What’s New in Security Integration ........................................................................................................... ix
  New Features in 11g Release 1 (11.1.1.5.0) ............................................................................................ ix

1  Introduction
  1.1 About Oracle Identity Management ..................................................................................................... 1-1
  1.2 Objectives of Integration ...................................................................................................................... 1-1
  1.3 Types of Integration .............................................................................................................................. 1-2
      1.3.1 Integration Among Oracle Identity Management Components ................................................ 1-2
      1.3.2 Integration for other Oracle products ......................................................................................... 1-2
      1.3.3 Integration for Third-Party products ......................................................................................... 1-3
  1.4 Key Integration Scenarios .................................................................................................................... 1-3
  1.5 How to Use this Book ........................................................................................................................... 1-4

2  Web Access Management
  2.1 Oracle Access Manager for Oracle Identity Management ................................................................. 2-1
  2.2 Oracle Access Manager for Oracle Fusion Middleware ..................................................................... 2-2
  2.3 Oracle Access Manager for Other Oracle Applications ..................................................................... 2-3
  2.4 Oracle Access Manager for Third-Party Applications ..................................................................... 2-3

3  Enterprise Single Sign-On
  3.1 Enterprise Single Sign-On Logon Manager .......................................................................................... 3-1
  3.2 Enterprise Single Sign-On Synchronization ......................................................................................... 3-1
  3.3 Enterprise Single Sign-On Provisioning Gateway ............................................................................... 3-2
  3.4 Enterprise Single Sign-On Authentication Manager ............................................................................ 3-2
  3.5 Enterprise Single Sign-On Universal Authentication Manager ....................................................... 3-3

4  Federation
  4.1 Oracle Identity Federation for Oracle Identity Management ............................................................. 4-1
4.2 Oracle Identity Federation for Oracle Fusion Middleware ........................................ 4-1
4.3 Oracle Identity Federation Authentication Engines ........................................ 4-2
4.4 Oracle Identity Federation Service Provider Integration Modules ....................... 4-2

5 Risk Management
5.1 Oracle Adaptive Access Manager for Oracle Identity Management ..................... 5-1
5.2 Oracle Adaptive Access Manager for Custom Applications ................................. 5-2

6 User, Account, and Entitlement Provisioning
6.1 Oracle Identity Manager Connectors for Oracle Identity Management ..................... 6-1
6.2 Oracle Identity Manager Connectors for Databases ........................................ 6-1
6.3 Oracle Identity Manager Connectors for Oracle Applications ............................. 6-2
6.4 Oracle Identity Manager Connectors for Third-Party Applications ......................... 6-3

7 Identity Governance
7.1 Oracle Identity Analytics for Oracle Identity Management ................................... 7-1
7.2 Oracle Identity Analytics for Third-Party Products ........................................... 7-2

8 Password Management
8.1 Oracle Identity Manager Password Management Support for Oracle Identity Management ... 8-1
8.2 Oracle Identity Manager Password Management through Connectors .................... 8-1
8.3 Oracle Enterprise Single Sign-On Suite ESSO-PR for Password Reset .................... 8-2

9 Database Security
9.1 Oracle Database Net Services LDAP Naming ........................................ 9-1
9.2 Oracle Database Enterprise User Security with LDAP ................................... 9-2

10 Fine-Grained Access Control
10.1 Oracle Entitlements Server for Oracle Identity Management ............................ 10-1
10.2 Oracle Entitlements Server for Oracle Fusion Middleware and Oracle SOA .......... 10-2
10.3 Oracle Entitlements Server for Third-Party products ..................................... 10-3

11 Configuring an Identity Store with Multiple Directories
11.1 Overview of Configuring Multiple Directories as an Identity Store ......................... 11-1
11.2 Using idmConfigTool configOVD to Configure Oracle Virtual Directory ............... 11-2
11.3 Configuring Multiple Directories as an Identity Store: Split Profile ..................... 11-2
11.3.1 Prerequisites ..................................................................................................... 11-3
11.3.2 Repository Descriptions ................................................................................. 11-3
11.3.3 Setting Up Oracle Internet Directory as a Shadow Directory ......................... 11-4
11.3.4 Directory Structure Overview - Shadow Join .............................................. 11-5
11.3.5 Configuring Oracle Virtual Directory Adapters for Split Profile ....................... 11-7
11.3.6 Configuring a Global Consolidated Changelog Plug-in ................................ 11-8
11.3.7 Validating the Oracle Virtual Directory Changelog ...................................... 11-9
11.4 Configuring Multiple Directories as an Identity Store: Distinct User and Group Populations in Multiple Directories .................................................................................. 11-9
11.4.1 Directory Structure Overview for Distinct User and Group Populations in Multiple Directories ........................................................................................................... 11-10
11.4.2 Configuring Oracle Virtual Directory Adapters for Distinct User and Group Populations in Multiple Directories ................................................................. 11-12
11.4.2.1 Create Enterprise Directory Adapters ........................................................................................................... 11-12
11.4.2.2 Create Application Directory Adapters ........................................................................................................... 11-14
11.4.3 Creating a Global Plug-in ..................................................................................................................................... 11-16
11.5 Additional Configuration Tasks .................................................................................................................................. 11-16

A Using the idmConfigTool Command
A.1 Syntax ............................................................................................................................................................................. A-1
A.2 Parameters ........................................................................................................................................................................ A-2
A.2.1 preConfigIDStore ....................................................................................................................................................... A-2
A.2.2 prepareIDStore Parameters .................................................................................................................................. A-3
A.2.3 configPolicyStore Parameters .................................................................................................................................. A-7
A.2.4 configOAM Parameters ............................................................................................................................................... A-7
A.2.5 configOIM Parameters ............................................................................................................................................... A-7
A.2.6 postProv Parameters ................................................................................................................................................ A-8
A.2.7 Validate IDStore parameters .................................................................................................................................. A-8
A.2.8 PolicyStore parameters ........................................................................................................................................... A-9
A.2.9 Validate OAM Configuration ................................................................................................................................ A-10
A.2.10 Validate OIM .............................................................................................................................................................. A-10
A.3 Examples .......................................................................................................................................................................... A-10

B Verifying Adapters for Multiple Directory Identity Stores by Using ODSM
B.1 Verifying Oracle Virtual Directory Adapters for Split Profile by Using ODSM .............................................................. B-1
B.1.1 Verifying User Adapter for Active Directory Server ................................................................................................. B-1
B.1.2 Verifying Shadowjoiner User Adapter ......................................................................................................................... B-2
B.1.3 Verifying JoinView Adapter ...................................................................................................................................... B-3
B.1.4 Verifying User/Role Adapter for Oracle Internet Directory ......................................................................................... B-3
B.1.5 Verifying Changelog adapter for Active Directory Server ........................................................................................ B-4
B.1.6 Verifying Changelog Adapter for Oracle Internet Directory .................................................................................... B-5
B.1.7 Configuring a Global Consolidated Changelog Plug-in .......................................................................................... B-6
B.1.8 Validate Oracle Virtual Directory Changelog ........................................................................................................ B-6
B.2 Verifying Adapters for Distinct User and Group Populations in Multiple Directories by Using ODSM ................................................. B-6
B.2.1 User/Role Adapter A1 ................................................................................................................................................ B-7
B.2.2 User/Role Adapter A2 ................................................................................................................................................ B-7
B.2.3 Changelog Adapter C1 ........................................................................................................................................... B-8
B.2.4 Changelog Adapter for Active Directory ................................................................................................................. B-8
B.2.5 Changelog Adapter C2 ........................................................................................................................................... B-9
B.2.6 Verifying Oracle Virtual Directory Global Plug-in ................................................................................................. B-10
B.2.7 Configuring a Global Consolidated Changelog Plug-in ......................................................................................... B-10

Index
Preface

This document describes the Identity Management integration options in Oracle Fusion Middleware 11g Release 1 (11.1.1).

Audience

This document is intended for system administrators responsible for integrating identity management components and related third-party products for Oracle Fusion Middleware 11g Release 1 (11.1.1).

For specific interoperability details about the products mentioned in this guide, consult the certification matrix for Oracle Fusion Middleware 11g Release 1 (11.1.1.x), which is located at:

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit
http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit
http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Related Documents

For more information, see the following documents in the Oracle Fusion Middleware 11g documentation set:

- Oracle Fusion Middleware Installation Guide for Oracle Identity Management
- Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Manager
- Oracle Access Manager Integration Guide
- Oracle Fusion Middleware Administrator’s Guide for Oracle Adaptive Access Manager
- Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Federation
Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong></td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td><code>monospace</code></td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
What's New in Security Integration

This chapter lists new integration features and updates.

New Features in 11g Release 1 (11.1.1.5.0)

New Integration Features

- A new integration tool is available in this release to help automate certain integration steps.
  
  For details, see Appendix A.

- Oracle Enterprise Single Sign-On Suite Plus (previously known as Oracle Enterprise Single Sign-On Suite) includes a new module and additional features.
  
  For details, see Chapter 3.
This chapter introduces basic Oracle Fusion Middleware integration concepts. It contains these topics:

- About Oracle Identity Management
- Objectives of Integration
- Types of Integration
- Key Integration Scenarios
- How to Use this Book

### 1.1 About Oracle Identity Management

Oracle Identity Management provides customers with a path to meet compliance efficiently, secure critical applications and sensitive data, and lower operational costs. Using the most complete and best-in-class suite of IdM solutions, enterprises can manage the end-to-end lifecycle of user identities across all enterprise resources both within and beyond the firewall.

Through its foundation for service-oriented security, Oracle Identity Management 11g delivers enhanced security by automating provisioning of user accounts, dramatically reducing help desk calls, streamlining compliance audit and reporting, consolidating identity silos, enabling rapid integration with enterprise applications, and more.

Successful integration with identity management technologies is key to the secure operation of today's enterprise applications. This document will enable you to assess the tools and techniques that Oracle IdM provides to enable you to run secure enterprise operations.

### 1.2 Objectives of Integration

Components of Oracle Identity Management typically integrate with the existing infrastructure and applications in the enterprise. Some examples:

- A directory service may provide a centralized user store for existing applications that are LDAP-enabled.
- An access management solution may provide single sign-on and web authorization for existing Web applications in concert with the application servers deployed in the enterprise.
- A provisioning solution may streamline the onboarding procedure by orchestrating the various entities and accounts that need to be created across multiple systems when a new employee is hired.
A role management solution may provide the necessary scoping to enforce audit rules.

Designed to help you respond and adapt to the needs of your enterprise, Oracle Identity Management presents a highly heterogeneous solution that gives you many different options to enhance security in your existing environment. Understanding the business requirements and implementing the right level of integration is the key to a successful identity management deployment.

Based on functional areas, this document provides a high-level guide to the types of integration available in each Oracle Identity Management product.

Its objective is to enable you to easily identify the capabilities and integrations available for your current enterprise deployment and to plan its future roadmap.

1.3 Types of Integration

This section explains the different types of possible IdM integrations:

- Integration Among Oracle Identity Management Components
- Integration for other Oracle products
- Integration for Third-Party products

1.3.1 Integration Among Oracle Identity Management Components

Many Oracle Identity Management components can integrate and interoperate with each other. For example, Oracle Access Manager can provide single sign-on for products such as Oracle Identity Manager and Oracle Identity Analytics.

This book covers the range of Oracle Identity Management component integrations.

1.3.2 Integration for other Oracle products

Oracle products cover a large spectrum of the technology stack, with products in all of these areas:

- operating systems
- virtual machines
- databases
- middleware
- applications

Oracle Identity Management is well equipped to handle many of the security requirements in each of these areas. Depending on your requirements, Oracle Identity Management can integrate with many products from the rest of the Oracle technology stack to provide additional security and identity management-related features to these products.

For example, Oracle Identity Manager provides user account management and provisioning support for Oracle E-Business Suite and Oracle PeopleSoft. This book will also cover those integration scenarios.
1.3.3 Integration for Third-Party products

For customers with non-Oracle products in their enterprise deployment, Oracle Identity Management can also integrate with many third-party products to strengthen and satisfy your business requirements.

For example, many of our LDAP-enabled products can be readily integrated with Microsoft Active Directory. You can use Oracle Access Manager, for example, to support Windows Native Authentication for web applications by integrating with a Microsoft Windows domain.

Where relevant, this book covers security integration scenarios between Oracle Identity Management and third-party products.

1.4 Key Integration Scenarios

Table 1–1 lists some key areas of integration in the identity management suite, and the components/products involved in each area.

<table>
<thead>
<tr>
<th>Objective</th>
<th>Description</th>
<th>Components</th>
</tr>
</thead>
<tbody>
<tr>
<td>Web Access Management</td>
<td>Centralized access management, single sign-on, fine-grained authentication and entitlement control.</td>
<td>Oracle Access Manager, Oracle Identity Manager, Oracle Adaptive Access Manager, Oracle Entitlements Server</td>
</tr>
<tr>
<td>Enterprise Single Sign-On</td>
<td>Enable single sign-on in a distributed enterprise and through a variety of sign-on interfaces.</td>
<td>Oracle Access Manager, Oracle Enterprise Single Sign-On, Oracle Identity Manager, Oracle Waveset, IBM Tivoli Identity Manager</td>
</tr>
<tr>
<td>Risk Management</td>
<td>Protect your exposed Web applications, services, and end-users from online threats and insider fraud.</td>
<td>Oracle Adaptive Access Manager</td>
</tr>
<tr>
<td>User, Account, and Entitlement Provisioning</td>
<td>Provision users, accounts, and entitlements for your enterprise applications.</td>
<td>Oracle Identity Manager</td>
</tr>
<tr>
<td>Password Management</td>
<td>Options for integrating password management solutions into the enterprise.</td>
<td>Oracle Access Manager, Oracle Adaptive Access Manager, Oracle Identity Manager</td>
</tr>
</tbody>
</table>
1.5 How to Use this Book

Use this book to understand the major integration options available to meet your site's requirements. Use the references provided with each topic to learn more about each option, including specific prerequisites, installation, and post-install configuration.

The book contains a comprehensive cross-product index that you can use to quickly locate a topic of interest. Each integration topic is indexed twice, once for each component/product in the integration. For example, the Oracle Identity Manager connector for Microsoft Exchange is indexed under both Microsoft Exchange and Oracle Identity Manager. This allows you to see what types of integration are available for any particular Oracle Identity Management component. It also allows you to see all the relevant integration options Oracle Identity Management supports for a particular Oracle product or third-party product from the reverse angle, that is, from the latter perspective.
Web Access Management

Oracle Access Manager provides Web single sign-on to enable secure access to multiple applications with one authentication step. It also provides flexible support for all popular authentication methods, including login forms, digital certificates, and smart cards.

This chapter explains how you can integrate Oracle Access Manager with other components to enable Web access management for your enterprise applications. It contains these sections:

- Oracle Access Manager for Oracle Identity Management
- Oracle Access Manager for Oracle Fusion Middleware
- Oracle Access Manager for Other Oracle Applications
- Oracle Access Manager for Third-Party Applications

2.1 Oracle Access Manager for Oracle Identity Management

Oracle Access Manager provides single sign-on support for many Oracle Identity Management components. It also integrates with some Oracle Identity Management components to support more advanced features for those components.

Oracle Access Manager with Oracle Security Token Service brokers trust between a Web Service Consumer (WSC) and a Web Service Provider (WSP).

Table 2–1 shows the supported integrations:

<table>
<thead>
<tr>
<th>Oracle Access Manager Integrated with</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Identity Manager</td>
<td>Enabling Identity Administration with Oracle Identity Manager in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager</td>
</tr>
<tr>
<td>Oracle Adaptive Access Manager</td>
<td>Integrating Oracle Access Manager and Oracle Adaptive Access Manager in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager</td>
</tr>
<tr>
<td></td>
<td>Configuring OAM and OAAM with Other Oracle Identity Management Products in the Oracle Fusion Middleware Installation Guide for Oracle Identity Management</td>
</tr>
</tbody>
</table>
2.2 **Oracle Access Manager for Oracle Fusion Middleware**

Oracle Access Manager integrates with various Oracle Fusion Middleware components to provide single sign-on support for applications running on Oracle WebLogic servers.

Oracle Access Manager with Oracle Security Token Service enables identity propagation for a Web Service Client.

Table 2–2 shows the supported integrations:

<table>
<thead>
<tr>
<th>Oracle Access Manager Integrated with</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle WebLogic Server 11g</td>
<td>Configuring Oracle Access Manager (OAM) in the Oracle Fusion Middleware Installation Guide for Oracle Identity Management</td>

</tr>
</tbody>
</table>
Enterprise Single Sign-On

Oracle Enterprise Single Sign-On Suite Plus provides users with unified sign-on and authentication across all their enterprise resources. Unlike Oracle Access Manager which focuses on web access management, Oracle Enterprise Single Sign-On Suite Plus also covers desktops, client-server, custom, and host-based mainframe applications.

Even if users travel or share workstations, they can enjoy the flexibility of a single log-on, eliminating the need for multiple user names and passwords and helping enforce strong password and authentication policies.

This chapter contains topics related to enterprise single sign-on:

- Enterprise Single Sign-On Logon Manager
- Enterprise Single Sign-On Synchronization
- Enterprise Single Sign-On Provisioning Gateway
- Enterprise Single Sign-On Authentication Manager

See Also: For the latest information about the suite, see Oracle Enterprise Single Sign-on Suite Plus Release Notes (Release 11.1.1.5.0).

3.1 Enterprise Single Sign-On Logon Manager

Oracle Enterprise Single Sign-On Suite Logon Manager (ESSO-LM) provides interfaces to network and computer logons as well as sign-on to applications, enabling users to log in one time with a single password. ESSO-LM handles storage and retrieval of credentials and settings from an external repository such as an LDAP or RDBMS store.

The ESSO-LM administration console interacts with the Logon Manager and facilitates management and administration of ESSO attributes. For details, see the ESSO-LMGlobal Agent Settings Reference Guide.

3.2 Enterprise Single Sign-On Synchronization

ESSO Synchronization is a component of Oracle Enterprise Single Sign-On Suite Logon Manager (ESSO-LM). This feature lets you synchronize credentials between an end user's local store (on a workstation) and a store in a remote SSO repository (file system share, relational database, or directory server). You configure synchronization through the ESSO-LM administration console.

Table 3–1 shows the supported integrations:
Oracle Enterprise Single Sign-On Provisioning Gateway (ESSO-PG) enables system administrators to directly distribute, reset, remove, or delete user credentials in ESSO-LM without the need for any user involvement. Here are some examples:

- An administrator can inject a new user's credentials directly into the user's ESSO-LM account.
- The administrator can update ESSO-LM simultaneously to reset a password and prevent an application from falling out of synchronization with ESSO-LM.
- When a user's access to an application is terminated, the administrator can use ESSO-PG to quickly remove the corresponding credentials from the user's ESSO-LM account.
- When a user leaves the company, the administrator can instantly delete all the user's credentials.

All these operations can be automatically initiated and controlled by industry-leading provisioning systems. ESSO-PG provides an open interface to integrate with other industry-standard or internally-developed provisioning systems, and also provides an interactive interface for administrators to manually provision credentials.

Table 3–2 shows the supported integrations:

### 3.4 Enterprise Single Sign-On Authentication Manager

Oracle Enterprise Single Sign-On Suite Authentication Manager (ESSO-AM), an add-on module to Oracle Enterprise Single Sign-on Logon Manager (ESSO-LM),
enables an organization to seamlessly provide a strong authentication bridge to all its applications, including smart cards and Entrust authenticators.

Users can employ different authenticators at different times, and application access can be controlled based upon the authenticator used for all authentication events: initial authentication, re-authentication, and forced authentication.

Table 3–3 shows the supported integrations:

<table>

</tr>
</tbody>
</table>

### 3.5 Enterprise Single Sign-On Universal Authentication Manager

Universal Authentication Manager (ESSO-UAM) is a new component of Oracle Enterprise Single Sign-on Suite Plus Release 11.1.1.5.0. ESSO-UAM enables enterprises to implement stronger and easier-to-use authentication methods, including two-factor authentication methods.

ESSO-UAM supports integrations in these areas:

- Microsoft Windows and Active Directory networks
- smart cards for logon and authentication
- proximity cards that a card reader can detect
- biometric technologies compatible with the BioAPI standard.

For details, see Oracle Enterprise Single Sign-on Suite Plus Release Notes (Release 11.1.1.5.0).
Oracle Identity Federation provides a comprehensive implementation of federation standards delivered via Oracle Universal Federation Framework - the unified, extensible and customizable architecture for rapid deployment in any multi-vendor environment.

Oracle Identity Federation allows customers to quickly achieve cross-domain SSO by providing a complete end-to-end federation deployment package, including a simple and lightweight deployment option for Service Providers.

This chapter introduces the integrations for Oracle Identity Federation:

- Oracle Identity Federation for Oracle Identity Management
- Oracle Identity Federation for Oracle Fusion Middleware
- Oracle Identity Federation Authentication Engines
- Oracle Identity Federation Service Provider Integration Modules

4.1 Oracle Identity Federation for Oracle Identity Management

Oracle Identity Federation integrates with several Oracle Identity Management products to provide integrated federation solutions. Table 4–1 shows the supported integrations:

<table>
<thead>
<tr>
<th>Oracle Identity Federation Integrated with</th>
<th>Additional Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Access Manager</td>
<td>For 11g webgates, see Integrating Oracle Access Manager with Oracle Identity Federation in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager For 10g webgates, see Oracle Access Manager in the Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Federation</td>
</tr>
</tbody>
</table>

4.2 Oracle Identity Federation for Oracle Fusion Middleware

Oracle Identity Federation integrates with Oracle Fusion Middleware products supporting a variety of federation use cases. Table 4–2 shows the supported integrations:
4.3 Oracle Identity Federation Authentication Engines

In Oracle Identity Federation, an authentication mechanism defines a method or policy for verifying an entity’s claimed identity using submitted credentials. An authentication engine is a module implementing a particular authentication method.

Oracle Identity Federation provides several out-of-the-box authentication engines and supports custom authentication engines. Table 4–3 shows the supported integrations:

<table>
<thead>
<tr>
<th>Authentication Engine for</th>
<th>Additional Information</th>
</tr>

<td>JAAS</td>
<td>Authentication Engines - JAAS in the Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Federation</td>
</tr>
<tr>
<td>Custom authentication engine</td>
<td>Authentication Engines - Custom in the Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Federation</td>
</tr>
</tbody>
</table>

4.4 Oracle Identity Federation Service Provider Integration Modules

A service provider (SP) integration module creates a user authenticated session at an identity and access management (IAM) system like Oracle Access Manager.

Oracle Identity Federation provides several out-of-the-box SP integration modules, and also supports custom service provider integration modules. Table 4–4 shows the supported integrations:

<table>
<thead>

</tbody>
</table>
Oracle Adaptive Access Manager supports companies by protecting their exposed Web applications, services, and end-users from online threats and insider fraud. Oracle Adaptive Access Manager features include:

- risk-aware authentication,
- real-time behavior profiling,
- transaction and event risk analysis.

Oracle Adaptive Access Manager provides real-time or offline risk analysis by calculating the risk of an access request, an event or a transaction and determining proper outcomes to prevent fraud and misuse. A portion of the risk evaluation is dedicated to verifying a user’s identity and determining if the activity is suspicious.

Oracle Adaptive Access Manager provides end-user-facing functionality to prevent fraud through its Virtual Authentication Devices to secure credential data at the entry point.

Oracle Adaptive Access Manager also provides interdiction methods including risk-based authentication, blocking, and configurable actions to interdict in other systems.

This chapter explains how you can integrate Oracle Adaptive Access Manager with other components to provide risk management for your enterprise applications. It contains these sections:

- Oracle Adaptive Access Manager for Oracle Identity Management
- Oracle Adaptive Access Manager for Custom Applications

### 5.1 Oracle Adaptive Access Manager for Oracle Identity Management

Oracle Adaptive Access Manager integrates with other Oracle Identity Management components to provide additional risk management support.

Table 5–1 shows the supported integrations:
Oracle Adaptive Access Manager provides a variety of mechanisms to integrate with custom applications.

Applications can integrate natively with Oracle Adaptive Access Manager using APIs. The Universal Installer reverse proxy deployment option offers login risk-based, multi-factor authentication to web applications without requiring any change to the application code.

Table 5–2 shows the supported integrations:

Oracle Identity Manager provides a comprehensive provisioning solution for many enterprise resources. Predefined connectors and a flexible Adaptor Factory enable customers to easily establish connectivity with well-known targets and custom systems.

This connectivity forms the basis of Oracle Identity Manager, enabling you to provide support for self-service and delegated administration, password management, provisioning, and request and approval workflow across many enterprise targets.

This chapter explains how you can integrate Oracle Identity Manager with other components to provision users, accounts, and entitlements for your enterprise applications. It contains these sections:

- Oracle Identity Manager Connectors for Oracle Identity Management
- Oracle Identity Manager Connectors for Databases
- Oracle Identity Manager Connectors for Oracle Applications
- Oracle Identity Manager Connectors for Third-Party Applications

### 6.1 Oracle Identity Manager Connectors for Oracle Identity Management

Table 6–1 shows the Oracle Identity Manager connectors for Oracle Identity Management components:

Oracle Identity Analytics (formerly Sun Role Manager) provides enterprises with the ability to engineer and manage roles and automate critical identity-based controls.

By integrating with the various enterprise systems including applications, operating systems, LDAP directories, and custom applications, Oracle Identity Analytics provides a complete view of access-related data that includes:

- the user's access,
- the why and how of that access, and
- whether the access violates policies.

Oracle Identity Analytics enables you to automate the access certification process and removes inappropriate access by integrating with a provisioning solution. It also provides evidence that the access complies with established policies.

Sections include:

- Oracle Identity Analytics for Oracle Identity Management
- Oracle Identity Analytics for Third-Party Products

### 7.1 Oracle Identity Analytics for Oracle Identity Management

Oracle Identity Analytics integrates with Oracle Identity Management components to pull in user, account and entitlement data, and to provide closed-loop remediation.

Table 7–1 shows the Oracle Identity Analytics integrations supported for Oracle Identity Management components:

<table>
<thead>
<tr>
<th>Oracle Identity Analytics Integration for</th>
<th>Additional Information</th>
</tr>
</thead>
</table>

*Note:* Oracle Waveset was formerly known as Sun Identity Manager.
To integrate with Oracle Identity Manager and Oracle Waveset, Oracle Identity Analytics leverages the connectors in those components, thus indirectly integrating with the target systems supported by those components.

### 7.2 Oracle Identity Analytics for Third-Party Products

Oracle Identity Analytics integrates with third-party products to pull in user, account and entitlement data, and to provide closed-loop remediation.

Table 7–2 shows the Oracle Identity Analytics integrations supported for third-party products:

<table>
<thead>
<tr>
<th>Oracle Identity Analytics Integration</th>

</table>
This chapter explains how you can integrate with Oracle Identity Manager for centralized password management features. Topics include:

- Oracle Identity Manager Password Management Support for Oracle Identity Management
- Oracle Identity Manager Password Management through Connectors
- Oracle Enterprise Single Sign-On Suite ESSO-PR for Password Reset

### 8.1 Oracle Identity Manager Password Management Support for Oracle Identity Management

Oracle Identity Manager’s password management feature includes password policy support and self-service administration for password reset and password change. Oracle Identity Manager provides centralized password management for other Oracle Identity Management components where password management is needed.

Table 8–1 shows the supported integrations:

<table>
<thead>
<tr>
<th><strong>Oracle Identity Manager Integration with</strong></th>
<th><strong>Additional Information</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Access Manager</td>
<td>Deployment Options for Password Management in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager.</td>

</tr>
<tr>
<td>Oracle Access Manager and Oracle Adaptive Access Manager combined</td>
<td>Deployment Options for Password Management in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager.</td>
</tr>
</tbody>
</table>

### 8.2 Oracle Identity Manager Password Management through Connectors

Oracle Identity Manager provides centralized password management for enterprise applications, a feature that you can leverage by provisioning through its connectors. In this way, you can configure a centralized password policy for the enterprise, allowing your users to specify a single password which can then be provisioned to the various targets where passwords are required.

Password reset, password change, and expiration can all be handled through Oracle Identity Manager’s self-service support.

See Chapter 6, "User, Account, and Entitlement Provisioning" for more information on supported connectors.
8.3 Oracle Enterprise Single Sign-On Suite ESSO-PR for Password Reset

Oracle Enterprise Single Sign-on Password Reset (ESSO-PR) allows users to access their Windows user accounts in case they lose or forget their password, without requiring help desk or technical support, improving the operational efficiency of the enterprise.

For details, see the Oracle Enterprise Single Sign-on documentation library at:

http://download.oracle.com/docs/cd/E12472_01/index.htm

ESSO-PR documents are located in the Password Reset Documentation section.
This chapter describes integrations that support database security. Topics include:

- Oracle Database Net Services LDAP Naming
- Oracle Database Enterprise User Security with LDAP

See Also:

Note: DB aliases are not supported.

9.1 Oracle Database Net Services LDAP Naming

To manage large networking environments, administrators must be able to easily access a centralized repository to specify and modify the network configuration. To support this requirement, the Oracle Net Services configuration can be stored in an LDAP-compliant directory server.

Supporting LDAP-compliant directory servers provides the enterprise with a vehicle for centrally managing and configuring a distributed Oracle network. The directory can act as a central repository of information about database network components, user and corporate policies, and user authentication and security, thus replacing localized client-side and server-side configuration files.

Table 9–1 shows the supported integrations:
Enterprise User Security (EUS), a feature of Oracle Database Enterprise Edition, leverages Oracle Directory Services (ODS) to centrally manage database users and role memberships in an enterprise LDAP directory. This provides a way to address the security and management problems posed by maintaining database users and privileges in individual databases.

Table 9–2 shows the supported integrations:

<table>
<thead>
<tr>
<th>Enterprise User Security Integration for</th>
<th>Additional Information</th>
</tr>
</thead>
</table>
Oracle Entitlements Server provides a fine-grained entitlement management solution that secures critical applications with uncompromised performance and reliability. By combining centralized policy management with distributed policy decision-making and enforcement, it enables you to rapidly adapt to changing business requirements.

This chapter includes these topics:
- Oracle Entitlements Server for Oracle Identity Management
- Oracle Entitlements Server for Oracle Fusion Middleware and Oracle SOA
- Oracle Entitlements Server for Third-Party products

10.1 Oracle Entitlements Server for Oracle Identity Management

You can integrate Oracle Entitlements Server with Oracle Identity Management components. Table 10–1 shows the supported integrations:

This chapter explains how to prepare directories other than Oracle Internet Directory for use as an Identity Store.

This chapter contains the following topics:

- Section 11.1, "Overview of Configuring Multiple Directories as an Identity Store"
- Section 11.2, "Using idmConfigTool configOVD to Configure Oracle Virtual Directory"
- Section 11.3, "Configuring Multiple Directories as an Identity Store: Split Profile"
- Section 11.4, "Configuring Multiple Directories as an Identity Store: Distinct User and Group Populations in Multiple Directories"
- Section 11.5, "Additional Configuration Tasks"

### 11.1 Overview of Configuring Multiple Directories as an Identity Store

This chapter describes how to configure Oracle Virtual Directory for two multiple directory scenarios. In both scenarios, you have some user data in a third-party directory, such as Active Directory, and other user data in Oracle Internet Directory.

In both scenarios, you use Oracle Virtual Directory to present all the identity data in a single consolidated view that Oracle Identity Management components can interpret.

The scenarios are as follows:

- **Split Profile**: A split profile, or split directory configuration, is one where identity data is stored in multiple directories, possibly in different locations. You use a split profile when you must extend directory schema in order to support specific schema elements, but you cannot or do not want to extend the schema in the third-party Identity Store. In that case, deploy an Oracle Internet Directory as a shadow directory to store the extended attributes. For details, see Section 11.4, "Configuring Multiple Directories as an Identity Store: Distinct User and Group Populations in Multiple Directories."

- **Distinct User and Group Populations**: Another multidirectory scenario is one where you have distinct user and group populations, such as internal and external users. In this configuration, Oracle-specific entries and attributes are stored in Oracle Internet Directory. Enterprise-specific entries, for example, entries with Fusion Applications-specific attributes, are stored in Active Directory. For details, see Section 11.4, "Configuring Multiple Directories as an Identity Store: Distinct User and Group Populations in Multiple Directories."
In this chapter, Active Directory is chosen as the non-Oracle Internet Directory Enterprise Directory. The solution is applicable to all enterprises having one or more Active Directories as their enterprise Identity Store.

11.2 Using idmConfigTool configOV D to Configure Oracle Virtual Directory

To configure Oracle Virtual Directory adapters as described in this chapter, you must use the -configOV D option to the idmConfigTool command. Before attempting to use this option with Oracle Fusion Middleware 11gR1 (11.1.1.5), ensure that you have applied the latest patches for Oracle Identity Management.

The syntax and properties for this option are as follows:

Syntax

```
./idmConfigTool.sh -configOV D input_file=input_Properties
```

Properties

Table 11–1 lists the command properties (where n=1,2..).

11.3 Configuring Multiple Directories as an Identity Store: Split Profile

This section describes how to configure multiple directories as an Identity Store. In cases where the Active Directory schema cannot be extended, you use Oracle Internet Directory as a shadow directory to store these attributes. Oracle Virtual Directory links them together to present a single consolidated DIT view to clients. This is called a split profile or split directory configuration. In this configuration, all the Oracle specific attributes and Oracle specific entities are created in Oracle Internet Directory.

This section contains the following topics:

- Section 11.3.1, "Prerequisites"
- Section 11.3.2, "Repository Descriptions"
- Section 11.3.3, "Setting Up Oracle Internet Directory as a Shadow Directory"
11.3.1 Prerequisites

The following assumptions and rules apply to this deployment topology:

- Oracle Internet Directory houses the Fusion Identity Store. This means that Oracle Internet Directory is the store for all Fusion Application-specific artifacts. The artifacts include a set of enterprise roles used by Fusion Application and some user attributes required by Fusion Applications. All other stores are referred to as enterprise Identity Stores.
- The enterprise contains more than one LDAP directory. Each directory contains a distinct set of users and roles.
- The enterprise policy specifies that specific user attributes, such as Fusion Application-specific attributes, cannot be stored in the enterprise directory. All the extended attributes must be stored in a separate directory called the shadow directory. This shadow directory must be Oracle Internet Directory because Active Directory does not allow you to extend the schema.
- User login IDs are unique across the directories. There is no overlap of the user login IDs between these directories.
- Oracle Identity Manager has no fine-grained authorization. If Oracle Identity Manager's mapping rules allow it to use one specific subtree of a directory, then it can perform all CRUD (Create, Read, Update, Delete) operations in that subtree of the LDAP directory. There is no way to enable Oracle Identity Manager to read user data in a subtree but not enable it to create a user or delete a user in subtree.
- Referential integrity must be turned off in Oracle Internet Directory so that an Oracle Internet Directory group can have members that are in one of the Active Directory directories. The users group memberships are not maintained across the directories with referential integrity.

11.3.2 Repository Descriptions

This section describes the artifacts in the Identity store and how they can be distributed between Active Directory and Oracle Internet Directory, based on different enterprise deployment requirements.

The Artifacts that are stored in the Identity Store are:

- Application IDs: These are the identities that are required to authenticate applications to communicate with each other.
- Seeded Enterprise Roles: These are the enterprise roles or LDAP group entries that are required for default functionality.
- Enterprise roles provisioned by Oracle Identity Manager: These are runtime roles.
- Enterprise Users: These are the actual users in the enterprise.
- Enterprise Groups: These are the roles and groups that already exist in the enterprise.
In a split profile deployment, the Identity Store artifacts can be distributed among Active Directory and Oracle Internet Directory, as follows.

- Oracle Internet Directory is a repository for enterprise roles. Specifically, Oracle Internet Directory contains the following:
  - Application IDs
  - Seeded enterprise roles
  - Enterprise roles provisioned by Oracle Identity Manager
- Active Directory is the repository for:
  - Enterprise users
  - Enterprise groups (not visible to Oracle Identity Manager or Fusion Applications)

The following limitations apply:

- The Active Directory users must be members of Oracle Internet Directory groups.
- The groups in Active Directory are not exposed at all. Oracle applications only manage the Oracle-created enterprise roles. The groups in Active Directory are not visible to either Oracle Identity Manager or Fusion Applications.

### 11.3.3 Setting Up Oracle Internet Directory as a Shadow Directory

In cases where Oracle Internet Directory is used as the shadow directory to store certain attributes, such as all the Fusion Application-specific attributes, use a separate container in Oracle Internet Directory to store the shadow attributes.

- The Shadow Entries container (cn=shadowentries) must be in a separate DIT from the parent of the users and groups container dc=mycompany,dc=com, as shown in Figure 11–1.
- The same ACL configured for dc=mycompany,dc=com within Oracle Internet Directory must be configured for cn=shadowentries. To perform this configuration, use the `ldapmodify` command. The syntax is as follows:

  ```
  ldapmodify -D cn=orcladmin -q -p portNum -h hostname -f ldifFile
  ```

  The following is a sample LDIF file to use with `ldapmodify`:

  ```
  dn: cn=shadowentries
  changetype: modify
  add: orclaci
  orclaci: access to entry by
  group="cn=RealmAdministrators,cn=groups,cn=OracleContext,dc=mycompany,dc=com" (browse,add,delete)
  orclaci: access to attr="(" by
  group="cn=RealmAdministrators,cn=groups,cn=OracleContext,dc=mycompany,dc=com" (read,write,search,compare)
  orclaci: access to entry by
  group="cn=OIMAdministrators,cn=groups,dc=mycompany,dc=com" (browse,add,delete)
  orclaci: access to attr="(" by
  group="cn=OIMAdministrators,cn=groups,dc=mycompany,dc=com" (search,read,compare,write)
  -
  changetype: modify
  add: orclentrylevelaci
  orclentrylevelaci: access to entry by * (browse,noadd,nodelete)
  orclentrylevelaci: access to attr="(" by * (read,search,nowrite,nocompare)
  ```
If you have more than one directory for which Oracle Internet Directory is used as a Shadow directory, then you must create different shadow containers for each of the directories. The container name can be chosen to uniquely identify the specific directory for which this is a shadow entry.

### 11.3.4 Directory Structure Overview - Shadow Join

Figure 11–1 shows the directory structure in the primary and shadow directories. The containers `cn=reservation`, `cn=appIDUsers`, `cn=FusionGroups`, and `cn=DataRoleGroups` are specific to Fusion Applications.

**Figure 11–1 Directory Structure**

Figure 11–2 shows how the DIT appears to a user or client application. The containers `cn=appIDUsers`, `cn=FusionGroups`, and `cn=DataRoleGroups` are specific to Fusion Applications.
Figure 11–2  Client View of the DIT

Figure 11–3 summarizes the adapters and plug-ins. The containers \texttt{cn=appIDUsers}, and \texttt{cn=FusionGroups} are specific to Fusion Applications.

Figure 11–3  Adapter and Plug-in Configuration
11.3.5 Configuring Oracle Virtual Directory Adapters for Split Profile

In order to produce the client side view of the data shown in Figure 11–2, you must configure multiple adapters in Oracle Virtual Directory following the steps in this section.

You can use `idmConfigTool` to create the adapters to facilitate this configuration.

**See Also:** Section B.1, "Verifying Oracle Virtual Directory Adapters for Split Profile by Using ODSM" for instructions on viewing the adapters using Oracle Directory Services Manager.

To create the adapters using `idmConfigTool`, perform the following tasks on `IDMHOST1`:

1. Set the environment variables: `MW_HOME`, `JAVA_HOME`, `IDM_HOME` and `ORACLE_HOME`.
   - Set `IDM_HOME` to `IDM_ORACLE_HOME`
   - Set `ORACLE_HOME` to `IAM_ORACLE_HOME`

2. Create a properties file for the adapter you are configuring called `splitprofile.props`, with the following content:

   ovd.host: ldaphost1.mycompany.com
   ovd.port: 8899
   ovd.binddn: cn=orcladmin
   ovd.ssl: true
   ldap1.type: AD
   ldap1.host: adhost.mycompany.com
   ldap1.port: 636
   ldap1.binddn: administrator@idmqa.com
   ldap1.ssl: true
   ldap1.base: dc=idmqa, dc=com
   ldap1.ovd.base: dc=idmqa, dc=com
   usecase.type: split
   ldap2.type: OID
   ldap2.host: ldaphost.mycompany.com
   ldap2.port: 3060
   ldap2.binddn: cn=oimLDAP, cn=users, dc=mycompany, dc=com
   ldap2.ssl: false
   ldap2.base: dc=mycompany, dc=com
   ldap2.ovd.base: dc=mycompany, dc=com

   The following list describes the parameters used in the properties file.
   - **ovd.host** is the host name of a server running Oracle Virtual Directory.
   - **ovd.port** is the https port used to access Oracle Virtual Directory.
   - **ovd.binddn** is the user DN you use to connect to Oracle Virtual Directory.
   - **ovd.password** is the password for the DN you use to connect to Oracle Virtual Directory.
   - **ovd.oamenabled** is set to `true` if you are using Oracle Access Management Access Manager, otherwise set to `false`.
   - **ovd.oamenabled** is always `true` in Fusion Applications deployments.
   - **ovd.ssl** is set to `true`, as you are using an https port.
 Configuring Multiple Directories as an Identity Store: Split Profile

- `ldap1.type` is set to OID for the Oracle Internet Directory back end directory or set to AD for the Active Directory back end directory.
- `ldap1.host` is the Active Directory host. Use the load balancer name where the host is highly available.
- `ldap2.host`: The Oracle Internet Directory host. Use the load balancer name where the host is highly available.
- `ldap1.port` is the port used to communicate with the back end directory.
- `ldap1.binddn` is the bind DN of the oimLDAP user.
- `ldap1.password` is the password of the oimLDAP user
- `ldap1.ssl` is set to true if you are using the back end's SSL connection, and otherwise set to false. This should always be set to true when an adapter is being created for AD.
- `ldap1.base` is the base location in the directory tree.
- `ldap1.ovd.base` is the mapped location in Oracle Virtual Directory.
- `usecase.type` is set to Single when using a single directory type.

3. Configure the adapter by using the `idmConfigTool` command, which is located at:

```
IAM_ORACLE_HOME/idmtools/bin
```

**Note:** When you run the `idmConfigTool`, it creates or appends to the file `idmDomainConfig.param`. This file is generated in the same directory that the `idmConfigTool` is run from. To ensure that each time the tool is run, the same file is appended to, always run the `idmConfigTool` from the directory:

```
IAM_ORACLE_HOME/idmtools/bin
```

The syntax of the command on Linux is:

```
idmConfigTool -configOVD input_file=splitprofile.props
```

During the running of the command you will be prompted for the passwords to each of the directories you will be accessing.

The command must be run once for each Oracle Virtual Directory instance.

### 11.3.6 Configuring a Global Consolidated Changelog Plug-in

Deploy a global level consolidated changelog plug-in to handle changelog entries from all the Changelog Adapters.

1. In a web browser, go to Oracle Directory Services Manager (ODSM).
2. Connect to an Oracle Virtual Directory instance.
3. On the Home page, click the **Advanced** tab. The Advanced navigation tree appears.
4. Expand Global Plugins
5. Click the **Create Plug-In** button. The Plug-In dialog box appears.
6. Enter a name for the Plug-in in the Name field.
Select the plug-in class **ConsolidatedChglogPlugin** from the list.

Click **OK**.

Click **Apply**.

### 11.3.7 Validating the Oracle Virtual Directory Changelog

Run the following command to validate that the changelog adapter is working:

```
$IDM_ORACLE_HOME/bin/ldapsearch -p 6501 -D cn=orcladmin -q -b 'cn=changelog' -s base 'objectclass=**' lastchangenumber
```

The command should return a changelog result, such as:

```
Please enter bind password:

cn=Changelog
lastChangeNumber=changelog_OID:190048;changelog_AD1:363878
```

If `ldapsearch` does not return a changelog result, double check the changelog adapter configuration.

### 11.4 Configuring Multiple Directories as an Identity Store: Distinct User and Group Populations in Multiple Directories

In this configuration, you store Oracle-specific entries in Oracle Internet Directory and enterprise-specific entries in Active Directory. If necessary, extend the Active Directory schema as described in "Configuring Active Directory for Use with Oracle Access Management Access Manager and Oracle Identity Manager" in *Oracle Fusion Middleware Enterprise Deployment Guide for Oracle Identity Management*.

---

**Note:** The Oracle Internet Directory that is to be used is not necessarily the PolicyStore Oracle Internet Directory. Conceptually, a non-Active Directory directory can be used as the second directory. For convenience, this section refers to the Policy Store Oracle Internet Directory.

---

The following conditions are assumed:

- Enterprise Directory Identity data is in one or more directories.
  Application-specific attributes of users and groups are stored in the Enterprise Directory.

- Application-specific entries are in the Application Directory. AppIDs and Enterprise Roles are stored in the Application Directory.

This section contains the following topics:

- **Section 11.4.1**, "Directory Structure Overview for Distinct User and Group Populations in Multiple Directories"

- **Section 11.4.2**, "Configuring Oracle Virtual Directory Adapters for Distinct User and Group Populations in Multiple Directories"

- **Section 11.4.3**, "Creating a Global Plug-in"
11.4.1 Directory Structure Overview for Distinct User and Group Populations in Multiple Directories

Figure 11–4 shows the directory structure in the two directories, listed here as internal and external. The containers cn=appIDUsers, cn=FusionGroups, and cn=RGX_FusionGroups are Fusion Applications-specific.

**Figure 11–4 Directory Structure**

Oracle Virtual Directory makes multiple directories look like a single DIT to a user or client application, as shown in Figure 11–5. The containers cn=appIDUsers, cn=FusionGroups, and cn=RGX_FusionGroups are Fusion Applications-specific.
Configuring Multiple Directories as an Identity Store: Distinct User and Group Populations in Multiple Directories

**Figure 11–5 Client View of the DIT**

![Client View of the DIT Diagram](image)

**Figure 11–6** provides an overview of the adapter configuration. The classes `inetOrgPerson`, `orclIDXPerson`, and `orclIDXGroup` and the containers `cn=appIDUsers` and `cn=fusionGroups` are required only for Fusion Applications.

**Figure 11–6 Configuration Overview**

![Configuration Overview Diagram](image)
11.4.2 Configuring Oracle Virtual Directory Adapters for Distinct User and Group Populations in Multiple Directories

Create the user adapter on the Oracle Virtual Directory instances running on LDAPHOST1 and LDAPHOST2 individually, as described in the following sections.

11.4.2.1 Create Enterprise Directory Adapters

Create Oracle Virtual Directory adapters for the Enterprise Directory. The type of adapter that is created will be dependent on whether or not the back end directory resides in Oracle Internet Directory or Active Directory.

You can use `idmconfgTool` to create the Oracle Virtual Directory User and Changelog adapters for Oracle Internet Directory and Active Directory.

See Also: Section B.2, "Verifying Adapters for Distinct User and Group Populations in Multiple Directories by Using ODSM" for instructions on viewing the adapters using Oracle Directory Services Manager.

Oracle Identity Manager requires adapters. It is highly recommended, though not mandatory, that you use Oracle Virtual Directory to connect to Oracle Internet Directory.

To create the adapters using `idmconfgTool`, perform the following tasks on IDMHOST1:

1. Set the environment variables: `MW_HOME`, `JAVA_HOME`, `IDM_HOME` and `ORACLE_HOME`.
   - Set `IDM_HOME` to `IDM_ORACLE_HOME`
   - Set `ORACLE_HOME` to `IAM_ORACLE_HOME`

2. Create a properties file for the adapter you are configuring called `ovd1.props`. The contents of this file depends on whether you are configuring the Oracle Internet Directory adapter or the Active Directory Adapter.

   - **Oracle Internet Directory** adapter properties file:
     ```
     ovd.host: ldaphost1.mycompany.com
     ovd.port: 8899
     ovd.binddn: cn=orcladmin
     ovd.password: ovdpassword
     ovd.oamenabled: true
     ovd.ssl: true
     ldap1.type: OID
     ldap1.host: oididstore.us.oracle.com
     ldap1.port: 3060
     ldap1.binddn: cn=oimLDAP,cn=systemids,dc=mycompany,dc=com
     ldap1.password: oidpassword
     ldap1.ssl: false
     ldap1.base: dc=mycompany,dc=com
     usecase.type: single
     ```

   - **Active Directory** adapter properties file:
     ```
     ovd.host: ldaphost1.mycompany.com
     ovd.port: 8899
     ovd.binddn: cn=orcladmin
     ovd.password: ovdpassword
     ```
Configuring Multiple Directories as an Identity Store: Distinct User and Group Populations in Multiple Directories

```plaintext
ovd.oamenabled:true
ovd.ssl:true
ldap1.type:AD
ldap1.host:adidstore.us.oracle.com
ldap1.port:636
ldap1.binddn:cn=adminuser
ldap1.password:adpassword
ldap1.ssl:true
ldap1.base:dc=mycompany,dc=com
ldap1.ovd.base:dc=mycompany,dc=com
usecase.type: single
```

The following list contains the parameters used in the properties file and their descriptions.

- **ovd.host** is the host name of a server running Oracle Virtual Directory.
- **ovd.port** is the https port used to access Oracle Virtual Directory.
- **ovd.binddn** is the user DN you use to connect to Oracle Virtual Directory.
- **ovd.password** is the password for the DN you use to connect to Oracle Virtual Directory.
- **ovd.oamenabled** is set to **true** if you are using Oracle Access Management Access Manager, otherwise set to **false**.
  
  **ovd.oamenabled** is always **true** in Fusion Applications deployments.
- **ovd.ssl** is set to **true**, as you are using an https port.
- **ldap1.type** is set to OID for the Oracle Internet Directory back end directory or set to AD for the Active Directory back end directory.
- **ldap1.host** Back end directory host.
- **ldap1.port** is the port used to communicate with the back end directory.
- **ldap1.binddn** is the bind DN of the oimLDAP user.
- **ldap1.password** is the password of the oimLDAP user.
- **ldap1.ssl** is set to **true** if you are using the back end's SSL connection, and otherwise set to **false**. This should always be set to **true** when an adapter is being created for AD.
- **ldap1.base** is the base location in the directory tree.
- **ldap1.ovd.base** is the mapped location in Oracle Virtual Directory.
- **usecase.type** is set to **single** when using a single directory type.

3. Configure the adapter by using the `idmConfigTool` command, which is located at:

```
IAM_ORACLE_HOME/idmtools/bin
```

**Note:** When you run the `idmConfigTool`, it creates or appends to the file `idmDomainConfig.param`. This file is generated in the same directory that the `idmConfigTool` is run from. To ensure that each time the tool is run, the same file is appended to, always run the `idmConfigTool` from the directory:

```
IAM_ORACLE_HOME/idmtools/bin
```
The syntax of the command on Linux is:

```
idmConfigTool.sh -configOVD input_file=configfile [log_file=logfile]
```

The syntax on Windows is:

```
idmConfigTool.bat -configOVD input_file=configfile [log_file=logfile]
```

For example:

```
idmConfigTool.sh -configOVD input_file=ovd1.props
```

The command requires no input. The output looks like this:

The tool has completed its operation. Details have been logged to logfile

Run this command on each Oracle Virtual Directory host in your topology, with the appropriate value for `ovd.host` in the property file.

11.4.2.2 Create Application Directory Adapters

Create Oracle Virtual Directory adapters for the Application Directory. The back end directory for the application directory is always Oracle Internet Directory.

You can use `idmconfigTool` to create the Oracle Virtual Directory User and Changelog adapters for Oracle Internet Directory and Active Directory. Oracle Identity Manager requires adapters. It is highly recommended, though not mandatory, that you use Oracle Virtual Directory to connect to Oracle Internet Directory.

To do this, perform the following tasks on IDMHOST1:

1. Set the environment variables: `MW_HOME`, `JAVA_HOME`, `IDM_HOME` and `ORACLE_HOME`.

   Set `IDM_HOME` to `IDM_ORACLE_HOME`

   Set `ORACLE_HOME` to `IAM_ORACLE_HOME`

2. Create a properties file for the adapter you are configuring called `ovd1.props`. The contents of this file is as follows.

   **Oracle Internet Directory** adapter properties file:

   ```
   ovd.host:ldaphost1.mycompany.com
   ovd.port:8899
   ovd.binddn:cn=orcladmin
   ovd.password:ovdpassword
   ovd.oamenabled:true
   ovd.ssl:true
   ldap1.type:OID
   ldap1.host:oididstore.us.oracle.com
   ldap1.port:3060
   ldap1.binddn:cn=oidLDAP,cn=systemids,dc=mycompany,dc=com
   ldap1.password:oidpassword
   ldap1.ssl:false
   ldap1.base:dc=mycompany,dc=com
   ldap1.ovd.base:dc=mycompany,dc=com
   usecase.type: single
   ```

   The following list describes the parameters used in the properties file.

   - `ovd.host` is the host name of a server running Oracle Virtual Directory.
   - `ovd.port` is the https port used to access Oracle Virtual Directory.
- ovd.binddn is the user DN you use to connect to Oracle Virtual Directory.
- ovd.password is the password for the DN you use to connect to Oracle Virtual Directory.
- ovd.oamenabled is set to true if you are using Oracle Access Management Access Manager, otherwise set to false.
  ovd.oamenabled is always true in Fusion Applications deployments.
- ovd.ssl is set to true, as you are using an https port.
- ldap1.type is set to OID for the Oracle Internet Directory back end directory or set to AD for the Active Directory back end directory.
- ldap1.host is the host on which back end directory is located. Use the load balancer name.
- ldap1.port is the port used to communicate with the back end directory.
- ldap1.binddn is the bind DN of the oimLDAP user.
- ldap1.password is the password of the oimLDAP user
- ldap1.ssl is set to true if you are using the back end's SSL connection, and otherwise set to false. This should always be set to true when an adapter is being created for AD.
- ldap1.base is the base location in the directory tree.
- ldap1.ovd.base is the mapped location in Oracle Virtual Directory.
- usecase.type is set to Single when using a single directory type.

3. Configure the adapter by using the idmConfigTool command, which is located at:

   IAM_ORACLE_HOME/idmtools/bin

---

**Note:** When you run the idmConfigTool, it creates or appends to the file idmDomainConfig.param. This file is generated in the same directory that the idmConfigTool is run from. To ensure that each time the tool is run, the same file is appended to, always run the idmConfigTool from the directory:

   IAM_ORACLE_HOME/idmtools/bin

---

The syntax of the command on Linux is:

   idmConfigTool.sh -configOVD input_file=configfile [log_file=logfile]

The syntax on Windows is:

   idmConfigTool.bat -configOVD input_file=configfile [log_file=logfile]

For example:

   idmConfigTool.sh -configOVD input_file=ovd1.props

The command requires no input. The output looks like this:

   The tool has completed its operation. Details have been logged to logfile

Run this command on each Oracle Virtual Directory host in your topology, with the appropriate value for ovd.host in the property file.
11.4.3 Creating a Global Plug-in

To create a Global Oracle Virtual Directory plug-in, proceed as follows:

1. In a web browser, go to Oracle Directory Services Manager (ODSM).
2. Create connections to each of the Oracle Virtual Directory instances running on LDAPHOST1 and LDAPHOST2, if they do not already exist.
3. Connect to each Oracle Virtual Directory instance by using the appropriate connection entry.
4. On the Home page, click the Advanced tab. The Advanced navigation tree appears.
5. Click the + next to Global Plugins in the left pane.
6. Click Create Plugin.
7. Create the Global Consolidated Changelog Plug-in as follows:
   Enter the following values to create the Global Consolidated Plug-in:
   - **Name**: Global Consolidated Changelog
   - **Class**: Click Select then choose: ConsolidatedChangelog
     Click OK when finished.

The environment is now ready to be configured to work with Oracle Virtual Directory as the Identity Store.

11.5 Additional Configuration Tasks

If you have previously integrated Oracle Identity Manager with a single directory and you are now reintegrating it with multiple directories, you must reset the changelog number for each of the incremental jobs to zero. The changelog numbers are repopulated on the next run.
Using the idmConfigTool Command

The `idmConfigTool` is located at:

`IAM_ORACLE_HOME/idmtools/bin`

You use the `idmConfigTool` to automate the following tasks:

- Preconfiguring the Identity Store components (Oracle Internet Directory and Oracle Virtual Directory) for installing the other Identity Management components, including Oracle Access Manager and Oracle Identity Manager.
- Postconfiguring the Identity Store components Oracle Access Manager, Oracle Identity Manager and wiring of Oracle Access Manager and Oracle Identity Manager.
- Extracting the configuration of the Identity Management components Oracle Internet Directory, Oracle Virtual Directory, Oracle Access Manager and Oracle Identity Manager.
- Validating the configuration parameters representing the Identity Management components Oracle Internet Directory, Oracle Virtual Directory, Oracle Access Manager and Oracle Identity Manager.

### A.1 Syntax

The tool has the following syntax on Linux:

```
idmConfigTool.sh -command input_file=filename log_file=logfileName log_level=log_level
```

The tool has the following syntax on Windows:

```
idmConfigTool.bat -command input_file=filename log_file=logfileName log_level=log_level
```

Values for `command` are as follows:

<table>
<thead>
<tr>
<th>Command</th>
<th>Component name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>preConfigIDStore</td>
<td></td>
<td>Configure the Identity Store and Policy store by creating the groups and setting ACIs to the various containers.</td>
</tr>
<tr>
<td>prepareIDStore</td>
<td></td>
<td>Configure the identity store by adding necessary users and associating users with groups. Modes are available to enable you to configure for a specific component.</td>
</tr>
</tbody>
</table>
The validate command requires a component name.

You must run this tool as a user with orcladmin privileges on Oracle Internet Directory.

### A.2 Parameters

The following sections list the parameters for the commands.

#### A.2.1 preConfigIDStore

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>IDSTORE_HOST</td>
<td>identity store hostname, for example mynode.us.mycompany.com</td>
</tr>
<tr>
<td>IDSTORE_PORT</td>
<td>identity store port, for example 1234</td>
</tr>
<tr>
<td>IDSTORE_BINDDN</td>
<td>cn:orcladmin</td>
</tr>
<tr>
<td>IDSTORE_USERNAMEATTRIBUTE</td>
<td>cn</td>
</tr>
<tr>
<td>IDSTORE_USERSEARCHBASE</td>
<td>cn:Users, dc:test</td>
</tr>
<tr>
<td>IDSTORE_GROUPSEARCHBASE</td>
<td>cn:Groups, dc:test</td>
</tr>
<tr>
<td>IDSTORE_SEARCHBASE</td>
<td>dc:test</td>
</tr>
<tr>
<td>IDSTORE_SYSTEMIDBASE</td>
<td>cn:system, dc:test</td>
</tr>
<tr>
<td>IDSTORE_READONLYUSER</td>
<td>readOnlyUser</td>
</tr>
<tr>
<td>IDSTORE_READWRITEUSER</td>
<td>readWriteUser</td>
</tr>
<tr>
<td>IDSTORE_SUPERUSER</td>
<td>FAAdmin</td>
</tr>
<tr>
<td>IDSTORE_OAMSOFTWAREUSER</td>
<td>oamSoftwareUser</td>
</tr>
<tr>
<td>IDSTORE_OAMADMINUSER</td>
<td>oamAdminUser</td>
</tr>
<tr>
<td>IDSTORE_OIMADMINUSER</td>
<td>oimAdminUser</td>
</tr>
<tr>
<td>IDSTORE_OIMADMINGROUP</td>
<td>oimAdminGroup</td>
</tr>
<tr>
<td>POLICYSTORE_SHARES_IDSTORE</td>
<td>true</td>
</tr>
</tbody>
</table>
### A.2.2 prepareIDStore Parameters

The `prepareIDStore` option takes "mode" as an argument to perform tasks for the specified component. The syntax for specifying the mode is:

```
prepareIDStore mode=mode
input_file=filename_with_ConfigParameters
```

where mode must be one of:

- `fusion`
- `OAM`
- `OIM`
- `OAAM`
- `WLS`
- `all` (performs all the tasks of the above modes combined)

#### prepareIDStore mode=fusion

The following are created in this mode:

- Create a Readonly User
- Create a ReadWrite User
- Create a Super User
- Add the readOnly user to the groups orclFAGroupReadPrivilegeGroup and orclFAUserWritePrefsPrivilegeGroup
- Add the readWrite user to the groups orclFAUserWritePrivilegeGroup and orclFAGroupWritePrivilegeGroup

#### Table A–1  prepareIDStore mode=fusion Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>IDSTORE_HOST</td>
<td>identity store hostname</td>
</tr>
<tr>
<td>IDSTORE_PORT</td>
<td>identity store port</td>
</tr>
<tr>
<td>IDSTORE_BINDDN</td>
<td>cn=orcladmin</td>
</tr>
<tr>
<td>IDSTORE_USERNAMEATTRIBUTE</td>
<td>cn</td>
</tr>
<tr>
<td>IDSTORE_LOGINATTRIBUTE</td>
<td>uid</td>
</tr>
<tr>
<td>IDSTORE_USERSEARCHBASE</td>
<td>cn=Users, dc=us,dc=oracle,dc=com</td>
</tr>
<tr>
<td>IDSTORE_GROUPSEARCHBASE</td>
<td>cn=Groups, dc=us,dc=oracle,dc=com</td>
</tr>
<tr>
<td>IDSTORE_SEARCHBASE</td>
<td>dc=us,dc=oracle,dc=com</td>
</tr>
<tr>
<td>IDSTORE_READONLYUSER</td>
<td>readOnlyUser</td>
</tr>
<tr>
<td>IDSTORE_READWRITEUSER</td>
<td>readWriteUser</td>
</tr>
<tr>
<td>IDSTORE_SUPERUSER</td>
<td>superUser</td>
</tr>
</tbody>
</table>
**prepareIDStore mode=OAM**
The following are created in this mode:
- Perform schema extensions as required by the OAM component
- Add the oblix schema
- Create the OAMSoftware User
- Create OblixAnonymous User
- Optionally create the OAM Admin User
- Associate these users to their respective groups
- Create the group "orclFAOAMUserWritePrivilegeGroup"

**Table A–2  prepareIDStore mode=OAM Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>IDSTORE_HOST</td>
<td>identity store hostname</td>
</tr>
<tr>
<td>IDSTORE_PORT</td>
<td>identity store port</td>
</tr>
<tr>
<td>IDSTORE_BINDDN</td>
<td>cn=orcladmin</td>
</tr>
<tr>
<td>IDSTORE_USERNAMEATTRIBUTE</td>
<td>cn</td>
</tr>
<tr>
<td>IDSTORE_LOGINATTRIBUTE</td>
<td>uid</td>
</tr>
<tr>
<td>IDSTORE_USERSEARCHBASE</td>
<td>cn=Users, dc=us,dc=oracle,dc=com</td>
</tr>
<tr>
<td>IDSTORE_GROUPSEARCHBASE</td>
<td>cn=Groups, dc=us,dc=oracle,dc=com</td>
</tr>
<tr>
<td>IDSTORE_SEARCHBASE</td>
<td>dc=us,dc=oracle,dc=com</td>
</tr>
<tr>
<td>IDSTORE_OAMSOFTWAREUSER</td>
<td>oamSoftwareUser</td>
</tr>
<tr>
<td>IDSTORE_OAMADMINUSER</td>
<td>oamAdminUser</td>
</tr>
</tbody>
</table>

**prepareIDStore mode=OIM**
The following are created in this mode:
- Create OIM Admin User under SystemID container
- Create OIM Admin Group
- Add OIM Admin User to OIM Admin Group
- Add ACIs to OIM Admin Group
- Create reserve container
- Create xelsysadmin user

**Table A–3  prepareIDStore mode=OIM Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>IDSTORE_HOST</td>
<td>identity store hostname</td>
</tr>
<tr>
<td>IDSTORE_PORT</td>
<td>identity store port</td>
</tr>
<tr>
<td>IDSTORE_BINDDN</td>
<td>cn=orcladmin</td>
</tr>
</tbody>
</table>
prepareIDStore mode=OAAM
The following are created in this mode:

- Create OAAM Admin User
- Create OAAM Groups
- Add the OAAM Admin User as a member of OAAM Groups

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>IDSTORE_USERNAMEATTRIBUTE</td>
<td>cn</td>
</tr>
<tr>

A.3 Examples

The following reference contains examples of idmConfigTool usage:
"Integrating Oracle Access Manager and Oracle Identity Manager" in the Oracle Fusion Middleware Integration Guide for Oracle Access Manager.
Verifying Adapters for Multiple Directory Identity Stores by Using ODSM

After you have configured your Oracle Virtual Directory adapters as described in Chapter 11, "Configuring an Identity Store with Multiple Directories," you can use ODSM to view the adapters for troubleshooting purposes. This chapter explains how.

This appendix contains the following sections:

- Section B.1, "Verifying Oracle Virtual Directory Adapters for Split Profile by Using ODSM"
- Section B.2, "Verifying Adapters for Distinct User and Group Populations in Multiple Directories by Using ODSM"

B.1 Verifying Oracle Virtual Directory Adapters for Split Profile by Using ODSM

This section describes how to validate the adapters created in Chapter 11.3.5, "Configuring Oracle Virtual Directory Adapters for Split Profile."

This section contains the following topics:

- Section B.1.1, "Verifying User Adapter for Active Directory Server"
- Section B.1.2, "Verifying Shadowjoiner User Adapter"
- Section B.1.3, "Verifying JoinView Adapter"
- Section B.1.4, "Verifying User/Role Adapter for Oracle Internet Directory"
- Section B.1.5, "Verifying Changelog adapter for Active Directory Server"
- Section B.1.6, "Verifying Changelog Adapter for Oracle Internet Directory"
- Section B.1.7, "Configuring a Global Consolidated Changelog Plug-in"
- Section B.1.8, "Validate Oracle Virtual Directory Changelog"

B.1.1 Verifying User Adapter for Active Directory Server

Verify the following adapter and plug-ins for Active Directory:

Follow these steps to verify the User Adapter in Oracle Virtual Directory using Oracle Directory Services Manager.

1. In a web browser, go to Oracle Directory Services Manager (ODSM). The URL is of the form: http://admin.mycompany.com/odsm.
2. Connect to each Oracle Virtual Directory instance by using the appropriate connection entry.

3. On the Home page, click the **Adapter** tab.

4. Click **user_AD1** adapter.

5. Verify that the User Adapter routing as configured correctly:
   a. Visibility must be set to internal.
   b. Bind Support must be set to enable.

6. Verify the User Adapter User Management Plug-in as follows:
   a. Select the **User Adapter**.
   b. Click the **Plug-ins** tab.
   c. Click the **User Management** Plug-in, then click **Edit** in the plug-ins table. The plug-in editing window appears.
   d. Verify that the plug-in parameters are as follows:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>directoryType</td>
<td>activedirectory</td>
<td>Yes</td>
</tr>
<tr>
<td>exclusionMapping</td>
<td>orclappiduser,uid=samaccountname</td>
<td></td>
</tr>
<tr>
<td>mapAttribute</td>
<td>orclguid=objectGuid</td>
<td></td>
</tr>
<tr>
<td>mapAttribute</td>
<td>uniquemember=member</td>
<td></td>
</tr>
<tr>
<td>addAttribute</td>
<td>user,samaccountname=%uid%,%orclshortuid%</td>
<td></td>
</tr>
<tr>
<td>mapAttribute</td>
<td>mail=userPrincipalName</td>
<td></td>
</tr>
<tr>
<td>mapAttribute</td>
<td>ntgrouptype=grouptype</td>
<td></td>
</tr>
<tr>
<td>mapObjectclass</td>
<td>groupofUniqueNames=group</td>
<td></td>
</tr>
<tr>
<td>mapObjectclass</td>
<td>orclidxperson=user</td>
<td></td>
</tr>
<tr>
<td>pwdMaxFailure</td>
<td>10</td>
<td>Yes</td>
</tr>
<tr>
<td>oamEnabled</td>
<td>True¹</td>
<td></td>
</tr>
<tr>
<td>mapObjectClass</td>
<td>inetorgperson=user</td>
<td>Yes</td>
</tr>
<tr>
<td>mapPassword</td>
<td>True</td>
<td>Yes</td>
</tr>
<tr>
<td>oimLanguages</td>
<td>Comma separated list of language codes, such as en, fr, ja</td>
<td></td>
</tr>
</tbody>
</table>

¹ Set oamEnabled to true only if you are using Oracle Access Management Access Manager.

### B.1.2 Verifying Shadowjoiner User Adapter

Follow these steps to verify the ShadowJoiner Adapter in Oracle Virtual Directory using Oracle Directory Services Manager:

1. In a web browser, go to Oracle Directory Services Manager (ODSM).
2. Connect to Oracle Virtual Directory.
3. On the Home page, click the **Adapter** tab.
4. Click the Shadow4AD1 Adapter.

5. Ensure that User Adapter routing as is configured correctly:
   a. **Visibility** must be set to internal.
   b. **Bind Support** must be set to enable.

6. Verify the User Adapter as follows:
   a. Select the User Adapter.
   b. Click the **Plug-ins** tab.
   c. Click the **User Management** Plug-in, then click **Edit** in the plug-ins table. The plug-in editing window appears.
   d. Verify that the parameters are as follows:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>directoryType</td>
<td>oid</td>
<td>Yes</td>
</tr>
<tr>
<td>pwdMaxFailure</td>
<td>10</td>
<td>Yes</td>
</tr>
<tr>
<td>oamEnabled</td>
<td>true</td>
<td></td>
</tr>
<tr>
<td>mapObjectclass</td>
<td>container=orclContainer</td>
<td>Yes</td>
</tr>
<tr>
<td>oimDateFormat</td>
<td>yyyyMMddHHmmsz'z'</td>
<td></td>
</tr>
</tbody>
</table>

**B.1.3 Verifying JoinView Adapter**

Follow these steps to verify the User Adapter in Oracle Virtual Directory using Oracle Directory Services Manager.

1. In a web browser, go to the Oracle Directory Services Manager (ODSM) page.
2. Connect to Oracle Virtual Directory.
3. On the Home page, click the **Adapter** tab.
4. Click the JoinView adapter.
5. Verify the Adapter as follows
   a. Click **Joined Adapter** in the adapter tree. It should exist
   b. Click **OK**.

**B.1.4 Verifying User/Role Adapter for Oracle Internet Directory**

Follow these steps to verify the User Adapter in Oracle Virtual Directory using Oracle Directory Services Manager.

1. In a web browser, go to Oracle Directory Services Manager (ODSM).
2. Connect to Oracle Virtual Directory.
3. On the Home page, click the **Adapter** tab.
4. Click User Adapter.
5. Verify the plug-in as follows:
   a. Select the User Adapter.
b. Click the **Plug-ins** tab.

c. Click the **User Management** Plug-in in the plug-ins table, then click **Edit**. The plug-in editing window appears.

d. Verify that the parameters are as follows:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>directoryType</td>
<td>oid</td>
<td>Yes</td>
</tr>
<tr>
<td>pwdMaxFailure</td>
<td>10</td>
<td>Yes</td>
</tr>
<tr>
<td>oamEnabled</td>
<td>true</td>
<td></td>
</tr>
<tr>
<td>mapObjectclass</td>
<td>container=orclCont</td>
<td>Yes</td>
</tr>
<tr>
<td>oimDateFormat</td>
<td>yyyyMMddHHmmszs</td>
<td></td>
</tr>
</tbody>
</table>

e. Click **OK**.

### B.1.5 Verifying Changelog adapter for Active Directory Server

Follow these steps to verify the Changelog Adapter in Oracle Virtual Directory using Oracle Directory Services Manager.

1. In a web browser, go to Oracle Directory Services Manager (ODSM).
2. Connect to Oracle Virtual Directory.
3. On the Home page, click the **Adapter** tab.
4. Click the changelog_AD1 adapter.
5. Verify the plug-in as follows.

   a. Select the Changelog Adapter.
   b. Click the **Plug-ins** tab.
   c. In the Deployed Plus-ins table, click the **changelog** plug-in, then click **Edit** in the plug-ins table. The plug-in editing window appears.
   d. Verify that the parameter values are as follows:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>directoryType</td>
<td>activedirectory</td>
<td></td>
</tr>
<tr>
<td>mapAttribute</td>
<td>targetGUID=objectGUID</td>
<td></td>
</tr>
<tr>
<td>requiredAttribute</td>
<td>samaccountname</td>
<td></td>
</tr>
<tr>
<td>sizeLimit</td>
<td>1000</td>
<td></td>
</tr>
<tr>
<td>targetDNFilter</td>
<td>cn=users,dc=idm,dc=ad,dc=com</td>
<td></td>
</tr>
<tr>
<td></td>
<td>The users container in Active Directory</td>
<td></td>
</tr>
<tr>
<td>mapUserState</td>
<td>true</td>
<td></td>
</tr>
<tr>
<td>oamEnabled</td>
<td>true</td>
<td></td>
</tr>
<tr>
<td>virtualDITAdapterName</td>
<td>user_J1;user_AD1</td>
<td></td>
</tr>
</tbody>
</table>
B.1.6 Verifying Changelog Adapter for Oracle Internet Directory

To use the changelog adapter, you must first enable changelog on the connected directory. To test whether the directory is changelog enabled, type:

```
ldapsearch -h directory_host -p ldap_port -D bind_dn -q -b '' -s base 'objectclass=*' lastchangenum
```

for example:

```
ldapsearch -h ldaphost1 -p 389 -D "cn=orcladmin" -q -b '' -s base 'objectclass=*' lastchangenum
```

If you see `lastchangenum` with a value, it is enabled. If it is not enabled, enable it as described in the Enabling and Disabling Changelog Generation by Using the Command Line section of Oracle Fusion Middleware Administrator’s Guide for Oracle Internet Directory.

Follow these steps to verify the Changelog Adapter in Oracle Virtual Directory using Oracle Directory Services Manager.

1. In a web browser, go to Oracle Directory Services Manager (ODSM).
2. Connect to an Oracle Virtual Directory instance.
3. On the Home page, click the Adapter tab.
4. Click the Changelog Adapter.
5. Verify the plug-in as follow.
   a. Select the Changelog Adapter.
   b. Click the Plug-ins tab.
   c. In the Deployed Plug-ins table, click the changelog plug-in, then click Edit in the plug-ins table. The plug-in editing window appears.
   d. Verify that the parameter values are as follows:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>directoryType</td>
<td>oid</td>
</tr>
<tr>
<td>mapAttribute</td>
<td>targetGUID=orclguid</td>
</tr>
<tr>
<td>requiredAttribute</td>
<td>orclGUID</td>
</tr>
<tr>
<td>modifierDNFilter</td>
<td>cn=orcladmin</td>
</tr>
<tr>
<td>sizeLimit</td>
<td>1000</td>
</tr>
<tr>
<td>targetDNFilter</td>
<td>dc=mycompany, dc=com</td>
</tr>
<tr>
<td>targetDNFilter</td>
<td>cn=shadowentries</td>
</tr>
<tr>
<td>mapUserState</td>
<td>true</td>
</tr>
<tr>
<td>oamEnabled</td>
<td>true</td>
</tr>
<tr>
<td>virtualDITAdapter</td>
<td>Name</td>
</tr>
<tr>
<td>Name</td>
<td>user_J1;shadow4AD1</td>
</tr>
<tr>
<td>virtualDITAdapter</td>
<td>User Adapter (The name of the User adapter's name)</td>
</tr>
</tbody>
</table>
B.1.7 Configuring a Global Consolidated Changelog Plug-in

Verify the global level consolidated changelog plug-in as follows:

1. In a web browser, go to Oracle Directory Services Manager (ODSM).
2. Connect to an Oracle Virtual Directory instance.
3. On the Home page, click the Advanced tab. The Advanced navigation tree appears.
4. Expand Global Plugins.
5. Click the ConsolidatedChglogPlugin. The plug-in editing window appears.

B.1.8 Validate Oracle Virtual Directory Changelog

Run the following command to validate that the changelog adapter is working:

```bash
$IDM_ORACLE_HOME/bin/ldapsearch -p 6501 -D cn=orcladmin -q -b 'cn=changelog' -s base 'objectclass=*' lastchangenumber
```

The command should return a changelog result, such as:

```
Please enter bind password:
cn=Changelog
lastChangeNumber=changelog_OID:190048;changelog_AD1:363878
```

If `ldapsearch` does not return a changelog result, double check the changelog adapter configuration.

B.2 Verifying Adapters for Distinct User and Group Populations in Multiple Directories by Using ODSM

This section describes how to view the adapters created in Section 11.4.2, "Configuring Oracle Virtual Directory Adapters for Distinct User and Group Populations in Multiple Directories."

Verify the user adapter on the Oracle Virtual Directory instances running on LDAPHOST1 and LDAPHOST2 individually. Follow these steps to verify the User Adapter in Oracle Virtual Directory using Oracle Directory Services Manager:

1. If they are not already running, start the Administration Server and the WLS_ODSM Managed Servers.
2. In a web browser, go to Oracle Directory Services Manager (ODSM) at: http://admin.mycompany.com/odsm
3. Verify connections to each of the Oracle Virtual Directory instances running on LDAPHOST1 and LDAPHOST2, if they do not already exist.
4. Connect to each Oracle Virtual Directory instance by using the appropriate connection entry.
5. On the Home page, click the Adapter tab.
6. Click the name of each adapter. Verify that it has the parameters shown in the following tables.

This section contains the following topics:

- Section B.2.1, "User/Role Adapter A1"
- Section B.2.2, "User/Role Adapter A2"
B.2.1 User/Role Adapter A1

Verify the plug-in of the User/Role Adapter A1, as follows:

1. Select the OIM User Adapter.
2. Click the **Plug-ins** tab.
3. Click the **User Management** Plug-in, then click **Edit** in the plug-ins table. The plug-in editing window appears.
4. Verify that the parameter values are as follows:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>directoryType</strong></td>
<td><code>activedirectory</code></td>
<td>Yes</td>
</tr>
<tr>
<td><strong>exclusionMapping</strong></td>
<td><code>orclappiduser,uid=samaccountname</code></td>
<td></td>
</tr>
<tr>
<td><strong>mapAttribute</strong></td>
<td><code>orclguid=objectGuid</code></td>
<td></td>
</tr>
<tr>
<td><strong>mapAttribute</strong></td>
<td><code>uniquemember=member</code></td>
<td></td>
</tr>
<tr>
<td><strong>addAttribute</strong></td>
<td><code>user,samaccountname=%uid%,%orclshortuid%</code></td>
<td></td>
</tr>
<tr>
<td><strong>mapAttribute</strong></td>
<td><code>mail=userPrincipalName</code></td>
<td></td>
</tr>
<tr>
<td><strong>mapAttribute</strong></td>
<td><code>ntgrouptype=grouptype</code></td>
<td></td>
</tr>
<tr>
<td><strong>mapObjectclass</strong></td>
<td><code>groupofUniqueNames=group</code></td>
<td></td>
</tr>
<tr>
<td><strong>mapObjectclass</strong></td>
<td><code>orclidxperson=user</code></td>
<td></td>
</tr>
<tr>
<td><strong>pwdMaxFailure</strong></td>
<td><code>10</code></td>
<td>Yes</td>
</tr>
<tr>
<td><strong>oamEnabled</strong></td>
<td><code>true</code></td>
<td></td>
</tr>
<tr>
<td><strong>mapObjectClass</strong></td>
<td><code>inetorgperson=user</code></td>
<td>Yes</td>
</tr>
<tr>
<td><strong>mapPassword</strong></td>
<td><code>true</code></td>
<td>Yes</td>
</tr>
<tr>
<td><strong>oimLanguages</strong></td>
<td>Comma separated list of language codes, such as en, fr, ja</td>
<td></td>
</tr>
</tbody>
</table>

Set `oamEnabled` to true only if you are using Oracle Access Management Access Manager.

B.2.2 User/Role Adapter A2

Verify the plug-in of the User/Role Adapter A2 as follows:

1. Select the User Adapter.
2. Click the **Plug-ins** tab.
3. Click the **User Management** Plug-in in the plug-ins table, then click **Edit**. The plug-in editing window appears.
4. Verify that the parameter values are as follows:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>directoryType</strong></td>
<td><code>activedirectory</code></td>
<td>Yes</td>
</tr>
<tr>
<td><strong>exclusionMapping</strong></td>
<td><code>orclappiduser,uid=samaccountname</code></td>

</tbody>
</table>
B.2.3 Changelog Adapter C1

To verify the Changelog Adapter C1 plug-in, follow these steps:

1. Select the OIM changelog adapter **Changelog_Adapter_C1**.
2. Click the **Plug-ins** tab.
3. In the **Deployed Plus-ins** table, click the **changelog** plug-in, then click **Edit** in the plug-ins table. The plug-in editing window appears.
4. In the **Parameters** table, verify that the values are as shown.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>directoryType</td>
<td>oid</td>
<td>Yes</td>
</tr>
<tr>
<td>pwdMaxFailure</td>
<td>10</td>
<td>Yes</td>
</tr>
<tr>
<td>oamEnabled</td>
<td>true¹</td>
<td></td>
</tr>
<tr>
<td>mapObjectclass</td>
<td>container=orclCont</td>
<td>Yes</td>
</tr>
</tbody>
</table>

¹ Set oamEnabled to true only if you are using Oracle Access Management Access Manager.

### Table B–1 Values in Parameters Table

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Comments</th>
</tr>
</thead>
</table>
| modifierDNFilter   | A bind DN that has administrative rights on the directory server, in the format:  
                      "!(modifiersname=cn=BindDN)"  
                      For example:  
                      "!(modifiersname=cn=orcladmin,cn=systemids,dc=mycompany,dc=com)" | Create   |
| sizeLimit          | 1000                                                                 | Create   |
| targetDNFilter     | dc=us,dc=mycompany,dc=com                                            | Create   |
| mapUserState       | true                                                                 | Update   |
| oamEnabled         | true                                                                 | Update   |
| virtualDITAdapterName | The adapter name of User/Role Adapter A1: User_Adapter_A1 | Create   |

B.2.4 Changelog Adapter for Active Directory

Verify the plug-in as follows.

1. Select the OIM Changelog Adapter.
2. Click the **Plug-ins** tab.
3. In the Deployed Plus-ins table, click the **changelog** plug-in, then click **Edit** in the plug-ins table. The plug-in editing window appears.
4. In the Parameters table, verify that the parameters are as follows:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>directoryType</td>
<td>activedirectory</td>
</tr>
</tbody>
</table>
B.2.5 Changelog Adapter C2

Verify the plug-in as follows:

1. Select the OIM changelog adapter Changelog_Adapter_C2.
2. Click the Plug-ins tab.
3. In the Deployed Plus-ins table, click the changelog plug-in, then click Edit in the plug-ins table. The plug-in editing window appears.
4. In the Parameters table, verify that the parameters are as follows:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>mapAttribute</td>
<td>targetGUID=objectGUID</td>
<td></td>
</tr>
<tr>
<td>requiredAttribute</td>
<td>samaccountname</td>
<td></td>
</tr>
<tr>
<td>sizeLimit</td>
<td>1000</td>
<td></td>
</tr>
<tr>
<td>targetDNFilter</td>
<td>dc=mycompany,dc=com</td>
<td>Search base from which reconciliation must happen. This value must be the same as the LDAP SearchDN that is specified during Oracle Identity Manager installation.</td>
</tr>
<tr>
<td>mapUserState</td>
<td>true</td>
<td></td>
</tr>
<tr>
<td>oamEnabled</td>
<td>true</td>
<td></td>
</tr>
<tr>
<td>virtualDITAdapterName</td>
<td>The name of the User adapter's name</td>
<td></td>
</tr>
</tbody>
</table>

_set oamEnabled to true only if you are using Oracle Access Management Access Manager._

**Note:** _virtualDITAdapterName_ identifies the corresponding user profile adapter name. For example, in a single-directory deployment, you can set this parameter value to User Adapter, which is the user adapter name. In a split-user profile scenario, you can set this parameter to J1;A2, where J1 is the JoinView adapter name, and A2 is the corresponding user adapter in the J1.

Table B–2 Values in Parameters Table

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>modifierDNFilter</td>
<td>A bind DN that has administrative rights on the directory server, in the format: <code>&quot;!(modifiersname=cn=BindDN)&quot;</code></td>
<td>Create</td>
</tr>
<tr>
<td></td>
<td><code>&quot;!(modifiersname=cn=orcladmin,dc=mycompany,dc=com)</code></td>
<td></td>
</tr>
<tr>
<td>sizeLimit</td>
<td>1000</td>
<td>Create</td>
</tr>
<tr>
<td>targetDNFilter</td>
<td>dc=uk, dc=mycompany,dc=com</td>
<td>Create</td>
</tr>
<tr>
<td>mapUserState</td>
<td>true</td>
<td>Update</td>
</tr>
<tr>
<td>oamEnabled</td>
<td>true</td>
<td>Update</td>
</tr>
</tbody>
</table>
### B.2.6 Verifying Oracle Virtual Directory Global Plug-in

To verify the Global Oracle Virtual Directory plug-in, proceed as follows:

1. In a web browser, go to Oracle Directory Services Manager (ODSM) at:
   
   \[
   \text{http://admin.mycompany.com/odsm}
   \]

2. Verify connections to each of the Oracle Virtual Directory instances running on LDAPHOST1 and LDAPHOST2, if they do not already exist.

3. Connect to each Oracle Virtual Directory instance by using the appropriate connection entry.

4. On the Home page, click the Adapter tab.

5. Click the Plug-ins tab.

6. Verify that the Global Consolidated Changelog Plug-in exists. Click OK when finished.

### B.2.7 Configuring a Global Consolidated Changelog Plug-in

Verify the global level consolidated changelog plug-in as follows:

1. In a web browser, go to Oracle Directory Services Manager (ODSM).

2. Connect to an Oracle Virtual Directory instance.

3. On the Home page, click the Advanced tab. The Advanced navigation tree appears.

4. Expand Global Plugins

5. Click the ConsolidatedChglogPlugin. The plug-in editing window appears.
