Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate failsafe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

This software or hardware and documentation may provide access to or information on content, products and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

Table of Contents

1.	Preface	1-1
2.	Creating Correspondence	2-1
3.	Generating Correspondence	3-1

1. Preface

The Correspondence screen enables you to setup the system's correspondence and explains how to setup ad hoc correspondence with the Correspondence form.

The Correspondence pages provide a cost-effective and easy to use method to build custom documents that draw information from the system's database without additional programming. You can choose what to include in a letter, create a template, and then use this template to produce a letter.

The core of the Correspondence module is the document element -- the information stored in the database merged into the correspondence. The system has document elements defined for commonly used data elements in correspondence, such as account numbers, account balances, customer addresses, telephone numbers, and due dates.

Correspondence consists of a document file with text of your choice and the document elements from the system's database. You can create a correspondence set that consists of one or more documents. If a correspondence set consists of more than one document, such as the account details letter and a payment overdue letter, it prints both documents every time the system generates correspondence for a customer.

2. Creating Correspondence

The Correspondence screen enables you to define who will receive the documents you created on the Document Definition page by creating correspondence sets. Each document must belong to a set, and a set can have more than one document.

You can set up the various documents and the data fields that the system compiles together when creating a correspondence. The system provides two different document formats: Word or XFDF: XML-based format.

Note

Oracle Financial Services Software assumes that the user is familiar with Word and the Merge Document command. If the user is creating e-form documents with XFDF, then Oracle Financial Services Software assumes that person is familiar with Adobe forms.

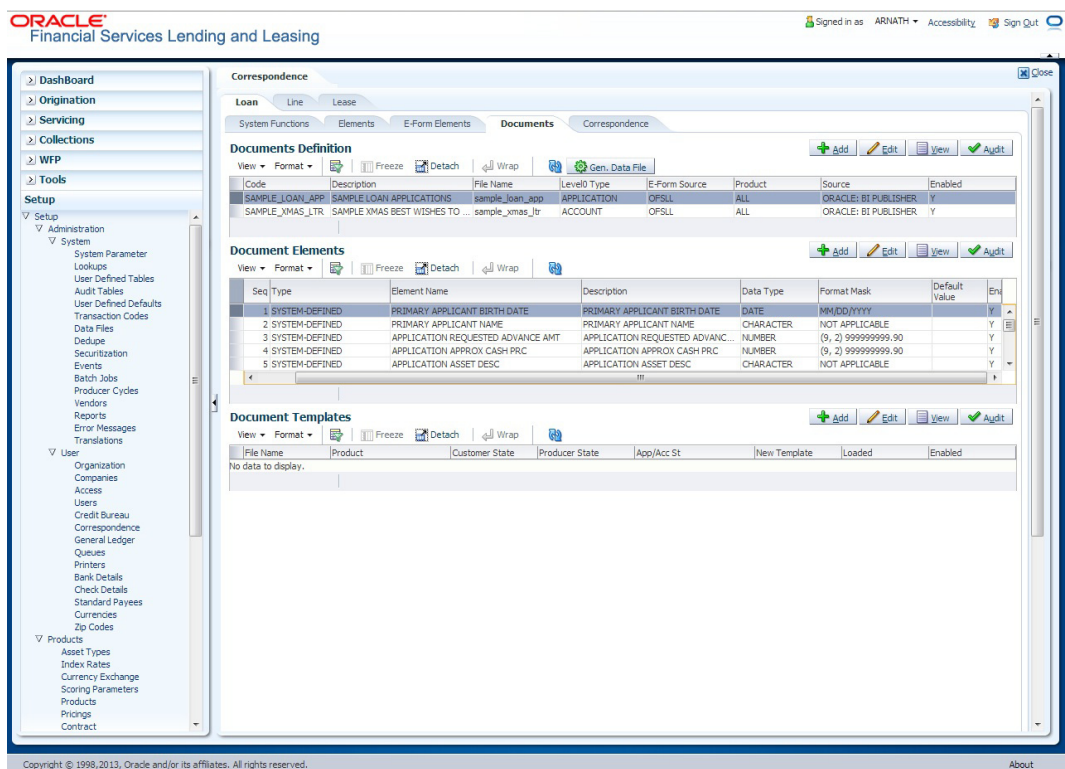

To create a Correspondence

1. On the Oracle Financial Services Lending and Leasing home page, click **Setup→Setup→ Administration→User→Correspondence→Loan/Line/Lease→Documents**
2. In the Document definition block, add a record. *For example:* SAMPLE_LOAN_APP

A brief description is given below:

Field:	Do this:
Code	Specify the document code to define the name for the new document.
Description	Specify the document description for the new document. This entry appears in the Correspondence section on the Request page, when you generate an ad hoc correspondence.
File Name	Specify the document file name for the resulting file (Word or XFDF document).
Level0 Type	Select the level0 type from the drop-down list.
E-form Source	Select the element e-form source from the drop-down list.
Product	Select the document product from the drop-down list.
Source	Select the document source type from the drop-down list.
Enabled	Check this box to enable the document definition.

3. In the **Document Elements** section, add the elements required in the correspondence.

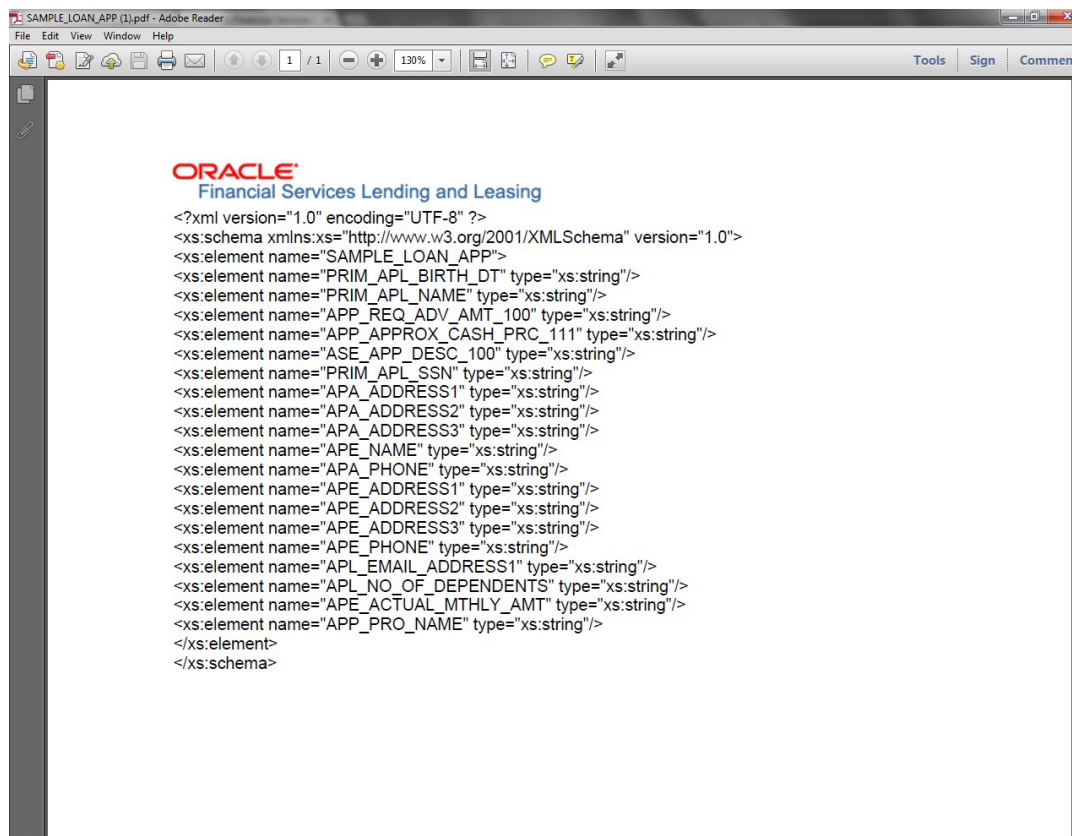

A brief description of the fields are given below:

Field:	Do this:
Seq	Specify the sequence number to order the document elements.
Type	<p>Select element type from the following from the drop-down list. This list provides the following options:</p> <p>System-defined – If you select, the value is supplied by the system and cannot be changed in the Correspondence Request page.</p> <p>Constant.</p> <p>User Defined Element – If you select, you can choose the value and change it in the Correspondence Request screen.</p> <p>User Defined Constant – If you choose, you can choose the value, but you cannot change it in the Correspondence Request screen.</p> <p>Translated Element – If a document contains an e-form element and you do not select this option, then the value will not be translated.</p>
Element Name	Select the element name from the drop-down list.

Field:	Do this:
Description	Specify element description. Notes: 1. Check that the element name does not have blank spaces or special characters, such as the forward slash "/" or backward slash "\". 2. If the element is system-defined, then the system will automatically complete this field..
Data Type	Select the element data type from the drop-down list.
Format Mask	Select the element format mask from the drop-down list.
Default Value	Specify the element default value.
Enabled	Check this box to include the element in the document.

4. Click on Gen.Data File to generate PDF file of the report.

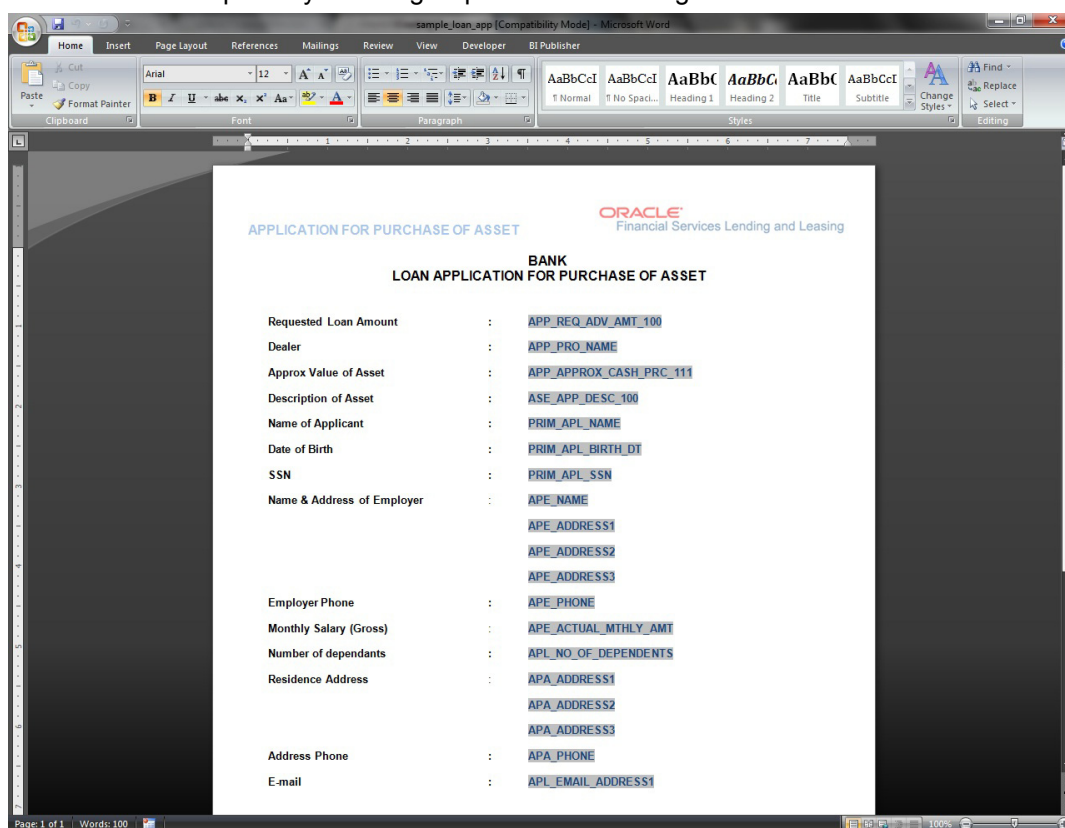

5. Copy and save the content in the pdf file as an xml file. The saved xml file should have the same name as entered in the Code column of Document Definition section. *For Example:* SAMPLE_LOAN_APP.xml.
6. Open MS Word.

Note

Oracle Financial Services Software assumes that BIP Desktop Tool is installed and the user is familiar with the BIP Report Tool.

7. In BI Publisher Tab in MS Word, click on Sample XML and import the saved xml file. *For Example: SAMPLE_LOAN_APP.xml.*
8. Create the template by inserting required elements tag.

9. The template created in MS Word should be saved with **.rtf** extension. *For Example: SAMPLE_LOAN_APP.rtf*

Note

The **.xml** and **.rtf** file should be saved with the same name as entered in the 'Code' column of Document Definition section.

10. Upload the rtf template in the BIP and create the data model with SQL query as "select CDO_XML_DOCUMENT from correspondence_docs where cdo_id = :docId".
11. After the data model creation, launch the correspondence screen and click Correspondence tab.
12. You can setup a correspondence with the created doc.

The screenshot displays the Oracle Financial Services Lending and Leasing application interface. The left sidebar contains a navigation menu with sections: Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The main area is titled 'Correspondence' and 'Origination'. It features a 'Result/Task' section with 'Underwriting: UNDEFINED' and a 'Search' bar. Below this is an 'Application' table with columns: App #, Dt, Product, Channel, Priority, Company, Branch, Status, Origination Stage Code, and Purpose. A table row shows 'UNDEFINED', '05/01/2013', 'LOAN HOME (VR)', 'WEB ENTRY', 'NORMAL', 'US01', 'USHQ', 'NEW - REVIEW REQU REVIEW', and 'VEHIC'. The 'Correspondence' section includes a 'Letters' tab and a 'Correspondence' table with columns: ID, Correspondence, and Date. A row shows '1061' and 'SAMPLE LOAN APPLICATION 10/21/2013'. Below this is a 'Documents' section with a table for 'Document Id', 'Document', 'Recipient', 'E-Form Source', 'Source Type', and 'Selected'. The 'Document Elements' section is also visible at the bottom.

- Select the created **Correspondence**. Click **Save and Add** to save and add a new record. Click to **Save and Return** save and return to main screen. Click **Return** to return to main screen without modifications.
