

# Oracle® Configuration Manager

Connectivity Test

Release 10.3.8

E38338-02

March 2013

---

To install Oracle Configuration Manager (OCM) in connected mode, you must be able to establish a secure network connection to Oracle. Based on your corporate networking policies, you may be able to make a direct connection to Oracle via the Internet or you may be able to access Oracle (and the Internet) via a proxy server. OCM supports both methods.

## Introduction

OCM uses the features of the Secure Socket Layer (SSL) and make use of HTTPS for all communications.

### 1. Direct access to the Internet

OCM initiates communication with Oracle using HTTPS. If you have direct connectivity to the Internet from your machine, no additional configuration is required. OCM contacts <https://ccr.oracle.com> on port 443.

### 2. Access to the Internet via a proxy server

If you are using a proxy server to connect to the Internet, you must supply the proxy connection details to OCM as part of the installation procedure.

If you are unsure of these details, the settings used in your Internet browser may work.

- To view these settings in Internet Explorer:

From the **Tools** menu, select **Internet Options**, select **Connections**, select **Lan Settings**, then select **Advanced**.

- To view these settings in Mozilla Firefox 2:

From the **Tools** menu, select **Options**, select **Advanced**, select **Network**, then select **Settings**.

## Data Destination

All communications with Oracle is directed to <https://ccr.oracle.com> on port 443.

## Testing the Link to Oracle

The following methods can be used to test for a viable network connection to Oracle. They are not listed in order of Oracle preference, but in a logical sequence that one can work through to determine the method requiring the least configuration work.

If you have questions concerning your specific network topology, contact your local network administrator.

## Direct Connection Over the Internet

To test a direct connection, follow the step in the Test Procedure column.

Test Procedure	Success Indicator	Comments
telnet ccr.oracle.com:443	Trying... Connected to...	Test the route to the Oracle servers

## Connection via a Proxy Server

To test connection via a proxy server, follow the steps in the Test Procedure column.

**Note:** To avoid a time-out, the steps *must* be executed in rapid sequence.

Test Procedure	Success Indicator	Comments
<b>Step 1:</b> telnet 'proxyhost' 'port'	Trying... Connected to...	Use the host name of your proxy server and the port your proxy server listens
<b>Step 2:</b> CONNECT ccr.oracle.com:443 HTTP/1.0	HTTP connection established	Confirmation on connection to the target

## Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at

<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

## Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.
