March 2013

This document describes how to implement the most common Oracle WSM interoperability scenarios.
Contents

Preface.................................................................................................................................................................. xi

  Documentation Accessibility ............................................................................................................................. xi
  Conventions .................................................................................................................................................. xi

1 Overview of Oracle WSM Interoperability

  1.1 About Oracle WSM Policies ............................................................................................................... 1-1
  1.2 Oracle WSM Interoperability Scenarios .......................................................................................... 1-1

2 Interoperability with Oracle WSM 10g Security Environments

  2.1 Overview of Interoperability with Oracle WSM 10g Security Environments ................................. 2-1
  2.2 A Note About Oracle WSM 10g Gateways ...................................................................................... 2-3
  2.3 A Note About Third-party Software ................................................................................................. 2-3
  2.4 Anonymous Authentication with Message Protection (WS-Security 1.0) ................................. 2-3
    2.4.1 Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service ................................. 2-4
    2.4.1.1 Configuring Oracle WSM 11g Web Service ........................................................................ 2-4
    2.4.1.2 Configuring Oracle WSM 10g Client .................................................................................. 2-4
    2.4.2 Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service ................................. 2-5
    2.4.2.1 Configuring Oracle WSM 10g Web Service ........................................................................ 2-5
    2.4.2.2 Configuring Oracle WSM 11g Client .................................................................................. 2-5
  2.5 Username Token with Message Protection (WS-Security 1.0) ...................................................... 2-6
    2.5.1 Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service ................................. 2-6
    2.5.1.1 Configuring Oracle WSM 11g Web Service ........................................................................ 2-6
    2.5.1.2 Configuring Oracle WSM 10g Client .................................................................................. 2-7
    2.5.2 Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service ................................. 2-7
    2.5.2.1 Configuring Oracle WSM 10g Web Service ........................................................................ 2-7
    2.5.2.2 Configuring Oracle WSM 11g Client .................................................................................. 2-8
  2.6 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0) ............................. 2-9
    2.6.1 Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service ................................. 2-9
    2.6.1.1 Configuring Oracle WSM 11g Web Service ........................................................................ 2-9
    2.6.1.2 Configuring Oracle WSM 10g Client .................................................................................. 2-9
    2.6.2 Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service ................................. 2-10
    2.6.2.1 Configuring Oracle WSM 10g Web Service ........................................................................ 2-10
    2.6.2.2 Configuring Oracle WSM 11g Client .................................................................................. 2-11
  2.7 Mutual Authentication with Message Protection (WS-Security 1.0) ............................................. 2-12
    2.7.1 Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service ................................. 2-12
3 Interoperability with Oracle Containers for Java EE (OC4J) 10g Security Environments

3.1 Overview of Interoperability with OC4J 10g Security Environments ........................................ 3-1
3.2 Anonymous Authentication with Message Protection (WS-Security 1.0) ................................ 3-3
  3.2.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-3
  3.2.1.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-3
  3.2.1.2 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-3
  3.2.2 Configuring OC4J 10g Client and OC4J 10g Web Service .................................................. 3-5
  3.2.2.1 Configuring OC4J 10g Client and OC4J 10g Web Service .................................................. 3-5
  3.2.2.2 Configuring OC4J 10g Client and OC4J 10g Web Service .................................................. 3-5

3.3 Username Token with Message Protection (WS-Security 1.0) ................................................. 3-6
  3.3.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-6
  3.3.1.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-6
  3.3.1.2 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-6
  3.3.2 Configuring OC4J 10g Client and OC4J 10g Web Service .................................................. 3-7
  3.3.2.1 Configuring OC4J 10g Client and OC4J 10g Web Service .................................................. 3-7
  3.3.2.2 Configuring OC4J 10g Client and OC4J 10g Web Service .................................................. 3-7

3.4 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0) ............................ 3-10
  3.4.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-10
  3.4.1.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-10
  3.4.1.2 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-10
  3.4.2 Configuring OC4J 10g Client and OC4J 10g Web Service .................................................. 3-11
  3.4.2.1 Configuring OC4J 10g Client and OC4J 10g Web Service .................................................. 3-11
  3.4.2.2 Configuring OC4J 10g Client and OC4J 10g Web Service .................................................. 3-11

3.5 Mutual Authentication with Message Protection (WS-Security 1.0) ..................................... 3-13
  3.5.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-13
  3.5.1.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service ........................................ 3-13
4 Interoperability with Oracle WebLogic Server 11g Web Service Security

Environments

4.1 Overview of Interoperability with Oracle WebLogic Server 11g Web Service Security Environments 4-1
4.2 Username Token With Message Protection (WS-Security 1.1) ............................................. 4-5
  4.2.1 Interoperating with a WebLogic Web Service Policy ....................................................... 4-6
    4.2.1.1 Attaching and Configuring the WebLogic Web Service Policy ................................. 4-6
    4.2.1.2 Attaching and Configuring the Oracle WSM Client Policy ........................................ 4-6
  4.2.2 Interoperating with a WebLogic Web Service Client Policy ........................................ 4-7
    4.2.2.1 Attaching and Configuring the Oracle WSM Policy .................................................. 4-7
    4.2.2.2 Attaching and Configuring the WebLogic Web Service Client Policy ...................... 4-8
4.3 Username Token With Message Protection (WS-Security 1.1) and MTOM ............................. 4-8
  4.3.1 Interoperating with a WebLogic Web Service Policy ....................................................... 4-8
    4.3.1.1 Attaching and Configuring the WebLogic Web Service Policy ................................. 4-8
    4.3.1.2 Attaching and Configuring the Oracle WSM Client Policy ........................................ 4-9
  4.3.2 Interoperating with a WebLogic Web Service Client Policy ........................................ 4-9
    4.3.2.1 Attaching and Configuring the Oracle WSM Policy .................................................. 4-9
    4.3.2.2 Attaching and Configuring the WebLogic Web Service Client Policy ...................... 4-10
4.4 Username Token With Message Protection (WS-Security 1.0) ............................................. 4-10
  4.4.1 Interoperability with a WebLogic Web Service Policy ....................................................... 4-10
    4.4.1.1 Attaching and Configuring the WebLogic Web Service Policy ................................. 4-10
    4.4.1.2 Attaching and Configuring the Oracle WSM Client Policy ........................................ 4-11
  4.4.2 Interoperability with a WebLogic Web Service Client Policy ........................................ 4-12
    4.4.2.1 Attaching and Configuring the Oracle WSM Policy .................................................. 4-12
    4.4.2.2 Attaching and Configuring the WebLogic Web Service Client Policy ...................... 4-12
4.5 Username Token Over SSL .................................................................................................. 4-13
  4.5.1 Interoperating with a WebLogic Web Service Client Policy ............................................. 4-13
    4.5.1.1 Attaching and Configuring the Oracle WSM Policy .................................................. 4-13
4.5.1.2 Attaching and Configuring the WebLogic Web Service Client Policy .......... 4-14
4.6 Username Token Over SSL with MTOM ....................................................... 4-14
4.6.1 Interoperating with a WebLogic Web Service Client Policy ................... 4-15
4.6.1.1 Attaching and Configuring the Oracle WSM Policy ............................. 4-15
4.6.1.2 Attaching and Configuring the WebLogic Web Service Client Policy ... 4-15
4.7 SAML Token (Sender Vouches) Over SSL .................................................... 4-15
4.7.1 Interoperating with a WebLogic Web Service Client Policy ................... 4-15
4.7.1.1 Attaching and Configuring the Oracle WSM Policy ............................. 4-15
4.7.1.2 Attaching and Configuring the WebLogic Web Service Client Policy ... 4-16
4.8 SAML Token (Sender Vouches) Over SSL with MTOM ............................ 4-17
4.8.1 Interoperating with a WebLogic Web Service Client Policy ................... 4-17
4.8.1.1 Attaching and Configuring the Oracle WSM Policy ............................. 4-17
4.8.1.2 Attaching and Configuring the WebLogic Web Service Client Policy ... 4-17
4.9 SAML Token 2.0 (Sender Vouches) With Message Protection (WS-Security 1.1)......... 4-18
4.9.1 Interoperating with a WebLogic Web Service Policy ............................. 4-18
4.9.1.1 Attaching and Configuring the WebLogic Web Service Policy.......... 4-18
4.9.1.2 Attaching and Configuring the Oracle WSM Client Policy .................. 4-20
4.9.2 Interoperating with a WebLogic Web Service Client Policy ................... 4-21
4.9.2.1 Attaching and Configuring the Oracle WSM Policy ............................. 4-21
4.9.2.2 Attaching and Configuring the WebLogic Web Service Client Policy ... 4-21
4.10 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.1) ...... 4-22
4.10.1 Interoperating with a WebLogic Web Service Policy ............................. 4-23
4.10.1.1 Attaching and Configuring the WebLogic Web Service Policy.......... 4-23
4.10.1.2 Attaching and Configuring the Oracle WSM Client Policy .................. 4-24
4.10.2 Interoperating with a WebLogic Web Service Client Policy ................... 4-24
4.10.2.1 Attaching and Configuring the Oracle WSM Policy ............................. 4-25
4.10.2.2 Attaching and Configuring the WebLogic Web Service Client Policy ... 4-25
4.11 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.1) and MTOM...... 4-26
4.11.1 Interoperating with a WebLogic Web Service Policy ............................. 4-26
4.11.1.1 Attaching and Configuring the WebLogic Web Service Policy.......... 4-26
4.11.1.2 Attaching and Configuring the Oracle WSM Client Policy .................. 4-27
4.11.2 Interoperating with a WebLogic Web Service Client Policy ................... 4-27
4.11.2.1 Attaching and Configuring the Oracle WSM Policy ............................. 4-27
4.11.2.2 Attaching and Configuring the WebLogic Web Service Client Policy ... 4-28
4.12 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0) .......... 4-28
4.12.1 Interoperating with a WebLogic Web Service Policy ............................. 4-28
4.12.1.1 Attaching and Configuring the WebLogic Web Service Policy.......... 4-28
4.12.1.2 Attaching and Configuring the Oracle WSM Client Policy .................. 4-29
4.12.2 Interoperating with a WebLogic Web Service Client Policy ................... 4-30
4.12.2.1 Attaching and Configuring the Oracle WSM Policy ............................. 4-30
4.12.2.2 Attaching and Configuring the WebLogic Web Service Client Policy ... 4-31
4.13 Mutual Authentication with Message Protection (WS-Security 1.0) ................... 4-31
4.13.1 Interoperating with a WebLogic Web Service Policy ............................. 4-32
4.13.1.1 Attaching and Configuring the WebLogic Web Service Policy.......... 4-32
4.13.1.2 Attaching and Configuring the Oracle WSM Client Policy .................. 4-34
4.13.2 Interoperating with a WebLogic Web Service Client Policy ................... 4-34
4.13.2.1 Attaching and Configuring the Oracle WSM Policy ............................. 4-35
5 Interoperability with Microsoft WCF/.NET 3.5 Security Environments

5.1 Overview of Interoperability with Microsoft WCF/.NET 3.5 Security Environments .... 5-1
5.2 Message Transmission Optimization Mechanism (MTOM) ........................................... 5-2
5.2.1 Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service .... 5-3
  5.2.1.1 Configuring Oracle WSM 11g Web Service .................................................. 5-3
  5.2.1.2 Configuring Microsoft WCF/.NET 3.5 Client ............................................. 5-3
5.2.2 Configuring Oracle WSM 11g Client and Microsoft WCF/.NET 3.5 Web Service .... 5-4
  5.2.2.1 Configuring Microsoft WCF/.NET 3.5 Web Service .................................. 5-4
  5.2.2.2 Configuring Oracle WSM 11g Client ......................................................... 5-4
5.3 Username Token With Message Protection (WS-Security 1.1) ................................... 5-5
  5.3.1 Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service .... 5-5
    5.3.1.1 Configuring Oracle WSM 11g Web Service ............................................. 5-5
    5.3.1.2 Configuring Microsoft WCF/.NET 3.5 Client .......................................... 5-6
  5.3.2 Configuring Oracle WSM 11g Client and Microsoft WCF/.NET 3.5 Web Service .... 5-9
    5.3.2.1 Configuring Microsoft WCF/.NET 3.5 Web Service ................................ 5-9
    5.3.2.2 Configuring Oracle WSM 11g Client ......................................................... 5-9
  5.3.3 Example .NET Web Service Client ................................................................... 5-10
5.4 Username Token Over SSL .............................................................................. 5-12
  5.4.1 Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service .... 5-12
    5.4.1.1 Configuring Oracle WSM 11g Web Service ............................................. 5-12
    5.4.1.2 Configuring Microsoft WCF/.NET 3.5 Client .......................................... 5-13
5.5 Mutual Authentication with Message Protection (WS-Security 1.1) ....................... 5-14
  5.5.1 Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service .... 5-15
    5.5.1.1 Configuring Oracle WSM 11g Web Service ............................................. 5-15
    5.5.1.2 Configuring Microsoft WCF/.NET 3.5 Client .......................................... 5-15
  5.5.2 Configuring Oracle WSM 11g Client and Microsoft WCF/.NET 3.5 Web Service .... 5-18
    5.5.2.1 Configuring Microsoft WCF/.NET 3.5 Web Service ................................ 5-18
    5.5.2.2 Configuring Oracle WSM 11g Client ......................................................... 5-19
5.6 Kerberos with Message Protection ................................................................... 5-20
  5.6.1 Configuration Prerequisites for Interoperability .................................................. 5-20
    5.6.2 Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service .... 5-20
    5.6.2.1 Configuring Oracle WSM 11g Web Service ............................................. 5-20
    5.6.2.2 Configuring Microsoft WCF/.NET 3.5 Client .......................................... 5-21
5.7 WCF/.NET 3.5 client with Microsoft Active Directory Federation Services 2.0 (ADFS 2.0) STS 5-23
  5.7.1 Install and Configure Active Directory Federation Services (ADFS) 2.0 ........ 5-23
    5.7.1.1 Install and Configure Active Directory ...................................................... 5-23
    5.7.1.2 Install ADFS 2.0 ...................................................................................... 5-24
6 Interoperability with Oracle Service Bus 10g Security Environments

6.1 Overview of Interoperability with Oracle Service Bus 10g Security Environments .......... 6-1
6.2 Username Token with Message Protection (WS-Security 1.0)........................................ 6-2
  6.2.1 Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service ...... 6-3
  6.2.1.1 Configuring Oracle WSM 11g Web Service.................................................. 6-3
  6.2.1.2 Configuring Oracle Service Bus 10g Client.................................................. 6-4
  6.2.2 Configuring Oracle WSM 11g Client and Oracle Service Bus 10g Web Service ...... 6-5
  6.2.2.1 Configuring Oracle Service Bus 10g Web Service........................................ 6-5
  6.2.2.2 Configuring Oracle WSM 11g Client............................................................ 6-5
6.3 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0).................... 6-6
  6.3.1 Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service ...... 6-7
  6.3.1.1 Configuring Oracle WSM 11g Web Service.................................................. 6-8
  6.3.1.2 Configuring Oracle Service Bus 10g Client.................................................. 6-8
  6.3.2 Configuring Oracle WSM 11g Client and Oracle Service Bus 10g Web Service ...... 6-9
  6.3.2.1 Configuring Oracle Service Bus 10g Web Service........................................ 6-9
  6.3.2.2 Configuring Oracle WSM 11g Client............................................................ 6-10
6.4 SAML or Username Token Over SSL............................................................................ 6-10
  6.4.1 Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service ...... 6-11
  6.4.1.1 Configuring Oracle WSM 11g Web Service.................................................. 6-11
  6.4.1.2 Configuring Oracle Service Bus 10g Client.................................................. 6-12
6.5 Mutual Authentication with Message Protection (WS-Security 1.0)............................... 6-13
  6.5.1 Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service ...... 6-15
  6.5.1.1 Configuring Oracle WSM 11g Web Service.................................................. 6-15
  6.5.1.2 Configuring Oracle Service Bus 10g Client.................................................. 6-15
  6.5.2 Configuring Oracle WSM 11g Client and Oracle Service Bus 10g Web Service ...... 6-17
  6.5.2.1 Configuring Oracle Service Bus 10g Web Service........................................ 6-17
  6.5.2.2 Configuring Oracle WSM 11g Client............................................................ 6-19

7 Interoperability with Axis 1.4 and WSS4J 1.5.8 Security Environments

7.1 Overview of Interoperability With Axis 1.4 and WSS4J 1.5.8 Security Environments ...... 7-1
7.2 Required Files for Interoperability With Axis and WSS4J............................................. 7-2
7.3 Username Token with Message Protection (WS-Security 1.0)........................................ 7-3
  7.3.1 Configuring Axis and WSS4J Client and Oracle WSM 11g Web Service ................. 7-3
  7.3.1.1 Configuring Oracle WSM 11g Web Service.................................................. 7-3
  7.3.1.2 Configuring Axis and WSS4J Client............................................................ 7-3
  7.3.2 Configuring Oracle WSM 11g Client and Axis and WSS4J Web Service ................. 7-4
  7.3.2.1 Configuring Axis and WSS4J Web Service.................................................. 7-4

Preface

This preface describes the document accessibility features and conventions used in this guide—Oracle Fusion Middleware Interoperability Guide for Oracle Web Services Manager.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>boldface</td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td>italic</td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td>monospace</td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Overview of Oracle WSM Interoperability

This guide describes interoperability of Oracle Web Services Manager (Oracle WSM) with various security stacks. Each chapter includes the following information:

- Overview of each security stack
- An explanation of the usage scenarios

For details regarding limitations and known problems, see Oracle Fusion Middleware Release Notes.

1.1 About Oracle WSM Policies

In Oracle WSM 11g, you attach policies to Web service endpoints. Each policy consists of one or more assertions, defined at the domain-level, that define the security requirements. A set of predefined policies and assertions are provided out-of-the-box.

For more details about the predefined policies, see ”Predefined Policies” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

For information about configuring and attaching policies, see ”Configuring Policies” and ”Attaching Policies to Web Services” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

1.2 Oracle WSM Interoperability Scenarios

Table 1–1 describes the most common Oracle WSM interoperability scenarios.

Interoperability with Oracle WSM 10g Security Environments

This chapter includes the following topics:

- Overview of Interoperability with Oracle WSM 10g Security Environments
- A Note About Oracle WSM 10g Gateways
- A Note About Third-party Software
- Anonymous Authentication with Message Protection (WS-Security 1.0)
- Username Token with Message Protection (WS-Security 1.0)
- SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0)
- Mutual Authentication with Message Protection (WS-Security 1.0)
- Username Token Over SSL
- SAML Token (Sender Vouches) Over SSL (WS-Security 1.0)

2.1 Overview of Interoperability with Oracle WSM 10g Security Environments

In Oracle WSM 10g, you specify policy steps at each policy enforcement point. The policy enforcement points in Oracle WSM 10g include Gateways and Agents. Each policy step is a fine-grained operational task that addresses a specific security operation, such as authentication and authorization; encryption and decryption; security signature, token, or credential verification; and transformation. Each operational task is performed on either the Web service request or response. For more details about the Oracle WSM 10g policy steps, see "Oracle Web Services Manager Policy Steps" in Oracle Web Services Manager Administrator's Guide 10g (10.1.3.4) at http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/policy_steps.htm#BABIAHEG.

In Oracle WSM 11g, you attach policies to Web service endpoints. Each policy consists of one or more assertions, defined at the domain-level, that define the security requirements. A set of predefined policies and assertions are provided out-of-the-box. For more details about the predefined policies, see Predefined Policies. For information about configuring and attaching policies, see Configuring Policies and Attaching Policies to Web Services.

Table 2–1 summarizes the most common Oracle WSM 10g interoperability scenarios based on the following security requirements: authentication, message protection, and transport.
For more information about:

- Oracle WSM 11g policies, see "Configuring Policies" and "Attaching Policies to Web Services" in *Oracle Fusion Middleware Security and Administrator’s Guide for Web Services*

- Oracle WSM 10g policy steps, see "Oracle Web Services Manager Policy Steps" in *Oracle Web Services Manager Administrator’s Guide 10g (10.1.3.4)* at [http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/policy_steps.htm#BABIAHEG](http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/policy_steps.htm#BABIAHEG)

**Note:** In the following scenarios, ensure that you are using a keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

Review "A Note About Oracle WSM 10g Gateways" on page 2-3 and "A Note About Third-party Software" on page 2-3 for important information about your usage of Oracle WSM 10g Gateways and third-party software.

</tr>
</tbody>
</table>
The following sections provide additional interoperability information about using Oracle WSM 10g Gateways and third-party software with Oracle WSM 11g.

### 2.2 A Note About Oracle WSM 10g Gateways

As described in Examining the Rearchitecture of Oracle WSM in Oracle Fusion Middleware, Oracle Fusion Middleware 11g Release 1 (11.1.1.7) does not include a Gateway component. You can continue to use the Oracle WSM 10g Gateway components with Oracle WSM 10g policies in your applications.

### 2.3 A Note About Third-party Software

As described in Examining the Rearchitecture of Oracle WSM in Oracle Fusion Middleware, Oracle WSM 10g supports policy enforcement for third-party application servers, such as IBM WebSphere and Red Hat JBoss. Oracle Fusion Middleware 11g Release 1 (11.1.1.7) only supports Oracle WebLogic Server. You can continue to use the third-party application servers with Oracle WSM 10g policies.

### 2.4 Anonymous Authentication with Message Protection (WS-Security 1.0)

The following sections describe how to implement anonymous authentication with message protection that conforms to the WS-Security 1.0 standard:
2.4.1 Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service

To configure Oracle WSM 10g client and Oracle WSM 11g Web service, perform the following steps:

2.4.1.1 Configuring Oracle WSM 11g Web Service

1. Create a copy of the policy: oracle/wss10_message_protection_service_policy.

```
| Note: | Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with. |
```

2. Edit the policy settings, as follows:
   a. Disable the Include Timestamp configuration setting.
   b. Leave the default configuration set for all other configuration settings.

   For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Attach the policy to a Web service.

   For more information about attaching the policy at deployment time using Fusion Middleware Control, see Attaching Policies to Web Services. For more information about attaching the policy at design time using JDeveloper, see "Attaching Policies to Web Services" in JDeveloper Online Help.

2.4.1.2 Configuring Oracle WSM 10g Client

1. Register the Web service (above) with the Oracle WSM 10g Gateway. See "Registering Web Services to an Oracle WSM Gateway" in the Oracle WSM Administrator’s Guide 10g at: http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm

2. Attach the following policy step to the request pipeline: Sign Message and Encrypt.

3. Configure the Sign Message and Encrypt policy step in the request pipeline, as follows:
   a. Set Encryption Algorithm to AES-128.
   b. Set Key Transport Algorithm to RSA-OAEP-MGF1P.
   c. Configure the keystore properties for message signing and encryption. The configuration should be in accordance with the keystore used on the server side.

4. Attach the following policy step to the response pipeline: Decrypt and Verify Signature.
5. Configure the Decrypt and Verify Signature policy step in the response pipeline, as follows:
   a. Configure the keystore properties for decryption and signature verification. The configuration should be in accordance with the keystore used on the server side.

6. Navigate to the Oracle WSM Test page and enter the virtualized URL of the Web service.

7. Invoke the Web service.

2.4.2 Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service

To configure Oracle WSM 11g client and Oracle WSM 10g Web service, perform the following steps:

2.4.2.1 Configuring Oracle WSM 10g Web Service

1. Register the Web service with the Oracle WSM 10g Gateway. See "Registering Web Services to an Oracle WSM Gateway" in the Oracle WSM Administrator's Guide 10g at: http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm

2. Attach the following policy step in the request pipeline: Decrypt and Verify Signature

3. Configure the Decrypt and Verify Signature policy step in the request pipeline, as follows:
   a. Configure the keystore properties for decryption and signature verification. The configuration should be in accordance with the keystore used on the server side.

4. Attach the following policy step in the response pipeline: Sign Message and Encrypt

5. Configure the Sign Message and Encrypt policy response pipeline as follows:
   a. Set Encryption Algorithm to AES-128.
   b. Set Key Transport Algorithm to RSA-OAEP-MGF1P.
   c. Configure the keystore properties for message signing and encryption. The configuration should be in accordance with the keystore used on the server side.

2.4.2.2 Configuring Oracle WSM 11g Client

1. Create a client proxy using the virtualized URL of the Web service registered on the Oracle WSM Gateway.

2. Create a copy of the following policy: oracle/wss10_message_protection_client_policy.

---

**Note:** Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

---

Edit the policy settings, as follows:
Username Token with Message Protection (WS-Security 1.0)

The following sections describe how to implement username token with message protection that conforms to the WS-Security 1.0 standard:

- "Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service" on page 2-6
- "Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service" on page 2-7

2.5.1 Configuring Oracle WSM 11g Web Service

To configure Oracle WSM 11g Web service, perform the following steps:

2.5.1.1 Configuring Oracle WSM 11g Web Service

1. Create a copy of the following policy: oracle/wss10_username_token_with_message_protection_service_policy.

   Note: Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

   Edit the policy settings, as follows:

   a. Disable the Include Timestamp configuration setting.

   b. Leave the default configuration set for all other configuration settings.

   For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Attach the policy to a Web service.

   For more information about attaching the policy at deployment time using Fusion Middleware Control, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For more
information about attaching the policy at design time using JDeveloper, see "Attaching Policies to Web Services" in JDeveloper Online Help.

2.5.1.2 Configuring Oracle WSM 10g Client

1. Register the Web service (above) with the Oracle WSM 10g Gateway. See "Registering Web Services to an Oracle WSM Gateway" in the Oracle WSM Administrator’s Guide 10g at: http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm

2. Attach the following policy step to the request pipeline: Sign Message and Encrypt

3. Configure the Sign Message and Encrypt policy step in the request pipeline, as follows:
   a. Set Encryption Algorithm to AES-128.
   b. Set Key Transport Algorithm to RSA-OAEP-MGF1P.
   c. Set Encrypted Content to ENVELOPE.
   d. Set Signed Content to ENVELOPE.
   e. Configure the keystore properties for message signing and encryption. The configuration should be in accordance with the keystore used on the server side.

4. Attach the following policy step to the response pipeline: Decrypt and Verify Signature.

5. Configure the Decrypt and Verify Signature policy step in the response pipeline, as follows:
   a. Configure the keystore properties for decryption and signature verification. The configuration should be in accordance with the keystore used on the server side.

6. Navigate to the Oracle WSM Test page and enter the virtualized URL of the Web service.

7. Select the Include Header checkbox against WS-Security and provide valid credentials.

8. Invoke the Web service.

2.5.2 Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service

To configure Oracle WSM 11g client and Oracle WSM 10g Web service, perform the following steps:

2.5.2.1 Configuring Oracle WSM 10g Web Service

1. Register the Web service with the Oracle WSM 10g Gateway. See "Registering Web Services to an Oracle WSM Gateway" in the Oracle WSM Administrator’s Guide 10g at: http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm

2. Attach the following policy steps in the request pipeline:
   - Decrypt and Verify Signature
   - Extract Credentials (configured as WS-BASIC)
   - File Authenticate
3. Configure the Decrypt and Verify Signature policy step in the request pipeline, as follows:
   a. Configure the keystore properties for extracting credentials. The configuration should be in accordance with the keystore used on the server side.

4. Configure the Extract Credentials policy step in the request pipeline, as follows:
   a. Set the Credentials location to WS-BASIC.

5. Configure the File Authenticate policy step in the request pipeline to use valid credentials.

6. Attach the following policy step in the response pipeline: Sign Message and Encrypt.

7. Configure the Sign Message and Encrypt policy response pipeline, as follows:
   a. Set Encryption Algorithm to AES-128.
   b. Set Key Transport Algorithm to RSA-OAEP-MGF1P.
   c. Configure the keystore properties for message signing and encryption. The configuration should be in accordance with the keystore used on the server side.

2.5.2.2 Configuring Oracle WSM 11g Client

1. Create a client proxy using the virtualized URL of the Web service registered on the Oracle WSM Gateway.

2. Create a copy of the following policy: oracle/wss10_username_token_with_message_protection_client_policy.

   Note: You can substitute File Authenticate with LDAP Authenticate, Oracle Access Manager Authenticate, Active Directory Authenticate, or SiteMinder Authenticate.

   Edit the policy settings, as follows:
   a. Disable the Include Timestamp configuration setting.
   b. Leave the default configuration set for all other configuration settings.

   For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Attach the policy to the Web service client.

   For more information about attaching the policy at deployment time using Fusion Middleware Control, see “Attaching Policies to Web Service Clients” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For more information about attaching the policy at design time using JDeveloper, see "Attaching Oracle WSM Policies to Web Service Clients" in JDeveloper Online Help.

5. Invoke the Web service.

2.6 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0)

The following sections describe how to implement SAML token (sender vouches) with message protection that conforms to the WS-Security 1.0 standard:

- "Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service” on page 2-9
- "Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service” on page 2-10

2.6.1 Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service

To configure Oracle WSM 10g client and Oracle WSM 11g Web service, perform the following steps:

2.6.1.1 Configuring Oracle WSM 11g Web Service

1. Create a copy of the following policy: oracle/wss10_saml_token_with_message_protection_service_policy.

   Note: Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

   Edit the policy settings, as follows:
   a. Disable the Include Timestamp configuration setting.
   b. Leave the default configuration set for all other configuration settings.

   For more information, see "Creating a Web Service Policy from an Existing Policy” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Attach the policy to the Web service.

   For more information about attaching the policy at deployment time using Fusion Middleware Control, see "Attaching Policies to Web Services” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For more information about attaching the policy at design time using JDeveloper, see "Attaching Policies to Web Services” in JDeveloper Online Help.

2.6.1.2 Configuring Oracle WSM 10g Client

1. Register the Web service (above) with the Oracle WSM 10g Gateway. See "Registering Web Services to an Oracle WSM Gateway” in the Oracle WSM Administrator’s Guide 10g at:

   http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm

2. Attach the following policy steps in the request pipeline:
SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0)

3. Configure the Extract Credentials policy step in the request pipeline, as follows:
   a. Set the Credentials location to WS-BASIC.

4. Configure the SAML—Insert WSS 1.0 Sender-Vouches Token policy step in the request pipeline, as follows:
   a. Set Subject Name Qualifier to www.oracle.com.
   c. Set Subject Format as UNSPECIFIED.
   d. Set other signing properties, as required.

5. Configure the Sign Message and Encrypt policy step in the request pipeline, as follows:
   a. Set the Encryption Algorithm to AES-128.
   b. Set Key Transport Algorithm to RSA-OAEP-MGF1P.
   c. Configure the keystore properties for decryption and signature verification. The configuration should be in accordance with the keystore used on the server side.

6. Attach the following policy step in the response pipeline: Decrypt and Verify Signature.

7. Configure the Decrypt and Verify Signature policy step in the response pipeline, as follows:
   a. Configure the keystore properties for decryption and signature verification. The configuration should be in accordance with the keystore used on the server side.

8. Navigate to the Oracle WSM Test page and enter the virtualized URL of the Web service.

9. Select Include Header checkbox against WS-Security and provide valid credentials.

10. Invoke the Web service.

2.6.2 Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service

To configure Oracle WSM 11g client and Oracle WSM 10g Web service, perform the following steps:

2.6.2.1 Configuring Oracle WSM 10g Web Service

1. Register the Web service with the Oracle WSM 10g Gateway. See "Registering Web Services to an Oracle WSM Gateway” in the Oracle WSM Administrator’s Guide 10g at: http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm

2. Attach the following policy steps in the request pipeline:
   - XML Decrypt
   - SAML—Verify WSS 1.0 Token
3. Configure the XML Decrypt policy step in the request pipeline, as follows:
   a. Configure the keystore properties for XML decryption. The configuration should be in accordance with the keystore used on the server side.
4. Configure the SAML—Verify WSS 1.0 Token policy step in the request pipeline, as follows:
   a. Set the Trusted Issuer Name as www.oracle.com.
5. Attach the following policy step in the response pipeline: Sign Message and Encrypt.
6. Configure the Sign Message and Encrypt policy step in the response pipeline, follows:
   a. Set Encryption Algorithm to AES-128.
   b. Set Key Transport Algorithm to RSA-OAEP-MGF1P.
   c. Configure the keystore properties for message signing and encryption. The configuration should be in accordance with the keystore used on the server side.

2.6.2.2 Configuring Oracle WSM 11g Client

1. Create a client proxy using the virtualized URL of the Web service registered on the Oracle WSM Gateway.
2. Create a copy of the following policy: oracle/wss10_saml_token_with_message_protection_client_policy.

   Note: Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

   Edit the policy settings, as follows:
   a. Disable the Include Timestamp configuration setting.
   b. Leave the default configuration set for all other configuration settings.

   For more information, see “Creating a Web Service Policy from an Existing Policy” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.
3. Attach the policy to the Web service client.

   For more information about attaching the policy at deployment time using Fusion Middleware Control, see ”Attaching Policies to Web Service Clients” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For more information about attaching the policy at design time using JDeveloper, see “Attaching Oracle WSM Policies to Web Service Clients” in JDeveloper Online Help.
5. Invoke the Web service.
2.7 Mutual Authentication with Message Protection (WS-Security 1.0)

The following sections describe how to implement mutual authentication with message protection that conform to the WS-Security 1.0 standards:

- "Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service" on page 2-12
- "Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service" on page 2-13

2.7.1 Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service

To configure Oracle WSM 10g client and Oracle WSM 11g Web service, perform the following steps:

2.7.1.1 Configuring Oracle WSM 11g Web Service
1. Create a copy of the following policy: oracle/wss10_x509_token_with_message_protection_service_policy.

```
Note: Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.
```

Edit the policy settings, as follows:

- a. Disable the Include Timestamp configuration setting.
- b. Leave the default configuration set for all other configuration settings.

For more information, see “Creating a Web Service Policy from an Existing Policy” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Attach the policy to the Web service.

For more information about attaching the policy at deployment time using Fusion Middleware Control, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For more information about attaching the policy at design time using JDeveloper, see "Attaching Policies to Web Services" in JDeveloper Online Help.

2.7.1.2 Configuring Oracle WSM 10g Client
1. Register the Web service (above) with the Oracle WSM 10g Gateway. See "Registering Web Services to an Oracle WSM Gateway" in the Oracle WSM Administrator’s Guide 10g at: http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm

2. Attach the following policy step in the request pipeline: Sign Message and Encrypt.

3. Configure the Sign Message and Encrypt policy step in the request pipeline, as follows:
   - a. Set Encryption Algorithm to AES-128.
   - b. Set Key Transport Algorithm to RSA-OAEP-MGF1P.
c. Configure the keystore properties for message signing and encryption. The configuration should be in accordance with the keystore used on the server side.

4. Attach the following policy step in the response pipeline: Decrypt and Verify Signature.

5. Configure the Decrypt and Verify Signature policy step in the response pipeline, as follows:
   a. Configure the keystore properties for decryption and signature verification. The configuration should be in accordance with the keystore used on the server side.

6. Update the following property in the gateway-config-installer.properties file located at ORACLE_HOME/j2ee/oc4j_instance/applications/gateway/gateway/WEB-INF:
   ```
   pep.securitysteps.signBinarySecurityToken=true
   ```

7. Restart Oracle WSM 10g Gateway.

8. Navigate to the Oracle WSM Test page and enter the virtualized URL of the Web service.

9. Invoke the Web service.

### 2.7.2 Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service

To configure Oracle WSM 11g client and Oracle WSM 10g Web service, perform the following steps:

#### 2.7.2.1 Configuring Oracle WSM 10g Web Service

1. Register the Web service with the Oracle WSM 10g Gateway. See "Registering Web Services to an Oracle WSM Gateway" in the Oracle WSM Administrator’s Guide 10g at: [http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm](http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm)

2. Attach the following policy steps in the request pipeline: Decrypt and Verify.

3. Configure the Decrypt and Verify Signature policy step in the request pipeline, as follows:
   a. Configure the keystore properties for decryption and signature verification. The configuration should be in accordance with the keystore used on the server side.

4. Attach the following policy steps in the response pipeline: Sign Message and Encrypt.

5. Configure the Sign Message and Encrypt policy step in the response pipeline, as follows:
   a. Set Encryption Algorithm to AES-128.
   b. Set Key Transport Algorithm to RSA-OAEP-MGF1P.
   c. Configure the keystore properties for message signing and encryption. The configuration should be in accordance with the keystore used on the server side.
2.7.2.2 Configuring Oracle WSM 11g Client
1. Create a client proxy using the virtualized URL of the Web service registered on the Oracle WSM Gateway.
2. Create a copy of the following policy: oracle/wss10_x509_token_with_message_protection_client_policy.

---

**Note:** Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

---

Edit the policy settings, as follows:

a. Disable the Include Timestamp configuration setting.

b. Leave the default configuration set for all other configuration settings.

For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Attach the policy to the Web service client.

For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

5. Invoke the Web service.

2.8 Username Token Over SSL

This section describes how to implement username token over SSL in the following scenarios:

- "Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service" on page 2-14
- "Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service" on page 2-15

For more information about:

- Configuring SSL on WebLogic Server, see Configuring SSL on WebLogic Server (One-Way) and Configuring SSL on WebLogic Server (Two-Way).

2.8.1 Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service

To configure Oracle WSM 10g client and Oracle WSM 11g Web service, perform the following steps:

2.8.1.1 Configuring Oracle WSM 11g Web Service

1. Configure the server for SSL.
For more information, see "Configuring SSL on WebLogic Server (One-Way)" and 
"Configuring SSL on WebLogic Server (Two-Way)" in Oracle Fusion Middleware 

2. Attach the following policy: wss_username_token_over_ssl_service_policy.

For more information about attaching the policy at deployment time using Fusion 
Middleware Control, see "Attaching Policies to Web Services" in Oracle Fusion 
Middleware Security and Administrator's Guide for Web Services. For more 
information about attaching the policy at design time using JDeveloper, see 
"Attaching Policies to Web Services" in JDeveloper Online Help.

2.8.1.2 Configuring Oracle WSM 10g Client

1. Configure the server for SSL.

For more information, see
http://download.oracle.com/docs/cd/B14099_ 
19/web.1012/b14013/configssl.htm.

2. Register the Web service (above) with the Oracle WSM 10g Gateway. See 
"Registering Web Services to an Oracle WSM Gateway" in the Oracle WSM 
Administrator's Guide 10g at:
http://download.oracle.com/docs/cd/E12524_ 
01/web.1013/e12575/gateways.htm

3. Navigate to the Oracle WSM Test page and enter the virtualized URL of the Web 
service.

4. Select the Include Header checkbox against WS-Security and provide valid 
credentials.

5. Invoke the Web service.

2.8.2 Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service

To configure Oracle WSM 11g client and Oracle WSM 10g Web service, perform the 
following steps:

2.8.2.1 Configuring Oracle WSM 10g Web Service

1. Configure the server for SSL.

For more information, see
http://download.oracle.com/docs/cd/B14099_ 
19/web.1012/b14013/configssl.htm.

2. Register the Web service with the Oracle WSM 10g Gateway. See "Registering Web 
Services to an Oracle WSM Gateway" in the Oracle WSM Administrator's Guide 10g 
at: http://download.oracle.com/docs/cd/E12524_ 
01/web.1013/e12575/gateways.htm

3. Attach the following policy steps to the request pipeline:

- Extract Credentials
- File Authenticate

Note: You can substitute File Authenticate with LDAP Authenticate, 
Oracle Access Manager Authenticate, Active Directory Authenticate, 
or SiteMinder Authenticate.
4. Configure the Extract Credentials policy step in the request pipeline, as follows:
   a. Configure the Credentials Location as WS-BASIC.

5. Configure the File Authentication policy step in the request pipeline with the appropriate credentials.

### 2.8.2.2 Configuring Oracle WSM 11g Client

1. Create a client proxy using the virtualized URL of the Web service registered on the Oracle WSM Gateway.
   Ensure that when generating the client, HTTP is specified in the URL along with the HTTP port number.

2. Create a copy of the following policy: oracle/wss_username_token_over_ssl_client_policy.
   ____________________________________________________________
   Note: Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.
   ____________________________________________________________

   Edit the policy settings, as follows:
   a. Disable the Include Timestamp configuration setting.
   b. Leave the default configuration set for all other configuration settings.

   For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Attach the policy to the Web service client.

   For more information about attaching the policy at deployment time using Fusion Middleware Control, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For more information about attaching the policy at design time using JDeveloper, see "Attaching Oracle WSM Policies to Web Service Clients" in JDeveloper Online Help.

4. Configure the policy, as described in "oracle/wss_username_token_over_ssl_client_policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

5. Invoke the Web service.

### 2.9 SAML Token (Sender Vouches) Over SSL (WS-Security 1.0)

The following sections describe how to implement SAML token (sender vouches) over SSL that conforms to the WS-Security 1.0 standard:

- "Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service" on page 2-17
- "Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service" on page 2-18

For more information about:

- Configuring SSL on WebLogic Server, see Configuring SSL on WebLogic Server (One-Way) and Configuring SSL on WebLogic Server (Two-Way).
2.9.1 Configuring Oracle WSM 10g Client and Oracle WSM 11g Web Service

To configure Oracle WSM 10g client and Oracle WSM 11g Web service, perform the following steps:

2.9.1.1 Configuring Oracle WSM 11g Web Service

1. Configure the server for two-way SSL.
   For more information, see Configuring SSL on WebLogic Server (Two-Way).
2. Create a copy of the following policy: oracle/wss_saml_token_over_ssl_service_policy.

   **Note:** Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

   Edit the policy settings, as follows:
   a. Disable the Include Timestamp configuration setting.
   For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.
3. Attach the policy.
   For more information about attaching the policy at deployment time using Fusion Middleware Control, see "Attaching Policies to Web Services“ in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For more information about attaching the policy at design time using JDeveloper, see “Attaching Policies to Web Services“ in JDeveloper Online Help.

2.9.1.2 Configuring Oracle WSM 10g Client

1. Configure the server for two-way SSL.
   For more information, see http://download.oracle.com/docs/cd/B14099_19/web.1012/b14013/configssl.htm.
2. Register the Web service (above) with the Oracle WSM 10g Gateway. See "Registering Web Services to an Oracle WSM Gateway“ in the Oracle WSM Administrator’s Guide 10g at: http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm
3. Attach the following policy steps to the request pipeline:
   - Extract Credentials
   - SAML—Insert WSS 1.0 Sender-Vouches Token
4. Configure the Extra Credentials policy step in the request pipeline, as follows:
   a. Configure the Credentials Location as WS-BASIC.
5. Configure the SAML—Insert WSS 1.0 Sender-Vouches Token policy step in the request pipeline, as follows:
   a. Configure the Subject Name Qualifier as www.oracle.com.
   b. Configure the Assertion Issuer as www.oracle.com.
   c. Configure the Subject Format as UNSPECIFIED.
   d. Configure the Sign the assertion as false.

6. Navigate to the Oracle WSM Test page and enter the virtualized URL of the Web service.

7. Select Include Header checkbox against WS-Security and provide valid credentials.

8. Invoke the Web service.

### 2.9.2 Configuring Oracle WSM 11g Client and Oracle WSM 10g Web Service

To configure Oracle WSM 11g client and Oracle WSM 10g Web service, perform the following steps:

#### 2.9.2.1 Configuring Oracle WSM 10g Web Service

1. Configure the server for two-way SSL.
   
   For more information, see

2. Register the Web service with the Oracle WSM 10g Gateway. See "Registering Web Services to an Oracle WSM Gateway" in the Oracle WSM Administrator’s Guide 10g at: [http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm](http://download.oracle.com/docs/cd/E12524_01/web.1013/e12575/gateways.htm)

3. Attach the policy step: SAML—Verify WSS 1.0 Token

4. Configure the SAML—Verify WSS 1.0 Token policy step in the request pipeline, as follows:
   a. Under Signature Verification Properties, set Allow signed assertions only to false.
   b. Set the Trusted Issuer Name to www.oracle.com.

#### 2.9.2.2 Configuring Oracle WSM 11g Client

1. Configure the server for two-way SSL.
   
   For more information, see “Configuring SSL on WebLogic Server (Two-Way)” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Create a client proxy using the virtualized URL of the Web service registered on the Oracle WSM gateway.

3. Create a copy of the following policy: oracle/wss_saml_token_over_ssl_client_policy.

---

**Note:** Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.
Edit the policy settings, as follows:

a. Disable the Include Timestamp configuration setting.

b. Leave the default configuration set for all other configuration settings.

For more information, see “Creating a Web Service Policy from an Existing Policy” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

4. Attach the policy to the Web service client.

For more information about attaching the policy at deployment time using Fusion Middleware Control, see “Attaching Policies to Web Service Clients” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For more information about attaching the policy at design time using JDeveloper, see “Attaching Oracle WSM Policies to Web Service Clients” in JDeveloper Online Help.

5. Configure the policy, as described in "oracle/wss_saml_token_over_ssl_client_policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

6. Invoke the Web service.
Interoperability with Oracle Containers for Java EE (OC4J) 10g Security Environments

This chapter describes the most common Oracle Containers for Java EE (OC4J) 10g interoperability scenarios based on the following security requirements: authentication, message protection, and transport.

This chapter contains the following sections:

- Overview of Interoperability with OC4J 10g Security Environments
- Anonymous Authentication with Message Protection (WS-Security 1.0)
- Username Token with Message Protection (WS-Security 1.0)
- SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0)
- Mutual Authentication with Message Protection (WS-Security 1.0)
- Username token over SSL
- SAML Token (Sender Vouches) Over SSL (WS-Security 1.0)

3.1 Overview of Interoperability with OC4J 10g Security Environments

In OC4J 10g, you configure your security environment.

- For information about using Application Server Control to configure the Web service, see Oracle Application Server Advanced Web Services Developer’s Guide at http://download.oracle.com/docs/cd/B31017_01/web.1013/b28975/toc.htm.

- For information about using JDeveloper to develop and configure your client-side application, see the JDeveloper online help.

- For information about how to modify the XML-based deployment descriptor files, see Oracle Application Server Web Services Security Guide 10g (10.1.3.1.0) at: http://download.oracle.com/docs/cd/B31017_01/web.1013/b28976/toc.htm

In Oracle WSM 11g, you attach policies to Web service endpoints. Each policy consists of one or more assertions, defined at the domain-level, that define the security requirements. A set of predefined policies and assertions are provided out-of-the-box. For more details about the predefined policies, see "Predefined Policies" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For information about configuring and attaching policies, see "Configuring Policies" and "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.
Table 3–1 summarizes the most common OC4J 10g interoperability scenarios based on the following security requirements: authentication, message protection, and transport.

For information about configuring and attaching Oracle WSM 11g policies, see "Configuring Policies" and "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

Note: In the following scenarios, ensure that you are using a keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

3.2 Anonymous Authentication with Message Protection (WS-Security 1.0)

This section describes how to implement anonymous authentication with message protection that conforms to the WS-Security 1.0 standard in the following scenarios:

- "Configuring OC4J 10g Client and Oracle WSM 11g Web Service" on page 3-3
- "Configuring Oracle WSM 11g Client and OC4J 10g Web Service" on page 3-4

3.2.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service

To configure OC4J 10g client and Oracle WSM 11g Web service, perform the following steps:

3.2.1.1 Configuring Oracle WSM 11g Web Service

1. Create a Web service application.
2. Attach the following policy to the entry point of the Web service: oracle/wss10_message_protection_service_policy.
   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3.2.1.2 Configuring OC4J 10g Client

1. Create a client proxy for the Web service (above) using Oracle JDeveloper.
2. Use the Oracle JDeveloper wizard to secure the proxy by right-clicking on the proxy project and selecting Secure Proxy.
3. Click Authentication in the Proxy Editor navigation bar and set the following options:
   - Select No Authentication.
4. Click Inbound Integrity in the Proxy Editor navigation bar and set the following options:
   - Select Verify Inbound Signed Request Body.
   - Select Verify Timestamp and Creation Time Required in Timestamp.
   - Enter the Expiration Time (in seconds).
   - Select all options under Acceptable Signature Algorithms.
5. Click Outbound Integrity in the Proxy Editor navigation bar and set the following options:
   - Select Sign Outbound Messages.
   - Select Add Timestamp to Outbound Messages and Creation Time Required in Timestamp.
Enter the **Expiration Time** (in seconds).

6. Click **Inbound Confidentiality** in the Proxy Editor navigation bar and set the following options:
   - Select **Decrypt Inbound Message Content**.
   - Select all options under **Acceptable Signature Algorithms**.

7. Click **Outbound Confidentiality** in the Proxy Editor navigation bar and set the following options:
   - Select **Encrypt Outbound Messages**.
   - Set the Algorithm to **AES-128**.

8. Click **Keystore Options** in the Proxy Editor navigation bar and configure the keystore properties, as required.
   
   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

9. Click **OK** to close the wizard.

10. In the Structure pane, click `<appname>Binding_Stub.xml` and edit the file as described in next section.

11. Invoke the Web service method from the client.

**Editing the `<appname>Binding_Stub.xml` File**

1. Provide the keystore password and sign and encryption key passwords.

2. In the inbound signature, specify the following:
   
   ```xml
   <inbound><verify-signature><tbs-elements>
   <tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-
   utility-1.0.xsd" local-part="Timestamp" />
   ...
   ```

3. In the outbound signature, specify that the timestamp should be signed, as follows:

   ```xml
   <outbound><signature/><tbs-elements>
   <tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-
   utility-1.0.xsd" local-part="Timestamp"/>
   ...
   ```

4. In the outbound encryption, specify the key transport algorithm, as follows:

   ```xml
   <outbound><encrypt>
   <keytransport-method>RSA-OAEP-MGF1P</keytransport-method>
   ...
   ```

**3.2.2 Configuring Oracle WSM 11g Client and OC4J 10g Web Service**

To configure Oracle WSM 11g client and OC4J 10g Web service, perform the following steps:

**3.2.2.1 Configuring OC4J 10g Web Service**

1. Create and deploy a Web service application.
2. Use Application Server Control to secure the deployed Web service.

3. Click **Authentication** tab and ensure that no options are selected.

4. Click **Integrity** tab of the Inbound Policies page and set the following options:
   - Select **Require Message Body to Be Signed**.
   - Select **Verify Timestamp and Creation Time Required in Timestamp**.
   - Enter the **Expiration Time** (in seconds).

5. Click **Integrity** tab of the Outbound Policies page and set the following options:
   - Select **Sign Body Element of Message**.
   - Set the **Signature Method** to **RSA-SHA1**.
   - Select **Add Timestamp and Creation Time Required in Timestamp**.
   - Enter the **Expiration Time** (in seconds).

6. Click **Confidentiality** tab of the Inbound Policies page and set the following options:
   - Select **Require Encryption of Message Body**.

7. Click **Confidentiality** tab of the Outbound Policies page and set the following options:
   - Select **Encrypt Body Element of Message**.
   - Set the **Encryption Method** to **AES-128**.
   - Set the public key to encrypt.

8. Configure the keystore properties and identity certificates.

   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

9. Edit the wsmgmt.xml deployment descriptor file, as described in **Editing the wsmgmt.xml File**.

### 3.2.2.2 Configuring Oracle WSM 11g Client

1. Create a client proxy for the OC4J 10g Web service.

2. Attach the following policy: oracle/wss10_message_protection_client_policy.

   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in *Oracle Fusion Middleware Security and Administrator’s Guide for Web Services*.

3. Configure the policy, as described in "oracle/wss10_username_token_with_message_protection_client_policy" in *Oracle Fusion Middleware Security and Administrator’s Guide for Web Services*.

4. Invoke the Web service method from the client.

**Editing the wsmgmt.xml File**

Edit the wsmgmt.xml file in `ORACLE_HOME/j2ee/oc4j_instance/config`, as follows:

1. In the inbound signature, specify the following:
   ```xml
   <inbound>
   <verify-signature>
   <tbs-elements>
   <tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity...
   ```
Username Token with Message Protection (WS-Security 1.0)

2. In the outbound signature, specify that the timestamp should be signed, as follows:
   `<outbound><signature><tbs-elements><tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" local-part="Timestamp"/>
   ...

3. In the outbound encryption, specify the key transport algorithm, as follows:
   `<outbound><encrypt><keytransport-method>RSA-OAEP-MGF1P</keytransport-method>
   ...

3.3 Username Token with Message Protection (WS-Security 1.0)

The following sections describe how to implement username token with message protection that conforms to the WS-Security 1.0 standard:

■ "Configuring OC4J 10g Client and Oracle WSM 11g Web Service" on page 3-6
■ "Configuring Oracle WSM 11g Client and OC4J 10g Web Service" on page 3-8

3.3.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service

To configure OC4J 10g client and Oracle WSM 11g Web service, perform the following steps:

3.3.1.1 Configuring Oracle WSM 11g Web Service
1. Create an Oracle WSM 11g Web service.
2. Attach the following policy to the Web service: oracle/wss10_username_token_with_message_protection_service_policy.
   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3.3.1.2 Configuring OC4J 10g Client
1. Create a client proxy for the Web service (above) using Oracle JDeveloper.
2. Specify the username and password in the client proxy, as follows:
   `port.setUsername(<username>)
   port.setPassword(<password>)`
3. Use the Oracle JDeveloper wizard to secure the proxy by right-clicking on the proxy project and selecting Secure Proxy.
4. Click Authentication in the Proxy Editor navigation bar and set the following options:
   ■ Select Use Username to Authenticate.
   ■ Deselect Add Nonce and Add Creation Time.
5. Click **Inbound Integrity** in the Proxy Editor navigation bar and set the following options:
   - Select **Verify Inbound Signed Request Body**.
   - Select **Verify Timestamp** and **Creation Time Required in Timestamp**.
   - Enter the **Expiration Time** (in seconds).
   - Select all options under **Acceptable Signature Algorithms**.

6. Click **Outbound Integrity** in the Proxy Editor navigation bar and set the following options:
   - Select **Sign Outbound Messages**.
   - Select **Add Timestamp to Outbound Messages** and **Creation Time Required in Timestamp**.
   - Enter the **Expiration Time** (in seconds).

7. Click **Inbound Confidentiality** in the Proxy Editor navigation bar and set the following options:
   - Select **Decrypt Inbound Message Content**.
   - Select all options under **Acceptable Signature Algorithms**.

8. Click **Outbound Confidentiality** in the Proxy Editor navigation bar and set the following options:
   - Select **Encrypt Outbound Messages**.
   - Set the Algorithm to **AES-128**.

9. Click **Keystore Options** in the Proxy Editor navigation bar and configure the keystore properties, as required.

   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

10. Click **OK** to close the wizard.

11. In the Structure pane, click `<appname>Binding_Stub.xml` and edit the file as described in **Editing the `<appname>Binding_Stub.xml` File**.

12. Invoke the Web service.

### Editing the `<appname>Binding_Stub.xml` File

Edit the `<appname>Binding_Stub.xml` file, as follows:

1. Provide the keystore password and sign and encryption key passwords.

2. In the inbound signature, specify the following:

   ```xml
   <inbound>
   <verify-signature>
   <tbs-elements>
   <tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
   local-part="Timestamp" />
   ...
   </tbs-elements>
   </verify-signature>
   </inbound>
   ```

3. In the outbound signature, specify that the timestamp and UsernameToken should be signed, as follows:

   ```xml
   <outbound>
   <signature>
   <tbs-elements>
   <tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-
   ```
4. In the outbound encryption, specify the key transport algorithm, as follows:
   `<outbound><encrypt>
   <keytransport-method>RSA-OAEP-MGF1P</keytransport-method>
   ...`

5. In the outbound encryption, specify that the UsernameToken should be encrypted, as follows:
   `<outbound>/<encrypt>/<tbe-elements>
   <tbe-element local-part="UsernameToken"
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity
   -secext-1.0.xsd" mode="CONTENT"/>
   ...`

### 3.3.2 Configuring Oracle WSM 11g Client and OC4J 10g Web Service

To configure Oracle WSM 11g client and OC4J 10g Web service, perform the following steps:

#### 3.3.2.1 Configuring OC4J 10g Web Service

1. Create and deploy a JAX-RPC Web service on OC4J.
2. Use Application Server Control to secure the deployed Web service.
3. Click **Authentication** tab and set the following options:
   - Select **Use Username/Password Authentication**.
   - Set **Password** to **Plain Text**.
4. Click **Integrity** tab in Inbound Policies page and set the following options:
   - Select **Require Message Body to Be Signed**.
   - Select **Verify Timestamp** and **Creation Time Required in Timestamp**.
   - Enter the **Expiration Time** (in seconds).
5. Click **Integrity** tab in Outbound Policies page and set the following options:
   - Select **Sign Body Element of Message**.
   - Set the **Signature Method** to **RSA-SHA1**.
   - Select **Add Timestamp** and **Creation Time Required in Timestamp**.
   - Enter the **Expiration Time** (in seconds).
6. Click **Confidentiality** tab in the Inbound Policies page and set the following options:
   - Select **Require Encryption of Message Body**.
7. Click **Confidentiality** tab in the Outbound Policies page and set the following options:
   - Select **Encrypt Body Element of Message**.
Set the **Encryption Method** to AES-128.

Set the public key to encrypt.

8. Configure the keystore properties and identity certificates.
   
   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

9. Edit the wsmgmt.xml deployment descriptor file, as described in **Editing the wsmgmt.xml File**.

### 3.3.2.2 Configuring Oracle WSM 11g Client

1. Create a client proxy for the OC4J 10g Web service.

2. Attach the following policy: `oracle/wss10_username_token_with_message_protection_client_policy`.

   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in *Oracle Fusion Middleware Security and Administrator’s Guide for Web Services*.

3. Configure the policy, as described in "oracle/wss10_username_token_with_message_protection_client_policy" in *Oracle Fusion Middleware Security and Administrator’s Guide for Web Services*.

4. Invoke the Web service method from the client.

### Editing the wsmgmt.xml File

Edit the wsmgmt.xml file in `ORACLE_HOME/j2ee/oc4j_instance/config`, as follows:

1. In the inbound signature, specify the following:

   ```xml
   <inbound><verify-signature><tbs-elements>
   <tbs-element
    name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" local-part="Timestamp"/>
   ...
   ```

2. In the outbound signature, specify that the timestamp should be signed, as follows:

   ```xml
   <outbound><signature><tbs-elements>
   <tbs-element
    name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" local-part="Timestamp"/>
   ...
   ```

3. In the outbound encryption, specify that the UsernameToken should be encrypted, as follows:

   ```xml
   <outbound><encrypt><tbe-elements>
   <tbe-element local-part="UsernameToken"
    name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd" mode="CONTENT"/>
   ...
   ```
3.4 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0)

The following sections describe how to implement SAML token sender vouches with message protection that conforms to the WS-Security 1.0 standard:

- "Configuring OC4J 10g Client and Oracle WSM 11g Web Service" on page 3-10
- "Configuring Oracle WSM 11g Client and OC4J 10g Web Service" on page 3-11

3.4.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service

To configure OC4J 10g client and Oracle WSM 11g Web service, perform the following steps:

3.4.1.1 Configuring Oracle WSM 11g Web Service

1. Create an Oracle WSM 11g Web service.
2. Attach the following policy to the Web service: oracle/wss10_saml_token__with_message_protection_service_policy.

   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3.4.1.2 Configuring OC4J 10g Client

1. Create a client proxy for the Web service (above) using Oracle JDeveloper.
2. Use the Oracle JDeveloper wizard to secure the proxy by right-clicking on the proxy project and selecting Secure Proxy.
3. Click Authentication in the Proxy Editor navigation bar and set the following options:
   - Select Use SAML Token.
   - Click SAML Details.
   - Select Sender Vouches Confirmation and Use Signature.
   - Enter the username that needs to be propagated as the Default Subject Name.
   - Enter www.oracle.com as the Default Issuer Name.
4. Click Inbound Integrity in the Proxy Editor navigation bar and set the following options:
   - Select Verify Inbound Signed Request Body.
   - Select Verify Timestamp and Creation Time Required in Timestamp.
   - Enter the Expiration Time (in seconds).
   - Select all options under Acceptable Signature Algorithms.
5. Click Outbound Integrity in the Proxy Editor navigation bar and set the following options:
   - Select Sign Outbound Messages.
   - Select Add Timestamp to Outbound Messages and Creation Time Required in Timestamp.
   - Enter the Expiration Time (in seconds).
6. Click **Inbound Confidentiality** in the Proxy Editor navigation bar and set the following options:
   - Select **Decrypt Inbound Message Content**.
   - Select all options under **Acceptable Signature Algorithms**.

7. Click **Outbound Confidentiality** in the Proxy Editor navigation bar and set the following options:
   - Select **Encrypt Outbound Messages**.
   - Set the Algorithm to **AES-128**.

8. Click **Keystore Options** in the Proxy Editor navigation bar and configure the keystore properties, as required.

   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

9. Click **OK** to close the wizard.

10. In the Structure pane, click `<appname>Binding_Stub.xml` and edit the file as described in **Editing the `<appname>Binding_Stub.xml File**.

11. Invoke the Web service method.

**Editing the `<appname>Binding_Stub.xml File**

Edit the `<appname>Binding_Stub.xml file, as follows:

1. Provide the keystore password and sign and encryption key passwords.

2. In the inbound signature, specify the following:
   ```xml
   <inbound><verify-signature><tbs-elements>
   <tbs-element name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" local-part="Timestamp" />
   ... 
   ```

3. In the outbound signature, specify that the timestamp should be signed, as follows:
   ```xml
   <outbound><signature><tbs-elements>
   <tbs-element name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" local-part="Timestamp" />
   ... 
   ```

4. In the outbound encryption, specify the key transport algorithm, as follows:
   ```xml
   <outbound><encrypt>
   <keytransport-method>RSA-OAEP-MGF1P</keytransport-method>
   ... 
   ```

### 3.4.2 Configuring Oracle WSM 11g Client and OC4J 10g Web Service

To configure Oracle WSM 11g client and OC4J 10g Web service, perform the following steps:

**3.4.2.1 Configuring OC4J 10g Web Service**

1. Create and deploy a JAX-RPC Web service on OC4J.
2. Use the Application Server Control to secure the deployed Web service.

3. Click **Authentication** in navigation bar and set the following options:
   - Select **Use SAML Authentication**.
   - Select **Accept Sender Vouches**.
   - Deselect **Verify Signature**.

4. Click **Inbound Integrity** in the navigation bar and set the following option:
   - Select **Require Message Body To Be Signed**.
   - Select **Verify Timestamp and Creation Time Required in Timestamp**.
   - Enter the **Expiration Time** (in seconds).

5. Click **Outbound Integrity** in the navigation bar and select the following options:
   - Select **Sign Body Element of Message**.
   - Set the **Signature Method** to **RSA-SHA1**.
   - Select **Add Timestamp and Creation Time Required in Timestamp**.
   - Enter the **Expiration Time** (in seconds).

6. Click **Inbound Confidentiality** in the navigation bar and set the following option:
   - Deselect **Require Encryption of Message Body**.

7. Click **Outbound Confidentiality** in the navigation bar and set the following option:
   - Select **Encrypt Body Element of Message**.
   - Set the **Encryption Method** to **AES-128**.
   - Set the public key to encrypt.

8. Configure the keystore properties and identity certificates.
   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5
   keytool generates keystores with v1 certificates.
   For more information, see the Oracle Fusion Middleware Administrator's Guide.

9. Edit the **wsmgmt.xml** deployment descriptor file, as described in **Editing the**
   **wsmgmt.xml** **File**.

10. Invoke the Web service.

### 3.4.2.2 Configuring Oracle WSM 11g Client

1. Create a client proxy for the OC4J 10g Web service.

2. Attach the following policy: oracle/wss10_saml_token_with_message_protection_
   client_policy.
   For more information about attaching the policy, see "Attaching Policies to Web
   Service Clients" in *Oracle Fusion Middleware Security and Administrator’s Guide for
   Web Services*.

3. Configure the policy, as described in "oracle/wss10_saml_token_with_message_
   protection_client_policy" in *Oracle Fusion Middleware Security and Administrator’s
   Guide for Web Services*.

4. Invoke the Web service method from the client.
Editing the wsmgmt.xml File

Edit the wsmgmt.xml file in ORACLE_HOME/j2ee/oc4j_instance/config, as follows:

1. In the inbound signature, specify the following:
   
   ```xml
   <inbound><verify-signature><tbs-elements>
   <tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-
   utility-1.0.xsd" local-part="Timestamp"/>
   ...
   
   2. In the outbound signature, specify that the timestamp should be signed, as follows:
   
   ```xml
   <outbound><signature><tbs-elements>
   <tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-
   utility-1.0.xsd" local-part="Timestamp"/>
   ...
   
   3. In the outbound encryption, specify that the UsernameToken should be encrypted, as follows:
   
   ```xml
   <outbound><encrypt><tbe-elements>
   <tbe-element local-part="UsernameToken"
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-
   secext-1.0.xsd" mode="CONTENT"/>
   ...
   
3.5 Mutual Authentication with Message Protection (WS-Security 1.0)

The following sections describe how to implement mutual authentication with message protection that conforms to the WS-Security 1.0 standard:

- "Configuring OC4J 10g Client and Oracle WSM 11g Web Service" on page 3-13
- "Configuring Oracle WSM 11g Client and OC4J 10g Web Service" on page 3-15

3.5.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service

To configure OC4J 10g client and Oracle WSM 11g Web service, perform the following steps:

3.5.1.1 Configuring Oracle WSM 11g Web Service

1. Create a Web service application.

2. Attach the following policy to the Web service: oracle/wss10_x509_token_with_message_protection_service_policy.

   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3.5.1.2 Configuring OC4J 10g Client

1. Create a client proxy for the Web service (above) using Oracle JDeveloper.

2. Use the Oracle JDeveloper wizard to secure the proxy by right-clicking on the proxy project and selecting Secure Proxy.
3. Click Authentication in the Proxy Editor navigation bar and set the following options:
   - Select Use X509 To Authenticate.

4. Click Inbound Integrity in the Proxy Editor navigation bar and set the following options:
   - Select Verify Inbound Signed Request Body.
   - Select Verify Timestamp and Creation Time Required in Timestamp.
   - Enter the Expiration Time (in seconds).
   - Select all options under Acceptable Signature Algorithms.

5. Click Outbound Integrity in the Proxy Editor navigation bar and set the following options:
   - Select Sign Outbound Messages.
   - Select Add Timestamp to Outbound Messages and Creation Time Required in Timestamp.
   - Enter the Expiration Time (in seconds).

6. Click Inbound Confidentiality in the Proxy Editor navigation bar and set the following options:
   - Select Decrypt Inbound Message Content.
   - Select all options under Acceptable Signature Algorithms.

7. Click Outbound Confidentiality in the Proxy Editor navigation bar and set the following options:
   - Select Encrypt Outbound Messages.
   - Set the Algorithm to AES-128.

8. Click Keystore Options in the Proxy Editor navigation bar and configure the keystore properties, as required.
   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

9. Click OK to close the wizard.

10. In the Structure pane, click `<appname>Binding_Stub.xml` and edit the file as described in Editing the `<appname>Binding_Stub.xml` File.

11. Invoke the Web service.

**Editing the `<appname>Binding_Stub.xml` File**
Edit the `<appname>Binding_Stub.xml` file, as follows:

1. Provide the keystore password and sign and encryption key passwords.

2. In the inbound signature, specify the following:

```xml
<inbound><verify-signature><tbs-elements>
  <tbs-element
ame-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" local-part="Timestamp" />
...```

3. In the outbound signature, specify that the timestamp should be signed, as follows:

   <outbound>
   <signature>
   <tbs-elements>
   <tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-
   utility-1.0.xsd" local-part="Timestamp"/>
   ...

4. In the outbound encryption, specify the key transport algorithm, as follows:

   <outbound>
   <encrypt>
   <keytransport-method>RSA-OAEP-MGF1P</keytransport-method>
   ...

3.5.2 Configuring Oracle WSM 11g Client and OC4J 10g Web Service

To configure Oracle WSM 11g client and OC4J 10g Web service, perform the following steps:

3.5.2.1 Configuring OC4J 10g Web Service

1. Create and deploy a JAX-RPC Web service on OC4J.
2. Use the Application Server Control to secure the deployed Web service.
3. Click Authentication tab and set the following options:
   - Select Use X509 Certificate Authentication.
4. Click Integrity tab of the Inbound Policies page and set the following options:
   - Select Require Message Body to Be Signed.
   - Select Verify Timestamp and Creation Time Required in Timestamp.
   - Enter the Expiration Time (in seconds).
5. Click Integrity tab of the Outbound Policies page and set the following options:
   - Select Sign Body Element of Message.
   - Set the Signature Method to RSA-SHA1.
   - Select Add Timestamp and Creation Time Required in Timestamp.
   - Enter the Expiration Time (in seconds).
6. Click Confidentiality tab of the Inbound Policies page and set the following options:
   - Select Require Encryption of Message Body.
7. Click Confidentiality tab of the Outbound Policies page and set the following options:
   - Select Encrypt Body Element of Message.
   - Set the Encryption Method to AES-128.
   - Set the public key to encrypt.
8. Configure the keystore properties and identity certificates.

Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.
9. Edit the wsmgmt.xml deployment descriptor file, as described in Editing the wsmgmt.xml File.

3.5.2.2 Configuring Oracle WSM 11g Client

1. Create a client proxy to the OC4J 10g Web service.

2. Attach the following policy: oracle/wss10_x509_token_with_message_protection_client_policy.

   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Configure the policy, as described in "oracle/wss10_x509_token_with_message_protection_client_policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

4. Invoke the Web service.

Editing the wsmgmt.xml File

Edit the wsmgmt.xml file in ORACLE_HOME/j2ee/oc4j_instance/config, as follows:

1. In the inbound signature, specify the following:
   
   ```xml
   <inbound><verify-signature><tbs-elements>
   <tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" local-part="Timestamp"/>
   ...
   ```

2. In the outbound signature, specify that the timestamp should be signed, as follows:

   ```xml
   <outbound>/<signature>/<tbs-elements>
   <tbs-element
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" local-part="Timestamp"/>
   ...
   ```

3. In the outbound encryption, specify that the UsernameToken should be encrypted, as follows:

   ```xml
   <outbound>/<encrypt>/<tbe-elements>
   <tbe-element local-part="UsernameToken"
   name-space="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd" mode="CONTENT"/>
   ...
   ```

3.6 Username token over SSL

The following sections describe how to implement username token over SSL:

- "Configuring OC4J 10g Client and Oracle WSM 11g Web Service" on page 3-17
- "Configuring Oracle WSM 11g Client and OC4J 10g Web Service" on page 3-18

For information about:
3.6.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service

To configure OC4J 10g client and Oracle WSM 11g Web service, perform the following steps:

3.6.1.1 Configuring Oracle WSM 11g Web Service

1. Configure the server for SSL.
   
   For more information, see "Configuring SSL on WebLogic Server (One-Way)" and "Configuring SSL on WebLogic Server (Two-Way)" in Oracle Fusion Middleware Security and Administrator's Guide for Web Services.

2. Attach one of the following policies to the Web service:
   
   oracle/wss_username_token_over_ssl_service_policy
   oracle/wss_username_or_saml_token_over_ssl_service_policy
   
   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3.6.1.2 Configuring OC4J 10g Client

1. Create a client proxy for the Web service (above) using Oracle JDeveloper.

   Ensure that the Web service endpoint references the URL with HTTPS and SSL port configured on Oracle WebLogic Server.

2. Add the following code excerpt to initialize two-way SSL (at the beginning of the client proxy code):

   ```java
   HostnameVerifier hv = new HostnameVerifier()
   httpsURLConnection.setDefaultHostnameVerifier(hv);
   System.setProperty("javax.net.ssl.trustStore","<trust_store>");
   System.setProperty("javax.net.ssl.trustStorePassword","<trust_store_password>");
   System.setProperty("javax.net.ssl.keyStore","<key_store>");
   System.setProperty("javax.net.ssl.keyStorePassword","<key_store_password>");
   System.setProperty("javax.net.ssl.keyStoreType","JKS");
   ```

3. Use the Oracle JDeveloper wizard to secure the proxy by right-clicking on the proxy project and selecting Secure Proxy.

4. Click Authentication in the Proxy Editor navigation bar and set the following options:
   
   - Select Use Username to Authenticate.
   - Deselect Add Nonce and Add Creation Time.

5. Click Inbound Integrity in the Proxy Editor navigation bar and deselect all options.
6. Click **Outbound Integrity** in the Proxy Editor navigation bar and deselect all options.

7. Click **Inbound Confidentiality** in the Proxy Editor navigation bar and deselect all options.

8. Click **Outbound Confidentiality** in the Proxy Editor navigation bar and deselect all options.

9. Click **Keystore Options** in the Proxy Editor navigation bar and configure the keystore properties, as required.
   
   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

10. Click OK to close the wizard.

11. In the Structure pane, click `<appname>Binding_Stub.xml` and edit the file as described in Editing the `<appname>Binding_Stub.xml File`.

12. Invoke the Web service.

**Editing the `<appname>Binding_Stub.xml File**

Edit the `<appname>Binding_Stub.xml file, as follows:

1. Provide the keystore password and sign and encryption key passwords.

2. In the outbound signature, specify that the timestamp should be signed, as follows (and remove all other tags):

   ```xml
   <outbound>
     <signature>
       <add-timestamp created="true" expiry="<Expiry_Time>"/>
     </signature>
   </outbound>
   ...
   ```

**3.6.2 Configuring Oracle WSM 11g Client and OC4J 10g Web Service**

To configure Oracle WSM 11g client and OC4J 10g Web service, perform the following steps:

**3.6.2.1 Configuring OC4J 10g Web Service**

1. Configure the server for SSL.
   
   For more information, see

2. Use the Application Server Control to secure the deployed Web service.

3. Click **Authentication** tab and set the following options:
   
   - Select **Use Username/Password Authentication**.

4. Click **Integrity** tab of the Inbound Policies page and deselect all options.

5. Click **Integrity** tab of the Outbound Policies page and deselect all options.

6. Click **Confidentiality** tab of the Inbound Policies page and deselect all options.

7. Click **Confidentiality** tab of the Outbound Policies page and deselect all options.
8. Edit the wsmgmt.xml deployment descriptor file, as described in Editing the wsmgmt.xml File.

3.6.2.2 Configuring Oracle WSM 11g Client

1. Create a client proxy to the OC4J 10g Web service using clientgen.

   Ensure that the Web service endpoint references the URL with HTTPS and SSL port configured on Oracle WebLogic Server.

2. Add the following code excerpt to initialize two-way SSL (at the beginning of the client proxy code):

   ```java
   HostnameVerifier hv = new HostnameVerifier()
   httpsURLConnection.setDefaultHostnameVerifier(hv);
   System.setProperty("javax.net.ssl.trustStore","<trust_store>");
   System.setProperty("javax.net.ssl.trustStorePassword","<trust_store_password>");
   System.setProperty("javax.net.ssl.keyStore","<key_store>");
   System.setProperty("javax.net.ssl.keyStorePassword","<key_store_password>");
   System.setProperty("javax.net.ssl.keyStoreType","JKS");
   ```

3. Attach the following policy: oracle/wss_username_token_over_ssl_client_policy.
   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

4. Configure the policy, as described in "oracle/wss_username_token_over_ssl_client_policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

5. Invoke the Web service.

Editing the wsmgmt.xml File

Edit the wsmgmt.xml file in ORACLE_HOME/j2ee/oc4j_instance/config, as follows:

1. In the outbound signature, specify that the timestamp should be signed, as follows (and remove all other tags):

   ```xml
   <outbound>
   <signature>
   <add-timestamp created="true" expiry="<Expiry_Time>"/>
   </signature>
   ...
   ```

3.7 SAML Token (Sender Vouches) Over SSL (WS-Security 1.0)

The following sections describe how to implement SAML token (sender vouches) over SSL that conforms to the WS-Security 1.0 standard:

- "Configuring OC4J 10g Client and Oracle WSM 11g Web Service" on page 3-20
- "Configuring Oracle WSM 11g Client and OC4J 10g Web Service" on page 3-21

For information about:

3.7.1 Configuring OC4J 10g Client and Oracle WSM 11g Web Service

To configure OC4J 10g client and Oracle WSM 11g Web service, perform the following steps:

3.7.1.1 Configuring Oracle WSM 11g Web Service

1. Configure the server for two-way SSL.

   For more information, see "Configuring SSL on WebLogic Server (Two-Way)" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Attach the following policy to the Web service:

   oracle/wss_saml_token_over_ssl_service_policy OR
   oracle/wss_username_or_saml_token_over_ssl_service_policy.

   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3.7.1.2 Configuring OC4J 10g Client

1. Configure the server for two-way SSL.

   For more information, see http://download.oracle.com/docs/cd/B14099_19/web.1012/b14013/configssl.htm.

2. Create a client proxy for the Web service (above) using Oracle JDeveloper.

   Ensure that the Web service endpoint references the URL with HTTPS and SSL port configured on Oracle WebLogic Server.

3. Add the following code excerpt to initialize two-way SSL (at the beginning of the client proxy code):

   ```java
   HostnameVerifier hv = new HostnameVerifier()
   httpsURLConnection.setDefaultHostnameVerifier(hv);
   System.setProperty("javax.net.ssl.trustStore","<trust_store>");
   System.setProperty("javax.net.ssl.trustStorePassword","<trust_store_password>");
   System.setProperty("javax.net.ssl.keyStore","<key_store>");
   System.setProperty("javax.net.ssl.keyStorePassword","<key_store_password>");
   System.setProperty("javax.net.ssl.keyStoreType","JKS");
   ```

4. Use the Oracle JDeveloper wizard to secure the proxy by right-clicking on the proxy project and selecting Secure Proxy.

5. Click Authentication in the Proxy Editor navigation bar and set the following options:

   - Select Use SAML Token.
   - Click SAML Details.
   - Select Sender Vouches Confirmation.
   - Enter a valid username as the Default Subject Name.
6. Click **Inbound Integrity** in the Proxy Editor navigation bar and set the following option:
   - Deselect **Verify Inbound Signed Message Body**.

7. Click **Outbound Integrity** in the Proxy Editor navigation bar and deselect all options.

8. Click **Inbound Confidentiality** in the Proxy Editor navigation bar and set the following option:
   - Deselect **Decrypt Inbound Message Content**.

9. Click **Outbound Confidentiality** in the Proxy Editor navigation bar and set the following option:
   - Deselect **Encrypt Outbound Message**.

10. Provide required information for the keystore to be used.

11. Click **OK** to close the wizard.

12. In the Structure pane, click `<appname>Binding_Stub.xml` and edit the file as described in **Editing the `<appname>Binding_Stub.xml` File**.

13. Invoke the Web service.

**Editing the `<appname>Binding_Stub.xml` File**

Edit the `<appname>Binding_Stub.xml` file, as follows:

1. Provide the keystore password and sign and encryption key passwords.

2. In the outbound signature, specify that the timestamp should be signed, as follows (and remove all other tags):

   ```xml
   <outbound>
   <signature>
   <add-timestamp created='true' expiry='<Expiry_Time'/>/>
   </signature>
   ...
   ```

**3.7.2 Configuring Oracle WSM 11g Client and OC4J 10g Web Service**

To configure Oracle WSM 11g client and OC4J 10g Web service, perform the following steps:

**3.7.2.1 Configuring OC4J 10g Web Service**

1. Configure the server for two-way SSL.
   For more information, see

2. Use the Application Server Control to secure the deployed Web service.

3. Click **Authentication** in navigation bar and set the following options:
   - Select **Use SAML Authentication**.
   - Select **Accept Sender Vouches**.
   - Deselect **Verify Signature**.

4. Click **Integrity** tab of the Inbound Policies page and deselect all options.
5. Click **Integrity** tab of the Outbound Policies page and deselect all options.
6. Click **Confidentiality** tab of the Inbound Policies page and deselect all options.
7. Click **Confidentiality** tab of the Outbound Policies page and deselect all options.
8. Edit the wsmgmt.xml deployment descriptor file, as described in Edit the wsmgmt.xml File.

### 3.7.2.2 Configuring Oracle WSM 11g Client

1. Configure the server for two-way SSL.
   
   For more information, see "Configuring SSL on WebLogic Server (Two-Way)" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Create a client proxy to the OC4J 10g Web service.
   
   Ensure that the Web service endpoint references the URL with HTTPS and SSL port configured on Oracle WebLogic Server.

3. Attach the following policy: oracle/wss_saml_token_over_ssl_client_policy.
   
   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

4. Configure the policy, as described in "oracle/wss_saml_token_over_ssl_client_policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

5. Invoke the Web service.

### Edit the wsmgmt.xml File

Editing the wsmgmt.xml file in ORACLE_HOME/j2ee/oc4j_instance/config, as follows:

1. In the outbound signature, specify that the timestamp should be signed, as follows (and remove all other tags):

   ```xml
   <outbound>
   <signature>
     <add-timestamp created="true" expiry="<Expiry_Time>"/>
   </signature>
   ...
   ```
4

Interoperability with Oracle WebLogic Server 11g Web Service Security Environments

This chapter contains the following sections:

- Overview of Interoperability with Oracle WebLogic Server 11g Web Service Security Environments
- Username Token With Message Protection (WS-Security 1.1)
- Username Token With Message Protection (WS-Security 1.1) and MTOM
- Username Token With Message Protection (WS-Security 1.0)
- Username Token Over SSL
- Username Token Over SSL with MTOM
- SAML Token (Sender Vouches) Over SSL
- SAML Token (Sender Vouches) Over SSL with MTOM
- SAML Token 2.0 (Sender Vouches) With Message Protection (WS-Security 1.1)
- SAML Token (Sender Vouches) with Message Protection (WS-Security 1.1)
- SAML Token (Sender Vouches) with Message Protection (WS-Security 1.1) and MTOM
- SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0)
- Mutual Authentication with Message Protection (WS-Security 1.0)
- Mutual Authentication with Message Protection (WS-Security 1.1)

4.1 Overview of Interoperability with Oracle WebLogic Server 11g Web Service Security Environments

In Oracle Fusion Middleware 11g, you can attach both Oracle WSM and Oracle WebLogic Server 11g Web service policies to WebLogic Java EE Web services.

For more details about the predefined Oracle WSM 11g policies, see the following sections in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services:

- "Attaching Policies to Web Services"
- "Configuring Policies"
- "Predefined Policies"

For more details about the predefined Oracle WebLogic Server 11g Web service policies, see:
Table 4–1 and Table 4–2 summarize the most common Oracle WebLogic Server 11g Web service policy interoperability scenarios based on the following security requirements: authentication, message protection, and transport. The tables are organized as follows:

- Table 4–1 describes interoperability scenarios with WebLogic Web service policies and Oracle WSM client policies.
- Table 4–2 describes interoperability scenarios with Oracle WSM Web service policies and WebLogic Web service client policies.

**Table 4–1  WebLogic Web Service Policy and Oracle WSM Client Policy Interoperability**

4.2 Username Token With Message Protection (WS-Security 1.1)

This section describes how to implement username token with message protection that conforms to the WS-Security 1.1 standard in the following interoperability scenarios:

- **Section 4.2.1, "Interoperating with a WebLogic Web Service Policy"**
4.2.1 Interoperating with a WebLogic Web Service Policy

The following sections describe how to implement username token with message protection that conforms to the WS-Security 1.1 standard and ensure interoperability between the WebLogic Web service policy and the Oracle WSM client policy:

- Section 4.2.1.1, "Attaching and Configuring the WebLogic Web Service Policy"
- Section 4.2.1.2, "Attaching and Configuring the Oracle WSM Client Policy"

### 4.2.1.1 Attaching and Configuring the WebLogic Web Service Policy

To configure a Web service with a WebLogic Web service policy, perform the following tasks.

#### Table 4–3 Attaching and Configuring the WebLogic Web Service Policy

### 4.2.1.2 Attaching and Configuring the Oracle WSM Client Policy

To configure the client with an Oracle WSM client policy, perform the following tasks.
### 4.2.2 Interoperating with a WebLogic Web Service Client Policy

The following sections describe how to implement username token with message protection that conforms to the WS-Security 1.1 standard and ensure interoperability between the Oracle WSM Web service policy and the WebLogic Web service client policy:

- Section 4.2.2.1, "Attaching and Configuring the Oracle WSM Policy"
- Section 4.2.2.2, "Attaching and Configuring the WebLogic Web Service Client Policy"

#### 4.2.2.1 Attaching and Configuring the Oracle WSM Policy

To configure a Web service with an Oracle WSM Web service policy, perform the following tasks.

4.2.2.2 Attaching and Configuring the WebLogic Web Service Client Policy

To configure a client that uses WebLogic Web service client policy, perform the following tasks.

| Table 4–6 Attaching and Configuring the WebLogic Web Service Client Policy |
|---|---|---|
| Task | Description | More Information |
| 1 | Create a client proxy for the Web service created in Table 4–5 using clientgen. | "Using the clientgen Ant Task to Generate Client Artifacts" in Oracle Fusion Middleware Getting Started With JAX-WS Web Services for Oracle WebLogic Server |
| 2 | Attach the following policies: | "Updating the JWS File with @Policy and @Policies Annotations" in Oracle Fusion Middleware Securing WebLogic Web Services for Oracle WebLogic Server |
| | ■ Wssp1.2-2007-Wss1.1-UsernameToken-Plain-EncryptedKey-Basic128.xml | |
| | ■ Wssp1.2-2007-SignBody.xml | |
| | ■ Wssp1.2-2007-EncryptBody.xml | |
| 3 | Provide the configuration for the server (encryption key) in the client. | "Updating a Client Application to Invoke a Message-Secured Web Service” in Oracle Fusion Middleware Securing WebLogic Web Services for Oracle WebLogic Server |
| **Note:** Ensure that the encryption key specified is in accordance with the encryption key configured for the Web service. | |
| 4 | Invoke the Web service method from the client. | "Writing the Java Client Application Code to Invoke a Web Service” in Oracle Fusion Middleware Getting Started With JAX-WS Web Services for Oracle WebLogic Server |

4.3 Username Token With Message Protection (WS-Security 1.1) and MTOM

This section describes how to implement username token with message protection that conforms to the WS-Security 1.1 standard and uses Message Transmission Optimization Mechanism (MTOM) in the following interoperability scenarios:

- Section 4.3.1, "Interoperating with a WebLogic Web Service Policy”
- Section 4.3.2, "Interoperating with a WebLogic Web Service Client Policy”

4.3.1 Interoperating with a WebLogic Web Service Policy

The following sections describe how to implement username token with message protection that conforms to the WS-Security 1.1 standard and ensure interoperability between the WebLogic Web service policy and the Oracle WSM client policy:

- Section 4.3.1.1, "Attaching and Configuring the WebLogic Web Service Policy”
- Section 4.3.1.2, "Attaching and Configuring the Oracle WSM Client Policy”

4.3.1.1 Attaching and Configuring the WebLogic Web Service Policy

To configure a Web service with a WebLogic Web service policy, perform the following tasks.
4.3.1.2 Attaching and Configuring the Oracle WSM Client Policy

To configure the client with an Oracle WSM client policy, perform the following tasks.

Table 4–8 Attaching and Configuring the Oracle WSM Client Policy

<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
<th>More Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Configure the client proxy for the Web service in Table 4–7 using clientgen or some other mechanism.</td>
<td>Follow the steps described in &quot;Username Token With Message Protection (WS-Security 1.1)&quot; on page 4-5.</td>
</tr>
<tr>
<td>2</td>
<td>If you did not use the @MTOM annotation in the Web service (as described in Table 4–7), attach wsmtom_policy from the Management tab.</td>
<td>Follow Step 2 of &quot;Attaching and Configuring the Oracle WSM Client Policy&quot; on page 4-6.</td>
</tr>
</tbody>
</table>

4.3.2 Interoperating with a WebLogic Web Service Client Policy

The following sections describe how to implement username token with message protection that conforms to the WS-Security 1.1 standard and ensure interoperability between the Oracle WSM Web service policy and the WebLogic Web service client policy:

- Section 4.3.2.1, "Attaching and Configuring the Oracle WSM Policy"
- Section 4.3.2.2, "Attaching and Configuring the WebLogic Web Service Client Policy"

4.3.2.1 Attaching and Configuring the Oracle WSM Policy

To configure a Web service with an Oracle WSM Web service policy, perform the following tasks.

<tr>
<td>2</td>
<td>If you did not attach the wsmtom_policy as described in Table 4–9, use the @MTOM annotation in the Web service client.</td>
<td>Follow Step 2 of “Attaching and Configuring the WebLogic Web Service Client Policy” on page 4-8.</td>
</tr>
</tbody>
</table>

4.4 Username Token With Message Protection (WS-Security 1.0)

This section describes how to implement username token with message protection that conforms to the WS-Security 1.0 standard in the following interoperability scenarios:

- Section 4.4.1, "Interoperability with a WebLogic Web Service Policy"
- Section 4.4.2, "Interoperability with a WebLogic Web Service Client Policy"

Note: WS-Security 1.0 policy is supported for legacy applications only. Use WS-Security 1.1 policy for maximum performance. For more information, see “Username Token With Message Protection (WS-Security 1.1)” on page 4-5.

4.4.1 Interoperability with a WebLogic Web Service Policy

The following sections describe how to implement username token with message protection that conforms to the WS-Security 1.0 standard and ensure interoperability between the WebLogic Web service policy and the Oracle WSM client policy:

- Section 4.4.1.1, "Attaching and Configuring the WebLogic Web Service Policy"
- Section 4.4.1.2, "Attaching and Configuring the Oracle WSM Client Policy"

4.4.1.1 Attaching and Configuring the WebLogic Web Service Policy

To configure a Web service with a WebLogic Web service policy, perform the following tasks.
4.4.1.2 Attaching and Configuring the Oracle WSM Client Policy

To configure the client with an Oracle WSM client policy, perform the following tasks.

Table 4–12  Attaching and Configuring the Oracle WSM Client Policy

<table>
<thead>
<tr>

</table>

### 4.6 Username Token Over SSL with MTOM

The following section describes how to implement username token over SSL with Message Transmission Optimization Mechanism (MTOM) in the following interoperability scenario:

- Section 4.6.1, "Interoperating with a WebLogic Web Service Client Policy"
4.6.1 Interoperating with a WebLogic Web Service Client Policy

The following sections describe how to implement username token over SSL with MTOM and ensure interoperability between the Oracle WSM Web service policy and the WebLogic Web service client policy:

- Section 4.6.1.1, "Attaching and Configuring the Oracle WSM Policy"
- Section 4.6.1.2, "Attaching and Configuring the WebLogic Web Service Client Policy"

4.6.1.1 Attaching and Configuring the Oracle WSM Policy

To configure a Web service with an Oracle WSM Web service policy, perform the following tasks.

<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
<th>More Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Configure the Oracle WSM Web service.</td>
<td>Follow the steps in &quot;Username Token With Message Protection (WS-Security 1.1)&quot; on page 4-5.</td>
</tr>
</tbody>
</table>

4.6.1.2 Attaching and Configuring the WebLogic Web Service Client Policy

To configure a client that uses a WebLogic Web service client policy, perform the following tasks.

<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
<th>More Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Create a client proxy for the Web service created in Table 4–17.</td>

<td></td>
</tr>
</tbody>
</table>
This section describes how to implement SAML token sender vouches with message protection that conforms to the WS-Security 1.1 standard in the following interoperability scenarios:

- Section 4.10.1, "Interoperating with a WebLogic Web Service Policy"
- Section 4.10.2, "Interoperating with a WebLogic Web Service Client Policy"
4.10.1 Interoperating with a WebLogic Web Service Policy

The following sections describe how to implement SAML token sender vouches with message protection that conforms to the WS-Security 1.1 standard and ensure interoperability between the WebLogic Web service policy and the Oracle WSM client policy:

- Section 4.10.1.1, "Attaching and Configuring the WebLogic Web Service Policy"
- Section 4.10.1.2, "Attaching and Configuring the Oracle WSM Client Policy"

4.10.1.1 Attaching and Configuring the WebLogic Web Service Policy

To configure a Web service with a WebLogic Web service policy, perform the following tasks.

<table>
<thead>
<tr>

| 3    | Provide the configuration for the server (encryption key) in the client.  
  **Note:** Ensure that the encryption key specified is in accordance with the encryption key configured for the Web service. | "Updating a Client Application to Invoke a Message-Secured Web Service" in Oracle Fusion Middleware Securing WebLogic Web Services for Oracle WebLogic Server |
| 4    | Invoke the Web service method from the client. | "Writing the Java Client Application Code to Invoke a Web Service" in Oracle Fusion Middleware Getting Started With JAX-WS Web Services for Oracle WebLogic Server |

4.12 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0)

This section describes how to implement SAML token with sender vouches and message protection that conforms to the WS-Security 1.0 standard in the following interoperability scenarios:

- Section 4.12.1, "Interoperating with a WebLogic Web Service Policy"
- Section 4.12.2, "Interoperating with a WebLogic Web Service Client Policy"

**Note:** WS-Security 1.0 policy is supported for legacy applications only. Use WS-Security 1.1 policy for maximum performance. For more information, see “SAML Token (Sender Vouches) with Message Protection (WS-Security 1.1)” on page 4-22.

4.12.1 Interoperating with a WebLogic Web Service Policy

The following sections describe how to implement SAML token with sender vouches and message protection that conforms to the WS-Security 1.0 standard and ensure interoperability between the WebLogic Web service policy and the Oracle WSM client policy:

- Section 4.12.1.1, "Attaching and Configuring the WebLogic Web Service Policy"
- Section 4.12.1.2, "Attaching and Configuring the Oracle WSM Client Policy"
4.12.1.1 Attaching and Configuring the WebLogic Web Service Policy

Create and configure token handlers for X.509 and for username token. In WebLogic Administration Console, navigate to the Web Service Security page of the domain and create the token handlers as follows:

- Create a token handle for username token and configure the following:
  - Name: <name>
  - Class name: weblogic.xml.crypto.wss.UsernameTokenHandler
  - Token Type: ut
  - Handling Order: 1

- Create a token handler for X.509 and configure the following:
  - Name: <name>
  - Class name: weblogic.xml.crypto.wss.BinarySecurityTokenHandler
  - Token Type: x509
  - Handling Order: 0

- For the X.509 token handler, add the following properties:
  - Name: UserX509ForIdentity
  - Value: true
  - IsEncrypted: False

Configure a credential mapping provider. Create a PKICredentialMapper and configure it as follows (leave all other values set to the defaults):

- Keystore Provider: N/A
- Keystore Type: jks
- Keystore File Name: default_keystore.jks
- Keystore Pass Phrase: <password>
- Confirm Keystore Pass Phrase: <password>
### 4.14.1.2 Attaching and Configuring the Oracle WSM Client Policy

To configure the client with an Oracle WSM client policy, perform the following tasks.

<table>

This chapter contains the following sections:

- Overview of Interoperability with Microsoft WCF/.NET 3.5 Security Environments
- Message Transmission Optimization Mechanism (MTOM)
- Username Token With Message Protection (WS-Security 1.1)
- Username Token Over SSL
- Mutual Authentication with Message Protection (WS-Security 1.1)
- Kerberos with Message Protection
- WCF/.NET 3.5 client with Microsoft Active Directory Federation Services 2.0 (ADFS 2.0) STS

5.1 Overview of Interoperability with Microsoft WCF/.NET 3.5 Security Environments

In conjunction with Microsoft, Oracle has performed interoperability testing to ensure that the Web service security policies created using Oracle WSM 11g can interoperate with Web service policies configured using Microsoft Windows Communication Foundation (WCF)/.NET 3.5 Framework and vice versa.

For more details about the predefined Oracle WSM 11g policies, see the following topics in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services:

- "Attaching Policies to Web Services"
- "Configuring Policies"
- "Predefined Policies"

Table 5-1 summarizes the most common Microsoft .NET 3.5 interoperability scenarios based on the following security requirements: authentication, message protection, and transport.
This section describes how to implement MTOM in the following interoperability scenarios:

- "Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service" on page 5-3
- "Configuring Oracle WSM 11g Client and Microsoft WCF/.NET 3.5 Web Service" on page 5-4

Table 5–1  Interoperability With Microsoft WCF/.NET 3.5 Security Environments

</table>
5.2.1 Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service

To configure Microsoft WCF/.NET 3.5 client and Oracle WSM 11g Web service, perform the steps described in the following sections:

5.2.1.1 Configuring Oracle WSM 11g Web Service

1. Create a Web service application.
2. Attach the following policy to the Web service: oracle/wsmotom_service_policy. For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator's Guide for Web Services.
3. Deploy the application.

5.2.1.2 Configuring Microsoft WCF/.NET 3.5 Client

1. Use the SVCUtil utility to create a client proxy and configuration file from the deployed Web service. See "Example app.config File for MTOM Interoperability" on page 5-3.
2. Run the client program.

Example app.config File for MTOM Interoperability

The following provides an example of the app.config file:

```xml
<?xml version="1.0" encoding="utf-8"?>
<configuration>
  <system.serviceModel>
    <bindings>
      <customBinding>
        <binding name="CustomBinding_IMTOMService">
          <mtomMessageEncoding maxReadPoolSize="64"
            maxWritePoolSize="16"
            messageVersion="Soap12" maxBufferSize="65536"
            writeEncoding="utf-8">
            <readerQuotas maxDepth="32" maxStringContentLength="8192" maxArrayLength="16384"
              maxBytesPerRead="4096" maxNameTableCharCount="16384" />
          </mtomMessageEncoding>
          <httpTransport manualAddressing="false" maxBufferPoolSize="524288" maxReceivedMessageSize="65536" allowCookies="false"
            authenticationScheme="Anonymous"
            bypassProxyOnLocal="false" hostNameComparisonMode="StrongWildcard"
            keepAliveEnabled="true" maxBufferSize="65536"
            proxyAuthenticationScheme="Anonymous"
            realm="" transferMode="Buffered"
            unsafeConnectionNtlmAuthentication="false"
            useDefaultWebProxy="true" />
        </binding>
      </customBinding>
    </bindings>
    <client>
      <endpoint address="<endpoint_url>"
        binding="customBinding" bindingConfiguration="CustomBinding_IMTOMService"
        contract="IMTOMService" name="CustomBinding_IMTOMService" />
    </client>
  </system.serviceModel>
</configuration>
```
5.2.2 Configuring Oracle WSM 11g Client and Microsoft WCF/.NET 3.5 Web Service

To configure Oracle WSM 11g client and Microsoft WCF/.NET 3.5 Web service, perform the steps described in the following sections:

5.2.2.1 Configuring Microsoft WCF/.NET 3.5 Web Service

1. Create a .NET Web service.
   
   
   For an example of a .NET Web service, see "Example of .NET Web Service for MTOM Interoperability" on page 5-4.

2. Deploy the application.

5.2.2.2 Configuring Oracle WSM 11g Client

1. Using JDeveloper, create a SOA composite that consumes the .NET Web service.
   For more information, see the Developer’s Guide for SOA Suite.

2. Attach the following policy to the Web service client: oracle/wsmtom_client_policy.
   
   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

Example of .NET Web Service for MTOM Interoperability

The following provides an example of the .NET Web service for MTOM interoperability.

```csharp
static void Main(string[] args)
{
    string uri = "http://host:port/TEST/MTOMService/SOA/MTOMService";
    // Step 1 of the address configuration procedure: Create a URI to serve as the base address.
    Uri baseAddress = new Uri(uri);

    // Step 2 of the hosting procedure: Create ServiceHost
    ServiceHost selfHost = new ServiceHost(typeof(MTOMService), baseAddress);

    try {
        HttpTransportBindingElement hb = new HttpTransportBindingElement();
        hb.ManualAddressing = false;
        hb.MaxBufferSize = 2147483647;
        hb.MaxReceivedMessageSize = 2147483647;
        hb.AllowCookies = false;
        hb.KeepAliveEnabled = true;
        hb.MaxBufferSize = 2147483647;
        hb.Realm = "";
        hb.UnsafeConnectionNtlmAuthentication = false;
        hb.UseDefaultWebProxy = true;
        MtomMessageEncodingBindingElement me = new MtomMessageEncodingBindingElement();
        me.MaxReadPoolSize=64;
    }
```

5-4 Oracle Fusion Middleware Interoperability Guide for Oracle Web Services Manager
5.3 Username Token With Message Protection (WS-Security 1.1)

This section describes how to implement username token with message protection that conforms to WS-Security 1.1 in the following interoperability scenarios:

- "Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service" on page 5-5
- "Configuring Oracle WSM 11g Client and Microsoft WCF/.NET 3.5 Web Service" on page 5-9

5.3.1 Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service

To configure Microsoft WCF/.NET 3.5 client and Oracle WSM 11g Web service, perform the steps described in the following sections:
5.3.1.1 Configuring Oracle WSM 11g Web Service

1. Create a Web service application.

2. Attach one of the following policies to the Web service:
   
   * oracle/wss11_username_token_with_message_protection_service_policy
   * oracle/wss11_saml_or_username_token_with_message_protection_service_policy

   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Export the X.509 certificate file from the keystore on the service side to a .cer file (for example, alice.cer) using the following command:

   ```
   keytool -export -alias alice -file C:\alice.cer -keystore default-keystore.jks
   ```

5.3.1.2 Configuring Microsoft WCF/.NET 3.5 Client

1. Import the certificate file (exported previously) to the keystore on the client server using Microsoft Management Console (mmc). For information, see "How to: View Certificates with the MMC Snap-in" at http://msdn.microsoft.com/en-us/library/ms788967.aspx.
   
   a. Open a command prompt.
   b. Type `mmc` and press ENTER.
   c. Select File > Add/Remove snap-in.
   d. Select Add and Choose Certificates.
   
   Note: To view certificates in the local machine store, you must be in the Administrator role.

   e. Select Add.
   f. Select My user account and finish.
   
   g. Click OK.
   h. Expand Console Root > Certificates -Current user > Personal > Certificates.
   i. Right-click on Certificates and select All tasks > Import to launch Certificate import Wizard.
   j. Click Next, select Browse, and navigate to the .cer file that was exported previously.
   
   k. Click Next and accept defaults and finish the wizard.

2. Generate a .NET client using the WSDL of the Web service.

   For more information, see "How to: Create a Windows Communication Foundation Client" at http://msdn.microsoft.com/en-us/library/ms733133.aspx.
3. In the Solution Explorer of the client project, add a reference by right-clicking on references, selecting Add reference, and browsing to C:\Windows\Microsoft .NET framework\v3.0\Windows Communication Framework\System.Runtime.Serialization.dll.

4. Edit the app.config file in the .NET project to update the certificate file and disable replays, as described in “Edit the app.config File” on page 5-7.

5. Compile the project.

6. Open a command prompt and navigate to the project’s Debug folder.

7. Enter `<client_project_name>.exe` and press Enter.

**Edit the app.config File**

Edit the app.config file to update the certificate file and disable replays, as shown in the following example (changes are identified in **bold**). If you follow the default key setup, then `<certificate_cn>` should be set to alice.

```xml
<configuration>
  <system.serviceModel>
    <behaviors>
      <endpointBehaviors>
        <behavior name="secureBehaviour">
          <clientCredentials>
            <serviceCertificate>
              <defaultCertificate findValue="<certificate_cn>"
                storeLocation="CurrentUser" storeName="My"
                x509FindType="FindBySubjectName"/>
            </serviceCertificate>
            </clientCredentials>
          </behavior>
        </endpointBehaviors>
      </behaviors>
    </system.serviceModel>
  </configuration>
```

**Note:** SVCUtil does not support some security policy assertions such as `<sp:SignedParts>`. As a workaround:

- Detach the policy
- Generate proxy using SVCUtil
- Attach the policy back

5.3.2 Configuring Oracle WSM 11g Client and Microsoft WCF/.NET 3.5 Web Service

To configure Oracle WSM 11g client and Microsoft WCF/.NET 3.5 Web service, perform the steps described in the following sections:

5.3.2.1 Configuring Microsoft WCF/.NET 3.5 Web Service

1. Create a .NET Web service.
   Be sure to create a custom binding for the Web service using the SymmetricSecurityBindingElement. For an example, see "Example .NET Web Service Client" on page 5-10.

2. Create and import a certificate file to the keystore on the Web service server.
   Using VisualStudio, the command would be similar to the following:
   makecert -r -pe -n "CN=wsmcert3" -sky exchange -ss my C:\wsmcert3.cer
   This command creates and imports a certificate in mmc.

   If the command does not provide expected results, then try the following sequence of commands. You need to download Windows Developer Kit (WDK) at http://www.microsoft.com/whdc/devtools/WDK/default.mspx.
   makecert -r -pe -n "CN=wsmcert3" -sky exchange -ss my -sv wscert3.pvk C:\wsmcert3.cer
   pvk2pfx.exe -pvk wscert3.pvk -spc wsmcert3.cer -pfx PRF_WSMCert3.pfx -pi welcome
   Then, in mmc, import PRF_WSMCert3.pfx.

3. Import the certificate created on the Web service server to the client server using the keytool command. For example:
   keytool -import -alias wsmcert3 -file C:\wsmcert3.cer -keystore <owsm_client_keystore>

4. Right-click on the Web service Solution project in Solutions Explorer and click Open Folder In Windows Explorer.

5. Navigate to the bin/Debug folder.

6. Double-click on the <project>.exe file. This command will run the Web service at the URL provided.

5.3.2.2 Configuring Oracle WSM 11g Client

1. Using JDeveloper, create a SOA composite that consumes the .NET Web service. For more information, see the Developer’s Guide for SOA Suite.

2. In JDeveloper, create a partner link using the WSDL of the .NET service.
3. Attach the following policy to the Web service client: oracle/wss11_username_token_with_message_protection_client_policy.

For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

4. Provide configurations for the csf-key and keystore.recipient.alias.

You can specify this information when attaching the policy, by overriding the policy configuration. For more information, see "Attaching Clients Permitting Overrides" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

Ensure that you configure the keystore.recipient.alias as the alias of the certificate imported in step 1 (wsmcert3). For example:

```xml
<wsp:PolicyReference URI="oracle/wss11_username_token_with_message_protection_client_policy"
    orawsp:category="security" orawsp:status="enabled"/>
<property name="csf-key" type="xs:string"
    many="false">basic.credentials</property>
<property name="keystore.recipient.alias" type="xs:string"
    many="false">wsmcert3</property>
```

5.3.2.3 Example .NET Web Service Client

```csharp
static void Main(string[] args)
{
    // Step 1 of the address configuration procedure: Create a URI to serve as the base address.
    // Step 2 of the hosting procedure: Create ServiceHost
    string uri = "http://<host>:<port>/TEST/NetService";
    Uri baseAddress = new Uri(uri);

    ServiceHost selfHost = new ServiceHost(typeof(CalculatorService), baseAddress);

    try
    {
        SymmetricSecurityBindingElement sm =
            SymmetricSecurityBindingElement.CreateUserNameForCertificateBindingElement();
        sm.SetKeyDerivation(false);
        sm.SecurityHeaderLayout = SecurityHeaderLayout.Lax;
        sm.IncludeTimestamp = true;
        sm.KeyEntropyMode = SecurityKeyEntropyMode.CombinedEntropy;
        sm.MessageProtectionOrder = MessageProtectionOrder.SignBeforeEncrypt;
        sm.RequireSignatureConfirmation = true;
        sm.LocalClientSettings.CacheCookies = true;
        sm.LocalClientSettings.DetectReplays = true;
        sm.LocalClientSettings.ReplayCacheSize = 900000;
        sm.LocalClientSettings.MaxClockSkew = new TimeSpan(00, 05, 00);
        sm.LocalClientSettings.MaxCookieCachingTime = TimeSpan.MaxValue;
        sm.LocalClientSettings.ReplayWindow = new TimeSpan(00, 05, 00);
        sm.LocalClientSettings.SessionKeyRenewalInterval = new TimeSpan(10, 00, 00);
        sm.LocalClientSettings.SessionKeyRolloverInterval = new TimeSpan(00, 05, 00);
    }
}
```
Username Token With Message Protection (WS-Security 1.1)

```
sm.LocalClientSettings.ReconnectTransportOnFailure = true;
sm.LocalClientSettings.TimestampValidityDuration = new TimeSpan(00, 05, 00);
sm.LocalClientSettings.CookieRenewalThresholdPercentage = 60;
sm.LocalServiceSettings.DetectReplays = false;
sm.LocalServiceSettings.IssuedCookieLifetime = new TimeSpan(10, 00, 00);
sm.LocalServiceSettings.MaxStatefulNegotiations = 128;
sm.LocalServiceSettings.ReplayCacheSize = 900000;
sm.LocalServiceSettings.MaxClockSkew = new TimeSpan(00, 05, 00);
sm.LocalServiceSettings.NegotiationTimeout = new TimeSpan(00, 01, 00);
sm.LocalServiceSettings.ReplayWindow = new TimeSpan(00, 05, 00);
sm.LocalServiceSettings.InactivityTimeout = new TimeSpan(00, 02, 00);
sm.LocalServiceSettings.SessionKeyRenewalInterval = new TimeSpan(15, 00, 00);
sm.LocalServiceSettings.ReconnectTransportOnFailure = true;
sm.LocalServiceSettings.MaxPendingSessions = 128;
sm.LocalServiceSettings.MaxCachedCookies = 1000;
sm.LocalServiceSettings.TimestampValidityDuration = new TimeSpan(15, 00, 00);
HttpTransportBindingElement hb = new HttpTransportBindingElement();
hb.ManualAddressing = false;
hb.MaxBufferSize = 524288;
hb.MaxReceivedMessageSize = 65536;
hb.AllowCookies = false;
hb.KeepAliveEnabled = true;
hb.MaxBufferSize = 65536;
hb.UnsafeConnectionNtlmAuthentication = false;
hb.UseDefaultWebProxy = true;
TextMessageEncodingBindingElement tbl = new TextMessageEncodingBindingElement();
tbl.MaxReadPoolSize = 64;
tbl.MaxWritePoolSize = 16;
tbl.WriteEncoding = System.Text.Encoding.UTF8;
CustomBinding binding1 = new CustomBinding(sm);
binding1.Elements.Add(tbl);
binding1.Elements.Add(hb);
ServiceEndpoint ep = selfHost.AddServiceEndpoint(typeof(ICalculator), binding1, "CalculatorService");

EndpointAddress myEndpointAdd = new EndpointAddress(new Uri(uri), EndpointIdentity.CreateDnsIdentity("WSMCert3"));
ep.Address = myEndpointAdd;

// Step 4 of the hosting procedure: Enable metadata exchange.
ServiceMetadataBehavior smb = new ServiceMetadataBehavior();
smb.HttpGetEnabled = true;
selfHost.Description.Behaviors.Add(smb);
sselfHost.Credentials_certificate.SetCertificate(StoreLocation.CurrentUser, StoreName.My, X509FindType.FindBySubjectName, "WSMCert3");
selfHost.Credentials.UserNameAuthentication.UserNamePasswordValidationMode = UserNamePasswordValidationMode.Custom;
CustomUserNameValidator cu = new CustomUserNameValidator();
selfHost.Credentials.UserNameAuthentication.CustomUserNamePasswordValidator = cu;
using (ServiceHost host = new ServiceHost(typeof(CalculatorService)))
```
5.4 Username Token Over SSL

This section describes how to implement username token over SSL in the following interoperability scenario:

- "Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service" on page 5-12

5.4.1 Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service

To configure Microsoft WCF/.NET 3.5 client and Oracle WSM 11g Web service, perform the steps described in the following sections:

5.4.1.1 Configuring Oracle WSM 11g Web Service

1. Configure the server for SSL.

   For more information, see "Configuring SSL on WebLogic Server (One-Way)" and "Configuring SSL on WebLogic Server (Two-Way)" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Create a copy of one of the following policies:

   - oracle/wss_username_token_over_ssl_service_policy
   - oracle/wss_saml_or_username_token_over_ssl_service_policy

   **Note:** Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

   Edit the policy settings, as follows:

   a. Disable the Creation Time Required configuration setting.

   b. Disable the Nonce Required configuration setting.

   c. Leave the default configuration set for all other configuration settings.
For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Attach the policy.

For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

5.4.1.2 Configuring Microsoft WCF/.NET 3.5 Client

1. Generate a .NET client using the WSDL of the Web service.

For more information, see “How to: Create a Windows Communication Foundation Client” at http://msdn.microsoft.com/en-us/library/ms733133.aspx.

2. In the Solution Explorer of the client project, add a reference by right-clicking on references, selecting Add reference, and browsing to C:\Windows\Microsoft .NET framework\v3.0\Windows Communication Framework\System.Runtime.Serialization.dll.

3. Edit the app.config file, as described in "Edit the app.config File" on page 5-13.

4. Compile the project.

5. Open a command prompt and navigate to the project’s Debug folder.

6. Type <client_project_name>.exe and press Enter.

**Edit the app.config File**

Edit the app.config file to update the certificate file and disable replays, as shown in the following example (changes are identified in **bold**):

```xml
<?xml version="1.0" encoding="utf-8"?>
<configuration>
  <system.serviceModel>
    <bindings>
      <binding name="BPELProcess1Binding">
        <security defaultAlgorithmSuite="Basic128" authenticationMode="UserNameOverTransport"
                  requireDerivedKeys="false" securityHeaderLayout="Lax" includeTimestamp="true"
                  keyEntropyMode="CombinedEntropy" messageProtectionOrder="SignBeforeEncrypt"
                  requireSignatureConfirmation="true">
          <localClientSettings cacheCookies="true" detectReplays="true"
                               maxClockSkew="00:05:00" maxCookieCachingTime="Infinite"
                               replayCacheSize="900000" sessionKeyRenewalInterval="10:00:00"
                               sessionKeyRolloverInterval="00:05:00" reconnectTransportOnFailure="false"
                               timestampValidityDuration="00:05:00"
                               cookieRenewalThresholdPercentage="60"/>
          <localServiceSettings detectReplays="true" issuedCookieLifetime="10:00:00"
                               maxStatefulNegotiations="128" replayCacheSize="900000"
                               maxClockSkew="00:05:00" negotiationTimeout="00:01:00" replayWindow="00:05:00"
                               inactivityTimeout="00:02:00"
                               sessionKeyRenewalInterval="15:00:00"
                               sessionKeyRolloverInterval="00:05:00"
                               reconnectTransportOnFailure="true" maxPendingSessions="128"
        </security>
      </binding>
    </bindings>
  </system.serviceModel>
</configuration>
```
5.5 Mutual Authentication with Message Protection (WS-Security 1.1)

The following sections describe how to implement mutual authentication with message protection that conform to the WS-Security 1.1 standards:

- "Configuration Prerequisites for Interoperability" on page 5-14
- "Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service" on page 5-15
- "Configuring Oracle WSM 11g Client and Microsoft WCF/.NET 3.5 Web Service" on page 5-18

Configuration Prerequisites for Interoperability

1. Export the X.509 certificate file from the keystore on the service side to a .cer file (for example, alice.cer) using the following command:

   keytool -export -alias alice -file C:\alice.cer -keystore default-keystore.jks

2. Import the certificate file (exported previously) to the keystore on the client server using Microsoft Management Console (mmc). For information, see 'How to: View Certificates with the MMC Snap-in' at http://msdn.microsoft.com/en-us/library/ms788967.aspx.

   a. Open a command prompt.
   b. Type mmc and press ENTER.
   c. Select File > Add/Remove snap-in.
   d. Select Add and Choose Certificates.
e. Select Add.

f. Select My user account and finish.

g. Click OK.

h. Expand Console Root > Certificates -Current user > Personal > Certificates.

i. Right-click on Certificates and select All tasks > Import to launch Certificate import Wizard.

j. Click Next, select Browse, and navigate to the .cer file that was exported previously.

k. Click Next and accept defaults and finish the wizard.

5.5.1 Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service

To configure Microsoft WCF/.NET 3.5 client and Oracle WSM 11g Web Service, perform the steps described in the following sections:

5.5.1.1 Configuring Oracle WSM 11g Web Service

1. Create a SOA composite and deploy it.

2. In Enterprise Manager, clone the following policy:
   oracle/wss11_x509_token_with_message_protection_service_policy
   Rename it as follows: wss11_x509_token_with_message_protection_service_policy_net

3. Export wss11_x509_token_with_message_protection_service_policy_net. Change encrypted="true" to "false", and import it back.
   <orasp:x509-token orasp:enc-key-ref-mech='thumbprint'
orasp:is-encrypted='false' orasp:is-signed='false'
orasp:sign-key-ref-mech='direct'/>

4. Using Enterprise Manager, attach the policy to the Web service.
   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

5.5.1.2 Configuring Microsoft WCF/.NET 3.5 Client

1. Use the SVCUtil utility to create a client proxy (see "Sample Client Program" on page 5-18) and configuration file from the deployed Web service.

2. In the Solution Explorer of the client project, add a reference by right-clicking on references, selecting Add reference, and browsing to C:\Windows\Microsoft .NET framework\v3.0\Windows Communication Framework\System.Runtime.Serialization.dll.

   a. Create a configuration file: app.config. Add the following code after the <system.serviceModel> element.

      ```
      <configuration>
      <system.serviceModel>
      ```
Mutual Authentication with Message Protection (WS-Security 1.1)

Oracle Fusion Middleware Interoperability Guide for Oracle Web Services Manager

<behaviors>
  <endpointBehaviors>
    <behavior name="secureBehaviour">
      <clientCredentials>
        <serviceCertificate>
          <defaultCertificate findValue="<certificate_cn>"
          storeLocation="CurrentUser" storeName="My"
          x509FindType="FindBySubjectName"/>
          </serviceCertificate>
        </clientCredentials>
      </behavior>
    </endpointBehaviors>
  </behavior>
</behaviors>

<bindings>
  <customBinding>

b. Modify the endpoint behavior as follows:

<endpoint address="http://<server>:<port>/MyWebService1SoapHttpPort"
  binding="customBinding"
  bindingConfiguration="MyWebService1SoapHttp"
  contract="MyWebService1" name="MyWebService1SoapHttpPort"
  behaviorConfiguration="secureBehaviour">
  <identity>
    <dns value="<certificate_cn>"/>
  </identity>
</endpoint>

c. Disable the message replay detection as follows:

<localClientSettings cacheCookies="true" detectReplays="false"
  replayCacheSize="900000"
  maxClockSkew="00:05:00" maxCookieCachingTime="Infinite"

d. Create a custom binding as shown below:

<security defaultAlgorithmSuite="Basic128"
  authenticationMode="MutualCertificate"

e. "Sample app.config File" on page 5-16 provides an example of the configuration file.

3. Compile the project.
4. Open a command prompt and navigate to the project’s Debug folder.
5. Enter <client_project_name>.exe and press Enter.

Sample app.config File

The following provides an example of the app.config file:

```xml
<?xml version="1.0" encoding="utf-8"?>
<configuration>
  <system.serviceModel>
    <behaviors>
      <endpointBehaviors>
        <behavior name="secureBehaviour">
          <clientCredentials>
            <serviceCertificate>
              <defaultCertificate findValue="<certificate_cn>"
              storeLocation="CurrentUser"
              x509FindType="FindBySubjectName"/>
            </serviceCertificate>
          </clientCredentials>
        </behavior>
      </endpointBehaviors>
    </behavior>
  </system.serviceModel>
</configuration>
```
Mutual Authentication with Message Protection (WS-Security 1.1)

Interoperability with Microsoft WCF/.NET 3.5 Security Environments

```
x509FindType="FindBySubjectName"/>

</clientCredentials>
</behavior>
</endpointBehaviors>
</behaviors>

<bindings>

<customBinding>
    <binding name="BPELProcess1Binding">
        <security defaultAlgorithmSuite="Basic128" authenticationMode="MutualCertificate"
            requireDerivedKeys="false" securityHeaderLayout="Lax" includeTimestamp="true"
            keyEntropyMode="CombinedEntropy" messageProtectionOrder="SignBeforeEncrypt"

            requireSignatureConfirmation="true">
                <localClientSettings cacheCookies="true" detectReplays="false"
                    replayCacheSize="900000" maxClockSkew="00:05:00"
                    maxCookieCachingTime="Infinite"
                    replayWindow="00:05:00" sessionKeyRenewalInterval="10:00:00"
                    sessionKeyRolloverInterval="00:05:00" reconnectTransportOnFailure="true"
                    timestampValidityDuration="00:05:00" cookieRenewalThresholdPercentage="60" />
                <localServiceSettings detectReplays="true" issuedCookieLifetime="10:00:00"
                    maxStatefulNegotiations="128" replayCacheSize="900000" maxClockSkew="00:05:00"
                    negotiationTimeout="00:01:00" replayWindow="00:05:00"
                    inactivityTimeout="00:02:00"
                    sessionKeyRenewalInterval="15:00:00" sessionKeyRolloverInterval="00:05:00"
                    reconnectTransportOnFailure="true" maxPendingSessions="128"
                    maxCachedCookies="1000" timestampValidityDuration="00:05:00" />
                <secureConversationBootstrap />
            </security>

            <textMessageEncoding maxReadPoolSize="64" maxWritePoolSize="16"
                messageVersion="Soap11" writeEncoding="utf-8">
                <readerQuotas maxDepth="32" maxStringContentLength="8192" maxArrayLength="16384"
                    maxBytesPerRead="4096" maxNameTableCharCount="16384" />
            </textMessageEncoding>

            <httpTransport manualAddressing="false" maxBufferPoolSize="524288"
                maxReceivedMessageSize="65536" allowCookies="false" authenticationScheme="Anonymous"
                bypassProxyOnLocal="false" hostNameComparisonMode="StrongWildcard"
                keepAliveEnabled="true" maxBufferSize="65536"
                proxyAuthenticationScheme="Anonymous"
                realm="" transferMode="Buffered" unsafeConnectionNtlmAuthentication="false"
                useDefaultWebProxy="true" />
        </binding>
    </customBinding>

</bindings>

<client>
    <endpoint address="<endpoint_url>"
            binding="customBinding" bindingConfiguration="BPELProcess1Binding"
            contract="BPELProcess1" name="BPELProcess1_pt" />
    <identity>
        <dns value=<certificate_cn> />
    </identity>
</endpoint>
</client>
```
Sample Client Program
namespace IO_NET10_client
{
    class Program
    {
        static void Main(string[] args)
        {

            BPELProcess1Client client = new BPELProcess1Client();
                StoreLocation.CurrentUser, StoreName.My,
                X509FindType.FindBySubjectName, "WSMCert3");

                StoreLocation.CurrentUser, StoreName.My,
                X509FindType.FindBySubjectName, "Alice");

            process proc = new process();
            proc.input = "Test wss11_x509_token_with_message_protection_policy -
            ";
            Console.WriteLine(proc.input);
            processResponse response = client.process(proc);
            Console.WriteLine(response.result.ToString());
            Console.WriteLine("Press <ENTER> to terminate Client.");
            Console.ReadLine();
        }
    }
}

5.5.2 Configuring Oracle WSM 11g Client and Microsoft WCF/.NET 3.5 Web Service
To configure Oracle WSM 11g client and Microsoft WCF/.NET 3.5 Web Service, perform the steps described in the following sections:

- "Configuring Microsoft WCF/.NET 3.5 Web Service" on page 5-9
- "Configuring Oracle WSM 11g Client" on page 5-19

5.5.2.1 Configuring Microsoft WCF/.NET 3.5 Web Service
1. Create a .NET Web service.
   For an example of a .NET Web service, see "Example .NET Web Service Client" on page 5-10.
2. Create a custom binding for the Web service using the SymmetricSecurityBindingElement.

3. The following is a sample of the SymmetricSecurityBindingElement object:

```csharp
SymmetricSecurityBindingElement sm =
sm.SetKeyDerivation(false);
sm.SecurityHeaderLayout = SecurityHeaderLayout.Lax;
sm.IncludeTimestamp = true;
sm.KeyEntropyMode = SecurityKeyEntropyMode.CombinedEntropy;
sm.MessageProtectionOrder = MessageProtectionOrder.SignBeforeEncrypt;
sm.RequireSignatureConfirmation = true;
```

4. Deploy the application.

5.5.2.2 Configuring Oracle WSM 11g Client

1. Using JDeveloper, create a SOA composite that consumes the .NET Web service. For more information, see the Developer’s Guide for SOA Suite.

2. In JDeveloper, create a partner link using the WSDL of the .NET service and add the import as follows:

```xml
<wsdl:import namespace="<namespace>" location="<WSDL location/>">
```

3. In Enterprise Manager, clone the policy: wss11_x509_token_with_message_protection_service_policy. Rename it as follows: wss11_x509_token_with_message_protection_service_policy_net

4. Export wss11_x509_token_with_message_protection_service_policy_net. Change encrypted="true" to "false", and import it back

```xml
<orasp:x509-token orasp:enc-key-ref-mech="thumbprint" orasp:is-encrypted="true" orasp:is-signed="false" orasp:sign-key-ref-mech="direct"/>
```

5. Attach the policy to the Web service client.

   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

6. Provide configurations for the keystore.recipient.alias.

   You can specify this information when attaching the policy, by overriding the policy configuration. For more information, see "Attaching Clients Permitting Overrides" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

   Ensure that you configure the keystore.recipient.alias as the alias of the certificate imported in step 4 (wsmcert3).

7. Invoke the Web service method from the client.
5.6 Kerberos with Message Protection

This section describes how to implement kerberos with message protection in the following interoperability scenarios:

- "Configuration Prerequisites for Interoperability" on page 5-20
- "Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service" on page 5-20

5.6.1 Configuration Prerequisites for Interoperability

Perform the following prerequisite steps:

1. Configure the Key Distribution Center (KDC) and Active Directory (AD). For more information, see the section "To Configure Windows Active Directory and Domain Controller" (the domain controller can serve as KDC) at http://download.oracle.com/docs/cd/E19316-01/820-3746/gisdn/index.html.

2. Set up the Kerberos configuration file krb5.conf in c:\winnt as shown in Example 5–1.

Example 5–1 Sample Kerberos Configuration File

    [logging]
    default = c:\log\krb5libs.log
    kdc = c:\log\krb5kdc.log
    admin_server = c:\log\kadmind.log

    [libdefaults]
    default_realm = MYCOMPANY.LOCAL
dns_lookup_realm = false
dns_lookup_kdc = false
default_tkt_enctypes = rc4-hmac
default_tgs_enctypes = rc4-hmac
permitted_enctypes = rc4-hmac
kdc = <hostname>

[realms]
MYCOMPANY.LOCAL =
{ kdc = <hostname>:<portnumber>  admin_server = <hostname>:<portnumber>
  default_domain = <domainname>
}

[domain_realm]
.<domainname> = MYCOMPANY.LOCAL
<domainname> = MYCOMPANY.LOCAL

[appdefaults]
pam =
{   debug = false  ticket_lifetime = 36000  renew_lifetime = 36000  forwardable =
      true  krb4_convert = false }

5.6.2 Configuring Microsoft WCF/.NET 3.5 Client and Oracle WSM 11g Web Service

To configure Microsoft WCF/.NET 3.5 client and Oracle WSM 11g Web service, perform the steps described in the following sections:

5.6.2.1 Configuring Oracle WSM 11g Web Service

1. Create a Web service application.
2. Copy the following policy: wss11_kerberos_with_message_protection_service_policy.
3. Edit the policy settings to set Algorithm Suite to Basic128Rsa15.

4. Attach the policy to the web service. For more information about attaching the policy at deployment time using Fusion Middleware Control, see “Attaching Policies to Web Service Clients” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

5. Deploy the application.

5.6.2.2 Configuring Microsoft WCF/.NET 3.5 Client

1. Create a user in AD to represent the host where the web service is hosted. By default the user account is created with RC4-HMAC encryption. For example, foobar with user name as "HTTP/foobar".

2. Use the following ktpass command to create a keytab file on the Windows AD machine where the KDC is running:

   ktpass -princ HTTP/foobar@MYCOMPANY.LOCAL -pass Oracle123 -mapuser foobar -out foobar.keytab -ptype KRB5_NT_PRINCIPAL -kvno 4

   where HTTP/foobar is the SPN, mapped to a user "foobar". Do not set "desonly or crypto as "des-cbc-crc". MYCOMPANY.LOCAL is the default Realm for the KDC and is available in the krb5.ini file. The pass password must match the password created during the user creation.

   Use FTP binary mode to move the generated keytab file to the machine where the SOA Composite Web service is hosted.

3. Use the following setSpn command to map the service principal to the user:

   setSpn -A HTTP/foobar@MYCOMPANY.LOCAL foobar
   setSpn -L foobar

   Only one SPN must be mapped to the user. If there are multiple SPNs mapped to the user, remove them using the command setSpn -D <spname> <username>.

4. Use the SVCUtil utility to create a client proxy and configuration file from the deployed Web service.

   Add the files generatedProxy.cs and app.config by right clicking the application (in the Windows Explorer) and selecting Add Existing Item.

   In the endpoint element of the app.config, add an "identity" element with service principal name as "HTTP/foobar@MYCOMPANY.LOCAL" (the same value used for creating keytab).

   `<client>
   <endpoint address="http://host:port/HelloServicePort"
   binding="customBinding"
   bindingConfiguration="NewHelloSoap12HttpPortBinding"
   contract="NewHello" name="HelloServicePort">
   <identity>
   <servicePrincipalName value="HTTP/foobar@MYCOMPANY.LOCAL"/>
   </identity>
   </endpoint>

   A sample binding is provided in Example 5–2.
Example 5–2  Sample Binding

```xml
<customBinding>
  <binding name="NewHelloSoap12HttpPortBinding">
    <!--Added by User: Begin-->
    <security defaultAlgorithmSuite="Basic128"
            authenticationMode="Kerberos"
            requireDerivedKeys="false" securityHeaderLayout="Lax"
            includeTimestamp="true"
            keyEntropyMode="CombinedEntropy"
            messageProtectionOrder="SignBeforeEncrypt"
            messageSecurityVersion="WSSecurity11WSTrustFebruary2005
WSSecureConversationFebruary2005WSSecurityPolicy11BasicSecurityProfile10"
            requireSignatureConfirmation="true">
      <localClientSettings cacheCookies="true" detectReplays="true"
                           replayCacheSize="900000" maxClockSkew="00:05:00"
                           maxCookieCachingTime="Infinite"
                           replayWindow="00:05:00"
                           sessionKeyRenewalInterval="10:00:00"
                           sessionKeyRolloverInterval="00:05:00"
                           reconnectTransportOnFailure="true"
                           timestampValidityDuration="00:05:00"
                           cookieRenewalThresholdPercentage="60" />
      <localServiceSettings detectReplays="true"
                             issuedCookieLifetime="10:00:00"
                             maxStatefulNegotiations="128" replayCacheSize="900000"
                             maxClockSkew="00:05:00"
                             negotiationTimeout="00:01:00" replayWindow="00:05:00"
                             inactivityTimeout="00:02:00"
                             sessionKeyRenewalInterval="15:00:00"
                             sessionKeyRolloverInterval="00:05:00"
                             reconnectTransportOnFailure="true"
                             maxPendingSessions="128"
                             maxCachedCookies="1000"
                             timestampValidityDuration="00:05:00" />
      <secureConversationBootstrap />
    </security>
    <!--Added by User: End-->
  </binding>
  <!--Added by User: Begin-->
  <httpTransport manualAddressing="false"
                   maxBufferPoolSize="524288"
                   maxReceivedMessageSize="65536" allowCookies="false"
                   authenticationScheme="Anonymous"
                   bypassProxyOnLocal="false"
                   hostNameComparisonMode="StrongWildcard"
                   keepAliveEnabled="true" maxBufferSize="65536"
                   proxyAuthenticationScheme="Anonymous"
                   realm="" transferMode="Buffered"
                   unsafeConnectionNtlmAuthentication="false"
                   useDefaultWebProxy="true" />
    <!--Added by User: End-->
  </httpTransport>
</customBinding>
```
The svcutil.exe utility will not work if the Web service has an Oracle WSM policy attached to it. Detach the policy from the service before running this utility to generate the proxy and re-attach once all artifacts are generated successfully.

5. Run the client program.

5.7 WCF/.NET 3.5 client with Microsoft Active Directory Federation Services 2.0 (ADFS 2.0) STS

This section describes securing a WCF/.NET 3.5 client with Microsoft Active Directory Federation Services 2.0 (ADFS 2.0) secure token service (STS), using a policy utilizing SAML bearer token over one-way SSL.

Note: The SAML sender vouches token is not supported in this use case.

This procedure described in this section assumes that you install and configure ADFS 2.0 on a Windows Server 2008 or Windows Server 2008 R2 system. This system is set up in the STS role.

The following topics are described:

- Section 5.7.1, "Install and Configure Active Directory Federation Services (ADFS) 2.0"
- Section 5.7.2, "Configure ADFS 2.0 STS As Trusted SAML Token Issuer"
- Section 5.7.3, "Configure Users in Oracle Internet Directory"
- Section 5.7.4, "Attach the Policy"
- Section 5.7.5, "Register the Web Service as a Relying Party in ADFS 2.0"
- Section 5.7.6, "Secure WCF/.NET 3.5 Client with ADFS 2.0"

5.7.1 Install and Configure Active Directory Federation Services (ADFS) 2.0

This section describes how to install and configure ADFS 2.0.

The following topics are described:

- Section 5.7.1.1, "Install and Configure Active Directory"
- Section 5.7.1.2, "Install ADFS 2.0"
- Section 5.7.1.3, "Create and Configure a Self-Signed Server Authentication Certificate"
- Section 5.7.1.4, "Configure the System as a Standalone Federation Server"
- Section 5.7.1.5, "Export ADFS 2.0 Token-Signing Certificate"
- Section 5.7.1.6, "Create Users with Email Address"

5.7.1.1 Install and Configure Active Directory

5.7.1.2 Install ADFS 2.0

As you configure ADFS 2.0 using the wizard, on the Server Role page be sure to click Federation server.

5.7.1.3 Create and Configure a Self-Signed Server Authentication Certificate
Create and configure a self-signed server authentication certificate in IIS and bind it to the default Web site using the Internet Information Services (IIS) Manager console. When done, enable SSL server authentication.

The AD FS 2.0 Setup Wizard automatically installed the Web server (IIS) server role on the system.

1. Open the Internet Information Services (IIS) Manager console.
2. On the Start menu, click All Programs, point to Administrative Tools, and then click Internet Information Services (IIS) Manager.
3. In the console tree, click the root node that contains the name of the system, and then, in the details pane, double-click the icon named Server Certificates in the IIS grouping.
4. In the Actions pane, click Create Self-Signed Certificate.
5. In the console tree, click Default Web Site.
6. In the Actions pane, click Bindings.
7. In the SiteBindings dialog box, click Add.
8. In the Add Site Binding dialog box, select https in the Type drop-down list. Select the certificate you just created in the SSL certificate drop-down list, click OK, and then click Close.

5.7.1.4 Configure the System as a Standalone Federation Server

5.7.1.5 Export ADFS 2.0 Token-Signing Certificate

For a self-signed certificate, select DER encoded binary X.509 (.cer).
If the signing certificate is not self-signed, select Cryptographic Message Syntax Standard – PKCS 7 certificates (.p7b) and check Include all the certificates in the certification path if possible.

5.7.1.6 Create Users with Email Address
Create users and include an email address. You later enable the STS to send the email address as the subject name id in the outgoing SAML assertions for the service.

Follow these steps to add a sample user to Active Directory. Make sure to set the email address for each user.

1. Log in to the system with domain administrator credentials.
2. Click Start, click Administrative Tools, and then click Active Directory Users and Computers.
3. In the console tree, right-click the Users folder. Click New, and then click User.
4. On the New Object – User page, add the user, and then click Next.
5. Provide a password, clear the User must change password at next logon check box, and then click Next.
6. Click Finish.
7. In the right-most pane of Active Directory Users and Computers, right-click the new user object, and then click Properties.
8. On the General tab, in the E-mail box, type the email address of the user, and then click OK.

5.7.2 Configure ADFS 2.0 STS As Trusted SAML Token Issuer
Perform the following steps to configure Oracle WSM to trust the SAML assertions issued by an ADFS 2.0 STS:

1. Get the STS signing certificates you exported in Section 5.7.1.5, "Export ADFS 2.0 Token-Signing Certificate".
For a .p7b file for a certificate chain, open the file in IE and copy each certificate in the chain in a .cer file.

2. Import the certificates into the location of the default keystore using keytool.
keytool -importcert -file <sts-signing-certs-file> -trustcacerts -alias <alias> -keystore default-keystore.jks

3. Add http://domain-name/adfs/services/trust as a SAML trusted issuer.
See "Defining Trusted Issuers and Trusted Distinguished Name List for Signing Certificates" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services for the steps to follow.

4. Add the Subject DN (as defined in RFC 2253) of the STS certificate in the Trusted STS Servers section. Use a string that conforms to RFC 2253, such as CN=abc. You can use the mechanism of your choice, such as keytool, to view the certificate and determine the Subject DN.

See "Defining Trusted Issuers and Trusted Distinguished Name List for Signing Certificates" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services for the steps to follow.
5.7.3 Configure Users in Oracle Internet Directory

For each user, configure the mail attribute to match the user email address set in ADFS.

5.7.4 Attach the Policy

Attach the Oracle WSM oracle/wss11_saml_or_username_token_with_message_protection_service_policy or oracle/wss_saml_tokenBearer_over_ssl_service_policy policy to the Web service.

These policies enforce message protection (integrity and confidentiality) and SAML-based authentication using credentials provided in SAML tokens with the bearer confirmation method in the WS-Security SOAP header. They also verify that the transport protocol provides SSL message protection.

5.7.5 Register the Web Service as a Relying Party in ADFS 2.0

Configure ADFS 2.0 to issue the SAML assertion to the Web service with the email address or the name ID (SAM-Account-Name) as the subject name id.

Add the Web Service as a Relying Party

1. In the AD FS 2.0 Management console, click AD FS 2.0.

2. In the details pane, click Add a trusted relying party to start the Add Relying Party Wizard.

3. On the Welcome page, click Start to begin.

4. Select Enter data about the relying party manually.

5. Provide a display name and enter any notes you want.

6. Select ADFS 2.0 Profile.

Configuring a token encryption certificate on this page is optional. Configure one on this page if you require that the token be encrypted. If you do not configure a token encryption certificate, the token issued by STS is not encrypted for the service.

8. WS-Trust is always enabled. Click Next.

9. For the Relying Party Trust Identifier, enter the service URL and click Add.

10. Permit all users to access this relying party.

11. Click Next and then Close.
Configure the Claim Rules for the Service

To enable the STS to send the email address or the name ID as the subject name id in the outgoing SAML assertions for the service, use the steps in this section to create a chain of two claim rules with different templates.

This section provides usecase-specific information.

1. Right-click on the Relying Party for the service and select Edit Claim Rules.
3. Select Send LDAP Attribute as Claims as the claim rule template to use.
4. Give the Claim a name, such as Get LDAP Attributes.
5. Set the Attribute Store to Active Directory, the LDAP Attribute to E-Mail-Addresses, and the Outgoing Claim Type to E-mail Address.
   If you want to instead use the name ID as the subject name ID, under LDAP Attribute, select SAM-Account-Name.
7. If you use the name ID as the subject name ID, click OK to close the property page and save the changes to the relying party trust.
   If you use the email address as the subject name ID, continue to add a rule.
8. Select Add Rule.
9. Select Transform an Incoming Claim as the claim rule template to use.
10. Give it a name, such as Email to Name ID.
11. Set the Incoming claim type as E-mail Address. (It must match the Outgoing Claim Type in the previous rule.)
12. Set the Outgoing claim type as Name ID and the Outgoing name ID format as Email (urn:oasis:names:tc:SAML:1.1:nameid-format:emailAddress).
13. Pass through all claim values and click Finish.
14. Click OK to close the property page and save the changes to the relying party trust.

5.7.6 Secure WCF/.NET 3.5 Client with ADFS 2.0

Perform the following steps to secure WCF/.NET 3.5 Client with ADFS 2.0:
1. Install .NET 3.5 and Visual Studio 2008.
2. Import the SSL server certificates for STS and the service into Windows.
   If the SSL server certificate for STS or the service is not issued from a trusted CA, or self-signed, then it needs to be imported with MMC tool, as described in Section 5.6.1, "Configuration Prerequisites for Interoperability".
3. Create and Configure the WCF Client.
ADFS 2.0 STS supports multiple security and authentication mechanisms for token insurance. Each is exposed as a separate endpoint. For username/password authentication, two endpoints are provided:

- http://<adfs.domain>/adfs/services/trust/13/username — This endpoint is for username token with message protection.
- https://<adfs.domain>/adfs/services/trust/13/usernamemixed — This endpoint is for username token with transport protection (SSL).

The WCF client uses the https://<adfs.domain>/adfs/services/trust/13/usernamemixed endpoint for username token on SSL to obtain the SAML bearer token for the service.

a. Generate the WCF Client with the service WSDL.

**Note:** SVCUtil does not support the security policy with policy alternatives as advertised for the OWSM policy oracle/wss11_saml_or_username_token_with_message_protection_service_policy, or the oracle/wss_saml_bearer_token_over_ssl_service_policy policy. To work around this:

1. Detach the policy for the service.
2. Generate a proxy using SVCUtil.
3. Attach the policy back to the service.

b. Configure the client with ws2007FederationHttpBinding:

In the Solution Explorer of the client project, add a reference by right-clicking on references, selecting Add reference, and browsing to C:\Windows\Microsoft .NET framework\v3.0\Windows Communication Framework\System.Runtime.Serialization.dll.

Edit the app.config file. (See http://msdn.microsoft.com/en-us/library/bb472490.aspx for information on WS 2007 Federation HTTP Binding.) Consider the following sample:

```xml
<?xml version="1.0" encoding="utf-8"?>
<configuration>
  <system.serviceModel>
    <behaviors>
      <endpointBehaviors>
        <behavior name="secureBehaviour">
          <clientCredentials>
            <serviceCertificate>
              <defaultCertificate findValue="weblogic"
                storeLocation="LocalMachine"
                storeName="My"
                x509FindType="FindBySubjectName"/>
            </serviceCertificate>
          </clientCredentials>
        </behavior>
      </endpointBehaviors>
    </behaviors>
  </system.serviceModel>
</configuration>
```
<behaviors>
<bindings>
<ws2007FederationHttpBinding>
<binding
name="JaxWsWss11SamlOrUsernameOrSamlBearerOverSSLSoapHttp">
<security mode="TransportWithMessageCredential">
<message negotiateServiceCredential="false"
algorithmSuite="Basic128"
issuedTokenType
profile="http://docs.oasis-open.org/wss/oasis-wss-saml-token-profile-1.1#SAMLV1.1"
issuedKeyType="BearerKey">
<issuer address
="https://domain-name/adfs/services/trust/13/usernamemixed"
binding ="ws2007HttpBinding"
bindingConfiguration="ADFSUsernameMixed"/>
</message>
</security>
</binding>
</ws2007FederationHttpBinding>
<ws2007HttpBinding>
<binding name="ADFSUsernameMixed">
<security mode="TransportWithMessageCredential">
<message clientCredentialType="UserName"
establishSecurityContext="false" />
</security>
</binding>
</ws2007HttpBinding>
</bindings>
</client>
</system.serviceModel>
</configuration>

---

c. Edit the program.cs file to make the service call.

If not already present, create a .cs file in the project and name it program.cs (or any name of your choice.) Edit it to match the following:

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
```
using System.Text;
using System.ServiceModel;

namespace Client
{
    class Program
    {
        static void Main(string[] args)
        {
            JaxWsWss11SamlOrUsernameOrSamlBearerOverSSLCredentials client = New JaxWsWss11SamlOrUsernameOrSamlBearerOverSSLCredentials();
            client.ClientCredentials.UserName.UserName = "joe";
            client.ClientCredentials.UserName.Password = "eoj";
            System.Net.ServicePointManager.ServerCertificateValidationCallback = ((sender, certificate, chain, sslPolicyErrors) => true);
            Console.WriteLine(client.echo("Hello"));
            Console.Read();
        }
    }
}

In this sample program.cs file:

- **joe** is the username and **eoj** is the password used by the client to authenticate to the STS.
- System.Net.ServicePointManager.ServerCertificateValidationCallback = ((sender, certificate, chain, sslPolicyErrors) => true); has been added to validate the server side self-signed certificate. This is not required if the server certificate is issued by a trusted CA. If using a self-signed certificate for testing, add this method to validate the certificate on the client side.
This chapter contains the following sections:

- Overview of Interoperability with Oracle Service Bus 10g Security Environments
- Username Token with Message Protection (WS-Security 1.0)
- SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0)
- SAML or Username Token Over SSL
- Mutual Authentication with Message Protection (WS-Security 1.0)

### 6.1 Overview of Interoperability with Oracle Service Bus 10g Security Environments

**Note:** Ensure that you have downloaded and applied the TYBN and U37Z patches released for Oracle Service Bus 10.3 using the patch tool.

In Oracle WSM 11g, you attach policies to Web service endpoints. Each policy consists of one or more assertions, defined at the domain-level, that define the security requirements. A set of predefined policies and assertions are provided out-of-the-box.

For more details about the predefined policies, see "Predefined Policies" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

For more information about configuring and attaching policies, see "Configuring Policies" and "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

**Table 6–1** summarizes the most common Oracle Service Bus 10g interoperability scenarios based on the following security requirements: authentication, message protection, and transport.

For more information about:
6.2 Username Token with Message Protection (WS-Security 1.0)

This section describes how to implement username token with message protection that conforms to the WS-Security 1.0 standard in the following interoperability scenarios:

- "Configuration Prerequisites for Interoperability" on page 6-3
- "Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service" on page 6-3
- "Configuring Oracle WSM 11g Client and Oracle Service Bus 10g Web Service" on page 6-5

</table>

Note: In the following scenarios, ensure that you are using a keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

In addition, ensure that the keys use the proper extensions, including DigitalSignature, Non_repudiation, Key_Encipherment, and Data_Encipherment.
Configuration Prerequisites for Interoperability
Perform the following prerequisite steps for the WebLogic Server on which Oracle Service Bus is running:

1. Copy the default-keystore.jks and trust.jks files to your domain directory.
   The default-keystore.jks is used to store public and private keys for SOAP messages within the WebLogic Domain. The trust.jks is used to store private keys, digital certificates, and trusted certificate authority certificates that are used to establish and verify identity and trust in the WebLogic Server environment.

2. Invoke the WebLogic Administration Console, as described in Accessing Oracle WebLogic Administration Console.

3. Configure the Custom Identity and Custom Trust keystores, as described in “Configuring keystores” in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

4. Configure SSL, as described in “Set up SSL” in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.
   Specify the private key alias, as required. For example: oratest.

5. Configure a credential mapping provider, as described in "Configure Credential Mapping Providers” in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.
   Create a PKICredentialMapper and configure it as follows (leave all other values set to the defaults):
   - Keystore Provider: N/A
   - Keystore Type: jks
   - Keystore File Name: default_keystore.jks
   - Keystore Pass Phrase: <password>
   - Confirm Keystore Pass Phrase: <password>

7. Invoke the OSB Console. For example:
   http://<host name>:<port number>/sbconsole

8. Create a ServiceKeyProvider.

9. Specify Encryption Key and Digital Signature Key, as required.
   You must use different keys on the Oracle WSM and Oracle Service Bus servers. You can use the same key for encryption and signing, if desired.

6.2.1 Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service
To configure Oracle Service Bus 10g client and Oracle WSM 11g Web Service, perform the steps described in the following sections:

6.2.1.1 Configuring Oracle WSM 11g Web Service
1. Create a copy of the following policy: wss10_username_token_with_message_protection_service_policy.
Username Token with Message Protection (WS-Security 1.0)

---

**Note:** Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

Edit the policy settings, as follows:

**a.** Set Encryption Key Reference Mechanism to issuerserial.

**b.** Set Algorithm Suite to Basic128Rsa15 to match the algorithm suite used for Oracle Service Bus.

**c.** Enable the Include Timestamp configuration setting.

**d.** Set Is Encrypted to false for the Username token element only.

For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Attach the policy to the Web service.

For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

### 6.2.1.2 Configuring Oracle Service Bus 10g Client

1. Create a copy of the Encrypt.xml and Sign.xml policy files.

For example, copy the files to myEncrypt.xml and mySign.xml. It is not recommended to edit the predefined policy files directly.

2. Edit the encryption algorithm in myEncrypt.xml file to prevent encryption compliance failure, as follows:

   ```
   <wssp:Target>
     <wssp:EncryptionAlgorithm
       URI="http://www.w3.org/2001/04/xmlenc#aes128-cbc"/>
     <wssp:MessageParts
       Dialect="http://schemas.xmlsoap.org/2002/12/wsse#part">
       wsp:Body()
     </wssp:MessageParts>
   </wssp:Target>
   ```

3. Edit the mySign.xml policy file attached to the Oracle Service Bus business service request only to sign the Username token by including the following target:

   ```
   <wssp:Target>
     <wssp:DigestAlgorithm URI="http://www.w3.org/2000/09/xmldsig#sha1"/>
     <wssp:MessageParts
       Dialect="http://www.bea.com/wls90/security/policy/wsee#part">
       wls:SecurityHeader(wsse:UsernameToken)
     </wssp:MessageParts>
   </wssp:Target>
   ```

4. Edit the mySign.xml policy file attached to the Oracle Service Bus business service response only to specify that the security token is unsigned:

   ```
   <wssp:Integrity SignToken="false"
   ```

   Also, for SOA clients only, comment out the target for system headers, as shown:
5. Invoke the Web service method from the client.

### 6.2.2 Configuring Oracle WSM 11g Client and Oracle Service Bus 10g Web Service

To configure Oracle WSM 11g client and Oracle Service Bus 10g Web Service, perform the steps described in the following sections:

#### 6.2.2.1 Configuring Oracle Service Bus 10g Web Service

1. Create a copy of the Encrypt.xml and Sign.xml policy files.

   For example, copy the files to myEncrypt.xml and mySign.xml. It is not recommended to edit the predefined policy files directly.

2. Edit the encryption algorithm in the myEncrypt.xml file to prevent encryption compliance failure, as follows:

   ```xml
   <wssp:Target>
   <wssp:EncryptionAlgorithm
     URI="http://www.w3.org/2001/04/xmlenc#aes128-cbc"/>
   <wssp:MessageParts
     Dialect="http://schemas.xmlsoap.org/2002/12/wsse#part">
     wsp:Body()
   </wssp:MessageParts>
   </wssp:Target>
   
   Also, for SOA clients only, comment out the target for system headers, as shown:
   ```
   ```xml
   <!-- wssp:Target>
   <wssp:DigestAlgorithm
     URI="http://www.w3.org/2000/09/xmldsig#sha1" />
   <wssp:MessageParts
     Dialect="http://www.bea.com/wls90/security/policy/wsee#part">
     wls:SystemHeaders()
   </wssp:MessageParts>
   </wssp:Target -->
   ```

3. Edit the mySign.xml policy file attached to the proxy service request only to specify that the security token is unsigned:

   ```xml
   <wssp:Integrity SignToken="false">
   
   Also, for SOA clients only, comment out the target for system headers, as shown:
   ```
   ```xml
   <!-- wssp:Target>
   <wssp:DigestAlgorithm
     URI="http://www.w3.org/2000/09/xmldsig#sha1" />
   <wssp:MessageParts
     Dialect="http://www.bea.com/wls90/security/policy/wsee#part">
     wls:SystemHeaders()
   </wssp:MessageParts>
   </wssp:Target -->
   ```

4. Create a Web service application that invokes the Oracle Service Bus routing service.

#### 6.2.2.2 Configuring Oracle WSM 11g Client

1. Create a copy of the following policy: wss10_username_token_with_message_protection_client_policy.
Edit the policy settings, as follows:

a. Set Encryption Key Reference Mechanism to issuerserial.
b. Set Recipient Encryption Key Reference Mechanism to issuerserial.
c. Set Algorithm Suite to Basic128Rsa15 to match the algorithm suite used for Oracle Service Bus.
d. Disable the Include Timestamp configuration setting.
e. Set Is Encrypted to false.
f. Leave the default configuration set for message signing and encryption.

For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Attach the policy to the Web service client.

For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Invoke the Web service from the client.

6.3 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.0)

This section describes how to implement SAML token (sender vouches) with message protection that conforms to the WS-Security 1.0 standard in the following interoperability scenarios:

- "Configuration Prerequisites for Interoperability" on page 6-6
- "Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service" on page 6-7
- "Configuring Oracle WSM 11g Client and Oracle Service Bus 10g Web Service" on page 6-9

Configuration Prerequisites for Interoperability

Perform the following prerequisite steps for the WebLogic Server on which Oracle Service Bus is running:

1. Copy the default-keystore.jks and trust.jks files to your domain directory.

   The default-keystore.jks is used to store public and private keys for SOAP messages within the WebLogic Domain. The trust.jks is used to store private keys, digital certificates, and trusted certificate authority certificates that are used to establish and verify identity and trust in the WebLogic Server environment.

2. Invoke the WebLogic Administration Console, as described in Accessing Oracle WebLogic Administration Console.
3. Create a SAMLIdentityAsserterV2 authentication provider, as described in "Configuring Authentication and Identity Assertion providers" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

4. Restart WebLogic Server to add the new provider to the Administration Server’s Runtime MBean server.

5. Select the authentication provider created in step 3.

   Configure the SAML asserting party as follows (leave other values set to the defaults):
   - Profile: WSS/Sender-Vouches
   - Target URL: <OSB Proxy Service Endpoint URI>
   - Issuer URI: www.oracle.com
   Select the Enabled checkbox and click Save.

7. Create a SamlCredentialMapperV2 credential mapping provider, as described in "Configure Credential Mapping Providers" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

   Select SamlCredentialMapperV2 from the drop-down list and name the credential mapper, for example, UC2_SamlCredentialMapperV2.

9. Configure the credential mapper as follows (leave other values set to the defaults):
   - Issuer URI: www.oracle.com
     
     **Note:** This value is specified in the policy file.
   - Name Qualifier: oracle.com

10. Create and configure a SAML relying party, as described in "SAML Credential Mapping Provider V2: Create a Relying Party" and "SAML Credential Mapping Provider V2: Relying Party: Configuration" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

    Configure the SAML relying party as follows (leave other values set to the defaults):
    - Profile: WSS/Sender-Vouches
    - Target URL: <Oracle WSM 11g Web Service>
    - Description: <your_description>
    Select the Enabled checkbox and click Save.

### 6.3.1 Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service

To configure Oracle Service Bus 10g client and Oracle WSM 11g Web Service, perform the steps described in the following sections:
6.3.1.1 Configuring Oracle WSM 11g Web Service

1. Create a copy of the following policy: oracle/wss10_saml_token_with_message_protection_service_policy.
   a. Set Encryption Key Reference Mechanism to issuerserial.
   b. Set Algorithm Suite to Basic128Rsa15 to match the algorithm suite used for Oracle Service Bus.
   c. Set Is Encrypted to false for the Username token element only.
   d. Leave the default configuration set for message signing and encryption.

For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator's Guide for Web Services.

2. Attach the policy to the Web service.

For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator's Guide for Web Services.

6.3.1.2 Configuring Oracle Service Bus 10g Client

1. Create a copy of the Encrypt.xml and Sign.xml policy files.

For example, to myEncrypt.xml and mySign.xml. It is not recommended to edit the predefined policy files directly.

2. Edit the encryption algorithm in the myEncrypt.xml file to prevent encryption compliance failure, as follows:

   `<wssp:Target>
    <wssp:EncryptionAlgorithm
      URI="http://www.w3.org/2001/04/xmlenc#aes128-cbc"/>
    <wssp:MessageParts
      Dialect="http://schemas.xmlsoap.org/2002/12/wsse#part">
      wsp:Body()
    </wssp:MessageParts>
   </wssp:Target>

3. Edit the mySign.xml file attached to the Oracle Service Bus business service request only to sign the SAML assertion by including the following target:

   `<wssp:Target>
    <wssp:DigestAlgorithm URI="http://www.w3.org/2000/09/xmldsig#sha1"/>
    <wssp:MessageParts
      Dialect="http://www.bea.com/wls90/security/policy/wsee#part">
      wls:SecurityHeader(wsse:Assertion)
    </wssp:MessageParts>
   </wssp:Target>

4. Edit the mySign.xml file attached to the Oracle Service Bus business service response only to specify that the security token is unsigned, as follows:

   `<wssp:Integrity SignToken="false">
   
   Also, for SOA clients only, comment out the target for system headers, as shown:

   `<!-- wssp:Target>
   <wssp:DigestAlgorithm URI="http://www.w3.org/2000/09/xmldsig#sha1"/>
   <wssp:MessageParts
      Dialect="http://www.bea.com/wls90/security/policy/wsee#part">
   
   <!-- End Oracle Fusion Middleware Interoperability Guide for Oracle Web Services Manager
5. Use the custom SAML policy file defined in Example 6-1.
6. Invoke the Web service from the client.

The following defines the custom SAML policy to be used:

```
<?xml version="1.0"?>
<wsp:Policy
    xmlns:wssp="http://www.bea.com/wls90/security/policy"
    xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-2004-01-wss-wssecurity-utility-1.0.xsd"
    xmlns:wls="http://www.bea.com/wls90/security/policy/wsee#part"
    wsu:Id="custom_saml">
    <wssp:SupportedTokens>
      <wssp:SecurityToken
        TokenType="http://docs.oasis-open.org/wss/2004/01/oasis-2004-01-saml-token-profile-1.0#SAMLAssertionID">
        <wssp:Claims>
          <wssp:ConfirmationMethod>sender-vouches</wssp:ConfirmationMethod>
        </wssp:Claims>
      </wssp:SecurityToken>
    </wssp:SupportedTokens>
  </wssp:Identity>
</wsp:Policy>
```

6.3.2 Configuring Oracle WSM 11g Client and Oracle Service Bus 10g Web Service

To configure Oracle WSM 11g client and Oracle Service Bus 10g Web Service, perform the steps described in the following sections:

6.3.2.1 Configuring Oracle Service Bus 10g Web Service

1. Create a copy of the Encrypt.xml and Sign.xml policy files.

   For example, to myEncrypt.xml and mySign.xml. It is not recommended to edit the predefined policy files directly.

2. Edit the encryption algorithm in the myEncrypt.xml policy file to prevent encryption compliance failure, as follows:

   ```
   <wssp:Target>
     <wssp:EncryptionAlgorithm
       URI="http://www.w3.org/2001/04/xmlenc#aes128-cbc"/>
     <wssp:MessageParts
       Dialect="http://schemas.xmlsoap.org/2002/12/wsse#part">
       <wssp:Body/>
     </wssp:MessageParts>
   </wssp:Target>
   ```
3. Edit the mySign.xml policy file attached to the proxy service request only to specify that the security token is unsigned:

   <wssp:Integrity SignToken="false"/>

Also, for SOA clients only, comment out the target for system headers, as shown:

   <!-- wssp:Target>
   <wssp:DigestAlgorithm
       URI="http://www.w3.org/2000/09/xmldsig#sha1" />
   <wssp:MessageParts
       Dialect="http://www.bea.com/wls90/security/policy/wsee#part">
       wls:SystemHeaders()
   </wssp:MessageParts>
   </wssp:Target -->

4. Use the custom SAML policy file defined in Example 6–1.

6.3.2.2 Configuring Oracle WSM 11g Client

1. Create a copy of the following policy: wss10_saml_token_with_message_protection_client_policy.

   Note: Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

   Edit the policy settings, as follows:

   a. Set Encryption Key Reference Mechanism to issuerserial.
   b. Set Recipient Encryption Key Reference Mechanism to issuerserial.
   c. Set Algorithm Suite to Basic128Rsa15 to match the algorithm suite used for Oracle Service Bus.
   d. Disable the Include Timestamp configuration setting.
   e. Leave the default configuration set for message signing and encryption.

   For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Attach the policy to the Web service client.

   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Invoke the Web service from the client.

6.4 SAML or Username Token Over SSL

This section describes how to implement the SAML or username token over SSL policy in the following interoperability scenario:

- "Configuration Prerequisites for Interoperability" on page 6-11
- "SAML Prerequisites for Interoperability" on page 6-11
- "Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service" on page 6-11
SAML or Username Token Over SSL

Interoperability with Oracle Service Bus 10g Security Environments

Configuration Prerequisites for Interoperability
See "Configuration Prerequisites for Interoperability" on page 6-3 for configuration information on the username token.

See "Configuration Prerequisites for Interoperability" on page 6-6 for configuration information on the SAML token.

SAML Prerequisites for Interoperability
For SAML, perform the following prerequisite steps for the WebLogic Server on which Oracle Service Bus is running:

1. Create a SamlCredentialMapperV2 credential mapping provider, as described in "Configure Credential Mapping Providers" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.
   Select SamlCredentialMapperV2 from the drop-down list and name the credential mapper; for example, UC2_SamlCredentialMapperV2.

2. Restart WebLogic Server.

3. Configure the credential mapper as follows (leave other values set to the defaults):
   - Issuer URI: www.oracle.com
     Note: This value is specified in the policy file.
   - Name Qualifier: oracle.com

4. Create and configure a SAML relying party, as described in "SAML Credential Mapping Provider V2: Create a Relying Party" and "SAML Credential Mapping Provider V2: Relying Party: Configuration" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.
   Configure the SAML relying party as follows (leave other values set to the defaults):
   - Profile: WSS/Sender-Vouches
   - Target URL: <Oracle WSM 11g Web Service>
   - Description: <your_description>
   Select the Enabled checkbox and click Save.

5. Restart WebLogic Server.

6.4.1 Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service

6.4.1.1 Configuring Oracle WSM 11g Web Service

To configure Oracle Service Bus 10g client and Oracle WSM 11g Web Service, perform the steps described in the following sections:

Configuring Oracle WSM 11g Web Service

1. Configure the server for two-way SSL.
   For more information, see "Configuring SSL on WebLogic Server (Two-Way)" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.
■ If the service policy is Username Token Over SSL, set Two Way Client Cert Behavior to "Client Certs Requested and Not Enforced."

■ If the service policy is SAML Token Over SSL, set Two Way Client Cert Behavior to "Client Certs Requested and Enforced."

2. Create a copy of the following policy: wss_saml_or_username_token_over_ssl_service_policy.

   **Note:** Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

■ For wss_username_token_over_ssl_service_policy, disable the Create Element and Nonce configuration settings.

■ For wss_saml_token_over_ssl_service_policy, disable the Include Timestamp configuration setting.

For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Use Fusion Middleware Control to import the policy.

4. Use JDeveloper to create a simple SOA composite.

5. Attach the copy of the wss_saml_or_username_token_over_ssl_service_policy policy to the composite and deploy it.

   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

### 6.4.1.2 Configuring Oracle Service Bus 10g Client

Both the SAML token client and the username token client are supported.

1. Configure the server for two-way SSL.

   For more information, see "Configuring SSL on WebLogic Server (Two-Way)" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

   ■ If the client policy is the equivalent of Username Token Over SSL, then set Two Way Client Cert Behavior to "Client Certs Requested and Not Enforced."

   ■ If the client policy is the equivalent of SAML Token Over SSL, then set Two Way Client Cert Behavior to "Client Certs Requested and Enforced."

2. In the Oracle Service Bus console, import the WSDL for the relying party. Make sure that there is no policy attached. (Policy assertions are not allowed on this service.)

3. For SAML token, create a business service.

   a. Attach the policy shown in Example 6–1, "Custom SAML Policy" to the request.

   b. Change the WSDL from HTTP to HTTPS.

4. For username token, create a business service.

   a. Attach the auth.xml policy to the request.
b. Change the WSDL from HTTP to HTTPS.

5. Create a service key provider.

6. Create a proxy service, and create a route to the business service.

   In **HTTP Transport Configuration**, set Authentication to "basic."

   On the **Security** page, associate the Service key provider. This is needed for Oracle Service Bus to send the client cert to SOA.

7. Run the proxy service from the Oracle Service Bus console with the username and password.

6.5 Mutual Authentication with Message Protection (WS-Security 1.0)

The following sections describe how to implement mutual authentication with message protection that conform to the WS-Security 1.0 standards:

- "Configuration Prerequisites for Oracle WebLogic Server" on page 6-13
- "Configuration Prerequisites for Oracle WSM" on page 6-14
- "Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service" on page 6-15
- "Configuring Oracle WSM 11g Client and Oracle Service Bus 10g Web Service" on page 6-17

**Configuration Prerequisites for Oracle WebLogic Server**

Perform the following prerequisite steps for the Oracle WebLogic Server on which Oracle Service Bus is running:

1. Copy the default-keystore.jks and trust.jks files to your domain directory.

   The default-keystore.jks is used to store public and private keys for SOAP messages within the WebLogic Domain. The trust.jks is used to store private keys, digital certificates, and trusted certificate authority certificates that are used to establish and verify identity and trust in the Oracle WebLogic Server environment.

2. Invoke the WebLogic Administration Console, as described in Accessing Oracle WebLogic Administration Console.

3. Configure the Custom Identity and Custom Trust keystores, as described in "Configuring keystores" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

4. Configure SSL, as described in "Set up SSL" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

   Specify the private key alias, as required. For example: oratest.

5. Configure a credential mapping provider, as described in "Configure Credential Mapping Providers" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

   Create a PKICredentialMapper and configure it as follows (leave all other values set to the defaults):

   - Keystore Provider: N/A
   - Keystore Type: jks
   - Keystore File Name: default_keystore.jks
Mutual Authentication with Message Protection (WS-Security 1.0)

- Keystore Pass Phrase: <password>
- Confirm Keystore Pass Phrase: <password>

6. Configure Authentication, as described in "Configure Authentication and Identity Assertion providers" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

Select the Authentication tab and configure as follows:

- Click DefaultIdentityAsserter and add X.509 to Chosen active types
- Click Provider Specific and configure the following:
  - Default User Name Mapper Attribute Type: CN
  - Active Types: X.509
  - Use Default User Name Mapper: True

7. Configure a token handler to specify that a client invoking a message-secured Web service uses an X.509 certificate to establish their identity. In WebLogic Administration Console, navigate to the Web Service Security page of the domain and configure the inbound and outbound messages as follows:

---
**Note:** Only username token with message protection or mutual authentication with message protection is available at any given time. Once you enable mutual authentication with message protection, username authentication will fail.
---

- Click _SERVICE_BUS_INBOUND_WEB_SERVICE_SECURITY_MBEAN_ and select the Token Handler tab.
- Click X.509 token handler and configure the following:
  - Name: UseX509ForIdentity
  - Value: True
- Perform the same steps for the outbound Oracle Service Bus MBean: _SERVICE_BUS_OUTBOUND_WEB_SERVICE_SECURITY_MBEAN_

8. If the users are not added, add the Common Name (CN) user specified in the certificate as described in "Create users" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

**Configuration Prerequisites for Oracle WSM**
Perform the following prerequisite steps for the Oracle WSM using Oracle WebLogic Server Administration Console:

1. Configure Authentication, as described in "Configure Authentication and Identity Assertion providers" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

Select the Authentication tab and configure as follows:

- Click DefaultIdentityAsserter and add X.509 to Chosen active types
- Click Provider Specific and configure the following:
  - Default User Name Mapper Attribute Type: CN
Active Types: X.509
- Use Default User Name Mapper: True

2. If the users are not added, add the Common Name (CN) user specified in the certificate as described in "Create users" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

6.5.1 Configuring Oracle Service Bus 10g Client and Oracle WSM 11g Web Service

To configure Oracle Service Bus 10g client and Oracle WSM 11g Web service, perform the steps described in the following sections:

- "Configuring Oracle WSM 11g Web Service" on page 6-15
- "Configuring Oracle Service Bus 10g Client" on page 6-15

6.5.1.1 Configuring Oracle WSM 11g Web Service

1. Create and deploy a SOA composite.

2. Create a copy of the following policy: wss10_x509_token_with_message_protection_service_policy.

   Edit the policy settings, as follows:
   
a. Set Encryption Key Reference Mechanism to issuerserial.
   b. Set Algorithm Suite to Basic128Rsa15 to match the algorithm suite used for Oracle Service Bus.

   For more information, see "Creating a Web Service Policy from an Existing Policy" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Attach the policy to the Web service.

   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

6.5.1.2 Configuring Oracle Service Bus 10g Client

1. Create an Oracle Service Bus business service.

2. Create a copy of the Encrypt.xml and Sign.xml policy files.

   For example, copy the files to myEncrypt.xml and mySign.xml. It is not recommended to edit the predefined policy files directly.

3. Attach the X.509 policy to the Oracle Service Bus business service request.

   ```xml
   <wsp:Policy
       xmlns:wssp="http://www.bea.com/wls90/security/policy"
       xmlns:s0="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
   ```

   Note: Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.
4. Attach the Sign.xml policy file to the Oracle Service Bus business service request.

5. Edit the myEncrypt.xml policy and attach it to the Oracle Service Bus business service request.

```xml
<?xml version="1.0"?>
<wsp:Policy
  xmlns:wssp="http://www.bea.com/wls90/security/policy"
  xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
  xmlns:wls="http://www.bea.com/wls90/security/policy/wsee#part"
  wsu:Id="X509Encrypt">
  <wssp:Confidentiality>
    <wssp:KeyWrappingAlgorithm URI="http://www.w3.org/2001/04/xmlenc#rsa-1_5"/>
    <wssp:Target>
      <wssp:EncryptionAlgorithm URI="http://www.w3.org/2001/04/xmlenc#aes128-cbc"/>
    </wssp:Target>
    <wssp:KeyInfo/>
  </wssp:Confidentiality>
</wsp:Policy>
```

6. Edit the mySign.xml policy file attached to the Oracle Service Bus business service response to specify that the security token is unsigned:

```xml
<wssp:Integrity SignToken="false">"
```

Also, for SOA clients only, comment out the target for system headers, as shown:

```xml
<?xml version="1.0"?>
<wsp:Policy
  xmlns:wssp="http://www.bea.com/wls90/security/policy"
  xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
  xmlns:wls="http://www.bea.com/wls90/security/policy/wsee#part"
  wsu:Id="X509Sign">
  <wssp:Integrity SignToken="false">"
    <wssp:SignatureAlgorithm URI="http://www.w3.org/2000/09/xmldsig#rsa-sha1"/>
    <wssp:CanonicalizationAlgorithm URI="http://www.w3.org/2001/10/xml-exc-c14n#"/>
    <!--wssp:Target>
    <wssp:DirectAlgorithm URI="http://www.w3.org/2000/09/xmldsig#sha1"/>
    <wssp:MessageParts Dialect="http://www.bea.com/wls90/security/policy/wsee#part">
      <wls:SystemHeaders/>
    </wssp:MessageParts>
  </wssp:Signature>
</wsp:Policy>
```
Mutual Authentication with Message Protection (WS-Security 1.0)

Interoperability with Oracle Service Bus 10g Security Environments

7. Attach the myEncrypt.xml policy file from Step 6 to the Oracle Service Bus business service response.

8. Create a ServiceKeyProvider.

9. Specify Encryption Key and Digital Signature Key, as required.
   You must use different keys on the Oracle WSM and Oracle Service Bus servers.
   You can use the same key for encryption and signing, if desired.

10. Create a proxy service, and create a route to the business service.
    On the Security page, associate the Service key provider. This is needed for Oracle Service Bus to send the client certificate to SOA.

11. Run the proxy service from the Oracle Service Bus console.

6.5.2 Configuring Oracle WSM 11g Client and Oracle Service Bus 10g Web Service

To configure Oracle WSM 11g client and Oracle Service Bus 10g Web Service, perform the steps described in the following sections:

- "Configuring Oracle Service Bus 10g Web Service" on page 6-17
- "Configuring Oracle WSM 11g Client" on page 6-19

6.5.2.1 Configuring Oracle Service Bus 10g Web Service

1. Create a Oracle Service Bus proxy service.

2. Create a copy of the Encrypt.xml and Sign.xml policy files.
   For example, to myEncrypt.xml and mySign.xml. It is not recommended to edit the predefined policy files directly.

3. Attach the X.509 policy as described in "Configuring Oracle Service Bus 10g Client" on page 6-15 to the proxy service request.

4. Edit the mySign.xml policy file attached to the proxy service request and comment out the target for system headers and timestamp, as shown:

```xml
<?xml version="1.0"?>
<wsp:Policy
```

Mutual Authentication with Message Protection (WS-Security 1.0)

xmlns:wssp="http://www.bea.com/wls90/security/policy"
xmlns:s0="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
s0:Id="X509SignRequest">
  <wssp:Integrity
xmlns:wls="http://www.bea.com/wls90/security/policy/wsee#part"
xmlns:wssp="http://www.bea.com/wls90/security/policy"
xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
    <wssp:SignatureAlgorithm URI="http://www.w3.org/2000/09/xmldsig#rsa-sha1" />
    <wssp:CanonicalizationAlgorithm URI="http://www.w3.org/2001/10/xml-exc-c14n#" />
    <!-- wssp:Target>
    <wssp:DigestAlgorithm URI="http://www.w3.org/2000/09/xmlmdsig#sha1" />
    <wssp:MessageParts
()</wssp:MessageParts>
  </wssp:Target -->
  <!-- wssp:Target>
  <wssp:DigestAlgorithm URI="http://www.w3.org/2000/09/xmlmdsig#sha1" />
  <wssp:MessageParts
(wsu:Timestamp)</wssp:MessageParts>
  </wssp:Target -->
  <wssp:Target>
    <wssp:DigestAlgorithm URI="http://www.w3.org/2000/09/xmlmdsig#sha1" />
    <wssp:MessageParts
  </wssp:Target>
</wssp:Policy>

5. Edit the encryption algorithm in the myEncrypt.xml file attached to the proxy service request as follows:

<?xml version="1.0"?>
<wsp:Policy
xmlns:wssp="http://www.bea.com/wls90/security/policy"
xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
xmlns:wls="http://www.bea.com/wls90/security/policy/wsee#part"
wsu:Id="X509Encrypt">
  <wssp:Confidentiality
  <wssp:KeyWrappingAlgorithm URI="http://www.w3.org/2001/04/xmlenc#rsa-1_5"/>
  <wssp:Target>
    <wssp:EncryptionAlgorithm URI="http://www.w3.org/2001/04/xmlenc#aes128-cbc"/>
    <wssp:MessageParts
  </wssp:Target>
  <wssp:KeyInfo />
</wssp:Confidentiality>
</wssp:Policy>
6. Attach mySign.xml and myEncrypt.xml policy files from the previous steps to the proxy service response.

7. Create a Service Key Provider.

6.5.2.2 Configuring Oracle WSM 11g Client

1. Create a copy of the following policy: wss10_x509_token_with_message_protection_client_policy.

---

**Note:** Oracle recommends that you do not change the predefined policies so that you will always have a known set of valid policies to work with.

---

In Enterprise Manager, edit the policy settings, as follows:

a. Set Encryption Key Reference Mechanism to issuerserial.

b. Set Recipient Encryption Key Reference Mechanism to issuerserial.

c. Set Algorithm Suite to Basic128Rsa15 to match the algorithm suite used for Oracle Service Bus.

d. Disable the Include Timestamp configuration setting.

For more information, see "Creating a Web Service Policy from an Existing Policy" in *Oracle Fusion Middleware Security and Administrator’s Guide for Web Services*.

2. In Enterprise Manager, specify keystore.recipient.alias in the client configuration. Ensure that the keystore.recipient.alias keys specified for the client exist as trusted certificate entry in the trust store configured for the Web service.

3. Attach the policy to the Web service client.

For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in *Oracle Fusion Middleware Security and Administrator’s Guide for Web Services*.

4. Invoke the Web service from the client.
This chapter contains the following sections:

- Overview of Interoperability With Axis 1.4 and WSS4J 1.5.8 Security Environments
- Required Files for Interoperability With Axis and WSS4J
- Username Token with Message Protection (WS-Security 1.0)
- SAML Token with Message Protection (WS-Security 1.0)
- Username Token Over SSL
- SAML Token (Sender Vouches) Over SSL

7.1 Overview of Interoperability With Axis 1.4 and WSS4J 1.5.8 Security Environments

In Axis 1.4 and WSS4J 1.5.8, you configure your security environment for inbound and outbound requests using handlers and deployment descriptors. For more information, see the Axis Deployment Tutorial at http://ws.apache.org/wss4j/axis.html.

In Oracle WSM 11g, you attach policies to Web service endpoints. Each policy consists of one or more assertions, defined at the domain-level, that define the security requirements. A set of predefined policies and assertions are provided out-of-the-box. For more details about the predefined policies, see “Predefined Policies” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For more information about configuring and attaching policies, see “Configuring Policies” and “Attaching Policies to Web Services” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

Table 7–1 the most common Axis and WSS4J interoperability scenarios based on the following security requirements: authentication, message protection, and transport.

For more information about:

Required Files for Interoperability With Axis and WSS4J

1. Create and compile a password callback class, PWCallback.java, that can resolve passwords required by username and keystore aliases.

The deployment descriptors defined in the following sections, contain username information, but not password information. As a best practice, you should not store sensitive information such as passwords in clear text within the deployment descriptor. To obtain the password, the Axis handler calls the password callback class. This mechanism is similar to JAAS. For more information, see the WSS4J documentation at http://ws.apache.org/wss4j.

2. Create the keystore properties file, crypto.properties, as shown below. Include this file in the classes directory.

```
org.apache.ws.security.crypto.merlin.keystore.type=jks
org.apache.ws.security.crypto.merlin.keystore.password=welcome1
org.apache.ws.security.crypto.merlin.file=default-keystore.jks
```

3. Create the saml.properties file, required for SAML interoperability scenarios only, as shown below:

```
org.apache.ws.security.saml.issuerClass=org.apache.ws.security.saml.SAMLIssuerImpl
org.apache.ws.security.saml.issuer.cryptoProp.file=crypto.properties
org.apache.ws.security.saml.issuer.key.name=orakey
org.apache.ws.security.saml.issuer.key.password=orakey
org.apache.ws.security.saml.issuer=www.oracle.com
org.apache.ws.security.saml.subjectNameId.name=weblogic
```

7.3 Username Token with Message Protection (WS-Security 1.0)

This section describes how to implement username token with message protection that conforms to the WS-Security 1.0 standard in the following interoperability scenarios:

- "Configuring Axis and WSS4J Client and Oracle WSM 11g Web Service" on page 7-3
- "Configuring Oracle WSM 11g Client and Axis and WSS4J Web Service" on page 7-4

7.3.1 Configuring Axis and WSS4J Client and Oracle WSM 11g Web Service

To configure Axis and WSS4J client and Oracle WSM 11g Web Service, perform the steps described in the following sections:

7.3.1.1 Configuring Oracle WSM 11g Web Service

1. Attach the following policy to the Web service: oracle/wss10_username_token_with_message_protection_service_policy.
   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.
2. Deploy the Web service.

7.3.1.2 Configuring Axis and WSS4J Client

1. Build your Web service client proxy.
2. Create the password callback class, PWCallback.java, and keystore properties file, crypto.properties, as described in "Required Files for Interoperability With Axis and WSS4J" on page 7-2.
3. Include the keystore file (for example, default-keystore.jks) and crypto.properties file directly under the classes folder.
   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.
4. Edit the deployment descriptor, client_deploy.wsdd, similar to Example 7–1.
   In the example, the receiver decrypts, verifies, and validates the username token; the sender inserts a username token, timestamp, signs the body, username token, and timestamp, and encrypts the body and username token. As shown in the example, the encryption key transport is overridden to match the Oracle WSM default requirements.
5. Set the following property within the client code to use the deployment descriptor defined in the previous step.
   System.setProperty("axis.ClientConfigFile", "client_deploy.wsdd");
6. Deploy the Web service client.

The following shows an example of the client_deploy.wsdd deployment descriptor.

```
org.apache.ws.security.saml.confirmationMethod=senderVouches
```
**Example 7–1  client_deploy.wsdd Deployment Descriptor**

```xml
<deployment xmlns="http://xml.apache.org/axis/wsdd/
xmlns:java="http://xml.apache.org/axis/wsdd/providers/java">
  <transport name="http"
pivot="java:org.apache.axis.transport.http.HTTPSender"/>
  <globalConfiguration >
    <!-- wss10_username_token_with_message_protection -->
    <requestFlow>
      <handler type="java:org.apache.axis.security.WSDoAllSender">
        <parameter name="passwordCallbackClass" value="com.oracle.xmlns.ConfigOverride_jws.CO_SOA.BPELProcess1.PWCallback"/>
        <parameter name="passwordType" value="PasswordText"/>
        <parameter name="user" value="weblogic"/>
        <parameter name="action" value="UsernameToken Timestamp Signature Encrypt"/>
        <parameter name="encryptionKeyTransportAlgorithm" value="http://www.w3.org/2001/04/xmlenc#rsa-oaep-mgf1p"/>
        <parameter name="encryptionKeyIdentifier" value="DirectReference"/>
        <parameter name="encryptionPropFile" value="crypto.properties"/>
        <parameter name="encryptionUser" value="orakey"/>
        <parameter name="encryptionParts" value="UsernameToken;remainder"/>
      </handler>
    </requestFlow>
    <responseFlow>
      <handler type="java:org.apache.ws.axis.security.WSDoAllReceiver">
        <parameter name="passwordCallbackClass" value="com.oracle.xmlns.ConfigOverride_jws.CO_SOA.BPELProcess1.PWCallback"/>
        <parameter name="action" value="Timestamp Signature Encrypt"/>
        <parameter name="signaturePropFile" value="crypto.properties"/>
        <parameter name="decryptionPropFile" value="crypto.properties"/>
        <parameter name="enableSignatureConfirmation" value="false"/>
      </handler>
    </responseFlow>
  </globalConfiguration>
</deployment>
```

### 7.3.2 Configuring Oracle WSM 11g Client and Axis and WSS4J Web Service

To configure Oracle WSM 11g client and Axis and WSS4J Web Service, perform the steps described in the following sections:

#### 7.3.2.1 Configuring Axis and WSS4J Web Service

1. Build your Web service.
2. Create the password callback class, PWCallback.java, and keystore properties file, crypto.properties, as described in "Required Files for Interoperability With Axis and WSS4J" on page 7-2.
3. Include the keystore file (for example, default-keystore.jks) and crypto.properties file directly under the classes folder.

Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.

4. Edit the deployment descriptor, server_deploy.wsdd, as shown in Example 7–2.

In the example, the receiver decrypts, verifies, and validates the username token; the sender inserts a username token, timestamp, signs the body, username token, and timestamp, and encrypts the body and username token. As shown in the example, the encryption key transport is overridden to match the Oracle WSM default requirements.

**Note:** WSS4J enforces an order to the elements in the header. Ensure action ordering is updated in server_deploy.wsdd as shown in Example 7–2.

5. Deploy the Web service.

### 7.3.2.2 Configuring Oracle WSM 11g Client

1. Attach the following policy to the Web service: oracle/wss10_username_token_with_message_protection_client_policy.

For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. For JSE clients only, configure the Web service client properties, as follows:

   **Note:** This step is not required for Java EE clients.

   myPort.setProperty(ClientConstants.WSS_KEYSTORE_TYPE, "JKS");
   myPort.setProperty(ClientConstants.WSS_KEYSTORE_LOCATION, 
                     "/keystore-path/default-keystore.jks");
   myPort.setProperty(ClientConstants.WSS_KEYSTORE_PASSWORD, "welcome1");
   myPort.setProperty(ClientConstants.WSS_RECIPIENT_KEY_ALIAS, "orakey");
   ...

   Where `setProperty` is defined as follows:

   ```java
   public void setProperty(String name, String value) {
     ((Stub) _port)._setProperty(name, value);
   }
   ```

3. Deploy the Web service client.

   The following shows an example of the server_deploy.wsdd deployment descriptor.

**Example 7–2  server_deploy.wsdd Deployment Descriptor**

```xml
<ns1:service name="HelloWorld" provider="java:RPC" style="wrapped" use="literal">
<!-- wss10_username_token_with_message_protection -->
<requestFlow>
  <handler type="java:org.apache.ws.axis.security.WSDoAllReceiver">
    <parameter name="passwordCallbackClass" value="PWCallback1"/>
    <parameter name="user" value="wss4j"/>
    <parameter name="action" value="Signature UsernameToken Timestamp Encrypt"/>
    <parameter name="signaturePropFile" value="crypto.properties"/>
  </handler>
</requestFlow>
```

---

Interoperability with Axis 1.4 and WSS4J 1.5.8 Security Environments 7-5
7.4 SAML Token with Message Protection (WS-Security 1.0)

This section describes how to implement username token with message protection that conforms to the WS-Security 1.0 standard in the following interoperability scenarios:

- "Configuring Axis and WSS4J Client and Oracle WSM 11g Web Service" on page 7-6
- "Configuring Oracle WSM 11g Client and Axis and WSS4J Web Service" on page 7-8

7.4.1 Configuring Axis and WSS4J Client and Oracle WSM 11g Web Service

To configure Axis and WSS4J client and Oracle WSM 11g Web service, perform the steps described in the following sections:

7.4.1.1 Configuring Oracle WSM 11g Web Service

1. Attach the following policy to the Web service: oracle/wss10_saml_token_with_message_protection_service_policy.

   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Deploy the Web service.

7.4.1.2 Configuring Axis and WSS4J Client

1. Build your Web service client proxy.

2. Create the password callback class, PWCallback.java, keystore properties file, crypto.properties file, and saml.properties file, as described in "Required Files for Interoperability With Axis and WSS4J" on page 7-2.

3. Include the keystore file (for example, default-keystore.jks) and crypto.properties file directly under the classes folder.

   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.
4. Edit the deployment descriptor, client_deploy.wsdd, similar to Example 7–3.
   
   In the example, the receiver decrypts, verifies, and validates the SAML token; the sender inserts a SAML token, timestamp, signs the body, SAML token, and timestamp, and encrypts the body. As shown in the example, the encryption key transport is overridden to match the Oracle WSM default requirements.

5. Set the following property within the client code to use the deployment descriptor defined in the previous step.

   ```java
   System.setProperty("axis.ClientConfigFile", "client_deploy.wsdd");
   ```

6. Deploy the Web service client.

   The following shows an example of the client_deploy.wsdd deployment descriptor.

   **Example 7–3  client_deploy.wsdd Deployment Descriptor**
   
   ```xml
   <deployment xmlns="http://xml.apache.org/axis/wsdd/
   xmlns:java="http://xml.apache.org/axis/wsdd/providers/java">
   <transport name="http"
   pivot="java:org.apache.axis.transport.http.HTTPSender"/>
   <globalConfiguration >
   <!-- wss10_saml_token_with_message_protection -->
   <requestFlow>
   <handler type="java:org.apache.ws.axis.security.WSDoAllSender">
   <parameter name="passwordCallbackClass" value="com.oracle.xmlns.ConfigOverride_jws.CO_SOA.BPELProcess1.PWCallback"/>
   <parameter name="passwordType" value="PasswordText"/>
   <parameter name="user" value="weblogic"/>
   <parameter name="action" value="Timestamp Signature SAMLTokenSigned Encrypt"/>
   <parameter name="samlPropFile" value="saml.properties"/>
   <parameter name="encryptionKeyTransportAlgorithm" value="http://www.w3.org/2001/04/xmlenc#rsa-oaep-mgf1p"/>
   <parameter name="encryptionKeyIdentifier" value="DirectReference"/>
   <parameter name="encryptionPropFile" value="crypto.properties"/>
   <parameter name="encryptionUser" value="orakey"/>
   <parameter name="encryptionParts" value="{Content}http://schemas.xmlsoap.org/soap/envelope/}Body"/>
   <parameter name="signatureUser" value="orakey"/>
   <parameter name="signaturePropFile" value="crypto.properties"/>
   <parameter name="signatureKeyIdentifier" value="DirectReference"/>
   <parameter name="signatureParts" value="{Element}http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" Timestamp;
   {Element}http://schemas.xmlsoap.org/soap/envelope/}Body"/>
   </handler>
   </requestFlow>
   <responseFlow>
   <handler type="java:org.apache.ws.axis.security.WSDoAllReceiver">
   <parameter name="passwordCallbackClass" value="com.oracle.xmlns.ConfigOverride_jws.CO_SOA.BPELProcess1.PWCallback"/>
   <parameter name="action" value="Timestamp Signature Encrypt"/>
   <parameter name="signaturePropFile" value="crypto.properties"/>
   <parameter name="decryptionPropFile" value="crypto.properties"/>
   <parameter name="enableSignatureConfirmation" value="false"/>
   </handler>
   </responseFlow>
   </globalConfiguration>
   </deployment>
   ```
7.4.2 Configuring Oracle WSM 11g Client and Axis and WSS4J Web Service

To configure Oracle WSM 11g client and Axis and WSS4J Web Service, perform the steps described in the following sections:

7.4.2.1 Configuring Axis and WSS4J Web Service

1. Build your Web service.
2. Create the password callback class, PWCallback.java, keystore properties file, crypto.properties file, and saml.properties file as described in "Required Files for Interoperability With Axis and WSS4J" on page 7-2.
3. Include the keystore file (for example, default-keystore.jks) and crypto.properties file directly under the classes folder.
   
   Ensure that you are using keystore with v3 certificates. By default, the JDK 1.5 keytool generates keystores with v1 certificates.
4. Edit the deployment descriptor, server_deploy.wsdd, as shown in Example 7–4.
   
   In the example, the receiver decrypts, verifies, and validates the SAML token; the sender inserts a SAML token, timestamp, signs the body, SAML token, and timestamp, and encrypts the body. As shown in the example, the encryption key transport is overridden to match the Oracle WSM default requirements.

   **Note:** WSS4J enforces an order to the elements in the header. Ensure action ordering is updated in server_deploy.wsdd as shown in Example 7–4.

5. Deploy the Web service.

7.4.2.2 Configuring Oracle WSM 11g Client

1. Attach the following policy to the Web service: oracle/wss10_saml_token_with_message_protection_client_policy.
   
   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator's Guide for Web Services.

2. For JSE clients only, configure the Web service client properties, as follows:

   **Note:** This step is not required for Java EE clients.

   ```java
   myPort.setProperty(ClientConstants.WSS_KEYSTORE_TYPE, "JKS");
   myPort.setProperty(ClientConstants.WSS_KEYSTORE_LOCATION, 
                     "/keystore-path/default-keystore.jks");
   myPort.setProperty(ClientConstants.WSS_KEYSTORE_PASSWORD, "welcome1");
   myPort.setProperty(ClientConstants.WSS_RECIPIENT_KEY_ALIAS, "orakey");
   ...
   
   Where `setProperty` is defined as follows:

   ```java
   public void setProperty(String name, String value) {
       ((Stub) _port)._setProperty(name, value);
   }
   ```

3. Deploy the Web service client.
The following shows an example of the server_deploy.wsdd deployment descriptor.

**Example 7–4 server_deploy.wsdd Deployment Descriptor**

```xml
<ns1:service name="HelloWorld" provider="java:RPC" style="wrapped" use="literal">
   <!-- wss10_username_token_with_message_protection -->
   <requestFlow>
      <handler type="java:org.apache.ws.axis.security.WSDoAllReceiver">
         <parameter name="passwordCallbackClass" value="PWCallback1"/>
         <parameter name="user" value="wss4j"/>
         <parameter name="action" value="Signature SAMLTokenUnsigned Timestamp Encrypt"/>
         <parameter name="signaturePropFile" value="crypto.properties" />
         <parameter name="decryptionPropFile" value="crypto.properties" />
      </handler>
   </requestFlow>
   <responseFlow>
      <handler type="java:org.apache.ws.axis.security.WSDoAllSender">
         <parameter name="passwordCallbackClass" value="PWCallback1"/>
         <parameter name="user" value="orakey"/>
         <parameter name="action" value="Timestamp Signature Encrypt"/>
         <parameter name="encryptionKeyTransportAlgorithm" value="http://www.w3.org/2001/04/xmlenc#rsa-oaep-mgf1p"/>
         <parameter name="signaturePropFile" value="crypto.properties" />
         <parameter name="signatureKeyIdentifier" value="DirectReference" />
      </handler>
   </responseFlow>
</ns1:service>
```

### 7.5 Username Token Over SSL

This section describes how to implement username token over SSL in the following interoperability scenarios:

- "Configuring Axis and WSS4J Client and Oracle WSM 11g Web Service" on page 7-9
- "Configuring Oracle WSM 11g Client and Axis and WSS4J Web Service" on page 7-10

#### 7.5.1 Configuring Axis and WSS4J Client and Oracle WSM 11g Web Service

To configure Axis and WSS4J client and Oracle WSM 11g Web service, perform the steps described in the following sections:

##### 7.5.1.1 Configuring Oracle WSM 11g Web Service

1. Configure the server for SSL.

   For more information, see "Configuring SSL on WebLogic Server (One-Way)" and "Configuring SSL on WebLogic Server (Two-Way)" in *Oracle Fusion Middleware Security and Administrator’s Guide for Web Services*.

2. Attach the following policy to the Web service: oracle/wss_username_token_over_ssl_service_policy.
For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Deploy the Web service.

7.5.1.2 Configuring Axis and WSS4J Client
1. Build your Web service client proxy.
2. Create the password callback class, PWCallback.java, and keystore properties file, crypto.properties, as described in "Required Files for Interoperability With Axis and WSS4J" on page 7-2.
3. Edit the deployment descriptor, client_deploy.wsdd, similar the example below. In the example, the receiver validates the username token and timestamp; the sender inserts a timestamp.

   ```xml
   <deployment xmlns="http://xml.apache.org/axis/wsdd/
   xmlns:java="http://xml.apache.org/axis/wsdd/providers/java">
   <transport name="http"
   pivot="java:org.apache.axis.transport.http.HTTPSender"/>
   <globalConfiguration >
   <!-- wss_username_token -->
   <requestFlow >
   <handler type="java:org.apache.ws.axis.security.WSDoAllSender" >
   <parameter name="action" value="UsernameToken Timestamp"/>
   <parameter name="user" value="weblogic"/>
   <parameter name="passwordCallbackClass" value="com.oracle.xmlns.ConfigOverride_jws.CO_SOA.BPELProcess1.PWCallback"/>
   <parameter name="passwordType" value="PasswordText"/>
   </handler>
   </requestFlow >
   </globalConfiguration >
   </deployment>
   ```

4. Set the following property within the client code to use the deployment descriptor defined in the previous step.

   ```java
   System.setProperty("axis.ClientConfigFile", "client_deploy.wsdd");
   ```

5. Deploy the Web service client.

7.5.2 Configuring Oracle WSM 11g Client and Axis and WSS4J Web Service
To configure Oracle WSM 11g client and Axis and WSS4J Web service, perform the steps described in the following sections:

7.5.2.1 Configuring Axis and WSS4J Web Service
1. Configure the server for SSL.
2. Build your Web service.
3. Create the password callback class, PWCallback.java, and crypto.properties file, as described in "Required Files for Interoperability With Axis and WSS4J" on page 7-2.
4. Edit the deployment descriptor, server_deploy.wsdd, similar to the example below. In the example, the receiver validates the username token and the timestamp; the sender inserts a timestamp.
<ns1:service name="HelloWorld" provider="java:RPC" style="wrapped" use="literal">
<!-- wss_username_token_over_ssl -->
<requestFlow>
  <handler type="java:org.apache.ws.axis.security.WSDoAllReceiver">
    <parameter name="passwordCallbackClass" value="PWCallback1"/>
    <parameter name="action" value="Timestamp UsernameToken"/>
  </handler>
</requestFlow>
<responseFlow>
  <handler type="java:org.apache.ws.axis.security.WSDoAllSender">
    <parameter name="action" value="Timestamp"/>
  </handler>
</responseFlow>
</ns1:service>

5. Deploy the Web service.

### 7.5.2.2 Configuring Oracle WSM 11g Client

1. Attach the following policy to the Web service client: wss_username_token_over_ssl_client_policy.

   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. For JSE clients only, configure the Web service client properties, as shown below. The username and password must be set by the client for generating the username token.

   Note: This step is not required for Java EE clients.

   ```
   myPort.setUsername("wss4j");
   myPort.setPassword("security");
   ```

3. Deploy the Web service client.

   When running the client, include the following client system property, where default-keystore.jks specifies the keystore that contains the certificate corresponding to the server certificate.

   ```
   -Djavax.net.ssl.trustStore=default-keystore.jks
   ```

### 7.6 SAML Token (Sender Vouches) Over SSL

This section describes how to implement SAML token (sender vouches) over SSL in the following interoperability scenarios:

- "Configuring Axis and WSS4J Client and Oracle WSM 11g Web Service" on page 7-11
- "Configuring Oracle WSM 11g Client and Axis and WSS4J Web Service" on page 7-12

#### 7.6.1 Configuring Axis and WSS4J Client and Oracle WSM 11g Web Service

To configure Axis and WSS4J client and Oracle WSM 11g Web service, perform the steps described in the following sections:
7.6.1.1 Configuring Oracle WSM 11g Web Service

1. Configure the server for SSL.

   For more information, see "Configuring SSL on WebLogic Server (One-Way)" and "Configuring SSL on WebLogic Server (Two-Way)" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. Attach the following policy to the Web service: wss_saml_token_over_ssl_service_policy.

   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

3. Deploy the Web service.

7.6.1.2 Configuring Axis and WSS4J Client

1. Build your Web service client proxy.

2. Create the password callback class, PWCallback.java; keystore properties file, crypto.properties; and SAML properties file, saml.properties, as described in "Required Files for Interoperability With Axis and WSS4J" on page 7-2.

3. Edit the deployment descriptor, client_deploy.wsdd, similar the example below. In the example, the receiver validates the SAML token and timestamp; the sender inserts a timestamp.

   ```
   <deployment xmlns="http://xml.apache.org/axis/wsdd/
      xmlns:java="http://xml.apache.org/axis/wsdd/providers/java">
   <transport name="http"
      pivot="java:org.apache.axis.transport.http.HTTPSender"/>
   <globalConfiguration >
   <!-- wss_saml_token -->
   <requestFlow >
   <handler type="java:org.apache.ws.axis.security.WSDoAllSender" >
   <parameter name="action" value="SAMLTokenSigned Timestamp"/>
   <parameter name="samlPropFile" value="saml.properties"/>
   <parameter name="user" value="weblogic"/>
   <parameter name="passwordCallbackClass" value="com.oracle.xmlns.ConfigOverride_jws.CO_SOA.BPELProcess1.PWCallback"/>
   <parameter name="passwordType" value="PasswordText"/>
   <parameter name="signatureUser" value="orakey" />
   <parameter name="signatureKeyIdentifier" value="DirectReference" />
   <parameter name="signaturePropFile" value="crypto.properties" />
   </handler>
   </requestFlow >
   </globalConfiguration >
   </deployment>
   ```

4. Set the following property within the client code to use the deployment descriptor defined in the previous step.

   ```java
   System.setProperty("axis.ClientConfigFile", 'client_deploy.wsdd');
   ```

5. Deploy the Web service client.

7.6.2 Configuring Oracle WSM 11g Client and Axis and WSS4J Web Service

To configure Oracle WSM 11g client and Axis and WSS4J Web service, perform the steps described in the following sections:
7.6.2.1 Configuring Axis and WSS4J Web Service

1. Configure the server for SSL.

2. Build your Web service.

3. Create the password callback class, PWCallback.java, and crypto.properties file, as described in "Required Files for Interoperability With Axis and WSS4J" on page 7-2.

4. Edit the deployment descriptor, server_deploy.wsdd, similar to the example below.

   In the example, the receiver validates the SAML token and the timestamp; the sender inserts a timestamp.

   ```xml
   <ns1:service name="HelloWorld" provider='java:RPC' style='wrapped' use='literal'>
     <!-- wss_saml_token_over_ssl -->
     <requestFlow>
       <handler type="java:org.apache.ws.axis.security.WSDoAllReceiver">
         <parameter name="passwordCallbackClass" value="PWCallback1"/>
         <parameter name="action" value="Timestamp SAMLTokenUnsigned"/>
       </handler>
     </requestFlow>
     <responseFlow>
       <handler type="java:org.apache.ws.axis.security.WSDoAllSender">
         <parameter name="action" value="Timestamp"/>
       </handler>
     </responseFlow>
   </ns1:service>
   ```

5. Deploy the Web service.

7.6.2.2 Configuring Oracle WSM 11g Client

1. Attach the following policy to the Web service client: wss_saml_token_over_ssl_client_policy.

   For more information about attaching the policy, see "Attaching Policies to Web Service Clients" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

2. For JSE clients, configure the Web service client properties, as shown below. The username must be set by the client for generating the SAML assertion.

   ```java
   myPort.setUsername("wss4j");
   ```

3. Deploy the Web service client.

   When running the client, include the following client system property, where default-keystore.jks specifies the keystore that contains the certificate corresponding to the server certificate.

   ```bash
   -Djavax.net.ssl.trustStore=default-keystore.jks
   ```
This chapter contains the following sections:

- Overview of Interoperability With Oracle GlassFish Security Environments
- Username Token with Message Protection (WS-Security 1.1)
- SAML Token (Sender Vouches) with Message Protection (WS-Security 1.1)

### 8.1 Overview of Interoperability With Oracle GlassFish Security Environments

Oracle GlassFish Enterprise Server Release 3.0.1 is an open source application server for the Java EE platform. Metro is an open-source Web service stack that is a part of Oracle GlassFish Enterprise Server.

In Oracle WSM 11g, you attach policies to Web service endpoints. Each policy consists of one or more assertions, defined at the domain-level, that define the security requirements. A set of predefined policies and assertions are provided out-of-the-box. For more details about the predefined policies, see “Predefined Policies” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services. For more information about configuring and attaching policies, see "Configuring Policies” and "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

For more information about:

- Configuring and attaching Oracle WSM 11g policies, see "Configuring Policies” and "Attaching Policies to Web Services” in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.
- Configuring Oracle GlassFish, see [http://download.oracle.com/docs/cd/E18930_01/index.html](http://download.oracle.com/docs/cd/E18930_01/index.html).
- Configuring Metro Web services, see [http://metro.java.net/guide/](http://metro.java.net/guide/)

### 8.2 Username Token with Message Protection (WS-Security 1.1)

This section describes how to implement username token with message protection that conforms to the WS-Security 1.1 standard in the following interoperability scenarios:

- "Configuring GlassFish Client and Oracle WSM 11g Web Service" on page 8-2
- "Configuring Oracle WSM 11g Client and GlassFish Web Service” on page 8-3
8.2.1 Configuring GlassFish Client and Oracle WSM 11g Web Service

To configure GlassFish client and Oracle WSM 11g Web service, perform the steps described in the following sections:

8.2.1.1 Configuration Prerequisites for Interoperability

Perform the following prerequisite steps:

1. Create a default-keystore.jks file with the following command:

   ```bash
   $JAVA_HOME/bin/keytool -genkeypair -alias orakey -keypass welcome -keyalg RSA
   -dname "CN=orakey, O=oracle C=us" -keystore default-keystore.jks -storepass
   welcome
   ```

2. Copy default-keystore.jks to the domain's fmwconfig directory.

3. Create a file user in GlassFish with the following command:

   ```bash
   $<GLASSFISHV3_HOME>/glassfish/bin/asadmin create-file-user
   ```

4. Import orakey from default-keystore.jks into GlassFish keystore and truststore. These are located in the directory `<domain-dir>/config`

   ```bash
   $JAVA_HOME/bin/keytool -importkeystore -srckeystore <path-to>/default-keystore.jks -destkeystore
   <path-to-gf-domain>/config/cacerts.jks -srcalias orakey -destalias orakey
   -srckeypass welcome -destkeypass changeit
   ```

5. Copy jps-config.xml and default-keystore.jks from the domain's fmwconfig directory into a local folder.

8.2.1.2 Configuring Oracle WSM 11g Web Service

1. Create a Web service.

2. Attach the following policy to the Web service: `oracle/wss11_username_token_with_message_protection_service_policy`. For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

8.2.1.3 Configuring GlassFish/Metro Client

   1. Provide a project name and location and select Finish.

2. Right click on the project. Select New > Web service Client. Follow the wizard and provide WSDL URL for service deployed in WebLogic.

3. Select Edit Web Services Attributes.

4. Check Use Development Defaults to include Metro libraries into the project.

5. Uncheck Use Development Defaults. Provide username subject and password.

6. For a Metro SE client:
a. Edit the truststore configuration. Select the same default-keystore.jks created in "Configuration Prerequisites for Interoperability" on page 8-2.
b. Drag and drop the Web service operation into main class, main method.
c. Right click on the project and choose run to execute the project.

7. For a Metro Java EE client:
   a. Drag and drop the Web service operation into EJB or Servlet to invoke.
   b. Deploy the application into GlassFish and invoke the Web service.

8.2.2 Configuring Oracle WSM 11g Client and GlassFish Web Service

To configure Oracle WSM 11g client and GlassFish Web service, perform the steps described in the following sections:

8.2.2.1 Configuration Prerequisites for Interoperability

Perform the following prerequisite steps:

1. Create a default-keystore.jks file with the following command:
   
   ```bash
   $JAVA_HOME/bin/keytool -genkeypair -alias orakey -keypass welcome -keyalg RSA 
   -dname "CN=orakey, O=oracle C=us" -keystore default-keystore.jks -storepass welcome
   ```

2. Copy default-keystore.jks to the domain's fmwconfig directory.

3. Save the credentials in credential store using WLST commands. For example:
   
   ```bash
   $<ORACLE_HOME>/common/bin/wlst.sh
   > connect()
   > createCred(map="oracle.wsm.security", key="keystore-csf-key", 
   user="keystore", password="welcome")
   > createCred(map="oracle.wsm.security", key="sign-csf-key", user="orakey", 
   password="welcome")
   > createCred(map="oracle.wsm.security", key="enc-csf-key", user="orakey", 
   password="welcome")
   > createCred(map="oracle.wsm.security", key="glassfish.credentials", 
   user="wlsUser", password="welcome1", description="Glassfish user credentials");
   ```

   A file cwallet.sso is created in the directory DOMAIN_HOME/config/fmwconfig

4. Create a file user in GlassFish with the following command:

   ```bash
   $<GLASSFISHV3_HOME>/glassfish/bin/asadmin create-file-user
   ```

   For more information, see http://download.oracle.com/docs/cd/E18930_01/html/821-2433/create-file-user-1.html.

5. Import orakey from default-keystore.jks into GlassFish keystore and truststore. These are located in the directory <domain-dir>/config

   ```bash
   $JAVA_HOME/bin/keytool -importkeystore -srckeystore <path-to>/default-keystore.jks -destkeystore <path-to-gf-domain>/config/keystore.jks -srcalias orakey -destalias orakey -srckeypass welcome -destkeypass changeit
   ```

6. Copy cwallet.sso, jps-config.xml and default-keystore.jks from the domain's fmwconfig directory into a local folder.
8.2.2.2 Configuring GlassFish/Metro Web Service
1. Create a Metro Web service. For more information, see http://metro.java.net/guide/.
2. Configure the appropriate security mechanism. For more information, see http://metro.java.net/guide/.

8.2.2.3 Configuring Oracle WSM 11g Client
1. Using JDeveloper, create a Web service proxy for the GlassFish service. Select the policy oracle/wss11_username_token_with_message_protection_client_policy in the wizard.
2. Set the csf-key to glassfish.credentials in the Override Properties option for the Web service proxy.
3. In the Web service proxy main class, set the system property of oracle.security.jps.config to jps-config.xml from Step 6 of "Configuration Prerequisites for Interoperability" on page 8-3.
4. Invoke the Web service.

**Note:** If you are using
- SOA Web service reference, set the property overrides to glassfish.credentials in the Security page. For more information, see Section 37.2.2 “How to Override Policy Configuration Property Values” in Developer's Guide for SOA Suite at http://download.oracle.com/docs/cd/E15523_01/integration.1111/e10224/sca_policy.htm#CDDEIAFA.

8.3 SAML Token (Sender Vouches) with Message Protection (WS-Security 1.1)

The following sections describe how to implement SAML token (sender vouches) with message protection that conforms to the WS-Security 1.1 standard:

- "Configuring GlassFish Client and Oracle WSM 11g Web Service" on page 8-4
- "Configuring Oracle WSM 11g Client and GlassFish Web Service" on page 8-6

8.3.1 Configuring GlassFish Client and Oracle WSM 11g Web Service
To configure GlassFish client and Oracle WSM 11g Web Service, perform the steps described in the following sections:

8.3.1.1 Configuration Prerequisites for Interoperability
Perform the following prerequisite steps:
1. Create a default-keystore.jks file with the following command:
SAML Token (Sender Vouches) with Message Protection (WS-Security 1.1)

```bash
$JAVA_HOME/bin/keytool -genkeypair -alias orakey -keypass welcome -keyalg RSA -dname "CN=orakey, O=oracle C=us" -keystore default-keystore.jks -storepass welcome
```

2. Copy default-keystore.jks to the domain’s fmwconfig directory.

3. Create a file user in GlassFish with the following command:

```bash
$<GLASSFISHV3_HOME>/glassfish/bin/asadmin create-file-user
```

For more information, see

4. Add the user as described in "Create users" in Oracle Fusion Middleware Oracle WebLogic Server Administration Console Help.

5. Import orakey from default-keystore.jks into GlassFish keystore and truststore. These are located in the directory `<domain-dir>/config`

```bash
$JAVA_HOME/bin/keytool -importkeystore -srckeystore <path-to>/default-keystore.jks -destkeystore <path-to-gf-domain>/config/cacerts.jks -srcalias orakey -destalias orakey -srckeypass welcome -destkeypass changeit
```

6. Copy jps-config.xml and default-keystore.jks from the domain’s fmwconfig directory into a local folder.

8.3.1.2 Configuring Oracle WSM 11g Web Service

1. Create a Web service.

2. Attach the following policy to the Web service: oracle/wss11_username_token_with_message_protection_service_policy.

   For more information about attaching the policy, see "Attaching Policies to Web Services" in Oracle Fusion Middleware Security and Administrator’s Guide for Web Services.

8.3.1.3 Configuring GlassFish/Metro Client

   1. Provide a project name and location. Select the server to deploy and select Finish.

   2. Right click on the project. Select New > Web service Client. Follow the wizard and provide WSDL URL for service deployed in WebLogic.

3. Create a SAML CallbackHandler that can be used with WSIT SAML Security Mechanisms supported by NetBeans.

   a. Place the file in the source folder of the project.

   b. Ensure issuer variable value is the same as in the jps-config.xml file created in Step 5 of "Configuration Prerequisites for Interoperability" on page 8-4.

   c. Set the urn reference to

   ```
   urn:oasis:names:tc:SAML:1.1:nameid-format:unspecified
   ```

   d. Set the user created in Step 3 and Step 4 of "Configuration Prerequisites for Interoperability" on page 8-6. For example, to set the user to wlsuser, modify the file as follows:

   ```
   CN=wlsuser,OU=SU,O=wlsuser,L=Los Angeles,ST=CA,C=US
   ```
4. To configure the JVM, log on to the GlassFish Administration Console. For more information, see http://download.oracle.com/docs/cd/E18930_01/html/821-2416/gepzd.html.
   a. In the left pane, expand Configuration and click JVM Setting.
   b. In the right pane, click JVM Option tab.
   c. Click Add JVM Option. A new text field is displayed. Enter -DWSIT_HOME=${com.sun.aas.installRoot}.
   d. Click Enterprise Server in left pane.
   e. Click Restart in the right pane to restart the server.

6. For SAML Callback Handler option, click Browse and select the file from Step 3.

7. Set the alias in Keystore and Truststore.

8. Open index.jsp file. Right click and select Web Service Client Reference. Select Operation in Select Operation to Invoke dialog box and click ok.

9. Run the project.

### 8.3.2 Configuring Oracle WSM 11g Client and GlassFish Web Service

To configure Oracle WSM 11g client and GlassFish Web Service, perform the steps described in the following sections:

#### 8.3.2.1 Configuration Prerequisites for Interoperability

Perform the following prerequisite steps:

1. Create a default-keystore.jks file with the following command:

   ```bash
   $JAVA_HOME/bin/keytool -genkeypair -alias orakey -keypass welcome -keyalg RSA -dname "CN=orakey, O=oracle C=us" -keystore default-keystore.jks -storepass welcome
   ```

2. Copy default-keystore.jks to the domain's fmwconfig directory.

3. Save the credentials in credential store using WLST commands. For example:

   ```bash
   $<ORACLE_HOME>/common/bin/wlst.sh
   > connect()
   > createCred(map="oracle.wsm.security", key="keystore-csf-key", user="keystore", password="welcome")
   > createCred(map="oracle.wsm.security", key="sign-csf-key", user="orakey", password="welcome")
   > createCred(map="oracle.wsm.security", key="enc-csf-key", user="orakey", password="welcome")
   > createCred(map="oracle.wsm.security", key="glassfish.credentials", user="wlsUser", password="welcome1", description="Glassfish user credentials");
   ```

   A file cwallet.sso is created in the directory DOMAIN_HOME/config/fmwconfig

4. Create a file user in GlassFish with the following command:

   ```bash
   $<GLASSFISHV3_HOME>/glassfish/bin/asadmin create-file-user
   ```
For more information, see http://download.oracle.com/docs/cd/E18930_01/html/821-2433/create-file-user-1.html.

5. Import orakey from default-keystore.jks into GlassFish keystore and truststore. These are located in the directory <domain-dir>/config

$JAVA_HOME/bin/keytool -importkeystore -srckeystore <path-to>/default-keystore.jks -destkeystore <path-to-gf-domain>/config/keystore.jks -srcalias orakey -destalias orakey -srckeypass welcome -destkeypass changeit

6. Copy cwallet.sso, jps-config.xml and default-keystore.jks from the domain’s fmwconfig directory into a local folder.

8.3.2.2 Configuring GlassFish/Metro Web Service

1. Create a Metro Web service. For more information, see http://metro.java.net/guide/.

2. Configure the appropriate security mechanism. For more information, see http://metro.java.net/guide/.

8.3.2.3 Configuring Oracle WSM 11g Client

1. Using JDeveloper, create a Web service proxy for the GlassFish service. Select the policy oracle/wss11_saml_token_with_message_protection_client_policy in the wizard.

2. Set the path to jps-config.xml created in Step 6 of “Configuration Prerequisites for Interoperability” on page 8-6.

3. Set the USERNAMEPROPERTY as follows: ((BindingProvider) sAMLTokenEchoService).getRequestContext().put(BindingProvider .USERNAMEPROPERTY, "wlsUser");

4. Invoke the Web service.
