## Index

---

---

# Preface

Oracle Business Intelligence Applications is a comprehensive suite of prebuilt solutions that deliver pervasive intelligence across an organization, empowering users at all levels - from front line operational users to senior management - with the key information they need to maximize effectiveness. Intuitive and role-based, these solutions transform and integrate data from a range of enterprise sources and corporate data warehouses into actionable insight that enables more effective actions, decisions, and processes.

Oracle BI Applications is built on Oracle Business Intelligence Suite Enterprise Edition (Oracle BI EE), a comprehensive set of enterprise business intelligence tools and infrastructure, including a scalable and efficient query and analysis server, an ad-hoc query and analysis tool, interactive dashboards, proactive intelligence and alerts, and an enterprise reporting engine.

## Audience

This document is intended for BI managers and implementors of Oracle BI Applications who are responsible for managing Oracle BI Applications security. It contains information describing Oracle BI Applications security and its preconfigured implementation.

## Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

### Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit

<http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

## Related Documentation

See the Oracle Business Intelligence Applications documentation library for a list of related Oracle Business Intelligence Applications documents: [http://docs.oracle.com/cd/E38317\\_01/index.htm](http://docs.oracle.com/cd/E38317_01/index.htm)

## Conventions

The following text conventions are used in this document:

<b>Convention</b>	<b>Meaning</b>
<b>boldface</b>	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

## What's New in This Guide

Oracle BI Applications 11.1.1.8 is a new release. This chapter describes features in Oracle Business Intelligence Applications 11g Release 1 (11.1.1.8.0) documented in this guide, *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Applications*, that may be of note.

### Notable Features in Oracle BI Applications Documented in This Guide

New features in Oracle BI Applications 11g Release 1 (11.1.1.8.0) that are documented in this guide include the following:

#### **Functional Setup Manager Security Tasks**

Security for different offerings in Oracle BI Applications is configured using guidance in informational Functional Setup Manager tasks.

---

---

# Integrating Security for Oracle BI Applications

This chapter is for security administrators. It describes the security features in Oracle Business Intelligence Applications.

This chapter contains the following topics:

- [Section 1.1, "Introduction"](#)
- [Section 1.2, "Extending Security in Oracle BI Applications"](#)
- [Section 1.3, "Using Oracle BI Applications Functional Setup Manager Informational Tasks to Set Up Security"](#)

## 1.1 Introduction

This section contains the following topics:

[Section 1.1.1, "High Level Steps for Setting Up Security in Oracle BI Applications"](#)

[Section 1.1.2, "What Tools Configure Security in Oracle Business Intelligence Applications?"](#)

[Section 1.1.3, "What Security Levels Does Oracle BI Applications Use?"](#)

[Section 1.1.4, "About Duty Roles in Oracle BI Applications"](#)

[Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#)

[Section 1.1.6, "Checking Oracle BI Applications User Responsibilities"](#)

[Section 1.1.7, "About Managing Presentation Services Catalog Privileges in Oracle Business Intelligence"](#)

[Section 1.1.8, "About Object-Level Security"](#)

[Section 1.1.9, "About Data-Level Security"](#)

[Section 1.1.10, "About User-Level Security"](#)

[Section 1.1.11, "Security Overview of Configuration Manager and Functional Setup Manager"](#)

[Section 1.1.12, "About Permissions in Configuration Manager and Functional Setup Manager"](#)

[Section 1.1.13, "Additional Sources of Information About Oracle BI Applications Security"](#)

## 1.1.1 High Level Steps for Setting Up Security in Oracle BI Applications

To set up security in Oracle BI Applications, you must do the following:

1. Read the rest of Section 2.1, "Introduction" to get an overview of security concepts, tools, and terminology.

For background information about security in the Oracle Business Intelligence Enterprise Edition platform, see *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*.

2. Learn about duty roles and how they control user privileges. For more information, see [Section 1.1.4, "About Duty Roles in Oracle BI Applications"](#).
3. The Oracle BI Applications provisioning process creates default BI duty roles and groups.
4. Define users, groups, and security mappings. For more information, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#)
5. Use Functional Setup Manager tasks for your module to properly set up security. For more information, see [Section 1.3, "Using Oracle BI Applications Functional Setup Manager Informational Tasks to Set Up Security"](#)

## 1.1.2 What Tools Configure Security in Oracle Business Intelligence Applications?

Security settings for Oracle Business Intelligence Enterprise Edition are made in the following Oracle Business Intelligence components:

- Oracle BI Applications Functional Setup Manager  
Use Oracle BI Applications Functional Setup Manager informational tasks to set up security for Oracle BI Applications offerings and modules. For detailed information, see *Oracle Fusion Middleware Configuration Guide for Oracle Business Intelligence Applications*.
- Oracle BI Administration Tool  
Use the Oracle BI Administration Tool to perform tasks such as setting permissions for business models, tables, columns, and subject areas; specifying filters to limit data accessibility; and setting authentication options. For detailed information, see *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition*.
- Oracle BI Presentation Services Administration  
Use Oracle BI Presentation Services Administration to perform tasks such as setting permissions to Presentation Catalog objects, including dashboards and dashboard pages. For detailed information, see *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*.
- Oracle Enterprise Manager Fusion Middleware Control  
Use Fusion Middleware Control to manage the policy store, duty roles, and permissions for determining functional access. For detailed information, see *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*.
- Oracle WebLogic Server Administration Console  
Use the Administration Console to manage users and groups in the embedded Oracle WebLogic Server LDAP. You can also use the Administration Console to manage security realms, and to configure alternative authentication providers. For detailed information, see *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*.

### 1.1.3 What Security Levels Does Oracle BI Applications Use?

Security in Oracle BI Applications can be classified broadly into the following three levels:

- **Object-level security.** Object-level security controls the visibility to business logical objects based on a user's role. You can set up object-level security for metadata repository objects, such as business models and subject areas, and for Web objects, such as dashboards and dashboard pages, which are defined in the Presentation Catalog. For more information, see [Section 1.1.8, "About Object-Level Security."](#)
- **Data-level security.** Data-level security controls the visibility of data (content rendered in subject areas, dashboards, Oracle BI Answers, and so on) based on the user's association to data in the transactional system. For more information, see [Section 1.1.9, "About Data-Level Security."](#)
- **User-level security (authentication of users).** User-level security refers to authentication and confirmation of the identity of a user based on the credentials provided. For more information, see [Section 1.1.10, "About User-Level Security."](#)

### 1.1.4 About Duty Roles in Oracle BI Applications

Object-level and data-level security are implemented in Oracle BI Applications using duty roles. Duty roles define a set of permissions granted to a user or group. Duty roles are typically related to either data or object security. For example, the Oracle BI Applications repository (OracleBIAnalyticsApps.rpd) uses the following duty roles:

- The *HR Org-based Security* duty role is used to control access to human resources data at the data security level.
- The *Human Resources Analyst* duty role is used to control Presentation layer object visibility for the Human Resources Analyst role at the object security level.

To view pre-configured duty roles in the RPD, select **Manage**, then select **Identity** in the Oracle BI Administration Tool. Duty roles are visible in the Identity Manager dialog in online mode. In offline mode, only duty roles that have had permissions, filters, or query limits set for them appear. For this reason, it is recommended that when you work with data access security in the Oracle BI Applications repository, you use the Administration Tool in online mode.

For detailed information about setting up and managing duty roles, see *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*. For information about using the Oracle BI Administration Tool Identity Manager to apply data access security in the Oracle BI repository, see *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition*.

The standard hierarchical structure of duty roles and users in Oracle BI Applications is typically the following: data security duty role, then object security duty role, then group (also called enterprise role), then user. It is a best practice to use this structure when setting up security.

The remainder of this topic describes how Oracle BI Applications controls user access using roles, and contains the following section:

#### 1.1.4.1 Viewing, Creating, and Editing Duty Roles

An administrator can view, modify, and create duty roles in the Oracle Enterprise Manager Fusion Middleware Control. To view roles:

1. Log in to Oracle Enterprise Manager Fusion Middleware Control as an administrator.
2. Expand Business Intelligence, right-click coreapplication, and select Security and then Application Roles.

A list of the configured duty roles is displayed. By default, Oracle BI includes four duty roles: BISystem, BIAdministrator, BIAuthor, and BIConsumer. When BI Applications are installed, additional pre-defined duty roles are created that map to operational application responsibilities, so the list of pre-configured duty roles depends on your installation. These duty roles have pre-defined permissions for the repository objects, and pre-defined data filters. Permissions for the roles are defined in the BI Administration Tool.

3. Click Create to create a new duty role and map it to LDAP users and groups; note that each duty role has a corresponding LDAP group to which it is assigned. To edit an duty role's mappings, select it in the list and click Edit.

#### 1.1.4.2 Authorizing User Access Using Roles

Authorization for Oracle BI Applications is controlled by security policies (Oracle BI Applications privileges) defined for users using a role-based model.

Every Oracle Applications user is hired by their company to perform a role in the organization, for example, Payroll Manager or Accounts Payable Manager. An Oracle Applications user is granted a role and thus inherits one or more associated privileges that were granted to the role.

It is possible to grant multiple duty roles to a user; however Oracle recommends that job roles, also known as enterprise roles and groups, are defined in such a way that need to grant multiple duty roles to user should be minimized.

Note that in cases where Oracle Business Intelligence Enterprise Edition test servers are configured against a test LDAP, and the production servers are configured against the corporate LDAP, but the test LDAP is *not* a fan-out copy of the corporate LDAP directory, a refresh of the LDAP GUIDs is needed for the system to function correctly. See "Refreshing User GUIDs" in *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition* for more information. Note that while LDAP is required for Fusion environments, it is optional for other source applications.

### 1.1.5 How to Define New Groups and Mappings for Users and BI Roles

---

---

**Note:** The following terms are synonymous:

- Enterprise Role
  - Job Role
  - Group
- 
- 

Oracle BI Applications implements data and object security using a set of BI duty roles. A separate set of roles are used to implement BI object security and BI data security.

To simplify BI duty role provisioning to application users, Oracle BI Applications also provides a BI duty role hierarchy of the roles used in BI object security and BI data security. The BI duty role hierarchy is structured in such a way that for each application area, typically a single BI duty role encapsulates the BI object and data

security role hierarchy that is built using multiple other BI duty roles. This single BI duty role can then be provisioned to the end user to enable access to a specific BI application.

For example, the BI duty role 'Fixed Asset Accounting Manager EBS' provides the encapsulation for EBS Fixed Asset Accounting security. The end user just needs to be provisioned with this single BI duty role – there is no need to separately provision underlying data/object security BI duty roles for this application to the user.

There are two ways to provision a BI duty role to a BI end user:

- Use Fusion Middleware (FMW) to provision a BI duty role to an end user, as described in [Section 1.1.5.1, "How to Use Fusion Middleware to Provision an End User"](#).

**Note:** You use this provisioning method if you are using Fusion Middleware to authenticate the user.

- Use an RPD initialization block to associate a BI duty role to an end user, as described in [Section 1.1.5.2, "How to Use a Repository Initialization Block to Provision an End User"](#).

**Note:** You can only use this provisioning method if you are not using Fusion Middleware to authenticate the user.

### 1.1.5.1 How to Use Fusion Middleware to Provision an End User

To use the FMW provisioning for BI duty role, the users and enterprise roles must be present in a LDAP and that LDAP should have been configured as the source for authentication for BI.

In this approach, you can use your existing enterprise roles to associate a BI duty role to an end user. If your installation has existing enterprise roles that you wish to use for BI security; you may want to consider using this approach.

For example, assume that an installation LDAP has enterprise role "ABC Corp Americas Account Manager", the users and enterprise roles are present in this LDAP, and this LDAP is used as source for authentication for the BI installation. Use Enterprise Manager (EM) of the BI instance and make the enterprise role "ABC Corp Americas Account Manager" a member of the BI duty role "Fixed Asset Accounting Manager EBS". After this association, all users that are members of enterprise role "ABC Corp Americas Account Manager" will inherit BI duty role "Fixed Asset Accounting Manager EBS".

Note that in this example, enterprise role "ABC Corp Americas Account Manager" is a custom enterprise role. Enterprise roles do not have to be provided by Oracle.

Oracle BI Applications also provides a sample set of default enterprise roles (also called groups) that inherit the BI duty role hierarchy. For example, BI Applications provide enterprise role "Fixed Asset Accounting Manager EBS", which is member of BI duty role "Fixed Asset Accounting Manager EBS". You can associate this enterprise role to your BI users. Any users made members of enterprise role "Fixed Asset Accounting Manager EBS" will automatically inherit BI duty role "Fixed Asset Accounting Manager EBS" and will have the correct security for Fixed Assets Accounting reporting for EBS. This association can be done in following ways:

- When you install BI Applications, the installation provides a default LDAP using Weblogic Embedded LDAP. If you plan to use this LDAP as the LDAP for users and enterprise roles, then you can upload all default enterprise roles provided by BI Applications. These enterprise roles are provided as a .ldif file and once the LDIF file is uploaded to Weblogic Embedded LDAP, then enterprise roles like

"Fixed Asset Accounting Manager EBS" are available in the embedded LDAP. You can define your BI users in this LDAP and associate the users to one or more enterprise roles. Creation of users and association of users to enterprise roles in Weblogic Embedded LDAP is done using Weblogic Administration Console.

- If your installation has an existing LDAP for authentication, and you do not wish to use the Weblogic Embedded LDAP that comes with the installation, then you can add the enterprise role "Fixed Asset Accounting Manager EBS" to your LDAP and associate this enterprise role with existing users. Any users made members of enterprise role "Fixed Asset Accounting Manager EBS" in your LDAP inherit BI duty role "Fixed Asset Accounting Manager EBS" and will have the correct security for this application. Addition of enterprise roles to your LDAP and association of enterprise roles to user should be done using native LDAP tools.

The FMW approach to BI duty role user association can be used only if Fusion Middleware is also used for the user authentication. If the user is being authenticated by a method other than Fusion Middleware Authentication, then Fusion Middleware cannot be used to associate a BI duty role to a user. For example, if a user is being authenticated using initialization block authentication, then the user association with a BI duty role cannot be done using Fusion Middleware.

### 1.1.5.2 How to Use a Repository Initialization Block to Provision an End User

Oracle BI Applications provides an initialization block named "Authorization" that queries the roles/responsibilities associated to the user in the source system and populates an Oracle BI Enterprise Edition variable called GROUP. Oracle BI EE associates BI duty roles to the users that are populated in the GROUP variable.

The initialization block approach to BI duty role association can be used only if user is not being authenticated using Fusion Middleware.

For example, to associate BI duty role "Fixed Asset Accounting Manager EBS" to a user using the initialization block approach, perform the following steps:

1. In the Oracle BI Administration Tool, enable the "Authorization" initialization block if disabled.
2. Update the initialization block SQL to use the EBS SQL used to populate users' EBS responsibilities. Oracle BI Applications provides different SQL statements for E-Business Suite, Siebel, and PeopleSoft for this initialization block.
3. Create a responsibility named "Fixed Asset Accounting Manager EBS" in the E-Business Suite source system and assign it to the user.
4. When the initialization block is run for the user, the GROUP variable is populated with the value "Fixed Asset Accounting Manager EBS". The BI Server will then assign BI duty role "Fixed Asset Accounting Manager EBS" to the user, in effect assigning the BI duty role of same name. If the user has multiple responsibilities in source system, the GROUP variable will contain name of all the responsibilities.

Oracle BI EE assign BI duty roles that match any names contained in the GROUP variable. If one of the names within GROUP variable does not match any BI duty role Oracle BI EE will ignore that name. For example, if the GROUP variable contains the value (A, B, C, D) and if BI duty roles of names A, B and C exist, the user will be assigned BI duty roles (A, B, C). The value D will be ignored.

## 1.1.6 Checking Oracle BI Applications User Responsibilities

Pre-configured duty roles match responsibilities and roles in source operational applications, so that after authentication the correct roles can be applied. An administrator can check a user's responsibilities in the following ways:

- In the Siebel or Oracle EBS operational applications, go to the Responsibilities view.
- In PeopleSoft applications, go to the Roles view to check a user's roles.
- In JD Edwards EnterpriseOne applications, go to the User Profiles application (P0092) to check a user's roles.
- Individual users can view the list of duty roles to which they are assigned. In the Oracle BI application, click **Signed In As *username*** and select **My Account**. Then, click the Roles and Catalog Groups tab to view the duty roles. In Presentation Services, duty roles are used to control the ability to perform actions (privileges) within Presentation Services.

For more information, refer to the system administrator for your source system.

## 1.1.7 About Managing Presentation Services Catalog Privileges in Oracle Business Intelligence

When you add a new catalog privilege to an duty role in Oracle BI Presentation Services, the change is not immediately reflected in the Oracle Business Intelligence environment. In order to register the catalog privilege, both the administrator and the user must perform the following tasks:

1. The Oracle BI administrator must reload the Oracle BI Server metadata through Oracle BI Presentation Services. To reload the metadata, in Oracle Business Intelligence Answers, select **Administration**, and then click **Reload Files and Metadata**.

For more information on managing Presentation Services catalog privileges, see *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*.

2. Users belonging to that duty role must log out from the Oracle BI application (or from Siebel or Oracle EBS operational application if the user is looking at Oracle BI dashboards using an embedded application) and then log in again.

## 1.1.8 About Object-Level Security

This section describes the object-level security features in Oracle BI Applications. It contains the following topics:

- [Section 1.1.8.1, "Metadata Object-Level Security in the RPD"](#)
- [Section 1.1.8.2, "Metadata Object-Level Security in Presentation Services"](#)

### 1.1.8.1 Metadata Object-Level Security in the RPD

Duty roles control access to metadata objects, such as subject areas, tables and columns. For example, users in a particular department can view only the subject areas that belong to their department.

Metadata object security is configured in the Oracle BI Repository, using the Oracle BI Administration Tool. The Everyone duty role is denied access to each of the subject

areas. Each subject area is configured to give explicit read access to selected related responsibilities. This access can be extended to tables and columns.

---

---

**Note:** By default in Oracle BI Applications, only permissions at the subject area level have been configured.

---

---

---

---

**Note:** The Siebel Communications and Financial Analytics industry applications have tables and columns that are industry-specific, and, therefore, hidden from other duty roles.

---

---

Oracle Business Intelligence supports hierarchies within duty roles. In the policy store, there are certain duty roles that are parent duty roles, which define the behavior of all the child duty roles. Inheritance is used to let permissions ripple through to child duty roles. For more information about parent duty roles and the pre-built duty role hierarchies, refer to the list of groups, duty roles, initialization blocks, and security policies published on My Oracle Support (ID 1333454.1) as a document named 'Oracle Business Intelligence Applications Duty Role Security Assignments for Oracle Fusion Applications'.

### 1.1.8.2 Metadata Object-Level Security in Presentation Services

Access to Oracle BI Presentation Services objects, such as dashboards, pages, reports, and Web folders, are controlled using duty roles. For detailed information about managing object-level security in Presentation Services, see *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*.

## 1.1.9 About Data-Level Security

This section describes the data-level security features in Oracle BI Applications. It contains the following topics:

- [Section 1.1.9.1, "Overview of Data-Level Security in Oracle BI Applications"](#)
- [Section 1.1.9.2, "Implementing Data-Level Security in the Oracle BI Repository"](#)
- [Section 1.1.9.3, "Data-Level Security Duty Roles in Oracle BI Applications"](#)
- [Section 1.1.9.4, "About Data-Level Security Design in Oracle BI Applications"](#)

### 1.1.9.1 Overview of Data-Level Security in Oracle BI Applications

Data-level security defines what a user in an OLTP application can access inside a report. The same report, when run by two different users, can bring up different data. This is similar to how the My Opportunities view in an operational application displays different data for different users. However, the structure of the report is the same for all users, unless a user does not have access to the report subject area, in which case the report displays an error.

For information about the data security policies that are supported in Oracle BI Applications, refer to the list published on My Oracle Support (ID 1333454.1) as a document named 'Oracle Business Intelligence Applications Duty Role Security Assignments for Oracle Fusion Applications'. During installation and configuration, you must make sure the correct duty roles and initialization blocks are set up for your environment.

For more information about the use of initialization blocks in Oracle Business Intelligence, see *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition* and *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*.

### 1.1.9.2 Implementing Data-Level Security in the Oracle BI Repository

Data-level security in Oracle BI Applications is implemented in three major steps, as described below. For instructions on performing these steps, see *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition*.

1. Set up initialization blocks that obtain specific security-related information when a user logs in, for example, the user's hierarchy level in the organization hierarchy, or the user's responsibilities. Initialization blocks obtain DimensionIds for each user session in order to restrict row-level access to factual or dimensional data.
2. Set up the joins to the appropriate security tables in the metadata physical and logical layers.

For detailed information about this security feature, see *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition*.

3. Set up the data filters for each duty role on each logical table that needs to be secured.

For detailed information about this security feature, see *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition*.

### 1.1.9.3 Data-Level Security Duty Roles in Oracle BI Applications

There are many pre-built duty roles used in Oracle BI Applications. Some duty roles share the same name as responsibilities for Siebel CRM and Oracle EBS applications and roles for PeopleSoft applications. A user who has any of these responsibilities or roles in the source application will be a member of the corresponding duty role automatically upon logging in to the Oracle BI application. Other duty roles based on similar objects in the source application can be added to the policy store, and then added to these data-level duty roles, if you need the corresponding data filters to apply to any additional group of users. For details about the duty roles that are supported in Oracle BI Applications, refer to the list of groups, duty roles, initialization blocks, and security policies published on My Oracle Support (ID 1333454.1) as a document named 'Oracle Business Intelligence Applications Duty Role Security Assignments for Oracle Fusion Applications'.

### 1.1.9.4 About Data-Level Security Design in Oracle BI Applications

As discussed in the preceding sections, Oracle BI Applications maintains data-level security duty roles that are assigned dynamically to every user at the session level. Each duty role has a set of filters associated with it that determines the data each user is allowed to see. A user is assigned an duty role through the Authorization initialization block.

The data security design has the following features:

- **Drill down.** The user can drill down on a particular position in the position hierarchy to slice the data by the next position level in the hierarchy. For example, if the initial report is defined as:

```
select Top Level Position, Revenue from RevenueStar
```

then by drilling down on a value of MyPosition in the TopLevelPosition hierarchy, the report will become:

```
Select Level8 Position, Revenue, where TopLevelPosition = 'MyPosition'
```

- **Personalized reports.** Users at different levels of the Position hierarchy can use the same Position-based reports but with each user seeing the data corresponding to his or her level. In such reports, Position is a dynamic column.

For example, if a report is defined as:

```
select Position, Revenue from RevenueStar
```

the logical query for the user at the top level of the hierarchy will be:

```
select Top Level Position, Revenue from RevenueStar
```

The logical query for the user at the next level of the hierarchy will be:

```
select Level8 Position, Revenue from RevenueStar
```

- **CURRENT Position hierarchy columns.** Position hierarchy columns with the prefix CURRENT contain the Current Position hierarchy at any point of time. This feature allows users to see the same data associated with the employee holding the Current Employee position at the time the report runs. This type of Analysis is called As Is.
- **Additional Position hierarchy columns.** The columns EMP\_LOGIN and EMPLOYEE\_FULL\_NAME are used at every level of the Position hierarchy to store additional information about an employee holding a particular position. In the Logical layer, the Employee path and Position path are two drill down paths under the Position hierarchy that allow the user to drill down on a position to see all positions under it. It also allows an employee to see all the employees reporting to him or her.

### 1.1.10 About User-Level Security

User security concerns the authentication and confirmation of the identity of the user based on the credentials provided, such as username and password. By default, user-level security is set up in the embedded Oracle WebLogic Server LDAP server and policy store in Oracle Business Intelligence Enterprise Edition. For more information, see *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*.

### 1.1.11 Security Overview of Configuration Manager and Functional Setup Manager

To access Oracle BI Applications Configuration Manager or Functional Setup Manager (for Oracle BI Applications), a User must be assigned to a Group/Enterprise Role/Job Role that is associated with one of the following Duty Roles:

- **BI Applications Administrator Duty (BIA\_ADMINISTRATOR\_DUTY)**  
Users with the BI Applications Administrator duty role have access to all Configuration Manager User Interfaces and all Functional Setup Manager User Interfaces. For Configuration Manager, only users with this duty role are able to perform system setup tasks.
- **BI Applications Implementation Manager (BIA\_IMPLEMENTATION\_MANAGER\_DUTY)**

Users with the BI Applications Implementation Manager duty role have access to Configuration Manager Overview page and the Export and Import of Setup Data. In Functional Setup Manager, these users have access to Configure Offerings and Manage Implementation Projects User Interfaces but cannot execute a setup task.

- BI Applications Functional Developer (BIA\_FUNCTIONAL\_DEVELOPER\_DUTY)

Users with the BI Applications Functional Developer duty role have access to Configuration Manager User Interfaces, except for the System Setup screens. In Functional Setup Manager, these users have access to the list of functional setup tasks assigned to them and have the ability to execute the setup tasks.

- BI Applications Load Plan Developer (BIA\_LOAD\_PLAN\_DEVELOPER\_DUTY)

Users with the BI Applications Load Plan Developer duty role have access to the Load Plans page, where they can create, edit, delete, generate, execute and monitor load plans. Users with this role can view and edit fact groups, data load parameters, domains mappings, and schedules associated with a load plan.

- BI Applications Load Plan Operator (BIA\_LOAD\_PLAN\_OPERATOR\_DUTY)

Users with the BI Applications Load Plan Operator duty role have limited access to the Load Plans page, where they can view the generation status and execution status details of load plans but are not able to modify them.

## 1.1.12 About Permissions in Configuration Manager and Functional Setup Manager

Security for different offerings in Oracle BI Applications is configured using guidance in informational Functional Setup Manager tasks. For details about the informational tasks related to your offering, see [Appendix A, "Configuring Security."](#)

This section describes permissions in Configuration Manager and Functional Setup Manager, and contains the following sections.

- [Section 1.1.12.1, "About Permissions in Configuration Manager"](#)
- [Section 1.1.12.2, "About Permissions in Functional Setup Manager"](#)

### 1.1.12.1 About Permissions in Configuration Manager

[Table 1–1](#) shows the list of Configuration Manager screens visible to each of the Oracle BI Applications Roles.

**Table 1–1 List of Configuration Manager Screens Visible to Each Oracle BI Applications Duty Role**

Oracle BI Applications Duty Role	Oracle BI Applications Configuration Manager screen	Associated Privilege
BI Applications Administrator	Overview	BIA_OVERVIEW_PRIV
BI Applications Administrator	System Setups - Define Oracle BI Applications Instance	BIA_DEFINE_INSTANCE_PRIV
BI Applications Administrator	System Setups - Manage Oracle BI Applications	BIA_MANAGE_INSTANCE_PRIV
BI Applications Administrator	System Setups - Manage Preferred Currencies	BIA_MANAGE_INSTANCE_PRIV

**Table 1–1 (Cont.) List of Configuration Manager Screens Visible to Each Oracle BI Applications Duty Role**

<b>Oracle BI Applications Duty Role</b>	<b>Oracle BI Applications Configuration Manager screen</b>	<b>Associated Privilege</b>
BI Applications Administrator	Functional Configurations - "Perform Functional Configurations" link to launch Functional Setup Manager	BIA_FUNCTIONAL_SETUPS_PRIV
BI Applications Administrator	Setup Data Maintenance and Administration - Manage Domains and Mappings	BIA_CONFIGURE_DOMAINS_PRIV
BI Applications Administrator	Setup Data Maintenance and Administration - Manage Data Load Parameters	BIA_CONFIGURE_DATALOAD_PARAMS_PRIV
BI Applications Administrator	Setup Data Maintenance and Administration - Manage Reporting Parameters	BIA_CONFIGURE_RPD_PARAMS_PRIV
BI Applications Administrator	Setup Data Export and Import - Export Setup Data	BIA_EXPORT_SETUPS_PRIV
BI Applications Administrator	Setup Data Export and Import - Import Setup Data	BIA_IMPORT_SETUPS_PRIV
BI Applications Functional Developer	Overview	BIA_OVERVIEW_PRIV
BI Applications Functional Developer	Functional Configurations - "Perform Functional Configurations" link to launch Functional Setup Manager	BIA_FUNCTIONAL_SETUPS_PRIV
BI Applications Functional Developer	Setup Data Maintenance and Administration - Manage Domains and Mappings	BIA_CONFIGURE_DOMAINS_PRIV
BI Applications Functional Developer	Setup Data Maintenance and Administration - Manage Data Load Parameters	BIA_CONFIGURE_DATALOAD_PARAMS_PRIV
BI Applications Functional Developer	Setup Data Maintenance and Administration - Manage Reporting Parameters	BIA_CONFIGURE_RPD_PARAMS_PRIV
BI Applications Functional Developer	Setup Data Export and Import - Export Setup Data	BIA_EXPORT_SETUPS_PRIV
BI Applications Functional Developer	Setup Data Export and Import - Import Setup Data	BIA_IMPORT_SETUPS_PRIV
BI Applications Implementation Manager	Overview	BIA_OVERVIEW_PRIV
BI Applications Implementation Manager	Setup Data Export and Import - Export Setup Data	BIA_EXPORT_SETUPS_PRIV
BI Applications Implementation Manager	Setup Data Export and Import - Import Setup Data	BIA_IMPORT_SETUPS_PRIV

### 1.1.12.2 About Permissions in Functional Setup Manager

Functional Setup Manager Roles are associated with Oracle BI Applications Roles as follows:

- The BI Applications Administrator role (BIA\_ADMINISTRATOR\_DUTY) is associated to the following Functional Setup Manager Roles:
  - ASM\_FUNCTIONAL\_SETUPS\_DUTY
  - ASM\_IMPLEMENTATION\_MANAGER\_DUTY
  - ASM\_APPLICATION\_DEPLOYER\_DUTY
  - ASM\_APPLICATION\_REGISTRATION\_DUTY
  - ASM\_LOGICAL\_ENTITY\_MODELING\_DUTY
  - ASM\_SETUP\_OBJECTS\_PROVIDER\_DUTY
- The BI Applications Implementation Manager role (BIA\_IMPLEMENTATION\_MANAGER\_DUTY) is associated to the following Functional Setup Manager duty:
  - ASM\_IMPLEMENTATION\_MANAGER\_DUTY
- The BI Applications Functional Developer role (BIA\_FUNCTIONAL\_DEVELOPER\_DUTY) is associated to the following Functional Setup Manager duty:
  - ASM\_FUNCTIONAL\_SETUPS\_DUTY

### 1.1.13 Additional Sources of Information About Oracle BI Applications Security

When configuring security in Oracle BI Applications, in some circumstances you might need to refer to security in other areas, as follows:

- Oracle Fusion Applications security
 

For more information, see:

  - *Oracle Fusion Applications Security Guide*
  - *Oracle Fusion Applications Common Security Reference Manual*
- Oracle Business Intelligence Enterprise Edition security implementation
 

For more information, see:

  - *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*
  - *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition*

## 1.2 Extending Security in Oracle BI Applications

You can extend the preconfigured Oracle BI Applications security model to match your operational source system. When you extend Oracle BI Applications, you need to ensure that your customizations and any new objects are valid and functional.

The general process for extending data-level security for repository objects is as follows:

1. Extend the physical table by adding the attribute by which the dimension or fact needs to be secured. (This step results in a change to the data model.)

2. Populate the relevant attribute value for each row in the fact or dimension table. (This step results in a change to the ETL mapping.)
3. Use the Oracle BI Administration Tool to create an initialization block to fetch the attribute values and populate them into a session variable when each user logs into Oracle BI Applications. You can create a target session variable for the initialization block if the initialization block is not a row-wise initialization block. (This step results in a change to the Oracle BI repository.) For instructions, see *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition*.
4. Use Fusion Middleware Control to create a duty role in the policy store. Then, restart the Oracle BI Server. For instructions, see *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*.
5. Use the Oracle BI Administration Tool in online mode to set up data filters based on the new role for each of the fact and dimension tables that need to be secured by the attribute you added in Step 1. (This step results in a change to the Oracle BI Repository.) For instructions, see *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition*.
6. Use the Oracle BI Administration Tool in online mode to restrict object access based on the duty role you created in Step 4. (This step results in a change to the Oracle BI Repository.) For instructions, see *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition*.
7. Use Presentation Services administration to set up Presentation Services catalog privileges based on the duty role you created in step 4. For instructions, see *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*.

---

**Note:** You can also leverage the existing Oracle BI Applications security objects when extending data-level security. To do this, copy existing security objects for secured dimensions, such as initialization blocks and duty roles, and then modify them to apply to the additional dimensions.

For more information on working with security objects like duty roles and initialization blocks, see the following resources:

- "Creating and Managing Duty Roles and Application Policies Using Fusion Middleware Control" in *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Enterprise Edition*
  - "Working with Initialization Blocks" in *Oracle Fusion Middleware Metadata Repository Builder's Guide for Oracle Business Intelligence Enterprise Edition*
- 

## 1.3 Using Oracle BI Applications Functional Setup Manager Informational Tasks to Set Up Security

Security for different offerings in Oracle BI Applications is configured using guidance in informational Functional Setup Manager tasks. For details about the informational tasks related to your offering, see [Appendix A, "Configuring Security."](#)

---

---

## Configuring Security

This appendix contains miscellaneous security Help topics.

This appendix contains the following topics:

- [Section A.1, "Informational Task Reference - Security"](#)

### A.1 Informational Task Reference - Security

The Help topics in this appendix are displayed in FSM when a BI implementer clicks the Go to Task icon next to security tasks.

#### A.1.1 How to Implement Accounts Receivable Security for PeopleSoft

Financial Analytics supports security over Billing and Revenue Management Business Unit in Accounts Receivable. This Business Unit is the same as Receivables Business Unit in PeopleSoft, and the list of Receivables Business Unit that a user has access to is determined by the grants in PeopleSoft.

##### Configuring Accounts Receivable Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Accounts Receivable security for PeopleSoft, enable Oracle PeopleSoft initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

##### Initialization Blocks

- Oracle Fusion Applications: Receivables Business Unit
- Oracle E-Business Suite: Operating Unit Organizations EBS
- Oracle PeopleSoft: Receivables Organizations

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables to display the Variables dialog
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.

5. Save the RPD file.

### **Configuring BI Duty Roles**

The following BI Duty Roles are applicable to the Accounts Receivable subject area.

- AR Analyst PSFT
- AR Manager PSFT

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## **A.1.2 How to Setup Accounts Payable Security for Oracle Fusion Applications**

Financial Analytics supports security over Payables Invoicing Business Unit in Accounts Payable subject areas. This Business Unit is the same as Business Unit in Oracle Fusion Applications, and the list of Business units that a user has access to is determined by the grants in Oracle Fusion applications.

### **Configuring Accounts Payable Security**

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. The initialization block names relevant to various source systems are given below. Oracle Fusion Applications security is enabled by default so there is no change required in the setup. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems. For example:

- Oracle Fusion Applications: Payables Business Unit
- Oracle E-Business Suite: Operating Unit Organizations EBS
- Oracle PeopleSoft: Payables Organizations

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (RPD file).
2. Choose Manage, then Variables to display the Variables dialog.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.
5. Save the RPD file.

### **Configuring BI Duty Roles**

The following BI Duty Roles are applicable to the Accounts Payable subject area.

- OBIA\_ACCOUNTS\_PAYABLE\_MANAGERIAL\_ANALYSIS\_DUTY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

### **Optional Drill to Purchase Order Details in Procurement and Spend Analytics**

Accounts Payable supports the ability to drill down on Purchase Order Number to the associated Purchase Order Details in Procurement and Spend Analytics. In order for this drill to work, the Procurement and Spend Analytics offering must be licensed and implemented. The Payables user must be granted at least one of the Procurement and Spend BI Duty roles.

## **A.1.3 How to Set Up Accounts Payable Security for Oracle E-Business Suite**

Financial Analytics supports security over Payables Invoicing Business Unit in Accounts Payable subject areas. This Business Unit is the same as Operating Unit Organizations in E-Business Suite, and the list of Operating Unit Organizations that a user has access to is determined by the grants in E-Business Suite.

### **Configuring Accounts Payable Security**

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Accounts Payable security for E-Business Suite, enable Oracle E-Business Suite initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems. For example:

- Oracle Fusion Applications: Payables Business Unit
- Oracle E-Business Suite: Operating Unit Organizations EBS
- Oracle PeopleSoft: Payables Organizations

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (RPD file).
2. Choose Manage, then Variables to display the Variables dialog.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.
5. Save the RPD file.

### **Configuring BI Duty Roles**

The following BI Duty Roles are applicable to the Accounts Payable subject area.

- AP Analyst
- AP Manager

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

### **Optional Drill to Purchase Order Details in Procurement and Spend Analytics**

Accounts Payable supports the ability to drill down on Purchase Order Number to the associated Purchase Order Details in Procurement and Spend Analytics. In order for this drill to work, the Procurement and Spend Analytics offering must be licensed and

implemented. The Payables user must be granted at least one of the Procurement and Spend BI Duty roles.

### A.1.4 How to Setup Accounts Payable Security for PeopleSoft

Financial Analytics supports security over Payables Invoicing Business Unit in Accounts Payable subject areas. This Business Unit is the same as Payables Business Unit in PeopleSoft, and the list of Payables Business Unit that a user has access to is determined by the grants in PeopleSoft.

#### Configuring Accounts Payable Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Accounts Payable security for PeopleSoft, enable Oracle PeopleSoft initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems. For example:

- Oracle Fusion Applications: Payables Business Unit
- Oracle E-Business Suite: Operating Unit Organizations EBS
- Oracle PeopleSoft: Payables Organizations

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (RPD file).
2. Choose Manage, then Variables to display the Variables dialog.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.
5. Save the RPD file.

#### Configuring BI Duty Roles

The following BI Duty Roles are applicable to the Accounts Payable subject area.

- AP Analyst PSFT
- AP Manager PSFT

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

#### Optional Drill to Purchase Order Details in Procurement and Spend Analytics

Accounts Payable supports the ability to drill down on Purchase Order Number to the associated Purchase Order Details in Procurement and Spend Analytics. In order for this drill to work, the Procurement and Spend Analytics offering must be licensed and implemented. The Payables user must be granted at least one of the Procurement and Spend BI Duty roles.

## A.1.5 How to Set Up Accounts Receivable Security for Oracle Fusion Applications

Financial Analytics supports security over Billing and Revenue Management Business Unit in Accounts Receivable subject areas. This Business Unit is the same as Business Unit in Oracle Fusion Applications, and the list of Business units that a user has access to is determined by the grants in Oracle Fusion applications.

### Configuring Accounts Receivable Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. The initialization block names relevant to various source systems are given below. Oracle Fusion Applications security is enabled by default so there is no change required in the setup. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems. For example:

- Oracle Fusion Applications: Receivables Business Unit
- Oracle E-Business Suite: Operating Unit Organizations EBS
- Oracle PeopleSoft: Receivables Organizations

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (RPD file).
2. Choose Manage, then Variables to display the Variables dialog
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.
5. Save the RPD file.

### Configuring BI Duty Roles

The following BI Duty Roles are applicable to the Accounts Receivable subject area.

- OBIA\_ACCOUNTS\_RECEIVABLE\_MANAGERIAL\_ANALYSIS\_DUTY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.6 How to Set Up Accounts Receivable Security for Oracle E-Business Suite

Financial Analytics supports security over Billing and Revenue Management Business Unit in Accounts Receivable subject areas. This Business Unit is the same as Operating Unit Organization in E-Business Suite, and the list of Operating Unit Organizations that a user has access to is determined by the grants in E-Business Suite.

### Configuring Accounts Receivable Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Accounts Receivable security for E-Business Suite, enable Oracle E-Business Suite initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems. For example:

- Oracle Fusion Applications: Receivables Business Unit
- Oracle E-Business Suite: Operating Unit Organizations EBS
- Oracle PeopleSoft: Receivables Organizations

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (RPD file).
2. Choose Manage, then Variables to display the Variables dialog
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.
5. Save the RPD file.

### **Configuring BI Duty Roles**

The following BI Duty Roles are applicable to the Accounts Receivable subject area.

- AR Analyst
- AR Manager

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## **A.1.7 How to Set Up Fixed Asset Security for Oracle Fusion Applications**

Financial Analytics supports security over fixed asset books in Fixed Asset subject areas. The list of asset books that a user has access to is determined by the grants in Oracle Fusion application.

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. The initialization block names relevant to various source systems are given below. Fusion Applications security is enabled by default, therefore no manual configuration is required. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

- Oracle Fusion Applications: Fixed Asset Book
- Oracle E-Business Suite: Fixed Asset Book EBS
- Oracle PeopleSoft: Fixed Asset Book PSFT

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.
5. Save the metadata repository (RPD file).

### Configuring BI Duty Roles

The following BI Duty Role is applicable to the Fixed Asset subject areas for Oracle Fusion Applications:

- OBIA\_ASSETS\_ACCOUNTING\_MANAGERIAL\_ANALYSIS\_DUTY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.8 How to Set Up Fixed Asset Security for E-Business Suite

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Fixed Asset security for E-Business Suite, enable Oracle E-Business Suite initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

- Oracle Fusion Applications: Fixed Asset Book
- Oracle E-Business Suite: Fixed Asset Book EBS
- Oracle PeopleSoft: Fixed Asset Book PSFT

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.
5. Save the metadata repository (RPD file).

### Configuring BI Duty Roles

The following BI Duty Role is applicable to the Fixed Asset subject areas for E-Business Suite:

- Fixed Asset Accounting Manager EBS

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.9 How to Set Up Fixed Asset Security for PeopleSoft

Financial Analytics supports security over fixed asset books in Fixed Asset subject areas. The list of asset books that a user has access to is determined by the grants in PeopleSoft.

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Fixed Asset security

for PeopleSoft, enable Oracle PeopleSoft initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

- Oracle Fusion Applications: Fixed Asset Book
- Oracle E-Business Suite: Fixed Asset Book EBS
- Oracle PeopleSoft: Fixed Asset Book PSFT

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.
5. Save the metadata repository (RPD file).

### **Configuring BI Duty Roles**

The following BI Duty Role is applicable to the Fixed Asset subject areas for PeopleSoft:

- Fixed Asset Accounting Manager PSFT

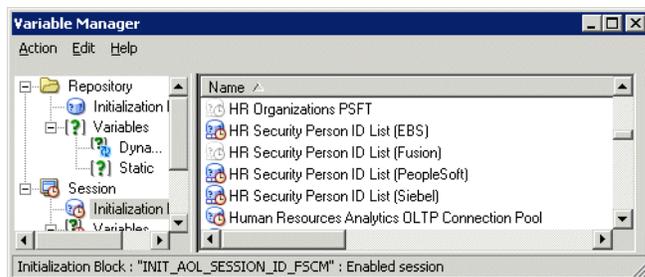

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## **A.1.10 How to Set Up Manager Hierarchy Base Security for Peoplesoft**

Note that although the task title mentions PeopleSoft adaptor, it applies to all AU customers who implement manager or resource hierarchy based security.

Manager/Resource hierarchy based security in PS1 is implemented by using the initialization block Manager Hierarchy Level and one or multiple of the initialization blocks HR Security Person ID List (Fusion), HR Security Person ID List (Siebel), HR Security Person ID List (EBS), and HR Security Person ID List (PeopleSoft) that correspond to the adaptors of your choice. Initialization block Manager Hierarchy Level depends on those HR Security Person ID List initialization blocks.

In the security implementation, you must first identify how many of these HR Security Person ID List initialization blocks you have in your BI metadata repository. Note that not all of them may exist in your RPDs depending on the specific Oracle BI Applications products (for example, CRM, HCM, etc.) that you are using. In what follows, we assume that all four of them exist in your RPD (but you may just see a subset of them in reality).

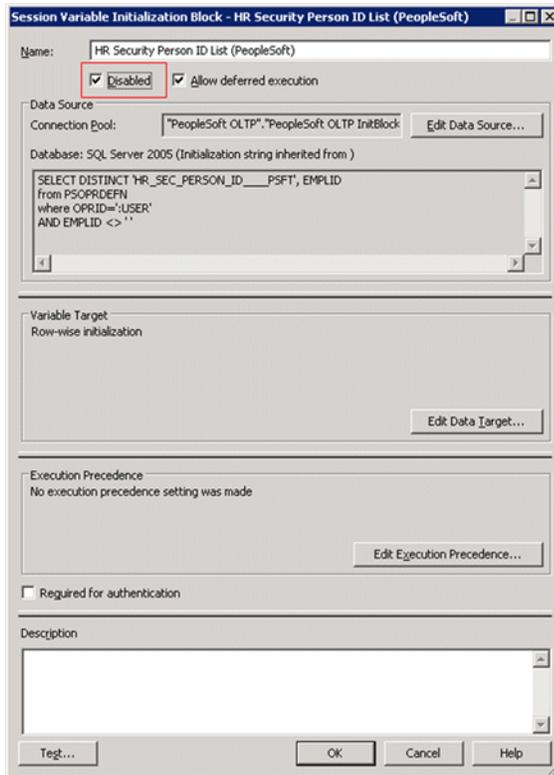

By default (that is, on installation), the initialization block HR Security Person ID List (Fusion) is disabled. As a security best practice, you should disable unused initialization blocks. If unused initialization blocks are not disabled, then they will be run to populate their corresponding variables. Although different AU adaptors have different data structures and formats to store employee information, this might lead to (in very rare cases) more than one eligible employee login ID value to be used in Manager Hierarchy Level, which will in turn impact the security setting.

Specifically:

- if you are implementing EBS, then only HR Security Person ID List (EBS) must be enabled, while HR Security Person ID List (Siebel) and HR Security Person ID List (PeopleSoft) must be disabled.
- if you are implementing PeopleSoft, then only HR Security Person ID List (PeopleSoft) must be enabled, while HR Security Person ID List (EBS) and HR Security Person ID List (Siebel) must be disabled.
- if you are implementing Siebel, then only HR Security Person ID List (Siebel) must be enabled, while HR Security Person ID List (EBS) and HR Security Person ID List (PeopleSoft) must be disabled.
- if you are implementing both EBS and PeopleSoft, then HR Security Person ID List (EBS) and HR Security Person ID List (PeopleSoft) must be enabled, while HR Security Person ID List (Siebel) must be disabled.
- if you are implementing both EBS and Siebel, then HR Security Person ID List (EBS) and HR Security Person ID List (Siebel) must be enabled, while HR Security Person ID List (PeopleSoft) must be disabled.
- if you are implementing both Siebel and PeopleSoft, then HR Security Person ID List (Siebel) and HR Security Person ID List (PeopleSoft) must be enabled, while HR Security Person ID List (EBS) must be disabled.
- if you are implementing all EBS, Siebel and PeopleSoft, then all HR Security Person ID List (EBS), HR Security Person ID List (Siebel) and HR Security Person ID List (PeopleSoft) must be enabled.

The screen shot below shows an example using HR Security Person ID List (PeopleSoft).

Click OK after this setting.

Do the same to the initialization blocks corresponding to other AU adaptors that you want to enable/disable.

Save your changes after your setting.

### A.1.11 How to Set Up Project Cost and Control Security for PeopleSoft

#### Overview

Oracle Project Analytics supports security over the following dimensions in Project Costing and Project Control subject areas.

**Table A-1 Supported Project Costing and Project Control subject areas**

<b>Project Costing and Control Facts Security Entity</b>	<b>Cost</b>	<b>Commitment</b>	<b>Budget</b>	<b>Forecast</b>
Project Business Unit	Y	Y	Y	Y
Project Organization	N	N	N	N
Expenditure Business Unit	N	N	N	N
Contract Business Unit	N	N	N	N
Project	Y	Y	Y	Y
Resource Organization	N	N	N	N
Ledger	N	N	N	N

## Configuring Project Cost and Control Security For PeopleSoft

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system.

---

**Note:** On installation, initialization blocks are enabled for E-Business Suite R12. If you are deploying on a source system other than E-Business Suite R12, then you must enable the appropriate initialization blocks.

---

To enable data security for Project Cost and Control in PeopleSoft, based on your PeopleSoft security configuration enable PeopleSoft data security initialization blocks listed below and make sure the initialization blocks of all other source systems are disabled. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

### About Data Security Configuration in PeopleSoft

In PeopleSoft, you access the security configuration pages for securing Project transactions by selecting Main Menu, then Set up Financials/Supply Chain, then Security, then Security Options.

#### A.1.11.1 Security by Business Unit

Init Blocks:

- Project Business Unit List Budget PSFT
- Project Business Unit List Costing PSFT
- Project Business Unit List Forecast PSFT
- Expenditure Business Unit List PSFT

If you are securing the Project data by Project/Expenditure Business Unit only, then follow the steps below to disable the Project dimension security:

1. In Enterprise Manager Fusion Middleware Control, select Business Application Instance, then Application Roles, then Select the Oracle BI Applications Stripe, and query for the OBIA\_PROJECT\_DATA\_SECURITY Application Role.

Note that OBIA\_PSFT\_PROJECT\_DATA\_SECURITY is listed as one of the members.

2. Remove OBIA\_PSFT\_PROJECT\_DATA\_SECURITY as a member of the OBIA\_PROJECT\_DATA\_SECURITY Duty Role.
3. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity, then Action, then Synchronize Application Roles.

#### A.1.11.2 Security by Project

Init Blocks:

- Project List Budget PSFT
- Project List Costing PSFT
- Project List Forecast PSFT

If you are securing the Project data by Project dimension only, then follow the steps below to disable the Project BU dimension security:

1. Disable Project Business Unit Security, as follows:
  - a. In Enterprise Manager Fusion Middleware Control, select Business Application Instance, then Application Roles, then Select the Oracle BI Applications Stripe, and query for the OBIA\_PROJECT\_BUSINESS\_UNIT\_DATA\_SECURITY Application Role.  
  
Note that OBIA\_PSFT\_PROJECT\_DATA\_SECURITY is listed as one of the members.
  - b. Remove OBIA\_PSFT\_PROJECT\_DATA\_SECURITY as a member of the OBIA\_PROJECT\_BUSINESS\_UNIT\_DATA\_SECURITY Duty Role.
  - c. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd). in online mode, and select Manage, then Identity, then Action, then Synchronize Application Roles.
2. Disable Expenditure Business Unit Security, as follows:
  - a. In Enterprise Manager Fusion Middleware Control, select Business Application Instance, then Application Roles, then Select the Oracle BI Applications Stripe, and query for the OBIA\_PROJECT\_EXPENDITURE\_BUSINESS\_UNIT\_DATA\_SECURITY Application Role.  
  
Note that OBIA\_PSFT\_PROJECT\_DATA\_SECURITY is listed as one of the members.
  - b. Remove OBIA\_PSFT\_PROJECT\_DATA\_SECURITY as a member of the OBIA\_PROJECT\_EXPENDITURE\_BUSINESS\_UNIT\_DATA\_SECURITY.
  - c. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity, then Action, then Synchronize Application Roles.

### A.1.11.3 Configuring BI Duty Roles

The following BI Duty Roles are applicable to the Project Costing and Control subject area.

- OBIA\_PSFT\_PROJECT\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_PSFT\_PROJECT\_MANAGEMENT\_ANALYSIS\_DUTY
- OBIA\_PSFT\_PROJECT\_DATA\_SECURITY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.12 How to Set Up Project Billing and Revenue Security for Peoplesoft

### Overview

Oracle Project Analytics supports security over the following dimensions in Project Billing and Revenue subject areas.

**Table A-2 Supported Project Billing and Revenue subject areas**

<b>Project Costing and Control Facts Security Entity</b>	<b>Billing</b>	<b>Revenue</b>	<b>Contract</b>	<b>Funding</b>	<b>Cross Charge-Receiver</b>	<b>Cross Charge-Provider</b>	<b>Cross Charge-Invoice</b>	<b>Cross Charge-Revenue</b>
Project Business Unit	Y	Y	N	Y	Y	N	Y	Y
Project Organization	N	N	N	N	N	N	N	N
Expenditure Business Unit	N	N	N	N	N	Y	N	N
Contract Business Unit	Y	Y	Y	Y	N	N	N	Y
Project	Y	Y	N	Y	Y	Y	Y	Y
Resource Organization	N	N	N	N	N	N	N	N
Ledger	N	N	N	N	N	N	N	N

### Configuring Project Billing and Revenue Security for PeopleSoft

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system.

---

**Note:** On installation, initialization blocks are enabled for E-Business Suite R12. If you are deploying on a source system other than E-Business Suite R12, then you must enable the appropriate initialization blocks.

---

You must enable data security for Project Billing & Revenue in PeopleSoft, based on your PeopleSoft security configuration. If security by Business Unit has been implemented, then follow the Security by Business Unit Section (ignore Security by Projects section); if security by projects has been implemented, then follow the Security by Projects section (ignore Security by Business Unit section) and enable data security initialization blocks listed in sections below. If only one source system is deployed, then you must make sure that all Project Security initialization blocks for other adapters are disabled. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

### About Data Security Configuration in PeopleSoft

In PeopleSoft, you access the security configuration pages for securing Project transactions by selecting Main Menu, then Set up Financials/Supply Chain, then Security, then Security Options.

Depending on your security configuration, you need to use any combination of the Project Business Unit or Project dimension that are supported. Based on that, you to change the default installed configuration to match the OLTP security setup.

#### A.1.12.1 Security by Business Unit

Init Blocks:

- Expenditure Business Unit List PSFT
- Project Business Unit List Funding PSFT
- Project Business Unit List Invoice PSFT

- Project Business Unit List Revenue PSFT
- Project Contract Business Unit List PSFT
- Project Contract Business Unit List Invoice PSFT
- Project Contract Business Unit List Revenue PSFT

If you are securing the Project data by Project /Expenditure/Contract Business Unit only, then follow the steps below to disable the Project dimension security:

1. In Enterprise Manager Fusion Middleware Control, select Business Application Instance, then Application Roles, then Select the Oracle BI Applications Stripe, and query for the OBIA\_PROJECT\_DATA\_SECURITY Application Role.

Note that OBIA\_PSFT\_PROJECT\_DATA\_SECURITY is listed as one of the members.

2. Remove OBIA\_PSFT\_PROJECT\_DATA\_SECURITY as a member of the OBIA\_PROJECT\_DATA\_SECURITY Duty Role.
3. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity, then Action, then Synchronize Application Roles.

Alternatively this step can be performed by restarting all BI Services.

### **A.1.12.2 Security by Project**

Init Blocks:

- Project List Funding PSFT
- Project List Invoice PSFT
- Project List Revenue PSFT

If you are securing the Project data by Project dimension only, then follow the steps below to disable the Project BU dimension security:

1. Disable Project Business Unit Security, as follows:
  - a. In Enterprise Manager Fusion Middleware Control, select Business Application Instance, then Application Roles, then Select the Oracle BI Applications Stripe, and query for the OBIA\_PROJECT\_BUSINESS\_UNIT\_DATA\_SECURITY Application Role.

Note that OBIA\_PSFT\_PROJECT\_DATA\_SECURITY is listed as one of the members.

- b. Remove OBIA\_PSFT\_PROJECT\_DATA\_SECURITY as a member of the OBIA\_PROJECT\_BUSINESS\_UNIT\_DATA\_SECURITY Duty Role.
  - c. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity, then Action, then Synchronize Application Roles.

Alternatively this step can be performed by restarting all BI Services.

2. Disable Expenditure Business Unit Security, as follows:
  - a. In Enterprise Manager Fusion Middleware Control, select Business Application Instance, then Application Roles, then Select the Oracle BI Applications Stripe, and query for the OBIA\_PROJECT\_EXPENDITURE\_BUSINESS\_UNIT\_DATA\_SECURITY Application Role.

Note that OBIA\_PSFT\_PROJECT\_DATA\_SECURITY is listed as one of the members.

- b. Remove OBIA\_PSFT\_PROJECT\_DATA\_SECURITY as a member of the OBIA\_PROJECT\_EXPENDITURE\_BUSINESS\_UNIT\_DATA\_SECURITY Duty Role.
  - c. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity, then Action, then Synchronize Application Roles.
3. Disable security filters, as follows:
    - a. In Oracle BI EE Administration Tool, select Manage, then Identity, then OBIA\_PROJECT\_CONTRACT\_BUSINESS\_UNIT\_DATA\_SECURITY, then Permissions, then Data Filters, then Disable data security filters for all facts except Funding and Contract.

### A.1.12.3 Configuring BI Duty Roles

The following BI Duty Roles are applicable to the Project Costing and Control subject area.

- OBIA\_PSFT\_PROJECT\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_PSFT\_PROJECT\_MANAGEMENT\_ANALYSIS\_DUTY
- OBIA\_PSFT\_PROJECT\_DATA\_SECURITY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.13 How to Set Up Project Billing and Revenue Security For Oracle

### Overview

Oracle Project Analytics supports security over the following dimensions in Project Billing and Revenue subject areas.

**Table A-3 Supported Project Billing and Revenue subject areas**

<b>Project Costing and Control Facts Security Entity</b>	<b>Billing</b>	<b>Revenue</b>	<b>Contract</b>	<b>Funding</b>	<b>Cross Charge-Receiver</b>	<b>Cross Charge-Provider</b>	<b>Cross Charge-Invoice</b>	<b>Cross Charge-Revenue</b>
Project Business Unit	Y	Y	N	Y	Y	N	Y	Y
Project Organization	Y	Y	N	Y	Y	N	Y	Y
Expenditure Business Unit	N	N	N	N	N	Y	N	N
Contract Business Unit	Y	Y	Y	Y	N	N	N	Y
Project	Y	Y	N	Y	Y	Y	Y	Y
Resource Organization	N	N	N	N	N	N	N	N
Ledger	N	N	N	N	N	N	N	N

### Configuring Project Billing and Revenue Security for Oracle Fusion

In order for data security filters to be applied, ensure that the following initialization blocks are enabled depending on the deployed source system.

---

**Note:** On installation, initialization blocks are enabled for E-Business Suite R12. If you are deploying on a source system other than E-Business Suite R12, then you must enable the appropriate initialization blocks.

---

You must disable Project Security initialization blocks for all other adapters. If more than one source system is deployed, make sure that the initialization blocks of those source systems are enabled.

Init Blocks:

- Project Business Unit List Funding Fusion
- Project Business Unit List Invoice Fusion
- Project Business Unit List Revenue Fusion
- Project Contract Business Unit List Fusion
- Project Contract Business Unit List Invoice Fusion
- Project Contract Business Unit List Revenue Fusion
- Project List Funding Fusion
- Project List Invoice Fusion
- Project List Revenue Fusion
- Project Organization List Funding Fusion
- Project Organization List Invoice Fusion
- Project Organization List Revenue Fusion

#### A.1.13.1 Configuring BI Duty Roles

The following BI Duty Roles are applicable to the Project Costing and Control subject area.

- OBIA\_PROJECT\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_PROJECT\_MANAGEMENT\_ANALYSIS\_DUTY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

### A.1.14 How to Set Up Project Cost and Control Security for Oracle Fusion

#### Overview

Oracle Project Analytics supports security using the following dimensions in Project Costing and Project Control subject areas.

**Table A-4 Supported security dimensions in Project Costing and Project Control subject areas**

<b>Project Costing and Control Facts Security Entity</b>	<b>Cost</b>	<b>Commitment</b>	<b>Budget</b>	<b>Forecast</b>
Project Business Unit	Y	Y	Y	Y
Project Organization	Y	Y	Y	Y
Expenditure Business Unit	Y	Y	N	N
Contract Business Unit	N	N	N	N
Project	Y	Y	Y	Y
Resource Organization	N	N	N	N
Ledger	N	N	N	N

**Configuring Project Cost and Control Security For Oracle Fusion Applications**

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system.

---

---

**Note:** On installation, initialization blocks are enabled for E-Business Suite R12. If you are deploying on a source system other than E-Business Suite R12, then you must enable the appropriate initialization blocks.

---

---

You need to ensure that all Project Security initialization blocks for other adapters are disabled. If more than one source system is deployed, then you must enable the initialization blocks of those source systems.

Init Blocks:

- Expenditure Business Unit List Fusion
- Project Business Unit List Budget Fusion
- Project Business Unit List Costing Fusion
- Project Business Unit List Forecast Fusion
- Project List Budget Fusion
- Project List Costing Fusion
- Project List Forecast Fusion
- Project Organization List Budget Fusion
- Project Organization List Costing Fusion
- Project Organization List Forecast Fusion

**A.1.14.1 Configuring BI Duty Roles**

The following BI Duty Roles are applicable to the Project Costing and Control subject area.

- OBIA\_PROJECT\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_PROJECT\_MANAGEMENT\_ANALYSIS\_DUTY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.15 How to Set Up CRM Primary Organization Based Security for Siebel

### Overview

Siebel CRM primary organization based security is applied in partner subject areas. In Siebel partner application, primary organization is basically the partner organization that the partner user belongs to. Primary organization based security gives the partner user access to only the entities of which his partner organization is the primary owner organization.

### Configuring Primary Organization Based Security

The session variable ORGANIZATION store the list organization ID that the user belongs to. It is initialized via the initial block 'Orgs for Org-Based Security' when user logs in and then used as data filter in the primary organization based data security duty role.

#### A.1.15.1 Configuring BI Duty Roles

'Primary Org-Based Security' is the internal BI duty role to define data filter for primary organization based data security. And by default, it has the following members:

- Partner Executive Analytics User
- Partner Operations Analytics User
- Partner Sales Manager Analytics User
- Partner Service Manager Analytics User

These duty roles control which subject areas and dashboard content the user get access to. As member of 'Primary Org-Based Security', they also ensure that the primary organization based data security filters are applied.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.16 How to Set Up CRM Primary Employee/Position Hierarchy Based Security for Siebel

### Overview

Primary employee/position hierarchy based security is widely used in many CRM subject areas, such as Sales, Marketing and Partner Management. For Siebel data source, CRM BI shares the same concept of Position and Position Hierarchy as they are defined in Siebel application.

Primary Employee/Position Hierarchy Based Security control starts with user's login and the login's level in the position hierarchy. User's login is then compared with the login defined at that particular level in position hierarchy as data filter in queries. By

this way, user is granted with data visibility to the transactions as direct owner and the transactions owned by his/her subordinates.

Note: In CRM Siebel Forecasting Analytics, in addition to the position hierarchy, more data visibility is granted to the login user via "Indirect Sales Hierarchy", which is originally defined in Siebel Forecasting application and brought over to DW by ETL.

### Configuring Resource Hierarchy Based Security

There are two session variables used in "Primary Employee/Position Hierarchy Based Security" for Siebel.

- USER is the OBIEE system session variable, which is populated automatically when an user logs onto BI.
- HIER\_LEVEL contains level defined in position hierarchy that the login user belongs to. This variable is initialized via the session initial block "User Hierarchy Level".

#### A.1.16.1 Configuring BI Duty Roles

All the primary employee and position based security roles should be defined as member of the internal role "Primary Employee/Position Hierarchy-based Security". In the default configuration, "Primary Employee/Position Hierarchy-based Security" has the following members.

- Partner Sales Rep Analytics User
- Partner Service Rep Analytics User
- Pricing Manager
- Primary Owner-Based Security
- Sales Manager Analytics
- Sales Representative Analytics
- Usage Accelerator - Sales Manager

These duty roles also control which subject areas and dashboard content the user can get access to.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.17 How to Set Up SIA Student Financial Security for Peoplesoft

The Student Financial module is secured by Business Unit and Academic Institution, (except the Credit history Subject Area, which is only secured by Business Unit). From the object security perspective, the table below shows the default job roles for Student Financial module access.

**Table A-5 Role names and Descriptions for Student Financial Analytics**

Role Name	Description
Bursar	Manages student receivables, student tuition and fee charges, student billing, student payments and student collections.
Campus Solutions Administrator	Administrator of Campus Solutions.
Student	Student of the Academic Institution.

The table below shows the duty roles and data security roles that are used by the Student Financial module.

**Table A-6 Role Names and Roles Types for Student Financial Analytics**

Role Name	Role Type
OBIA_Student_Accounts_Analysis_Duty	Duty Role
OBIA_SIA_Admin_Analysis_Duty	Duty Role
OBIA_Student_Analysis_Duty	Duty Role
OBIA_STUDENT_INSTITUTION_DATA_SECURITY	Data Security Role
OBIA_STUDENT_BUSINESS_UNIT_DATA_SECURITY	Data Security Role
OBIA_STUDENT_DATA_SECURITY	Data Security Role

To set up SIA Student Financial Security for Peoplesoft:

1. Log into Weblogic console.
2. Click on "Lock and Edit" button.
3. Navigate to Security Realms, then myrealm, then Users and Groups, then Users.
4. On the users tab, create a new user.  
Ensure that the same user is present in the Peoplesoft Campus Solution OLTP system.
5. Navigate to Security Realms, then myrealm, then Users and Groups, then Groups.
6. On the Groups tab, create the same group as that available in the JAZN file.  
For example, Bursar, or Admissions Manager.
7. Navigate to Security Realms, then myrealm, then Users and Groups, then Users, and click on the newly created user.
8. Click on the groups tab and associate the user with the appropriate application role along with BIAuthors and BIConsumers roles and save the changes.
9. Click the Release Configuration button.

All role mappings are accomplished inside the JAZN file, which is provided with the Oracle BI Applications installation. Any new role mapping is a part of the customization effort and the JAZN file needs to be updated.

### A.1.18 How to Set Up SIA Administration Recruiting Security for Peoplesoft

The Student Financial module is secured by Business Unit and Academic Institution, (except the Credit history Subject Area, which is only secured by Business Unit). From the object security perspective, the table below shows the default job roles for Student Financial module access.

**Table A-7 Role names and Descriptions for Student Financial Analytics**

Role Name	Description
Admissions Manager	Manages Recruiting processes to meet the enrollment targets.
Campus Solutions Administrator	Administrator of Campus Solutions.

The table below shows the duty roles and data security roles that are used by the Admissions and Recruiting module.

**Table A-8 Role Names and Role Types for Admissions and Recruiting**

Role Name	Role Type
OBIA_Student_Admissions_Analysis_Duty	Duty Role
OBIA_SIA_Admin_Analysis_Duty	Duty Role
OBIA_STUDENT_INSTITUTION_DATA_SECURITY	Data Security Role

To set up SIA Admissions and Recruiting Security for Peoplesoft:

1. Log into Weblogic console.
2. Click on "Lock and Edit" button.
3. Navigate to Security Realms, then myrealm, then Users and Groups, then Users.
4. On the users tab, create a new user.  
Ensure that the same user is present in the Peoplesoft Campus Solution OLTP system.
5. Navigate to Security Realms, then myrealm, then Users and Groups, then Groups.
6. On the Groups tab, create the same group as that available in the JAZN file.  
For example, Bursar, or Admissions Manager.
7. Navigate to Security Realms, then myrealm, then Users and Groups, then Users, and click on the newly created user.
8. Click on the groups tab and associate the user with the appropriate application role along with BIAuthors and BICongsumers roles and save the changes.
9. Click the Release Configuration button.

All role mappings are accomplished inside the JAZN file, which is provided with the Oracle BI Applications installation. Any new role mapping is a part of the customization effort and the JAZN file needs to be updated.

### A.1.19 How to Set Up SIA Student Records Security for Peoplesoft

The Student Records module is secured by Academic Institution. From the object security perspective, the table below shows the default job roles that have Student Records module access.

**Table A-9 Role names and Descriptions for Student Records**

Role Name	Description
Registrar	The Registrar is the head of the Student Records Office and is one of the key owners of the Student Information System.
Campus Solutions Administrator	Administrator of Campus Solutions.
Student	Student of the Academic Institution.

**Note:** The Student does not have access to the following three Subject Areas:

- Institution summary
- Class instructor

- Class meeting pattern

The table below shows the duty roles and data security roles that are used by the Student Records module.

**Table A-10 Role Names and Roles Types for Student Records**

Role Name	Role Type
OBIA_Student_Records_Analysis_Duty	Duty Role
OBIA_SIA_Admin_Analysis_Duty	Duty Role
OBIA_Student_Analysis_Duty	Duty Role
OBIA_STUDENT_INSTITUTION_DATA_SECURITY	Data Security Role
OBIA_STUDENT_DATA_SECURITY	Data Security Role

To set up SIA Student Records for Peoplesoft:

1. Log into Weblogic console.
2. Click on "Lock and Edit" button.
3. Navigate to Security Realms, then myrealm, then Users and Groups, then Users.
4. On the users tab, create a new user.  
Ensure that the same user is present in the Peoplesoft Campus Solution OLTP system.
5. Navigate to Security Realms, then myrealm, then Users and Groups, then Groups.
6. On the Groups tab, create the same group as that available in the JAZN file.  
For example, Bursar, or Admissions Manager.
7. Navigate to Security Realms, then myrealm, then Users and Groups, then Users, and click on the newly created user.
8. Click on the groups tab and associate the user with the appropriate application role along with BIAuthors and BIConsumers roles and save the changes.
9. Click the Release Configuration button.

All role mappings are accomplished inside the JAZN file, which is provided with the Oracle BI Applications installation. Any new role mapping is a part of the customization effort and the JAZN file needs to be updated.

## A.1.20 How to Implement Security For Order Management Analytics

To implement security for Oracle Order Management Analytics, do the following:

- For EBS:
  - If you are implementing Inventory Org Based Security, then follow the steps in [Section A.1.20.1, "How to implement OM Inventory Org Based Security for EBS"](#).
  - If you are implementing Operating Unit Based Security, then follow the steps in [Section A.1.20.3, "How to implement OM Operating Unit Org-based Security for EBS"](#).
  - Then, follow the steps in [Section A.1.20.5, "How to Grant Cross Functional Access to Order Management Users"](#).

- For Fusion:
  - If you are implementing Inventory Org Based Security, then follow the steps in [Section A.1.20.2, "How to implement OM Inventory Org Based Security for Oracle Fusion Applications"](#).
  - If you are implementing Operating Unit Based Security, then follow the steps in [Section A.1.20.4, "How to implement OM Operating Unit Org-based Security for Oracle Fusion Applications"](#).
  - Then, follow the steps in [Section A.1.20.5, "How to Grant Cross Functional Access to Order Management Users"](#).

### A.1.20.1 How to implement OM Inventory Org Based Security for EBS

#### Overview

Order Management Analytics supports security over Inventory Organizations in OM subject areas. The list of Inventory Organizations that a user has access to is determined by the grants in EBS.

#### Configuring Inventory Org Based Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Inventory Org Based security for EBS, enable E-Business Suite initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

Oracle Fusion Applications: SCOM\_AN: SECURITY: Inv Org Shipments List

E-Business Suite: Inventory Organizations EBS

#### To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Open the variable by navigating to: Manage, then Variables, then Session, then Variables, then Non-System, then INV\_ORG.
3. Open the initialization block by navigating menu: Manage, then Variables, then Session, then Initialization blocks, then Inventory Organizations EBS.
4. Clear the **Disabled** check box.
5. Save the RPD.

**A.1.20.1.1 Configuring BI Duty Roles** The following BI Duty Roles are applicable to the Order Management subject area.

- Order Management Analyst
- Order Management Executive
- Order Fulfillment Analyst
- Order Fulfillment Executive

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

### **A.1.20.2 How to implement OM Inventory Org Based Security for Oracle Fusion Applications**

#### **Overview**

Order Management Analytics supports security over Inventory Organizations in OM subject areas. The list of Inventory Organizations that a user has access to is determined by the grants on the Oracle Fusion Applications

#### **Configuring Inventory Org Based Security**

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Inventory Org Based security for Fusion, enable Oracle Fusion initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

Oracle Fusion Applications: SCOM\_AN: SECURITY: Inv Org Shipments List

E-Business Suite: Inventory Organizations EBS

#### **To enable initialization blocks, follow the steps below:**

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Open the variable by navigating to: Manage, then Variables, then Session, then Variables, then Non-System, then INV\_ORG\_SHIPMENTS.
3. Open the initialization block by navigating menu: Manage, then Variables, then Session, then Initialization blocks, then SCOM\_AN:SECURITY:Inv Org Shipments List.
4. Clear the **Disabled** check box.
5. Save the RPD.

**A.1.20.2.1 Configuring BI Duty Roles** The following BI Duty Roles are applicable to the Order Management subject area.

- OBIA\_SHIPPING\_MANAGEMENT\_ANALYSIS\_DUTY
- OBIA\_EXTENDED\_SHIPPING\_MANAGEMENT\_ANALYSIS\_DUTY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

### A.1.20.3 How to implement OM Operating Unit Org-based Security for EBS

#### Overview

Order Management Analytics supports security over Operating Unit Organizations in OM subject areas. The list of Operating Unit Organizations that a user has access to is determined by the grants in EBS.

#### Configuring Inventory Org Based Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Operating Unit Org Based security for EBS, enable E-Business Suite initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

Oracle Fusion Applications: Order Fulfillment Orchestration BU List

E-Business Suite: Operating Unit Organizations EBS

#### To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Open the variable by navigating to: Manage, then Variables, then Session, then Variables, then Non-System, then OU\_ORG\_\_\_\_EBS.
3. Open the initialization block by navigating menu: Manage, then Variables, then Session, then Initialization blocks, then Operating Unit Organizations EBS.
4. Clear the **Disabled** check box.
5. Save the RPD.

**A.1.20.3.1 Configuring BI Duty Roles** The following BI Duty Roles are applicable to the Order Management subject area.

- Order Management Analyst
- Order Management Executive
- Order Fulfillment Analyst
- Order Fulfillment Executive

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

### A.1.20.4 How to implement OM Operating Unit Org-based Security for Oracle Fusion Applications

#### Overview

Order Management Analytics supports security over Operating Unit Organizations in OM subject areas. The list of Operating Unit Organizations that a user has access to is determined by the grants on the Oracle Fusion Applications.

### Configuring Operating Unit Org Based Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Operating Unit Org Based security for Fusion, enable Oracle Fusion initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

Oracle Fusion Applications: Order Fulfillment Orchestration BU List

E-Business Suite: Operating Unit Organizations EBS

#### To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Open the variable by navigating to: Manage, then Variables, then Session, then Variables, then Non-System, then OM\_BU.
3. Open the initialization block by navigating menu: Manage, then Variables, then Session, then Initialization blocks, then Order Fulfillment Orchestration BU List.
4. Clear the **Disabled** check box.
5. Save the RPD.

**A.1.20.4.1 Configuring BI Duty Roles** The following BI Duty Roles are applicable to the Project Costing and Control subject area.

- OBIA\_EXTENDED\_ORDER\_MANAGEMENT\_ANALYSIS\_DUTY
- OBIA\_ORDER\_MANAGEMENT\_ANALYSIS\_DUTY

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

### A.1.20.5 How to Grant Cross Functional Access to Order Management Users

#### Overview

Clients are accessing data from across the enterprise and delivering deep insight directly to business users. They perform cross-functional analysis to understand cause and affect relationships between key performance indicators across different departments. Cross functional reporting from a variety of relational databases and data sources is possible too. OBIA is a prepackaged data warehouse enabling historical analysis and cross domain insight. Common Conformed Dimensions ensure cross fact, cross subject areas and federated OBIA reporting.

Order Management enables users to analyze OM data along with data from Inventory, Account Receivable, GL Revenue, etc. For Example we may need reports like the below. This is cross functional reporting with Order Mgmt and Supply chain -

Q. How many of my top customers bought products from my worst suppliers?

Q. Which of my top suppliers are also my top customers?

**E-Business Suite and JD Edwards EnterpriseOne adapters:**

By default, Order Management's security implementation for E-Business Suite and JD Edwards EnterpriseOne adapter is enabled with cross-functional capability. The following BI Duty Roles enable users to access to the Order Management subject areas.

- Order Management Analyst
- Order Management Executive
- Order Fulfillment Analyst
- Order Fulfillment Executive
- Order Management Analyst JDE
- Order Management Executive JDE
- Order Fulfillment Analyst JDE
- Order Fulfillment Executive JDE

**Table A-11 Duty Roles and Subject Areas**

Duty Role Description	Subject Areas:
<p>Order Fulfillment Executive, Order Fulfillment Executive JDE.</p> <p>This role provides secured access to Sales Order fulfillment managers and supply chain executives with insight into orders, backlogs, shipments and inventory to track fulfillment performance.</p>	<p>Sales - Invoice Lines</p> <p>Sales - Schedule Lines</p> <p>Sales - Backlog Lines</p> <p>Sales - Pick Lines</p> <p>Sales - Sales Revenue</p> <p>Sales - Sales Receivables</p> <p>Sales - Sales Overview</p> <p>Sales - Orders, Backlog and Invoices</p> <p>Sales - Order Process</p> <p>Sales - Order Lines</p> <p>Sales - Customer Activity</p> <p>Sales - Inventory &amp; Backlog</p> <p>Sales - Backlog History</p>
<p>Order Fulfillment Analyst, Order Fulfillment Analyst JDE.</p> <p>This role provides secured access to Sales Order fulfillment analysts with detailed insight into order line, booking line and backlog line details.</p>	<p>Sales - Backlog History</p> <p>Sales - Backlog Lines</p> <p>Sales - Booking Lines</p> <p>Sales - Order Lines</p> <p>Sales - Schedule Lines</p> <p>Sales - Invoice Lines</p> <p>Sales - Pick Lines</p> <p>Sales - Sales Revenue</p> <p>Sales - Sales Receivables</p> <p>Sales - Sales Overview</p> <p>Sales - Orders, Backlog and Invoices</p> <p>Sales - Order Process</p> <p>Sales - Customer Activity</p> <p>Sales - Inventory &amp; Backlog</p>

**Table A-11 (Cont.) Duty Roles and Subject Areas**

Duty Role Description	Subject Areas:
<p>Order Management Analyst, Order Management Analyst JDE.</p> <p>This role provides secured access to Sales Order management analysts with detailed insight into order lines, booking line and invoice line details.</p>	<p>Sales - Overview</p> <p>Sales - Booking Lines</p> <p>Sales - Invoice Lines</p> <p>Sales - Sales Revenue</p> <p>Sales - Orders and Invoices</p> <p>Sales - Orders, Backlog and Invoices</p> <p>Sales - Order Lines</p> <p>Sales - Customer Activity</p>
<p>Order Management Executive, Order Management Executive JDE.</p> <p>This role provides order management executives with secured access to sales revenue, orders, invoices and backlog details.</p>	<p>Sales - Overview</p> <p>Sales - Booking Lines</p> <p>Sales - Invoice Lines</p> <p>Sales - Sales Revenue</p> <p>Sales - Orders and Invoices</p> <p>Sales - Orders, Backlog and Invoices</p> <p>Sales - Order Lines</p> <p>Sales - Customer Activity</p>

**Fusion Adapter:**

Order Management's security implementation for Fusion adapter has two modes.

For Fusion embedded BI deployment, use these duty roles.

OBIA\_ORDER\_FULFILLMENT\_ORCHESTRATION\_BUSINESS\_UNIT\_DATA\_SECURITY,

OBIA\_INVENTORY\_ORGANIZATION\_SHIPMENT\_DATA\_SECURITY.

For OBIA standalone deployment, which requires cross functional reporting, use these duty roles.

OBIA\_EXTENDED\_ORDER\_FULFILLMENT\_ORCHESTRATION\_BUSINESS\_UNIT\_DATA\_SECURITY,

OBIA\_EXTENDED\_INVENTORY\_ORGANIZATION\_SHIPMENT\_DATA\_SECURITY.

The following table shows the subject areas granted to each duty roles. Note that the 'extended' roles have broader access.

**Table A-12 Duty Roles and Subject Areas**

<b>Duty Role Description</b>	<b>Subject Areas</b>
<p>OBIA_SHIPPING_MANAGEMENT_ANALYSIS_DUTY</p> <p>Description - This BI duty role is for Shipping Managers who are responsible for overseeing both processes and people for picking, packing and shipping items. This duty role allows Shipping Managers to get insight into Shipping, Backlogs, Inventory Transactions and Inventory Balances</p> <p>Is a member of:</p> <p>OBIA_INVENTORY_ORGANIZATION_SHIPMENT_DATA_SECURITY</p>	<p>Sales - Pick Lines</p>
<p>OBIA_EXTENDED_SHIPPING_MANAGEMENT_ANALYSIS_DUTY</p> <p>Description - This duty role provides cross-module access to the shipping manager job role for stand-alone BI Apps content.</p> <p>Member of - OBIA_EXTENDED_INVENTORY_ORGANIZATION_SHIPMENT_DATA_SECURITY</p>	<p>Sales - Pick Lines</p> <p>Sales - Order Process</p> <p>Sales - Inventory &amp; Backlog</p>
<p>OBIA_ORDER_MANAGEMENT_ANALYSIS_DUTY</p> <p>Description - This BI duty role is for Order Managers who are responsible for processing orders, managing backlogs and optimizing fulfillment performance. This duty role allows Order Managers to analyze Orders, Bookings, Holds, Orchestration Process, Shipping, Backlogs, Invoices and Inventory</p> <p>Is a member of: OBIA_ORDER_FULFILLMENT_ORCHESTRATION_BUSINESS_UNIT_DATA_SECURITY</p>	<p>Sales - Backlog History</p> <p>Sales - Backlog Lines</p> <p>Sales - Booking Lines</p> <p>Sales - Order Lines</p> <p>Sales - Schedule Lines</p> <p>Sales - Order Process</p> <p>DOO Process Instances</p> <p>Sales - Order Holds</p>

**Table A-12 (Cont.) Duty Roles and Subject Areas**

Duty Role Description	Subject Areas
<p>OBIA_EXTENDED_ORDER_MANAGEMENT_ANALYSIS_DUTY</p> <p>Description - This duty role provides cross-module access to the order manager job role for stand-alone BI Apps content. The cross-module access will include invoice, inventory, backlog, AR and shipping</p> <p>Is a member of: OBIA_EXTENDED_ORDER_FULFILLMENT_ORCHESTRATION_BUSINESS_UNIT_DATA_SECURITY</p>	<p>Sales - Backlog History</p> <p>Sales - Backlog Lines</p> <p>Sales - Booking Lines</p> <p>Sales - Order Lines</p> <p>Sales - Schedule Lines</p> <p>Sales - Invoice Lines</p> <p>Sales - Pick Lines</p> <p>Sales - Sales Revenue</p> <p>Sales - Sales Receivables</p> <p>Sales - Sales Overview</p> <p>Sales - Orders, Backlog and Invoices</p> <p>Sales - Orders &amp; Invoices</p> <p>Sales - Order Process</p> <p>Sales - Customer Activity</p> <p>Sales - Inventory &amp; Backlog</p> <p>Sales - Order Holds</p> <p>DOO Process Instances</p>

**How to Grant Cross Functional Access to Order Management Users**

**Note:** The following section describes a post-installation and optional configuration task.

1. To facilitate OM users (such as Order Manager and Shipping Manager) to perform deeper and cross functional analysis apart from their regular duty, Oracle Supply Chain and Order Management Analytics has configured data and functional security to access cross functional information (such as inventory, backlog, shipping information) through extended duty roles. If you would like to provision such a duty to the Order Management users, then follow the instructions in this task.
2. Understanding Extended Duty Roles: Seeded security roles for Oracle BI Applications for Fusion Applications includes the following additional duty roles. These extended roles are not mapped to any enterprise job roles by default, but they are pre-configured within Oracle BI Applications to enforce object and data level security for Inventory transactions.
3. 'Extended Order Management Analysis Duty' role (Role name: OBIA\_EXTENDED\_ORDER\_MANAGEMENT\_ANALYSIS\_DUTY) – This duty role provides cross-module access to the order manager job role for stand-alone Oracle BI Applications content. The cross-module access will include invoice, inventory, backlog, AR and shipping information. Data security on Oracle BI Applications is implemented using OBIA\_ORDER\_FULFILLMENT\_ORCHESTRATION\_BUSINESS\_UNIT\_DATA\_SECURITY.
4. 'Extended Shipping Management Analysis Duty' role (Role name: OBIA\_EXTENDED\_SHIPPING\_MANAGEMENT\_ANALYSIS\_DUTY) – This duty role provides cross-module access to the shipping manager job role for stand-alone Oracle BI Applications content. The cross-module access will include inventory, backlog and orders information. Data security on Oracle BI Applications is

implemented using 'OBIA\_INVENTORY\_ORGANIZATION\_SHIPMENT\_DATA\_SECURITY'.

5. Follow the steps below to implement Extended Duty roles in Supply Chain and Order Management Analytics:
  - a. Assign BI duty 'OBIA\_EXTENDED\_ORDER\_MANAGEMENT\_ANALYSIS\_DUTY' to Fusion Applications job role, 'Order Manager' or similar.
  - b. Assign BI duty 'OBIA\_EXTENDED\_SHIPPING\_MANAGEMENT\_ANALYSIS\_DUTY' to Fusion Applications job role, 'Shipping Manager' or similar.
  - c. Assign appropriate Fusion Applications duty roles to the job role - 'Order Manager' and assign BU privileges. Data security of 'OBIA\_ORDER\_MANAGEMENT\_ANALYSIS\_DUTY' (Oracle BI Applications duty role) is controlled by the BUs assigned to the user.
  - d. Customize Presentation catalog permissions for subject areas including cross functional content (for example Sales - Inventory and Backlog) and Subject Area permissions as desired for below mentioned roles.

## A.1.21 How to set up HR Supervisor Hierarchy Based Data Security

- [Section A.1.21.12, "Learning Manager \(secured by HR Supervisor Hierarchy List\) AU BI Data"](#)
- [Section A.1.21.13, "HR Duty Role to Oracle BI Applications HR Presentation Catalog Mapping"](#)

### A.1.21.1 Introduction

Data can be secured via the HR Supervisor Hierarchy using list variable[s], with associated data roles and security filter[s] which are applied at the physical SQL level as IN (a, b, c,...) statement.

#### How to choose / assign the Duty Role

Each BI Apps Duty role grants access to one or more subject areas, and is a member of at least one data security role.

You need to map a source role/responsibility to one or more BI Apps Duty roles. For instructions on how this is done refer to the FSM task in [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

#### HR Data Role to Duty Role Mapping

**Note:** The following are applicable to HR Supervisor Hierarchy security.

**Table A-13 HR Data Role to Duty Role Mapping**

Data (Security) Role	Duty Role
Line Manager (secured by HR Supervisor Hierarchy List) AU BI Data	Line Manager (secured by HR Supervisor Hierarchy List) AU BI Duty
Payroll Manager (secured by HR Supervisor Hierarchy List) AU BI Data	Payroll Manager (secured by HR Supervisor Hierarchy List) AU BI Duty
Compensation Analyst (secured by HR Supervisor Hierarchy List) AU BI Data	Compensation Analyst (secured by HR Supervisor Hierarchy List) AU BI Duty
Compensation Manager (secured by HR Supervisor Hierarchy List) AU BI Data	Compensation Manager (secured by HR Supervisor Hierarchy List) AU BI Duty
Recruiting Manager (secured by HR Supervisor Hierarchy List) AU BI Data	Recruiting Manager (secured by HR Supervisor Hierarchy List) AU BI Duty
Recruiting VP (secured by HR Supervisor Hierarchy List) AU BI Data	Recruiting VP (secured by HR Supervisor Hierarchy List) AU BI Duty
Time Collection Manager (secured by HR Supervisor Hierarchy List) AU BI Data	Time Collection Manager (secured by HR Supervisor Hierarchy List) AU BI Duty
Human Resource VP (secured by HR Supervisor Hierarchy List) AU BI Data	Human Resource VP (secured by HR Supervisor Hierarchy List) AU BI Duty
Human Resource Analyst (secured by HR Supervisor Hierarchy List) AU BI Data	Human Resource Analyst (secured by HR Supervisor Hierarchy List) AU BI Duty
Human Resource Manager (secured by HR Supervisor Hierarchy List) AU BI Data	Human Resource Manager (secured by HR Supervisor Hierarchy List) AU BI Duty
Learning Manager (secured by HR Supervisor Hierarchy List) AU BI Data	Learning Manager (secured by HR Supervisor Hierarchy List) AU BI Duty

### A.1.21.2 Line Manager (secured by HR Supervisor Hierarchy List) AU BI Data

#### Initialization Blocks

The Line Manager HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A-14 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID____EBS	HR Security Person ID List (EBS)
HR_SEC_PERSON_ID____PSFT	HR Security Person ID List (PeopleSoft)

**Data Security Role Filters**

The Line Manager HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-15 Data Security Role Filters**

Name	Filter
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Calendar	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Enrollment and Completion	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Enrollment Events	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Absence Event	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Recruitment Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Accrual Transactions - Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Accrual Transactions - Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Time and Labor - Reported Time	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Time and Labor - Processed Time	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

**Table A–15 (Cont.) Data Security Role Filters**

Name	Filter
Fact - HR - Workforce Gains and Losses - Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Gains and Losses - Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Payroll Balance Summary	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

### A.1.21.3 Payroll Manager (secured by HR Supervisor Hierarchy List) AU BI Data

#### Initialization Blocks

The Payroll Manager HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A–16 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID____EBS	HR Security Person ID List (EBS)
HR_SEC_PERSON_ID____PSFT	HR Security Person ID List (PeopleSoft)

#### Data Security Role Filters

The Payroll Manager HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A–17 Data Security Role Filters**

Name	Filter
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR – Payroll Balance Summary	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Payroll Balance Detail	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

### A.1.21.4 Compensation Analyst (secured by HR Supervisor Hierarchy List) AU BI Data

#### Initialization Blocks

The Compensation Analyst HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A-18 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID____EBS	HR Security Person ID List (EBS)
HR_SEC_PERSON_ID____PSFT	HR Security Person ID List (PeopleSoft)

**Data Security Role Filters**

The Compensation Analyst HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-19 Data Security Role Filters**

Name	Filter
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Payroll Balance Summary	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Payroll Balance Detail	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Gains and Losses - Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Gains and Losses - Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

**A.1.21.5 Compensation Manager (secured by HR Supervisor Hierarchy List) AU BI Data****Initialization Blocks**

The Compensation Manager HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A-20 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID____EBS	HR Security Person ID List (EBS)

**Table A–20 (Cont.) Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID___PSFT	HR Security Person ID List (PeopleSoft)

**Data Security Role Filters**

The Compensation Manager HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A–21 Data Security Role Filters**

Name	Filter
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR – Payroll Balance Summary	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Payroll Balance Detail	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Gains and Losses - Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Gains and Losses - Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

**A.1.21.6 Recruiting Manager (secured by HR Supervisor Hierarchy List) AU BI Data**

**Initialization Blocks**

The Recruiting Manager HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A–22 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID___EBS	HR Security Person ID List (EBS)
HR_SEC_PERSON_ID___PSFT	HR Security Person ID List (PeopleSoft)

### Data Security Role Filters

The Recruiting Manager HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-23 Data Security Role Filters**

Name	Filter
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Recruitment Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

### A.1.21.7 Recruiting VP (secured by HR Supervisor Hierarchy List) AU BI Data

#### Initialization Blocks

The Recruiting VP HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A-24 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID___EBS	HR Security Person ID List (EBS)
HR_SEC_PERSON_ID___PSFT	HR Security Person ID List (PeopleSoft)

### Data Security Role Filters

The Recruiting VP HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-25 Data Security Role Filters**

Name	Filter
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Recruitment Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

### A.1.21.8 Time Collection Manager (secured by HR Supervisor Hierarchy List) AU BI Data

#### Initialization Blocks

The Time Collection Manager HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A–26 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID___EBS	HR Security Person ID List (EBS)
HR_SEC_PERSON_ID___PSFT	HR Security Person ID List (PeopleSoft)

**Data Security Role Filters**

The Time Collection Manager HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A–27 Data Security Role Filters**

Name	Filter
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Time and Labor - Reported Time	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Time and Labor - Processed Time	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR – Payroll Balance Summary	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

**A.1.21.9 Human Resource VP (secured by HR Supervisor Hierarchy List) AU BI Data****Initialization Blocks**

The Human Resource VP HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A–28 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID___EBS	HR Security Person ID List (EBS)
HR_SEC_PERSON_ID___PSFT	HR Security Person ID List (PeopleSoft)

**Data Security Role Filters**

The Human Resource VP HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A–29 Data Security Role Filters**

<b>Name</b>	<b>Filter</b>
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Calendar	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Enrollment and Completion	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Enrollment Events	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Absence Event	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Recruitment Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Accrual Transactions - Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Accrual Transactions - Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR – Payroll Balance Summary	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Payroll Balance Detail	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

#### **A.1.21.10 Human Resource Analyst (secured by HR Supervisor Hierarchy List) AU BI Data**

##### **Initialization Blocks**

The Human Resource Analyst HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A–30 Initialization Blocks**

<b>Variable Name</b>	<b>Initialization Block Name</b>
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID____EBS	HR Security Person ID List (EBS)

**Table A–30 (Cont.) Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID____PSFT	HR Security Person ID List (PeopleSoft)

**Data Security Role Filters**

The Human Resource Analyst HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A–31 Data Security Role Filters**

Name	Filter
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR – Payroll Balance Summary	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Payroll Balance Detail	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Gains and Losses - Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Gains and Losses - Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

**A.1.21.11 Human Resource Manager (secured by HR Supervisor Hierarchy List) AU BI Data**

**Initialization Blocks**

The Human Resource Manager HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A–32 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID____EBS	HR Security Person ID List (EBS)
HR_SEC_PERSON_ID____PSFT	HR Security Person ID List (PeopleSoft)

### Data Security Role Filters

The Human Resource Manager HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-33 Data Security Role Filters**

Name	Filter
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Calendar	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Enrollment and Completion	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Enrollment Events	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Absence Event	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Recruitment Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Accrual Transactions - Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Accrual Transactions - Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Gains and Losses - Balance Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Workforce Gains and Losses - Event Information	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

#### A.1.21.12 Learning Manager (secured by HR Supervisor Hierarchy List) AU BI Data

##### Initialization Blocks

The Learning Manager HR Supervisor Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A-34 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_PERSON_ID	Not applicable, this is a multi source variable population see below.
HR_SEC_PERSON_ID___EBS	HR Security Person ID List (EBS)
HR_SEC_PERSON_ID___PSFT	HR Security Person ID List (PeopleSoft)

**Data Security Role Filters**

The Learning Manager HR Supervisor Hierarchy list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-35 Data Security Role Filters**

Name	Filter
Dim - HR Supervisor Hierarchy	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Calendar	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Enrollment and Completion	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)
Fact - HR - Learning Enrollment Events	"Core"."Dim - HR Supervisor Hierarchy"."Top Level Source Person ID" = VALUEOF(NQ_SESSION.HR_SEC_PERSON_ID)

**A.1.21.13 HR Duty Role to Oracle BI Applications HR Presentation Catalog Mapping**

Note: The following are applicable to HR Supervisor Hierarchy security.

**Table A-36 HR Duty Role to HR Presentation Catalog Mapping**

Duty Role	HR Presentation Catalog Mapping
Line Manager (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources - Absence and Leave Accrual Human Resources - Compensation Human Resources - Learning Enrollment and Completion Human Resources - Recruitment Human Resources - Workforce Deployment Human Resources – Time and Labor
Payroll Manager (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources – Payroll Human Resources – Time and Labor
Compensation Analyst (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources - Compensation Human Resources – Payroll
Compensation Manager (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources - Compensation Human Resources – Payroll

**Table A-36 (Cont.) HR Duty Role to HR Presentation Catalog Mapping**

<b>Duty Role</b>	<b>HR Presentation Catalog Mapping</b>
Recruiting Manager (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources – Recruitment
Recruiting VP (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources – Recruitment
Time Collection Manager (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources – Time and Labor
Human Resource VP (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources - Absence and Leave Accrual Human Resources - Compensation Human Resources - Learning Enrollment and Completion Human Resources - Payroll Human Resources - Recruitment Human Resources - Workforce Deployment Human Resources - Workforce Effectiveness
Human Resource Analyst (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources - Absence and Leave Accrual Human Resources - Compensation Human Resources - Learning Enrollment and Completion Human Resources - Recruitment Human Resources - Workforce Deployment
Human Resource Manager (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources - Absence and Leave Accrual Human Resources - Compensation Human Resources - Learning Enrollment and Completion Human Resources - Recruitment Human Resources - Workforce Deployment
Learning Manager (secured by HR Supervisor Hierarchy List) AU BI Duty	Human Resources - Learning Enrollment and Completion
Fusion Workforce Deployment Analysis Duty	Human Resources - Workforce Deployment
Fusion Compensation Analysis Duty	Human Resources - Compensation Human Resources – Payroll
Fusion Absence and Leave Accrual Analysis Duty	Human Resources - Absence and Leave Accrual

## A.1.22 How to set up Department Based Data Security

- Section A.1.22.13, "HR Duty Role to Oracle BI Applications HR Presentation Catalog Mapping"

### A.1.22.1 Introduction

Human Resource Analytics supports data security over Human Resources subject areas / facts via the Department dimension using department list variable[s]; each variable is used by one (or more) data roles, the data roles ensure security filter[s] are applied at the physical SQL level as IN (a, b, c,...) statement.

#### How to choose / assign the Duty Role

Each BI Apps Duty role grants access to one or more subject areas, and is a member of at least one data security role.

You need to map a source role/responsibility to one or more BI Apps Duty roles. For instructions on how this is done refer to the FSM task in [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

#### HR Data Role to Duty Role Mapping

**Note:** The following are applicable to Department security.

**Table A-37 HR Data Role to Duty Role Mapping**

Data (Security) Role	Duty Role
Line Manager (secured by Department List) AU BI Data	Line Manager (secured by Department List) AU BI Duty
Payroll Manager (secured by Department List) AU BI Data	Payroll Manager (secured by Department List) AU BI Duty
Compensation Analyst (secured by Department List) AU BI Data	Compensation Analyst (secured by Department List) AU BI Duty
Compensation Manager (secured by Department List) AU BI Data	Compensation Manager (secured by Department List) AU BI Duty

**Table A-37 (Cont.) HR Data Role to Duty Role Mapping**

<b>Data (Security) Role</b>	<b>Duty Role</b>
Recruiting Manager (secured by Department List) AU BI Data	Recruiting Manager (secured by Department List) AU BI Duty
Recruiting VP (secured by Department List) AU BI Data	Recruiting VP (secured by Department List) AU BI Duty
Time Collection Manager (secured by Department List) AU BI Data	Time Collection Manager (secured by Department List) AU BI Duty
Human Resource VP (secured by Department List) AU BI Data	Human Resource VP (secured by Department List) AU BI Duty
Human Resource Analyst (secured by Department List) AU BI Data	Human Resource Analyst (secured by Department List) AU BI Duty
Human Resource Manager (secured by Department List) AU BI Data	Human Resource Manager (secured by Department List) AU BI Duty
Learning Manager (secured by Department List) AU BI Data	Learning Manager (secured by Department List) AU BI Duty

**A.1.22.2 Line Manager (secured by Department List) AU BI Data**

Name: OBIA\_AU\_HCM\_LINEMGR\_DEPT\_DATA\_SECURITY.

**Initialization Blocks**

The Line Manager Department list is determined at user sign-on via one or more Initialization Blocks:

**Table A-38 Initialization Blocks**

<b>Variable Name</b>	<b>Initialization Block Name</b>
HR_SEC_DEPT_LINEMGR_LIST	Not applicable, this is a multi source variable population see below.
HR_SEC_DEPT_LINEMGR_LIST___EBS	HR - Line Manager - Department List (EBS)
HR_SEC_DEPT_LINEMGR_LIST___PSFT	HR - Line Manager - Department List (PeopleSoft)

**Data Security Role Filters**

The Line Manager Department list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-39 Data Security Role Filters**

<b>Name</b>	<b>Filter</b>
Fact - HR - Learning Enrollment and Completion	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Fact - HR - Learning Enrollment Events	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Fact - HR - Absence Event	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)

**Table A–39 (Cont.) Data Security Role Filters**

<b>Name</b>	<b>Filter</b>
Fact - HR - Recruitment Event Information	"Core"."Dim - Requisition Organization"."Requisition Organization Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Fact - HR - Workforce - Event Information	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Fact - HR - Workforce - Balance Information	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Fact - HR - Accrual Transactions - Event Information	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Fact - HR - Accrual Transactions - Balance Information	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Fact - HR - Time and Labor - Reported Time	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Fact - HR - Time and Labor - Processed Time	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Dim - Department	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Dim - Requisition Organization	"Core"."Dim - Requisition Organization"."Requisition Organization Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Fact - HR - Learning Calendar	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)
Fact - HR - Payroll Balance Summary	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_LINEMGR_LIST)

**A.1.22.3 Payroll Manager (secured by Department List) AU BI Data**

Name: OBIA\_AU\_HCM\_PYRLMGR\_DEPT\_DATA\_SECURITY.

**Initialization Blocks**

The Payroll Manager Department list is determined at user sign-on via one or more Initialization Blocks:

**Table A–40 Initialization Blocks**

<b>Variable Name</b>	<b>Initialization Block Name</b>
HR_SEC_DEPT_PYRLMGR_LIST	Not applicable, this is a multi source variable population see below.
HR_SEC_DEPT_PYRLMGR_LIST___EBS	HR - Payroll Manager - Department List (EBS)
HR_SEC_DEPT_PYRLMGR_LIST___PSFT	HR - Payroll Manager - Department List (PeopleSoft)

### Data Security Role Filters

The Payroll Manager Department list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-41 Data Security Role Filters**

Name	Filter
Dim - Department	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_PYRLMGR_LIST)
Fact - HR - Payroll Balance Detail	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_PYRLMGR_LIST)
Fact - HR - Payroll Balance Summary	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_PYRLMGR_LIST)

#### A.1.22.4 Compensation Analyst (secured by Department List) AU BI Data

Name: OBIA\_AU\_HCM\_CMPALYST\_DEPT\_DATA\_SECURITY.

#### Initialization Blocks

The Compensation Analyst Department list is determined at user sign-on via one or more Initialization Blocks:

**Table A-42 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_DEPT_CMPALYST_LIST	Not applicable, this is a multi source variable population see below.
HR_SEC_DEPT_CMPALYST_LIST____EBS	HR - Compensation Analyst - Department List (EBS)
HR_SEC_DEPT_CMPALYST_LIST____PSFT	HR - Compensation Analyst - Department List (PeopleSoft)

### Data Security Role Filters

The Compensation Analyst Department list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-43 Data Security Role Filters**

Name	Filter
Dim - Department	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_CMPALYST_LIST)
Fact - HR - Payroll Balance Detail	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_CMPALYST_LIST)
Fact - HR - Payroll Balance Summary	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_CMPALYST_LIST)

**Table A–43 (Cont.) Data Security Role Filters**

Name	Filter
Fact - HR - Workforce - Event Information	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_CMPALYST_LIST)
Fact - HR - Workforce - Balance Information	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_CMPALYST_LIST)

**A.1.22.5 Compensation Manager (secured by Department List) AU BI Data**

Name: OBIA\_AU\_HCM\_CMPMGR\_DEPT\_DATA\_SECURITY.

**Initialization Blocks**

The Compensation Manager Department list is determined at user sign-on via one or more Initialization Blocks:

**Table A–44 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_DEPT_CMPMGR_LIST	Not applicable, this is a multi source variable population see below.
HR_SEC_DEPT_CMPMGR_LIST___EBS	HR - Compensation Manager - Department List (EBS)
HR_SEC_DEPT_CMPMGR_LIST___PSFT	HR - Compensation Manager - Department List (PeopleSoft)

**Data Security Role Filters**

The Compensation Manager Department list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A–45 Data Security Role Filters**

Name	Filter
Dim - Department	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_CMPMGR_LIST)
Fact - HR - Payroll Balance Detail	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_CMPMGR_LIST)
Fact - HR - Payroll Balance Summary	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_CMPMGR_LIST)
Fact - HR - Workforce - Event Information	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_CMPMGR_LIST)
Fact - HR - Workforce - Balance Information	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_CMPMGR_LIST)

**A.1.22.6 Recruiting Manager (secured by Department List) AU BI Data**

Name: OBIA\_AU\_HCM\_RCRTMTMGR\_DEPT\_DATA\_SECURITY.

### Initialization Blocks

The Recruiting Manager Department list is determined at user sign-on via one or more Initialization Blocks:

**Table A-46 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_DEPT_RCRTMTMGR_LIST	Not applicable, this is a multi source variable population see below.
HR_SEC_DEPT_RCRTMTMGR_LIST ____ EBS	HR - Recruiting Manager - Department List (EBS)
HR_SEC_DEPT_RCRTMTMGR_LIST ____ PSFT	HR - Recruiting Manager - Department List (PeopleSoft)

### Data Security Role Filters

The Recruiting Manager Department list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-47 Data Security Role Filters**

Name	Filter
Dim - Department	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_RCRTMTVP_LIST)
Dim - Requisition Organization	"Core"."Dim - Requisition Organization"."Requisition Organization Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_RCRTMTMGR_LIST)
Fact - HR - Recruitment Event Information	"Core"."Dim - Requisition Organization"."Requisition Organization Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_RCRTMTMGR_LIST)

### A.1.22.7 Recruiting VP (secured by Department List) AU BI Data

Name: OBIA\_AU\_HCM\_RCRTMTVP\_DEPT\_DATA\_SECURITY.

### Initialization Blocks

The Recruiting VP Department list is determined at user sign-on via one or more Initialization Blocks:

**Table A-48 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_DEPT_RCRTMTVP_LIST	Not applicable, this is a multi source variable population see below.
HR_SEC_DEPT_RCRTMTVP_LIST ____EBS	HR - Recruiting VP - Department List (EBS)
HR_SEC_DEPT_RCRTMTVP_LIST ____PSFT	HR - Recruiting VP - Department List (PeopleSoft)

### Data Security Role Filters

The Recruiting VP Department list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-49 Data Security Role Filters**

Name	Filter
Dim - Department	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_RCRTMTVP_LIST)
Dim - Requisition Organization	"Core"."Dim - Requisition Organization"."Requisition Organization Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_RCRTMTVP_LIST)
Fact - HR - Recruitment Event Information	"Core"."Dim - Requisition Organization"."Requisition Organization Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_RCRTMTVP_LIST)

**A.1.22.8 Time Collection Manager (secured by Department List) AU BI Data**

Name: OBIA\_AU\_HCM\_TLBRMGR\_DEPT\_DATA\_SECURITY.

**Initialization Blocks**

The Time Collection Manager Department list is determined at user sign-on via one or more Initialization Blocks:

**Table A-50 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_DEPT_TLBRMGR_LIST	Not applicable, this is a multi source variable population see below.
HR_SEC_DEPT_TLBRMGR_LIST___EBS	HR - Time Collection Manager - Department List (EBS)
HR_SEC_DEPT_TLBRMGR_LIST___PSFT	HR - Time Collection Manager - Department List (PeopleSoft)

**Data Security Role Filters**

The Time Collection Manager Department list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-51 Data Security Role Filters**

Name	Filter
Dim - Department	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_TLBRMGR_LIST)
Fact - HR - Time and Labor - Reported Time	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_TLBRMGR_LIST)
Fact - HR - Time and Labor - Processed Time	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_TLBRMGR_LIST)
Fact - HR - Workforce Balance Information	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_TLBRMGR_LIST)

**Table A-51 (Cont.) Data Security Role Filters**

Name	Filter
Fact - HR – Payroll Balance Summary	"Core"."Dim - Department"."Department Number" = VALUEOF(NQ_SESSION.HR_SEC_DEPT_TLBRMGR_LIST)

**A.1.22.9 Human Resource VP (secured by Department List) AU BI Data**

Name: OBIA\_AU\_HCM\_HRVP\_DEPT\_DATA\_SECURITY.

**Initialization Blocks**

The Human Resource VP Department list is determined at user sign-on via one or more Initialization Blocks:

**Table A-52 Initialization Blocks**

Variable Name	Initialization Block Name
HR_SEC_DEPT_HRVP_LIST	Not applicable, this is a multi source variable population see below.
HR_SEC_DEPT_HRVP_LIST____EBS	HR - Human Resource VP - Department List (EBS)
HR_SEC_DEPT_HRVP_LIST____PSFT	HR - Human Resource VP - Department List (PeopleSoft)

**Data Security Role Filters**

The Human Resource VP Department list Security is applied depending on the roles the user is granted, and when it is applied it is supported by the following HR logical facts and dimensions:

**Table A-53 Data Security Role Filters**

Name	Filter

### A.1.23 How to Set Up Price Analytics Security for EBS

There is no row-level security applied to Price Analytics reports and metrics. Users who can access Price Analytics Subject areas can view all Order and Quote data in the related reports without any data-security filter.

#### Configuring BI Duty Roles

The table below lists BI Duty roles that can be assigned to users in order to give them access to Price Analytics Subject Areas.

**Table A-61 BI Duty Roles and Subject Areas**

BI Duty Roles	Subject areas
Price Administrator	Sales – CRM Price Waterfall
Price Order Analytics	Sales – CRM Price Waterfall - Orders
Price Quote Analytics (Member E-Business Suite responsibility: Quoting User, Quoting Sales Agent, Quoting Sales Manager)	Sales – CRM Price Waterfall - Quotes

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

### A.1.24 How to set up HR Position Hierarchy Based Data Security

#### Contents

- Section A.1.24.12, "Learning Manager (secured by HR Position Hierarchy List) AU BI Data"
- Section A.1.24.13, "HR Duty Role to Oracle BI Applications HR Presentation Catalog Mapping"

#### A.1.24.1 Introduction

Data can be secured via the HR Position Hierarchy using list variable[s], with associated data roles and security filter[s] which are applied at the physical SQL level as JOIN statement with the variables.

#### How to choose / assign the Duty Role

Each BI Apps Duty role grants access to one or more subject areas, and is a member of at least one data security role.

You need to map a source role/responsibility to one or more BI Apps Duty roles. For instructions on how this is done refer to the FSM task in [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

#### HR Data Role to Duty Role Mapping

**Note:** The following are applicable to HR Position Hierarchy security.

**Table A-62 HR Data Role to Duty Role Mapping**

Data (Security) Role	Duty Role
Line Manager (secured by HR Position Hierarchy List) AU BI Data	Line Manager (secured by HR Position Hierarchy List) AU BI Duty
Payroll Manager (secured by HR Position Hierarchy List) AU BI Data	Payroll Manager (secured by HR Position Hierarchy List) AU BI Duty
Compensation Analyst (secured by HR Position Hierarchy List) AU BI Data	Compensation Analyst (secured by HR Position Hierarchy List) AU BI Duty
Compensation Manager (secured by HR Position Hierarchy List) AU BI Data	Compensation Manager (secured by HR Position Hierarchy List) AU BI Duty

**Table A-62 (Cont.) HR Data Role to Duty Role Mapping**

<b>Data (Security) Role</b>	<b>Duty Role</b>
Recruiting Manager (secured by HR Position Hierarchy List) AU BI Data	Recruiting Manager (secured by HR Position Hierarchy List) AU BI Duty
Recruiting VP (secured by HR Position Hierarchy List) AU BI Data	Recruiting VP (secured by HR Position Hierarchy List) AU BI Duty
Time Collection Manager (secured by HR Position Hierarchy List) AU BI Data	Time Collection Manager (secured by HR Position Hierarchy List) AU BI Duty
Human Resource VP (secured by HR Position Hierarchy List) AU BI Data	Human Resource VP (secured by HR Position Hierarchy List) AU BI Duty
Human Resource Analyst (secured by HR Position Hierarchy List) AU BI Data	Human Resource Analyst (secured by HR Position Hierarchy List) AU BI Duty
Human Resource Manager (secured by HR Position Hierarchy List) AU BI Data	Human Resource Manager (secured by HR Position Hierarchy List) AU BI Duty
Learning Manager (secured by HR Position Hierarchy List) AU BI Data	Learning Manager (secured by HR Position Hierarchy List) AU BI Duty

**A.1.24.2 Line Manager (secured by HR Position Hierarchy List) AU BI Data**

**Initialization Blocks**

The Line Manager HR Position Hierarchy list is determined at user sign-on via one or more Initialization Blocks:

**Table A-63 Initialization Blocks**

<b>Variable Name</b>	<b>Initialization Block Name</b>
HR_SEC_POS_LIST	Not applicable, this is a multi source variable population see below.
HR_SEC_POS_HIER_VER	Not applicable, this is a multi source variable population see below.

### A.1.25 How to set up Payroll Legislative Data Group Based Data Security

There is no topic for this FSM Task.

### A.1.26 How to set up Payroll Based Data Security

There is no topic for this FSM Task.

### A.1.27 How to Set Up Project GL Reconciliation Security for Peoplesoft

#### Overview

Project Analytics supports security over following dimensions in Project GL Recon. In the Oracle Business Intelligence Applications solution, the "Business Unit" entity refers to "Operating Unit Organizations" in EBS. The list of Business Units that a user has access to, is determined by E-Business Suite grants.

**Table A–86 Project Costing and Control Facts**

<b>Security Entity</b>	<b>GL Recon Cost Fact</b>	<b>GL Recon Revenue Fact</b>
Project Business Unit	N	N
Project Organization	N	N
Expenditure Business Unit	N	N

**Table A-86 (Cont.) Project Costing and Control Facts**

Security Entity	GL Recon Cost Fact	GL Recon Revenue Fact
Contract Business Unit	N	N
Project	N	N
Resource Organization	N	N
Ledger	Y	Y

**Configuring PROJECT GL REC FOR E-Business Suite**

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system.

---

---

**Note:** On installation, initialization blocks are enabled for E-Business Suite R12. If you are deploying on a source system other than E-Business Suite R12, then you must enable the appropriate initialization blocks.

---

---

You must enable data security for Project GL Reconciliation in E-Business Suite by enabling E-Business Suite data security initialization block listed below. If only one source system is deployed, then you must make sure that all Project Security initialization blocks for other adapters are disabled. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

**Init Blocks**

EBS: Project GL Recon Ledger List EBS

**To Set Up Project GL Reconciliation Security for EBS**

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity, then Application Roles.
2. Double click on OBIA\_PROJECT\_LEDGER\_DATA\_SECURITY, navigate to Permissions, then Data Filters, and enable all data security filters.
3. Save the metadata repository.

**A.1.27.1 Configuring BI Duty Roles**

The following BI Duty Roles are applicable to the Project GL Recon subject area.

- OBIA\_EBS\_PROJECT\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_EBS\_PROJECT\_MANAGEMENT\_ANALYSIS\_DUTY
- OBIA\_EBS\_PROJECT\_DATA\_SECURITY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.28 How to Set Up Project Resource Management Security for Peoplesoft

### Overview

Project Analytics supports security using following dimensions in Project Resource Management subject areas.

**Table A-87 Supported Project Resource Management Security subject areas**

<b>Project Resource Management Facts</b>						
<b>Securing Entity</b>	<b>Resource Availability</b>	<b>Resource Requirement</b>	<b>Resource Utilization Assignment</b>	<b>Resource Utilization Capacity</b>	<b>Resource Utilization Expected</b>	<b>Employee Job/Competency</b>
Project Business Unit	N	Y	Y	N	Y	N
Project Organization	N	N	N	N	N	N
Expenditure Business Unit	N	N	N	N	N	N
Contract Business Unit	N	N	N	N	N	N
Project	N	Y	Y	N	Y	N
Resource Organization	N	N	N	N	N	N
Ledger	N	N	N	N	N	N

### Configuring Project Resource Management For PeopleSoft

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system.

---

---

**Note:** On installation, initialization blocks are enabled for E-Business Suite R12. If you are deploying on a source system other than E-Business Suite R12, then you must enable the appropriate initialization blocks.

---

---

Enable data security for Project Resource Management in PeopleSoft based on your PeopleSoft security configuration. That is, if security by Business Unit has been implemented, then you must follow the Security by Business Unit Section (ignore Security by Projects section); if security by projects has been implemented, then you must follow the Security by Projects section (ignore Security by Business Unit section) and enable data security initialization blocks listed in sections below. You must disable Project Security initialization blocks for other adapters. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

### About Data Security Configuration in PeopleSoft

In PeopleSoft, you access the security configuration pages for securing Project transactions by selecting Main Menu, then Set up Financials/Supply Chain, then Security, then Security Options.

Depending on your security configuration, you need to use any combination of either Project Business Unit or Project dimension. Based on that, you need to change the default configuration to match the OLTP security setup.

### **A.1.28.1 Security by Business Unit**

Init Blocks:

- Project Business Unit List RM PSFT

If you are securing the Project data by Project BU only, then follow the steps below to disable the Project dimension security:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity.
2. Double click on OBIA\_PROJECT\_BUSINESS\_UNIT\_DATA\_SECURITY, navigate to Permissions, then Data Filters, and enable all data security filters that are disabled.

This activates Project BU Security, which is required for the Resource Management Module in PeopleSoft.

3. In Enterprise Manager Fusion Middleware Control, select Business Application Instance, then Application Roles, then Select the Oracle BI Applications Stripe, and query for the OBIA\_PROJECT\_DATA\_SECURITY Application Role.

Note that OBIA\_PSFT\_PROJECT\_DATA\_SECURITY is listed as one of the members.

4. Remove OBIA\_PSFT\_PROJECT\_DATA\_SECURITY as a member of the OBIA\_PROJECT\_DATA\_SECURITY Duty Role.
5. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity, then Action, then Synchronize Application Roles.

### **A.1.28.2 Security by Project**

Init Blocks:

- Project List RM PSFT

If you are securing the Project data by Project dimension only, then follow the steps below to disable the Project BU dimension security:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity.
2. Double click on OBIA\_PROJECT\_DATA\_SECURITY, navigate to Permissions, then Data Filters, and enable all data security filters that are disabled.

This activates Project based Security, which is required for the Resource Management Module in PeopleSoft.

3. In Enterprise Manager Fusion Middleware Control, select Business Application Instance, then Application Roles, then Select the Oracle BI Applications Stripe, and query for the OBIA\_PROJECT\_BUSINESS\_UNIT\_DATA\_SECURITY Application Role.

Note that OBIA\_PSFT\_PROJECT\_DATA\_SECURITY is listed as one of the members.

4. Remove OBIA\_PSFT\_PROJECT\_DATA\_SECURITY as a member of the OBIA\_PROJECT\_BUSINESS\_UNIT\_DATA\_SECURITY Duty Role.

5. In Oracle BI EE Administration Tool, select Manage, then Identity, then Action, then Synchronize Application Roles.

**Note:** Tree based Project Security type queries are not supported in the default application.

### A.1.28.3 Configuring BI Duty Roles

The following BI Duty Roles are applicable to the Project Resource Management subject area.

- OBIA\_PSFT\_PROJECT\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_PSFT\_PROJECT\_MANAGEMENT\_ANALYSIS\_DUTY
- OBIA\_PSFT\_PROJECT\_DATA\_SECURITY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.29 How to Set Up General Ledger Security for Peoplesoft

### Overview

Financial Analytics supports a combination of the following security mechanisms for GL subject areas:

- Security using Ledgers
- Security using PeopleSoft Chartfields

### A.1.29.1 Configuring Ledger Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Ledger Security for PeopleSoft, enable PeopleSoft initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

- E-Business Suite 11i: Ledgers EBS11
- E-Business Suite R12: Ledgers EBS12
- Oracle PeopleSoft: Ledgers PeopleSoft

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.
5. Save the metadata repository (RPD file).

### A.1.29.2 Configuring GL Segment Security using PeopleSoft Chartfields

**Note:** This section is applicable only if you have enabled Commitment Control in PeopleSoft. If you do not have Commitment Control, then you can skip this section.

This section gives an overview of the segment security using PeopleSoft Chartfields and supported scenarios in BI Applications.

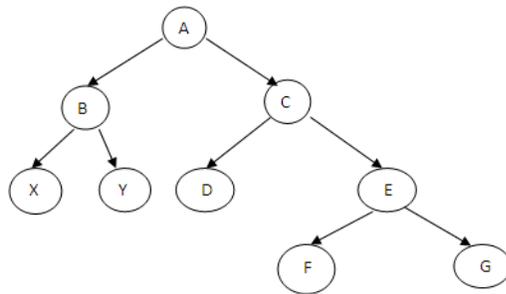

There are various options using which you can setup security rules in the Commitment Control module in PeopleSoft. Oracle BI Applications supports only the following two security rules:

- Security rules setup using the "Allow" access attribute.
- Security rules setup using the "Tree Node" parameter.

A user can have two different types of access for each chartfield:

- Partial Access - User has access to specific values within the tree defined for a chartfield. The node, for which the user has access to, is defined using the "Allow" and the "Tree Node" parameter in PeopleSoft. When the user is given access to a node within the tree, it means that the user has access to that node and all its child nodes.

For example, if a user is granted access to node C, then the user has access to nodes C, D, E, F and G.

- Full Access – The user has complete access to all the SETIDs for that chartfield.

### A.1.29.3 Configuring GL Segment Security

GL Segment Security can be applied on the qualified GL Segment Dimensions : 'Dim – Cost Center', 'Dim – Natural Account' & 'Dim – Balancing Segment', as well as the 10 generic dimensions 'Dim – GL Segment1 to 'Dim – GL Segment 10' which are configurable to be any of the chartfields and is configured in the task <taskname & link>.

Before setting up the security, you need to first identify which of these segment dimensions you need to apply security on depending on your security requirements and the security setup in the Commitment Control module. Once that is determined the following steps to configure the RPD metadata need to be repeated for each of the securing segment dimension.

#### Initialization Blocks and Session Variables

1. Create a "row wise" session initialization block and a corresponding session variable to get all the parent nodes the user has access to in a tree. Use the SQL queries and session variable names as given in the table below depending on the dimension that is secured.

**Table A-88 Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim - Cost Center	<pre> SELECT DISTINCT 'GL_SEC_ COSTCENTER_FILTEREDACCESS___ PSFT', 'Department'    '~'    DEFN.SETID    '~'     DEFN.TREE_ NAME    '~'    DEFN.TREE_NODE FROM PS_KSEC_RULES RULES, PS_ KSEC_RULES_DEFN DEFN, PS_KSEC_ RULES_EVEN EVENTS, PS_KSEC_ OPR_RULES OPR WHERE OPR.KSEC_ RULE=EVENTS.KSEC_RULE AND EVENTS.KSEC_RULE=RULES.KSEC_ RULE AND RULES.KSEC_ RULE=DEFN.KSEC_RULE AND EVENTS.KSEC_EVENT='INQUIRE' AND RULES.KSEC_ATTRIB='A' AND DEFN.KSEC_RULE_PARAM='TRE' AND DEFN.CHARTFIELD='DEPTID' AND OPR.OPRID = 'VALUEOF(NQ_ SESSION.USER)'  UNION  SELECT DISTINCT 'GL_SEC_ COSTCENTER_FILTEREDACCESS___ PSFT', 'Department'    '~'    DEFN.SETID    '~'     DEFN.TREE_ NAME    '~'    DEFN.TREE_NODE FROM PS_KSEC_RULES RULES, PS_ KSEC_RULES_DEFN DEFN,PS_KSEC_ RULES_EVEN EVENTS, PS_KSEC_ CLSS_RULES CLSS, PSOPRDEFN OP, PSROLEUSER ORL, PSROLECLASS RCL WHERE CLSS.OPRCLASS = RCL.CLASSID AND OP.OPRID = ORL.ROLEUSER AND ORL.ROLENAME = RCL.ROLENAME AND CLSS.KSEC_ RULE=EVENTS.KSEC_RULE AND EVENTS.KSEC_RULE=RULES.KSEC_ RULE AND RULES.KSEC_ RULE=DEFN.KSEC_RULE AND EVENTS.KSEC_EVENT='INQUIRE' AND RULES.KSEC_ATTRIB='A' AND DEFN.KSEC_RULE_PARAM='TRE' AND DEFN.CHARTFIELD='DEPTID' AND OP.OPRID = 'VALUEOF(NQ_ SESSION.USER)                     </pre>	GL_SEC_COSTCENTER_FILTEREDACCESS___PSFT

**Table A-88 (Cont.) Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim - Natural Account	<pre> SELECT DISTINCT 'GL_SEC_ ACCOUNT_FILTEREDACCESS____ PSFT', 'Account'    '~'    DEFN.SETID    '~'    D EFN.TREE_NAME    '~'    DEFN.TREE_ NODE FROM PS_KSEC_RULES RULES, PS_KSEC_RULES_DEFN DEFN, PS_ KSEC_RULES_EVEN EVENTS, PS_ KSEC_OPR_RULES OPR WHERE OPR.KSEC_RULE=EVENTS.KSEC_ RULE AND EVENTS.KSEC_ RULE=RULES.KSEC_RULE AND RULES.KSEC_RULE=DEFN.KSEC_ RULE AND EVENTS.KSEC_ EVENT='INQUIRE' AND RULES.KSEC_ATTRIB='A' AND DEFN.KSEC_RULE_PARAM='TRE' AND DEFN.CHARTFIELD='ACCOUNT' AND OPR.OPRID = 'VALUEOF(NQ_ SESSION.USER)'  UNION  SELECT DISTINCT 'GL_SEC_ ACCOUNT_FILTEREDACCESS____ PSFT', 'Account'    '~'    DEFN.SETID    '~'    D EFN.TREE_NAME    '~'    DEFN.TREE_ NODE FROM PS_KSEC_RULES RULES, PS_KSEC_RULES_DEFN DEFN, PS_ KSEC_RULES_EVEN EVENTS, PS_ KSEC_CLSS_RULES CLSS, PSOPRDEFN OP, PSROLEUSER ORL, PSROLECLASS RCL WHERE CLSS.OPRCLASS = RCL.CLASSID AND OP.OPRID = ORL.ROLEUSER AND ORL.ROLENAM = RCL.ROLENAM AND CLSS.KSEC_ RULE=EVENTS.KSEC_RULE AND EVENTS.KSEC_RULE=RULES.KSEC_ RULE AND RULES.KSEC_ RULE=DEFN.KSEC_RULE AND EVENTS.KSEC_EVENT='INQUIRE' AND RULES.KSEC_ATTRIB='A' AND DEFN.KSEC_RULE_PARAM='TRE' AND DEFN.CHARTFIELD='ACCOUNT' AND OP.OPRID = 'VALUEOF(NQ_ SESSION.USER)'                     </pre>	GL_SEC_ACCOUNT_FILTEREDACCESS____PSFT

**Table A-88 (Cont.) Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim - Balancing Segment	<pre> SELECT DISTINCT 'GL_SEC_ BALANCING_FILTEREDACCESS___ PSFT', 'Fund Code'    '~'    DEFN.SETID    '~'    DEFN .TREE_NAME    '~'    DEFN.TREE_ NODE FROM PS_KSEC_RULES RULES, PS_KSEC_RULES_DEFN DEFN, PS_ KSEC_RULES_EVEN EVENTS, PS_ KSEC_OPR_RULES OPR WHERE OPR.KSEC_RULE=EVENTS.KSEC_ RULE AND EVENTS.KSEC_ RULE=RULES.KSEC_RULE AND RULES.KSEC_RULE=DEFN.KSEC_ RULE AND EVENTS.KSEC_ EVENT='INQUIRE' AND RULES.KSEC_ATTRIB='A' AND DEFN.KSEC_RULE_PARAM='TRE' AND DEFN.CHARTFIELD='FUND_ CODE' AND OPR.OPRID = 'VALUEOF(NQ_SESSION.USER)'  UNION  SELECT DISTINCT 'GL_SEC_ BALANCING_FILTEREDACCESS___ PSFT', 'Fund Code'    '~'    DEFN.SETID    '~'    DEFN .TREE_NAME    '~'    DEFN.TREE_ NODE FROM PS_KSEC_RULES RULES, PS_KSEC_RULES_DEFN DEFN,PS_ KSEC_RULES_EVEN EVENTS, PS_ KSEC_CLSS_RULES CLSS, PSOPRDEFN OP, PSROLEUSER ORL, PSROLECLASS RCL WHERE CLSS.OPRCLASS = RCL.CLASSID AND OP.OPRID = ORL.ROLEUSER AND ORL.ROLENAME = RCL.ROLENAME AND CLSS.KSEC_ RULE=EVENTS.KSEC_RULE AND EVENTS.KSEC_RULE=RULES.KSEC_ RULE AND RULES.KSEC_ RULE=DEFN.KSEC_RULE AND EVENTS.KSEC_EVENT='INQUIRE' AND RULES.KSEC_ATTRIB='A' AND DEFN.KSEC_RULE_PARAM='TRE' AND DEFN.CHARTFIELD='FUND_ CODE' AND OP.OPRID = 'VALUEOF(NQ_SESSION.USER)'                     </pre>	GL_SEC_BALANCING_FILTEREDACCESS___PSFT

**Table A-88 (Cont.) Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim - GL Segment<n>	<pre> SELECT DISTINCT 'GL_SEC_ SEGMENT&lt;n&gt;_FILTEREDACCESS___ PSFT', '&lt; ChartfieldString&gt;'    '~'    DEFN.SETID   ' ~'    DEFN.TREE_ NAME    '~'    DEFN.TREE_NODE FROM PS_KSEC_RULES RULES, PS_ KSEC_RULES_DEFN DEFN, PS_KSEC_ RULES_EVEN EVENTS, PS_KSEC_ OPR_RULES OPR WHERE OPR.KSEC_ RULE=EVENTS.KSEC_RULE AND EVENTS.KSEC_RULE=RULES.KSEC_ RULE AND RULES.KSEC_ RULE=DEFN.KSEC_RULE AND EVENTS.KSEC_EVENT='INQUIRE' AND RULES.KSEC_ATTRIB='A' AND DEFN.KSEC_RULE_PARAM='TRE' AND DEFN.CHARTFIELD='&lt;ChartfieldCode &gt;' AND OPR.OPRID = 'VALUEOF(NQ_ SESSION.USER)'  UNION  SELECT DISTINCT 'GL_SEC_ SEGMENT&lt;n&gt;_FILTEREDACCESS___ PSFT', '&lt; ChartfieldString&gt;'    '~'    DEFN.SETID   ' ~'    DEFN.TREE_ NAME    '~'    DEFN.TREE_NODE FROM PS_KSEC_RULES RULES, PS_ KSEC_RULES_DEFN DEFN, PS_KSEC_ RULES_EVEN EVENTS, PS_KSEC_ CLSS_RULES CLSS, PSOPRDEFN OP, PSROLEUSER ORL, PSROLECLASS RCL WHERE CLSS.OPRCLASS = RCL.CLASSID AND OP.OPRID = ORL.ROLEUSER AND ORL.ROLENAME = RCL.ROLENAME AND CLSS.KSEC_ RULE=EVENTS.KSEC_RULE AND EVENTS.KSEC_RULE=RULES.KSEC_ RULE AND RULES.KSEC_ RULE=DEFN.KSEC_RULE AND EVENTS.KSEC_EVENT='INQUIRE' AND RULES.KSEC_ATTRIB='A' AND DEFN.KSEC_RULE_PARAM='TRE' AND DEFN.CHARTFIELD='&lt;ChartfieldCode &gt;' AND OP.OPRID = 'VALUEOF(NQ_ SESSION.USER)'                     </pre>	GL_SEC_SEGMENT<n>_FILTEREDACCESS___PSFT

**Connection Pool: "PeopleSoft OLTP"."PeopleSoft OLTP DbAuth Connection Pool"**

**Notes:**

- For the Dim - GL Segment<n> init blocks, use the appropriate chartfield string and the chartfield code based on the chartfield you are securing. You can get the chartfield code from the PeopleSoft source system and the chartfield string should match the names used in file\_glaacct\_segment\_config\_psft.csv file.
- Use the default value for these variables as 'Default'.

- All the variables created above should end with \_\_\_\_PSFT (4 '\_' followed by the string PSFT). This is for multi source implementation where the same variable can be initialized using multiple SQL's for multiple source systems.

2. Create a "row wise" session initialization block and a corresponding session variable to get the level in the hierarchy the above nodes fall in a tree. Use the sql queries and session variable names as given in the table below depending on the dimension that is secured.

**Table A-89 Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – Cost Center	SELECT DISTINCT 'GL_SEC_COSTCENTER_FILTEREDACCESSLEVELS____PSFT', FIXED_HIER_LEVEL FROM W_COST_CENTER_DH WHERE LEVEL0_SECURITY_ID IN (VALUelistOF(NQ_SESSION.GL_SEC_COSTCENTER_FILTEREDACCESS____ PSFT)) AND CURRENT_FLG='Y'	GL_SEC_COSTCENTER_FILTEREDACCESSLEVELS____PSFT
Dim – Natural Account	SELECT DISTINCT 'GL_SEC_ACCOUNT_FILTEREDACCESSLEVELS____PSFT', FIXED_HIER_LEVEL FROM W_NATURAL_ACCOUNT_DH WHERE LEVEL0_SECURITY_ID IN (VALUelistOF(NQ_SESSION.GL_SEC_ACCOUNT_FILTEREDACCESS____ PSFT)) AND CURRENT_FLG='Y'	GL_SEC_ACCOUNT_FILTEREDACCESSLEVELS____PSFT
Dim – Balancing Segment	SELECT DISTINCT 'GL_SEC_BALANCING_FILTEREDACCESSLEVELS____PSFT', FIXED_HIER_LEVEL FROM W_BALANCING_SEGMENT_DH WHERE LEVEL0_SECURITY_ID IN (VALUelistOF(NQ_SESSION.GL_SEC_BALANCING_FILTEREDACCESS____ PSFT)) AND CURRENT_FLG='Y'	GL_SEC_BALANCING_FILTEREDACCESSLEVELS____PSFT
Dim – GL Segment<n>	SELECT DISTINCT 'GL_SEC_SEGMENT<n>_FILTEREDACCESSLEVELS____PSFT', FIXED_HIER_LEVEL FROM W_GL_SEGMENT_DH WHERE LEVEL0_SECURITY_ID IN (VALUelistOF(NQ_SESSION.GL_SEC_SEGMENT<n>_FILTEREDACCESS____ PSFT)) AND CURRENT_FLG='Y'	GL_SEC_SEGMENT<n>_FILTEREDACCESSLEVELS____PSFT

Connection Pool: "Oracle Data Warehouse"."Oracle Data Warehouse Repository Initblocks Connection Pool"

**Notes:**

- The 2nd highlighted variable name in the SQL comes from the variable names defined in Step 1. Make sure you use the same names.
- Use the default value for these variables as 0.

- All the variables created above should end with \_\_\_\_PSFT (4 '\_' followed by the string PSFT). This is for multi source implementation where the same variable can be initialized using multiple SQL's for multiple source systems.
- 3. Create a "row wise" session initialization block and a corresponding session variable to get all the SETIDs to which user has partial access for a given segment. Use the sql queries and session variable names as given in the table below depending on the dimension that is secured.

**Table A-90 Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – Cost Center	<pre> SELECT DISTINCT 'GL_SEC_ COSTCENTER_ FILTEREDACCESSVALUESETS____ PSFT', 'Department'    '~'    DEFN.SETID FROM PS_KSEC_RULES RULES, PS_ KSEC_RULES_DEFN DEFN, PS_KSEC_ RULES_EVEN EVENTS, PS_KSEC_ OPR_RULES OPR WHERE OPR.KSEC_ RULE=EVENTS.KSEC_RULE AND EVENTS.KSEC_RULE=RULES.KSEC_ RULE AND RULES.KSEC_ RULE=DEFN.KSEC_RULE AND EVENTS.KSEC_EVENT='INQUIRE' AND RULES.KSEC_ATTRIB='A' AND DEFN.KSEC_RULE_PARAM='TRE' AND DEFN.CHARTFIELD='DEPTID' AND OPR.OPRID = 'VALUEOF(NQ_ SESSION.USER)'  UNION  SELECT DISTINCT 'GL_SEC_ COSTCENTER_ FILTEREDACCESSVALUESETS____ PSFT', 'Department'    '~'    DEFN.SETID FROM PS_KSEC_RULES RULES, PS_ KSEC_RULES_DEFN DEFN,PS_KSEC_ RULES_EVEN EVENTS, PS_KSEC_ CLSS_RULES CLSS, PSOPRDEFN OP, PSROLEUSER ORL, PSROLECLASS RCL WHERE CLSS.OPRCLASS = RCL.CLASSID AND OP.OPRID = ORL.ROLEUSER AND ORL.ROLENAME = RCL.ROLENAME AND CLSS.KSEC_ RULE=EVENTS.KSEC_RULE AND EVENTS.KSEC_RULE=RULES.KSEC_ RULE AND RULES.KSEC_ RULE=DEFN.KSEC_RULE AND EVENTS.KSEC_EVENT='INQUIRE' AND RULES.KSEC_ATTRIB='A' AND DEFN.KSEC_RULE_PARAM='TRE' AND DEFN.CHARTFIELD='DEPTID' AND OP.OPRID = 'VALUEOF(NQ_ SESSION.USER)'                     </pre>	<p>GL_SEC_COSTCENTER_ FILTEREDACCESSVALUESET S____PSFT</p>

Connection Pool: "PeopleSoft OLTP"."PeopleSoft OLTP DbAuth Connection Pool"

**Notes:**

- For the Dim – GL Segment<n> init blocks, use the appropriate chartfield string and the chartfield code based on the chartfield you are securing. You can get the chartfield code from the PeopleSoft source system and the chartfield string should match the names used in file\_glacct\_segment\_config\_psft.csv file.
- Use the default value for these variables as 'Default'.

- All the variables created above should end with \_\_\_\_PSFT (4 '\_' followed by the string PSFT). This is for multi source implementation where the same variable can be initialized using multiple SQL's for multiple source systems.
- 4. Create a "row wise" session initialization block and a corresponding session variable to get all the SETIDs to which user has full access for a given chartfield. Use the SQL queries and session variable names as given in the table below depending on the dimension that is secured.

**Table A-91 Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – Cost Center	SELECT DISTINCT 'GL_SEC_COSTCENTER_FULLACCESS____PSFT', COST_CENTER_LOV_ID, FROM W_COST_CENTER_D WHERE COST_CENTER_LOV_ID NOT IN VALUELISTOF(NQ_SESSION.GL_SEC_COSTCENTER_FILTEREDACCESSVALUESETS____PSFT)	GL_SEC_COSTCENTER_FULLACCESS____PSFT
Dim – Natural Account	SELECT DISTINCT 'GL_SEC_ACCOUNT_FULLACCESS____PSFT', NATURAL_ACCOUNT_LOV_ID, FROM W_NATURAL_ACCOUNT_D WHERE NATURAL_ACCOUNT_LOV_ID NOT IN VALUELISTOF(NQ_SESSION.GL_SEC_ACCOUNT_FILTEREDACCESSVALUESETS____PSFT)	GL_SEC_ACCOUNT_FULLACCESS____PSFT
Dim – Balancing Segment	SELECT DISTINCT 'GL_SEC_BALANCING_FULLACCESS____PSFT', BALANCING_SEGMENT_LOV_ID, FROM W_BALANCING_SEGMENT_D WHERE BALANCING_SEGMENT_LOV_ID NOT IN VALUELISTOF(NQ_SESSION.GL_SEC_BALANCING_FILTEREDACCESSVALUESETS____PSFT)	GL_SEC_BALANCING_FULLACCESS____PSFT
Dim – GL Segment<n>	SELECT DISTINCT 'GL_SEC_SEGMENT<n>_FULLACCESS____PSFT', SEGMENT_LOV_ID FROM, W_GL_SEGMENT_D WHERE SEGMENT_LOV_ID NOT IN VALUELISTOF(NQ_SESSION.GL_SEC_SEGMENT<n>_FILTEREDACCESSVALUESETS____PSFT) AND SEGMENT_LOV_ID LIKE '<ChartfieldString>%'	GL_SEC_SEGMENT<n>_FULLACCESS____PSFT

Connection Pool: "Oracle Data Warehouse"."Oracle Data Warehouse Repository Initblocks Connection Pool"

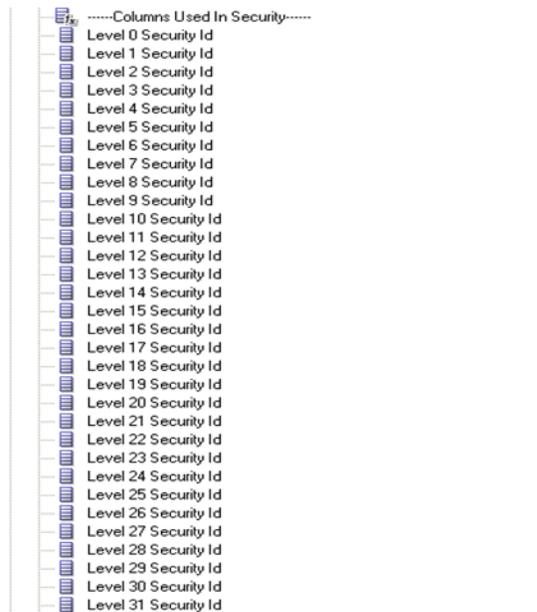

**Notes:**

- For the generic GL Segment dimensions, Dim – GL Segment 1 - 10, you will need to apply an appropriate filter to filter the SETIDs applicable for that chartfield. You can apply a filter on the chartfield string column which should be exactly similar to the one name used in file\_glacct\_segment\_config\_psft.csv file.
- The 2nd highlighted variable name in the SQL comes from the variable names defined in Step 3. Make sure you use the same names.

- Use the default value for these variables as 'Default'.
- All the variables created above should end with \_\_\_\_PSFT (4 '\_' followed by the string PSFT). This is for multi source implementation where the same variable can be initialized using multiple SQL's for multiple source systems.

### Security Id Expression in the logical dimensions

1. Each dimension has 32 security columns Level 0 Security Id through Level 31 Security Id as shown below. The expression for each of these logical columns need to be modified using the hierarchy level variable created above.

2. Open the logical table source of the dimension that maps to the warehouse dimension table and set the expression for each of these columns using the example from "Dim – Cost Center" dimension. For example, if you are securing by "Dim – GL Segment3" and the hierarchy level variable for this segment is "GL\_SEC\_SEGMENT3\_FILTEREDACCESSLEVELS", you would set the expression for each of the "Level <n> Security Id" column with the following:

```
INDEXCOL( IFNULL( VALUEOF(<n>, NQ_SESSION."GL_SEC_PROGRAM_FILTEREDACCESSLEVELS"), VALUEOF(0, NQ_SESSION."GL_SEC_SEGMENT3_FILTEREDACCESSLEVELS")),
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_Segment3"."LEVEL31_SECURITY_ID",
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_Segment3"."LEVEL30_SECURITY_ID",
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_Segment3"."LEVEL29_SECURITY_ID",
...and so on for each security id column...
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_Segment3"."LEVEL1_SECURITY_ID",
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_Segment3"."LEVEL0_SECURITY_ID")
```

3. Repeat the above steps for each of the segment dimension to be secured.

### Security filters in the "Data Security" application roles

Do the following:

1. Navigate to "Manage -> Identity" from the menu, open the "General Ledger Data Security" application role and navigate to "Permissions -> Data Filters". For each of the logical facts secured under this role, you will see some existing filters, which are handling ledger security. You will need to append the segment security filters to this with an 'AND' condition. A snippet of the segment security filters to be appended for a given segment dimension is given below, assuming the security is on "Dim - GL Segment3" and the session variable prefix used in the previous steps was "GL\_SEC\_SEGMENT3".

```
(
"Core"."Dim - GL Segment3"."Segment Value Set Code" IS NULL OR
((
"Core"."Dim - GL Segment3"."Segment Value Set Code" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FULLACCESS") OR
"Core"."Dim - GL Segment3"."Level 0 Security Id"      = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 1 Security Id"      = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 2 Security Id"      = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
...and so on for each security id column...
"Core"."Dim - GL Segment3"."Level 30 Security Id"     = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 31 Security Id"     = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS")
)
)
AND
"Core"."Dim - GL Segment3"."Current Flag Security" = 'Y')
)
```

2. Repeat the above for each segment dimension that is secured using appropriate variable names for each segment and appending each block of filters with an AND. For example, if you are securing by cost center and segment3 dimensions, the filter will look like this, which includes the ledger security:

```
/* Ledger security filters */
(
"Core"."Dim - Ledger"."Key Id" = VALUEOF(NQ_SESSION."LEDGER")
)
/* cost center segment security filters */
AND
(
"Core"."Dim - Cost Center"."Cost Center Value Set Code" IS NULL OR
((
"Core"."Dim - Cost Center"."Cost Center Value Set Code" = VALUEOF(NQ_
SESSION."GL_SEC_COST_CENTER_FULLACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 0 Security Id"      = VALUEOF(NQ_
SESSION." GL_SEC_COST_CENTER_FILTEREDACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 1 Security Id"      = VALUEOF(NQ_
SESSION." GL_SEC_COST_CENTER_FILTEREDACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 2 Security Id"      = VALUEOF(NQ_
SESSION." GL_SEC_COST_CENTER_FILTEREDACCESS") OR
...and so on for each security id column...
"Core"."Dim - Cost Center"."Cost Center Level 30 Security Id"     = VALUEOF(NQ_
SESSION." GL_SEC_COST_CENTER_FILTEREDACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 31 Security Id"     = VALUEOF(NQ_
SESSION." GL_SEC_COST_CENTER_FILTEREDACCESS")
)
)
AND
"Core"."Dim - Cost Center"."Current Flag Security" = 'Y')
)
```

```

/* segment3 security filters */
AND
(
  (
    "Core"."Dim - GL Segment3"."Segment Value Set Code" IS NULL OR
    (
      "Core"."Dim - GL Segment3"."Segment Value Set Code" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FULLACCESS") OR
      "Core"."Dim - GL Segment3"."Level 0 Security Id" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
      "Core"."Dim - GL Segment3"."Level 1 Security Id" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
      "Core"."Dim - GL Segment3"."Level 2 Security Id" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
      ...and so on for each security id column...
      "Core"."Dim - GL Segment3"."Level 30 Security Id" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
      "Core"."Dim - GL Segment3"."Level 31 Security Id" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS")
    )
  )
  AND
  "Core"."Dim - GL Segment3"."Current Flag Security" = 'Y')
)

```

**Note:** When a tree has more than one version, the security filters are always applied on the current version for that tree (CURRENT\_FLG='Y'). However you can navigate through any other version of the tree in the reports but security will always be applied on the current version.

#### A.1.29.4 Configuring BI Duty Roles

The following BI Duty Roles are applicable to the General Ledger subject area.

- Budget Director PSFT
- Budget Analyst PSFT
- Financial Analyst PSFT
- CFO Group PSFT
- Controller Group PSFT

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

**Note:** These roles will have access to Account Payables, Account Receivables and Fixed Assets data in BI to facilitate the drill down from GL to those modules. However, access to data in the respective modules must be provisioned in the E-Business Suite system for these users in order to use the drill down capabilities.

### A.1.30 How to Set Up Project GL Reconciliation Security for PeopleSoft

#### Overview

Project Analytics supports security using Ledger dimension in Project GL Recon.

**Table A–92 Project Costing and Control Facts**

Security Entity	GL Recon Cost Fact	GL Recon Revenue Fact
Project Business Unit	N	N
Project Organization	N	N
Expenditure Business Unit	N	N
Contract Business Unit	N	N
Project	N	N
Resource Organization	N	N
Ledger	Y	Y

**Configuring PROJECT GL RECON FOR PeopleSoft**

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system.

---

**Note:** On installation, initialization blocks are enabled for E-Business Suite R12. If you are deploying on a source system other than E-Business Suite R12, then you must enable the appropriate initialization blocks.

---

Enable data security for Project GL Reconciliation for PeopleSoft by enabling PeopleSoft data security initialization block listed below. If only one source system is deployed, then you must make sure that all Project Security initialization blocks for other adapters are disabled. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

**Init Blocks**

PeopleSoft: Project GL Recon Ledger List PSFT

**To Set Up Project GL Reconciliation Security for PeopleSoft**

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity, then Application Roles.
2. Double click on OBIA\_PROJECT\_LEDGER\_DATA\_SECURITY, navigate to Permissions, then Data Filters, and enable all data security filters.
3. Save the metadata repository.

**A.1.30.1 Configuring BI Duty Roles**

The following BI Duty Roles are applicable to the Project GL Recon subject area.

- OBIA\_PSFT\_PROJECT\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_PSFT\_PROJECT\_MANAGEMENT\_ANALYSIS\_DUTY
- OBIA\_PSFT\_PROJECT\_DATA\_SECURITY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI

Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.31 How to Set Up General Ledger Security for E-Business Suite

### Overview

Financial Analytics supports a combination of the following security mechanisms for GL subject areas:

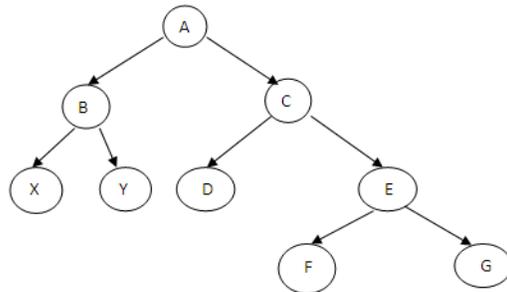

- Security using Ledgers
- Security using GL Accounting Segments

This section gives an overview of the segment security using GL Accounting Segments and supported scenarios in BI Applications.

One or more value sets are used to define the accounting segments in your OLTP. A user can have two different types of access for each value set:

- **Partial Access** - The user has access to specific nodes within a value set. If the value set has hierarchical relationships defined between nodes, access to the user can be granted using "include" access type to a given node. This allows the user to access that node and all its child nodes.

For example, if a user is granted access to node C, then the user has access to nodes C, D, E, F and G.

**Note:** Oracle BI Applications does not support security rules that are set up using the "exclude" access type in Oracle E-Business Suite.

- **Full Access** – The user has complete access to all the value set.

### A.1.31.1 Configuring Ledger Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Ledger Security for PeopleSoft, enable PeopleSoft initialization block and make sure the initialization blocks of all other source systems are disabled. The initialization block names relevant to various source systems are given below. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

- E-Business Suite 11i: Ledgers EBS11
- E-Business Suite R12: Ledgers EBS12
- Oracle PeopleSoft: Ledgers PeopleSoft

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.
4. Clear the **Disabled** check box.
5. Save the metadata repository (RPD file).

### A.1.31.2 Configuring GL Segment Security

GL Segment Security can be applied on the qualified GL Segment Dimensions : 'Dim – Cost Center', 'Dim – Natural Account' & 'Dim – Balancing Segment', as well as the 10 generic dimensions 'Dim – GL Segment1 to 'Dim – GL Segment 10' which are configurable to be any of the accounting segments and is configured in the task <taskname & link>.

Before setting up the security, you need to first identify which of these segment dimensions you need to apply security on depending on your security requirements and the security setup in the E-Business Suite system. Once that is determined the following steps to configure the RPD metadata need to be repeated for each of the securing segment dimension.

#### Initialization Blocks and Session Variables

1. Create a "row wise" session initialization block and a corresponding session variable to get all the parent nodes the user has access to in a tree. Use the SQL queries and session variable names as given in the table below depending on the dimension that is secured.

**Table A–93 Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – Cost Center	SELECT DISTINCT 'GL_SEC_COSTCENTER_VALUESETS___EBS', COST_CENTER_LOV_ID FROM W_COST_CENTER_D WHERE ROW_WID > 0	GL_SEC_COSTCENTER_VALUESETS___EBS
Dim – Natural Account	SELECT DISTINCT 'GL_SEC_ACCOUNT_VALUESETS___EBS', NATURAL_ACCOUNT_LOV_ID FROM W_NATURAL_ACCOUNT_D WHERE ROW_WID > 0	GL_SEC_ACCOUNT_VALUESETS___EBS
Dim – Balancing Segment	SELECT DISTINCT 'GL_SEC_BALANCING_VALUESETS___EBS', BALANCING_SEGMENT_LOV_ID FROM W_BALANCING_SEGMENT_D WHERE ROW_WID > 0	GL_SEC_BALANCING_VALUESETS___EBS
Dim – GL Segment<n>	SELECT DISTINCT 'GL_SEC_SEGMENT<n>_VALUESETS___EBS', SEGMENT<n>_ATTRIB FROM W_GLACCT_SEG_CONFIG_TMP	GL_SEC_SEGMENT<n>_VALUESETS___EBS

**Connection Pool: "Oracle Data Warehouse"."Oracle Data Warehouse Repository Initblocks Connection Pool"**

**Notes:**

- For the generic GL Segment dimensions, Dim – GL Segment 1 - 10, you will need to select the corresponding segment column from W\_GLACCT\_SEG\_CONFIG\_TMP which will have all the value sets corresponding to that segment.
  - Use the default value for these variables as 'Default'.
  - All the variables created above should end with \_\_\_\_EBS (4 '\_' followed by the string EBS). This is for multi source implementation where the same variable can be initialized using multiple SQL's for multiple source systems.
2. Create a "row wise" session initialization block and a corresponding session variable to get all the parent nodes the user has access to in a value set. Use the SQL queries and session variable names as given in the table below depending on the dimension that is secured.

**Table A-94 Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – Cost Center	<pre>select DISTINCT 'GL_SEC_ COSTCENTER_FILTEREDACCESS____ EBS', TO_CHAR(C.FLEX_VALUE_SET_ ID)    '~'    C.FLEX_VALUE from FND_ FLEX_VALUE_RULE_USAGES a, FND_ FLEX_VALUE_RULE_LINES B, FND_ FLEX_VALUES C  where a.FLEX_VALUE_RULE_ID = B.FLEX_VALUE_RULE_ID and a.FLEX_ VALUE_SET_ID = B.FLEX_VALUE_ SET_ID and B.FLEX_VALUE_SET_ID = C.FLEX_VALUE_SET_ID and C.FLEX_ VALUE between B.FLEX_VALUE_LOW and B.FLEX_VALUE_HIGH and B.INCLUDE_EXCLUDE_INDICATOR = 'T' and C.SUMMARY_FLAG = 'Y' and TO_CHAR(a.FLEX_VALUE_SET_ID) = VALUelistof(NQ_SESSION.GL_SEC_ COSTCENTER_VALUESETS____EBS) and TO_CHAR(a.RESPONSIBILITY_ID) = VALUelistof(NQ_SESSION.GL_ SEC_EBS_RESP_ID) and a.APPLICATION_ID = 101</pre>	GL_SEC_COSTCENTER_FILTEREDACCESS____EBS

**Table A-94 (Cont.) Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – Natural Account	<pre>select DISTINCT 'GL_SEC_ACCOUNT_ FILTEREDACCESS___EBS', TO_ CHAR(C.FLEX_VALUE_SET_ID)    '~'    C.FLEX_VALUE from FND_ FLEX_VALUE_RULE_USAGES a, FND_ FLEX_VALUE_RULE_LINES B, FND_ FLEX_VALUES C  where a.FLEX_VALUE_RULE_ID = B.FLEX_VALUE_RULE_ID and a.FLEX_ VALUE_SET_ID = B.FLEX_VALUE_ SET_ID and B.FLEX_VALUE_SET_ID = C.FLEX_VALUE_SET_ID and C.FLEX_ VALUE between B.FLEX_VALUE_LOW and B.FLEX_VALUE_HIGH and B.INCLUDE_EXCLUDE_INDICATOR = 'T' and C.SUMMARY_FLAG = 'Y' and TO_CHAR(a.FLEX_VALUE_SET_ID) = VALUelistof(NQ_SESSION.GL_SEC_ ACCOUNT_VALUESETS___EBS) and TO_CHAR(a.RESPONSIBILITY_ID) = VALUelistof(NQ_SESSION.GL_SEC_ EBS_RESP_ID) and a.APPLICATION_ID = 101</pre>	GL_SEC_ACCOUNT_ FILTEREDACCESS___EBS
Dim – Balancing Segment	<pre>select DISTINCT 'GL_SEC_ BALANCING_FILTEREDACCESS___ EBS', TO_CHAR(C.FLEX_VALUE_SET_ ID)    '~'    C.FLEX_VALUE from FND_ FLEX_VALUE_RULE_USAGES a, FND_ FLEX_VALUE_RULE_LINES B, FND_ FLEX_VALUES C  where a.FLEX_VALUE_RULE_ID = B.FLEX_VALUE_RULE_ID and a.FLEX_ VALUE_SET_ID = B.FLEX_VALUE_ SET_ID and B.FLEX_VALUE_SET_ID = C.FLEX_VALUE_SET_ID and C.FLEX_ VALUE between B.FLEX_VALUE_LOW and B.FLEX_VALUE_HIGH and B.INCLUDE_EXCLUDE_INDICATOR = 'T' and C.SUMMARY_FLAG = 'Y' and TO_CHAR(a.FLEX_VALUE_SET_ID) = VALUelistof(NQ_SESSION.GL_SEC_ BALANCING_VALUESETS___EBS) and TO_CHAR(a.RESPONSIBILITY_ID) = VALUelistof(NQ_SESSION.GL_ SEC_EBS_RESP_ID) and a.APPLICATION_ID = 101</pre>	GL_SEC_BALANCING_ FILTEREDACCESS___EBS

**Table A-94 (Cont.) Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – GL Segment<n>	<pre>select DISTINCT 'GL_SEC_ SEGMENT&lt;n&gt;_FILTEREDACCESS___ EBS', TO_CHAR(C.FLEX_VALUE_SET_ ID)    '~'    C.FLEX_VALUE from FND_ FLEX_VALUE_RULE_USAGES a, FND_ FLEX_VALUE_RULE_LINES B, FND_ FLEX_VALUES C  where a.FLEX_VALUE_RULE_ID = B.FLEX_VALUE_RULE_ID and a.FLEX_ VALUE_SET_ID = B.FLEX_VALUE_ SET_ID and B.FLEX_VALUE_SET_ID = C.FLEX_VALUE_SET_ID and C.FLEX_ VALUE between B.FLEX_VALUE_LOW and B.FLEX_VALUE_HIGH and B.INCLUDE_EXCLUDE_INDICATOR = 'T' and C.SUMMARY_FLAG = 'Y' and TO_CHAR(a.FLEX_VALUE_SET_ID) = VALUelistof(NQ_SESSION.GL_SEC_ SEGMENT&lt;n&gt;_VALUESETS___EBS) and TO_CHAR(a.RESPONSIBILITY_ID) = VALUelistof(NQ_SESSION.GL_ SEC_EBS_RESP_ID) and a.APPLICATION_ID = 101</pre>	GL_SEC_SEGMENT<n>_ FILTEREDACCESS___EBS

Connection Pool: "Oracle EBS OLTP"."Oracle EBS OLTP DbAuth Connection Pool"

**Notes:**

- The 2nd highlighted variable name in the SQL comes from the variable names defined in Step 1. Make sure you use the same names.
  - Use the default value for these variables as 'Default'
  - All the variables created above should end with \_\_\_EBS (4 '\_' followed by the string EBS). This is for multi source implementation where the same variable can be initialized using multiple SQL's for multiple source systems.
3. Create a "row wise" session initialization block and a corresponding session variable to get the level in the hierarchy the above nodes fall in a hierarchical value set. Use the SQL queries and session variable names as given in the table below depending on the dimension that is secured.

**Table A-95 Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – Cost Center	<pre>SELECT DISTINCT 'GL_SEC_ COSTCENTER_ FILTEREDACCESSLEVELS___EBS', FIXED_HIER_LEVEL FROM W_COST_ CENTER_DH WHERE LEVEL0_ SECURITY_ID IN (VALUelistof(NQ_ SESSION.GL_SEC_COSTCENTER_ FILTEREDACCESS___EBS)) AND CURRENT_FLG='Y'</pre>	GL_SEC_COSTCENTER_ FILTEREDACCESSLEVELS___ _EBS

**Table A-95 (Cont.) Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – Natural Account	SELECT DISTINCT 'GL_SEC_ACCOUNT_FILTEREDACCESSLEVELS____EBS', FIXED_HIER_LEVEL FROM W_NATURAL_ACCOUNT_DH WHERE LEVEL0_SECURITY_ID IN (VALUelistOF(NQ_SESSION.GL_SEC_ACCOUNT_FILTEREDACCESS____EBS)) AND CURRENT_FLG='Y'	GL_SEC_ACCOUNT_FILTEREDACCESSLEVELS____EBS
Dim – Balancing Segment	SELECT DISTINCT 'GL_SEC_BALANCING_FILTEREDACCESSLEVELS____EBS', FIXED_HIER_LEVEL FROM W_BALANCING_SEGMENT_DH WHERE LEVEL0_SECURITY_ID IN (VALUelistOF(NQ_SESSION.GL_SEC_BALANCING_FILTEREDACCESS____EBS)) AND CURRENT_FLG='Y'	GL_SEC_BALANCING_FILTEREDACCESSLEVELS____EBS
Dim – GL Segment<n>	SELECT DISTINCT 'GL_SEC_SEGMENT<n>_FILTEREDACCESSLEVELS____EBS', FIXED_HIER_LEVEL FROM W_GL_SEGMENT_DH WHERE LEVEL0_SECURITY_ID IN (VALUelistOF(NQ_SESSION.GL_SEC_SEGMENT<n>_FILTEREDACCESS____EBS)) AND CURRENT_FLG='Y'	GL_SEC_SEGMENT<n>_FILTEREDACCESSLEVELS____EBS

Connection Pool: "Oracle Data Warehouse"."Oracle Data Warehouse Repository Initblocks Connection Pool"

**Notes:**

- The 2nd highlighted variable name in the SQL comes from the variable names defined in Step 2. Make sure you use the same names.
  - Use the default value for these variables as 0.
  - All the variables created above should end with \_\_\_\_EBS (4 '\_' followed by the string EBS). This is for multi source implementation where the same variable can be initialized using multiple SQL's for multiple source systems.
4. Create a "row wise" session initialization block and a corresponding session variable to get all the value sets to which user has partial access for a given segment. Use the SQL queries and session variable names as given in the table below depending on the dimension that is secured.

**Table A-96 Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – Cost Center	select DISTINCT 'GL_SEC_COSTCENTER_FILTEREDACCESSVALUESETS____EBS', TO_CHAR(A.FLEX_VALUE_SET_ID) FROM FND_FLEX_VALUE_RULE_USAGES A WHERE TO_CHAR(A.FLEX_VALUE_SET_ID) = VALUELISTOF(NQ_SESSION.GL_SEC_COSTCENTER_VALUESETS____EBS) AND TO_CHAR(A.RESPONSIBILITY_ID) = VALUELISTOF(GL_SEC_EBS_RESP_ID)AND A.APPLICATION_ID = 101	GL_SEC_COSTCENTER_FILTEREDACCESSVALUESET S____EBS
Dim – Natural Account	select DISTINCT 'GL_SEC_ACCOUNT_FILTEREDACCESSVALUESETS____EBS', TO_CHAR(A.FLEX_VALUE_SET_ID) FROM FND_FLEX_VALUE_RULE_USAGES A WHERE TO_CHAR(A.FLEX_VALUE_SET_ID) = VALUELISTOF(NQ_SESSION.GL_SEC_ACCOUNT_VALUESETS____EBS) AND TO_CHAR(A.RESPONSIBILITY_ID) = VALUELISTOF(GL_SEC_EBS_RESP_ID)AND A.APPLICATION_ID = 101	GL_SEC_ACCOUNT_FILTEREDACCESSVALUESET S____EBS
Dim – Balancing Segment	select DISTINCT 'GL_SEC_BALANCING_FILTEREDACCESSVALUESETS____EBS', TO_CHAR(A.FLEX_VALUE_SET_ID) FROM FND_FLEX_VALUE_RULE_USAGES A WHERE TO_CHAR(A.FLEX_VALUE_SET_ID) = VALUELISTOF(NQ_SESSION.GL_SEC_BALANCING_VALUESETS____EBS) AND TO_CHAR(A.RESPONSIBILITY_ID) = VALUELISTOF(GL_SEC_EBS_RESP_ID)AND A.APPLICATION_ID = 101	GL_SEC_BALANCING_FILTEREDACCESSVALUESET S____EBS
Dim – GL Segment<n>	select DISTINCT 'GL_SEC_SEGMENT<n>_FILTEREDACCESSVALUESETS____EBS', TO_CHAR(A.FLEX_VALUE_SET_ID) FROM FND_FLEX_VALUE_RULE_USAGES A WHERE TO_CHAR(A.FLEX_VALUE_SET_ID) = VALUELISTOF(NQ_SESSION.GL_SEC_SEGMENT<n>_VALUESETS____EBS) AND TO_CHAR(A.RESPONSIBILITY_ID) = VALUELISTOF(GL_SEC_EBS_RESP_ID)AND A.APPLICATION_ID = 101	GL_SEC_SEGMENT<n>_FILTEREDACCESSVALUESET S____EBS

Connection Pool: "Oracle EBS OLTP"."Oracle EBS OLTP DbAuth Connection Pool"

**Notes:**

- The 2nd highlighted variable name in the SQL comes from the variable names defined in Step 1. Make sure you use the same names.
- Use the default value for these variables as 'Default'.

- All the variables created above should end with \_\_\_\_EBS (4 '\_' followed by the string EBS). This is for multi source implementation where the same variable can be initialized using multiple SQL's for multiple source systems.

**Table A-97 Initialization Blocks and Session Variables**

Dimension	SQL	Variable Name
Dim – Cost Center	SELECT DISTINCT 'GL_SEC_COSTCENTER_FULLACCESS____EBS', COST_CENTER_LOV_ID, FROM W_COST_CENTER_D WHERE COST_CENTER_LOV_ID NOT IN VALUELISTOF(NQ_SESSION.GL_SEC_COSTCENTER_FILTEREDACCESSVALUESETS____EBS)	GL_SEC_COSTCENTER_FULLACCESS____EBS
Dim – Natural Account	SELECT DISTINCT 'GL_SEC_ACCOUNT_FULLACCESS____EBS', NATURAL_ACCOUNT_LOV_ID, FROM W_NATURAL_ACCOUNT_D WHERE NATURAL_ACCOUNT_LOV_ID NOT IN VALUELISTOF(NQ_SESSION.GL_SEC_ACCOUNT_FILTEREDACCESSVALUESETS____EBS)	GL_SEC_ACCOUNT_FULLACCESS____EBS
Dim – Balancing Segment	SELECT DISTINCT 'GL_SEC_BALANCING_FULLACCESS____EBS', BALANCING_SEGMENT_LOV_ID, FROM W_BALANCING_SEGMENT_D WHERE BALANCING_SEGMENT_LOV_ID NOT IN VALUELISTOF(NQ_SESSION.GL_SEC_BALANCING_FILTEREDACCESSVALUESETS____EBS)	GL_SEC_BALANCING_FULLACCESS TS____EBS
Dim – GL Segment<n>	SELECT DISTINCT 'GL_SEC_SEGMENT<n>_FULLACCESS____EBS', SEGMENT<n>_ATTRIB, FROM W_GLACCT_SEG_CONFIG_TMP WHERE SEGMENT<n>_ATTRIB NOT IN VALUELISTOF(NQ_SESSION.GL_SEC_SEGMENT<n>_FILTEREDACCESSVALUESETS____EBS)	GL_SEC_SEGMENT<n>_FULLACCESS____EBS

Connection Pool: "Oracle Data Warehouse"."Oracle Data Warehouse Repository Initblocks Connection Pool"

- For the generic GL Segment dimensions, Dim – GL Segment 1 - 10, you will need to select the corresponding segment column from W\_GLACCT\_SEG\_CONFIG\_TMP which will have all the value sets corresponding to that segment.

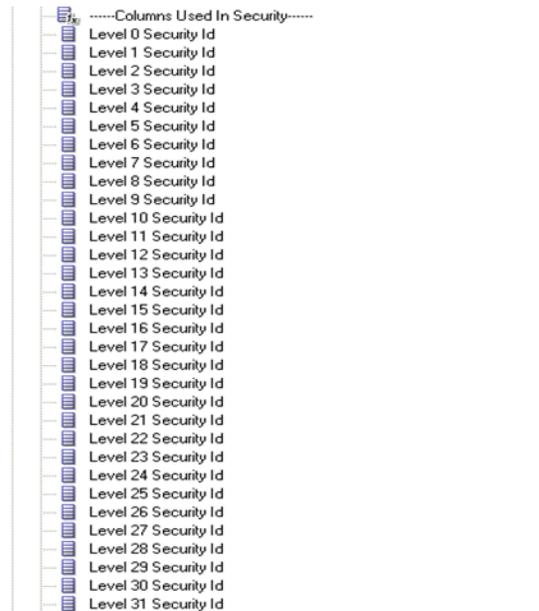

- The 2nd highlighted variable name in the SQL comes from the variable names defined in Step 4. Make sure you use the same names.

- Use the default value for these variables as 'Default'.

- All the variables created above should end with \_\_\_\_EBS (4 '\_' followed by the string EBS). This is for multi source implementation where the same variable can be initialized using multiple SQL's for multiple source systems.

## Logical Column Expression in the BMM layer

- Each dimension has 32 security columns Level 0 Security Id through Level 31 Security Id as shown below. The expression for each of these logical columns need to be modified using the hierarchy level variable created above.

- Open the logical table source of the dimension that maps to the warehouse dimension table and set the expression for each of these columns using the example from "Dim – Cost Center" dimension.

For example, if you are securing by "Dim – GL Segment3" and the hierarchy level variable for this segment is "GL\_SEC\_SEGMENT3\_FILTEREDACCESSLEVELS", you would set the expression for each of the "Level <n> Security Id" column with the following:

```
INDEXCOL( IFNULL( VALUEOF(<n>, NQ_SESSION."GL_SEC_SEGMENT3_
FILTEREDACCESSLEVELS"), VALUEOF(0, NQ_SESSION."GL_SEC_SEGMENT3_
FILTEREDACCESSLEVELS")),
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_
Segment3"."LEVEL31_SECURITY_ID",
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_
Segment3"."LEVEL30_SECURITY_ID",
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_
Segment3"."LEVEL29_SECURITY_ID",
...and so on for each security id column...
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_
Segment3"."LEVEL1_SECURITY_ID",
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_
Segment3"."LEVEL0_SECURITY_ID")
```

## Security filters in the "Data Security" application roles

Do the following:

- Navigate to "Manage -> Identity" from the menu, open the "General Ledger Data Security" application role and navigate to "Permissions -> Data Filters". For each of the logical facts secured under this role, you will see some existing filters, which are handling ledger security. You will need to append the segment security filters to this with an 'AND' condition. A snippet of the segment security filters to be

appended for a given segment dimension is given below, assuming the security is on "Dim – GL Segment3" and the session variable prefix used in the previous steps was "GL\_SEC\_SEGMENT3".

```
(
"Core"."Dim - GL Segment3"."Segment Value Set Code" IS NULL OR
((
"Core"."Dim - GL Segment3"."Segment Value Set Code" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FULLACCESS") OR
"Core"."Dim - GL Segment3"."Level 0 Security Id"      = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 1 Security Id"      = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 2 Security Id"      = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
...and so on for each security id column...
"Core"."Dim - GL Segment3"."Level 30 Security Id"     = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 31 Security Id"     = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS")
)
)
AND
"Core"."Dim - GL Segment3"."Current Flag Security" = 'Y')
)
```

2. Repeat the above for each segment dimension that is secured using appropriate variable names for each segment and appending each block of filters with an AND. For example, if you are securing by cost center and segment3 dimensions, the filter will look like this, which includes the ledger security:

```
/* Ledger security filters */
(
"Core"."Dim - Ledger"."Key Id" = VALUEOF(NQ_SESSION."LEDGER")
)
/* cost center segment security filters */
AND
(
"Core"."Dim - Cost Center"."Cost Center Value Set Code" IS NULL OR
((
"Core"."Dim - Cost Center"."Cost Center Value Set Code" = VALUEOF(NQ_
SESSION."GL_SEC_COST_CENTER_FULLACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 0 Security Id"      = VALUEOF(NQ_
SESSION."GL_SEC_COST_CENTER_FILTEREDACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 1 Security Id"      = VALUEOF(NQ_
SESSION."GL_SEC_COST_CENTER_FILTEREDACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 2 Security Id"      = VALUEOF(NQ_
SESSION."GL_SEC_COST_CENTER_FILTEREDACCESS") OR
...and so on for each security id column...
"Core"."Dim - Cost Center"."Cost Center Level 30 Security Id"     = VALUEOF(NQ_
SESSION."GL_SEC_COST_CENTER_FILTEREDACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 31 Security Id"     = VALUEOF(NQ_
SESSION."GL_SEC_COST_CENTER_FILTEREDACCESS")
)
)
AND
"Core"."Dim - Cost Center"."Current Flag Security" = 'Y')
)
/* segment3 security filters */
AND
(
"Core"."Dim - GL Segment3"."Segment Value Set Code" IS NULL OR
((
```

```

"Core"."Dim - GL Segment3"."Segment Value Set Code" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FULLACCESS") OR
"Core"."Dim - GL Segment3"."Level 0 Security Id" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 1 Security Id" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 2 Security Id" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
...and so on for each security id column...
"Core"."Dim - GL Segment3"."Level 30 Security Id" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 31 Security Id" = VALUEOF(NQ_SESSION."GL_
SEC_SEGMENT3_FILTEREDACCESS")
)
AND
"Core"."Dim - GL Segment3"."Current Flag Security" = 'Y')
)

```

**Note:** When a tree has more than one version, the security filters are always applied on the current version for that tree (CURRENT\_FLG='Y'). However you can navigate through any other version of the tree in the reports but security will always be applied on the current version.

### A.1.31.3 Configuring BI Duty Roles

The following BI Duty Roles are applicable to the General Ledger subject area.

- Budget Director
- Budget Analyst
- Financial Analyst
- CFO Group
- Controller Group

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

**Note:** These roles will have access to Account Payables, Account Receivables and Fixed Assets data in BI to facilitate the drill down from GL to those modules. However, access to data in the respective modules must be provisioned in the E-Business Suite system for these users in order to use the drill down capabilities.

## A.1.32 How to Set Up General Ledger Security for Fusion Applications

This topic describes how to implement GL segment security in Oracle BI Applications with a Fusion Applications source system, and contains the following sections:

- [Section A.1.32.1, "Introduction"](#)
- [Section A.1.32.2, "Configuring GL Segment Security"](#)

### A.1.32.1 Introduction

Oracle Financial Analytics supports a combination of the following security mechanisms for GL subject areas:

- Security using GL Data Access Sets

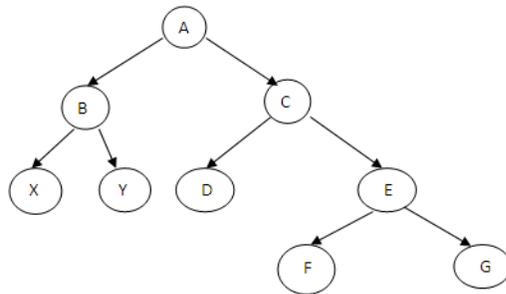

- Security using GL Accounting Segments

Data Access Set security is configured during installation and does not require additional configuration. This section gives an overview of the segment security, and describes how to configure security using GL Accounting Segments.

One or more value sets define the accounting segments in your OLTP. You can set up these value sets as a tree value set or non-tree value set. Users can have different types of access for each value set:

- NOACCESS - User has access to none of the values in that value set.
- FULLACCESS - User has access to all the values in that value set.
- FILTEREDACCESS - User has access to specific values in that value set, defined as follows:
  - Tree valueset: If the valueset has a tree, then access to the user can be granted using "is-descendant of" hierarchical operator. This means that the user has access to that node and all the descendants of that node within that value set.

For example in the following illustration, if the user is granted "is-descendant of" node C, then the user has access to nodes C, D, E, F and G.

- Non-tree valueset: If the valueset does not have a tree, then the user can be granted access to specific node/s or a range of nodes

### A.1.32.2 Configuring GL Segment Security

Prior to configuring the segment security in the Oracle BI Repository, you should have completed configuring the segment dimensions in the Oracle BI Repository by mapping the segment VOs to the appropriate logical dimensions using BI Extender. Then perform the following tasks for each of the segment that you are securing. Based on the value sets used for those segments, the segment can be a tree enabled segment or a non-tree segment. The security implementation is different for these cases.

- [Section A.1.32.2.1, "Tree Segment Security Implementation"](#)
- [Section A.1.32.2.2, "Non-Tree Segment Security Implementation"](#)

**A.1.32.2.1 Tree Segment Security Implementation** Perform the following steps when the segment on which security to be applied is a tree-based segment.

#### Task 1 Define Initialization Blocks and Session Variables

1. For tree-based value sets, the data security VO "FscmTopModelAM.DataSecurityAM.KFFHierFilter1" will give the different access types for the user as mentioned in the previous section. You will need to

create a row wise session initialization block which reads from this VO. A sample SQL for this initialization block is as follows.

```
SET variable DISABLE_SQL_BYPASS=1, ApplicationIdBind='101',
KeyFlexfieldCodeBind='GL#', SegmentLabelCodeBind='FA_COST_CTR': SELECT DISTINCT
'COST_CENTER_'||AccessType, CASE WHEN AccessType = 'FULLACCESS' THEN
ValueSetCode ELSE ValueSetCode||'~'||TreeCode||'~'||TreeNodePk1Value END FROM
"oracle.apps.fscm.model.analytics.applicationModule.FscmTopModelAM_
FscmTopModelAMLocal"...FscmTopModelAM.DataSecurityAM.KFFHierFilter1"
```

Turn ON the "Allow deferred execution" option for this initialization block.

Use the appropriate segment label code for the particular segment and any suitable prefix for the variable name, which are highlighted in bold text. In the above example, the segment label code used is "FA\_COST\_CTR" and the variable prefix used is "COST\_CENTER\_". This SQL will give (a) the value set codes the user has been granted full access to and/or (b) specific parent nodes within a tree the user has been granted access to using "is-descendant of" operator.

2. Create two session variables for the initialization block with names `<prefix>_FULLACCESS` and `<prefix>_FILTEREDACCESS`, where `<prefix>` is the variable prefix used in the initialization block SQL. For example, in the above case you will define two session variables with the name `COST_CENTER_FULLACCESS` and `COST_CENTER_FILTEREDACCESS`. Default them with a value '-1' (Varchar).
3. When the user has filtered access, we need to determine the hierarchy level in the hierarchy/tree where the node falls. For this you will need to create another row wise session initialization block. A sample SQL for this would be as follows. You will need to use the `FILTEREDACCESS` variable created in the previous step.

```
SELECT DISTINCT 'COST_CENTER_LEVELS', FIXED_HIER_LEVEL FROM "Oracle Data
Warehouse"."Catalog"."dbo"."W_COST_CENTER_DH" WHERE LEVEL0_SECURITY_ID IN
(VALUELISTOF(NQ_SESSION.COST_CENTER_FILTEREDACCESS)) AND CURRENT_FLG='Y'
```

Turn ON the "Allow deferred execution" option for this initialization block.

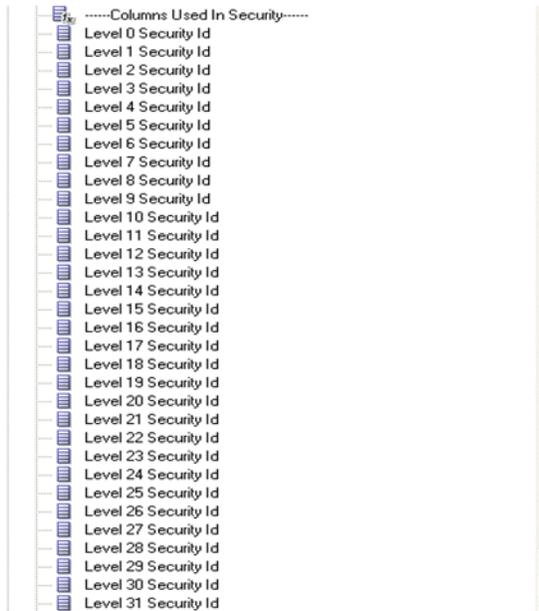

Use "`<prefix>_LEVELS`" for the variable name in the select clause, where `<prefix>` is the same variable prefix that is used in Steps 2 and 3. **Note:** The variable name used (in the where clause), should be the same as defined in the previous initialization block.

4. Create a session variable for the initialization block with the same name as used in the initialization block (`COST_CENTER_LEVELS` in this example) and default it with a value 0 (number). Set the execution precedence to make the initialization block mentioned in the previous step to run first.
5. You can refer to the initialization blocks "Cost Center Security" and "Cost Center Security Top Node Levels" in the repository installed by default, as a reference to create the above two initialization blocks.
6. Repeat the previous steps for each of the segment to be secured, giving a different name for the two initialization blocks and the three session variables for each segment.

## Task 2 Security id Expression in the logical dimensions

Each segment dimension in the Oracle BI Repository (Dim - Cost Center, Dim - Balancing Segment, Dim - Natural Account Segment and Dim - GL Segment 1-10) can be either a tree or non-tree segment based on your requirements. In case you have configured them to be tree segments, perform the steps below after creating the initialization blocks and variables mentioned in [Task 1](#).

- Each dimension has 32 security columns, Level 0 Security Id through Level 31 Security Id, as shown below. The expression for each of these logical columns must be modified using the hierarchy level variable created above.

- Open the logical table source of the dimension that maps to the warehouse dimension table and set the expression for each of these columns using the example from "Dim - Cost Center" dimension. For example, if you are securing by "Dim - GL Segment3" and the hierarchy level variable for this segment is "SEGMENT3\_LEVELS", you would set the expression for each of the "Level <n> Security Id" column with the following:

```
INDEXCOL( IFNULL( VALUEOF(<n>, NQ_SESSION."SEGMENT3_LEVELS"), VALUEOF(0, NQ_SESSION."SEGMENT3_LEVELS")),
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_Segment3"."LEVEL31_SECURITY_ID",
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_Segment3"."LEVEL30_SECURITY_ID",
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_Segment3"."LEVEL29_SECURITY_ID",
...and so on for each security id column...
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_Segment3"."LEVEL1_SECURITY_ID",
"Oracle Data Warehouse"."Catalog"."dbo"."Dim_W_GL_SEGMENT_DH_Security_Segment3"."LEVEL0_SECURITY_ID")
```

- Repeat the above steps for each of the segment dimension to be secured.

### Task 3 Security Filters in the Data Security Duty Roles

After completing [Task 2](#), filters need to be added to the appropriate Data Role for data security predicates to be applied to queries.

- Navigate to "Manage -> Identity" from the menu.
- Open the "OBIA\_GENERAL\_LEDGER\_DATA\_SECURITY" Duty Role.
- Navigate to "Permissions -> Data Filters".

For each of the logical facts secured under this role, you will see some existing filters, which are handling data access security. You will need to append the

segment security filters to this with an 'AND' condition. A snippet of the segment security filters to be appended for a given segment dimension is given below, assuming the security is on "Dim - GL Segment3" and the session variable prefix used in the previous steps was "SEGMENT3".

```
(
"Core"."Dim - GL Segment3"."Segment Value Set Code" IS NULL OR
((
"Core"."Dim - GL Segment3"."Segment Value Set Code" = VALUEOF(NQ_
SESSION."SEGMENT3_FULLACCESS") OR
"Core"."Dim - GL Segment3"."Level 0 Security Id"      = VALUEOF(NQ_
SESSION."SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 1 Security Id"      = VALUEOF(NQ_
SESSION."SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 2 Security Id"      = VALUEOF(NQ_
SESSION."SEGMENT3_FILTEREDACCESS") OR
...and so on for each security id column...
"Core"."Dim - GL Segment3"."Level 30 Security Id"     = VALUEOF(NQ_
SESSION."SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 31 Security Id"     = VALUEOF(NQ_
SESSION."SEGMENT3_FILTEREDACCESS")
)
)
AND
"Core"."Dim - GL Segment3"."Current Flag Security" = 'Y')
)
```

4. Repeat the above for each tree based segment dimension that is secured using appropriate variable names for each segment and appending each block of filters with an AND. For example, if you are securing by cost center and segment3 dimensions, the filter including the data access set security, will be as follows:

```
/* data access security filters */
(
"Core"."Dim - GL Data Access Set Security"."Ledger List" = VALUEOF(NQ_
SESSION."LEDGER_LIST")
OR
"Core"."Dim - GL Data Access Set Security"."Ledger BSV List" = VALUEOF(NQ_
SESSION."LEDGER_BSV_LIST")
OR
"Core"."Dim - GL Data Access Set Security"."Ledger MSV List" = VALUEOF(NQ_
SESSION."LEDGER_MSV_LIST")
)
/* cost center segment security filters */
AND
(
"Core"."Dim - Cost Center"."Cost Center Value Set Code" IS NULL OR
((
"Core"."Dim - Cost Center"."Cost Center Value Set Code" = VALUEOF(NQ_
SESSION."COST_CENTER_FULLACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 0 Security Id"      = VALUEOF(NQ_
SESSION." COST_CENTER_FILTEREDACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 1 Security Id"      = VALUEOF(NQ_
SESSION." COST_CENTER_FILTEREDACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 2 Security Id"      = VALUEOF(NQ_
SESSION." COST_CENTER_FILTEREDACCESS") OR
...and so on for each security id column...
"Core"."Dim - Cost Center"."Cost Center Level 30 Security Id"     = VALUEOF(NQ_
SESSION." COST_CENTER_FILTEREDACCESS") OR
"Core"."Dim - Cost Center"."Cost Center Level 31 Security Id"     = VALUEOF(NQ_
```

```

SESSION." COST_CENTER _FILTEREDACCESS")
)
AND
"Core"."Dim - Cost Center"."Current Flag Security" = 'Y')
)
/* segment3 security filters */
AND
(
(
"Core"."Dim - GL Segment3"."Segment Value Set Code" IS NULL OR
((
"Core"."Dim - GL Segment3"."Segment Value Set Code" = VALUEOF(NQ_
SESSION."SEGMENT3_FULLACCESS") OR
"Core"."Dim - GL Segment3"."Level 0 Security Id"      = VALUEOF(NQ_
SESSION."SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 1 Security Id"      = VALUEOF(NQ_
SESSION."SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 2 Security Id"      = VALUEOF(NQ_
SESSION."SEGMENT3_FILTEREDACCESS") OR
...and so on for each security id column...
"Core"."Dim - GL Segment3"."Level 30 Security Id"     = VALUEOF(NQ_
SESSION."SEGMENT3_FILTEREDACCESS") OR
"Core"."Dim - GL Segment3"."Level 31 Security Id"     = VALUEOF(NQ_
SESSION."SEGMENT3_FILTEREDACCESS")
)
)
AND
"Core"."Dim - GL Segment3"."Current Flag Security" = 'Y')
)

```

**Note:** When a tree has more than one version, the security filters are always applied on the current version for that tree (CURRENT\_FLG='Y'). However, you can navigate through any other version of the tree in the reports but security will always be applied on the current version.

**A.1.32.2.2 Non-Tree Segment Security Implementation** Perform the following steps when the segment on which security to be applied is not a tree based segment.

### Task 1 Define Initialization Blocks and Session Variables

1. Determine the name of the VO that was generated for the segment. It will follow a naming pattern such as FLEX\_VS\_<label>\_VI, where <label> is the segment label defined in the OLTP.
2. Create a session row wise initialization block reading from this VO.

A sample SQL statement might be:

```

SELECT 'GL_MANAGEMENT_FILTEREDACCESS', ValueSetCode||'~'||Value FROM
"oracle.apps.fscm.model.analytics.applicationModule.FscmTopModelAM_
FscmTopModelAMLocal"... "FscmTopModelAM.AccountBIAM.FLEX_VS_GL_MANAGEMENT2_VI"

```

Use an appropriate prefix for the variable name, highlighted above. This initialization block gives a concatenation of value set code and values the user has access to.

3. Create appropriate session variable with the same name as used above and default it with a value '-1' (Varchar). In the above example, the variable name is "GL\_MANAGEMENT\_FILTEREDACCESS".
4. Repeat the above steps for each non-tree segment that needs to be secured.

## Task 2 Security Filters in the "Data Security" Data Roles

After you have completed [Task 1](#), filters need to be added to the appropriate Data Role for data security predicates to be applied to queries.

1. Navigate to "Manage -> Identity" from the menu, and open the "OBIA\_GENERAL\_LEDGER\_DATA\_SECURITY" Data Role.
2. Navigate to "Permissions -> Data Filters", and for each of the logical facts secured under this role, append the following filter to any existing filters with an 'AND' condition. The sample filter will look like:

```
(
"Core"."Dim - GL Segment2"."Segment Value Set Code" IS NULL OR
"Core"."Dim - GL Segment2"."Segment Code Id" = VALUEOF(NQ_SESSION."GL_
MANAGEMENT_FILTEREDACCESS")
)
```

3. Repeat the previous steps for each non-tree segment dimension that is secured using appropriate variable names for each segment and appending each block (one block per segment) with an "AND" condition. If you have a combination of non-tree and tree segments, then apply the data filters accordingly (as explained for each case) appending each filter with an 'AND' condition.

## A.1.33 How to Set Up CRM Territory Hierarchy Based Security for Oracle Fusion

### Overview

Territory hierarchy based security is widely used in many CRM subject areas, such as Sales, Marketing and Partner Management. Territory based security control starts with the list of territories that the login user works for and the levels these territories belong to in the territory hierarchy. The list of territories and the levels in the territory hierarchy are then used as part of the data filter condition in queries.

There are variations of territory hierarchy based security when it's actually applied in different areas, although they are all territory based by nature.

- For Opportunity and Revenue, visibility is granted to the login user via the following:
  - As member of the territory team that the opportunity is assigned to.
  - As owner or administrator of a parent territory in the hierarchy.
- For Territory Quota and Resource Quota, visibility is granted to the login user via the following:
  - As team member of the territory that the Quota is created on.
  - As an owner or administrator of a parent territory in the hierarchy.
- For Forecasting, visibility is granted to the login user via the following:
  - As team member of the territory that the Forecast is created on.
  - As owner or administrator of a parent territory in the hierarchy.
- For Leads, visibility is granted to the login user via the following:
  - As team member of the territory that is assigned to lead.
  - As owner or administrator of a parent territory in the hierarchy of the territory assigned to lead.

### Configuring Resource Hierarchy Based Security

There are 3 session variables used in territory hierarchy based data security roles.

- TERR\_LIST contains the list of Ids of the territory, in which the login user is a team member. This variable is initialized via the session initial block "Territory List".
- SUPER\_TERR\_LIST contains the list of Ids of the territory, in which the login user is an owner or administrator. This variable is initialized via the session initial block "Super Territory List".
- TERR\_HIER\_LEVEL\_LIST contains the list of the levels in territory hierarchy that the login user is an owner or administrator of the territory. This variable is initialized via the session initial block "Territory Hierarchy Level List".

#### A.1.33.1 Configuring BI Duty Roles

All the Territory Hierarchy Based security roles should be defined as member of the internal role OBIA\_TERRITORY\_HIERARCHY\_DATA\_SECURITY, under which, all the necessary data filters are defined. In the default configuration, OBIA\_TERRITORY\_HIERARCHY\_DATA\_SECURITY has the following members:

- OBIA\_LEAD\_ANALYSIS\_DUTY
- OBIA\_PARTNER\_ANALYSIS\_DUTY
- OBIA\_PARTNER\_ADMINISTRATIVE\_ANALYSIS\_DUTY
- OBIA\_PARTNER\_CHANNEL\_ACCOUNT\_MANAGER\_ANALYSIS\_DUTY
- OBIA\_PARTNER\_CHANNEL\_ADMINISTRATIVE\_ANALYSIS\_DUTY
- OBIA\_PARTNER\_CHANNEL\_ANALYSIS\_DUTY
- OBIA\_OPPORTUNITY\_LANDSCAPE\_ANALYSIS\_DUTY
- OBIA\_SALES\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_SALES\_MANAGERIAL\_ANALYSIS\_DUTY
- OBIA\_SALES\_TRANSACTIONAL\_ANALYSIS\_DUTY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.34 How to Set Up Project Billing and Revenue Security for E-Business Suite

### Overview

Project Analytics supports security over following dimensions in Project Billing and Revenue subject areas. In Oracle Business Intelligence Applications, the 'Business Unit' entity refers to 'Operating Unit Organizations' in E-Business Suite. The list of Business Units that a user has access to, is determined by E-Business Suite grants.

**Table A-98 Supported Project Billing and Revenue subject areas**

<b>Project Billing &amp; Revenue Facts Dimension Used For Securing</b>	<b>Billing</b>	<b>Revenue</b>	<b>Contract</b>	<b>Funding</b>	<b>Cross Charge-Receiver</b>	<b>Cross Charge-Provider</b>	<b>Cross Charge-Invoice</b>
Project Business Unit	Y	Y	N	Y	Y	N	Y
Project Organization	Y	Y	N	Y	Y	N	Y
Expenditure Business Unit	N	N	N	N	N	Y	N
Contract Business Unit	Y	Y	Y	Y	N	N	N
Project	Y	Y	N	Y	Y	Y	Y
Resource Organization	N	N	N	N	N	N	N
Ledger	N	N	N	N	N	N	N

### **Configuring Project Billing and Revenue Security for E-Business Suite**

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system.

---

**Note:** On installation, initialization blocks are enabled for E-Business Suite R12. If you are deploying on a source system other than E-Business Suite R12, then you must enable the appropriate initialization blocks.

---

Enable data security for Project Billing and Revenue in E-Business Suite by enabling the initialization blocks listed below based on the E-Business Suite adaptor. If only one source system is deployed, then you must make sure that all Project Security initialization blocks for other adaptors are disabled. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

#### **Initialization Blocks for Project Billing and Revenue**

- For R11x
  - Expenditure Business Unit List EBS11x
  - Project Business Unit List Funding EBS11x
  - Project Business Unit List Invoice EBS11x
  - Project Business Unit List Revenue EBS11x
  - Project Contract Business Unit List EBS11x
  - Project Contract Business Unit List Invoice EBS11x
  - Project Contract Business Unit List Revenue EBS11x
- For R12
  - Expenditure Business Unit List EBSR12
  - Project Business Unit List Funding EBSR12
  - Project Business Unit List Invoice EBSR12
  - Project Business Unit List Revenue EBSR12
  - Project Contract Business Unit List EBSR12

- Project Contract Business Unit List Invoice EBSR12
- Project Contract Business Unit List Revenue EBSR12
- For both R11x and R12
  - Project List Funding EBS
  - Project List Invoice EBS
  - Project List Revenue EBS
  - Project Organization List Funding EBS
  - Project Organization List Invoice EBS
  - Project Organization List Revenue EBS

#### **A.1.34.1 Configuring BI Duty Roles**

The following BI Duty Roles are applicable to the Project Billing and Revenue subject area.

- OBIA\_EBS\_PROJECT\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_EBS\_PROJECT\_MANAGEMENT\_ANALYSIS\_DUTY
- OBIA\_EBS\_PROJECT\_DATA\_SECURITY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

### **A.1.35 How to Set Up CRM Resource Organization Based Security for Oracle Fusion**

#### **Overview**

Oracle Fusion CRM resource organization based security is applied when the Fusion marketing managers or marketing operational managers access marketing campaigns. It provides the users with access to all marketing campaigns primarily owned by their organizations or child organizations.

#### **Configuring Resource Organization Based Security**

There are two session variables used in resource organization based data security role.

- RESOURCE\_ORG\_LIST contains the list of resource organization id that the login user belongs to. It is initialized via initial block "Resource Org List".
- RESOURCE\_ORG\_HIER\_LEVEL\_LIST contains the list of levels of resource organization hierarchy. It is initialized via initial block "RESOURCE\_ORG\_HIER\_LEVEL\_LIST".

#### **A.1.35.1 Configuring BI Duty Roles**

OBIA\_RESOURCE\_ORGANIZATION\_HIERARCHY\_DATA\_SECURITY is the internal BI duty role to define data filter for resource organization hierarchy based data security. By default, it has the following members:

- OBIA\_MARKETING\_OPERATIONAL\_ANALYSIS\_DUTY
- OBIA\_MARKETING\_MANAGERIAL\_ANALYSIS\_DUTY

These duty roles control which subject areas and dashboard content the user get access to. And as members of OBIA\_RESOURCE\_ORGANIZATION\_HIERARCHY\_DATA\_SECURITY, they also ensure the primary resource organization hierarchy based data security filters are applied to all the queries involving marketing campaign.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.36 How to Set Up Price Analytics Security for Siebel Applications

### Overview

There is Primary Employee/Position Hierarchy based data security applied to Price Analytics reports and metrics. Users who can access Price Analytics Subject areas can view all Order and Quote data in the related reports with/without data security filters based on the BI Duty Role assigned as specified in the following section.

### A.1.36.1 Configuring BI Duty Roles

This table lists down BI Duty roles (and applicable data security) which can be assigned to users in order to give them access to Price Subject Areas.

**Table A-99 BI Duty roles and applicable data security**

BI Duty Role	Data Security	Subject Areas
Pricing Administrator	None	Sales – CRM - Price Sales – CRM Price Waterfall Sales – CRM Price Waterfall – Orders Sales – CRM Price Waterfall – Quotes
Pricing Manager	Primary Employee/Position Hierarchy based data security	Sales – CRM - Price Sales – CRM Price Waterfall Sales – CRM Price Waterfall – Orders Sales – CRM Price Waterfall – Quotes

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.37 How to Set Up Project Cost and Control Security for E-Business Suite

### Overview

Oracle Project Analytics supports security over following dimensions in Project Costing and Project Control subject areas. In Oracle Business Intelligence Applications, the 'Business Unit' entity refers to 'Operating Unit Organizations' in E-Business Suite. The list of Business Units that a user has access to is determined by E-Business Suite grants.

**Table A-100 Supported Project Costing and Project Control subject areas**

<b>Project Costing and Control Facts</b>	<b>Cost</b>	<b>Commitment</b>	<b>Budget</b>	<b>Forecast</b>
<b>Security Entity</b>				
Project Business Unit	Y	Y	Y	Y
Project Organization	Y	Y	Y	Y
Expenditure Business Unit	Y	N	N	N
Contract Business Unit	N	N	N	N
Project	Y	Y	Y	Y
Resource Organization	N	N	N	N
Ledger	N	N	N	N

**Configuring Project Cost and Control Security For E-Business Suite**

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system.

---

---

**Note:** On installation, initialization blocks are enabled for E-Business Suite R12. If you are deploying on a source system other than E-Business Suite R12, then you must enable the appropriate initialization blocks.

---

---

You must enable data security for Project Cost and Control in E-Business Suite by enabling the initialization blocks listed below based on your E-Business Suite adaptor. You must disable Project Security initialization blocks for other adapters. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

**Init Blocks: EBS R11x**

- Expenditure Business Unit List EBS11x
- Project Business Unit List Budget EBS11x
- Project Business Unit List Costing EBS11x
- Project Business Unit List Forecast EBS11x

**Init Blocks: EBS R12**

- Expenditure Business Unit List EBSR12
- Project Business Unit List Budget EBSR12
- Project Business Unit List Costing EBSR12
- Project Business Unit List Forecast EBSR12

**Init Blocks: EBS R11x and EBS R12**

- Project List Budget EBS
- Project List Costing EBS
- Project List Forecast EBS
- Project Organization List Budget EBS

- Project Organization List Costing EBS
- Project Organization List Forecast EBS

### A.1.37.1 Configuring BI Duty Roles

The following BI Duty Roles are applicable to the Project Costing and Control subject area.

- OBIA\_EBS\_PROJECT\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_EBS\_PROJECT\_MANAGEMENT\_ANALYSIS\_DUTY
- OBIA\_EBS\_PROJECT\_DATA\_SECURITY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.38 How to implement Security for Supply Chain Analytics

### Overview

Supply Chain Analytics supports role-based and organization-based security in Inventory and Costing subject areas. Assign users to the appropriate roles to control which subject areas they can access. The list of Inventory Organizations that a user has access to is determined by the grants in the source application system.

### Configuring Inventory Org Based Security for E-Business Suite

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Inventory Org Based security for E-Business Suite, enable the Oracle EBS initialization block. If more than one source system is deployed, then you must also enable the initialization blocks of those source systems.

#### To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAalyticsApps.rpd).
2. Open the variable by navigating to: Manage, then Variables.
3. Open the initialization block that needs to be enabled under Session – Initialization Blocks (Inventory Organizations EBS).
4. Clear the **Disabled** check box.
5. Repeat the above steps for the following initialization blocks:
  - SCOM\_AN:SECURITY:Inv Org CycleCount List
  - SCOM\_AN:SECURITY:Inv Org InvTxns List
  - SCOM\_AN:SECURITY:Inv Org Onhand List
  - SCOM\_AN:SECURITY:Inv Org Shipments List
6. Save the RPD.

### A.1.38.1 Configuring BI Duty Roles

The following BI Duty Roles are applicable to the Order Management subject area.

- Inventory Analyst

This role provides secured access to Inventory Analysts with detailed insight into transactions, balances, aging, bill of materials, cycle counts and returns, and covers the following Subject Areas:

- Inventory – Cycle Count
- Inventory – Transactions
- Inventory – Customer and Supplier Returns
- Inventory – Bill of Materials
- Inventory – Balances
- Inventory - Aging

- Inventory Manager

This role provides secured access to Inventory Managers with insight into inventory details and costing data, and covers the following Subject Areas:

- Inventory – Cycle Count
- Inventory – Transactions
- Inventory – Customer and Supplier Returns
- Inventory – Bill of Materials
- Inventory – Balances
- Inventory - Aging
- Costing – Margin Analysis
- Costing – Item Cost
- Costing – Inventory Valuation

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.39 How to Set Up CRM Partner Organization Based Security for Oracle Fusion

Oracle Fusion CRM partner organization based security is applied when fusion partner administrator access partner organization, partner owned leads and opportunity/revenue. Partner administrator should be able to access the above entities owned by his partner organization.

### Configuring Partner Organization Based Security

The session variable PARTNER\_ORG\_HIER\_LIST stores a list of partner organizations the login user belongs to. It is initialized via initial block Partner Org Hierarchy List and then used in partner organization based data security role.

### A.1.39.1 Configuring BI Duty Roles

OBIA\_PARTNER\_ORGANIZATION\_DATA\_SECURITY is the internal BI duty role to define data filter for partner organization based data security. By default, it has one member BI duty role:

- OBIA\_PARTNER\_ADMINISTRATIVE\_ANALYSIS\_DUTY

These duty roles control which subject areas and dashboard content the user get access to. And as members of OBIA\_RESOURCE\_ORGANIZATION\_HIERARCHY\_DATA\_SECURITY, they also ensure the primary resource organization hierarchy based data security filters are applied to all the queries involving marketing campaign.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.40 How to Set Up Service Analytics Security for Siebel

### Overview

There is no row-level security applied to Service Analytics reports and metrics. Users who can access Service Analytics Subject areas can view all data in the related reports without any data-security filter.

### Configuring BI Duty Roles

This table lists down BI Duty roles which can be assigned to users in order to give them access to Service Subject Areas.

**Table A-101 BI Duty Roles and Associated Subject Areas**

BI Duty Roles	Subject Areas
Service Agent	Service - CRM Activities Service - CRM Service Requests Service - CRM Agreements Service - CRM Assets Service - CRM Customer Satisfaction Service - CRM Orders
Service Manager	Service - CRM Activities Service - CRM Service Requests Service - CRM Agreements Service - CRM Assets Service - CRM Email Response Service - CRM Customer Satisfaction Service - CRM Orders
Service Executive	Service - CRM Activities Service - CRM Service Requests Service - CRM Agreements Service - CRM Assets Service - CRM Customer Satisfaction Service - CRM Orders

**Table A–101 (Cont.) BI Duty Roles and Associated Subject Areas**

BI Duty Roles	Subject Areas
Service Delivery and Costs Analyst	Service - CRM Agreements

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.41 How to implement Inventory Org Based Security for EBS Manufacturing Analytics

### Overview

Manufacturing Analytics supports security over Inventory Organizations in manufacturing subject areas. The list of Inventory Organizations to which a user has access is determined by the grants in E-Business Suite.

### Configuring Inventory Org Based Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Inventory Org Based security for EBS, enable E-Business Suite initialization block and make sure the initialization blocks of all other source systems are disabled.

Oracle EBS: Inventory Org-based Security

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Navigate to Manage and open variables from menu ('INV\_ORG').
3. Open the initialization block that you need to enable under Session – Initialization Blocks (Inventory Organizations EBS).
4. Clear the **Disabled** check box.
5. Save the metadata repository.

### Configuring BI Duty Roles

The following BI Duty Roles are applicable to the Manufacturing Analytics subject area.

- OBIA\_MANUFACTURING\_EXECUTION\_ANALYSIS\_DUTY
- OBIA\_MANUFACTURING\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_MANUFACTURING\_COST\_ANALYSIS\_DUTY

**Table A-102 BI Duty Roles and Associated Subject Areas**

<b>BI Duty Roles</b>	<b>Subject Areas</b>
OBIA_ MANUFACTURING_ EXECUTION_ANALYSIS_ DUTY  Manufacturing Execution Analyst for E-Business Suite. This role provides secured access to Operations Manager, Production Supervisor with Manufacturing execution.	Manufacturing – Material Usage Manufacturing –Work Order Performance Manufacturing –Work OrderSnapshot Manufacturing –Resource Usage Manufacturing –Resource Utilization Manufacturing –Work Order Cycle Time Manufacturing –Kanban Manufacturing –WorkOrderAging
OBIA_ MANUFACTURING_ EXECUTIVE_ANALYSIS_ DUTY  Manufacturing Executive for E-Business Suite. This role provides secured access to VP Manufacturing, Plant Manager, Plant General Manager with insight into Planning Manufacturing execution and costing.	Manufacturing –Production Plan Manufacturing –Actual Production Manufacturing – Material Usage Manufacturing –Work Order Performance Manufacturing –Work OrderSnapshot Manufacturing –Resource Usage Manufacturing –Resource Utilization Manufacturing –Work Order Cycle Time Manufacturing –Kanban Manufacturing –WorkOrderAging Manufacturing-Production Cost Manufacturing-Plan to Produce Manufacturing-Discrete Quality
OBIA_ MANUFACTURING_ COST_ANALYSIS_DUTY  Manufacturing Cost Analyst for E-Business Suite. This role provides secured access to Production Controller, Cost Accountant with insight over Production costing.	Manufacturing-Production Cost

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

#### **A.1.42 How To Customize Extended Cross Functional Security for Employee Expenses**

To facilitate procurement users (such as Procurement VP or Spend Analyst) to perform deeper and cross functional analysis apart from their regular duty, Oracle Procurement and Spend Analytics has data and functional security to access the employee expenses transactions (such as expense report, credit card transaction and expense violation) through extended duty roles. If you would like to provision this duty to the procurement and spend users, then follow the steps below.

**Understanding Extended Duty Roles:** BI seeded duty roles for Fusion Applications includes a 'Procurement Executive Analysis Duty' role (Role name: OBIA\_PROCUREMENT\_EXECUTIVE\_ANALYSIS\_DUTY) to act like a Spend Analyst/Executive duty. This extended role is not mapped to any enterprise job roles by default, but it is pre-configured within Oracle BI Applications to enforce object and data level security for Employee Expenses. Internally, data security is implemented using 'Extended Procurement and Spend Business Unit Data Security' (Role name: OBIA\_EXTENDED\_PROCUREMENT\_AND\_SPEND\_BUSINESS\_UNIT\_DATA\_SECURITY). This data security role enables cross functional analysis by manage spend Business Unit Data Security.

Follow the steps below to implement 'Procurement Executive Analysis Duty' role:

1. Create 'VP of Procurement' or similar executive job role in your Fusion Applications deployment and assign BI duty 'Procurement Executive Analysis Duty' to 'VP of Procurement'.
2. Assign appropriate Fusion Applications duty roles to the job role - 'VP of Procurement' and assign BU privileges. Data security of 'Procurement Executive Analysis Duty' (OBIA duty role) is controlled by the BUs assigned to the user in the agent access 'manage spend' action.
3. Customize Presentation catalog permissions (for Employee Expense dashboard and related analyses) and Subject Area permissions as desired for 'Procurement Executive Analysis Duty' role.

For more information on how to create and manage job roles in Fusion Applications, refer to section 'Understanding How to Secure Oracle Fusion Applications' in *Oracle Fusion Applications Administrator's Guide*.

### A.1.43 How To Customize Extended Cross Functional Security for Accounts Payables

To facilitate procurement users (such as Category Managers and Procurement Managers) to perform deeper and cross functional analysis apart from their regular duty, Oracle Procurement and Spend Analytics includes configured data and functional security to access the accounts payable transactions (such as invoices, payments, payment schedules) through extended duty roles. To implement these duties, follow steps below.

**Understanding Extended Duty Roles:** Seeded security roles for Oracle BI Applications for Fusion Applications include the following additional duty roles. These extended roles are not mapped to any enterprise job roles by default, but they are pre-configured within Oracle BI Applications to enforce object and data level security for Accounts Payables.

- 'Procurement Managerial Extended Analysis Duty' role (Role name: OBIA\_PROCUREMENT\_MANAGERIAL\_ANALYSIS\_DUTY) – This BI Duty role enables users to perform cross functional analysis outside of Category Management. Internally, data security on Oracle BI Applications is implemented using 'Extended Procurement and Payable Business Unit Data Security' (Role name: OBIA\_EXTENDED\_PROCUREMENT\_AND\_PAYABLE\_BUSINESS\_UNIT\_DATA\_SECURITY).
- 'Category Manager Extended Analysis Duty' role (Role name: OBIA\_CATEGORY\_MANAGER\_ANALYSIS\_DUTY) – This BI Duty role enables to perform cross functional analysis outside of Procurement Management. Internally, data security on Oracle BI Applications is implemented using 'Extended Procurement and Payable Business Unit Data Security' (Role name: OBIA\_EXTENDED\_PROCUREMENT\_AND\_PAYABLE\_BUSINESS\_UNIT\_DATA\_SECURITY).

- 'Procurement Executive Analysis Duty' role (Role name: OBIA\_PROCUREMENT\_EXECUTIVE\_ANALYSIS\_DUTY) to act also like a Spend Analyst/ Executive duty. Internally, data security on Oracle BI Applications is implemented using 'Extended Procurement and Spend Business Unit Data Security' (Role name: OBIA\_EXTENDED\_PROCUREMENT\_AND\_SPEND\_BUSINESS\_UNIT\_DATA\_SECURITY). This data security role enables cross functional analysis by manage spend Business Unit Data Security.

Follow the steps below to implement 'Procurement Executive Analysis Duty' role:

1. Assign BI duty 'Procurement Managerial Extended Analysis Duty' to Fusion Applications job role, 'Procurement Manager' or similar.
2. Assign BI duty 'Category Manager Extended Analysis Duty' to Fusion Applications job role, 'Category Manager' or similar.
3. Create 'VP of Procurement' or similar executive job role in your Fusion Applications deployment and assign BI duty 'Procurement Executive Analysis Duty' to 'VP of Procurement'.
4. Assign appropriate Fusion Applications duty roles to the job role - 'VP of Procurement' and assign BU privileges. Data security of 'Procurement Executive Analysis Duty' (OBIA duty role) is controlled by the BUs assigned to the user in the agent access 'manage spend' action.
5. Customize Presentation catalog permissions (for Supplier Performance – AP Transactions related content) and Subject Area permissions as desired for above mentioned roles.

For more information on how to create and manage job roles in Fusion Applications, refer to section 'Understanding How to Secure Oracle Fusion Applications' in *Oracle Fusion Applications Administrator's Guide*.

#### A.1.44 How to Grant GL Security Data Role to HR VP Users

In Oracle Business Intelligence Applications, in order for a BI user with VP of HR job role to see GL data, he/she needs to be provisioned with GL data role pertaining to a Financial Analyst job role. The GL data role provisioned will control the data security that will be enforced upon the GL data the user is trying to view. To understand more details on how GL data are provisioned in Fusion Applications, refer to *Oracle General Ledger User's Guide* for more information.

#### A.1.45 How To Customize Security for Procurement Executive / Spend Analyst

To enable procurement users (such as Procurement VP or Spend Analyst) to perform deeper and cross functional analysis apart from their regular duties, Oracle Procurement and Spend Analytics includes data and functional security to access the employee expenses transactions (such as expense report, credit card transaction and expense violation) through extended duty roles. If you would like to provision such duty to the procurement and spend users, then follow the steps below.

**Understanding Extended Duty Roles:** BI seeded duty roles for Fusion Applications includes 'Procurement Executive Analysis Duty' role (Role name: OBIA\_PROCUREMENT\_EXECUTIVE\_ANALYSIS\_DUTY) to act also like a Spend Analyst/ Executive duty. This extended role is not mapped to any enterprise job roles by default, but it is pre-configured within Oracle BI Applications to enforce object and data level security for Spend Analysis. Internally, data security on Oracle BI Applications is implemented using 'Extended Procurement and Spend Business Unit Data Security' (Role name: OBIA\_EXTENDED\_PROCUREMENT\_AND\_SPEND\_

BUSINESS\_UNIT\_DATA\_SECURITY). This data security role enables cross functional analysis by manage spend Business Unit Data Security.

Follow the steps below to implement 'Procurement Executive Analysis Duty' role:

1. Create 'VP of Procurement' or similar executive job role in your Fusion Applications deployment and assign BI duty 'Procurement Executive Analysis Duty' to 'VP of Procurement'.
2. Assign appropriate Fusion Applications duty roles to the job role - 'VP of Procurement' and assign BU privileges. Data security of 'Procurement Executive Analysis Duty' (OBIA duty role) is controlled by the BUs assigned to the user in the agent access 'manage spend' action.
3. Customize Presentation catalog permissions (for Spend Analyzer dashboard and related analyses) and Subject Area permissions as desired for 'Procurement Executive Analysis Duty' role.

For more information on how to create and manage job roles in Fusion Applications, refer to section 'Understanding How to Secure Oracle Fusion Applications' in *Oracle Fusion Applications Administrator's Guide*. For more information on how to define and customize security in Oracle BI Applications, refer to *Oracle Fusion Middleware Security Guide for Oracle Business Intelligence Applications*.

## A.1.46 How to Set Up CRM Partner Channel Based Security for Oracle Fusion

### Overview

Oracle Fusion CRM partner channel based security is applied when fusion channel administrator or channel operation manager access partner owned leads and opportunity/revenue. For leads, this means user can see all the leads that have sales channel stamped as indirect or partner. For opportunity/revenue, this means that user can access all opportunities (and associated revenue) that have a partner assigned to them.

### Configuring Partner Channel Based Security

There is no session variable involved in the setting up for this data security.

#### A.1.46.1 Configuring BI Duty Roles

OBIA\_PARTNER\_ALL\_INDIRECT\_TRANSACTIONAL\_DATA\_SECURITY is the internal BI Duty Role used to define data filter for partner channel based data security. And by default, it only has one member duty role:

- OBIA\_PARTNER\_CHANNEL\_ADMINISTRATIVE\_ANALYSIS\_DUTY

This duty role controls which subject areas and dashboard content the user get access to. And as a member of OBIA\_PARTNER\_ALL\_INDIRECT\_TRANSACTIONAL\_DATA\_SECURITY, it ensures the partner channel based data security filter is applied in all queries involving lead or opportunity/revenue.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.47 How to Set Up CRM Partner Account Team Based Security for Oracle Fusion

### Overview

Oracle Fusion CRM partner account team based security is applied when fusion channel account manager access partner owned opportunity/revenue. Partner channel account managers should be able to access all opportunities/revenue owned by the partner organization on whose partner account team they are a member of.

### Configuring Partner Account Team Based Security

The session variable `USER_PARTY_ID` is the resource party Id that uniquely defines the login user. It is initialized via session initial block `GET_PARTY_ID` and then used in partner account team based data security role.

#### A.1.47.1 Configuring BI Duty Roles

`OBIA_PARTNER_TEAM_DATA_SECURITY` is the internal BI duty role to define data filter for partner account team based data security. By default, it has one member BI duty role:

- `OBIA_PARTNER_CHANNEL_ACCOUNT_MANAGER_ANALYSIS_DUTY`

This duty role controls which subject areas and dashboard content the user get access to. And as a member of `OBIA_PARTNER_TEAM_DATA_SECURITY`, it ensures that the partner account team based data security filter is applied to all queries involving opportunity or revenue.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.48 How to Set Up Project Resource Management Security for E-Business Suite

### Overview

Project Analytics supports security over following dimensions in Project Resource Management subject areas. In the Business Intelligence Applications solution, the 'Business Unit' entity refers to 'Operating Unit Organizations' in E-Business Suite. The list of Business Units that a user has access to, is determined by E-Business Suite grants.

**Table A-103 Supported Project Resource Management Security subject areas**

<b>Project Resource Management Facts</b>						
<b>Securing Entity</b>	<b>Resource Availability</b>	<b>Resource Requirement</b>	<b>Resource Utilization Assignment</b>	<b>Resource Utilization Capacity</b>	<b>Resource Utilization Expected</b>	<b>Employee Job/Competency</b>
Project Business Unit	N	Y	Y	N	Y	N
Project Organization	N	Y	Y	N	Y	N
Expenditure Business Unit	N	N	N	N	N	N
Contract Business Unit	N	N	N	N	N	N

**Table A–103 (Cont.) Supported Project Resource Management Security subject areas**

<b>Project Resource Management Facts</b>						
<b>Securing Entity</b>	<b>Resource Availability</b>	<b>Resource Requirement</b>	<b>Resource Utilization Assignment</b>	<b>Resource Utilization Capacity</b>	<b>Resource Utilization Expected</b>	<b>Employee Job/Competency</b>
Project	N	Y	Y	N	Y	N
Resource Organization	N	N	N	Y	Y	Y
Ledger	N	N	N	N	N	N

### **Configuring Project Resource Management For E-Business Suite**

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system.

---

---

**Note:** On installation, initialization blocks are enabled for E-Business Suite R12. If you are deploying on a source system other than E-Business Suite R12, then you must enable the appropriate initialization blocks.

---

---

You must enable data security for Project Resource Management in E-Business Suite by enabling the initialization blocks listed below based on your E-Business Suite adaptor. Make sure that all Project Security initialization blocks for other adapters are disabled. If more than one source system is deployed then, you must also enable the initialization blocks of those source system.

#### **Init Blocks**

Init Blocks for E-Business Suite R11x only:

- Project Business Unit List RM EBS11x

Init Blocks for E-Business Suite R12x only:

- Project Business Unit List RM EBSR12

Init Blocks for both E-Business Suite R11x and R12:

- Project List RM EBS
- Project Organization List RM
- Project Resource Organization List

#### **Configuration**

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd) in online mode, and select Manage, then Identity.
2. Double click on OBIA\_PROJECT\_DATA\_SECURITY, navigate to Permissions, then Data Filters, and enable data security filters related to Resource Management Fact Tables.

This activates Project based Security which is needed for Resource Management Module in E-Business Suite.

3. Double click on OBIA\_PROJECT\_RESOURCE\_ORGANIZATION\_DATA\_SECURITY, navigate to Permissions, then Data Filters, and enable all data security filters related to Resource Management Fact Tables.

This activates Resource Organization based Security which is needed for Resource Management Module in E-Business Suite.

4. Double click on OBIA\_PROJECT\_ORGANIZATION\_DATA\_SECURITY, navigate to Permissions, then Data Filters, and enable data security filters related to Resource Management Fact Tables.

This activates Project Organization based Security which is needed for Resource Management Module in E-Business Suite.

5. Double click on OBIA\_PROJECT\_BUSINESS\_UNIT\_DATA\_SECURITY, navigate to Permissions, then Data Filters, and enable data security filters related to Resource Management Fact Tables.

This activates Project Business Unit based Security which is needed for Resource Management Module in E-Business Suite.

#### **A.1.48.1 Configuring BI Duty Roles**

The following BI Duty Roles are applicable to the Project Resource Management subject area.

- OBIA\_EBS\_PROJECT\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_EBS\_PROJECT\_MANAGEMENT\_ANALYSIS\_DUTY
- OBIA\_EBS\_PROJECT\_DATA\_SECURITY

These duty roles control which subject areas and dashboard content the user get access to. These duty roles also ensure the data security filters are applied to all the queries. For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

### **A.1.49 How to Implement Procurement and Spend Analytics Security**

This topic contains the following sections:

- [Section A.1.49.1, "How to implement Hierarchy Based Security for Employee Expense Subject Areas"](#)
- [Section A.1.49.2, "How to implement Org Based Security for Employee Expense Subject Areas"](#)
- [Section A.1.49.3, "How to implement Procurement and Spend Subject Areas Security for Suppliers"](#)
- [Section A.1.49.4, "How to implement Procurement and Spend Security for Procurement users"](#)
- [Section A.1.49.5, "Other Security in Procurement and Spend"](#)

#### **About Duty Roles**

The following sections explain which Duty Roles you need to deploy for each functional area. Duty roles control which subject areas and dashboard content a user can access. Duty roles also ensure that appropriate data security filters are applied to the SQL queries that power the dashboards and reports.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#), or in FSM refer to the FSM Task 'How to Define New Groups and Mappings for Users and BI Roles'.

### A.1.49.1 How to implement Hierarchy Based Security for Employee Expense Subject Areas

This section covers Hierarchy-based security for Employee Expense Subject Areas.

**A.1.49.1.1 Overview** The employee expense subject areas support security by employee hierarchy for line managers. The list of values a user has access to is determined by the grants in the source application system.

**A.1.49.1.2 Enabling Initialization Blocks** In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. For example, to enable security for EBS, enable Oracle EBS initialization block and make sure the initialization blocks of all other source systems are disabled.

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.

Use the table below for guidance on which Initialization Blocks to enable for your Source System.

4. Clear the **Disabled** check box.
5. Save the metadata repository (RPD file).

The table below shows which Initialization Blocks need to be enabled for each Source System.

**Table A-104 List of Source Systems and related Initialization Blocks**

Source System	Initialization Block
Oracle Fusion Applications	HR Security Person ID List (Fusion)
Oracle EBS	HR Security Person ID List (EBS)
Oracle PeopleSoft	HR Security Person ID List (PeopleSoft)

### A.1.49.1.3 Configuring BI Duty Roles

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#), or in FSM refer to the FSM Task 'How to Define New Groups and Mappings for Users and BI Roles'.

The following BI Duty Roles are applicable to the Employee Expense Subject Areas:

**Table A–105 List of BI Duty Roles and Related Subject Areas**

Role	Employee Expenses - Credit Card	Employee Expenses - Overview	Employee Expenses - Violations
OBIA_LINE_MANAGER_EXPENSE_ANALYSIS_DUTY	X	X	X
OBIA_AU_LINE_MANAGER_EXPENSE_ANALYSIS_DUTY	X	X	X

**A.1.49.2 How to implement Org Based Security for Employee Expense Subject Areas**

This section covers Org-based security for Employee Expense Subject Areas.

**A.1.49.2.1 Overview** The employee expense subject areas support security by Business Unit for corporate card administrators, expense managers, and spend executives. The list of values a user has access to is determined by the grants in the source application system.

**A.1.49.2.2 Enabling Initialization Blocks** In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. For example, to enable security for EBS, enable Oracle EBS initialization block and make sure the initialization blocks of all other source systems are disabled.

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.

Use the table below for guidance on which Initialization Blocks to enable for your Source System.

4. Clear the **Disabled** check box.
5. Save the metadata repository (RPD file).

The table below shows which Initialization Blocks need to be enabled for each Source System.

**Table A–106 List of Source Systems and related Initialization Blocks**

Source System	Initialization Block
Oracle Fusion Applications	PROC_SPEND_AN:SECURITY:Employee Expense Corporate Card BU List PROC_SPEND_AN:SECURITY:Employee Expense Violation BU List
Oracle EBS	Operating Unit Org-based Security
Oracle PeopleSoft	Operating Unit Org-based Security

**A.1.49.2.3 Configuring BI Duty Roles**

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI](#)

[Roles](#)", or in FSM refer to the FSM Task 'How to Define New Groups and Mappings for Users and BI Roles'.

The following BI Duty Roles are applicable to the Employee Expense Subject Areas:

**Table A-107 List of BI Duty Roles and Related Subject Areas**

<b>Role</b>	<b>Employee Expenses - Credit Card</b>	<b>Employee Expenses - Overview</b>	<b>Employee Expenses - Violations</b>
OBIA_CORPORATE_CARD_ADMINISTRATION_ANALYSIS_DUTY	X		
OBIA_EXPENSE_MANAGEMENT_ANALYSIS_DUTY			X
OBIA_PROCUREMENT_EXECUTIVE_ANALYSIS_DUTY	X	X	X
Procurement and Spend Executive	X	X	X
Procurement and Spend Executive PSFT	X	X	X

### A.1.49.3 How to implement Procurement and Spend Subject Areas Security for Suppliers

This section covers security for Suppliers.

**A.1.49.3.1 Overview** The procurement and spend subject areas support security for suppliers in the Fusion Applications. The list of values a user has access to is determined by the grants in the source application system.

**A.1.49.3.2 Enabling Initialization Blocks** In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. For example, to enable security for EBS, enable Oracle EBS initialization block and make sure the initialization blocks of all other source systems are disabled.

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.

Use the table below for guidance on which Initialization Blocks to enable for your Source System.

4. Clear the **Disabled** check box.
5. Save the metadata repository (RPD file).

The table below shows which Initialization Blocks need to be enabled for each Source System.

**Table A-108 List of Source Systems and related Initialization Blocks**

Source System	Initialization Block
Oracle Fusion Applications	PROC_SPEND_AN:SECURITY:Procurement Supplier Access Level PROC_SPEND_AN:SECURITY:Procurement Supplier Access List

### A.1.49.3.3 Configuring BI Duty Roles

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#), or in FSM refer to the FSM Task 'How to Define New Groups and Mappings for Users and BI Roles'.

The BI Duty Role "OBIA\_SUPPLIER\_ANALYSIS\_DUTY" is applicable to these Subject Areas:

- Fact - Purchasing - Agreement
- Fact - Purchasing - Order
- Fact - Purchasing - Receipt
- Fact - Spend and AP Invoice Distribution
- Dim - Supplier
- Dim - Supplier Site

### A.1.49.4 How to implement Procurement and Spend Security for Procurement users

This section covers security for Procurement users.

**A.1.49.4.1 Overview** The procurement and spend subject areas support security by agent security for procurement users. The list of values a user has access to is determined by the grants in the source application system.

**A.1.49.4.2 Enabling Initialization Blocks** In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. For example, to enable security for EBS, enable Oracle EBS initialization block and make sure the initialization blocks of all other source systems are disabled.

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables.
3. Under Session – Initialization Blocks, open the initialization block that you need to enable.

Use the table below for guidance on which Initialization Blocks to enable for your Source System.

4. Clear the **Disabled** check box.
5. Save the metadata repository (RPD file).

The table below shows which Initialization Blocks need to be enabled for each Source System.

**Table A-109 List of Source Systems and related Initialization Blocks**

Source System	Initialization Block

### A.1.49.5 Other Security in Procurement and Spend

To implement security for executive roles or to extend cross functional security, refer to the following topics:

- [Section A.1.42, "How To Customize Extended Cross Functional Security for Employee Expenses"](#)
- [Section A.1.43, "How To Customize Extended Cross Functional Security for Accounts Payables"](#)
- [Section A.1.45, "How To Customize Security for Procurement Executive / Spend Analyst"](#).

## A.1.50 How to Set Up CRM Resource Hierarchy Based Security for Oracle Fusion

### Overview

Resource hierarchy based security is widely used in many CRM subject areas, such as Sales, Marketing and Partner Management. Resource based security control starts with the current login user. The login user's party Id and the levels that the login user belongs to in resource hierarchy are then used as part of the data filter condition in queries.

There are variations of resource hierarchy based security rule when it's actually applied in different areas, although they are all resource based by nature.

For Opportunity and Revenue, visibility is granted to the login user as:

- A member of the opportunity team.
- Direct manager or above in the managerial hierarchy of the team member.

For Resource Quota, visibility is granted to the login user as:

- The resource that the resource quota is created for.
- Direct manager or above in the managerial hierarchy of the owner.

For Leads, visibility is granted to the login user as:

- A member of the lead team.
- Direct manager or above in the managerial hierarchy of the team member.

For Sales Campaigns, visibility is granted to the login user as:

- Direct owner of the campaign.
- Direct manager or above in the managerial hierarchy of the owner.

### **Configuring Resource Hierarchy Based Security**

There are 2 session variables used in resource hierarchy based data security roles.

- RESOURCE\_HIER\_LEVEL\_LIST contains the list of all the possible levels that the login user belongs to. This variable is initialized by session initial block "Resource Hierarchy Level List".
- USER\_PARTY\_ID is the resource party Id that uniquely defines the login user. This variable is initialized by session initial block GET\_PARTY\_ID.

#### **A.1.50.1 Configuring BI Duty Roles**

All the Resource Hierarchy Based security roles should be defined as member of the internal role OBIA\_RESOURCE\_HIERARCHY\_DATA\_SECURITY, under which, all the necessary data filters are defined. In the default (that is, installed) configuration, OBIA\_RESOURCE\_HIERARCHY\_DATA\_SECURITY has the following members.

- OBIA\_LEAD\_ANALYSIS\_DUTY
- OBIA\_PARTNER\_ANALYSIS\_DUTY
- OBIA\_PARTNER\_ADMINISTRATIVE\_ANALYSIS\_DUTY
- OBIA\_PARTNER\_CHANNEL\_ACCOUNT\_MANAGER\_ANALYSIS\_DUTY
- OBIA\_PARTNER\_CHANNEL\_ADMINISTRATIVE\_ANALYSIS\_DUTY
- OBIA\_PARTNER\_CHANNEL\_ANALYSIS\_DUTY
- OBIA\_OPPORTUNITY\_LANDSCAPE\_ANALYSIS\_DUTY
- OBIA\_SALES\_CAMPAIGN\_ANALYSIS\_DUTY
- OBIA\_SALES\_EXECUTIVE\_ANALYSIS\_DUTY
- OBIA\_SALES\_MANAGERIAL\_ANALYSIS\_DUTY
- OBIA\_SALES\_TRANSACTIONAL\_ANALYSIS\_DUTY

These duty roles control which subject areas and dashboard content the user get access to.

For more information about how to define new groups and mappings for Users and BI Roles, see [Section 1.1.5, "How to Define New Groups and Mappings for Users and BI Roles"](#).

## A.1.51 How to Set Up Security for PIM in Oracle EBS

### Overview

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. For example, to enable security for EBS, enable Oracle EBS initialization block and make sure the initialization blocks of all other source systems are disabled. The PIM repository has two initialization blocks which are applicable only to Fusion. These must be manually disabled for an EBS source.

Initialization blocks which have to be disabled are ItemClass and PIM\_EGO\_ENABLED.

To disable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Choose Manage, then Variables.
3. Right-click the ItemClass and PIM\_EGO\_ENABLED initialization blocks and select Disable.

## A.1.52 How to Set Up Security for Enterprise Asset Management Analytics

### Overview

Enterprise Asset Management supports security over Maintenance Organizations in Enterprise Asset Management subject areas. The list of Maintenance Organizations that a user has access to, is determined by the grants in EBS.

### Configuring Maintenance Organization Data Security

In order for data security filters to be applied, appropriate initialization blocks need to be enabled depending on the deployed source system. To enable Maintenance Organization Data Security for EBS, enable Oracle EBS initialization block and make sure the initialization blocks of all other source systems are disabled.

To enable initialization blocks, follow the steps below:

1. In Oracle BI EE Administration Tool, edit the BI metadata repository (for example, OracleBIAnalyticsApps.rpd).
2. Navigate to Manage and open variables from menu ('MAINT\_ORG\_LIST').
3. Under Session – Initialization Blocks, open the initialization block that you need to enable (Maintenance Organizations EBS).
4. Clear the **Disabled** check box.
5. Save the metadata repository (RPD file).

### Configuring BI Duty Roles

The BI Duty Roles below are applicable to the Enterprise Asset Management subject area. These duty roles control which subject areas and dashboard content users have

access to. These duty roles also ensure the data security filters are applied to all the queries.

- Operations Manager

EAM Operation Analyst for EBS. This Role provides secured access to VP Operation, Plant Manager, and EAM Analyst about organization level visibility to utilize Asset optimally.

- Maintenance Super User

EAM Super User for EBS. This role provides secured access to Maintenance Planner and Super User for planning and managing asset maintenance activities.

- Maintenance User

EAM Maintenance Use for EBS. This role provides secured access to Maintenance User for completing tasks assigned to maintenance work orders.
