

# Oracle® Enterprise Manager Ops Center

Updating Your Oracle Solaris 11 Operating System

12c Release 2 (12.2.1.0.0)

**E37103-02**

June 2014

---

This guide provides an end-to-end example for how to use Oracle Enterprise Manager Ops Center.

## Introduction

Oracle Solaris 11 uses a different update mechanism than earlier versions of the operating system. Oracle Solaris 11 uses packages to update the operating system and any non-global zones. The packages are part of an Image Packaging System (IPS) that is integrated with the ZFS file system. The ZFS integration automatically creates an alternate boot environment every time an operating system is installed or updated. You can quickly and easily create an alternate boot environment when needed, and manage existing boot environments. Creating an alternate boot environment provides a safe method of testing an update before deploying it to your live environment.

The global zone is the default operating system and has control over all the processes. A global zone always exists even when no other zones are configured. The global zone is used for systemwide administrative control. Non-global zones, or simply zones, are configured inside the global zone.

You can patch zones that run on a supported configuration. When you update the global zone or the Oracle Solaris 11 operating system, depending on the IPS package setting, the non-global zones are also updated. If the package setting is to update the non-global zones, then the non-global zones are also updated.

A boot environment is created, whenever you update or make any changes to Oracle Solaris 11 operating system.

This example describes how you can update a boot environment by creating several profiles and plans and include them in a larger deployment plan to consistently apply updates to Oracle Solaris 11 operating system.

You will create a boot environment profile for Oracle Solaris 11 operating system, a profile for updating Oracle Solaris 11, create a deployment plan for updating Oracle Solaris 11 operating system, and then apply the deployment plan.

See [Related Articles and Resources](#) for links to related information and articles.

## What You Will Need

You will need the following to update an Oracle Solaris 11 operating system:

- The operating system that is being updated must be agent-managed.
- Enterprise Controller and a Proxy Controller installed on an Oracle Solaris 11 operating system.

- Oracle Solaris 11 Software Update Library must have latest packages.
- An Update Admin and a Plan/Profile Admin role to create a Profile.

## Updating an Oracle Solaris 11 Operating System

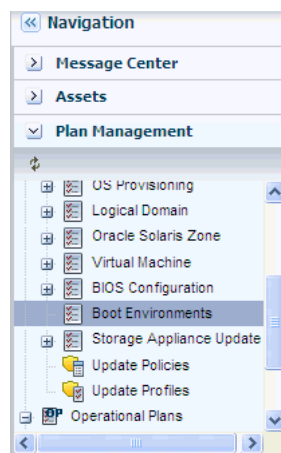

Complete the following actions to update your Oracle Solaris 11 operating system:

- [Create a Profile for Boot Environment for Oracle Solaris11 Operating System](#)
- [Create a Profile for Updating Oracle Solaris 11 Operating System](#)
- [Create a Deployment Plan for Updating Oracle Solaris 11 Operating System](#)
- [Apply the Deployment Plan for Updating Oracle Solaris 11 Operating System](#)

### Create a Profile for Boot Environment for Oracle Solaris11 Operating System

The steps to create a profile for boot environment for Oracle Solaris 11 operating system are:

1. Click **Plan Management**, then expand **Profiles and Policies**. Click **Boot Environments** option.

2. Click **Create Profile** from the Actions pane to start the **Create Profile for Boot Environments** wizard. Enter the following information.
  - Name: Enter the name of the profile
  - Description: (Optional) Enter the description of the profile
  - Subtype: Select Solaris 11 for the subtype

**Identify Profile** \* Indicates Required Field

\* **Name:** BE\_Profile11

**Description:** BE\_Profile11

\* **Subtype:** Subtype  
Solaris 10  
Solaris 11

**Target Type:** Target Type  
Oracle Solaris 11

3. Click **Next** to specify the boot environment parameters. Enter the following information.
  - **BE Policy:** Select Create a New Boot Environment when needed
  - **Boot Environment Name:** Select Auto-generate a unique Boot Environment name.

**Specify Boot Environment parameters**

Specify the name of an existing Boot Environment and any options to be executed in the target host(s).

**Profile Subtype :** Solaris 11

**BE Policy:**

Create a new Boot Environment when needed

Always create a new Boot Environment

Prohibit creation of a new Boot Environment. Fail the job if new BE is required.

Activate Boot Environment and reboot on job completion.

**Boot Environment Name :**

Auto-generate a unique Boot Environment name

Use specific Boot Environment Name:

Click **Next** to display the summary for the boot environment profile.

4. Click **Finish** to create the profile for boot environment for Oracle Solaris 11 operating system.

**Summary**

Review the properties of the profile. Click Finish to save the profile.

**Name:** BE\_Profile11

**Description:** BE\_Profile11

**Target Type:** Oracle Solaris 11

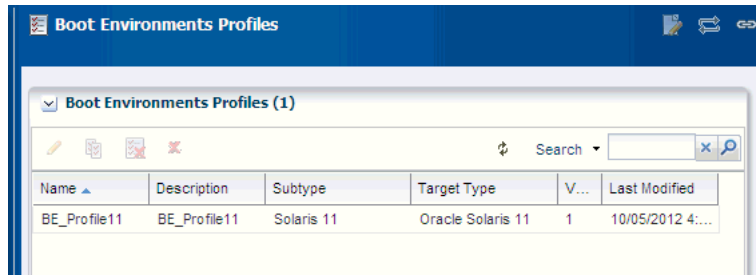

**Profile Sub Type:** Solaris\_11

**Boot Environment Policy:** AS\_NEEDED

**Activate Boot Environment and reboot on job completion:** false

**Use specific Boot Environment Name:**

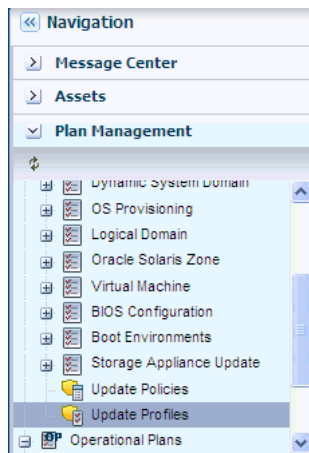

After the profile is created, you can view the profile for the boot environment for Oracle Solaris 11 operating system in the center pane.

## Create a Profile for Updating Oracle Solaris 11 Operating System

The steps to create a profile for updating an Oracle Solaris 11 operating system are:

1. Click **Plan Management** in the Navigation pane.
2. Click **Update Profiles** under **Profiles and Policies** hierarchy.

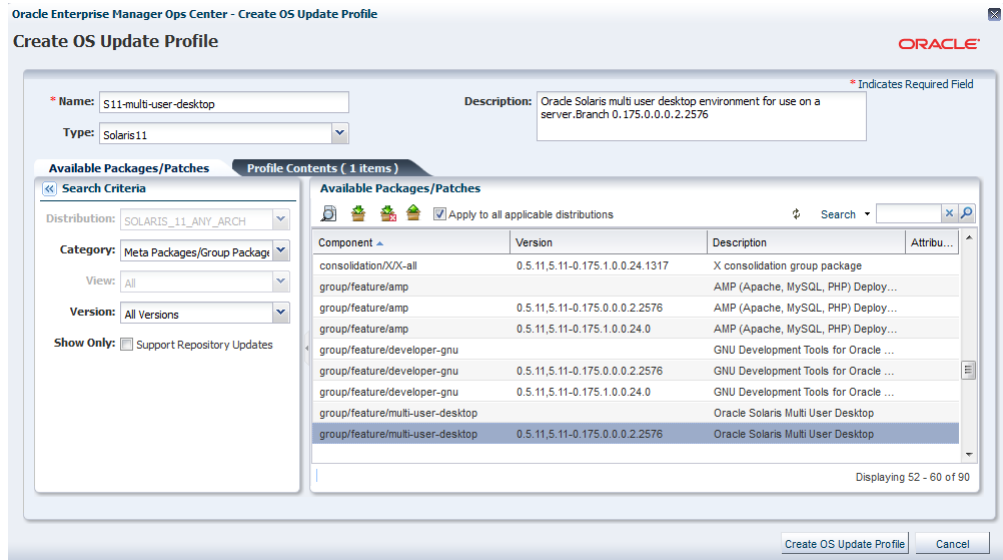

3. Click **New Profile** in the Actions pane to start the **Create OS Update Profile** wizard. Enter the following information.

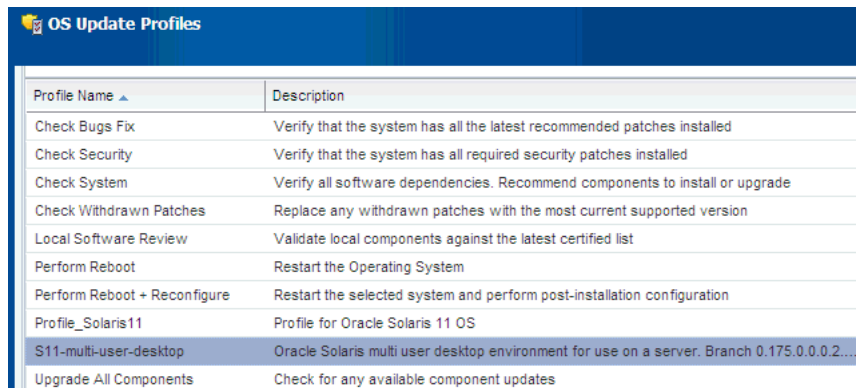

- Name: Enter the name of the profile
- Type: Enter the type as Solaris 11
- Description: (Optional) Enter the description of the profile

Use the Search Criteria to search the category you want to upgrade. Click Upgrade icon.

Click **Create OS Update Profile** to create the profile.

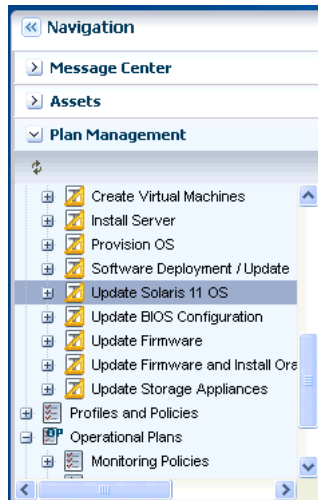

After the profile is created, you can view the profile in the center pane.

## Create a Deployment Plan for Updating Oracle Solaris 11 Operating System

The steps to create a deployment plan for updating an Oracle Solaris 11 operating system are.

1. In the Navigation pane, under **Plan Management**, expand **Deployment Plans**. Click **Update Solaris 11 OS** option.

2. Click **Create Plan from Template** in the Actions Pane.

3. Enter a plan name and the plan description. Select the Failure Policy as Stop at failure.

\* Plan Name:

Description:

Failure Policy:  Stop at failure  Complete as much as possible

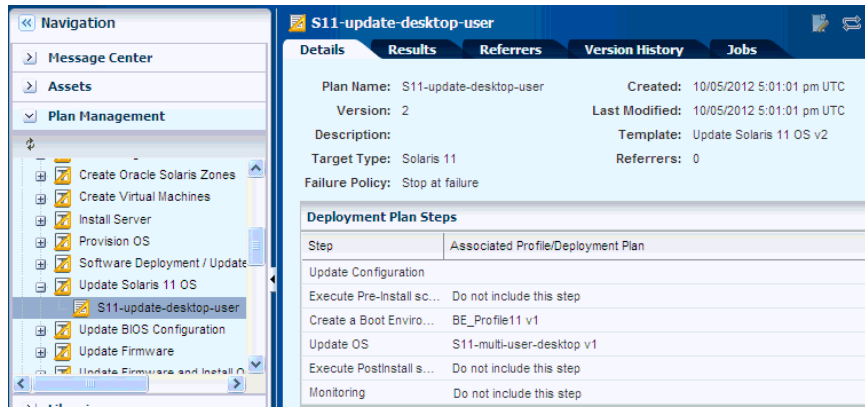

Target Type: Solaris 11

Template Name: Solaris 11 Update

4. Each step has a drop-down menu of available actions in the Associated Profiles / Deployment Plan field. On the Update OS step, select the profile that you have just defined, and then click **Save**.

Step	Profile/Plan Type	Associated Profile/Deployment Plan
Update Configuration	Not Required	
Pre Install Script	Operational Profile	Do not include this step
Create A Boot Environment	Boot Environment Profile	BE_Profile11 v1 (Solaris 11)
Update OS	Software Update Profile	S11-multi-user-desktop v1
PostInstallScript	Operational Profile	Do not include this step
Monitoring	Monitoring Policy	Do not include this step

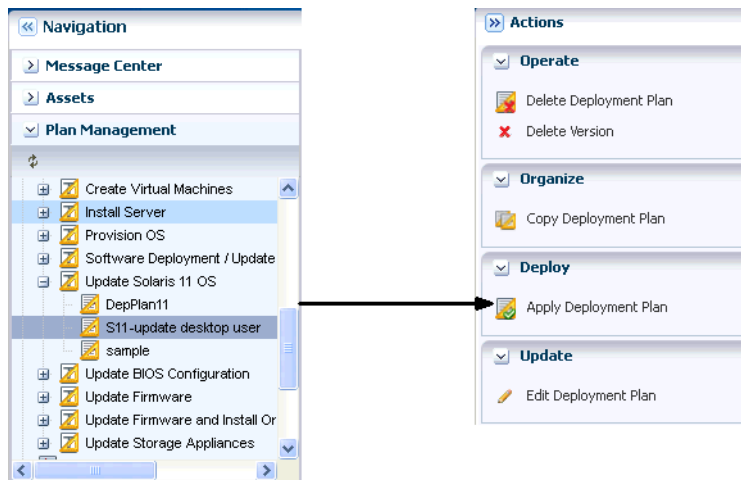

5. The created deployment plan now appears under the Deployment Plan branch of Plan Management drawer of Navigation pane.

## Apply the Deployment Plan for Updating Oracle Solaris 11 Operating System

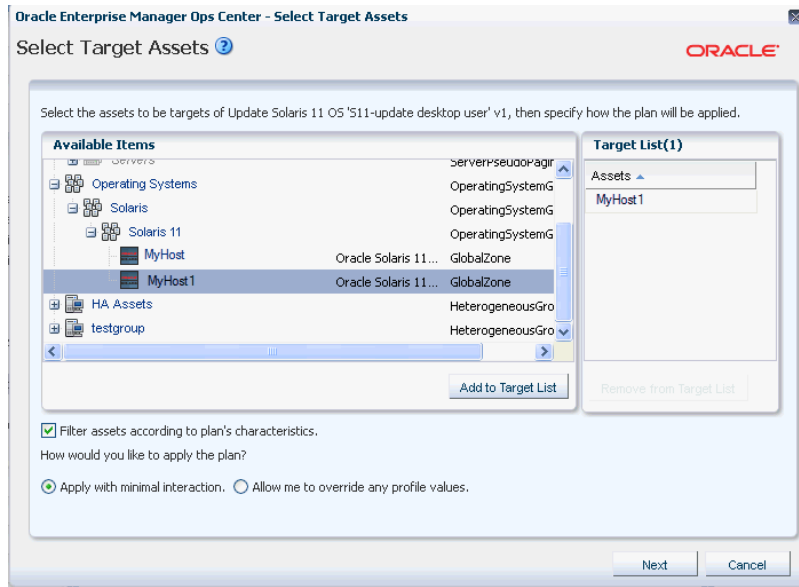

After you create the deployment plan, you must select the target asset to run the deployment plan.

1. Click **Plan Management**, then expand **Deployment plans**. Click **Update Solaris 11 OS**.
2. Select the deployment plan that you just created and click **Apply Deployment Plan** in the Actions pane.

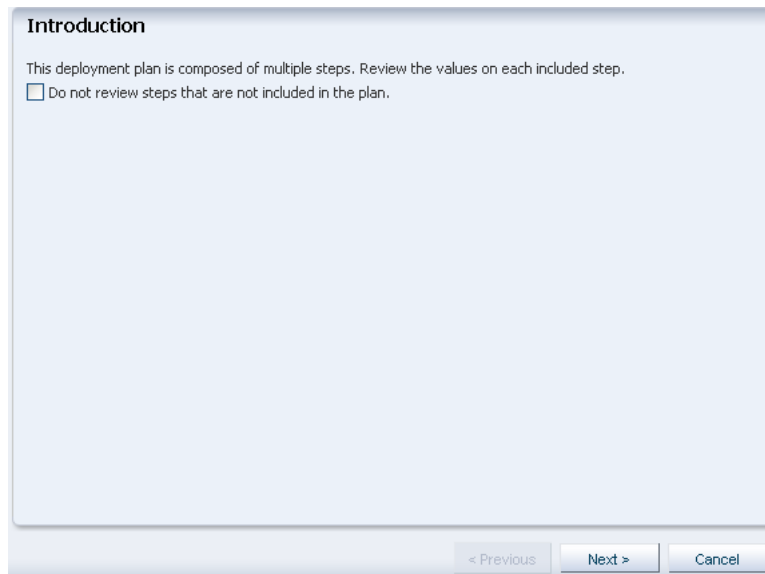

The Select Target Assets window is displayed.

3. Select the target assets and click Add to Target List. Select Apply the plan with minimal interaction and click **Next**.

4. Do not select the check box for Do not review steps that are not included in the plan. Click **Next**.

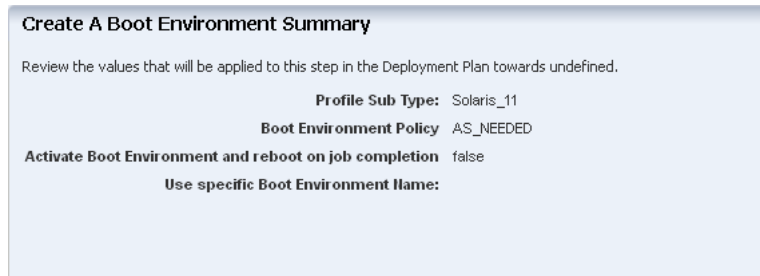

5. For the Global Update Settings window, select Perform Update as the Execution Mode and click **Next** to skip the Pre Install Script.

6. Click **Next** to display the Create a Boot Environment Summary.

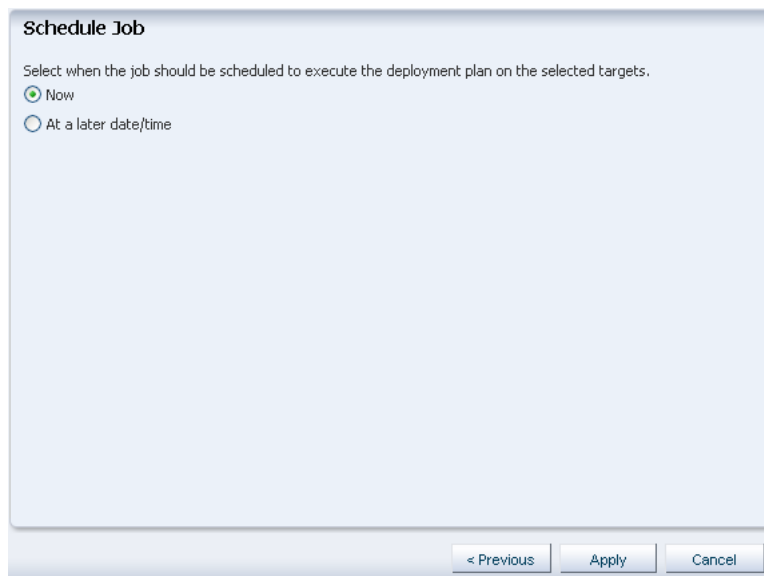

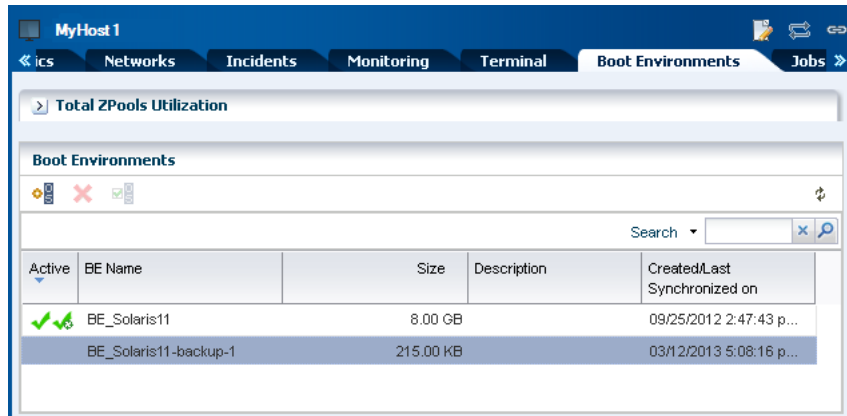

7. Click **Next** to view the Update OS Summary.

8. Click **Next** to Schedule the job. Select **Now** to execute the deployment plan on the selected target and click **Apply**.

The job runs to execute the deployment plan.  
You can view the boot environment in the center pane.

## What's Next?

You can update an alternate boot environment by deploying a Software Deployment / Update deployment plan and selecting the alternate boot environment as the target.
