This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS. Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Ce logiciel et la documentation qui l'accompagne sont protégés par les lois sur la propriété intellectuelle. Ils sont concédés sous licence et soumis à des restrictions d'utilisation et de divulgation. Sauf stipulation expresse de votre contrat de licence ou de la loi, vous ne pouvez pas copier, reproduire, traduire, diffuser, modifier, accorder de licence, transmettre, distribuer, exposer, exécuter, publier ou afficher le logiciel, même partiellement, sous quelque forme et par quelque procédé que ce soit. Par ailleurs, il est interdit de procéder à toute ingénierie inverse du logiciel, de le désassembler ou de le décompiler, excepté à des fins d'interopérabilité avec des logiciels tiers ou tel que prescrit par la loi.

Les informations fournies dans ce document sont susceptibles de modification sans préavis. Par ailleurs, Oracle Corporation ne garantit pas qu'elles soient exemptes d'erreurs et vous invite, le cas échéant, à lui en faire part par écrit.

Si ce logiciel, ou la documentation qui l'accompagne, est livré sous licence au Gouvernement des Etats-Unis, ou à quiconque qui aurait souscrit la licence de ce logiciel pour le compte du Gouvernement des Etats-Unis, la notice suivante s'applique:

U.S. GOVERNMENT END USERS. Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

Ce logiciel ou matériel a été développé pour un usage général dans le cadre d'applications de gestion des informations. Ce logiciel ou matériel n'est pas conçu ni n'est destiné à être utilisé dans des applications à risque, notamment dans des applications pouvant causer des dommages corporels. Si vous utilisez ce logiciel ou matériel dans le cadre d'applications dangereuses, il est de votre responsabilité de prendre toutes les mesures de secours, de sauvegarde, de redondance et autres mesures nécessaires à son utilisation dans des conditions optimales de sécurité. Oracle Corporation et ses affiliés déclinent toute responsabilité quant aux dommages causés par l'utilisation de ce logiciel ou matériel pour ce type d'applications.

Oracle et Java sont des marques déposées d'Oracle Corporation et/ou de ses affiliés. Tout autre nom mentionné peut correspondre à des marques appartenant à d'autres propriétaires qu'Oracle.

Intel et Intel Xeon sont des marques ou des marques déposées d'Intel Corporation. Toutes les marques SPARC sont utilisées sous licence et sont des marques ou des marques déposées de SPARC International, Inc. AMD, Opteron, le logo AMD et le logo AMD Opteron sont des marques ou des marques déposées d'Advanced Micro Devices. UNIX est une marque déposée d'The Open Group.

Ce logiciel ou matériel et la documentation qui l'accompagne peuvent fournir des informations ou des liens donnant accès à des contenus, des produits et des services émanant de tiers. Oracle Corporation et ses affiliés déclinent toute responsabilité ou garantie expresse quant aux contenus, produits ou services émanant de tiers, sauf mention contraire stipulée dans un contrat entre vous et Oracle. En aucun cas, Oracle Corporation et ses affiliés ne sauraient être tenus pour responsables des pertes subies, des coûts occasionnés ou des dommages causés par l'accès à des contenus, produits ou services tiers, ou à leur utilisation, sauf mention contraire stipulée dans un contrat entre vous et Oracle.

Accessibilité de la documentation

Pour plus d'informations sur l'engagement d'Oracle pour l'accessibilité à la documentation, visitez le site Web Oracle Accessibility Program, à l'adresse <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Accès aux services de support Oracle

Les clients Oracle qui ont souscrit un contrat de support ont accès au support électronique via My Oracle Support. Pour plus d'informations, visitez le site <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> ou le site <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> si vous êtes malentendant.

Using This Documentation

- **Overview** – Provides late-breaking information about Oracle Virtual Networking host driver for Oracle VM 3.4.1.
- **Audience** – System administrators, authorized service providers, and users who have experience in administering advanced networks.
- **Required knowledge** – Advanced experience in using Oracle Virtual Networking host drivers for Oracle VM.

Product Documentation Library

Documentation and resources for this product and related products are available at <http://www.oracle.com/goto/Oracle-Virtual-Networking/docs>

Feedback

Provide feedback about this documentation at <http://www.oracle.com/goto/docfeedback>

Late-Breaking Information

These topics provide late-breaking information about Oracle Virtual Networking host drivers for Oracle VM.

- “[What's New in This Release](#)” on page 9
- “[Minimum Requirements](#)” on page 9
- “[Downloading the Host Drivers](#)” on page 11
- “[Known Issues](#)” on page 12

What's New in This Release

This release of Oracle Virtual Networking host drivers support hosts running Oracle VM 3.4.1 hypervisor.

This version of host drivers provides the following functionality:

- Oracle Software Defined Networking (SDN) and PVI vNICs
- Support for InfiniBand stack version kernel-ib 1.5.5.151
- Local boot from the Oracle VM server’s hard drive
- ConnectX-2 Single and Dual Port HCAs. See “[Supported HCAs](#)” on page 10.

The following features are not yet supported:

- PXE install, SAN install
- SAN boot, iSCSI boot

Support for Oracle VM 3.2.6 has a consideration about adding LUNs. For more information, see “[Manual Addition of a Virtual or Physical Disk](#)” on page 11.

Minimum Requirements

These topics provide minimum system requirements for the host drivers.

- “[Supported OS Levels](#)” on page 10

- “Supported HCAs” on page 10
- “System Limitations and Restrictions” on page 10

Supported OS Levels

This release provides initial support for kernel versions 2.6.39-300. 32.6.el5uek.

Supported HCAs

This host driver release supports Oracle HCAs as well as third-party manufacturers' HCAs with the requirement that the HCAs use the required version of firmware. Refer to the Oracle HCA's product notes for latest firmware versions.

The following Oracle HCAs are supported.

Supported Oracle HCAs	Documentation
Sun InfiniBand Dual Port 4x QDR PCIe Low Profile Host Channel Adapter M2	http://docs.oracle.com/cd/E19241-01/index.html
Sun InfiniBand Dual Port 4x QDR PCIe Express Module Host Channel Adapter M2	http://docs.oracle.com/cd/E19157-01/index.html
Oracle Dual Port QDR InfiniBand Adapter M3	http://docs.oracle.com/cd/E40985_01/index.html

For third-party HCAs, refer to the manufacturer's documentation for the required firmware version.

Support for HA vNICs

You must create two separate vNICs from each Oracle Fabric Interconnect and create a bonded interface in Oracle VM to support HA vNICs on an Oracle VM server. For information about creating a bonded interface, refer to the Oracle VM server software documentation. Creating HA vNICs on an Oracle VM server by using the Oracle XgOS CLI or Oracle Fabric Manager is not supported in this release.

System Limitations and Restrictions

- “Virtual Resources Supported” on page 11

- “[Boot Methods](#)” on page 11

Virtual Resources Supported

This release of the host drivers supports the following number of virtual resources for each host.

I/O Resource	Maximum of Type
vNICs	<ul style="list-style-type: none"> ■ Eight standalone vNICs ■ Four pairs of bonded vNICs
vHBAs	<ul style="list-style-type: none"> ■ Four standalone vHBAs ■ Two pairs of multipath vHBAs

Boot Methods

This host driver release supports only the local boot from server's hard driver. SAN install, PXE install, and SAN/iSCSI boot are not supported.

Manual Addition of a Virtual or Physical Disk

A newly added storage disk is not automatically recognized. You must manually add the virtual or the physical disk. You need to use the `xsigo-scan -r -a` command in the Oracle VM server. This command is required only in some situations and not all.

- On storage, if the LUN is already created and associated with the vHBA WWPN before adding the vHBA on the Oracle Fabric Interconnect, then the target is already visible on the Oracle Fabric Interconnect as the vHBA comes up. In this situation, the `xsigo-scan -r -a` command is not required.
- If the vHBA is created on the Oracle Fabric Interconnect first, and then the LUN is created on storage and mapped to the vHBA, the target is not already visible. In this situation, the `xsigo-scan -r -a` command is required to make the LUN visible to Oracle VM hosts.
- Regardless of whether the LUN is configured before or after the vHBA is added to the Oracle Fabric Interconnect, anytime LUN masking is enabled to the vHBA, the `xsigo-scan -r -a` command is required to make the LUN visible to the Oracle VM hosts.

Downloading the Host Drivers

This release of host drivers supports Oracle VM 3.4.1 hosts through the following RPM file:

```
xsigo-hostdrivers-kmod-2.6.39_300.32.5.el5uek.5.0.7.LX-1.x86_64.rpm
```

Known Issues

The following known issues are for this release of Oracle Virtual Networking host drivers for Oracle VM 3.4.1.

Bug ID	Description
16338092	<p>For a PVI vNIC connected to a VM running any OS other than RHEL 6u2, a PVI vNIC will stay in up state even if the vNIC is actually set to down on the Oracle Fabric Interconnect. This problem occurs if you first create the vNIC in a PVI, then set the vNIC interface to none, set the vNIC interface back to the PVI, then attempt to set the vNIC to down.</p> <p>After this series of events, the PVI vNIC will not be set to down state unless the vNIC is in a RHEL 6u2 VM on an Oracle VM 3.4.1 server.</p>
16338065	<p>With iSCSI storage, a problem prevents the deletion of iSCSI LUNs from the array. If you attempt to delete an iSCSI LUN from the iSCSI array, after refreshing Oracle VM Manager the LUN will still be displayed and the port connected to the LUN will be put into an error state. This problem also occurs with physical NICs, so it appears that this is a problem in Oracle VM Manager. Be aware to explicitly delete an iSCSI LUN from Oracle VM Manager. This requirement exists for vNICs and physical NICs alike.</p>
16338007	<p>A problem with Oracle VM hosts prevents passing traffic (even pings) across a PVI vNIC if the MTU is set to 64000 on a RHEL 5u8 virtual machine. During testing, an MTU of 9138 K passed traffic in all cases. Using a 9 K MTU on a PVI vNIC should be used.</p>
16337950	<p>For Oracle VM hosts, a problem in the host drivers prevents a newly added LUN from being automatically recognized.</p> <p>You can workaround this problem by issuing the <code>xsigo-scan -r -a</code> command from the Oracle VM server.</p>
16335100	<p>If an event causes failover or restart of the OpenSM InfiniBand subnet manager, multicast traffic is delayed for approximately seven seconds while the failover or restart occurs.</p>
16334399	<p>Disks can be prevented from being displayed on a Linux host (or VM running in an Oracle VM server). This problem manifests in either of the following ways:</p> <ul style="list-style-type: none">■ If LUN Masks are not configured on the Oracle Fabric Interconnect and the vHBA is present, if you then create the LUN and map it to storage, the disk is not automatically displayed. In this situation, you can work around the problem by running a target rescan on the Oracle Fabric Interconnect and then running the <code>xsigo-scan -r -a</code> command on the Oracle VM host to make the LUN visible.■ If LUN Masks are configured on the Oracle Fabric Interconnect, but the vHBA is not already present. then if you create the vHBA and attach it to storage, the disk is not automatically displayed. In this situation, you can work around the problem by running a target rescan on the Oracle Fabric Interconnect and then running the <code>xsigo-scan -r -a</code> command on the Oracle VM host to make the LUN visible. Or, in cases where the vHBA is not already present and is added later, you will need to run the <code>xsigo-scan -r -a</code> command on the Oracle VM 3.4.1 host to make the LUN visible.
