See **Start Premise Based Service Page 2** on page 2-3 for the business process diagram associated with this activity.

**Group:** Service Agreement Activation Process

**Group:** Field Activity /Field Order Completion Process

**Group:** Pending SA/SP Monitor Process

**Actor/Role:** CC&B

**Description:** The background process, SAACT, Service Agreement Activation, periodically checks to see if Service Agreements can be activated. CC&B creates an exception processing record for each Service Agreement with the Service Agreement's effective start date less than the current business date and with missing or incomplete information. The Service Agreement may also be manually activated. A separate background process creates To Do Entries for Pending Start/Stops that are older than a configured date. To Do Type and To Do Roles must also be configured.

**Group:** Field Activity Completion

**Group:** Field Activity /Field Order Completion Process

**Actor/Role:** CC&B

**Description:** If fieldwork is required, a Field Activity is created. The Field Activity Type is configured based on specific profiles. Each Field Activity eligible for dispatch will have a specific Dispatch Group defined for every Service Point Type and Operations Area. The SA type SA/SP Fieldwork Creation algorithm determines if a Field Activity is necessary. The background process, Pending SA/SP Monitor, creates Field Activities for Pending Start and Stop Agreements shortly before the start/stop date if Field Activities have not already been created. Once the Field Activity is completed the start read is made available in CC&B. The background process, Service Agreement Activation, uses this Field Activity information to determine if the Pending Service Agreement can be activated. Refer to 5.3.2.1 Manage Field Activities and Field Orders.
