This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

# Known and Resolved Issues

The following sections describe known issues with the Oracle Tuxedo software and include recommended workarounds. The problems are listed by the Change Request (CR) number. The CR number is provided to facilitate the tracking of these problems.

Contact your Oracle Customer Support Center for assistance in the tracking of any unresolved problems. When contacting the Oracle Customer Support Center, please refer to the CR number.

- [Known Limitations](#)
- [Product Constraints](#)
- [Resolved Issues](#)

## Known Limitations

[Table 1](#) describes the known limitations for Oracle Tuxedo and provides recommended workarounds.

**Table 1 Known Limitations**

1. <b>Best performance is obtained when buffer size is smaller than 100KB.</b>	
<b>Description</b>	When buffer size is greater than 100KB, Direct Cross Node Communication Leveraging RDMA feature lowers performance.
<b>Platforms</b>	All

**Table 1 Known Limitations**

	<b>Workaround</b>	Disable Direct Cross Node Communication Leveraging RDMA feature when buffer size is greater than 100KB.
2.	<b>Jolt SSL does not work with Oracle JDK 1.6 u32 and JDK 7</b>	
	<b>Description</b>	Jolt SSL in Tuxedo 12cR1 does not work with Oracle JDK 1.6 u32 and JDK 7.
	<b>Platforms</b>	All
	<b>Workaround</b>	Use Oracle JDK 1.6 u37 or Oracle JDK 1.6 u26 with Jolt SSL.
3.	<b>XmlHelper::save() loses content of XML document of mixed type</b>	
	<b>Description</b>	<p>In a schema where a type is defined as follows:</p> <pre>&lt;xsd:complexType name="myType" mixed="true"&gt; ...</pre> <p>A document cannot be loaded by SDO XmlHelper, then saved as its original content. For example:</p> <pre>...     Dear Mr.&lt;name&gt;John Smith&lt;/name&gt;.     Your order &lt;orderid&gt;1032&lt;/orderid&gt;     will be shipped on &lt;shipdate&gt;2001-07-13&lt;/shipdate&gt;. ... can only be saved as: ...     &lt;name&gt;John Smith&lt;/name&gt;     &lt;orderid&gt;1032&lt;/orderid&gt;     &lt;shipdate&gt;2001-07-13&lt;/shipdate&gt; ...</pre>
	<b>Platforms</b>	All
	<b>Workaround</b>	These types of documents should be handled directly by the application code.
4.	<b>Error data sent is ignored when Web service binding is used to connect two Tuxedo domains</b>	

**Table 1 Known Limitations**

<b>Description</b>	<p>The current implementation of Web services binding only returns the fault string when a SOAP fault occurs. For those services where fault detail may contain additional information or data (as handled by the GWWS SALT gateway), ServiceInvocationException has no place or mechanism to store this data.</p> <p>This may happen:</p> <ul style="list-style-type: none"> <li>• when attempting to invoke an existing Tuxedo service exposed as a Web service from an SCA component or SCA client.</li> <li>• only between two Tuxedo domains.</li> </ul>
<b>Platforms</b>	All
<b>Workaround</b>	Use ATMI binding and /Domain feature to connect two Tuxedo domains.
<b>5. JATMI binding does not support transaction.</b>	
<b>Description</b>	The JATMI binding crashed when running with transaction because the JATMI container does not have sufficient transaction support for TSESSION.
<b>Platforms</b>	All
<b>Workaround</b>	The services accessed may be configured as AUTOTRAN.
<b>6. JATMI reference binding does not check the presence of two different serviceType</b>	
<b>Description</b>	JATMI reference binding does not check the presence of two different serviceType, inputBufferType, outputBufferType and errorBufferType elements without specifying a target attribute.
<b>Platforms</b>	All
<b>Workaround</b>	To avoid this problem, you should not configure duplicated XML elements for ATMI binding without specifying target in the composite file.
<b>7. Sometimes invoking tpabort in an Oracle Tuxedo client fails</b>	
<b>Description</b>	This issue only occurs when a Java server is involved in a transaction. Sometimes the transaction is committed automatically before tpabort is invoked in an Oracle Tuxedo client.
<b>Platforms</b>	Linux x86 32-bit
<b>Workaround</b>	None
<b>8. "Command.run( ): process completed before monitors could start" appears during installation</b>	

**Table 1 Known Limitations**

<b>Description</b>	During Oracle Tuxedo installation, the following error message sometimes appears: "Command.run( ): process completed before monitors could start."
<b>Platforms</b>	OEL5 x86 64-bit
<b>Workaround</b>	You can safely ignore this message.

## Product Constraints

[Table 2](#) describes product constraints for Oracle Tuxedo and provides recommended workarounds.

**Table 2 Product Constraints**

1.	<b>Have to rebuild TMS servers when upgrading tuxedo to 12.1.1</b>
<b>Description</b>	TMS server binaries have to be re-compiled and re-linked after upgrading Tuxedo to 12.1.1.
<b>Platforms</b>	All
<b>Workaround</b>	None.

## Resolved Issues

Any software or documentation fixes that are made to Oracle Tuxedo 12c Release 1 (12.1.1) are reported in updates to this section.

[Table 3](#) lists the software and documentation problems that have been fixed in Release 12c Release 1 (12.1.1). Problems are listed by bug number.

**Table 3 Problems Fixed in Oracle Tuxedo 12c Release 1 (12.1.1)**

1.	10087453	GWTDOMAIN connections not reported to event broker
2.	11075862	Request to improve tmqueue/tmqforward restart after they died
3.	11769303	Exception not always thrown by corba client timeout occurs within commit

**Table 3 Problems Fixed in Oracle Tuxedo 12c Release 1 (12.1.1)**

4. 12706766	TPNOTIY with a new flag to return immediatly after checking that client exist
5. 12895294	Need faddr/frange for gwtdomain
6. 13109309	tmadmin pq queue count too high for app servers on as5 multicore
7. 13350779	Dynamic change to min=0 for servers fails
8. 13354862	Enhancement request: new api to get the username (principal name) from security
9. 13358022	QMADMIN leaves orphan process
10. 13385815	Can not compil simpappssl corba sample provided by tuxedo product
11. 13449208	Possible gwtomain hanging on message
12. 13458820	Enhancement request: shift-jis message catalog garbled on aix
13. 13476066	iiop request indefinitely waits for response
14. 13478819	gwtomain core dump on _dom_freend
15. 13535072	Event notification thread goes into tight loop
16. 13594998	gwtomain sometimes don't process any requeust for some seconds
17. 13630313	Message leak when tm_mqi has multiple instances
18. 13649274	libfml_cat:3: error: no space in fielded buffer
19. 13724874	tmboot catalog error, nls:4: cannot open message catalog, libtux_cat,.lang=c
20. 13741289	Context leaks when using tpmulticontexts and tpu_thread with /ws client
21. 13895423	Building tuxedo mq adapter with only mq tx client installed
22. 13930115	[ER] tuxedo mq adapter fail recover mechanism
23. 13930116	[ER] allow mutli threading in tm mq adapter server
24. 13965614	gwws can not handle crlf
25. 13965770	[er] add patchlevel attribute winthin release xml element of registry.xml
26. 13994890	TM_KILL_WITH_BBLOCK does not work under high load
27. 14041741	MULTIPLE RDOMS ON ON_DEMAND mode cause other normal services not used

**Table 3 Problems Fixed in Oracle Tuxedo 12c Release 1 (12.1.1)**

28. 14116565	gwtomain send dmkeepalive msg every second when remote domain no response
29. 14135406	CONVERSATIONAL SERVER SPAWN/DECAY FUNCTION doesn't work correctly
30. 14144929	gwws makes outbound call got tpsystem occasionally
31. 14214734	Outbound attribute failed with error type and/or subtype do not match
32. 14231888	/DOMAIN doesn't support fml32 buffer bigger then 70000 bytes
33. 14308647	rp installer outputs error message
34. 14323552	Q_CAT:1353 occurs when tpdequeue() rolled back
35. 14339774	wsl backlog can config in windows
36. 14348578	LIBTUX_CAT:681 occurs when long running on windows
37. 14354417	Service name not displayed when reporting libtux_cat:1401
