these exceptions before continuing with pay cycle processing. Others are logged only after Payment Creation is finished; these can be viewed as informational only, and usually require handling outside of the pay cycle pages before you run them in a later pay cycle.

Discount Evaluation Alerts

The Discount Evaluation feature compares the potential interest income with the discount amount and determines whether taking a discount is economically feasible.

PeopleSoft Payables uses the Number of Days in Year to compute the annual discount effective rate. PeopleSoft Payables is delivered with a default number of 360 days, in accordance with U.S. federal specifications; but you can override that default on the External Accounts - Accounts Information page.

During the pay cycle, the system calculates the due dates for vouchers based on the invoice date, invoice receipt date, acceptance date, or constructive receipt date, in conjunction with the payment terms (interest rates versus payment discounts).

If the bank interest income is greater than the amount of the discount, the pay cycle drops the voucher from the process. If a payment is denied, the system provides a discount denied alert so that you can pay the voucher if you choose to.

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts," Defining Account Information

Understanding Financial Sanctions Validation

Oracle provides validation of your vendors against financial sanctions lists (for example, the Specially Designated Nationals (SDN) list) at the vendor level, voucher level, and payment level. At the payment level, financial sanctions validation is performed if you:

- Select the Financial Sanctions list edit check box on the Payment Selection Criteria - Preferences page for that pay cycle.

If financial sanctions validation is enabled at the installation level, all remit vendors selected for a pay cycle are validated. If financial sanctions validation is enabled at the bank level, only selected remit vendors whose banks are enabled are validated. The system updates the vendor's financial sanctions status on the Vendor Information component.

- Run the Financial Sanctions Validation Application Engine process (AP_SDN_VAL).

You can schedule the Financial Sanctions Validation process to run on a predefined schedule using the Process Scheduler, or you can run it on an ad hoc basis.

Note. Financial sanctions validation is performed only on remit vendors with a source transaction of *VCHR* (Accounts Payable transactions).

At the payment level, the system verifies the financial sanctions status of the vendor during:

1. The Payment Selection process.

The system does not select payments for a vendor with a financial sanctions status of *Blocked* or *Review*. However, if financial sanctions validation is enabled at the bank level and you no longer validate for a particular vendor's bank, the system may select a vendor with a financial sanctions status of *Review*.

2. The validation step of the Payment Selection process, only if you select the Financial Sanctions edit list check box on the Payment Selection Criteria - Preferences page for that pay cycle.

Selecting this option enables you to validate your vendors once again before payment creation. If the vendor's financial sanctions status changes to *Review*, the system creates payment validation errors for this vendor's payments. You can view these payment validation errors on the Pay Cycle Financial Sanction Warnings page.

Note. The system never creates payments for a vendor with a financial sanctions status of *Blocked* regardless of whether financial sanctions validation is enabled at the installation level or bank level, or is not enabled at either level. If you change how financial sanctions validation is performed (for example, you no longer validate for a particular bank), you must change the financial sanctions status on the vendor from *Blocked* to *Valid* or *Cleared* before you can pay this vendor.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Entering Identifying Information.

Pages Used to Handle Pay Cycle Exceptions and Alerts

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Lost Discount Alert	PYCYCL_DSCNT_ALRT	- Accounts Payable, Payments, Pay Cycle Exceptions, Review Discount Lost Alert, Lost Discount Alert - Click the Discount Lost link on the Pay Cycle Manager page.	View scheduled payments that you have not included in the current pay cycle with earned discounts that you may lose if you don't pay them before the next payment date.
Discount Denied	PYCYCL_DSCNT_DENY	- Accounts Payable, Payments, Pay Cycle Exceptions, Review Discount Denied Alert, Discount Denied - Click the Discount Denied link on the Pay Cycle Manager page.	View scheduled payments for which the system has denied a discount because waiting for the due date and earning the interest income during that time is better.
Withholding Exception	WTHD_EXCEPTION	- Accounts Payable, Payments, Pay Cycle Exceptions, Review Withholding Alert, Withholding Exception - Click the Withholding link on the Pay Cycle Manager page.	View payments for which withholding errors occurred during pay cycle processing.
Pay Cycle Errors	PYCYCL_ERR	- Accounts Payable, Payments, Pay Cycle Exceptions, Review Pay Cycle Errors, Pay Cycle Errors - Click the Pay Cycle Error link on the Pay Cycle Manager page.	View pay cycle processing errors for a pay cycle. Note. You can view general information on financial sanctions exceptions using the Pay Cycle Errors page. Use the Pay Cycle Financial Sanction Warnings page to access detail information about the financial sanctions exceptions.

Page Name	Definition Name	Navigation	Usage
Bank Replacement Exceptions - Schedule Exceptions	PYCYCL_BANK_EXPTN	- Accounts Payable, Payments, Pay Cycle Exceptions, Review Bank Replacement, Bank Replacement Exceptions - Schedule Exceptions - Click the Bank Replacement link on the Pay Cycle Manager page.	Review bank replacement exceptions created during the Payment Selection process. These occur only when you apply a bank replacement rule to replace the bank account (optionally including payment method and currency) for all payments in a pay cycle.
Bank Replacement Exceptions - Payment Exceptions	PYCYCL_BANK_EXPTN1	- Accounts Payable, Payments, Pay Cycle Exceptions, Review Bank Replacement, Bank Replacement Exceptions - Payment Exceptions - Click the Bank Replacement link on the Pay Cycle Manager page.	Review bank replacement exceptions created during the Payment Creation process. These occur when you apply a bank replacement rule that includes any of the following options: Replace Bank with Another Bank, Replace by Currency, Replace by Individual Payment Limit, and Replace by Bank Maximum Limit.
Pay Cycle Financial Sanction Warnings	PYCYCL_FNS_ERR	- Accounts Payable, Payments, Pay Cycle Exceptions, Pay Cycle SDN List Exceptions, Pay Cycle Financial Sanction Warnings - Click the Financial Sanctions Exceptions link on the Pay Cycle Manager page.	View detail information about financial sanctions exceptions for a pay cycle.

Handling Potential Lost Discounts

Access the Lost Discount Alert page (Accounts Payable, Payments, Pay Cycle Exceptions, Review Discount Lost Alert, Lost Discount Alert).

Lost Discount Alert [Pay Cycle Manager](#)

Lost Discount Alert page

This page alerts you to any discount lost on a pay cycle. If you selected the Include Lost Discount check box on the Payment Selection Criteria - Preferences page for the pay cycle, then all payments with potential lost discounts are automatically paid in the pay cycle, and this page is not applicable. You must view this page after Payment Selection has run and before you run Payment Creation to use the Include button to include a payment with a potential lost discount.

Note. All discount alerts are cleared automatically when you rerun a completed pay cycle.

Note. Lost rebates are not tracked and do not appear on this page.

Voucher Information

Appr Stat (approval status) Displays the voucher scheduled payment approval status.

Handling Displays the payment handling code. You set up payment handling codes on the Payment Handling Codes page.

See [Chapter 21, "Processing Pay Cycles," Payment Sorting, page 644.](#)

Separate Payment	Specifies whether the scheduled payment is a separate payment and prevents it from being grouped with any other payment. If this option is not selected, the scheduled payment is combined with other scheduled payments that are being paid to a vendor from the same bank account using the same payment method. By default, the system groups all payments for a vendor by the payment method, even if the payments are for different business units. In addition to the standard payment groupings, draft payments have added groupings, such as draft maturity date, sight code, or scheduled payment date. You can overrule the default grouping criteria if you set up the Do Not Mix with Other Business Units option for a particular business unit or when you select the Separate payment option.
Hold Payment	Specifies whether the payment schedule is on hold so that it is not picked up by the pay cycle. The hold option can be set manually or by a scheduled process. For example, the withholding process places on hold those vouchers with withholding exceptions.
Hold Reason	Displays the reason that the scheduled payment is on hold.
Alert Reason	Indicates why the alert was issued for the payment.
Payment Message	Shows any payment message for the payment schedule.
Include	Click to include the payment in the current pay cycle. This button is active only after you run Payment Selection and before you run Payment Creation.

Invoice Amounts

Gross	Displays the amount of the payment if a discount is not applied.
Discount Avail (discount available)	Displays the amount you are in danger of losing if you do not include this payment in the cycle.
Net	Displays the amount of the payment if the discount is taken.

Chapter 42, "Processing Withholding in PeopleSoft Payables," page 1151

Viewing Pay Cycle Errors

Access the Pay Cycle Errors page (Accounts Payable, Payments, Pay Cycle Exceptions, Review Pay Cycle Errors, Pay Cycle Errors).

Search Criteria

Error Type

Select the error type you want to view, and click the Search button. Values are:

- *All Error Types*: This is the default.
- *Currency Conversion Related*: Payment source transaction currency is not defined for translation to payment currency.
- *(USF) Federal Payment*: Possible errors include:

The last manual ID number, last transportation ID number, or last other ID number is out of the range established on the Payables installation options.

A scheduled payment has caused the number of appropriations per payment schedule to exceed the limit defined on the Schedule Payment Restrictions page.

For U.S. federal agencies only.

- *Financial Gateway Staging*: Payment settled through the PeopleSoft Financial Gateway process could not be transmitted.
- *Financial Sanctions*: The vendor's financial sanctions status changed to *Review* during financial sanctions validation in the validation step of the Payment Selection process.

Note. Use the Pay Cycle Financial Sanction Warnings page to access detail information about the financial sanctions exceptions.

- *(USF) IPAC Information*: IPAC information was not found. For U.S. federal agencies only.
- *Negative Payment*: A scheduled payment selected by the pay cycle has a negative amount payment.
- *Negative Payment/With.Restored*: PayCycle has detected this payment is a credit payment which is not applied against any outstanding liability.
- *Payment Error*: Payments are in error.
- *Vendor Bank*: Bank routing information was not found for an electronic payment to a vendor.

Search Results

The search results grid displays the error type for each error, along with the source of the error (such as voucher entry), the advice ID and advice sequence (which are identical to the voucher ID and payment count), key fields and, in the Message Text field, a description of the error.

Viewing Bank Replacement Exceptions

Access the Bank Replacement Exceptions - Schedule Exceptions and Bank Replacement Exceptions - Payment Exceptions pages (Accounts Payable, Payments, Pay Cycle Exceptions, Review Bank Replacement, Bank Replacement Exceptions - Schedule Exceptions).

Schedule exceptions occur during the Payment Selection process, and payment exceptions occur during the Payment Creation process. Schedule exceptions occur only if your bank replacement rule consists of the option to replace all bank accounts in the pay cycle.

Note. Scheduled payments with bank replacement exceptions are dropped from the pay cycle and revert to their original bank account, payment method, and currency upon completion of the pay cycle. They remain available in their original state for future pay cycles.

Viewing Schedule Exceptions**Exception Type**

Select the exception type you want to view:

All: All exceptions. This is the default.

Invalid SetID: The replacement bank account does not match the bank setID on the bank replacement rule.

Pay To Bank: Remit-to vendor bank routing information for an electronic payment is missing.

Payment Currency: The replacement bank does not have a valid currency.

Payment Method: The replacement payment method is not valid for the replacement bank account.

Exceptions

Displays details about each scheduled payment that has a payment exception of the type indicated in the Exception Type field.

Viewing Payment Exceptions

Exception Type	Select the exception type you want to view. These are the same as those available on the Bank Replacement Exceptions - Schedule Exceptions page, with these additions: <i>Currency Conversion:</i> Indicates that the conversion from the payment currency to the replacement bank account default currency failed. <i>Insufficient Funds:</i> Indicates that the amount limit on all available replacement bank accounts has been reached, or a large-amount payment exceeds the amount limit of each available replacement bank account.
Exceptions	Displays details about each created payment that has a payment exception of the type indicated in the Exception Type field, along with details about each scheduled payment included in the created payment.

See Also

Chapter 8, "Establishing Pay Cycles," Defining Bank Replacement Rules, page 152

Viewing Financial Sanctions Exceptions

Access the Pay Cycle Financial Sanction Warnings page (Accounts Payable, Payments, Pay Cycle Exceptions, Pay Cycle SDN List Exceptions, Pay Cycle Financial Sanction Warnings).

Use this page to access detail information on the financial sanctions exceptions. You can also use the Pay Cycle Errors page to view general information on financial sanctions exceptions.

Voucher

Advice ID and Advice Sequence	Displays the voucher ID and payment count.
Entry ID	Displays the entity ID of the vendor (for example, passport number).
Financial Sanctions Inquiry	Click to access the Financial Sanctions Inquiry page. The Financial Sanctions Inquiry enables you to use search criteria to list details about the data in the financial sanctions lists. See <i>PeopleSoft Banks Setup and Processing 9.1 PeopleBook</i>, "Setting Up and Using the Financial Sanctions Service," Searching the Financial Sanctions Data.
Vendor ID	Displays the vendor ID of the vendor who is a potential match to the financial sanctions lists.

Name/Address Information

Displays the address, city, and country of the vendor.

Message Detail

Displays the error and description of the error.

Reviewing Draft Payments

This section discusses how to:

- Approve staged draft payments.
- View details about draft payments.
- View details about draft vouchers.

See Also

Chapter 31, "Processing Drafts," page 915

Pages Used to Review Draft Payments

Page Name	Definition Name	Navigation	Usage
Draft Staging Approval	APD_APPROVE_PNL	• Accounts Payable, Payments, Drafts, Draft Staging Approval • Click the Draft Staging Approval link on the Pay Cycle Manager page.	Approve or reject draft payments that are created during the Draft Staging Application Engine process (AP_DFT_PROC) in the Pay Cycle process.
Draft Inquire	APD_APPROVE_PNL2	• Accounts Payable, Payments, Drafts, Draft Staging Inquiry, Draft Inquire • Click the Draft Staging Key button on the Draft Staging Approval page.	View a listing of draft payments created in the Draft Staging table.
Draft Inquire (Voucher)	APD_APPROVE_PNL3	Accounts Payable, Payments, Drafts, Draft Staging Inquiry, Draft Inquire (Voucher)	View the scheduled draft payments by Draft Master ID.

Approving Staged Draft Payments

Access the Draft Staging Approval page (Accounts Payable, Payments, Drafts, Draft Staging Approval).

Note. You must either approve or reject draft payments before you run the Payment Creation process. However, approving or rejecting payments does not affect the draft payment's status. If you selected the Preapprove option on the Preferences page of the Payment Selection Criteria component, then the draft payment status is changed to *Approved*. If you did not select this option, the drafts that you approve from this page have a draft status of *Created*.

Main Information Tab

Click the Draft Staging Key button to access the Draft Staging Inquiry page, where you can review details about the draft payment and the vouchers associated with the draft payment.

Master ID	Displays the draft master ID for a set of scheduled payments.
# of Draft (number of draft)	Displays the number of the draft that will be created for the draft master if you selected draft optimization.
Master Status	Select the option that indicates the status of the draft master: <i>Not Apprv</i> (not approved): Indicates that the scheduled draft payment has not been approved. <i>Approve</i> : Creates draft payments for the scheduled draft payments that are attached to the Master Draft ID. <i>Reject</i> : Clears the draft payments that are grouped into the Draft Master ID. The scheduled payments are rejected or deselected so that no payments are created.
Payment Method	Indicates whether the draft is a customer-initiated or customer-initiated EFT draft payment.
Draft Amount	Displays the amount of the draft payment.
Amount (NonDft) (amount non-draft)	Displays any payment amount that is being paid by an alternate payment method if you specify draft rounding on the Payment Selection Criteria page.
Maturity Dt	Displays the draft maturity date.

Additional Information Tab

Sch Maturity Dt (scheduled maturity date)	Displays the draft scheduled maturity date if the maturity date is adjusted as a result of the bank holiday and business calendar options that you selected.

Additional Page Elements

Approve All	Click to approve all scheduled draft payments shown.
Reject All	Click to reject all scheduled draft payments shown.
Display Only Not Approved	Click to see only those scheduled draft payments that are not approved.
Display All	Click to see all scheduled draft payments, regardless of whether they are approved.

Viewing Details About Draft Payments

Access the Draft Inquire page (Accounts Payable, Payments, Drafts, Draft Staging Inquiry, Draft Inquire).

Draft Master ID	Displays the scheduled draft payment draft master ID.
Bank	Displays the vendor's bank.
Bank Account	Displays the vendor's bank account.
Separate	Indicates whether the scheduled payment is grouped with other scheduled payments that are also selected for the vendor in the same pay cycle.
Draft Group CD (draft group code)	Displays the draft payment group code number.
Draft Create Key	Displays the system-assigned sequence number. It is a child key of Draft Master ID.
Draft Amount	Displays the total amount of the draft payment.
Stamp Tax	Displays the amount of any applicable stamp tax.
Alt Payment Method (alternate payment method)	Displays the payment method by which the draft rounding remaining amount is paid.
Excluded	Indicates whether draft will be excluded: Y if the draft amount is <i>not</i> to be paid. N if the draft amount <i>is</i> to be paid and will use an alternate payment method if one is specified.

Viewing Details About Draft Vouchers

Access the Draft Inquire (Voucher) page (Accounts Payable, Payments, Drafts, Draft Staging Inquiry, Draft Inquire (Voucher)).

Draft Master ID	Displays the draft master ID.
Pymnt Nbr (payment number)	Displays the sequence number of the scheduled payment.
Gross Amount	Displays the gross amount of the draft payment, excluding any applicable stamp tax minimization amounts.

Viewing the Trial Register

This section discusses how to use the Trial Register report.

Page Used to View the Trial Register

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Register	RUN_APY2030	Click the Trial Register link from the Pay Cycle Manager.	Define run parameters for the Trial Register report (APY2030). Use the report to examine or print a summary of payments by bank account after payment selection and creation, but before you print checks or create EFT or ACH files.

Using a Trial Register

Access the Register page and run the Trial Register report (click the Trial Register link from the Pay Cycle Manager).

After viewing the Trial Register report, you can:

- Print it for your records.
- Close it and return to the Pay Cycle Manager page to proceed with check printing.

If you find an error in the register:

1. Reset the pay cycle.
2. Rectify the problem in the Payment Selection Criteria component.

[Chapter 8, "Establishing Pay Cycles," page 143](#)

Approving the Pay Cycle

This section discusses how to approve the pay cycle.

If you have selected user approval on the Payment Selection Criteria - Preferences page, then your pay cycles must be approved after you have completed payment creation and before you run your output processes.

Note. Payments for pay cycles that require user approval are not eligible for posting until the pay cycle has been approved.

Note. (USF) U.S. federal agencies use payment schedule certification rather than approval. You certify payment schedules after payment selection and before payment creation.

Pay Cycle/Payments/Drafts

Scheduled Payments	Displays the number of scheduled payments in the pay cycle.
Paycycle Summary	Click to access the Pay Cycle Summary page, where you can see details for the pay cycle.
Approve	Click to approve the pay cycle and continue processing.
Reject	Click to reject the pay cycle. The Reset button on the Pay Cycle Manager page becomes active, and you can reset the pay cycle.

Pay Cycle Results

This grid displays a row of data for each output process that must be run to generate payment files and negotiable documents. For EFT payments, because all payments regardless of bank account run as one output process, only one EFT row can appear. For checks, advices, positive payment files, and file copies, each bank account and payment method combination runs as a separate output process. This means multiple check rows, positive payment rows, and so forth can appear in the grid.

Payment File	Describes the payment form.
Form ID	Displays the payment form ID.
Settle by	Displays the settle through method, either <i>Financial Gateway</i> or <i>Pay Cycle</i> .
Positive Payment Form	Displays the form ID used for printing a positive payment file.

File Copy Form Displays the form ID used for printing the file copy.

First Payment Displays the first payment reference.

Verifying Payment References

This section provides an overview of payment reference verification and discusses how to:

- Confirm payment references.
- Unconfirm payment references.

See Also

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts," Defining Payment Methods

[Chapter 22, "Using Additional Payment Processing Options," Using Express Payments, page 705](#)

Understanding Payment Reference Verification

When you use preprinted stationery, use the Payment Reference page to verify that the system is assigning the correct check numbers. The system assigns the check numbers, based on the last check number used, so you might need to verify that the system is using the correct number. If it isn't, then you might need to change the payment reference number to match the number used on your preprinted form.

Note. To use payment reference confirmation for a bank account, you must select the Confirm Numbers option on the External Accounts - Payment Methods page.

Note. You cannot use the Confirm Payment References feature with Express Payments. You can use the Confirm Payment References feature only with regular pay cycle payments.

Page Used to Verify Payment References

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Payment Reference	PYMNT_CNFRM	- Accounts Payable, Payments, Pay Cycle Approvals, Reference Confirmation, Payment Reference - Accounts Payable, Payments, Pay Cycle Approvals, Reference Unconfirmation, Payment Reference - Click the Reference Confirmation link on the Pay Cycle Manager page.	Access through the Pay Cycle Manager or Reference Confirmation component to confirm that the system reference number matches the reference number on your preprinted check stock or to renumber the system-assigned reference numbers. Access through the Reference Unconfirmation component to unconfirm any payment references that you have previously confirmed.

Confirming Payment References

Access the Reference Confirmation - Payment Reference page (Accounts Payable, Payments, Pay Cycle Approvals, Reference Confirmation, Payment Reference).

Search Criteria

Enter your search criteria and click search to view payment references. Bank setID, bank code, and bank account are required fields.

From Ref / To Ref and From Date / Thru Date Select to view a range of payment references or a date range. Enter the from and to references or dates in the fields below.

Actions

Renumber All . . . Click to renumber the payment references if a discrepancy exists between the system payment references and your preprinted stationery.

Confirm All Click to confirm that the system payment reference numbers match those of the printed checks.

Search Results

This grid displays the payment reference, payee name, payment amount, payment date, and pay cycle status of each payment that meets your selection criteria.

Occasionally you might want to confirm individual reference numbers one at a time. Do this by selecting the appropriate Confirm check box for each payment reference and then saving the page.

Unconfirming Payment References

Access the Reference Unconfirmation - Payment Reference page (Accounts Payable, Payments, Pay Cycle Approvals, Reference Unconfirmation, Payment Reference).

This page is identical to the Reference Confirmation - Payment Reference page except that it enables you to unconfirm payments you have already confirmed. Two ways are available to unconfirm payment references:

- Deselect the check box for each payment that you want to unconfirm and save the page.
- Click the Unconfirm All button to clear all of the payments on the page.

Producing Manual Positive Payment Files

This section provides an overview of how to produce manual positive payment files and discusses how to produce positive payment files.

Understanding How to Produce Manual Positive Payment Files

If a payment in your pay cycle is paid from a bank account that requires positive payment files, you see a positive payment output process row for that bank account on the Pay Cycle Manager page after you run Payment Creation for that pay cycle. All you need to do is run the positive payment output process to produce your positive payment file.

Occasionally you may want to produce a positive payment file outside of the normal pay cycle process, such as when you've created manual payments that you want to appear in the positive payment file. In those cases, you use the Manual Positive Payment page to initiate the production of a positive payment file.

Page Used to Produce Manual Positive Payment Files

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Manual Positive Payment	PYCYCL_POS_PAY	Accounts Payable, Payments, Pay Cycle Processing, Manual Positive Payment, Manual Positive Payment	Create a manual positive payment file to send to your bank. This is a text file that your clearinghouse bank can import into its own payment tables.

Producing Positive Payment Files

Access the Manual Positive Payment page (Accounts Payable, Payments, Pay Cycle Processing, Manual Positive Payment, Manual Positive Payment).

Specify the bank setID, bank code, and bank account for which want to produce the positive payment file. In addition, specify the following items:

Step Group Name Specify the step group or the list of pay cycle processes that you want the Pay Cycle process to run to produce the positive payment file. The positive payment output process is part of the Pay Cycle process, although in this case you can run it without running a full pay cycle.

See [Chapter 8, "Establishing Pay Cycles," Creating a Pay Cycle, page 147.](#)

Select one of the following processing options:

Format and File Select to run the positive payment output process and create an output file.

File Only Select to create the positive payment output file without rerunning the positive payment output process. This is useful for those times when you previously selected the Format and File option, but the file was not successfully created.

Click the Process button to create the positive payment file. This transfers you to the Pay Cycle Manager page, where you complete the positive payment file output process.

Restarting Pay Cycles and Re-creating Checks

This section provides an overview of how to restart a pay cycle and discusses how to re-create and reprint checks.

Understanding Pay Cycle Restart

When you do a restart for the pay cycle, the system assigns the name for the new pay cycle based on the following logic:

- The name format is RSTRT#, where # is a number from 1 to 9.
- If it is a restart of the original pay cycle, the system scans pay cycles RSTRT1 through RSTRT9 and assigns a name to the first one that it finds unused or with a status of *Completed*. For example, the restart of paycycle MTHLY is any of RSTRT1 through RSTRT9.
- If this is a subsequent attempt at restarting, the system assigns the same pay cycle name it did for the first restart instance and increases the pay cycle sequence number by one. For example, the restart for pay cycle RSTRT3 with pay cycle sequence number 1 is pay cycle RSTRT3 with sequence number 2.

Note. Only nine restarted pay cycles can run at any given time. Any attempt to restart another pay cycle will be unsuccessful if started after nine pay cycles with a status other than *Completed* have already restarted.

Note. You cannot restart the original pay cycle more than once for the same set of payment reference numbers, regardless of whether you choose to re-create the checks using new reference numbers.

Note. You can only restart the latest sequence of each pay cycle.

Pages Used to Restart Pay Cycles and Re-create Checks

Page Name	Definition Name	Navigation	Usage
Recreate Checks	PYCYCL_RSTRT	Accounts Payable, Payments, Pay Cycle Processing, Check Restart, Recreate Checks	Restart or reprint checks for a pay cycle when you have already printed checks.
Email Payment Advice	PYCYCL_EMAIL_ADV	Accounts Payable, Payments, Pay Cycle Processing, Email Payment Advice	Resend payment advices as needed or as required by vendor

Re-creating and Reprinting Checks

Access the Recreate Checks page (Accounts Payable, Payments, Pay Cycle Processing, Check Restart, Recreate Checks).

Recreate Checks

*Pay Cycle: DAILY PAYMENT RUN

*Seq Num: Status: Completed

Select	Bank SetID	Bank Code	Bank Account	Payment Method	Form ID	First Payment	Last Payment	Status
☒	SHARE	FRBNK	CHQ1	BOO	DRAFT1	000001	000001	Completed

Check Reprint Parameters

From Payment Ref: To Payment Ref:

Payment Date: Alignment Count:

Reference Number

☐ Recreate with new reference
☒ Re-Print using same reference

Server:

Recreate Checks page

Pay Cycle and Seq Num	Enter the pay cycle and pay cycle sequence number. Every time you run a given pay cycle, the Pay Cycle process increments the sequence number. If you access this page from the Pay Cycle Manager using the Recreate button, the Pay Cycle field is populated with the current pay cycle. The sets of payments represented by the pay cycle and pay cycle sequence number appear in the unlabeled grid below.
Select	Select this check box for a row of printed payments to make the Check Reprint Parameters group box available for entry.
Payment Method	Displays the available payment methods Values are: <i>CHK</i> (check): You can re-create a check using the same reference number or a new reference number. <i>BOO</i> (customer-initiated draft): You can only reprint a customer-initiated draft using the same reference number.
Form ID	Displays the form ID used for the printing format.
First Payment	Displays the first payment reference number in the set of payments.
Last Payment	Displays the last payment reference number in the set of payments.

Check Reprint Parameters

From Payment Ref and To Payment Ref	Displays by default the original references of the first and last payments. Reprint only part of a pay cycle by selecting just some of the reference numbers.
Payment Date	By default displays the current date, which you can change if necessary.
Alignment Count	Displays the number of test forms that are generated before the system prints the first check.
Recreate with new reference	Select to void the original reference numbers (for checks, these are the check numbers) and re-create the payments with new numbers. Note. When you select this option, both the Summary and Details links become unavailable for entry on the Pay Cycle Manager page.
Re-Print using same reference	Select to reprint the payments using the original reference numbers. For the <i>BOO</i> payment method, only this option is available.
Server	Select the server from which to run the process.

Process

Click to restart the pay cycle and initiate the check reprint process. This accesses the Pay Cycle Manager page, where you monitor the process:

- Confirm that the Pay Cycle status is *Approved*.
- The Payment Creation process runs in the background.

After Payment Creation is complete, you can reprint your checks.

The transfer to the Pay Cycle Manager page is necessary to ensure security, to prevent people who are not authorized from using the Recreate Checks page to reprint checks. Oracle strongly recommends that you use security measures to control user access to the Recreate Checks page.

Note. If you are using preprinted check forms, you must restart the printing and then, after the forms are printed, access the Payment Reference page to update the system-assigned reference numbers to match those of the payment forms.

Email Payment Advice page

Pay Cycle	Select the pay cycle that you want to use to resend email advices. You must enter a pay cycle ID.
Seq Num(Sequence Number)	Select the sequence number of the pay cycle that you want to use to resend email advices. You must enter a sequence number.
Payment Advice User ID	Select the user ID that has the appropriate email payment advice user preferences defined.
Vendor Select Option	Select either <i>Select All</i> or <i>Specify</i>. If you select <i>Specify</i>, the Vendors grid will be populated with vendors that have been included in the selected pay cycle, that have the Enable Email Payment Advice check box selected, and for which the Payment method matches the entries in the Notification group box on the Vendor page. You can remove or add vendors from this list.

Running the Pay Cycle Job

This section discusses how to run the Pay Cycle job (APPCJOB), which enables you to run the pay cycle from payment selection through the output processes without user intervention.

Page Used to Run the Pay Cycle Job

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Pay Cycle Job Request	AP_PCJOB_CREATE	Accounts Payable, Payments, Pay Cycle Processing, Pay Cycle Job, Pay Cycle Job Request	Submit a Pay Cycle job to run on Process Scheduler. The Pay Cycle job consists of a lights-out run of the Payment Selection and Payment Creation processes.

Running the Pay Cycle Job

To run a Pay Cycle job:

1. When setting up the payment selection criteria for the pay cycle in the Payment Selection Criteria component, select an Approval value of *None*.

To process a pay cycle using the Pay Cycle job, the status of the pay cycle must be *New*, *Reset*, *No Work*, or *Completed*. If you select the Automatic Increment Dates option for the pay cycle in the Payment Selection Criteria component, you avoid having to increment the dates for a pay cycle before running the job.

2. Access the Pay Cycle Job Request page and enter the required information:
 - a. Enter a pay cycle ID (created in the Payment Selection Criteria component).
 - b. Enter an output server name (the server name supplied by default from the User Preferences page).
 - c. Enter an output destination.

This should be a valid directory path. A meta string (such as %%OutputDirectory%%) is not permitted. You must specify a full directory path with a backslash at the end (for example: C:\TEMP\).
3. Click the Submit Job button to initiate processing.
4. When the process is complete (the Job status is *Processed*), review all the output files to ensure that they were generated correctly.

The Pay Cycle job produces only outputs to files; any files that require printing must be printed independently after the job is complete.
5. If the Job status is *No success*, view the pay cycle using the Pay Cycle Manager page for more details.
6. When the Job status is *Processed*, click Finalize Job.

When you click Finalize, the system enables the Auto Increment flag and increments the date range accordingly. The pay cycle advances to a status of *N* (new) and you cannot reset it.

Note. Oracle recommends that you use the Pay Cycle Manager page to confirm that all output processes are complete before clicking the Finalize Job button.

Note. Oracle does not recommend that you create a run control for the Pay Cycle job to run on a recurring basis without any oversight because you must return to the Pay Cycle Job Request page after you've submitted the job in order to finalize the pay cycle.

Positive Payment is not supported by the Pay Cycle Job process.

Chapter 22

Using Additional Payment Processing Options

This chapter provides an overview of additional payment processing options and discusses how to:

- Use express payments.
- Record manual payments.
- Create manual payments.
- Cancel individual payments.
- Escheat individual payments.
- Cancel and escheat multiple payments.
- Forecast payments.
- Perform the bank transfer charge process.
- Process reschedule payments.

Understanding Additional Payment Processing Options

The payment process routine should satisfy your business needs, but there may be times when you need additional options. If you need to print a check immediately, for example, you cannot wait for the next pay cycle run. For this reason, PeopleSoft Payables provides additional payment processing options.

This section discusses the following:

- Express payments.
- Manual payments.
- Manual payment eligibility requirements.
- Payment cancellation.
- Payment escheatment.
- Payment forecasting.
- Bank transfer charge process.

- Reschedule payments process.

Express Payments

PeopleSoft Payables express payments enable you to create payments quickly outside of your regular payment cycles. Vouchers must be entered into the system and be approved for payment before you can create an express payment. Express payments offer you a lot of flexibility on paying your vendors on demand. You can pay a single voucher or you can search other vouchers for that vendor and select only those that you want paid. If there are multiple payment schedules within a voucher, you can select all or just the payment schedule numbers that you want to pay.

In addition, you identify the payment details, such as the date that prints on the check, and the number of the check. You can also specify the bank information and pay method associated with the express payment.

You can also enter a voucher and record a manual payment at the same time.

Pay method options available on the Express Payment page include:

- *ACH* (automated clearing house).
- *EFT Draft* (electronic funds transfer customer draft).
- *Cust Draft* (customer-initiated draft).
- *Check* (system check).
- *EFT* (electronic funds transfer).
- *Giro - EFT* (giro electronic funds transfer).

Important! Express payments do not support overflow advice.

Note. If financial sanctions validation is enabled at the installation level or the bank level, you cannot create an express payment if the vendor has a financial sanctions status of *Review* or *Blocked*. However, if financial sanctions validation is enabled at the bank level and you no longer validate for a particular vendor's bank, the system may allow you to create an express payment for a vendor with a financial sanctions status of *Review*. The system validates the vendor against financial sanctions lists (for example, the Specially Designated Nationals (SDN) list) when you attempt to create an express payment.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

Manual Payments

There are two ways of creating manual payments in PeopleSoft Payables:

1. Using the online voucher entry component.
2. Using the Manual Payment Creation feature.

Manual Payments Using Online Voucher Entry

When you record manual payments in the online voucher entry component you create a voucher for the payment just as you would for a normal invoice and select *Record* as the payment Action on the Payments page. Basically, you create a voucher and a payment for that voucher simultaneously, but the system does not generate a check or other payment form.

Payment posting, reissuing, closing, and voiding all work the same as they do for payments created with the pay cycle.

Note. If financial sanctions validation is enabled at the installation level or the bank level, you cannot select *Record* as the payment action if the vendor has a financial sanctions status of *Review* or *Blocked*. However, if financial sanctions validation is enabled at the bank level and you no longer validate for a particular vendor's bank, the system may allow you to create a manual payment for a vendor with a financial sanctions status of *Review*. The system validates the vendor against financial sanctions lists (for example, the SDN list) when you attempt to save a voucher.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

Manual Payments Using the Manual Payment Creation Feature

Using the Manual Payment Creation feature, you create a payment, but you apply it to existing vouchers rather than creating a voucher specifically for the payment. The Manual Payment Creation feature enables you to track manual payments in your PeopleSoft Payables system by creating manual payment worksheets and applying one or more vouchers to them. For example, if you write a check to a vendor outside the system, you can record that manual payment in PeopleSoft Payables and apply vouchers for that vendor against the payment so that your balance with the vendor reflects the manual payment.

Payment posting, reissuing, closing, and voiding work the same as they do for payments created with the pay cycle.

Note. If financial sanctions validation is enabled at the installation level or the bank level, you cannot create a manual payment worksheet if the vendor has a financial sanctions status of *Review* or *Blocked*. However, if financial sanctions validation is enabled at the bank level and you no longer validate for a particular vendor's bank, the system may allow you to create a manual payment worksheet for a vendor with a financial sanctions status of *Review*. The system validates the vendor against financial sanctions lists (for example, the SDN list) when you attempt to build a manual payment worksheet.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

Manual Payment Methods Compared

These features provide different benefits. Decide on a case by case basis which feature meets your business needs.

Manual Payment Creation Process	Recording Manual Payments Using Online Voucher Entry
Enables you to associate multiple scheduled payments for multiple vouchers.	Enables you to associate only one scheduled payment for one voucher.

Manual Payment Creation Process	Recording Manual Payments Using Online Voucher Entry
Once you save the manual payment, you cannot delete it. You can, however, cancel the manual payment using payment cancellation.	You can toggle back and forth between the <i>Record</i> and <i>Schedule</i> options on the Voucher - Payments page. If you decide not to record the payment, you can switch from <i>Record</i> to <i>Schedule</i> and the system deletes the payment from the PAYMENT_TBL at save time.
Payments are not created in the PAYMENT_TBL until they are fully applied. This means that you can only create a manual payment for amounts equal to existing scheduled payments, or the sum of two or more scheduled payments. For example, if you create a payment for 5000 USD, but you only have voucher scheduled payments for this vendor equal to 4500 USD, you cannot fully apply the manual payment and therefore the payment cannot be created. Likewise, if you have one scheduled payment equal to 4000 USD and another equal to 2000 USD, you cannot partially apply either of the scheduled payments and cannot fully apply the manual payment. You can, however, save the manual payment worksheet and modify it later. When you save the worksheet, Pay Cycle Manager and Express Check bypass any voucher checked for select on the Apply Vouchers page of the worksheet, so that those vouchers remain available for application to manual payments. When you create the worksheet, it is inserted into the worksheet tables APD_MANDFT_SRCH and APD_MANDFT_WS. Once you successfully create the manual payment in PAYMENT_TBL, the system deletes the worksheet data from the worksheet tables.	Payments selected as <i>Record</i> are created in the PAYMENT_TBL at save time, as long as the amount of the payments entered adds up either to the gross amount or to the gross less the discount, as specified on the Invoice Information page.

Withholding On Manual Payments

In PeopleSoft Payables, you can elect to calculate withholding at payment time or at voucher posting time via a setting on the withholding entity. This withholding calculation setting appears by default onto the voucher. If withholding for a voucher is set to be calculated at payment time, users with the appropriate authority can override this setting to have withholding calculated at voucher posting time.

In the case of manual payments, the system invokes the withholding calculation routine for any payments applied to withholding applicable vouchers. The withholding reporting tables are updated accordingly.

On the Create Manual Payment page, you can apply manual payments to vouchers that have already had withholding calculated at voucher posting time. If the Withholding Calculated field is selected (the default setting), the system allows you to apply manual payments to vouchers that are set to withhold at voucher post and have been posted.

You also have the option of deselecting this check box, in which case the system allows you to apply manual payments to all withholding applicable vouchers for the remit vendor, regardless of whether or not withholding has been calculated. The only exception are vouchers requiring withholding calculation at voucher post that have not been posted as of yet. In this case, the system does not physically withhold, but does update the withholding reporting table with the applicable withholding transaction amount for reporting purposes.

Manual Payment Eligibility Requirements

Scheduled payments are only available for application on the Apply Voucher page, if they meet certain eligibility requirements:

- Voucher Style: Regular, Register Voucher, Reversal Voucher, Third-Party Voucher, or Adjustment Voucher.

Prepaid vouchers are not eligible.

- Voucher: Approved, budget-checked, and postable.
- Scheduled Payment: No netting and no payment hold.
- Match status: Matched and no match.

Note. If you select the Pay Unmatched Voucher option on the Procurement - Payables Online Vouchering page, vouchers with the following match statuses are also available for payment: manually overridden, match dispute, match exceptions exist, overridden - credit note, and to be matched.

Business Unit and Currency Considerations

Depending on your setup, the list on the Apply Voucher page may contain scheduled payments from multiple business units with multiple payment methods or multiple payment currencies.

If you select the Do Not Mix with other Units option for the selected business unit on the Payables Definition - Payments page, the list contains scheduled payments for other business units, but you can only select and apply scheduled payments that have the same business unit.

If the vendor has scheduled payments with different payment currencies, the system converts the amount to the currency of the manual payment and displays it in the Paid Amount field. At save time, if the payment amount is fully applied, the payment is created and scheduled payments are updated with appropriate paid information, converted currency amounts, and status.

[Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining Payment Options, page 65](#)

Payment Cancellation

PeopleSoft Payables provides two methods for cancelling payments:

1. The Cancel Payment component (PYMNT_CANCEL) enables you to cancel individual payment.
2. The Mass Payment Cancellation component (AP_PMT_MASS_CNL) enables you to cancel multiple payments.

The Mass Payment Cancellation component provides you the ability to cancel a selected population of payments. For example, an interface from payroll may have been processed in error and all payments for that source may need to be cancelled. You can also cancel an entire pay cycle or single or multiple ranges of payment references within a pay cycle.

With PeopleSoft Payables, you can record:

- Stop payments: Checks that you have already sent out for which you have asked the bank to stop the payment.
- Void payments: Payments that you decide to cancel before you send them out.

The system automatically reconciles a voided payment.

PeopleSoft Payables backs out all payment information for the vouchers affected by a canceled payment. You can optionally reopen or close those vouchers the next time that you run voucher and payment posting. If you reopen vouchers for payment, you can specify whether to pay the same amount or to recalculate the payment amount.

You can only cancel reconciled payments if you have the Federal Payments feature enabled. If you do not have this feature enabled, the system only returns unreconciled payments.

Important! You cannot cancel prepayments, nor can you cancel a payment if it is for a regular voucher that you have applied to a prepayment.

When you cancel a payment, select one of two processing options to create the necessary accounting entries information:

- For canceled payments marked with the *Do Not Reissue/Close Liability* option, run both the Payment Posting Application Engine process (AP_PSTPYMNT) and the Voucher Posting Application Engine process (AP_PSTVCHR), which creates accounting entries from both payment-related transactions and vouchers.
- For all other canceled payments, run the Payment Posting process, which creates accounting entries from payment-related transactions.

Note. You must run the Journal Generator Application Engine process (FS_JGEN) to generate General Ledger journals for these accounting entries.

Payment Cancellation and PeopleSoft Financial Gateway

When you cancel payments that are settled through PeopleSoft Financial Gateway, the system creates and sends a cancel payment message to PeopleSoft Financial Gateway. This message can contain an individual cancel payment or multiple cancel payments depending on if you use the Cancel Payment component or the Mass Payment Cancellation component, respectively.

To cancel payments settled through PeopleSoft Financial Gateway, the payment's settlement status must have a value of *Error*, *Hold*, or *Loaded*.

The system handles PeopleSoft Financial Gateway payment cancellation in one of two ways, depending on if the payment is processed or not. Assuming that a payment is pending processing—meaning, it has a *Loaded* status in the PeopleSoft Financial Gateway staging tables—one of the following two scenarios happens:

1. If PeopleSoft Financial Gateway receives the cancellation message in time, it removes the payment from the staging table and sends it back to the PeopleSoft Payables system. PeopleSoft Payables then updates the payment's status to *Canceled*.
2. If PeopleSoft Financial Gateway does not receive the cancellation message in time—meaning, PeopleSoft Financial Gateway is currently processing the payment—the system prevents payment cancellation, even though payment displays only a *Loaded* status. In this scenario, PeopleSoft Financial Gateway sends an error acknowledgement message to PeopleSoft Payables. Until PeopleSoft Payables receives another message and updates the payment status to *Paid*, you cannot cancel the payment.

PeopleSoft Financial Gateway payments can also be out of synchronization ("out of sync") between PeopleSoft Financial Gateway and Payables. This occurs when you attempt to reverse (or undo) a canceled payment, as no message is sent to PeopleSoft Financial Gateway to keep the systems synchronized. The system displays a warning message when you try to save these types of reversed canceled payments.

[Chapter 22, "Using Additional Payment Processing Options," Canceling Individual Payments, page 723](#)

[Chapter 22, "Using Additional Payment Processing Options," Performing Mass Payment Cancellation and Escheatment, page 737](#)

[Chapter 23, "Running Voucher and Payment Posting," Understanding the Voucher Posting and Payment Posting Processes, page 751](#)

Payment Escheatment

Occasionally, an organization issues a check to a vendor, but the vendor does not deposit it. Perhaps the vendor goes out of business. Whatever the reason, the check becomes stale-dated. In rare cases, a stale-dated check must revert to the state if no legal heirs or claimants exist.

When you identify a check as stale dated, it is informational only. When you decide to escheat a stale-dated check, you use the Payment Escheatment component (PYMNT_ESCHEATED) to escheat an individual payment:

PeopleSoft Payables enables you to reclassify the stale-dated check to an escheat liability account by debiting cash and crediting escheatment liability. When users escheat payments, they enter an escheatment date. The system uses the escheatment date to control the accounting for the escheatment entry.

Note. The system uses the escheatment date to compare to the effective date of the Accounting Entry template and then selects the active template.

Payment posting treats an escheated payment like a voided payment except that there is no option to close or restate the voucher liability.

When you escheat a payment, you can select on-demand processing options to run just the Payment Posting process, or both the Payment Posting process and Journal Generator process.

- Running only the Payment Posting process creates accounting entries that reverse the cash entries to an escheatment liability account, which users predefine on the Accounting Entry template.

The system records the escheatment liability account to the vouchering GL business unit and the cash entry to the bank's cash GL business unit. If they are different business units, the system generates InterUnit entries.

Note. Use the Accounting Entry Template page to modify the accounts and effective dates if you use separate accounts for different periods. For example, you report California escheated payment transactions on November 1, 2006. You use a different escheatment account for the following year's transactions. Enter a new effective row dated November 1, 2006 and modify the account. This ensures the system uses the new account for the following year's escheated payment transactions.

- Running both processes does the accounting entry work (discussed in the first bullet point) and also creates the General Ledger journals.

Payment Forecasting

PeopleSoft Payables provides payment forecasting, which enables you to view expected cash disbursements over a longer time span rather than the next pay through date.

See Also

[Chapter 22, "Using Additional Payment Processing Options," Forecasting Payments, page 741](#)

Bank Transfer Charge Process

PeopleSoft Payables provides bank transfer charge processing for businesses in which vendors are often responsible for the bank transfer charge that is deducted from the payment. The system automatically calculates and creates electric funds transfer (EFT) payments and creates reports of bank transfer charge transactions.

The bank transfer charge process calculates the actual payment amount by deducting the bank transfer charge from the payment amount in cases when the vendor pays the charge. This operation is processed only for EFT payments and takes place within the pay cycle. The system generates the EFT file using the adjusted payment amount. The applicable amount of the bank transfer charge is defined in the bank transfer charge code and identified by the combination of bank and file layout. Alternatively, the amount of the charge can be a unique specified amount at the vendor location. This process is enabled at the bank and vendor location levels.

Bank Transfer Charge Autoduction

If you enable the bank transfer charge option, the system creates a transaction for the charge during the pay cycle, and generates the accounting entry for the charge at the payment posting.

Consider the following during autoduction:

- Calculation basis.
- Separate payments, pay groups, and mixing with other business units.
- Canceling payments.
- Non-EFT payments.

Bank Transfer Charge Calculation Basis

When you enable the bank transfer charge option using the Bank Transfer Charge table, the system calculates the amount of the charge based on the payment amount.

Separate Payments, Pay Groups, and Mixing with Other Business Units

The bank transfer charge is calculated based on the payment. If one voucher has the Separate Payment check box selected on the Voucher component (VCHR_EXPRESS), the bank transfer charge of this payment is calculated separately from other payments.

The process is the same for calculations based on the pay group. When the payments are grouped using group IDs, the charge is calculated for each group ID.

In the same manner, if one business unit has the Do Not Mix with other Units option selected on the Payables Definition component (BUS_UNIT_TBL_AP), and if payment for this business unit is made separately, the bank transfer charge is also calculated separately based on the payment amount of the business unit.

On the other hand, if one business unit has the Do Not Mix with other Units option disabled (which means that the transactions of this business unit can be paid with the transactions of other business units), the bank transfer charge is calculated based on the payment amount that includes the transactions of other business units.

Canceling Payments

The accounting entry for a bank transfer charge suspense is created during payment posting. At this point, the gross amount is divided into two parts: the actual payment and the bank transfer charge. If this payment is canceled, reverse accounting will generate for all entries, including the bank transfer charge.

Non-EFT Payments

The bank transfer charge is processed only for EFT payments. (EFT does not include Draft EFT and Giro EFT.)

Important! If there are any setup steps missing, the bank charge is not deducted. For instance, if vendor location is set up to use the Bank Transfer Charge table, but the table was not found during the payment process, the pay cycle completes without errors and the bank transfer charge is not deducted from the payment amount. In this case, a message is logged to the PeopleSoft Process Monitor.

See Also

Chapter 22, "Using Additional Payment Processing Options," Performing the Bank Transfer Charge Process, page 745

Reschedule Payments Process

Rescheduling payments is a common business process in some countries. The Reschedule Payments Application Engine process (which includes both the AP_SMT_SEL and AP_SMT_SPLIT Application Engine processes) provides the functionality in PeopleSoft Payables.

To run the Reschedule Payments process, first set up reschedule payments conditions—which define agreements between you and vendors—and reschedule payments options for vendors—which associate vendors with the Reschedule Payments process.

Generally, reschedule payments is a settlement method that profiles the payment methods, conditions, and amounts, depending on the total number of transactions in a certain period of time.

In some countries, such as Japan, customers usually do not issue a payment to their vendors for each transaction. Instead, the vendor summarizes the transactions and charges for the total amount of the transactions based on prior agreements. The vendor summarizes the transactions and charges for the total amount of the transactions. Then, the customer issues a payment to the vendor on a specific date. Suppose that you made an agreement with a vendor to issue a payment on the 20th day of the next month for all transactions in that month. The vendor charges you for the total amount of transactions in the month, and you issue a payment on the 20th day of the next month. The period of time for transactions is usually one month, which can start on any day (the 1st, 15th, 20th, 25th, and so forth).

Split Multiple Payment Terms diagram

Different payment conditions and methods are applied depending on the total amount of the invoices, as illustrated by the following examples.

Example 1

If the total amount of the invoices is less than or equal to 10,000,000 JPY, pay in EFT at the end of the next month. If the total amount of the invoices is over 10,000,000 JPY, pay in customer initiated draft at the end of the next month.

Example 1

Example 2

You could choose to reschedule the total amount of invoices and apply different payment methods and conditions to each amount.

If the total amount of the invoices is less than or equal to 10,000,000 JPY, pay in EFT at the end of the next month. If the total amount of the invoices is over 10,000,000 JPY, reschedule the total amount into portions of 60 percent and 40 percent. Then pay the 60 percent amount in EFT at the end of the next month and pay the 40 percent amount in customer initiated draft at the end of two months.

Example 2

Example 3

In a more complicated scenario, you might run the Reschedule Payments process several times in a certain period of time.

Run it on the 15th and at the end of the month. On the 15th, reschedule the total amount of the invoices into two portions: pay in EFT for 60 percent, and then pay in customer initiated draft for 40 percent with a due date of the 10th of the next month. At the end of the next month, you pay the sum of the amount corresponding to 40 percent in the previous process and the amount of the invoices that come after the 15th in customer initiated draft.

Example 3

Processing Vouchers with Reschedule Payments Processing

For example, you run the Reschedule Payments process twice every month (on the 15th and at the end of the month) for the vouchers with due dates in the month that you run it. Use the 10th as the basis date when you run the Reschedule Payments process on the 15th and use the 20th as the basis date when you run it at the end of month.

The total amount of vouchers for a vendor that you process with the Reschedule Payments process is 15,000,000 JPY on July 15, 2006.

In this case, the Reschedule Payments process reschedules the total amount into portions of 60 percent and 40 percent because the basis date is July 10, 2006. For vouchers for 60 percent (9,000,000 JPY), the end of the month (July 31, 2006) is set as the payment condition and EFT is set as the payment method. For vouchers for 40 percent (6,000,000 JPY), the end of the month (July 31, 2006) is set as the payment condition, customer initiated draft is set as the payment method, and MONT3 (October 31, 2006) is set as the draft sight. The system recalculates the due date, scheduled pay date, and draft maturity date based on the basis date of July 10, 2006.

New vouchers worth 14,000,000 JPY are entered after July 15, 2006. Because the Reusable check box for vouchers for 40 percent (6,000,000 JPY) was selected in the previous process, the vouchers worth 6,000,000 JPY plus newly entered vouchers worth 14,000,000 JPY are processed by the Reschedule Payments process this time. Therefore, the vouchers worth 20,000,000 JPY are split into portions of 50%, because the basis date is July 20, 2006. For vouchers for one half (10,000,000 JPY), the 10th of the next month (August 10, 2006) is set as the payment condition and CHK is set as the payment method. For vouchers of the other half (10,000,000 JPY), the 10th of the next month (August 10, 2006) is set as the payment condition, the customer initiated draft is set as the payment method, and MONT3 (November 10, 2006) is set as the draft sight. The due date, scheduled pay date, and draft maturity date are recalculated based on the basis date of July 20, 2006.

Using Express Payments

This section discusses how to:

- Create express payments.
- Review express payments.

Pages Used to Create and Review Express Payments

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Express Payment	PYMNT_EXPRESS	Accounts Payable, Payments, Express Payments, Create Express Payment, Express Payment	Create a payment for one or multiple vouchers for one specific vendor.
Express Payment Manager - Pay Cycle	EXP_PYCYCL_MGR	• Accounts Payable, Payments, Express Payments, Manage Express Payment, Express Payment Manager - Pay Cycle • Click the Create Payment button on the Express Payment page.	Review and process Express Payments. You can only review express payments being processed from the Express Payment Manager.

Creating Express Payments

Access the Express Payment page (Accounts Payable, Payments, Express Payments, Create Express Payment, Express Payment).

Express Payment

Payor US001 NEW YORK OPERATIONS 144 North Street New York, NY 10168	Bank and Payee Information Bank SetID: SHARE USA BANK Bank: USBNK 111 Montgomery Street Account: CHCK San Francisco, CA 94601 Payment Currency: USD Pay Method: CHK Vendor Set ID: SHARE Bay Area Electric- Vendor: USA0000001 998 Powel St. Address: 1 San Francisco, CA 94001

Select Voucher Customize | Find | View All | First 1 of 1 Last

Unit	Voucher	Payments	Payment Method
US001	00000167		

Express Payment page

Note. Multiple views of this page are available by clicking the tabs in the scroll area.

Note. Only one payment is created for the vendor, unless the Separate Payment option or the Do Not Mix Units options are selected. In those cases, more than one payment can be created to pay the vendor.

Payor

This group box displays the payor information. If you have multiple payments being paid for the same bank, it is possible that the payor could be different than what appears on the page.

Bank and Payee Information

The bank and payee information appears by default from the schedule payment selected on the Voucher - Payments page.

Payment Detail

Date Enter the date that prints on the check.

Amount Displays the amount of the payment, based upon the vouchers that are selected in the Select Voucher group box.

Reference Displays the number of the check. *NEXT* indicates that the system generates the number, incrementing the reference number based on the last number that it used for a check in the specified bank account.

Bank and Payee Information

Once you select a bank setID and a vendor setID, the system displays the name and address of the bank and vendor information in this group box.

Bank SetID Enter the bank setID, bank, and bank account from which the payment is drawn.

Payment Currency Enter the payment currency.

Pay Method Enter the pay method.

Vendor Set ID Enter the setID, vendor ID, and address of the vendor you are paying.

Select Vouchers

On Hold Specifies whether the payment scheduled is on hold. The holding option can be set manually or by a scheduled process. For example, the withholding process places those vouchers with withholding exceptions on hold.

Evaluate Discount Rate Select for the system to compare where you receive the most benefit, such as paying a discounted voucher early and taking the discount or waiting for the due date and earning the interest income during that time.

Add All Vouchers Click to automatically enter all outstanding payments for the vendor to this payment.

Create Payment Click to generate a pay cycle with the name *Quick 1* through *Quick 9*, and transfers you to the Express Payment Manager page to complete your check processing.

Note. If financial sanctions validation is enabled, the system validates the vendor against financial sanctions lists (for example, the SDN list) upon clicking the Create Payment button. The system does not allow you to create a payment for a vendor with a financial sanctions status of *Review* or *Blocked*. However, if financial sanctions validation is enabled at the bank level and you no longer validate for a particular vendor's bank, the system may allow you to create an express payment for a vendor with a financial sanctions status of *Review*.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

Server	Select from the available options. The prompt only shows servers that have a status of <i>Running</i> on the Process Monitor Server List page. The system performs validation before a process is initiated to ensure that PeopleSoft Process Scheduler server is currently running.
Pay Cycle	Appears after you click the Create Payment button.

Note. If you reach a Quick 9 pay cycle you can process the existing express pay cycles and then create a new express pay cycle or use the regular pay cycle and select only those payments you want to process.

Main Information Tab

Select the Main Information tab.

Choose the payment schedules that you want to pay.

Unit	Enter the business unit for the payment schedule that you want to pay.
Voucher	Enter the voucher ID for the payment schedule that you want to pay.
Payments	Enter the payment schedule number associated with the payment schedule that you want to pay.
Payment Method	Displays the payment method for the payment schedule that you want to pay.
Invoice Number	Displays the invoice number associated with the voucher that you select.
Invoice Date	Displays the invoice date associated with the voucher that you select.
Apply Discount	Select to apply the discount to the payment.

Additional Information Tab

Select the Additional Information tab.

Gross	Displays the gross amount for the selected payment schedule.
Amount	Displays the payment amount for the selected payment schedule. This amount differs from the gross amount when there is a discount available.

Express Payment Manager - Pay Cycle page

Note. Multiple views of this page are available by clicking the tabs in the scroll area.

Pay Cycle Status

Status

Displays the current status of the express payment pay cycle. Options include:

New: The first time that the express payment pay cycle runs.

Approved: Ready to run. express payments are preapproved by definition.

Running: Currently running.

Complete: Complete.

Refresh

Click to refresh the Express Payment Manager page to display the most current status. Some express payment processes must complete before the next process can start. While these processes are running, the status for the Express Payment is *Processing*. Click the Refresh button to update the page, so that you can view whether the express payment is ready to advance to the next step.

Pay From Date	Displays the scheduled pay date for the voucher payment schedule. If the scheduled pay date is between the pay from and pay through dates, the voucher payment schedule can be paid in the current express payment pay cycle.
Payment Date	Displays the date that prints on payments. It can differ from the pay through date.
Schedule Payments Selected	Displays the number of scheduled payments selected to be processed.
Summary	Click to access the Pay Cycle Summary Data page, where you can view summary information about scheduled payments by each bank account.
Details	Click to access the Pay Cycle Detail Data page, where you can search scheduled payments by different search criteria, such as business unit, invoice, or vendor ID.

Pay Cycle Reset

Server	Select a server from the available options.
Reset	Click to initiate a process to clear all of the scheduled payments currently being processed in the pay cycle. This link is active when payments are created, selected, and rejected. It remains active until the pay cycle has been <i>Approved</i> .

Pay Cycle Exceptions

Discount Lost	Opens the Lost Discount Alert page, so that you can review lost discount alert exceptions generated during pay cycle processing.
Withholding Exceptions	Opens the Wthd Exception (withholding exception) page, so that you can review withholding exceptions generated during pay cycle processing.
Discount Denied	Click to review and to override discount denied information. If the bank interest earned on the net voucher amount is greater than the amount of the discount that you gain by paying early, the system issues a discount denied exception and the Discount Denied link becomes active.

Main Information Tab

Select the Main Information tab.

The Main Information and Additional Information tabs only show high-level information about the scheduled payments in the pay cycle. For detailed information about both electronic and nonelectronic payments, click the Summary and Detail links in the Pay Cycle Status group box.

Process	Click to initiate the next step of the express payment pay cycle, such as creating an EFT file, or printing checks or advices.
Recreate	Click to recreate checks that have already been generated.
Pay Status	Displays the current status for the pay cycle's bank account or payment method.
Instance	Displays the process instance for the latest process that you initiated for the bank account or payment method.
Bank and Account	Displays the bank and account that is being processed for the pay cycle.
Server Name	Select a specific PeopleSoft Process Scheduler server from which to run the pay cycle Output process.
Output Type	Select this option to create your express payments in a file format. This is useful if the printer is not attached to the server that creates the checks. You may send the checks to a file and later copy this file to another machine where the check could be printed.
Output Destination	Specify the output file directory or the printer name for the output file creation. If the File check box is selected, the Output Destination field appears by default from the Server File Destination specified on the User Preferences - PayCycle page. You can override the default with a valid directory path, but remember that a meta string (such as %%OutputDirectory%%) is not permitted. You must specify a full directory path with a backslash at the end (for example: C:\TEMP\).

Note. System checks, EFTs, ACHs, and drafts can be processed by express payment.

Additional Information Tab

Select the Additional Information tab.

Pay File	Displays the name of the payment output file that is created.
Form ID	Displays the Form ID specified on the bank account definition for the document formatting.
Positive Pymnt (positive payment)	This does not apply to express payment processing.
Copy Frm (copy form)	Displays the Form ID specified on the bank account definition for formatting check copy files.
First Payment	Displays the beginning payment reference number for the pay cycle.

Recording Manual Payments

This section discusses how to:

- Record manual payments.
- Assign special check numbers to manual payments.

Page Used to Record Manual Payments

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher - Payments	VCHR_PAYMENT_PNL	Accounts Payable, Vouchers, Add/Update, Regular Entry, Voucher - Payments	Record a manually issued payment by changing the value in the Action field to <i>Record</i> .

Recording Manual Payments

To record a manual payment within the system:

Note. Both the Manually Schedule Payments option and the Record Payment option must be selected in the User Preferences - Payables Online Vouchering (OPR_DEF_TABLE_AP1) page in order to access the payment options section on the Voucher - Payments page.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Defining User Preferences," Defining Payables User Preferences.

1. Access the Voucher component.
2. Create a voucher for the payment.
3. On the Voucher - Payments page, select *Man* (manual) as the payment method.
4. Select *Record* as the payment action.

When you select *Record*, many fields in the component become unavailable for entry, including the Gross Amount, Discount, Scheduled Due, Net Due, Discount Due, Pay Group, Handling, Hold Payment, and Separate Payment.

5. Select *Full* (for a full payment) or *Discounted* (for a discount payment) in the Pay field.

When you record a payment, the Accounting Date field becomes active, enabling you to change the Accounting Date field to reflect the actual date of the manual payment.

6. (Optional) If you have set up document sequencing for the General Ledger business unit associated with the PeopleSoft Payables business unit, a Doc Seq link appears at the top of the Payments page; click this link to view or override the document sequencing settings.
7. Make sure that the remit to vendor, vendor location, and address, as well as the bank code and account type match the manual payment that was made.
8. Enter a payment reference number in the Schedule Payment group box.
9. (Optional) Modify the Payment Date field to reflect the date of the manual payment.
10. Confirm the following items to ensure that your manual payments are recorded successfully:
 - The amount of the payments entered must add up either to the gross amount or to the gross less the discount as specified on the Invoice Information page.
 - The voucher must be approved in the system.
 - The bank account setup must support manual payments.

Note. If financial sanctions validation is enabled at the installation level or the bank level, you cannot select *Record* as the payment action if the vendor has a financial sanctions status of *Review* or *Blocked*. However, if financial sanctions validation is enabled at the bank level and you no longer validate for a particular vendor's bank, the system may allow you to create a manual payment for a vendor with a financial sanctions status of *Review*.

See [Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Voucher Validation, page 299.](#)

Note. Use the Manual Draft Creation page to enter vendor-initiated drafts.

See Also

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Invoice Information for Online Vouchers, page 303](#)

[Chapter 31, "Processing Drafts," Creating Drafts Manually, page 935](#)

Assigning Special Check Numbers to Manual Payments

The flexibility of assigning special check numbers to manual payments can result in your losing the ability to update the last reference number used on the payment method table in External Accounts component (BANK_EXTERNAL). This flexibility enables you to assign check numbers from a different number range other than the one used for pay cycle processing. If the check number that you assign to a manual payment is different by more than 100 from the last reference number used, the system assumes that a different check number range is being used, and it does not update the last reference number used.

Creating Manual Payments

To set up your auto-numbering for manual payments, use the Auto Numbering component (AUTO_NUM_PNL).

This section discusses how to:

- Set auto-numbering for manual payments.
- Build manual payment worksheets.
- Enter manual payments.
- Apply vouchers to manual payments.
- Delete manual payment worksheets.

Pages Used to Create Manual Payments

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Auto Numbering	AUTO_NUM_PNL	Set Up Financials/Supply Chain, Common Definitions, Codes and Auto Numbering, Auto Numbering	Define automatic numbering specifications for manual payments using the Manual Payment Creation component.
Manual Pay Selection (manual payment selection)	AP_MAN_SEL	Accounts Payable, Payments, Manual Payment and Prepayment, Create Manual Payment, Manual Pay Selection	Enter criteria to build the manual payment worksheet.
Man Pay Worksheet (manual payment worksheet)	AP_MAN_ENTRY	• Accounts Payable, Payments, Manual Payment and Prepayment, Update Payment Worksheet, Man Pay Worksheet • Click the Build Worksheet button on the Manual Pay Selection page	Enter manual payment information.

Page Name	Definition Name	Navigation	Usage
Apply Voucher	AP_MAN_APPLY	- Accounts Payable, Payments, Manual Payment and Prepayment, Update Payment Worksheet, Apply Voucher - Click the Build Worksheet button on the Manual Pay Selection page.	Apply scheduled vouchers to the manual payment.
Delete Payment Worksheet	APD_DELETE_WS	Accounts Payable, Payments, Manual Payment and Prepayment, Delete Payment Worksheet	Delete manual payment worksheets.

Setting Auto-Numbering for Manual Payments

Access the Auto Numbering page (Set Up Financials/Supply Chain, Common Definitions, Codes and Auto Numbering, Auto Numbering).

Number Type

Create a number type to automatically increment the manual payment worksheet ID for the creation of manual payments.

This worksheet number is shared with manual draft payment worksheets.

Optional Criteria

Pay to Bank Number:

Scheduled Pay From Date:

Scheduled Pay To Date:

Build Worksheet

Manual Pay Selection page

Enter the bank code and account information.

Remit SetID, Remit Vendor and Vendor Location

Enter the setID, remit vendor ID, and vendor location for the vendor to whom you remit the manual payment. When you build the worksheet, the system returns eligible scheduled payments with the same vendor information.

Note. If financial sanctions validation is enabled and the vendor has a financial sanctions status of *Review* or *Blocked*, the system displays a warning message that the vendor selected is currently under financial sanctions review. The system does not allow you to create a manual payment for this vendor.

Payment Currency

Enter a currency for the manual payment.

Match Currency

Select if you want the system to return scheduled payments with the same payment currency. If you do not select this option, the system returns all eligible scheduled payments for the remit vendor, regardless of their payment currency and converts them to the selected vendor's currency.

Withholding Calculated

Select for the manual payment worksheet functionality to only return those vouchers for the remit vendor that have had withholding calculated (meaning, those vouchers for which withholding has been calculated at voucher posting time and have been posted).

If this check box is not selected, all vouchers for the remit vendor are available on the manual payment worksheet excluding all paid payment schedules and vouchers that are set to have withholding calculated at voucher posting and have not yet been posted. The Withholding tab on the Manual Pay Worksheet - Apply Voucher page displays whether the voucher is withholding applicable and whether withholding has been calculated.

You can use the fields in the Optional Criteria group box to limit the vouchers that the system returns. For example, you can limit the search to vouchers with the same pay to bank or to vouchers with specific scheduled pay dates.

Pay to Bank Number

Enter a vendor bank number for the system to return eligible vouchers whose schedule payments have the same vendor pay to bank.

Scheduled Pay From Date and Scheduled Pay To Date

Use these fields to limit the search to eligible vouchers whose scheduled pay dates falls within given date range.

When you click the Build Worksheet button, the system uses the information entered here to return a list of eligible voucher scheduled payments that you can apply to the manual payment. Once a worksheet is built, you can remove it using the Delete Payment Worksheet page.

Note. If financial sanctions validation is enabled, the system validates the vendor against financial sanctions lists (for example, the SDN list) upon clicking the Build Worksheet button. The system updates the vendor's financial sanctions status on the Vendor Information component (VNDR_ID). The system does not allow you to build a worksheet for a vendor with a financial sanctions status of *Review* or *Blocked*. However, if financial sanctions validation is enabled at the bank level and you no longer validate for a particular vendor's bank, the system may allow you to create a manual payment worksheet for a vendor with a financial sanctions status of *Review*.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

Note. Only scheduled voucher payments that are regular vouchers, registered vouchers, reversal vouchers, third-party vouchers, or adjustment vouchers are returned for application to manual payments.

Entering Manual Payments

Access the Man Pay Worksheet page (Accounts Payable, Payments, Manual Payment and Prepayment, Update Payment Worksheet, Man Pay Worksheet).

Man Pay Worksheet page

Payment Date

Enter the actual payment date, for example, the date that you wrote the manual check.

Document Sequencing

Click this link to access document sequencing information. This link only appears if document sequencing is enabled.

The document type and journal type are viewable at any time, but the document sequence number and document sequence date are updated only when the payment is created in PAYMENT_TBL.

Accounting Date

Displays the posting date. You can override this value.

Payment Ref (payment reference)

Defaults to *NEXT* and the system generates a new number at save time based on the next sequential number in the bank account.

You can manually override this entry with a numeric value. The system validates it at save time.

Amount

Enter the manual payment amount.

Apply Discount

Select for the system to check the discount date against the creation date of the manual payment. If the scheduled payment for the voucher qualifies for the discount, the Paid Amount field on the Apply Voucher page displays the discount amount for the scheduled payment instead of the gross amount.

Refresh

Click to calculate the total applied and balance amounts, check for discount situations and update the voucher list on the Apply Voucher page.

Number of Payments	Displays the number of scheduled payments currently applied to this manual payment.
Total Applied	Displays the total amount of the scheduled payments currently applied to this manual payment.
Balance	Displays the difference between the manual payment amount and the total amount of the applied scheduled payments.

Note. The manual payment is only created in the PAYMENT_TBL when the balance is 0.00, that is, when the payment is *fully applied* to scheduled payments. Otherwise, only the manual payment worksheet is saved.

Applying Vouchers to Manual Payments

Apply Voucher page

Note. Multiple views of this page are available by clicking the tabs in the scroll area.

Common Page Information

Scheduled Pay From Date, Scheduled Pay To Date, and Match Currency	These fields have the same functionality as on the Manual Pay Selection page. Use them to further limit the vouchers that appear based on the payment date range and currency of the payment.
Payment Amount	Displays the payment amount currently entered on the Man Pay Worksheet page.

Total Applied	Displays the total amount of the scheduled payments currently applied to this manual payment.
Balance	Displays the difference between the manual payment amount and the total amount of the applied scheduled payments. Note. The manual payment is only created in the PAYMENT_TBL when the balance is 0.00, that is, when the payment is <i>fully applied</i> to voucher scheduled payments. Otherwise, only the manual payment worksheet is saved.
Main Information Tab	
Select the Main Information tab.	
Select	Select this check box to individually select scheduled payments and then click the Refresh button to apply the manual payment and recalculate the total applied and balance amounts. Once you select the scheduled payments, they are placed on hold even if you do not fully apply and create the manual payment. Click the Search button in the Build Worksheet Parameters group box to take them off hold.
Bus Unit (business unit)	Displays the business unit of the selected payments.
Voucher ID	Displays the voucher ID of the selected payments. Click any of the voucher IDs listed to access the Voucher Inquiry page for that voucher.
Pymnt Nbr (payment number)	Displays the number of the scheduled payment. If there are multiple scheduled payments for a voucher, they each have a unique payment number.
Separate Payment	Indicates the option you selected on the Payments page in the Voucher component. You can select a scheduled payment that has Separate Payment enabled. However, you cannot select any other scheduled payments along with this one. The system displays an error message if you try to do this.
Paid Amount	Displays the actual payment amount and currency of the scheduled payment; this can be either the gross or discount amount. Note. If you selected the Apply Discounts check box on the Manual Payment Worksheet page, and if the scheduled payment is eligible for the discount, this field displays the discount amount instead of the gross amount.
Apply Discount	Indicates whether or not you selected the Apply Discounts check box on the Manual Payment Worksheet page.
Payment Method	Displays the payment method for the scheduled payment.

Due Date	Displays the net due date of the scheduled payment.
Scheduled Pay Date	Displays the scheduled due date of the scheduled payment.
Gross Payment Amount	Displays the gross amount of the scheduled payment.
Transaction Currency	Displays the transaction currency of the scheduled payment.
Discount	Displays the discount amount of the scheduled payment.
Discount Due Date	Displays the discount due date of the scheduled payment.

Withholding Information Tab

Select the Withholding Information tab.

In addition to the select, business unit, voucher number, and payment number fields, this tab displays:

Withholding Applicable	Displays whether or not a voucher is withholding applicable.
Withholding Calculated	Displays whether or not a voucher has had withholding calculated, for example at voucher post. If you select a voucher which is withholding applicable but has not had withholding calculated, the system does not physically withhold for the voucher. Instead it creates withhold transactions based on the amount paid or amount subject to withholding for reporting purposes only. In other words the voucher is treated as 0% withholdable. This ensures that the paid amount is reported for withholding.

Note. For vendors that require physical withholding, a withholding amount is not withheld.

Additional Information Tab

Select the Additional Information tab.

In addition to the select, business unit, voucher number, and payment number fields, this tab displays:

Bank and Account	Displays the bank and type of bank account from which the scheduled payment is being created.
Pay to Bank Number	Displays the remit vendor's bank number, if you entered one on the Manual Pay Selection page.
Bank Account # (bank account number)	Displays the bank account number.
Do Not Mix BU (do not mix business unit)	Select to restrict your voucher selection to only those vouchers with the same PeopleSoft Payables business unit as the payment that you are creating.

Displays the worksheet and payment date information.

Canceling Individual Payments

This section provides an overview of payment cancellation with associated liabilities and discusses how to cancel a payment.

This section discusses canceling individual payments. PeopleSoft Payables also provides the ability to cancel multiple payments using the Mass Payment Cancellation component.

See Also

Chapter 22, "Using Additional Payment Processing Options," Cancelling and Escheating Multiple Payments, page 733

Understanding Payment Cancellation With Associated Liabilities

This section discusses how to:

- Cancel payments with associated liabilities.
- Cancel payment schedules with associated liabilities.
- Payment cancellation with no Commitment Control integration
- Payment cancellation and Commitment Control integration.
- Payment cancellation processing sequence.

Cancel Payments With Associated Liabilities

To cancel payments and close any associated liabilities, select the Do Not Reissue/Close Liability option. The system determines if vouchers associated with the payment are direct vouchers or PO vouchers. If you are cancelling the payment with the close liabilities option, the associated voucher is a PO voucher, and:

- Commitment Control is not enabled, the system provides you with the option to unmatched vouchers.
- Commitment Control is enabled, the system provides you with the option to restore encumbrances.

If all the system checks pass, the system displays the PO Associated with the Voucher page.

Cancel Payment Schedules With Associated Liabilities

For payments defined with payment schedules, select the Do Not Reissue/Close Liability option. The system functions like it does when canceling a payment using the close option, except that it cancels a payment schedule and closes any liabilities associated with that payment schedule. The other difference between canceling a payment schedule and canceling a payment is that the pages list the schedule ID number instead of the reference number, and the PO Associated with the Voucher page displays all the vouchers associated with the payment schedule.

Payment Cancellation With No Commitment Control Integration

When the payment cancellation and closure includes purchase orders associated with vouchers, but Commitment Control is not enabled, the system provides you with the option of unmatching the voucher, in addition to closing the liability. The system:

- Determines if the payment being cancelled has at least one matched voucher.
If so, the system provides you with the option to unmatch the voucher, in addition to closing the liability.
- Determines if the matched voucher is associated to a closed receiver line.
- Provides you with the option for unmatching the voucher if there is no association to a closed receiver line.

The system generates a new message asking if you wish to unmatch the voucher. Select Yes to unmatch the voucher and close the liability. Select No to only close the liability.

- Provides you with the option for unmatching the voucher if there is an association to a closed receiver line.

The system generates a new message asking if you wish to unmatch the voucher. Select Yes to unmatch the voucher and close the liability. Note that the system unmatches the closed receiver line as well. Select No to only close the liability.

- Determines if the voucher is partially paid.

If so, the system displays a warning message that the voucher cannot be unmatched because it has been partially paid. You can continue with closing the voucher, however, the system does not unmatch the voucher.

Payment Cancellation and Commitment Control Integration

If the payment to be cancelled contains vouchers tied to purchase orders, the system gives the option of restoring encumbrance to the purchase order. If you choose to restore the encumbrance, the system automatically unmatches the voucher. If you choose not to restore the encumbrance, the system does not unmatch the voucher.

When the voucher is associated with purchase orders, and Commitment Control is enabled, the system:

- Determines if the encumbrance can be restored to the purchase order.

The system generates a message asking if you wish to restore the encumbrance and reopen the purchase order. Select Yes to restore the encumbrance and reopen the purchase order. Select No and the system only liquidates the liability.

If you use matching and you opted to restore the encumbrance and reopen the purchase order, the system automatically unmatches the voucher after the Voucher Posting process, which updates the purchase order and the receiver match statuses to *Partial*.

- Determines if the purchase order has been reconciled and finalized, and if encumbrances are established.

If all purchase orders have been reconciled, then the system prevents you from reopening the purchase orders and restoring the encumbrances and the system advises you that only the remaining liability can be restored.

- Determines if the PO voucher has no associated partial payments.

The system determines if the unreconciled PO vouchers have multiple payment schedules and if two or more payment schedules have been paid. The system does not restore the encumbrance when there is an active payment schedule. For the system to restore encumbrances, the following conditions must be met: associated payment schedules must either be not paid or paid and cancelled, and the entire voucher amount must be available.

The system uses these results to ensure field value synchronization between source transactions and referenced transactions, which are used in the Budget Processor process.

The following diagram illustrates the PeopleSoft Payables payment cancellation processing logic for scenarios involving purchase orders and Commitment Control integration.

PeopleSoft Payables cancellation processing logic for scenarios involving purchase orders and Commitment Control integration

See *PeopleSoft Commitment Control 9.1 PeopleBook*, "Processing Source Transactions Against Control Budgets."

Payment Cancellation Processing Sequence

The following is the sequence of processes you perform to successfully close a PO voucher that has not been paid:

1. Create a PO voucher.
2. Run the Matching Application Engine process (AP_MATCH).

3. Run the Commitment Control's Budget Processor process.
4. Run the Voucher Posting process.
5. Pay the voucher.
6. Run the Payment Posting process.
7. Cancel and close the payment.
8. Run the Payment Posting process again.
9. Run the Voucher Posting process again to unmatched any matched items.

Description:

Cancel Payment page

Action

Select to run one of the following on-demand processes after you have marked and saved the cancellation. This creates the necessary accounting entries.

Displayed on-demand processes depend on the selected Payment Status and Cancel Action values. For example, if you select Void and Re-Open Voucher(s)/Re-Issue, the *1. Payment Post* and *2. Journal Generate* values appear.

Processes are numbered to indicate the order of how the processes are run. For example, if you select *2. Journal Generate*, the system automatically initiates the number 1 process (in this example, *1. Payment Post*), and then the number 2 process (in this example, *2. Journal Generate*).

- *1. Payment Post*: Selecting this option runs only the Payment Posting process.
- *2. Voucher Post*: Selecting this option runs two processes: first, the Payment Posting process, followed by the Voucher Posting process.
- *2. Journal Generate*: Selecting this option runs the Payment Posting process and then the Journal Generator process.
- *3. Journal Generate*: Selecting this option runs the Payment Posting process, the Voucher Posting process, and then the Journal Generator process.

See [Chapter 22, "Using Additional Payment Processing Options," Payment Cancellation, page 698.](#)

Bank Set ID

Displays your bank setID, bank code, and account number and descriptions.

Remit Vendor

Displays remit vendor number and description.

Reference ID

Displays payment reference ID.

Creation Date

Displays the date the payment was created.

Payment Date

Displays the date the payment was issued.

Settle by

Displays whether the payment was settled through *Financial Gateway* or *Pay Cycle* functionality.

Settlement Status

Displays the settlement status of *Error*, *Hold*, *Loaded*, *Paid*, *Canceled*, or *None*.

Date Cancelled

Enter the date that you want to cancel the payment.

Payment Status

Select a payment action. Options include:

Void: Select to void the payment. You void a payment when it has not been released.

Stop: Select to stop the payment. You stop a payment when it has been released.

Undo Cancel: You can undo any cancellation until you post the canceled payment.

Warning! After posting, you cannot undo the cancellation.

Cancel Action

Select a cancel action. Options include:

Re-Open Voucher(s)/Re-Issue: Use to reselect the scheduled payments and reissue them the next time that you run a pay cycle, assuming that the vouchers meet the selection criteria for that pay cycle.

Important! If you reopen and reissue the voucher, the existing schedule payment will be cancelled in the Payment Posting process and a new schedule is added.

Note. If you decide to reopen vouchers and reissue, remember that you must run the Payment Posting process *twice* to record the reversal before those vouchers are available for a new payment selection. You can undo your cancellation, as long as the canceled payment is not posted.

Re-Open Voucher(s)/Put on Hold: Use to reopen the scheduled payments, but places the reopened scheduled payments on hold for your review. Select this option if you need to perform additional investigation or revise voucher information before proceeding with payment. A pay cycle process does not select the scheduled payments until the hold is removed on the Payments page of the Voucher component.

If you select this value, you must also select a reason code in the Hold Reason field.

Do Not Reissue/Close Liability: Use to cancel the payment and close any liabilities associated with it. The amount of the liability to close is calculated as the amount of unpaid liability remaining. The system takes into account whether the business unit is accounting at gross or net. The Payment Posting process identifies the voucher as process manual close, and the amount of the outstanding liability is reversed the next time the Voucher Posting process runs.

See Chapter 22, "Using Additional Payment Processing Options," Understanding Payment Cancellation With Associated Liabilities, page 723

.

Hold Reason

Specify a hold reason for payment cancellations placed on hold. The system defaults this hold reason onto the cancelled payment's new payment schedule. Select from the following: *Accounting*, *Amount*, *CCR Expire* (Central Contractor Registry vendor expiration), *Contrct Ret* (contract return), *Goods*, *IPAC* (Intra-Governmental Payment and Collection System), *Other*, *Quantity*, and *Wthd hold* (withholding hold).

Description	Enter comments or an explanation for the cancellation.
Document Sequencing	If you have document sequencing enabled, click the Document Sequence link to access the Document Sequence page, where you can change the payment document type.

☐ Undo Escheatment	

Description:

Payment Escheatment page

Action

Select to run one of the following on-demand processes after you have marked and saved the escheatment. This creates the necessary reversal accounting entries.

- *1. Payment Post:* Selecting this option runs only the Payment Posting process.
- *2. Journal Generate:* Selecting this option runs the Payment Posting process and then the Journal Generator process.

See [Chapter 22, "Using Additional Payment Processing Options," Payment Escheatment, page 699.](#)

Payment Status**Escheated**

Select to classify the payment as escheated. The Date Escheated field becomes available for entry.

Stale Dated Payment

Select to classify the payment as stale-dated. The Stale Date field becomes available for entry.

Undo Escheatment

Select to remove the escheatment classification.

Cancel Action

Escheated

When you select Escheated in the Payment Status group box, the system selects the Escheated option in the Cancel Action group box.

The Payment Posting process creates accounting entries that reverse the cash entries to an escheatment liability account, which you predefine on the Accounting Entry template.

Note. The system uses the escheatment date to compare to the effective date of the Accounting Entry template and then selects the active template.

Canceling and Escheating Multiple Payments

This section provides an overview of mass payment cancellation and escheatment processing and discusses how to:

- Perform mass payment cancellation and escheatment.
- Review mass payment cancellation information.

Understanding Mass Payment Cancellation and Escheatment Processing

The Mass Payment Cancellation component enables you to search for multiple payments and then cancel, escheat or stale-date, or undo those actions.

Performing mass payment cancellation is a two step process:

1. Define search criteria and specify the mass operation.

Click the Search button to retrieve the results of your search.

2. Specify additional information about the mass operation and exclude specific payments from processing.

Enter an action and click the Run button to initiate the on-demand process or the Mass Cancellation Application Engine process (AP_MASSPMTCN).

Note. To cancel and escheat multiple payments using the Mass Payment Cancellation component, you need to add the Mass Payment Cancellation v1 source transaction (APMASSCNL) for specific users on the User Preference - Process Group page. You also need to specify the Mass Cancellation process group (APPMTCNL1), and optionally, the Cancel, Payment Post process group (APPMTCNL2) for the Mass Payment Cancellation v1 source transaction. This is required even if you do not enable on-demand processing.

If you enable on-demand processing, additional source transactions and process groups are available to set up for the Mass Payment Cancellation component.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Setting Up On-Demand Processing."

This section discusses:

- Update actions.
- Process validations.

Update Actions

During the Mass Cancellation process, the system validates selected payments, updates the status, creates errors, and updates the payment and related tables. The following table lists the update actions for each mass operation:

Payment Status (PYMNT_STATUS)	Status Fields (PAYMENT_TBL)
S (stop)	• CASH_CLEARED_FLG = Y. • CASH_CLEARED_DT = cancel date. • CANCEL_POST_STATUS = W – pending.
V (void)	• RECON_TYPE = V. • RECON_STATUS = REC. • CASH_CLEARED_FLG = Y. • CASH_CLEARED_DT = cancel date. • CANCEL_POST_STATUS = W – pending.
L (stale-dated)	• ESCHEAT_DT = escheated date. • CANCEL_DT = null. • CANCEL_POST_STATUS = N.
W (escheated)	• ESCHEAT_DT = current date. • CANCEL_DT = escheated date. • CASH_CLEARED_FLG = Y. • CASH_CLEARED_DT = cancel date. • CANCEL_POST_STATUS = W – pending. • RECON_TYPE = V. • RECON_STATUS = REC.

Payment Status (PYMNT_STATUS)	Status Fields (PAYMENT_TBL)
<i>T</i> (undo escheat)	• PYMNT_STATUS = <i>P</i>. • CANCEL_ACTION = <i>N</i>. • CANCEL_POST_STATUS = <i>N</i>. • CASH_CLEARED_FLG = <i>N</i>. • CASH_CLEARED_DT = null. • ESCHEATED_DT = null. • CANCEL_DT = null. • RECON_TYPE = <i>U</i>. • RECON_STATUS = <i>UNR</i>.
<i>U</i> (undo cancel)	• MANUAL_CLOSE_DT = null in VOUCHER table. • PYMNT_STATUS = <i>P</i>. • CANCEL_ACTION = <i>N</i>. • CANCEL_DT = null. • CANCEL_POST_STATUS = <i>N</i>. • RECON_TYPE = <i>U</i>. • RECON_STATUS = <i>UNR</i>. • CASH_CLEARED_FLG = <i>N</i>. • CASH_CLEARED_DT = cancel date.

Process Validations

When an error is found during the Mass Cancellation process, the system updates the temporary table (AP_PMTMASS_TMP3) with a message code that you can view using the Mass Cancellation Error page. The following table lists the validations performed during the Mass Cancellation process:

Mass Operation	Condition	Validation
<i>Cancel</i>	PYMNT_STATUS = Void and CANCEL_ACTION <> Close Liability	Check whether the voucher for this payment can be reopened. The voucher may have already been flagged for closing or has already been closed.

Mass Operation	Condition	Validation
<i>Cancel</i>	PYMNT_STATUS = Void and CANCEL_ACTION = Close Liability	Check whether the withholding payment can be closed. The withholding payment cannot be closed until the corresponding regular payment is canceled or closed.
<i>Cancel</i>	COMMITMENT_CNTL_AP = Y and CANCEL_ACTION = Close Liability	This payment cannot be closed if the payment is associated with a voucher that is related to an active debit memo, adjustment, or reversal voucher.
<i>Cancel</i>	COMMITMENT_CNTL_AP = Y and CANCEL_ACTION = Close Liability and Restore Encumbrance = Y	This payment cannot be closed if the payment is associated to at least one PO voucher that has multiple payment schedules and the scheduled payments have been paid.
<i>Cancel</i>	PYMNT_STATUS = Void/Stop and CANCEL_ACTION = Close Liability	Check whether the payment includes a voucher that has been matched to a PO. The payment cannot be closed if the voucher is matched to a PO.
<i>Cancel</i>	PYMNT_STATUS = Void/Stop and CANCEL_ACTION = Close Liability	Check whether there is at least one voucher that was converted from a prior release. The payment cannot be closed if the voucher was converted from a prior release.
<i>Undo Cancel</i>	COMMITMENT_CNTL_AP = Y	Cannot undo cancel if the payment is associated to a PO voucher that was closed.
<i>Cancel or Escheat/Stale-date</i>	PYMNT_STATUS = Void/Escheated	If Allow if Withholding Exists check box is not selected, check whether payment has associated withholding paid payment. The payment cannot be escheated if it is associated with a paid withholding payment.
<i>Cancel or Escheat/Stale-date</i>	PYMNT_STATUS = Void/Escheated	If Allow Withholding is disabled, check whether payment has associated withholding payment where PYMNT_SELECT_STATUS is unpaid or cancelled. The payment cannot be escheated if it is associated with an unpaid or cancelled withholding payment.

Pages Used to Cancel and Escheat Multiple Payments

Page Name	Definition Name	Navigation	Usage
Mass Payment Cancellation	AP_PMT_MASS_CNL	Accounts Payable, Payments, Cancel/Void Payments, Mass Payment Cancellation, Mass Payment Cancellation	Search for multiple payments for mass payment cancellation and select the maintenance operation you want to perform: <i>Cancel</i> , <i>Escheat/Stale-date</i> , <i>Undo Cancel</i> , or <i>Undo Escheat/Stale-date</i> .
Mass Cancellation Job	AP_PMTMASS_RUN	Accounts Payable, Payments, Cancel/Void Payments, Review Mass Cancellation, Mass Cancellation Job	View the job details, errors, and search criteria for a specific mass payment cancellation request.
Mass Cancellation Error	AP_PMTMASS_ERR	Click a link in the Error Count column on the Mass Cancellation Job page.	View error details associated with a mass payment cancellation job.

Performing Mass Payment Cancellation and Escheatment

Access the Mass Payment Cancellation page (Accounts Payable, Payments, Cancel/Void Payments, Mass Payment Cancellation, Mass Payment Cancellation).

Mass Payment Cancellation

Step 1: Search for the payments on which you want to perform a mass operation by completing the search criteria. Click the Search button to view the payments that meet your search criteria.

Warning: If your search criteria returns more than 500 payments, consider modifying your search criteria to improve performance.

Mass Payment Cancellation page for Step 2

Search Criteria

All fields in the Search Criteria group box are required fields. You must enter at least one field name and value as additional search criteria.

Mass Operation

Select the processing option you want to perform: *Cancel*, *Escheat/Stale-date*, *Undo Cancel*, or *Undo Escheat/Stale-date*.

Warning! After posting, you cannot undo the cancellation or escheatment.

Settle By

Select the settle through method, either *Financial Gateway* or *Pay Cycle*. *Pay Cycle* appears as the default.

Note. If you select *Financial Gateway*, during the Mass Payment Cancellation process, the system creates and sends a message to the PeopleSoft Financial Gateway. Once the system receives a response from the PeopleSoft Financial Gateway, the search results are displayed in Payment Inquiry.

Bank SetID, Payment Method, Bank Code, and Bank Account

Enter bank information and a payment method to further narrow your selection.

Field Name	Select at least one field name and value. You may select more than one field name to use in your search criteria. <i>Payment Reference</i> appears as default. When you select <i>Payment Reference</i>, you can define multiple values and multiple ranges. The system joins these fields by the <i>or</i> condition. For example, you can define <i>Payment Reference</i> = 100000, or <i>Payment Reference</i> = 200000, or <i>Payment Reference between</i> 300000 and 400000. The system retrieves all payments that meet that criteria. When you select <i>Pay Cycle</i> and value, the system requires that you select a <i>Pay Cycle Sequence Number</i> and value as well. When you select other available field names, define a single value or single range of values for that field name. When you select the other fields, they are joined by the <i>and</i> condition. For example, you define <i>Pay Cycle</i> = <i>Weekly</i>, and <i>Pay Cycle Sequence Number</i> = 001, and <i>Payment Reference</i> = 100000, or <i>Payment Reference</i> = 200000. The system retrieves the payment references 100000 and 200000 generated from the Weekly pay cycle with a pay cycle sequence number of 001.

Processing Detail - Common Fields

The fields appearing in this group box are dependent upon the mass operation you selected in the Search Criteria group box. These fields are common to all mass operations.

Request ID and Request Description	Specify a request ID and a description. The system uses these IDs to track each process request. This field is required and displays for all mass operations.
Document Sequencing	Click to access the Document Sequence page to override the default document type and enter a document sequence number, if applicable. This link appears only if document sequencing is enabled.
Action	Select to run one of the following on-demand processes: 1. <i>Mass Cancel</i>: Selecting this option runs the Mass Cancellation process. This is the only process available if you select the <i>Undo Cancel</i> as the mass operation. Note. This is the only action that appears if you do not use on-demand processing. 2. <i>Payment Post</i>: Selecting this option runs the Mass Cancellation process followed by the Payment Posting process. 3. <i>Voucher Post</i>: Selecting this option runs three processes: first, the Mass Cancellation process, followed by the Payment Posting process, and then the Voucher Posting process. This process is available when you select the <i>Cancel</i> mass operation and the <i>Do not reissue/Close Liability</i> cancel action.

Processing Detail - Cancel Mass Operation

These fields are displayed in addition to the common fields when you select *Cancel* as the mass operation. These fields are similar to fields displayed on the Cancel Payment page.

See [Chapter 22, "Using Additional Payment Processing Options," Canceling a Payment, page 728.](#)

Payment Status	Select a payment status of <i>Stop</i> or <i>Void</i> . <i>Void</i> appears as the default.
Date Cancelled	Enter a date to cancel the payments. Today's date appears as default.
Hold Reason	Specify a hold reason for payment cancellations placed on hold. This field is available only when the cancel action is <i>Reopen Voucher/Put on Hold</i> .
Cancel Action	Select a cancel action that includes: <i>Do not reissue/Close Liability.</i> <i>Reopen Voucher/Put on Hold.</i> <i>Reopen Voucher/Reissue.</i>
Restore Encumbrance to PO	Select to restore the PO encumbrance and close the voucher liability. If the check box is not selected, only the voucher liability is closed. This check box is selected by default and is only applicable when the cancel action is <i>Do not reissue/Close Liability</i> and you use Commitment Control.
Allow if Withholding Exists	Select to cancel selected payments for vouchers that are subject to withholding. The payment to the withholding agency is not canceled unless it is included in the search results based on your search criteria. This check box is selected by default. If the check box is not selected, the system creates an error for the selected payments for vouchers that are subject to withholding. The payment to the withholding agency is canceled if it is included in the search results based on your search criteria.
Note. The check box is not applicable if you only report withholding information.	

Processing Detail - Escheat/Stale-date Mass Operation

These fields are displayed in addition to the common fields when you select *Escheat/Stale-date* as the mass operation. These fields are similar to fields displayed on the Payment Escheatment page.

See [Chapter 22, "Using Additional Payment Processing Options," Escheating a Payment, page 731.](#)

Payment Status	Select a payment status of <i>Escheated</i> or <i>Stale</i> . <i>Escheated</i> appears as the default.
Escheat Date	Enter a date to escheat the payments. Today's date appears as default. This field is required if you select <i>Escheated</i> as the payment status.

Stale Date

Enter a date to stale-date the payments. Today's date appears as default. This field is required if you select *Stale* as the payment status.

Note. To perform cancellations from a Stale status to an Escheat status, use the Payment Escheatment component.

Processing Detail - Undo Mass Operations

No additional fields are displayed for the *Undo Cancel* or the *Undo Escheat/Stale-date* mass operation. The system validates the common fields when you click the Run button.

Reviewing Mass Payment Cancellation Information

Access the Mass Cancellation Job page (Accounts Payable, Payments, Cancel/Void Payments, Review Mass Cancellation, Mass Cancellation Job).

Process Instance	Process Date	Run Control ID	Mass Operation	Payments Processed	Error Count	Request ID	Request Description
10350	10/12/2009	RTM0000053	Cancel	15		CANCEL	CANCEL

Mass Cancellation Job page

The Mass Cancellation Job page displays job details and search criteria used for the mass cancellation job.

When you perform a mass operation, search results are saved in the temporary table (AP_PMTMASS_TMP3) and displayed on this page. For performance reasons, the search results, or job details, are deleted from the table and this page when you run the next mass operation search with a date greater than the process date. For example, if you run multiple searches on one day, all jobs display on this page until you run another search on another day. Then only that job appears on this page, the prior jobs are deleted.

Error Count

Click a link to access the Mass Cancellation Error page to view the error details associated with a specific mass cancellation job.

Note. Use the Cancel Payment page or the Payment Escheatment page to individually handle errors listed on the Mass Cancellation Error page.

Forecasting Payments

This section discusses how to:

- Define forecast cycles.
- Review forecast by bank account.
- Reset the forecast cycle.

Pages Used to Forecast Payments

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Forecast Cycle	PYFRCST_CYCLE	Accounts Payable, Reports, Forecast, Forecast Cycle	Define forecast cycles that determine the universe of scheduled payments that can be selected for a payment forecast.
Forecast by Bank Account	PYFRCST_BANK	Accounts Payable, Reports, Forecast, Forecast by Bank Account	Review payment forecasts by bank. Review summarized amounts for each period in your forecast cycle. If a category does not appear, no payments are scheduled for that period.
Reset Forecast Cycle	PYFRCST_DELETE	Accounts Payable, Reports, Forecast, Reset Forecast Cycle	Reset the forecast cycle and adjust the parameters to review various what-if scenarios.
Forecast Report Request	PYFRCST_RQST	Accounts Payable, Reports, Forecast, Forecast Report Request	Define run parameters for the Payment Forecast report (APY2040). Use the report to examine your payment forecasts.

Defining Forecast Cycles

Access the Forecast Cycle page (Accounts Payable, Reports, Forecast, Forecast Cycle).

Forecast Cycle

Forecast Cycle: YEAR

Forecast Selection Criteria

*Pay From Date: 01/01/1994

*Pay Through Date: 12/31/1994

Forecast Cycle page

Forecast Selection Criteria

- Pay From Date

Enter the beginning date for your forecast cycle. All payment schedules pay dates equal to or greater than the pay from date are included in your forecast.
- Pay Through Date

Enter the ending date for your forecast cycle. All payment schedules with a scheduled pay date equal to or less than the pay through date are included in your forecast.
- Created

Displays the date for the last time that this forecast cycle was processed.
- User

Displays the user ID of the user who ran this forecast cycle the last time that it was processed.
- Bank Set ID

Enter your bank setID, bank code, and bank account number.
- Create Forecast Now

Initiates the Payment Forecast process. The system evaluates your unpaid payment schedules and summarizes the data for your review on the Forecast by Bank Account page.

Selection

Category	Defines the time interval in which the forecast results can be viewed and reported upon. Your categories can be of different lengths. For example, the forecast calendar could start on a daily basis for two weeks, continue to a weekly basis for eight weeks, and then switch to a monthly basis for the next twelve months.
From	Enter the first day for the time span and the last in the To field. Subsequent intervals build upon each other.

Reviewing Forecast by Bank Account

Access the Forecast by Bank Account page (Accounts Payable, Reports, Forecast, Forecast by Bank Account).

Forecast Cycle	Displays the name of the forecast cycle.
Bank SetID	Displays the SetID associated with the bank code and account that has payments scheduled within the forecast cycle timeframe.
Bank Code	Displays the bank code associated with the bank account that has payments scheduled within the forecast cycle timeframe.
Bank Account	Displays the bank account that has payments scheduled within the forecast cycle timeframe.
Created By	Displays the user name who ran this forecast cycle the last time the forecast cycle was processed.
Created	Displays the date that the forecast cycle was created.
Pay From Date	Displays the beginning date for your forecast cycle.
Pay Through Date	Displays the ending date for the forecast cycle.

Forecast by Period

From	Displays the date associated with the first day for the time span.
Through	Displays the date associated with the last day for the time span.
Amount	Displays the total amount for the scheduled payments due within the date range listed. The currency for the scheduled amount also appears.
Scheduled Payments	Displays number of scheduled payments that are due within the date range listed.

Resetting the Forecast Cycle

Access the Reset Forecast Cycle page (Accounts Payable, Reports, Forecast, Reset Forecast Cycle).

Payment Forecast Cycle Displays the name of the payment forecast cycle.

Do Not Delete Ensures that if you click Save, nothing related to the forecast cycle definition that you created is deleted.

Delete Forecast Results Only Erases the results of a forecast, so that you can run it again.

Delete Both Results and Cycle Deletes the results and the definition of the forecast cycle.

Performing the Bank Transfer Charge Process

This section discusses how to perform bank transfer charge autodeduction.

Pages Used to Perform the Bank Transfer Charge Process

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Bank Transfer Charge Inquiry	BCH_BNKCHRG_INQ	Accounts Payable, Review Accounts Payable Info, Payments, Bank Transfer Charge, Bank Transfer Charge Inquiry	View bank transfer charges that have been deducted from the prepayment. All search fields are required.
EFT Remittance Advice Letter	RUN_FIN2027	Accounts Payable, Reports, Payments, EFT Remittance Advice Letter	Define run parameters for the EFT Remittance Advice letter (FIN2028) or the EFT Bank Advice letter (FIN2027). Use the report to review selected EFT remittance. If you install the bank transfer charge option, the system adds two new fields for information related to bank transfer charges to this report.

Page Name	Definition Name	Navigation	Usage
Process Bank Charges	BCH_RUN_1000	Accounts Payable, Reports, Payments, Bank TRF Charge Detail, Process Bank Charges	Define run parameters for the Bank Transfer Charge Detail report (BCH1000). Use the report to review a list of all EFT payments processed in a specified period of time shown with bank charge information. This report supports GENX only.

Performing Bank Transfer Charge Autoduction

Access the bank transfer charge Inquiry page (Accounts Payable, Review Accounts Payable Info, Payments, Bank Transfer Charge, Bank Transfer Charge Inquiry).

This page displays payment information according to the search criteria that you enter. Only the payments for which bank transfer charges were deducted appear in the Payment Data group box.

Search Criteria

All of these search fields are required.

SetID	Enter bank setID.
Bank Code	Enter bank code of payment bank.
Bank Account	Enter bank account of payment bank.
Currency	Enter currency code of the transaction.
From Date and Thru Date	Enter date range of the payment dates.

Payment Data

Remit SetID	Displays setID of remit to vendor.
Remit Vendor	Displays vendor ID of the vendor to whom the payment was transferred.
Location	Displays vendor location of remit vendor.
Payment Amount	Displays actual payment amount transferred to the remit vendor.
Bank Charge	Displays amount of bank transfer charge deducted.

Post Status

Displays the posting status of the payment. Options include:

N: Not posted.

U: Unposted.

P: Posted.

Processing Reschedule Payments

This section discusses how to:

- Run the Reschedule Payments process.
- Inquire about reschedule payments errors.
- Cancel the Reschedule Payments process.

Pages Used to Process Reschedule Payments

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Reschedule Payments Request	SMT_SPLIT_REQ	Accounts Payable, Payments, Pay Cycle Processing, Reschedule Payment Request	Set parameters for and run the Reschedule Payments Application Engine process (AP_SMT_SEL).
Reschedule Payments Error	SMT_ERROR_PNL	Accounts Payable, Payments, Pay Cycle Exceptions, Reschedule Payment Error	Inquire about errors during the Reschedule Payments process.
Cancel Rescheduled Payments	SMT_CANCEL_PNL	Accounts Payable, Payments, Pay Cycle Processing, Cancel Rescheduled Payments	Cancel reschedule payments processing.

Running the Reschedule Payments Process

Access the Reschedule Payments Request page (Accounts Payable, Payments, Pay Cycle Processing, Reschedule Payment Request).

The system displays the run control ID that you entered to access the page.

Due Date From and **Date To** Select the terms of the due date on vouchers to be processed. The Reschedule Payments process summarizes the amount of vouchers with due dates between these dates.

Base Date	Specify the base date used by the Reschedule Payments process. The system recalculates the due date and scheduled pay date of schedule payments based on this date. Reschedule payments refers to a condition in which the base date is between the basis from day and the basis to day as defined in the Reschedule ID Control group box on the Reschedule Payments page.
Business Unit	Specify the business unit to be processed by the Reschedule Payments process.
SetID, Bank Code, and Bank Account	Specify the setID, code, and account of vouchers to be processed by the Reschedule Payments process.

The Reschedule Payments process processes only those vouchers that meet the following conditions:

Page	Condition
Identifying Information	The Withholding check box is deselected.
Payables Options	A Reschedule ID is specified in the Additional Payment Information group box.
Invoice Information	The Voucher Style must be: <i>Adjustments, Regular, or Register Voucher</i> . The Reschedule Payments process does <i>not</i> process the following voucher styles: <i>Journal Voucher, Prepaid Voucher, Third Party Voucher, and Template Voucher</i> .
• Invoice Information • Payments	The currency code on the Invoice Information page and the payment gross amount currency on the Payments page must be the same. The Reschedule Payments process does not process vouchers if different currency codes are specified in these fields.
Payments	• There is no discount amount for the voucher. The Reschedule Payments process does not process vouchers with discount amounts. • A netting status of <i>N</i> (not applicable), or a netting status of <i>S</i> (selected), if the payments for these vouchers are netting balance. Vouchers that are not netting balance are not processed even if the netting status is <i>S</i>. • The Hold Payment check box is deselected. • The Separate Payment check box is deselected.

Page	Condition
Draft Maturity Dates	The Group Code field is deselected. Note. This condition is only applicable when the payment method is a draft type. When the method is a draft type, a Draft link appears in the Payment Methods group box on the Payments page.

Note. The Reschedule Payments process in PeopleSoft Payables does not process vouchers that are selected for payment.

See Also

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information,"
 Entering Vendor Identifying Information

Inquiring About Reschedule Payments Errors

Access the Reschedule Payments Error page (Accounts Payable, Payments, Pay Cycle Exceptions, Reschedule Payment Error).

After running the Reschedule Payments process, check the status of the process in PeopleSoft Process Monitor. If you find any errors there, use the Reschedule Payments Error page to inquire about the errors. You must correct any errors.

Note. The system does not complete the process for vouchers with errors. After you correct the errors, run the process again.

To inquire about errors in the Reschedule Payments process:

1. Enter the run control ID that you used when you ran the process, then click the Search button.
2. Error messages appear in the Search Results group box for the process with that run control ID.
3. To narrow the search results, enter specific values in the Process Instance, Request Date From, and To Date fields, and click the Search button.

Search Results

The page displays information about the vouchers for the run control ID that you enter. The following error statuses can appear in the Status column:

Status	Descriptions
Invalid Bank Account SEQ NBR not Found	If there is an error in bank account information, this status appears. Make sure that there are no inconsistencies in the bank account information.
Invalid Reschedule ID	If the reschedule ID is invalid, this status appears. Check that the effective date of the reschedule ID is not in the future compared to the base date on the Reschedule Payments Request page.
Invalid Payment Method	If the payment method is invalid, this status appears. Check that the payment method defined on the Reschedule Payments page is in the bank account of the remit vendor.
Invalid Draft Sight Code	If the sight code is invalid, this status appears. Check that the effective date of the sight code is not in the future compared to the base date on the Reschedule Payments Request page.
Invalid Term Code	If the term code is invalid, this status appears. Check that the effective date of the terms code on the Reschedule Payments page is not in the future compared to the base date on the Reschedule Payments Request page. Make sure that the terms code is not a discount terms code, such as 2D (2 percent discount in 10 days, net 30).

Canceling the Reschedule Payments Process

Access the Cancel Reschedule Payments page (Accounts Payable, Payments, Pay Cycle Processing, Cancel Rescheduled Payments).

This page enables you to cancel a process that you have already run. Because the Reschedule Payments process groups vouchers together, you can cancel processes by group ID.

Note. When you cancel processes, the system restores the bank code, bank account, payment method, payment condition, due date, scheduled pay date, draft maturity date, and draft scheduled maturity date to their former settings or values.

To cancel the Reschedule Payments process:

1. Enter the run control ID that you used when you ran the process that you want to cancel. Then click the Search button.
2. The system displays the search results for the Run Control ID that you entered.
3. To narrow the search results, enter specific values for the bank setID, bank code, bank account, remit setID, remit vendor, request a date period, and click the Search button.
4. Select the check boxes of groups that you want to cancel.
5. Click Save to cancel the process that you specified.

Chapter 23

Running Voucher and Payment Posting

This chapter provides an overview of the voucher posting and the payment posting processes, and discusses how to:

- Run the Voucher Posting Application Engine process (AP_PSTVCHR).
- Run the Payment Posting Application Engine process (AP_PSTPYMNT).
- Run the Cash Clearing Application Engine process (AP_APCSHCLR).
- Review posted accounting entries.

Understanding the Voucher Posting and Payment Posting Processes

The Voucher Posting process creates accounting entries from vouchers. The system uses the accounting entry template and inheritance rules that you set up on the Accounting Entry Template and ChartField Inheritance pages to identify the offset accounts needed to create accounting entries. The entries include the expense distributions entered into the system, as well as additional entries for the payables offset, value-added tax (VAT) expense, nonprorated, nonmerchandise expenses, and closure expenses. These accounting entries are then available for generating general ledger journals, using the Journal Generator Application Engine process (FS_JGEN). Vouchers must be entered, approved, and posted before you can send voucher information to the general ledger.

The Payment Posting process creates accounting entries from payment-related transactions, such as system-created payments, manual payments, drafts, electronic file transfer (EFT) payments, ACH payments, and canceled payments. The Payment Posting process also creates realized gain or loss offsets when a transaction is entered in a different currency than the base currency and the rates have fluctuated between the invoice and payment dates. These accounting entries are then available to the Journal Generator process to pass to your general ledger.

There is a difference between running the Voucher Posting and Payment Posting processes and running the Journal Generator process. Before you can transfer a voucher or payment to the general ledger, it must be associated with accounts. The posting processes create all accounting lines. Voucher accounting lines are created based on the distribution lines from voucher entry. However, proration of nonmerchandise charges result in accounting lines that are different from what was actually entered in the distribution lines.

Here are examples of accounting lines that are created during the posting processes:

- Payables liability account.
- Discount earned.

- Discount lost.
- Late charge.
- Realized gains and losses.
- Use tax liability.
- VAT accounting entries.

The posting processes also assign interunit document sequencing numbers.

To improve system processing time, each posting program calls the InterUnit Processor to function only when the following scenarios exist:

Voucher Posting process:

- The general ledger unit is different between the voucher distribution level and the voucher header level.
- The balancing ChartField value is different between the expense (DST) and liability (APA) line under the summary control posting option method. (This does not apply to the detail-offset posting option; in that method, balance ChartFields are always inherited.)

Payment Posting process:

- The general ledger business unit is different between the liability (APA) and the cash (CAS/CAC) lines.
- The balancing ChartField value is different between the AP liability (APA) and cash (CAS/CAC) lines.

Note. An exception to this process is when you post using the detail offset posting method. In this method, balance ChartFields are always inherited.

See [Chapter 10, "Setting Up PeopleSoft Payables Accounting," Posting Method Definition, page 221.](#)

If you have selected multibook accounting in the subsystem, the posting processes also post to the secondary ledgers in the default ledger group. If you set up multibook accounting using nontranslate ledgers, then the accounting entries are calculated from the transaction currency. If you are using translate ledgers for your multibook accounting, then the accounting entries are calculated from the base currency of the primary ledger.

After you run the posting processes, vouchers and payments remain in the PeopleSoft Payables subsystem. Run the Journal Generator process to distribute the accounting lines to the general ledger.

Voucher Posting Process

To run the voucher posting process:

1. Create vouchers using the online Voucher component (VCHR_EXPRESS) or Quick Invoice Entry component (VCHR_QUICK_PNL).
2. (Optional) If required, run the Document Tolerance Checking Application Engine process (FS_DOC_TOL) and Budget Processor Application Engine process (FS_BP).
3. (Optional) If required, run the Matching Application Engine process (AP_MATCH) and approve voucher.
4. Define a voucher posting request using the Voucher Posting Request page.

5. Run the Voucher Posting process using Process Scheduler.
6. Evaluate posting results using the Voucher Accounting Entries page.

Payment Posting Process

To run the payment posting process:

1. Create payments using the Pay Cycle Application Engine process (AP_APY2015), the Pay Cycle Manager page, Express Payments page, Create Manual Draft page, Regular Entry - Payments page (record a manual payment), or the Man Pay Worksheet (manual payment worksheet) page.
2. (Optional) Run the Voucher Posting process after running the Pay Cycle process.

The Voucher Posting process is not required to be run prior to creating payments.

3. Define and verify a payment posting request using the Payment Posting Request page.
4. Run the Payment Posting process using PeopleSoft Process Scheduler.
5. Evaluate the results using the Voucher Accounting Entries page or Vendor Balance page.

Accounting Methods for Nonmerchandise Charges

There are three methods of accounting for nonmerchandise charges, such as freight, sales tax, use tax, and miscellaneous charges:

- Prorate.
- Allocate.
- Expense (non-prorate and non-allocate).

Prorate

If you prorate nonmerchandise amounts, the amounts charged to the distribution lines are added to merchandise amounts on the distribution lines and the total is posted to the distribution ChartFields.

Prorated discounts and late interest charges do not generate separate accounting lines during the Voucher Posting process.

Allocate

If you allocate nonmerchandise amounts, the amounts charged to the distribution lines are posted to the appropriate nonmerchandise accounts from the accounting template, and the other ChartField values are populated based on the inheritance rules. ChartField inheritance is defined at the ledger group level and on the ChartField Inheritance page.

Allocated nonmerchandise amounts generate separate accounting lines during the Voucher Posting process.

Expense (non-prorate and non-allocate)

If you are using Summary Control posting, you have two options for nonprorated charges. You can either expense the charges at the header or allocate them to the distribution lines. Allocate them by selecting the Allocate check box on the Non-Merch Charges page in the Procurement Control component (BUS_UNIT_INTFC2). If you expense the charges at the header, the nonmerchandise accounting entry is shown in summary and is charged to the PeopleSoft General Ledger business unit related to the voucher's PeopleSoft Payables business unit. The account and alternate account are derived from the accounting template. The other ChartFields are derived from the ChartField inheritances defined for the setID associated with the PeopleSoft General Ledger business unit related to the voucher's PeopleSoft Payables business unit.

If you are using Detail Offset posting, you have only one option for nonprorated charges. You must allocate them. For this reason, the Allocate check box is selected and unavailable for entry on the Non-Merch Charges page in the Procurement Control component.

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Setting Up Nonmerchandise Charges, page 42

Running the Voucher Posting Process

This section discusses how to define a voucher posting request.

You can post vouchers according to:

- Business unit.
- Origin.
- Control group.
- Contract.
- Voucher.

Page Used to Run the Voucher Posting Process

Page Name	Definition Name	Navigation	Usage
Voucher Posting Request	PST_VCHR_RQST	Accounts Payable, Batch Processes, Vouchers, Voucher Posting, Voucher Posting Request	Define a request for a run of the Voucher Posting Application Engine process (AP_PSTVCHR). You may be required to run the Matching and Budget Processor processes, among others, before running the Voucher Posting process.

Defining a Voucher Posting Request

Access the Voucher Posting Request page (Accounts Payable, Batch Processes, Vouchers, Voucher Posting, Voucher Posting Request).

Post Voucher Option

Specify which vouchers to include in the Voucher Posting process. For each value that you select, different fields are available for entry in the grid at the bottom of the page. Regardless of which value you select, the system posts only those vouchers that are eligible to post. Values are:

Post All Units: Post all eligible vouchers for all of the business units in the system.

Post All Vchrs for Closed Pymt (post all vouchers for closed payments):
Post all eligible vouchers for closed payments.

Post Business Unit: Enter a business unit to post all eligible vouchers within that payables business unit.

Post Contract: Enter a business unit and contract ID to post all eligible transactions covered by the contract.

Post Group: Specify the business unit and control group ID. The control group must be ready to post; otherwise, no vouchers in the group are posted. You can select groups for posting on the Post Control Group page.

Post Origin: Enter a setID and origin to post all eligible vouchers from the origin that you specify.

Post Voucher: Enter a business unit and voucher to post. Multiple vouchers can be selected.

Initiate Entry Event Generator

Select this check box to run the Entry Events Application Engine process (FS_EVENTGEN) for the vouchers being posted. This field appears only if you have enabled entry events (as either required or optional) at the installation options level.

Prepayment Application Method

Indicate which vendor the system should use when applying prepaid vouchers to regular vouchers. Values are:

Invoicing Vendor: The system performs application based on the invoicing vendor of the prepaid and regular voucher. This is the default value.

Remit Vendor: The system performs application based on the remit vendor of the prepaid and regular voucher.

Autopilot Run Control

Select this checkbox to enable this run control ID and settings to use the Autopilot feature.

See *PeopleSoft General Ledger 9.1 PeopleBook*, "Using Autopilot to Process Journals," Understanding Autopilot.

Note. The exact procedure for running a process on a server depends on the type of server that you are using and your organization's standards. For example, if you are running PeopleSoft Payables in a DB2 environment, you or your mainframe administrator submits JCL to initiate the program. If you do initiate the posting program from the server, the program retrieves its processing options from the Voucher Posting Run Control record that you already set up in the online pages.

Chapter 5, "Organizing Vouchers with Origins and Control Groups," Posting Control Groups, page 106

Running the Payment Posting Process

You can post payments by:

- Bank account.
- Payment method.
- Individual payment.

This section discusses how to create payment accounting entries.

Page Used to Run the Payment Posting Process

Page Name	Definition Name	Navigation	Usage
Payment Posting Request	PST_PYMNT_RQST	Accounts Payable, Batch Processes, Payment, Payment Posting, Payment Posting Request	Create payment accounting entries by running the Payment Posting Application Engine process (AP_PSTPYMNT). You may be required to run the Matching and Budget Processor processes, among others, before running the Payment Posting process. You must also pay vouchers before you can post payments.

Creating Payment Accounting Entries

Access the Payment Posting Request page (Accounts Payable, Batch Processes, Payment, Payment Posting, Payment Posting Request).

Post Payment Option

Specify which payments to include in the Payment Posting process. For each value that you select, different entry fields appear for you to complete. The system saves these settings with the run control ID:

Post All Banks: Posts all eligible payments that belong to any of the bank accounts in the system. Because you are posting payments for all banks, the Post Payment List group box shows no data.

Post Bank Account: Posts all eligible payments for the specified bank account. The SetID, Bank Code, and Bank Account fields become available for entry.

Post Payment: Posts only the payment that you specify. The SetID, Bank Code, Bank Account, Payment Method, and Payment Reference fields become available for entry.

Post Payment Method: Posts all payments using the specified payment method for the bank account that you enter. The SetID, Bank Code, Bank Account, and Payment Method fields become available for entry.

Note. Regardless of the option that you select when the Payment Posting process runs, it posts only those payments that are eligible to post. Therefore, if you choose to post payments for a specific bank account, and you have entered a manual payment on that account that has not yet been applied to one or more vouchers, the system does not post that payment.

[Chapter 24, "Reviewing PeopleSoft Payables Accounting Entries Examples," page 767](#)

Running the Cash Clearing Process

This section provides an overview of the cash clearing process in PeopleSoft Payables and discusses how to enter cash clearing requests.

Understanding the Cash Clearing Process in PeopleSoft Payables

The Cash Clearing process creates accounting entries to record the actual settlement or clearing of payment transactions at the bank of issue. It creates the entries based on payments that have cleared the bank and been reconciled as cleared by the bank reconciliation process. The system does not create cash clearing accounting entries for unreconciled payments.

The Cash Clearing process enables you to track amounts that have actually cleared your bank versus amounts still floating in the banking system. The more often you reconcile payment information from your bank, the more accurate your cash account balances.

To use this process, you need a bank account for which:

- The cash clearing option has been selected.
- Account ChartFields exist for both a cash account and a cash-clearing control account.

The account types that you define on the External Accounts page are Cash - AP (cash accounts payable) and Cntrl - AP (control accounts payable), respectively.

It is advisable to have a PeopleSoft General Ledger business unit that is used in voucher and payment entry, with a PeopleSoft Payables Journal Template for cash clearing account defined. Although this is not a strict processing requirement, it helps to identify the cash clearing accounting entries and guarantees their uniqueness from other transaction accounting entries.

The Cash Clearing process creates accounting entries for each scheduled payment that has been paid, reconciled, and cleared for bank accounts eligible for cash clearing. These accounting entries are then available to the Journal Generator process to pass to the general ledger.

Cash Clearing Accounting Examples

Cash clearing accounting for payments is a two-step process.

1. It focuses on the use of a special cash-clearing control account to help provide an accurate cash-on-hand balance by including the effect of payment transactions that have been issued, but have not yet cleared the bank.
2. When the payment is issued and posted, the accounts payable liability account is debited, and the cash clearing control account (as opposed to the actual cash account) is credited for the payment amount.

This table lists payment posting accounting entries:

ChartField	Debit	Credit
Accounts Payable	999	
Cash Clearing		999

Later, when the cash clearing request is processed, a pair of balanced accounting entries is created to clear the net cash amount of the issued payment for each payment that has been reconciled.

This table lists cash clearing accounting entries:

ChartField	Debit	Credit
Cash Clearing	999	
Cash		999

To determine the actual cash balance, add any debit or credit residue in the cash clearing control account from payment or deposit amounts that have not yet been cleared to the cash account balance.

See Also

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts"

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Reconciling Statements"

Page Used to Enter a Cash Clearing Request

Page Name	Definition Name	Navigation	Usage
Cash Clearing Request	CASH_CLRG_REQUEST	Accounts Payable, Batch Processes, Payment, Cash Clearing, Cash Clearing Request	Define a request for a run of the Cash Clearing Application Engine process (AP_APCSHCLR).

Entering Cash Clearing Requests

Access the Cash Clearing Request page (Accounts Payable, Batch Processes, Payment, Cash Clearing, Cash Clearing Request).

Pay Date Option

Specify which payments to include in the Cash Clearing process:

All Reconciled Payments: Runs the Cash Clearing process on all payments that you have reconciled.

Clearing Date Range: Runs the Cash Clearing process on reconciled payments in the clearing date range that you specify. The clearing date is the date that the payment clears the bank. Enter the beginning and ending dates of the clearing date range in the From and To Date fields.

Payment Date Range: Runs the Cash Clearing process on reconciled payments based on the payment date range that you specify. The payment date is the date that PeopleSoft Payables created the payment. Enter the beginning and ending dates of the clearing date range in the From and To Date fields.

Acctg Date Opt (accounting date option)

Specify the accounting date to be used for the cash clearing accounting entries that the system creates:

Use Clearing Bank: Uses the accounting date that you specified for the bank.

Use Payment Date: Uses the payment date as the accounting date.

Use Specific Date: Enables you to specify the accounting date in the Acctg Date field.

Initiate Entry Event Generator

Select this check box to run the Entry Events process. This check box appears only if you have made entry events required or optional at the installation options level.

Bank Account

In the Bank Account group box, select the check box for each bank account on which you want to run the Cash Clearing process. For each row, you can view the bank account bank setID, bank code, bank account, bank account number, and bank account description.

Select at least one bank account for processing.

Reviewing Posted Accounting Entries

This section discusses how to:

- Review posted accounting entries.
- Review journal detail for a general ledger journal.

Pages Used to Review Posted Accounting Entries

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher Accounting Entries	VCHR_ACTG_ENTRIES	- Accounts Payable, Review Accounts Payable Info, Vouchers, Accounting Entries, Voucher Accounting Entries - Accounts Payable, Review Accounts Payable Info, Vouchers, Voucher, Voucher Inquiry Click the Accounting Entries button on the Voucher Inquiry page.	Review the results of the Voucher Posting Application Engine process (AP_PSTVCHR).
Unbalanced Accounting Entries	VCHR_ACCTG_UNBAL	Accounts Payable, Review Accounts Payable Info, Vouchers, Unbalanced Accounting Entries	Review any unbalanced accounting entries (including interunit and intraunit setup error vouchers).
Drill to Source	AP_GL_DRILL	Accounts Payable, Review Accounts Payable Info, Vouchers, Journal Drill Down, Drill to Source	Review the journal detail for a general ledger journal. You can view the journal information by journal line.
Posted Voucher Listing	RUN_APY1020	Accounts Payable, Reports, Vouchers, Posted Voucher, Posted Voucher Listing	Define run parameters for the Posted Voucher Listing report (APY1020). Use this report to review all posted vouchers for a given business unit and date range.

Reviewing Posted Accounting Entries

Access the Voucher Accounting Entries page (Accounts Payable, Review Accounts Payable Info, Vouchers, Accounting Entries, Voucher Accounting Entries).

Voucher Accounting Entries page

Note. Multiple views of this page are available by selecting the tabs in the scroll area.

Common Page Information

- Business Unit

Select the business unit for the voucher whose accounting entries you want to review. You must also select a voucher ID or invoice number or the system does not return any data.
- Voucher ID

Select the voucher ID of the voucher whose accounting entries you want to review.
- Invoice Number

Select the invoice number of the voucher whose accounting entries you want to review.
- Accounting Line View Option

Displays *Standard* and is the only available value if you have not enabled entry events. If you have enabled entry events, select one of the following values:

Standard: The system displays nonentry event accounting entries.

Supplemental: The system displays only entry event accounting entries.

View Both: The system displays both entry event and nonentry event accounting entries.
- Show Foreign Currency

Select to display the foreign currency of the transaction lines in addition to the monetary amount.
- Invoice Date

Displays the invoice date, vendor ID, and vendor name of the voucher that your search returns.

Accounting Information

Posting Process

Displays the posting process for the specific entry.

Note. Each posting process appears on its own view in the Accounting Information region. The different views appear as view 1 of 2, view 2 of 2, and so on. To see the accrual, payment, cancel, and closure definitions, click View All, or scroll through each of these views.

GL Dist Status (general ledger distribution status)

Displays the PeopleSoft General Ledger distribution status.

Main Information Tab

Select the Main Information tab.

Monetary Amount DR (monetary amount debit)

Displays the monetary amount debit associated with the PeopleSoft General Ledger business unit of the accounting entry. This field appears only if the Display Debit/Credit Amounts in Subsystems check box is selected on the User Preferences - Overall Preferences page.

Monetary Amount CR (monetary amount credit)

Displays the monetary amount credit associated with the PeopleSoft General Ledger business unit of the accounting entry. This field appears only if the Display Debit/Credit Amounts in Subsystems check box is selected on the User Preferences - Overall Preferences page.

Monetary Amount

Displays the monetary amount (debits as positive numbers and credits as negative numbers) associated with the PeopleSoft General Ledger business unit of the accounting entry. This field appears only if the Display Debit/Credit Amounts in Subsystems check box is *not* selected on the User Preferences - Overall Preferences page.

Currency Code

Displays the currency associated with the PeopleSoft General Ledger business unit of the accounting entry.

Ledger

Displays the general ledger and PeopleSoft General Ledger business unit to which this accounting entry has been charged.

ChartField Tab

Select the ChartField tab.

(USF) Schedule ID

Displays schedule IDs for those associated with a payment (including cancellations, and so on). This field only appears if the federal payments option is enabled at the Installation Options level.

Tax Authority

Displays the tax authority code charged for the use tax liability lines.

Entry Event	Displays the entry event code and EE line number associated with the transaction line. These fields appear only if you have enabled entry events.
Account	Displays the account and other ChartFields to which this accounting entry has been charged.

Journal Tab

Select the Journal tab.

Journal ID, Line, and Journal Date	Displays the general ledger journal ID, line number, and journal date assigned by the Journal Generator process for this accounting entry. If these fields are blank, then this accounting entry has not been journal generated.
Doc Type (document type)	Displays the document type, document sequence number, and document sequence date for this accounting entry.
Budget Date	Displays the date that the Budget Processor process uses to determine which budget period to verify.
Budget Status	Displays the budget status for this accounting entry. Possible values include: <i>N</i> (not checked): This accounting entry has not been budget checked. <i>V</i> (valid): This accounting entry passed budget checking. <i>E</i> (error): The system detected an error while running the Budget Processor process on this accounting entry.
Primary	Indicates whether this is the primary ledger.

Note. Multiple views of this page are available by selecting the tabs in the scroll area.

Common Page Information

- GL journal (general ledger journal)

Click to view the entire journal entry to which this line belongs.
- Account

Displays the general ledger account and other ChartFields to which this accounting entry has been charged.
- Base Amount DR (base amount debit)

Displays the debit amount of the line in the general ledger base currency. The base currency code also appears.
- Base Amount CR (base amount credit)

Displays the credit amount of the line in the general ledger base currency. The base currency code also appears.
- Transaction Amount DR (transaction amount debit)

Displays the entered debit amount of the line.
- Transaction Amount CR (transaction amount credit)

Displays the entered credit amount of the line.

Chartfields Tab

Select the Chartfields tab.

- Unit

Displays the PeopleSoft Payables business unit to which this accounting entry has been charged.

Fund Code Displays the fund code and any other ChartFields to which this accounting entry has been charged.

Voucher Information Tab

Select the Voucher Information tab.

Voucher ID Displays the voucher ID and description of the voucher with which this journal line is associated. Click to access the Voucher Accounting Entries page, where you can view accounting details for the voucher.

Amount Displays the distribution line amount of the voucher with which this journal line is associated.

Base Amount Displays the amount of the distribution line with which this journal line is associated in the base currency.

Document Information Tab

Select the Document Information tab.

Document Type Displays the document type for this voucher line.

Journal Code Displays the journal code associated with the document type for this accounting entry.

Chapter 24

Reviewing PeopleSoft Payables Accounting Entries Examples

This chapter lists common elements and discusses:

- PeopleSoft Payables accounting entries.
- Accounting entries for standard vouchers.
- Accounting entries for debit memo adjustment vouchers.
- Accounting entries for prepayments.
- Accounting entries for draft payments.
- Accounting entries for letter of credit payments.
- Accounting entries for withholding payments.
- Accounting entries for period end accruals.
- Accounting entries for vouchers with multiple freight charges.
- Accounting entries for claim vouchers.
- Accounting entries for voucher closure.
- Accounting entries for unposted vouchers.
- Accounting entries for canceled or voided payments.
- Accounting entries for interunit vendors.
- Accounting entries for value-added tax (VAT) transactions.

PeopleSoft Payables Accounting Entries

The following accounting entry examples are based upon certain assumptions:

- Examples are based upon a single line voucher with the following details:
 - The business unit is DEU01.
 - The gross amount is 10,000.
 - The transaction currency and base currency is EUR.
 - Discount is 2 percent.
 - Distribution general ledger DEU01.
- Payments are made in the same currency as the voucher.
- Payments are made from a bank owned by the vouchering business unit.
- Accounting is at gross.
- The Summary Control value is specified as the default posting method.
- Two sets of payment posting results are shown: discount not taken and discount taken.

In actual posting, only one entry is created.

Common Elements Used in This Chapter

Discount

The discount transaction accounts for discounts that are taken (or not taken) at the time of payment. The two discount distribution account types are mutually exclusive. The setting of the Account At field on the General Controls page determines which discount distribution account type is used:

Gross: The gross amount of vouchers is used as the basis for accounting. Any discounts taken are recognized as discounts earned. Discounts not taken are not reflected.

Net: The net amount of vouchers is used as the basis for accounting. Any discounts that you lose are recognized as discounts lost.

Discounts are charged depending on the option selected in the Discount Allocation Policy group box on the General Controls page. Options include: Allocate Discounts, Prorate Discounts, and Expenses Discounts.

The standard transaction accounts for the liability, the expense distribution, and the cash payment.

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Selecting General Controls, page 38

Accounting Entries for Standard Vouchers

The following examples illustrate accounting entries for regular vouchers.

Action: Voucher Entered and Posted

There are two accounting entries for the voucher transaction: expense distribution and accounts payable. The expense distribution entry tracks who should incur the expense and applies to the distribution general ledger business units that you entered on the voucher. The accounts payable entry accounts for what is owed to the vendor and applies to the vouchering payables business unit. For this voucher transaction, both of these entries are recorded to the general ledger business unit DEU01.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Expense Distribution	10000	EUR	10000	EUR
DEU01	Accounts Payable	(10000)	EUR	(10000)	EUR

Action: Payment Entered and Posted, Discount Not Taken

There are two accounting entries for the voucher transaction at payment time: accounts payable and cash distribution. The accounts payable entry removes the liability that was created when the voucher was posted. The cash distribution entry represents the actual cash payment and the reduction to the cash account. For this voucher transaction, both of these entries are recorded to general ledger business unit DEU01.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Accounts Payable	10000	EUR	10000	EUR
DEU01	Cash Distribution	(10000)	EUR	(10000)	EUR

Action: Payment Entered and Posted, Discount Taken

The new entry in this example is for the discount earned account. Because accounting is set at gross and our liability is the gross amount of the voucher, it is necessary to create an entry for the discount earned account to maintain a balanced entry.

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>	<i>Calculation</i>
DEU01	Accounts Payable	10000	EUR	10000	EUR	
DEU01	Cash Distribution	(9800)	EUR	(9800)	EUR	10000 - (10000 * .02)
DEU01	Discount Earned	(200)	EUR	(200)	EUR	10000 * .02

Accounting Entries for Debit Memo Adjustment Vouchers

Debit memo adjustment vouchers can automatically be created for discrepancies between the voucher and the purchase orders and receivers.

The following accounting entry examples are based upon these assumptions in addition to the assumptions made in the prior section:

- The purchase order amount is 10,000 EUR.
- The receiver amount is 8000 EUR.
- The Matching Application Engine process (AP_MATCH) is run.

Note. The Matching process creates debit memos for merchandise amounts and tax amounts only. No miscellaneous charges, freight charges, or discounts are applied to the debit memo vouchers. The system calculates sales and use tax amounts and VAT amounts based on the tax codes specified on the voucher line.

Action: Voucher Entered and Matched, Debit Memo Created and Posted

The two accounting entries for the debit memo are accounts payable and expense distribution. The debit memo voucher will inherit the distribution line information.

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>
DEU01	Account Payable	2000	EUR	2000	EUR
DEU01	Expense Distribution	(2000)	EUR	(2000)	EUR

Accounting Entries for Prepayments

Prepayments are possible through the use of prepaid vouchers. For accounting purposes, the net effect of a prepaid voucher is a merchandise voucher paid or partially paid by a prepaid voucher. Thus, instead of crediting a cash account, use the expense account for the prepaid voucher.

The following accounting entry examples are based upon these assumptions in addition to the assumptions made in the prior section:

- The prepayment voucher is applied to the voucher described above (10,000 EUR).
- The business unit is DEU01.
- The prepayment amount is 1000 EUR.

Action: Prepaid Voucher Entered and Posted

The two accounting entries for the prepayment are prepaid expense and accounts payable. The accounting entry template populates the account for the prepaid expense entry during voucher creation. It is reversed when the prepayment is applied to the merchandise voucher.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Prepaid Expense	1000	EUR	1000	EUR
DEU01	Accounts Payable	(1000)	EUR	(1000)	EUR

Action: Payment Created and Posted for Prepayment

Prepayments are never discounted. Posting the prepayment releases the payables liability and leaves the prepaid expense entry open.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Accounts Payable	1000	EUR	1000	EUR
DEU01	Cash Distribution	(1000)	EUR	(1000)	EUR

Action: Invoice Received, Voucher Entered, Prepayment Applied to Voucher, and Posted

Posting the invoice and applied prepayment creates the following entries:

- Accounts payable entry and expense entry for the merchandise voucher.
- Accounts payable entry and expense entry to reverse the prepayment.

Payment processing:

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>
DEU01	Expense Distribution	10000	EUR	10000	EUR
DEU01	Accounts Payable	(10000)	EUR	(10000)	EUR

Prepayment processing:

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>
DEU01	Accounts Payable	1000	EUR	1000	EUR
DEU01	Prepayment Expense	(1000)	EUR	(1000)	EUR

Action: Payment Created and Posted for the Invoice Balance, Discount Not Taken

Posting the payment creates the following entries:

- Cash entry for the balance of the merchandise voucher.
- Accounts payable entry to fully reverse the liability balance.

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>	<i>Calculation</i>
DEU01	Accounts Payable	9000	EUR	9000	EUR	10000 - 1000
DEU01	Cash Distribution	(9000)	EUR	(9000)	EUR	10000 - 1000

Action: Payment Created and Posted for the Invoice Balance, Discount Taken

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Accounts Payable	9000	EUR	9000	EUR	10000 - 1000
DEU01	Cash Distribution	(8800)	EUR	(8800)	EUR	10000 - 1000 - (10000 * .02)
DEU01	Discount Earned	(200)	EUR	(200)	EUR	10000 * .02

Accounting Entries for Draft Payments

When a payment is made with the draft (EFT, customer, or vendor) payment method, it's necessary to post accounting entries to the draft clearing account. This should only be done when the payment has a post status of *U* (unposted) and has a draft status of *C* (created) or *A* (approved).

Action: Voucher Entered and Posted

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Expense Distribution	10000	EUR	10000	EUR
DEU01	Accounts Payable	(10000)	EUR	(10000)	EUR

Action: Payment Entered and Posted, Discount Not Taken

The system credits the draft clearing account instead of the cash account.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Accounts Payable	10000	EUR	10000	EUR
DEU01	Draft Clearing	(10000)	EUR	(10000)	EUR

Action: Payment Settlement Date Reached, Discount Not Taken

Once the draft reaches the settlement date, the system reverses the draft clearing account and credits the cash account. This is only done when the payment has a posted status of *P* (posted), a draft status of *A* (approved); and the settlement date is on or before the posting date.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Draft Clearing	10000	EUR	10000	EUR
DEU01	Cash Distribution	(10000)	EUR	(10000)	EUR

Action: Payment Entered and Posted, Discount Taken

When a discount is taken, the system subtracts the discount amount from the draft clearing amount and posts the difference to the discount earned account.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Accounts Payable	10000	EUR	10000	EUR	
DEU01	Draft Clearing	(9800)	EUR	(9800)	EUR	10000 - (10000 * .02)
DEU01	Discount Earned	(200)	EUR	(200)	EUR	10000 * .02

Action: Payment Settlement Date Reached, Discount Taken

Once the draft reaches the settlement date, the draft clearing account is reversed, and the cash account is credited. This is only done when the payment has a post status of *P* (posted), has a draft status of *A* (approved), and the settlement date is on or before the posting date.

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>	<i>Calculation</i>
DEU01	Draft Clearing	9800	EUR	9800	EUR	10000 - (10000 * .02)
DEU01	Cash Distribution	(9800)	EUR	(9800)	EUR	10000 - (10000 * .02)

Accounting Entries for Letter of Credit Payments

When a payment is made with the letter of credit payment method, post accounting entries to the line of credit account. This should only be done when the payment has a post status of *U* (unposted) and a payment method of *LC* (letter of credit).

Action: Voucher Entered and Posted

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>
DEU01	Expense Distribution	10000	EUR	10000	EUR
DEU01	Accounts Payable	(10000)	EUR	(10000)	EUR

Action: Payment Entered and Posted, Discount Not Taken

The system credits the letter of credit account instead of the cash account.

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>
DEU01	Accounts Payable	10000	EUR	10000	EUR
DEU01	Letter of Credit	(10000)	EUR	(10000)	EUR

Action: Payment Entered and Posted, Discount Taken.

When a discount is taken, the system subtracts the discount amount from the letter of credit amount and posts the difference to the discount earned account.

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>	<i>Calculation</i>
DEU01	Accounts Payable	10000	EUR	10000	EUR	
DEU01	Letter of Credit	(9800)	EUR	(9800)	EUR	10000 - (10000 * .02)
DEU01	Discount Earned	(200)	EUR	(200)	EUR	10000 * .02

Accounting Entries for Withholding Payments

Depending on your withholding setup, PeopleSoft Payables either generates a separate withholding payment when the voucher is paid, or tracks the withholding for reporting purposes. During the Payment Posting or Voucher Posting Application Engine processes (AP_PSTVCHR and AP_PSTPYMNT, respectively), depending on whether you selected to have withholding calculated at voucher posting or at payment time, a liability is created for the withholding portion as the vendor portion is paid. As you pay the withholding portion, the liability reduces based on the setup in PeopleSoft General Ledger.

Our example is for a 1099 vendor with the following additional information and withholding defaults:

- The business unit is US001.
- The transaction currency and the base currency is USD.
- The entity is the IRS.
- Federal withholding is 33 percent.

Action: Voucher Entered and Posted, Withholding Calculated at Voucher Posting

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
US001	Expense Distribution	10000	USD	10000	USD	
US001	Accounts Payable	(6700)	USD	(6700)	USD	10000 - (10000 * .33)
US001	Withholding Liability	(3300)	USD	(3300)	USD	10000 * .33

Action: Voucher Entered and Posted, Withholding Calculated at Payment Posting

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
US001	Expense Distribution	10000	USD	10000	USD
US001	Accounts Payable	(10000)	USD	(10000)	USD

Action: Regular Payment Entered and Posted for the Nonwithholding Portion, Withholding Calculated at Payment Posting, Discount Not Taken

The payment is made only to the vendor and a withholding liability is created for the withholding portion. The withholding entries are grouped by entity and jurisdiction. When the withholding portion is paid to the taxing entity, the withholding liability is debited and the cash distribution account is credited.

Payment processing:

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
US001	Accounts Payable	6700	USD	6700	USD	10000 - (10000 * .33)

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
US001	Cash Distribution	(6700)	USD	(6700)	USD	10000 - (10000 * .33)

Withholding processing:

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
US001	Accounts Payable	3300	USD	3300	USD	10000 * .33
US001	Withholding Liability	(3300)	USD	(3300)	USD	10000 * .33

Action: Regular Payment Entered and Posted, Withholding Calculated at Payment Posting, Discount Taken

Payment processing:

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
US001	Accounts Payable	6700	USD	6700	USD	10000 - 10000 * .33)
US001	Cash Distribution	(6500)	USD	(6500)	USD	10000 - (10000 * .33) + (10000 * .02)
US001	Discount Earned	(200)	USD	(200)	USD	10000 * .02

Withholding processing:

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>	<i>Calculation</i>
US001	Accounts Payable	3300	USD	3300	USD	10000 * .33
US001	Withholding Liability	(3300)	USD	(3300)	USD	10000 * .33

Accounting Entries for Period End Accruals

The following are accounting entry examples for Period End Accruals:

Action:

The following example is a voucher with one distribution line. Budget checking has not been considered for this scenario.

<i>Voucher</i>	<i>Posting Process</i>	<i>Line Number</i>	<i>Distribution Account Type</i>	<i>Accounting Period</i>	<i>Monetary Amount</i>	<i>Account</i>	<i>Department</i>
00000040	Period End Accrual	1	DST – Expense Distribution	5	1500	650080	11000
00000040	Period End Accrual	1	APV – Payables Period End Accruals	5	-1500	207100	11000

Reversal entries:

<i>Voucher</i>	<i>Posting Process</i>	<i>Line Number</i>	<i>Distribution Account Type</i>	<i>Accounting Period</i>	<i>Monetary Amount</i>	<i>Account</i>	<i>Department</i>
00000040	Period End Accrual	1	DST – Expense Distribution	6	-1500	650080	11000
00000040	Period End Accrual	1	APV – Payables Period End Accruals	6	1500	207100	11000

Accounting Entries for Voucher created from a PO that has not been budget checked

The expense and accrual line will be journal generated and show as an accrual in period five. The expense line will be budget checked to reduce the budget in period five. The accrual line will not be budget checked.

The budget date will be determined according to the default budget date option defined on the Installation Options page.

- If the option is set to *Accounting Date*, then the budget date will be the accounting date determined on the Period End Accrual Run Control page.
- If the option is set to *Predecessor Doc*, then the budget date will come from the PO distribution line record.

Note. The expense entry will be budget checked only if Commitment Control is enabled for Payables at the installation level, for accruals on the Procurement Control page, and the voucher has not been budget checked. After running the Period End Accruals process, if commitment control is enabled and the voucher has not been budget checked yet, you need to run budget check process.

Voucher	Posting Process	Line Number	Distribution Account Type	Accounting Period	Monetary Amount	Account	Budget Line Status	GL Distribution Status	Department
00000040	Period End Accrual	1	DST – Expense Distribution	5	1500	650080	N	N	11000
00000040	Period End Accrual	1	APV – Payables Period End Accruals	5	-1500	207100	V	N	11000

Accrual Reversal Entries:

Voucher	Posting Process	Line Number	Distribution Account Type	Accounting Period	Monetary Amount	Account	Budget Line Status	GL Distribution Status	Department
00000040	Period End Accrual	1	DST – Expense Distribution	6	-1500	650080	N	N	11000
00000040	Period End Accrual	1	APV – Payables Period End Accruals	6	1500	207100	V	N	11000

Encumbrance relief:

The distribution account type is ENR – reserved for encumbrances, The budget status is set *Not Processed* so it can be selected and processed by the commitment control processor. The GL distribution status is set to *I* so it will not be journal generated. The chartfield information on this entry is selected from the commitment control activity log. The PO that the voucher line was created from will have an encumbrance entry in the activity log. The chartfields found on the default commitment control detail ledger will be populated on this line.

Voucher	Posting Process	Line Number	Distribution Account Type	Accounting Period	Monetary Amount	Account	Budget Line Status	GL Distribution Status	Department
00000040	Period End Accrual	1	ENR – Encumbrance	5	-1500	650080	N	I	11000

Encumbrance relief reversal:

The distribution account type is ENR – reserved for encumbrances, The budget status is set *Not Processed* so it can be selected and processed by the commitment control processor. The GL distrib status is set to *I* so it will not be journal generated. The chartfield information on this entry is selected from the commitment control activity log.

Voucher	Posting Process	Line Number	Distribution Account Type	Accounting Period	Monetary Amount	Account	Budget Line Status	GL Distribution Status	Department
00000040	Period End Accrual	1	ENR – Encumbrance	6	1500	650080	N	I	11000

Accounting Entries for a Voucher that has been created from a PO and the Voucher has been budget checked

Accrual entries

The expense and accrual line will be journal generated and show as an accrual in period 5. The expense line will not be budget checked.

Voucher	Posting Process	Line Number	Distribution Account Type	Accounting Period	Monetary Amount	Account	Budget Line Status	GL Distribution Status	Department
00000040	Period End Accrual	1	DST – Expense Distribution	5	1500	650080	V	N	11000

<i>Voucher</i>	<i>Posting Process</i>	<i>Line Number</i>	<i>Distribution Account Type</i>	<i>Accounting Period</i>	<i>Monetary Amount</i>	<i>Account</i>	<i>Budget Line Status</i>	<i>GL Distribution Status</i>	<i>Department</i>
00000040	Period End Accrual	1	APV – Payables Period End Accruals	5	-1500	207100	V	N	11000

Accrual reversal entries

The expense and accrual line will be journal generated and show the reversal of the accrual in period 6. The expense line will not be budget checked. The budget status is set to valid.

<i>Voucher</i>	<i>Posting Process</i>	<i>Line Number</i>	<i>Distribution Account Type</i>	<i>Accounting Period</i>	<i>Monetary Amount</i>	<i>Account</i>	<i>Budget Line Status</i>	<i>GL Distribution Status</i>	<i>Department</i>
00000040	Period End Accrual	1	DST – Expense Distribution	6	-1500	650080	V	N	11000
00000040	Period End Accrual	1	APV – Payables Period End Accruals	6	1500	207100	V	N	11000

Encumbrance relief will not be created because the voucher has already been budget checked. Encumbrance relief reversal will not be created.

Accounting Entries for Vouchers with Multiple Freight Charges

This example uses the following additional information:

- The merchandise amount is 9000.
- The air freight amount is 700.
- The land freight amount is 300.

Different accounts are defined for air freight and land freight. The Voucher Posting process creates the following entries:

Action: Voucher Entered and Posted

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Expense Distribution	9000	EUR	9000	EUR
DEU01	Freight Expense	700	EUR	700	EUR
DEU01	Freight Expense	300	EUR	300	EUR
DEU01	Accounts Payable	(10000)	EUR	(10000)	EUR

There are no differences with the payment posting.

Accounting Entries for Claim Vouchers

Processing claims vouchers result in accounting entries between the PeopleSoft Payables and Receivables systems, as shown in this table:

Action: Claim Voucher Generated from the Claims Workbench, but not Posted

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Accounts Receivable	220	EUR	220	EUR
DEU01	Accounts Receivable Rebate Control	(220)	EUR	(220)	EUR
DEU01	Cash	220	EUR	220	EUR
DEU01	Accounts Receivable	(220)	EUR	(220)	EUR

Action: Voucher Posted, Claim Voucher Closed

Continuing with the current example, this table shows the resulting accounting entries after voucher closure:

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Accounts Receivable Rebate Control	220	EUR	220	EUR
DEU01	Rebate Account 1	(60)	EUR	(60)	EUR
DEU01	Rebate Account 2	(40)	EUR	(40)	EUR
DEU01	Rebate Account 3	(100)	EUR	100)	EUR
DEU01	VAT Input	(20)	EUR	(20)	EUR

When you process claim settlements from the Claims Workbench that are debit memos, the Voucher Posting process closes the claim voucher, debiting the payables account and crediting the rebate account.

Claim settlements that are a payment type other than debit memos (for example, checks) are handled by the Receivable Update Application Engine process (ARUPDATE). Here, the Receivable Update process closes the voucher by debiting the receivables account and crediting the rebate account.

For both processes, the system derives the rebate account information from the rebate agreement.

Accounting Entries for Voucher Closure

When closing a voucher, the voucher is identified to prevent payments from being made for the voucher. The original voucher must be posted before the reversing entries can be created.

Action: Voucher Entered and Posted, Then Closed, Closed Voucher Posted

If the above voucher closes, the entries are:

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Expense Distribution	(9000)	EUR	(9000)	EUR
DEU01	Freight Expense	(700)	EUR	(700)	EUR

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>
DEU01	Freight Expense	(300)	EUR	(300)	EUR
DEU01	Accounts Payable	10000	EUR	10000	EUR

However, if the voucher has been partially paid, then only the portion remaining open is closed. Therefore, if the vendor pays 5000 EUR, the remaining 5000 EUR closes.

Action: Voucher Entered and Posted, 50 Percent of the Voucher Closed, Closed Voucher Posted

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>
DEU01	Expense Distribution	(4500)	EUR	(4500)	EUR
DEU01	Freight Expense	(350)	EUR	(350)	EUR
DEU01	Freight Expense	(150)	EUR	(150)	EUR
DEU01	Accounts Payable	5000	EUR	5000	EUR

Accounting Entries for Unposted Vouchers

The system creates reversing entries and archives the original entries. The UNPOST_SEQ for the archived entry is one higher than for the reversal entry. Nothing is deleted.

The reversing accounting entry is as follows:

Action: Post Voucher

<i>Account</i>	<i>Unpost Sequence</i>	<i>Debit</i>	<i>Credit</i>
Expense Account	0	785.00	

<i>Account</i>	<i>Unpost Sequence</i>	<i>Debit</i>	<i>Credit</i>
AP Liability	0		785.00

Action: Unpost Voucher

<i>Account</i>	<i>Unpost Sequence</i>	<i>Debit</i>	<i>Credit</i>
Expense Account	1		785.00
AP Liability	1	785.00	
Expense Account	2	785.00	
AP Liability	2		785.00

Reversing entries only pass to the appropriate ledgers.

Accounting Entries for Canceled or Voided Payments

Payments are canceled or voided with reissue or closed liability. When canceled or voided and then reissued, the voucher becomes available for repayment. When the liability closes, the voucher is identified, and payment can no longer be made for the voucher. Payments can be made up of multiple vouchers; therefore, all the vouchers for the payment are either reopened or closed.

Action: Payment Entered and Posted, Then Canceled and Marked Reissue, and the Canceled Payment Posted

Payment processing:

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>
DEU01	Accounts Payable	10000	EUR	10000	EUR
DEU01	Cash Distribution	(10000)	EUR	(10000)	EUR

If the payment has been discounted, the discount is also reversed.

Cancellation processing:

<i>GL Business Unit</i>	<i>Distribution Account Type</i>	<i>Foreign Amount</i>	<i>Foreign Currency</i>	<i>Monetary Amount</i>	<i>Currency Code</i>
DEU01	Accounts Payable	(10000)	EUR	(10000)	EUR
DEU01	Cash Distribution	10000	EUR	10000	EUR

Accounting Entries for Interunit Vendors

Interunit vendors enable you to eliminate transactions between legal entities that belong to the same financial group. The affiliate ChartField is populated on all accounting lines for the vendor master data. This is a standard accounting entry.

Action: PeopleSoft France Buys Licenses from PeopleSoft, Inc.

In the following example, PeopleSoft France buys some licenses from PeopleSoft Inc. Vendor US0000001 is also identified as BU US001 and then as an interunit vendor.

<i>Account</i>	<i>Affiliate</i>	<i>Business Unit</i>	<i>Debit</i>	<i>Credit</i>	<i>DST_ACCT_T YPE</i>
Account Payable	US001	FRA01		2000	APA
Expense Account	US001	FRA01	2000		DST

Accounting Entries for VAT Transactions

There are several types of VAT transactions. This section discusses accounting entries for vouchers with:

- Recoverable VAT calculated at gross.
- Recoverable VAT calculated at net.
- Recoverable inclusive VAT.
- Recoverable inclusive VAT calculated at net.

The following examples use this additional information, unless otherwise specified:

- Record Input VAT is selected.

- VAT is calculated at gross.
- The VAT calculation type is Exclusive.
- The VAT declaration point is *Invoice Date*.
- The VAT tax rate is 10 percent.
- VAT is 100 percent recoverable.

VAT Calculated at Gross or Net

Discounts determine the difference between VAT calculated at gross and VAT calculated at net. Calculating at gross uses the gross amount that you enter on the voucher when determining the VAT basis amount. Calculating at net assumes discounts are always taken. The VAT amount is the gross amount minus the net discounts.

Calculating VAT at gross:

- Gross amount = 10000
- Discount = 2 percent
- Gross = 10000 (VAT basis amount)

Calculating VAT at net:

- Gross amount = 10000
- Discount = 2 percent
- Net = $10000 - (10000 * .02) = 9800$ (VAT basis amount)

Note. You cannot select the Recalculate check box on a payment when you are calculating at net.

VAT Calculation Types

There are two types of VAT calculation methods: exclusive and inclusive.

- VAT Exclusive: The VAT amount reported on the vendor's invoice and entered into PeopleSoft Payables from the merchandise amount.

The system generates a calculated VAT amount that is used to check tolerances. The system calculated amount is gross (merchandise amount) * VAT code %.

- **VAT Inclusive:** The VAT amount is not reported separately on the vendor's invoice but is included in the merchandise amount.

Because the VAT amount is included in the gross amount, it is necessary to determine the expense distribution portion using the following equation:

$$\text{Gross} - (\text{VAT Code \%} * \text{distribution expense}) = \text{distribution expense}$$

PeopleSoft calculates the distribution expense by substituting in the appropriate values:

$$\text{Gross Amount} = 10000$$

$$\text{VAT Code} = 10\%$$

$$\text{Expense Distribution} = x$$

$$10000 - .1x = x$$

$$10000 = x + .1x$$

$$10000 = 1.1x$$

$$x = 10000 / 1.1$$

$$x = 9090.91$$

The Include Freight and Include Misc Charges (include miscellaneous charges) options are not valid if the VAT calculation type is inclusive.

VAT Declaration Point

The VAT declaration point determines the date on which VAT input is recognized. There are four possible dates:

- Accounting.
- Delivery.
- Invoice.
- Payment.

The Record Input VAT option must be selected. For accounting purposes, accounting, delivery, and invoice declaration points create the same entries; an entry is made to a VAT input account when the voucher posts.

Payment generates an accounting entry to a VAT input intermediate account when the voucher posts. This entry reverses and posts to the VAT input account when the payment posts.

The VAT use type determines the percentage of the VAT input that is recoverable and the percentage that is a nonrecoverable amount.

Accounting Entries for Vouchers with Recoverable VAT Calculated at Gross

The following examples illustrate accounting entries for vouchers with recoverable VAT calculated at gross.

Action: Voucher Entered and Posted

The system calculates the VAT amount using the VAT basis amount (10000), the VAT rate (10 percent), and recoverable percentage (100 percent). The VAT calculation type is Exclusive; therefore you must enter a VAT amount on the Voucher Invoice Information page or on the VAT Header page.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Expense Distribution	10000	EUR	10000	EUR	
DEU01	VAT Input Recoverable	1000	EUR	1000	EUR	10000 * .1
DEU01	Accounts Payable	(11000)	EUR	(11000)	EUR	

Action: Payment Entered and Posted, Discount Not Taken

The payment accounting entries for this example are no different from those for the standard voucher example, but a balance exists in the VAT Input Recoverable account.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Accounts Payable	11000	EUR	11000	EUR
DEU01	Cash Distribution	(11000)	EUR	(11000)	EUR

Action: Payment Entered and Posted, Discount Taken

The payment accounting entries for this example are no different than those in the standard voucher example. The differences are the calculation of the discount, based on the total merchandise amount including the VAT, and the balance in the VAT Input Recoverable account.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Accounts Payable	11000	EUR	11000	EUR	

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Cash Distribution	(10800)	EUR	(10800)	EUR	11000 - ((11000 - 1000) * .02)
DEU01	Discount Earned	(200)	EUR	(200)	EUR	(11000 - 1000) * .02

Action: Payment Entered and Posted, Discount Taken, Recalculate at Payment

When you recalculate at payment, you can create adjusting entries to reduce the amount of recorded VAT based on payment discounts. This is only true when VAT is set to calculate at gross. The system assumes 100 percent recoverability of VAT unless set up differently.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Accounts Payable	11000	EUR	11000	EUR	
DEU01	Cash Distribution	(10780)	EUR	(10780)	EUR	11000 - (11000 * .02)
DEU01	Discount Earned	(220)	EUR	(220)	EUR	11000 * .02
DEU01	Discount Earned Adjust Due to VAT	20	EUR	20	EUR	1000 * .02
DEU01	VAT Input Rec. Discnt Adjust	(20)	EUR	(20)	EUR	1000 * .02

Accounting Entries for Vouchers with Non-Recoverable VAT Calculated at Gross

The following examples illustrate accounting entries for vouchers with non-recoverable VAT calculated at gross.

Action: Voucher Entered and Posted

The system calculates the VAT amount using the VAT basis amount (10000), the VAT rate (10 percent). The VAT calculation type is *Exclusive*; therefore you must enter a VAT amount on the Voucher Invoice Information page or on the VAT Header page. The VAT amount is NON-recoverable and it is prorated into the Expense Distribution.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Expense Distribution	11000	EUR	11000	EUR	$10000 + (10000 * .1)$
DEU01	Accounts Payable	(11000)	EUR	(11000)	EUR	

Action: Payment Entered and Posted, Discount Not Taken

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Accounts Payable	11000	EUR	11000	EUR
DEU01	Cash Distribution	(11000)	EUR	(11000)	EUR

Action: Payment Entered and Posted, Discount Taken

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Accounts Payable	11000	EUR	11000	EUR	
DEU01	Cash Distribution	(10800)	EUR	(10800)	EUR	$11000 - ((11000 - 1000) * .02)$
DEU01	Discount Earned	(200)	EUR	(200)	EUR	$(11000 - 1000) * .02$

Action: Payment Entered and Posted, Discount Taken, Recalculate at Payment

When you recalculate at payment, you can create adjusting entries to reduce the amount of the prorated VAT based on payment discounts. This is only true when VAT is set to calculate at gross.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Accounts Payable	11000	EUR	11000	EUR	
DEU01	Cash Distribution	(10780)	EUR	(10780)	EUR	11000 - (11000 * .02)
DEU01	Discount Earned	(220)	EUR	(220)	EUR	11000 * .02
DEU01	Discount Earned Adjust Due to VAT	20	EUR	20	EUR	1000 * .02
DEU01	Expense Distribution (Expense Adjustment)	(20)	EUR	(20)	EUR	1000 * .02

Accounting Entries for Vouchers with Recoverable VAT Calculated at Net

The following examples illustrate accounting entries for vouchers with recoverable VAT calculated at net.

Action: Voucher Entered and Posted, VAT Calculated at Net

Calculating at net assumes discounts are always taken. In this example, the entry to the VAT Input Recoverable account is net of the discount. Based on the amount and tax code specified on the voucher line, less the discount, the system calculates a VAT amount; as the VAT calculation type is Exclusive, the user must enter a VAT amount.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Expense Distribution	10000	EUR	10000	EUR	

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	VAT Input Recoverable	980	EUR	980	EUR	$(10000 - (10000 * .02)) * .1$
DEU01	Accounts Payable	(10980)	EUR	(10980)	EUR	

Action: Payment Entered and Posted, Discount Not Taken, VAT Calculated at Net

Because the discount is not taken, and the VAT input is calculated net of the discount, it appears necessary to account for the difference at payment time. However, because you enter the VAT amount on the header, the system has no way of knowing whether a discount should be added. The system proceeds as if you entered the full VAT amount.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Accounts Payable	10980	EUR	10980	EUR
DEU01	Cash Distribution	(10980)	EUR	(10980)	EUR

Action: Payment Entered and Posted, Discount Taken, VAT Calculated at Net

Because the VAT amount is user-entered, the system has no way of knowing whether a portion of the discount should be subtracted. Therefore, the entire discount amount is deducted.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Accounts Payable	10980	EUR	10980	EUR	
DEU01	Cash Distribution	(10780)	EUR	(10780)	EUR	
DEU01	Discount Earned	(200)	EUR	(200)	EUR	$10000 * .02$

Accounting Entries for Vouchers with Recoverable Inclusive VAT

The following examples illustrate accounting entries for vouchers with recoverable inclusive VAT.

Action: Voucher Entered and Posted

The calculation assumes the VAT amount is included in the gross amount that you entered on the voucher header. The system automatically makes the calculations.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Expense Distribution	9090.91	EUR	9090.91	EUR	10000 / 1.1
DEU01	VAT Input Recoverable	909.09	EUR	909.09	EUR	9090.91 * .1
DEU01	Accounts Payable	(10000)	EUR	(10000)	EUR	

Action: Payment Entered and Posted, Discount Not Taken

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Accounts Payable	10000	EUR	10000	EUR
DEU01	Cash Distribution	(10000)	EUR	(10000)	EUR

Action: Payment Entered and Posted, Discount Taken

Because the discount is taken and the system is set to account at gross, it is necessary to account for the discount at time of payment. The VAT amount is not adjusted by the discount.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Accounts Payable	10000	EUR	10000	EUR	

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Cash Distribution	(9818.18)	EUR	(9818.18)	EUR	$10000 - ((100000 / 1.1) * .02)$
DEU01	Discount Earned	(181.82)	EUR	(181.82)	EUR	$(100000 / 1.1) * .02$

Action: Payment Entered and Posted, Discount Taken, Recalculated at Payment

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Accounts Payable	10000	EUR	10000	EUR	
DEU01	Cash Distribution	(9800)	EUR	(9800)	EUR	$10000 - (10000 * .02)$
DEU01	Discount Earned	(200)	EUR	(200)	EUR	$10000 * .02$
DEU01	Discount Earned Adjust Due to VAT	18.18	EUR	18.18	EUR	$909.09 * .02$
DEU01	VAT Input Rec. Discnt Adjust	(18.18)	EUR	(18.18)	EUR	$909.09 * .02$

Accounting Entries for Vouchers with Recoverable Inclusive VAT Calculated at Net

The following examples illustrate accounting entries for vouchers with recoverable inclusive VAT calculated at net.

Action: Voucher Entered and Posted

In performing the calculation, the system assumes that the discount is taken and the VAT amount is included in the header gross amount.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code	Calculation
DEU01	Expense Distribution	9107.47	EUR	9107.47	EUR	
DEU01	VAT Input Recoverable	892.53	EUR	892.53	EUR	8925.32 * .1
DEU01	Accounts Payable	(10000)	EUR	(10000)	EUR	

Action: Payment Entered and Posted, Discount Not Taken

The VAT is not adjusted, even though it is calculated at net (minus the discount).

GL Business Unit	Ledger	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Primary	Accounts Payable	10000	EUR	10000	EUR
DEU01	Primary	Cash Distribution	(10000)	EUR	(10000)	EUR

Action: Payment Entered and Posted, Discount Taken

Because the discount is taken, and the system is set to account at gross, it is necessary to account for the discount at time of payment. The VAT amount is not adjusted by the discount.

GL Business Unit	Distribution Account Type	Foreign Amount	Foreign Currency	Monetary Amount	Currency Code
DEU01	Accounts Payable	10000	EUR	10000	EUR
DEU01	Cash Distribution	(9817.85)	EUR	(9817.85)	EUR
DEU01	Discount Earned	(182.15)	EUR	(182.15)	EUR

Chapter 25

Managing Accruals for PeopleSoft Payables

This chapter provides an overview of accrual processing and discusses how to:

- Process accruals for PeopleSoft Payables.
- Delete accruals for PeopleSoft Payables.

Understanding Payables Accrual Processing

Accounting Entries for Period End Accruals will not be integrated with PC (project costing) and AM (asset management), the PC distribution status and AM distribution status for the PE accrual entries will be set to *Ignore*.

Eligibility for Accrual Processing

The following list provides eligibility requirements for processing Period End Accruals:

- The Accrue Unprocessed Vouchers at Period End checkbox and a Journal Generator template must be selected in the associated Payables business unit (Procurement Options).
- Vouchers that have not been previously posted in a postable status.
- Vouchers that match group control rules.
- Vouchers that match with Period End Accrual Options set up with valid statuses determined by Period End accruals (matching options, budget check options, document tolerance options and approval options).
- Vouchers that have period end accrual entries posted that have been subsequently deleted.
- For vouchers created from receipts that have been accrued, the voucher will not be accrued. However, if the voucher has been created for an amount greater than the receipt, the difference between the receipt amount and the total voucher line amount will be accrued in the period end accrual process.
- Vouchers not in an error or recycle status.
- Vouchers not in a budget check error condition.
- Vouchers on payment hold.

Understanding Payables Accrual Entries

This section discusses:

Commitment Control entries for accruals.

Commitment Control Entries for Accruals

If budget checking is enabled at the Installation Options level for payables and on the Procurement Options page for period end accruals, create the expense and encumbrance reversal entries as needed. The high level rules are:

- If the voucher is created from a PO, and the voucher has not been budget checked, create an encumbrance relief and encumbrance relief reversal entry. The encumbrance entries will derive their ChartField values from the commitment control activity log entry for the PO. Create an expense and an expense reversal entry.
- If the voucher is created from a PO, and the voucher has been budget checked, do not create commitment control expense and encumbrance entries.
- If the voucher has not been created from a PO, and the voucher has been budget checked, do not create the commitment control expense entries.
- If the voucher has not been created from a PO, and the voucher has not been budget checked, create the commitment control expense and expense reversal entries.

Encumbrance Relief

The voucher, originating from a PO, will have an encumbrance entry in the commitment control activity record. The chartfield information found on the commitment control activity log for the encumbrance will be used to create the encumbrance relief entry.

Accounting entry rules:

- The accounting entry type or DST_ACCT_TYPE will be set to ENR.
- This accounting entry will not be journal generated to the General Ledger.
- The accounting date will be set to the accounting date on the run control record.
- The accounting entry will include the required fields to perform budget checking.
- The budget date will be determined by the Default Budget Date option in commitment control installation options.

The options are Accounting Date Default or Predecessor Document Date Default. Where Accounting Date default has been setup, use the accounting date on the run control. For Predecessor Document Date Default use the Budget Date on the PO. The budget date is found on the PO distribution line.

Encumbrance Relief Reversal

The encumbrance relief reversal will be a copy of the encumbrance relief with the following exceptions:

- The amounts will be reversed.
- Accounting date will be derived by taking the accounting date from the run control, find the period that the run control falls in and then get the first day of the next period for the general ledger business unit default ledger.
- Budget date will be the same as the encumbrance relief entry.
- The accounting period will be the accounting period where the derived accounting date falls.

See [Chapter 24, "Reviewing PeopleSoft Payables Accounting Entries Examples," Accounting Entries for Period End Accruals, page 779.](#)

Processing Accruals for PeopleSoft Payables

This section lists prerequisites and discusses how to process accruals for PeopleSoft Payables.

Prerequisites

Before processing period end accruals you must:

- Define accrual information for each business unit.
- Define accounting entry templates.
- Define Journal Generator templates.

Pages Used for Processing Accruals for PeopleSoft Payables

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Period End Accrual Processing	PE_ACCRL_RQST	Accounts Payable, Batch Processes, Vouchers, Period End Accrual, Create Period End Accruals	Process period end accruals for specific business units or all business units.
Review Period End Accrual Selection	PE_ACCRL_RQST1	Accounts Payable, Batch Processes, Vouchers, Period End Accrual, Create Period End Accruals Click the Review Business Unit Details link on the Period End Accrual Processing page.	Review accrual information prior to running the create period end accrual process.

Page Name	Definition Name	Navigation	Usage
Period End Accrual Delete	PE_ACCRL_DELETE	Accounts Payable, Batch Processes, Vouchers, Period End Accrual, Delete Period End Accruals	To deleting accruals for PeopleSoft Payables.

[Return to Process Period End Accruals](#)

Review Period End Accrual Selection page

The accrual reversal accounting date will be derived by selecting the first day of the next accounting period from the date provided in the run control. The system will create the accrual reversals by reversing the amounts found on the accrual entry and set the accounting date to reversal date. The system will create the expense reversal by reversing the amounts found on the expense entry.

The Review Period End Accrual selection allows users to review accrual information as well as any known errors that may be encountered will be listed such as:

- No journal generator template setup in the business unit setup.
- Control check box at the BU level has not been checked and does not allow period end accruals.
- Periods for the applications are still open.
- Business unit is not enabled to process period end accruals.

Note. The system displays an estimate of the number of vouchers that are eligible to be processed by Period End Accrual process. During the process, the number of vouchers processed may be different, depending on the detail rules when accounts are excluded, Control Group rules, if applicable, etc.

Period End Accrual Delete page

There may be instances where the accounting entries have been created erroneously. If the accounting entries have not been journal generated, you can reverse the entries. If the accounting entries have been journal generated, any erroneous transactions will need to be reversed in General Ledger through a reversing journal transaction. If transactions have been budget checked by commitment control, these transactions will have to be zeroed out and budget checked after they have been reversed.

When the transactions are populated into the grid, users have the option to select the transactions they want to delete. The check box will be unavailable for selection if the accounting transaction has been journal generated. If you select transactions for deletion and they have been budget checked, the transactions will be updated to zero out the amounts and the system will set the budget checking status to not budget checked.

The delete selected rows button will delete all selected rows and their associated reversal row. If budget checking has been run on any transactions selected for deletion, users will receive a message that the budget checked transactions will need to be budget checked again to reverse any activity. If the rows have been budget checked, they will be updated to be budget checked again. The distribution status will be set to *Ignore* for all lines so they will not be selected by the Journal Generator program.

Chapter 26

Reporting and Reconciling Open Liabilities

This chapter provides an overview of open liability and reconciliation reporting and discusses how to:

- Create open liability reports.
- Create reconciliation reports.

Understanding Open Liability and Reconciliation Reporting

PeopleSoft Payables provides reports to view open liabilities and compare them to the open liabilities in PeopleSoft General Ledger. These reports enable you to find unbalanced liabilities easily and correct them as necessary. PeopleSoft Payables also provides a report that enables you to age vendors' liabilities.

Creating an open liability or reconciliation report involves specifying both report parameters and run control parameters on a single page. Initiating an Application Engine process from the page accesses the PeopleSoft Process Scheduler, from which you can select options to populate the appropriate report tables and generate reports to your specifications.

The following open liability and reconciliation reports are delivered with PeopleSoft Payables:

<i>Report Name</i>	<i>Application Engine Process</i>	<i>Report Description</i>
Payables Open Liability (APY1406)	AP_APY1406	This report lists posted (recorded) open liabilities in the PeopleSoft Payables tables as of a specific date. You can also specify whether to include unrecorded (unposted) liabilities, prepayments, unmatured drafts paid, and available discounts.

Report Name	Application Engine Process	Report Description
Vendor Liability Aging (APY1408)	AP_APY1408	This report lists all posted (recorded) open liabilities in PeopleSoft Payables as of a specific date and grouped by the aging cycle bucket. You can also specify whether to include unrecorded (unposted) liabilities, prepayments, unmatured drafts paid, and available discounts.
Summary AP/GL Open Liability (APY1400) Detail AP/GL Open Liability (APY1405)	AP_APY1405	These reports list accounting activity that has been processed by the Journal Generator Application Engine process (FS_JGEN).
AP/GL Account Reconciliation Report (APY1410)	AP_APGLREC	This report lists account totals by journal ID and account.
AP/GL Journal Reconciliation Report (APY1420)	AP_APGLREC	This report lists account totals by journal line and journal ID.

Note. Data that appears in open liability and reconciliation reports is accurate as of the time you run the Application Engine process that loads the report tables, based on the requested as-of date and as-of date type parameters that you select. However, if the report tables already have the data that you want, you can run multiple reports by changing the report request parameters and running the reports only.

Creating Open Liability Reports

This section discusses how to:

- Generate open liability reports.
- Generate vendor liability aging reports.

Pages Used to Create Open Liability Reports

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Payables Open Liability	RUN_APY1406	Accounts Payable, Reports, Voucher Reconciliation, Payables Open Liability	Specify run control and reporting parameters to generate Payables Open Liability (APY1406) reports.
Vendor Liability Aging	RUN_APY1406	Accounts Payable, Reports, Voucher Reconciliation, Vendor Liability Aging	Specify run control and reporting parameters to generate Vendor Liability Aging (APY1408) reports. The reporting parameters are similar to the Payables Open Liability (APY1406) reports, except that you specify an aging cycle ID. Note. The Vendor Liability Aging and Payables Open Liability pages access the same run control page (RUN_APY1406). However, the available Application Engine processes depend on the selected report functionality.

Generating Open Liability Reports

Access the Payables Open Liability page (Accounts Payable, Reports, Voucher Reconciliation, Payables Open Liability).

Payables Open Liability report

Use this page to generate the Payables Open Liability report.

As Of Date

Enter the end date for the period that you are processing.

As Of Date Type

Select either the accounting date or the invoice date. The report output is based on either the accounting date or the invoice date of the voucher.

The report includes data based on the combination of the values in the As Of Date field and the As Of Date Type field. For example, suppose that you enter 07/31/2006 as the as-of date and select the accounting date as the as-of date type. All vouchers with open liabilities with the accounting date of July 31, 2006 or earlier are included in the report.

Aging Basis Date

Select to age by either *Net Due Date* or *Scheduled Pay date*.

808

Copyright © 1992, 2012, Oracle and/or its affiliates. All Rights Reserved.

Include Unrecorded Liabilities	Select this option to include vouchers that have not been paid and voucher posted. Selecting this option also includes those vouchers that have not been processed through the Journal Generator, which means they are not recorded in the PeopleSoft General Ledger.
Include Prepayment	Select this option to include prepaid vouchers that have available amounts to be applied. If you select to include prepayments, the report displays the Prepayments column that includes both prepaid vouchers that have been paid but are not fully applied and any prepaid vouchers that have not been paid. Prepaid vouchers that have been paid but are not fully applied appear as a negative (–) amount. Prepaid vouchers that have not been paid appear as a positive amounts. If you do not select this check box, the Prepayments column does not appear in the report, and the report Totals field displays the total amount of the prepayments that are not fully applied
Include Unmatured Drafts Paid	Select this option to include vouchers that are paid by a draft method when the payment date is not due yet. Also, this option includes drafts that have been written off after the as-of date.
Include Available Discount	Select this option to include vouchers that reduce the liability. The system includes the discount amount if the report as of date is less than or equal to the discount date on the voucher, or if you select the Always take discount option for the remit vendor on the Additional Payables Options collapsible region on the Vendor Information - Payables Options page. If you do not select to include available discounts, the Discount Available column does not appear in the reports.
Business Unit Option	Select <i>All</i> to create a report for all business units for the time period you specified. Select <i>Value</i> to specify any number of business unit rows on which to report.
Vendor Select Option	Select <i>Select All</i> to create a report for all vendors for the time period that you specify. Select <i>Specify</i> to specify any number of vendor ID rows on which to report.
Currency Options	Select a currency option to use in the report. Options are: • <i>Base Currency</i>: The report uses the base currency of the business unit for each voucher. • <i>Selected Foreign Currency</i>: The report uses the currency defined in the Currency, Rate Type, and Currency Effective Date fields. • <i>Transaction Currency</i>: The report uses the currency in which the procurement took place.

Report Format Options

You have the flexibility to group reporting results in a number of ways. In particular, the Report Group By field, in combination with the Currency Options field, determine how the report displays currency groups, subtotals, and grand totals. The possible combinations are described in the following table:

Report Group By Option	Currency Option	Currency Grouping	Subtotals	Grand Totals
Business Unit/Vendor	Base Currency	No grouping is required because a business unit has one base currency.	Calculated for each vendor.	Calculated for each business unit.
Business Unit/Vendor	Transaction Currency	Vouchers are grouped by currency because they can have different transaction currencies.	Calculated for each transaction currency.	No grand totals are calculated because each transaction can be in a different currency.
Business Unit/Vendor	Selected Foreign Currency	No grouping is required because all vouchers are converted into the selected foreign currency.	Calculated for each vendor.	Calculated for each business unit.
Vendor/Business Unit	Base Currency	No grouping is required because a business unit has one base currency.	Calculated for each business unit.	No grand totals are calculated because each business unit may use a different currency.
Vendor/Business Unit	Transaction Currency	Vouchers are grouped by currency because they can have different transaction currencies.	Calculated for each transaction currency.	No grand totals are calculated because there are multiple transaction currencies.
Vendor/Business Unit	Selected Foreign Currency	No grouping is required because all vouchers are converted into the selected foreign currency.	Calculated for each business unit.	Calculated for each vendor.

Process Scheduler Options

When you click the Run button, the Process Scheduler Request page lists the processes that generate a liability report. You can load data and generate a report or merely generate the report. This table lists the options, depending on the report that you select:

<i>Process List Option</i>	<i>Description</i>
Open Liability Data & Reports	Loads data into the report tables based upon run request parameters and generates the Payables Open Liability report.
Open Liability Report Only	Generates the Payables Open Liability report using data that is already loaded into report tables. Use this option when data is already loaded and when only the report format options have been changed since the last data load. Note. You must run the Open Liability Data Application Engine process (AP_APY1406) if the as-of date, as-of date type, business unit options, or vendor options parameters change.

Generating Vendor Liability Aging Reports

Access the Vendor Liability Aging page (Accounts Payable, Reports, Voucher Reconciliation, Vendor Liability Aging).

Note. This page is similar to the Payables Open Liability page, with the exception of the Aging Cycle ID field and the report table and report generated.

Aging Cycle ID Select an aging cycle to specify the aging categories that group overdue columns in the report.

Process Scheduler Options

When you click the Run button, the Process Scheduler Request page lists the processes that generate a liability report. You can load data and generate a report or just generate the report. This table describes options, depending on the report that you select:

<i>Process List Option</i>	<i>Description</i>
Vendor Liab Aging Data & Report	Loads data into the report tables based upon run request parameters and generates the Vendor Liability Aging report.

<i>Process List Option</i>	<i>Description</i>
Vendor Liab Aging Report Only	Generates the Vendor Liability Aging report using data that is already loaded into report tables. Use this option when data is already loaded and when only the report format options have been changed since the last data load. Note. You must run the Vendor Liab Aging Data Application Engine process (AP_APY1408) if the as-of date, as-of date type, business unit options, or vendor options parameters change.

Creating Reconciliation Reports

This section discusses how to:

- Generate payables open liability reconciliation reports.
- Generate Payables and General Ledger account reconciliation reports.
- Generate Payables and General Ledger journal reconciliation reports.

Pages Used to Create Reconciliation Reports

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Payables Open Liability Reconciliation	RUN_APY1405	Accounts Payable, Reports, Voucher Reconciliation, Open Liability Reconciliation, Payables Open Liability Reconciliation	Specify run control and reporting parameters to generate Payable Open Liability Reconciliation (APY1400 and APY1405) reports. Create a detail report, a summary report, or both during processing.
AP/GL Account Reconciliation (accounts payable and general ledger account reconciliation)	APGL_REC_N_REQ2	Accounts Payable, Reports, Voucher Reconciliation, AP/GL Account Recon Request, AP/GL Account Reconciliation	Specify run control and reporting parameters to generate AP/GL Account Reconciliation (APY1420) reports.

Page Name	Definition Name	Navigation	Usage
AP/GL Journal Reconciliation (accounts payable and general ledger journal reconciliation)	APGL_REC_N_REQ1	Accounts Payable, Reports, Voucher Reconciliation, AP/GL Journal Recon Request, AP/GL Journal Reconciliation	Specify run control and reporting parameters to generate AP/GL Journal Reconciliation (APY1410) reports.

Generating Payables Open Liability Reconciliation Reports

Access the Payables Open Liability Reconciliation page (Accounts Payable, Reports, Voucher Reconciliation, Open Liability Reconciliation, Payables Open Liability Reconciliation).

Request ID	Enter an ID that comprises any combination of characters.
As Of Date	Enter a date for the period that you are processing. This field is compared to the journal date.
Business Unit Option	Select <i>All</i> to create a report for all business units for the time period you specified. Select <i>Value</i> to specify any number of general ledger business unit rows on which to report.

Process Scheduler Options

When you click the Run button, the Process Scheduler Request page lists the processes that generate an open liability reconciliation report. The following options enable you to load data and generate a report or merely generate a report:

Process List Option	Description
APGL Open Liab Recon Data/Rept	Loads data into the report tables based upon run request parameters and generates both summary and detail versions of the Payables Open Liability Reconciliation report.
Summary AP/GL Open Liability	Generates a summary version of the Payables Open Liability Reconciliation report using data that is already loaded into report tables. Use this option only when data is already loaded.
Detail AP/GL Open Liability	Generates a detailed version of the Payables Open Liability Reconciliation report using data that is already loaded into report tables. Use this option only when data is already loaded.

Generating Payables and General Ledger Account Reconciliation Reports

Access the AP/GL Account Reconciliation page (Accounts Payable, Reports, Voucher Reconciliation, AP/GL Account Recon Request, AP/GL Account Reconciliation).

Business Unit	Select a business unit for the time period that you specify.
Ledger and Account	Select the general ledger and account for the journal entries that you want to include in the report.
Accounting Period	Enter the accounting period for which you want to create a report.
Fiscal Year	Enter the four-digit fiscal year for the accounting period for which you want to create a report.

Process Scheduler Options

When you click the Run button, the Process Scheduler Request page lists the processes that generate a reconciliation report. The following options enable you to load data and generate a report or merely generate a report:

<i>Process List Option</i>	<i>Description</i>
AP GL Acct Recon Data & Rept	Loads data into the report tables based upon run request parameters and generates the AP/GL Account Reconciliation report.
AP/GL Account Reconciliation	Generates the AP/GL Account Reconciliation report using data that is already loaded into report tables. Use this option only when data is already loaded.

Generating Payables and General Ledger Journal Reconciliation Reports

Access the AP/GL Journal Reconciliation page (Accounts Payable, Reports, Voucher Reconciliation, AP/GL Journal Recon Request, AP/GL Journal Reconciliation).

Report Option	Specify how you want to organize the report data. Options are: <i>Accounting Period:</i> Include detail in the report by accounting period. If you select this option, the Accounting Period and the Fiscal Year fields become active. <i>Journal Date:</i> Include detail in the report by journal date. If you select this option, the Journal Date field becomes active. <i>Journal ID:</i> Include detail in the report by journal ID. If you select this option, the GL Journal ID field becomes active.

Journal ID	Enter the general ledger journal ID for which you want to create a report. This field is active only if you select the <i>Journal ID</i> report option.
Journal Date	Enter the journal date for which you want to create a report. This field is active only if you select the <i>Journal Date</i> report option.
Accounting Period	Enter the accounting period for which you want to create a report. This field is active only if you select the <i>Accounting Period</i> report option.
Fiscal Year	Enter the four-digit fiscal year for the accounting period for which you want to create a report. This field is active only if you select the <i>Accounting Period</i> report option.

Process Scheduler Options

When you click the Run button, the Process Scheduler Request page lists the processes that generate a reconciliation report. The following options enable you to load data and generate a report or merely generate a report:

<i>Process List Option</i>	<i>Description</i>
AP GL Journal Recon Data & Rpt	Loads data into the report tables based upon run request parameters and generates the AP/GL Journal Reconciliation report.
AP/GL Journal Reconciliation	Generates the AP/GL Journal Reconciliation report using data that is already loaded into report tables. Use this option only when data is already loaded.

Chapter 27

Reviewing Voucher, Payment, and Vendor Information

This section provides an overview of voucher, payment, and vendor information, lists common elements, and discusses how to:

- Review voucher information.
- Review payment information.
- Locate related procurement documents.
- Review vendor information.

Understanding Voucher, Payment, and Vendor Inquiries

PeopleSoft Payables provides numerous inquiry pages and reports that enable you to access your voucher, payment, and vendor information how and when you need it. The inquiry pages in particular can be very useful when your customers call and want you to track down information for them.

Using Voucher Information to Access Payment Detail

What if a vendor calls looking for an outstanding invoice? The vendor won't have any of the information that has become part of the voucher (such as voucher ID), but only raw data as it appears on their invoice. How do you find the information they are requesting? In this instance, you would:

1. Use the Voucher Inquiry page to search for vouchers by vendor and vendor invoice number.
2. Drill down to the Scheduled Payment Inquiry page to view the scheduled payment details for the vouchers (such as payment method, scheduled pay date, and approval status).
3. Drill down to the Voucher Payment Detail page to access detail on the payment itself (such as bank, payment date, payment amount, currency, and payment status).
4. Drill down to the Voucher Detail Lines Display page to view invoice and distribution line level detail for the vouchers (such as General Ledger business unit, ChartFields, and line amounts).

You can continue to drill down from the inquiry pages to more detailed information.

Using Payment Information to Access Voucher Detail

What if a vendor calls and asks you which invoices were included on a check they have received? The advice may have become separated from the check itself, making it impossible for them to enter reconciling entries in Account Receivable. In this instance you would:

1. Use the Payment Inquiry page to search for payments by vendor name and check amount, or payment method.
2. Drill down to the Vouchers For a Payment page to view payment details (such as vendor address, reconciliation date, voucher ID, paid amount, and currency).

You can continue to drill down from the inquiry pages to more detailed information.

In addition to being interconnected, enabling you to access payment information for a voucher, or voucher information for a payment, these interconnected pages also enable you to:

- Enter ranges to limit the data returned.
- Personalize sorts by field or in ascending or descending order.
- Navigate back and forth between pages quickly with hyperlinks.

Common Elements Used in This Chapter

Amount Rule	Enter an amount rule and a value in the Amount field. To search on a particular voucher amount, specify how you are comparing your search to that amount. Options include: <i>Any,Equal to,Greater than,Greater than or equal to,Less than, Less than or equal to.</i>
Financial Sanctions Status	Select a vendor's financial sanctions status. This field is applicable when you have enabled financial sanction editing either at the installation level on the Installations Options - Payables page or at the bank level on the Bank Information page. Options include: <i>Blocked:</i> The vendor has been positively identified as being a match to a financial sanctions list (for example, the Specially Designated Nationals (SDN) list). <i>Cleared:</i> The vendor was reviewed and determined that it is not a match to a financial sanctions list. <i>Review:</i> The vendor is a potential match to a financial sanctions list and needs further review. <i>Valid:</i> The vendor is not a potential match to a financial sanctions list. The system sets this status initially for all vendors before any validation occurs.
Max Rows (maximum rows)	Enter the maximum rows to be retrieved in the main search for each component. Maximum rows that can be retrieved are 300.

Reviewing Voucher Information

You can review vouchers using several inquiry pages and reports.

This section describes how to:

- Review voucher details.
- Review voucher payment details.
- Review scheduled payment information.

Pages Used to Review Voucher Information

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher Search	VCHR_SRCH_WRK	Accounts Payable, Vouchers, Add/Update, Voucher Search	Perform a quick search when little data is known.
Voucher Inquiry	AP_VOUCHER_INQUIRY	Accounts Payable, Review Accounts Payable Info, Vouchers, Voucher, Voucher Inquiry	Search for and review status of a voucher and any payment information.
Voucher Details	AP_VCHR_LN_DET_DSP	Click a Detail Lines button on the More Details tab of the Voucher Inquiry Results grid on the Voucher Inquiry page.	View voucher line and distribution line detail. You can also view attachments and comments related to this voucher.
Voucher Payment Detail	VCHR_PYMNT_INQ	Click the Payment Information button on the Voucher Details tab of the Voucher Inquiry Results grid on the Voucher Inquiry page.	View information about the payments that make up a voucher.
Scheduled Payment Inquiry	AP_SCHD_PYMNT_INQ	• Click the Scheduled Payments button on the More Details tab of the Voucher Inquiry Results grid on the Voucher Inquiry page. • Accounts Payable, Review Accounts Payable Info, Vendor, Scheduled Payment, Scheduled Payment Inquiry	View the scheduled payments details.

Page Name	Definition Name	Navigation	Usage
Rejected Vouchers	VNDR_PAYINQ_RJCT	Accounts Payable, Review Accounts Payable Info, Vendor, Rejected Vouchers	View vouchers that have a status of <i>Rejected</i> .

Voucher Inquiry page (3 of 3)

Note. Multiple views of this page are available by clicking the tabs in the scroll area. We document fields that are common to all views first.

Search Criteria

Enter search criteria to create your request.

Note. The screenshot displays all the fields that can display. Actual search criteria fields that appear are dependent on fields specified on the Named Search Criteria List page.

See [Chapter 9, "Setting Up Draft, Payment, and Voucher Processing," Setting Up Inquiry Search Criteria, page 214.](#)

From Business Unit and To Business Unit	Enter a business unit or a range of business units to be used in your search. A business unit is required. You must specify at least one other search criteria. If only the business unit is known, use the Voucher Search page. If you search on a range of business units, you cannot search on either a Voucher ID or an Invoice number.
From Short Name and To Short Name	Enter a vendor short name or range of vendor short names to be used in your search. Once a name is entered in the From Vendor Short Name field, the To Vendor Short Name field is populated and available for entry. Once you enter a name in the From Vendor Short Name field, both vendor ID fields are populated but are unavailable for entry. If you search for a range of vendor short names you cannot search on a vendor location in the same search.
From Vendor ID and To Vendor ID	Enter a vendor ID or range of vendor IDs to be used in your search. Once a number is entered in the From Vendor ID field, the To Vendor ID is populated and available for entry. To search on a range of vendor ID numbers, use both fields. To search on one vendor ID number, use the From Vendor ID field and leave the To Vendor ID field blank. Once you enter a vendor ID in the From Vendor ID field, the vendor name fields are not populated but are unavailable for entry. If you search for a range of vendor IDs, you cannot search on a vendor location in the same search.
Entry Status	Select the overall voucher status.
Lease Number	Enter the lease number for a lease payment voucher. This field displays only when you have also installed the Real Estate Management module.
Voucher Style	Select a voucher style. Options include specific voucher styles, all vouchers, and all vouchers except prepaid and single pay vouchers.
Post Status	Select a voucher post status. Options include: <i>NotApplied</i> , <i>Posted</i> , or <i>Unposted</i> .
Approval Status	Select an approval status. Options include: <i>Approved</i> , <i>Denied</i> , or <i>Unapproved</i> .
Voucher Balance	Select a voucher balance option. Options include: <i>Balance Remains</i> or <i>No Balance Remains</i> .

Voucher Source	Select the original data source for the voucher or leave blank to select all sources.
Match Status	Select a specific match status of the voucher.
Max Rows	Enter the maximum amount of rows for the system to display. The system will initially count the number of rows returned by the search criteria, and if this number is larger than the amount entered in this field, a message will display asking if the system should continue searching additional data rows. If you click OK, the system will sort the rows based on the sort criteria selected and display only the maximum. If you select Cancel, you can return to the search page to enter additional search criteria to further reduce the number of results.

Sort Criteria

Sort By	Enter the field you want to sort by and select a sort order of <i>Ascending</i> or <i>Descending</i> . Double click on any column header and you can also resort the search results.

Display Currency Criteria

Currency	Enter the type of currency in which you want your data to display. This field is populated from the operator preferences but you can edit it. The system converts all of the payments shown to this currency.
Rate Type	Enter to convert the amounts that use the exchange rate for the type of currency you selected.
Show Display Currency	Select if you want to convert all amounts to one consistent currency type for display purposes.
Convert	Click to activate the search on the payments that match your selection criteria and to convert the display, if you chose to.

Late Interest Analysis

Payment Date	Enter a "what-if" payment date.
Calculate	Click to calculate late interest charges for overdue vouchers.

Voucher Inquiry Results

Once you generate your search, the results appear at the bottom of the page.

Voucher Details Tab

Accounting Entries	Click the button to access the Voucher Accounting Entries page in a separate window, where you can view detailed information about a voucher's associated accounting entries while still reviewing the voucher inquiry search results.
Match Workbench	Click the button to access one of the Match Workbench inquiry pages in a separate window, where you can view detailed information about matched documents for the selected voucher while still reviewing the voucher inquiry search results. The inquiry page you access is dependent on the match status of the voucher.
Payment Information	Click the button to access the Voucher Payment Detail page, where you can view more detailed information about a voucher payment.
Scheduled Payments	Click the button to access the Scheduled Payment Inquiry page, where you can retrieve scheduled payment information for a vendor or a group of vendors.

Amounts Tab

Lists the various amounts and charges of the voucher.

Gross Invoice Amount	Displays the total invoice amount, including any nonmerchandise amounts.
Voucher Unpaid Balance	Displays the unpaid balance amount remaining on the voucher.
Unapplied Prepayments	Displays the total unapplied prepayments for the voucher.
Total Non-Merch (total nonmerchandise)	Displays total amount of gross invoice amount allocated to sales tax, use tax, freight tax, and miscellaneous tax.
Entered VAT	Displays the VAT amount entered on the voucher header.
Gross Amount Paid	Displays the actual amount paid on this voucher.
Net Amount Paid	Displays the gross amount paid on this voucher, less any discount.

More Details Tab

Lists the various statuses of the voucher and the dates associated with the voucher.

Detail Lines	Click the button to access the Voucher Details page, where you can view line and distribution line detail for the voucher.

Scheduled Payment Inquiry page (2 of 2)

Search Criteria

Enter the search criteria for your inquiry. There are some dependencies among search fields:

- You cannot search by both vendor ID and vendor short name.
- You must enter a vendor setID to search by vendor.

- You must enter a remit vendor setID to search by remit vendor.
- You must enter a bank setID to search by bank and bank account.

All other fields can be used to search in any combination. Many fields enable you to search by single value or range of values.

Most fields in this region are similar to those discussed for the Voucher Inquiry page.

See [Chapter 27, "Reviewing Voucher, Payment, and Vendor Information," Reviewing Voucher Details, page 820.](#)

Note. The screenshot displays all the fields that can display. Actual search criteria fields that appear are dependent on fields specified on the Named Search Criteria List page.

See [Chapter 9, "Setting Up Draft, Payment, and Voucher Processing," Setting Up Inquiry Search Criteria, page 214.](#)

Display Currency Criteria

You can convert the currency that appears in the results region to one common currency. You can enter your display currency criteria either before or after you click the Search button. Enter the currency code of the type of currency that you want your data to be displayed in. This field is automatically populated from the operator preferences, but you can edit it. The system converts all of the payments shown to this currency.

Select Rate Type to convert the amounts by using the exchange rate for the type of currency that you selected. Select the Show Display Currency check box to view additional information about the converted amounts. Today's date appears by default in the As of Date field. If you have already generated your search, click the Convert button to convert the display of your results.

Note. The Convert button *displays* the converted currencies; it does not convert them.

Sort Criteria

To sort your results, select the field or fields that you want to sort by, and select whether you want your inquiry sorted in descending order. Click the Sort button to generate the sort.

Schedule Payment Listing

Results appear in the Scheduled Payment Listing grid.

Style	Displays the voucher style for this scheduled payment.
Voucher ID	Click the Voucher ID link to access the Voucher Inquiry page, where you can view more detailed information about the payments that make up this voucher.
Pymnt Nbr (payment number)	Displays the payment number for this scheduled payment. This is a system-generated number, not the payment reference number (that is, not a check number or its equivalent).

Scheduled to Pay	Displays the payment date scheduled for this payment.
Hold Payment	Displays as checked if there is a hold on the payment for this voucher.
(USF) IPAC Payment	Displays as checked if this payment is a payment to be processed through the U.S. Department of Treasury's IPAC system. This appears only if you are a U.S. federal agency. <u>See Chapter 37, "(USF) Processing PeopleSoft Payables for U.S. Federal Agencies," page 1033.</u>
Trans Currency (transaction currency)	Displays the type of currency that the transaction itself is in.
Display Gross Amount	Displays the gross amount, which appears in the converted currency. This field appears only if you select the Show Display Currency check box.
Display Currency	Displays the common currency in which the gross amount is calculated. This field appears only if you select the Show Display Currency check box.
Approval Status	Displays the approval status of the scheduled payment. Values are: <i>Approved</i> , <i>Pending</i> , and <i>Denied</i> .
Draft Sight Code	Displays the draft sight code that is associated with this scheduled payment.
Draft Scheduled Maturity Date	Displays the date on which the draft that is associated with this scheduled payment matures, if applicable.
Letter of Credit ID	Displays the letter of credit ID that is associated with this scheduled payment, if applicable.
Netting Reference ID	Displays the netting reference ID number that is associated with this scheduled payment, if applicable.
Total Display Gross Amount	Displays the gross amount, which appears in the converted currency. This field appears only if you select the Show Display Currency check box.

Reviewing Payment Information

PeopleSoft Payables includes several inquiry pages and reports that enable you to examine the detail associated with your payments. The inquiry pages are just a starting point. You might find that you want to use PeopleTools to create additional inquiry pages that contain the data that you need organized in the manner that you desire.

This section describes how to:

- Review payment information.
- Review payment voucher details.
- Review replaced payments.
- Review scheduled payments on hold.
- Review overdue scheduled payments.

Pages Used to Review Payment Information

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Payment Inquiry	PYMNT_INQ_SRCH	Accounts Payable, Review Accounts Payable Info, Payments, Payment, Payment Inquiry	Search on payments using specific search criteria to create a list of detailed payment information or display a chart of payments by date.
Vouchers For a Payment	PYMNT_VCHR_DET_SEC	Click the Payment Reference ID link on the Payment Inquiry page.	View more detailed information about a payment voucher.
Replaced Payments	PYMNT_RPLCD	Accounts Payable, Review Accounts Payable Info, Payments, Replaced Payments	View those payments for which you have replaced the payment reference number. Payment reference numbers are replaced when you recreate checks in a pay cycle.
Scheduled Payments on Hold	VNDR_PAYINQ_HLD	Accounts Payable, Review Accounts Payable Info, Vendor, Scheduled Payments on Hold	View vouchers that are scheduled for payment, yet are on hold.
Overdue Scheduled Payments	VNDR_PAYINQ_OVRDUE	Accounts Payable, Review Accounts Payable Info, Vendor, Overdue Scheduled Payments	View vouchers that are overdue for a vendor.

Reviewing Payment Information

Access the Payment Inquiry page (Accounts Payable, Review Accounts Payable Info, Payments, Payment, Payment Inquiry).

Payment Inquiry page (2 of 3)

Payment Inquiry page (3 of 3)

Note. Multiple views of this page are available by clicking the tabs in the scroll area. We document fields that are common to all views first.

Search Criteria

From Payment Date and To Payment Date	Enter to search for a payment that was issued on a particular date or in a range of dates. When you select the Show Chart option, these are required fields.
Payment Status	Select a specific payment status. Options are as follows: <i>Alignment, Deleted, Escheated, Overflow, Paid, Pre-Note, Replaced, Same Ref (same reference), Stale, Stop, Undo, or Void.</i>
Settle by	Select a settlement method of <i>Gateway or Pay Cycle.</i>
Settlement Status	Select a settlement status. Options are: <i>Canceled, Error, Hold, Loaded, None, Paid, Received, or Send.</i>
Schedule ID	Enter a schedule ID number to review payments in a payment schedule. This field only displays if you enable federal payment schedules.
Single Payment Vouchers	Select to limit returned results to only single payment vouchers.

Show Chart

Select this option to display a summary of payments by amount and currency chart. The paid amount can only be displayed in one currency, which is the payment currency. Clicking a bar on the chart displays the list of payments that are represented on the chart.

This option requires you to specify a date range in the From Date and To Date fields.

The dates cannot span more than 31 days.

Chart Type

Select what kind of chart you want to display. The options are: *Bar Chart*, *Horizontal Bar*, *Horizontal Stacked Bar*, *Percentage Stacked Bar*, and *Stacked Bar*. After the chart is displayed, you can change this option and click the Search button to display the new chart type.

Max Rows

Enter the maximum number of rows that you want to appear in the grid. The maximum number of rows displayed is determined after the search criteria is applied and after the sort criteria is applied.

Sorting Criteria**1st sort**

Specify how your inquiry results will be sorted. The options are *Account*, *Amount*, *Currency*, *Date*, *Paycycle*, *Pymnt Ref* (payment reference), *Remit Vndr* (remit vendor), and *Vendor*.

Select whether the data is to be sorted in Descending order.

2nd sort

Select a field to sort by in the 2nd sort field for a more detailed sort within your first sort. Available choices are the same as for the first sort. Again, indicate whether the data is to be sorted in descending order.

Payment Details Tab**Payment Reference ID**

Click the payment reference ID number to access the Vouchers For a Payment page, where you can view the vouchers that make up this payment.

Reconciliation Status

Displays whether the payment has been reconciled.

Reconcile Date

Displays the reconciliation date if the payment has been reconciled.

Additional Info Tab

Lists the post status, cancel status, pay cycle, and bank information associated with the payment.

Vendor Details Tab

Lists the vendor name and address associated with the payment.

Financial Gateway Tab

Lists summary information for payments settled through the Financial Gateway.

Payment Details

Click to access the Review Payment Details page and review settlement detail information.

Vouchers For a Payment page

- Days Outstanding**

Displays the number of days difference between the payment date and the due date for unreconciled payments. For reconciled payments, this is the number of days difference between the payment date and the payment clear date.
- Value Date**

Displays when the funds actually clear the bank.
- Approved By**

Displays the person who approves the pay cycle. This is for Federal only and is set at the Pay Cycle Certification page.

Approval Date	Displays the date the pay cycle was approved. This field only displays when you enable the Federal Payments feature.
Treasury Chk # (Treasury check number)	Displays the check number that the U.S. Treasury issued to pay an obligation on behalf of an agency. This can also represent an electronic payment number issued by the U.S. Treasury via electronic funds transfer. This field only displays when you enable the Federal Payments feature.
Voucher ID	Click to access the Voucher Inquiry page, where you can view details for this voucher.

Locating Related Procurement Documents

With both PeopleSoft Payables and Purchasing installed, you can inquire and cross-reference related documents across the procure-to-pay business cycle, to tie all documents together for the same transaction flow. You have quick access to requisitions, purchase orders, receivers, and vouchers/payments associated with the requested voucher or payment ID. You can also see such things as post status, budget check status, match status, and gross amount.

This section describes how to:

- Locate documents from a voucher ID.
- Locate documents from a payment ID.
- Locate documents from a purchase order number.

Pages Used to Locate Related Procurement Documents

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher Document Status	PRCR_DOCSTAT_VCHR	Accounts Payable, Review Accounts Payable Info, Vouchers, Document Status, Voucher Document Status	Locate related documents starting from a voucher number.
Purchase Order Inquiry	PO_INQUIRY	Accounts Payable, Review Accounts Payable Info, Interfaces, Purchase Order	View purchase order and related documentation information.
Purchase Order Inquiry - Purchase Order	PO_LINE_INQ	Click the DOC ID (document ID) link for a Document Type of PO on the Voucher Document Status page.	View purchase order information associated with the voucher.

Reviewing Vendor Information

This section discusses how to:

- Review vendor aging.
- Review past due aging.
- Review scheduled due aging.
- Review current vendor balances.

Pages Used to Review Vendor Information

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Vendor Aging	AP_VNDR_AGING	Accounts Payable, Review Accounts Payable Info, Vendor, Aging, Vendor Aging	Review the aging of different payments for a vendor or group of vendors.
Past Due Aging	MTRC_AP_PAST_AGING	Accounts Payable, Review Accounts Payable Info, Vendor, Past Due Aging Metric, Past Due Aging	Display and review past due payments by voucher status in the form of a list or chart.
Scheduled Due Aging	MTRC_AP_SCHD_AGING	Accounts Payable, Review Accounts Payable Info, Vendor, Scheduled Due Aging Metric, Scheduled Due Aging	Display and review scheduled due payments by voucher status in the form of a list or chart.
Vendor Current Balances	AP_VNDR_BAL	Accounts Payable, Review Accounts Payable Info, Vendor, Current Balance, Vendor Current Balances	Review the current payables balance for a vendor or group of vendors.

Reviewing Vendor Aging

Access the Vendor Aging page (Accounts Payable, Review Accounts Payable Info, Vendor, Aging, Vendor Aging).

Vendor Aging page

Search Criteria

Enter the search criteria for your inquiry. You can use any combination of the search criteria fields. You can search by single vendor ID, single vendor name, or a range of these values. Today's date appears by default in the As of Date field.

Display Currency Criteria

You can convert the currency that appears in the results region to one common currency. You can enter your display currency criteria either before or after you click the Search button. Enter the currency code of the type of currency in which you want your data to appear. This field is automatically populated from the operator preferences, but you can edit it. The system converts all of the payments shown to this currency. Select a rate type to convert the amounts that use the exchange rate for the type of currency that you selected. Select the Show Display Currency check box to view additional information about the converted amounts. If you have already generated your search, click the Convert button to convert the display of your results.

Note. The Convert button *displays* the converted currencies; it does not convert them.

Balance as of XX/XX/XXXX

Your inquiry results are broken down into these status categories: Approved Voucher, Unapproved Voucher, Negative Voucher, Hold Payment, Prepaid Voucher, and Draft Issued.

Note. The Prepaid Voucher row displays unapplied amounts of *paid* prepayment vouchers.

If your search retrieves no data for a status category, the results region of the page displays *0.00* in each amount field.

For payments that fall into more than one category, such as an unapproved negative voucher, the following hierarchy applies:

1. Hold payments.
2. Negative vouchers.
3. Unapproved or approved vouchers.

In this hierarchy, *1* is the highest priority. For example, a negative voucher has a higher priority than an unapproved voucher, so a negative, unapproved voucher appears in the Negative Voucher column.

The columns in the following table refer to the scheduled date or maturity date of a voucher, payment, or draft

These fields display in the Past Due column.

Past Due: Over 60d	Totals in this column refer to items that are more than 60 days past their scheduled date or maturity date.
Past Due: 60 to 31d	Totals in this column refer to items that are 31 days or more (up to 60 days) past their scheduled date or maturity date.
Past Due: 30 to 1d	Totals in this column refer to items that are 1 to 30 days past their scheduled date or maturity date.

These fields display in the Schedule / Maturity Due column.

Schedule / Maturity Date: 0-30d	Totals in this column refer to items that are at their scheduled or maturity date or that have up to 30 days until their scheduled date or maturity date.
Schedule / Maturity Date: 31-60d	Totals in this column refer to items with 31 to 60 days before their scheduled date or maturity date.
Schedule / Maturity Date: Over 60d	Totals in this column refer to items with more than 60 days before their scheduled date or maturity date.

These fields display in the Total column.

Total	Total of all columns for each line.

Click the link in any cell containing your results to access the vendor Scheduled Payment Inquiry page, to view details for that value.

See Also

Chapter 27, "Reviewing Voucher, Payment, and Vendor Information," Reviewing Scheduled Payment Information, page 826

Reviewing Past Due Aging

Access the Past Due Aging page (Accounts Payable, Review Accounts Payable Info, Vendor, Past Due Aging Metric, Past Due Aging).

Past Due Aging page

This chart displays a summary of payments that are past due. Amounts that are to be paid are grouped by aging categories: 1 to 30 Days, 31 to 60 Days, and Over 60 Days. Click a bar on the graph to display the list of vouchers that are represented by that bar on the chart.

Transaction Currency	Select the currency code in which you want to display past due amounts on the chart. Amounts can only be displayed in the transaction currency. Only payments in the currency you select are shown in the chart.
Chart Type	Select the kind of chart you want to display. Options are: <i>Bar Chart</i> , <i>Horizontal Bar</i> , <i>Horizontal Stacked Bar</i> , <i>Percentage Stacked Bar</i> , and <i>Stacked Bar</i> . After the chart appears, you can change this option and click the Draw Chart button to display the new chart type.

Past due payments are categorized by the status of the vouchers from which they derive their amounts. The following categories have particular characteristics:

- Prepaid vouchers reflect the available amount remaining to be applied.
- Drafts issued reflect amounts in drafts that have been created, but the draft maturity date has passed and the draft's status is still *Created* or *Approved*.

Reviewing Scheduled Due Aging

Access the Scheduled Due Aging page (Accounts Payable, Review Accounts Payable Info, Vendor, Scheduled Due Aging Metric, Scheduled Due Aging).

Scheduled Due Aging page

This chart displays a summary of scheduled payments. Amounts that are to be paid are grouped by aging categories: 1 to 30 Days, 31 to 60 Days, and Over 60 Days. Click a bar on the graph to display the list of vouchers that are represented by that bar on the chart.

Transaction Currency

Select the currency code in which you want to display scheduled payment amounts on the chart. Amounts can only be displayed in the transaction currency. Only payments in the currency you select are shown in the chart.

Chart Type

Select what kind of chart you want to display. Options are: *Bar Chart*, *Horizontal Bar*, *Horizontal Stacked Bar*, *Percentage Stacked Bar*, and *Stacked Bar*. After the chart appears, you can change this option and click the Draw Chart button to display the new chart type.

Reviewing Current Vendor Balances

Access the Vendor Current Balances page (Accounts Payable, Review Accounts Payable Info, Vendor, Current Balance, Vendor Current Balances).

Vendor Current Balances page

Search Criteria

Enter the search criteria for your inquiry. You cannot search by both vendor ID and vendor short name. If you do not search by business unit, you must search by vendor ID or vendor short name. You can search by single vendor ID, single vendor name, or a range of these values. Today's date appears by default in the As of Date field.

Sort Criteria

To sort your results, select the field that you want to sort by, and select whether you want your inquiry sorted in ascending or descending order. Click the Sort button to generate the sort.

Display Currency Criteria

You can convert the currency that appears in the results region to one common currency. You can enter your display currency criteria either before or after you click the Search button. Enter the currency code of the type of currency in which you want your data to be displayed. This field is automatically populated from the operator preferences, but you can edit it. The system converts all of the payments shown to this currency. Select a rate type to convert the amounts by using the exchange rate for the type of currency that you selected. Select the Show Display Currency check box to view additional information about the converted amounts. If you have already generated your search, click the Convert button to convert the display of your results.

Note. The Convert button *displays* the converted currencies; it does not convert them.

Vendor Current Balances

Once you complete your inquiry, your results appear in this grid.

Short Vendor Name	Click to open the Scheduled Payment Inquiry page, for a breakdown of details for this vendor that is independent of the selected business unit and transaction currency.
Gross Amount	Click to open the Scheduled Payment Inquiry page, for a breakdown of details for this vendor by business unit and transaction currency.
Unapplied Prepayments	Displays the available balance of any paid, unapplied prepayments. Note. Prepaid vouchers must be <i>paid</i> to appear here. See Chapter 30, "Processing Prepayments," page 885.
Payable Balance	Displays the total balance of payments for each vendor.
Voucher Inquiry	Click the Voucher Inquiry button to access the Voucher Inquiry page, where you can view details about the vouchers payable to this vendor.

If the Show Display Currency check box is selected, the following additional columns appear:

Display Currency	Displays the type of currency that you requested that the balance amounts be shown in.
Display Gross Amount	Displays the gross amount in the converted currency. The total of this column also appears at the bottom of the page.
Display Unapplied Prepayments	Displays the amount of unapplied prepayments in the converted currency.
Display Payable Balance	Displays the total payable balance for each vendor in the converted currency.

Budget-Checking PeopleSoft Payables Transactions Using Commitment Control

This chapter provides an overview of the Commitment Control feature in PeopleSoft Payables, lists prerequisites, and discusses how to:

- Budget-check during online voucher entry.
- Budget-check in batch mode.
- Perform partial and final liquidations.
- Handle budget-checking exceptions.
- Post vouchers after budget checking.
- Modify, delete, and close vouchers after budget checking.
- Make payments after budget checking.

Understanding the Commitment Control Feature in PeopleSoft Payables

The Commitment Control feature is an optional feature of Oracle's PeopleSoft Financials, Enterprise Service Automation, and Supply Chain Management product lines that enables you to control commitments and expenditures automatically by checking them against predefined, authorized budgets. It is a subsystem of PeopleSoft General Ledger that you can activate for specific products and business units.

With the Commitment Control feature, the procure-to-pay cycle is populated with pre-encumbrances, encumbrances, and expenditures, all of which are tracked against a designated budget. Here is a high-level overview of the procure-to-pay cycle when using the Commitment Control feature:

1. When you generate a requisition, a pre-encumbrance is created in the budget records by the budget-checking process.
2. When a requisition becomes a purchase order, the Commitment Control feature relieves the pre-encumbrance and creates an encumbrance.
3. When the purchased goods or services are delivered and the purchase order becomes a voucher, the Commitment Control feature relieves the encumbrance and creates an expenditure.

The Commitment Control feature deducts each type of financial obligation from the available budget amount and tracks them by obligation type so that you can see how much money you have committed in pre-encumbrances, encumbrances, and expenditures.

The Commitment Control feature enables you to receive advance warning about all activities that might send controlled budgets over their approved amounts, and it enables you to stop any transactions that might go over budget. When transactions exceed budget amounts, the Commitment Control feature issues exceptions, which trigger workflow so that responsible parties can take corrective action. You can specify the degree of control and corrective action that you want to allow individual users to exercise over exceptions.

In PeopleSoft Payables, budget checking occurs at voucher creation, deletion, closing, and posting. You also perform budget checking after the payment posting process to check exchange rate realized gains or losses and earned or lost discounts. You can run budget checking for a single voucher during voucher entry or for many vouchers using a batch process. In any case, when you enable the Commitment Control feature for PeopleSoft Payables, you cannot pass a voucher to the general ledger until it has been budget-checked and posted unless you use the Period End Accrual Process. And you cannot post a voucher if it is over budget (although you can give certain users the security clearance to override budget-checking for over-budget vouchers).

PeopleSoft Payables Transactions Subject to Budget Checking

PeopleSoft Payables uses these Commitment Control source transaction types:

Vouchers (AP_VOUCHER)	The budget-checking process checks the distribution line's merchandise amount plus any prorated nonmerchandise amounts. The currency value is the general ledger business unit's base currency.
Non-prorated (AP_VCHR_NP)	The budget-checking process checks the nonprorated, nonmerchandise amounts, or sales and use tax, for the distribution lines. A sibling table of the distribution line joins the amounts with the accounts from the charge header table. The currency value is the general ledger business unit's base currency.
Discount Earned (AP_ACCTDSE)	The budget-checking process checks the discounts earned against the accounts that are posted to the general ledger for vouchers associated with open purchase orders.
Note. You must budget-check this transaction type using the batch Budget Processor Application Engine process (FS_BP). Note that, because making payments may create voucher accounting lines, you should budget-check any such accounting lines after making payments.	

Discount Earned - PO Closed (AP_ACTDSEC)

The budget-checking process checks the discounts earned against the accounts that are posted to the general ledger for vouchers associated with closed purchase orders.

Note. You must budget-check this transaction type using the batch Budget Processor process. Note that, because making payments may create voucher accounting lines, you should budget-check any such accounting lines after making payments.

Voucher Accounting (AP_ACCT_LN)

The budget-checking process checks entries from the accounting line table for realized gains or losses, late charges, discounts lost, and closed vouchers. The amounts are checked against the original distribution line. The realized gains or losses, late charges, and discounts lost are checked against the accounts that are posted to the general ledger.

Note. You must budget-check this transaction type using the batch Budget Processor process. Note that, because making payments may create voucher accounting lines, you should budget-check any such accounting lines after making payments.

See [Chapter 28, "Budget-Checking PeopleSoft Payables Transactions Using Commitment Control," Closing Vouchers After Budget Checking, page 874.](#)

See [Chapter 28, "Budget-Checking PeopleSoft Payables Transactions Using Commitment Control," Making Payments After Budget Checking, page 874](#)

.

Voucher Accrual Encumbrance (AP_ACENC)

The budget-checking process checks the encumbrance entries associated with purchase orders. These entries are created by the Period End Accruals process. You must budget-check this transaction type using the batch Budget Processor process. You should budget-check accounting lines after running the Period End Accruals process.

Voucher Accrual Expense (AP_ACEXP)

The budget-checking process checks expense entries from the accounting line table created by the Period End Accruals process. You must budget-check this transaction type using the batch Budget Processor process. You should budget-check accounting lines after running the Period End Accruals process.

See Also

PeopleSoft Commitment Control 9.1 PeopleBook, "Setting Up Commitment Control Source Transaction Types"

Budget-Checking Vouchers

The Budget Processor process checks vouchers and voucher accounting lines against all control budgets that they are subject to, updates the Commitment Control ledger (LEDGER_KK), and updates the budget-checking status of the transactions.

You can budget-check individual vouchers when you create them online, or you can budget-check multiple vouchers and voucher accounting lines in batch mode. The online version and the batch version of the Budget Processor process perform exactly the same tasks. Batch mode is recommended for efficiency, and it is required if you budget-check voucher accounting lines.

Chapter 28, "Budget-Checking PeopleSoft Payables Transactions Using Commitment Control," Budget-Checking During Online Voucher Entry, page 861

Chapter 28, "Budget-Checking PeopleSoft Payables Transactions Using Commitment Control," Budget-Checking in Batch Mode, page 863

Document Tolerances

Document tolerances are percentages or amounts by which related procurement documents (such as purchase orders and vouchers) are allowed to differ. The Document Tolerance Application Engine process (FS_DOC_TOL) enables you to set document tolerances between pre-encumbrances and encumbrances or encumbrances and expenses. If these tolerances aren't met, the system creates a document tolerance exception.

If the Commitment Control feature and document tolerance checking are enabled for the business unit, you must run both the Document Tolerance process and the Budget Processor process. You can initiate these processes by selecting the appropriate actions on the Invoice Information page and clicking the Run button.

If you run the Budget Processor process as a batch process using the Budget Check page, you must run the Document Tolerance process independently.

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Setting Up On-Demand Processing"

Exception Handling

Transactions that fail budget checking are flagged by the system as exceptions. Exceptions fall into two categories: errors and warnings.

Errors are exceptions that have failed budget checking because they do not conform to the rules established for the control budget. Errors are not allowed to continue through the system. This type of control is strict. Errors stop at the budget-check stage and do not proceed until they are corrected. Most errors occur when a transaction has at least one line that exceeds at least one budget and is over tolerance. Depending on the configuration of the control budgets, the exact reason for a budget to have insufficient funds varies from budget to budget. The budget may be on hold, closed, or simply lacking a sufficient available budget amount.

Warnings are exceptions that do not conform to the rules of the control budget but that passed through the system anyway. They function as exceptions that are automatically overridden, as well as issues that do not conform to the use of the budget. For example, you might receive a warning if the budget and accounting dates differ. This type of control is loose. Warnings are allowed through the system because the transactions merely require some type of audit trail. You don't want to prevent them—you simply want to analyze them. If the control option for the control budget definition is *Track without Budget*, you receive only warning exceptions. If the control option for the control budget definition is *Track with Budget*, you receive only warning exceptions, unless there is no budget for a transaction. In that case, you receive an error exception.

You are notified of exceptions in two ways: online and through workflow notification.

With online notification, you receive a message regarding a transaction's status when the budget-checking process finishes. The message indicates the type of exception that the transaction created and enables you to directly access the appropriate transaction exception header page, where you can either view the warnings generated or view and override the errors.

With batch budget-checking, users are notified of exceptions through workflow, based on their individual security profiles in the system. The system generates an appropriate worklist for each user and may also generate an email message. Users have access to a list of budgets that caused exceptions or a list of transactions with exceptions. These two options are available through the PeopleSoft system navigation or through the worklist. This provides two ways to access exceptions and override them. As a user, you can choose a particular budget from a worklist and access the Budget Exception page to view a list of all transactions that have failed for a budget. Alternatively, you can select a particular transaction in a worklist and access the appropriate transaction exception header page to view a list of all budgets that have caused exceptions for the transaction. The worklist contains a complete list of exceptions, and it indicates the exact cause of the error or warning. These two pages enable you to inquire about exceptions and override them.

Correcting Errors

You can correct errors for transactions by:

- Changing the amount on the transaction lines to conform to budget limits and then budget-checking again.
- Changing the budget amounts to allow the transactions to pass budget checking.
- Overriding the budget for a particular transaction.
- Overriding the entire transaction for all affected budgets.

In each case, you must have appropriate security clearance.

In PeopleSoft Payables, you pay the voucher amount even if it is over budget. Because you can't adjust the voucher unless the voucher is itself in error, you usually make adjustments to the budget or perform an override.

Security for Budget Adjustments and Overrides

The security profile of a user determines which budgets that user can adjust and which budgets and transactions the user can override. You set up this authority when you set up the Commitment Control feature. Only superusers have budget and transaction override authority. A user ID and date-time stamp appear on the inquiry pages when a budget or transaction has been overridden.

Budget Overrides

Overriding a budget involves selecting a check box on the appropriate page. A superuser can access the Budget Exceptions page, the transaction header and line exceptions pages, or the exception details page for any transaction header to override a budget or transaction.

PeopleSoft Commitment Control 9.1 PeopleBook, "Managing Budget Exceptions"

PeopleSoft Commitment Control 9.1 PeopleBook, "Setting Up Commitment Control Security"

Prerequisites

To use the Commitment Control feature in PeopleSoft Payables, you follow the usual Commitment Control setup procedure, including the following PeopleSoft Payables-specific steps:

1. Enable the Commitment Control feature for Payables on the Installation Options - Installed Products page.

Note. If you set the Installation option for the Default Budget Date field to *Prior Document Budget Date*, the system assigns the budget date on the purchase order to the purchase order voucher. If you set the Default Budget Date field to *Document Accounting Date*, the system assigns the accounting date to the purchase order voucher.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook, "Setting Installation Options for PeopleSoft Applications,"* Defining Options for Installed PeopleSoft Applications.

2. Specify the default values for Payables source transactions in the Source Transactions component (KK_SOURCE_TRAN1) on the Definition page, the Selection Criteria page, the Referenced Record Keys page, and the Options page.

There are seven Commitment Control source transaction types that PeopleSoft Payables uses: vouchers (AP_VOUCHER), nonprorated amounts (AP_VCHR_NP), earned discount (AP_ACCTDSE), earned discount - PO closed (AP_ACTDSEC), voucher accounting lines (AP_ACCT_LN), Voucher Accrual Encumbrance (AP_ACENC) and Voucher Accrual Expense (AP_ACEXP).

Note. You rarely need to change the default definitions for these source transaction types; only programmers with extensive experience working with PeopleSoft application code should make such changes.

Note. If you require that the earned discount amount be applied to the encumbrance when you perform budget-checking, no further setup is required for the AP_ACCTDSE or AP_ACTDSEC source transaction types.

If you require that the earned discount amount not be applied to the encumbrance when you perform budget-checking, for the AP_ACCTDSE or the AP_ACTDSEC source transaction type, delete the three source transaction fields referencing the purchase order on the Source Transactions - Referenced Record Keys page. This removes the link to the purchase order and prevents the discount amount from being added to the encumbrance.

See [Chapter 28, "Budget-Checking PeopleSoft Payables Transactions Using Commitment Control," PeopleSoft Payables Transactions Subject to Budget Checking, page 856.](#)

See *PeopleSoft Commitment Control 9.1 PeopleBook*, "Setting Up Commitment Control Source Transaction Types."

3. If you use balanced entries for budget checking, set up an offset account for each Payables source transaction type for each control budget definition that you set up on in the Budget Definitions component (KK_BUDG5).

See *PeopleSoft Commitment Control 9.1 PeopleBook*, "Setting Up Basic Commitment Control Options," Defining Offsets.

Budget-Checking During Online Voucher Entry

When you create online transactions, you can budget-check them in real time by invoking the Budget Processor process on the Invoice Information page.

To budget-check vouchers during online voucher entry:

1. Access the Voucher component (VCHR_EXPRESS1), create a voucher, and save it.

When Commitment Control is enabled, you can add or delete invoice lines to a voucher copied from a purchase order. However, you can only delete distribution lines, not add distribution lines, to a voucher copied from a purchase order. The system issues a warning that distribution lines cannot be inserted because the encumbrance cannot be reversed. If necessary, change the purchase order distribution lines.

2. Use the Voucher Summary page to check that the following conditions have been met:

- The voucher has been saved and edited with the approval status *Approved* and the entry status *Postable*.
- The budget header status and nonprorated budget status are *Not Chk'd* (not checked).

Note that the voucher header maintains two budget-checking statuses: one for the overall status of the distribution line amounts and one for the nonprorated nonmerchandise amounts.

The budget-checking status of the voucher is *Not Chk'd* if the voucher has not already been budget-checked or if fields on the voucher that affect budget-checking have been changed. The status is *Valid* if the voucher has already been budget-checked successfully and *Error* if the voucher has been budget-checked and failed. You must run budget-checking again whenever you change a budget-checked voucher.

The Non-Prorated Budget Status is *Valid* if there are no nonmerchandise charges. Also, the Non-Prorated Budget Status is *Valid* if the voucher header General Ledger business unit is not set up for the Commitment Control feature, and the nonmerchandise charges are not allocated. If the voucher header General Ledger business unit is not set up for the Commitment Control feature, and nonmerchandise charges exist, but there is no interunit entry, the Non-Prorated Budget Status is marked *Valid*. The voucher will not be budget-checked if there is an interunit entry and the nonmerchandise charges are allocated.

Note. When you enter interunit vouchers on the Invoice Information page, the Budget Status field on the Voucher Summary page changes from *Valid* to *Not Chk'd*. You must run the Budget Processor to reset the status to *Valid* to make the voucher eligible for voucher posting.

3. On the Invoice Information page, in the Action field select any appropriate on-demand process group that includes budget checking, and click the Run button to run the Budget Processor process on the voucher.

The budget-checking on-demand process is not available if the Budget Processor process has already run on the voucher.

4. On the Voucher Summary page, review the budget header status (Budget Status) and nonprorated budget status (Budget Misc Status).

The Budget Processor process returns the status *Valid* if the voucher passes the budget check. If the distribution line fails budget checking, the Budget Processor process returns the budget header status *Error*. If the nonprorated charges fail budget checking, the Budget Processor returns the budget nonprorate status *Error*.

Access the budget-checking exceptions pages to view vouchers with budget-checking errors.

PeopleSoft Commitment Control 9.1 PeopleBook, "Processing Source Transactions Against Control Budgets," Using the Commitment Control Page

Budget-Checking in Batch Mode

This section describes how to run the Budget Processor process in batch mode.

Understanding Batch Mode Budget-Checking

Batch mode budget checking is the most efficient way to budget-check PeopleSoft Payables transactions, and the process is required if you want to budget-check voucher accounting lines.

Running budget checking in batch mode is a two-step process. Both the voucher and the nonprorated, nonmerchandise charges should be checked together. If you perform budget checking on the voucher only, and nonprorated charges exist, then the voucher is not postable, because only half of the voucher is checked. You don't need to run budget checking on nonprorated, nonmerchandise charges if you prorate all charges.

Important! The Budget Check batch mode process does not check vouchers of closed accounting entry periods. The processor calls a validation program to verify that the vouchers are of an open accounting period; if not, the system displays an error message.

Page Used to Budget-Check in Batch Mode

Page Name	Definition Name	Navigation	Usage
Budget Check	AP_KK_CHECK_REQ	Accounts Payable, Batch Processes, Vouchers, Budget Check	Request a run of the Budget Processor Application Engine process (FS_BP) in batch mode.

Running Budget Processor in Batch Mode

Access the Budget Check page (Accounts Payable, Batch Processes, Vouchers, Budget Check).

Transaction Type

Select the type of source transaction on which you want to run the Budget Processor process. Options are:

AP ACCT LN: Budget-check voucher lines and closed vouchers with realized gain or loss, late charge, and discount lost.

AP ACCTDSE: Budget-check voucher lines associated with open purchase orders with discount earned.

AP ACTDSEC: Budget-check voucher lines associated with closed purchase orders with discount earned.

AP VCHR NP: Budget-check nonprorated items on a voucher.

AP VOUCHER: Budget-check the expense distributions as well as prorated charges for a voucher.

AP_ACENC: Budget-check encumbrance entries created by the Period End Accruals process

AP_ACEXP: Budget-check expenses entries created by the Period End Accruals process.

Process All Business Units

Select to have the Budget Processor process review all business units. If you do not select this option, you must select *Business Unit* in the Field Name field and specify a business unit or range of business units to be processed.

Field Name

Specify the criteria for selecting vouchers on which to run the Budget Processor process. The list of available fields depends on the transaction type selected and whether you process all business units. Values include:

Blank: The Budget Processor process reviews all vouchers. This selection is available for any transaction type and if you select Process All Business Units.

Accounting Date: The Budget Processor process reviews vouchers using the accounting dates entered in the From and To fields. This field is available for any transaction type, regardless of whether you select Process All Business Units.

Business Unit: The Budget Processor process reviews vouchers using the business units entered in the From and To fields. This field is available for any transaction type and if you do not select Process All Business Units.

Close Status Indicator: The Budget Processor process reviews vouchers using the close status indicator. This field is available for AP_VOUCHER and AP_VCHR_NP transaction types, regardless of whether you select Process All Business Units.

Invoice Number: The Budget Processor process reviews vouchers using the invoice numbers entered in the From and To fields. Prompt table validation does not occur on values entered in the From and To fields. This field is available for AP_VOUCHER and AP_VCHR_NP transaction types and if you do not select Process All Business Units.

Vendor ID: The Budget Processor process reviews vouchers using the vendor ID entered in the From and To fields. This field is available for AP_VOUCHER and AP_VCHR_NP transaction types, regardless of whether you select Process All Business Units.

Vendor Set ID: The Budget Processor process reviews vouchers using the vendor set ID entered in the From and To fields. This field is available for AP_VOUCHER and AP_VCHR_NP transaction types, regardless of whether you select Process All Business Units.

Voucher ID: The Budget Processor process reviews vouchers using the voucher IDs entered in the From and To fields. This field is available for any transaction type and if you do not select Process All Business Units.

Value Type

Options are:

Range: The Budget Processor process reviews a range of values entered using the From and To fields

Value: The Budget Processor process reviews an individual value entered using the From and To field.

Performing Partial and Final Liquidations

If you use the Commitment Control feature and have both PeopleSoft Purchasing and Payables installed, you can use the finalize function on the Invoice Information page to show that the current distribution line on the voucher represents a final liquidation of the predecessor PO transaction. This eliminates the need to run the PO and requisitions reconciliation processes to determine that you can close a PO or requisition. Consequently, you have more control over the budget because you quickly free up funds. The reduced amount can be either monetary or numeric.

To liquidate a predecessor document for an amount lower than the original:

1. Access the Invoice Information page and create or modify a voucher for the reduced amount.
2. Select the Finalize check box or button.
 - For individual distribution lines, select the Finalize check box on the distribution line.
 - For all distribution lines, click the Invoice Lines Finalize Line button, which populates the Finalize check boxes.
 - For an entire document, click the Finalize Document button in the header.
3. Save the voucher.
4. After the voucher is approved, run budget checking on the voucher to confirm the correction.

To reverse a reduction:

1. Access the Invoice Information page.
2. Deselect the Finalize check box for the affected lines.

For an entire document, click the Undo Finalize button in the header.

- For individual distribution lines, deselect the Finalize check box on the distribution line.
 - For all distribution lines, click the Invoice Lines Undo Finalize Line button.
 - For an entire document, click the Undo Finalize button in the header.
3. Save the voucher.
 4. Run budget checking on the voucher to confirm the correction.

Handling Budget-Checking Exceptions

This section lists common elements and discusses how to handle voucher header exceptions.

Note. Many pages in this section are similar. Most fields are documented in the common elements section.

See [Chapter 28, "Budget-Checking PeopleSoft Payables Transactions Using Commitment Control," Common Elements Used in This Section, page 867.](#)

See Also

[Chapter 28, "Budget-Checking PeopleSoft Payables Transactions Using Commitment Control," Exception Handling, page 858](#)

Common Elements Used in This Section

Advanced Budget Criteria	Select to access the Budget Exceptions - Refine Inquiry Criteria page, where you can restrict rows to specific business units, ledger groups, and accounts. Leave these fields blank to return all values.
Budget Date	Displays the budget date of the transaction line. You define which field the system uses for the budget date for the transaction in the source transaction definition.
Exception Type	Select the budget-checking status of the transaction. On some pages, you use this field to limit the exception rows retrieved to transactions with either an <i>Error</i> or <i>Warning</i> exception.
Foreign Amount	Displays the amount of the line in the entry currency.
Ledger Group	Displays the Commitment Control ledger group for the transaction header exception or transaction line exception.
Line From/Line Thru	Enter the voucher line numbers in these fields to view a range of lines. The prompt list shows only voucher lines with exceptions.
Line Status	Select the budget-checking status of the transaction line. On some pages, you use this field to limit the selected rows to lines with either <i>Error</i> or <i>Warning</i> exceptions.
Maximum Rows	Select the maximum number of rows to display in the scroll area.
Monetary Amount	Displays the amount in the base currency of the primary ledger.

More Budgets Exist	Indicates whether or not the transaction has more exceptions than the number that you entered in the Maximum Rows field. If selected, more exceptions exist.
More Lines Exist	Indicates whether or not the transaction has more transaction line exceptions than the number that you entered in the Maximum Rows field. If selected, more exceptions exist.
Override Budget	Select to update the control budget ledger, even though the transaction exceeds the budget. This field is available only if the budget transaction failed budget checking and if you have authority to override a budget entry. It is not available if the source transaction type does not allow overrides and the budget header status is <i>Not Checked</i>. If the budget header status displays the status <i>Not Checked</i> but the transaction has failed budget checking, then you must have changed the source transaction after the Budget Processor process issued the error exceptions, and you did not run the Budget Processor again. When you override the budget, the system populates the <i>Override User ID</i> field with the user ID for the user who overrode budget checking, and it populates the <i>Override Date</i> field with the date and time that the budget was overridden. After you override a budget with exceptions, change the budget available amount, or change the transaction amount, the transaction passes budget checking.
Override Transaction	Select to enable the entire transaction to update the control budget, even if error exceptions exist. This option is available only for users with appropriate security access. This option is not available if the transaction passed budget checking with only warning exceptions. You can select it before budget checking or after you run the Budget Processor process and it returns errors.
Transfer	On the Budget Override tab for the Voucher page, the Voucher (NP) Exceptions page, and the Voucher (Acct Ln) Exceptions page, click the View Related Links button to open a page with the following options: Click Go to Budget Exception to open the Budget Exceptions page, where you can view other transactions that have exceptions for the budget and override them. You must have authority to inquire on the budget to open the page. Click Go to Budget Inquiry to open the Budget Details page, where you can view the budget details, such as the available amount remaining, the attributes, and the amounts used by each ledger (encumbrance, pre-encumbrance, and so on) in the budget. You must have authority to run inquiries on the budget to open the page.  Click the Budget Override Available Info (budget override available information) button to determine why you can't override a particular budget entry.

Click the Tran Override Available Info (transaction override available information) button to determine why you can't override the entire transaction.

Click the Budget Check Document button to run the Budget Processor process again, after you override the transaction or a budget. You also run the process again if you change the voucher.

Click the Budget Check Details button to open the Commitment Control page, where you can see the source transaction type and the amount type for the voucher.

Search

Click Search on a header exceptions page (such as the Voucher Exceptions page) to refresh the Budgets with Exceptions scroll area.

Fetch Select

Click Fetch Select on a line exceptions page (such as the Voucher - Line Exceptions page) to refresh the Transaction Lines with Budget Exceptions scroll area.

Click to access detail pages, where you can view the reasons for the exceptions.

Pages Used to Handle Budget-Checking Exceptions

Page Name	Definition Name	Navigation	Usage
Voucher Exceptions	KK_XCP_HDR_AP1	Commitment Control, Review Budget Check Exceptions, Accounts Payable, Voucher, Voucher Exceptions	View budget-checking errors or warning messages for vouchers. View budgets for the transaction lines with exceptions. If you are authorized, you can override the budget exceptions on this page.
Payables Voucher Line Drill Down	KK_DRL_AP1_SEC	Click the View Exception Details button for a voucher line on the Voucher Exceptions page.	View additional details relating to the voucher transaction line budget exceptions.
Voucher - Line Exceptions	KK_XCP_LN_AP1	Commitment Control, Review Budget Check Exceptions, Accounts Payable, Voucher, Line Exceptions	View individual voucher lines with budget-checking errors or warning messages.

Page Name	Definition Name	Navigation	Usage
Voucher Line - Exception Details	KK_XCP_TRAN_SEC3	 Click the View Exception Details button for a voucher line on the Voucher - Line Exceptions page.	View details for voucher lines with budget exceptions.
Voucher (NP) Exceptions (voucher nonprorated exceptions)	KK_XCP_HDR_AP1N	Commitment Control, Review Budget Check Exceptions, Accounts Payable, Voucher Non-prorated, Voucher (NP) Exceptions	View budget-checking errors or warning messages for vouchers with nonprorated, nonmerchandise amounts or sales and use tax. You can view budgets for the transaction lines with exceptions. If you are authorized, you can override the budget exceptions on this page.
Payables Non-Prorated Voucher Line Drill Down	KK_DRL_AP1N_SEC	 Click the View Exception Details button for a voucher line on the Voucher (NP) Exceptions page.	View additional details relating to the voucher nonprorated transaction line budget exceptions.
Voucher Non-prorated Amount - Line Exceptions	KK_XCP_LN_AP1N	Commitment Control, Review Budget Check Exceptions, Accounts Payable, Voucher Non-prorated, Line Exceptions	View individual voucher lines in a voucher with nonprorated transaction lines and budget-checking errors or warning messages.
Voucher Non-prorated Line - Exception Details	KK_XCP_TRAN_SEC3	 Click the View Exception Details button for a voucher line on the Voucher Non-prorated - Line Exceptions page.	View details for nonprorated voucher lines with budget exceptions.
Voucher (Gain/Loss) Exceptions	KK_XCP_HDR_AP2	Commitment Control, Review Budget Check Exceptions, Accounts Payable, Voucher Accounting Line, Voucher (Gain/Loss) Exceptions	View individual accounting lines for vouchers with realized gains or losses. View budgets for the transaction lines with exceptions. If you are authorized, you can override the budget exceptions on this page.
Payables Accounting Line Voucher Line Drill Down	KK_DRL_AP2_SEC	 Click the View Exception Details button for a voucher line on the Voucher (Gain/Loss) Exceptions page.	View additional details relating to the voucher accounting line budget exceptions.

Page Name	Definition Name	Navigation	Usage
Voucher Accounting Line - Line Exceptions	KK_XCP_LN_AP2	Commitment Control, Review Budget Check Exceptions, Accounts Payable, Voucher Accounting Line, Line Exceptions	View individual accounting lines for vouchers with realized gains or losses with budget-checking errors or warning messages.
Voucher Accounting Line - Line Exception Details	KK_XCP_TRAN_SEC3	 Click the View Exception Details button for a voucher line on the Voucher Accounting Line - Line Exceptions page.	View individual accounting lines for vouchers with realized gains or losses with budget-checking exceptions.
Period End Accruals	KK_XCP_HDR_AP3	Commitment Control, Review Budget Check Exceptions, Accounts Payable, Period End Accruals	Handle budget-checking exceptions for encumbrance/expense entries created by the Period End Accruals process.

Handling Voucher Header Exceptions

Voucher Exceptions

Line Exceptions

Voucher Exceptions page

Click the *View Related Links* button for the voucher ID to open a page with the following options:

Go to Source Entry opens the Voucher component where you can view or change the voucher.

Go to Source Inquiry opens the Voucher Inquiry component where you can view the voucher.

Budget Override

Select the Budget Override tab.

Click the *View Exception Details* button to access the Payables Voucher Line Drill Down page, where you can view transaction line details and drill down to the voucher.

Budget ChartFields

Select the Budget ChartFields tab.

The Budget ChartFields tab displays the ChartField values for the budgets with exceptions.

Posting Vouchers After Budget Checking

When you run the Voucher Posting Application Engine process (AP_PSTVCHR), only vouchers that have passed budget checking are posted. Voucher posting checks the budget-checking statuses (header and nonprorated) of the voucher. If both the statuses are *Valid*, the voucher is posted.

If Commitment Control is on, posting creates accounting entries with necessary information about the budget date and status to check the realized gain/loss and discount earned/lost entries. You need to run the Commitment Control module in batch mode to process voucher (AP_VOUCHER, AP_VCHR_NP) and discount earned (AP_ACCTDSE, AP_ACTDSEC) source transactions.

Each accounting line contains both the header and line status flag. The Budget Processor sets the flags to the appropriate settings.

Modifying, Deleting, and Closing Vouchers After Budget Checking

When you alter, delete, or close a voucher or voucher accounting line transaction after budget checking, you must repeat the budget check of the altered, deleted, or voucher-closing transaction.

This section discusses how to:

- Modify vouchers after budget checking.
- Delete vouchers after budget checking.
- Close vouchers after budget checking.

Modifying Vouchers After Budget Checking

When you budget-check a modified voucher, the Budget Processor process deletes any exception rows from the first budget check. This includes the deletion of override marks for any budgets listed on the altered transactions. A message appears informing you of this when you mark the budget for override and save the page. In effect, altering a transaction after it has been budget-checked forces the Budget Processor process to treat the transaction as if it were new when budget checking is performed again.

To make changes to budget-checked transactions, do the following:

1. Open the voucher and make changes to the particular transactions.

Note. You can only delete distribution lines, not add distribution lines, to a voucher copied from a purchase order. The system issues a warning that distribution lines cannot be inserted because the encumbrance cannot be reversed. If necessary, change the purchase order distribution lines.

2. Save the changes.
3. Run the Budget Processor process again to check the budget.

The Budget Processor process deletes the original transactions (including liquidations) from the Commitment Control ledger data table (LEDGER_KK) and posts the new transactions.

Deleting Vouchers After Budget Checking

When you delete vouchers, the amounts in the Commitment Control ledger data table is reversed to accommodate the changes.

The budget statuses and the voucher entry status appear on the Delete Voucher page. You can access the Voucher Details page to view the details for the voucher. Once you delete the voucher, the Budget Processor process runs automatically to adjust the budget so that the budget accounts for the deleted voucher amount.

Note. The voucher entry status remains *Postable* until budget-checking is run successfully. If the process does not complete successfully, access the Delete Voucher page and click the Delete button to rerun the Budget Processor process. The Budget Processor process cannot be run through the batch process for deleted vouchers.

[Chapter 19, "Managing Vouchers," Deleting Vouchers, page 517](#)

Closing Vouchers After Budget Checking

When you close vouchers, the system marks the voucher for closure. Posting the closed voucher creates accounting lines for the portion of the voucher that is closed. The system processes closed vouchers from the voucher source transactions, AP_ACCT_LN.

All vouchers, including a voucher that references a purchase order, can be closed from the close voucher component.

Making Payments After Budget Checking

If the Commitment Control feature is enabled for PeopleSoft Payables, the Pay Cycle Application Engine process (AP_APY2015) selects for payment only those vouchers that have passed budget checking. During payment selection, it doesn't matter if the Budget Control feature is set to *On* or *Off*, because the flags are set correctly in both cases.

Payment posting may create late interest, realized gains or losses, and earned or lost discounts accounting entries. Run the Budget Processor process on payments after you have posted them and created accounting entries. Set up the budget check run control to process the AP_ACCT_LN, AP_ACCTDSE, and AP_ACTDSEC transaction types, so that the process adjusts the budget for the payment realized gains or losses and earned or lost discount amounts.

Running Document Tolerances

This chapter provides an overview of document tolerances and discusses how to:

- Set up document tolerances.
- Run document tolerances with budget checking.
- Run document tolerances without budget checking.
- Review document tolerance exceptions and overrides.

Understanding Document Tolerances

Document tolerances are allowable percentages or amounts by which related procurement documents can differ. You can set dollar tolerances between pre-encumbrances and encumbrances and between encumbrances and expenses. If the allowable percentage or amount is exceeded, the system creates a document tolerance exception. For example, consider this scenario:

- The encumbrance for a purchase order is 100.00 USD.
- The expenditure for a voucher is 150.00 USD.
- The document tolerance percentage is 10.

When the voucher is document tolerance-checked, it fails tolerance checking.

You cannot post a voucher if its document tolerance status is not valid. In addition, you cannot create system payments for a voucher if its document tolerance status is not valid. (You can still create manual payments for vouchers that have an invalid document tolerance status). If you have the proper authorization, you can override the document tolerance checking errors and continue processing the voucher.

You can run the Document Tolerance Checking Application Engine process (FS_DOC_TOL) either with or without using the Commitment Control feature.

Note. If you enable the Commitment Control feature and you want to use the voucher document tolerance status as a prerequisite for running the Budget Processor Application Engine process (FS_BP), you must modify the Selection Criteria page in the Commitment Control Source Transactions component (KK_SOURCE_TRAN) to include the DOC_TOL_HDR_STATUS field as part of the payable transactions. Select *DOC_TOL_HDR_STATUS* as the Field Name, and select V as the Field Value.

Setting Up Document Tolerances

The setup for document tolerances is the same for both PeopleSoft Payables and Purchasing.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Defining Procurement Options," Defining Document Tolerances.

Running Document Tolerances with Budget Checking

This section discusses how to:

- Run the Document Tolerance Checking process from the Invoice Information page.
- Verify the document tolerance status on the Summary page.

Understanding Including Multiple Processes With the Document Tolerances Checking Process

If the Commitment Control feature is enabled and document tolerance is enabled for the business unit, you can run document tolerances by initiating a process group that includes the Matching Application Engine process (AP_MATCH), the Document Tolerance Checking process, and the Budget Processor process. You do this by using the Action field on the Invoice Information page. The system runs the Matching process, the Document Tolerance Checking process, and then runs the Budget Processor process. These processes can also be run separately.

Pages Used to Run Document Tolerances with Budget Checking

Page Name	Definition Name	Navigation	Usage
Invoice Information	VCHR_EXPRESS1	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information	Run Document Tolerances with Budget Checking. You must run the Document Tolerance process independently as a batch process if you run the Budget Processor process as a batch process.
Voucher - Summary	VCHR_SUMMARY_PG	Accounts Payable, Vouchers, Add/Update, Regular Entry, Summary	Check the document tolerance status of the voucher. This page appears only after you have saved a new voucher.

Running the Document Tolerance Checking Process from the Invoice Information Page

Access the Invoice Information page (Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information).

Action

Select an on-demand process group in the Action field and click Run to initiate budget checking and document tolerance checking.

While the voucher is being processed, the fields in the Voucher component (VCHR_EXPRESS) are unavailable for entry. Click the Refresh icon to view the processing status of the voucher on the Voucher Summary page.

The process groups that are available depend on your user ID and whether the voucher requires the processing.

Note. You normally run the Budget Processor process as a batch process using the Budget Checking Request page.

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Setting Up On-Demand Processing"

Verifying the Document Tolerance Status on the Summary Page

Access the Summary page (Accounts Payable, Vouchers, Add/Update, Regular Entry, Summary).

Status

Document Tolerance Status

If document tolerance checking is enabled, the system displays the document tolerance status. Values are:

Valid: The voucher passed document tolerance checking.

Not Checked: The voucher requires document tolerance checking. If any amounts, quantities, or ChartFields are modified after the document tolerance is checked, the system resets the document tolerance status to *Not Checked*.

Error: Exceptions were generated for the voucher during document tolerance checking. You can override document tolerance exceptions on the Document Tolerance Exception page.

See Also

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Viewing Voucher Summary Information, page 380

Running Document Tolerances Without Budget Checking

If the Commitment Control feature is not enabled and document tolerance is enabled, you initiate document tolerance checking using the Document Tolerance page.

This section lists the page used to run document tolerances without budget checking.

Page Used to Run Document Tolerances Without Budget Checking

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Document Tolerance	DOC_TOL_RUN_CNTRL	Accounts Payable, Batch Processes, Vouchers, Document Tolerance	Run the Document Tolerance Checking Application Engine process (FS_DOC_TOL). Have the system check the transaction for document tolerance exceptions.

Reviewing Document Tolerance Exceptions and Overrides

This section discusses how to:

- View and override document tolerance exceptions.
- View document tolerance override history.

Pages Used to Review Document Tolerance Exceptions and Overrides

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Document Tolerance Exceptions	DOC_TOL_EXCPT	Accounts Payable, Vouchers, Maintain, Document Tolerance Exceptions	View and override document tolerance exceptions.

Page Name	Definition Name	Navigation	Usage

Save Return to Search Notify

Document Tolerance Exceptions page

Exceptions

Rule ID Displays the rule ID and description of the document tolerance rule that produced the exception.

Details

Pred Doc Amt (predecessor document amount)	Displays the amount of the predecessor document (purchase order).
Life-to-Date Liquidated Amt (life-to-date liquidated amount)	Displays the sum total of all source documents (vouchers) linked to the predecessor document. If you have multiple vouchers tied to the same purchase order, the Document Tolerance Checking process calculates the tolerance against the sum total of all of the vouchers tied to this purchase order rather than the amounts of the individual vouchers. An individual voucher may be within the tolerance, but if the sum total of the linked vouchers exceeds the tolerance, the voucher does not pass document tolerance checking.
Defined Tolerance Amount	Displays the tolerance amount that is defined on the Document Tolerance page.
Defined Tolerance Percentage	Displays the tolerance percentage that is defined on the Document Tolerance page.
Note. The system uses whichever value is lower (either the defined amount or the defined percentage) to calculate the tolerance. If the amount of the source document exceeds the lower defined amount, the voucher does not pass document tolerance checking and the system generates an exception.	
Calculated Doc Tol Amt (calculated document tolerance amount)	Displays the amount of the source document (purchase order), plus any defined tolerance amount.
Calculated Doc Tol Percent Amt (calculated document tolerance percent amount)	Displays the amount of the source document (purchase order), plus any defined tolerance percentage amount.
Source Doc Monetary Amt (source document monetary amount)	Displays the amount of the source document (voucher).
Source Doc Converted Amt (source document converted amount)	Displays the converted amount of the source document (voucher). The system converts the source document to the predecessor document's General Ledger business unit base currency to calculate the tolerance.
Predecessor GL Base Currency (predecessor general ledger base currency)	Displays the predecessor document's General Ledger business unit base currency.
Transaction Currency	Displays the currency of the source document (voucher).
Override	Select to override the exception and make the transaction available for further processing.

Viewing Document Tolerance Override History

Access the Document Tolerance Override History page (Accounts Payable, Review Accounts Payable Info, Vouchers, Document Tolerance Override).

The fields on this page are the same as the fields on the Document Tolerance Exceptions page, with the exception of the User ID field and the DateTime field. These two additional fields provide an audit trail of exceptions that have been overridden.

User ID	Displays the ID of the user who overrode the exception on the Document Tolerance Exceptions page.
DateTime	Displays the date and time when the user overrode the exception on the Document Tolerance Exceptions page.

Chapter 30

Processing Prepayments

This section provides an overview of prepayment processing, lists prerequisites, and discusses how to:

- Enter prepaid vouchers online.
- Apply final invoices to prepayments.
- Generate final payments.
- Review prepayments.

Understanding Prepayment Processing

This section discusses:

- Prepayment overview.
- Prepayment application and payment.
- Prepayment posting.
- Prepaid and regular voucher cross-reference record.
- Discounts and prepayment application.
- Prepayment cancellation.
- Prepaid and applied voucher closure.
- Manual prepayment application example.
- Accounting entry example 1: prepayment without value-added tax (VAT) or withholding.
- Accounting entry example 2: prepayment with 100% VAT on regular voucher.
- Accounting entry example 3: prepayment with 100% VAT on payment.
- Accounting entry example 4: prepayment with 5% prorated, nonrecoverable VAT.
- Accounting entry example 5: prepayment with withholding.
- Recurring prepayment vouchers.

Prepayment Overview

Down payments and prepayments are common practice worldwide. Most organizations, at one time or another, must pay for goods or services before an invoice is received. For example, when a company sets up a new customer account with a vendor, the vendor may require prepayment on the first one or two orders before extending credit to the buyer. The prepayment functionality in PeopleSoft Payables:

- Allows a payment to be made to a vendor without an invoice.
- Creates accounting entries for the prepayment.
- Applies VAT and withholdings to the prepayment.
- Facilitates the application of the final voucher to the prepayment.

Use prepayments to create payments for vendors before receiving an invoice:

1. Enter and pay a prepaid voucher immediately.
2. Enter it as a regular voucher when the invoice is received.
3. Apply or link the regular voucher and prepaid voucher prior to payment of the regular voucher.

The system deducts the payment made on the prepaid voucher from the regular voucher's scheduled payment and remits the balance to the vendor.

4. Post both the prepayment voucher and the prepayment to create the appropriate accounting entries once the prepayment has been made.

The voucher and payment posting processes reverse the prepayment entries and charge the final accounts when the regular voucher is posted.

The prepayment voucher has all the attributes of a regular voucher, including document sequencing, VAT, and withholding. The actual prepayment has all the attributes of a regular payment with the exception of discounts and split payments.

Prepayment application can be performed in batch processing (part of voucher posting) or manually using the Apply Vouchers to Prepayment page. You can apply multiple vouchers to one prepayment, as well as one voucher to multiple prepayments.

The order in which you process prepayment application is flexible. You can enter and post a regular voucher before you enter the prepaid voucher. When you run voucher posting, the two transactions are applied (assuming they meet the application criteria). Or, you can manually apply the regular voucher to the prepaid voucher immediately after the prepaid voucher has been paid.

Note. For automatic application, either the prepaid voucher or the regular voucher must be picked up by the Voucher Posting Application Engine process (AP_PSTVCHR) to be applied. If both vouchers are already posted, voucher posting does not process them, and no application occurs. In this scenario, you can manually apply the regular voucher to the prepaid voucher using the Apply Vouchers to Prepayment page. Voucher posting creates the apply accounting entries the next time it is run for that business unit.

See Also

Chapter 30, "Processing Prepayments," Applying Final Invoices to Prepayments, page 906

Prepayment Application and Payment

Complete the following steps to apply and pay regular and prepaid vouchers:

1. Create the prepaid voucher.
2. Pay the prepaid voucher.

Note. Prepaid vouchers must be paid before a regular voucher can be applied to them. They do not need to be payment-posted.

The accounting entries that are created for prepaid voucher during voucher posting include

- Prepaid expense account (122000): 1000.00 Debit.
- Accounts payable account (200000): 1000.00 Credit.

3. Create a regular voucher.

Note. Regular vouchers must be approved before they can be applied to prepaid vouchers using either the batch or manual application processes.

4. (Optional) Manually apply the regular voucher to the prepaid voucher.
5. Run the Voucher Posting process for the regular voucher.

The Voucher Posting process calls the AP Prepayment Application Application Engine process (AP_PPAY_APPL), which applies regular vouchers to prepayments.

6. Run the Pay Cycle Application Engine process (AP_APY2015) to pay the regular voucher payment.

The Pay Cycle process pays the regular voucher payment schedule, which was reduced in prepayment application.

An advice routine selects invoice information from applied prepaid vouchers, so they appear on the payment advice. This advice lists regular vouchers that are applied to prepayments.

Note. If you run the Pay Cycle process before running the Voucher Posting process for the regular voucher, the regular voucher is paid in full, because the AP Prepayment Application process will not have been run. Use the manual application process to run the Pay Cycle process before the Voucher Posting process.

Prepayment Posting

When you run the Voucher Posting process for the regular voucher:

1. The Voucher Posting process calls the AP Prepayment Application process, which processes the vouchers in the following order:
 - a. Auto-apply prepayments with matching references.
 - b. Auto-apply prepayments with the Auto-Apply check box selected.
2. The AP Prepayment Application process loops through the available prepaid vouchers by invoice date (oldest first).
3. For each prepaid voucher, the process loops through the regular vouchers that are being processed in the current run or were previously posted but are not fully paid or applied.

It searches for vouchers that match the invoicing vendor and transaction currency of the prepaid voucher and processes regular vouchers by scheduled payment date (oldest first).

Note. The AP Prepayment Application process does not update application links that have been made manually. For example, if you have partially applied a prepayment to a regular voucher, the system does not apply the rest of the prepayment when you run the AP Prepayment Application process.

4. When a match is found, rows are created in the PS_VCHR_PPAY_XREF table that link to prepaid and regular vouchers.

Note. Vouchers with payment schedules on hold are not applied.

5. The scheduled payment (PS_PYMNT_VCHR_XREF) on the regular voucher is reduced by the amount of the applied prepaid voucher.
6. To balance the payment amounts on PS_PYMNT_VCHR_XREF to the voucher gross amount, a row is inserted into PS_PYMNT_VCHR_XREF with PREPAID_STATUS of A (applied), and the amount is applied against the prepaid voucher.
7. If voucher posting encounters regular vouchers which are applied to prepaid vouchers, reversal accounting entries are created for the prepaid vouchers.
8. A posting status field (REV_POST_STATUS) on PS_VCHR_PPAY_XREF tracks whether the reversing accounting entries have been created.

Note. In the case where the regular voucher is *smaller* than the prepaid voucher, voucher posting prorates the prepayment reversals so that only the portion of the prepaid voucher, which is applied to the regular payment, is reversed.

Note. The prepaid voucher must be posted before the regular voucher for the Voucher Posting process to create the prepaid reversal entries.

9. The accounting entries created for the posted, applied regular vouchers during voucher posting are:

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Expense	631000	5000.00	
Accounts Payable	200000		5000.00
Prepaid Account	122000		1000.00
Accounts Payable	200000	1000.00	

Unposting Prepaid and Applied Vouchers

When a regular voucher that is applied to a prepaid voucher is unposted, the prepayment application is reversed. The system updates PS_VCHR_PPAY_XREF to show that no vouchers are applied.

There are no additional restrictions on voucher unpost for prepayments.

Prepaid and Regular Voucher Cross-Reference Record

The PS_VCHR_PPAY_XREF record stores the linkage between prepaid vouchers and regular vouchers which have been applied to one another. This is how information is processed:

1. A row is inserted into PS_VCHR_PPAY_XREF when a new prepaid voucher is entered.
2. This row is updated with the relevant linkage data when a regular voucher is applied to the prepaid voucher.
3. Additional rows are added to PS_VCHR_PPAY_XREF, if and when the prepaid voucher is applied to additional regular vouchers.
4. When application occurs, PS_PYMNT_VCHR_XREF (for the regular voucher) is also updated.

The existing scheduled payment is updated to reflect the reduced payment that is remitted to the vendor. For each prepaid voucher that is applied, a row is inserted with prepaid_status A (applied). This row keeps PS_PYMNT_VCHR_XREF in balance with the voucher gross; the row is not used to generate a payment.

5. When payments are created, the scheduled payment generates a payment that has already been reduced by the applied prepaid vouchers.
6. When a regular voucher is posted, unposted rows in PS_VCHR_PPAY_XREF generate a set of reversal accounting entries for the prepaid voucher.
7. When a scheduled payment is fully applied (there is nothing left to pay the vendor), the prepaid_status is set to F (fully applied), and the pymnt_selct_status is set to S (settled). No additional row is inserted into PS_PYMNT_VCHR_XREF.

Discounts and Prepayment Application

Prepayment application evaluates regular vouchers that are fully applied by prepayments to determine whether they are eligible for a payment discount. If the regular voucher is fully applied by a prepayment and is eligible for a payment discount, the application is performed at the discounted amount. The appropriate discount accounting entries are created when the apply accounting entries are created in voucher posting.

Prepayment Cancellation

You can perform payment cancellation on prepaid vouchers and unposted regular vouchers that are applied to prepaid vouchers.

During payment cancellation, the system processes PS_PYMNT_VCHR_XREF prepaid application rows, as well as the regular payment schedule rows.

Canceling and Reissuing

The original payment schedule is identified as canceled (PYMNT_SELCT_STATUS = X) and a new payment schedule is inserted. The prepaid application rows (PREPAID_STATUS = A) are also canceled. New application rows are inserted into PS_PYMNT_VCHR_XREF, and are identical to the canceled rows except that the ORIG_PYMNT_CNT on the new applied rows is the PYMNT_CNT of the new payment schedule.

For prepayments, the payment can be canceled as long as it is not applied. PYMNT_VCHR_XREF is updated normally. If the option to reissue the payment is selected, PS_VCHR_PPAY_XREF is updated to point to the payment count of the newly scheduled payment rather than the canceled one.

Canceling and Closing

If you cancel a payment for a regular voucher that has prepaid vouchers applied to it, and you decide to close the voucher, only the unapplied portion of the regular voucher is closed. When you save, a warning message advises you that if you want to close the entire voucher, you should not proceed.

Note. Applied prepayments *cannot* be canceled. The prepaid voucher must be unapplied before its associated payment can be canceled. Applied prepayments do not appear in the Payment Cancellation search view.

Prepaid and Applied Voucher Closure

If you attempt to close a regular voucher that is applied to one or more prepaid vouchers, a warning message advises you of the following: Prepaid vouchers (or portions of prepaid vouchers) that have been applied to regular voucher payment schedules *cannot* be closed.

Unpaid regular payment schedules that are applied to prepaid vouchers *can* be closed, but only the unpaid and unapplied portion of the payment schedule (the amount remaining to be paid) is closed.

If a regular voucher is applied to one or more prepaid vouchers and you want to close out the entire regular voucher, you must unapply it first.

Example: Closing Prepaid and Regular Vouchers

This example assumes the following:

- A prepaid voucher for 1000.00 USD is posted and paid.
- A regular voucher for 5000.00 USD is created.
- The prepaid and regular vouchers are applied to each other (manually or using batch).
- The regular voucher's payment schedule is reduced to 4000.00 USD.

In this example, you *can* close the regular voucher, but only 4000.00 USD is closed. However, if you unapply the vouchers and then close the regular voucher, the entire 5000.00 USD is closed.

Note. Prepaid vouchers that are applied to regular vouchers must also be unapplied prior to closure. Applied prepaid vouchers do not appear in the Voucher Closure search view.

Manual Prepayment Application Example

Let's say you have scheduled payments for two regular vouchers (REG-A and REG-B) and you want to apply some of each of them to the scheduled payment for a prepaid voucher (PP-1).

<i>Voucher ID</i>	<i>Scheduled Payment Amount</i>
PP-1	2000.00 USD
REG-A	1000.00 USD
REG-B	3000.00 USD

If you apply 300.00 USD of REG-A to PP-1, the remaining balance of PP-1 is 1700.00 USD. You could then apply 1700.00 USD of REG-B to PP-1, and PP-1 is fully applied. The resulting final payments would be 700.00 USD for voucher REG-A and 1300.00 USD for voucher REG-B.

Accounting Entry Example 1: Prepayment Without VAT or Withholding

This scenario assumes:

- Prepayment: 1000.00 USD.
- Regular voucher: 5000.00 USD.

Prepaid Voucher

Accrual (voucher posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Prepaid Expense	122000	1000.00 USD	N/A
Accounts Payable	200000	N/A	1000.00 USD

Payment (payment posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Accounts Payable	200000	1000.00 USD	N/A
Cash	100001	N/A	1000.00 USD

Applied Regular Voucher

Accrual (voucher posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Expense	631000	5000.00 USD	N/A
Accounts Payable	200000	N/A	5000.00 USD
Prepaid Expense	122000		1000.00 USD
Accounts Payable	200000	1000.00 USD	N/A

Payment (payment posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Accounts Payable	200000	4000.00 USD	N/A
Cash	100001	N/A	4000.00 USD

Accounting Entry Example 2: Prepayment with 100% VAT on Regular Voucher

This scenario assumes:

- Prepayment for 1196.00 EUR.
- Applied regular voucher for 3588.00 EUR.
- VAT declaration point is invoice.

Note. The Voucher Posting process creates similar accounting entries when the VAT declaration point is invoice, delivery, or accounting date.

Prepaid Voucher

Accrual (voucher posting):

Description	Account	Debit	Credit
Prepaid Expense	122000	1000.00 EUR	N/A
VAT Input Recoverable	206103	196.00 EUR	N/A
Accounts Payable	200000	N/A	1196.00 EUR

Payment (payment posting):

Description	Account	Debit	Credit
Accounts Payable	200000	1196.00 EUR	N/A
Cash Distribution	100001	N/A	1196.00 EUR

Applied Regular Voucher

Accrual (voucher posting):

Description	Account	Debit	Credit
Expense Account	631000	3000.00 EUR	N/A
VAT Input Recoverable	206103	588.00 EUR	N/A
Accounts Payable	200000	N/A	3588.00 EUR
Prepaid Expense	122000	N/A	1000.00 EUR

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
VAT Input Recoverable	206103	N/A	196.00 EUR
Accounts Payable	200000	1196.00 EUR	N/A

Payment to vendor for 2392.00 EUR.

Payment (payment posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Accounts Payable	200000	2392.00 EUR	N/A
Cash Distribution	100001	N/A	2392.00 EUR

Accounting Entry Example 3: Prepayment with 100% VAT on Payment

This scenario assumes:

- Prepayment for 1000.00 EUR.
- Applied regular voucher for 11960.00 EUR.
- VAT declaration point is payment.

Prepaid Voucher

Accrual (voucher posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Prepaid Expense	122000	1000.00 EUR	N/A
VAT Intermediate Recoverable	206300	196.00 EUR	N/A
Accounts Payable	200000	N/A	1196.00 EUR

Payment (payment posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
VAT Intermediate Recoverable	206300	N/A	196.00 EUR
VAT Input Recoverable	206103	196.00 EUR	N/A
Accounts Payable	200000	1196.00 EUR	N/A
Cash Distribution	100001	N/A	1196.00 EUR

Applied Regular Voucher

Accrual (voucher posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Expense Account	631000	10000.00 EUR	N/A
VAT Intermediate Recoverable	206300	1960.00 EUR	N/A
Accounts Payable	200000	N/A	11960.00 EUR
Prepaid Expense	122000	N/A	1000.00 EUR
VAT Intermediate Recoverable	206300	N/A	196.00 EUR
Accounts Payable	200000	1196.00 EUR	N/A

Payment to vendor for 10764.00 EUR.

Payment (payment posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
VAT Intermediate Recoverable	206300	N/A	1764.00 EUR
VAT Input Recoverable	206103	1764.00 EUR	N/A

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Accounts Payable	200000	10764.00 EUR	N/A
Cash Distribution	100001	N/A	10764.00 EUR

Accounting Entry Example 4: Prepayment with 5% Prorated, Nonrecoverable VAT

This scenario assumes:

- Prepayment for 1000.00 EUR.
- Applied regular voucher for 11960.00 EUR.
- VAT declaration point is payment.
- VAT Type: Prorate nonrecoverable.

Prepaid Voucher

Accrual (voucher posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Prepaid Expense	122000	1186.20 EUR	N/A
VAT Intermediate Recoverable	206300	9.80 EUR	N/A
Accounts Payable	200000	N/A	1196.00 EUR

Payment (payment posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
VAT Intermediate Recoverable	206300		9.80 EUR
VAT Input Recoverable	206103	9.80 EUR	N/A
Accounts Payable	200000	1196.00 EUR	N/A

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Cash Distribution	100001	N/A	1196.00 EUR

Applied Regular Voucher

Accrual (voucher posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Expense Account	631000	11862.00 EUR	N/A
VAT Input Recoverable	206103	98.00 EUR	N/A
Accounts Payable	200000	N/A	11960.00 EUR
Prepaid Expense	122000	N/A	1186.20 EUR
VAT Input Recoverable	206103	N/A	9.80 EUR
Accounts Payable	200000	1196.00 EUR	N/A

Payment to vendor for 10764.00 EUR.

Payment (payment posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
VAT Intermediate Recoverable	206300	N/A	88.20 EUR
VAT Input Recoverable	206103	88.20 EUR	N/A
Accounts Payable	200000	10764.00 EUR	N/A
Cash Distribution	100001	N/A	10764.00 EUR

Accounting Entry Example 5: Prepayment with Withholding

This scenario assumes the following:

- Vendor is subject to 31 percent withholding.
- Prepayment for 1000.00 USD gross.
 - Withholding is not postponed.
 - Payment to vendor is 690.00 USD.
 - Withholding payment is scheduled for 310.00 USD.
- Regular voucher for 5000.00 USD.
 - 1000.00 USD of prepaid voucher is applied.
 - Payment to vendor is 2760.00 USD.
 - Withholding payment is scheduled for 1240.00 USD.

Prepaid Voucher

Accrual (voucher posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Prepaid Expense	122000	1000.00 USD	N/A
Accounts Payable	200000	N/A	1000.00 USD

Payment (payment posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Accounts Payable	200000	310.00 USD	N/A
Withholding Liability	203000	N/A	310.00 USD
Accounts Payable	200000	690.00 USD	N/A
Cash	100001	N/A	690.00 USD

Applied Regular Voucher

Accrual (voucher posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Expense	631000	5000.00 USD	N/A
Accounts Payable	200000	N/A	5000.00 USD
Prepaid Expense	122000	N/A	1000.00 USD
Accounts Payable	200000	1000.00 USD	N/A

Payment (payment posting):

<i>Description</i>	<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Accounts Payable	200000	1240.00 USD	N/A
Withholding Liability	203000	N/A	1240.00 USD
Accounts Payable	200000	2760.00 USD	N/A
Cash	100001	N/A	2760.00 USD

Recurring Prepayment Vouchers

This section discusses voucher contracts.

Voucher Contracts

PeopleSoft voucher and order contracts enable you to manage recurring voucher payments and PO releases over any time period. PeopleSoft voucher and order contracts support both product and service contracts and enable you to share contracts across business units. Use voucher contracts to establish and schedule amounts for recurring payments such as rent and lease payments, utilities, and regular supply deliveries, and you can generate the resulting vouchers. As each voucher comes due according to the payment terms of the vendor and business unit, the voucher is approved and paid. You can adjust the amount of individual vouchers during the life of the contract.

Select the Prepaid Voucher option or the Prepaid Voucher with Advance PO Contract process option in the Voucher Contracts Options group box on the Maintain Contract - Header page to associate a prepayment reference for the contract. When a recurring voucher is generated, it is applied to the prepaid voucher using either the batch or manual application processes.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Using Voucher and Order Contracts"

Prerequisites

To process prepayments, set up a default prepaid expense account and give users the authority to prepay vouchers. You set up a default prepaid expense account in the Accounting Entry Template page. The account that you enter here automatically changes to the Account field on the distribution line for prepaid vouchers.

Note. Because prepayments are created immediately, the open liability should never be overstated. For this reason, the liability account is the accounts payable account.

You give users the authority to prepay vouchers on the Voucher Styles page. Select the Allow Prepay Voucher check box to give the user the authority to enter a prepayment voucher. Once you select the check box, the Prepay Limit field (in the Online Voucher Processing group box on the User Preferences - Procurement: Payables page) becomes available for entry, and you can specify a maximum amount for each prepayment the user can enter. You must also specify a currency and rate type for this amount.

Note. If you do not enter an amount, the user may enter a prepayment for any amount.

Entering Prepaid Vouchers Online

This section discusses how to:

- Create prepaid vouchers.
- Set batch prepayment processing options.
- Specify VAT and withholding on prepayments.
- Schedule and record prepayments.

Note. You can also enter and apply prepayments using the Quick Invoice Entry component (VCHR_QUICK_PNL).

See [Chapter 17, "Using Quick Invoices," page 451](#).

Pages Used to Enter Prepaid Vouchers Online

Page Name	Definition Name	Navigation	Usage
Invoice Information	VCHR_EXPRESS1	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information Select the <i>Prepaid Voucher</i> voucher style on the Add a New Value page before accessing the Invoice Information page.	Create a prepaid voucher.
Voucher Attributes	VCHR_STATUS_IA	Accounts Payable, Vouchers, Add/Update, Regular Entry, Voucher Attributes	Set batch processing options for prepayments and withholding.
Voucher - Payments	VCHR_PAYMENT_PNL	Accounts Payable, Vouchers, Add/Update, Regular Entry, Payments	Schedule and record prepayments.

Creating Prepaid Vouchers

Access the Invoice Information page (Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information).

When you select a voucher style of *Prepaid Voucher*, the Invoice Information page looks different than it does when you select *Regular Voucher*. The fields that differ are:

Pay Terms

Override the payment terms, but only single payment terms with no discount are allowed. The payment terms code appears by default from the PeopleSoft Payables business unit. The payment term is validated when you click Refresh or Save.

Misc. Amount (miscellaneous amount), **Freight Amount**, and **Sales Tax** For prepaid vouchers, the nonmerchandise charges (freight, miscellaneous charges, and taxes) do not appear.

(USF) Advance Payment Option

Select Use Advance Payment in the Advance Payment Option group box. If you are creating a prepayment voucher and you are a U.S. federal agency with Enable Federal Payments field selected on the Installation Options - Payables page, the Advance Payment Option group box appears.

Note. The Voucher component (VCHR_EXPRESS) does not copy lines from the associated purchase order when you enter the purchase order number here. Purchase order business unit and purchase order ID are used as a verification step only when creating an advance payment.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," page 1033.](#)

Account

Override the account with any valid account. For prepaid vouchers, the account in the distribution line appears by default from the Prepaid Expense field on the Accounting Entry Template page.

Note. Prepaid vouchers can contain only a single voucher line and a single distribution line. The ability to insert and delete voucher lines and distribution lines is disabled for prepaid vouchers.

Setting Batch Prepayment Processing Options

Access the Voucher Attributes page (Accounts Payable, Vouchers, Add/Update, Regular Entry, Voucher Attributes).

You establish the processing options for the AP Prepayment Application process in the Prepayment group box on the Voucher Attributes Page. The two options are:

Prepayment Reference

Enter the reference number on both the prepaid voucher and the unapplied voucher so the system can match them. This is a free-form (10-character) field used to match up prepaid vouchers with unapplied vouchers.

Automatically Apply Prepayment

Select this check box to enable the system to apply unapplied vouchers to prepayments automatically during the Voucher Posting process.

These fields work together to determine whether the prepayment is to be applied to a specific voucher and whether it can be applied automatically to any other open voucher for that vendor.

Note. You can also apply the regular vouchers and prepaid vouchers manually using the Apply Vouchers to Prepayment page. Changes made on this page are updated in the VCHR_PPAY_XREF record immediately.

Batch Prepayment Application Process Logic

The AP Prepayment Application process applies prepaid vouchers and regular vouchers to each other using the Prepayment Reference field first, and then using the auto-apply (automatically apply prepayment) feature. The Prepayment Reference field and the Automatically Apply Prepayment check box can be used for both prepaid vouchers and regular vouchers. How they function depends on the voucher type.

On prepaid vouchers, the Automatically Apply Prepayment check box is selected by default and is unavailable for entry. Once you enter a prepayment reference, the Automatically Apply Prepayment check box becomes available for entry and is deselected. You now have the option to select the Automatically Apply Prepayment check box, or to leave it deselected. If you do not use the Prepayment Reference field to match prepayments and regular vouchers, the system uses the auto-apply feature.

For regular vouchers, the Automatically Apply Prepayment check box is selected by default and is available for entry. You can enter a prepayment reference and select the Automatically Apply Prepayment check box or deselect the Automatically Apply Prepayment check box. By leaving the prepayment reference blank and deselecting the Automatically Apply Prepayment check box, you can set the regular voucher to be ignored by the auto-apply feature, in which case, no prepaid vouchers are applied to it.

Prepaid and regular vouchers can have one of these possible combinations of settings for these fields. The following table lists these combinations from most to least restrictive and shows how the system applies regular vouchers and prepayments for each one:

<i>Prepayment Reference</i>	<i>Automatically Apply Prepayment Check Box</i>	<i>Prepayment Rule Applied</i>
Entered	Deselected	The system applies prepayments only where the prepayment reference on the prepaid voucher is equal to the prepayment reference on the unapplied voucher.
Entered	Selected	The system first applies prepayments where the prepayment reference on the prepaid voucher is equal to the prepayment reference on the unapplied voucher. If no matches exist, if there is a remaining prepayment to be applied, or if there are remaining unapplied voucher amounts, the system applies prepayments automatically.
Blank	Selected	The system applies prepayments to unapplied vouchers automatically.

<i>Prepayment Reference</i>	<i>Automatically Apply Prepayment Check Box</i>	<i>Prepayment Rule Applied</i>
Blank	Blank	This option can only be used for regular vouchers. The system does not apply the regular voucher to any prepayments.

Chapter 30, "Processing Prepayments," Applying Final Invoices to Prepayments, page 906

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Completing Voucher Attributes, page 373

Specifying VAT and Withholding on Prepayments

Access the Voucher Attributes page (Accounts Payable, Vouchers, Add/Update, Regular Entry, Voucher Attributes).

VAT and withholding work much the same way with prepaid vouchers as they do with regular vouchers with a few exceptions.

Withholding on Prepayments

You can postpone the withholding on a prepaid voucher by selecting the Postpone Withholding check box in the Prepayment group box on the Voucher Attributes page.

Postpone Withholding

Select to postpone withholding until you process the final invoice. This field is also stored on the PS_VCHR_PPAY_XREF table.

If withholding is postponed (that is, withholding does not occur on the prepaid voucher), withholding occurs on the regular voucher using the total of the regular schedule rows and the related applied rows.

If withholding is not postponed, (that is, if withholding occurs on the prepaid voucher) when the regular voucher is processed, only the non-applied rows are used as a basis for withholding.

Note. When there is withholding on a prepaid voucher (that is, when withholding is *not* postponed), the full gross amount of the prepaid voucher (not the amount of the payment to the vendor) is available for application to regular vouchers.

VAT on Prepayments

The accounting entries for prepayments also differ when they involve VAT. When the applied regular voucher is posted, all of the accounting entries for the associated prepayment vouchers are reversed, including the VAT accounting entries.

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Completing Voucher Attributes, page 373

Chapter 43, "Resolving Complex Withholding Scenarios," Calculating Withholding on Prepayments, page 1197

Scheduling and Recording Prepayments

Access the Voucher - Payments page (Accounts Payable, Vouchers, Add/Update, Regular Entry, Payments).

PeopleSoft Payables treats prepaid vouchers like regular vouchers with some slight modifications with respect to payments. Schedule payments for prepaid vouchers using the Payments page, and then the Pay Cycle process picks up the scheduled payment and generates an actual check.

You can also record payments for prepaid vouchers using the Payments page. Use the record payment feature to record checks that were processed outside PeopleSoft Payables.

To schedule the payment for a prepayment:

1. Enter a prepaid voucher for 1000.00 USD using a unique prepayment reference number in the Prepayment Reference field.
2. Run the Pay Cycle process and the system produces a check that you can mail to the vendor.
3. Receive a final voucher for 2001.00 USD.
4. Enter a regular voucher using the same prepayment reference number that you used on the prepaid voucher.
5. When you run the Voucher Posting process, it automatically calls the AP Prepayment Application process which applies the two vouchers to one another.

Run the Pay Cycle process to create a second check for 1001.00 USD.

Note. You can also manually apply the vouchers, and the Pay Cycle process creates the second check.

To record the payment for a prepayment

1. Write a check and give it to the vendor.

(Assume a vendor needs a check for a deposit of 1000.00 USD immediately).

2. Enter a prepaid voucher.

On the Payments page, change the value in the Action field to *Record*, and enter the check number of the manual check.

3. Enter the final voucher when it comes in, and if you are using the Prepayment Reference field, the AP Prepayment Application process applies the two vouchers to each other during the Voucher Posting process.
4. The system issues a check to the vendor for the remainder amount when you run the Pay Cycle process.

Fields that Differ on the Payments Page

Prepayment

Click this link to access the Apply Vouchers to Prepayment page. You can search for and apply eligible regular vouchers to a prepaid voucher. The link is enabled after the voucher is posted.

Discount

Discounts are not permitted on the payment for a prepaid voucher, so the Discount, Net Due, and Discount Due fields are unavailable for entry when you are entering a prepaid voucher.

Note. Prepaid vouchers can only be paid with a single payment. The ability to insert and delete payments is disabled for prepaid vouchers. Also note that prepaid vouchers cannot be paid with an express payment.

Applying Final Invoices to Prepayments

This section describes how to:

- Apply prepaid vouchers manually.
- Search for eligible vouchers.

Pages Used to Apply Final Invoices to Prepayments

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Apply Vouchers to Prepayment	PPAY_MANUAL_APPLY	Accounts Payable, Payments, Manual Payment and Prepayment, Apply Vouchers to Prepayment	Apply and unapply vouchers manually to prepaid vouchers.
Voucher Prepayment Search	VCHR_PPAY_SRCH	Click the Apply new vouchers to payment link on the Apply Vouchers to Prepayment page.	Search for regular vouchers that are eligible for application to a prepaid voucher.

Applying Prepaid Vouchers Manually

Access the Apply Vouchers to Prepayment page (Accounts Payable, Payments, Manual Payment and Prepayment, Apply Vouchers to Prepayment).

Apply Vouchers to Prepayment

Prepayment					
Business Unit:	US001	Currency:	USD	Prepaid Voucher

[Unapply](#)

Apply Vouchers to Prepayment page

Note. Prepaid vouchers must be paid before you can apply regular vouchers to them. Also note that if you apply vouchers manually, the reversal accounting entries are *not* created at the time of application; they are not created until you run the Voucher Posting process.

Prepayment

Contains details for the prepaid voucher.

Prepaid Voucher Click to access the Voucher - Summary page where you can view the prepaid voucher.

Total applied Displays the total amount of the regular vouchers that you have applied to the prepaid voucher.

Pending Application Displays the amount of the regular vouchers that you have copied from the Voucher Prepayment Search page but which you have not yet applied to the prepaid voucher.

Available Amount Displays the amount of the prepaid voucher that is still available for application to a regular voucher.

Applied Voucher

Contains details for the regular applied voucher.

Applied Voucher Displays the voucher ID for the regular voucher. Click to access the Voucher - Summary page where you can view the regular voucher.

Payment Count Displays the payment count of the scheduled payment for this regular voucher.

Schedule Amount	Displays the amount and currency of the scheduled payment for this regular voucher.
Applied Amount	Enter the amount of the regular voucher that you want to apply to the prepaid voucher. When you copy the voucher from the Voucher Prepayment Search page, this field is available for entry. Apply a partial amount or the full amount of the voucher. Once you apply the regular voucher to the prepaid voucher, this field becomes display-only, and shows you the amount and currency of the regular voucher that you have applied to the prepaid voucher.
Select for Unapply	Select to unapply a regular voucher from the prepaid voucher. Note. You must unpost regular vouchers before you can unapply them. The Select for Unapply check box is unavailable for regular voucher payment schedules that have been fully paid. Note. You must cancel the payment before you can unapply the regular voucher payment schedule.
Reversal Posting Status	Displays the status of the reversal accounting entries for the applied voucher. Values are: <i>Not Applied</i> (payment not applied): The regular voucher has not been applied to the prepaid voucher. <i>Unposted</i>: The regular voucher has been applied, but no reversal accounting entries have been created for it. <i>Posted</i>: The regular voucher has been applied to the prepaid voucher, and reversal accounting entries have been generated for it. Note. You must unpost regular vouchers before you can unapply them.
	Click to delete the row. You can only delete rows that have <i>not</i> been applied to a prepaid voucher.
Apply new vouchers to payment	Click to access the Voucher Prepayment Search page, where you can search for regular vouchers that are eligible to be applied to the selected prepaid voucher. This link becomes unavailable once the available amount is 0.00.
Apply All	Click to apply all of the vouchers pending application. Note. The sum of the vouchers selected for application cannot exceed the available amount of the prepaid voucher.
Unapply	Click to unapply the vouchers that you have selected for unapply.

Note. When you click the Apply All or Unapply buttons, the system saves the page and applies or unapplies the selected vouchers accordingly. If you save the page without clicking the Apply or Unapply buttons, the system does not apply or unapply the selected regular vouchers.

Searching for Eligible Vouchers

Access the Voucher Prepayment Search page (click the Apply new vouchers to payment link on the Apply Vouchers to Prepayment page).

☐	1								

Voucher Prepayment Search page

The system only searches for regular vouchers with the same business unit, invoicing vendor, and transaction currency as the prepaid voucher.

Additional Eligibility Criteria for Regular Voucher

To be eligible, regular vouchers must have the following characteristics:

- Approved.
- Entry status of *Postable*.
- Valid budget status.
- Voucher style of *Regular*.

Additional Eligibility Criteria for Regular Voucher's Payment

To be eligible, regular vouchers payments must have the following characteristics:

- Available for payment.
- Prepaid status of *Unapplied*.
- Not on hold or on withhold hold.

- Netting select status of *Applicable*.
- Gross amount of greater than zero.

The business unit, invoicing vendor, and transaction currency of the prepaid voucher appear at the top of this page.

Copy/Back

Click this link to copy selected regular vouchers to the Apply Vouchers to Prepayment page.

Search Criteria

Voucher ID

Search for eligible regular vouchers by voucher ID or invoice ID.

Apply Method

Indicate which vendor the system should use when applying prepaid vouchers to regular vouchers. Values are:

Invoicing Vendor: The system performs application based on the invoicing vendor of the prepaid and regular voucher. This is the default value.

Remit Vendor: The system performs application based on the remit vendor of the prepaid and regular voucher.

Note. You must select the invoicing vendor or remit vendor prior to entering either the voucher ID or the invoice ID.

Date From and Date To

Use to search for eligible vouchers whose invoice date falls within a specified range of time.

Apply Vouchers to a Prepayment

Displays details about the regular vouchers that your search produced.

Payment Information

Displays details about the scheduled payments for the regular vouchers that your search produced.

Select

Select for the scheduled payments that you want to copy to the Apply Vouchers to Prepayment page. The selected rows are copied when you click the Copy/Back button at the top of the page.

Generating Final Payments

After you apply the prepaid vouchers to the regular vouchers, run the Pay Cycle process to create the final payment. The system treats the applied voucher just as it treats any other regular voucher during payment selection.

You can also pay the balance of an applied regular voucher with a manual check. Use the Payments page or the Payment Creation feature to record manual payments.

Applied prepaid vouchers appear on the payment advice for the applied regular voucher.

This section lists the pages used to generate final payments.

Reviewing Prepayments

You can review prepayments using several inquiry pages and reports.

This section discusses how to:

- Inquire on prepayments.
- Report on prepayment settlements.

Pages Used to Review Prepayments

Page Name	Definition Name	Navigation	Usage
Prepayment Inquiry	PREPAYMENT_INQ2	Accounts Payable, Review Accounts Payable Info, Payments, Prepayments, Prepayment Inquiry	Review regular vouchers that have been applied to a prepayment.
Open Prepayments Report	RUN_APY2100	Accounts Payable, Reports, Prepayments, Open Prepayments	Define run parameters for the Open Prepayments report (APY2100). Use this report to review unapplied prepaid vouchers.

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Prepayment Settlements Report	RUN_APY2101	Accounts Payable, Reports, Prepayments, Prepayment Settlements	Define run parameters for the Prepayment Settlement report (APY2101). Use this report to review regular voucher payment schedules that have been settled (fully applied).

Inquiring on Prepayments

Access the Prepayment Inquiry page (Accounts Payable, Review Accounts Payable Info, Payments, Prepayments, Prepayment Inquiry).

Enter your search criteria and click Search to retrieve a list of vouchers that meet your criteria. The system displays voucher information, including the payment schedule number, in the Search Results.

The system uses the payment schedule number to properly display payment information for the voucher. For example, you enter a prepayment voucher for a withholding vendor. The first schedule payment is paid to the vendor. The second schedule payment to the withholding entity has not been paid. When you inquire on the prepayment for the first schedule payment, the system displays the payment date and reference number. When you inquire on the prepayment for the second schedule payment, the system does not display any information in the payment date and reference number.

Prepaid Voucher

Displays information associated with the prepayment voucher.

Business Unit	Displays the business unit that is used when the prepayment voucher was entered.
Bank SetID	Displays the bank setID that is associated with the bank code and account that was used for this prepayment.
Voucher ID	Displays the voucher ID that is associated with the prepayment voucher.
Bank Code	Displays the bank code for the account on which the prepayment was drawn.
Gross Amount	Displays the amount of the prepayment that was created for this voucher.
Bank Account	Displays the account on which the prepayment was drawn.
Payment Date	Displays the date that the prepayment was processed.
Reference	Displays the check number of the prepayment.
Balance	Displays the balance remaining on the prepayment. (That is, the prepayment amount less the applied amounts).

Applied Voucher

Displays information related to the regular applied vouchers.

Applied Business Unit	Displays the business unit in which the applied voucher was entered.
Applied Voucher	Displays the voucher ID for the applied vouchers.
Gross Invoice Amount	Displays the gross amount of the applied voucher.
Applied Amount	Displays the amount of the regular voucher that has been applied to the prepaid voucher.
Reversal Posting Status	Displays the status of the reversal accounting entries for the applied voucher.

Reporting on Prepayment Settlements

Access the Prepayment Settlements Report page (Accounts Payable, Reports, Prepayments, Prepayment Settlements).

Vendor Range

From Vendor ID and To Vendor ID	Enter the from and to vendor IDs to restrict the report to single vendor or a range of vendors.

Date Range

From Date and Through Date	Enter the from and through dates to restrict the report to a single date or a range of dates.

Chapter 31

Processing Drafts

This chapter provides an overview of draft processing, lists common elements, and discusses how to:

- Create drafts manually.
- Manage drafts.
- Reconcile and approve drafts.
- Review drafts.

Understanding Draft Processing

This section discusses:

- Draft payment process flow.
- Sight codes.
- Vendor-initiated draft process.
- Customer-initiated draft process.
- Customer-initiated electronic fund transfer (EFT) draft process.
- Draft numbering.
- Draft maturity date calculation and processing.
- Draft staging process.
- Draft rounding calculation.
- Draft optimization (stamp tax minimization).
- Stamp tax calculation.
- Draft approval.
- Draft bank reconciliation and approval.
- Draft EFT bank files and EFT answer files.
- Draft statuses.
- Draft accounting entries.

- Draft accounting entries for value-added taxes (VAT).
- Draft write-offs.
- Draft processing limitations.

Draft Payment Process Flow

Drafts are used throughout the world in commercial transactions involving a customer or vendor who agrees to pay a specified amount on a certain day. Drafts are payments that are dated for some time in the future—usually in 30, 60, 90, or 120 days. PeopleSoft Payables currently supports customer-initiated electronic funds transfer (EFT) and vendor-initiated drafts, and enables you to manage and process these draft payments efficiently.

Before the draft due date, the system produces a draft that includes the draft identification number, the draft amount, and the draft maturity date. You send this draft to your vendor. About 10 days before the draft maturity date, the vendor submits the draft to its bank for collection and the vendor's bank asks your bank to honor the draft. When your bank verifies the funds, it pays the draft. PeopleSoft Payables checks for drafts that have matured at payment posting and changes the draft status of those matured drafts from *Approved* to *Due*.

This flowchart illustrates the draft payment process in PeopleSoft Payables:

Draft Payment process

See Also

[Chapter 6, "Setting Up Payment Formats and Payment Forms," Available PeopleSoft Payables Payment Formats, page 110](#)

Sight Codes

The sight code references the agreed-upon payment terms between you and your vendor. Sight codes are similar to accounts payable and accounts receivable payment terms, such as NET30, except that sight codes do not use discounts. You can maintain your default sight codes at the business unit, origin, and vendor levels of the PeopleSoft default hierarchy.

Vendor-Initiated Draft Process

You always create Bill of Exchange (BOE) or vendor-initiated draft payments manually. After you record the draft information, PeopleSoft Payables creates the draft payment and generates the accounting entries. To create drafts manually, first create a draft identification number (draft ID) on the Create Manual Draft page and select the vendor. The system builds a worksheet that identifies scheduled payments that can be included on the draft. You select the scheduled payment to include for the draft.

Note. The Pay Cycle Application Engine process (AP_APY2015) does not process vendor-initiated drafts.

Vendor-initiated drafts differ from the check payment method because the vendor initiates payment and the draft is drawn against your bank account with a future due date—typically payable in 90 days. Upon the settlement date of the draft (at 90 days), you can assume that the whole amount of the draft has been withdrawn from your account.

Two types of vendor-initiated drafts are available: unapproved and preapproved. When a draft is unapproved, the vendor must send you the draft; however, when a draft is approved, no action is required on your part. You assume that your vendor will still send you a nonnegotiable draft as information.

A draft is not always sent with the invoice that it pays. In fact, a draft might be issued for several hundred individual invoices. The invoices might have been entered before the draft is received. In this case, upon receiving the draft, you must associate the draft payment with the appropriate invoices. You assume that your vendor always informs you about which invoices are being paid by the draft.

When vendor-initiated drafts are processed, the vendor might not send a voucher, because a draft notice can suffice for a voucher. If you receive a voucher, you enter it and select *Vendor Draft* as the payment method. The system computes the scheduled due date, the maturity date, or the scheduled maturity date based on the usual terms and the sight code (if used). The date might not be the actual date of the draft when it is issued, but it gives an estimate for forecasting. When you manually create draft payments, you enter the actual draft issue date and the draft settlement date.

Note. If you haven't prearranged with your bank to receive a bank information file, you do not need to run the Draft Reconciliation and Approval process (PYMNT_APPR_RECON). Depending on whether the Draft Issue Approval Required check box is selected in the Payables options, however, you may need to run the Draft Reconciliation and Approval process to promote the draft status from C (created) to A (approved) before you can run the Payment Posting Application Engine process (AP_PSTPYMNT).

[Chapter 6, "Setting Up Payment Formats and Payment Forms," Drafts, page 115](#)

[Chapter 21, "Processing Pay Cycles," Reviewing Draft Payments, page 677](#)

Customer-Initiated Draft Process

Bills of Order (BOO), or customer-initiated draft payments, are usually created by the Pay Cycle process, which you schedule to run according to your needs. The Pay Cycle process sequentially evaluates the vouchers in the PS_PYMNT_VCHR_XREF table, selects the payment schedules to be processed using the criteria that you establish, and then creates draft payments. If stamp tax minimization is applicable, PeopleSoft Payables splits the draft master and assigns sibling system draft identification numbers.

Customer-initiated drafts are most often processed by the Pay Cycle process and go through the approval process at that time. Drafts must be either in the *Approved* or *Created* status before they can be paid and accounting entries can be generated. If you don't require draft approval, you can select *Preapprove* on the Draft Options page of the Payment Selection Criteria component (PYCYCL_DEFN) before you start the Pay Cycle process. Preapproved drafts are created in the *Approved* status when the Pay Cycle process runs.

You can also create customer-initiated drafts manually on the Create Manual Draft page. You create manual customer-initiated drafts in the same way that you create vendor-initiated drafts.

[Chapter 21, "Processing Pay Cycles," Running and Managing Pay Cycles, page 650](#)

[Chapter 21, "Processing Pay Cycles," Reviewing Draft Payments, page 677](#)

Customer-Initiated EFT Draft Process

Customer-initiated EFT drafts are processed in PeopleSoft Payables much the same way that customer-initiated drafts are processed, except that you don't print the drafts. Instead of printing drafts, you send an EFT file to your bank when the draft payment is due. Your bank pays the draft on the draft maturity date.

Note. If you haven't prearranged with your bank to receive a bank information file, you do not need to run the Draft Reconciliation and Approval process; however, you do need to run the Draft Reconciliation and Approval process to promote the draft status from *C* (created) to *A* (approved).

See Also

[Chapter 31, "Processing Drafts," Draft Approval, page 927](#)

Draft Numbering

PeopleSoft Payables assigns a reference identification number—similar to a check number—to each draft. This reference number varies by draft type and business unit. PeopleSoft Payables prints this number on drafts, and you use it in your communication with your vendor as a means of identifying the draft. However, if you use preprinted stationery or vendor-initiated drafts, the number is already printed on the draft. In this case, you manually enter the preprinted number in the system as the draft identification number. You set up the draft reference number on the External Accounts - Payment Methods page when you set up bank information.

Automatic Draft Master Numbering

After you define the draft master ID, the Draft Staging process uses it to identify the payment schedule for a vendor for a group of drafts. To find the next master ID, you can use auto-numbering to search for a DTFP (or master draft ID). You set up your draft numbering scheme using the Auto Numbering (automatic numbering) page.

Draft Control Numbering

The draft control number is a system-assigned number that you use for auditing or internal control. During payment creation, the system assigns the draft control number, which is usually the same as the draft reference number. You can manually modify or override these numbers on the Draft Info Update (draft information update) page.

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Defining Financials and Supply Chain Management Common Definitions," Setting Up Automatic Numbering

Draft Maturity Date Calculation and Processing

When you save a voucher, PeopleSoft Payables automatically calculates the draft maturity date and the draft scheduled maturity date using the scheduled due date, sight code, and holiday values.

For example, suppose that your vendor's sight code is two months and the basis date for this sight code is the scheduled due date. The scheduled due date for the payment is March 21. After the system calculates the draft maturity date, the draft maturity date is May 21 (March 21 plus two months). Because May 21 is a bank holiday, the draft scheduled maturity date is adjusted one day, making the adjusted maturity date May 22. The draft scheduled maturity date is used by the Payment Posting process to create settlement accounting entries, to debit draft clearing accounts, and to credit cash accounts.

Now suppose that you have two vouchers from the same vendor with the following information:

<i>Description</i>	<i>Field Name</i>	<i>Date</i>
Scheduled pay date	SCHEDULED_PAY_DT	September 1, 2006
Draft maturity date	DFT_MAT_DT	October 1, 2006
Draft scheduled maturity date	DFT_SCHED_MAT_DT	October 2, 2006 (assuming the maturity date October 1 is a Sunday)

If you create a payment for these two vouchers in the Pay Cycle process, the payment will have the following dates:

<i>Description</i>	<i>Field Name</i>	<i>Date</i>
Draft issue date	CREATION_DT	September 1, 2006
Draft maturity date	DFT_MAT_DT	October 1, 2006
Payment date	PYMNT_DT	October 2, 2006

Note. You can manually override the draft maturity date and the adjusted draft scheduled maturity date during scheduled payment, but the voucher payment schedule due date must be before or equal to the draft maturity date or the adjusted draft scheduled maturity date.

Draft Staging Process

When the Pay Cycle process runs, the Draft Staging Application Engine process (AP_DFT_PROC) can occur between payment selection and payment creation. The Draft Staging process groups scheduled payments and creates a temporary or virtual view of split draft payments. If you start the Pay Cycle process with payment selection, you must follow it with the Draft Staging process. If you start the Pay Cycle process with payment selection and payment creation, the Draft Staging process runs automatically. Depending on whether you have selected the Preapprove check box on the Draft Options page of the Payment Selection Criteria component, draft payment can ultimately be created with a *C* (created) or *A* (approved) status. After the Draft Staging process runs, you can review the scheduled payments on the Draft Staging Approval page, where you can approve or reject draft payments at the draft master level.

Because payments shown in the Draft Staging process have not yet been physically created or split (if you are using draft optimization), you can still reject the draft. If you approve the payment from the staging table, then the Payment Creation process creates a physical payment record, entering drafts with a status of *C* (created) or *A* (approved), based upon the approval option you selected on the Draft Options page in the Payment Selection Criteria component. For rejected draft payments, the status is returned to *Unselect* and the draft payment can be picked up during the next pay cycle.

[Chapter 21, "Processing Pay Cycles," Reviewing Draft Payments, page 677](#)

Draft Rounding Calculation

Draft rounding enables you to control at what point a draft is issued for payment, as well as the alternate payment method that is used for payments that do not meet your specifications. Draft rounding is specified for a vendor location on the Vendor Information - Payables Options page in the Draft Processing Control group box of the Additional Payables Options section and on the Draft Options page in the Payment Selection Criteria component.

To apply the draft rounding rules that you specify in the Payment Selection Criteria component, you must already have selected *Use Pay Cycle Default* for the vendor in the Draft Rounding field on the Vendor Information - Payables Options page. If you select *Do Not Use*, draft rounding does not occur for the vendor. If you select *Specify* and enter a rounding position, the Pay Cycle process uses that value. When the Pay Cycle process runs, draft rounding rounds down to the whole value that you specify in the Rounding Position field for the vendor or in the Payment Selection Criteria component, depending on the preceding criteria.

If you select draft rounding, the system totals the amount of scheduled payments, rounding to the number of positions that you specify. Any remaining amount is either not paid during the pay cycle or is scheduled for payment by an alternate payment method. You specify how you want to handle the remaining amount in the Remaining Amount Action field on the Vendor Information - Payables Options page and the Draft Options page. The default relationship between the vendor and the payment selection criteria is the same as for the draft rounding position.

Here is an example of how draft rounding calculation works. Suppose that you have two vendors that you pay by draft.

You have specified the following rounding options for Vendor A:

- Number of rounding positions: 5.
- Remaining amount action: do not issue draft.

You specified the following rounding options for Vendor B:

- Number of rounding positions: 4.
- Remaining amount action: alternate pay method.
- Payment method: check.

When the Pay Cycle process runs, the system finds the following scheduled payments for the vendors:

<i>Remit Vendor</i>	<i>Draft Master ID</i>	<i>Scheduled Payment</i>
Vendor A	0001	3,000
Vendor B	0002	1,000,000
Vendor B	0002	3,001,500

Draft rounding calculation determines whether the total payment amount is over the rounding position value and, if so, what happens to the remaining amount. For the purposes of this example, draft rounding totals the scheduled payment amount for Vendor B and determines that the draft payment is over the rounding position value.

After rounding, these are the scheduled payments:

<i>Remit Vendor</i>	<i>Draft Master ID</i>	<i>Scheduled Payment</i>	<i>Issue Draft?</i>	<i>Alternate Payment Method</i>
Vendor A	0001	3,000	No	None
Vendor B	0002	1,000,000	Yes	None
Vendor B	0002	3,000,000	Yes	None
Vendor B	0002	1,500	No	Yes (check)

- Because Vendor A's rounding position is set at 5, no draft is issued for the scheduled payment until the payment amount is equal to or greater than 100,000.
- Because Vendor B's rounding position is set at 4, drafts are issued for the scheduled payments, because they are greater than the rounding position.

Because the scheduled payment amount of 1,500 has exactly four positions, it is paid by check because the alternate payment method option is selected.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information," Defining Vendor Locations

Draft Optimization (Stamp Tax Minimization)

Draft optimization, or stamp tax minimization, is primarily applied to Japanese domestic drafts and is performed during the Draft Staging process. Stamp tax minimization reduces tax liability by splitting draft payments and determining the optimum number and denominations of drafts. Currently, stamp tax minimization uses the Japanese yen as the payment currency, and it uses the current Stamp Tax table, which is updated by Japan's Ministry of Finance to determine the stamp tax amount. You maintain the Stamp Tax table on the Stamp Tax page.

During draft staging, PeopleSoft Payables summarizes the payment schedule information, based on the criteria that you specify in the pay cycle selection criteria. The system determines the optimal number of drafts by using the draft master amount, the Stamp Tax table, and the maximum number of drafts that you specify. The Draft Staging process runs draft rounding, if applicable, and then runs stamp tax minimization. Drafts are then put into the staging table.

Note. Specify the Group Code on the Draft Maturity Date page to group payment schedules manually into one draft. Select the Separate Payment check box on the Additional Payables Options collapsible region on the Vendor Information - Payables Options page to create one draft for one payment schedule. You can preview, approve, or reject split draft payments on the Draft Staging Approval page.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information," Defining Vendor Locations

Stamp Tax Calculation

Stamp tax calculation is based on the rules that you specify on the Stamp Tax Rule page in the Stamp Tax component (APD_STAMP_TAX_COM), and the Stamp Tax table associated with those rules on the Stamp Tax page. Here is an example with sample Stamp Tax table values:

<i>Draft Amount From</i>	<i>Draft Amount To</i>	<i>Stamp Tax Amount</i>
1	99,999	0

<i>Draft Amount From</i>	<i>Draft Amount To</i>	<i>Stamp Tax Amount</i>
100,000	1,000,000	200
1,000,001	2,000,000	400
2,000,001	3,000,000	600
3,000,001	5,000,000	1,000
5,000,001	10,000,000	2,000
10,000,001	20,000,000	4,000

Suppose that these are the stamp tax rules for the Stamp Tax table:

<i>Draft Amount From</i>	<i>Draft Amount To</i>	<i>Draft Split?</i>	<i>Draft Split Amount</i>
1	2,999,999		
3,000,000	4,099,999	Yes	3,000,000
4,100,000	4,999,999		
5,000,000	9,099,999	Yes	5,000,000

Here are two stamp tax scenarios:

Scenario A

The scheduled payment is for 8,400,000 JPY with a maximum number of drafts set to 4. When draft optimization runs for the scheduled payment, the following drafts are created:

<i>Number of Drafts</i>	<i>Draft Amount</i>	<i>Stamp Tax Amount</i>
1	5,000,000	1,000
2	3,000,000	600
3	400,000	200

<i>Number of Drafts</i>	<i>Draft Amount</i>	<i>Stamp Tax Amount</i>
Total	8,400,000	1,800

Draft optimization performs the following actions:

1. Reviews the total value of the scheduled payment, and then finds the stamp tax rule that applies to the total amount.

The total amount falls between the 5,000,000 to 9,099,999 range; drafts in this range are split at 5,000,000, giving us one 5,000,000 draft.

2. Checks the Stamp Tax table in the PeopleSoft system and determines that drafts for 5,000,000 are subject to stamp tax minimization in the amount of 1,000.

This leaves a sum of 3,400,000.

3. Evaluates the stamp tax rules and finds that this amount falls within the 3,000,000 to 4,999,999 range.

Drafts in this range are split at 3,000,000, giving us another draft of 3,000,000.

4. Checks the Stamp Tax table and determines that this amount is subject to stamp tax minimization in the amount of 600.

This leaves a sum of 400,000.

5. Checks the Stamp Tax table and determines that this amount is subject to stamp tax minimization in the amount of 200.

Scenario B

The scheduled payment is for 8,400,000 JPY with a maximum number of drafts set to 2. When draft optimization is performed for the scheduled payment, the following drafts are created:

<i>Number of Draft</i>	<i>Draft Amount</i>	<i>Stamp Tax Amount</i>
1	5,000,000	1,000
2	3,400,000	600
Total	8,400,000	1,600

Draft optimization performs the following actions:

1. Reviews the total value of the scheduled payment, then finds the stamp tax rule that applies to the total amount.

The total amount falls between the 5,000,000 to 9,099,999 range.

Drafts in this range are split at 5,000,000, so the system creates one 5,000,000 draft.

2. Checks the Stamp Tax table and determines that drafts for 5,000,000 are subject to stamp tax minimization in the amount of 1,000.

This leaves a sum of 3,400,000.

3. Evaluates the stamp tax rules and finds that this amount falls within the 3,000,000 to 4,999,999 range.

Drafts in this range are split at 3,000,000, so the system creates another draft of 3,000,000.

4. Checks the Stamp Tax table and determines that this amount is subject to stamp tax minimization in the amount of 600.

Because you specified that the maximum number of drafts for this vendor is two, the payment is not split any further.

Your vendor pays the stamp tax to the appropriate taxing authority. You can view stamp tax detail on the Draft Payment Inquiry - Draft Detail page, or on the Draft Create Detail - Stamp Tax Summary report (APY2054), Drafts Create Detail report (APY2053), and Drafts Create Summary report (APY2056).

Note. Review drafts after they are split on the Draft Staging Approval page. After a draft has been split, the system assigns the split drafts with the same draft master number. You cannot delete a single split payment created as a result of draft optimization. You must delete the entire payment by draft master number. Therefore, in the preceding example with two drafts created after draft optimization, you could not delete only the second draft. You would need to delete the entire draft payment.

See Also

Chapter 9, "Setting Up Draft, Payment, and Voucher Processing," Setting Up Draft Processing, page 197

Draft Approval

Draft approval is performed for vendor-initiated drafts, customer-initiated drafts, and customer-initiated EFT drafts. You can review and approve draft payments either before or after payment creation. If you select the Preapprove check box on the Payment Selection Criteria - Draft Options page, the system sets the draft status to *A* (approved) after the payment is created. If you do not select the Preapprove check box, the system sets the draft status to *C* (created), and you must approve the draft manually.

Reviewing and Approving Drafts Before Payment Creation

During pay cycle, select the *Payment Selection* value on the Pay Cycle Manager page.

After payment selection, run the Draft Staging process to group drafts and to perform draft optimization and rounding.

After draft staging, go to the Draft Staging Approval page, where you can review the draft payments and approve them before payment creation.

Reviewing and Approving Drafts After Payment Creation

If your bank does not send you a bank file containing draft details, you can approve drafts in the following way:

1. After you run the Pay Cycle process or create drafts manually, use the Draft Approval page to manually update the draft status from *Created* to *Approved*.

Depending on the option that you select on the Payables Options - Payment Options page, the system may require a status of *Approved* before it can generate accounting entries in the Payment Posting process.

2. Run the Payment Posting process to create accounting entries.

If your bank does send you a bank file containing draft details, you can approve drafts in the following way:

1. When your bank transmits an electronic file to you that contains the draft detail, use the Draft Reconciliation and Approval - Draft Approval page to perform draft approval.
2. Review draft payments that the automatic reconciliation process matches.
3. Accept, reject, or partially pay payments.

The approval process updates the status for all accepted drafts with the *Approved* status so that the Payment Posting process can generate accounting entries.

4. Use the Prepare Bank Answer File page to create a bank answer file for those draft payments with exceptions, and send the bank answer file to your bank.
5. Run the Payment Posting process to create accounting entries.

Chapter 31, "Processing Drafts," Reconciling and Approving Drafts, page 950

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining Payment Options, page 65

Chapter 21, "Processing Pay Cycles," Running and Managing Pay Cycles, page 650

Chapter 23, "Running Voucher and Payment Posting," Running the Payment Posting Process, page 756

Draft Bank Reconciliation and Approval

You perform draft reconciliation and approval prior to the bank paying the draft. If exceptions exist, the bank does not pay the draft until you resolve the exception. The bank reconciliation process occurs after the bank pays the vendor and issues you a bank statement. When you receive your bank statements, reconciling draft payments is no different from reconciling any other payment type within PeopleSoft Payables. During bank reconciliation, you reconcile the payment information with the actual bank remittance.

If you have arranged with your bank to receive an electronic bank file containing the details relating to scheduled draft payments, you can use the Draft Recon and Approval (draft reconciliation and approval) component (PYMNT_APPR_RECON) to review and approve those draft payments that are coming due. If your bank does not send you a bank file containing draft details, approve your drafts manually. When the draft is due, review it on the Draft Approval page and manually change the draft status to *Approved* by selecting the Approve check box.

Automatic draft reconciliation and approval occurs when your bank transmits an electronic bank file to you that contains the draft detail. You import the bank file by selecting PeopleTools, EDI Manager, Monitor EDI Processing, Schedule Inbound EC Agent. The Draft Reconciliation and Approval process performs matching against the bank file by selecting each draft payment. It then updates the status for all accepted drafts with the *Approved* status so that the Payment Posting process can generate accounting entries. The Draft Reconciliation and Approval process automatically matches drafts with the following equivalent parameters:

- The draft number on the payment in PeopleSoft Payables must exactly match the draft number in the bank file.
- The due date in PeopleSoft Payables can be less than or equal to the due date in the bank file.
- The amount of the payment in PeopleSoft Payables must exactly match the draft amount in the bank file.

The Matching Application Engine process (AP_MATCH) populates the Draft Reconciliation page with draft data, and it selects the drafts that do not match, citing a reason code. If the draft number and amount match, and the due date is later or equal to the due date in PeopleSoft Payables, then the draft is marked as *Approved*.

Note. The system requires a reject code for drafts that are not matched or that are rejected.

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Reconciling Statements"

PeopleTools PeopleBook: Supported Integration Technologies

Draft EFT Bank Files and EFT Answer Files

If you have arranged with your bank to process drafts electronically, your bank sends you an EFT file containing the payment information and it requests confirmation within a specified time. Select PeopleTools, EDI Manager, Monitor EDI Processing, Schedule Inbound EC Agent to load the EFT file from the bank into PeopleSoft Payables. The Draft Reconciliation and Approval process matches drafts in PeopleSoft Payables against drafts in the bank file.

Review exceptions on the Draft Recon and Approval - Draft Exceptions (draft reconciliation and approval - draft exceptions) page. When reviewing draft payment exceptions, you have two choices:

- You can reject the entire amount.
- You can pay only the amount entered in PeopleSoft Payables, rejecting the remaining balance.

After you review draft exceptions, use the Prepare Bank Answer File page to create a bank answer file. Select PeopleTools, EDI Manager, Monitor EDI Processing, Schedule Outbound EC Agent to respond to your bank by the deadline. If you don't send the bank answer file to your bank, the bank assumes that you agree that the draft information is correct and pays your vendor.

Note. If the draft maturity date is earlier than or the same as the date specified in the bank file, the draft maturity date criteria are met.

Draft Statuses

This table describes the draft statuses:

<i>Draft Status</i>	<i>Description</i>
Create	The draft master is created and waiting to mature or be printed. During the payment posting process, the AP (accounts payable) liability account is debited, and the draft payable account is credited.
Approve	The draft has been manually or automatically approved during pay cycle.
Due	The draft has reached maturity. During the payment posting process, the draft payable account is debited, and the cash account is credited.
Reconcile	Bank reconciliation has been performed, and the draft has been date stamped.
Cancel	The draft has been canceled, and no accounting entries have been created.
Write Off	The draft has been approved and posted, but draft collections or exchange of draft occurs before the maturity date settlement. You can specify the write-off account and write-off date. The maturity date settlement does not happen when the draft is written off.

The draft status determines the processing characteristics for the draft and also determines how the system generates accounting entries. Drafts in PeopleSoft Payables have their own type of accounting entry because your cash account should not be credited immediately. When a draft is created, a temporary account (draft payable) is credited until the draft is due or reconciled.

The accounting entry template defines draft payables accounts (such as draft - normal and draft - fixed asset) because you can associate multiple accounts with one bank or bank account. Draft accounts are defined at the bank account or bank account payment level.

PeopleSoft Payables assigns a document sequencing number to a draft whenever an accounting entry for a draft occurs so that you can track the life cycle of the draft payment.

[Chapter 23, "Running Voucher and Payment Posting," Understanding the Voucher Posting and Payment Posting Processes, page 751](#)

Draft Accounting Entries

You run the Payment Posting process on the draft issue date to generate accounting entries for drafts with the *Approved* or *Created* status. If the draft issue date is earlier than or the same as the current date, then the Payment Posting process debits the AP liability account and credits the draft payable account. If the draft payment date (maturity date) is earlier than or the same as the current date, then the Payment Posting process debits the draft payable account and credits the cash account.

This table lists the accounting entries that are created as each accounting event occurs:

Draft Status	Accounting Entries
<i>Approved or Created</i>	DR AP Liability (APA) CR Draft Payable (DFC)
<i>Cancellation entries</i>	DR Draft Payable (DFC) CR AP Liability (APA)
<i>Approved/Due</i>	With cash clearing: DR Draft Payable (DFC) CR Cash Clearing (CAC)
N/A	No cash clearing: DR Draft Payable (DFC) CR Cash (CAS)
<i>Cancellation entries</i>	With cash clearing: DR Cash Clearing (CAC) CR AP Liability (APA)
N/A	No cash clearing: DR Cash (CAS) CR AP Liability (APA)

Draft Status	Accounting Entries
<i>Due/Reconciled</i>	DR Cash Clearing (CAC) CR Cash (CAS)

Draft Accounting Entries for VAT

Value added tax (VAT) is recorded at draft payment posting if you enter a VAT declaration point on the invoice as the payment date. The VAT amount is calculated based on the VAT rate that was effective on the invoice date.

This table shows the accounting entries that are generated when payments include VAT:

VAT Recovery Percentage	Accounting Entries
The VAT recovery is 100 percent.	DR VAT Input Recoverable (VIR) CR VAT Intermediate Recoverable (VIIR)
The VAT recovery is less than 100 percent.	DR VAT Input Recoverable (VAT Amount * Recoverable %) (VIR) DR VAT Input Non-Recoverable (VAT Amount * (100 – Recoverable %)) (VIN) CR VAT Intermediate (VIIR) CR VAT Intermediate Non-Recoverable (VIIN)
The VAT recovery percentage is equal to 0.	DR VAT Input Non-Recoverable (VIN) CR VAT Intermediate Non-Recoverable (VIIN)
The VAT Recalculate at Payment option is set.	One or a combination of the following entries: DR Discount Taken (VIDA) CR VAT Input Recoverable (VIDR) CR VAT Input Non-Recoverable (VIDN)

Draft Write-Offs

After a draft has been approved and posted, but before the maturity date settlement, you can apply a write-off so that the maturity date settlement does not occur. Use the Draft Write-Off page to specify the write-off account and the write-off date. PeopleSoft Payables does not delete drafts that are written off from the PeopleSoft Payables system. When you run the Payment Posting process, it automatically creates accounting entries.

Draft Processing Limitations

Draft functionality has the following limitations:

- Draft processing functionality does not support the use of multiple bank layouts. During processing, if the system needs to split a scheduled payment, the system can only use the default layout code of the defined bank account payment method for the newly created scheduled payment.
- Drafts cannot be processed through the PeopleSoft Financial Gateway.

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts," Defining Payment Methods

Common Elements Used in This Chapter

Bank SetID	Displays the bank setID for a bank account.
Bank Code	Displays the bank code for a bank account.
Bank ID	Displays a bank's identification number.

Payment ID	Displays the number of the draft. <i>NEXT</i> indicates that the system generates the number, incrementing the payment ID based on the last number used for a draft.
Remit Setid	Displays the remit setID for the vendor.
Remit Vendor	Displays the name of the remit vendor.
Draft Ref (draft reference)	Displays the reference number for the draft payment. The system assigns the draft reference number when the Pay Cycle process runs or during manual draft creation. You can manually override the draft reference number on the Draft Info Update page. <i>NEXT</i> indicates that the system generates the number based on the value in the Last Ref Number (last reference number) field on the Payment Method page in the External Bank component (BANK_EXTERNAL).
Draft Control ID	Specify the draft control ID. The system assigns the same number that it uses for the draft reference number; however, you can override the draft control ID on the Draft Info Update page. You use this number for internal auditing purposes.
Draft Status	Search by draft payment status by selecting: <i>Approved</i>: Searches for only those drafts with an <i>Approved</i> status that meet other search criteria. <i>Created</i>: Searches for only those drafts with a <i>Created</i> status that meet other search criteria. <i>Both</i>: Searches for drafts with a status of either <i>Approved</i> or <i>Created</i> that meet other search criteria.
Payment Method	Select the payment method for the draft: <i>Cust Draft</i> (customer draft): Customer-initiated draft payments. <i>EFT Draft</i> (electronic funds transfer draft): EFT customer-initiated draft payments. <i>Vndr Draft</i> (vendor draft): Vendor-initiated draft payments.
Settlement Date	Displays the draft payment settlement date.
Queue Inst (queue instance)	Displays the queue instance number that is generated by the system when you run the EDI Manager Inbound EC Agent process.
Draft Maturity Date	Displays the date on which the draft matures.

Reject Code	Displays the current reason that the draft payment is rejected. You can change the reason by entering a different reject code from the list of values: 13: Draft ID not clear enough. 19: Remitted to another bank. 39: Do not pay non-appv (nonapprove) draft. 70: Litigation. 71: Already paid. 72: Wrong acceptance code. 73: Amount disputed. 74: Disagreement on due date. 75: Extended due date request. 76: Late claim. 90: Partial payment of the drawee.
Bank Report Num (bank report number)	Displays the bank report number from the bank file.
Branch ID	Displays the vendor's bank branch identification number.
Last Date to Respond	Displays the last day that you can respond to the bank file. If you do not respond by this date, the bank assumes that you agree that the payment amount is correct.

Creating Drafts Manually

This section provides an overview of manual draft creation and discusses how to.

- Create draft payments manually.
- Review manually created drafts.
- Apply vouchers to manual drafts.

Understanding Manual Draft Creation

When you receive the draft (or draft notice for preapproved drafts), enter the draft on the Create Manual Draft page. The payment date is the draft due date. When you apply the draft to the appropriate vouchers, the scheduled due date, net due date, and payment method for each voucher are corrected to match the draft issue date, maturity date, and draft payment method. The vouchers are then marked as paid. With this process, you can apply multiple vouchers to a single draft.

Note. If financial sanctions validation is enabled at the installation level or the bank level, you cannot create a manual draft worksheet if the vendor has a financial sanctions status of *Review* or *Blocked*. However, if financial sanctions validation is enabled at the bank level and you no longer validate a particular vendor's bank, the system may allow you to create a manual payment worksheet for a vendor with a financial sanctions status of *Review*. The system validates the vendor against financial sanctions lists (for example, the Specially Designated Nationals (SDN) list) when you attempt to build a manual draft worksheet.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

Withholding on Manual Drafts

In PeopleSoft Payables, you can calculate withholding at payment time or at voucher posting time by specifying a setting for the withholding entity. This withholding calculation setting appears by default on the voucher. If withholding for a voucher is set for calculation at payment time, users with the appropriate authority can override this setting to have withholding calculated at voucher posting time.

In the case of manual drafts, the system invokes the withholding calculation routine for any drafts applied to withholding-applicable vouchers. The withholding reporting tables are updated accordingly.

On the Manual Draft Creation page, you have the option of applying manual drafts only to vouchers that have already had withholding calculated at voucher posting time. If the Withholding Calculated field is selected (the default setting), the system allows you to apply manual drafts only to vouchers that are set to withhold at voucher post and that have been posted.

You can deselect this check box, in which case the system allows you to apply manual drafts to all withholding-applicable vouchers for the remit vendor, regardless of whether withholding has been calculated. The only exceptions are vouchers requiring withholding calculation at voucher post that have not been posted as yet. In this case, the system does not physically withhold, but it does update the withholding reporting table with the applicable withholding transaction amount for reporting purposes.

Pages Used to Create Drafts Manually

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Manual Draft Creation	APD_MANDFT_SEL	Accounts Payable, Payments, Drafts, Create Manual Draft, Manual Draft Creation	Manually create customer-initiated or vendor-initiated drafts.

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Manual Draft Entry	APD_MANDFT_ENTRY	- Accounts Payable, Payments, Drafts, Update Manual Draft Worksheet, Manual Draft Entry - Click the Build button on the Manual Draft Creation page.	Review drafts that you created on the Manual Draft Creation page. Note. You must have previously created a manual draft payment to access this page. If you click the Build button on the Manual Draft Creation page and save the worksheet without completing the draft information, you can use this page to edit or complete the manual draft payment information. If you previously created the draft payment, you cannot edit any of the draft payment information. In this circumstance, this page is for information only.
Manual Draft Apply	APD_MANDFT_APPLY	Accounts Payable, Payments, Drafts, Update Manual Draft Worksheet, Manual Draft Apply	Apply vouchers to manual drafts.

Creating Draft Payments Manually

Access the Manual Draft Creation page (Accounts Payable, Payments, Drafts, Create Manual Draft, Manual Draft Creation).

Manual Draft Creation

Enter Selection

Bank SetID:	SHARE

*Vendor Location:	MAIN		
*Payment Currency:	USD	☒ Match Currency	☒ Withholding Calculated
Pay to Bank Number:			

Build

Manual Draft Creation page

Enter the bank code and account information.

Remit SetID, Remit Vendor, and Vendor Location

Enter the setID, remit vendor ID, and vendor location for the vendor to whom you remit the manual payment. When you build the worksheet, the system returns eligible scheduled payments with the same vendor information.

Note. If financial sanctions validation is enabled and the vendor has a financial sanctions status of *Review* or *Blocked*, the system displays a warning that the vendor selected is currently under financial sanctions review and vouchers for this vendor cannot be applied against a manual draft.

Payment Currency

Displays the payment currency for the draft payment.

Match Currency

Select this option to return scheduled payments with the same payment currency. If you do not select this option, the system returns all eligible scheduled payments for the remit vendor, regardless of their payment currency, and converts them to the selected vendor's currency.

Withholding Calculated

Select return only those vouchers for the remit vendor that have had withholding calculated—that is, those vouchers for which withholding has been calculated at voucher posting time and that have been posted.

If this check box is deselected, all vouchers for the remit vendor are available on the manual draft worksheet, excluding vouchers that are set to have withholding calculated at voucher posting and that have not yet been posted. The Withholding tab of the Manual Draft Entry - Manual Draft Apply page displays two flags indicating whether the voucher is withholding-applicable and whether withholding has been calculated.

Pay to Bank Number

Specify the bank to which the draft payment is made. The pay-to bank number is used as one of the matching criteria for the scheduled payments that you apply to the draft payment. Only those scheduled payments that have the specified pay-to bank number appear when you click the Build button.

The value in the Pay to Bank Number field is a system-created value that is associated with each vendor bank account that you define on the Vendor Bank Account page.

Build

Click to create a temporary worksheet for the manual draft payment, based on the remit vendor, vendor location, and payment currency that you specify. Assign a draft worksheet ID search for scheduled payments that match the specified criteria. The system displays the Manual Draft Entry page, where you can enter the payment amount, draft drawee, payment description, and draft maturity date.

Note. If financial sanctions validation is enabled, the system validates the vendor against financial sanctions lists (for example, SDN list) when you click the Build button. The system updates the vendor's financial sanctions status on the Vendor Information component (VNDR_ID). The system does not allow you to build a draft worksheet for a vendor with a financial sanctions status of *Review* or *Blocked*. However, if financial sanctions validation is enabled at the bank level and you no longer validate a particular vendor's bank, the system may allow you to create a manual draft worksheet for a vendor with a financial sanctions status of *Review*.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Understanding Financial Sanctions Validation.

When you save manual drafts, the status of the draft varies depending on the values that you selected on the Payables Options - Payment Options page:

- If you selected the Draft Issue Approval Required check box, the status of the manual draft is *Approved*.
- If you did not select the Draft Issue Approval Required check box, the status of the manual draft is *Created*.

Note. After the system builds a draft worksheet, if you decide that you don't want to create the manual draft, you can remove the draft worksheet by using the Delete Worksheets page. You cannot delete a draft worksheet if you have applied scheduled payments to the manual draft and saved the draft worksheet. After you have applied scheduled payments to the manual draft, you can cancel the manual draft payment by using the Cancel Manual Draft page.

Manual Draft Apply page

- Payment Amount

Displays the payment amount currently entered on the Manual Draft Entry worksheet page.
- Total Applied

Displays the total amount of the scheduled payments currently applied to this manual draft.
- Amount Left to Apply

Displays the difference between the manual draft payment amount and the total amount of the applied scheduled payments.
- Refresh

Click to apply the selected scheduled payments to the manual draft and recalculate the total applied amount and the amount left to apply.

Note. Multiple views of this page are available by clicking the tabs in the scroll area.

Main Information

Select the Main Information tab.

- Select

Select the check box next to vouchers that you want to include in the draft payment. Deselect the check box if you do not want the voucher to be included in the draft payment.
- Business Unit

Displays the business unit for the scheduled payment.
- Voucher

Displays the voucher ID of the selected payments. Click any of the voucher IDs listed to access the Voucher Inquiry page for that voucher.
- Pymnt Nbr (payment number)

Displays the number of vouchers included in the scheduled payment.

Paid Amount	Displays the amount of the payment.
Payment Currency	Displays the currency of the payment.
Payment Method	Displays the payment method for the voucher.
Due Date	Displays the voucher payment due date.
Scheduled Pay Date	Displays the payment scheduled due date.
Maturity Date	Displays the draft maturity date.

Withholding Information

Select the Withholding Information tab.

Withholding Applicable	Displays whether a voucher is withholding-applicable.
Withholding Calculated	Displays whether a voucher has had withholding calculated—for example, at voucher post. If you select a voucher that is withholding-applicable but has not had withholding calculated, the system does not physically withhold for the voucher. Instead it creates withhold transactions based on the amount paid or amount subject to withholding for reporting purposes only. The voucher is treated as 0 percent withholdable. This ensures that the paid amount is reported for withholding. Note. For vendors that require physical withholding, a withholding amount is not withheld.

Additional Info

Select the Additional Info (additional information) tab.

Bank and Account	Displays the bank and type of bank account from which the scheduled payment is created.
Gross Payment Amount and Transaction Currency	Displays the gross amount and transaction currency of the scheduled payment.
Pay to Bank Nbr (pay to bank number)	Displays a system-created value that is associated with each vendor bank account that you define on the Vendor Bank Account page.
Bank Account #	Displays the bank account number.
Do Not Mix BU (do not mix business units)	Indicates the option selected on the Payables Definition - Payments page. If this check box is selected, you can select only vouchers with the same PeopleSoft Payables business unit as the payment that you are creating.

Separate Payment

Indicates the option selected on the Payments page in the Voucher component. You can select a scheduled payment that has this check box selected. However, you cannot select any other scheduled payments. If you do, the system displays an error message.

Managing Drafts

This section discusses how to:

- Cancel manual drafts.
- Delete posted manual draft worksheets.
- Approve unposted draft payments.
- Update draft information.
- Write off draft payments.
- Enter draft write-off details.

Pages Used to Manage Drafts

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Manual Draft Cancellation	APD_MANDFT_CANCEL	Accounts Payable, Payments, Drafts, Cancel Manual Draft, Manual Draft Cancellation	Cancel a manual draft after it has been created. A manual draft must be created and fully applied before you can access this page.
Manual Draft Cancellation Detail	APD_XREF_SEC	 Click the Show Details button on the Manual Draft Cancellation page.	View a list of the vouchers that you applied to the draft payment that you want to cancel.
Delete WS (After Posting) (delete worksheet [after posting])	APD_MANDFT_DELETE	Accounts Payable, Payments, Drafts, Delete Draft Worksheet, Delete WS (After Posting)	Delete manual draft worksheets and work tables after you have posted the manual draft using the payment posting process. A manual draft must be posted by the Payment Posting process before you can access this page.

Page Name	Definition Name	Navigation	Usage
Delete WS (Before Posting) (delete worksheet [before posting])	APD_DELETE_WS	Accounts Payable, Payments, Drafts, Delete Draft Worksheet, Delete WS (Before Posting)	Delete a manual draft worksheet. Manual drafts can be created with no voucher applied. Therefore, deleting the draft worksheet enables you to clear those worksheets that you do not use. For manual drafts that have vouchers applied, use manual draft cancellation.
Draft Approval	PYMNT_MAN_APPR	- Accounts Payable, Payments, Drafts, Draft Approval, Draft Approval - Click the Draft Staging Approval link on the Pay Cycle Manager page.	Approve unposted draft payments manually.
Draft Info Update (draft information update)	APD_DRAFT_UPD	Accounts Payable, Payments, Drafts, Draft Information Update, Draft Info Update	Update the draft reference number, the draft control number, and the payment message. You must already have created a draft to access this page.
Draft Update	APD_DRAFT_UPD_SEC	 Click the Details button on the Draft Info Update page.	Modify the draft reference number and the draft control identification number. The draft reference and draft control numbers are system-generated, based on the last number that the system used for a draft payment.
Draft Write Off	APD_DRAFT_WO	Accounts Payable, Payments, Drafts, Draft Write-Off, Draft Write Off	Write off draft payments and enter write-off information for draft payments that you have posted.
Draft Write Off Details	APD_DRAFT_WO_SEC	 Click the Details button on the Draft Write Off page.	Enter the write-off account and write-off date.

Canceling Manual Drafts

Access the Manual Draft Cancellation page (Accounts Payable, Payments, Drafts, Cancel Manual Draft, Manual Draft Cancellation).

Account	Enter to search by bank account. This field is required.
Draft Status	Search by current draft status. Drafts with the <i>Approved</i> or <i>Created</i> draft status can be posted when the Payment Posting process runs.

Total

Total Amount	Displays the total amount for the draft payments that meet the search criteria.

Main Information

Select the Main Information tab in the Search Results scroll area.

Date	Displays the draft payment date.
Reference	Displays the draft reference number.
Approve	Select the payment for approval. When you click the Save button, the system changes the draft payments status to <i>Approved</i> .
Amount	Displays the amount and currency of the draft payment.

Additional Info

Select the Additional Info tab in the Search Results scroll area.

Pay Status

Displays the payment status of the draft:

Alignment: The payment is used for alignment purposes.

Paid: The payment was made.

Pre-Note: The data is a bank prenote. You typically use prenotes when setting up electronic banking.

Overflow: The payment printed on an overflow advice.

Replaced: The payment was replaced. For example, when a check is reprinted with a new check number, the check number is given the status of *Replaced*.

Stopped: The payment was reversed. Use the Payment Cancellation page to stop a canceled payment.

Undo: The canceled payment was undone. Use the Payment Cancellation page to undo a canceled payment.

Void: The payment is void. Use the Payment Cancellation page to void a canceled payment.

Deleted: The payment was deleted.

Account # (account number)	Displays the bank account number.
GL Unit (general ledger unit)	Displays the general ledger business unit for the draft payment.
Write Off Acct (write off account)	Select the account from which the draft payment is written off.
Alternate Acct (alternate account)	(Optional) Enter a statutory account.
Write Off Date	Specify the effective date for the draft payment write-off.

Reconciling and Approving Drafts

During draft bank reconciliation, reconcile the payment information with actual bank information using the Draft Recon and Approval page. Before you can reconcile and approve drafts, you must have created draft payments in the Manual Draft Creation component (APD_MANDFT_SEL) or by running the Pay Cycle process. To import the bank file, select PeopleTools, EDI Manager, Monitor EDI Processing, Schedule Inbound EC Agent.

After reconciling your draft payments, you may want to submit a bank answer file to your bank regarding the draft payments.

Note. If you haven't prearranged with your bank to receive a bank information file, you do not need to run the Draft Reconciliation and Approval process; however, you do need to run the Draft Reconciliation and Approval process to promote the draft status from C (created) to A (approved).

This section discusses how to:

- Reconcile drafts.
- Approve drafts during reconciliation.
- Review payment and bank details.
- Review draft payment exceptions.
- Review draft payment totals.
- Prepare bank answer files.
- Delete imported bank data.

Pages Used to Reconcile and Approve Drafts

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Draft Reconciliation	PYMNT_AUTO_REC	Accounts Payable, Payments, Drafts, Draft Recon and Approval, Draft Reconciliation	Perform automatic draft reconciliation and approval when your bank transmits an electronic bank file to you that contains the draft detail. The Draft Reconciliation and Approval process does matching against the bank file by marking each draft payment as approved.
Draft Approval	PYMNT_AUTO_APPR	Accounts Payable, Payments, Drafts, Draft Recon and Approval, Draft Approval	Review draft payments that the automatic reconciliation process matches. You can accept, reject, or partially pay payments. The approval process updates the status for all accepted drafts with the status <i>Approved</i> so that the Payment Posting process can generate accounting entries.
Payment/Bank Details	PYMNT_APPR_DTL	Click the Display Detail button on the Draft Approval page in the Draft Recon and Approval component. This button is available only if you select the Details check box.	Review draft payment information from the imported bank file.
Draft Exceptions	PYMNT_AUTO_EX	Accounts Payable, Payments, Drafts, Draft Recon and Approval, Draft Exceptions	Review automatic bank reconciliation draft payment exceptions and the reason codes that indicate why payments are marked as not payable.
Reconciliation Summary	PYMNT_AUTO_SUMM	Accounts Payable, Payments, Drafts, Draft Recon and Approval, Reconciliation Summary	View a summary of the draft payment totals after reviewing the automatic draft payment reconciliation and approval results.

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Prepare Bank Answer File	PYMNT_AUTO_OUTP	Accounts Payable, Payments, Drafts, Prepare Bank Answer File, Prepare Bank Answer File	Prepare a bank answer file before sending the file by selecting PeopleTools, EDI Manager, Monitor EDI Processing, Schedule Outbound EC Agent. You must complete draft reconciliation and approval before you can access this page.
Delete Imported Bank Data	PYMNT_AUTO_DEL	Accounts Payable, Payments, Drafts, Prepare Bank Answer File, Delete Imported Bank Data	Delete bank file data that you imported into PeopleSoft Payables. At least one bank file must be imported into the system before you can access this page.

Reconciling Drafts

Access the Draft Reconciliation page (Accounts Payable, Payments, Drafts, Draft Recon and Approval, Draft Reconciliation).

Creation Date	Displays the draft payment creation date.
Bank File Total	Displays the total amount of all payments listed in the transmitted bank file.
Reconcile	Click to match the bank file by selecting each draft payment and updating the status for all accepted drafts. The system displays the Draft Reconciliation and Approval - Draft Approval page, where you can review the matched draft payments.
Drawee Acct Num (drawee account number)	Displays the vendor's bank account number.
Total Amount	Displays the total amount of the payment for the row.

Approving Drafts During Reconciliation

Access the Draft Approval page (Accounts Payable, Payments, Drafts, Draft Recon and Approval, Draft Approval).

Draft Approval page

Creation Date	Displays the draft payment creation date from the bank file.
Drawee Account Number	Displays the bank account number.
Pay Total	Displays the matched payment total amount.
Approve All	Click to approve all of the draft payments that you select.
Unapprove All	Click to reverse the approval of selected payments that you previously approved.
Display Detail	Click to view the Payment/Bank Details page. This button is available only if you select the Detail check box.

Note. You can access multiple views of this page by selecting the tabs in the scroll area.

Main Information

Select the Main Information tab in the Draft Payment scroll area.

Detail	Select to activate the Draft Payment Details button. Click the Display Detail button to view draft payment information from the imported bank file.
Approve	Selects the payment for approval. When you click the Save button, the system changes the draft status from <i>Created</i> to <i>Approved</i> .

Name	Displays the vendor's name.
Draft Amount	Displays the draft amount and currency of the draft payment.

Additional Info

Select the Additional Info tab in the Draft Payment scroll area.

The scroll area displays payment method and cancellation information.

Reviewing Payment and Bank Details

Access the Payment/Bank Details page (click the Display Detail button on the Draft Approval page in the Draft Recon and Approval component).

Source = AP

Payment Reference	Displays the draft reference number.
Name 1	Displays the vendor's name.
Payment Date	Displays the payment due date.
Payment	Displays the draft payment ID.
Remit Vendor	Displays the name of the remit vendor, the cancellation status, and the effective date.

Source = Bank

Drawer Ref (drawer reference)	Displays the reference ID that a drawer uses to identify the draft.
Currency Index	Displays the currency index listed in the bank file.
Accept Code	Displays the accept code from the bank file.
Drawee Reference	Displays the payment number.
Remit Person Reference	Displays the reference number for the remit person listed in the bank file.
Creation Date	Displays the draft creation date.

Reviewing Draft Payment Exceptions

Access the Draft Exceptions page (Accounts Payable, Payments, Drafts, Draft Recon and Approval, Draft Exceptions).

Note. You can access multiple views of this page by clicking the tabs in the scroll area.

Main Information

Select the Main Information tab in the Draft Exceptions scroll area.

Drawer Reference	Displays the vendor's draft payment reference number.
Drawer Name	Displays the entity to whom the draft payment is made.
Due Date	Displays the draft due date or draft scheduled maturity date.
Note. The draft due date is usually the same as the draft maturity date. However, if the draft maturity date falls on a holiday or nonbusiness day, the draft due date is different from the draft maturity date. For example, if the draft maturity date falls on a Saturday, the draft due date might be set to the following Monday, depending on the holiday rules.	
Approve	Select for partial payment and to reject the balance. This option is available only if the bank file payment amount is greater than the payment amount in the PeopleSoft Payables system.

Additional Info

Select the Additional Info tab in the Draft Exceptions scroll area.

The scroll area displays the reject code, a description, and comments.

Reviewing Draft Payment Totals

Access the Reconciliation Summary page (Accounts Payable, Payments, Drafts, Draft Recon and Approval, Reconciliation Summary).

Pay Total	Displays the matched payment total.
Partial Pay Total	Displays the partial payment total.
Reject Total	Displays the rejected payment total.
Total Amount	Displays the total payment amount.

Preparing Bank Answer Files

Access the Prepare Bank Answer File page (Accounts Payable, Payments, Drafts, Prepare Bank Answer File, Prepare Bank Answer File).

Creation Date	Displays the draft payment creation date from the bank file.
Process	Click to begin preparing the data for the bank answer file for the output instances that you selected.

Note. You can access multiple views of this page by clicking the tabs in the scroll area.

Main Information

Select the Main Information tab in the Bank Account scroll area.

Select	Click to select the output instance that you want to process.
Output Inst (output instance)	Displays the output instance that appears after you run the EDI Manager Outbound EC Agent process.
Output File Status	Displays the status of the output file: <i>E</i> : An error has occurred during the process. <i>L</i> : The output file was loaded. <i>P</i> : The output file was processed.
Filename	Displays the file name that the EDI Manager Outbound EC Agent process created.
SIREN Number	Displays the SIREN number.

Additional Info

Select the Additional Info tab in the Bank Account scroll area.

Drawee Account Number	Displays the vendor's bank account number.
Total Amount	Displays the total amount to be paid into the vendor's bank account.

Deleting Imported Bank Data

Access the Delete Imported Bank Data page (Accounts Payable, Payments, Drafts, Prepare Bank Answer File, Delete Imported Bank Data).

Delete this Queue Instance	Select to mark this queue instance for deletion.
Process	Click to delete all bank file data associated with the selected queue instance.

Reviewing Drafts

PeopleSoft Payables includes several inquiry pages and reports that enable you to view and manage draft payments. You can define draft payment selection criteria that enable you to run inquiries on draft payments at various stages of the draft life cycle. By specifying a payment date range, you can also view draft payments details (by vendor or bank account) over a period of time.

The Draft Payment Inquiry component (PYMNT_DFT_INQ) shows the aggregate amount listed by sibling system draft identification number. This inquiry also shows a draft's voucher payment schedule. You can view details by vendor, draft maturity date, payment amount, bank, draft master identification number, and subtotal by date.

This section lists common elements and discusses how to:

- Search for draft payments.
- View detail information for draft payments.
- View details for canceled or deleted draft payments.
- View a summary of draft payments.

Note. Draft payments must have been created or have a status of approved, due, or reconciled before you can use the pages in the Draft Payment Inquiry component.

Common Elements Used in This Section

	Click to access the Payment Inquiry page, where you can view the voucher.
Name	Displays the name of the remit vendor.
Currency	Displays the draft payment currency.
Amount	Displays the amount of the draft payment.
Bank Account	Displays the remit vendor's bank account number.
Master ID	Use this field if you specify draft optimization on the Payment Selection Criteria - Draft Options page.
Control ID	Displays the control ID, which is assigned by the Pay Cycle process to group a list of scheduled payments.

Pages Used to Review Drafts

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Drafts - Selection Criteria	PYMNT_DFT_INQ1	Accounts Payable, Review Accounts Payable Info, Payments, Drafts, Selection Criteria	Create a draft payment inquiry. Enter the parameters for your inquiry on the Selection Criteria page and search for draft payments that match the specifications. You can view details relating to the draft payment on the other pages of the component.
Drafts - Draft Detail	PYMNT_DFT_INQ2	Accounts Payable, Review Accounts Payable Info, Payments, Drafts, Draft Detail	View detail information for draft payments, based on the specified criteria on the Selection Criteria page.
Drafts - Cancel/Delete Payment	PYMNT_DFT_INQ3	Accounts Payable, Review Accounts Payable Info, Payments, Drafts, Cancel/Delete Payment	View details about any canceled or deleted draft payments.
Drafts - Draft Summary	PYMNT_DFT_INQ4	Accounts Payable, Review Accounts Payable Info, Payments, Drafts, Draft Summary	View a summary of the draft payments in the search results.
Payment Hist by Pymnt Method (payment history by payment method)	RUN_APY2050	Accounts Payable, Reports, Payments, Payment History by Pay Method, Payment Hist by Pymnt Method	Define run parameters for the Payment History by Payment Method - Detail or Summary report (APY2050). Use this report to review a list of drafts issued but remaining unpaid by the due date.

Page Name	Definition Name	Navigation	Usage
Payment Aging by Bank	RUN_APY2051	Accounts Payable, Reports, Payments, Payment Aging by Bank, Payment Aging by Bank	Define run parameters for the Payment Aging Summary (Detail) Report by Bank (APY2051). Use this report to review a summary of aging drafts that are still payable analyzed by bank account and sorted by date. The report details are: • Balance as of the end of the previous month. • Aggregate amount that increased in the current month. • Aggregate amount that decreased in the current month.
Payment Aging by Vendor	RUN_APY2052	Accounts Payable, Reports, Vendor, Payment Aging by Vendor, Payment Aging by Vendor	Define run parameters for the Payment Aging Summary (Detail) Report by Vendor (APY2052). This report provides a summary of aging drafts that are still payable to each vendor by the period range you specify. The report details are: • Balance as of the end of the previous month. • Aggregate amount that increased in the current month. • Aggregate amount that decreased in the current month.
Draft Create Detail	RUN_APY2053	Accounts Payable, Reports, Payments, Drafts Create Detail, Draft Create Detail	Define run parameters for the Drafts Create Detail List (APY2053). Use this report to review detail for draft payments based on the issue date or the due date.
Draft Create Summary	RUN_APY2056	Accounts Payable, Reports, Payments, Drafts Create Summary, Draft Create Summary	Define run parameters for the Drafts Create Summary report (APY2056). Use this report to review a summary by bank for draft payments.

Page Name	Definition Name	Navigation	Usage
Draft Stamp Tax Summary	RUN_APY2054	Accounts Payable, Reports, Payments, Drafts Stamp Tax Summary, Draft Stamp Tax Summary	Define run parameters for the Drafts Create Detail - Stamp Tax Summary report (APY2054). Use this report to review a summary of the draft stamp tax that is associated with draft payments.

Searching for Draft Payments

Access the Drafts - Selection Criteria page (Accounts Payable, Review Accounts Payable Info, Payments, Drafts, Selection Criteria).

Drafts - Selection Criteria page

Vendor ID

Specify the from and to vendor IDs if an inquiry covers a range of vendors.

Amount Rule

Specify the amount rule and enter an amount for the draft payments included in the inquiry. Options are:

Any: Includes draft payments that meet the selection criteria in any amount.

Equal to: Includes draft payments that are equal to the specified amount that meets the selection criteria.

Greater than: Includes draft payments that are greater than the specified amount that meet the selection criteria.

Greater than or equal to: Includes draft payments that are greater than or equal to the specified amount that meet the selection criteria.

Less than: Includes draft payments that are less than the specified amount that meet the selection criteria.

Less than or equal to: Includes draft payments that are less than or equal to the specified amount that meet the selection criteria.

Reference

Specify the from and to payment reference numbers if an inquiry covers a range of payment reference numbers.

Payment Date

Specify the from and to payment dates if an inquiry covers a range of dates.

Draft Status

Specify the draft payment statuses to include in the inquiry. Options are:

ALL: Includes all draft payments, regardless of their status, as long as they meet the selection criteria.

Approved: Includes only those draft payments with a status of *Approved* that meet the selection criteria.

Created: Includes only those draft payments with a status of *Created* that meet the selection criteria.

Due: Includes only those draft payments with a status of *Due* that meet the selection criteria.

Reconciled: Includes only those draft payments with a status of *Reconciled* that meet the selection criteria.

Summary Options**Subtotal By**

Select to determine how the system sorts the results of the inquiry. Options are *Bank Account Number*, *Due Date*, and *Remit Vendor*.

Count

Displays the number of draft payments included in the payment subtotal.

Totals**Paid Amount**

Displays the total amount of the draft payment.

Count

Displays the number of drafts included in the payment total.

Unpaid Amount	Displays any payment amount that is not included in the draft payment.

Viewing Detail Information for Draft Payments

Access the Drafts - Draft Detail page (Accounts Payable, Review Accounts Payable Info, Payments, Drafts, Draft Detail).

Count	Displays the number of drafts included in the payment total.

Main Information

Select the Main Information tab.

Payment Date	Displays the draft issue date.

Additional Info

Select the Additional Info tab.

Stamp Tax	Displays the amount of stamp tax, if applicable. Stamp tax is applicable if you use stamp tax minimization.

Viewing Details for Canceled or Deleted Drafts Payments

Access the Drafts - Cancel/Delete Payment page (Accounts Payable, Review Accounts Payable Info, Payments, Drafts, Cancel/Delete Payment).

Unpaid	Displays the total amount of the unpaid draft payments.

Count	Displays the number of unpaid drafts that are not included in the payment total.

Main Information

Select the Main Information tab.

Payment Date	Displays the date that the unpaid amount is due.

Additional Info

Select the Additional Info tab.

Date Cancelled Indicates the date the unpaid amount was canceled.

Viewing a Summary of Draft Payments

Access the Drafts - Draft Summary page (Accounts Payable, Review Accounts Payable Info, Payments, Drafts, Draft Summary).

Payment Date Displays the draft due or settlement date.

Count Displays the number of drafts included in the payment total.

Chapter 32

Sending Information to PeopleSoft Asset Management

This chapter provides an overview of the asset-loading process and discusses how to:

- Create asset-applicable vouchers.
- Send voucher information to PeopleSoft Asset Management.

Understanding the Asset-Loading Process

This section discusses the following:

- Eligibility criteria for distribution to PeopleSoft Asset Management.
- Interface types.
- Discounts earned or lost.
- Technical details of the Payables to Assets Interface process.
- Return to Vendor transaction processing.

PeopleSoft Payables can be integrated with PeopleSoft Asset Management and PeopleSoft Purchasing. The interface between the applications eliminates the need for dual maintenance of receipts and vouchers and their corresponding asset data, and it provides the following benefits:

- PeopleSoft Payables and Purchasing applications send all asset additions, adjustments, and retirements to PeopleSoft Asset Management.
- PeopleSoft Asset Management receives information from both systems in a consistent manner.
- PeopleSoft Purchasing can simultaneously send receipts to PeopleSoft Asset Management as either capitalized or noncapitalized assets.

If noncapitalized assets are created in PeopleSoft Purchasing, these assets can be capitalized when the voucher information comes from PeopleSoft Payables.

Another advantage of this interface is flexibility. You can:

- Establish the point in the purchase process when you send information to PeopleSoft Asset Management.

You can share data when the merchandise is received, or you can communicate the data at the time of payment.

- Unitize or consolidate assets from subsystems.

You can unitize one load line into many, or you can consolidate many load lines into one in the Interface Asset Information component in PeopleSoft Asset Management.

PeopleSoft Payables and PeopleSoft Purchasing pass asset acquisition information to PeopleSoft Asset Management, including processing changes to assets if receivers or vouchers are modified or if subsequent receivers or vouchers are added for existing assets.

For example, PeopleSoft Payables creates new voucher accounting lines when a voucher for an asset is posted or unposted and subsequently distributes the accounting information to PeopleSoft Asset Management. Posting the voucher creates voucher accounting lines, and unposting the voucher creates reversal entries. The Payables to Assets Interface Application Engine process (INTFAPAM) distributes the information to PeopleSoft Asset Management from PeopleSoft Payables through the Load Assets Request page.

New accounting entries are also made during payment posting for discounts that are earned or lost. If the original accounting entries were asset-applicable, then the new entries are distributed to PeopleSoft Asset Management as well.

PeopleSoft Asset Lifecycle Management Fundamentals 9.1 PeopleBook, "Integrating PeopleSoft Asset Management with Other Products"

Eligibility Criteria for Distribution to PeopleSoft Asset Management

Vouchers must meet the following conditions before you can send voucher information to PeopleSoft Asset Management:

- Vouchers must have at least one asset applicable distribution line to be selected for processing by the Payables to Assets Interface process.

The asset-applicable voucher distribution lines and any discounts earned or lost for those vouchers are sent to PeopleSoft Asset Management.

- If matching is required for a voucher, it must have a match status of *Matched* or *Overridden* before it can be selected for processing by the Payables to Assets Interface process.

The associated receiver (if applicable) must also have a partially or fully matched status.

- All vouchers must be posted in PeopleSoft Payables before running the Payables to Assets Interface process.

This is because the information distributed to PeopleSoft Asset Management is obtained from the voucher accounting entries.

- Voucher accounting lines are flagged for distribution to PeopleSoft Asset Management whenever an asset-applicable voucher is posted and whenever one is reposted after being unposted:
 1. If a voucher has previously been distributed to PeopleSoft Asset Management and it is then unposted, the unposting process creates reversal entries for the voucher accounting lines. The voucher accounting lines are sent to PeopleSoft Asset Management with the interface type *RET* (retirement).
 2. If a voucher is posted and subsequently unposted without being distributed to PeopleSoft Asset Management, the unposting process still creates reversal entries for the voucher accounting lines. However, no asset is created because the two transactions cancel out each other. The voucher is not distributed to PeopleSoft Asset Management until it has been reposted.
- Voucher accounting lines are flagged for distribution to the PeopleSoft Asset Management system when discounts are earned or lost, when there are late charges, or when vouchers are closed.

Warning! If the profile ID, Asset Management business unit, or ChartFields are changed after a voucher has already been distributed to PeopleSoft Asset Management, the system does not automatically handle the asset transfer. You must make this change manually in the PeopleSoft Asset Management system.

Interface Types

This table describes the interface types for which PeopleSoft Payables sends voucher accounting entries to PeopleSoft Asset Management:

<i>Interface Type</i>	<i>Criteria</i>	<i>Description</i>
RET	AM_DISTRIB_STATUS = 'M'	Retirement. This interface type occurs when a voucher is unposted.
CLS	AM_DISTRIB_STATUS = 'N' and CLOSE_STATUS = 'C'	Closed. This interface type occurs when a voucher is posted that is marked for closure.
ADJ	AM_DISTRIB_STATUS = 'N' and CLOSE_STATUS <> 'C' and DST_ACCT_TYPE IN ('DSE', 'DSL', 'DSEM', 'DSLM', 'LAT')	Discount Lost/Earned. This interface type occurs when a voucher is posted with a discount earned or lost or with late charges.

Discounts Earned or Lost

PeopleSoft Payables sends information about discounts earned or lost to PeopleSoft Asset Management so that PeopleSoft Asset Management can add or subtract the amount from the asset cost. The following examples illustrate this process.

In these scenarios, assume the following facts:

- The voucher gross amount is 2000.00 USD.
- The potential discount (if paid within discount period) is two percent.

- The possible discount earned or lost (or not taken) is 40.00 USD.

You run the Payables to Assets Interface process to send information to PeopleSoft Asset Management after voucher posting and again after payment posting. The following information is sent to record INTFC_PRE_AM after each of these posting processes.

Note. These entries are generated during each posting process and do not depend on whether the voucher is paid before or after voucher posting.

Example of Accounting at Net

This example shows accounting at net:

- Discount available at voucher posting.

DSCNT_AMT holds the discount available at voucher posting:

<i>INTFC_TYPE</i>	<i>COST</i>	<i>MERCHANDISE_AMT</i>	<i>DSCNT_AMT</i>
Null - No Entry	1960.00	2000.00	40.00

- Discount taken at payment posting.

If the voucher is paid within the discount period, or if discount was taken manually, the Payables to Asset Interface process does not process this voucher as the system has already accounted for the discount.

<i>INTFC_TYPE</i>	<i>COST</i>	<i>MERCHANDISE_AMT</i>	<i>DSCNT_AMT</i>
Null - No Entry	N/A	N/A	N/A

- Discount lost at payment posting.

If the voucher is either not paid within the discount period, or if the discount is not taken, the Payables to Assets Interface process sends a cost of 40.00 USD to PeopleSoft Asset Management to adjust for the discount lost:

<i>INTFC_TYPE</i>	<i>COST</i>	<i>MERCHANDISE_AMT</i>	<i>DSCNT_AMT</i>
ADJ	40.00	2000.00	0.00

Example of Accounting at Gross

This example shows accounting at gross:

- Discount available at voucher posting.

The DSCNT_AMT is zero:

<i>INTFC_TYPE</i>	<i>COST</i>	<i>MERCHANDISE_AMT</i>	<i>DSCNT_AMT</i>
Null - No Entry	2000.00	2000.00	0.00

- Discount taken at payment posting.

If the voucher is paid within the discount period or manually taken after the discount period, the discount is taken and the Payables to Assets Interface process sends a cost of -40.00 USD to PeopleSoft Asset Management to adjust for the discount taken:

<i>INTFC_TYPE</i>	<i>COST</i>	<i>MERCHANDISE_AMT</i>	<i>DSCNT_AMT</i>
ADJ	-40.00	2000.00	0.00

- Discount lost at payment posting.

If the voucher is either not paid within the discount period, or if the discount is not taken, the Payables to Assets Interface process does not need to process the discount for the voucher. There is no entry for record INTFC_PRE_AM:

<i>INTFC_TYPE</i>	<i>COST</i>	<i>MERCHANDISE_AMT</i>	<i>DSCNT_AMT</i>
Null - No Entry	N/A	N/A	N/A

Note. The system does not track rebates lost or taken, and these are not sent to PeopleSoft Asset Management.

Technical Details of the Payables to Assets Interface Process

The Payables to Assets Interface process selects all voucher accounting lines with these values:

<i>Field</i>	<i>Description</i>	<i>Value</i>	<i>Definition</i>
VCHR_ACCTG_LINE.A SSET_FLG	Asset.	Y	Yes. Note. The value must be Y for each accounting entry to be distributed to PeopleSoft Asset Management.

<i>Field</i>	<i>Description</i>	<i>Value</i>	<i>Definition</i>
VCHR_ACCTG_LINE.A M_DISTRIB_STATUS	Asset Management distribution status.	<i>N</i> or <i>M</i>	<i>N</i> (not yet distributed to asset management): The Voucher Posting process creates voucher accounting lines with this status, which indicates that the accounting lines have been posted. <i>M</i> (modified): The Voucher Unposting process creates reversal entries with this status, which indicates that the accounting lines have been unposted.
VCHR_ACCTG_LINE. POST_STATUS_AP	Account Payable Posting Status	<i>P</i>	Posted.
VCHR_ACCTG_LINE.P RIMARY_LEDGER	Primary ledger.	<i>Y</i>	Yes. Note. The value must be <i>Y</i> for each accounting entry to be distributed to PeopleSoft Asset Management.

Note. For vouchers with receiving required, only vouchers with fully matched receivers are sent to PeopleSoft Asset Management.

The Payables to Assets Interface process copies the following information from the voucher distribution level in PeopleSoft Payables to the preinterface table (INTFC_PRE_AM) in PeopleSoft Asset Management:

<i>Description</i>	<i>Field Name</i>
Transaction date.	VOUCHER.INVOICE_DT
Accounting date.	VCHR_ACCTG_LINE.ACCOUNTING_DT
Purchase order (PO) keys, if the voucher is a PO voucher:	
• PO business unit.	VCHR_ACCTG_LINE.BUSINESS_UNIT_PO

Description	Field Name
• PO ID.	VCHR_ACCTG_LINE.PO_ID
• PO line number.	VCHR_ACCTG_LINE.LINE_NBR
• PO schedule number.	VCHR_ACCTG_LINE.SCHED_NBR
• PO distribution line number.	VCHR_ACCTG_LINE.PO_DIST_LINE_NUM
Receiver keys:	
• Receiver business unit.	VCHR_ACCTG_LINE.BUSINESS_UNIT_RECV
• Receiver ID.	VCHR_ACCTG_LINE.RECEIVER_ID
• Receiver line number.	VCHR_ACCTG_LINE.RECV_LN_NBR
• Receiver ship sequence number.	VCHR_ACCTG_LINE.RECV_SHIP_SEQ_NBR
• Receiver distribution line number.	VCHR_ACCTG_LINE.RECV_DIST_LINE_NUM
Payables business unit.	VCHR_ACCTG_LINE.BUSINESS_UNIT
Voucher ID.	VCHR_ACCTG_LINE.VOUCHER_ID
Voucher line number.	VCHR_ACCTG_LINE.VOUCHER_LINE_NUM
Voucher distribution line number.	VCHR_ACCTG_LINE.DISTRIB_LINE_NUM
Asset Management business unit.	VCHR_ACCTG_LINE.BUSINESS_UNIT_AM
Asset ID.	VCHR_ACCTG_LINE.ASSET_ID
Profile ID.	VCHR_ACCTG_LINE.PROFILE_ID
Cost type.	VCHR_ACCTG_LINE.COST_TYPE

<i>Description</i>	<i>Field Name</i>
ChartFields. Note. Available ChartFields include ACCOUNT, ALTACCT, BOOK_CODE, ADJUST_TYPE, CATEGORY, ACTIVITY, SCENARIO, STATISTICS_TBL, OPERATING_UNIT, DEPTID, PRODUCT, PROJECT_ID, FUND_CODE, CLASS_FLD, PROGRAM_CD, BUDGET_REF, AFFILIATE, AFFILIATE_INTRA1, AFFILIATE_INTRA2, CHARTFIELD1, CHARTFIELD2, CHARTFIELD3.	VCHR_ACCTG_LINE."ChartField" Note. Because ChartFields are configurable, they are mapped to their respective ChartField name. For example, department ID is mapped to VCHR_ACCTG_LINE.DEPTID.
Description.	VCHR_ACCTG_LINE.DESCR
Vendor ID.	VOUCHER.VENDOR_ID
Voucher quantity.	VCHR_ACCTG_LINE.QTY_VCHR
Cost in General Ledger business unit's base currency.	MONETARY_AMOUNT + FREIGHT_AMT_NP_BSE + MISC_AMT_NP_BSE + SALETX_AMT_NP_BSE + USETAX_AMT_NP_BSE + DSCNT_AMT_BSE. If VOUCHER.VAT_NRCVR_PRO_FLG = 'N', then MONETARY_AMOUNT + FREIGHT_AMT_NP_BSE + MISC_AMT_NP_BSE + SALETX_AMT_NP_BSE + USETAX_AMT_NP_BSE + DSCNT_AMT_BSE + (A.VAT_INV_AMT_BSE + A.VAT_NONINV_AMT_BSE - A.VAT_RCVRY_AMT_BSE - A.VAT_REBATE_AMT_BSE). Note that all fields are from VCHR_ACCTG_LINE. Note. Monetary amount is calculated as follows: Merchandise Amount + Sales Tax (if prorating sales tax) + Use Tax (if prorating use tax) + Freight (if prorating freight) + Miscellaneous Charges + Nonrecoverable Prorated VAT – Discount (if accounting at net).

<i>Description</i>	<i>Field Name</i>
Transaction cost in transaction currency.	FOREIGN_AMOUNT + FREIGHT_AMT_NP + MISC_AMT_NP + SALETX_AMT_NP + USETAX_AMT_NP + DSCNT_AMT. If VOUCHER.VAT_NRCVR_PRO_FLG = 'N' then TXN_COST = FOREIGN_AMOUNT + FREIGHT_AMT_NP + MISC_AMT_NP + SALETX_AMT_NP + USETAX_AMT_NP + DSCNT_AMT + (VAT_INV_AMT + VAT_NONINV_AMT - VAT_RCVRY_AMT - VAT_REBATE_AMT). Note that all fields are from VCHR_ACCTG_LINE.
Sales tax amount in General Ledger business unit's base currency.	SALETX_AMT_BSE + SALETX_AMT_NP_BSE
Sales tax code.	VOUCHER.SALETX_CD
Use tax amount in General Ledger business unit's base currency.	USETAX_AMT_BSE + USETAX_AMT_NP_BSE
Use tax code.	VOUCHER.USETAX_CD
Freight amount in General Ledger business unit's base currency.	FREIGHT_AMT_BSE + FREIGHT_AMT_NP_BSE Note. If VOUCHER.FRGT_PRORATE_FLG is 'N', FREIGHT_AMT_NP_BSE is not 0 while FREIGHT_AMT_BSE is 0.
Discount amount.	VCHR_ACCTG_LINE.DSCNT_AMT
Invoice ID.	VOUCHER.INVOICE_ID
General Ledger business unit's base currency code.	VCHR_ACCTG_LINE.CURRENCY_CD
Transaction currency code.	VCHR_ACCTG_LINE.FOREIGN_CURRENCY
Project Costing business unit.	VCHR_ACCTG_LINE.BUSINESS_UNIT_PC
Activity ID.	VCHR_ACCTG_LINE.ACTIVITY_ID
Analysis type.	VCHR_ACCTG_LINE.ANALYSIS_TYPE

<i>Description</i>	<i>Field Name</i>
Resource type.	VCHR_ACCTG_LINE.RESOURCE_TYPE
Resource category.	VCHR_ACCTG_LINE.RESOURCE_CATEGORY
Resource subcategory.	VCHR_ACCTG_LINE.RESOURCE_SUB_CAT
Merchandise amount.	VCHR_ACCTG_LINE.MERCH_AMT_VSE
VAT invoice amount.	VCHR_ACCTG_LINE.VAT_INV_AMT_BSE
VAT recovery amount.	VCHR_ACCTG_LINE.VAT_RCVRY_AMT_BSE
VAT nonrecoverable amount.	VAT_INV_AMT_BSE + VAT_NONINV_AMT_BSE - VAT_RCVRY_AMT_BSE - VAT_REBATE_AMT_BSE. Note that all fields are from VCHR_ACCTG_LINE.

Note. After the system copies the voucher information to the Pre-interface table, the Payables to Assets Interface process sets the AM_DISTRIB_STATUS field on the voucher accounting line for all the selected vouchers to *D* (distributed).

Once the voucher has been preloaded into the Pre-interface table using the Payables to Assets Interface process, you can view the information on the Load Preview - Pre-AM - Pre-AM 1 page.

Next, you complete the asset-loading process by running the Payables/Purchasing Interface Application Engine process (AMPS1000), which automatically calls the Transaction Loader Application Engine process (AMIF1000). The Payables/Purchasing Interface process creates interface IDs. The Transaction Loader process uses the interface IDs and creates an acquisition row for each asset. After you run the two processes, you can view the asset cost on the Asset Cost Adjust/Transfer page.

Return to Vendor Transaction Processing

Defined RTV adjustment options determine whether the PeopleSoft Payables or Purchasing applications generate asset retirement transactions that are sent to PeopleSoft Asset Management for processing (INTFC_PRE_AM). You can specify these adjustment options as defaults at the PeopleSoft Payables business unit level (using the Payables Definition - Voucher Build page), which you can override at the Purchasing RTV voucher defaults level (using the RTV Defaults page).

Note. PeopleSoft Purchasing's RTV Reconciliation Application Engine process (PO_RTVRECON) processes RTV information for use in PeopleSoft Asset Management only when a PeopleSoft Payables adjustment voucher will not be created.

Creating Asset-Applicable Vouchers

This section provides an overview of asset-applicable vouchers and discusses how to:

- Use the Assets tab to create asset-applicable vouchers.
- Copy asset-applicable vouchers from purchase orders and receivers.

Understanding Asset-Applicable Vouchers

You create asset-applicable vouchers on the Invoice Information page. If the voucher is created by copying from a purchase order or receipt, the asset information is also copied. If asset information was not entered on the purchase order or receipt, then it must be entered manually during voucher creation. Regardless of how you create the voucher, you must access the Assets tab to make the voucher asset-applicable.

You can also create asset-applicable vouchers by entering data on the Quick Invoice page.

Note. When a voucher is created by copying from another voucher or template voucher, the asset information is also copied from the source voucher.

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Creating Vouchers Online, page 309](#)

[Chapter 17, "Using Quick Invoices," page 451](#)

Pages Used to Create Asset-Applicable Vouchers

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Invoice Information	VCHR_EXPRESS1	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information	Enter asset information on an invoice and create asset-applicable vouchers.
Quick Invoice	VCHR_HEADER_QV	Accounts Payable, Vouchers, Add/Update, Quick Invoice Entry, Quick Invoice Select the Assets tab for the distribution line using the complete template.	Enter asset information on a quick invoice and create asset-applicable vouchers.

Using the Assets Tab to Create Asset-Applicable Vouchers

Access the Assets tab on the Distribution Lines grid on the Invoice Information page or the Quick Invoice page using the complete template. Some of the fields described below are available only on the Invoice Information page.

Use One Asset ID	Select to assign a single asset ID to multiple distribution lines. This field appears in the Invoice Lines group box and does not appear for quick invoices.
Quantity	Enter a quantity on the GL Chart (general ledger ChartFields) tab and on the parent invoice line for each asset-applicable distribution line. The total of all quantities on the distribution lines must equal the quantity entered on the parent invoice line.
Asset	Select to make the distribution line asset applicable. This field does not appear for quick invoices.
Business Unit	Enter the PeopleSoft Asset Management business unit to which the asset is distributed. This field is required.
Profile ID	Enter the profile ID category to which the asset is assigned. This field is required.
Asset ID	Enter either an asset ID or leave the value as <i>NEXT</i> so that the system generates the asset ID after you send the asset information to PeopleSoft Asset Management. The default field value is <i>NEXT</i>. If you enter an existing asset ID, the costs for the subsequent voucher are added to the asset ID entered on the page.

Sequence Number	Enter a sequence number to indicate an asset grouping of voucher distribution lines, if you have accepted the default asset ID value of <i>NEXT</i> . Leave this field blank if you entered a known asset ID. If the asset ID is <i>NEXT</i> and the Sequence Number field is blank, the system generates a unique number. This field does not appear for quick invoices.
Cost Type	Enter the cost type for the asset. Options are: A: Allowance for ADV Depr (advanced depreciation). C: Cost type. G: Grant reimbursements. I: Impairment loss. M: Margin. P: Scrap on asset. R: Revaluation. S: Sale of assets. V: Reserve for ADV Depr (advanced depreciation). W: Depr. write-off (depreciation write-off). X: Revaluation reversal. Y: Impairment reversal.

Note. If you copy the voucher information from the purchase order or receiver, these fields might be populated with information from the purchase order or receiver line.

Copying Asset-Applicable Vouchers from Purchase Orders and Receivers

If the voucher data you send to PeopleSoft Asset Management relates to previous assets that are created in PeopleSoft Purchasing, the voucher *must* be matched either fully or partially to the purchase order and receiver. When you create vouchers for asset-related items, copy the voucher information from the receiver. The Payables to Assets Interface process will only send receiver information to PeopleSoft Asset Management if the receiver information exists on the voucher.

Note. The Receiver Interface Push Application Engine process (PO_RECVPUSH) must be run to send receiver information related to a purchase order to PeopleSoft Asset Management. Both the Receiver Interface Push process and the Payables to Assets Interface process must be run when the voucher is created from a PO.

If asset information has been specified on a purchase order or receiver, you can:

- Copy purchase order and receiver information to the voucher using the worksheet copy option on the Invoice Information page or the Quick Invoice page.
- Copy the entire purchase order or receiver, or use the PO Lookup Criteria page or the Receiver Lookup Criteria page to select specific information to copy onto the voucher.

- Process the data through the Voucher Build Application Engine process (AP_VCHRBLD) and the Matching Application Engine process (AP_MATCH).

The Matching process attempts to find receiver information for a voucher that contains only purchase order information. However, it can only do so if there is a one-to-one relationship between the purchase order and the receiver. Multiple receipts that sum to the voucher total can be associated by the Matching process. Partial receipts must be associated manually. If there are multiple receivers for the purchase order, the Payables to Assets Interface process obtains the receiver information from the PO_LINE_MATCHED table, which is populated by the Matching process.

Sending Voucher Information to PeopleSoft Asset Management

This section discusses how to run the Payables to Assets Interface process.

Pages Used to Send Voucher Information to PeopleSoft Asset Management

Page Name	Definition Name	Navigation	Usage
Load Assets Request	INTFC_APAM_RQST	Accounts Payable, Batch Processes, Extracts and Loads, Load Assets Request	Request a run of the Payables to Assets Interface Application Engine process (INTFAPAM), which copies the voucher information from the selected vouchers, populates the Pre-interface table in PeopleSoft Asset Management, and updates the Asset Management distribution status on the distribution lines for the selected vouchers to be distributed.

Running the Payables to Assets Interface Process

Access the Load Assets Request page (Accounts Payable, Batch Processes, Extracts and Loads, Load Assets Request).

Interface Asset Information Select to preview the data on the Pre-Interface Table (Pre-AM01) using the Load Preview - Pre-AM page.

Process Option Select the process option. Options are:

- *Process All Business Units.*
- *Process Business Unit.*
- *Process Control Group.*
- *Process Origin.*
- *Process Vendor.*
- *Process Voucher.*

Depending on the process option that you select, different fields in the group box become available for entry. If you select the process option *Process All Business Units*, no additional information is required. However, each of the other options requires additional parameters such as a business unit, voucher ID, group, vendor ID, origin, or buying agreement ID.

If you specify a vendor ID or origin, you also need to enter the associated setID.

Chapter 33

Processing Self-Billed Invoices

This chapter provides an overview of self-billed invoice (SBI) processing, lists prerequisites, and discusses how to:

- Perform SBI processing.
- Review SBIs.

Understanding SBI Processing

PeopleSoft Payables supports SBIs. SBIs are invoices that are created from Evaluated Receipt Settlement (ERS) data that are sent to the supplier (vendor) to provide tax details. Self-billed invoices contain all of the information that the vendor would have provided on an actual invoice. In business environments that use ERS and value-added tax (VAT), for example, there is typically a requirement to provide an invoice containing all the VAT details that can be returned to the vendor. Customers can send the vendor an SBI with all of the VAT details.

You can also combine data from multiple vouchers on one invoice to meet the requirements of businesses that process large volumes of receipts using ERS.

To create SBIs:

1. Create a receiver on the Receiving page.
2. Run the Voucher Build Application Engine process (AP_VCHRBLD) with the *Evaluated Receipts (ERS)* option selected as the voucher build interface on the Voucher Build page.
3. Review the voucher on the Voucher Summary page.
4. (Optional) Change SBI options on the Voucher Attributes page.
5. Run the Matching Application Engine process (AP_MATCH) from the Match Request page.
6. Run the Voucher Posting Application Engine process (AP_PSTVCHR) from the Voucher Posting Request page. (The voucher must be posted before running the SBI Application Engine process (APSBIPRC).
7. Run the SBI process in selection mode.
8. Review the SBI vouchers.
9. Run the SBI process in either commit mode or rollback mode.
10. Print the SBIs.

Note. When you build the ERS voucher using the Voucher Build process, the system populates the invoice number field with the packing slip number from the receiver.

This section discusses:

- SBI numbering options.
- ERS vouchers for SBI vendors.
- SBI voucher status summary.

PeopleSoft Purchasing 9.1 PeopleBook, "Receiving Shipments," Entering Receipts

SBI Numbering Options

At each of the levels in the control hierarchy, there are four numbering options for SBIs. Two options for individual vouchers meet European requirements. The difference between these options is the method that generates the SBI number. In Europe, customers must generate unique SBI numbers that differ from the invoice numbers. In the U.S., some customers use the invoice number as the SBI number. This table lists the formulas used to create these options:

<i>Value</i>	<i>Description</i>	<i>Definition</i>	<i>Numbering Formula</i>
<i>D</i>	Default	Changes automatically to the value that you selected at the next highest level in the control hierarchy. This option is not available at the General Ledger business unit level, because it is the highest level in the control hierarchy.	N/A

Value	Description	Definition	Numbering Formula
<i>G</i>	Group Vouchers (Auto-Num)	Enables you to group vouchers that satisfy a set of criteria onto a single SBI. This is particularly useful for customers who process large volumes of receipts using ERS.	GL business unit + vendor ID + vendor location + ERS sequence number
<i>I</i>	Individual Voucher (Auto-Num)	Allows only one voucher for each SBI. If the SBI numbering option is <i>I</i> , the system assigns the next available SBI number to the invoice based on the invoicing location.	GL business unit + vendor ID + vendor location + ERS sequence number
<i>P</i>	Individual Voucher - Invoice Number	Allows only one voucher for each SBI. If the SBI numbering option is set to <i>P</i> , the system generates the SBI number by combining the invoice number with the ERS sequence number.	Invoice number + ERS sequence number

Group Vouchers

If the SBI numbering option is set to *G* (group), the system uses the following criteria to group vouchers:

Field	Record Field
Vendor	VOUCHER.VENDOR_SETID, VOUCHER.VENDOR_ID
Vendor Location	VOUCHER.VNDR_LOC
Transaction Currency	VOUCHER.TXN_CURRENCY_CD
GL Business Unit	VOUCHER.BUSINESS_UNIT_GL
Payment Due Date	VOUCHER.DUE_DATE

<i>Field</i>	<i>Record Field</i>
VAT Registration Number	VOUCHER.VAT_RGSTRN_SELLER

The system assigns the next available SBI number for the vendor location to vouchers that are grouped using the above criteria. The SBI numbers are unique and sequential.

ERS Vouchers for SBI Vendors

When PeopleSoft Payables generates ERS vouchers for SBI vendors using the Voucher Build process, the following actions occur:

1. The SBI flag on the appropriate voucher records is set to *Y*.

The SBI process processes all posted and matched vouchers that are identified as SBI.

2. The SBI number is set to zero or blank.
3. The system determines the SBI numbering option based on the PeopleSoft Payables hierarchy.

First, the system takes the option that is defined for the invoicing vendor using the location on the voucher. If the vendor is set to *Default From Higher Level*, the system gets the option from the PeopleSoft Payables business unit on the voucher. If the PeopleSoft Payables business unit is set to *Default From Higher Level*, it then gets the setting from the PeopleSoft General Ledger business unit.

4. The SBI in process flag is set to *N* and the SBI process ID is set to zero.

SBI Voucher Status Summary

Use the Voucher Summary page to review a voucher's SBI status before and after you run vouchers through the SBI process. Before processing the voucher through SBI, use the Voucher Attributes page to override the SBI Num Option (SBI number option) field at the voucher level. After running the SBI process, use this page to review the SBI numbers for your vouchers. The SBI number is populated and appears only after the SBI process is complete.

If the voucher does not qualify for SBI, then the SBI Num Option and SBI Number fields are unavailable for entry.

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Completing Voucher Attributes, page 373](#)

Prerequisites

Before you can process SBIs, you must:

- Enable ERS.

Before setting up SBI processing for a business unit, you must enable ERS for that business unit. You can enable ERS at the PeopleSoft General Ledger business unit, PeopleSoft Payables business unit, and vendor location levels.

Note. You can use ERS with non-purchase order receipts; however, you must price the receipts first or the Voucher Build process fails them.

- Define SBI vendors.

Before you can process an SBI invoice for a vendor, you must also define that vendor as an SBI vendor on the Payables Options page in the Self-Billed Invoice Options group box.

- Specify SBI options.

You can specify the SBI processing options at various levels in the default hierarchy. You can set them at the PeopleSoft General Ledger business unit, the PeopleSoft Payables business unit, vendor location, and voucher levels.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information," Defining Self-Billed Invoice Options

Performing SBI Processing

This section discusses how to:

- Run SBI process in Selection mode.
- Review selected SBI data.
- Roll back SBI data.
- Run SBI process in Commit mode.
- Print self-billed invoices.

Pages Used to Perform SBI Processing

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
SBI Creation Request	SBI_CREATE_REQUEST	Accounts Payable, Batch Processes, Vouchers, Self-Billed Invoices, SBI Creation Request	Specify the SBI selection parameters.
SBI Creation Request - Message Log	AP_MESSAGE_LOG	Select the Message Log tab from the SBI Creation Request page.	Review the process message log for information on the records that were selected or rejected. This page lists the messages for the process that you just finished running.
SBI Voucher Review	VCHR_SBI_REVIEW	Accounts Payable, Review Accounts Payable Info, Vouchers, Self-Billed Invoice Creation, SBI Voucher Review	Review the SBIs that were selected by the SBI process. You can also use this page to put SBI vouchers on hold, to look up purchase order or receipt information, and to search for SBIs by vendor or vendor location.
SBI Review Request	RUN_APY1065	Accounts Payable, Reports, Vouchers, Self-Billed Invoices, SBI Review Request	Define run parameters for the Self-Billed Invoices Review report (APY1065). Use the report to review selected SBI data.
SBI Print	VCHR_SBI_PRINT	Accounts Payable, Reports, Vouchers, Print Self-Billed Invoices, SBI Print	Define run parameters for SBI Print report (APY1060). View all SBI process cycles which have SBIs pending print, and print the SBIs. The SBI Print report lists all of the documents that comprise an SBI.

Running SBI Process in Selection Mode

Access the SBI Creation Request page (Accounts Payable, Batch Processes, Vouchers, Self-Billed Invoices, SBI Creation Request).

SBI Creation Request page

Note. The ERS vouchers must be posted and matched before you can run the SBI process.

Run Control ID

When you add a new run control ID, the SBI process is set to run in Selection mode and all run mode-related fields are unavailable for entry. The SBI Selection Process check box is selected, but both this check box, and the Commit and Rollback check boxes are unavailable for entry until you have run the SBI process in Selection mode.

The mode in which the PeopleSoft Application Engine process runs is always controlled through PeopleCode.

SBI Selection Process

Select to run the SBI process in Selection mode rather than Commit or Rollback mode. When you enter a new run control ID, the system automatically selects the Selection process for you, and you cannot change the field.

Commit

Select to run the SBI process in Commit mode rather than Selection or Rollback mode. You can only select this option after you have run the SBI process in Selection mode.

After you run the SBI process in Selection mode, the system automatically changes to the Commit mode for you.

Rollback

Select to run the SBI process in Rollback mode rather than Selection or Commit mode. You can only select this option after you have run the SBI process in Selection mode.

Date Range

Enter to restrict the vouchers selected for the SBI process using the invoice date. Values are:

Select All: Selects all the vouchers regardless of date range.

Specify: Enter a date range in the From Date and Through Date fields.

During the SBI Selection process, the system:

1. Identifies candidate vouchers.

- SBI_Flag = Y
- SBI_In_Process_Flag = N
- Voucher_Type = E
- Post_Status_AP = P
- SBI_Num = 0 or blank
- SBI_Doc_Opt = G/I/P
- Invoice_Date between From_Date and Through_Date from request page and also satisfying business unit and vendor selection options.
- MATCH_STATUS_VCHR = M

2. Updates vouchers as SBI is in process.

3. Processes vouchers with SBI_Doc_Opt as I or P.

4. Processes vouchers with SBI_Doc_Opt = G.

Group them using criteria mentioned in Voucher Creation/Process section.

5. Assigns sequentially generated dummy SBI numbers starting with 1 for SBIs under each vendor or location regardless of SBI_Doc_Opt.

6. Creates data in VCHR_SBI_P and VCHR_SBI_DATA_P.

7. Sets the initial approval status for these SBIs based on vendor or location approval status.

8. Marks SBI_CREATE_RQST to indicate selection process is complete.

Reviewing Selected SBI Data

Access the SBI Voucher Review page (Accounts Payable, Review Accounts Payable Info, Vouchers, Self-Billed Invoice Creation, SBI Voucher Review).

After the SBI process completes its run in Selection mode, SBI data are created in VCHR_SBI_P and VCHR_SBI_DATA_P with dummy SBI numbers. The dummy SBI numbers are sequentially generated (starting from 1) under each vendor location.

Search Criteria

SetID and Vendor

Search for a vendor by entering a vendor setID and vendor ID and then clicking the Search button.

Location

Search for a vendor by entering a vendor and location and then clicking the Search button. You must enter a value for the Vendor ID field to select a location value.

Search Results

SBI Hold

Select this check box to hold the entire SBI.

You can also hold individual vouchers by selecting the SBI Hold check box in the SBI Vouchers group box.

If you put SBI vouchers on hold, the system skips them during the Commit process and picks them up during the next run of the SBI Selection process.

SBI Vouchers

SBI Hold

Select this check box to hold any of the individual vouchers that comprise the SBI.

Invoice

Displays invoice numbers of the SBI vouchers that your search produced.

Click PO List Push button to view the details for the purchase orders associated with the voucher. Review purchase order information before you make a final decision to hold, commit, or roll back these SBI vouchers.

Click Receipt List button to view the details for the receipts that are associated with the voucher. Review receipt information before you make a final decision to hold, commit, or roll back these SBI vouchers.

See Also

[Chapter 20, "Running the Matching Process," Managing Matches and Match Exceptions, page 605](#)

Rolling Back SBI Data

After you review the SBI vouchers and determine that you need to rerun the SBI process, access the SBI Creation Request page and select the Rollback mode.

Once the SBI Selection process is complete, all of the fields on the SBI Creation Request page are unavailable except for Commit and Rollback. Once you roll back the selection, you can modify run parameters for the process cycle for the next run or define a new process cycle.

During the SBI Rollback process, the system:

1. Deletes data from VCHR_SBI_P and VCHR_SBI_DATA_P.
2. Updates vouchers so that they can be processed in the next run.
3. Marks SBI_CREATE_RQST to indicate the that Rollback process is complete.

See Also

Chapter 33, "Processing Self-Billed Invoices," Running SBI Process in Selection Mode, page 986

Running SBI Process in Commit Mode

After you review the SBI vouchers and determine them to be accurate, return to the SBI Creation Request page to run the SBI process again in Commit mode.

Once the SBI Selection process is complete, all the fields on the SBI Creation Request page are unavailable except the Commit and Rollback options. Once you commit the selection, you can modify run parameters for the process cycle for the next run or to define a new process cycle.

If you run the SBI Process in Commit mode, the data is moved from VCHR_SBI_P and VCHR_SBI_DATA_P to VCHR_SBI and VCHR_SBI_DATA with real SBI numbers. Also, a copy of the data is inserted in VCHR_SBI_R and VCHR_SBI_DATA_R for reporting purposes to speed up the SBI print process.

During the SBI Commit process, the system:

1. Deletes data from VCHR_SBI_P and VCHR_SBI_DATA_P that are in hold status and updates their status in VOUCHER records so that they can be processed in subsequent runs.
2. Assigns real SBI numbers.

Gets a count of SBIs (SBI_Doc_Opt = G/I) under each vendor and location and gets the next block of numbers needed from VENDOR_LOC. The SBI numbers are of the form "GL business unit"-"vendor ID"-"vendor location"-"sequential number" (for example, M04A-0000000046-1-56).

3. Assigns real SBI numbers to SBIs whose SBI_Doc_Opt = P.

These SBI numbers are generated by concatenating Invoice_Number and ERS_INV_SEQ.

4. Inserts data into VCHR_SBI and VCHR_SBI_DATA.
5. Inserts data into VCHR_SBI_R and VCHR_SBI_DATA_R with cycle ID as one of the keys. (This enables you to print SBIs generated for a particular process cycle).
6. Updates voucher tables with the real SBI numbers and marks SBI processing as completed.
7. Deletes data from VCHR_SBI_P and VCHR_SBI_DATA_P.
8. Marks SBI_CREATE_RQST to indicate that the Commit process is complete.

Chapter 33, "Processing Self-Billed Invoices," Running SBI Process in Selection Mode, page 986

Printing Self-Billed Invoices

Access the SBI Print page (Accounts Payable, Reports, Vouchers, Print Self-Billed Invoices, SBI Print).

SBI Process Cycle ID	Lists all process cycles with SBIs pending print.
SBI Print	Select the SBI Print check box next to the SBI Process Cycle ID that you want to print.
Process Reissue	Select to process the reissued SBIs.

The SBI Print report is a printed version of the SBI Print process (APY1060.SQR). The SBI Print process has two types of output: report only or report and files. You define the output at the vendor-location level on the Payables Options page in the Self-Billed Invoice Options section.

When you run the SBI Print process, the system:

1. Removes any data from VCHR_SBIRPT_TBL for the run control from previous run.
2. Loops through and loads fresh data into VCHR_SBIRPT_TBL for all process cycles that need to be printed and creates another record for reissue if reprints have been requested.
3. Refreshes the page.
4. Starts up the SQR report to print SBIs.

Reviewing SBIs

This section discusses how to review SBIs.

Pages Used to Review SBIs

Page Name	Definition Name	Navigation	Usage
SBI Voucher Inquiry	VCHR_SBI_INQUIRE	Accounts Payable, Review Accounts Payable Info, Vouchers, Self-Billed Invoice, SBI Voucher Inquiry	Search for SBIs by vendor location, SBI number, SBI creation date, SBI print status and reissue status for the selected vendor. Approve unapproved SBIs and generate reissue requests on certain SBIs. Drill down to view SBI details.
Self-Billed Invoice	VCHR_SBI_DATA_SEC	 Click the button located on the Self-Billed Invoice Inquiry page.	View all of the vouchers that make up an SBI by their business unit ID and voucher ID.
SBI Vendor Listing	RUN_APY1070	Accounts Payable, Reports, Vendor, SBI Vendor, SBI Vendor Listing	Define run parameters for the SBI Vendor Listing report (APY1070). Use the report to review details of selected SBI vendors.
Unapproved SBI by Vendor	RUN_APY1080	Accounts Payable, Reports, Vouchers, Unapproved SBIs by Vendor	Define run parameters for the unapproved SBIs by Vendor report (APY1080). Use the report to review unapproved SBIs by vendor.

Reviewing SBIs

Access the SBI Voucher Inquiry page (Accounts Payable, Review Accounts Payable Info, Vouchers, Self-Billed Invoice, SBI Voucher Inquiry).

Note. This page shows committed SBI data, so it should be used only after you have run the SBI process in Commit mode.

Search Criteria

SBI Print

Search for SBIs by print status. Values are *Print Pending* or *Print Completed*.

Reissue

Search for SBIs by reissue status. Values are *No* or *Yes*.

Search Results

Click to view all the vouchers that make up an SBI.

Approval

Change the status of an SBI from *Approved* to *Unapproved* while the SBI print status is pending, but you cannot change the status after the print process has completed.

SBI Print

Displays the print status of the SBIs that your search produced. The SBI print status is always updated by the system.

SBI Reissue

Select this check box to reissue printed SBIs. You can only change the SBI Reissue check box for SBIs that have a print status of completed. When the SBI Reissue check box is selected, data is created in VCHR_SBI_R and VCHR_SBI_DATA_R with process cycle as *REISSUE* and system maintained as Y.

Chapter 34

Processing Landed Cost Transactions

This chapter provides an overview of the Landed Cost Extraction Application Engine process (LC_EXTRACT) and discusses how to:

- Enter landed cost transactions online.
- Run the Landed Cost extraction process.
- Review landed cost exceptions.

Note. To run the Landed Cost Extraction process, you must have PeopleSoft Payables, Purchasing, Inventory, and Cost Management installed on the same database. To update subcontracted services to actual costs, you must also have PeopleSoft Manufacturing installed.

Understanding the Landed Cost Extraction Process

Landed cost includes all charges associated with getting an inventory item into your warehouse and available for use or sale. These charges may include material, subcontracted services, freight, insurance, duty, taxes, and handling charges. PeopleSoft Payables features a landed cost extraction module that extracts landed cost data from vouchers, purchase orders, and receivers and passes the data to PeopleSoft Cost Management.

Note. In PeopleSoft Payables, landed cost charges can be attached to vouchers as nonmerchandise charges. Nonmerchandise charges include freight, sales and use tax, value-added tax (VAT), and miscellaneous charges.

Nonmerchandise charges entered on the voucher or copied from a receiver are associated with landed cost codes. Landed cost codes define whether a particular landed cost is to be prorated to the voucher distribution lines or charged to separate expense accounts. If the nonmerchandise charges have a landed cost component, you must prorate the cost. The landed cost code is also associated with an inventory item and indicates whether the charge is to be accrued to an inventory account or expensed at invoice. If the nonmerchandise charges have a landed cost component and are typically charges by the merchandise vendor versus a third-party vendor, you must accrue the cost.

Nonmerchandise charges may be entered on the purchase order. Charges entered on the purchase order are copied onto receivers associated with that purchase order. During voucher entry, nonmerchandise charges can be entered on vouchers received from the merchandise vendor or from third-party vendors. Material charges are matched to the purchase order and receipt using the Matching Application Engine process (AP_MATCH). Nonmerchandise charges, whether vouchered from merchandise vendors or from third-parties, are matched to the receivers by the Landed Cost Extraction process. The Landed Cost Extraction process passes the costs to PeopleSoft Cost Management using the CM_MATCHED_COST and CM_RMATCH_COST records. The Transaction Costing Application Engine process (CM_COSTING) in PeopleSoft Cost Management calculates the purchase price variance (the difference between the vouchered costs and PO costs) and the exchange rate variance (any change in the currency exchange rates between the voucher and the PO).

Note. Nonmerchandise charges that exist on purchase orders but not vouchers are picked up by the Landed Cost Extraction process after the nonmerchandise charges are manually closed.

The Landed Cost Extraction process is a way to pass all receipt-matched information and matched miscellaneous charges to Inventory.

Landed Cost Extraction processes inventory items in these ways:

- Flags eligible vouchers (matched and posted).

Voucher styles include regular vouchers, adjustment vouchers, reversal vouchers, and third-party vouchers. The system includes both previously extracted vouchers and selected vouchers in landed cost processing to calculate the life to date voucher amount for a receiver line ship.

- Finds the corresponding receivers (putaway into Inventory and fully matched).

The Landed Cost Extraction process also includes fully extracted receivers because they can still be adjusted by adjustment or reversal vouchers.

Note. The Landed Cost Extraction process looks at the receipt line instead of the header to extract landed cost data from vouchers. Receipt lines are not processed through landed cost until they are fully matched. The system processes fully matched receiver lines regardless of the match status on the receiver header.

- Sums the vouchers with the same receiver line information (BUSINESS_UNIT, RECEIVER_ID, RECV_LN_NBR, RECV_SHP_SEQ_NBR).
- Prorates the miscellaneous charges to the receiver lines based on the receiver accepted quantity.

The voucher line miscellaneous charge will be prorated based on QTY_RECV_APPLIED / sum of QTY_RECV_APPLIED for the voucher line.

- Calculates the material unit costs.

Note. Life to date voucher amounts includes previously extracted vouchers, in addition to the vouchers selected in the current Landed Cost Extract run control. This helps to ensure accurate calculations of voucher costs by including associated vouchers. For example, a regular voucher and its associated adjustment voucher is included in the voucher unit cost calculation.

- $CM\_UNIT\_COST\_VO = \text{Life to date } RECV\_VCHR\_MTCH.MERCH\_AMT\_VCHR \text{ (converted to Inventory business unit base currency)} / RECV\_LN\_SHIP.QTY\_SH\_ACCPT\_SUOM$
- $CM\_UNIT\_COST\_POVO = \text{Life to date } RECV\_VCHR\_MTCH.MERCH\_AMT\_VCHR \text{ (converted to Inventory business unit base currency using exchange rate on purchase order)} / RECV\_LN\_SHIP.QTY\_SH\_ACCPT\_SUOM$
- $CM\_UNIT\_COST\_PO = RECV\_LN\_DISTRIB.MERCH\_AMT\_BSE / RECV\_LN\_DISTRIB.QTY\_DS\_ACCPT\_SUOM$
- Calculates the miscellaneous charge unit costs.
 - $CM\_UNIT\_COST\_VO = \text{Life to date } VCHRLN\_MISC\_CHG\_MISC\_AMT \text{ (prorated to voucher receiver line and converted to Inventory business unit base currency)} / RECV\_LN\_SHIP.QTY\_SH\_ACCPT\_SUOM$
 - $CM\_UNIT\_COST\_POVO = \text{Life to date } VCHRLN\_MISC\_CHG\_MISC\_AMT \text{ (prorated to voucher receiver line and converted to Inventory business unit base currency using exchange rate on purchase order)} / RECV\_LN\_SHIP.QTY\_SH\_ACCPT\_SUOM$
 - $CM\_UNIT\_COST\_PO = RECV\_LN\_DIST\_LC.UNIT\_COST$
- Populates CM_MATCHED_COST record for material unit costs and miscellaneous charge unit costs (CM_UNIT_COST_VO, CM_UNIT_COST_POVO, and CM_UNIT_COST_PO).

Creates one row for each cost element for each receiver distribution line.

- Populates CM_MATCHED_COST record for the subcontracted services that are included in a production ID (Manufacturing).
- Populates CM_MATCHED_COST record for the excise taxes, custom duties, and sales taxes for India.

The process matches the non-recoverable portion of these charges from third-party vouchers (PeopleSoft Payables) to the non-recoverable portion from the POs and receipts (PeopleSoft Purchasing).

- Populates CM_RMATCH_COST record for return to vendor (RTV) adjustment vouchers.
- Populates receiving shipment (RECV_LN_SHIP_VC) and distribution (RECV_LN_DIST_VC) tables with the actual vouchered miscellaneous charges so that you can report and inquire on this data.

- Adds a line to the CM_MATCHED_COST record and the RECV_LN_DIST_LC record with a zero amount if a charge is vouchered which was not on the purchase order to alert analysts of a discrepancy between the expected and vouchered miscellaneous charges.

Note. This step is important, because if voucher charges are not on the purchase order, the miscellaneous charge codes could be different. For example, suppose that the purchase order indicated that there would be a UPS charge for delivering material. This information would be entered into the RECV_LN_SHP_LC and RECV_LN_DISTRB_LC tables as miscellaneous charges for the purchase order. If the vendor uses UPS and the voucher reflects this, the RECV_LN_SHIP_VC and RECV_LN_DISTRB_VC are populated with the same information, and the _VC tables match the _LC tables. Analysts would have nothing to worry about. If, however, the vendor uses Fed Ex instead of UPS, the _VC tables are out of sync with the _LC tables (they would have different miscellaneous charge codes for the delivery charges associated with this material), and the analyst should be made aware of this discrepancy. The Landed Cost process populates the _VC tables with actual amounts from the voucher and then populates the _LC tables with zero amount rows for any charges it finds in the _VC tables that do not exist in the _LC tables. (In the example above, it populates the _LC tables with a row for the FedEx charge with a zero amount).

- Updates the voucher and receiver tables by flagging the processed vouchers and receivers with the landed cost extracted flag.

Note. Landed cost supports multicurrency, sales tax, and nonrecoverable VAT. You can also have multiple vouchers for each receiver line.

This diagram illustrates how the Landed Cost Extraction process works:

Landed Cost Extraction process

PeopleSoft Cost Management 9.1 PeopleBook, "Structuring Landed Costs," Running the Landed Cost Extract Process

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Nonmerchandise Charge Details, page 332

Prerequisites

The Landed Cost Extraction process is not set up in PeopleSoft Payables. You set the parameters in PeopleSoft Purchasing and Cost Management.

Define the landed cost component parameters on the Misc Charge/Landed Cost Defn (miscellaneous charge/landed cost definition) page. These include:

- Cost elements (choose a cost category of material or landed).

The material category tracks material costs and subcontracted services. The landed category tracks all other landed costs.

- Prorate charges.
- Extended amount tolerances.
- Quantity received tolerances.
- Landed cost groups.
- Accrue charges.

See Also

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Defining Procurement Options," Defining Miscellaneous Charges and Landed Costs

Entering Landed Cost Transactions Online

Unlike other processes in PeopleSoft Payables, landed cost transactions are not actually entered on a particular page in the application. Instead, you define certain miscellaneous charge codes as having a landed cost element by selecting the Landed Cost Component check box on the Misc Charge/Landed Cost Defn page.

Each time that you use these miscellaneous charge codes on a regular voucher, adjustment voucher, reversal voucher, or a third-party voucher and then run the Landed Cost Extraction process, the system recognizes these charges as landed cost. It extracts them and sends them to PeopleSoft Cost Management where users can analyze and report on them.

Note. All nonmerchandise charges, such as freight, sales and use tax, VAT, and miscellaneous charges, are set up on the Misc Charge/Landed Cost Defn page.

Running the Landed Cost Extraction Process

This section discusses how to run the Landed Cost Extraction process.

The Landed Cost Extraction process extracts landed cost data from matched and posted regular vouchers, adjustment vouchers, reversal vouchers, and third-party vouchers and writes data to the PeopleSoft Cost Management CM_MATCHED_COST table for further processing. You run this process from the Landed Cost Extract page.

Pages Used to Run the Landed Cost Extraction Process

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Landed Cost Extract	LC_RUN_CNTRL	Accounts Payable, Batch Processes, Extracts and Loads, Extract Landed Cost, Landed Cost Extract	Runs the Landed Cost Extraction Application Engine process (LC_EXTRACT), which can be run for all business units, specific business units, or specific vouchers.
Landed Cost Extract - Messages	AP_MESSAGE_LOG	Accounts Payable, Batch Processes, Extracts and Loads, Extract Landed Cost, Landed Cost Extract, Messages	View error messages associated with previous landed cost extraction requests.

Running the Landed Cost Extraction Process

Access the Landed Cost Extract page (Accounts Payable, Batch Processes, Extracts and Loads, Extract Landed Cost, Landed Cost Extract).

Options

Select the hierarchy level for which you want to run the Landed Cost Extraction process: *All business units*, *Specific business units*, or *Specific vouchers*.

If you select *Specific business units* or *Specific vouchers* a message displays indicating that vouchers may be processed in addition to the ones selected by the run control. Additional vouchers are processed by the Landed Cost Extraction process if they are associated with the same receiver line ships. If you select *All business units* all vouchers in the system will be processed.

The number of vouchers selected by the run control and the total number of vouchers processed by the Landed Cost Extraction process displays in the Landed Cost Extraction Application Engine log.

Note. Additional vouchers are included to help ensure accurate unit cost calculations. These additional vouchers may be vouchers that have been fully extracted by previous Landed Cost Extraction processes or vouchers that are not selected by the current Landed Cost Extraction process run control. Vouchers that are not selected by the current run control, but are included in the unit cost calculations, will be locked and their extract status will be updated.

Reviewing Landed Cost Exceptions

This section discusses how to review landed cost extract exceptions.

Page Used to Review Landed Cost Exceptions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Landed Cost Extract Exceptions	VCHR_LC_LOG	Accounts Payable, Review Accounts Payable Info, Interfaces, Landed Cost Extract Exceptions, Landed Cost Extract Exceptions	Use to view exceptions generated during the Landed Cost Extraction Application Engine process (LC_EXTRACT).

Reviewing Landed Cost Extract Exceptions

Access the Landed Cost Extract Exceptions page (Accounts Payable, Review Accounts Payable Info, Interfaces, Landed Cost Extract Exceptions, Landed Cost Extract Exceptions).

The Landed Cost Extraction process generates two types of exceptions:

- Currency conversion.

An exception is generated if the exchange rate is not found when converting the PO and voucher amount to the inventory business unit base currency.

- Miscellaneous charge tolerance.

An exception is generated if the actual life to date voucher miscellaneous charge exceeds the miscellaneous charge on the receiver line ship by more than the defined tolerance established on the Misc Charge/Landed Cost Defn page.

Chapter 35

Processing Multiple Currencies in PeopleSoft Payables

This chapter provides an overview of how to use multiple currencies in PeopleSoft Payables and discusses how to perform the PS/AP Revaluation Application Engine process (AP_REVALUE).

Understanding Multiple Currencies in PeopleSoft Payables

PeopleSoft offers a uniquely flexible structure that enables you to manage financial information in multiple currencies. You can use a *ChartField* to designate different currency codes within a ledger, or as required, you can store each currency in a different *ledger*.

PeopleSoft also provides specific input, processing, and reporting features that satisfy the most demanding requirements of multinational financial management. It supports the European Common Currency (Euro), as well as currency conversions, remeasurement, revaluation, and translation. It also provides a complete audit trail of all multicurrency processing.

This section discusses:

- Multicurrency terminology in PeopleSoft Payables.
- Voucher processing in a multicurrency environment.
- Payment processing in a multicurrency environment.
- PeopleSoft Payables Revaluation processing.
- Multibook in PeopleSoft Payables.

Multicurrency Terminology in PeopleSoft Payables

Below are some key terms and concepts that you encounter when you use Oracle's PeopleSoft Financials multicurrency applications. We've made an effort to use these terms consistently to coincide with generally accepted accounting terms and Financial Accounting Standards Board (FASB) rules.

Types of Currency

Currency refers to the denomination of a monetary transaction. PeopleSoft applications use a currency code to identify and track individual currencies. Though the system does not require it, we suggest that you use the International Standards Organization (ISO) currency codes supplied with the application. You may use an unlimited number of currencies in PeopleSoft applications.

Base Currency

The base currency is the primary currency used for a business unit, and is sometimes referred to as the unit's *book* currency. A business unit can have one and only one base currency. This is generally the local currency for the organization; however, accounting rules or other circumstances might dictate otherwise.

In PeopleSoft Payables, you assign a base currency to each business unit on the General Ledger Definition - Definition page. PeopleSoft Payables business units use the base currency of their associated general ledger business units. Once established, the base currency of a general ledger business unit cannot be changed.

Transaction and Payment Currency

Any currency with which a business unit interacts, other than its base currency, is a foreign currency. PeopleSoft Payables refers to a foreign currency as a *transaction currency* when describing the currency of the invoice, and as a *payment currency* when describing the currency in which payments are made.

The system stores all distribution accounting data in three currencies: the base currency of the general ledger business unit on the distribution line, the PeopleSoft Payables business unit base currency, and the transaction currency.

Currency Calculations

The system performs several calculations when it works with multicurrency transactions.

Conversion

Conversion is the exchange of one currency for another. In PeopleSoft Payables, this refers to expressing the value of foreign currency transactions in terms of the base currency. Conversion occurs in many places in your PeopleSoft Payables system.

When receiving vouchers from a vendor, you can enter a transaction amount in a foreign currency. The system uses an exchange rate to convert the transaction amount to the PeopleSoft Payables business unit base currency and the general ledger business unit base currency.

When you create payments in one currency for vouchers in a different currency, the system performs currency conversion as necessary to enable payment creation. It uses either the currency rate type, or override to convert the payment currency into the voucher's base currency, and the bank's general ledger base currency. During the revaluation of your current payables balance, the process revalues unpaid vouchers, based on business unit's base currency.

Exchange Rate

An exchange rate is the value of one currency expressed in terms of another. Actual exchange rates vary based on the currency rate type that you use. There are several recognized currency rate types, including spot (immediate), current, negotiated (discount and premium forward rates), average, and historical rates. The system supports any number of exchange rates.

Unrealized Gains and Losses	An unrealized gain or loss represents the difference between the amount that you would pay in your base currency if your outstanding foreign currency accounts liability balance were paid now and the amount that you would have paid if payment was made when the items were created. If the exchange rate is more favorable now than when items were created, you have an unrealized gain. If the exchange rate is less favorable now, you have an unrealized loss.
Realized Gains and Losses	Realized gains or losses represent the actual increase or decrease, due to exchange rate fluctuations, or rate type changes in the amount of money paid in the base currency. The system determines realized gain or loss only at payment time.

PeopleSoft Global Options and Reports 9.1 PeopleBook, "Processing Multiple Currencies"

Voucher Processing in a Multicurrency Environment

Multicurrency affects voucher processing at all levels: entering and validating vouchers, scheduling payments, using control groups, and posting vouchers.

Entering Multicurrency Vouchers

Each voucher has a transaction currency denomination. The currency code for the transaction appears by default through the PeopleSoft Payables control hierarchy (business unit, voucher origin, control group, and vendor). If required, you can change the currency and rate type on the voucher. You can change the currency code for the voucher on the Voucher - Invoice Information page or on the Voucher - Attributes page, and you can change the rate type for the voucher on the Voucher - Attributes page.

For each voucher, the system converts the transaction currency to the voucher base currency using the exchange rate and exchange rate type. By specifying the exchange rate source, you can enter a specific exchange rate or have the system determine the exchange rate from the exchange rate tables. If you select *User* as the source, enter the exchange rate yourself. If you select *Tables* as the source, the system uses the invoice date of the voucher and the exchange rate tables to determine the exchange rate to use.

The transaction currency code applies to all amounts entered onto the voucher. At save time, the system performs a conversion to the base currency defined for the business unit and to the PeopleSoft General Ledger base currency for the distribution line on interunit accounts.

Transaction balancing occurs on both the transaction and the base amounts. During voucher save, base amount rounding differences are added to the largest expense accounting lines for each voucher line.

Scheduling Payments for Multicurrency Vouchers

Payment scheduling creates scheduled payment records for each voucher. Each scheduled payment has a gross payment amount and a discount payment amount. The scheduled payment amounts are converted based upon the currency exchange rate of the voucher transaction currency. You can override the currency rate or rate type on the Holiday/Currency Options page selected from the Voucher - Payments page. When you enter a specific rate, the rate is used to convert the currency between the voucher transaction currency and the payment currency. When you override the rate type, the new rate type is used to convert from the transaction currency to the payment currency and from the payment currency to the bank's base currency and the voucher's base currency.

Note. If you use a rate type on the payment that is different from the rate type on the voucher, realized gain and loss may occur.

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Completing Voucher Attributes, page 373

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Scheduling and Creating Voucher Payments for Online Vouchers, page 357

Payment Processing in a Multicurrency Environment

Multicurrency also affects payment processing at many levels.

Payment Selection

From a multicurrency perspective, PeopleSoft Payables determines the amount of a given currency required to pay a scheduled payment. The payment currency does not have to be the same as the voucher transaction currency. In fact, the payment currency can be in any currency that you have set up for the bank. You can either accept the default or select another valid currency code.

Payment Creation

During payment creation, the system converts the voucher transaction currency to the payment transaction currency for the payment. It converts the payment transaction currency to the voucher base currency and the bank base general ledger currency for posting. The amounts form the basis of realized gain and loss accounting entries created in payment posting.

PeopleSoft Payables supports checks, automated clearing house (ACH) payments, direct debits, wire transfers, electronic funds transfers (EFT), drafts, GIRO, letters of credit, and bank transfers. The Pay Cycle Application Engine process (AP_APY2015) consists of payment selection and payment creation. Output processes print checks and create files.

The payment creation process populates the payment amount and bank base amount of the payment. The payment table also holds the corresponding currency codes and rates. The check print process accesses the currency code table to access symbols and descriptive information to print on the check and remittance advice.

The Trial Payment Register, the Payment Register, and the Payment Forecast reports all reflect multicurrency payments.

Note. During payment creation, the system calculates the payment transaction currency from the voucher transaction currency.

This graphic shows the currency conversion process for vouchers and payments:

Reviewing Currency Conversion for payments and vouchers

Note. If the voucher transaction currency and the payment transaction currency are not equal, you should not use the General Ledger Balance By All Currencies function.

Payment Posting

The Payment Posting Application Engine process (AP_PSTPYMNT) creates accounting entries that relieve liabilities and record payments, as well as discounts taken or lost, VAT, withholding and realized gains and losses. The Payment Posting process also creates accounting entries resulting from canceled payments (void and stop checks). The system calculates the exchange rate gain or loss by subtracting the BASE_CURRENCY at payment time from the BASE_CURRENCY at voucher entry time. However, if the voucher's transaction currency is different from the payment's transaction currency, the gain or loss is an overall gain or loss (refer to following graphic).

Reviewing Exchange Rate Gain or Loss process flow

If a situation arises where the voucher is in currency A, the payment is in currency B, and the voucher's base is in currency C, you have a potential realized gain or loss. In this situation, the payment accounting entry foreign currency is the currency of the payment.

When rounding errors occur during the generation of accounting entries, the amounts are posted to the rounding suspense account. Rounding suspense account entries can be reclassified in PeopleSoft General Ledger for any ledgers.

[Chapter 21, "Processing Pay Cycles," Running and Managing Pay Cycles, page 650](#)

PeopleSoft Payables Revaluation Processing

Revaluation adjusts the domestic currency value of asset and liability account balances that are maintained in foreign currencies. It is necessary to reflect the actual value of these assets and liabilities in the *domestic* currency, because the exchange rates fluctuate between the domestic currency and the foreign currencies. Revaluation is generally performed at the end of each accounting period and results in a domestic currency adjustment to the account being revalued, with an offsetting entry being made to the revaluation gain or loss accounts. In PeopleSoft Payables, the PS/AP Revaluation process determines the revaluation adjustment required for the balance sheet account and creates a journal entry for this adjustment and its offsetting gain or loss amounts.

You might need to revalue your open payables for financial reporting purposes. PeopleSoft Payables enables you to create summarized revaluation accounting entries and input these entries into the Journal Generator. You can run the revaluation for one or many PeopleSoft Payables business units.

You revalue transactions as follows:

1. Run the PS/AP Revaluation process.

The PS/AP Revaluation process creates the unrealized gains and loss entries for selected PeopleSoft Payables business units for a given period. The PS/AP Revaluation process inspects the transaction tables and applies a specified exchange rate to each unpaid, scheduled payment which has a voucher transaction currency that is not in the business unit's base currency. It then applies the exchange rate to create a revaluation base amount, which it uses to create a revaluation accounting line.

2. Run the Journal Generator Application Engine process (FS_JGEN).

The Journal Generator process creates journals from the revaluation accounting lines. Make sure that you have set up an accounting definition to relate the revaluation accounting lines to journal lines. You also need a journal generator template specifying the creation of a reversing journal for revaluation.

If you run revaluation in PeopleSoft Payables, rather than in PeopleSoft General Ledger, the process happens at a specified level of detail. This provides more flexible results if your exchange rates are volatile. If you do run the process in PeopleSoft Payables for the accounts that you use here, you do not want to run the PeopleSoft General Ledger revaluation against the same account balances in PeopleSoft General Ledger, because you would be double counting.

Note. Vouchers must be posted before you can run revaluation.

Multibook in PeopleSoft Payables

The Multibook feature supports multiple base currencies, each in the form of a ledger, defined for a business unit. Optionally, you can post a single transaction to all base currencies (all ledgers) or to only one of those base currencies (individual ledgers).

With the Multibook feature, several ledgers are grouped together within a ledger group. Ledgers within the group share the same physical structure, but each ledger can have its own base currency. The ledger group controls how transactions post to all ledgers within the group or to an individual ledger. The system automatically converts transactions to the applicable base currency and then posts to the corresponding ledger. This gives you full, drill-down support and cross-currency comparisons at both the summary and transaction levels.

Enable the Multibook feature on the Installation Options - Overall page, by selecting the Create Multibook Accounting Entries in Subsystems check box. If this check box is selected, and if your ledger group is set up for secondary ledgers, the PeopleSoft Payables posting processes and revaluation process create the accounting entries for those ledgers. However, if this check box is not selected, the PeopleSoft Payables posting processes and revaluation process create only the primary ledger entries. The Journal Generator process creates the secondary and translate ledger entries.

Set up ledger groups on the Ledger Groups - Definition page.

The calculations for secondary ledgers are dependent upon whether you are using *Translation* or *Non-Translation* ledgers:

Non-Translation ledgers	The system creates accounting entries by converting from the transaction currency to the base currency.
Translation ledgers	The system creates accounting entries by converting from the primary ledger base currency to the translate ledger base currency.

Use the Multibook feature to maintain the real-time balance of certain accounts in the ledger. You can track gain and loss for secondary ledgers more accurately (when they are non-translation ledgers).

Performing the PS/AP Revaluation Process

This section discusses how to:

- Mark vouchers for revaluation.
- Run the Revaluation process.
- Review the revaluation process.

Pages Used to Perform the PS/AP Revaluation Process

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher - Voucher Attributes	VCHR_STATUS_IA	Accounts Payable, Vouchers, Add/Update, Regular Entry, Voucher Attributes	Mark vouchers for revaluation.
Revalue Payables	RVL_RUN_CNTL_AP	Accounts Payable, Batch Processes, Vouchers, Payables Revaluation, Revalue Payables	Run the PS/AP Revaluation Application Engine process (AP_REVALUE).

Page Name	Definition Name	Navigation	Usage
Review Payables Revaluation	RVL_AP_ACCTG_ENTS	Account Payable, Review Accounts Payable Info, Vouchers, Review Payables Revaluation, Review Payables Revaluation	Review the results of the PS/AP Revaluation process.

Marking Vouchers for Revaluation

Access the Voucher Attributes page (Accounts Payable, Vouchers, Add/Update, Regular Entry, Voucher Attributes).

Select the Revalue Voucher check box to mark vouchers for revaluation.

The system automatically selects all vouchers for revaluation, but you can select transactions of your choice for revaluation at the voucher level. The PS/AP Revaluation process recognizes transactions that are identified for revaluation and ignores the transactions that have not been identified.

Revalue Payables page

Prerequisites

Vouchers must be posted before you can run revaluation, and they must be marked for revaluation to be selected by the PS/AP Revaluation process.

Revaluation Request Parameters

As of Date	Enter the as of date. Generally this date is the same as your period start date.
Rate Type	Enter a currency rate type to determine the exchange rate to be used in revaluation. The value you enter here overrides the rate type from the original voucher.
Check Only	Select to run the PS/AP Revaluation process without distributing the accounting entries to the PeopleSoft General Ledger. When the Check Only check box is selected, accounting entries are created, but are marked <i>Ignore</i>; therefore, they are not available for distribution to PeopleSoft General Ledger. As long as this check box is selected, you can run this process as many times as needed to evaluate results using various rate types. Each time that you run the process, it deletes any entries identified with the value <i>Ignore</i> (from the previous run) and creates new entries. Note. The system does not generate document sequencing when running the PS/AP Revaluation process in check only mode.

Revaluation Accounting Values

Accounting Date	Enter the accounting date that is used as the date for each generated revaluation entry. The system stores the accounting date with the revalued amount of each item.
Account	Use to override the default accounts payable account for the revaluation adjustment. The accounts payable account is defined on the Accounting Entry template. The unrealized gain and loss accounts defined on the Accounting Entry template are used to offset this adjustment. Note. Only the account is overridden; all other ChartFields remain. If you are using alternate accounting, the alternate account is blank.

Business Units

Business Unit	Select the business units that you want to process for this revaluation period.

Reviewing the Revaluation Process

Access the Review Payables Revaluation page (Account Payable, Review Accounts Payable Info, Vouchers, Review Payables Revaluation, Review Payables Revaluation).

Review Payables Revaluation page

Accounting Information

Transaction Currency	Displays the transaction currency of the vouchers. Transaction currencies are not combined.
Accounting Date	Displays the accounting date for the PS/AP Revaluation process.
Distributed to GL	Displays as checked if the revaluation accounting entries were distributed to PeopleSoft General Ledger.
Vendor ID	Displays the vendor ID for the accounting entry. The PS/AP Revaluation process groups the business unit by vendor ID.
Voucher ID	Displays the voucher ID for the accounting entry.
Ledger	Displays the PeopleSoft General Ledger business unit ledger to which this accounting entry has been charged.
Account	Displays the account and other ChartFields to which this accounting entry has been charged.
Affiliate	Displays the affiliate account to which this accounting entry has been charged. Create an affiliate account by overriding the default PeopleSoft General Ledger business unit for the PeopleSoft Payables business unit in the GL Unit (general ledger) field on the Voucher - Invoice Information page.

Monetary Amount DR (monetary amount debit)	If you select Display Debit/Credit Amounts in Subsystems on the User Preferences - Overall Preferences page, this field displays the monetary amount DR associated with the GL unit of the accounting entry.
Monetary Amount CR (monetary amount credit)	If you select Display Debit/Credit Amounts in Subsystems on the User Preferences - Overall Preferences page, this field displays the monetary amount credit associated with the GL unit of the accounting entry.
Monetary Amount (monetary amount debits and credits)	If you do not select Display Debit/Credit Amounts in Subsystems on the User Preferences - Overall Preferences page, this field displays the monetary amount (debits as positive numbers and credits as negative numbers) associated with the GL unit of the accounting entry.
Currency Code	Displays the currency code associated with the GL unit of the accounting entry.
Tot Open (total open)	Displays the total number of open entries for the page.
Unrealized Gain	Displays the unrealized gain for the accounting entry.
Unrealized Loss	Displays the unrealized loss for the accounting entry.
Net	Displays the net gain or loss (unrealized gain plus unrealized loss) for the page.

Processing Document Sequencing in PeopleSoft Payables

This chapter provides an overview of document sequencing in PeopleSoft Payables and the document sequence header table, lists prerequisites, and discusses how to:

- Define and assign document types.
- Use document sequencing with various transactions.

Understanding Document Sequencing

Statutory requirements in some countries require that all financial transactions (*documents*) be classified into different transaction types, and that within each transaction type, all documents entered be numbered sequentially. The Document Sequencing feature helps you maintain established business practices by meeting both of these requirements.

Document sequencing is available for documents that you create either online or through background (batch) processing. When you activate the Document Sequencing feature, the PeopleSoft system automatically assigns a sequence number to each document (invoice, voucher, journal, and so on) that you create. You can also enter sequence numbers manually. When you delete, change, or unpost a document, the system may generate additional document sequence numbers, as appropriate.

Document Sequencing Setup Considerations

Document sequencing *must* be established for business units at implementation, before transactions exist for the business units. Activating document sequencing functionality when a business unit has existing transactions results in payment cancellation and voucher closure issues. Consequently, once a business unit has transactions, its document sequencing setting should not be changed.

If you have erroneously activated document sequencing, you must correct the resulting voucher issues as follows:

- Use credit vouchers to close vouchers.
- Use journal entries to correct the accounting entries of canceled payments.

Document Sequence Header Table (VCHR_DOCSEQ_HDR)

PeopleSoft Payables uses a Document Sequence Header table, VCHR_DOCSEQ_HDR, to store document sequence numbers for each new set of accounting entries. This table is a child of the voucher table. Where possible, the data for VCHR_DOCSEQ_HDR is populated online. For example, when a voucher is closed, the voucher close document sequence number is generated or validated when you save the page. The Voucher Posting Application Engine process (AP_PSTVCHR) then copies the document sequencing information to the closure accounting lines.

In other cases, however, document sequence numbers have to be generated in a batch process. In these instances, the necessary information is inserted by bulk into VCHR_DOCSEQ_HDR. The document sequencing routine is invoked to create a new document sequence number for each row in VCHR_DOCSEQ_HDR. PeopleSoft Payables processes (payment posting, revaluation, and cash clearing) call a routine (FTDOCAE) that copies the document sequence information from VCHR_DOCSEQ_HDR to the accounting entry table. For example, when a payment is canceled, and the associated vouchers are closed, a closure document sequence number is generated for each voucher that is associated with the payment.

When the certain events occur, the system combines four data elements to generate a document sequence number and inserts this combination into VCHR_DOCSEQ_HDR. The document sequence number consists of the following:

- The PeopleSoft General Ledger business unit.
- The default ledger group of the business unit.
- The appropriate journal code/document type (this is dependent on the defined sequence by option).
- The sequence date range value.

This table lists the various events in PeopleSoft Payables that generate document sequence numbers, and it details whether document sequencing occurs online or as a batch process, as well as which pages and processes are involved.

<i>Event</i>	<i>Type of Processing</i>	<i>Pages / Processes</i>
New voucher	Online Batch	Voucher component Voucher Build (AP_VCHRBLD)
Voucher closure	Online Batch	Close Voucher component Voucher Mass Maintenance component Voucher Posting (AP_PSTVCHR)
Voucher unpost	Online	Unpost Voucher component Voucher Mass Maintenance component

<i>Event</i>	<i>Type of Processing</i>	<i>Pages / Processes</i>
Voucher delete	Online	Delete Voucher component Voucher Mass Maintenance component
New payment	Online or Batch	Express Payment page Voucher component (Payments page) Manual Pay component Pay Cycle (AP_APY2015)
Pay cycle reset	Online	Pay Cycle Manager page
Cancel payment	Online	Cancel Payment page Mass Payment Cancellation component
Cancel payment voucher close	Batch	Payment Posting (AP_PSTPYMNT)
Manual draft	Online	Manual Draft Creation page
Draft write-off	Online	Draft Write Off page
Cash clearing	Batch	Cash Clearing (AP_APCSHCLR)
Payables revaluation	Batch	PS/AP Revaluation (AP_REVALUE)

Prerequisites

Before you can begin using the Document Sequencing feature in PeopleSoft Payables, you must:

- Enable document sequencing at the system level.
- Enable document sequencing at the PeopleSoft General Ledger business unit level.
- Specify a document sequence range.
- Define the journal types and journal codes.

Defining and Assigning Document Types

To set up your document types and assigning document types, use the following components:

- Document Type (DOC_TYPE).
- Journal Generator Template (JRNLGEN_APPL_ID).
- Procurement Control (BUS_UNIT_INTFC2).
- External Accounts (BANK_EXTERNAL).

This section discusses how to:

- Define PeopleSoft Payables document sequencing.
- Assign document types to journals.
- Assign document types to accounting entry types.
- Assign default document types for payment methods.

Pages Used to Define and Assign Document Types

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Document Type	DOC_TYPE	Set Up Financials/Supply Chain, Common Definitions, Document Sequencing, Document Type	Use this page to define your Payables document types.
Journal Generator Template - Defaults	JRNL_GEN_DEFAULTS	General Ledger, Journals, Subsystem Journals, Journal Generator Template, Defaults	Assign a document type to the accounting entries that PeopleSoft Payables generates. The Journal Generator Application Engine process (FS_JGEN) uses this information to assign a document sequence number when you create journals through the Journal Generator process.

Page Name	Definition Name	Navigation	Usage
Journal Generator Template - Summarization	JRNL_GEN_SUM	General Ledger, Journals, Subsystem Journals, Journal Generator Template, Summarization	Select <i>Retain Detail</i> in the How Specified Option group box to retain and pass the document sequence numbers to PeopleSoft General Ledger.
Procurement Control - Document Types	BUS_UNIT_INTFC4	Set Up Financials/Supply Chain, Business Unit Related, Procurement, Procurement Control, Document Types The Procurement Control - Document Types page only appears if you have document sequencing enabled at the installation level.	Assign document types to each accounting entry type in PeopleSoft Payables.
External Accounts - Document Sequence	PYMNT_BANK_DOC_SEC	Banking, Bank Accounts, External Accounts, Payment Methods Click the Document Sequencing link on the External Accounts - Payment Methods page. This link is active only if the bank belongs to a PeopleSoft General Ledger business unit that is set up for document sequencing.	Assign default document types for payment methods.

Defining PeopleSoft Payables Document Sequencing

Access the Document Type page (Set Up Financials/Supply Chain, Common Definitions, Document Sequencing, Document Type).

Once you set up your system for document sequencing, you can use this page to define your payables document types.

See Also

PeopleSoft Global Options and Reports 9.1 PeopleBook, "Defining Document Sequencing," Defining Document Types

Assigning Document Types to Journals

Access the Journal Generator Template - Defaults page and the Summarization page (General Ledger, Journals, Subsystem Journals, Journal Generator Template, Defaults).

Use the Journal Generator Template - Defaults page to assign a document type to the accounting entries. Use the Journal Generator Template - Summarization page to select *Retain Detail* to retain and pass the document sequence number to PeopleSoft General Ledger.

See Also

PeopleSoft Global Options and Reports 9.1 PeopleBook, "Defining Document Sequencing," Defining Sequencing Options for Accounting Entries

Assigning Document Types to Accounting Entry Types

Access the Procurement Control - Document Types page (Set Up Financials/Supply Chain, Business Unit Related, Procurement, Procurement Control, Document Types).

You assign document types for each accounting entry type in PeopleSoft Payables at the PeopleSoft General Ledger business unit level.

See Also

Chapter 4, "Setting Up PeopleSoft Payables Business Units," Defining Procurement Controls for General Ledger Business Units, page 32

Assigning Default Document Types for Payment Methods

Access the External Accounts - Document Sequence page (click the Document Sequencing link on the External Accounts - Payment Methods page).

Set up the default document type setup for the various payment methods on the Payment Methods page in the External Accounts component. From this page, you can access a Document Sequence page for assigning the default document type for that payment method, if the bank account is tied to a PeopleSoft General Ledger business unit for which the Document Sequencing feature has been enabled.

PeopleSoft Banks Setup and Processing 9.1 PeopleBook, "Setting Up External, Internal, and Netting Accounts," Defining Payment Methods

Using Document Sequencing with Various Transactions

This section describes how document sequencing affects various transactions and activities in PeopleSoft Payables processing.

To create accounting transactions and document sequencing, you:

- Enter vouchers with document sequencing.
- Close vouchers with document sequencing.
- Unpost and repost vouchers with document sequencing.
- Delete vouchers with document sequencing.
- Create payments with document sequencing.
- Create manual payments with document sequencing.
- Cancel payments with document sequencing.
- Create manual drafts with document sequencing.
- Write-off drafts with document sequencing.
- Use document sequencing with interunit transactions.
- Process cash clearing entries with document sequencing.
- Use document sequencing with revaluation entries.

Pages Used to Create Document Sequencing with Various Transactions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Invoice Information - Document Sequence	DOC_SEQ_AP_SEC	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information Click the Document Sequencing link on the Invoice Information page.	Override the default document type and enter a document sequence number, if applicable.
Close Voucher - Document Sequence	DOC_SEQ_CLOSE_SEC	Accounts Payable, Vouchers, Add/Update, Close Voucher Click the Document Sequencing link on the Close Voucher page.	Override the default document type and enter a document sequence number, if applicable.

Page Name	Definition Name	Navigation	Usage
UnPost Voucher - Document Sequence	DOC_SEQ_UNPST_SEC	Accounts Payable, Vouchers, Add/Update, UnPost Voucher Click the Unpost Document Sequencing link on the UnPost Voucher page.	Override the default document type and enter a document sequence number, if applicable.
UnPost Voucher - Document Sequence	DOC_SEQ_REPST_SEC	Accounts Payable, Vouchers, Add/Update, UnPost Voucher Click the Repost Document Sequencing link on the Voucher UnPost page.	Override the default document type and enter a document sequence number, if applicable.
Delete Voucher - Delete Document	SEQ_NBR_DEL_TBL	Accounts Payable, Vouchers, Add/Update, Delete Voucher A prompt appears when you click the Delete button in the Delete Voucher component.	After you click the Delete button, enter a deletion reason. The deletion reason is required if you are using the Document Sequencing feature.
Pay Cycle Manager	PYCYCL_MGR	Accounts Payable, Payments, Pay Cycle Processing, Pay Cycle Manager	Run and manage the Pay Cycle process, from payment selection through output processing (printing checks and advices, producing electronic file transfer (EFT) files, and so forth). Transfer to the pay cycle exceptions pages and pay cycle detail and summary data pages, where you can handle exceptions and hold, exempt, or separate payments. View the status and results of the Pay Cycle process.
Express Payment	PYMNT_EXPRESS	- Accounts Payable, Payments, Express Payments, Create Express Payment - Click the Express Payment link on the Voucher - Payments page.	Create a payment for one or multiple vouchers for one specific vendor.

Page Name	Definition Name	Navigation	Usage
Voucher - Payments	VCHR_PAYMENT_PNL	Accounts Payable, Vouchers, Add/Update, Regular Entry, Payments	Record a manually issued payment by changing the schedule payment Action field value to <i>Record</i> . Click the Doc Seq (document sequence) link to override the default document type and enter a document sequence number, if applicable.
Manual Pay Selection	AP_MAN_SEL	Accounts Payable, Payments, Manual Payment and Prepayment, Create Manual Payment, Manual Pay Selection	Enter criteria to build the manual payment worksheet. On the Man Pay Worksheet (manual payment worksheet) page, enter the manual payment information. On the Apply Voucher page, apply scheduled vouchers to the manual payment.
Cancel Payment - Document Sequence	DOC_SEQ_CANCEL_SEC	Accounts Payable, Payments, Cancel/Void Payments, Payment Cancellation, Cancel Payment Click the Document Sequencing link on the Cancel Payment page.	Override the default document type and enter a document sequence number, if applicable.
Manual Draft Creation - Document Sequence	DOC_SEQ_PY_REC_SEC	Accounts Payable, Payments, Drafts, Create Manual Draft, Manual Draft Creation Click the Document Sequencing link on the Manual Draft Creation page.	Override the default document type and enter a document sequence number, if applicable.
Draft Write Off - Document Sequence	DOC_SEQ_PY_REC_SEC	Accounts Payable, Payments, Drafts, Draft Write-Off Click the Document Sequencing link on the Draft Write Off page.	Override the default document type and enter a document sequence number, if applicable.

Entering Vouchers with Document Sequencing

Access the Invoice Information - Document Sequence page (click the Document Sequencing link on the Invoice Information page).

When you enter a voucher online that is associated with a business unit setup for document sequencing, a document sequencing link appears on the Invoice Information page, enabling you to access the Document Sequence page. On that page, you can override the default document type and enter a document sequence number, if applicable.

Document Type	The system automatically assigns the default document type for each transaction based on your setup. You can override this setting by selecting a new value from the available types.
Journal Code	Displays the associated journal code for the selected document type. This field is display only.
Document Sequence Number	Displays <i>NEXT</i> until you save the transaction if you have opted to use automatic numbering. When you save the transaction, the system assigns the next available sequence number. If you have not opted to use automatic numbering, use this field to enter the document sequence number.
Document Sequence Date	When you save the transaction, the system automatically records the current date in the Document Sequence Date field.

Note. The Voucher Build Application Engine process (AP_VCHRBLD) assigns the document type, document sequence number, and document sequence date as part of its process.

See Also

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Invoice Information for Online Vouchers, page 303](#)

Closing Vouchers with Document Sequencing

Access the Close Voucher - Document Sequence page (click the Document Sequencing link on the Close Voucher page).

Voucher closure creates a new document sequence number and document sequence date for the closure accounting entries that are created by the Voucher Posting process. If you are using the online Close Voucher component (VCHR_CLOSE), you can access a document sequence page, where you can override the default document type and enter a manual document sequence number.

When you save the Close Voucher component, the online document sequencing routines are invoked. If the edit is successful, a row is inserted into the VCHR_DOC_SEQ_HDR table for the closure event. This row contains the document type, document sequence number and the document sequence date for the closure event. When the Voucher Posting process processes the closed voucher, it copies this new document sequence information to the closure accounting entries.

Regardless of the voucher type and closure method you use—either closing individual vouchers using Close Voucher page, or closing multiple vouchers using the Mass Maintenance component (VCHR_MASS_MAINT)—the system writes to VCHR_DOC_SEQ_HDR table. When you use the Mass Maintenance component, you can enter comments that the system applies to all the vouchers included in a single closure event.

Note. The Close Voucher page is used to mark the voucher for closure. The voucher is closed when you run the Voucher Posting process.

Note. If you are using document sequencing and have saved the voucher on the Close Voucher page with the Close check box selected, you cannot access the voucher again to reopen it.

See Also

[Chapter 19, "Managing Vouchers," Closing Vouchers, page 513](#)

Unposting and Reposting Vouchers with Document Sequencing

Access the Unpost Voucher - Document Sequence page (click the Unpost Document Sequencing link on the UnPost Voucher page).

When you unpost a voucher, the Voucher Posting process:

- Creates reversal accounting entries for any vouchers with document sequence numbers, regardless of whether the vouchers have been distributed to PeopleSoft General Ledger.
- Creates a new document sequence number and document sequence date for the reversing accounting entries that it generates.
- Creates a new accrual document sequence number for the unposted voucher.

If the unposted voucher is reposted, the Voucher Posting process creates new accounting entries with the new accrual document sequence number and date, based on the setup specified on the Procurement Control - Document Types page.

In the UnPost Voucher component, you can access two document sequence pages for processing document sequencing as part of unpost and repost.

Unpost Document Sequencing Click this link to override the default document type and number for unposting. When you click the Unpost button on the UnPost Voucher page and click OK, the system creates reversing accounting entries with a new document sequence number.

Repost Document Sequencing Click this link to override the default document type and number for reposting. When you run the Voucher Posting process to repost this voucher, the system creates new accounting entries with a new document sequence number.

See Also

Chapter 19, "Managing Vouchers," Unposting Vouchers, page 505

Deleting Vouchers with Document Sequencing

Access the Delete Voucher - Delete Document page (Accounts Payable, Vouchers, Add/Update, Delete Voucher).

Enter a document delete reason in the Long Description field. This page appears and a document delete reason is required when document sequencing is enabled for the PeopleSoft General Ledger business unit.

See Also

Chapter 19, "Managing Vouchers," Deleting Vouchers, page 517

Creating Payments with Document Sequencing

You can create payments in a batch process or online.

For batch processing, access the Pay Cycle Manager page to run the Payment Creation process to create payments. This process generates document sequence numbers for these payments. The Payment Posting Application Engine process (AP_PSTPYMNT) then copies the document sequence numbers generated during the Payment Creation process to the payment accounting entries.

For online payment processing, you can record a manual payment in the Voucher component (VCHR_EXPRESS), create a manual payment, or access the Express Payment page to create a payment for one or multiple vouchers for one specific vendor. These online processes create payments and generate document sequence numbers. The Payment Posting process then copies the document sequence numbers generated during online payment processing to the payment accounting entries.

See Also

Chapter 21, "Processing Pay Cycles," Running and Managing Pay Cycles, page 650

Chapter 22, "Using Additional Payment Processing Options," Using Express Payments, page 705

Creating Manual Payments with Document Sequencing

You can create manual payments using online voucher entry or through the Manual Payment feature.

Record a manual payment in the online voucher entry component by selecting *Record* as the payment action for the scheduled payment on the Voucher - Payments page. Payment posting, reissuing, closing, and voiding work the same as they do for payments created with the Pay Cycle process.

Use the Manual Payment Creation feature to create manual payments. You create a payment, but you apply it to existing vouchers rather than creating a voucher specifically for the payment. Payment posting, reissuing, closing, and voiding work the same as they do for payments created with the Pay Cycle process. However, for payments canceled with the option to close the liability, the Payment Posting process generates new document sequence numbers instead of copying them from another table.

See Also

[Chapter 22, "Using Additional Payment Processing Options," Recording Manual Payments, page 712](#)

[Chapter 22, "Using Additional Payment Processing Options," Creating Manual Payments, page 714](#)

Canceling Payments with Document Sequencing

Access the Payment Cancellation - Document Sequence page (click the Document Sequencing link on the Cancel Payment page).

Use the Payment Cancellation component (PYMNT_CANCEL) to cancel individual payments, or you can use the Mass Payment Cancellation component (AP_PMT_MASS_CNL) to cancel multiple payments. Regardless of the component you use, you can override the document type for the cancellation accounting entries and enter a document sequence number, if applicable.

Payment cancellation creates a new document sequence number and date for the cancellation accounting entries that are created by the Payment Posting process. Payment posting also generates new closure document sequence numbers for all the vouchers that are associated with the canceled payment with the option to close the liability.

If you choose to undo a payment cancellation for a payment with a document sequence number by selecting Undo Cancel on the Payment Cancellation page or the Mass Payment Cancellation page, the following warning message appears: Undo Cancel requires deletion of document sequence number Proceed? (7015,209) Undo Cancel requires deletion of document sequence number. Proceed?

If you click OK, the Delete Document - Document Deletion Reason dialog box appears.

Note. This is possible only if you have not run the Payment Posting process on the payment.

See Also

[Chapter 22, "Using Additional Payment Processing Options," Canceling Individual Payments, page 723](#)

Creating Manual Drafts with Document Sequencing

Access the Manual Draft Entry - Document Sequence page (click the Document Sequencing link on the Manual Draft Creation page).

You can override the document type for the draft accounting entries and enter a document sequence number, if applicable.

When you create manual drafts for a bank that is tied to a PeopleSoft General Ledger business unit enabled for document sequencing, the system assigns the draft that you create a document sequence type, document sequence number, and date.

See Also

[Chapter 31, "Processing Drafts," Creating Drafts Manually, page 935](#)

Writing Off Drafts with Document Sequencing

Access the Draft Write Off - Document Sequence page (Accounts Payable, Payments, Drafts, Draft Write-Off).

The Document Sequence page that you access from the Draft Write Off page is the same as the Document Sequence page that you access from the Manual Draft Worksheet component.

You can override the document type for the draft write off accounting entries and enter a document sequence number, if applicable.

When you are writing off drafts for a bank that is tied to a PeopleSoft General Ledger business unit enabled for document sequencing, the system assigns the draft that you are writing off a document sequence type, document sequence number, and date.

See Also

[Chapter 31, "Processing Drafts," Managing Drafts, page 943](#)

Using Document Sequencing with Interunit Transactions

This section discusses how to:

- Process cash clearing entries with document sequencing.
- Use document sequencing with revaluation entries.

Interunit Vouchers

In some cases, the charged-to distribution (PeopleSoft General Ledger) business unit for a voucher is different from the PeopleSoft General Ledger business unit related to the vouchering (PeopleSoft Payables) business unit. The accounting entries created for this type of voucher by the Voucher Posting process go to more than one PeopleSoft General Ledger business unit. This type of transaction is called an *interunit voucher*. Because document sequencing is based on the PeopleSoft General Ledger business unit, document sequencing is more complex.

If the voucher's Payables business unit is related to a PeopleSoft General Ledger business unit enabled for document sequencing, then the Voucher Posting process assigns the voucher accounting entries for that PeopleSoft General Ledger business unit, the document sequence type, and number.

The Voucher Posting process sequences the interunit accounting entries for any applicable PeopleSoft General Ledger business units separately. The Voucher Posting process takes the document type from the default accrual interunit document type specified on the Procurement Control - Document Types page for those PeopleSoft General Ledger business units.

Note. This document type must be set to auto-numbering because the interunit accounting entries are created during the Voucher Posting process without any user interaction.

Interunit Payments

Interunit payments occur when a payment is created for a bank that is tied to a different PeopleSoft General Ledger business unit than the associated voucher's Payables business unit.

When the Payment Posting process creates accounting entries for an interunit payment, it:

- Assigns to the accounting entries, which go to the PeopleSoft General Ledger business unit of the payment's bank, the document sequence type, and number generated at the time the payment was created.
- Sequences the other accounting entries to the PeopleSoft General Ledger business unit tied to the associated voucher's Payables business unit separately, taking the default payment interunit document type specified on the Procurement Control - Document Types page.

Note. This document type must be set for auto-numbering, because the interunit accounting entries are created during the Payment Posting process without any user interaction.

Processing Cash Clearing Entries with Document Sequencing

For accounting entries created by cash clearing, the Cash Clearing Application Engine process (AP_CSHCLR) creates a new document sequence number and updates the cash clearing accounting entries with the new document sequence data. The cash clearing document type appears by default from the setup specified on the Procurement Control - Document Types page.

See Also

Chapter 23, "Running Voucher and Payment Posting," Running the Cash Clearing Process, page 758

Using Document Sequencing with Revaluation Entries

For accounting entries that are created by revaluation, the PS/AP Revaluation Application Engine process (AP_REVALUE) creates a new document sequence number for the revaluation accounting entries on the revaluation accounting line (RVL_ACCTG_LN_AP). The revaluation document type appears by default from the setup specified on the Procurement Control - Document Types page.

Note. If you run revaluation in PeopleSoft Payables rather than in PeopleSoft General Ledger, the process occurs at a specified level of detail. If you run the process in PeopleSoft Payables for the accounts that you use here, do not run the General Ledger revaluation against the same account balances in PeopleSoft General Ledger; if you do, you will be double counting.

Chapter 35, "Processing Multiple Currencies in PeopleSoft Payables," Performing the PS/AP Revaluation Process, page 1012

Chapter 37

(USF) Processing PeopleSoft Payables for U.S. Federal Agencies

This chapter provides an overview of processing federal payments, lists prerequisites, and discusses how to:

- Apply prompt payment protocols.
- Enforce valid reimbursable periods for project-related vouchers.
- Certify federal payment schedules.
- Create Electronic Certification System (ECS) bulk payment summary certification files.
- Create Secure Payment System (SPS) payment summary files.
- Reclassify federal cash transactions for Partial 224 reporting.
- Cancel federal payment schedules.
- Inquire and report on federal payment schedules.
- Process outbound Intra-governmental Payment and Collection System (IPAC) transactions.
- Process inbound IPAC transactions.
- Handle advances for federal agencies.
- Process Federal Registry Data.
- Process Central Contractor Registry (CCR) inbound files.
- Create CCR vendors using staged data.
- Create CCR payment holds.

Understanding Federal Payment Processing

This section discusses:

- Overview of federal payment schedule processing.
- Federal payment schedule processing.
- Other options for federal payment schedule processing.

- CCR voucher and vendor processing.

Overview of Federal Payment Schedule Processing

U.S. federal agencies use payment schedules (also called Treasury schedules) to group vouchers in batches that the system pays all at once. You establish rules to make those batches of payments on time, based on invoice, receipt of goods and services, and acceptance dates.

Payment scheduling by due date helps U.S. federal agencies fulfill their Prompt Payment Act obligation to bundle payments with shared characteristics when sending them for processing by the Department of the Treasury.

In PeopleSoft Payables, the Pay Cycle Application Engine process (AP_APY2015) selects payments during a pay cycle run and assigns them to the appropriate payment schedule. The Pay Cycle process then produces a transaction file of the payment schedule for you to deliver to the Department of the Treasury. A voucher is known as a *warehoused payment* until it is selected for a schedule, generated as a transaction file, and transmitted to a Treasury Disbursing Office (TDO).

The Pay Cycle process groups payments for submission to the TDO when they share the following characteristics:

<i>Field</i>	<i>Description</i>
Agency Location Code (ALC)	A numeric symbol used to identify accounting reports and documents prepared by or for agency accounting stations and disbursing offices (for example, eight-digit agency location station code, four-digit checking account symbol, and three-digit Treasury office number).
Payment schedule type	The field that indicates whether payments cover transportation expenses or other expenses.
Payment method	The physical means of payment, such as a check or electronic funds transfer (EFT).
Treasury Account Symbol	A 14-byte alphanumeric field representing the fund that the payment is drawn from. You set this up as a ChartField attribute of a Fund Code.

You can also set up payment schedule processing so that it generates a new schedule after the current schedule reaches a defined number of payments and appropriations. You perform this setup for each payment method and EFT layout combination used for payment schedules, using the Payment Schedule Restrictions page.

Federal Payment Schedule Processing

To process federal payment schedules:

1. Enter payment schedule vouchers just as you would any other voucher, using either the Voucher component (VCHR_EXPRESS), the Quick Invoice Entry component (VCHR_QUICK_PNL), or a source that is processed through the Voucher Build Application Engine process (AP_VCHRBLD).
2. Run the Voucher Posting Application Engine process (AP_PSTVCHR) and any other processes that are part of the voucher business practice, such as budget checking and matching.
3. Run the Pay Cycle process to generate payment schedules.

The Pay Cycle process:

- Selects vouchers that meet the criteria for federal payment schedules and groups them by schedule, creating new schedules according to the schedule restriction criteria that you specified on the Payment Schedule Restriction page.
 - Updates the payment schedule ID in the Schedule ID field on the Voucher - Payments page.
 - Kicks off workflow to notify certifiers of payment schedules needing certification (optional).
 - Creates a file for transmission to the U.S. Treasury for disbursement.
4. Certify the payment schedule.

This step occurs during Pay Cycle processing, after payment selection and before payment creation.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Certifying Federal Payment Schedules, page 1045.](#)

5. Run the Payment Posting Application Engine process (AP_PSTPYMNT).
6. (Optional) Review the payment schedule using the Payment Inquiry page.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Inquiring and Reporting on Federal Payment Schedules, page 1061.](#)

7. Transmit the payment schedule file to the Department of Treasury.
8. For bulk payment schedule files (Type B SF1166 forms) only: after sending the bulk payment schedule file to the Department of Treasury and receiving summary certification data back from them, enter the summary certification data into the PeopleSoft database and generate an SF1166 Summary Certification file for uploading to the ECS or SPS system for certification.

Use the ECS Summary and ECS Summary Totals pages or the SPS Summary Totals pages.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Creating ECS Bulk Payment Summary Certification Files, page 1049.](#)

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Creating SPS Payment Summary Files, page 1052.](#)

9. After receiving notice that the payment schedule was disbursed, reconcile the payment schedule using the Schedule ID Reconciliation page.

See *PeopleSoft Banks Setup and Processing 9.1 PeopleBook*, "Reconciling Statements," Managing Federal Schedule ID Reconciliations.

10. Run the Cash Clearing Application Engine process (AP_APCSHCLR).

See Also

Chapter 21, "Processing Pay Cycles," page 637

Chapter 23, "Running Voucher and Payment Posting," page 751

Other Options for Federal Payment Schedule Processing

There are many federal features in PeopleSoft Payables beyond those listed in the setup and processing steps discussed in this overview section. These options are also covered in this chapter:

- Enforcing prompt payment protocols.
- Enforcing valid reimbursable periods.
- Processing IPAC transactions.
- Handling pay advances for federal agencies.

CCR Voucher and Vendor Processing

The U.S. Federal Government maintains the Central Contractor Registry, a database of federal vendors. To do business with the U.S. Federal Government, vendors must be registered and hold a valid status in this database. Vendors can be assigned one of four status values, which determines if they can submit CCR vouchers. Status can be assigned manually by a user, or automatically by the system during batch updates.

As status is an important prerequisite for voucher processing, you must keep your PeopleSoft system and the CCR database synchronized. Synchronize the systems by downloading CCR files using the Payables CCR Load Application Engine process (AP_CCR_LOAD). (You can configure this to run automatically as a final process.) To process inbound CCR files:

1. Run the Payables CCR Load process using the Load Registry File page.

Each line in the CCR file contains the information for a contractor. For CCR lines that have no errors, the Payables CCR Load process updates the vendor information if the contractors have already been created as vendors in the system. For contractors that have not been created as vendors, the Payables CCR Load process loads the contractors into the staging tables. Create vendors from these contractors by using the Contractor Inquiry and Vendor Build pages. The system updates existing vendors with new information using effective dated logic found in the vendor records.

The system optionally disables vendors' Open for Ordering functionality when their CCR status changes from *Active* to *Expired*. This action prevents the creation of purchase orders and vouchers for expired vendors. The system also optionally takes vouchers off hold when a vendor's status changes from *Expired* to *Active* if you choose to process held vouchers.

2. Verify the loading status on the Inquire CCR File Information page.

The system displays all errors in the CCR file on this page.

3. Correct the errors manually using an editor program (for example, WordPad) for CCR lines that have errors.

The system creates a file containing all lines in the inbound CCR file that have errors in the same directory as the original inbound CCR file. The filename is <file name>Err.txt. As an example, the CCR inbound filename is BCD40822_08331.txt, the error filename is BCD40822_08331Err.txt.

When correcting errors, refer to the error messages displayed in the Inquire CCR File Information page. The key fields of each error line (DUNS Number and DUNS+4) are displayed at the beginning of each error message on the page.

4. Rename the file to a unique filename (for example, BCD40822_08331A.txt) after you correct all errors.
5. Load the corrected CCR file using the Load Registry File page.

If there are any errors found in this file, the system creates another error file and loads the valid lines to the CCR staging tables.

6. Repeat steps 1 - 5 until all vendor data is created or updated.

As the CCR database contains the official information for the contractor, you cannot edit certain relevant CCR data fields for a CCR vendor. These uneditable fields are:

- Vendor Name
- DUNS Number
- Organization Type
- Business Type
- Address
- Banking Information
- Contact Information
- CCR Registration Indicator
- CCR Registration Status

The following table shows the BPN file types that PeopleSoft supports:

<i>File Code</i>	<i>Description</i>
BCD40822	Complete Daily
BCR40822	Complete Refresh

Prerequisites

To set up the system to process federal payment schedules:

1. Enable Federal Payments on the Installation Options - Payables page.

You must select the Enable Federal Payments option and enter payment schedule ID ranges for each of three types of payment schedules: *Transportation*, *Manual*, and *Other*.

You can also select the Enable Date Calc Basis (enable date calculation basis) option to enable the enforcement of federal prompt pay protocols.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Setting Installation Options for PeopleSoft Applications," Setting Up Payables Installation Options.

2. Specify default payment schedule types for each SetID on the Payables Options - Payment Options page.

Select manual, transport, or other payments. You can override these settings at the voucher origin, vendor location, or voucher.

See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Selecting Payment Options, page 77.

3. Specify the federal payment indicator (employee, non-employee, or both) for each federal EFT and Automated Clearing House (ACH) layout on the EFT File Layouts and ACH File Layout pages.

See Chapter 11, "(USF) Setting Up PeopleSoft Payables for U.S. Federal Agencies," Setting Up EFT and ACH Payment Formats, page 237.

4. Define Agency Location Codes (ALCs) for TDOs and federal agencies with whom you share IPAC transactions.

You define ALCs on the Agency Location Code page.

See Chapter 11, "(USF) Setting Up PeopleSoft Payables for U.S. Federal Agencies," Defining Agency Location Codes, page 239.

5. Define vendors.

Specify the vendor electronic file options on the Vendor Information - Payables Options page.

Specify vendor Treasury options for ECS or SPS check output and ECS or SPS Same Day Payment file generation.

Assign ALCs to federal vendors with whom you share IPAC transactions.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Entering Electronic File Options.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," (USF) Entering Vendor Information for U.S. Federal Agencies.

6. Define federal spending region codes.

You define federal spending region codes on the Spending Region Install Option page, the appropriate ChartField Value page, and the Spending Region Definition page.

See Chapter 11, "(USF) Setting Up PeopleSoft Payables for U.S. Federal Agencies," Defining Federal Spending Regions, page 244.

7. On the Regional Finance Centers page, define your Regional Finance Centers.

See Chapter 11, "(USF) Setting Up PeopleSoft Payables for U.S. Federal Agencies," Defining Regional Financial Codes, page 247.

8. On the Bank Information page, assign each Agency Location Code to a bank.

See *PeopleSoft Banks Setup and Processing 9.1 PeopleBook*, "Setting Up Banks," Defining Bank Information.

9. On the External Accounts page, specify Regional Finance Centers by bank account.

See *PeopleSoft Banks Setup and Processing 9.1 PeopleBook*, "Setting Up External, Internal, and Netting Accounts," Defining External Account Information.

10. On the External Accounts - Payment Methods page, specify the payment methods for federal payment generation, by bank account, and select the Payment Schedule option.

See *PeopleSoft Banks Setup and Processing 9.1 PeopleBook*, "Setting Up External, Internal, and Netting Accounts," Defining Payment Methods.

11. On the Payment Schedule Restrictions page, restrict the number of payments and appropriations per schedule for each payment method and EFT layout combination that uses payment schedules.

See Chapter 11, "(USF) Setting Up PeopleSoft Payables for U.S. Federal Agencies," Specifying Restrictions for Federal Payment Schedules, page 248.

12. Specify the Treasury Account Symbol (TAS) ChartField attribute and assign TAS values to Fund ChartField values.

To assign TAS values to Fund ChartField values:

- a. On the Payables Definition - Numbering page, specify the Treasury account symbol attribute for the business unit.

For example, you could set up the business unit US001 with *TSYMBOL* as the fund attribute for TAS values.

- b. On the ChartField Attribute page, attach the Treasury Symbol Attribute to the Fund Code ChartField.

To continue the example, you would enter *TSYMBOL* as the attribute associated with the Fund Code ChartField.

- c. On the ChartField Attribute Values page (which you access when you define ChartField values), assign specific TAS values to specific Fund Code ChartField values.

For example, you can link a particular fund, such as 0100DA - Fiscal Year 2001 Single Year, to the appropriate TAS value 06010100, which represents the fund.

Now, when payments are processed for business unit US001 and fund 0100DA, the system uses the proper TAS 06010100 when processing the payment.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Defining and Using ChartFields," Defining and Using Account Types and Attributes.

13. Specify an Approval option of *Certifier* on the Payment Selection Criteria - Preferences page for the pay cycles you use for federal payment schedules, and designate a certifier.

(Optional) Enable workflow for payment schedule certification on the Payment Selection Criteria - Preferences page for the pay cycles you use for federal payment schedules. This enables PeopleSoft Workflow to update the worklist of the user who is defined as the certifier for the pay cycle, notifying the certifier that a federal payment schedule is ready for certification.

See [Chapter 8, "Establishing Pay Cycles," Setting Pay Cycle Preferences, page 170.](#)

Applying Prompt Payment Protocols

This section provides an overview of prompt payment protocols, lists prerequisites, and discusses how to:

- Apply prompt payment calculation rules for vouchers.
- Calculate late interest charges.

Understanding Prompt Payment Protocols

If you are using federal payment schedules, you have two options to help you meet Prompt Payment Act obligations:

- Prompt payment due date calculation, also known as Date Calculation Basis.
- Late interest charge calculation.

Prompt Payment Due Date Calculation

Prompt payment due date calculation helps you determine the best dates to pay vouchers. The system weighs early payment discounts against interest you could earn by leaving the money in the bank until the due date. If you represent a U.S. federal agency, payment scheduling by prompt due date helps you fulfill the Prompt Payment Act obligation to pay bills promptly and at the time of greatest savings.

When you elect to apply prompt payment due date calculation, you can establish rules for determining a voucher's federal payment basis date based on the invoice date, goods receipt date, services receipt date, and acceptance date. You specify these rules for a voucher on the Date Calculation page (an auxiliary page accessed from the Invoice Information page). The system uses these rules to derive the basis date and, in turn, uses the basis date, payment terms, and holiday processing options to determine the payment due date.

You can view the discounts taken and discounts lost for scheduled voucher payments that were subject to prompt payment date calculation on the Prompt Payment Inquiry page and on the Prompt Pay Report (APS2001).

Late Interest Charge Calculation

PeopleSoft Payables can also calculate interest charges for late payments to vendors automatically. PeopleSoft Payables follows Prompt Payment Act protocols:

- Late interest is assessed on a payment made after the voucher due date.

- Late interest is calculated using the U.S. Treasury interest rate for the period.
- Late interest is not assessed on a payment to a government entity or employee.
- Late interest of less than 1.00 USD is not paid.

You maintain the U.S. Treasury interest rate on the Late Interest Charges page. This page is effective-dated so that you can enter a new interest rate whenever the rate changes. As delivered, the system follows current U.S. Treasury guidelines:

- Payments made 1 to 30 days late are subject to simple interest late charges.
- Payments made 31 to 360 days late are subject to compound interest charges.
- Payments outstanding for more than one year are subject to a maximum of 360 days calculated interest.

The Pay Cycle process calculates late interest based on the Late Charge Code for vouchers subject to late interest charges that have passed the payment due date. The Pay Cycle process also determines whether the calculated interest falls within the threshold for payment. The system tracks interest that is below the minimum interest threshold amount, but does not pay it. The Pay Cycle process generates interest lines using either the original distribution or a specified set of distributions, depending on the setup.

You can view the late interest charges applied to scheduled voucher payments on the Prompt Payment Inquiry page.

You can also calculate late interest for individual vouchers using various potential payment dates in the Late Interest Analysis section of the Voucher Inquiry page.

See Also

Chapter 21, "Processing Pay Cycles," Understanding Pay Cycle Alerts, page 666

Prerequisites

To set up prompt payment due date calculation:

1. Access the Installation Options - Payables page and select Enable Date Calc Basis and Evaluate Discount Rate.
2. (Optional) To specify date calculation basis defaults for a vendor, access the Vendor Information - Federal page and enter your defaults in the Date Calculation Basis group box.
3. (Optional) To specify date calculation basis defaults for a setID, access the Payables Options - Payment Options page and enter your defaults in the Date Calculation Basis group box.
4. (Optional) To specify date calculation basis defaults for a voucher origin, access the Voucher Origin - Accounting and Pay Options page and enter your defaults in the Basis Date group box.

The date calculation basis rules you set up at these levels in the hierarchy default through the hierarchy to the voucher, where you can override them on the Date Calculation page.

To set up late interest charge calculation:

1. Access the Installation Options - Payables page and select Enable Late Charge.

2. Access the Accounting Entry Template page and enter default ChartField values for late interest charges.
3. Access the Late Interest Charges page to define interest rates.
4. (Optional) Access the Late Chrg Chartfield Override page to override the ChartFields that the late charge accounting entries will be generated against.

If you don't override the late charge ChartFields, the accounting entries will be generated based on the late charge ChartFields defined on the Accounting Entry Template and inheritance. If you do override it, ChartFields will be determined by override as well. For example, if your budget has expired, you could override the late charge ChartFields and replace them with those for an active budget.

5. Access the Payment Reason Codes page to define reason codes for late payments.
6. Access the Procurement Control - General Controls page to specify your Late Payment Allocation Policy.
7. To specify late charge defaults for a vendor, access the Vendor Information - Payables Options page and enter your defaults in the Late Charges group box.
8. To specify late charge defaults for a business unit, access the Payables Definition - Payments page and enter your defaults in the Late Interest Charges group box.
9. To specify late charge defaults for a voucher origin, access the Voucher Origin - Accounting and Pay Options page and enter your defaults in the Late Charges group box.
10. To specify late charge information for a voucher, access the Late Charge Information page from the Voucher - Payments page in the Voucher component and enter your late charge specifications.

Pages Used to Apply Prompt Payment Protocols

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Date Calculation	VCHR_DT_CALC_SBP	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information Click the Basis Date Calculation link on the Invoice Information page.	(USF) Define the date calculation basis for U.S. federal prompt payment due date requirements and enable enforcement of valid reimbursable periods for project-related vouchers.
Prompt Payment Inquiry	AP_PRMPT_PYMNT_INQ	Accounts Payable, Review Accounts Payable Info, Payments, Prompt Payments	View discounts taken, discounts lost, and late interest charges for scheduled payments subject to U.S. federal prompt payment date calculation or late interest charge calculation.
Pay Cycle Manager	PYCYCL_MGR	Accounts Payable, Payments, Pay Cycle Processing, Pay Cycle Manager	Run and manage the Pay Cycle process, from Payment Selection through output processing (printing checks and advices, producing EFT files, and so forth). Transfer to pay cycle exceptions pages and pay cycle detail and summary data pages, where you can handle exceptions and hold, exempt, or separate payments. View Pay Cycle processing status and results.
Voucher Inquiry	AP_VOUCHER_INQUIRY	Accounts Payable, Review Accounts Payable Info, Vouchers, Voucher, Voucher Inquiry	Search for and review status of a voucher and any payment information.

Applying Prompt Payment Calculation Rules for Vouchers

Access the Date Calculation page (click the Basis Date Calculation link on the Invoice Information page).

1. Accept or override the default date calculation basis.

This value determines the date calculation rules that apply to a transaction under the U.S. Prompt Pay Act. Select one of the following:

- *(none)*
- *Agricultural Commodities*
- *Dairy*
- *Meat*
- *Poultry*
- *Prompt Pay Basis 7 days*
- *Prompt Pay Basis 14 days*

2. Enter the dates that the system will use to calculate the payment basis date.

You can enter an invoice date, goods receipt date, services receipt date, and acceptance date. The system uses these dates to calculate the federal payment basis date, depending on the date calculation basis.

3. Click Calculate to populate the Fed Pymnt Basis Date (federal payment basis date), which the system uses as the basis date for calculating the payment due date for the scheduled payment (based on the payment terms).

See Also

Chapter 37, "(USF) Processing PeopleSoft Payables for U.S. Federal Agencies," Enforcing Valid Reimbursable Periods for Project-Related Vouchers, page 1045

Calculating Late Interest Charges

Access the Pay Cycle Manager page or the Voucher Inquiry page (Accounts Payable, Payments, Pay Cycle Processing, Pay Cycle Manager).

- Run the Pay Cycle process; the late charge will automatically be added to the payment according to your setup.

Note. Late charges are calculated on the voucher gross amount (in the invoice currency) and, once calculated, converted from the invoice currency to the payment currency, if necessary.

- Use the Late Interest Analysis collapsible section on the Voucher Inquiry page to calculate potential late fees.

Enter the Payment Date on which you anticipate making your payments, click the Calculate button, and the system displays late interest details for all vouchers that would be overdue if you paid them at that time.

To view discounts taken, discounts lost, and late charges on scheduled payments, use the Prompt Payment Inquiry page.

Enforcing Valid Reimbursable Periods for Project-Related Vouchers

This section discusses how to enforce valid reimbursable periods.

Note. You must select the Enable Date Calc Basis option on the Installation Options - Payables page to access this functionality.

Page Used to Enforce Valid Reimbursable Periods for Project-Related Vouchers

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Date Calculation	VCHR_DT_CALC_SBP	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information Click the Basis Date Calculation link on the Invoice Information page.	(USF) Define the date calculation basis for U.S. federal prompt payment due date requirements and enable enforcement of valid reimbursable periods for project-related vouchers.

Enforcing Valid Reimbursable Periods

Access the Date Calculation page (click the Basis Date Calculation link on the Invoice Information page).

Project Service Dates

Select Edit Project Services Dates to enforce valid reimbursable periods for a project-related voucher (a voucher that includes Project as a ChartField in its distribution lines). Enter the valid reimbursable period in the Performance Start Date and Performance End Date fields. If this date range falls outside of the range of the project start and end dates for any voucher distribution line, the voucher fails and generates an error message.

Certifying Federal Payment Schedules

This section provides an overview of federal payment schedule certification and discusses how to certify payment schedules.

Understanding Federal Payment Schedule Certification

The U.S. federal government requires some agencies to certify payment schedules, attaching the name of the individual who certifies a payment schedule (thereby authorizing payment) to that document. Payment schedule certification takes place after payment selection in the Pay Cycle process and can only be executed by a designated certifier. The certifier has the ability to include or exclude vouchers from the pay cycle and then approve the overall run of payments. Once the pay cycle is certified, the payment creation section of the Pay Cycle process proceeds and creates the certified payment schedules. The certifier's name is permanently attached to each payment schedule, along with the date of certification.

Note. You must designate a payment schedule certifier for the pay cycle on the Pay Cycle Selection - Preferences page. You can also optionally choose to have workflow notify the certifier by worklist that payment schedules are ready for certification.

Note. The certifier cannot certify payments for vouchers that he or she created. Therefore, the Pay Cycle process will not select vouchers created by the certifier. These vouchers must be processed in another pay cycle with a different certifier.

Pay Cycle Certification page

Note. Multiple views of this page are available by clicking the tabs in the scroll area. We document fields that are common to all views first.

Common Page Information

# of Sched Pymnts (number of scheduled payments)	Displays the number of scheduled payments currently grouped in this payment schedule.
Pay Cycle Manager	Click to return to the Pay Cycle Manager page.
Reject	Click to reject all payment schedules in the pay cycle. When payment schedules are rejected and saved, the pay cycle cannot continue to process them. However, you can reset the pay cycle. If you reject and then reset the pay cycle, it is just like resetting a pay cycle.
Status	Displays the status of the pay cycle: <i>Certifying</i> , <i>Rejected</i> , or <i>Selected</i> .
Total Amount	Displays the total amount of the pay cycle.
Certify	Click to certify all of the payment schedules in the pay cycle. You can continue with Payment Creation after schedule payment is certified.
Schedule ID	Displays the schedule ID is composed of a three-character indicator of the schedule type—transportation (TRN), manual (MAN), and other (OTH)—followed by the numeric schedule range that is set up on the Installation Options - Payables page.

Method	Indicates the payment method.
Exclude All	Click to exclude all listed vouchers in a payment schedule.
Include All	Click to include all listed vouchers in a payment schedule.
<i>Schedule Payment Tab</i>	
Exclude	Select to exclude individual vouchers in the payment schedule from processing; the system removes selected scheduled payments from the current pay cycle so that these schedule payments can be selected in the next pay cycle.
Voucher	Displays the voucher ID number for the scheduled payment.
Pymnt Cnt (payment count)	Displays the sequence number of the scheduled payment. The system generates this number when you add a new scheduled payment on a voucher.
Scheduled Pay Date	Displays the scheduled due date of the scheduled payment.
Separate	Indicates the option you selected in the Separate Payment field on the Payments page in the Voucher component. If you selected this check box, this payment is not grouped with other payments for the remit to vendor.
On Hold	Indicates the option you selected in the Hold Payment field on the Payments page in the Voucher component. If you selected this check box for the payment, the system stores the scheduled payment but does not pay it.
Gross Amount	Displays the payment amount for the scheduled payment if you do not take a discount.
Paid Amount	Displays the actual payment amount, Currency, and Rate Type of the scheduled payment; this can be either the gross or discount amount.
<i>Additional Info Tab</i>	
Vendor	Displays the name of the vendor that is associated with this payment.
Remit Vndr	Displays the vendor ID that is associated with this payment.
Advice Date	Displays the invoice date for this scheduled payment.
Invoice	Displays the invoice number for the scheduled payment.

Handling	Indicates the option you selected in the Handling field on the Payments page in the Voucher component.
Reason	Displays the reason code explaining why the payment is on hold.

Payment Message Tab

Payment Message	Displays any message you entered on the Payment Message page in the Voucher component.

Creating ECS Bulk Payment Summary Certification Files

This section provides an overview of ECS summary file creation and discusses how to enter ECS summary information.

Note. The U.S. Treasury is phasing out the Electronic Certification System (ECS) and replacing it with the Secure Payment System (SPS). PeopleSoft Payables provides both the ECS and the SPS summary files for payments. You need to determine when your organization begins utilizing the SPS Summary generation based on the timing of the U.S. Treasury turning off the ECS system.

See Also

Chapter 37, "(USF) Processing PeopleSoft Payables for U.S. Federal Agencies," Creating SPS Payment Summary Files, page 1052

Understanding ECS Summary File Creation

If you send SF1166 bulk payment schedule data (Type B SF1166 format) through ECS, you must enter ECS summary data into the database after you receive that data from the Department of Treasury. You then use that data to generate an SF1166 Summary Certification file to upload to ECS and certify the payment schedules. The bulk payment formats for which this summary certification file is required are defined in the system as the following EFT file layouts:

- SF1166SCHK
- SF1166VNDR
- SF1166TRVL

Note. You do not need to submit an SF1166 Summary Certification file for payments made with the EFT file layouts ECSCHK, ECSVNDR, or ECSTRVL. These file layouts include both payment data and certification data.

The process for submitting bulk ECS payment schedule files and SF1166 Summary Certification files is as follows:

1. Submit the bulk ECS payment to the Department of Treasury via magnetic tape or file transfer.
2. The Department of Treasury loads the payment data into their system and provides summary data back to a certifying officer at your agency.
3. Your certifying officer enters this summary data into the PeopleSoft system using the ECS Summary page.
4. You run the APS8003 SQR process to generate the SF1166 Summary Certification file from the data you entered from the ECS Summary Totals page.
5. Your certifying officer uploads the SF1166 Summary Certification file to the ECS system to certify the payment schedules.

Chapter 11, "(USF) Setting Up PeopleSoft Payables for U.S. Federal Agencies," Setting Up EFT and ACH Payment Formats, page 237

Pages Used to Create ECS Bulk Payment Summary Certification Files

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
ECS Summary	GFAP_ECS_SUMMARY	Accounts Payable, Payments, Pay Cycle Processing, ECS Summary Data, ECS Summary	Enter payment information for the summary file.
ECS Summary Totals	GFAP_RUN_ECS	Accounts Payable, Payments, Pay Cycle Processing, Generate ECS Summary File, ECS Summary Totals	Generate the file that is uploaded to the ECS system.

Entering ECS Summary Information

Access the ECS Summary page (Accounts Payable, Payments, Pay Cycle Processing, ECS Summary Data, ECS Summary).

After you receive data from the Department of Treasury, use the ECS Summary page to enter the payment information that you will use to create the SF1166 Summary Certification file for each payment schedule. This information includes:

Schedule ID

Select a schedule ID. You can use the Payment Inquiry page to determine Schedule IDs.

Summary Payment Type 1: Select a payment type from the following options:

- *Benefit*
- *Bonds*
- *Claim Files*
- *Daily Benefits*
- *IDRS Daily*
- *Miscellaneous*
- *Pre-Authorized Debit*
- *Salary*
- *Tax Refunds*
- *Travel*
- *Vendor*

Summary Payment Type 2: Select a payment type from the following options:

- *Check*
- *Electronic File Transfer*
- *Fedline/Fedwire*
- *Mixed Check/ACH*

Regional Financial Center Enter the Regional Financial Center code for the payment schedule.

MAC for Payment Type Enter a code provided by the U.S. Treasury. ECS calculates and validates a cryptographic Message Authentication Code (MAC) for each payment schedule.

Payment Date Enter the requested payment date.

Tape Reel Numbers Enter the Reel Numbers provided by the U.S. Treasury.

EDI Comments Enter any summary remarks.

Chapter 37, "(USF) Processing PeopleSoft Payables for U.S. Federal Agencies," Understanding Federal Payment Processing, page 1033

Creating SPS Payment Summary Files

This section provides an overview of SPS summary file creation and discusses how to create SPS summary information.

Note. The U.S. Treasury is phasing out the Electronic Certification System (ECS) and replacing it with the Secure Payment System (SPS). PeopleSoft Payables provides both the ECS and the SPS summary files for payments. You need to determine when your organization begins utilizing the SPS Summary generation based on the timing of the U.S. Treasury turning off the ECS system.

Understanding SPS Summary File Creation

SPS requires payment formats that closely resemble the ECS formats. SPS supports both bulk and non-bulk SF1166 electronic payments. Similar to ECS, if you send SF1166 bulk payment schedule data through SPS, you must enter SPS summary data into the database after you receive that data from the Department of Treasury. You then use that data to generate an SF1166 Summary Certification file to upload to SPS and certify the payment schedules.

Note. You do not need to submit an SF1166 Summary Certification file for payments made with the EFT file layouts SPSCHK, SPSVND, or SPSTRVL. These file layouts include both payment data and certification data.

The process for submitting SPS bulk payment schedule files and SF1166 Summary Certification files is similar to submitting ECS files: The steps include:

1. Submit the bulk SPS payment to the Department of Treasury via magnetic tape or file transfer.
2. The Department of Treasury loads the payment data into their system and provides summary data back to a certifying officer at your agency.
3. Your certifying officer enters this summary data into the PeopleSoft system using the SPS Summary Totals page.
4. You run the APS8003 SQR process to generate the SF1166 Summary Certification file from the data you entered from the SPS Summary Totals page.
5. Your certifying officer uploads the SF1166 Summary Certification file to the SPS system to certify the payment schedules.

Pages Used to Create SPS Payment Summary Files

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
SPS Summary Totals	GFAP_SPS_SUMMARY	Accounts Payable, Payments, Pay Cycle Processing, SPS Summary Data, SPS Summary Totals	Enter payment information for the summary file.

Page Name	Definition Name	Navigation	Usage
SPS Summary Totals	GFAP_RUN_SPS	Accounts Payable, Payments, Pay Cycle Processing, Generate SPS Summary File, SPS Summary Totals	Run the APS8004 SQR process to generate the file that is uploaded to the SPS system.

Chapter 37, "(USF) Processing PeopleSoft Payables for U.S. Federal Agencies," Understanding Federal Payment Processing, page 1033

Reclassifying Federal Cash Transactions for Partial 224 Reporting

This section provides an overview of cash reclassification reporting and discusses how to manage cash reclassification transactions.

Understanding Cash Reclassification Reporting

PeopleSoft Payables supports the U.S. federal requirement of reporting cash reclassification transactions from one treasury symbol (fund code) to another on the Partial 224 report. The Partial 224 report is an effort by the U.S. Treasury to ultimately phase out the SF224 Statement of Cash Transactions report over the next several years by having agencies report collection and disbursement activity with a new Business Event Type Code (BETC). Once the cash activity includes the BETC you only need to report cash reclassifications via the Partial 224 report.

Warning! The reporting of cash reclassifications for the new Partial 224 report is not applicable until the U.S. Treasury completes their requirements for Business Event Type Codes (BETC). The U.S. Treasury plans on phasing the BETC requirements towards the end of 2006. Please contact the U.S. Treasury for more information.

To process a cash reclassification transaction from one treasury symbol to another in PeopleSoft Payables:

1. Cancel the payment for the original voucher on the Cancel Payment page.

Select to close the liability on the Cancel Payment page if you do not need to restore the encumbrance and reopen the purchase order.

2. (Optional) Close the original voucher on the Close Voucher page and select to restore the encumbrance and reopen the purchase order, if applicable.
3. Run the Payment Posting process and then run the Voucher Posting process.
4. Enter a new voucher (source voucher) and reference the original voucher (reference voucher) in the Reference Voucher field and the schedule payment number in the Reference Payment field on the Voucher - Payments page.
5. Enter the new voucher as a manual payment on the Voucher - Payments page, since the vendor already received the payment.

Upon saving the voucher, the system populates the reference voucher table (PYMNT_VCHR_REF) with business unit, voucher ID, payment count, reference voucher, and reference payment count data.

6. Run the Voucher Posting process and then run the Payment Posting process.

The Payment Posting process populates the cash reclassification table (AP_VCH_ACCTG_LN) with the cash entries associated with the canceled payment from the referenced voucher and the source voucher. The system populates the record only if there is at least one cash distribution line with a difference between treasury symbols on the referenced voucher and the source voucher. The cash entries (all cash distribution lines) should net to zero on the two vouchers.

7. (Optional) Modify the cash reclassification transaction using the Partial SF-224 Cash Reclassification page. This is necessary if the user did not establish the relationship with the old voucher by populating the reference information in Step 4.

Warning! The reporting of cash reclassifications for the new Partial 224 report is not applicable until the U.S. Treasury completes their requirements for Business Event Type Codes (BETC). The U.S. Treasury plans on phasing the BETC requirements towards the end of 2006. Please contact the U.S. Treasury for more information.

1	US001	TR8						

Partial SF-224 Cash Reclassification page

Search Criteria**Business Unit**

Enter the PeopleSoft Payables business unit of the voucher. This is a required field.

From Date and To Date

Enter a single date in the From Date field or a range of dates.

The system compares against the accounting date of the payment if you select *Reclassified Only* as the Additional Filter Criteria.

The system compares against the accounting date of the voucher if you select *To Be Reclassified Only* as the Additional Filter Criteria.

Voucher ID

Enter a voucher ID. If you enter a vendor ID, only vouchers for that vendor are available for selection. You can select only vouchers with a voucher reference associated with it.

Agency Location Code

Enter the numeric symbol of the U.S. federal agency.

Additional Filter Criteria

Select *Reclassified Only* or *To Be Reclassified Only*.

Reclassified Only: The system retrieves vouchers that have reference vouchers associated with them.

To Be Reclassified Only: The system retrieves vouchers that have no reference vouchers associated with them.

Payment Reclassification**Voucher ID**

Displays the voucher ID of the cash reclassification transaction.

Payment Count

Displays the payment schedule count of the voucher selected.

Reference Voucher	Displays the reference voucher ID, if applicable. You can enter a reference voucher ID to retrieve cash accounting lines for the source voucher and the reference voucher. You can only enter a voucher with a canceled payment and the voucher is in a closed status. If you select <i>Reclassified Only</i> as the Additional Filter Criteria you can clear the reference voucher and reference payment, click the Update button, and the system removes the link between the source voucher and the reference voucher. Upon saving, the system deletes the records from the reference voucher and cash reclassification tables (AP_VCH_ACCTG_LN and PYMNT_VCHR_REF). If you select <i>To Be Reclassified Only</i> as the Additional Filter Criteria you can enter a reference voucher and a reference payment, click the Update button, and the system retrieves cash distribution lines for the source voucher and the reference voucher.
Reference Payment	Displays the payment schedule count, if applicable. You can enter a payment schedule count to retrieve cash accounting lines for the source voucher and the reference voucher.
Update	Click to update the cash distribution lines.

Cash Distribution Lines

The system displays the cash distribution lines for both the source voucher and the referenced voucher.

Fund Code	Displays the treasury symbol, or fund ChartField, of the cash transaction.
Monetary Amount	Displays the amount of the cash transaction. The cash amounts for the distribution lines should net to zero.

Canceling Federal Payment Schedules

This section provides an overview of federal payment schedule cancellation and discusses how to cancel payment schedules.

Understanding Payment Schedule Cancellation

Payment schedule cancellation functions similar to regular payment cancellation—except that you can cancel even those payment schedules that have been reconciled.

Note. If the payment schedule to be canceled has been reconciled, the Payment Posting process reverses the payment accounting entries but not the cash clearing entries.

Note. You can also cancel a specific payment within a payment schedule using the Payment Cancellation page without canceling or altering the payment schedule.

Payment Schedule Cancellation | [Payment Detail](#)

Payment Schedule Cancellation page

Cancel Action	Displays the most recent cancellation action. See the description of the Cancel Action group box below for possible values.
Schedule Cancel Date	Displays the date the schedule was canceled. This appears only after a cancellation action has been entered and saved on this page.
Date Cancelled	Specify the date you want to cancel the payment.
Payment Status	
Void	Select to cancel a payment schedule for payments that you have not sent out. The system automatically reconciles a voided payment.
Stop	Select to cancel a payment schedule for payments that you have sent out and are asking the bank to stop payment.
Undo Cancel	Select to undo any cancellation that has not been posted.
Important! You cannot undo a cancellation after running Payment Posting on the canceled payment.	

Cancel Action

Re-Open Voucher(s)/Re-Issue Enables you to reselect the payment schedule and reissue it the next time that you execute a pay cycle, assuming that the vouchers meet the selection criteria for that pay cycle.

Re-Open Voucher(s)/Put on Hold Enables you to reopen the payment schedule, but places the reopened payment schedule on hold for your review. You typically select this option if you need to perform additional investigation or revise voucher information before proceeding with payment. The Pay Cycle process does not select the scheduled payments until the hold is removed on the Payments page of the Voucher component.

Do Not Reissue/Close Liability Use this option to cancel the payment schedule and close any liabilities associated with it. The amount of the liability to close is calculated as the amount of unpaid liability remaining. The system takes into account whether the business unit is accounting at gross or net. The Payment Posting process marks the voucher for closure, and the amount of the outstanding liability is reversed the next time the Voucher Posting process runs.

Important! Use the Do Not Reissue/Close Liability option only if you do not intend to reissue the voucher.

Document Sequencing Click to access the Document Sequence page, where you can change the payment Document Type.

Note. If you choose to reopen vouchers and reissue, remember that you must run the Payment Posting process to record the reversal before those vouchers are available for a new payment selection. You can undo your cancel, as long as the canceled payment schedule is not posted.

Inquiring and Reporting on Federal Payment Schedules

This section provides an overview of federal payment schedule inquiries and reports and discusses how to:

- Inquire on federal payment schedules.
- Inquire on federal payment schedule processing and transmittal data.

Understanding Federal Payment Schedule Inquiries and Reports

PeopleSoft Payables provides the ability to search for payments by payment schedule ID on the Payment Inquiry page and also provides:

- The Federal Payment Schedule Inquiry page for viewing payment schedule processing and transmittal data, such as the date transmitted to the Treasury Department, disbursement date, and cancellation date and status.

- The Prompt Payment inquiry page for viewing discounts taken, discounts lost, and late interest charges for scheduled payments subject to U.S. federal prompt payment date calculation or late interest charge calculation.
- The Federal Payment Schedule Report (APY9024), listing payment schedules paid as of a specific date.
- The Schedule and Appropriation Symbol report (APC8053), listing voucher distribution lines by payment schedule and treasury account symbol.

Sent Date	Displays the date the payment schedule flat file was transmitted to the Treasury Disbursement Office. This field is updated when you perform the Schedule Reconciliation process.
Payment Date	Displays the date the payment schedule was paid in the Pay Cycle process.
Date Cancelled	Displays the date the payment schedule was cancelled. This field is updated when you cancel a payment using the Payment Schedule Cancellation page.
Disbursed Date	Displays the date the Treasury Disbursement Office issued the payment. This field is updated when you perform the Schedule Reconciliation process. See <i>PeopleSoft Banks Setup and Processing 9.1 PeopleBook</i>, "Reconciling Statements," Managing Federal Schedule ID Reconciliations.

Processing Outbound IPAC Transactions

This section provides an overview of outbound IPAC processing in PeopleSoft Payables, lists prerequisites, and discusses how to:

- Create outbound IPAC vouchers.
- Enter outbound IPAC information.
- Enter additional IPAC information.
- Run the Pay Cycle process for outbound IPAC payments.
- Perform schedule reconciliation for IPAC payments.
- Cancel IPAC Payments.
- Inquire on IPAC payments.

Understanding Outbound IPAC Processing in PeopleSoft Payables

IPAC is an inter-agency funds transfer mechanism for U.S. federal agencies. There are five types of IPAC transactions: payment, collection, adjustment, post SGL, and zero-dollar. PeopleSoft Payables supports IPAC payments, post SGL, and zero-dollar (supporting-information only) transactions. PeopleSoft Receivables supports collection transactions, adjustments, post SGL, and zero-dollar transactions.

PeopleSoft Payables enables users both to create IPAC transactions for uploading to the IPAC system ("outbound" IPAC transactions) and to receive information about payments initiated by other agencies through the IPAC system for entry into PeopleSoft Payables ("inbound" IPAC transactions).

For outbound IPAC processing, PeopleSoft Payables provides an IPAC EFT file layout, which can be used for payments, post SGL, and zero-dollar transactions. Users enter vouchers for these IPAC transactions just as they would for any payment, but they enter additional IPAC-related information on the IPAC Information page in the Voucher component. Vouchers must be copied from purchase orders.

The Pay Cycle process processes IPAC vouchers like any other voucher: the EFT File Creation step (FIN2025.sqr) creates the payment flat files that you transmit to the federal IPAC system.

Note. If an IPAC voucher enters the system through the Voucher Build process, you must then create the IPAC data within the IPAC information page. If you do not create IPAC data before running the Pay Cycle process, the payment will be rejected. If the Pay Cycle process rejects the voucher, you can enter the required information on the IPAC Information page and resubmit the pay cycle.

Zero-dollar and Post SGL IPAC Transactions

Zero-dollar IPAC transactions are information-only adjustments to IPAC vouchers that have already been paid. You cannot change any monetary amounts. You can create zero-dollar transactions only after the original IPAC payment has been processed by the Pay Cycle process.

When you enter a zero-dollar IPAC transaction on the IPAC page, a payment record with an amount of 0.00 USD is automatically entered on the Voucher - Payments page. The due date and other payment values are automatically populated. When you run the Pay Cycle process for a zero-dollar IPAC transaction, the Pay Cycle process treats the payment as a zero-dollar payment and creates the IPAC flat file for the payment. Zero-dollar IPAC transactions are always flagged as separate payments.

You can create unlimited numbers of zero-dollar IPAC transactions associated with an IPAC voucher that has been paid, but you must enter them serially, when the previous one has been fully processed by the Pay Cycle process.

Prerequisites

To set your system up for outbound IPAC processing, perform the following steps:

1. Enable Federal Payments on the Installation Options - Payables page.
2. View the IPAC EFT file layout on the EFT File Layouts page.

IPAC is a delivered file layout. You may want to indicate that the payment format applies to both employee payments and non-employee payments, although the system performs no edits for employee versus non-employee payments for the *IPAC* file layout.

3. Define a pre-fix and starting counter number (5 digits) in the ALC setup component for your assigned ALC. This pre-fix/bulk counter will then be used to generate unique Doc Reference numbers.

4. Enable vendors for federal processing on the Vendor – Federal page in the Vendor Information component (VNDR_ID) and enter the Agency Location Code. For each vendor (agency) you do business with and utilize IPAC, you must define their ALC in order to send or receive IPAC payments. The vendor ALC is required. All other federal-specific vendor detail is recommended.
5. Enter the Agency Location Code for the agencies that receive your IPAC payments on the Bank Information page.
6. Enter the Sender Disbursement Office (DO) symbol for the disbursing bank account on the External Accounts page.
7. Specify the payment method as EFT and the EFT layout as IPAC on the Payment Methods page for the disbursing bank account.

See Also

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," page 293

Creating Outbound IPAC Vouchers

Access the Voucher - Invoice Information page (Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information).

1. Select *Regular Voucher* on the Add page.

Note. IPAC vouchers must have a voucher style of *Regular*.

2. Copy a purchase order.

Note. IPAC vouchers must be preceded by a purchase order.

3. Complete the voucher by entering all required fields on the Invoice Information, Payments, and Voucher Attributes pages.

Enter a payment Method of *EFT* and a Bank Account for which the EFT layout is IPAC.

Note. Multiple payment schedules are not allowed for IPAC vouchers.

Payment terms with discount or rebate are not allowed for IPAC vouchers.

You cannot include nonmerchandise charges on IPAC vouchers.

4. Save the voucher.

Since the EFT file layout for the bank account on the voucher has a file layout of IPAC, you will receive a message prompting you to click the IPAC link on the Voucher - Payments page. The IPAC link is activated only after you save the voucher.

5. Click the IPAC link on the Voucher - Payments page to access the IPAC page.

6. Select the transaction type for the IPAC transmission.

Values are *Payment*, *Post SGL*, and *Zero*. Only *Payment* is available for selection the first time IPAC is processed. After a payment is processed, all values are available for selection.

7. Click the Create button to populate the required fields in the IPAC Details scroll area.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Entering Outbound IPAC Information, page 1069.](#)

8. Enter data in the fields not populated when you clicked the Create button.

The fields that require entry on the page vary based on the transaction type. These are not required by PeopleSoft Payables, but may be required by your organization.

9. Click OK to save the voucher.

Note. Any changes to the invoice ID, invoice date, or gross amount on the voucher after save require you to update the same data on the IPAC page.

Entering Outbound IPAC Information

Access the IPAC page (click the IPAC link on the Voucher - Payments page).

IPAC page after clicking create

When you first enter this page, only the header information is displayed. After you select an IPAC type, and click the Create button, the rest of the page will be displayed and some fields will be populated. Next complete any required fields; this varies based on the selected IPAC transaction type.

Creating Post SGL and Zero-dollar IPAC Transactions

To create post SGL IPAC transactions:

1. Access the Voucher component for the IPAC voucher you want to adjust.
2. On the Voucher - Payments page, click the IPAC link to access the IPAC page.
3. Add a new IPAC header row in the Header Information scroll area and select an IPAC Type of *Post SGL*.
4. Click the Create button.

The system automatically populates fields in the SGL Information scroll area.

5. Enter an Orig Doc Ref (original document reference) and an Original DO (original disbursement office) in the Header Information scroll area.
6. Enter an Original Line # (original line number) in the Detail Information scroll area.
7. Click OK to save the voucher and make the Post SGL transaction available to the Pay Cycle process for processing.

To create Zero-dollar IPAC transactions:

1. Access the Voucher component for the IPAC voucher you want to adjust.
2. On the Voucher - Payments page, click the IPAC link to access the IPAC page.
3. Add a new IPAC header row in the Header Information scroll area and select an IPAC Type of *Zero*.
4. Click the Create button.

The system automatically populates specific fields in the Detail Information, Line Amount, and Invoice regions.

5. Enter an Orig Doc Ref (original document reference) in the Header Information scroll area.
6. Click OK to save the voucher and make the Zero-dollar transaction available to the Pay Cycle process for processing.

Header Information

Sender ALC (Sender Agency Location Code)	Displays the ALC values entered on the Bank Information page. See Chapter 11, "(USF) Setting Up PeopleSoft Payables for U.S. Federal Agencies," Defining Agency Location Codes, page 239.
Sender DO (Sender Disbursement Office)	Displays the sender DO value entered on the External Accounts page. See <i>PeopleSoft Banks Setup and Processing 9.1 PeopleBook</i> , "Setting Up External, Internal, and Netting Accounts," Defining External Account Information.
Receiver ALC	Displays the receiver's (vendor's) ALC by default from the vendor. You assign the ALC to the vendor on the Vendor Information - Federal page.

IPAC Type

The first IPAC header row must be a *Payment* transaction type with one exception, the first row can be an *Adjustment* transaction type if the voucher was built from the accounts receivables refund process.

Select from:

Payment for new transactions that you are sending to the IPAC system.

Post SGL to add or change the SGL account information for previous transactions that you sent for collection. This value is available only if the original IPAC payment to which it refers has a status of *Processed*, which indicates that the payment has been processed by the Pay Cycle process and the Outbound IPAC file has been sent to the IPAC system.

Zero for zero-dollar, information-only IPAC transactions. This value is available only if the original IPAC payment to which it refers has a status of *Processed*, which indicates that the payment has been processed by the Pay Cycle process and the Outbound IPAC file has been sent to the IPAC system.

Adjustment for vouchers that originated from the accounts receivables refund process. Users are required to enter at least one debit credit pair of SGL information if you select this value. Only one adjustment transaction can be included per voucher.

Create

Select an IPAC type and then click to display the detail IPAC information.

Doc Reference (document reference)

This value is created during Pay Cycle using the ALC bulk pre-fix/counter defined during set up. The counter is incremented by one for each IPAC payment.

Status

Indicates the status of the IPAC voucher:

Processed: IPAC vouchers have gone through the Payment Selection part of the Pay Cycle process and cannot be modified.

Not Processed: IPAC vouchers have not gone through the Payment Selection part of the Pay Cycle process and can be modified.

Detail Information

Each row in the Detail Information scroll area displays one invoice line—distribution line combination. With the exception of Final Pay, the rest are optional. Fields required for zero-dollar transactions are noted below.

Trace ID

Displays the business unit code followed by the voucher ID. This auto-populated value enables back-end systems to match transactions.

Misc Info

Click to access the IPAC Miscellaneous Description page, where you can enter related free-form text, accounting code information and a fiscal year ID.

Description

Click to access the IPAC Description page, where you can enter a free-form description of the IPAC transaction.

Cross Reference Document	Displays the document reference number of the original IPAC payment for zero-dollar transactions.
Original Line #	Displays the original line number of the original invoice line being adjusted for zero-dollar and adjustment transactions only.
Contact Name and Phone	Enter the name and phone number of a contact person at your agency.

Transaction Information

Obligation Doc	Displays the purchase order identifier. The default is the same as the value that appears in the PO ID field.
Final Pay	Select to indicate that payment is final. Deselect to indicate a partial payment. Required for original payment.
Contract and Contract Line	Displays the contract ID and contract line item number copied from the voucher, if present.
Requisition	Enter the ID of the request for goods or services. This value is not copied from the voucher.

Sender/Receiver TAS/BETC

Sender TAS (Sender Treasury Account Symbol)	Displays the Sender TAS based on the fund code entered on the distribution line. You associate Treasury Account Symbols with fund codes on the TAS/BETC setup component. Required for original payment.
Sender BETC (sender business event type code) and Recvr BETC (receiver business event type code)	Optionally, enter the code used in the Government-wide Accounting and Reporting Modernization (GWA) Project system to indicate the type of activity being reported, such as payments, collections, and so on.
Sender DUNS (sender Dun and Bradstreet number) and Recvr DUNS (receiver Dun and Bradstreet number)	Enter the Dun and Bradstreet number used to identify the sender (your agency) or the receiver (the customer's agency).
Sender DUNS4 and Recvr DUNS4 (receiver DUNS4)	Enter the four-character identifier that, along with the DUNS number, identifies individual business locations for federal vendors and federal customers.
Receiver TAS (Receiver Treasury Account Symbol)	Represents the fund and appropriation that receives the payment.
Receiver Dept.	Represents the two-digit code assigned by the U.S. Department of Treasury to the agency receiving the transaction. Required for original payment.

SGL Information

(Optional) Enter Standard General Ledger information. Bear the following in mind:

- If you enter data in any SGL Information field, you must enter data in all of the fields.
- SGL amounts must balance with the IPAC line amount, and you must have offsetting debit and credit entries.

You must enter SGL account information for Post SGL transaction types, and—optionally—you can enter SGL account information for collection. The SGL information fields are not available for zero-dollar transaction types.

Sender/Receiver Flag	Select a value to indicate whether the SGL account information for the line is for the Sender (your agency) or the Receiver (the customer's agency).
Federal Flag	Select a value to indicate whether the SGL account information for the line is Federal or Non-Fed (non-federal).
SGL Action	Select a value that indicates the action for the line. Values are: <i>Add</i> : Indicates this is a new line. <i>Edit</i> : Indicates this is a changed line. For Post SGL transaction types, the action is <i>Edit</i> for existing lines and <i>Add</i> for new lines.

Entering Additional IPAC Information

Access the IPAC Miscellaneous Description page (click the Misc Info link on the IPAC page).

Fiscal Year Obligation ID	Select a value to indicate the fiscal year of the obligation. Values are: <i>Not Applicable</i> , <i>Current Fiscal Year</i> , and <i>Prior Fiscal Year</i> .
ACL/CD (Accounting Classification Code), ACRN (Account Classification Reference Number), Job (Job Order Number), and JAS	Displays the identification codes. The JAS code consists of a combination of Job Order Number, Accounting Classification Reference Number, and Site ID.
FSN (Fiscal Station Number)	Enter the eight-digit number identifying the subdivision of the sender ALC.
DoD	Enter the DoD Activity Address Code.

The fields that are available on this page vary based on the IPAC transaction type. This table shows the fields that are available based on the IPAC type:

<i>IPAC Transaction Type</i>	<i>Available Fields</i>
Payment	All fields available.

IPAC Transaction Type	Available Fields
Zero Dollar	Only the text box.
Post SGL	Only the text box.

Running the Pay Cycle Process for Outbound IPAC Payments

Access the Pay Cycle Manager page and process the appropriate pay cycle (Accounts Payable, Payments, Pay Cycle Processing, Pay Cycle Manager).

The following processing is specific to outbound IPAC payments:

- The Pay Cycle process marks all included IPAC vouchers as *Processed* on the IPAC page.
- The Pay Cycle process will reject and create an error for any vouchers whose payment method is EFT and EFT layout is IPAC and for which no data is entered on the IPAC page.

View pay cycle errors on the Pay Cycle Error page. The Pay Cycle process will not process the payment until you enter the proper IPAC data.

- The Pay Cycle process processes zero-dollar and post SGL IPAC transactions (for non-monetary adjustments to original IPAC payment transactions).

[Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Processing Outbound IPAC Transactions, page 1064](#)

Performing Schedule Reconciliation for IPAC Payments

Access the Schedule ID Reconciliation page (Banking, Reconcile Statements, Schedule ID Reconciliation).

See *PeopleSoft Banks Setup and Processing 9.1 PeopleBook*, "Reconciling Statements," Managing Federal Schedule ID Reconciliations.

Canceling IPAC Payments

Since IPAC payments are made by the Department of Treasury's IPAC system once they receive the EFT file created by the Pay Cycle process, you should not cancel IPAC payments that have been processed by the Pay Cycle process. If you try to cancel an IPAC payment on the Payment Schedule Cancellation page, you will receive a warning message.

Processing Inbound IPAC Transactions

This section provides an overview of inbound IPAC processing and setup, lists prerequisites, and discusses how to:

- Load inbound IPAC files.
- Review staged inbound IPAC files.
- Create the inbound IPAC voucher and record the payment.
- Inquire on inbound IPAC payments.

See Also

Chapter 37, "(USF) Processing PeopleSoft Payables for U.S. Federal Agencies," Processing Outbound IPAC Transactions, page 1064

Understanding Inbound IPAC Processing and Setup

PeopleSoft Payables can receive and load information from the IPAC system that other agencies have sent to the IPAC system for payment processing. PeopleSoft Payables uses this information to create manual payment records for those payments. This is known as inbound IPAC processing.

This flowchart illustrates the inbound IPAC process in PeopleSoft Payables:

Inbound IPAC processing in PeopleSoft Payables

To process inbound IPAC files in PeopleSoft Purchasing and Payables:

1. Create a purchase order and a voucher for the payment, selecting the Inbound IPAC option on the Voucher - Payments page to indicate that the voucher should be placed on hold until staged IPAC data is associated with the voucher.
2. Receive the inbound IPAC flat file from the IPAC system.
The flat file contains the IPAC information for the payment.
3. Load the IPAC flat file into the IPAC staging tables using the Load Inbound IPAC Application Engine process (AP_INIPAC).
4. (Optional) View the information loaded from the flat file into the IPAC staging tables using the Inbound IPAC Data page.

5. Update the voucher with the staged IPAC information:

- a. Open the voucher in the Voucher component and click the Select IPAC link on the Voucher - Payments page to access the Inbound IPAC Stage Selection page.
- b. Select the staged inbound IPAC data that goes with the voucher.

The system performs edits to ensure that the sender ALC in the staged data matches the vendor ALC on the voucher, the receiving ALC (customer ALC) matches the ALC you have set up for your bank, the IPAC header amount equals the voucher gross amount, and the PO ID in the staged data matches the PO ID on the voucher.

- c. Click OK.

The staged IPAC data you selected is copied to the PeopleSoft Payables IPAC records, and you are returned to the Voucher - Payments page.

6. Manually record the payment on the Voucher - Payments page by selecting a payment action of *Record* and entering a payment reference number.

The payment is manual because the IPAC system has already transferred the funds.

7. Post the payment.

Prerequisites

Set up the system for inbound IPAC processing:

- Perform the same setup as for outbound IPAC processing, except that you are not concerned with the IPAC EFT layout or with assigning it to bank accounts.
- Configure the environmental variables of all affected workstations to enable IPAC inbound processing.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Prerequisites, page 1065](#).

See [Chapter 11, "\(USF\) Setting Up PeopleSoft Payables for U.S. Federal Agencies," Configuring Workstations for IPAC Inbound Processing, page 249](#).

Pages Used to Process Inbound IPAC Transactions

Page Name	Definition Name	Navigation	Usage

Inbound IPAC Data page

Note. On this page, the *sending agency* is the vendor's agency, which is receiving the payment, and the *receiving agency* is the customer's agency—that is, your agency—which is making the payment.

Search Criteria**File Name**

Enter the file name. Displays the concatenation of the file name + User ID of the user who loaded the file + date/time that the file was loaded.

Agency Location Code

Enter the ALC of the sending agency, which is the agency receiving the payment.

Inbound Staged Date	Enter the date the inbound IPAC file was loaded into the inbound IPAC staging tables using the Load Inbound IPAC process.
Staged Status	Select from: • <i>Error</i> • <i>Selected</i> • <i>Staged</i>
Doc Reference (document reference)	Enter the payment confirmation number.

Header Information

Agency Location Code	Displays the sender's ALC.
IPAC Amount	Displays the total amount of the IPAC payment.
Sender DO (Sender Disbursement Office)	Displays the sender's disbursement office code.
Tran Set ID (Transaction set identifier)	Displays the transaction set ID. PeopleSoft Payables only processes inbound IPAC transactions whose transaction set ID is <i>810</i> , collection.
Customer ALC	Displays your ALC.

Detail Information

Each row in the Detail Information grid represents one voucher line-distribution line combination.

Line Amount	Displays the amount for the voucher line-distribution line combination.
Sender Treasury Account Symbol	Represents the fund and appropriation to which the payment was made.
Contact Name	Displays a sender contact name.
IPAC Accounting Classification	Displays the accounting classification code that identifies a project. It was supplied by you, the customer, to the vendor when the goods or services were originally requested. This is identical to the ACL/CD field on the IPAC page.
Receiver Department	Displays the two-digit code assigned by the Department of Treasury to the agency receiving the transaction (for inbound IPAC, your agency).
Description	Displays a description of the invoice line item.

Cross Reference Document	Displays the document reference number of the original IPAC payment for zero-dollar transactions.
Obligation Document Number	Displays the PO ID.
IPAC Pay Flag	Indicates whether a payment is <i>F</i> , final or <i>P</i> , partial.
IPAC Purchase Order	Displays the PO ID.
IPAC Quantity	Displays the item quantity.
Receiver Treasury Account Symb (receiver treasury account symbol)	Represents the fund and appropriation upon which the payment is drawn.

Creating the Inbound IPAC Voucher and Recording the Payment

Access the Invoice Information page in the Voucher component.

1. Select *Regular Voucher* on the Add page.

Note. IPAC vouchers must have a voucher style of *Regular*.

2. Copy a purchase order.

Note. IPAC vouchers must be preceded by a purchase order.

3. Complete the voucher by entering all required fields on the Invoice Information, Payments, and Voucher Attributes pages.
4. On the Voucher - Payments page, select the Inbound IPAC option.

This places the voucher payment on hold with a Hold Reason of *IPC*, IPAC hold, until the inbound IPAC data has been staged and is ready for you to associate with the voucher.

If the inbound IPAC data has already been staged, click the Select IPAC link and proceed to step 8.

5. Save the voucher.

Run the normal approval processing for the voucher—budget checking, document tolerance checking, matching, voucher approval—and post the voucher.

6. Load the inbound IPAC file to the staging tables using the Load Inbound IPAC page and (optionally) confirm that the IPAC data was staged on the Inbound IPAC Data Inquiry page.
7. Access the voucher using the Voucher component and click the Select IPAC link on the Voucher - Payments page to access the Inbound IPAC Stage Selection page.

8. On the Inbound IPAC Stage Selection page, enter your Inbound Lookup Criteria to search for the staged IPAC transaction you want to associate with the voucher, and click Search.

The Agency Location Code in the Inbound Lookup Criteria group box is the sender's ALC.

The Inbound IPAC Stage Selection page is identical to the outbound IPAC page, with the exception of the Inbound Lookup Criteria group box and the Select, File Name, and Staged Date fields in the Header Information scroll area. Note that, on the Inbound IPAC Stage Selection page, the meaning of receiver and sender are the reverse of their meaning on the outbound IPAC page. In other words, on the Inbound IPAC Stage Selection page, the receiver is the paying agency (your agency) and the sender is the agency that was paid.

See [Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," Entering Outbound IPAC Information, page 1069.](#)

9. Scroll through the search results in the Header Information scroll area and select the transaction you want to associate with the voucher.

You cannot save the voucher if:

- The voucher gross amount does not equal the staged IPAC transaction's total amount.
- The ALC for the vendor on the voucher does not equal the Sender ALC on the staged transaction.
- The ALC for the voucher's bank does not equal the Receiver ALC on the staged transaction.

10. Click Copy to Voucher to copy the staged IPAC transaction data to the voucher and the AP IPAC tables.

11. Click the Back to Invoice link and access the Voucher - Payments page.

12. On the Voucher - Payments page, select a payment Action of *Record* and enter a payment Reference number.

13. Save the voucher.

When you save:

- The system deletes the staged IPAC data that you selected from the inbound IPAC staging tables.
- Payments are marked as reconciled.
- The IPAC link becomes available.

You can click it to view all IPAC data associated with the voucher on the IPAC page.

14. Run the Payment Posting process and the Cash Clearing process to update accounting lines and cash balances.

Handling Advances for Federal Agencies

PeopleSoft Payables uses prepayment functionality to handle payment advances to employees. U.S. federal agencies have one specific advance handling requirement which is not otherwise required for prepayments, which is that advances must be tied to existing purchase orders. To that end, when Enable Federal Payments is selected on the Installation Options - Payables page, the Advance Payment Option group box appears on the Invoice Information page for the prepayment voucher style. When you select Use Advance Payment in that group box, the system verifies that there is a purchase order associated with the prepayment.

To pay and record expenses against an advance:

1. Create a purchase order for the advance.
2. Create a prepayment voucher.
 - a. Enter a voucher style of *Prepaid Voucher* on the add/search page when accessing the Voucher component.
 - b. Select the Use Advance Payment option on the Invoice Information page, and enter the associated purchase order.
 - c. Complete the voucher.

See [Chapter 30, "Processing Prepayments," Entering Prepaid Vouchers Online, page 900.](#)

3. Pay the voucher, either through the Pay Cycle process or manually.
4. Record expenses against the advance by creating a regular voucher in the Voucher component and applying it to the prepayment.

See [Chapter 30, "Processing Prepayments," Applying Final Invoices to Prepayments, page 906.](#)

- a. If the expense is more than the advance, the Voucher Posting process automatically schedules a payment for the difference.

For example, if the advance is for 1000 USD and you enter an expense voucher against the advance for 1300 USD, the Voucher Posting process schedules a payment of 300 USD to the employee.

- b. If the expense is less than the advance, then enter two distribution lines on the expense voucher, one for the expense, the other a credit to cash.

For example, if the advance is for 1000 USD and the expense voucher is for 800 USD, enter an expense distribution of 800 USD and a credit to cash distribution of 200 USD.

Enter and collect the receivable using your receivables processes.

Processing Federal Registry Data

This section provides an overview of processing federal registry data and discusses how to:

- Load registry files.
- Inquire on the Federal Registry Load process.
- Maintain federal entities.
- Create vendors from federal registry data.

Understanding Processing Federal Registry Data

Federal registry data is loaded from a federal Agency registration complete extract file that has been downloaded from the Fedreg site. The Fedreg file will include updates to all staged data including federal entities that have been created as vendors. The following actions will occur:

- The federal entities in the stage record that have not been created as vendors are updated with the latest data.
- The federal entities that have been created as vendors will be updated in the vendor records.
- Vouchers that have been put on hold because the federal vendor was expired are taken off hold, if the vendor is no longer expired.
- Vendors that have changed from an active status to an expired status and have vouchers with pending payments will have the payments put on hold with the provided reason code.

During the Fedreg Load process, messages for the following conditions will be written to the file load message log:

- Legal name change
- Expired to unexpired status
- Unexpired to expired status
- Vouchers put on hold
- Vouchers taken off hold
- Federal entity business type has changed
- The agency type changes from 'buyer' to 'buyer and seller'. Optionally, you can create a vendor through the Maintain Federal Entities component if you want to do business with this entity as a seller.
- Agency type changes from 'buyer and seller' to 'buyer' only. The vendor is set to an expired status.

Maintain Federal Entities page (2 of 2)

- Vendor

Click this link to access the Vendor Information page for this vendor.
- Create Vendor

Click this button to access the Federal Entity Create page and to use this page to create a new vendor. This button only appears if the federal entity is a seller or a seller and buyer.

Creating Vendors from Federal Registry Data

Access the Federal Entity Create page. (Click the Create Vendor button on the Maintain Federal Entities page.)

- Trading Partner Code

Enter a trading partner code. This is a required field. The value entered here will be populated on the federal page of Vendor component.
- Vendor subject to withholding

Select this checkbox to indicate that this vendor is subject to withholding.
- Vendor ID

Enter a vendor ID or leave blank for the system to use Auto Numbering.

Vendor Location	Enter a vendor location. The system will return an error if this field is not populated.
Create	When the vendor is created successfully the user will get a message that the vendor has been created successfully. When you click the OK button, you will be transferred back to the Federal Entity Inquiry page where the new vendor will be listed in the vendor grid and a link will be enabled so you can transfer to the Vendor component.
Cancel	Click this button to clear the values on this page and return to the Federal Agency Inquiry page.
Return to Federal Agency Inquiry	Click this link to return to the Federal Agency Inquiry page. The system does not clear the populated values and if you transfer back to the create page, these values will remain populated for the current session.

Processing CCR Inbound Files

This section provides an overview of processing CCR inbound files and discusses how to:

- Load registry files.
- Review file load status.

See Also

[Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," CCR Voucher and Vendor Processing, page 1036](#)

Understanding CCR Inbound Files Processing

As part of standard CCR Inbound File processing, the system automatically sets any vendors that are expired in CCR to a payment hold status 30 days after the expiration date. The vendor is still active, but cannot process payments any time 30 days after the expiration date. Until the vendor is in a payment hold status, it is still open for ordering and payment. For example, if a vendor is considered expired with CCR on September 1, the PeopleSoft system will mark the vendor with a payment hold status beginning October 1. From September 1 through September 30, the vendor can still be paid in the PeopleSoft system.

Pages Used to Process CCR Inbound Files

Page Name	Definition Name	Navigation	Usage
Load Registry File	RUN_CCR_LOAD	Vendors, Central Contractor Registry, Load Registry File	Run the Payables CCR Load Application Engine process (AP_CCR_LOAD), and import CCR vendor information to the PeopleSoft staging tables.
Inquire CCR File Information	AP_CCR_FILE_INQ	Vendors, Central Contractor Registry, Inquire CCR File Load Status	Review the load status of imported file information. This page displays line item information of load activity, such as updates and errors.

Loading Registry Files

Access the Load Registry File page (Vendors, Central Contractor Registry, Load Registry File).

Request Number

Enter a processing request number.

File Path and File Name	Enter a file path and, optionally, a specific file name for processing. If you enter the wild card character (*.*) in the file name field, the system processes all files in the directory.
Disable Ordering for Expired	Select to prevent the system from creating purchase orders and vouchers for expired vendors.
Update CCR Vouchers on Hold and Hold Reason	Select to enable held CCR vouchers to be processed and to define the held voucher types that the system will update.
	Note. This is an override to the normal system functionality.

Reviewing File Load Status

Access the Inquire CCR File Information page (Vendors, Central Contractor Registry, Inquire CCR File Load Status).

This page displays several system status messages, such as errors or identifying pieces of information. This information includes:

- Previously processed: Identifies whether the file has already processed.
- Updated vendors: Which vendors have been automatically updated with new or edited information.
- Updated vendor errors: What errors the system encountered during the update vendors process.

You may need to manually update the vendor for any necessary changes.

- Updated held vouchers: Which vouchers the system has automatically taken off hold due to contractor registration renewal in the CCR database.
- Vendor name change: Which vendors have had a legal name or Doing Business As name change.

Creating CCR Vendors Using Staged Data

This section discusses how to:

- Review contractor information.
- Run the Vendor Build process.

Pages Used to Create CCR Vendors Using Staged Data

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Contractor Inquiry	AP_CCR_VNDR	Vendors, Central Contractor Registry, Add Vendors from CCR, Contractor Inquiry	Review information for U.S. federal government contractors and, optionally, create CCR vendors.
Vendor Build	AP_CCR_VNDR_BUILD	Vendors, Central Contractor Registry, Add Vendors from CCR, Contractor Inquiry Click the Create Vendor button on the Contractor Inquiry page.	Create new CCR vendors with staged contractor information and additional vendor data.

Reviewing Contractor Information

Access the Contractor Inquiry page (Vendors, Central Contractor Registry, Add Vendors from CCR, Contractor Inquiry).

Vendor Click a vendor link to access the vendor component and to view summary information about a vendor.

Create Vendor Click to access the Vendor Build page and create a CCR vendor from staged contractor data.

Running the Vendor Build Process

Access the Vendor Build page (Click the Create Vendor button on the Contractor Inquiry page).

Vendor subject to withholding Deselect this check box if the vendor is not subject to withholding. If vendors are subject to withholding, the system prompts you to enter the required information after it completes the vendor creation process.

Vendor ID Enter an ID number. If you leave this field blank, the system automatically assigns a vendor ID number.

Vendor Location Displays the default value of *MAIN*.

SetID Select a setID with which to build the vendor. You can add set IDs.

Create Vendor Now

Click to create a vendor using the entered vendor and staged contractor information. The system will display a confirmation message; click Yes to continue creating a CCR vendor.

Creating CCR Payment Holds

This section provides an overview of CCR payment holds and discusses how to create CCR payment holds.

Understanding CCR Payment Holds

When a CCR vendor is in an expired status, any payments to the vendor must be evaluated by an end user and put on hold when required. For regular vouchers and Quick Invoice vouchers, the system displays a warning message when you enter payments for expired CCR vendors. The warning message provides the user with an option to set the payment on hold and provide a reason code for putting the payment on hold. During the CCR Inbound File process, the system automatically takes payments off hold if the CCR vendor has re-registered and is no longer considered expired. The system displays payments taken off hold on the Inquire File Load Status page.

Pages Used to Create CCR Payment Holds

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher - Payments	VCHR_PAYMENT_PNL	Accounts Payable, Vouchers, Add/Update, Regular Entry, Payments	Create voucher payments, including voucher payment holds.
Quick Invoice Entry - Payment Details	VCHR_PYMNT_QV_SEC	Accounts Payable, Vouchers, Add/Update, Quick Invoice Entry Click the Payments link on the Quick Invoice page.	Create voucher payments, including voucher payment holds.
Inquire File Load Status	AP_CCR_FILE_INQ	Vendors, Central Contractor Registry, Inquire CCR File Load Status	Review file status load information.

Creating CCR Payment Holds

Whether you create a CCR voucher using the Regular Voucher entry page or the Quick Invoice, the hold payment process is the same.

Access the Voucher - Payment or Quick Invoice Entry - Payment Details page.

1. Select the Hold check box.
2. Enter CCR in the Hold Reason field.

3. Complete entering voucher information, and click Save.

Chapter 38

Using Entry Events in PeopleSoft Payables

This chapter provides an overview of entry events in PeopleSoft Payables and discusses how to generate accounts payable entry events.

Understanding Entry Events in PeopleSoft Payables

Entry events are the short-hand codes used to post pro-forma accounting entries to the general ledger with minimal input from the end user. These codes are used across all modules for all documents and derive their accounting entries from a central table.

Entry event codes enable applications to create standard accounting entries automatically based on accounting lines generated by document posting routines. Users assign an entry event code to a transaction distribution line when they create a document. The FS_EVENTGEN Application Engine process, also called the Entry Event Generator, generates additional standard accounting entries based on the entry event code that users entered.

After enabling entry events, users may assign entry event codes to distribution lines for accounts payable transactions. Entry event processes and entry event process steps are predefined and delivered with the system. You define appropriate entry events to specify the debits and credits necessary for each business scenario.

You can run the FS_EVENTGEN process in conjunction with the Voucher Posting Application Engine process (AP_PSTVCHR), the Payment Posting Application Engine process (AP_PSTPYMNT), and the Cash Clearing Application Engine process (AP_APCSHCLR) by selecting the Initiate Entry Event Generator check box on the run control pages for these processes. You can also use the Voucher Entry Event request page, the Payment Entry Event request page, and the Cash Clearing Entry Event request page to run the Entry Event Generator process separately.

PeopleSoft Application Fundamentals 9.1 PeopleBook, "Using Entry Events"

Upward and Downward Adjustment Entry Event Entries for PeopleSoft Payables Transactions Subject to Commitment Control

PeopleSoft Payables uses entry events to generate separate budgetary debit and credit entries for upward and downward adjustments to purchase orders and vouchers that are processed after funding has expired.

Note. To generate upward and downward adjustment entries for vouchers that have been posted and then finalized or partialized, you must run the FS_EVENTGEN process separately from the Voucher Posting process, that is, you must run it from the Voucher Entry Event request page.

See *PeopleSoft Application Fundamentals 9.1 PeopleBook*, "Using Entry Events," Using Entry Event Codes for Upward and Downward Adjustments.

Generating Accounts Payable Entry Events

This section discusses how to:

- Generate voucher entry events.
- Generate payment entry events.
- Generate cash clearing entry events.

Pages Used to Generate Accounts Payable Entry Events

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher Entry Event	PST_EE_RUN_REQUEST	Accounts Payable, Batch Processes, Vouchers, Voucher Entry Event	Request a run of the FS_EVENTGEN process to generate entry event accounting entries for vouchers, payments, and cash clearing, respectively.
Payment Entry Event	PST_EE_RUN_REQUEST	Accounts Payable, Batch Processes, Payment, Payment Entry Event	Request a run of the FS_EVENTGEN process to generate entry event accounting entries for vouchers, payments, and cash clearing, respectively.
Cash Clearing Entry Event	PST_EE_RUN_REQUEST	Accounts Payable, Batch Processes, Payment, Cash Clearing Entry Event	Request a run of the FS_EVENTGEN process to generate entry event accounting entries for vouchers, payments, and cash clearing, respectively.
Voucher Posting Request	PST_VCHR_RQST	Accounts Payable, Batch Processes, Vouchers, Voucher Posting	Request a run of the Voucher Posting Application Engine process (AP_PSTVCHR). You can generate entry events by selecting the Initiate Entry Event Generator option.

Page Name	Definition Name	Navigation	Usage
Payment Posting Request	PST_PYMNT_RQST	Accounts Payable, Batch Processes, Payment, Payment Posting	Request a run of the Payment Posting Application Engine process (AP_PSTPYMT). You can generate entry events by selecting the Initiate Entry Event Generator option.
Cash Clearing Request	CASH_CLRG_REQUEST	Accounts Payable, Batch Processes, Payment, Cash Clearing	Request a run of the Cash Clearing Application Engine process (AP_APCSHCLR). You can generate entry events by selecting the Initiate Entry Event Generator option.

Generating Voucher Entry Events

Access the Voucher Entry Event page (Accounts Payable, Batch Processes, Vouchers, Voucher Entry Event).

Entry Event Process Select *Voucher Accrual* to process voucher entries.

Process Option Select one of the following:

All Business Units: Process all voucher entries for all business units.

Business Unit: Process the vouchers in a specific business unit. The Business Unit field in the Selection Criteria group box becomes available for entry.

Document: Process the voucher entries for a specific voucher. The Business Unit and Document fields in the Selection Criteria group box becomes available for entry.

Selection Criteria

The fields available in this group box depend on the process option you select.

Business Unit Enter a business unit whose vouchers you want to generate entry events. This field is available if you selected a process option of *Business Unit* or *Document*.

Document Enter a voucher ID for a voucher you want to generate entry events. This field is available if you selected a process option of *Document*. You must also enter a business unit.

Generating Payment Entry Events

Access the Payment Entry Event page (Accounts Payable, Batch Processes, Payment, Payment Entry Event).

Entry Event Process	Select <i>Payments</i> to process payment entries.
Process Option	Select one of the following: <i>All Banks</i>: Process all entries for all banks. <i>Bank Account</i>: Process entries for one bank account. The bank account fields in the Selection Criteria group box become available for entry. <i>Payment</i>: Process entries for a particular payment. The bank account fields and the Payment Reference field in the Selection Criteria group box become available for entry.

Selection Criteria

The fields available in this group box depend upon the process option you select.

SetID, Bank Code, and Bank Account	Enter a bank setID, bank code, and bank account. These fields are available if you selected a process option of <i>Bank Account</i> or <i>Payment</i> .
Payment Reference	Enter a payment reference (such as a check number). This field is available if you selected a process option of <i>Payment</i> . You must also enter the bank account fields.

Generating Cash Clearing Entry Events

Access the Cash Clearing Entry Event page (Accounts Payable, Batch Processes, Payment, Cash Clearing Entry Event).

Entry Event Process	Select <i>Cash Clearing</i> to process cash clearing entries.
Process Option	Select <i>All Reconciled Payments</i> to process all reconciled payments.

There are no selection criteria available for generating cash clearing entry events.

Drilling Down to Entry Event Journal Lines

This section provides an overview of how to drill down from journal lines and discusses how to link the PeopleSoft Payables entry event Journal Drill Down page with accounting entry definitions.

Understanding How to Drill Down from Journal Lines

You can view source transactions for PeopleSoft Payables accounting entries from journal lines in PeopleSoft General Ledger for both standard and entry event journals. You search for journals in the Journal Inquiry component (JOURNAL_INQUIRY) and drill down to source transactions for individual journal lines. The page that you access is based upon the selections that you made on the Accounting Entry Definition page.

You can also review source transactions for entry event journals directly from the menu in PeopleSoft Payables.

Before you can view source transactions for a journal entry in PeopleSoft General Ledger, you must specify the exact type of information that you want to drill down to from the Journal Inquiry component. To do so, you link a drill down page with each accounting entry definition for which you generate journals.

See Also

Chapter 23, "Running Voucher and Payment Posting," Reviewing Journal Detail for a General Ledger Journal, page 764

PeopleSoft General Ledger 9.1 PeopleBook, "Reviewing Financial Information," Viewing Journal Information

Pages Used to Drill Down to Entry Event Journal Lines

Page Name	Definition Name	Navigation	Usage
Accounting Entry Definition	JRNL_GEN_ACCTG_DEF	General Ledger, Journals, Subsystem Journals, Accounting Entry Definition	Identify the drill down pages for each accounting entry definition that the Journal Generator process (FS_JGEN) uses to general journal for PeopleSoft Payables.
Journal Inquiry	INQ_JRNL_CRITERIA	General Ledger, Review Financial Information, Journals, Journal Inquiry Criteria	Enter search criteria to retrieve a list of journals.
Journal Inquiry Details	INQ_JRNL_HDR_DTL	Click a journal ID on the Journal Inquiry page.	View journal lines for a journal and drill down to the source transactions in PeopleSoft Payables.
Journal Drill Down	EE_VCH_DRILL	Accounts Payable, Review Accounts Payable Info, Vouchers, EE Journal Entry Drill Down, Journal Drill Down	Review the accounting entries for PeopleSoft Payables items for entry event journals.

Linking the PeopleSoft Payables Entry Event Journal Drill Down Page with Accounting Entry Definitions

To link the PeopleSoft Payables entry event Journal Drill Down page with the accounting entry definition:

1. Access the Accounting Entry Definition page (General Ledger, Journals, Subsystem Journals, Accounting Entry Definition).
2. Select *EGAPDEFN* (entry event payables definition) as the accounting definition name.
3. In the Page Name field, select *EE_VCH_DRILL* (AP voucher payment drillback) for the PeopleSoft Payables entry event Journal Drill Down page.
4. Select the Cross Product Drill Down check box.

Chapter 39

Archiving Transactions

This chapter provides overviews of data types available for archiving and archive object definitions, Query definitions, and template definitions, and discusses how to:

- Archive data.
- Restore archived data.

See Also

PeopleTools PeopleBook: Data Management, "Using PeopleSoft Data Archive Manager"

Understanding Data Types Available for Archiving

This section discusses:

- Archiving general overview.
- Archiving business process.
- Archiving business rules.

Archiving General Overview

In PeopleSoft Payables, you use the PeopleTools Data Archive Manager to archive payments, vouchers, and vendors. This process removes them from the production transaction tables, yet keeps them online in history tables where they are available for queries and reporting. Removing them from your production tables helps maintain speedy daily processing activities, while still retaining online access to information.

In addition, you can generate archived reports that provide the necessary tracking information for your regulatory agencies. Remember that the data stays available if you need to reload it for an audit.

To archive data in PeopleSoft Payables, you'll complete the same procedures for payments, vouchers, and vendors. Payments that are cleared or canceled must be archived to history tables and deleted from the transaction tables before you can begin to archive the related vouchers. Likewise, before you can archive vendors, completely processed vouchers or closed vouchers must be archived to history tables and deleted from the transaction tables.

When you archive, you first move transactions out of the main online tables into online history tables where you can still query them for information about the transactions. Later, when you no longer need to reference those transactions, you can use third-party database utilities to move them to flat files and delete them completely from the online system.

Note. We recommend that you use unique run control IDs for each archive process. That is, have separate run control IDs for payment archive, voucher archive, and vendor archive.

When you archive your transactions, you'll need to select a batch ID. Batch IDs provide a method of identifying a group of transactions during the archiving process, and are automatically assigned by the system. The combination of batch ID and archive date specified during archive selection is then used as the key when you run the selection report, rollback, and deletion processes, and when you perform audits.

Archiving Business Process

The following procedures provide an overview of the archiving procedure in PeopleSoft Payables.

Archive transactions as follows:

1. Run the payment, voucher, or vendor archive selection process.

Based on the template and query you select, this process flags selected transactions for archival.

2. Run the payment, voucher, or vendor archive selection report.

This report lists all the selected data, so you can verify that you're archiving the correct transactions. You'll probably want to run this report every time you run a payment, voucher, or vendor archive request.

3. Run the payment, voucher, or vendor archive delete process.

This removes the records from the transaction tables.

4. Run the payment, voucher, or vendor archive rollback process.

If the report reveals that you have selected the wrong set of data, you can run a roll back process. This clears the records, enabling you to rerun the archive selection process with different parameters.

Archiving Business Rules

This section discusses the following PeopleSoft Payables archiving business rules:

- Payment archival business rules.
- Voucher archival business rules.
- Vendor archival business rules.

Payment Archival Business Rules

To be archived, payment data must pass the following business rules:

The payment post status must be *Posted* and the reconciliation status must be *Reconciled* when any of these three scenarios are met:

- The reconciliation method is set to none (*N*), the cash cleared flag is active (*Y*), the cash cleared date is not null, and the cash cleared date value is less than the archive as of date value.
- The cancel action value is set to *Close* or *Processed*, the cancel date is not null, and the cancel date value is less than the archive as of date value.
- The cash cleared flag is not active (*N*), the bank account does not use the Cash Clearing Application Engine process (AP_APCSHCLR), and the payment date value is less than the archive as of date value.

Voucher Archival Business Rules

To be archived, voucher data must pass the following business rules:

- Voucher post status is *Posted* and the invoice date value is less than the archive as of date value, or voucher entry status is *Deleted* and the invoice date value is less than the archive as of date value.
- Associated payments no longer exist on the payment table.
Payments must have been previously archived.
- No related vouchers exist that are not currently archived.
- Voucher does not have accounting lines which have not been distributed to the general ledger.
- Voucher does not have accounting lines with a journal date value greater than an archive as of date value.
- Voucher does not have scheduled payments with a status other than *Closed*, *Paid*, or *Canceled*.
- Voucher does not have scheduled payments with unposted withholding transactions.
- Voucher does not have accounting lines with unposted VAT information.
- Voucher should be matched or overridden if matching is required.
- Voucher does not have voucher lines referencing a purchase order that does not have a status of *Complete*, *Canceled*, or *Pending Cancel*.
- Voucher does not have accounting lines which have asset information that has not been distributed to PeopleSoft Asset Management.
- Voucher does not have accounting lines which have PeopleSoft Project Costing related information that has not been distributed to PeopleSoft Project Costing.
- Voucher has been budget checked if applicable.

Vendor Archival Business Rules

To be archived, vendor data must pass the following business rules:

- Last activity date value is less than the archive as of date value, or the last activity date value is null and the vendor status value is equal to the to be archived value.
- Vendor cannot have any payments on the Payment table.

Payments must be archived prior to running the vendor archive process.

- Vendor cannot have any voucher on the voucher table.

Vouchers must be archived prior to running the vendor archive process.

- Vendor may not have existing purchase orders that do not have a status of *Complete*, *Canceled*, or *Pending Cancel*.
- Vendor may not also be linked to an active PeopleSoft Receivables customer.

Understanding Archive Objects Definitions, Query Definitions, and Template Definitions

PeopleSoft Payables delivers archive object definitions, query definitions, and template definitions to archive:

- Payment data
- Voucher data
- Vendor data

You can modify them if needed using the Data Archive Manager. You can also use the Data Archive Manager to create your own archive object definitions, query definitions, and template definitions to archive other types of data.

Archive Object Definitions

An archive object definition identifies the tables that contain the data to be archived and the history tables that are updated for each table. PeopleSoft Payables delivers these archive objects:

Data Type	Archive Object
Payment data	PAYABLES_PAYMENTS
Reconciled payment data	PAYMENT_RECON_TBL
Payment advice table	PYMNT_ADVICE
Voucher – vendor bank data	VCHR_VNDR_BANK
Voucher – vendor information data	VCHR_VNDR_INFO
Voucher data	VOUCHER
Voucher HIPAA data	VOUCHER_HIPAA
Vendor data	VENDOR
Vendor – reporting element data	VENDOR_RPT_ELEMENTS

Archive Query Definitions

Each archive query definition defines the selection criteria to archive data from transaction tables. PeopleSoft Payables delivers these archive queries:

Data Type	Archive Query
Archive all payment data	AP_ARCHIVE_PYMNT_ALL
Archive bank account data	AP_ARCHIVE_PYMNT_BANK_ACCT
Archive voucher, all business units	AP_ARCHIVE_VOUCHER_ALL
Archive voucher, business unit	AP_ARCHIVE_VOUCHER_BU
Archive all vendors data	AP_VENDOR_ARCH_ALL
Archive vendors by class data	AP_VENDOR_ARCH_CLASS
Archive vendors by persistence data	AP_VENDOR_ARCH_PERS
Archive vendors by setID data	AP_VENDOR_ARCH_SETID
Archive vendors by status data	AP_VENDOR_ARCH_STATUS

Review these queries to determine whether you want to add additional selection criteria for the transactions to be archived. Refer to the *PeopleTools PeopleBook: PeopleSoft Query* documentation if you want to create your own archive queries.

See *PeopleTools PeopleBook: Data Management, "Using PeopleSoft Data Archive Manager," Defining Archive Queries*

See *PeopleTools PeopleBook: PeopleSoft Query*

Archive Template Definitions

When you archive data, you select an archive template definition. Each archive template definition includes one or more archive object definitions and the archive query definitions used to select the data. PeopleSoft Payables delivers these archive templates:

Data Type	Archive Template
Payment data	Payables Payment Archive (AP_PYMNT)
Voucher data	Voucher Archive (AP_VCHR)
Vendor data	Vendor Archive (AP_VNDR)

Archiving Data

This section provides overviews of the archive process flow and history tables, and lists the pages used to archive data.

Understanding the Archive Process Flow

Archive transaction data as follows:

1. Archive transaction data to the history tables by selecting the archive template and query for the data type that you want to archive on the Archive Data to History page.

Also, enter the archive date used to select the transactions by clicking Reset Query Find Variables on the Define Archive Query Binds page.

This table shows what the system compares the archive date to for the different data types:

<i>Data Type</i>	<i>Archive Date</i>
Payment	• As of date. • As of date, bank setID, bank code, and bank account key.
Voucher	• As of date. • As of date and business unit.
Vendor	• As of date. • As of date and setID. • As of date, setID, and vendor classification. • As of date, setID, and vendor persistence. • As of date, setID, and vendor status.

Note. You can run the process multiple times to create various "what-if" scenarios based on the archive date.

2. (Optional) Review the number of rows that were selected for archiving for each table on the Audit Archiving page.

This page lists the number of rows that were selected for archiving for each archive ID (template), archive batch number, and table combination.

Note. This page displays data only if you selected the Audit Row Count check box on the Archive Data to History page.

3. Delete the data from the transaction tables for a specific archive ID (template) and batch number on the Archive Data to History page.
4. (Optional) Rollback the transaction data from the history tables for a specific archive ID (template) and batch number on the Archive Data to History page if you deleted the transaction data in error.
5. Remove the transaction data from the history tables for a specific archive ID (template) and batch number on the Archive Data to History page.

Understanding History Tables

PeopleSoft Payables updates these history tables when you run the selection process:

<i>Data to Archive</i>	<i>FROM History Table</i>	<i>TO History Table</i>
Payment data	PAYMENT_TBL	AP_ARC_PYM_TB_H
	PAYMENT_RCN_TBL	AP_ARC_PYM_RC_H
	PYMNT_ADVICE	AP_ARC_PYM_AD_H
Voucher data	BCH_XREF_EXT	AP_ARC_BCH_XR_H
	DISTRIB_LINE	AP_ARC_DIST_L_H
	DISTRIB_LINE_NP	AP_ARC_DIST_N_H
	PYMNT_VCHR_MSG	AP_ARC_PY_MSG_H
	PYMNT_VCHR_WTHD	AP_ARC_PYM_WT_H
	PYMNT_VCHR_XREF	AP_ARC_PYM_XR_H
	VCHR_ACCTG_LINE	AP_ARC_VCH_AC_H
	VCHR_DOCSEQ_HDR	AP_ARC_VCH_DO_H
	VCHR_FRGH_CHRG	AP_ARC_VCH_FR_H
	VCHR_LINE_TXGEO	AP_ARC_VCH_TG_H

Data to Archive	FROM History Table	TO History Table
	VCHR_LINE_WTHD	AP_ARC_VCH_WT_H
	VCHR_LN_EXS_DTL	AP_ARC_VCHL_E_H
	VCHR_LN_TX_DTL	AP_ARC_VCH_TX_H
	VCHR_MISC_CHRG	AP_ARC_VCH_MS_H
	VCHR_RECV_MTCH	AP_ARC_VCH_RM_H
	VCHR_SALETX_CHG	AP_ARC_VCH_ST_H
	VCHR_USETAX_CHG	AP_ARC_VCH_UT_H
	VCHR_VNDR_IBANK	AP_ARC_VCH_VI_H
	VCHRLN_MISC_CHG O	AP_ARC_VCHL_M_H
	VOUCHER_LINE	AP_ARC_VCH_LN_H
	VOUCHER	AP_ARC_VOUCH_H
	VOUCHER_HIPAA	AP_ARC_VCH_HP_H
	VCHR_VNDR_BANK	AP_ARC_VCH_VB_H
	VCHR_VNDR_INF	AP_ARC_VCH_VN_H
Vendor data	VENDOR	AP_ARC_VENDOR_H
	VENDOR_ADDR	AP_ARC_VND_AD_H
	VENDOR_ADDR_PHN	AP_ARC_VND_PH_H
	VENDOR_CNTCT	AP_ARC_VND_CN_H

<i>Data to Archive</i>	<i>FROM History Table</i>	<i>TO History Table</i>
	VENDOR_ID_NBRS	AP_ARC_VND_ID_H
	VENDOR_INVOICE	AP_ARC_VND_IN_H
	VENDOR_LOC	AP_ARC_VND_LC_H
	VENDOR_PAY	AP_ARC_VND_PY_H
	VENDOR_TYPE	AP_ARC_VND_TP_H
	VENDOR_WTHD	AP_ARC_VND_WT_H
	VENDOR_WTHD_JUR	AP_ARC_VND_WJ_H
	VNDR_ADDR_SCROL	AP_ARC_VND_AS_H
	VNDR_BANK_ACCT	AP_ARC_VND_BK_H
	VNDR_CNTCT_PHN	AP_ARC_VND_CP_H
	VNDR_CNTCT_SCR	AP_ARC_VND_CS_H
	VNDR_GOV_CERT	AP_ARC_VND_GC_H
	VNDR_GOV_SRC	AP_ARC_VND_GS_H
	VNDR_HDR_IND_CL	AP_ARC_VND_HN_H
	VNDR_IBANK_ACCT	AP_ARC_VND_IB_H
	VNDR_IND_CLASS	AP_ARC_VND_IC_H
	VNDR_LOC_ID_NBR	AP_ARC_VND_LI_H
	VNDR_LOC_SCROL	AP_ARC_VND_LS_H

<i>Data to Archive</i>	<i>FROM History Table</i>	<i>TO History Table</i>
	VNDR_RTV_FEE	AP_ARC_VND_RT_H
	VNDR_URL	AP_ARC_VND_UR_H
	VNDR_VAT_RGSTRN	AP_ARC_VND_VT_H
	VNDR_RPT_ELEM	AP_ARC_VND_RP_H

The data in these tables is keyed by the archive ID (template) and batch number for each archive run. If you want to see all transactions that are selected to archive you can run a query on the history tables or you can run one of the PeopleSoft Payables archive reports.

You may not want to delete data from the history tables each time that you select and delete data from the transaction tables. This way the data will be available for a period of time to enable you to restore the data into the transaction tables. We recommend that create a schedule for deleting data from the history tables. Before you delete data from the history tables, you should use a third-party database utility to copy the contents to a flat file.

Important! If you decide to run the archive selection process again because you didn't select the correct data, you must first use the Data Archive Manager option to remove the data from the history tables.

Pages Used to Archive Data

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Archive Data to History	PSARCHRUNCNTL	PeopleTools, Data Archive Manager, Archive Data to History	Select an archive template and query and select the action you want to take in the archiving process.
Define Archive Query Binds	PSARCHRUNQRYBND	Click Define Binds on the Archive Data to History page.	Enter the date used to select the transactions to archive by clicking the Reset Query Bind Variables button.
Audit Archiving	PSARCHIVEAUDIT	PeopleTools, Data Archive Manager, Audit Archiving	View the number of rows selected to be archived for each table for a specific archive run.

Restoring Archived Data

This section provides an overview of data restoration and lists the page used to restore data.

Understanding Data Restoration

The *Selection* process type option on the Archive Data to History page places a copy of the data in the transaction tables in the history tables and the *Delete* process type option removes the transaction data from the transaction tables. If you delete the data from transaction tables in error, you can restore the data from the history tables by using the *Rollback* process type option on the Archive Data to History page. The process restores all data for a specific archive ID (template) and process run. You cannot restore selected data. For example, you cannot specify that you want to restore data for a specific payment, voucher, or vendor.

Important! After you delete data from the history tables, you cannot restore it to the transaction tables unless you first manually restore it to the history tables from a flat file.

Managing Voucher Line Tax Information with Taxware and Vertex

This chapter discusses how to manage voucher line tax information with Taxware and Vertex.

Managing Voucher Line Tax Information with Taxware and Vertex

This section provides an overview of voucher unposting when using Taxware and Vertex and discusses how to:

- Review and modify tax summary information for a voucher.
- Review and modify voucher line tax information.
- Override a tax location on the voucher.

Understanding Voucher Unposting When Using Taxware and Vertex

Unposting a voucher does not activate Taxware and Vertex to recalculate any edited amounts. This means if you are using Taxware or Vertex and need to change the tax parameters on the Invoice Line Tax Information page when unposting vouchers, first enter a reversal voucher to reverse all the accounting entries, then enter a new voucher with the changed tax parameters. This applies if you are reversing single vouchers, or multiple vouchers using the Voucher Mass Maintenance component (VCHR_MASS_MAINT).

Pages Used to Manage Voucher Line Tax Information with Taxware and Vertex

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Sales/Use Tax Summary	AP_SUT_SUMM_PG	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information Click the Sales/Use Tax Summary link on the Invoice Information page.	Review the sales and use tax information for all the voucher lines, and if applicable, modify tax information.

Page Name	Definition Name	Navigation	Usage
Invoice Line Tax Information	VCHR_LINE_TAX	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information Click the Sales/Use Tax link in the Invoice Lines group box on the Invoice Information page.	Review and, if applicable, override tax settings for the voucher line.
GeoCodes and Addresses	VCHR_LINE_TXGEO	Click the Override Tax Location link on the Invoice Line Tax Information page	Define a new tax location for vouchers (Taxware or Vertex users only).

Reviewing and Modifying Tax Summary Information for a Voucher

Access the Sales/Use Tax Summary page (click the Sales/Use Tax Summary link on the Invoice Information page).

Sales/Use Tax Summary

Sales/Use Tax Summary page with Taxware

Note. Only fields specific to Taxware and Vertex are discussed in this section. Other voucher fields are discussed in detail in "Entering and Processing Vouchers Online: General Voucher Entry Information."

Voucher Line Tax Information

Click to access the Invoice Line Tax Information page to review detail tax information for this voucher line.

Override Tax Location

Click to access the GeoCodes and Addresses page, where you can define a new Taxware or Vertex tax location.

Tax Destination Indicates the location for which a sales or use tax is applicable. This value is defined as a ship to location, but it does not have to be the same as the ship to location defined in the PeopleSoft Payables control hierarchy.

Fields displayed when you select the More Information tab are discussed in detail in the following section.

See [Chapter 40, "Managing Voucher Line Tax Information with Taxware and Vertex," Reviewing and Modifying Voucher Line Tax Information, page 1119.](#)

Tax Details

These fields are display-only and represent information returned by Taxware or Vertex. These fields display the amounts that are due to each tax agency for each voucher line.

Note. For a single voucher line, up to four tax code types can be displayed: *County*, *State*, *City*, and *District*.

Invoice Line Tax Information page with Taxware

The fields on this page display values that are passed to the voucher line through the PeopleSoft Payables default hierarchy. If the voucher was created by copying a purchase order, purchase order values override the PeopleSoft Payables default hierarchy, so the voucher inherits sales and uses tax data from the purchase order. However, the third-party tax application provides the tax rates used in the calculation. When you create a new voucher, all of the fields on this page can be overridden for the voucher line.

Note. Only fields specific to Taxware and Vertex are discussed in this section. Other voucher fields are discussed in detail in "Entering and Processing Vouchers Online: General Voucher Entry Information."

Fields Appearing For Third-Party Tax Applications Only

Additional fields appear on this page if you have installed and enabled a third-party tax application, like Taxware or Vertex.

Sales and Use Tax

Title Passage

Select *Buyer Dest* (buyer destination), *Consignee*, or *Sell Origin* (seller origin). These applications use this information to apply the appropriate tax calculation algorithms.

Category

Select a category that applies to the voucher line. This system populates this field by default from the purchase order.

SUT Product Code, Tax User Area, Job Number, and SUT Freight Code Displays information that is copied from the purchase order if the voucher is created by copying a purchase order. These fields are information-only and appear on the third-party tax application register.

Override Tax Location Click to access the GeoCodes and Addresses page, where you can define a new Taxware or Vertex tax location. You can enter an address for any one or all four addresses to determine the applicable tax; point of order, order acceptance (Taxware only), ship to, and ship from addresses.

Note. If you enter a one-time address in PeopleSoft Purchasing, that address populates this field.

Tax Details

These are display-only fields. After you return to the Invoice Information page and save the voucher, access the Voucher Line Tax Information page again. These fields will now display the amounts that are due to each tax agency for the voucher line.

See Also

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Invoice Information for Online Vouchers, page 303](#)

Overriding a Tax Location on the Voucher

Access the GeoCodes and Addresses page (Click the Override Tax Location link on the Invoice Line Tax Information page).

This page is used only by Taxware or Vertex, and the fields vary depending on which application you selected on the Installation Options - Overall page.

Location Type	Enter a location address option. For Taxware, the options are <i>Order Acpt</i> (order accepted), <i>POO</i> (point of order origin), <i>Ship From</i>, or <i>Ship To</i>. For Vertex, the options are <i>Order Acpt</i> (order accepted), <i>Ship From</i>, or <i>Ship To</i>. The system populates the <i>Ship From</i> geocode by default from the vendor. The system populates the <i>Order Acpt</i> and <i>POO</i> fields from the <i>Ship From</i> field unless you entered a one-time address on the PO or the voucher specifically for order accept or point of order origin.
GeoCode	Displays a value that is used by third-part tax applications to link a location to the tax calculation algorithms. If you did not select a geocode, this field displays a Lookup link. Clicking the geocode value or Lookup link accesses the Tax GeoCode Selection page, where you select a geocode value for the location.

Chapter 41

Processing Value Added Tax (VAT) in PeopleSoft Payables

This chapter provides an overview of processing value added tax (VAT) in PeopleSoft Payables, lists common elements, and discusses how to:

- Understand accounts payable VAT calculations and accounting entries.
- Enter online vouchers with VAT.
- Enter third-party, VAT-only vouchers.
- (CAN) Enter vouchers with VAT and sales tax.
- Enter vouchers with VAT and withholding.

Understanding VAT Processing in PeopleSoft Payables

PeopleSoft Payables enables you to record and report VAT information associated with vouchers. Before you can do this, you must set up your VAT environment and enable your business units for VAT.

The system calculates VAT based on the information you enter during setup (for example, VAT codes which determine the VAT rates that the system uses).

The system loads the VAT information on all your PeopleSoft Payables transactions and documents into the VAT transaction table and then into the VAT reporting tables, which you can use to create VAT returns and other VAT reports.

You set up VAT for PeopleSoft Payables and any other of your Oracle's PeopleSoft applications that process VAT transactions using the VAT and Intrastat components and pages. VAT setup and the associated system pages are described in detail in the *PeopleSoft Global Options and Reports 9.1 PeopleBook*.

PeopleSoft Global Options and Reports 9.1 PeopleBook, "Working with VAT"

Common Elements for This Chapter

VAT Entity

Displays the code identifying the VAT reporting entity.

Understanding Accounts Payable VAT Calculations and Accounting Entries

This section discusses:

- VAT calculations in PeopleSoft Payables.
- VAT accounting entries in PeopleSoft Payables.

VAT Calculations in PeopleSoft Payables

This section discusses VAT calculations in PeopleSoft Payables.

Exclusive VAT Calculation for Vouchers

In the case of exclusive VAT vouchers, when you save the voucher, a VAT confirmation process takes place. The system calculates the VAT amount for each line based on entered VAT values and stores that amount on the distribution line. The system compares the calculated amount to the amount of VAT that you entered on the voucher header. If there is a discrepancy, the system compares the amount of difference against the VAT tolerance rules, as defined in your PeopleSoft Payables control hierarchy. If the difference is within tolerance, the voucher is accepted and the difference is allocated to the distribution line with the highest VAT basis amount upon running the Voucher Posting Application Engine process (AP_PSTVCHR). If the difference is out of tolerance, and you have set up VAT tolerance checking to issue a warning, the system alerts you with a warning message to check for input errors (you also have the option of having the system issue an error or not check for tolerances at all.) The system stores the calculated VAT amount on the voucher header, but the payment is always based on the VAT amount shown on the vendor's invoice.

Inclusive VAT Calculation for Vouchers

Another common processing scenario generally occurs with low monetary value invoices. In this case, known as VAT inclusive, the amount of VAT is not explicitly detailed on the voucher, but is included in the merchandise amount for each voucher line. The system calculates the amount of VAT for the voucher and stores the amount for reporting purposes. The system calculates the VAT at the line level and stores the sum of all VAT amounts, on all lines, on the voucher header.

Vouchers with a VAT Exemption

When your organization is VAT exempt, the VAT Exception Type is *Exoneration*. In this case, the transactions are treated as taxable at a zero-rate. This means that the transaction line would have a taxable type VAT Applicability (*X*) and a VAT code with a zero rate should be specified on the line. There is nothing that prevents you from entering a VAT amount on the header in this case—even if all of the lines are zero-rated. However, the VAT tolerance check occurs (unless you have opted not to use it), since the calculated VAT amount would be zero.

When the good or service is VAT exempt, the voucher line is flagged with a VAT Applicability of *Exempt*, and there is no VAT code on the line. In this case, you are not allowed to enter a VAT amount on the header if all lines are flagged as exempt. However, it is possible for a voucher to contain a mixture of taxable and exempt lines, in which case you can enter a VAT amount on the header.

Another type of VAT exemption occurs when you have been granted a temporary suspension from paying VAT. In this case the transaction line has a taxable-type VAT Applicability (*S*), and a VAT code with a zero-rate should be specified on the line.

Finally, when a transaction line is outside the scope of VAT, VAT calculation simply ignores the transaction (except in some exceptional circumstances). Like exempt goods or services, these lines have a VAT applicability of *O*, no VAT code on the line, and you would be unable to enter a VAT amount on the header if all lines are thus flagged.

Postponed or Self-Assessed VAT

In some cases, you are required to record both input and output VAT on a voucher. In this case, VAT is due on your purchase but has not been charged by the vendor. Instead of including the VAT in your payment to the vendor, you pay it to your country's VAT authorities. Examples of this include EC acquisitions, reverse charge transactions in Europe, and self-assessed GST in Canada. This may also be referred to as *postponed VAT* or *self-imposed VAT*. When VAT is self-assessed, the record output VAT flag is set to *Y*. If all of the voucher lines are self-assessed, then you enter no VAT amount; the system calculates the VAT amount for each line and stores the total on the voucher header.

If you have both self-assessed and non self-assessed voucher lines, any VAT amount entered on the voucher header applies only to the non self-assessed lines.

VAT Accounting Entries in PeopleSoft Payables

VAT accounting entries are created by voucher posting and payment posting, when applicable, for each combination of general ledger business unit, VAT code, and VAT transaction type that exists in the voucher distribution. Several factors affect how VAT can be accounted for, as follows:

- If you are recording input VAT only, where VAT is included on the invoice and the VAT amount is payable to the vendor, the VAT amount is included in the accounts payable entry during voucher posting.
- If you are recording both input and output VAT, where VAT is not included on the invoice and you may be liable for VAT, but it is not payable to the vendor, the system creates a separate VAT liability entry during voucher posting.
- The VAT declaration point determines the date on which VAT is recognized.

If VAT is declared at time of payment, intermediate VAT accounting entries are created by voucher posting. Payment posting reverses the intermediate entries and creates the VAT accounting entries against the final VAT accounts. If VAT is declarable at invoice, delivery, or accounting date, the VAT accounting entries for the final VAT accounts are created by voucher posting; no intermediate accounts are used.

- If VAT is initially calculated at gross and then recalculated at the time of payment, and a cash discount is being taken, adjusting VAT accounting entries are created by payment posting to reduce the amount of VAT that is recorded, based on the amount of the discount.

- Voucher posting and payment posting create separate entries for recoverable VAT and non-recoverable VAT.

If you are prorating non-recoverable VAT, the non-recoverable VAT is applied to the expense accounts specified for each VAT-applicable line. If you are not prorating non-recoverable VAT, the non-recoverable VAT is applied to the non-recoverable VAT account specified for each VAT code and VAT transaction type. If the Allocate Non-Recoverable option is selected on the transaction, then the system looks to the ChartField inheritance options for each ChartField to determine whether the value is inherited from the associated expense distribution line, from the defaults defined for the business unit, or from the VAT accounting template. If the Allocate Non-Recoverable option is deselected, then the rest of the ChartFields default from the VAT accounting template.

- VAT can be recorded in the general ledger using the general ledger business unit associated with the accounts payable business unit on the voucher header or the general ledger business unit on the voucher distribution line, depending on the VAT interunit settings.

PeopleSoft Global Options and Reports 9.1 PeopleBook, "Working with VAT"

Entering Online Vouchers With VAT

VAT information for vouchers defaults through the PeopleSoft Payables control hierarchy. When you enter VAT-applicable vouchers online, you can review and override VAT defaults at the voucher header, voucher line, and voucher distribution line levels. You may specify that VAT defaults on lower levels be reset based on any overrides made at the higher levels. You can also enter a VAT amount for the voucher header and review VAT calculations before you save the voucher.

This section discusses how to:

- Review and override voucher header VAT defaults.
- Review and override voucher line VAT defaults.
- Review and override voucher distribution line VAT defaults.
- Review VAT summary information for a voucher.

Pages Used to Enter Online Vouchers With VAT

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Invoice Header VAT Information	VCHR_VAT_HD_EXP	Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information Click the VAT Summary link on the Invoice Information page. Click the Transfer to VAT Header link on the Invoice VAT Summary Information page.	Review and, if applicable, override the voucher's VAT settings.
Invoice Line VAT Information	VCHR_LINE_VAT_SEC1	Click the Invoice Line VAT link in the Invoice Lines scroll area on the Invoice Information page. This link appears as the VAT/Intrastat link for adjustment voucher lines.	Review, and if applicable, override VAT defaults for the voucher line. Enter Intrastat information for Intrastat-applicable vouchers.
Voucher Distribution Line VAT Information	DISTRIB_LN_VAT_SEC	Click the VAT link on the VAT tab in the Distribution Lines scroll area on the Invoice Information page, then click the VAT link for the distribution line row.	Review, and if applicable, override VAT defaults for the distribution line.
Invoice VAT Summary Information	VCHR_VAT_SM_EXP	Click the VAT Summary link on the Invoice Information page.	Review the VAT amounts summarized by VAT rate. This page provides a preliminary view of the VAT calculations based on the parameters that have defaulted (or been manually updated), as well as the amounts entered. You can also link from this page to the VAT header, line, and distribution line defaults pages.
Voucher VAT Details	VCHR_VAT_INFO	Accounts Payable, Review Accounts Payables Info, Vouchers, VAT Details, Voucher VAT Details	Search for vouchers and view VAT details for a voucher, including all calculated and entered VAT amounts, VAT code, transaction type, and use type.

Reviewing and Overriding Voucher Header VAT Defaults

Access the Invoice Header VAT Information page (click the Transfer to VAT Header link on the Invoice VAT Summary Information page).

VAT Treatments

Treatment Group: Domestic Purchases

Invoice Header VAT Information page

Note. Because complex algorithms are used to obtain the VAT voucher header defaults, avoid overriding these values whenever possible. If you do change any values on this page, be aware that values that appear lower down on the page can be dependent on values that appear higher up on the page. For example, if you override the VAT reporting country, all other VAT default fields that appear lower down on the page will have to be changed to the default values defined for the new VAT reporting country. You should therefore work from top to bottom and click the Adjust Affected VAT Defaults button in the Adjust/Reset VAT Defaults collapsible region each time you change a value. This automatically updates any dependent values that appear on the page, and avoids updating values that you have already overridden.

Physical Nature

Physical Nature	Indicates whether an object is a good or a service. For many countries there is a requirement to report the sale and/or purchase of goods separately from services. The system defaults this value from the vendor or PeopleSoft Payables business unit, depending on the transaction.
Change Physical Nature	Click to override the default physical nature value for this invoice. The system resets all of the VAT defaulting for this level only.

VAT Locations

The following terms appear only when the transaction is for a service: Location Country, Location State, Vendor Location Country, Vendor Location State, Service Performed Country, and Service Performed State.

Location Country	Shows the PeopleSoft Payables business unit country.
Location State	Shows the PeopleSoft Payables business unit state. This field is applicable only in a VAT environment that tracks the tax by regional subunit of a country, such as a province or state.
Vendor Location Country	Shows the vendor location country.
Vendor Location State	Shows the vendor location state.
Service Performed Country	Depending on the services performed flag setting in the VAT defaulting hierarchy (for example at the vendor or business unit level), the system sets the value for this field as follows: • If it is the ship from location, it sets it to the vendor location country. • If it is the ship to location, it sets it to the PeopleSoft Payables business unit country. • If it is the buyer's location, it sets it to the PeopleSoft Payables business unit country. • If it is the supplier's location, it sets it to the vendor location country.

Service Performed State	Depending on the services performed flag setting in the VAT defaulting hierarchy (for example the vendor or business unit level), the system sets the value for this field as follows: • If it is the ship from location, it sets it to the vendor location state. • If it is the ship to location, it sets it to the PeopleSoft Payables business unit state. • If it is the buyer's location, it sets it to the PeopleSoft Payables business unit state. • If it is the supplier's location, it sets it to the vendor location state. This field is applicable only in a VAT environment that tracks the tax by regional subunit of a country, such as a province or state.
Ship From Country	Shows the country from which the good or service is shipped. In the case of transactions involving goods or freight service transactions, this is used to determine the VAT treatment.
Ship From State	Shows the state from which the good or service is shipped. In the case of transactions involving goods or freight service transactions, this is used to determine the VAT treatment. This field is applicable only in a VAT environment that tracks the tax by regional subunit of a country, such as a province or state.
Ship To Country	Shows the country to which the good or service is shipped. In the case of transactions involving goods or freight service transactions, this is used to determine the VAT treatment.
	Note. This value must be identical to the country of the Ship To ID on the voucher line.
Ship To State	Shows the state to which the good or service is shipped. In the case of transactions involving goods or freight service transactions, this is used to determine the VAT treatment. This field is applicable only in a VAT environment that tracks the tax by regional subunit of a country, such as a province or state.

VAT Service Specific Defaults

This region displays only when the transaction is for a service.

Service Type	Displays the VAT service type of <i>Freight</i> or <i>Other</i> . The value in this field determines whether or not the special rules for freight transport within the European Union apply. The value comes from the VAT default hierarchy.

Place of Supply Driver Displays the usual place of supply (meaning, the place where VAT is usually liable) for the service. This value is used to help determine the place of supply country and the VAT treatment. Options are: *Buyer's Countries*, *Supplier's Countries*, or *Where Physically Performed*. The system derives the value from the VAT default hierarchy.

VAT Registrations

Reporting Country Shows the country for which this VAT will be reported. This is the VAT Entity or VAT registration country and determines many of the VAT defaults.

Defaulting State If the reporting country requires that VAT be tracked by state or province, this field displays the state within the reporting country that is used to retrieve values from the VAT Defaults table.

Vendor Registration Country and Vendor Registration ID Registration country and ID of the vendor taken from the vendor information.

Exception Type Where applicable, exception granted for the VAT entity. Options are: *None*, *Exonerated*, or *Suspended*. This value is obtained from the VAT entity registration for the VAT reporting country.

Certificate ID If applicable, displays the ID of the VAT exception certificate that may have been issued to the VAT entity.

VAT Controls

Calculate at Gross or Net Shows how VAT is calculated. The default value comes from the VAT entity driver. Options are:

Gross: The system calculates VAT before it applies any early payment discounts.

Net: The system calculates VAT after it deducts early payment discounts. If there are two percentage discounts, the system uses the larger of the two when it calculates VAT. The system will not use discount amounts, only discount percentages.

Recalculate at Payment If you are calculating VAT at gross, select this check box to enable VAT recalculation at payment time to allow for any early payment discounts. This causes the system to adjust the VAT amount at the time of payment if the discount has been taken. This value is set on the VAT entity driver and defaults from the VAT hierarchy.

Calculation Type

Indicates the type of VAT calculation. Options are:

Exclusive: The VAT amount is stated separately from the merchandise amount on the invoice, and is added to the total merchandise amount to obtain the voucher gross amount. The total VAT amount is entered on the voucher header.

Inclusive: The VAT is included in the merchandise amount specified for each line and is not stated separately. No separate VAT amount is entered on the voucher header.

This value is set on the AP Options driver and defaults through the VAT hierarchy (voucher origin, control group, vendor, and vendor location.)

Declaration Point

For a good or a service, shows when you want VAT transaction information to be recognized for reporting purposes. Options are:

Acctg Date (accounting date): VAT is recognized on accounting date.

Delivery: VAT is recognized on delivery.

Invoice: VAT is recognized at time of invoice.

Payment: VAT is recognized at time of payment.

This value is set on the VAT entity registration driver and defaults through the VAT hierarchy (PeopleSoft Payables business unit options, voucher origin, control group, vendor, and vendor location.)

Declaration Date

Shows the date on which the VAT is recognized.

It defaults from the accounting date when the Declaration Point is *Acctg Date* (accounting date). You cannot override this date, however, you may modify the accounting date on the Invoice Information page.

It defaults from the shipment date, receipt date, or invoice date, in that order, when the Declaration Point is *Delivery*. You may override this date.

It defaults from the invoice date when the Declaration Point is *Invoice*. You may override this date.

Rounding Rule

Shows the VAT rounding rule. The value comes from the VAT country driver and defaults through the VAT hierarchy. Options are:

Natural Round: Amounts are rounded normally (up or down) to the precision specified for the currency code. For example, for a currency defined with two decimal places, 157.4659 would round up to 157.47, but 157.4649 would round down to 157.46.

Round Down: Amounts are rounded down. For example, for a currency defined with two decimal places, 157.4699 would round down to 157.46.

Round Up: Rounds up and limits rounding precision to one additional decimal place. For example, for a currency defined with 2 decimal places, 157.4659 would round up to 157.47, but 157.4609 would be rounded down to 157.46.

Non-Recovery Charge

Shows the charge code for the non-recoverable VAT. The values default from the Procurement Control - Non-Merch Charges page.

Calc on Advance Payments
(calculate on advance payments)

Select for the system to calculate VAT on advance payments for vouchers of the *Prepaid Voucher* voucher style. The value is derived from the VAT entity registration driver.

Important! You must specify the correct declaration point option when defining VAT defaults for the system to automatically and correctly perform this calculation.

On the VAT Defaults Setup page for the VAT driver type *Entity Registration*, select the VAT for advance payment check boxes.

Include Freight

Select for the system to include any freight amounts in the VAT basis by calculating VAT on the merchandise amount plus any freight amount. This option is only available for exclusive VAT calculation. The value comes from the VAT entity registration driver.

Include Miscellaneous

Select for the system to include any miscellaneous charge amounts in the VAT basis by calculating VAT on the merchandise amount plus any miscellaneous charge amount. This option is only available for exclusive VAT calculation. The value comes from the VAT entity registration driver.

In Reporting Currency

Select to enter the VAT amount in the VAT reporting currency. You enter the VAT amount by clicking the Enter Reporting Amounts link to open the VAT Reporting Currency Amounts page, where you can enter the total VAT amount and the total VAT applicable amount in the reporting currency, and the applicable exchange rate. The system automatically calculates the VAT based on this exchange rate on saving the page. The In Reporting Currency value comes from the VAT entity registration driver.

Note. This option is only available if the Amounts in Reporting Currency option for the VAT entity registration driver in the VAT Defaults table is set to Y. Additionally, the VAT Treatment Group for the voucher must be *Domestic Purchases* and the transaction currency for the voucher must be different from the VAT reporting currency

Enter Reporting Amounts

Click to open the VAT Reporting Currency Amounts page on which you can enter the total VAT applicable amount and the total VAT amount in the VAT reporting currency. The system automatically calculates the exchange rate.

Allocate Non-Recoverable

This check box is applicable only when non-recoverable VAT is not being prorated. When non-recoverable VAT is not being prorated, the system obtains the account and alternate account for the non-recoverable VAT accounting entry from the VAT accounting template associated with the VAT code.

If this check box is selected, the other, non-account ChartFields will be obtained based on the ChartField inheritance options that have been defined for non-recoverable VAT. For each ChartField, these options allow you to specify whether the ChartField value is inherited from the expense distribution line, whether the value comes from the business unit defaults, or whether the value comes from the VAT accounting template.

If this check box is not selected, the other, non-account ChartFields are all obtained from the VAT accounting entry template.

The value of this check box comes from the Procurement Control component.

VAT Treatments**Place of Supply Country**

Displays the country in which the VAT is liable. This field appears only when the transaction is for services.

Treatment Group

Displays the appropriate VAT treatment group. Options are: *Domestic Purchases*, *European Union Purchases*, *Imports*, *No VAT Processing*, and *Out of Scope*.

Within Oracle's PeopleSoft applications, detail VAT treatment values on the transaction lines, which come from complex algorithms, are used for applying the precise defaults applicable to the transaction lines. Each of these detail VAT treatment values are associated with a VAT treatment group. The system tracks the VAT treatment group on the header enabling individual transaction lines to be grouped together into invoices during batch processes and to validate the detail line VAT treatment values on the transaction lines.

Adjust/Reset VAT Defaults

Any changes you make to fields on this page may affect VAT defaults on this page. For accuracy and consistency, use the following fields and buttons to adjust affected VAT defaults or to reset all VAT defaults. Adjusting or resetting VAT defaults will only affect fields within the VAT Defaults group box.

Adjust Affected VAT Defaults

Click this button to have the system adjust the VAT defaults that are affected by your changes, after you have selected the affected levels. All changes you have made to VAT Defaults on this page that affect other VAT Defaults on this page will be retained.

We recommend that you always click the Adjust Affected VAT Defaults button after changing any defaults on the VAT page. As values that appear lower down on the page can be dependent on values that appear higher up on the page, you should work from top to bottom and click the Adjust Affected VAT Defaults button in the Adjust/Reset VAT Defaults collapsible region as needed. This avoids updating values that you have already overridden.

Click the List of fields to be selected icon to view a list of all of the fields whose values will be adjusted if you click the Adjust Affected VAT Defaults button.

Levels

Select the levels to which you want the action to apply before you click the Reset All VAT Defaults button:

All lower levels: Reset the VAT defaults for the voucher line and the voucher distribution line.

This and all lower levels: Reset the defaults for the voucher header, the voucher line, and the voucher distribution line.

This level only: Reset the defaults for the voucher header only.

Reset All VAT Defaults

Click to reset any fields that you may have overridden on this page (including those that you changed by clicking the Adjust Affected VAT Defaults button) back to the original defaults before you save the page. Depending on your selection in the Level field, the VAT default values will be reset for the voucher header, the voucher line, the distribution line, or all three.

Note. Reset completely redetermines the VAT defaults. If you have changed a VAT driver field, resetting VAT defaults does not necessarily return the original default values. Rather, it resets all of the default values based on the new driver value.

Invoice Line VAT Information page

Note. Because complex algorithms are used to obtain the VAT defaults, avoid overriding these values whenever possible. If you do change any values on this page, be aware that values that appear lower down on the page can be dependent on values that appear higher up on the page. For example, if you override VAT applicability, the VAT code and transaction type will also have to be changed. You should therefore work from top to bottom and click the Adjust Affected VAT Defaults button in the Adjust/Reset VAT Defaults collapsible region as needed. This automatically updates any dependent values that appear on the page, and avoids updating values that you have already overridden.

Physical Nature

The fields displayed are the same as those described for the Invoice Header VAT Information page.

VAT Locations

The fields displayed are the same as those described for the Invoice Header VAT Information page.

VAT Service Specific Defaults

Service Type	Displays the VAT service type of <i>Freight</i> or <i>Other</i> if the transaction is for a service. The value in this field determines whether or not the special rules for freight transport within the European Union apply. The value comes from the VAT default hierarchy.
Place of Supply Driver	Displays the usual place of supply (meaning, the place where VAT is usually liable) for the service if the transaction is for a service. This value is used to help determine the place of supply country and the VAT treatment. Options are: <i>Buyer's Countries</i> , <i>Supplier's Countries</i> , or <i>Where Physically Performed</i> . The value comes from the VAT default hierarchy.

VAT Registrations

Many of these fields are the same as those described for the Invoice Header VAT Information page. Others include:

Reporting Country	Shows the country for which this VAT will be reported. This is the VAT Entity VAT registration country and determines many of the VAT defaults.
Defaulting State	Displays the state within the reporting country for which an associated value is retrieved from the VAT defaults table if the reporting country requires that VAT be tracked by state or province.

VAT Controls

Use Type	Determines the split between recoverable (taxable) and nonrecoverable (nontaxable) VAT. For the Canadian public sector, the use type also determines the rebate of the nonrecoverable VAT. VAT rebates are calculated based on statutory rebate rates that are established for each Public Service Body. The value comes from the VAT default hierarchy—specifically, Payables Options, voucher origin, control group, vendor location, and item.

VAT Treatments

Place of Supply Country	Displays the country in which the VAT is liable. The value comes from complex algorithms. This field appears only when the transaction is for services.

Treatment

Select the appropriate VAT treatment, but only if the algorithms did not return the correct value. Options are:

Domestic Goods Purchases: This refers to the purchase of goods where the supplier and customer are located in the same country.

Domestic Services Purchases: This refers to the purchase of services where the supplier and customer are located in the same country.

Domestic Reverse Chg Purchase: This refers to the purchase of goods subject to the domestic reverse charge. Transaction lines flagged for the reverse charge should have the reverse charge applied if the overall total of the reverse charge goods on the invoice is equal to or greater than the threshold amount specified for the VAT reporting country.

EU Goods Purchase: This refers to goods purchased within the European Union (EU).

EU Service Purchase: This refers to services purchased within the European Union (EU).

No VAT Processing: No VAT is processed for this voucher line.

Outside of Scope: This is outside the scope of VAT.

Self-Assess Goods Import: This refers to imported goods for which the customer is self-assessing the VAT. The vendor is not registered to collect VAT but the customer is liable to pay VAT to the VAT authority.

Self-Assess Service Import: This refers to imported services for which the customer is self-assessing the VAT. The vendor is not registered to collect VAT but the customer is liable to pay VAT to the VAT authority.

Zero-rated Goods Import: This refers to imported goods subject to zero-rate VAT.

Within Oracle's PeopleSoft applications, detail VAT treatment values on the transaction lines are used for applying the precise defaults applicable to the transaction lines.

VAT Details**Applicability**

Shows the VAT status. Options are: *Taxable*, *Exempt* (not subject to VAT), and *Outside of Scope of VAT*. The value comes from an algorithm that uses the VAT Applicable default, the treatment, and the exception type.

VAT Code

Shows the VAT code that defines the rate at which VAT is calculated for this line. The value comes from an algorithm that uses the treatment and applicability to retrieve the applicable VAT Code default from the VAT default hierarchy.

Transaction Type

Shows the code that categorizes and classifies this transaction for VAT reporting and accounting. The value comes from an algorithm that uses the treatment and applicability to retrieve the applicable Transaction Type from the VAT default hierarchy.

Record Output VAT

Select this check box to enable voucher entry when VAT is not included on the invoice but is payable to your VAT authority rather than the vendor. In this case, you will be accounting for both input and output VAT for the purchase. This will be the case for an Intra-EU Acquisition or when you must account for output VAT on a service supplied by a foreign supplier. This is also referred to as self-assessing for VAT. The value comes from an algorithm that uses the treatment and applicability to retrieve the applicable value from the PeopleSoft delivered VAT system setup data.

Adjust/Reset VAT Defaults

The fields displayed are the same as those described for the Invoice Header VAT Information page. If you select a Level value of *This and all lower levels*, the reset action will apply to the voucher line and the voucher distribution line. If you select a Level value of *All lower levels*, the reset action will apply only to the voucher distribution line.

Intrastat

This group box appears only for adjustment vouchers in a VAT environment. You use this information to record financial adjustments to transactions involving the movement of goods within the European Union.

Nature of Transaction 1 and Nature of Transaction 2 Enter the Nature of Transaction 1 and Nature of Transaction 2 codes applicable to the financial adjustment.

Fiscal Regime For countries that require Fiscal Regime on the Intrastat return, enter the Fiscal Regime applicable to the financial adjustment

Voucher Distribution Line VAT Information page

VAT Defaults

Use Type

Displays the use type which determines the split between recoverable (taxable) and nonrecoverable (nontaxable) VAT.

For the Canadian public sector, the use type also determines the rebate of the nonrecoverable VAT. VAT rebates are calculated based on statutory rebate rates that are established for each Public Service Body.

The value comes from the VAT default hierarchy — specifically, PeopleSoft Payables Options, voucher origin, control group, vendor location, and item.

Apportionment Control

Select the option to be used when searching for VAT apportionment information. The default value comes from the Payables Business Unit driver. Options include:

Dist GL BU (Distribution GL Business Unit): If you select this value, the system uses the general ledger business unit on the distribution line to search for the taxable and exempt percentages.

Txn BU (Transaction Business Unit): If you select this value, the system uses the PeopleSoft Payables business unit for the voucher to search for the taxable and exempt percentages.

Txn GL BU (Transaction GL Business Unit): If you select this value, the system uses the general ledger business unit to which the PeopleSoft Payables business unit is mapped to search for the taxable and exempt percentages.

Recovery Source

Select one of the following values:

Automatic: The system determines which percentages to use based on the VAT use type on the voucher line. Use the Recalculate button to calculate the VAT recovery percent.

Manual: Select if you want to override the percentage that defaults from the VAT use type. You can enter the percentage of VAT entered that is recoverable.

For both options, the system-calculated percentage is based on the VAT use type and VAT apportionment for the ChartFields on the distribution line.

The availability of this field is dependent on the Allow Override Recovery/Rebate option specified on the AP Options VAT driver in the VAT Defaults table.

(CAN) Rebate Source	Select one of the following values: <i>Automatic:</i> The system determines which percentages to use based on the VAT use type that has an associated Public Service Body code. Use the Recalculate button to calculate the VAT rebate percent. <i>Manual:</i> Select if you want to override the percentage that defaults from the VAT use type. When you do, you can enter the percentage that is used to calculate the rebate. For both options, the system-calculated percentage is based on the VAT use type and VAT apportionment for the ChartFields on the distribution line. The availability of this field is dependent on the Allow Override Recovery/Rebate option specified on the AP Options VAT driver in the VAT Defaults table.
Treatment	Displays the VAT treatment. This defaults from the invoice line.
Transaction Type	Categorizes VAT amounts by business transaction types (for example, a domestic purchase, an import from another VAT country, or a purchase for resale). These codes are required for reporting purposes and default onto the distribution line through the VAT defaulting hierarchy.
Recovery Percent	Enter the percentage in this field if you set the recovery source to <i>Manual</i> .
(CAN) Rebate Percent	Enter the percentage in this field if you set the rebate source to <i>Manual</i> .
VAT Calculations	
Transaction Amount	Enter the amount of the transaction in the transaction currency. If the control total amount has been entered on the pending item, the system automatically populates this field with a value from the pending item for the first VAT line.
Transaction Amount Base	Displays the amount of the transaction in the base currency.
Basis Amount	Displays the amount on which the VAT is calculated in the transaction currency. If VAT is being calculated at Net, this amount is net of any discounts.
Basis Amount Base	Displays the amount on which the VAT is calculated in the base currency. If VAT is being calculated at net, this amount is net of any discounts.
Calculated Amount	Displays the system calculated VAT amount in the transaction currency.
Calculated Amount Base	Displays the system calculated VAT amount in the base currency.
Invoiced Amount	Displays the system calculated VAT amount recorded to the invoice.
Invoiced Amount Base	Displays the system calculated VAT amount recorded to the invoice, in the base currency.

Recovery Percent	Displays the system calculated VAT recovery percentage. If you set the recovery source to <i>Manual</i> , enter the percentage in this field.
(CAN) Rebate Percent	Displays the system calculated VAT rebate percentage. If you set the rebate source to <i>Manual</i> , enter the percentage in this field.
Recovery Amount	Displays the system calculated VAT recovery amount.
Recovery Amount Base	Displays the system calculated VAT recovery amount in the base currency.
Rebate Amount	Displays the system calculated VAT rebate amount.
Rebate Amount Base	Displays the system calculated VAT rebate amount in the base currency.
Non-recoverable Amount	Displays the non-recoverable system calculated VAT amount.
Non-Recoverable Amount Base	Displays the non-recoverable system calculated VAT amount in the base currency.
Recalculate	Click to recalculate the VAT for the line.

Invoice VAT Summary Information page

The best approach for applying VAT to your vouchers is to wait until you have completed entering all other voucher information, and then either let the system apply the VAT defaults at save time or navigate to any of the VAT pages to allow the VAT defaults to be applied. However, at any point during voucher entry, you can use the VAT Summary page to review the VAT settings for the invoice. The top of the page displays the VAT header default settings and below that you can view the VAT settings by VAT code, VAT line, and VAT distribution line. You may navigate to the VAT Header, VAT Line and VAT Distribution Line pages from here as well.

If you edit VAT information on the VAT Header, VAT Line and VAT Distribution Line pages the system automatically recalculates the VAT amounts that display on the Invoice VAT Summary Information page.

Note. Many of the fields on this page are the same as those on the voucher VAT defaults pages. Only fields that do not appear on those pages or that behave in ways particular to this page are discussed here.

Transfer to VAT Header

Click to open the Invoice Header VAT Information page on which you can review and, if applicable, override VAT header default values.

VAT Information

The calculated fields that appear in this grid are the subtotals for each VAT Code on the voucher.

Percent	Displays the tax percentage applied to the transaction. The VAT percent defaults from the VAT code.
VAT Basis Amount	Shows the amount upon which VAT is calculated.
VAT Calculated	Shows the system calculated VAT amount. The system calculates the VAT amount based on your VAT transaction amount and the VAT percentage.
VAT Invoiced	Shows the amount of VAT on the invoice.
VAT Recovery	Shows the amount of VAT that is recoverable.
VAT Non Recoverable	Shows the amount of VAT that is non-recoverable.
(CAN) VAT Rebate Amount	Shows the VAT rebate amount. This is only for Canadian public service bodies.

Invoice Line VAT Information

This grid displays the VAT treatment, use type, applicability, code, and rate (percent), along with the VAT basis and calculated amounts for each voucher line. These fields are all defined either in the VAT Information section immediately above, or in the discussion of the Invoice Line VAT Information page.

Click to access the Invoice Line VAT Information page, where you can review, and if applicable, override default voucher line VAT settings.

If a driver higher up in the default hierarchy, such as Ship to ID or Item, changes after the invoice line defaults have been applied, a red triangle icon appears instead.

Voucher Distribution Line VAT Information

This grid displays the VAT basis, calculated and invoiced VAT amounts for each distribution line, along with the recovery percentage, recovery amount, rebate percentage, and rebate amount. These fields are all defined either in the VAT Information section, above, or in the discussion of the Invoice Distribution Line VAT Information page.

Each distribution line number functions as a link to the Invoice Distribution Line VAT Information page for the distribution line. On this page you can review, and if applicable, override default distribution line VAT settings.

Click to access the Voucher Distribution Line VAT Information page, where you can review, and if applicable, override default voucher distribution line VAT settings.

If a driver higher up in the default hierarchy, such as Ship to ID or Item, changes after the distribution line defaults have been applied, a red triangle icon appears instead.

Entering Third-Party, VAT-Only Invoices

This section provides an overview of how to handle third-party, VAT-only invoices.

See Also

[Chapter 15, "Entering and Processing Vouchers Online: Specific Voucher Styles," Entering Third-Party Vouchers, page 412](#)

Understanding Third-Party, VAT-Only Invoices

Generally, a third-party, VAT-only invoice is received following a purchase imported from outside your country, or if you are located within the European Union, from outside of the European Union. A VAT-only invoice (perhaps with freight and miscellaneous charges as well) arrives after the purchase, usually from a customs agent of the country that received the goods.

This means that when you receive a VAT-only invoice from a third party, there is usually also an invoice from the original merchandise vendor to which the third-party invoice is related. Most often that original voucher will have been recorded as in Import transaction for VAT purposes, and you enter the third-party voucher to record the customs VAT payable on that purchase. You generally record the third-party VAT-only voucher as a Domestic transaction. The result is that you have two vouchers in the system with much of the same transaction information. As such, be careful not to report the purchase amount on the VAT return twice.

If the voucher lines are flagged as exempt, outside of scope, exonerated, or suspended, the VAT Transaction Loader selects them only from the original purchase voucher. No special handling is required for these. If you must include these voucher lines on your VAT return, create your VAT report definition so that you are selecting these transactions based on the information specified on the original purchase invoice.

However, if the voucher lines are flagged as taxable, the VAT Transaction Loader selects them from both the original purchase voucher and the third-party voucher and loads both into the VAT Transaction table. This can result in purchase amounts being reported twice. The way to handle taxable transactions for reporting purposes depends on the VAT reporting requirements in your country:

- If your country requires that you report each transaction separately, you must report the taxable purchase amount from the voucher that records the import transaction and report the customs VAT applicable to that purchase from the third-party voucher. These may or may not appear on the same VAT return.
- If your country requires that you report the taxable purchase amount from the customs invoice, rather than the original purchase invoice, you must report both the taxable purchase amount and the customs VAT amount from the third-party voucher.

In either situation, you can avoid reporting the taxable purchase amounts on these transactions twice by making the VAT transaction types for the third-party voucher lines different from the original voucher lines:

- Define a default transaction type for import purchases at a level in the payables VAT default hierarchy that is appropriate for your organization.
- Define a different default transaction type for domestic transactions that indicates customs VAT at a level in the payables VAT default hierarchy that is appropriate for your organization, usually the vendor.

Note. If you have also defined a default transaction type for domestic transactions at the item level, this value will override any value you define for the vendor. In this case, you must enter the customs VAT transaction type directly on the third-party voucher line, using the Invoice Line VAT Defaults page.

Then, when you create your VAT report definitions, indicate the transaction type that should be included on the report's line for total purchases:

- If your country requires that you report the taxable purchase amount from the original purchase invoice, specify the VAT transaction type you set up for imports.
- If your country requires that you report the taxable purchase amount from the customs invoice, specify the VAT transaction type for domestic purchases that you set up for customs VAT.

Example

Let's say an organization located in Canada purchases goods for 750.00 USD from the United States. The voucher for the original purchase invoice is recorded with a VAT Treatment Group of Import, and has two lines, one marked Import (*IMP*) and the second marked Exempt (*EXMPT*). The purchase amount is recorded as 990.00 CAD. The goods pass through Canadian customs and the customs authorities estimate that the goods are worth 1000.00 CAD. A customs invoice for 35.00 CAD is received and recorded as a third-party VAT-only voucher with a VAT Treatment Group of Domestic Purchase.

The original purchase voucher distribution lines are:

VAT Applicability	VAT Transaction Amount	VAT Basis Amount	VAT Amount	VAT Transaction Type	VAT Distribution Status
Taxable	495.00	495.00	0.00	IMP	Not yet
Exempt	495.00	495.00	0.00	EXMPT	Not yet

The third-party voucher distribution lines are:

VAT Applicability	VAT Transaction Amount	VAT Basis Amount	VAT Amount	VAT Transaction Type	VAT Distribution Status
VAT only	500.00	500.00	35.00	CSTMS	Not yet
Exempt	500.00	500.00	0.00	EXMPT	Ignore

In the VAT transaction table, the lines are recorded as:

VAT Document ID	VAT Transaction Amount	VAT Basis Amount	VAT Amount	VAT Transaction Type
1	495.00	495.00	0.00	IMP
1	495.00	495.00	0.00	EXMPT
2	500.00	500.00	35.00	CSTMS

To report the taxable purchase amount based on the customs invoice, define the VAT report with the following values:

VAT Report Line	VAT Transaction Types to be Included on Report Line	Amount Reported on VAT Return
Total purchases	CSTMS	500.00
Total recoverable input VAT on purchases	CSTMS	35.00

Currency Conversion for VAT-Only Third-Party Vouchers

Generally a VAT-only invoice is received following a purchase of goods from a foreign country, and this invoice is often in your local currency. Customs agencies generally use their own exchange rate to translate from a foreign currency to the local currency, therefore making it impossible for the system to translate the line and distribution line amounts to the local currency accurately when copying those amounts from the original voucher to the third-party voucher. Therefore, the system does not copy an amount to the line when the source document and the third-party vendor's currency differ.

In this case, the system copies all line information, but copies the amount on both the line and the distribution line as *0.00*. The system issues a warning message indicating that 0.00 will be copied to the lines, because the currency of the source document does not equal that of the third-party vendor.

If the currency on the original voucher and the VAT invoice are different, you must manually translate the amount that is copied into the distribution from the original voucher to ensure that the VAT basis amount is correct.

Note. We recommend that you set VAT tolerance checking very high for a customs agent, and any other vendor that is typically third-party, to take into consideration the currency conversion differences between the import vendor and the customs agent.

Unlinkable VAT-Only Vouchers

If you receive a VAT-only voucher that does not provide enough information to enable you to link it to the original purchase voucher, enter the following information on the third-party voucher:

Currency	Defaults from the vendor.
Account	If you need to prorate non-recoverable VAT, miscellaneous, or freight, you must enter the appropriate expense account number. If you are not prorating, you do <i>not</i> need to changed the default account number.
Amount	To save the voucher and calculate a VAT basis amount, you must enter the distribution amount manually.

Here is what happens on the various VAT pages in the Voucher component (VCHR_EXPRESS):

- The values on the Invoice Header VAT Information page default based on the defaulting hierarchy.
- Once you have entered the freight, VAT and distribution line amounts, you can calculate the VAT on the Invoice Summary VAT Information page.
- The VAT use type on the Invoice Line VAT Information page defaults from the vendor. To ensure that accounting entries are calculated correctly, you must also enter the VAT applicability as *Taxable* on this page.

(CAN) Entering Vouchers with VAT and Sales Tax

To accommodate a situation where you have invoices with both sales tax and VAT, you must configure the sales tax calculation parameters to include VAT when you enter your voucher. You can do this by selecting the Include VAT check box in the Calculation Parameters group box on the Tax Code page when you set up your sales tax codes. You can also select the Include VAT option for an individual voucher in the Calculation Parameters group box on the Invoice Line Tax Information page.

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Voucher Line Tax Information, page 338

Entering Vouchers With VAT and Withholding

In the European Community, it is common to have a voucher with both VAT and a portion that is withheld. The amount that is withheld is calculated at the time of payment, rather than scheduling a separate payment for the amount that is withheld. When you are configuring withholding, you can specify whether VAT should be included or excluded from the withholding calculation.

You set up the parameters for calculating withholding on the Withholding Options page (which you access through the Misc. Setup (miscellaneous setup) link from the Withholding Entities page). Select the Apply VAT check box on this page if the VAT should form part of the basis for calculation. For example, let's say that the merchandise amount is 1000.00 EUR and the VAT is 70.00 EUR. If the withholding should be on 1070.00 EUR, you select this check box to achieve the correct calculation.

Chapter 42

Processing Withholding in PeopleSoft Payables

This chapter provides an overview of the withholding process and discusses how to:

- Review and enter withholding information for vouchers.
- Review withholding calculations.
- Create withholding accounting entries.
- Post withholding transactions.
- Run the Withholding Mismatch report.
- Adjust withholding manually.
- Process withholding updates.
- Generate withholding reports.
- Review withholding information.

[Chapter 46, "\(IND\) Setting Up and Processing Tax Deducted at Source for India," page 1259](#)

Understanding the Withholding Process

This section discusses:

- Withholding general processing overview.
- PeopleSoft Payables and PeopleSoft Real Estate Management withholding behavior.

Withholding General Processing Overview

Our withholding architecture enables you to meet the varying withholding requirements of different countries. To use withholding in PeopleSoft Payables, you must set up your withholding environment, complete your business unit withholding setup, and set up your withholding vendors. The setup information you provide defaults onto the applicable voucher lines.

The system calculates the actual withholding amounts as part of the Payment Posting Application Engine process (AP_PSTPYMNT) or the Voucher Posting Application Engine process (AP_PSTVCHR) depending on your withholding entity setup or withholding override options at the voucher. To generate withholding reports, you need to post your payments (either using the Voucher Posting process or the Payment Posting process) and then post your withholding transactions. The system creates reporting information from the posted withholding transactions, enabling you to generate withholding reports, withholding certificates, and/or files as applicable.

The following diagrams illustrate the general process flow for withholding in PeopleSoft (the withholding process for your location may differ slightly):

Withholding process flow (part 1)

Withholding process flow (part 2)

You complete the withholding process as follows:

1. Set up your withholding environment.

Set up the appropriate withholding rules, classes, types, jurisdictions, and entities. Under the withholding entity, define the withholding remit vendor or vendors, assign the combination of withholding types, jurisdictions, classes, and rules that apply, and define the type of control information required from the vendor to process the withholding. You apply combinations of withholding entities, types, jurisdictions, classes, and rules to your withholding vendors when you define them. You can assign more than one combination to a vendor. For example, a U.S. vendor may be subject to both 1099–G and 1099–MISC withholding.

You can also define withholding codes, which you can use to override the withholding information that defaults onto the voucher from the vendor; these, too, are combinations of withholding entities, types, jurisdictions, and classes.

As a final step, set up the withholding reports to meet your reporting requirements.

2. Enter withholding vendors.

Make any vendor a withholding vendor by selecting the Withholding check box on the Vendor Information - Identifying Information page, and by transferring to the Withholding Vendor Information page from the Vendor Information - Location page, on which you select the appropriate withholding entities and enter the associated withholding control information.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Defining Withholding Options.

3. Enter withholding vouchers.

The type of withholding that you define for the vendor defaults to each voucher line. Therefore, any vouchers you enter for a vendor that you have defined as a withholding vendor are subject to withholding. If the voucher is for a withholding vendor, you can click the Withholding link on the Voucher - Invoice Information page to access the Withholding Information page, where you can view the withholding for each voucher line and make the lines not withholding applicable, or make adjustments as needed.

4. Pay the vouchers.

Depending on your withholding setup, the system may generate a separate withholding payment to the tax authority when the voucher is paid, or just calculate the withholding for reporting to the tax authority. During payment posting, a liability is created for the withholding portion. As you pay the withholding portion, the liability is reduced based on your general ledger setup.

See [Chapter 13, "Setting Up PeopleSoft Payables Withholding," Understanding Withholding Entity Setup, page 272.](#)

See [Chapter 42, "Processing Withholding in PeopleSoft Payables," Creating Withholding Accounting Entries, page 1161.](#)

5. Post the withholding.

Posting combines voucher and payment information into transaction tables.

6. View withholding balances online.

7. Complete the required set up for generating your withholding reports by entering your withholding control information and running a withholding control report.

Once you have completed these steps you can run your withholding reports based on the requirements of your tax authority.

PeopleSoft Payables and PeopleSoft Real Estate Management Withholding Behavior

If you implement withholding functionality between PeopleSoft Payables and PeopleSoft Real Estate Management, the system does or does not default the withholding code onto the voucher, depending on the particular scenario. This table illustrates the scenarios:

<i>Withholding Established in PeopleSoft Payables</i>	<i>Withholding Applicable in PeopleSoft Real Estate Management</i>	<i>Withholding Code</i>	<i>Voucher Results</i>
Yes	Yes	Same code defined for the PeopleSoft Payables vendor and PeopleSoft Real Estate Management.	The system determines that the withholding codes are the same, and defaults the PeopleSoft Real Estate Management withholding code onto the voucher.
Yes	Yes	Different codes defined for the PeopleSoft Payables vendor and PeopleSoft Real Estate Management.	The system defaults the PeopleSoft Real Estate Management withholding code onto the voucher.

<i>Withholding Established in PeopleSoft Payables</i>	<i>Withholding Applicable in PeopleSoft Real Estate Management</i>	<i>Withholding Code</i>	<i>Voucher Results</i>
No	Yes		The system creates the voucher without a withholding code.
Yes	No		The system creates the voucher without a withholding code.

Important! Note that you must establish withholding in *both* PeopleSoft Payables and PeopleSoft Real Estate Management for the system to default a withholding code. If not, the system creates the invoice without a withholding code.

See Also

PeopleSoft Real Estate Management 9.1 PeopleBook, "Structuring Leases," Defining Transaction Routing Codes

Common Elements Used in This Chapter

Entity	Tax authority.
Type	Defines withholding at the highest level in PeopleSoft Payables. For example, in the U.S. 1099 is a withholding type.
Jurisdiction	Jurisdictions introduce an additional level of classification between the withholding type and class.
Class	For each withholding type, you can define classes or activities, such as Rent, or Royalties.
Withholding Class Combination	For the sake of brevity, we sometimes refer to the combination of withholding entity, type, jurisdiction, and class as a <i>withholding class combination</i> .

Reviewing and Entering Withholding Information for Vouchers

This section provides prerequisites and explains how to view and override withholding information when you enter withholding vouchers.

Prerequisites

Before entering and processing withholding vouchers you must.

- Set up withholding entities, types, classes, jurisdictions, rules, and codes.
- Set up withholding for applicable vendors at the vendor location level.

Any vendor entered into the system can be a withholding vendor. Flag a vendor as withholding-applicable on the Vendor Information - Identifying Information page by selecting the Withholding check box. From the Vendor Information - Location page you can transfer to the Withholding Vendor Information page, on which you select the withholding entity and enter the required control information.

- Set up withholding at the general ledger business unit (Procurement Control component).

Withholding Information page

- Postpone Withholding

Select this check box to postpone withholding for prepaid vouchers. If you select this option, withholding is *not* calculated when the prepaid voucher is paid. It is calculated when the regular voucher is created.
- Apply Withholding at Voucher Post

Select to apply withholding during the voucher posting process. If the withholding has not yet been calculated, users with the appropriate security can select this option to override the entity setting and have withholding for unposted vouchers calculated at voucher posting. The Apply Withholding field in the Withholding Details grid updates to display *Vchr Post* as the withholding calculation setting.

Note.

You provide users with the authority to override withhold calculation using the User Preferences component. This field does not appear unless users have the authority to override the calculation.
- Line

Displays the voucher line number whose withholding information you are viewing.
- Withholding Code

Select a withholding code for this voucher line if you are using withholding codes to define a set of withholding class combinations that you want to apply at the same time.

Instead of withholding codes, you can utilize the options in the grid to create the withholding class combinations you need.
- Withholding Applicable

Deselect this check box to disable withholding for the individual voucher line.
- Entity, Type, Jurisdiction, and Class

Displays the withholding entity, type, jurisdiction, and class specified for the vendor at the vendor location level. You can override the defaults by selecting new values.

Withholding Basis Amt Override (withholding basis amount override)	Enter an amount if you need to withhold on the basis of an amount other than the amount you established as the basis for withholding on the Withholding Options page. If you don't enter an amount here, the system accepts the defaults you established on the Withholding Options page.
Contract Reference	(IND) Enter a contract reference number. This field is mandatory if you select the Contract Reference field for this type on the Withhold Type page.
Rule Override	Select a withholding rule to override the rule that defaults automatically from the withholding entity. Note. Users typically leave this field blank.
Apply Withholding	See the definition for Apply Withholding at Voucher Post.
Applicable	Use this check box to control withholding applicability for the specific withholding class combination for a voucher line. If multiple withholding class combinations are listed you can choose to deselect this check box for one or more of them so that withholding does not occur for that withholding class combination on this voucher line.

Note. For the withholding to default properly, you must set up vendor and business unit information accordingly on the Procurement Control – Withholding Page. Also, if there are no values here withholding does not occur.

Note. If you try to save a voucher with a withholding vendor that wasn't set up completely, the system issues a warning.

Reviewing Withholding Calculations

This section provides overviews of the withholding calculation and hold payment options for withholding, and lists the page used to review withholding calculations.

Understanding Withholding Calculation

The PeopleSoft Payables calculation module calculates withholdings at voucher posting or at payment processing, depending on the withholding calculation setting on the withholding entity and the voucher.

The following diagram illustrates how the calculation model works (note that calculation for India is slightly different):

Withholding calculation process flow

Chapter 46, "(IND) Setting Up and Processing Tax Deducted at Source for India," page 1259

Understanding Hold Payment Options for Withholding

When withholding is calculated at voucher post, the Voucher Posting process calls the Withhold Calculation Application Engine process (AP_WTHDCALC) to determine whether withholding vouchers exist. The Withhold Calculation process uses the payment hold option you define at the withholding entity or the vendor level, if specified, and the payment hold status on the original payment schedule of the voucher to determine if the scheduled payments should be placed on hold.

When withholding is calculated at payment post, and the payment is on hold, the payment is not selected or processed by the Withhold Calculation process.

This table provides various scenarios and expected results for the payment hold options:

<i>Withhold Entity or Vendor Payment Hold Option</i>	<i>Payment Hold Status on Original Payment Schedule</i>	<i>Payment Hold Status and Hold Reason of Original Payment Schedule After Voucher Posting</i>	<i>Payment Hold Status and Hold Reason of Withhold Payment Schedule After Voucher Posting</i>
<i>No Hold</i>	No	No	No
<i>No Hold</i>	Yes Reason code: QTY	Yes Reason code: QTY	Yes Reason code: QTY
<i>Wthd Only</i> Reason Code: WTHD	No	No	Yes Reason Code: WTHD
<i>Wthd Only</i> Reason code: WTHD	Yes Reason code: QTY	Yes Reason code: QTY	Yes Reason Code: WTHD
<i>Hold Both</i> Reason code: WTHD	No	Yes Reason Code: WTHD	Yes Reason Code: WTHD
<i>Hold Both</i> Reason code: WTHD	Yes Reason code: QTY	Yes Reason code: QTY	Yes Reason Code: WTHD

Creating Withholding Accounting Entries

This section provides an overview of withholding accounting entries.

Understanding Withholding Accounting Entries

Depending on your withholding setup, PeopleSoft Payables either generates a separate withholding payment when the voucher is paid, or tracks the withholding for reporting purposes. During payment posting or voucher posting (depending on whether you selected to have withholding calculated at voucher posting or at payment time), a liability is created for the withholding portion as the vendor portion is paid. As you pay the withholding portion, the liability is reduced based on the general ledger setup.

The posting process retrieves the ChartField information for the accounting liability entry from the procurement control definition based on the TableSet control value for the PeopleSoft Payables business unit used during voucher entry. You define the ChartFields for the withholding liability on the Withholding ChartFields page within the Procurement Control component (BUS_UNIT_INTFC2). For example:

1. Define procurement controls for general ledger business units.

Business unit = FED01.

Business unit = FEDRL.

2. Define, at a minimum, the account ChartFields for the withholding class combination for the general ledger business units.

FED01 account ChartField = 230000.

FEDRL account ChartField = 235000.

3. Create a voucher in the FED01 PeopleSoft Payables business unit for a vendor who is set up for withholding.

The TableSet control for this business unit's ChartFields is FEDRL.

4. Run the posting process.

The system looks at the TableSet control for the PeopleSoft Payables business unit and retrieves the account defined for FEDRL in the procurement control definition. The system selects account 235000 as the liability account.

Note. This example is intended to illustrate how the system determines the withholding liability ChartFields and does not represent the entire set up and process flow for withholding.

This section provides posting examples.

Withholding Calculated at Payment: Posting Example

The following example shows the accounting for a 100 USD voucher subject to 1099 withholding. The withholding portion is 33 USD and the non-withholding portion 67 USD.

The following are the accounting entries created:

1. Post the voucher.

<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Expense Account	100.00	
AP Liability		100.00

2. Pay and post the non-withholding portion.

<i>Account</i>	<i>Debit</i>	<i>Credit</i>
AP Liability	100.00	
Cash		67.00
Withholding Liability		33.00

3. Pay and post the withholding.

<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Withholding Liability	33.00	
Cash		33.00

Withholding Calculated at Voucher Posting: Voucher and Payment Posting Example

The following example shows the accounting for a 100 USD voucher subject to 1099 withholding, but in this case the withholding is calculated at voucher posting. The withholding portion is 33 USD and the non-withholding portion 67 USD.

The following are the accounting entries created:

1. Post the voucher.

<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Expense Account	100.00	
AP Liability		67.00
Withholding Liability		33.00

2. Pay and post the non-withholding portion.

<i>Account</i>	<i>Debit</i>	<i>Credit</i>
AP Liability	67.00	
Cash		67.00

3. Pay and post the withholding.

<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Withholding Liability	33.00	
Cash		33.00

Posting Withholding Transactions

You must post the withholding transactions using the Withholding Posting Application Engine process (AP_WTHD) before you can create withholding reports. Posting withholding combines the voucher and payment information in withholding transaction tables. The system uses these tables to generate the withholding reports.

You must post payments before running withholding posting.

This section lists the page used to post withholding transactions.

Page Used to Post Withholding Transactions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Withhold Transaction Post	WTHD_TRXN_POST	Vendors, 1099/Global Withholding, Maintain, Post Withholdings, Withhold Transaction Post	Define the parameters for running the Withholding Posting Application Engine process (AP_WTHD). You can post all transactions available for withholding post through a specified date, or specify by business unit. The through date is the withholding declaration date.

Running the Withholding Mismatch Report

Before you can create the Withholding Mismatch report (APX9010), you must run the Withholding Mismatch Application Engine process (WTHD_MISMTCH). The Withholding Mismatch report enables to you identify voucher lines on which the withholding applicable flag does not match the withholding flag on the vendor. You can update transactions using the Withholding Update Application Engine process (AP_WTHD_UPDT), and then rerun the Withholding Mismatch process and Withholding Mismatch report to recheck the voucher line withholding.

Note. If you manually adjust mismatches reported on this report by using the Withhold Adjustment page, the mismatches will continue to appear on this report even after you make the adjustments, although the adjusted transactions have been written to the withholding transaction table.

This section discusses how to enter the Withholding Mismatch parameters.

Page Used to Run the Withholding Mismatch Report

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Withhold Mismatch Request	WTHD_MISMTCH_RQST	Vendors, 1099/Global Withholding, General Reports, Wthd Voucher/Vendor Mismatch, Withhold Mismatch Request	Define run parameters for the Withholding Missmatch Application Engine process (WTHD_MISMTCH) and the Withholding Mismatch report (APX9010). Use the report to identify all voucher lines on which the withholding applicable flag does not match the withholding flag on the vendor. The report does not compare the withholding class combination on the vendor to the withholding class combination on the voucher lines. It only checks the withholding flag.

Entering the Withholding Mismatch Parameters

Access the Withhold Mismatch Request page (Vendors, 1099/Global Withholding, General Reports, Wthd Voucher/Vendor Mismatch, Withhold Mismatch Request).

Business Unit	Select a business unit to run the report for only that particular business unit.
Vendor SetID	Select a vendor setID to run the report for only that setID.
Vendor ID	Select a vendor ID to run the report for only that vendor.
Start Date and End Date	Specify the date range for which you want to run the report. These are required fields.

Click Run to access the Process Scheduler Request page. You can select to run the Withholding Missmatch process and the Withholding Mismatch report as part of a job, or you can select to run them individually.

Adjusting Withholding Manually

Once you have posted the withholding data, you may need to make adjustments to the withholding transactions. You can either run the Withholding Update process to make adjustments automatically, or you can enter adjustments manually using the Withhold Adjustments page.

This section discusses how to manually adjust posted withholding transactions.

Legacy							+	-

Withhold Adjustments page

You can either modify existing posted withholding entries or add withholding entries from a legacy or third-party system.

To modify an existing withholding entry:

1. Enter your search criteria in the Search Criteria group box and click the Search button.
- The Adjustments grid displays all posted withholding transactions that meet your criteria.

2. Modify data for each withholding transaction in the Adjustments grid that requires it.

You can also add and delete transaction rows as needed.

3. Save.

Saving the page updates the withholding transaction table, but *does not update the underlying voucher tables*. To have the system update the underlying voucher tables, use the Withholding Update process.

To add legacy or third-party data:

1. Add a withholding transaction row in the Adjustments grid.
2. Enter the following information, at minimum: business unit, entity, type, jurisdiction, class, rule, basis amount, liability amount, paid amount, payment date, declaration date, and adjustment reason.
3. Save.

Each transaction row you enter is added to the withholding transaction table, and is added to or subtracted from the totals already in the withholding transaction table.

Adjustments

This grid shows business unit and withholding class combination data on the Main Information tab, withholding transaction details on the Transaction Info tab, and bank account and payment information on the Payment Information tab. The Adjustment Reason tab displays the creation date and the user ID of the user who created the transaction adjustment row, along with a field for entering adjustment reasons.

Basis Amt (basis amount)	Displays the amount on which the withholding is calculated. This is the basis amount that is reported to the withholding entity for this payment. It includes the liability amount and is typically the gross amount of the voucher.
Liability Amt (liability amount)	Displays the amount of back up withholding that is retained to remit to the withholding entity. This amount may also be remitted to the original vendor depending on your business processes.
Paid Amount	Displays the amount of the withholding liability amount that has been paid to the withholding entity or original vendor. This value appears after you pay the liability to the entity or original vendor and post the payment. An amount of 0.00 means that no withholding has been paid.
Payment Date	Displays the date on which the payment was made. Some entities, including the IRS in the United States, require that you report withholding based on payment date. In this case the payment date needs to be in the year that you are reporting in. For example, let's say that you need to do an adjustment for a vendor for 2005 but the current year is 2006. When you add a row, the payment date defaults to today's date, which you must override with a 2005 date.

Declaration Date	Displays the date on which the withholding is declared. Declaration date is used for withholding entities who use a date other than payment date—accounting date, for example—to report withholding transactions.
Posted Date	Displays the date the payment was posted.
Adjustment Reason	Enter an adjustment reason for the listed transaction.

Processing Withholding Updates

This section provides an overview of the Withholding Update process and discusses how to:

- Update individual voucher lines.
- Update all voucher lines for a vendor.
- Run the Withholding Update process.

Understanding the Withholding Update Process

Occasionally, you may discover that a vendor's withholding setup was incorrect during the year and that you must correct it before generating your final withholding reports. You can do this by:

- Updating individual voucher lines.

You may find, for example, that originally a vendor was not set up for withholding, but that the vendor changed to withholding-applicable in mid-year. Perhaps you created several vouchers with the wrong withholding information and you need to update them. In a case such as this one, use the Withholding Invoice Line Update page to update the voucher lines that have the wrong withholding flag or class.

View each voucher line for a specified vendor, business unit and payment date on the Withholding Invoice Line Update page. You can update the withhold flag or the withhold class for a single voucher line. At save, the system stores the changes in a pre-processing table until you run the Withholding Update process. During that process, the system makes the changes to the voucher lines and transaction tables.

- Updating all voucher lines for a vendor.

You can easily update individual lines using the Withholding Invoice Line Update page, but what if you need to update all vouchers lines for a vendor? Perhaps you discover that a vendor whom you did not set up for withholding, is, in fact, withholding-applicable. In this case, update all voucher lines for the vendor using the Withholding Vendor Update page.

Use this page only if you intend to update all voucher lines with the same withholding information. If you want to specify different withholding information for different voucher lines for one vendor location, use the Withholding Invoice Line Update page on which you can select voucher lines and update them individually.

Important! To change a vendor's voucher lines to withholdable, you must first ensure that the withholding information on the vendor is correct before running the Withholding Update process.

Special Cases and How the Withholding Update Process Handles Them

The following situations may require some manual processing in addition to or instead of using the Withholding Update process:

- The Withholding Update process does not consider the basis amount options you specify on the Withholding Options page when you set up withholding entities (that is, whether sales tax, freight, miscellaneous charges, discounts, freight, or VAT amounts are included in the withholding basis amount).

For example, if you use the Withholding Update process to change from withholding class 01, which includes freight and sales tax in the basis amount, to withholding class 02, which includes only freight, the Withholding Update process will not recalculate the basis amount to include only freight; the basis amount will still include freight and sales tax.

- The Withholding Update process always uses the invoicing vendor when creating new withholding transaction data, regardless of the Apply Withholding Balance To option (*Remit to vendor* or *Invoicing Vendor*) selected on the Withholding Options page.
- You cannot use the Withholding Invoice Line Update page to update partially paid vouchers.

You must either make adjustments manually, using the Withhold Adjustments page, or fully pay the vouchers in question before running the Withholding Update process. You *can*, however, update partially paid vouchers using the Withholding Vendor Update page.

- You cannot use the Withholding Invoice Line Update page to update fully paid vouchers whose payment schedules are extended into the next tax reporting year or period.

You must make adjustments in those cases manually, using the Withhold Adjustments page. You *can* update vouchers whose payment schedules are extended into the next tax reporting year or period using the Withholding Vendor Update page, but only if you run the same vendor update for *both the current tax reporting period and the next one*.

- Updated withholding data is for reporting purposes only and will not take into account any rule tier definition, contract reference, threshold, cumulative flag, surcharges, or similar local withholding setup.

Take the way the Withholding Update process handles a withholding class combination with a threshold of 100,000 INR, for example. If all existing vouchers for a vendor total 90,000 INR, and you update the withholding for them all by running the Withholding Update process, the new withholding transactions are available for reporting, but when you create new vouchers for the vendor, the withholding accumulated basis amount reverts to zero even though there are 90,000 INR worth of vouchers for this vendor.

- The Withholding Update process is designed such that withholding is reported as one "bucket" per withholding class combination.

Warning! Pay close attention to the exclusions listed above before attempting to use the Withholding Update process.

Withholding Invoice Line Update page

Use the Criteria and Tax Reporting Year group boxes to enter the selection criteria for the vouchers you want to update. Click Search when you have entered all of your search criteria in these group boxes.

Use the Defaults group box to enter the withholding class combination you want to apply to your updated voucher lines.

Use the Details grid to view the voucher lines retrieved by your search and select voucher lines for updating.

Criteria

Enter a business unit and date range for the vouchers you want to update. These fields are required.

Clear Updated Withholding

Select to delete all the previously updated voucher lines from the staging table upon save. This does not delete the voucher lines from the transaction table. It is for cleaning up previous update requests.

Defaults

Specify any withholding entity, type, jurisdiction, and class you want to apply to all of your updated voucher lines. You can also override these for individual lines on the Details grid after you've applied them to all of the lines.

- Set All Lines to Wthd** (set all lines to withhold)

Click to apply the withholding combination you enter here to all of the voucher lines in the Details grid.
- Set All Lines to No Wthd** (set all lines to no withholding)

Click to set all voucher lines in the Details grid to withholding not applicable.

Tax Reporting Year

Enter the start and end dates of the tax year for which you are reporting withholding.

Details

The Details grid lists the voucher lines returned by your search. The Current Withhold Details tab displays the original withholding information for the selected voucher lines. You can update these by entering new values on each row. If you want to update all the voucher lines to the same new withholding combination, enter the withholding combination in the Defaults group box and click the Set All Lines to Wthd button.

The New Withhold Details tab shows the updated withholding details after you have saved the page.

The following are fields that appear on the Current Withhold Details tab:

- Current Withhold**

Displays selected to indicate that the voucher line is currently withholdable.
- New Withhold**

Select *Y* for withholding applicable or *N* for no withholding on the voucher line.

Note. You must complete the remaining line information (Entity, Type, Jurisdiction, and Class fields), regardless of whether selecting *Y* or *N*. This ensures the system correctly processes the withholding data.

- Payment Date**

Displays the voucher payment date. Vouchers must be paid before you can update voucher lines.

The following field appears on the New Withhold Details tab:

Status

Displays the update status:

P (pending) means that an update occurs the next time you run the Withholding Update process.

U (updated) means that the Withholding Update process has run and the transaction tables are updated.

If this field is blank, the line is not selected for update.

Updating all Voucher Lines for a Vendor

Access the Withholding Vendor Update page (Vendors, 1099/Global Withholding, Maintain, Update Vendor Withholdings, Withholding Vendor Update).

Withholding Vendor Update page

Enter a vendor setID and tax reporting year before you enter information in the Details grid.

Warning! If you change the vendor setID, the system deletes all the information in the grid. This is necessary to ensure that only vendors for the specified setID exist in the grid.

Details

You must select a vendor ID, vendor location, and business unit. The following fields also appear on the Vendor tab:

Current Withhold

Displays the current withholding applicability of the vendor location:

Y if the vendor location is currently withholding applicable.

N if the vendor location is not withholding applicable.

The following fields appear on the New Withhold Details tab:

New Withhold (new withholding)	Select the new withholding applicability status for the vendor location: Y if the new vendor location is withholding applicable. N if the new vendor location for withholding is not applicable. If you select Y, the withholding combination fields appear.

If the new withholding applicability is Y, then you must enter a withholding entity in the Entity field. Fields for new withholding type, new jurisdiction (New Jur CD), and new class also appear. Enter as needed.

Criteria	Displays the update status: P (pending) means that an update occurs the next time you run the Withholding Update process. U (updated) means the Withholding Update process has run and the transaction tables are updated.

Running the Withholding Update Process

Access the Withhold Update Request page (Vendors, 1099/Global Withholding, Maintain, Update Withholdings, Withhold Update Request).

For the run control, enter the request ID and a description.

Process Option	Select among <i>Process All Updates</i> , <i>Process Only Vendor Updates</i> , or <i>Process Only Voucher Lines</i> .

Warning! The Withholding Update process is not advised if there are multiple withholding classes per voucher line or there are multiple entity-withholding type combinations for a given voucher or for a vendor's vouchers (the latter when updating by vendor).

Also, the Withholding Update process does not adjust entries in the WTHD_PERIOD_LOG or WTHD_CALC_RPT tables.

Generating Withholding Reports

To set up your withholding reports, use the following components:

- 1099 Piggyback States (WTHD_STATE_TABLE).

- Report Control Information (WTHD_CONTROL).

PeopleSoft Payables provides withholding reporting capabilities. Throughout the year, PeopleSoft Payables tracks all withholding vendor information. When it is time to send your withholding reports, PeopleSoft Payables extracts all the withholding balances from vouchers in the period, business units, and vendors you specify, and prepares a report or electronic file for transmission to the tax authority, based on your setup.

This section discusses how to:

- Enter transmitter and payor data.
- Select vendors and business units.
- (USA) Enter states for the combined federal and state filing program.
- Run the Withholding Reporting Application Engine process (AP_WTHDRPT).
- Review withholding report information.
- Run withholding reports.

Some reports specific to particular tax authorities are discussed in the chapter, "Processing Special Withholding Requirements."

Click to access the Transmitter Phone page, where you can enter the transmitter's telephone, fax information, and contact information.

Vendor Software Indicator

Selected by default indicating that the electronic file was generated via outside vendor software. Deselect this check box if you have customized this process.

Transmitter Name 1 and Transmitter Name 2	Use to enter the transmitter's name.
Tax ID	Enter your tax ID for this transmitter.
Transmitter Cntl Code (transmitter control code)	If applicable, enter your transmitter control code.
Media Number	If applicable, enter your media number.
Contact Name 1 and Contact Email Address	Enter the name of a contact person for this transmitter and email address, as applicable

Payer Information

Click to access the Payer Address page on which you can enter the payer address data, formatted as required by your tax authority.

Click to access the Payer Phone page on which you can enter the payer's telephone and fax information.

Combined Federal State Filing Participant	(USA) Select this flag if the payer is participating in the Combined Federal State Filing program.
Payer Name 1 and Payer Name 2	Enter the payer's name.
Control ID	Enter a control ID. This could be a business unit.
Payer Tax ID	Enter your tax ID for this payer.
Employer's Ref # (employer's reference number)	Enter the employer's reference number for use in payment reporting to Sub-contractors and the monthly reporting for the HMRC.
HMRC Office # (HM Revenue and Customs office number)	Enter the HM Revenue & Customs Office number for use in payment reporting to Sub-contractors and the monthly reporting for the HMRC.
Accts Office Ref # (accounts office reference number)	Enter the HM Revenue & Customs Office reference number for use in payment reporting to Sub-contractors and the monthly reporting for the HMRC.

Selecting Vendors and Business Units

Access the Report Control Information - Vendors and Business Units page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Report Control Information, Vendors and Business Units).

All Vendors

Select if you want to process all withholding vendors that are associated with the business units you specify.

If you only want to process specific withholding vendors, deselect this check box. A Vendors group box displays in which you can enter the individual vendor IDs.

Note. (USA) Select this option for 1099 reporting. If you do not, your correction files will be incorrect.

Include Direct Sales Vendors

Select to have the reporting process list all direct sales vendors who have no vouchers for the reporting year. Only select this for one payer, not for all. Otherwise, the system reports vendors several times.

Vendors

Use this group box to select the withholding vendors (that are associated with the business units you specify) on which you want to report if you do not select the All Vendors option.

Business Units

Specify one or more business units to process. The business units must be associated with the selected setID. If you fail to specify any business units, the system will not find any withholding transactions to report.

If you specify multiple business units, the system consolidates the balances of vendors that have vouchers spread out over the selected business units.

(USA) Entering States for the Combined Federal and State Filing Program

Access the Report Control Information - Piggyback States/Numbers page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Report Control Information, Piggyback States/Numbers).

Withhold Report Post page

Important! For 1099 reports, you use a separate report posting process, described in another chapter.

See [Chapter 44, "Processing Special Withholding Requirements," page 1209](#).

Report ID	Select the withholding report ID for which you want to create the report information.
Report Date	Select the date of the report.
Control ID	Select the report control ID.
Calendar ID	Select the appropriate calendar ID.
Fiscal Year	Enter the fiscal year for the report.
Period	Enter the period for the report. The fiscal year and period determine the date range used to select vendor payments for withholding reporting.
Withhold Certificate	Select if you require the system to create a withholding certificate.
Quarterly Return Certificate	Select if you require the system to create a TDS quarterly return certificate.

Note. Before you can run the Withholding Reporting process, you must define the withholding control information on the pages in the Report Control Information component.

Reviewing Withholding Report Information

Access the Withholding Report Info page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Report Information, Withholding Report Info).

Tax ID and Description	Displays the tax ID of the vendor from whom the withholding in this report was withheld, and the description of the Tax ID.
Basis Amt (basis amount)	Displays the basis amount on which the withholdings were calculated.
Liability Amt (liability amount)	Displays the amount of the withholding.
Paid Amount	Displays how much of the withholding has been paid to the tax authority.
Report Date	Displays the date on which you created your reporting information.

Running Withholding Reports

Access the Withhold Report page (Vendors, 1099/Global Withholding, Global Withholding Reports, Withholding Report, Withhold Report).

Note. Do not use this page for 1099 reporting. Use the Withhold 1099 Report page instead.

You must run the Withholding Reporting process before you can generate withholding reports.

Withholding Report ID	Select the ID of the withholding report you want to run. The Report Processes group box displays the name of the process for this report and a description.

The following table lists some of the sample global withholding reports we provide with PeopleSoft Payables using the Withhold Report page.

Report ID	Report Type	Country	Report Name
APY8025	BI Publisher	Japan	Japan Withholding Report

Withhold Payment Inquiry page

Entering Search Criteria

- Vendor SetID

Select the setID of the vendors for which you want to run the report.
- From Vendor ID and To Vendor ID

Select the vendor ID. The From Vendor ID is a required field. You can also include a range of vendors using the From Vendor ID and To Vendor ID fields.
- From Date and To Date

Enter the date range you want to inquire on.

Payment Details

The Payment Details group box shows details on the withholding payment information for each withholding payment. If you are using the federal payment option, the payment details display by payment schedule.

- (USF) Schedule ID

Shows the payment schedule ID. This field only displays if you are a U.S. federal agency and have selected the federal payment option on the Installation options page.
- Payment Amount

Displays the payment amount in the payment currency for the remit vendor.
- Vendor Liability Amount Paid

Displays the portion of the payment amount that has been paid to the specified vendor in the transaction currency.

The system displays payment and withholding information for each payment or payment schedule. In addition, the system displays:

- Gross Payment Amount

Displays the amount of payment paid to the remit vendor to cover the invoicing vendor's liability.

Withholding Basis Amount	Displays the basis amount of the withholding for the payment or payment schedule.
Withhold Liability	Displays the amount to be withheld and paid to the withholding entity for the payment or payment schedule.
Remit SetID and Remit Vendor Name	Displays the setID and name of the remit vendor for the payment or payment schedule.

Chapter 43

Resolving Complex Withholding Scenarios

This chapter discusses how to:

- Exonerate vendors from withholding.
- Use tiered-based withholding.
- Use period-based withholding.
- Manage period-based withholding.
- Calculate withholding on prepayments.
- Apply withholding to first payment only.
- Calculate withholding on payment cancellations.
- Group withholding for payment posting.

Note. This chapter covers complex or unusual withholding scenarios. The main discussion of withholding setup and processing in PeopleSoft Payables can be found in the other withholding chapters in this PeopleBook.

[Chapter 46, "\(IND\) Setting Up and Processing Tax Deducted at Source for India," page 1259](#)

Exonerating Vendors from Withholding

PeopleSoft Payables enables you to exonerate a vendor from withholding on a percentage basis. Some vendors enjoy special privileges when it comes to withholding. This privilege is termed exoneration and enables this vendor to be withheld less than other vendors. For instance, a vendor might have a condition that stipulates that it be withheld half of the regular amount during the first six months of the year. To support this feature, we have provided a way of specifying an exoneration percentage and an expiration date for this exoneration at the vendor level. This information needs to be tracked at the jurisdiction level as well, and it is stored in the `VENDOR_WTHD_JUR` table.

Example: Vendor Exoneration

Assume that you paid 55,000 EUR from an exonerated vendor. Assume also that the withholding amount calculated prior to any exoneration is 3600 EUR (see the example in the section Using Tiered-Based Withholding). If this vendor had an effective exoneration of 25%, you would withhold 2700 EUR instead of 3600 EUR.

See Also

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information," Defining Withholding Options

Using Tiered-Based Withholding

To support tiered-based withholding, you set up your withholding rule such that the withholding percentage depends on the basis amount. Just as in a bracketed income tax system, the bigger the amount, the higher the withholding percentage becomes. Here is an example:

<i>From Amount (EUR)</i>	<i>To Amount (EUR)</i>	<i>Percentage</i>	<i>Additional Amount (EUR)</i>
0	9,999	5%	0
10,000	19,999	6%	500
20,000	49,999	7%	1100
50,000	99,999	8%	3200
100,000	100,000+	9%	7200

If, for example, your transaction amount were 55,000 EUR, you would calculate your withholding in the following manner. Because 55,000 EUR falls into the 50,000–99,999 bracket, you would subtract the amount from the From Amount of that bracket, multiply this by the corresponding percentage, and add the Additional Amount. Here is how it would look:

1. 55,000 EUR – 50,000 EUR (from amount of bracket) = 5000 EUR.
2. 5000 EUR × 8% = 400 EUR.
3. 400 EUR + 3200 EUR = 3600 EUR.

In this case, the withholding on this 55,000 EUR transaction would be 3600 EUR.

[Chapter 13, "Setting Up PeopleSoft Payables Withholding," Defining Withholding Rules, page 277](#)

Using Period-Based Withholding

This section discusses how to:

- Set up period-based withholding.
- Calculate period-based withholding.
- Compare credit notes for period-based and voucher withholding.

Setting Up Period-Based Withholding

To set up period-based withholding calculations, you set up a calendar that determines a period for your withholding rule by using the Calendar Builder page. You join that calendar to the withholding rule (which you set up using the Withhold Rule page) by using the Withholding Entity page.

For example, assume you withhold at 10% if the total accumulated monthly basis amount is less than 10,000 EUR, and you withhold at 12% if the total monthly basis amount is equal to or over 10,000 EUR:

1. Set up a withholding rule with a line for each percentage withholding and basis amount range:

<i>From Basis Amount</i>	<i>To Basis Amount</i>	<i>Percent Withheld</i>	<i>Additional Amount</i>
0	9,999.99	10%	0
10,000	9999999999.99	12%	1000

2. Define a calendar with monthly periods.
3. Define withholding categories on the Withholding Entity page that join the withholding rule to the monthly calendar.

Now when you pay less than 10,000 EUR in a month to a vendor, you withhold at 10% and when you pay more, you withhold at 12%.

Note. You can also set up your withholding categories on the Withholding Entity page to set a minimum basis or withholding amount below which no withholding occurs; if the withholding category is associated with a calendar, this minimum amount will be applied by calendar period (that is, by month for a monthly calendar).

[Chapter 13, "Setting Up PeopleSoft Payables Withholding," Defining Withholding Rules, page 277](#)

[Chapter 13, "Setting Up PeopleSoft Payables Withholding," Defining Withholding Entities, page 280](#)

Calculating Period-Based Withholding

As with tiered withholding, period-based withholding calculations are not based on one transaction but rather on all transactions that have occurred during a certain period of time (a month, a week, a year, and so on). However, these calculations occur at payment time and must be calculated for each individual transaction.

Example: Calculating Period-Based Withholding

Consider the example from section Using Tiered-Based Withholding. Assume you've paid 55,000 EUR to a vendor this month and withheld 3,600 EUR. Now you receive a second transaction in the amount of 50,000 EUR. Here is how the withholding on the second payment would be calculated:

1. $50,000 \text{ EUR} + 55,000 \text{ EUR (balance from first transaction)} = 105,000 \text{ EUR}.$
2. $105,000 \text{ EUR} - 100,000 \text{ EUR (from basis amount)} = 5000 \text{ EUR}.$
3. $5000 \text{ EUR} \times 9\% = 450 \text{ EUR}.$
4. $450 \text{ EUR} + 7200 \text{ EUR (additional amount at the 9\% bracket)} = 7,650 \text{ EUR}.$
5. $7650 \text{ EUR} - 3,600 \text{ EUR (amount already withheld)} = 4,050 \text{ EUR}.$

In this case, the withholding on the second transaction of 50,000 EUR would amount to 4,050 EUR. The same methodology would then apply to all subsequent payments to this vendor.

Comparing Credit Notes for Period-Based and Voucher Withholding

Credit notes for period-based withholding are accounted for during withholding and payment calculations and therefore reduce the amount of the withholding for a given payment. Here are some incremental examples using the following constants:

- Period balance for basis amount is 600.00 EUR.
- Withholding rate is 10%.
- Period balance for withholding amount is 60.00 EUR ($600.00 \times .10$).
- Payments are made within the same period, June 2006.

Payment #1:

Payment #1 pay cycle is dated June 1, 2006.

Voucher #	Applicable?	Basis Amount	Withholding
00000100	Y	250.00	25.00
00000101	Y	-50.00	-5.00

Result: Payment is for 180.00 EUR to the vendor and the withholding is 20.00 EUR.

Payment #2:

Payment #2 pay cycle is dated June 8, 2006.

Voucher #	Applicable?	Basis Amount	Withholding
00000102	Y	100.00	10.00

Result: Payment is for 90.00 EUR to the vendor and the withholding is 10.00 EUR.

If you add the basis amounts for the first two payments (250.00 EUR + 100.00 EUR = 350.00 EUR) you are less than or equal to the period balance of 600.00 EUR. The system does not include the credit amount when calculating the basis amount totals. The 10% withholding rate still applies (350.00 EUR $\times$.10 = 35.00 EUR). The withholding is 10.00 EUR (35.00 EUR - 25.00 EUR [withholding taken for the first voucher] = 10.00 EUR). The system does not include the credit withholding amount when calculating the withholding amount totals.

Payment #3:

Payment #3 pay cycle is dated June 15, 2006.

Voucher #	Applicable?	Basis Amount	Withholding
00000103	Y	250.00	25.00
00000104	N	-50.00	0.00

Result: Payment is for 175.00 EUR to the vendor and the withholding is 25.00 EUR.

If you add the basis amounts for the three payments (250.00 EUR + 100.00 EUR + 250.00 EUR = 600.00 EUR) you are less than or equal to the period balance of 600.00 EUR. The system does not include the credit amount when calculating the basis amount totals. The 10% withholding rate still applies (600.00 EUR $\times$.10 = 60.00 EUR). The withholding is 25.00 EUR (60.00 EUR - 25.00 EUR [withholding taken in the first payment] - 10.00 EUR [withholding taken in the second payment] = 25.00 EUR). The system does not include the credit withholding amount when calculating the withholding amount totals. Because the period balance for the withholding amount is 60.00 EUR and the withholding amount taken is 60.00 EUR, no additional withholding is calculated on the credit voucher 00000104.

Managing Period-Based Withholding

Because your withholdings can be period-based, PeopleSoft Payables enables you to update the current withholding totals for period-based withholding using the Withholding Period Adjustment page. This feature handles the possibility that you may issue a manual check and need to take this manual transaction into account for withholding calculations of subsequent transactions for the same period. Corrections to period-based withholding amounts update the table the system uses to accumulate period totals, called WTHD_PERIOD_LOG.

This section discusses how to:

- Update period-based withholding.
- Review period-based withholding.

Calculating Withholding on Prepayments

Prepayments enable you to pay for goods or services before an invoice is received. You can choose to withhold on the prepaid voucher, or postpone withholding until you process the final invoice. If you postpone withholding, the withholding is *not* calculated when the prepaid voucher is paid. It is calculated when the system applies the regular voucher to the prepaid voucher during the Voucher Posting process.

You can postpone withholding for prepayments by selecting the *Postpone Withholding* check box on either the Withholding Information page or on the Voucher - Voucher Attributes page.

Here are some examples of withholding on prepayments. If your supplier asked you for a prepayment of 1000.00 EUR on merchandise worth 10,000.00 EUR, you would have the following two options given a 5% withholding:

Note. In all of these examples, the prepaid voucher is voucher ID 00000001 and the applied regular voucher is voucher ID 00000002.

Example 1: Apply Withholding on the Prepayment (Withholding Is Not Postponed)

This option would mean that withholding would occur on the prepayment and the following PYMNT_VCHR_XREF rows would have been generated—assuming backup withholding—after this prepayment is paid:

Voucher ID	Payment Type	Payment Gross Amount	Prepaid Status	Prepaid Applied BU	Prepaid Applied Voucher	Prepaid Applied Payment	Reason
00000001	Regular	950.00 EUR	P			0	
00000001	Withholding	50.00 EUR	P			0	

When the prepayment is applied to the regular voucher, the following rows get written to the PYMNT_VCHR_XREF table.

Voucher ID	Payment Type	Payment Gross Amount	Prepaid Status	Prepaid Applied BU	Prepaid Applied Voucher	Prepaid Applied Payment	Reason
00000001	Regular	950.00 EUR	P			0	Nothing changes
00000001	Withholding	50.00 EUR	P			0	Nothing changes

Voucher ID	Payment Type	Payment Gross Amount	Prepaid Status	Prepaid Applied BU	Prepaid Applied Voucher	Prepaid Applied Payment	Reason
00000002	Regular	9000.00 EUR	U			0	Adjusted original entry after prepaid applied.
00000002	Regular	1000.00 EUR	A	US001	00000001	1	New entry after prepaid applied.

After the regular voucher is paid, the entries look like this (the withholding calculations are performed during pay cycle):

Voucher ID	Payment Type	Payment Gross Amount	Prepaid Status	Prepaid Applied BU	Prepaid Applied Voucher	Prepaid Applied Payment	Reason
00000001	Regular	950.00 EUR	P			0	Nothing changes from original entries.
00000001	Withholding	50.00 EUR	P			0	Nothing changes from original entries.
00000002	Regular	8550.00 EUR	U			0	Modified row from withholding calculations.
00000002	Withholding	450.00 EUR					Newly created row from withholding calculations 5% of 9,000.00 EUR.

Voucher ID	Payment Type	Payment Gross Amount	Prepaid Status	Prepaid Applied BU	Prepaid Applied Voucher	Prepaid Applied Payment	Reason
00000002	Regular	1000.00 EUR	A	US001	00000001	1	

Example 2: Postpone Withholding on a Prepayment

This option means that withholding is not calculated for a prepayment and that, instead, withholdings are calculated on the full EUR 10,000 when the regular voucher is paid. When the prepayment is paid, the PYMNT_VCHR_XREF entries for the prepayment would look like this (no withholding at this point):

This is what PYMNT_VCHR_XREF looks like after the prepayment is paid:

Voucher ID	Payment Type	Payment Gross Amount	Prepaid Status	Prepaid Applied BU	Prepaid Applied Voucher	Prepaid Applied Payment	Reason
00000001	Regular	1000.00 EUR	P				

This is what PYMNT_VCHR_XREF looks like after the prepayment has been applied:

Voucher ID	Payment Type	Payment Gross Amount	Prepaid Status	Prepaid Applied BU	Prepaid Applied Voucher	Prepaid Applied Pymnt	Reason
00000001	Regular	1000.00 EUR	P			0	This does not change.
00000002	Regular	9000.00 EUR	U			0	Original from voucher save readjusted by prepayment application.
00000002	Regular	1000.00 EUR	A	US001	00000001	1	Prepaid adjustment.

This is what PYMNT_VCHR_XREF looks like after the regular voucher has been paid:

<i>Voucher ID</i>	<i>Payment Type</i>	<i>Payment Gross Amount</i>	<i>Prepaid Status</i>	<i>Prepaid Applied BU</i>	<i>Prepaid Applied Voucher</i>	<i>Prepaid Applied Pymnt</i>	<i>Reason</i>
00000001	Regular	1000.00 EUR	P			0	This does not change.
00000002	Withholding	500.00 EUR	U			0	Newly created row from withholding calculations 5% of 10,000.00 EUR.
00000002	Regular	1000.00 EUR	A	US001	00000001	1	Does not changed from above.
00000002	Regular	8500.00 EUR	U			0	Adjusted regular payment – withholding (withholding actually generates this row not prepayment)

Chapter 30, "Processing Prepayments," Specifying VAT and Withholding on Prepayments, page 904

Applying Withholding to First Payment Only

In cases in which you have scheduled multiple payments for a voucher for a withholding vendor, you can apply the entire withholding amount to the first payment. When you do this, the system checks the total basis amount for the voucher when the first payment is being issued. It then checks that the first installment amount is greater than the total withholding amount for the voucher. If the first installment amount is greater, the system withholds the total withholding; if it is not, the system creates an exception and rejects the transaction. Make a correction at the voucher level and reschedule at a later time.

You can specify this option on the Withholding Entity page by selecting the Appl. 1st Pmnt (apply first payment) option. This information is stored on the WTHD_CATEGORY table.

Chapter 13, "Setting Up PeopleSoft Payables Withholding," Defining Withholding Entities, page 280

Calculating Withholding on Payment Cancellations

PeopleSoft Payables handles reversals for withholdings on payment cancellations. Withholding calculations occur at payment time, so the system needs to know not to calculate withholdings again. After canceling, run payment and withhold posting. The system creates a new entry in the PYMNT_VCHR_XREF table for the regular amount (gross amount – withholding = regular amount) and a reversal entry on the WTHD_TRXN_TBL so that you will not report withholding twice.

Here is an example of how it works.

Payment Cancellation Example

Some of the associated withholdings are not in Not Selected status (one is in Paid status).

Note. Two withholding classes are associated with the voucher in this example.

After Payment and Withholding Posting:

PYMNT_VCHR_XREF (after payment and withholding calculations):

<i>Payment Count</i>	<i>Payment Type</i>	<i>Payment Gross Amount</i>	<i>Payment Select Status</i>	<i>Payment ID</i>	<i>Original Payment Count</i>	<i>Withhold Payment Count</i>	<i>Withhold Post Status</i>
1	R	900.00 USD	P	150	0	0	P
2	W	75.00 USD	P	151	1	1	P
3	W	25.00 USD	N		1	2	U

PYMNT_VCHR_WTHD:

<i>Payment Count</i>	<i>Withhold Payment Count</i>	<i>Withhold Entity</i>	<i>Withhold Type</i>	<i>Withhold Juris Code</i>	<i>Withhold Class</i>	<i>Withhold Amount</i>
1	1	IRS	1099	FED	01	75.00 USD
1	2	IRS	1099	FED	02	25.00 USD

WTHD_TRXN_TBL:

<i>Payment ID</i>	<i>Withhold Entity</i>	<i>Withhold Type</i>	<i>Withhold Juris Code</i>	<i>Withhold Class</i>	<i>Withhold Basis Amt</i>	<i>Withhold Liability Amount</i>	<i>Paid Amount</i>
150	IRS	1099	FED	01	1000.00 USD	75.00 USD	0.00 USD
150	IRS	1099	FED	02	1000.00 USD	25.00 USD	0.00 USD
151	IRS	1099	FED	01	0.00 USD	0.00 USD	75.00 USD

After Payment Cancellation, Payment Posting, and Withholding Posting

PYMNT_VCHR_XREF:

<i>Payment Count</i>	<i>Payment Type</i>	<i>Payment Gross Amount</i>	<i>Payment Select Status</i>	<i>Payment ID</i>	<i>Original Payment Count</i>	<i>Withhold Payment Count</i>	<i>Withhold Post Status</i>
1	R	900.00 USD	X	150	0	0	X
2	W	75.00 USD	P	151	4	1	P
3	W	25.00 USD	N		4	2	U
4	R	900.00 USD	N		0	0	U

PYMNT_VCHR_WTHD:

<i>Payment Count</i>	<i>Withhold Payment Count</i>	<i>Withhold Entity</i>	<i>Withhold Type</i>	<i>Withhold Juris Code</i>	<i>Withhold Class</i>	<i>Withhold Amount</i>
1	1	IRS	1099	FED	01	75.00 USD
1	2	IRS	1099	FED	02	25.00 USD
4	1	IRS	1099	FED	01	75.00 USD

150	IRS	1099	FED	01	1000.00 USD	75.00 USD	0.00 USD
150	IRS	1099	FED	02	1000.00 USD	25.00 USD	0.00 USD
151	IRS	1099	FED	01	0.00 USD	0.00 USD	75.00 USD
150	IRS	1099	FED	01	-1000.00 USD	-75.00 USD	0.00 USD
150	IRS	1099	FED	02	-1000.00 USD	-25.00 USD	0.00 USD

Further Considerations for Canceling Payments with Withholding

Consider the following points when canceling payments with withholding.

Canceling Withholding Schedules

If withholding has been paid and the withholding payment needs to be canceled as well, you must cancel this separately. It will not be canceled just because the regular payment is canceled. Alternatively, you may use the Withholding Adjustment page to adjust withholding.

Canceling a Payment, Changing Withholding Details, and Reissuing the Payment

If you cancel a payment and want to change the withholding details for the voucher and reissue the payment with withholding recalculated, you must:

1. Cancel the payment.
2. Delete the withholding schedule on the voucher.
3. Add the withholding schedule amount back to the regular payment schedule. That is, consolidate the withholding schedule with the regular payment schedule.
4. Change the withholding details.
5. Save the voucher.
6. Run the Pay Cycle Application Engine process (AP_APY2015) on the voucher or make a manual payment to reissue the payment with withholding recalculated.

Note that you:

- Cannot delete or update a withholding schedule on a voucher if a related payment schedule has been paid or if the withholding has been posted.
- Cannot delete or update a regular payment schedule if a related withholding schedule exists or if withholding has been posted.
- Must cancel the related payment before you can delete withholding schedules.

Chapter 22, "Using Additional Payment Processing Options," Canceling Individual Payments, page 723

Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Scheduling and Creating Voucher Payments for Online Vouchers, page 357

Grouping Withholding for Payment Posting

In PeopleSoft Payables, accounting entries are written for withholding during voucher posting (if withholding at voucher posting option is selected) and payment posting, and withholding entries are grouped by WTHD_ENTITY, WTHD_TYPE, WTHD_JUR_CD, WTHD_CLASS, and WTHD_RULE.

The linking of a withholding PYMNT_VCHR_XREF (PYMNT_TYPE = W) to its PYMNT_VCHR_WTHD entries is 1 to 1 and is linked in the following way for backup withholding:

<i>PYMNT_VCHR_XREF.BUSINESS_UNIT</i>	=	<i>PYMNT_VCHR_WTHD.BUSINESS_UNIT</i>
<i>PYMNT_VCHR_XREF.VOUCHER_ID</i>	=	<i>PYMNT_VCHR_WTHD.VOUCHER_ID</i>

PYMNT_VCHR_XREF.BUSINESS_UNIT	=	PYMNT_VCHR_WTHD.BUSINESS_UNIT
PYMNT_VCHR_XREF.Orig_Pymnt_Cnt	=	PYMNT_VCHR_WTHD.PYMNT_CNT
PYMNT_VCHR_XREF.WTHD_Pymnt_Cnt	=	PYMNT_VCHR_WTHD.WTHD_PYMNT_CNT

Example #1: Two-Line Voucher with Single Payment

Assumptions include:

- Total 1000 USD: Line 1: 500 USD, Line 2: 500 USD.
- Line 1 withholding is 31%.
- Line 2 withholding is 20%.

PYMNT_VCHR_XREF:

Payment Count	Paid Type	Payment Gross Amount	Original Payment Count	Withhold Payment Count
1	R	745.00	0	0
2	W	155.00	1	1
3	W	100.00	1	2

PYMNT_VCHR_WTHD:

Payment Count	Withhold Payment Count	Entity	Type	Juris	Class	Rule	Withhold Basis Amount	Withhold Amount
1	1	CA	1099	North	04	RULE4	500.00	155.00
1	2	IRS	1099	South	02	RULE2	500.00	100.00

VCHR_ACCTG_LINE (assuming summary control posting method):

Chapter 44

Processing Special Withholding Requirements

This chapter provides a list of common elements and discusses how to:

- Process U.S. withholding.
- Process U.K. withholding.
- Process Japanese withholding.
- Process Australian Taxation Office (ATO) withholding.

Common Elements Used in This Chapter

Entity	Tax authority.
Type	Definition of a withholding at the highest level in PeopleSoft Payables. For example, in the U.S. 1099 is a withholding type.
Jurisdiction	An additional level of classification between the withholding type and the class.
Class	A subdivision (activity) of each withholding type, such as Rent or Royalties.
Withholding Class Combination	The combination of withholding entity, type, jurisdiction, and class.

Processing U.S. Withholding

This section provides an overview of the 1099 withholding process, lists prerequisites and common elements, and discusses how to:

- Generating the 1099 Report Post, Report, and Copy B processes.
- Run the 1099 Withholding to Send Detail Report.
- Run the Withholding Sent File process.

- Process correction files.
- Process replacement files.

Understanding 1099 Withholding

In the United States, accounts payable departments create 1099 forms and electronic files each calendar year to report various tax liabilities for vendors. 1099 income encompasses multiple categories, although the primary category for PeopleSoft Payables is likely to be non-employee compensation.

PeopleSoft enables you to provide the U.S. Internal Revenue Service (IRS) with withholding information based on the transactions that occurred during the reporting year.

Note. Refer to IRS Publication 1220 as the definitive resource for 1099 rules and regulations.

This section discusses:

- Supported 1099 reports.
- Adjustment process.
- 1099 reporting process flow.
- Filing requirements.
- Taxpayer Identification Number (TIN).

Supported 1099 Reports

PeopleSoft Payables supports the following 1099 reports:

- 1099–MISC
- 1099– I (interest income)
- 1099–G (government payments)

Adjustment Process

You can make adjustments to your withholding using the:

- Withhold Adjustments page.
- Withholding Update Application Engine process (AP_WTHD_UPDT).

See [Chapter 42, "Processing Withholding in PeopleSoft Payables," Adjusting Withholding Manually, page 1165.](#)

See [Chapter 42, "Processing Withholding in PeopleSoft Payables," Processing Withholding Updates, page 1168.](#)

1099 Reporting Process Flow

For efficient withholding processing, run payment and withholding posting throughout the year.

To create your 1099 files for the Internal Revenue Service and Copy B reports for your vendors:

1. (Optional) Run the Withholding Mismatch Report (APY9010).

This report shows all mismatched voucher lines for the selected vendor location.

2. (Optional) Manually update incorrect withholding on the voucher lines using the Withhold Adjustments page or the Withholding Update pages and process.
3. (Optional) Rerun the Withholding Mismatch Report.
4. (Optional) Run the Duplicate Vendors report (APY3215) and make adjustments, if necessary, to combine withholding totals for vendors with duplicate Taxpayer Identification Numbers (TINs).
5. Run the 1099 Job (AP_1099) to populate the withholding 1099 table, run the withholding 1099 report, and create the 1099 Copy B forms.

The 1099 Report Post process populates the withholding 1099 table by extracting data from the withhold transaction table and inserting it into the withholding 1099 table.

The 1099 Report process compares the information in the withholding transaction tables to the information that you have already sent to the IRS and populates a third table with the information that needs to be sent to the IRS for the current year. This enables you to process corrections and replacements in addition to original submissions.

The 1099 Report Copy B Sort process generates the selected forms and sorts the information in specified order.

Note. You can run these processes individually as well.

6. Create and print the 1099-MISC, 1099-G, and 1099-INT Crystal report forms.

Note. You can run these reports forms using the same run control as the 1099 processes.

7. Generate a 1099 Withholding to Send Detail Report.

This report is a summary of the data stored in the withholding detail table (WTHD_TO_SND_DTL). It is a replica of the file you are sending to the IRS.

8. Run the Withholding Sent File Application Engine process (WTHD_SENT) once you have sent your file to the IRS.

This process records all of the data you sent to the IRS.

See *PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook*, "Maintaining Vendor Information," Reporting on Duplicate Vendors.

See [Chapter 42, "Processing Withholding in PeopleSoft Payables," Running the Withholding Mismatch Report, page 1164.](#)

Filing Requirements

Since IRS filing requirements are subject to change, please refer to IRS publication 1220 for the current requirements.

The IRS enables you to file using magnetic or electronic media. PeopleSoft Payables automatically formats the files according to the latest IRS requirements.

In certain cases, the IRS acts as a forwarding agent for states that participate in the Combined Federal/State Filing Program. Consult current IRS publications for information.

The IRS enables you to send a test file before you send your regular file. Test files should contain a sample of each record you are required to file. You can create test files using PeopleSoft Payables.

Taxpayer Identification Number (TIN)

Every vendor in the United States must have a Taxpayer Identification Number (TIN). For individuals, this is their Social Security Number (SSN). For businesses, this is a Federal EIN. For sole proprietorships and partnerships, you have a choice between the person's SSN or the Federal EIN.

Prerequisites

Before you begin, you must:

- Define a withholding calendar and the withholding controls.
- Complete all withholding setup, including the applicable 1099 piggyback states.
- Set up withholding vendors.
- Enter, post, and pay vouchers; run the Payment Posting Application Engine process (AP_PSTPYMNT) and the Withholding Posting Application Engine process (AP_WTHD).
- (Optional) Run the Withholding Mismatch Report and update withholding manually using the Withhold Adjustments page or via the Withholding Update pages and process.
- (Optional) Run the Duplicate Vendors report to review any TINs, names, addresses, and so forth, that are shared with more than one vendor for a specified entity over a specified period.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information"

Common Elements Used in This Section

Vendor ID

Enter to specify a particular vendor.

- Start Date** and **End Date** Limit a search to information between the start and end date.
- Control SetID** and **Control ID** Generate a different IRS file with each control ID. You must enter a setID before you select the control ID.
- Report ID** Defaults as *US_REPORT*.

Pages Used to Process U.S. Withholding

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
1099 Report Post / Report / Copy B	RPT_1099_JOB	Vendors, 1099/Global Withholding, 1099 Reports, Withhold 1099 Report Job, 1099 Report Post / Report / Copy B	Request to run the 1099 Job (AP_1099), that includes the 1099 Report Post Application Engine process (1099_RPT_PST), the 1099 Report Application Engine process (AP_APY1099), and the 1099 Copy B Sort Application Engine process (AP_COPYB_RPT). You can also select to run these processes individually. In addition, you can select to run the 1099 report forms (1099-MISC, 1099-G, and 1099-INT) separately or as part of the same run control request.
1099 to Send Report	TO_SEND_RPT	Vendors, 1099/Global Withholding, 1099 Reports, 1099 to Send Detail, 1099 to Send Report	Define run parameters for the 1099 Withholding to Send Detail Report (APY8056). Use the report to review a summary of the data stored in the withholding detail table (WTHD_TO_SND_DTL). The report lists all the information created by the 1099 reporting process and is a replica of the data in the file you are sending to the IRS. You must complete the 1099 Report process—with the exception of sending the file—for the report to accurately summarize your data.

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Withhold Sent	WTHD_SENT	Vendors, 1099/Global Withholding, 1099 Reports, Withholding Sent File, Withhold Sent	Request a run of the Withholding Sent File Application Engine process (WTHD_SENT). This process finalizes the 1099 reporting and file creation process. It records all the data in the file you have sent. Do not run this process until you send your file to the IRS. You can only run it once for each time you run the withholding report. The system uses this information when creating correction or replacement files.

Generating the 1099 Report Post, Report, and Copy B Processes

Access the 1099 Report Post / Report / Copy B page (Vendors, 1099/Global Withholding, 1099 Reports, Withhold 1099 Report Job, 1099 Report Post / Report / Copy B).

1099 Report Post / Report / Copy B page

The 1099 Report Post / Report / Copy B page is divided into three sections; 1099 Report Post, 1099 Report, and 1099 Report Copy B Sort. Each section corresponds to the three 1099 processes, respectively (1099_RPT_PST, AP_APY1099, and AP_COPYB_RPT).

Note. The 1099 Report Post / Report / Copy B page is for U.S. reporting. The Withhold Reports page is for global reporting. The person who controls security for your PeopleSoft pages defines security for these pages so that your users can access whichever reports are applicable for the company.

1099 Report Post

Parameters common to all three processes are listed in this group box. You must complete these parameters to run the 1099 Job or any of the three 1099 processes.

Report Date Displays today's date by default.

Include Manual Overrides Select to include manually adjusted or updated withholding transactions. This is usually selected for 1099 reporting.

- Control SetID and Control ID** Select the withholding control setID and control ID to use to create 1099 reporting.
- The system uses the payor data for the specified control ID you entered on the Report Control Information - Payor Data page. This data must match the information the IRS has on file. In particular, the tax ID, transmitter control code, and name data should be the same, since the 1099 Report process pulls the header information for the IRS file from this page.
- Calendar SetID and Calendar ID** Select the calendar you want to use. You must create an annual calendar with one period for the entire year to use for 1099 reporting.
- Fiscal Year and Period** Enter the fiscal year and period for the calendar you specified. The system uses this information to determine which transactions to include in the posting. It selects all transactions with a payment date in the specified period. For 1099 reporting, the period is defined as a calendar year.
- Use Report Date For Vendor** Select this checkbox to use the date the report is run to get the max effective dated Vendor Address that will be reported on the copy B. If unchecked, then the system will use 12/31/ reporting year.

When you run the 1099 Report Post process, the system extracts the withholding transaction data and populates the Withholding 1099 Report table.

1099 Report

You must complete these parameters to run the 1099 Job or the 1099 Report process. You do not have to complete these parameters if you are running the 1099 Report Post process or the 1099 Copy B Sort process individually.

- Type of File/Return** Select the type of the file or return to create. Options include:
- Orig/Corr* (original or correction): Select if you have not yet sent a file to the IRS or you are sending a correction file after sending an incorrect one.
- Replace*: Select if the IRS requests a replacement file.
- Test*: Select if you are sending a test file.
- Replacement Character** Enter the character the IRS sends you as a replacement character to include in the file if you need to send a replacement file.

When you run the 1099 Report process, the process creates the file for the IRS and stores it in the directory specified on the Process Scheduler. You can send the file to the IRS using the new Filing Information Returns Electronically (FIRE) system.

The 1099 Report process automatically produces an electronic file and moves data to a reporting table to produce Copy B reports.

Note. The naming convention for the IRS tax file is `IRSTAX_<FILE_EXTENSION>_<WTHD_CNTL_ID>_<PROCESS_INSTANCE>.TXT` (for example, `IRS_001_CORP_1234.TXT`) for all platforms except for MVS. Because of the 8-character name limit for the MVS platform, the system truncates the file name after 8 characters (for example, `IRS_001_.TXT`).

You can view the IRS tax file from the Report Manager.

1099 Report Copy B Sort

You must complete these parameters to run the 1099 Job or the 1099 Copy B Sort process. You do not have to complete these parameters if you are running the 1099 Report Post process or the 1099 Report process individually.

Withhold Type	Select the type of 1099 report you want to generate from: <i>1099G</i> for 1099-G (government payments) report. <i>1099I</i> for 1099-I (interest income) report. <i>1099M</i> for 1099-MISC (miscellaneous) report. <i>All</i> for all supported 1099 reports.
Mask TIN	Select this checkbox to mask social security numbers on the Copy B report.
Vendor Select Option	Select from these options: <i>Select All:</i> The report runs for all vendors in the control setID defined in the 1099 Report Post group box. <i>Specify:</i> The report runs for all vendors you specify in the Vendor Payees grid at the bottom of the page.
AP 1099 sort order	Select to sort the report by <i>Name</i> , <i>TIN</i> , or <i>Vendor ID</i> .

You can select to run the `AP_COPYB_RPT` Application Engine process followed by the appropriate 1099 Crystal reports (for the 1099-MISC Copy B, 1099-INT Copy B, or 1099-G Copy B) separately. Or you can select the `PRINT 1099 COPY B job (APCOPYB)`, which runs the Application Engine process together with the 1099 Crystal reports in the correct order.

Running the 1099 Withholding to Send Detail Report

Access the 1099 to Send Report page (Vendors, 1099/Global Withholding, 1099 Reports, 1099 to Send Detail, 1099 to Send Report).

Note. This report will be blank if you do not run the 1099 Report process first. Also, be aware that the balances on this report may not balance against the information provided in the Vendor Withholding Balances Control Report (APY3012), since the report includes vendors that have been updated from withholding applicable to non-withholding applicable.

Fiscal Year	Enter the applicable fiscal year.

Running the Withholding Sent File Process

Access the Withhold Sent page (Vendors, 1099/Global Withholding, 1099 Reports, Withholding Sent File, Withhold Sent).

Note. You do not need to run this process if you are sending a test file to the IRS. The test file is a viable IRS file, but the information generated for the test does not need to be stored in the online system.

Processing Correction Files

If you determine that you reported incorrect data for a vendor or a group of vendors, you need to create a correction file. To correct the transaction data within the PeopleSoft Payables system, do one of the following:

- Adjust the individual voucher lines for the vendor using the Withholding Invoice Line Update page and running the Withholding Update process.
- Enter an adjustment on the Withhold Adjustments page.
- Enter a new voucher.

To complete the correction process:

1. Run the 1099 Job.

The system generates the 1099 report showing only the corrections and the appropriate 1099 Copy B forms.

2. Run the 1099 Withholding to Send Detail Report.
3. Run the Withholding Sent File process.

Processing Replacement Files

Once you send a file to the IRS and run the Withholding Sent File process, you are finished with the 1099 reporting process unless the IRS rejects the file because of formatting errors. In that case, the IRS may tell you what is invalid in the file either through contact information you provide or on their internet page, where the file is stored. Make the necessary changes and resubmit the file.

To do this, access the 1099 Report Post / Report / Copy B page, complete the parameters in the 1099 Report Post and the 1099 Report group boxes. In the 1099 Report group box, select *Replace* in the Type of File/Return field, and enter the replacement character provided to you by the IRS in the Replacement Character field.

Run the 1099 Report Post and the 1099 Report processes. The system generates a new replacement file that you can send to the IRS. You must run the Withholding Sent File process after creating the replacement file.

Note. You can create a replacement file only if one and only one original file was sent to the IRS.

Processing U.K. Withholding

To set up U.K. withholding, use the Withholding Codes component (WTHD_CODE).

This section provides an overview of the U.K. Construction Industry Scheme (CIS) and discusses how to:

- Set up withholding entities for CIS.
- Define CIS withholding requirements for the entity.
- Define business units as collection agents for CIS.
- Define withholding codes for CIS.
- Set up withholding rules for CIS.
- Set up withholding vendors CIS.
- Enter address information for CIS vendors.
- Set up contractor details for CIS.
- Set up tax calendars.
- Generate reports for CIS.
- Generate payments to HM Revenue & Customs.

Understanding the U.K. CIS

This section describes how to implement the CIS using the Global Withholding features in PeopleSoft Payables.

In the U.K., payments to suppliers for construction operations fall within the scope of the CIS. This scheme states that suppliers (referred to in the scheme as subcontractors) who operate in the construction industry can be paid only if they are holders of either a Registration Card or a Subcontractors Tax Certificate. Registration Card holders have amounts deducted from their payments for labor based on their tax and National Insurance Contribution (NIC) liability. Certificate holders can be paid gross, but details of all the payments must be retained for reporting to the Inland Revenue.

With the legislative changes effective 04/2007, Contractors and sub-contractors will no longer use CIS Vouchers. Contractors must send a monthly return to HM Revenue & Customs including details of payments made within the scheme to all sub-contractors, details of any deductions they have made from payments to sub-contractors, a declaration confirming that employment status has been considered, and a declaration that the verification process has been applied correctly.

Note. Detailed Inland Revenue specifications are available at this web address: <http://www.hmrc.gov.uk/new-cis>

CIS Sample Data

The withholding setup for the U.K. should be configured as the sample data shown in this table:

<i>Type</i>	<i>Value</i>
Withhold Entity	<i>HMRC</i>
Withholding Rule	<i>CISO</i>
Withholding Rule	<i>CISS</i>
Withholding Rule	<i>CISI</i>
Withholding Type	<i>CIS07</i>
Withholding Class	<i>CISI</i>
Withholding Class	<i>CISIM</i>
Withholding Class	<i>CISS</i>
Withholding Class	<i>CISSM</i>
Withholding Jurisdiction	<i>UKWTA</i>
Withholding Code	<i>CISS</i>
Withholding Code	<i>CISSSM</i>
Withholding Code	<i>CISI</i>
Withholding Code	<i>CISIM</i>
Withholding Code	<i>CISO</i>

Note. Jurisdiction is not needed for CIS processing, but it is a required object in the data structure. We deliver a dummy jurisdiction of UKWTA with the sample data.

Registration Cards

Registration cards, of which there are two types, are issued to those that do not qualify for a subcontractor tax certificate. For holders of these cards, a deduction must be made on payments at the prevailing rate that is specified by the government. The two types of registration cards are:

CIS4(P) - Permanent Card This bears the National Insurance number of the card holder. It has no expiration date.

CIS4(T) - Temporary Card This does not bear the National Insurance number and has an expiration date.

In PeopleSoft Payables, no distinction is made between the two types of registration cards. This is because withholding is triggered by the withholding code and its associated rule, not by attributes that are assigned to the vendor. We recommend that registration card holders use the delivered sample withholding codes (or their equivalents).

Withholding Entity page

The system creates scheduled payments for amounts that are deducted from payments to sub-contractors defined under the withholding entity. These payments must be made to the HM Revenue & Customs within 14 days after the end of the tax month. You must create a vendor that represents the Accounts Office of the HM Revenue & Customs to which these deducted amounts can be remitted. To ensure that scheduled payments are made to the HM Revenue & Customs vendor, you enter the vendor details on the Withholding Entity page.

To ensure that deductions from payments made to CIS Sub-contractors are kept as a separate payment that can be made at the end of the month to the HM Revenue & Customs, select the Create Withholding Payment check box for the CIS4 withholding class. Then, in the Round Option field, select *Natural* as the rounding option (you must not leave this field blank). Set the Hold Payment field to *Withd Only* (withhold only) or *No Hold*.

Important. You must define at least one entity named HMRC as there is processing tied to the entity.

Entering Vendor Addresses

Setting Up Contractor Details for CIS

Access the Report Control Information - Payor Data page (Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Report Control Information, Payor Data).

Before you generate the monthly and annual returns, you must enter your own company's tax information (contractor details) on the Report Control Information - Payor Data page.

Payer Name 1 and Payer Name 2 are optional fields, but they are used on the EDI file that is submitted to the HM Revenue & Customs. Ideally, you should enter at least Payer Name 1. You should enter your Contractor tax reference in the Tax ID field. If you are using EDI to submit your returns, enter the EDI ID that is issued to you by the HM Revenue & Customs in the Transmitter Cntl Cd field.

It is also important that you enter your business address on the address page. Access this page by clicking the Envelope button.

Note. You must also make sure that you have listed the applicable business units and vendors (or chose the All Vendors option) on the Report Control Information - Vendors and Business Units.

Setting Up Tax Calendars for CIS

Access the Calendar Builder page (Set Up Financials/Supply Chain, Common Definitions, Calendars/Schedules, Calendar Builder).

U.K. reporting consists of monthly and annual returns. You are obliged to report all payments that are made to subcontractors within 14 days of the end of the tax month.

In the U.K., the tax year runs from April 6 to April 5 of the following year. Each tax month starts on the sixth day of the month. To ensure that payments that are subject to withholding processing are reported in the correct tax month, create a monthly calendar for the U.K. tax year.

To produce the annual return, create an annual calendar.

Monthly Calendar

This is an example of a monthly calendar:

Generating Reports for CIS

You generate two kinds of reports for CIS: monthly and annual.

Generating Monthly Reports

PeopleSoft provides a flat file conforming to the CIS scheme GFF(generic flat file format) data mapping standards as defined in the EB5/CIS300 message implementation guidelines published by the HMRC.

The U.K. CIS File SQR report (APY8032), which you run from the Withhold Report request page, produces both the flat file and the report output. The PeopleSoft system produces two files:

- Construction Gross Payment Vouchers

This file contains details of payments that are made to contractors. The file that is produced is called APY8032.23E (or APCIS23E.DAT on IBM OS390 servers).
- Tax Payment Vouchers

This file contains details of payments that are made to sub-contractors. The file produced is called APY8032.25E (or APCIS25E.DAT on IBM OS390 servers).

In addition to producing the flat file, you must also print a copy of the Tax Payment Voucher (form CIS25E). This single-part document is sent to the subcontractor to provide a record of the amounts that have been deducted from the subcontractor's payments during the tax month.

To create the files, you must first post the withholding details into the transaction table using the Withholding Posting Application Engine process (AP_WTHD), from the Withhold Transaction Post page. You then need to extract the data from the transaction table into the reporting tables, using the Withhold Report Post page to run the Withholding Reporting Application Engine process (AP_WTHDRPT). On the Withhold Report Post page, you enter your report ID and control ID for CIS reports (the delivered Report ID for monthly reports is *CIS_NEW*, UK Construction Industry Scheme; the delivered Control ID is *GBR-REPORT*, UK Withholding Report). For the monthly returns, you must select the U.K. monthly tax calendar.

After you extract the data to the report files, you create the output files and the CIS25E report by running the withholding reports using the Withhold Report page.

You must send the files that are produced into the EDI translation software of your choice. This software converts the flat file into EDI messages. A list of third-party EDI translation and submission software providers is available from the HMRC.

Generating Annual Reports

All payments that are made to subcontractors during the tax year must be reported to the HMRC. This can be done using preprinted, multi-part stationery or through EDI. PeopleSoft provides for the EDI solution. The system generates a flat file that conforms to the file that is specified in the HM Revenue & Customs Message Implementation Guide. We produce a single file:

End of Year Payments. The file that is produced is called APY8032.36E (or APCIS36E.DAT on IBM OS390 servers).

To create the files, all the withholding details for the year must have been posted to the transaction table using the Withhold Transaction Post page.

Then, extract the data from the transaction table into the reporting tables using the Withhold Report Post page. For the annual returns, select the U.K. annual tax calendar.

After you extract the data to the report table, you create the output file by running the Withholding Reports.

You must send the files that are produced to the EDI translation software of your choice. This software converts the flat file to EDI messages. A list of third-party EDI translation and submission software providers is available from the HM Revenue & Customs.

[Chapter 42, "Processing Withholding in PeopleSoft Payables," Generating Withholding Reports, page 1174](#)

Generating Payments to HMRC

There are several ways in which you can set up the system to generate the payment to the HMRC. The method you select depends on the volume of CIS transactions and the way in which you run your pay cycle.

Method 1 - Placing HMRC Payments on Hold

With this method, you set up the system to place the HMRC scheduled payments on hold automatically. Within 14 days after the end of the tax month, you take the scheduled payments off hold. Set up a pay cycle that includes scheduled payment dates within the tax period range (for example, from the sixth of the previous month to the fifth of the current month). Then a single payment to the HMRC can be generated for all withheld amounts.

To place the withheld scheduled payments on hold:

1. Set the Hold option to *Withd Only* (withhold only) on the Withholding Entity page for withholdingClasses CIS0, CISS, CISSM, CISI, and CISIM.
2. Set the Withholding Date option to *Payment* on the Payment Selection Criteria - Dates page.

This sets the scheduled due date on the payment so that it is equal to the payment date, making it easier to select only the withheld payments that were made during the tax month.

A variation of this method is to place the HM Revenue & Customs vendor on hold. With this approach, you leave the vendor on hold until just before running a pay cycle that selects HM Revenue & Customs scheduled payments. You take the vendor off hold before running the pay cycle and place the vendor back on hold immediately after the pay cycle completes. To do this, you select the Hold Payments check box on the Additional Payables Options collapsible region on the Vendor Information - Payables Options page.

Method 2 - Using Pay Groups

If the volume of withheld payment is too great to permit resetting the Hold option manually, then you can use Pay Groups. You define one set of pay groups for regular payments and another pay group exclusively for payments that are made to the HM Revenue & Customs. Then you assign the HM Revenue & Customs pay group to your HM Revenue & Customs vendor. When scheduled payments are created for the withheld amount, the system assigns the HM Revenue & Customs pay group to it. When payment to the HM Revenue & Customs is due, you either temporarily include the HM Revenue & Customs pay group in the Payment Selection Criteria component (PYCYCL_DEFN) or create a new pay cycle ID. To prevent the HM Revenue & Customs payments from being selected during the tax month, use different pay groups for all other voucher payments.

Method 3- Using Withholding Class Payment Terms

When defining your withholding entities, you can indicate for every combination of withholding class and withholding categories the payment terms you want to apply to the withheld payment. For example, knowing that you need to pay within 14 days after the end of the tax month, which ends on the 5th of the calendar month, you would create a payment term (Single Payment) that contains two split terms. The first term would say that for any payment falling between the 1st and the 5th of the calendar month, the payment ID would be *Same month, on the 15th*. The second term would indicate that between the 6th and the end of the calendar month, the scheduled date should be *Next month, on the 15th*. That way, all withheld amounts that need to be paid to the HM Revenue & Customs will be scheduled to be paid on the 15th, allowing you to run your pay cycle before the due date of the 19th of the calendar month.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Defining Procurement Options"

Processing Japanese Withholding

This section provides an overview of Japanese withholding, lists prerequisites, and discusses how to generate the Withholding Summary Sheet.

Understanding Japanese Withholding Processing

To meet one of the Japanese income tax reporting requirements, PeopleSoft Payables provides a supporting summary sheet report (WTP2_001) corresponding to the year-end Japan Withholding Report (APY8025), which is printed per vendor. The summary sheet has both detailed and summarized information for the applicable withholding transactions that are processed (paid) in the PeopleSoft Payables module.

Information includes payment and withholding amount summarized by:

- Set of withholding classes defined for each reporting line.
- Vendor category.
- Vendor.

Each summary has a subtotal line indicating the number of payments made, total payment amount, and total withholding amount. The lines for categories, defined classes, and report totals also display the number of payees.

Prerequisites

Because this report is a summary sheet attached to the Japan Withholding Report, every step that must be completed for the Japan Withholding Report also is a prerequisite for the summary sheet. All transaction information used in the summary sheet is based on the detailed information used in the Japan Withholding Report. You can select a portion of the report's information and then output a partial summary sheet, but you cannot include any additional transactions that are not in the report.

To produce the Japan Withholding Report and its summary sheet:

1. Set up your withholding environment.

Note that the withholding report definitions you make on the Report Definition 1 page are a prerequisite for generating the withholding summary sheet.

2. Register withholding (create voucher).
3. Create payments.
4. Post payments.
5. Post withholdings.
6. Run the Withholding Reporting process.
7. Produce the Japan Withholding Report (not required).
8. Create the summary sheet.

You must run the Withholding Reporting process before you can produce the Japan Withholding Report. Because the summary sheet is calculated based on the information shown on the Japan Withholding Report, the Withholding Reporting process is also required to create the summary sheet. Consequently, the summary sheet cannot include any transaction that is not processed for the Japan Withholding Report, but it is possible to produce the report for a subset of this information.

Important! When there are more than two lines in one voucher and withholding tax is applied to both lines using the *gross amount* (that is, when the Withholding Basis Amt Override field is blank), the summary sheet double-counts the gross amount in the Payment Amount field. If you want to automatically calculate withholding tax based on the line amount, make sure you have the correct amount in the Withholding Basis Amt Override field on the voucher.

Page Used to Process Japanese Withholding

Page Name	Definition Name	Navigation	Usage
Withholding Report by Class	WTP2_RUN_WTP2_001	Vendors, 1099/Global Withholding, Global Withholding Reports, Withholding Report by Class, Withholding Report by Class	Generate the summary sheet for the withholding report by class.

Generating the Withholding Summary Sheet

Access the Withholding Report by Class page (Vendors, 1099/Global Withholding, Global Withholding Reports, Withholding Report by Class, Withholding Report by Class).

Withholding Report ID Select the Withholding Report ID created in the Report Definition component.

Withholding Entity Select the entity whose transactions are included in the report output.

From Payment Date Select the date for which the report should begin the output of data.

Note. This is the date a payment was made to a vendor for whom an amount was withheld, not the date a payment was made to the withholding entity.

To Payment Date Select the date for which the report should end the output of data.

Note. If you are generating this summary sheet with the withholding report (per vendor), the date range must be from the first day of the accounting period you specified on the Withhold Report page to the last day of the same accounting period.

All payment and withholding amounts are converted into the currency defined in the withholding entity, using the exchange rate type defined during the Withholding Posting process.

Important! The currency used in this report is that of the currently effective, single currency code defined for the withholding entity. If there were more than two currencies used to post withholding transactions for the same withholding entity during the selected period of the report, amounts of all transactions that were posted in a currency different from the currently effective currency of the withholding entity do not appear on this report.

Processing ATO Withholding

This section provides an overview of ATO withholding, lists common elements, and discusses how to:

- Post withholding data to the withholding report table.
- Run the PAYG Voluntary Agreement, Labour Hire, and No ABN Quoted reports.
- Run the PAYG Payment Summary Statement and No ABN Quoted Summary Statement reports.
- Adjust or enter payment summary data manually.

See Also

[Chapter 42, "Processing Withholding in PeopleSoft Payables," page 1151](#)

[Appendix C, "PeopleSoft Payables Reports," page 1289](#)

Understanding ATO Withholding

This section discusses:

- PAYG overview.

- ATO withholding setup.
- How information is displayed on ATO forms.
- Posting withholding report data.
- Running the PAYG Vendor reports.
- Printing the reports.
- Printing the PAYG payment summary reports.
- Adjusting or entering payment summary data manually.

PAYG Overview

To meet PAYG (Pay As You Go) legislative requirements for Australia withholding, the PeopleSoft system provides several withholding report formats and the functionality to handle PAYG withholding as defined by the ATO.

Specifically, the PeopleSoft system supports these reports using impact printers:

- Payment Summary - Voluntary Agreement (PAYG Voluntary Agreement - APY8041).
- Payment Summary - Labour Hire and Other Specified Payments (PAYG Labour Hire - APY8042).
- Payment Summary - Withholding where ABN not Quoted (PAYG No ABN Quoted - APY8043).
- PAYG Payment Summary Statement (PAYG Payment Summary Statement - APY8044).
- PAYG Withholding where ABN not quoted - Annual Report (PAYG No ABN Quoted Summary Statement - APY8045).

ATO Withholding Setup

This table provides the steps you should follow to set up ATO withholding:

Step	Purpose	Navigation
We recommend that you set up these withholding rules: • VOLAG Voluntary Agreement. • LABHR Labor Hire and Other Specified Payments. • NOABN Withholding where ABN not Quoted.	Tells the system what rules to use and what actions to take during withholding. Note. You can only set up withholding percentages on the Withhold Rule page.	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding Rules, Withhold Rule See Chapter 13, "Setting Up PeopleSoft Payables Withholding," Defining Withholding Rules, page 277.

Step	Purpose	Navigation
Use the Withhold Type page to specify the classes that belong to the PAYG withholding type.	Defines withholding at the highest level in PeopleSoft Payables. For each withholding type, you can define classes, such as Voluntary Agreement, Labor, and No ABN (Australian Business Number).	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Types and Classes, Withhold Type See Chapter 13, "Setting Up PeopleSoft Payables Withholding," Defining Withholding Types and Classes, page 279.
Set up the ATO as a vendor.	Tells the system to whom to send the withholdings. Note. You must define the vendor information for the withholding entity before you can complete the Withholding Entity page. Entities are treated the same as vendors, just like every other payee in your system. If you pay the ATO vendor via EFT, provide your EFT code in the Payment Instruction Ref 1 field in the Electronic File Options section on the Payables Options page.	Vendors, Vendor Information, Add/Update, Vendor See <i>PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook</i> , "Maintaining Vendor Information."
Define the ATO withholding entity (tax authority).	Tells the system which withholding type/class combinations are associated with the withholding rule.	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Entities, Withholding Entity See Chapter 13, "Setting Up PeopleSoft Payables Withholding," Defining Withholding Entities, page 280.
On the Entity Fields - Vendor page, select the Optional check box for the Tax District Reference field.	Provides the delivered SQRs with the setup it needs for the Tax District Reference field and the ATO withholding entity. Note. Due to the way the Taxpayer Identification Number field is used, you should always leave it blank in the vendor withholding data. All other check boxes for fields should be deselected.	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Entities, Entity Fields - Vendor See Chapter 13, "Setting Up PeopleSoft Payables Withholding," Defining Vendor Information for the Entity, page 287.
Associate the following withholding codes with the PAYG withholding code: • VOLAG. • LABHR. • NOABN.	Tells the system which withholding codes you want it to process at the same time.	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Withholding Codes, Withhold Code See Chapter 13, "Setting Up PeopleSoft Payables Withholding," Defining Withholding Codes, page 288.

Step	Purpose	Navigation
On the Report Definition 1 page, do the following: - Create a report line row for each class you defined under the PAYG withholding type. - Select the type/jurisdiction/class combination in the Report Line Definition group box.	Tells the system the selection criteria for withholding reports. Also tells the system the layout of the withholding reports based on the tax authority's reporting and filing requirements. Note. Due to the need for additional parameters, the PAYG reports do not use the usual mechanism to launch withholding reports. Therefore, there is no need to set up report associations on the Report Definition 2 page.	Set Up Financials/Supply Chain, Product Related, Procurement Options, Withholding, Report Definition, Report Definition 1 See Chapter 13, "Setting Up PeopleSoft Payables Withholding," Setting Up PeopleSoft Payables Withholding Reports, page 289.
Set up the ATO withholding entity and ChartFields on the Withholding and Withholding ChartFields pages in the Procurement Control component.	Tells the system which withholding entities and types are associated with the business unit. Also tells the system which ChartFields should be used when creating the liability entry.	Set Up Financials/Supply Chain, Business Unit Related, Procurement, Procurement Control, Withholding See Chapter 4, "Setting Up PeopleSoft Payables Business Units," Selecting Withholding Options, page 47.

How Information is Displayed on ATO Forms

This table shows how information entered in PeopleSoft Financials is displayed on all three ATO forms:

Labels on ATO Form	Fields on Pages	Page and Navigation
Your ABN	Tax ID	Report Control Information - Payor Data page Select Set Up Financials Supply Chain, Product Related, Procurement Options, Withholding, Report Control Information, Payor Data.
Branch Number	Transmitter Cntl Cd	Report Control Information - Payor Data page
Payer's Name (line 1 and line 2)	Transmitter Name 1 and Transmitter Name 2	Report Control Information - Payor Data page
Payee's Address (line 1 and line 2) Suburb/Town, Country, State, Postcode	Address 1 and 2, City, Country, State, Postal	Address page Select Vendors, Vendor Information, Add/Update, Vendor, Address.

This table shows how information entered in PeopleSoft Financials is displayed for Voluntary Agreement vendors:

Label on ATO Form	Field on Page	Page and Navigation
Payee ABN	VAT Registration ID	VAT Registration Details Select Vendors, Vendor Information, Add/Update, Vendor, Identifying Information. Click the Registration link on the Identifying Information page to access the VAT Registration Details page.

This table shows how information entered in PeopleSoft Financials is displayed for Labor Hire vendors:

Label on ATO Form	Field on PeopleSoft Page	Page and Navigation
Payee Tax File Number	Tax District Reference Note. Make sure you leave the Taxpayer Identification Number blank.	Withholding Vendor Information Select Vendors, Vendor Information, Add/Update, Vendor, Location. Click the Global/1099 Withholding link on the Vendor Information - Location page and select the Additional Information tab in the Withholding Information group box.

This table shows how information entered in PeopleSoft Financials is displayed for No ABN vendors:

Labels on ATO Form	Fields on PeopleSoft Page	Page and Navigation
Payee Trading Name (line 1 and 2)	Name 1 and Name 2	Address Select Vendors, Vendor Information, Add/Update, Vendor, Address. Expand the Payment/Withholding Alt Names section to access the Withholding Alternate name group box.
Payee Phone Contact	Prefix and Telephone	Address Select Vendors, Vendor Information, Add/Update, Vendor, Address. Expand the Payment/Withholding Alt Names section to access the Phone Information group box.

Posting Withholding Report Data

The reports require aggregated data to be present in the Withholding Report table. Data is aggregated into the Withholding Report table through the Withholding Reporting process, which you can run from the Withhold Report Post page or from the Create PAYG Report Information page.

Whether you launch the Withholding Reporting process from the Withhold Report Post page or from the Create PAYG Report Information page depends on what dates you need to use to summarize withholding.

If your dates fall on the start and end of a period in a calendar, which would be the case when aggregating for year-end reporting, use the Withhold Report Post page. The from and through dates, which are hidden, are based on the start and end dates of the specified calendar period.

If you need to aggregate payments between arbitrary dates, which can be the case if you get a request for a payment summary from one of your vendors during the fiscal year, then you can use the Create PAYG Report Information page to specify arbitrary from and through dates.

Remember that the ATO wants summary reports to exclude payments that have already been reported on previous summaries; therefore, you have to enter appropriate dates. Except for the handling of from and through dates, both methods give the same results as they pass the same parameters to the same process.

Running the PAYG Vendor Reports

PAYG reports for all three classes of PAYG vendors are run by selecting Vendor, Withholdings, PAYG Withholding by Vendor.

At the minimum you need to specify the Report ID, the Vendor SetID and the Vendor ID on this page.

If the information you have provided uniquely identifies the data you want processed in the Withholding Report table, the system defaults the rest of the fields automatically. This would typically happen with vendors for whom you have only set up one location and which you are only paying from one business unit.

In this case, it saves you from having to enter the Vendor Location,Business Unit and Location.

If the Draft Flag check box is deselected, the report is set to print directly into the boxes on the standard ATO form. If you select the Draft Flag, the report prints explanatory labels above each field, so that you can read the results more easily on plain paper. The system displays the from and through dates to remind you what dates the payments were summarized on.

Note. The PAYG No ABN Quoted report, APY8043.SQR, actually prints one page per payment, rather than one report that sums up the amounts paid during the specified time. That means that you may print several pages or forms from APY8043.SQR if you have made several payments to the specified vendor during that time.

Printing the Reports

Direct printing on ATO forms requires an impact printer as the forms use carbon copies. There are no feeding sprockets to guide the paper, so you will need to position the paper precisely, which depends on the printer model. On test printers, we lined up the printer 1/8 inch above the yellow shaded boxes and immediately below the Payment Summary for year ending 30 June (see the red line in the following illustration):

Payment Summary

Australian
Taxation Office

What this form is for

This form is used to provide details of amounts withheld.

Print neatly in **BLOCK LETTERS** with a black pen only.

Do not use rubber stamps to show Tax File Number, name

Payment Summary for year ending 30 June

Payer details

Payer's name

**Your Australian Business
or Withholder**

ATO Payment Summary Form

To minimize compatibility issues with older printers, the reports print a pure ASCII file, rather than the usual PCL commands found in our regular SQRs. Some of the test printers had problems printing the report date because it was so close to the end of the forms that the printer thought that it was out of paper.

To avoid requesting a page feed when printing on an ATO form, we have added a hardcoded switch in APY804.SQC to allow you to skip printing of the report date.

Set this variable to 0 if you have problems with printing the report date. In this case, you will have to fill in the report date by hand.

Let #print_report_date = 0

Let #print_report_date = 1

This switch has no effect when in Draft mode because printing starts at the top of the page.

Printing the PAYG Payment Summary Reports

Under the PAYG Withholding System, payers are required to submit the PAYG Payment Summary Statement form by August 14 to the ATO each year together with the ATO originals of all payment summaries listed on the form. The PAYG No ABN Quoted Summary Statement is submitted separately from this form as per the ATO guidelines.

The PAYG Payment Summary Statement form is a reconciliation report. It comprises the total number of payment summaries issued during the financial year, which must equate to the total amount of gross and tax withheld reported on the form.

After generating all Payment Summaries for Voluntary Agreement and Labor Hire through the APY8041 and APY8042 processes respectively, the system writes the payment information required for the PAYG Payment Summary Statement to the Withholding Report Log. This is irrespective of whether the Issued check box on the Withholding by Vendor page is selected or deselected. Selecting the Issued check box flags the payment to be included in the PAYG Payment Summary Statement process. Deselecting the Issued check box represents a duplicate print to be excluded from the above process.

The Withholding Report Log page displays the relevant information for each of the respective types of payment summaries issued during the financial year. Payments summaries which you have issued to your Payees, and which should be included in the Payment Summary Statement, must have the Issued check box selected. For all payment summary printouts that are duplicated, deselect the Issued check box to exclude them from the Payment Summary Statement.

After you choose all the withholding report history on the Withholding Report Log page by selecting or deselecting the Issued check boxes, you can execute the PAYG Payment Summary Statement process from the Withholding Summary page. For form printing using impact printers, deselect the Draft Flag check box. For draft print mode, select the Draft Flag check box. To freeze the fiscal year so that no one can modify the data once you have reported it to the ATO, select the Close Fiscal Year check box.

Adjusting or Entering Payment Summary Data Manually

If you issued payment summaries by filling in the Voluntary Agreement and Labour Hire forms manually, you can enter that information directly in the Withholding Report Log page. This allows you to meet your reporting requirements for the PAYG Payment Summary Statement.

To add a vendor or payee, click the Add a new row button. Enter the information for the vendor in the Vendor Information group box. You can also enter any required payment summary data manually in the Withholding Information group box.

If you enter data manually, do the following:

- Make sure that the Issued check box and amounts agree with the payment summaries you have issued to your vendors.
- Make sure the withholding type is correct for the vendor type. It should be either VOLAG, LABHR, or NOABN in capital letters. The system expects all vendors to be of the same withholding type. The APY8044 process only selects the VOLAG and LABHR withholding types.
- The entry in the Fiscal Year field determines whether it appears on the PAYG Payment Summary Statement for a given year. It is your responsibility to ensure that the fiscal year matches the from and through dates that you indicate and also the contents of your payment summaries. The system does not validate according to the Australian fiscal year calendar.

Alternatively, instead of filling in this page manually, you could run the APY8041, APY8042, or APY8043 (for No ABN Payment Summaries) reports for the same vendors and reporting periods as you had previously filled in manually on the forms.

The system allows manual adjustments where necessary, as mentioned previously. The Payment Summary reporting processes would then update the historical data automatically and you could update the page as required.

PAYG Payment Summary Statement Form:

The horizontal alignment recommended for impact printers is 2 ¹/₁₆ inches from the top of the form. As a result, it will print the fiscal year at the top of the boxes. The data should fit into its respective boxes. Initially, you may need to make several adjustments before getting all the data to print in the correct boxes.

When you finalize the payment reports for the financial year and ensure that all payment summaries have been reconciled to the payment statement, it is recommended that you close the financial year by selecting the Close Fiscal Year check box and then running the APY8044 process. This process locks the data for that fiscal year and prevents payment transactions from being reported for the fiscal year for which you have already provided summary reports to the ATO.

Furthermore, the payment information for closed periods will not be available on the Withholding Report Log page. You can view all historical payments against closed fiscal years through the withholding inquiries (Vendor, 1099/Global Withholding, Review), however, you cannot make further modifications to historical data.

Common Elements Used in This Section

Business Unit	Select the business unit for which you want the reports to be created.
Draft Flag	Select this check box to print onto a sheet of regular A4 paper. In this case, the report also prints labels for the data. Deselect this check box if you want the reports to print directly into the boxes of the ATO forms. Direct printing on ATO forms requires an impact printer as the forms use carbon copies.
Location	Select the location of the withholding entity for which you want the reports to be created.
Report Date	Select the date on which you created your reporting information.
Report ID	Select the Report ID of the report for which you want to generate data.
Request ID	Specify a request ID and a description. The system uses these IDs to track each posting request; however, the Request ID can be used repeatedly. The Process Scheduler Request ID is the unique number.
Vendor SetID	Select a vendor setID for the vendors for which you want to run the reports.
Vendor Location	Select the vendor location for which you want the reports to be created.
Vendor ID	Select the ID of the vendor for which you want the reports to be created.
Withholding Entity	Select the withholding entity or taxing authority for which you want the reports to be created.

Chapter 45

(IND) Processing Excise Duty, Sales Tax, VAT, and Customs Duty for India in PeopleSoft Payables

This chapter discusses how to:

- Create third-party vouchers with customs duty.
- Process PeopleSoft Payables vouchers with excise duties, sales tax, and VAT.

Creating Third-Party Vouchers with Customs Duty

This section provides an overview of customs duty processing for India and third-party vouchers and discusses how to:

- Create the voucher.
- Add or modify the customs duty amount.
- View recoverable and nonrecoverable amounts.

Understanding Customs Duty Processing for India

Basic customs duty is calculated based on the assessable value of the item. Because the assessable value plus the calculated duty equal the base amount, the duty along with additional and special duty must be calculated in a specific order. The customs duty is calculated in the following order:

1. The customs authority holds and assesses the goods being imported.
The duty payable must be paid to the customs authority before the goods are released.
2. The customs authority issues a bill of entry (BOE) assessing the duty payable.
3. Send the BOE to purchasing for processing.
4. Pass the BOE to accounts payable where the third-party voucher is used to enter and pay the customs authority.
5. Copy the purchase order (PO) into the third-party voucher to ensure that the items or distribution are reflected on the third-party voucher.

6. Override the amounts copied into the third-party voucher from the PO and enter new custom duty codes (the amounts as shown on the PO are generally different from what is actually payable to customs authorities) using the Invoice Line Custom Duty Tax Detail page.

When a new customs duty is added to the voucher line, the amount should roll up to the header. Also, at the time of creation of third-party voucher for payment to custom authorities, receiving is not complete; therefore, the third-party voucher cannot be created on the basis of receipts.

7. Pay the customs authority.
8. After the payment is made, the goods are released and a receiver is entered.

Associate the receiver to the third-party voucher.

9. Run the Landed Cost Extraction Application Engine process (LC_EXTRACT).

The Landed Cost Extraction process captures any variances between the PO calculated amount and the amount entered on the third-party voucher and correctly cost the inventory.

Note. The customs duty assessable value should not be confused with the excise assessable value defined on the Item Tax Applicability page.

See *PeopleSoft Global Options and Reports 9.1 PeopleBook*, "(IND) Setting Up Excise Duty, Customs Duty, Sales Tax, and VAT."

Understanding Third-Party Vouchers

You must create vouchers for customs duty by copying from the PO. This ensures that the percentage of recoverable and nonrecoverable custom duty populates to VCHR_LN_EXS_DTL. If the actual amounts differ from those on the BOE, override them on the voucher. After you send payment to the government and create the receiver, reopen the voucher and associate the receiver. Otherwise, the Landed Cost Extraction process does not allocate the customs duty.

Note. Customs duty charges are nonprorated.

To create third-party vouchers for customs duty:

1. Create a third-party voucher by selecting *Third Party Voucher* in the Voucher Style field in the Voucher component (VCHR_EXPRESS).

- Click the Copy PO button in the Copy from a Source Document group box on the Invoice Information page to copy from the PO to create the third-party voucher.

This copies the customs duty charges from the PO. The duty amounts appear by default on the Invoice Line Custom Duty Detail page. If you change amounts in the Tax Amount field and tab out, the system recalculates the amounts in the custom duty Recovery Amount and custom duty Non Recovery Amount fields.

Note. Amount fields are not populated from the PO if the transaction currency of the PO is different than the third-party voucher currency.

For example, if the PO transaction currency is USD (for import purchase orders vendor is normally outside of India) and the third-party voucher transaction currency is INR (for the Indian customs authority), the PO copy function does not populate required fields. In order to copy required fields from the PO, change the transaction currency of the third-party voucher to be in sync with the transaction currency of the PO (USD). After changing the transaction currency on the voucher header, copy from the PO to create the third-party voucher. Specify the correct payment currency at the time of payment (INR).

- Issue the payment and send it along with the BOE to the appropriate government agency.
- When the government receives your payment and releases your goods, create the receiver and manually associate the receiver to the third-party voucher.

Manually associating the receiver enables the Landed Cost Extraction process to properly allocate the nonmerchandise costs.

Note. The Associate Receiver(s) link on the third-party voucher is only available to custom duty vouchers. This link is not available until the PO copy function is performed. You can then associate receivers to the third-party voucher. The Associate Receiver(s) link is available if the third-party voucher is not posted or posted.

Invoice Line Custom Duty Tax Detail page

- Custom Duty Applicable

This is selected if the vendor is defined as custom duty applicable in the Vendor Location Tax Applicability page.
- Custom Duty Details
- Tax Type

Displays C for customs duty tax type.
- Tax Component Code

Displays the customs duty tax elements. The total of these elements would be the amount remitted to the customs authorities. Values are:

BCD (basic customs duty).

ACD (additional customs duty).

SAD (special customs duty).

Note.

Additional customs duty tax elements include ADD (anti dumping duty), SGD (safeguard duty), and CVD (countervailing duty).
- Basis Amount

Displays the assessed value of the item. The BCD is calculated based on the assessed value of the item. The other elements are compounded, meaning that the assessed value plus the duty amount calculation form the basis for the other amounts. Because assessed value plus the calculated duty are the basis amount, ACD and SAD must be calculated in that order, respectively.

Tax Amount	Displays the basis amount multiplied by the tax rate percentage. Enter a tax amount to override the amount displayed. When you tab out of this field, the system recalculates the amounts in the Recovery Amount and the Non Recovery Amount fields.
Rcvry Percent (recovery percent)	Displays the recoverable tax percentage defined on the Tax Calculation Code page.
Recovery Amount	Displays the amount which can be reclaimed. Tax amount multiplied by the recovery percentage.
Non Recovery Amount	Displays the amount which cannot be reclaimed and is generally included in the total cost of the item. The difference between the tax amount and the recovery amount.

Viewing Recoverable and Nonrecoverable Amounts

Access the Voucher Custom Duty Summary page (click the Custom Duty Summary icon on the Invoice Information page).

Processing PeopleSoft Payables with Excise Duties, Sales Tax, and VAT

This section discusses the PeopleSoft Payables functionality specific to India excise duty, sales tax, and VAT processing, which includes minor changes to data entry and to processing. This section discuss how to:

- Create vouchers with excise duty, sales tax, and VAT.
- Enter voucher excise duty, sales tax, and VAT details.
- Copy PO and receiver information into vouchers.

- Post vouchers.

Pages Used to Process PeopleSoft Payables with Excise Duties, Sales Tax, and VAT

See Also

PeopleSoft Global Options and Reports 9.1 PeopleBook, "(IND) Setting Up Excise Duty, Customs Duty, Sales Tax, and VAT," Tax Calculation Code Default Hierarchy

Creating Vouchers with Excise Duty, Sales Tax, and VAT

Access the Invoice Information page (Accounts Payable, Vouchers, Add/Update, Regular Entry, Invoice Information).

You can create vouchers with excise duty, sales tax, and VAT by using the following voucher styles: regular voucher, reversal voucher, register voucher, or adjustments. When you create vouchers, either online using the Voucher component or in batch using the Voucher Build Application Engine process (AP_VCHRBLD), do not enter the gross amount in the header. Rather, enter only the individual voucher line information. At save time, the system calculates excise, sales taxes, and VAT, and the gross amount.

Note. When you create vouchers online using the Voucher component the system generates an error message if it calculates a gross amount value that is different from the one that you have entered manually. Change the gross amount to the system-calculated value or modify the tax parameters.

When you create vouchers using the Voucher Build process the system will overwrite the header gross amount entered by the user with the amount calculated by the AP India Tax Calculation Application Engine process (APVEDTPREX).

Excise/Sales Tax

Click this link to access the Invoice Line Excise Duty/Sales Tax/VAT Detail page. This link appears when you create an excise, sales tax, or VAT applicable voucher.

Entering Voucher Excise Duty, Sales Tax, and VAT Details

Access the Invoice Line Excise Duty/Sales Tax/VAT Detail page (click the Excise/Sales Tax link on the Invoice Information page).

OK Cancel Refresh

Invoice Line Excise Duty/Sales Tax/VAT Detail page

Until the voucher is posted, you can enter or override tax information for the following fields:

- Transaction Type.
- Excise Tax Rate Code.
- Tax Rate Code.
- Ship To Location.

Click Calculate to recalculate and display new tax amounts.

Excise, sales tax, and VAT calculations are performed by the global common routine that is called during voucher online creation and the Voucher Build process. The excise, sales tax, and VAT calculations are based on the defaults defined if no changes are made to this page.

Copying PO and Receiver Information into Vouchers

You can copy PO or receiver information in two ways. You can copy:

- An entire PO or receiver.
- Individual lines from one or more POs or receivers from the worksheet.

Because tax rate structures are subject to change, PeopleSoft Payables copies only static information such as tax transaction type and tax category. The Tax Determination process determines the tax rate and codes at the time of voucher save. To determine and calculate tax, PeopleSoft Payables copies:

- Tax transaction type.
- Item tax category for excise duty, sales tax, and VAT.
- Vendor tax category for excise duty, sales tax, and VAT.

Note. Detail tax codes from EXS_PO_SHIP_TAX are not copied from PeopleSoft Purchasing. They are determined in PeopleSoft Payables.

Posting Vouchers

Sometimes, you can recover a portion of sales tax or VAT. At voucher post, the system creates accounting entries to track and accrue sales tax or VAT, both recoverable and nonrecoverable, and excise tax.

This table lists the accounting entries that the system creates during voucher posting for sales tax, VAT, and excise tax:

<i>Distributed Account Type</i>	<i>Account</i>	<i>Other ChartFields</i>	<i>Debit</i>	<i>Credit</i>
APA	APLIAB			134.00
DST	EXPENSE	CF10	110.00	
CNCA	CENVAT1	CF1	15.00	
STSO	SETOFF1	CF1	5.00	

<i>Distributed Account Type</i>	<i>Account</i>	<i>Other ChartFields</i>	<i>Debit</i>	<i>Credit</i>
STSO	SETOFF2	CF2	4.00	

This table lists the accounting entries that the system creates during voucher posting for customs duty tax:

<i>Distributed Account Type</i>	<i>Account</i>	<i>Other ChartFields</i>	<i>Debit</i>	<i>Credit</i>
APA	APLIAB			3287.13
DST	EXPENSE	CF10	418.71	
CNCI	CUSTOM	CF1	2868.42	

Chapter 46

(IND) Setting Up and Processing Tax Deducted at Source for India

This chapter provides an overview of tax deducted at source (TDS) transactions, and discusses how to:

- Set up TDS organizational details.
- Set up TDS processing.
- Process TDS transactions.
- Report TDS transactions.

Understanding Tax Deducted at Source Transactions

TDS is a form of withholding with complex rules and regulations. Different rules apply to different types of payments. TDS requires that you calculate withholding when you book the liability (meaning, when you post the voucher) or when you make the payment, whichever is earlier. Some types of withholding are calculated only after you reach or exceed a set minimum basis amount. When the minimum basis amount is exceeded, the system calculates withholding for prior amounts and future transactions. TDS also has surcharges in addition to the calculated withholding. For Education Cess, you also define an additional surcharge percent.

PeopleSoft Payables provides a withholding architecture that enables you to meet the withholding requirements for India. You can easily calculate surcharge and tax amounts and report accurate TDS and Education Cess information when required. PeopleSoft Payables has modified several pages to enable TDS processing.

To process TDS reporting:

1. Set up withholding information at the withholding, business unit, and vendor levels.
2. Specify the (Basic Statistical Returns (BSR) code of the withholding entity's vendor bank account on the Vendor Bank Account Options collapsible region on the Vendor Information - Payables Options page.
3. Create a voucher on the withholding vendor.
4. Post the voucher.
5. Create a payment to the withholding vendor.
6. Post the payment.
7. Run the Withholding Posting Application Engine process (AP_WTHD).

8. Update the TDS Challan information using the Update TDS Challan Information page.
9. Run the Withholding Reporting Application Engine process (AP_WTHDRPT).
10. Run the TDS Register (APY8070) and the TDS Certificate (APY8080) reports.

This diagram illustrates the process flow of TDS in PeopleSoft Payables:

TDS process flow

Note. The voucher must be paid and the payment posted prior to the withholding posting.

Setting Up TDS Organizational Details

To set up your TDS organizational details, use the following components:

- Organization Details (ORG_RGSTN_DTL).
- Tax Location (ORG_TAX_LOC).

- Certificate Numbering (WTHD_CRTIFICATE_NUM).

This section discusses how to:

- Define income tax registration details.
- Define tax location details.
- Set up automatic TDS certificate numbering.

Note. Setting up TDS organizational details is similar to setting up your organizational structure for excise duty, sales tax, VAT, and customs duty for India.

See Also

PeopleSoft Global Options and Reports 9.1 PeopleBook, "(IND) Setting Up Excise Duty, Customs Duty, Sales Tax, and VAT"

Pages Used to Set Up TDS Organizational Details

Page Name	Definition Name	Navigation	Usage
Organization Details	ORG_RGSTN_DTL	Set Up Financials/Supply Chain, Common Definitions, Excise and Sales Tax/VAT IND, Organization details, Organization Details	Specify a permanent account number (PAN), PAN ward, and PAN circle for TDS processing.
Tax Location - Tax Location Definition	ORG_TAX_LOC	Set Up Financials/Supply Chain, Common Definitions, Excise and Sales Tax/VAT IND, Tax Location, Tax Location Definition	Specify a TAN number, TAN ward, and TAN circle for TDS processing.
Certificate Numbering	WTHD_CRTIFICATE_NUM	Vendors, 1099/Global Withholding, Global Withholding Reports, TDS Certificate Numbering, Certificate Numbering	Define the certificate numbering for each PeopleSoft Payables business unit and withholding entity.

Defining Income Tax Registration Details

Access the Organization Details page (Set Up Financials/Supply Chain, Common Definitions, Excise and Sales Tax/VAT IND, Organization details, Organization Details).

PAN Number (permanent account number)	Enter the number assigned by the income tax authority to identify your organization's tax returns. This number must be a 20-digit alphanumeric value.
PAN Ward and PAN Circle	Enter the location of the income tax offices to which your organization submits its taxes. Tax authorities assign these values. Wards and circles can change at the discretion of the income tax authority.

See Also

PeopleSoft Global Options and Reports 9.1 PeopleBook, "(IND) Setting Up Excise Duty, Customs Duty, Sales Tax, and VAT," Defining Organization Details

Defining Tax Location Details

Access the Tax Location - Tax Location Definition page (Set Up Financials/Supply Chain, Common Definitions, Excise and Sales Tax/VAT IND, Tax Location, Tax Location Definition).

TAN Number	Enter the code assigned to you by the tax authorities that represents the location of the income tax office where your taxes are paid.
TAN-Ward and TAN-Circle	Enter the ward and circle associated with your TAN. Tax authorities assign these values. Wards and circles can change at the discretion of the income tax authority.
Journal Template	Select the journal template to use to record tax accounting entries for the general ledger business unit. These templates define the summarization rules for creating journals that are passed to the general ledger.

See Also

PeopleSoft Global Options and Reports 9.1 PeopleBook, "(IND) Setting Up Excise Duty, Customs Duty, Sales Tax, and VAT," Defining Tax Locations

Setting Up Automatic TDS Certificate Numbering

Access the Certificate Numbering page (Vendors, 1099/Global Withholding, Global Withholding Reports, TDS Certificate Numbering, Certificate Numbering).

Pre Fix 1	Specify, for example, a company name or a PeopleSoft Payables business unit short name.
Pre Fix 2	Specify, for example, the financial year.

Start From Number

Specify a number from which the system begins assigning a ten-digit serial number for each PeopleSoft Payables business unit.

Note. Statutory returns must be filed separately for each TAN number.

Setting Up TDS Processing

To set up your TDS processing, use the following components:

- Withhold Rule (WTHD_RULE).
- Withhold Type (WTHD_TYPE).
- Withhold Jurisdiction (WTHD_JURISDICTION).
- Vendor Categories (WTHD_VNDR_CAT).
- Withholding Entity (WTHD_ENTITY).
- Procurement Control (BUS_UNIT_INTFC2).
- Vendor Information (VNDR_ID).

This section discusses how to:

- Define TDS surcharges.
- Define types and classes.
- Define jurisdiction.
- Define vendor categories.
- Define TDS withholding entities.
- Define the PAN and ward numbers.
- Define the PAN and ward numbers for vendors.
- Define the BSR code.

Note. Setting up TDS processing is similar to setting up your global withholding environment.

Withholding Entity page

Withholding Entity

Apply Withholding

Select either *Payment* or *Vchr Post* (voucher post) to determine when withholding occurs. The default value is *Payment*.

Round Option

Select to indicate how the system should round to whole monetary amounts. Options are:

Down: Select this value to round amounts down to the next whole number, regardless of actual decimal amount.

Natural: Selecting this value rounds decimal amounts of less than 0.5 down to the next whole number, and rounds amounts of more than 0.5 up to the next whole number. Note that this option uses a function to determine the decimal precision to which to round the amount, depending on the installed currency configuration.

(IND) *NRR* (Nearest Rupee Rounding): Select to round to the nearest Rupee. If an amount contains a part of a rupee consisting of paise then, if such part is fifty paise or more, it will be increased to one rupee and if such part is less than fifty paise, it will be ignored. If the transaction currency is different from the base currency, the transaction amounts will not be rounded. Only the base amounts will be rounded.

TDS: Selecting this value rounds decimal amounts to the appropriate zero decimal, regardless of the installed currency configuration.

Up: Select this value to round amounts up to the next whole number, regardless of actual decimal amount.

Main Information Tab

Select the Main Information tab.

Create Withholding Payment Select if you want to create separate payments for the withholding.

Otherwise, withholding is not calculated, although basis amounts are reported.

Note. Creating a zero percent withholding rule accomplishes the same result.

Withholding Rule

Select the withholding rule to which these categories apply.

Hold Payment

Select to hold these payments. The available options are:

Hold All: Hold both the payment and the withholding amount.

No Hold: Do not hold the payment or withholding amount.

Withd Only: Hold the withholding amount only.

You can override the option you select here at the vendor level on the Withholding Vendor Information page.

Note. If you wish to hold the vendor's payment, you can set the rule at zero percent and set the hold option to *Hold All*.

Additional Information Tab

Select the Additional Information tab.

Min Basis (minimum basis) and Min Withhold (minimum withhold)	These fields are not used for TDS processing. Leave these fields blank. Note. The actual threshold amount is checked against the withholding rule.
Payment Terms ID	Enter a term to indicate when the withholding portion of the voucher will be paid to the withholding entity.
Cumulative	Select to indicate that the system should monitor voucher totals until it reaches the threshold amount that you specified on the withholding rules. Vouchers must have identical values for the withhold entity, type, jurisdiction, class, rule, vendor ID, and contract reference fields. Once it reaches that amount, the system calculates withholding on previous vouchers and on future vouchers as they are entered. Note. When the cumulative flag is not selected, the system calculates withholding on vouchers once the threshold limit is crossed but does not include previous vouchers. See Chapter 46, "(IND) Setting Up and Processing Tax Deducted at Source for India," Calculating Withholding, page 1276.

PeopleSoft Source-to-Settle Common Information 9.1 PeopleBook, "Maintaining Vendor Information," Defining Vendor Bank Accounts

Processing TDS Transactions

This section discusses how to:

- Review and enter withholding information for vouchers.
- Post vouchers.
- Process payments.
- Post payments.
- Calculate withholding.
- Update Challan information.
- Update acknowledgement numbers.

Note. Processing TDS transactions is similar to processing withholding transactions. We've documented the additional steps required for TDS processing in this section.

See Also

[Chapter 42, "Processing Withholding in PeopleSoft Payables," page 1151](#)

Pages Used to Process TDS Transactions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Withholding Information	VCHR_WTHD_EXP	Click the Withholding link on the Invoice Information page.	Override the withholding for the individual voucher lines, and specify a contract reference number, if applicable.

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Voucher Posting Request	PST_VCHR_RQST	Accounts Payable, Batch Processes, Vouchers, Voucher Posting, Voucher Posting Request	Initiate the Voucher Posting Application Engine process (AP_PSTVCHR).
Update TDS Challan Information	WTHD_CHLN_INFO	Accounts Payable, Batch Processes, Update TDS Challan Info, Update TDS Challan Information	View and update Challan information for TDS reporting.
Update Acknowledgement Number	UPD_ACKNO_PG	Accounts Payable, Batch Processes, Update TDS Akno Number	Enter acknowledgement numbers to be printed on the TDS certificate.

Reviewing and Entering Withholding Information for Vouchers

Access the Withholding Information page (click the Withholding link on the Invoice Information page).

Specify a contract reference number, if applicable. Override withholding information for the individual voucher lines.

Note. The functionality for regular and prepaid vouchers for TDS processing is similar to processing general withholding transactions. While applying the prepayment against a voucher, the computation of TDS is the difference between the voucher TDS amount less the prepayment TDS amount.

During final voucher processing, PeopleSoft Payables verifies that both the type of payment (type and class) under the voucher and prepayment are the same.

See Also

[Chapter 14, "Entering and Processing Vouchers Online: General Voucher Entry Information," Entering Invoice Information for Online Vouchers, page 303](#)

[Chapter 42, "Processing Withholding in PeopleSoft Payables," page 1151](#)

Posting Vouchers

Access the Voucher Posting Request page (Accounts Payable, Batch Processes, Vouchers, Voucher Posting, Voucher Posting Request).

The Voucher Posting Application Engine process (AP_PSTVCHR) performs the withholding calculations. The Voucher Posting process calls the Withhold Calculation Application Engine process (AP_WTHDCALC) to determine whether withholding vouchers exist.

Note. After you pay a voucher, you cannot unpost it.

See Also

Chapter 23, "Running Voucher and Payment Posting," Running the Voucher Posting Process, page 754

Processing Payments

Payment processing for TDS involves the following modifications:

Payment Selection and Creation

You must first post vouchers so withholding can be calculated; otherwise, the system excludes them from the pay cycle.

Withholding Calculation

A surcharge field computes the surcharge based on the tax amount calculated based on the withholding rule that you defined during TDS setup.

See Also

Chapter 21, "Processing Pay Cycles," Running and Managing Pay Cycles, page 650

Posting Payments

Accounting Entries are created during payment posting.

Vendor Payment

This table lists the accounting entries that are to be created for a vendor payment:

<i>Account</i>	<i>Debit</i>	<i>Credit</i>
AP Liability	8980	
Bank		8980

TDS Payment

This table lists the accounting entries that are to be created for a TDS payment:

<i>Account</i>	<i>Debit</i>	<i>Credit</i>
Withholding Liability	1020	
Bank		1020

See Also

Chapter 23, "Running Voucher and Payment Posting," Running the Payment Posting Process, page 756

Calculating Withholding

The Withhold Calculation process monitors the withholding basis amount. Select the Cumulative option on the Withholding Entity page to indicate that the system should monitor voucher totals until it reaches the threshold amount that you specify.

Cumulative Option Selected

When a vendor's vouchers sum exceeds the threshold amount for a contract or for a period, the system calculates withholding for that vendor based on the total accumulated amount including the vouchers entered previously. After that vendor reaches the threshold amount, the system calculates withholding on every subsequent voucher based on the gross payment amount or transaction amount.

For example, the threshold amount is 10,000 INR for a given withholding rule and the Cumulative check box is selected. You create 3 vouchers with identical values for the withhold entity, type, jurisdiction, class, rule, vendor ID, and contract reference: V1 for 8000 INR, V2 for 7000 INR, and V3 for 5000 INR for withholding period 1. When V1 is voucher posted, no withholding entity payment schedule will be created since the voucher total amount has not reached the threshold of 10,000 INR for period 1. When V2 is posted, the withholding entity payment schedule will be created based on 15,000 (8000 INR from V1 + 7000 INR from V2) since the voucher total has exceeded the threshold. When V3 is posted, the withholding will be calculated for the voucher amount (5000 INR).

Cumulative Option Not Selected

If you do not select the Cumulative option, the system bases the withholding calculation on the withholding basis amount and the period withholding tier rule defined in the system.

Scheduled Pay Date

The system determines the scheduled pay date based on the accounting date if withholding is called at the time of voucher posting. The system stores withholding basis and withholding amounts to monitor the total amounts.

Note. The PeopleSoft Payables calculation module calculates withholdings at voucher posting or at payment processing, depending on the withholding calculation setting on the withholding entity and the voucher. Calculation for TDS transactions are performed at voucher posting. For those withholding transactions calculated at payment posting, the system determines the scheduled pay date based on the payment date.

Education Cess

In addition to calculating withholding and the surcharge amount for TDS requirements, PeopleSoft Payables also calculates the Education Cess tax levy. Use the Withhold Rule page to define the surcharge percentages and rule details for Education Cess. The system uses the withhold rule to calculate Education Cess. For example:

- Invoice amount = 50,000 INR.
- Percent withheld = 20.
- Surcharge % = 2.
- Additional surcharge % = 2.

The withhold amount is 10,000 INR (50,000 INR * .20). The surcharge amount is 200 INR (10,000 INR * .02). The system calculates the Education Cess amount by adding the withhold amount and the surcharge amount and multiplying that amount by the additional surcharge. The Education Cess amount is 204 INR ((10,000 INR + 200 INR) * .02). Therefore, the total gross amount for the withholding vendor is 10,404 INR (10,000 INR + 200 INR + 204 INR).

1												

Update TDS Challan Information page

- Calendar Setid, Calendar ID, Fiscal Year, and Period**

Enter calendar, fiscal year, and period search information. The system returns and displays payment details whose withholding declaration date is within the period entered in the Period field.
- Retrieve All Lines**

Select check box to retrieve all lines. The system obtains and displays all payment details regardless if a Challan ID number or date of deposit has already been entered against the payment ID.

Paid Amount	Displays the total of the amounts paid for all vendors with the same payment reference.
Challan ID Num (Challan ID number)	Enter the Challan ID number for that payment. The system displays the Challan ID number on the TDS Certificate (APY8080).
Deposit Date	Enter the date the tax payment was deposited as stamped by the bank on the Challan. The system displays the deposit date on the TDS Certificate (APY8080).

Fourth Quarter		0.000	0.000

Update Acknowledgement Number page

Business Unit	Displays the business unit entered on the Add a New Value page.
Withholding Entity	Displays the withholding entity entered on the Add a New Value page.
Calendar SetID	Displays the calendar setID entered on the Add a New Value page.
Calendar ID	Displays the calendar ID entered on the Add a New Value page.
Fiscal Year	Displays the fiscal year entered on the Add a New Value page.

Period	Displays the period entered on the Add a New Value page.
First Quarter,Second Quarter,Third Quarter, and Fourth Quarter	Enter the acknowledgement number of the previous quarter's TDS return for each quarter. These are place holders for the acknowledgement numbers received from the tax department after filing the returns for first, second, third and fourth quarters respectively. The values entered here will be displayed on the TDS certificate.
Tax Deducted	Enter the amount of tax remitted in respect of the deductee in relevant quarter.
Tax Deposited	Enter the amount of tax deposited in respect of deductee in relevant quarter.

Reporting TDS Transactions

PeopleSoft Payables provides TDS reports that conform to the withholding reporting requirements for India. These reports include:

- TDS Register (APY8070).
- TDS Certificate (APY8080).
- TDS Challan Information report (APY8085).
- Work Contract Certificate (APY8090).

This section lists the pages used to report on TDS transactions.

Pages Used to Report TDS Transactions

<i>Page Name</i>	<i>Definition Name</i>	<i>Navigation</i>	<i>Usage</i>
Withhold Report Post	WTHD_RPT_POST	Vendors, 1099/Global Withholding, Global Withholding Reports, Create Reporting Information, Withhold Report Post	Run the Withholding Reporting Application Engine process (AP_WTHDRPT) to populate the Withholding Report table with data from the Withholding Transaction table based on your report setup. Select the Withhold Certificate check box to generate the necessary information for TDS certificates. Select the Quarterly Return Certificate check box to generate the necessary information for TDS quarterly certificates. This check box is available if a quarterly calendar is selected.
TDS Reports	RUN_APY8070	Vendors, 1099/Global Withholding, Global Withholding Reports, TDS Reports, TDS Reports	The TDS Register (APY8070) contains information that is similar to the TDS Challan Information report (APY8085). Use the TDS Register to view detailed information for each withholding class and vendor on TDS applicable vouchers and related payments issued to the withholding entity. It also includes total amounts of applicable invoice on which tax has not been deducted. Use the TDS Challan Information report to provide information for the TDS Challan. Generate the TDS Challan Information report every month when you pay the government TDS for that month. Note. Run the Withholding Reporting Application Engine process (AP_WTHDRPT) prior to running the TDS Register.

Page Name	Definition Name	Navigation	Usage
TDS Certificates	RUN_APY8080	Vendors, 1099/Global Withholding, Global Withholding Reports, TDS Certificates, TDS Certificates	The TDS Certificate (APY8080) is issued by the payer for deduction of tax. Use the TDS Certificate for proof of deduction of income tax by the payer to the payee. The Work Contract Certificate (APY8090) is issued by the payer for works contract. Use the Work Contract Certificate to issue to the payee for proof of deduction of tax on Work Contract.
Run TDS Quarterly Return	RUN_APY8081	Vendors, 1099/Global Withholding, Global Withholding Reports, TDS Quarterly Returns	Run TDS quarterly returns.
Run TDS Annexure	RUN_AP8081A	Vendors, 1099/Global Withholding, Global Withholding Reports, TDS Quarterly Return Annexure	Run the TDS Quarterly Return Annexure program.

Appendix A

Configuring Batch Processes

This appendix discusses how to configure temporary tables for batch processing.

Configuring Temporary Tables for Batch Processing

When you run batch processes in parallel, you risk data contention and deadlocks on temporary tables. To avoid this, PeopleTools enables you to dedicate specific instances of temporary tables for each process. When PeopleSoft Application Engine manages a dedicated temporary table instance, it controls the locking of the table before use and the unlocking of the table after use.

When you decide how many temporary table instances to dedicate for a process, consider the number of temporary tables that the process uses. More instances result in more copies of the temporary tables on the system. For example, if a process uses 25 temporary tables and you have 10 instances for a process, you will have 250 temporary tables on the system.

If you run processes in parallel and all of the dedicated temporary table instances are in use, the performance of the process decreases. You need to find a balance that works for your organization.

Note. When you specify the number of instances, PeopleSoft Application Designer displays a list of the temporary tables for the process. Use the list to determine how many temporary tables each process uses.

Specify how many temporary table instances to dedicate for each of the following batch processes that can run in parallel in PeopleSoft Payables:

- Voucher Build (AP_VCHRBLD).
- Matching (AP_MATCH).
- Pay Cycle (AP_APY2015).
- Voucher Posting (AP_PSTVCHR).
- Payment Posting (AP_PSTPYMNT).
- Document Tolerance (FS_DOC_TOL).
- Payables to Assets Interface (INTFAPAM).

The PeopleTools documentation discusses the usage of temporary tables in detail and describes how to specify the number of instances.

If you run any of the PeopleSoft General Ledger COBOL processes, also configure the temporary tables for those processes. The *PeopleSoft General Ledger 9.1 PeopleBook* discusses how to do this in detail.

[Chapter 37, "\(USF\) Processing PeopleSoft Payables for U.S. Federal Agencies," page 1033](#)

Delivered Workflows for PeopleSoft Payables

This section discusses PeopleSoft Payables workflows. The workflows are listed alphabetically by workflow name.

Approve Vouchers

This section discusses the Approve Vouchers workflow.

Description

Event Description	A voucher is created that requires approval.
Action Description	The system places a link to the Voucher Approval page on the workflow user's worklist.
Notification Method	Worklist

Workflow Objects

Approval Rule Set	Payment Approval Rule Set 1
Business Process	PROCESS_VOUCHERS
Activity	APPROVE_VOUCHERS
Role	If using the delivered Payment Approval Rule Set 1, the roles are ANALYST, SUPERVISOR, and MANAGER

Matching Exceptions

This section discusses the Matching Exceptions workflow.

Description

Event Description	A voucher that does not pass the Matching Application Engine process (AP_MATCH) is flagged as an exception. Workflow worklist items are generated by the Process Match Exceptions Application Engine process (MTCH_ERR_WF) and email notifications are generated by the Matching Workflow Application Engine process (AP_MTH_NOTFY). The Matching process executes both of these processes. Workflow and email notification is selected at the match rule type or match rule level.
Action Description	The system places a link to the Matching Workflow page on the workflow user's worklist. The system sends an email notification to the action owner that contains a link to the Matching Workflow page.
Notification Method	Worklist and Email

Workflow Objects

Approval Rule Set	None
Business Process	MATCHING_ERRORS
Activity	ANALYZE MATCHING ERRORS
Role	There are three different sources for the user list, role, SQL definition, and query.

(USF) Pay Cycle Certification

This section discusses the Pay Cycle Certification workflow.

Description

Event Description	A pay cycle is processed for federal payments that requires a certification approval. Pay Cycle Certification workflow is available if a certifier has been entered and the pay cycle has been setup to be certified.
Action Description	The system places a link to the Paycycle Certification page on the certifier's worklist.
Notification Method	Worklist

Workflow Objects

Approval Rule Set	None
Business Process	Ent AP Process Pay Cycles
Activity	PAYCYCLE_CERTIFICATION
Role	None

Appendix C

PeopleSoft Payables Reports

This appendix lists, and provides general information about, all the reports provided with PeopleSoft Payables.

Note. For samples of these reports, see the Portable Document Format (PDF) files that are published with your online documentation.

PeopleSoft Payables Reports: A to Z

This table provides general information about delivered PeopleSoft Payables reports, sorted alphanumerically by report ID.

Note. You may see both of the terms XML Publisher (XMLP) and BI Publisher, depending on the version of your PeopleTools installation and the Bundle version of your 9.1 application. As of PeopleTools 8.52, references to XML Publisher (XMLP) have changed to BI Publisher. This does not denote a change to the reports; only the naming convention has changed.

Report ID and Report Name	Description	Navigation	Run Control Page
APC8053 Payables Report by Schedule and Appropriation Symbol	(USF) Lists voucher distribution lines by federal schedule and appropriation symbol. Because each distribution line of a voucher references a different appropriation symbol, the detailed level of this report shows individual voucher distribution lines. (Crystal Report)	Accounts Payable, Reports, Payments, Schedule and Approp Symbol, Payables Report by Schedule and Appropriation Symbol	RUN_APC8053
