

Oracle® Enterprise Manager Ops Center

Update Oracle Solaris 10 OS Workflow

12c Release 1 (12.1.2.0.0)

E37545-01

November 2012

This workflow provides an end-to-end example for how to use Oracle Enterprise Manager Ops Center.

Introduction

Workflows are divided into two categories: Deploy and Operate. Each workflow is a compilation of several examples.

This workflow is an example of how to use Oracle Enterprise Manager Ops Center to update Oracle Solaris 10 operating systems. You can update the patches and packages of the operating system to the latest recommended updates, security and bug fixes.

You can create update profiles and policies that help to update the operating systems consistently and automate the process. Ensure to set up the storage libraries to download the patches and packages from the Knowledge Base.

You can select to update the Alternate Boot Environment (ABE) of the OS. This helps to check system stability before updating the production environments. Also, you can simulate the updating job to download the patches and packages from the Knowledge Base and install the patches at a later time.

Required Permissions and Roles

The following permissions and roles are required to update the Oracle Solaris 10 operating system:

- Update Admin
 - Discover and manage the assets
- Plan/Profile Admin
 - Create and manage the profiles and plans
- Update Simulation Admin and Update Permission
 - Create OS update job to deploy or update software

Workflow

This workflow lists the prerequisites and captures the tasks to be executed for updating Oracle Solaris 10 OS.

[Figure 1](#) shows the tasks that must be performed for updating Oracle Solaris 10 OS.
