1. Navigation

This document provides an overview on the basic template, navigation, common operations that can be performed and keyboard short cuts available in Oracle Financial Services Lending and Leasing. The document is organised into below topics:

- Logging In
- Template and Navigation
- Common Operations
- Hot Keys

Note

The application can be best viewed in 1280 x 1024 screen resolution.

1.1 Audience

This document is intended to all the Prospect Users who would be working on the application.

1.2 Conventions Used

Term	Refers to
The system/application	Oracle Financial Services Lending and Leasing
Mnemonic	The underlined character of the tab or button

1.3 Logging In

The pre-requisites to log into the system are a valid user ID and a password, defined by the system administrator in Administration -> User Page.

Note

If an User ID is inactive for a specified number of days, then the User ID is disabled automatically.

When you invoke the application, the System displays the **Sign In** page.

ORACLE[®]
Financial Services Lending and Leasing

Help

Sign In

Sign in to Oracle Financial Services Lending and Leasing.

* User Id

* Password

Oracle Financial Services Lending and Leasing 14.1.0.0.0
Copyright © 1998, 2013, Oracle and/or its affiliates. All rights reserved.

- **User ID** – Specify a valid User ID.
- **Password** – Specify a valid password for the specified User ID

Note

Password field is case sensitive

After specifying valid credentials, click **Sign In** to sign into the application.

1.4 Template and Navigation

This section provides a brief input on the template and navigation of the system. Details are grouped into two categories to enable easy understanding. These include:

- Home Page
- Screens

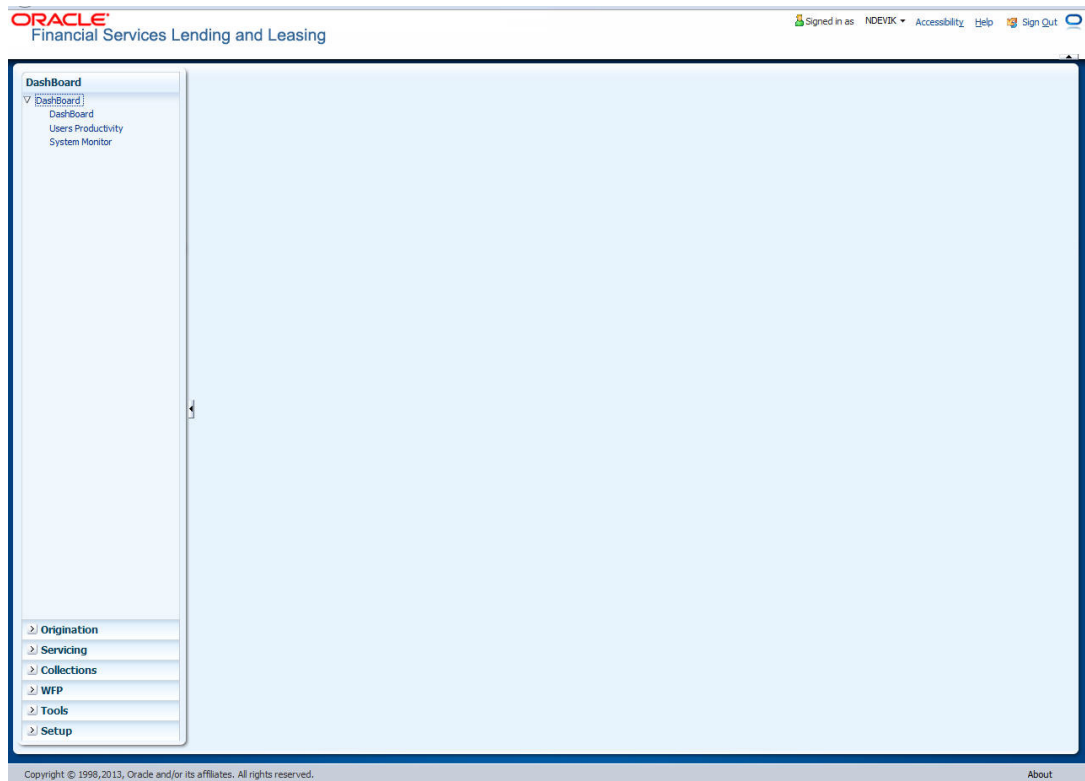

1.4.1 Home Page

After you login to the application with your valid credentials, the system recognizes your credentials and displays the Home Page.

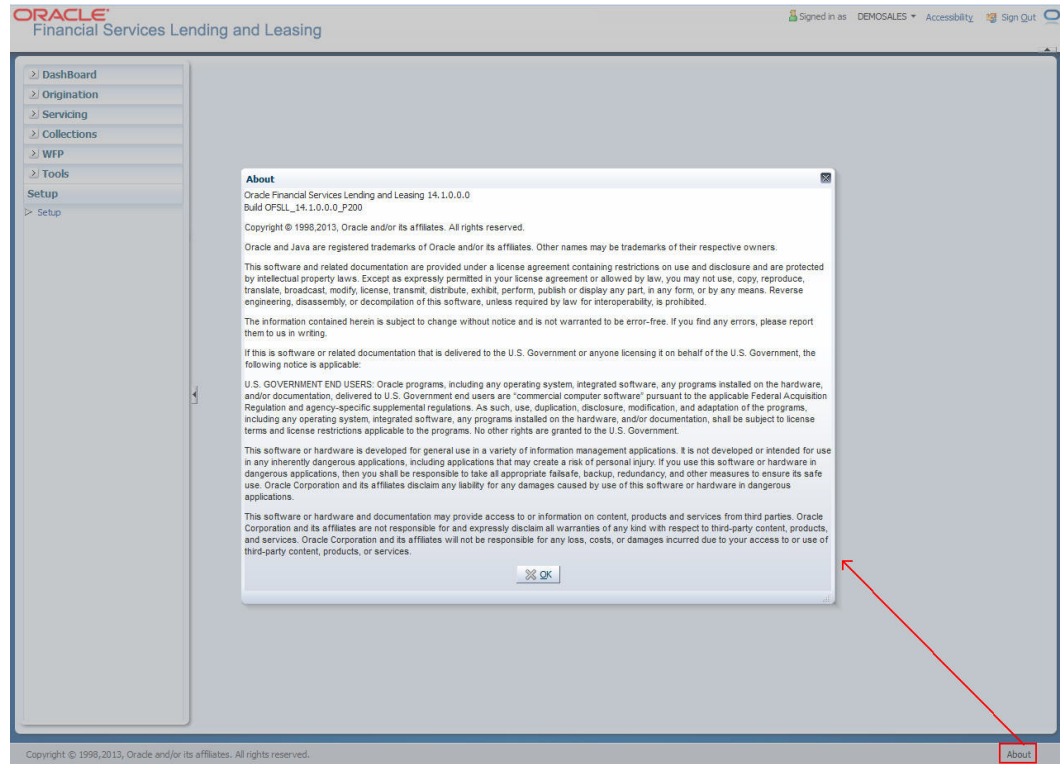

The Home page is split into three windows by vertical and horizontal splitters.

- Header
- Left Pane

- Right Pane/Work Area

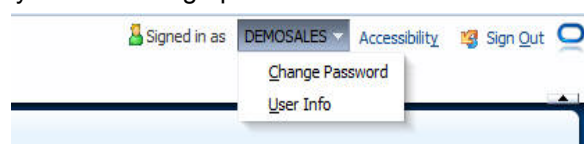

Click **About** link available in the right corner of the footer, to view the application details. For example, the version number of the application.

Header

In the Header, the system displays;

- User ID you have logged in with – Click the adjoining drop-down arrow, the system displays the following options:

- Change Password – Click to change the current password.

Specify the current password in the **Current Password** field and a valid password, you wish to maintain as a new password, in the **New Password** field.

Confirm the password specified in the New Password field.

Click **Submit** to change the password and **Cancel** to revert changes.

- User Info – Click to view the current user info.

In this screen, apart from viewing the user info, you can set the Session Language and enable error log.

Session Language – Select the language you need to set for the session, from the drop-down list.

Debug Enabled Ind – Check this box to enable error logs.

Click **Submit** to save the changes, and **Close** to close the window without changes.

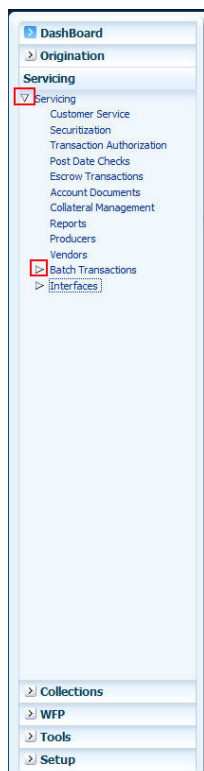

- Accessibility – Click the link to view accessibility features of the system
Refer accessibility document for further details.
- Sign Out – Click the link to sign off from the application. You can also click on  icon to sign off from the application

Note

Sign off from the system, when you complete your work session.

Left Window

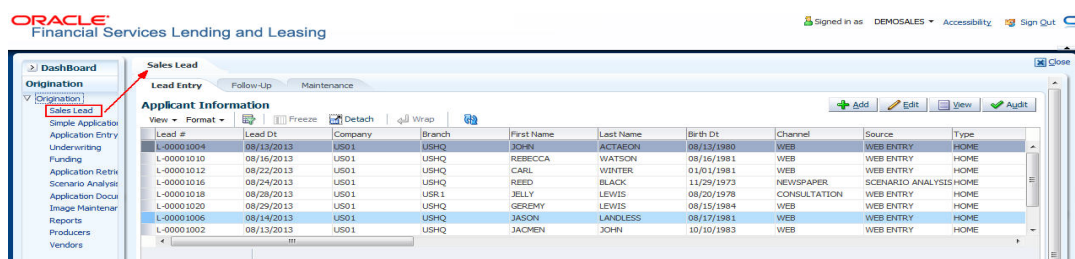

In the left pane, the system lists and provides drop-down links for the various modules available in the product. Click  to expand the Module Master Tabs and  to collapse them.

To open a screen, navigate to the Module Master Tab to which the screen belongs, expand the tabs and click the screen link you wish to open.

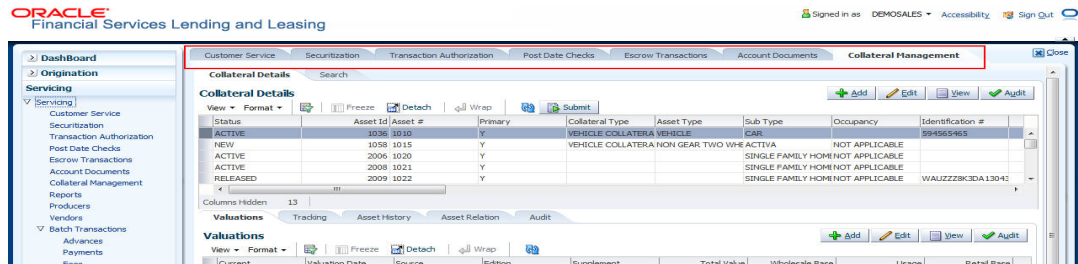

Right Window

The Right Window can also be termed as work area. When you click the screen link on the left pane, the system displays the corresponding screen in the right pane.

You can open a maximum of 15 screens at a go. Once the maximum limit is reached, the system displays an error message as "You have too many tabs open. You will need to close some tabs before opening new ones". Click 'OK' to continue.

In origination, only one among the three screens namely, Application Entry, Underwriting, Funding can be opened at a time. If 'Application Entry' screen is open and you click on Underwriting or Funding, the system retains the same screen.

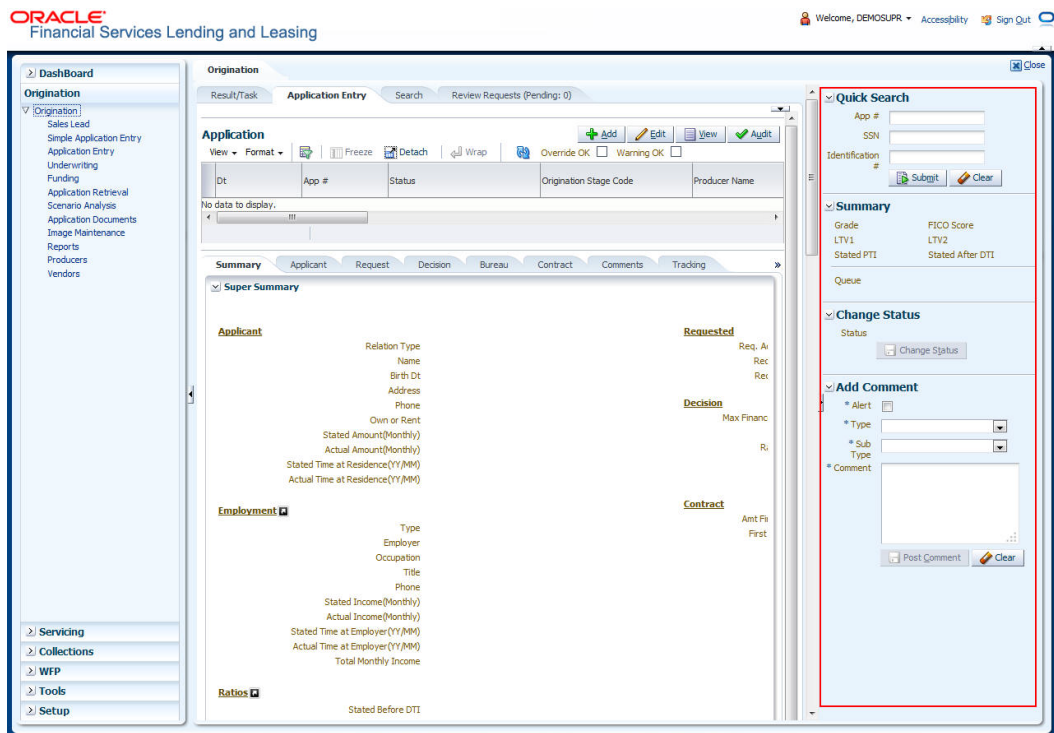

Each active screen is displayed as a tab at the top of right pane, across its width. To view a screen, click the screen tab. You can identify the active screen with its white background. Also, operation on any of the screen will not affect the data in the other screens.

Right Splitter/Action Window

The Right Splitter/Action Window has quick access to search and other options to avoid switching between tabs or navigating into sub tabs periodically. You can access the Right Splitter/Action Window while working on an Application or Customer Service screens. You can click  and  to toggle the view of Right Splitter/Action Window.

Origination Screens

In Origination → Application screens, you can use the Right Splitter/Action Window to do the following:

- Use **Quick Search** to search for an application based on application number, last 4 digits of SSN (SSN of the primary applicant) or identification number. If multiple applications or accounts are found during 'Identification #' search, the system displays an error message as "Multiple Matches found for the Identification #, Please use normal Search".

- **Summary** section displays critical information that has to be referred repeatedly during origination like – DTI, PTI, Book Value, Grade, FICO Score, Approved Advance, Rate and Term.
- Use **Change Status** section to change the application status to next level. If the application edit status is restricted, then the 'Change Status' will be read-only.
- Use **Add Comment** section to post an alert or comment during Underwriting and Funding stages.

For detailed information on the above options, refer to respective sections in the document.

Servicing and Collection Screens

In Servicing and Collection → Customer Service screens, you can use the Right Splitter/ Action Window to do the following:

- Use **Quick Search** to search for an account based on account number, or customer Id, or last 4 digits of SSN (SSN of the primary applicant) or identification number. If multiple applications or accounts are found during 'Identification #' search, the system displays an error message as "Multiple Matches found for the Identification #, Please use normal Search". You can also select the Queue Condition and Auto Run options during search.
- Use **Add Comment** section to post an alert or comment based on Type and Sub Type.
- Use **Add Call Activity** section to post all types of call activities including promise to pay, account conditions and so on, irrespective of the screen you are working on. This is similar to the option available in 'Call Activities sub tab' under Customer Service tab.

For detailed information on the above options, refer to respective sections in the document.

The height of the Header and the width of the Left Pane do not change, with the resizing of application window.

The system facilitates toggling the Header and Left Pane of the home page to increase the visible area of the screens. Click  to toggle upper pane and  to toggle left pane. To untoggle click  and  respectively.

Note

Few screens in Origination, Servicing and Collection are identical and are linked. Hence, you can open only one screen at a time from the group. A sample of the grouping structure is given below, based on the stages of the screens:

Origination:

- Simple Application Entry
- Application Entry
- Underwriting
- Funding

Collection:

- Collection
- Bankruptcy
- Repossession
- Deficiency

WFP:

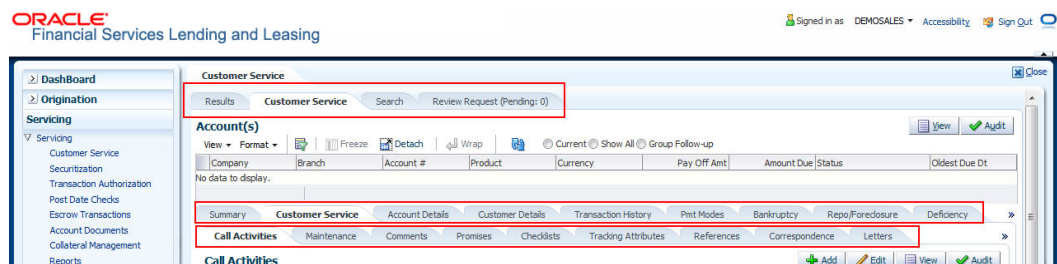

- Producers
- Credit Lines
- Units

To get more clarity on the feature discussed above, consider Origination. If you have opened a screen any of the four screens listed above, say you have opened Application Entry, you cannot open any another screen. To open another screen, you need to close the Application Entry screen.

1.4.2 Screens

Details in few main screens are grouped into different sections. These sections are displayed as tabs, horizontally within the screen. In turn, details in few of these tabs are again grouped. Such details are displayed as sub-tabs horizontally, when you click the tab under which they are grouped. Similar to the main screen tabs, you can identify the active tab with its white background.

For example, Customer Service main screen has four main tabs. When you click on 'Customer Service' tab, the screen displays the corresponding tabs and so on.

Note

Click  to view the list of additional subtabs, if any.

1.5 Common Operations

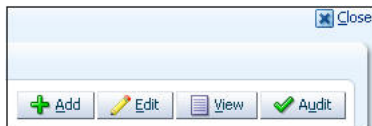

Some of the operations are common to most of the screens. These are grouped into three categories, based on their features.

- Basic Operations
- Basic Actions
- Personalization Options

1.5.1 Basic Operations

All the screens contain buttons to perform all or few of the basic operations. The four basic operations available are:

- Add
- Edit
- View
- Audit

When you click any of the operation tabs, the system displays the records in-line, below the respective setup tables.

The table below gives a snapshot of them:

Basic Operation	Description
Add	Click to add a new record. When you click Add , the system displays a new record enabling you to specify the required data. It is mandatory to specify details for the fields with '*' symbol.
Edit	Click to edit an existing record. Select the record you want to edit and click 'Edit'. The system displays an existing record in editable mode. Edit the details you need to.
View	Click to view an existing record. Select the record you want to view and click 'View'. The system displays an existing record in display mode,
Audit	Click to view audit info. If an audit is set for a field, then the system tracks the changes for that field. Select the record for which you want to view the audit info and click 'Audit'. The system displays the details tracked for that field.
Close	Click to close a screen or a record. When you try to close an unsaved, modified record, then the system displays an error message as "You are in middle of transaction, would you like to close the page and loose all changes, if any?". Click 'Yes' to continue and 'No' to save the record.

1.5.2 Basic Actions

Most of the screens contain buttons to perform all or few of the basic actions.

All or few of these actions are enabled when you select any of the Basic Operations.

The table below gives a snapshot of them:

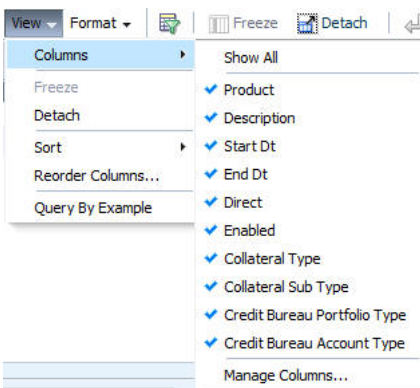

Basic Actions	Description
Save And Add	Click to save and add a new record. This button is displayed when you click 'Add' button.
Save And Return	Click to save and return to main screen. This button is displayed when you click 'Add' or 'Edit' buttons.
Return	Click to return to main screen without modifications. This button is displayed when you click 'Add', 'Edit' or 'View' buttons.

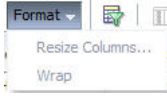

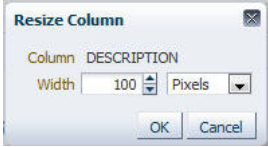

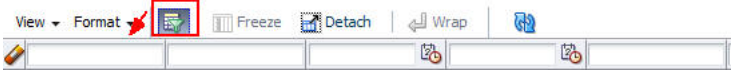

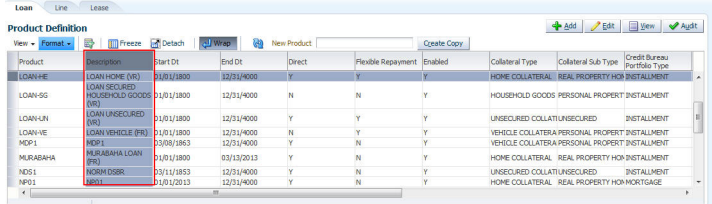

1.5.3 Personalization Options

You can personalize the data displayed in the setup tables. Once personalized, the system saves the settings for that User ID until next personalization.

The table below gives a snapshot of them:

Options	Description
View	<p>Click to personalize your view. The drop-down list provides the following options of customization:</p> <ul style="list-style-type: none"> • Customize columns you wish to view • Sort the order of displayed data • Reorder columns <p>Additionally, the drop-down list provides selection of options adjoining 'View'.</p> 

Options	Description
Format	<p>Click to resize columns or wrap a data in the table cells.</p>  <p>Select the column you need to resize and select Resize Columns option from the Format drop-down list.</p>  <p>Specify the Width and the unit for the selected column. Click OK to apply changes and Cancel to revert.</p>
Query by Example	<p>Click to query for the data by an example. When this option is selected, the system displays an empty row above column heads. You can specify all or any of the details of the record you wish to query.</p> 
Freeze	<p>Select the column at which you need to freeze the table and click Freeze. Function is similar to the freeze option in MS excel.</p>
Detach	<p>Click to detach the setup table from the screen. An example of the detached table is provided below.</p>
Wrap	<p>Select the column in which the data needs to be wrapped and click Wrap.</p> 
	<p>Click to refresh the data in the table</p>

Note

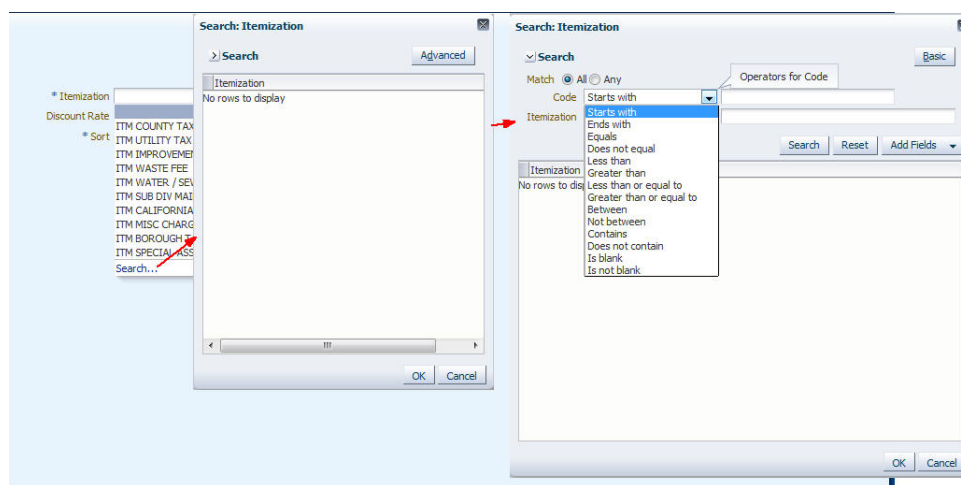

Click 'Add', 'Edit' or 'View' button to open a new page in expanded mode with details.

Drop-down List

The system provides an option to select the required data from LOV, for few fields. You can either select the record from the list or enter the first alphabet of the value you want. When you provide the alphabet, the system limits the selection to the values starting with the specified alphabet. These lists are grouped into two types:

- Drop-down list – Provides only select option, search option unavailable

- Combo drop-down list – The LOV contains huge data and provides both select and search option. These drop-down arrows are smaller in size, when compared to normal drop-down arrows, thus enabling easy identification.

Click the arrow button available before 'Search' to toggle the search options.

Buttons/Menu	Do this
Basic	Click 'Basic' for normal search.
Advanced	Click 'Advanced' for advanced search. In this mode, you can select the search option from drop-down list adjoining the search criteria. Selected record will be highlighted (Hover to select).
Note: The system displays either of the 2 options.	
Match	Select 'All' to display results exactly matching the specified characters. Select 'Any' to display results matching any of the specified characters
Search	Click to search for the values based on the specified search criteria. The search results are displayed below with the details in respective columns.
Reset	Click to reset the search criteria
Add Fields	Click to add additional fields to search criteria.

The search criteria are provided below the 'Match' field. These criteria vary based on the Field for which the search is executed.

Also, the system remembers your recent search options and demarcates them from the actual ones.

1.6 Keyboard Compatibility

The system facilitates keyboard compatibility. You can perform most of your tasks using keyboard short cuts also termed as 'Hot Keys'. These hot keys are single keyboards or a combination of keyboards. The available options are listed below:

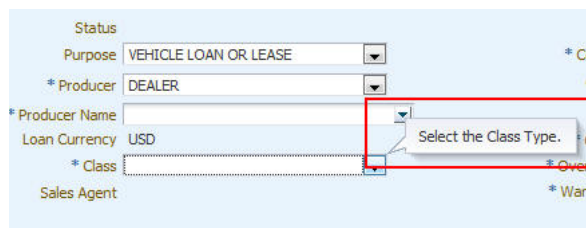

1. **Shift + Alt** + mnemonic to activate buttons on the screen. For example, to open 'Accessibility' window, press '**Shift + Alt + y**'.
2. **Tab** for forward navigation in the application. **Shift + Tab** for backward navigation in the application. When the required link/tab/button/field is highlighted, press enter on the keyboard to edit.
3. **Space bar** to check or uncheck 'Check Box'.
4. **Arrow Keys** to hover within the drop-down list.

For further details on Keyboard Compatibility, refer 'Section 1.8.3.2 Keyboard Compatibility'.

1.7 Tool Tips

The system is facilitated with tool tip option. When the cursor is moved to any of the field on the screen, a popup is displayed with a tip on the action to be performed.

1.8 Accessibility

1.8.1 Understanding Accessibility

Accessibility is making the application usable for multiple user groups, which includes users with physical challenges. One of the most important reason to make the application accessible is to provide them the opportunity to work. The four main categories of disabilities are visual, hearing, mobility, and cognitive.

A person with disability might encounter one or more barriers that can be eliminated or minimized by making the electronic information user-friendly and approachable.

1.8.2 Application Accessibility Preferences

Oracle Financial Services Lending and Leasing is facilitated with the feature of Accessibility to make the application more usable for the people who are differently abled. You can set the accessibility preferences soon after login. On the landing page using the 'Accessibility' link on the right end of the header and can set the following preferences as required

Screen Reader

Screen reader provides assistance to the visually impaired users. It interprets the screen elements by reading the them aloud.

High Contrast

High contrast feature increases the contrast level to make the screen more appealing for the reader with low vision.

Large Fonts

Large fonts feature enlarges the font size to ensure the clear display and appropriate spacing. This benefits the reader with low vision.

1.8.2.1 For Visual Challenges

The visual challenges varies widely, however it generally includes, blindness, low vision or colour blindness. To make the application more accessible, following features are provided.

Blindness:

In order to interpret the visual display information in the audible form, Screen reader compatibility is provided.

In places where Screen reader technology cannot obtain information from images, text equivalents for images are provided.

For Users with difficulty in using mouse, since it requires hand and eye coordination, Keyboard navigation is provided. Details of keyboard navigation is provided in '*Section 1.8.3.2 Keyboard Compatibility*'.

Low vision:

For Users who cannot view the content that has small font size and cannot be enlarged, Software magnifier to enlarge text and images beyond normal font enlargement is provided.

Also, there is no information presented using attributes such as depth, size, location, font etc.

For high contrast requirements Screen setting can be adjusted.

Color blindness:

Oracle Accessibility guidelines have been followed and hence accessibility issues relating to colour blindness are addressed.

Also, high contrast colours have been used to address difficulty in identifying shades of colours. For example, Black text in white background.

1.8.2.2 For Hearing Challenges

People with hearing challenges or hard of hearing might encounter problems accessing the information presented using sounds. Some application features minimize their concerns.

Visual representations of audible information is provided so that Users with this challenge do not miss information presented using audio.

1.8.2.3 For Age-related Challenges

Apart from the above, there can be aging issues like weak eye-sight or hearing.

Issues related to weak eyesight can be addressed through Application features for Visual Challenges provided in '*Section 1.8.2.1 For Visual Challenges*'.

Issues related to hearing can be addressed through Application features for hearing challenges provided in 'Section 1.8.2.2 For Hearing Challenges'.

For Users who are less familiar with computers, the simplified user interface with easy navigation options, uniform layout and design and commonly used terminology in the application is of great advantage.

To address issues relating to understanding complex information, User manuals are provided for online help and tool tips at all required places are provided. In addition, system messages like error, warning or information helps you through.

1.8.3 Other Accessibility Considerations

1.8.3.1 Documentation Accessibility

Apart from assigning the logical sequence and organizing the topics, the following techniques are used to enhance the accessibility of the documentation.

- Addition of text equivalent to all graphics
- Usage of standard fonts and avoiding shadow or reversed text
- Usage of strong foreground and background colour contrast
- Color usages as per Oracle Accessibility guidelines have been ensured
- Usage of styles and formatting elements
- Documentation in simple language to ensure easy understanding
- Including accurate and effective navigational features, such as cross-reference, tables of content, and bookmarks as appropriate

1.8.3.2 Keyboard Compatibility

The application is made compatible with keyboard only-operations. However, there is a change in the key combination based on the browser on which the application is running.

Browser	Operating System	Key Combination	Action
Google Chrome	Linux	Alt + mnemonic	Click
Google Chrome	Mac OS X	Control + Option + mnemonic	Click
Google Chrome	Windows	Alt +mnemonic	Click
Mozilla Firefox	Linux	Alt + Shift + mnemonic	Click
Mozilla Firefox	Mac OS X	Control + mnemonic	Click
Mozilla Firefox	Windows	Alt + Shift + mnemonic	Click
Microsoft Internet Explorer 7	Windows	Alt + mnemonic	Set focus
Microsoft Internet Explorer 8	Windows	Alt + mnemonic	Click or set focus
Apple Safari	Windows	Alt + mnemonic	Click

Browser	Operating System	Key Combination	Action
Apple Safari	Mac OS X	Control + Option + mnemonic	Click

Also, one can use the following keyboard shortcuts in order to increase or decrease the zoom level.

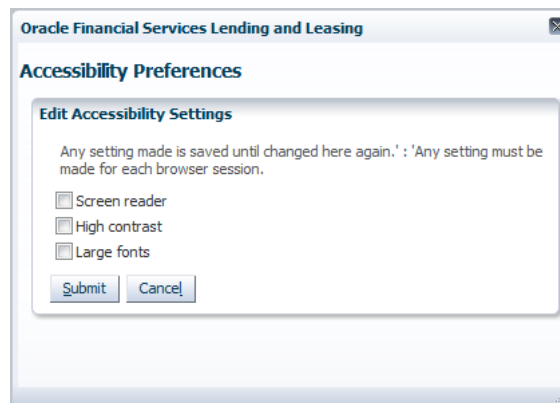

Shortcut	Action
Ctrl++	To increase zoom level.
Ctrl+-	To decrease zoom level.
Ctrl+0	To set zoom level to default level.

1.8.4 Setting up Accessibility Preferences

A user has an option to setup or change the accessibility preferences.

To edit accessibility settings

1. Click Accessibility in the header part of the application. The system displays the following screen:.

2. Select any or all of the required options to edit or change the accessibility settings.
3. Click Submit.

Note

- Settings made is saved until changed.
 - Settings must be made for each browser session.
-

2. Administration System

In **Administration** → **System**, you can record setup data related to the application's overall functionality and performance. This data affects;

- The mechanics of the system
- The processes of the system
- The search for Location of files to complete the tasks.

Navigating to Administration System

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup** → **Setup** → **Administration** → **System**

The System drop-down link records the following data:

- System Parameters
- Lookups
- User Defined Tables
- Audit Tables
- Transaction Codes
- Data Files
- Securitization
- Events
- Batch Jobs
- Reports
- Error Messages
- Translations

Using these parameters, you can control the behavior of the system from a technical perspective. For example, determine parameter values, define what information is audited, and record default values. The product provides default values for all these screens.

2.1 System Parameters

System parameters define information or values used throughout the system. They act as switches that control the manner in which a function is implemented, or whether or not the system performs a particular task. Parameters are used throughout the system to control everything from user access to what information is stored on any given form. Parameters also define configuration data, such as the location of the system files, the URLs for the report and image servers, and other administration controlled data. Some of the system parameters are setup when the system is installed, but the values associated with the parameters need to be reviewed and maintained.

There are three types of parameters in the system, grouped by what part of the system they affect:

Parameter Type:	Parameter Range:
System parameters	These parameters apply to the entire system. Examples: batch processes, archiving, aging.

Parameter Type:	Parameter Range:
Organization parameters	These parameters apply to the organization, division, and user responsibility. Examples: User login control, password expiration.
Company parameters	These parameters apply to the company and branch. Examples: decision fax control, scoring model.

Hence, the System Parameters screen contains the following three tabs:

- System Parameters
- Organization Parameters
- Company Parameters

2.1.1 System Parameters Setup

The System Parameters Setup screen displays and records each system wide parameter, along with its current value and whether or not it is enabled. These parameters relate to the overall processing of the system, such as application server file locations and data purging configuration.

To set up the System Parameters

1. Click **Setup** → **Setup** → **Administration** → **System** → **System Parameters** → **System**. The system displays the **System Parameter** screen
2. In the **System Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

System Parameters

Parameter: AADPRC_B3_100_01_DEBUG_LEVEL

Parameter Description: AADPRC_B3_100_01_DEBUG_LEVEL

* Parameter value: HIGH

Save And Return Return

A brief description of the fields is given below:

Field	Do this
Parameter	System parameter of the specified parameter description is displayed here.
Parameter Description	Select the description of system parameter from the drop-down list.
Parameter Value	Specify the value for the system parameter (required).
Enabled	Check this box to enable the parameter.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.1.2 Organization Parameters

The Organization parameters control the system functions related to user log in, such as passwords and expiration dates, responsibility levels and the ability to access the system features. Individual parameters can be created with different values for uniquely defined organizations, divisions, and responsibility combinations.

When determining which parameter to use, the system selects the best match based on a hierarchical sort by the Organization, Division, and Responsibility fields, with values of ALL being a lower order match than an exact match.

For example:

Assume the organization parameter `UIX_APP_VIEW_ALL_APPS` (VIEW ALL APPLICATIONS) is as follows:

- If a user belongs to an organization as 'DMC' with a responsibility of SUPERUSER and is using the Underwriting screen of Lending menu, the system will return with a value N, and the system will not allow the user to view all applications.
- If the user belongs to any organization with a responsibility of SUPERUSER, and is using the Underwriting screen of Lending menu, the system will return with a value Y, and the system will allow the user to view all applications.

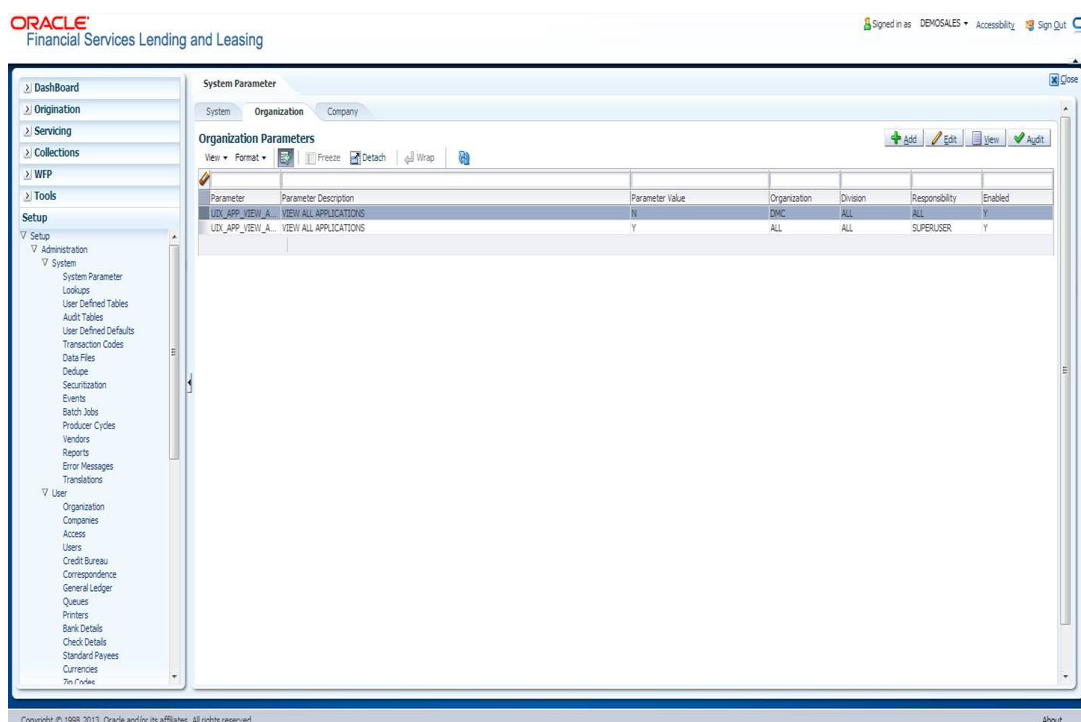

Note

Be aware that while the system allows for Organization parameters to be defined at all three hierarchical (organization, division, and responsibility) levels, not all will be applicable to each parameter. For example, while you can define the `UIX_SMTP_SERVER` (EMAIL SERVER FOR USER) for a responsibility, you would normally want only to define this parameter based on organization or division.

To set up the Organization Parameters

1. Click **Setup** → **Setup** → **Administration** → **System** → **System Parameters** → **Organization** tab.

2. In the **Organization Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Parameter	Parameter of the specified parameter description is displayed here.
Parameter Description	Select the description of system parameter from the drop-down list.
Parameter Value	Specify the value for the system parameter.
Organization	Select the organization for which the parameter will be valid from the drop-down list.
Division	Select the department for which the parameter will be valid from the drop-down list.
Responsibility	<p>Select the responsibility for which the parameter will be valid from the drop-down list.</p> <p>IMPORTANT: In selecting which organization parameter to use, the system searches for a best match using the following attributes:</p> <ol style="list-style-type: none"> 1. Organization 2. Division 3. Responsibility <p>Hence, Oracle Financial Services Software recommends creating a version of each organization parameter, where ALL is these fields.</p>
Enabled	Check this box to enable the parameter.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.1.3 Company Parameters

The Company parameters control the system processes associated with functions that may vary for different companies or branches. These parameters address credit scoring, credit bureau interfaces, fax services, and fax generation. Individual parameters may be set up with different values for uniquely defined company and branch combinations.

When these parameters values are requested by the system, the system responds with the “best” match based on a hierarchical sort ordered on company and branch fields, with values of ALL being a lower order match than an exact match. For example, assume the company parameter `UIX_RUN_AAI_ACT` (ONLINE ACCOUNT CREATION AND ACTIVATION) has been defined as:

The system uses these two parameters to determine whether to create and activate an account online.

- When processing items for the company `US01`, the system will return a value `N` and not create and activate an account online.
- When processing items for the company other than `US01` and within the value `ALL`, the system will return with a value `Y` and create and activate an account online.

To set up the Company Parameters

- Click **Setup** → **Setup** → **Administration** → **System** → **System Parameters** → **Company** tab.
- On the **Company Parameters** screen, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Parameter Description	Select the description of system parameter from the drop-down list.
Parameter Value	Specify the value for the system parameter.
Company	Select the portfolio company for which the parameter will be valid from drop-down list.
Branch	Select the portfolio branch for which the parameter will be valid from the drop-down list (required). IMPORTANT: In selecting which company parameter to use, the system searches for a best match using the following attributes: 1. Company 2. Branch For this reason, the Software recommends creating a version of each company parameter where ALL is the value in these fields.
Enabled	Check this box to enable the parameter.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.2 Lookups Setup screen

The Lookup Setups screen defines the contents in many drop-down fields used throughout the system. Fields that make use of drop-down field will accept only entries that are stored on this screen.

The Lookups screen contains two sections: **Lookup Types** and **Lookup Codes**. Lookup types and codes can be system-defined or user-defined. The lookup types describe the function of the related lookup codes.

For system-defined lookup types, only the Description field may be changed.

A *system-defined lookup type* (**Lookup Types** block, **System Defined** is selected) is one that is critical to the system and cannot be changed. However, you can still modify the lookup type description and Record indicator (Enabled/Disabled).

A *user-defined lookup type* (**Lookup Types** block, **System Defined** is not selected) is one that can be modified, depending on a user's business needs. You can modify the description, system indicator and record indicator. If a lookup type is user-defined, the lookup code belonging to that lookup type can either be system-defined or user-defined.

A *system-defined lookup code* (**Lookups** screen, **System Defined** is selected) is one on which the system processing is dependent. Without this lookup code, the process produces incorrect results or fails.

A *user-defined lookup code* (**Lookups** screen, **System Defined** is not selected) is one that can be defined or altered by a user.

WARNING: System-defined lookup types are those that are required by the system. Their related lookup codes will also be system defined. If you update and save a user-defined lookup type as a system-defined-lookup type (that is, change the System Defined button from **No** to **Yes** in the Lookup Type sub screen), the system will not allow you to change the lookup type back to user-defined in the future.

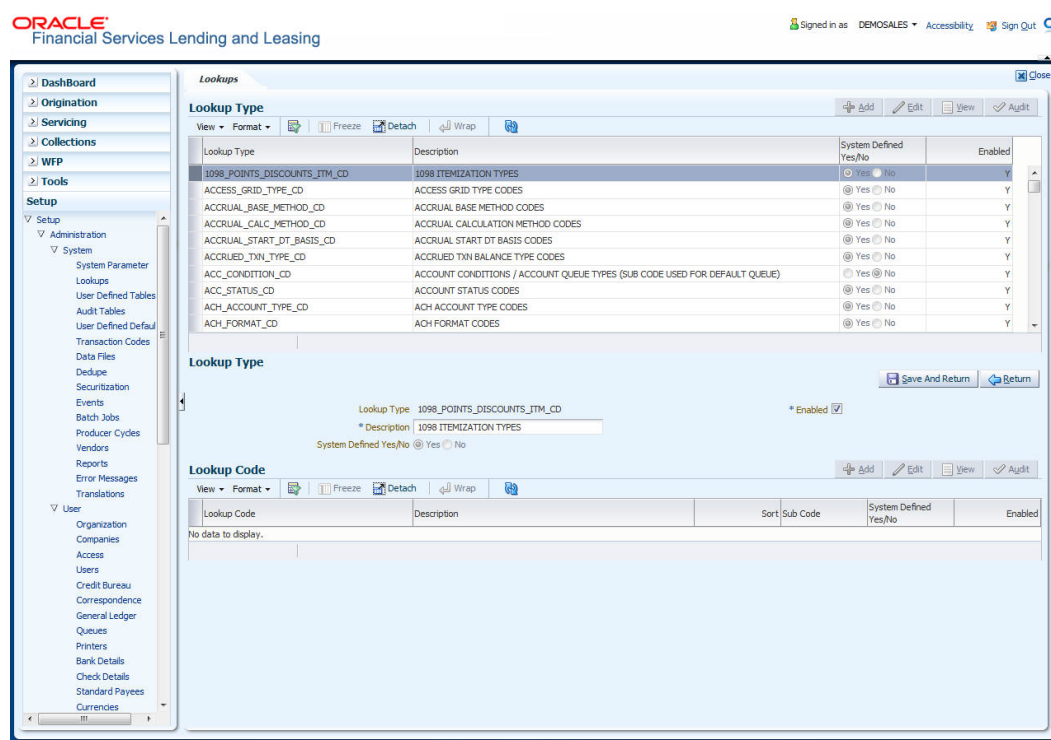

Note

Lookup codes cannot be deleted, as they may have been used in the past, and the display and processing of that data is still dependent on the existing setup.

Typically, the system Administrator would modify the descriptions of lookup codes and add new lookup codes to the existing lookup types as needed.

To set up the Lookups

1. Click **Setup** → **Setup** → **Administration** → **System** → **Lookups**. The system displays the **Lookups** screen. The details are grouped into two:
 - Lookup Types
 - Lookup Codes
2. In the **Lookup Types** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Lookup Type	Specify the lookup type.
Description	Specify the description for the lookup type .

Field	Do this:
System Defined Yes/No	Select 'Yes', if you wish to maintain the lookup type as system defined and 'No', if you wish to maintain lookup type as User defined.
Enabled	Check this box to enable the lookup type.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Lookup Codes** section, you can setup individual codes that a field or process using the related lookup type can have. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Lookup Code	Specify the lookup code. These are solely dependent on the function of the Lookup Type.
Description	Specify the lookup code description. This may be changed as per your business requirement.
Sort	Specify the sort order for the lookup code. This determines the order these lookup codes are displayed or processed.
Sub Code	Specify the sub code for the lookup code.
System Defined Yes/No	Select 'Yes', if you wish to maintain the lookup code as system defined and 'No', if you do not want to maintain it as system defined. System defined lookup codes cannot be modified, except for changing the Description or Sorting fields. If the lookup type is not system defined, then the code can be modified.
Enabled	Check this box to enable the lookup code.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.3 User Defined Tables

In User Defined Tables you can maintain user-defined tables, such as the data attributes the system uses on its Search screens.

In the following example, the list of attributes in the Criteria column are computed from the User Defined Tables screen.

To set up a user-defined table, you must:

1. Define the fields on the table.
2. Join the related tables.
3. Assign the table a lookup type.

You can create tables for different products, funding, and collateral types.

After creating the user-defined tables, the system sorts the attributes to make the system usage more efficient. These details are used with different functions of the system, including:

- Tracking follow-up items

- Creating details in bankruptcy, foreclosure/repossession, and deficiency

Note

Many of these tables, (ASSET TRACKING ATTRIBUTES for example) may be configured during the initial setup of the application to provide for your specific business needs. Others, such as APPLICATION SEARCH, may be changed whenever your business needs change. Still others should not be changed without consulting Oracle Financial Services Software, as changing them would require changes to existing code for the expected results to be implemented. As a thumb rule, it is better to add or disable information on the User Defined Tables screen than to edit existing entries.

To set up the User Defined Tables

1. Click **Setup** → **Setup** → **Administration** → **System** → **User Defined Tables**. The system displays the User Defined Tables screen. The details are grouped into two:
 - User Defined Tables
 - User Defined Table Attributes
2. In the **User Defined Tables** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot shows the Oracle Financial Services Lending and Leasing application interface. On the left is a navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, Setup, Administration, System, System Parameter, Lookups, User Defined Tables, Audit Tables, User Defined Defaults, Transaction Codes, Data Files, Dedupe, Securitization, Events, Batch Jobs, Producer Cycles, Vendors, Reports, Error Messages, Translations, User, Products, and WFP. The main area is titled 'User Defined Tables' and contains a table of existing tables and a form to add a new one. The table has columns: Table, User table Type, Description, System Defined (Yes/No), Enabled, Product Type, Funding Type, Collateral Type, View Name, and SQL. The form below the table has fields for Table, User table Type, Description, System Defined (radio buttons), Enabled (checkbox), Product Type, Funding Type, Collateral Type, View Name, and SQL Statement. Below the form is the 'User Defined Table Attributes' section with a table for attributes.

A brief description of the fields is given below:

Field	Do this:
Table	Specify the user-defined table name.
User Table Type	Select the user-defined table type from the drop-down list. This determines where and how the related data is being used.
Description	Specify the description for user-defined table.

Field	Do this:
System Defined Yes/NO	Select 'Yes', if you wish to maintain the User table type as system defined and 'No', if you do not want to maintain it as system defined. System defined entries cannot be modified. If the entry is not system defined, then it can be modified.
Enabled	Check this box to enable the user-defined table (optional).
Product Type	Select the product type from the drop-down list.
Funding Type	Select the funding type associated with the user-defined table from the drop-down list.
Collateral Type	Select the collateral type associated with the user-defined table from the drop-down list.
View Name	Specify the view name.
SQL Statement	<p>Specify the SQL version of the statement.</p> <p>For Example: For SEARCH_ACC_ACCOUNTS table, the SQL is as follows:</p> <pre>SELECT /*+ FIRST_ROWS */ ACC_AAD_ID FROM ACCOUNTS WHERE</pre> <p>Note: For the above SQL, the where criteria is part of the User Defined Table Attributes</p>
Sort	Specify the sort order for the user-defined table relative to other tables of the same type.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4. In the **User Defined Table Attributes** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Attribute	Specify the user-defined table attribute.
Description	Specify the description for the user-defined table attribute.
Data Type	Select the data type for the attribute (CHARACTER, NUMBER, or DATE) from drop-down list.
Length	Specify the maximum length of the user-defined table attribute.
Sort	Specify the sort order of the user-defined table attribute. If the sort order is changed it will only affect new instances of the User Defined Table, and will not affect existing data.
Operator	Select the operator for the user-defined table attribute from the drop-down list.
System Defined Yes/No	Select 'Yes', if you wish to maintain the User table attribute as system defined and 'No', if you do not want to maintain it as system defined. System defined entries cannot be modified. If the entry is not system defined, then it can be modified.
Enabled	Check this box to enable the user-defined table attribute so that the attribute will be considered when creating new instances of the User Defined Table.
Sub Attribute	Specify the sub-attribute for the attribute (sub attributes are used to associate related attributes).

Field	Do this:
LOV Type	Select the list of value (LOV) type for the user-defined table attribute from the drop-down list.
LOV Validation Ind	Check this box to enable LOV validation of the user-defined table attribute. This indicates whether the data must come from the LOV.
Lookup Types	Specify the lookup type of the LOV associated with the user-defined table attribute.
Default Value	Specify the default value for the user-defined table attribute.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.4 Audit Tables

the system allows you to track changes in the database during origination. This includes the tracking of:

- Account status history
- Audit history of specified fields

The Audit Tables Setup screen records the tables and columns requiring an audit. the system stores the following details for the fields you want to audit for changes:

- Current value in field
- New value field
- User who changed the field's content
- Date and time when the value was changed

IMPORTANT: The system recommends that only a database administrator perform the following steps.

To set up the Audit Tables

1. Click **Setup** → **Setup** → **Administration** → **System** → **Audit Tables**. The system displays the Audit Tables screen. The details are grouped into two:
 - Audit Tables
 - Audit Columns

- In the **Audit Tables** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Audit Columns

Column	Description	Data Type	Enabled
No data to display.			

A brief description of the fields is given below:

Field	Do this:
Table	The table name on which audit trigger needs to be created is displayed here (the system table being audited).
Description	Specify the table description.
Display Description	Specify the column description to be displayed on audit screen.
Display Column	Select the table column to be displayed on audit screen from the drop-down list.
Enabled	Check this box to enable the audit table so that it will be considered while generating the database triggers.
Reset Row ID	Check this box to allow resetting the row identifier.
Primary Key 1 (unlabeled)	The table primary key column 1 is displayed here. (These columns define how to access the data in the table.)
Primary Key 2 (unlabeled)	The table primary key column 2 is displayed here.
Primary Key 3 (unlabeled)	The table primary key column 3 is displayed here.
Primary Key 4 (unlabeled)	The table primary key column 4 is displayed here.
Primary Key 5 (unlabeled)	Table primary key column 5 is displayed here .

Field	Do this:
Primary Key 6 (unlabeled)	Table primary key column 6 is displayed here.
Primary Key 7 (unlabeled)	The table primary key column 7 is displayed here.
Primary Key 8 (unlabeled)	The table primary key column 8 is displayed here.
Primary Key 9 (unlabeled)	The table primary key column 9 is displayed here.
Primary Key 10 (unlabeled)	The table primary key column 10 is displayed here.
Primary Key 11 (unlabeled)	The table primary key column 11 is displayed here.
Primary Key 12 (unlabeled)	The table primary key column 12 is displayed here.
Primary Key 13 (unlabeled)	The table primary key column 13 is displayed here.
Primary Key 14 (unlabeled)	The table primary key column 14 is displayed here.
Primary Key 15 (unlabeled)	The table primary key column 15 is displayed here.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Audit Tables Columns** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Column	Specify the column name on which the audit needs to be created from drop-down list (column in the table that is being audited)
Description	Specify the column description (description of the data contained in the column).
Data Type	The data type for the attribute is displayed here.
Enabled	Check this box to enable the audit column.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.5 Transaction Codes

The system uses transaction codes to define the actions and tasks it can perform; for example, activating an account, changing a due date, applying a late fee, and charging off an account.

The Transaction Codes Setup screen catalogs and defines these core system actions.

Three sub screens, Transaction Parameters, Access Grid, and Transaction Product Definition, record any additional information required to perform a transaction, the user types that can perform the transaction, and the product type to which the transaction codes apply.

Note

The Software recommends that you lock the setup data and also restrict the access to the seed data once you are in production.

To set up the Transaction Codes

1. Click **Setup** → **Setup** → **Administration** → **System** → **Transaction Codes**. The system displays the Transaction Codes screen.
2. In **Transaction Super Group** section, you can view the following information

Parameters

Transaction Parameters

Parameter code	Default	Sort	Displayed? Yes/No	Required? Yes/No
No data to display.				

A brief description of the fields is given below:

Field	Do this:
Txn Code	Specify the transaction code (required).
Description	Specify the description for the transaction.
Group	Select the transaction group (the group within the Transaction Super Group that the transaction code belongs to) from the drop-down list.
Action	Select the action type code for the transaction (what action will take place when the transaction occurs) from the drop-down list.
Monetary	Check this box to maintain the transaction as a monetary transaction. If unchecked, then the transaction is nonmonetary.
System Defined Yes/No	Select 'Yes', if you wish to maintain the transaction code as system defined and 'No', if you do not want to maintain it as system defined. System defined entries cannot be modified. If entry is not system defined, then it can be modified.
Enabled	Check this box to enable the transaction.
Txn/Bal Type	Select the transaction / balance type affected by the Transaction from the drop-down list.
Statement Txn Type	Select the statement transaction type (how the transaction should appear on the customer statement) from the drop-down list.
Batch	Check this box to perform the transaction in a batch process.

Field	Do this:
Manual	Check this box, if the transaction is a manual transaction. If you define a transaction as manual, the system recommends that the transaction that reverses it also be defined as manual.
Stmt Print	Check this box to print the transaction on customer statements.
GL	Check this box, if the transaction is a general ledger transaction.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.5.1 **Transaction Codes sub screens**

The Transaction Codes screen contains three sub screens:

- Parameters
- Access Grid
- Products

IMPORTANT: Please contact your Implementation Manager before making any changes in these sub screens.

2.5.1.1 **Parameters**

Here, you can define the parameter information for the associated transaction. The Parameters apply exclusively to these super groups:

(For manual transactions, these are the parameters that appear when you click Load Parameters on the Customer Service window's Maintenance screen.)

CAUTION: Treat the Transaction Parameters sub screen as containing view-only information. This is very sensitive data and you should not change it without consulting Oracle Financial Services Software.

To set up the Parameters

1. Click **Setup** → **Setup** → **Administration** → **System** → **Transaction Codes** → **Parameters**.
2. In the **Transaction Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Parameter Code	Select the parameter code associated with the transaction code, from the drop-down list.
Default	Specify the default value for the transaction parameter (value to initially populate, or used if no value is supplied).
Sort	Specify the sort order for the transaction parameter.
Displayed? Yes/No	Select 'Yes' to display the parameter and 'No' if you do not want to display in current use.

Field	Do this:
Required? Yes/No	Select 'Yes' if the parameter is required and 'No' if you do not require the parameter. (You must select Required as empty values are not allowed.)

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.5.1.2 Access Grid

The Access Grid sub screen allows you to control access to each transaction according to user responsibility, account status, and account condition. It allows the administrator to control when these transactions may be conducted. Normally, you would create or modify the access based on either the user responsibility or account condition. Account status access is left unchanged.

To set up the Access Grid sub screen

1. Click **Setup** → **Setup** → **Administration** → **System** → **Transaction Codes** → **Access Grid**.
2. In the **Transaction User Access Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Access Type	Select the access grid function type (ACCOUNT CONDITION, ACCOUNT STATUS, CHECKER RESPONSIBILITY, and RESPONSIBILITY) that is being used to control the creation of the associated transaction, from the drop-down list.
Access Value	Select the access function grid value from the drop-down list (based on a lookup associated with the Access Type. Multiple entries for each access type may be created as long as each has a different access value).
Allowed? Yes/No	Select 'Yes' if the access is allowed and 'No' if the access is not allowed (indicates whether the current Access Type / Access Value may create the associated transaction).
System Defined Yes/ No	Select 'Yes', if you wish to maintain access type as system defined and 'No', if you do not want to maintain it as system defined. System defined entries cannot be modified. If entry is not system defined, then it can be modified.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.5.1.3 Products

The Products sub screen allows you to define the products to which the transaction codes apply. It allows the administrator to control if the associated transaction code will be available for use for specific product types and or funding types.

Normally, an Access Value of ALL is defined for one or more Access Types with a given Allowed value. Additional Access Values are then defined for the same Access Types with the opposite Allowed value. This controls access to the associated transaction.

To set up the Products sub screen

1. Click **Setup** → **Setup** → **Administration** → **System** → **Transaction Codes** → **Products**.
2. In the **Transaction Product Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Product Type	Select the product type associated with the transaction code from the drop-down list.
Funding Type	Select the funding type associated with the transaction code from the drop-down list.
Allowed? Yes/No	Select 'Yes' if the transaction is allowed and 'No' if the transaction is not allowed (indicates whether the current Access Type / Access Value may create the associated transaction).

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.6 Data Files

The Data Files Setup screen organizes information pertaining to the various output data files that the system can generate. the system uses the Data Files Setup screen to outline the file layouts of each data file produced within the system, including the length and data type of each column name.

These files are typically produced during the nightly process.

One major advantage for the system-defined data files is the format mask of each column name within each data file. A format mask is like a stencil that forces data input to be of the same format before accepting the data.

You can change the order in which the fields are displayed in the file.

Note

Any addition or removal of a field or change in the data type length requires the Software involvement.

To set up the Data Files

1. Click **Setup** → **Setup** → **Administration** → **System** → **Data Files**. The system displays the Data Files screen. The details are grouped into three:
 - Data File Definitions
 - Record Definitions
 - Column Definitions

The Data File Definitions section defines specific data files. Each is associated with a specific Output Data Definition (ODD) batch job that gathers the data the file will contain. While new data file definitions may be created they will have no use unless a batch job is also created to populate the data.

- In the **Data Files Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

CUST_PAYMENT_EXTRACT	OUTBOUND CUSTOMER EXTRACTS TO PAYMENT AGENCIES	customer_pmt_extract_s(COMPANY_COD	UNDEFINED	<input type="radio"/> Yes <input checked="" type="radio"/> No

Data File Definitions

Name: ADVERSE_ACTION

Description: ADVERSE ACTION LETTER

File Name: ADVERSE_ACTION

Directory Path: UNDEFINED

System Defined Yes/No: ☐ Yes ☒ No

Enabled: ☒

Record Definitions

Record Type	Description	Record Format	Delimiter	Terminator
1	FILE HEADER RECORD	VARIABLE		CARRIAGE RETURN AND LINE FEED
2	FILE DETAILS RECORD	VARIABLE		CARRIAGE RETURN AND LINE FEED
3	FILE FOOTER RECORD	VARIABLE		CARRIAGE RETURN AND LINE FEED

Column Definitions

Seq	Column Name	Data Type	Format Mask	Length	Data Column	Output Column
1	RECORD TYPE	VARCHAR2	NOT APPLICABLE	30	1	1
2	PROCESS DATE	DATE	YYYYMMDD	8	2	2
3	POTFOLIO COMPANY	VARCHAR2	NOT APPLICABLE	30	3	3

A brief description of the fields is given below:

Field	Do this:
Name	Specify data file type (name of data file definition).
Description	Specify data file description.
File Name	Specify data file name. Prefix used for files generated for this Data File. This is the only field on the Data File Definitions screen that can or should be modified by your Administrator. The generated file name will be in the form of <FILE NAME>_<COMPANY ID>_<BRANCH ID>_<MMDDYYYY>_<PROCESS ID>.DAT. The inclusion of _<COMPANY ID> and _<BRANCH ID> depends entirely on the associated batch process.
Directory Path	Specify the directory path.
System Defined Yes/No	Select 'Yes', if you wish to maintain the data file definition as system defined and 'No', if you do not want to maintain it as system defined. System defined entries cannot be modified. If the entry is not system defined, then it can be modified.
Enabled	Check this box to enable the data file definition.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Each data file definition is made up of one or more record definitions. These define organization of the data. The associated batch file determines how these records are used. The order in which the data is populated determines the order in which those records will

appear in the output file. This is generally related to the order the records appear in the Data File Definition section.

4. In the **Record Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Record Type	Specify the type of record being defined.
Description	Specify record description.
Record Format	Select the format of output data (FIXED, VARIABLE) from the drop-down list.
Delimiter	Specify the delimiter (column separator used with VARIABLE format).
Terminator	Select the record terminator code (how the end of each record is indicated within the file -- CARRIAGE RETURN, LINE FEED, or CARRIAGE RETURN AND LINE FEED) from the drop-down list.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Each record definition is made up of one or more column definitions. These define the output of the data. Much of this data is informational; it indicates what data is being provided by the associated batch job. Unless otherwise noted, the data should not be changed without changing the associated batch job.

6. In the **Column Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

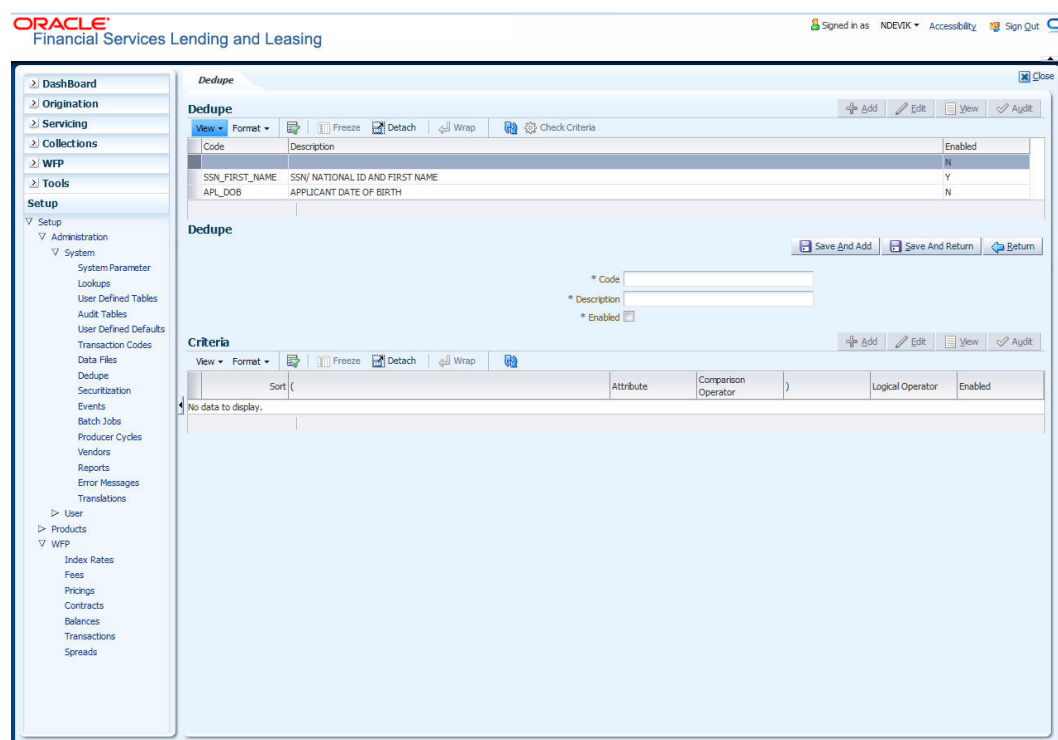

A brief description of the fields is given below:

Field	Do this:
Seq	Specify the order in which the output data dump will process the column information.
Column Name	Specify name/description of the column (informational only).
Data Type	Specify the data type. This describes the type of data the column is expected to contain (CHARACTER, DATE, or NUMBER). This effects how the ODD process handles the data, and should not be changed .
Format Mask	Select the format mask for the column from the drop-down list. For DATE or NUMBER columns, this field defines the output format of the data. For example; Date fields may be entered using the MM/DD/YYYY format, Number fields may be entered as decimal numbers with varying degrees of precision. Other formats for each data type are available.

Field	Do this:
Length	Specify the column length (the maximum number of characters of the output data to be included in the output file). Each output data details column may contain up to 240 characters of data. If the output data details column contains more data than the length value the data will be truncated. For VARIABLE records the length should be set to “-1” or a Delimited file will be created with FIXED LENGTH columns.
Data Column	Specify the data column sequence. This is the column that will be used to select the data that is being output. This should not be changed.
Output Column	Specify the output column sequence. This is the column that will appear in Output File. The Output Data Dump process allows for the output of 250 columns of data per record. No output column should be repeated in the setup for a record.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.7 Securitization

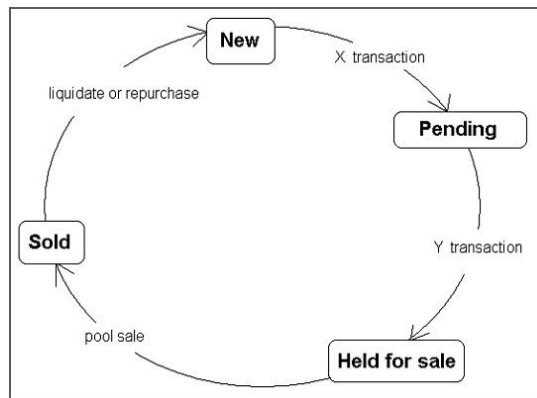

With the Securitization Setup window, the system provides a powerful tool that enables financial institutions to create account pools, to track and manage portfolios.

The Securitization Setup window enables you to:

- Query account information
- Select accounts based on selection criteria
- Create a pool of selected accounts for sale
- Maintain the pools created and report transactions on these accounts
- Report on investors

- Repurchase pools or specific accounts from pools.

Securitization screen enables you to define the securitization cycles, as well as the responsibilities that can access the various statuses in each cycle. The following diagram demonstrates the status cycle:

To create a cycle

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup** → **Setup** → **Administration** → **System** → **Securitization**. The system displays the Status Cycle set up screen. The details are grouped into three:
 - Status Cycle
 - Current/Next Status
 - Status Change Responsibilities
2. In the **Status Cycle** section, you can view the following details.

A brief description of the fields is given below:

Field:	Do this:
Cycle	View the cycle code.
Type	View the cycle type.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Current/Next Status** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Current Status	Select the current status from the adjoining drop-down list.
Next Status	Select the next status from the adjoining drop-down list.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. In the **Status Change Responsibilities** section, you can define the responsibilities that are authorized to change the code. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Responsibility	Select the responsibility that will be capable of executing this transition, from the drop-down list.
Allowed	Select 'Yes' to allow change to the status responsibility and 'No' to disallow.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.8 **Events**

During loan origination or account processing, when an account moves from one status/sub status to another, or changes condition, the system can trigger an event and perform the associated event actions. This can occur either online or in batch mode.

Note

Only predefined events and actions can be set up on the Events Setup window. You cannot create new event types or action types.

As processing events and associated actions require additional processing at the server level, the performance of the transactions, for which the events are setup, may be adversely affected dependent upon your specific configuration.

2.8.1 **Events**

In the Events screen you can setup "trigger events" with associated actions which the system performs during loan origination and account processing. The fields on this form are both system and user defined. There are four sub screens on the Events screen to set up and maintain these events:

- Events Types
- Event Action Types
- Online
- Batch

Event Types and Action Types sections of this screen provide a master table for setting up the online and batch events. This setup triggers the event, which in turn triggers the actions associated with the events, during application entry

Navigating to Events

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup** → **Setup** → **Events**.

2.8.1.1 Event Types

1. Click **Setup** → **Setup** → **Administration** → **System** → **Events** → **Loan** → **Events Types**.
2. In the **Events Type** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot displays the Oracle Financial Services Lending and Leasing interface. On the left is a navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, and Tools. The main area is titled 'Events' and has tabs for Loan, Line, and Lease. Under the 'Loan' tab, there are sub-tabs for Event Types, Event Action Types, Online, and Batch. The 'Event Types' sub-tab is active, showing a table of event types. Below the table is a form for editing an event type, with fields for Event Type Code, Description, Process Type, Entity Type, Engine Type, Enabled, and System Defined.

Event Type Code	Description	Process Type	Entity Type	Engine Type	Enabled	System Defined
EYE01	ACCOUNT LEVEL BATCH EVENT #01	BATCH	ACCOUNTS	MONETARY TRANSACTIONS PROCESSING	Y	
EYE02	APPLICATION LEVEL BATCH EVENT #01	BATCH	APPLICATIONS	CREDIT BUREAU PROCESSING	Y	
EYE03	ACCOUNT LEVEL BATCH EVENT #02	BATCH	ACCOUNTS	MONETARY TRANSACTIONS PROCESSING	Y	
EYE04	APPLICATION LEVEL BATCH EVENT #02	BATCH	APPLICATIONS	CORRESPONDENCE	Y	
EYE05	ACCOUNT LEVEL BATCH EVENT #03	BATCH	ACCOUNTS	CONDITION/ASSIGNMENT PROCESSING	Y	
EYE06	APPLICATION LEVEL BATCH EVENT #03	BATCH	APPLICATIONS	APPLICATION STATUS CHANGE	Y	
EYE07	ACCOUNT LEVEL BATCH EVENT #04	BATCH	ACCOUNTS	CONDITION/ASSIGNMENT PROCESSING	Y	
EYE08	APPLICATION LEVEL BATCH EVENT #04	BATCH	APPLICATIONS	APPLICATION STATUS CHANGE	Y	
EYE09	ACCOUNT LEVEL BATCH EVENT #05	BATCH	ACCOUNTS	CONDITION/ASSIGNMENT PROCESSING	Y	
EYE10	APPLICATION LEVEL BATCH EVENT #05	BATCH	APPLICATIONS	APPLICATION STATUS CHANGE	Y	

Below the table, the 'Event Types' section shows details for Event Type Code EYE01. The Description is ACCOUNT LEVEL BATCH EVENT #01, Process Type is BATCH, Entity Type is ACCOUNTS, Engine Type is MONETARY TRANSACTIONS PROCESSING, and Enabled is checked. The System Defined checkbox is unchecked.

A brief description of the fields is given below:

Field:	Do this:
Event Type Code	Specify the event type code.
Description	Specify the event description.
Process Type	Specify the process type (BATCH or ONLINE) from the drop-down list.
Entity Type	Specify the entity type (ACCOUNTS or APPLICATIONS) from the drop-down list.
Engine Type	Specify the engine type (MONETARY TRANSACTIONS PROCESSING, NON-MONETARY TRANSACTION PROCESSING, CONDITION/ASSIGNMENT PROCESSING, APPLICATION STATUS CHANGE, CREDIT BUREAU PROCESSING, LETTERS PROCESSING or CORRESPONDENCE) from the drop-down list.
Enabled	Check this box to activate the event type.

Field:	Do this:
System Defined	Select 'Yes' to indicate that the event type is system define. Select 'No' to indicate that the event type is user defined.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.8.1.2 Event Action Type

The **Event Action Types** section is system defined and lists the action codes supported in the system.

1. Click **Setup** → **Setup** → **Administration** → **System** → **Events** → **Loan** → **Event Action Types**.
2. In the **Events Action Types** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot displays the 'Event Action Types' window in the Oracle Financial Services Lending and Leasing application. The window has a navigation pane on the left with options like Dashboard, Origination, Servicing, Collections, WFP, and Tools. The main area shows a table of event action types. The table has columns: Action Code, Description, Process Type, Entity Type, Engine Type, and Enabled. The table lists various transaction processing actions. Below the table, there is a form to add or edit an event action type, with fields for Action Code, Description, Process Type, Entity Type, Engine Type, and a System Defined checkbox.

A brief description of the fields is given below::

Field:	Do this:
Action Code	Specify the action code.
Description	Specify the action description.
Process Type	Select the process type (BATCH or ONLINE) from the drop-down list.
Entity Type	Select the entity type from the drop-down list.
Engine Type	Select the engine type from the drop-down list.
Enabled	Check this box to activate the action.

Field:	Do this:
System Defined	Select 'Yes' to indicate that the event type is system define. Select 'No' to indicate that the event type is user defined.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.8.1.3 Online

The Online screen allows you to set up the online events by defining all online events and the event criteria actions. The system supports the following online events:

1. A change in account's status. the system processes the event's actions when the:
 - Account status of ACTIVE is reversed
 - Account status is changed to PAID
 - Account status change to PAID is reversed
 - Account status is changed to CHARGE OFF
 - Account status change to CHARGE OFF is reversed.
2. The opening or closing of an accounts conditions. The system processes the event's actions when the:
 - Account condition DELINQUENT is opened
 - Account condition DELINQUENT is closed
 - CHG OFF Reversal
 - Paid Off Reversal
 - BKRP is closed
 - BKRP Is Opened
 - When Queue is Closed
 - When status/ Sub status changed to 'Approved- Rehashed'
 - Account condition SCHG is closed
 - Account condition SCHG is Opened
3. The posting of a non-monetary transaction to the account.

The events that can be performed online after each of the events listed above are as follows:

- Send correspondence for an account
- Generate correspondence for an account
- Send a credit bureau request for an account
- Post a monetary transaction for an account
- Post a condition transaction for an account

To setup Online Event

1. Click **Setup → Setup → Administration → System → Events → Loan → Online.**

- In the **Events** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Event Code	Specify the event code .
Event Type	Specify the event type from the drop-down list.
Frequency	Specify the event frequency from the drop-down list.
Synchronous	Check this box to set the event as synchronous (any failure in triggering the event will fail to trigger the entire transaction). If unchecked, then the event is asynchronous (any failure in the event will not affect the transaction, which will be successfully completed).
Enabled	Check this box to activate the event type.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

The **Event Criteria** section allows you to name and describe the query for an event, as well as enable or disable the query.

- In the **Event Criteria** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Query Name	Specify the query name.
Description	Specify the query description.

Field:	Do this:
Enabled	Check this box to activate the event criteria.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Criteria Details

The Criteria Details sub screen allows you to define the selection criteria for the event. The event engine uses these criteria to determine which accounts to include in the event action.

6. In the **Setup → Setup → Administration → System → Events → Loan → Online → Criteria** section, you can define the event selection criteria. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Seq	Specify sequence numbers.
(Specify left bracket.
Parameter	Select the parameter from the drop-down list.
Comparison Operator	Select comparison operator from the drop-down list.
Criteria Value	Specify criteria value.
)	Specify right bracket.
Logical Expression	Specify logical operator from the drop-down list.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Actions

The Actions section records the actions the system performs after the event is triggered.

8. In the **Setup → Setup → Administration → System → Events → Loan → Online → Action** section, define the action you want the system to perform for the event by entering the following information. (You can set up more than one event action for a particular event, then use the Seq field to define the order in which the events will occur)

A brief description of the fields is given below:

Field:	Do this:
Description	Select the event action description from the drop-down list.
Seq	specify sequence number.
Enabled	Check this box to activate the event action.

9. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

10. For each event action, use the **Action Parameters** section to set up the required action parameters and values. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Description	Specify the parameter description from the drop-down list.
Value	Specify parameter value.

11. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.8.1.4 Batch

The Batch screen allows you to set up the events performed as a batch transaction by the system. The system supports the following predefined batch events for application and account processing. (These batch events are listed in the Events Types section on the Setup screen):

- ACCOUNT LEVEL BATCH EVENT #01
- ACCOUNT LEVEL BATCH EVENT #02
- ACCOUNT LEVEL BATCH EVENT #03
- ACCOUNT LEVEL BATCH EVENT #04
- ACCOUNT LEVEL BATCH EVENT #05
- ACCOUNT LEVEL BATCH EVENT #06
- ACCOUNT LEVEL BATCH EVENT #07
- ACCOUNT LEVEL BATCH EVENT #08
- ACCOUNT LEVEL BATCH EVENT #09
- ACCOUNT LEVEL BATCH EVENT #10

To setup the Batch Event

1. Click **Setup** → **Setup** → **Administration** → **System** → **Events** → **Loan** → **Batch**.
2. In the **Events** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Event Code	Specify the event code.
Event Type	Specify the event type from the drop-down list.
Frequency	Specify the event frequency from the drop-down list.
Synchronous	Check this box to set the event as synchronous (any failure in triggering the event will fail to trigger the entire transaction). If unchecked, then the event is asynchronous (any failure in the event will not affect the transaction, which will be successfully completed).
Enabled	Check this box to activate the event type.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

The **Events Criteria** section allows you to name and describe the query for an event, as well as enable or disable the query.

4. In the **Events Criteria** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Query Name	Specify the query name.
Description	Specify the query description.
Enabled	Check this box to activate the event criteria.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Criteria Details

The Criteria Details sub screen allows you to define the selection criteria for the event. The event engine uses these criteria to determine which accounts to include in the event action.

6. In the click **Setup → Setup → Administration → System → Events → Loan → Batch → Criteria** section, you can define the event selection criteria. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Seq	Specify sequence numbers.
(Specify left bracket.
Parameter	Select the parameter from the drop-down list.
Comparison Operator	Select comparison operator from the drop-down list.
Criteria Value	Specify criteria value.

Field:	Do this:
)	Specify right bracket.
Logical Expression	Specify logical operator from the drop-down list.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Action

The Action sub screen allows you to define the actions performed in the batch event. The system supports the following batch event actions:

- Send letter for an account
- Generate correspondence for an account

8. Click

Setup → Setup → Administration → System → Events → Loan → Batch → Action.

9. In the **Actions** section, define the action you want the system to perform for the event by entering the following information. (You can set up more than one event action for a particular event, then use the Seq field to define the order in which the events will occur.) Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Description	Select the event action from the drop-down list.
Seq	Specify sequence numbers (required).
Enabled	Check this box to activate the event action.

10. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

11. For each event action, use the **Action Parameters** section to set up the required action parameters and values. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Description	Select the event action from the drop-down list.
Value	Specify sequence numbers (required).

12. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.8.1.5 Monitoring Events

You can verify the status of events and event actions on the Monitor Jobs screen of the Utilities form.

To monitor events

1. On the Oracle Financial Services Lending and Leasing home screen, click **Dashboard → Dashboard → System Monitor → Jobs → Back Ground.**

The system displays the status for all asynchronous events that have been completed or failed for an account.

For further details, on monitoring events refer Dashboard Chapter of this Guide.

2.9 **Batch Jobs**

“Batch jobs” refer to the back-end processes that automatically run at a certain time. There are two types of batch jobs:

- Business processes (such as billing and delinquency processing)
- Housekeeping tasks (such as application aging and application purging)

2.9.1 **Batch Jobs**

The Batch Job screen allows you to set up, monitor, and maintain batch jobs in the system.

Batch jobs can be set up to be performed on a daily, weekly, monthly, and ad-hoc basis. Batch jobs can also be configured to trigger an e-mail or phone message if a batch job fails.

Critical batch jobs control job flow and system date rollover to allow recovery during errors. Errors are instances where a process did not successfully complete. Failures indicate that a particular job encountered errors that require remedial action. The number of errors allowed before failure is defined for each job. Some errors automatically result in a failure.

Navigating to Batch Jobs:

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup** → **Setup** → **Administration** → **System** → **Batch Jobs**. The Batch Jobs details are further grouped into two tabs:
 - Batch Jobs tab
 - Job Holidays tab

2.9.1.1 **Batch Jobs**

In the Batch Job Setup screen, you can track and maintain all batch processes within the system. Using this form, the system administrator can configure the frequency and start time of each batch process, as well as set the number of threads to improve performance.

“Threading” allows a specific job to be separated into smaller units that are processed at the same time. This allows Oracle Financial Services Lending and Leasing to complete the job in less time.

You can set up multiple batch jobs within a batch set. In the Batch Job Sets section, each process is listed with the last run date (Last Run Dt field) and the next scheduled process date (Next Run Dt field). In the Freq Code and Freq Value fields, you can determine the frequency of each batch set, such as daily, weekly and monthly. You can also set up batch sets to incorporate a dependency on another batch set. This way, if the initial batch fails, the dependent set will not be processed.

In the Batch Jobs section, you can configure the process to run on weekends and holidays using the respective option boxes.

CAUTION: As the batch job setup widely affects the Oracle Financial Services Lending and Leasing system, Oracle Financial Services Software suggests that the system administrator has a clear understanding of the various functionalities within Oracle Financial Services Lending and Leasing before creating and updating the batch processes.

For the standard job set please review the Visio document,
dbk_std_detail_design_job_sets.vsd

To setup a Batch job

1. Click **Setup** → **Setup** → **Administration** → **System** → **Batch Jobs**.
2. In the **Batch Job Sets** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Batch Job Sets

Set Code: SET-AAI * Job Set Description: ACCOUNT CREATION * Start Time: 10:00 AM * Next Run Dt: 08/09/2003 10:00:00 AM

* Frequency: DAILY * Critical: ☐ * Enabled: ☐ * Parent: ROOT

Frequency value: DAILY Last Run Dt: 08/08/2003 Dependency: EXECUTE ALWAYS

Batch Jobs

Seq	Job Type	Job Code	Job Description	Threads	Comm Count	Errors Allowed
1	PROCEDURE	AAIPRC_B1_100_01	APPLICATION TO ACCOUNT INTERFACE	1	100	50
2	PROCEDURE	TYNACT_B1_100_01	ACCOUNT ACTIVATION	1	100	50

Batch Job Threads

Thread	Trace Level	Enabled
1	0	Y

A brief description of the fields is given below:

Field:	Do this:
Set Code	Specify the code for the batch job set.
Job Set Description	Specify the description for the batch job set.
Frequency	Select the frequency at which the job set is to be executed from the drop-down list.
Frequency Value	Select the frequency value from the drop-down list. The frequency value will be displayed based on the frequency code selected.
Start Time	Specify the start time for the job set.
Critical	Check this box to set job as critical. A “critical” job is one that prevents the General Ledger (GL) post date from rolling forward, should the job fail.
Enabled	Check this box to enable the job set.
Last Run Dt	The system displays the last run date of the job set.
Next Run Dt	Specify the next run date for job set. You can select the data from adjoining calendar icon.
Parent	Select the parent job set from drop-down list.

Field:	Do this:
Dependency	Select the type of dependency on the parent from drop-down list.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Batch Job** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Seq	Specify the batch job sequence number. Note: Within a job set, jobs are executed sequentially based on the sequence number assigned.
Job Type	Select the batch job request type from the drop-down list.
Job Code	Specify the batch job request code.
Job Description	Specify the batch job description.
Threads	The system displays the number of threads used by the job.
Commit Count	Specify the number of rows after which auto-commit is triggered.
Errors Allowed	Specify the number of errors allowed.
Weekend	Check this box to perform batch jobs on weekend.
Holiday	Check this box to perform batch jobs on a holiday. (Holidays are defined on the Job Holidays screen.)
Enabled	Check this box to enable the batch job.
Parent	Select the parent batch job from the drop-down list.
Dependency	Select the dependency clause of the batch job from the drop-down list.
Command	Specify the command line for the job (required).
RollbackSegment	If you choose, use this field to specify the rollback segment for job.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. In the **Batch Job Thread** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Thread	Specify the name of thread.
Trace	Specify the SQL trace level (0, 1, 4, 8, 12). The higher the number, the more activities the system can trace.

Field:	Do this:
Enabled	Check this box to enable the thread.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.9.1.2 Job Holidays

The system allows you to define holidays within the company on Job Holidays screen. You can then use the Batch jobs screen to set up whether you want the system to perform batch jobs on these days or not, using the Holiday box of Batch Jobs section .

To define job holidays

1. Click **Setup** → **Setup** → **Administration** → **System** → **Batch Jobs** → **Job Holidays**.
2. In the **Job Holidays** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot shows the Oracle Financial Services Lending and Leasing interface. The left sidebar contains a navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The Setup menu is expanded, showing sub-menus like Administration, System, and User. The main window displays the 'Job Holidays' screen. It features a table with the following data:

Holiday Dt	Description	Enabled
09/10/2013	TEST HOLIDAY	Y
12/25/2002	CHRISTMAS	Y
09/21/2002	THANKS GIVING DAY	Y
07/05/2002	INDEPENDENCE DAY	Y
12/25/2001	CHRISTMAS	Y
09/22/2001	THANKS GIVING DAY	Y
07/04/2001	INDEPENDENCE DAY	Y
12/25/2000	CHRISTMAS	Y

Below the table, there is a form to add a new holiday. It includes a 'Holiday Dt' field with the value '09/10/2013', a 'Description' field with the value 'TEST HOLIDAY', and an 'Enabled' checkbox that is checked.

A brief description of the fields is given below:

Field:	Do this:
Holiday Dt	Specify the date of the job holiday. You can select the date from the adjoining calendar icon.
Description	Specify the job holiday description (required).
Enabled	Check this box to enable the holiday.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.9.2 Batch Jobs Available

The below table provides a list of Batch Jobs maintained in the system and a brief description to each:

Engine Type	Description	Batch Job	Description	Origination	Servicing	Collection	Product	Comment
AAE	Application Account Interface	aaiprc_bj_100_01	APPLICATION TO ACCOUNT INTERFACE	No	Yes	No	Common	This process periodically picks up applications in 'Approved-Verified' status and creates accounts.
ACH	ACH Accounts	acaprc_bj_100_01	ACCOUNT ACH PROCESSING	No	Yes	No	Common	This process produces the ACH file for the eligible customer payments.
ACH	ACH Producers	acpprc_bj_100_01	PRODUCER ACH PROCESSING	Yes	Yes	No	Common	This process produces the ACH file for the eligible producer payments.
ACH	ACH Vendors	acvprc_bj_100_01	VENDOR ACH PROCESSING	No	Yes	No	Common	This process produces the ACH file for the eligible vendor payments.
ACH	ACH Producer/Vendors/ Customer/ Third Party	acxprc_bj_100_01	ACH Producer/Vendors/ Customer/ Third Party	Yes	Yes	No	Common	This process produces the ACH file for the eligible Producer/Vendors/ Customer/Third Party
AGE	Aging Applications	agaapp_bj_100_01	APPLICATION AGING PROCESS	Yes	No	No	Common	This process puts applications into 'Aged-Application' substatus.
AGE	Aging Contracts	agccon_bj_100_01	CONTRACT AGING PROCESS	Yes	No	No	Common	This process puts contracts into 'Aged-Contract' substatus.

2.10 Reports

The Reports screen allows you to setup reports in the system.

To set up the Reports

1. Click **Setup** → **Setup** → **Administration** → **System** → **Reports** link. The system displays the Report screen. The details are grouped into two:
 - Reports

- Report Parameters
- In the **Reports** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Code	Description	Package	Module	System Defined	Enabled
ACCOUNT_WISE_PDC	ACCOUNT WISE PDC LIST	OCSPOC_EM_100_03	SERVICING	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACC_LIST_LEASE	ACCOUNTS AND LISTING - LEASE	OCSACC_EM_121_01	COLLECTIONS	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACC_LIST_LINE	ACCOUNTS AND LISTING - LINE	OCSACC_EM_112_01	COLLECTIONS	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACC_LIST_LOAN	ACCOUNTS AND LISTING - LOAN	OCSACC_EM_111_01	COLLECTIONS	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y
ACC_PAYABLE_ORIGINATION	ACCOUNT PAYABLE(ORIGINATION)	OFNAPY_EM_100_01	ORIGINATION	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input checked="" type="checkbox"/> Y

Parameter	Description	Parameter Type	Parameter Sub Type	Default	Sort	Enabled
COMPANY_BRANCH	COMPANY / BRANCH	LIST OF VALUES	PORTFOLIO COMPANY AND BRANCH	ALL/ALL	2	<input checked="" type="checkbox"/> Y
P_ACC_NBR_FROM	ACCOUNT NO. FROM	NUMBER			3	<input checked="" type="checkbox"/> Y
P_ACC_NBR_TO	ACCOUNT NO. TO	NUMBER			4	<input checked="" type="checkbox"/> Y
REP_FORMAT	REPORT FORMAT	LIST OF VALUES	REPORT FORMAT TYPE	PDF	5	<input checked="" type="checkbox"/> Y

A brief description of the fields is given below:

Field	Do this:
Code	Specify the code of the report.
Description	Specify the description of the report.
Package	Specify the package .
Module	Select the code of the report from the drop-down list.
System Defined Yes/ No	Select 'Yes', if you wish to maintain the Report as system defined and 'No', if you do not want to maintain it as system defined. System defined entries cannot be modified. If the entry is not system defined, then it can be modified.
Enabled	Check this box to enable the report definition.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
- In the **Report Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Parameter	Specify the parameter code of the report.
Description	Specify the description of the parameter.

Field	Do this:
Parameter Type	Select the parameter type of the report from the drop-down list.
Parameter Sub Type	Select the parameter sub type of the report from the drop-down list.
Default	Specify the default value for the report parameter (value to initially populate, or used if no value is supplied) (optional).
Sort	Specify the sort order for the lookup code. This determines the order these report parameters are displayed or processed.
Enabled	Check this box to enable the report definition.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.11 Error Messages

In the Error Messages Setup screen, you can translate or modify the text of error messages. the system displays all messages as they appear to the system users in the Error Message section's Message field.

New messages created with the Error Messages screen can then be translated with the **Setup → Setup → Administration → System → Translation → Message Translation** screen.

To set up the Error Messages Setup screen

1. Click **Setup → Setup → Administration → System → Error Messages**. The system displays the Error Message screen.
2. On the **Error Messages Setup** screen's **Error Type** section, use the **Error Type** field to select the error type. These are the categories of error messages available for creating or editing.
3. The error messages associated with the error type you selected appear in the Error Message section.

4. In the **Error Messages** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field	Do this:
Region	Specify the region code.
Country	Specify the country code.
Customer	Specify the customer code.
Engine	Specify the engine code.
Error Code	Specify the error code.
System Defined	Displays whether the record is system defined or not.
Enabled	Check this box to enable the data error message.
Error Message	Specify the error message.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

2.12 Translation

You can setup translation properties.

Navigating to Translation

1. Click **Setup** → **Setup** → **Administration** → **System** → **Translation**. The system displays the Translation screen. On this screen you can,
 - Setup Translation
 - Translate Error Messages

2.12.1 Setup Translation

In the Setup Translation tab, you can translate the contents of a predefined list of setup description fields into a different language.

After you translate an entry in the Translation Data section, the system adds the new data to the setup form.

To set up the Translation Setup

1. Click **Setup** → **Setup** → **Administration** → **System** → **Translation** → **Setup Translation**.
2. In the **Language** section, you can select the language for which you need to setup the translation.

Note

For more information, refer **Language setup** at the end of this chapter.

3. In the **Source Type** section, you can select the source (or location in the system) of the item you want to translate.
4. Click **Populate All** in the **Source Type** section and the system loads the setup data descriptions in the Translation section screen for the selected source type.

If you have new entries and are unsure as to which setup items have been updated since the last translation, click **Populate All**, the system loads the additional data for all items with no impact to the previously translated data for any of the entries.

5. In the **Translation Data** section, Select:
 - **All** – to view all the records (both translated and un-translated) in the Translation Data section.
 - **Translated** – to view all the translated records in the Translation Data section.
 - **Un Translated** – to view all the un-translated records in the Translation Data section.
6. In the **Translation Data** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Note

You cannot add a new record.

A brief description of the fields is given below:

System Defined	Check this box to indicate that the record is system defined.
Enabled	Check this box to indicate that the record is active.
Message	Specify the error message.
English Translation	Specify the English translated description.

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Language setup

On the Lookup master tab's Lookup Types screen, you can add other languages to the TRD_LANGUAGE_CD lookup type and perform translations for those languages.

However, translated data only appears in one language, which is defined by the User Language parameter. This parameter can be defined in the system configuration file, typically named DBKWEB.CFG, which defines the parameter as:

Parameter: otherparams=ORA_USER=<schema_name> USR_LANG=<native language>

Note

<native language> should match lookup codes in the TRD_LANGUAGE_CD lookup type on the Administration form's Lookups screen.

The system supports the following pre-defined list of setup items for translation:

1. Asset Sub Types
2. Asset Types
3. Assignments
4. Audit Table Columns
5. Audit Tables
6. Call Action Result Types
7. Call Action Types

3. Administration User

In the **Administration →User**, you can record setup data that define your organization structure and its users. Information in this link is more “data” related, whereas the information stored on the System drop-down link functions more like switches that control system behavior.

Navigating to Administration System

1. On the Oracle Financial Services Lending and Leasing home page, click **Setup →Setup →Administration →User**.

The User drop-down link records the following data:

- Organization
- Companies
- Access
- Users
- Credit Bureau
- Correspondence
- Queues
- Printers
- Currencies
- ZipCodes

3.1 Organization

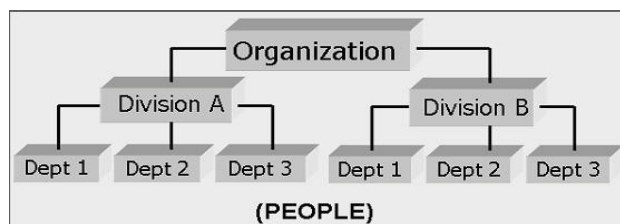

The Organization page records the operational hierarchy of your business in terms of people. It groups the human resources of your business in three categories: organization, division, and department. The system uses this data to control access of users to accounts.(The Companies page allows you to setup the location of these accounts.)

Note

You can have only one active organization, so use the Organization field to define your organization at its highest level.

Divisions are groups within your organization that will have access to the same accounts. Larger organizations often define their divisions by region. Smaller organizations may define division as branch offices or even departments, and might only have one division defined.

Departments are smaller units within a division. They expand on who is in the corresponding Division field. The system uses this sub page, for example, when setting up the Services page on the Utility form. At least one department must be defined for each division.

As an example of an organization setup, Oracle Corp. might be defined as:

Organization: O-0001Oracle Corp.ORA

Division: OD-001Central RegionC01

Department: ODD-01OriginationORG

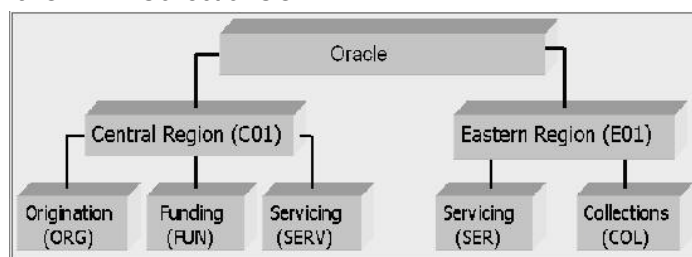

Department: ODD-02FundingFUN

Department: ODD-03ServicingSER

Division: OD-002Eastern RegionE01

Department: ODD-11ServicingSER

Department: ODD-12CollectionCOL

Note

The Short Name field on the Organization page allows you to create the ID that Oracle Financial Services Lending and Leasing will use when referring to the organization, division, and department throughout the system.

To setup the Organization page

1. Click **Setup** → **Setup** → **Administration** → **User** → **Organization**.

2. In the **Organization Definition** section, there can be only one active entry, so use this page to define your organization at its highest level. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot displays the Oracle Financial Services Lending and Leasing interface. The left sidebar contains a navigation menu with categories like Setup, Products, and Tools. The main window is titled 'Organization Definition' and features a table of existing organizations. Below the table is a form for defining a new organization, including fields for Organization Name, Short Name, Enabled status, Country, City, State, Address Line 1, Address Line 2, and Zip. There are also sections for 'Division Definition' and 'Department Definition' with their respective tables and forms.

A brief description of the fields is given below:

Field:	Do this:
Organization	Specify the organization ID (the ID is the unique identifier used internally by Oracle Financial Services Lending and Leasing to represent your organization). Note: Do not edit this field.
Organization	Specify the organization name.
Short Name	Specify the short name for the organization. Note: This ID represents this organization throughout the system.
Enabled	Check this box to enable the organization. Note: Only one enabled organization is currently allowed by Oracle Financial Services Lending and Leasing.
Country	Select the country where the organization is located from the drop-down list.
City	Specify the city where the organization is located.
State	Select the state where the organization is located from the drop-down list.
Address Line 1	Specify the address line 1 for the organization.
Address Line 2	Specify the address line 2 for the organization.

Field:	Do this:
Zip	Select the zip code of the location where the organization is located from the drop-down list.
Extn	Specify the extension of the selected zip code.
Phone 1	Specify the primary phone number for the organization.
Extn 1	Specify the phone extension for the primary phone number.
Phone 2	Specify the alternate phone number for the organization .
Extn 2	Specify the phone extension for the alternate phone number, if specified.
Fax 1	Specify the primary fax number for the organization.
Fax 2	Specify the alternate fax number for the organization.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Division Definition** section, you can setup the information for the groups within your organization that will have access to the same accounts. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Division	Specify the division ID. The ID is the unique identifier used internally by the system to represent the division within the organization. Note: Once specified, do not edit this field.
Division Name	Specify the division name.
Short Name	Specify the short name for the division. Note: This ID represents this division throughout the system (required).
Enabled	Check this box to enable the division.
Country	Select the country where the division is located from the drop-down list.
City	Specify the city where the division is located.
State	Select the state where the division is located from the drop-down list.
Address Line 1	Specify the address line 1 for the division.
Address Line 2 (unlabeled)	Specify the address line 2 for the division.
Zip	Select the zip code of the location where the division is located from the drop-down list.

Field:	Do this:
Extn	Specify the extension of the selected zip code.
Phone 1	Specify the primary phone number for the division.
Extn 1	Specify the extension for the primary phone number.
Phone 2	Specify the alternate phone number for the division.
Extn 2	Specify the extension for the alternate phone number .
Fax 1	Specify the primary fax number for the division.
Fax 2	Specify the alternate fax number for the division.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. Click **Setup** → **Setup** → **Administration** → **User** → **Organization** → **Department Definition**.
7. On the **Department Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Department	Specify the department ID. Note: The ID is the unique identifier used internally by the system to represent the department within the division.
Department Name	Specify the department name.
Short Name	Specify the short name for the department. Note: This is the ID that appears throughout the system to represent this department.
Enabled	Check this box to enable the department.
Country	Select the country where the department is located from the drop-down list.
City	Specify the city where the department is located.
State	Select the state where the department is located from the drop-down list.
Address Line 1	Specify the address line 1 for the department.
Address Line 2	Specify the address line 2 for the department.
Zip	Select the zip code where the department is located from the drop-down list.
Extn	Specify the zip extension where the department is located.
Phone 1	Specify the primary phone number for the department.
Extn 1	Specify the phone extension for the primary phone number.

Field:	Do this:
Phone 2	Specify the alternate phone number for the department.
Extn 2	Specify the phone extension for the alternate phone number.
Fax 1	Specify the primary fax number for the department.
Fax 2	Specify the alternate fax number for the department.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
9. Click **Setup** → **Setup** → **Administration** → **User** → **Organization** → **Display Format**.
10. On the **Display Format** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Format Type	Select the type of format from the drop-down list.
Format Sub Type	Select the sub type of the format from the drop-down list. The format sub type will be displayed based on the format type selected.
Format	Specify the format based on the format and sub type format selected.
Format Mask	Specify the format mask.
Format Filled	Specify the format filled.
Special Data	Specify the special data, if any.
Enabled	Check this box to enable the display format.

11. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.2 Companies

The Companies page records the hierarchical structure of your portfolio companies and their branches. Just as Oracle Financial Services Lending and Leasing uses the Organization page to determine the location of people, it uses the information on the Companies page to determine the location of accounts. In completing the Companies page, there can be more than one company, and each company can have more than one branch.

Accounting is performed at the company level. Accounts can be sorted down to the branch level. For this reason, branches are set up to reflect different business practices. You would set up different branches if, for example:

- The General Ledger (GL) differs between branches
- The branches work with different accounts
- There is a difference between branches in terms of the tasks they perform

As an example of the companies setup, Oracle Corp. might have the following companies and branches defined as:

Company: C-0001TrustOne Financial CorpTOFC

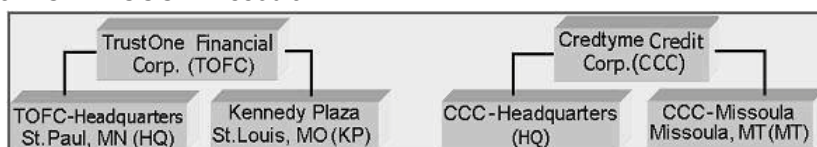

Branch: CB-01TOFC - HeadquartersHQ

Branch: CB-02Kennedy Plaza KP

Company: C-0002Credtyme Credit CorpCCC

Branch: CB-11CCC - HeadquartersHQ

Branch: CB-12CCC - MissoulaMT

Note

The system does not limit the number of companies or associated branches with the company you can enter.

The Short Name field on the Companies page allows you to create the ID that the system will use while referring to the company and branch.

KEY CONCEPT: Note the difference between the Company page and the Organization page:

- On the **Organization** page, *Oracle Financial Services Lending and Leasing users* belong to an organization and division.
- On the **Companies** page, *credit accounts* belong to a company and branch.

As you can see in the following Access page section, the information on the Organization and Companies pages define the operational hierarchy of your companies in terms of which Oracle Financial Services Lending and Leasing users will have access to which *accounts*

To setup the Companies

1. Click **Setup** → **Setup** → **Administration** → **User** → **Companies**. The **Companies** page defines entities within your organization that originate and/or service Loans.

- In the **Company Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Extn 2	Specify the phone extension for the alternate phone number.
Fax 1	Specify the primary fax number for the portfolio branch.
Fax 2	Specify the alternate fax number for the portfolio branch.

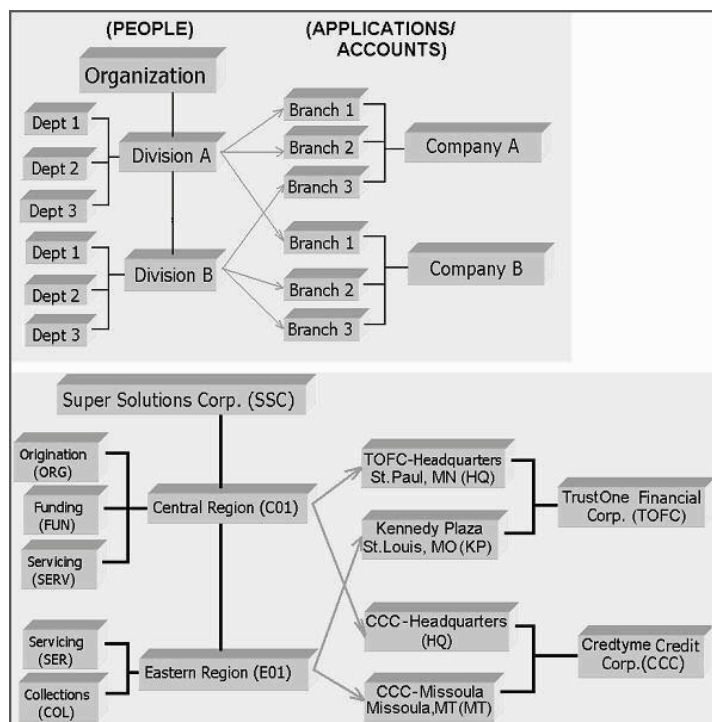

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.3 Access

Using the organizations, divisions, companies, and branches created on the Organization and Companies pages, you can control the access privileges of accounts. On the Access page, you define which organization/division (users) can gain access to which company/branch (accounts) locations.

Normally, for each division within an organization, you would define a record with Company value of ALL and a Branch value of ALL, then select the Allowed box. You then define other

records for the same Organization and Division for other Company and Branch combinations with the Allowed box cleared to restrict access.

To setup the Access

1. Click **Setup** → **Setup** → **Administration** → **User** → **Access**. The system displays the Access screen. In this page, you can control the access privileges of the user for the following categories:
 - Data
 - Screen
 - Reports
 - Correspondence
 - Transaction

3.3.1 Data

The Data page allows you to restrict access to different data.

To setup the Data

1. Click **Setup** → **Setup** → **Administration** → **User** → **Access** → **Data**.

2. In the **Access Grid** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot displays the 'Access Grid' interface in the Oracle Financial Services Lending and Leasing application. The main area features a table with the following data:

Organization	Division	Company	Branch	Allowed
DMC	US01	ALL	ALL	Y
DMC	NL02	ALL	ALL	Y
DMC	SA03	ALL	ALL	Y
DMC	JPD4	ALL	ALL	Y

Below the table, there are several input fields and controls:

- * Organization: DMC (dropdown)
- * Division: US01 (dropdown)
- * Company: US01 (dropdown)
- * Branch: ALL (dropdown)
- * Allowed: ☒ (checkbox)

The left sidebar contains a navigation menu with the following items:

- Dashboard
- Origination
- Servicing
- Collections
- WFP
- Tools
- Setup
 - Translations
 - User
 - Organization
 - Companies
 - Access
 - Users
 - Credit Bureau
 - Correspondence
 - General Ledger
 - Queues
 - Printers
 - Bank Details
 - Check Details
 - Standard Payees
 - Currencies
 - Zip Codes
 - Products
 - Asset Types
 - Index Rates
 - Currency Exchange
 - Scoring Parameters
 - Products
 - Pricings
 - Contract
 - Edits
 - Cycles
 - Scoring Models
 - Fees
 - Origination Fees
 - Compensation
 - Commission
 - Insurance
 - Checklists
 - Stipulations

A brief description of the fields is given below:

Field:	Do this:
Organization	Select the organization for which you are defining access privileges from the drop-down list.
Division	Select the division within the organization for which you are defining Access privileges from the drop-down list.
Company	Select the portfolio company to which you are defining access privileges for the organization and division specified from the drop-down list.
Branch	Select the portfolio branch of the company to which you are defining access privileges for the organization and division specified from the drop-down list.
Allowed	Check this box to provide access to the data pertaining to the company and branch, for the organization and division specified.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.3.2 Screen

In the screen page, you can control the access to the following:

1. Menu – Control access at the application menu level. For example, for **Setup** menu you can provide access only to an Administrator.
2. Screens – Control access to the screens available in the application
3. Buttons – Control access based on the stage.

For example, Add and Edit buttons can be disabled once an application is funded.

If you want to restrict updating the Applicant details, then edit button has to be disabled for the stage.

The Screen page allows you to restrict access to different screens.

To set the Screen Security

1. Click **Setup** → **Setup** → **Administration** → **User** → **Access** → **Screen**.
2. In the **Security Super Group** section, you can view the details of the super group you want to work with.

The screenshot displays the Oracle Financial Services Lending and Leasing interface. The left sidebar shows the navigation menu with 'Setup' selected. The main content area is titled 'Access' and contains the 'Security Super Group' section. This section includes a list of super groups and a 'Security Access Definition' table. The table lists access codes, descriptions, types, and system-defined status. Below the table is the 'Security User Access Details' section, which shows a table with access types and values.

3. In the **Security Access Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Note

You can not add a new record

A brief description of the fields is given below:

Field:	Do this:
Access Code	The system displays the selected access code.
Description	Modify the description of the access code.
Type	The system displays the type of security access definition.
System Defined	<p>If 'Yes' is selected, the security access definition entry is system defined.</p> <p>If 'No' is selected, the security access definition entry is manually defined.</p>

Field:	Do this:
Enabled	Check this box to enable the security access definition entry is enabled.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
5. In the **Security User Access Details** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Access Type	Select the access type of the user who will have access to this screen from the drop-down list.
Active Value	Select the active value of the user who will have access to this screen from the drop-down list.
Allowed	Select 'Yes' to allow access to this screen or 'No' to deny access to this screen.
System Defined	Select 'Yes', if the screen user access definition entry is system defined. Select 'No', if the screen user access definition entry is manually defined.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.3.3 Reports

In the Reports page you can control access to generate certain reports.

To set up Reports

1. Click **Setup** → **Setup** → **Administration** → **User** → **Access** → **Reports**.

2. In the **Reports** section, you can view the following information:

Reports

Code	Module	Description	Enabled
ACCOUNT_WISE_PDC	SERVICING	ACCOUNT WISE PDC LIST	Y
ACC_LIST_LEASE	COLLECTIONS	ACCOUNTS AND LISTING - LEASE	Y
ACC_LIST_LINE	COLLECTIONS	ACCOUNTS AND LISTING - LINE	Y
ACC_LIST_LOAN	COLLECTIONS	ACCOUNTS AND LISTING - LOAN	Y
ACC_PAYABLE_ORIGINATION	ORIGINATION	ACCOUNT PAYABLE(ORIGINATION)	Y
ACC_PAYABLE_SERVICING	SERVICING	ACCOUNT PAYABLE(SERVICING)	Y
ACC_PAY_LOG_CUSTOMER	SERVICING	ACCOUNTS PAYABLE LOG BY CUSTOMER	Y
ACC_PAY_LOG_PRODUCER	SERVICING	ACCOUNTS PAYABLE LOG BY PRODUCER	Y
ACC_PAY_LOG_THIRDPARTY	SERVICING	ACCOUNTS PAYABLE LOG BY THIRD PARTY	Y
ACC_PAY_LOG_VENDOR	SERVICING	ACCOUNTS PAYABLE LOG BY VENDOR	Y

Reports User Access Definition

Access Type	Access Value	Allowed	System Defined
RESPONSIBILITY	ALL	<input type="radio"/> Yes <input checked="" type="radio"/> No	<input type="radio"/> Yes <input checked="" type="radio"/> No

Access Type: RESPONSIBILITY
Access Value: ALL
Allowed: ☒ Yes ☐ No
System Defined: ☐ Yes ☒ No

A brief description of the fields is given below:

Field	View this:
Code	Displays the code of the report.
Module	Displays the code of the report from the drop-down list.
Description	Displays the description of the report.
Enabled	Displays whether the report definition is enabled or not.

3. In the **Reports User Access Definition** section, you can set the access rights for the report selected in the Reports section. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Access Type	Select the access grid function type from the drop-down list.
Access Value	Select the access function grid value from the drop-down list.
Allowed	Select 'Yes' to allow access or 'No' to restrict access to the entry based on the access type and value.
System Defined Yes/No	Select 'Yes', if the report user access definition entry is system defined. Select 'No', If the report user access definition entry is manually defined.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.3.4 Correspondence

The Correspondence page allows you to restrict access to different correspondence commands on the Letters menu, thus restricting your ability to generate certain correspondence.

If you do not have the responsibility to create a type of correspondence, the corresponding command on the Letters menu is unavailable (dimmed).

To setup the Correspondence

1. Click **Setup** → **Setup** → **Administration** → **User** → **Access** → **Correspondence**.
2. In the **Correspondence Codes** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot shows the Oracle Financial Services Lending and Leasing interface. The left sidebar contains a navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The main area is titled 'Access' and contains two sections: 'Correspondence Codes' and 'Correspondence User Access Definition'.

Correspondence Codes

Code	Description	Enabled
CBK_01	01 BANKRUPTCY SET	<input checked="" type="checkbox"/>
CCO_01	01 COLLECTION SET	<input type="checkbox"/>
CCS_01	01 CUSTOMER SERVICE SET	<input type="checkbox"/>
CCF_01	01 DEFICIENCY SET	<input type="checkbox"/>
CFN_01	01 FUNDING SET	<input type="checkbox"/>
CRF_01	01 REPO/FORECLOSURE SET	<input type="checkbox"/>
CUF_01	01 UNDERWRITING SET	<input type="checkbox"/>

Correspondence User Access Definition

Access Type	Access Value	Allowed	System Defined
RESPONSIBILITY	ALL	<input checked="" type="radio"/> Yes <input type="radio"/> No	<input checked="" type="radio"/> Yes <input type="radio"/> No

A brief description of the fields is given below:

Field:	Do this:
Code	The system displays the correspondence code name you want to work with.
Description	The system displays the description for the correspondence code (display only).
Enabled	Check this box to enable the selected correspondence code entry.

3. In the **Correspondence User Access Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Access Type	Select the access grid function type from the drop-down list.
Access Value	Select the access function grid value from the drop-down list.
Allowed	Select 'Yes' to allow access or 'No' to restrict access to the entry based on the access type and value.
System Defined Yes/No	Select 'Yes', if the correspondence user access definition entry is system defined. Select 'No', If the correspondence user access definition entry is manually defined.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.4 Users

The Users page allows you to create and set up a user. In the User Definition section, you can assign a user an identification name and password to log on to the system. You can also assign the organization, division, and department where each user is located. Additional fields allow you to record information for contacting the user. You can also define the time frame within which a user has access to the system to ensure compliance to the company's schedule. This is a very useful feature to prevent logins during scheduled maintenance.

The Responsibility field records the job function of the user and defines the level of access that user has within the system; in particular:

- What menu items does the user have access to?
- What transactions can the user perform on the Maintenance page on the Customer Service window?
- What edits can the user perform on the Verification link during origination?

Note

The system's SUPERUSER responsibility grants access to the entire system. Give careful consideration to the number and type of users who receive this responsibility.

To set up the Users page

1. Click **Setup** → **Setup** → **Administration** → **User** → **Users**. The system displays the Users screen.

- In the **User Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot shows the Oracle Financial Services Lending and Leasing application. The 'Users' section is active, displaying the 'User Definition' window. The window has a table of users and a detailed form for editing a specific user.

User	Organization	Division	Department	Start Dt	End Dt	System Defined	Enabled	First Name	MI
AFRA	DMC	US01	ORG	08/12/2013	08/12/9999	<input checked="" type="radio"/> Yes <input type="radio"/> No	<input checked="" type="checkbox"/>	Y AFRA

The detailed form for User AFRA shows the following fields:

- User: AFRA
- Organization: DMC
- Division: US01
- Department: ORG
- Start Dt: 08/12/2013
- End Dt: 08/12/9999
- System Defined: ☒ Yes ☐ No
- Enabled: ☒
- First Name: AFRA
- MI: ME
- Last Name: MOHASEEN
- Responsibility: UNDERWRITER
- Phone 1: (000)-000-0000
- Phone 2: (000)-000-0000
- Ext 1: 0
- Ext 2: 0
- Fax 1: (000)-000-0000
- Fax 2: (000)-000-0000
- Replacement User: [dropdown]
- Dt: [calendar icon]
- Type: EMPLOYEE
- Reference #: [dropdown]
- Email: [text field]
- Default Language: [dropdown]

A brief description of the fields is given below:

Field:	Do this:
User	Specify the user ID. Note: This field is a unique indicator and cannot be updated, edited, or deleted once saved.
Organization	Select the organization to which the user belongs, from the drop-down list.
Division	Select the division to which the user belongs, from the drop-down list.
Department	Select the department to which the user belongs, from the drop-down list.
Start Dt	Specify the start date for the user. You can also select from the adjoining calender icon.
End Dt	Specify the end date for the user. You can also select from the adjoining calender icon.
System Defined	Select 'Yes', if the entry is system defined. System defined entries cannot be modified. Select 'No', if the entry is not system defined and it can be modified.
Enabled	Check this box to enable the user.
First Name	Specify the first name of the user.

Field:	Do this:
MI	Specify the middle initial of the user.
Last Name	Specify the last name of the user.
Responsibility	Select the responsibility for the user from the drop-down list. Note: The users mapped to the role 'Responsibility' can only view the screens.
Phone 1	Specify the user's primary phone number.
Extn 1	Specify the phone extension for the primary phone number.
Phone 2	Specify the user's alternate phone number.
Extn 2	Specify the phone extension for the alternate phone number.
Fax 1	Specify the user's primary fax number.
Fax 2	Specify the user's alternate fax number.
Replacement User	Select the user ID of the replacement user from the drop-down list.
Dt	Specify the date from when the replacement is effective. You can also select from the adjoining calender icon. Note: These two fields allow you to create a replacement user for the current user. This is particularly useful when a new employee assumes the duties of a former. By completing the Replacement User and Replacement Dt field, the system recognizes the replacement user as the current user on the effective date. For more information, refer the section, 'Replacement Users'.
Type	Select the user type from the drop-down list.
Reference #	Specify the reference number for the user from the drop-down list.
Email	Specify user's email address.
Default language	Select the default language from the drop-down list.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.4.1 **Replacement users**

By completing the **Replacement User** and **Dt** fields on the Users page, you can replace an existing user with a new user. The system assigns all responsibilities of the original user to the new user as of the date of the replacement.

The **Replacement User** and **Dt** fields allow you to designate a replacement for the current user in the User ID field. When you complete the **Replacement User** and **Dt** fields, save your entry, and then enable the record, the system replaces the original user. The system changes the **End Dt** field to the date when the original user was replaced (the same date in the Dt field).

The system assigns the queues of the original user to only those replacement users who have the same user responsibilities (or Super User responsibility) as set in the system.

The system updates the following when replacing users:

1. Assigns all applications in the replaced user's underwriting queue with the status NEW to the replacement user's queue.
2. Assigns all applications in the replaced user's funding queue with a status other than FUNDED to the replacement user's queue. The system currently stores the collector name in the back end tables, which are updated with the replacement users ID in the case of the replacement of any user.
3. Also updates the Producer Management page with the replacement user in the **Underwriter** and **Collector** fields. The system assigns all applications routed to the original user to the replacement user. This also includes any future applications for the replaced user.
4. The system automatically updates the **Collector ID** field in all accounts to the replacement user and routes all accounts assigned to the original user to the replacement user.

Note

The system will not update the replacement user ID for accounts that are closed.

5. On the queue setup of Customer Service page's Responsibilities sub page, the record for the original user will be disabled and a new record will be created for the replacement user. If the replacement user already exists in the setup, The system will not create a new record. It updates the user ID and routes all accounts that were assigned to the original user, based on the account condition, to the replacement user.

3.4.2 Application and Oracle Identity Manager Synchronization

Oracle Identity Manager is for user administration. Oracle Financial Services Lending and Leasing has been developed in such a way that it can be implemented with or without Oracle Identity Manager. In case OID has been employed, the user definition is done in OID and then synchronized to the Oracle Financial Services Lending and Leasing Users table using a utility JAR called OID Synchronization JAR. In OID, users are defined across various groups belonging to a realm which is nothing but the directory structure in OID. A user can be configured to belong to multiple groups in a realm. Every time the user tries to login to Oracle Financial Services Lending and Leasing or OBIEE, the system validates the login ID and the password with OID and provides access to those applications.

3.5 Credit Bureau

In the system, an important part of the origination process is pulling a credit report from a credit bureau and scoring that information against a user-defined risk model. These credit reports can be pulled both automatically and manually.

After you enter an application, the system compares its contents against pre-screen criteria. If the application passes a pre-screen edits check, the system advances the status of the application and automatically pulls a credit report.

You can manually request a credit report for an applicant or any other party included on the application, such as co-signers and spouses by selecting the bureau from which you want to pull the report. If more than one report type is defined for the selected bureau, then you can indicate the type of report you want to pull.

The following are few additional Credit Bureau Setup details:

- The credit bureau from which the report is pulled is determined by the applicant's zip code. The credit bureau interface searches the information in the Credit Bureau Zip

Matrix tab and matches the applicant's zip code to determine the bureau(s) from which to request a report.

- The number of credit reports automatically pulled per applicant is controlled through the credit request parameter CRB_MAX_BUREAU_PULL. If this parameter is set to 1, a credit bureau request will be made for the Bureau1 credit bureau from the zip code matrix. Likewise, if this parameter is set to 2, a credit bureau request will be made for the Bureau1 and the Bureau2 credit bureaus from the zip code matrix.
- The system automatically pulls credit reports for only the primary applicant and the primary applicant's spouse (for joint applications) unless the CRB_ALL_APL_BUREAU_PULL credit request parameter is set to Y. However, if the parameter is set to Y, the system pulls credit reports for all of the applicants on the Loan, regardless of their relationship to the primary borrower.
- Passwords, default report formats, and other required information from the credit bureaus are set up in the Report Formats page.

Member codes and passwords when switching credit bureau access methods (moving from dial-up to Net Connect). The member codes and passwords are not dependent on the connection method used to access the bureau.

Frame relay access is from the database server to the Experian host through a TCP/IP socket connection. The connection is outbound only and it is to a specific port (699 or 700) on the Experian host.

The credit bureau service will be accessing Experian Net Connect service through HTTP to the ECALS URL supplied by Experian as well as by the HTTPS to the URL returned as a response to the ECALS URL inquiry (the credit request URL). This access is from the database server access.

3.5.1 Credit Bureau

The setup for Credit Bureau spans across the following links:

- Reporting

This section explains how to setup the pages opened from each .

Navigating to Credit Bureau

1. On the Oracle Financial Services Lending and Leasing home page, click **Setup → Setup → Administration → User → Credit Bureau**.

3.5.1.1 Reporting

The system reports to the credit bureau agencies in the Metro 2 format with the payment and account status information of each account holder. The Credit Bureau Reporting page contains the program identifier to be reported to the bureaus.

To setup the Reporting

1. Click **Setup → Setup → Administration → User → Credit Bureau → Reporting**.

2. In the **Credit Bureau Reporting** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot displays the Oracle Financial Services Lending and Leasing Credit Bureau Reporting interface. The left sidebar contains navigation options like Dashboard, Origination, Servicing, Collections, WFP, and Tools. The main area shows the 'Credit Bureau Reporting' section with a table of reporting data. The table has columns for Company, Bureau, Program Identifier, and Enabled. Below the table, there are input fields for Company, Bureau, Program Identifier, and an Enabled checkbox.

Company	Bureau	Program Identifier	Enabled
JP04	EPX	254454	Y
US01	EXP	ABCDE	Y
JP04	CREDCO	ADFRGT	Y
NL02	EPX	DSJHDS	Y
US01	EPX	FQHIJLMNO	Y
US01	TUC	PQRSTUWXYZ	Y
NL02	TUC	PREQDDDDDD	Y
NL02	EXP	SDJHSDH	Y
US01	CREDCO	YES	Y
SA03	CREDCO	XXXXXXXXXXXXXX	Y

Below the table, there are input fields for Company, Bureau, Program Identifier, and an Enabled checkbox.

* Company: JP04
 * Bureau: EPX
 * Program Identifier: 254454
 * Enabled: ☒

A brief description of the fields is given below:

Field	Do this:
Company	Select the portfolio company from the drop-down list.
Bureau	Select the bureau from the drop-down list.
Program Identifier	Specify the program identifier. The customer receives this from the bureau and uses it to identify itself to that bureau. You will need to update this information.
Enabled	Check this box to enable the program.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.5.2 Special Metro II Code reporting

The system allows you to report the following special Metro II segments to the credit bureau output file:

- Consumer Information Indicator Code (CIIC)
- Compliance Condition Code (CCCD)
- Special Comment Code (SPCC).

The system users will need to use call Action/Results and Reason fields on the Call Activities sub page of the Customer Service form (Lending > Customer Service > Customer Service (2) master tab > Account Details tab > Call Activities sub tab) to place specific account conditions where these Metro II segments are to be reported. The specific segment reported for a given condition will be based on the account condition and call activity reason codes.

Note

It is the responsibility of the Administrator or individual user to setup Special Metro II Code reporting functionality.

When users open one of the following conditions:

CIIC	CONSUMER INFORMATION INDICATOR CODE (METRO2 - FCRA)
CCCD	COMPLIANCE CONDITION CODE (METRO2)
SPCC	SPECIAL COMMENT CODE (METRO2)

The system recognizes the condition, processes the selected Metro II reporting call activity reason code, and generates the Metro II reporting segment in the Metro II reporting output file.

Note

You are responsible for selecting the correct Metro II reporting segment reason code to be reported. If you do not select a Metro II reporting segment reason code, the system will not generate information to Metro II output file. If you select an incorrect Metro II reporting segment reason code, the system will report the selected Metro II reporting segment. The system does not validate the contents of the Reason field with the contents of the Condition field.

To end the reported Special Metro II Special Code, close the open Special Metro II Condition (no reason code needed). The system recognizes the closing of the open Special Metro II Condition and will not create a Metro II reporting segment in the output file.

IMPORTANT: The CBU_FILE_FREQUENCY (METRO 2 FILE FREQUENCY) Company system parameter determines if output file is generated and created daily or output file is written with daily data and output monthly.

To setup Metro II Code reporting

1. On the Oracle Financial Services Lending and Leasing home page, click **Setup → Setup → Administration → User → Queues → Call Action Results** to open and close the following system defined condition codes:

Action Code	Description
CIIC	CONSUMER INFORMATION INDICATOR CODE (METRO2 - FCRA)
CCCD	COMPLIANCE CONDITION CODE (METRO2)
SPCC	SPECIAL COMMENT CODE (METRO2)

When setup is completed, you can open and close Special Metro II code conditions.

Note

Opening and closing Special Metro II Code reporting is a manual process.

The CBU_FILE_FREQUENCY (METRO 2 FILE FREQUENCY) Company system parameter determines, if output file is generated and created daily or output file is written with daily data and output monthly.

3.5.3 Oracle Wallet Manager setup

The Experian Net Connect, Equifax Internet System to System, and CSC interfaces within the the system credit bureau service use functionality provided by the Oracle Wallet feature. Use the Oracle Wallet Manager on the database server to create and export a wallet for use by the credit bureau service.

Note

All of the above mentioned interfaces use the same Oracle wallet. If a wallet already exists and is in use by one of the credit bureau interfaces, there is no need to create another wallet. Due to differing certificate requirements, there may be a need to import additional trusted certificates into the wallet, but there will not be a need to create a new one. The credit bureau parameter `ORA_WALLET_PATH` contains the location of the Oracle Wallet used by the credit bureau service.

To create and export a wallet suitable for use by the credit bureau

Refer to the Oracle documentation for more detailed instructions on how to use the Oracle Wallet Manager to create and manage a wallet:

1. If a wallet does not already exist, create one somewhere on the database server. The location must be readable and writable by the Oracle user. Make a note of the full path where the wallet is stored (for example, `/etc/ORACLE/WALLETS/oracle` or `C:\oracle\WALLETS`).
 - For Transunion credit bureau, a separate wallet file is needed under transunion folder inside the main wallet path (for example: `/etc/ORACLE/WALLETS/oracle/transunion` or `C:\oracle\WALLETS\transunion`).
2. The wallet needs to contain the public key for the certificate authority that issued the server certificate for each HTTPS web site that will be connected to by the credit bureau interface. At the time of this document, those sites are:

<code>https://ssl.experian.com</code>	Experian
<code>https://transport5.ec.equifax.com</code>	Equifax
<code>https://www.emortgage.Equifax.com</code>	CSC
<code>https://www.credcoconnect.com</code>	Credco

This list may change. Use the URL provided to you by the credit bureau when they set up your service. To get the proper Experian HTTPS URL, enter the ECALS URL that was provided by Experian into a web browser. The response returned to the browser is the HTTPS URL that will be used to communicate with Experian.

1. Import the necessary certificate authority's certificate files into the Oracle wallet that was created in Step 1. See the appendix of this chapter for detailed instructions of how to download and install a trusted certificate.
2. Test the wallet by connecting to each web site with a simple command issued from SQLPlus.

```
SQL> select utl_http.request('https://ssl.experian.com', NULL,
'file:/etc/ORACLE/WALLETS/oracle', 'password') from dual;
```

Replace the URL in the above command with each HTTPS URL given to you for use by the credit bureaus. Also replace the wallet path with the path to your wallet and your wallet password. The output from the command is not important, what is important is that it runs

without displaying an Oracle error. If there is an Oracle error, then something is wrong with the contents of the wallet, the path to the wallet, and/or the wallet password.

3. When the wallet contains all of the required trusted certificates, export the wallet to a text file. On the **Operations** menu of the Oracle Wallet Manager, choose **Export All Trusted Certificates**. The text file MUST be located in the same directory as the wallet and the filename MUST be default.txt. Anytime a change is made to the trusted certificates in the wallet, the wallet must be re-exported to the same text file.
4. In the **Setup** → **Setup** → **Credit Bureau** → **Parameters** set the `ORA_WALLET_PATH` and `ORA_WALLET_PASSWORD` parameters.

To create a client certificate wallet suitable for use by the CredcoConnect interface

The CredcoConnect interface requires another wallet file in addition to the default wallet file. This additional wallet file contains the client certificate and certificate chain issued to your company by First American Credco when your account is created.

1. Save the client certificate file sent to you by First American on your local PC.
2. Open Microsoft Internet Explorer and go to **Tools** → **Internet Options** → **Content** → **Certificates** screen.
3. Click the **Import** button. Choose **Next** and locate the PFX file you saved in Step 1. Choose **Next** and enter the password provided to you by Credco for the certificate file. Select the **Enable string private key protection** and **Mark the private key as exportable** check boxes. Choose the default selections on the following screens until the import is successful.
4. On the **Certificate Manager** screen, select the First American Corporation certificate and click the **Export** button.
5. Choose **Next**, **Yes**, export the private key, **Next**, PKCS12 format, include all certificates in the certification path, and enable strong protection and **Next**.
6. Set the password for the certificate to be the same password as your Oracle wallet.
7. Choose **Next** and save the file as **credco.p12**.
8. Copy the **credco.p12** file to your database server and into the same directory where the existing Oracle wallet in use by Oracle Financial Services Lending and Leasing is located.

3.5.4 Oracle JVM Security setup

The Experian Net Connect interface within the credit bureau service requires the use of the Oracle Java Virtual Machine (JVM) that is resident in the Oracle database. Furthermore, specific permissions must be granted to the Java classes used by the credit bureau service. These permissions have been added to the `set_java_perms.sql` script that is part of the distribution. This script (as well as many other useful SQL scripts) is available from the Oracle Financial Services Software technical support Oracle Financial Services Lending and Leasing patches web site.

The `set_java_perms.sql` script needs to run as the SYS user (or a user with SYS privileges). The script will prompt for SYS user id and password. Be prepared to provide it when prompted. Also, the script will select the value of the `ORA_WALLET_PATH` parameter from the credit bureau parameters table. Make sure that it has been updated with the proper wallet path before running the `set_java_perms.sql` script (although the script can be safely run again if necessary).

Credit Bureau Service operation

The basic operation of the credit bureau service has not changed. Once setup, there is no operational difference between accessing the credit bureaus via dial-up, frame relay, or the Internet.

3.5.5 Importing a trusted certificate into an Oracle Wallet

The HTTPS servers used by Experian, Equifax, and CSC for their Internet based credit report services (as well as all HTTPS servers) contain a site certificate signed by a trusted Certificate Authority (CA). The CA is an entity that guarantees the identity of the HTTPS server. If the client trusts the CA, and the CA says that the HTTPS server is who they say they are, then the client inherently trusts the HTTPS server. Normally, a client tool such as Microsoft Internet Explorer has a large store of trusted CA certificates which makes secure communication between a client and a trusted HTTPS server relatively seamless and uneventful.

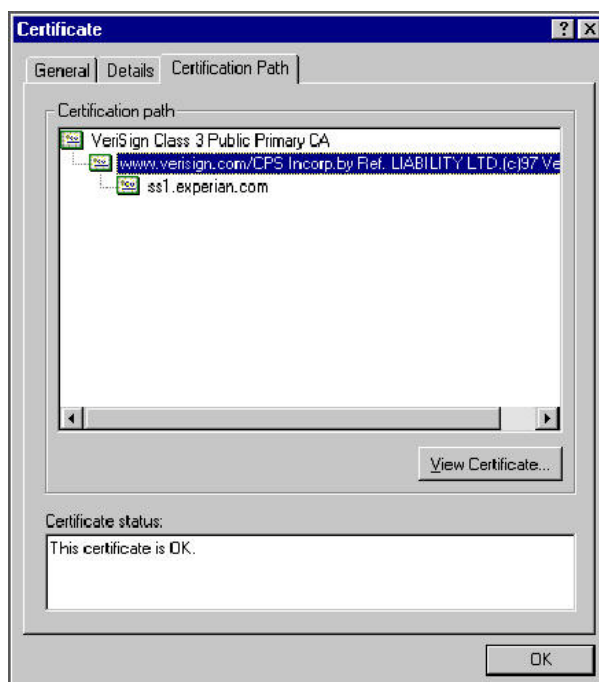

Unfortunately, the store of CA certificates in the default Oracle wallet is rather small and it is likely that it will not contain the certificate of the CA that is certifying one or more of the credit bureau web sites. This means that the CA certificate must be imported into the wallet. To do this, the certificates must first be exported from a browser and then imported into the Oracle wallet using the Oracle Wallet Manager.

Using Microsoft Internet Explorer to Export a Certificate

1. Use Microsoft Internet Explorer and connect to one of the HTTPS URLs referenced in the Oracle Wallet Manager Setup section of this document.

If the web site asks for a user id and password, cancel the dialog box and remain on the top-level HTTPS page.

2. Once connected, from the browser's **File** menu, choose **Properties**.
3. Click the **Certificates** button.
4. Click the **Certification Path** tab. The bottom-most certificate is the one generated by the host itself. The one or more certificates above the bottom-most one are of greater importance to this task. The screen shot below displays a web site with two CAs (an intermediate, and a primary). Whether it is an intermediate CA or a primary one, the steps are the same for saving the certificate as a text file.

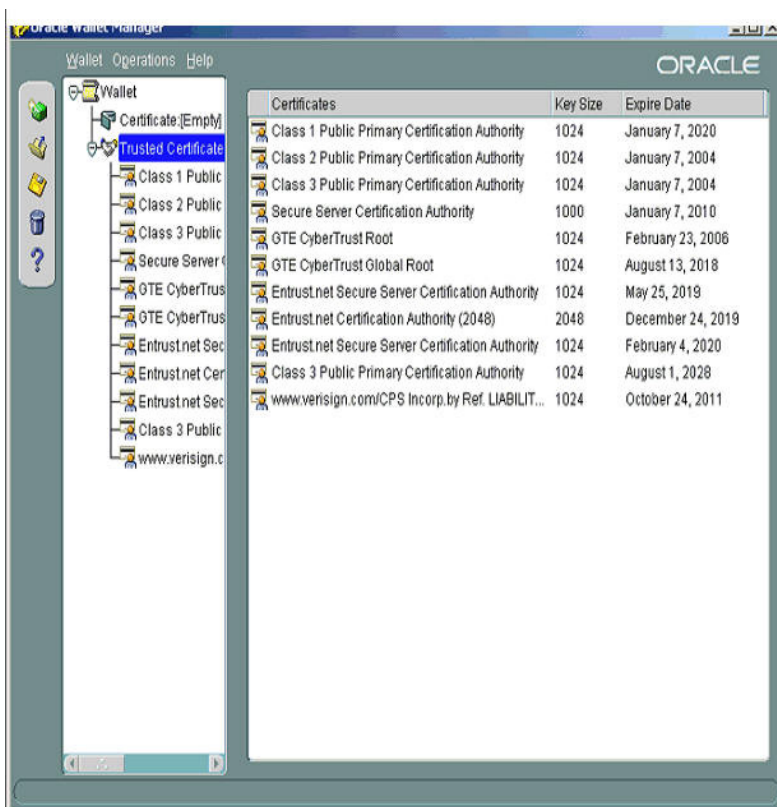

5. Click the first certificate above the bottom-most certificate (it may be the only certificate above the bottom-most certificate).
6. Click the **View Certificate** button.
7. Click the **Details** tab.
8. Click the **Copy to File** button.
9. Click the **Next** button.
10. Choose the **Base 64** encoded format.
11. Click the **Next** button.
12. Enter a filename and location for the file.
13. Click the **Next** button.
14. Click the **Finish** button.
15. Repeat steps 5 through 14 for the next certificate in the certification path, if any.

3.5.6 Importing the Certificates into an Oracle Wallet

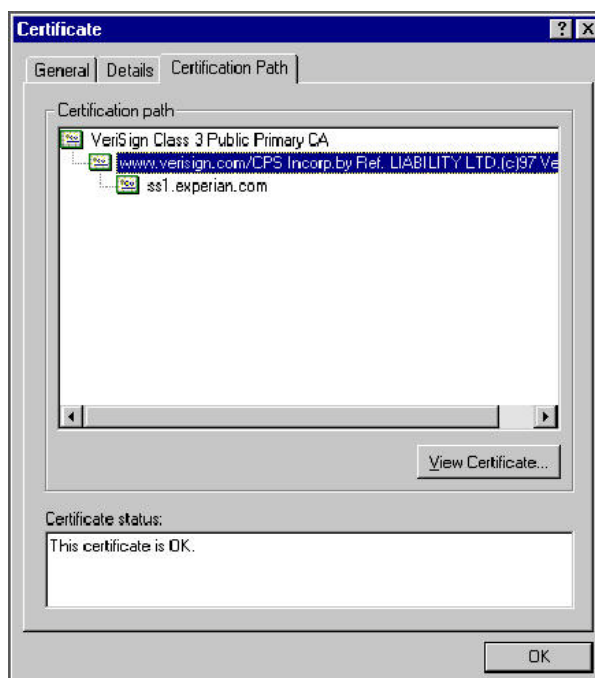

1. Copy the certificates exported and saved during the process described above onto the database server (not the iAS server).
2. As the Oracle user (or Administrator on Windows), start the Oracle Wallet Manager.
3. Open the wallet that will be used by the credit bureau service. Create a new wallet if one does not already exist.
4. View the list of Trusted Certificates in the wallet.
5. Check the list of certificates against the list of certificates that are in use on the HTTPS servers used by the credit bureaus (and that were exported and saved during the export process described above).

- Click the **Trusted Certificates** heading in the left list box of the Oracle Wallet Manager.

- Use Microsoft Internet Explorer to view the certificate details for the HTTPS web sites (**File** → **Properties** → **Certificates** → **Certification Path** → **View Certificate** → **General**) that will be contacted by the credit bureau service. Look through the list of certificates shown in the right panel of the Oracle Wallet Manager and look for a match between the **Issued To** and **Valid To** dates shown in the Internet Explorer View Certificate Window.

The screen shot below shows a certificate that is already in the wallet's list of trusted certificates (see the last entry for the `www.verisign.com/CPS` certificate).

8. On the **Operations** menu, choose **Import Trusted Certificate** and follow the prompts for locating and loading the files that were copied onto the database server in step 1 for any certificate not already stored in the wallet.
9. On the **Wallet** menu, choose **Save** when finished loading certificates.

3.5.7 De-duping Credit Bureau data

Oracle Financial Services Lending and Leasing allows you to remove duplicate (“de-dupe”) liabilities data from the credit bureau information.

De-duping logic

The de-duping logic is based on a number of parameters that the system compares among *tradelines* (**only**) to determine if they are duplicates. The following fields are used to determine if two tradelines are duplicates:

Field:	Description:
Account #	The account number of the consumer with the lender for the particular account.
Open Date	The date the account was opened.
Member Code	The subscriber code of the lender with the respective credit bureau. Note: Since member codes for the same lender differ across bureaus, this field is used only for tradelines reported by the same bureau. Since reports obtained from CSC can have tradelines from different bureaus, this field is only for reports pulled from the credit bureaus.

All available bureau reports pulled later than DEDUP_CRB_EXPIRATION_DAYS days old will be used.

The following system parameters will be set up to provide switches to allow the functionality to be turned on and off:

Parameter	Description	Valid Values	Setup Value
JOINT_DEDUP_SPOUSE_LIABILITIES	De-dupe the tradelines with spouse	Y, N	Y
JOINT_DEDUP_ALLAPL_LIABILITIES	De-dupe the tradelines with spouse and secondary applicants(s).	Y, N	Y
DEDUP_CRB_EXPIRATION_DAYS	Credit report expiration days	Number	90

Whenever two (or more) items are identified as duplicates, Oracle Financial Services Lending and Leasing uses the following hierarchy to pick one of the items as the “correct” one:

1. **Last Reported Date:** The row that has been reported most recently is used.
2. **Owner:** In case of a tie on the last reported date, one of the tradelines is picked in the descending order of priority depending on who the tradeline belongs to: Primary, Spouse, then Secondary.

Debt Ratio combination

Oracle Financial Services Lending and Leasing uses the system parameter DBR_JOINT_INC_DEBT_WITH_SPOUSE to decide whether to combine debt ratios of the spouse with the primary applicant. The DBR_JOINT_INC_DEBT_WITH_COAPP parameter decides whether to do the same on a non-spousal joint application.

When this indicator is checked, all liabilities in the Liability section on the Summary sub page of the Applicant (2) master tab with the Include box selected will be used in the debt ratio calculation.

The following system parameter will be set up to provide switches to allow the functionality to be turned on and off:

De-duping process

The de-duping logic will be integrated into the system decision-making process in the following manner:

Initial credit pulls on new applications

- If the JOINT_DEDUP_SPOUSE_LIABILITIES/ JOINT_DEDUP_ALLAPL_LIABILITIES system parameters are set to **Y**, uses the de-duping logic described above to uncheck the duplicate liabilities in the spouse's/co-applicant's liabilities.
- If the DBR_JOINT_INC_DEBT_WITH_SPOUSE/ DBR_JOINT_INC_DEBT_WITH_ALLAPL parameters are set to **Y**, the system includes the liabilities of the spouse/ co-applicant while calculating the debt ratio of the primary applicant.
- The system will use all available credit reports at the time.

Subsequent credit pulls (manual)

- To remove duplicate liabilities from the calculation, choose the **Dedup Liabilities** button on the **Underwriting** form (**Applicants** master tab > **Summary** sub page > **Liability** section). (Potential record locking situations force the action to remain manual versus the system automatically doing it).
- If the **Populate Debt** and **Include Debt** boxes are selected in the **Applicant/Customer Detail** section on the **Bureau** master tab on the **Underwriting** form for the credit request and the JOINT_DEDUP_SPOUSE_LIABILITIES/ JOINT_DEDUP_ALLAPL_LIABILITIES system parameters are set to **Y**, the system will use the de-duping logic described above to uncheck the duplicate liabilities in the spouse's/co-applicant's liabilities.
- If the DBR_JOINT_INC_DEBT_WITH_SPOUSE/ DBR_JOINT_INC_DEBT_WITH_COAPL parameters are set to **Y**, the system will include the liabilities of the spouse/ co-applicant while calculating the debt ratio of the primary applicant.
- The system will use all available credit reports at the time of the request that have been requested within the number of days specified in the DEDUP_CRB_EXPIRATION_DAYS parameter.

Restrictions

The de-duping logic will be limited based upon the discussion above. If the system cannot identify two tradelines as duplicates based upon the logic mentioned above, the individual tradelines will be retained. In such circumstances, both tradelines will be used in the debt ratio calculation and it will be the user's responsibility to disregard one of them by clearing the Include check box.

3.6 Correspondence

The Correspondence page enables you to setup the system's correspondence.

The system provides two types of correspondence: predefined and ad hoc. The following chart provides a quick summary of both:

TYPE OF CORRESPONDENCE	AD HOC	PREDEFINED
Created automatically		X
Created manually	X	X
Generated for accounts	X	X
Generated for applications	X	X
Set up with the Correspondence link	X	
Set up with the Letters link on the Product link		X

This chapter explains how to setup ad hoc correspondence with the Correspondence form.

The Correspondence pages provide a cost-effective and easy to use method to build custom documents that draw information from the system's database without additional programming. You can choose what to include in a letter, create a template, and then use this template to produce a letter.

The core of the Correspondence module is the document element -- the information stored in the database merged into the correspondence. The system has document elements defined for commonly used data elements in correspondence, such as account numbers, account balances, customer addresses, telephone numbers, and due dates.

Correspondence consists of a document file with text of your choice and the document elements from the system's database.

You can create a correspondence set that consists of one or more documents. If a correspondence set consists of more than one document, such as the account details letter and a payment overdue letter, it prints both documents every time the system generates correspondence for a customer.

The Correspondence module creates the following standard ad hoc correspondence:

- Microsoft Word (RTF)
- Adobe Acrobat (PDF/XFDF)

Note

In this document and in the system, the term BANKERS SYSTEM is synonymous with Adobe Acrobat.

3.6.1 Correspondence

The Correspondence page contains the following sub pages:

- System Functions
- Elements
- E-Form Elements
- Documents
- Correspondence

Navigating to Correspondence

1. On the Oracle Financial Services Lending and Leasing home page, click **Setup** → **Setup** → **Administration** → **User** → **Correspondence**.

3.6.1.1 System Functions

The System Functions page enables you to view the predefined functions for the appropriate Loan product in the system. These are attributes from the database.

Functions define how the system retrieves data to include in correspondence. The data is retrieved as elements which are either specific database columns or calculated values. Elements are recorded on the Elements page.

To view the predefined system functions

1. Click **Setup** → **Setup** → **Correspondence** → **Loan** → **System Functions**.
2. In the **Function Definition** section, you can view the following information.

The screenshot shows the Oracle Financial Services Lending and Leasing interface. The left navigation pane has 'Setup' expanded, showing 'Administration' (System, User), 'Products' (WFP, Index Rates, Fees, Pricing, Contracts, Balances, Transactions, Spreads), and 'Tools'. The main window is titled 'Correspondence' and has tabs for 'Loan', 'Line', and 'Lease'. The 'System Functions' tab is active, showing a 'Function Definition' section with a table of predefined functions. Below this is a 'Function Parameters' section with a table of parameters.

Function Name	Description	Function Type	Source Program
GET_ACC_111_DTLS	Get ACC Details (Loan CE)	COR_ELM_PROC	CGNACC_EL_111_01
GET_ACP_111_DTLS	Get Account Repayment Schedule Details	COR_ELM_PROC	CGNACP_EL_111_01
GET_ACR_111_DTLS	Get Account Rate Schedule Details	COR_ELM_PROC	CGNACR_EL_111_01
GET_ACS_111_DTLS	Get APP Payment Change Schedule Details	COR_ELM_PROC	CGNACS_EL_111_01
GET_APC_111_DTLS	Get APP Repayment Schedule Details	COR_ELM_PROC	CGNAPC_EL_111_01
GET_APP_111_DTLS	Get APP Details (Loan CE)	COR_ELM_PROC	CGNAPP_EL_111_01
GET_APP_ADC_111_DTLS	Get Application Decisions (Loan Close Ended)	COR_ELM_PROC	CGNADC_EL_111_01
GET_APP_CON_111_DTLS	Get Application CON Details (Loan CE)	COR_ELM_PROC	CGNACO_EL_111_01
GET_ARC_111_DTLS	Get APP Rate Schedule Details	COR_ELM_PROC	CGNARC_EL_111_01
GET_ART_111_DTLS	Get Account Payment Change Schedule Details	COR_ELM_PROC	CGNART_EL_111_01
GET_CON_111_DTLS	Get CON Details (Loan CE)	COR_ELM_PROC	CGNCON_EL_111_01

Position	Parameter	Description
1	lv_LO_ACC_id	Account ID
2	lv_name_ar	Parameter Name
3	lv_value_ar	Parameter value

A brief description of the fields is given below:

Field:	View this:
Function Name	Displays the function name.
Description	Displays the function description.
Function Type	Displays the function type.
Source Program	Displays the source program.

3. In the **Functions Parameters** section, you can view the following information.

A brief description of the fields is given below::

Field:	View this:
Position	Displays the parameter position.
Parameter	Displays the function parameter.

Field:	View this:
Description	Displays the function parameter description.

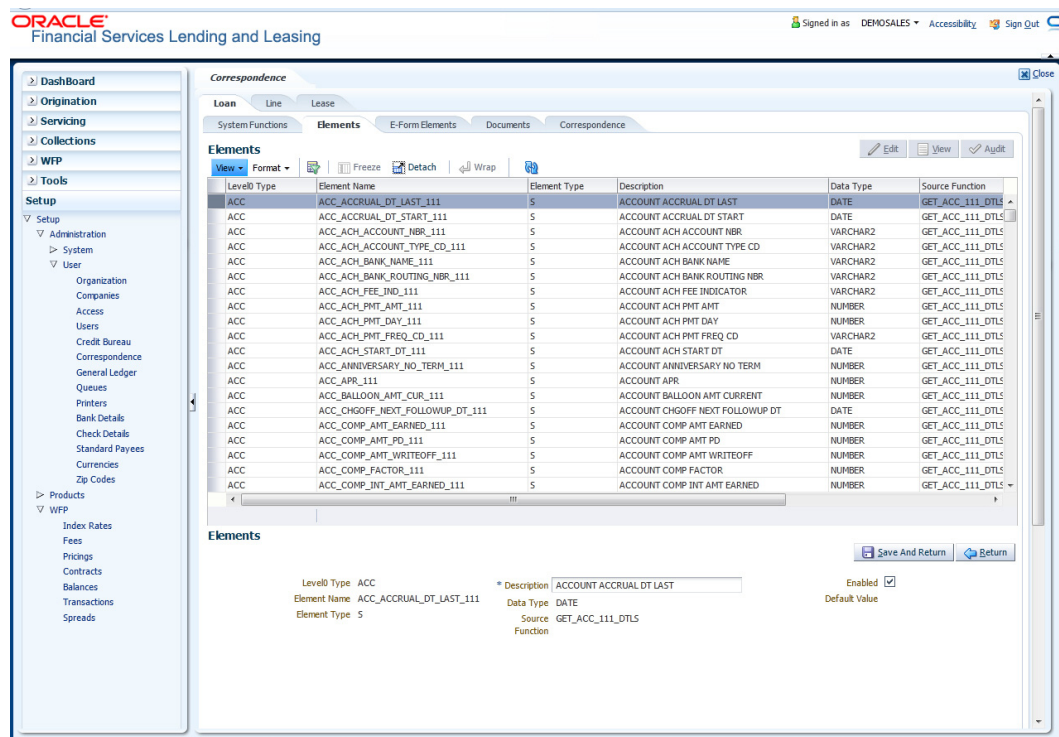

3.6.1.2 Elements

The Elements page displays the predefined document elements retrieved from the database when the correspondence is generated.

In the Element Definitions section, you can update or edit only the Description field.

To view the Elements

1. Click **Setup** → **Setup** → **Administration** → **User** → **Correspondence** → **Loan** → **Elements**
2. On the **Element Definitions** page, perform any of the [Basic Operations](#) mentioned in Navigation chapter. You cannot add a new record.

A brief description of the fields is given below:

Field:	Do this:
Level0 Type	Displays the element Level0 type.
Element Name	Displays the element name.
Element Type	Displays the element type.
Description	Specify the element description.
Data Type	Displays the element data type.
Source Function	Displays the element function.

Field:	Do this:
Enabled	Displays if the element is enabled or not.
Default Value	Displays the default value.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.6.1.3 E-Form Elements

The E-forms Elements page defines elements included when the system generates online correspondence with a browser. The E-forms page is set up only for PDF elements using the XFDF format. These definitions translate the external element required by the vendor to a systems correspondence element.

For example,

Vendor Element	AllBorrowers.FullNameStreetCityStateZip (Contains names of all borrowers with address of primary customer)
The system's Elements	PRIM_APL_NAME SPOUSE_APL_NAME PRIM_APA_ADDRESS1 PRIM_APA_ADDRESS2 PRIM_APA_ADDRESS3
Translation:	PRIM_APL_NAME ',' SPOUSE_APL_NAME ',' PRIM_APA_ADDRESS1 ';' PRIM_APA_AD- DRESS2 ';' PRIM_APA_ADDRESS3

To setup the E-forms Elements

1. Click **Setup** → **Setup** → **Administration** → **User** → **Correspondence** → **Loan** → **E-Form Elements**

- In the **E-form Elements Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot shows the Oracle Financial Services Lending and Leasing interface. The main window is titled "Correspondence" and has tabs for "Loan", "Line", "Lease", "System Functions", "Elements", "E-Form Elements", "Documents", and "Correspondence". The "E-Form Elements" tab is active, displaying a table of existing elements and a form for defining a new one.

Level0 Type	Source Code	Element Name	Description	Data Type Code	Translation	Enabled
ACCOUNT	OFSLL	WWWWWWW	ELEMENT30	DATE	CURRENT_SYSTEM_DATE	Y
ACCOUNT	OFSLL	ELEMENT2	ELEMENT2_DESC	DATE	CURRENT_SYSTEM_DATE	Y
ACCOUNT	OFSLL	666 77777	ELEMENT2	DATE	CURRENT_SYSTEM_DATE	N
APPLICATION	OFSLL	859	DESC45	NUMBER	PCB_NAME	N
ACCOUNT	OFSLL	EEEEEEEEEEEE	EEEEEEEEEEEE	DATE	CURRENT_SYSTEM_DATE	N
ACCOUNT	OFSLL	ELEMENT1	ELEMENT1_DESC	DATE	CURRENT_SYSTEM_DATE	N
ACCOUNT	OFSLL	ELEMENT3	ELEMENT56	DATE	CURRENT_SYSTEM_DATE	N
APPLICATION	OFSLL	ELEMENT5	ELEMENT_5	NUMBER	ACS_ADJUSTMENT_VALUE_111_1	Y
APPLICATION	OFSLL	ELEMENT_1	ELEMENT_1	DATE	CURRENT_SYSTEM_DATE	N
ACCOUNT	OFSLL	ELEMENT_3	ELEMENT_3	NUMBER	PCB_NAME	N
SALE LEAD	BANKER	ELEMENT67	ELEMENT67	NUMBER	PCB_ADDRESS2PCB_CITY	Y

Below the table, the "E-Form Elements" form is visible, showing fields for defining a new element:

- * Level0 Type: ACCOUNT
- * Source Code: OFSLL
- * Element Name: WWWWWW
- * Description: ELEMENT30
- * Data Type Code: DATE
- * Translation: CURRENT_SYSTEM_DATE
- * Enabled: ☒

A brief description of the fields is given below:

Field:	Do this:
Level0 Type	Select the element Level0 type from the drop-down list.
Source Code	Select the element e-form source code from the drop-down list.
Element Name	Specify the element name (the name used in the external form).
Description	Specify the element description.
Data Type Code	Select the element data type code from the drop-down list.
Translation	Select the translation for the e-form element (SQL statement fragment defining the element data), from the drop-down list.
Enabled	Check this box to enable the e-form element.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.6.1.4 Documents

The Documents page enables you to set up the various documents and the data fields that the system compiles together when creating a correspondence. The system provides two different document formats: Word or XFDF: XML-based form.

Note

Oracle Financial Services Software assumes that the user is familiar with Word and the Merge Document command. If the user is creating e-form documents with XFDF, then Oracle Financial Services Software assumes that person is familiar with Adobe forms.

To setup documents to be compiled in correspondence

1. Click **Setup** → **Setup**
→ **Administration** → **User** → **Correspondence** → **Loan** → **Documents**.
2. In the **Document Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Code	Specify the document code to define the name for the new document.
Description	Specify the document description for the new document. This entry appears in the Correspondence section on the Request page, when you generate an ad hoc correspondence.
File Name	Specify the document file name for the resulting file (Word or XFDF document).
Level0 Type	Select the level0 type from the drop-down list.
E-form Source	Select the element e-form source from the drop-down list.
Product	Select the document product from the drop-down list.
Source	Select the document source type from the drop-down list.

Field:	Do this:
Enabled	Check this box to enable the document definition.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Document Elements** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Seq	Specify the sequence number to order the document elements.
Type	<p>Select element type from the following from the drop-down list. This list provides the following options:</p> <p><i>System-defined</i> – If you select, the value is supplied by the system and cannot be changed in the Correspondence Request page.</p> <p><i>Constant</i>.</p> <p><i>User Defined Element</i> – If you select, you can choose the value and change it in the Correspondence Request screen.</p> <p><i>User Defined Constant</i> – If you choose, you can choose the value, but you cannot change it in the Correspondence Request screen.</p> <p><i>Translated Element</i> – If a document contains an e-form element and you do not select this option, then the value will not be translated.</p>
Element Name	Select the element name from the drop-down list.
Description	<p>Specify element description.</p> <p>Notes:</p> <ol style="list-style-type: none"> 1. Check that the element name does not have blank spaces or special characters, such as the forward slash “/” or backward slash “\”. 2. If the element is system-defined, then the system will automatically complete this field..
Data Type	Select the element data type from the drop-down list.
Format Mask	Select the element format mask from the drop-down list.
Default Value	Specify the element default value.
Enabled	Check this box to include the element in the document.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. In the **Document Template** section, you can set the information about the template which is attached to the correspondence documents. The template thus saved is similar to the template functionality available in MS word. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
File Name	Specify the file name to define the name for the new template.
Product	Select the product for which the template is valid, from the drop-down list.
Customer State	Select the customer state for which the product is valid, from the drop-down list.
Producer State	Select the Producer state for which the product is valid, from the drop-down list.
App/Acc St	Select the Applicant/Account state for which the product is valid, from the drop-down list.
New Template	Check this box to load the template as a new template.
Loaded	Check this box to indicate that the template is loaded.
Enabled	Check this box to enable the template.

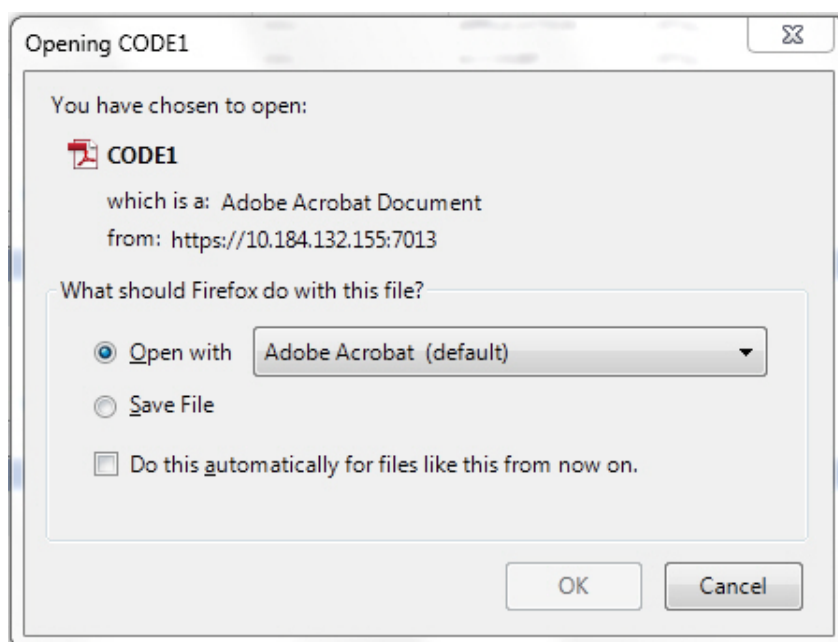

7. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

The Document Elements sub page records the system's application or account information that appears in the ad hoc correspondence

To generate a data file for a document

1. In the **Document Definition** section of **Setup** → **Setup** → **Administration** → **User** → **Correspondence** → **Loan** → **Documents**, select the record for which you want to generate a data file.
2. Click **Gen. Data File** button.

The system displays a new window with the following options:

- Open with – Select to view the data file in the format you want. The adjacent drop-down list provides a list of formats compatible with the system. The system downloads the file and displays it.
 - Save File – Select to save the data file on your system.
3. Check the box **Do this automatically for files like this from now on** to apply selected properties for the files which are similar to the current one.

3.6.1.5 Correspondence

The Correspondence page enables you to define who will receive the documents you created on the Document Definition page by creating correspondence sets. Each document must belong to a set, and a set can have more than one document.

To set up a correspondence set

1. Click **Setup** → **Setup** → **Administration** → **User** → **Correspondence** → **Loan** → **Correspondence**. The correspondence setup is classified into two:
 - Documents
 - Functions
2. In the **Correspondence** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot displays the Oracle Financial Services Lending and Leasing interface. The left sidebar shows the navigation menu with 'Setup' expanded. The main area is titled 'Correspondence' and contains a table of correspondence sets and a form for creating a new set.

Code	Description	Print Schedule	Level	Group	Company	Branch
CODE11	DESC11	ONLINE	APPLICATION	01 UNDERWRITING SET	ALL	ALL
DOC_PREP	DOCUMENT PREPARATION	ONLINE	APPLICATION	01 FUNDING SET	ALL	ALL
LN_CE_RISC_CON_1	NOTE AND SECURITY AGREEMENT 1	ONLINE	APPLICATION	01 FUNDING SET	ALL	ALL
LN_CE_XMAS_LTR_1	XMAS BEST WISHES TO CUSTOMERS	ONLINE	ACCOUNT	01 CUSTOMER SERVICE SET	ALL	ALL
SAMPLE_LOAN_APP	SAMPLE LOAN APPLICATION	ONLINE	APPLICATION	01 UNDERWRITING SET	ALL	ALL

Below the table, there is a form for creating a new correspondence set. The form includes fields for Code, Description, Print Schedule, Level, Group, Company, Branch, Product, and Enabled. The 'Enabled' checkbox is checked.

The 'Documents' section shows a table of documents associated with the correspondence set.

Documents	Recipient	Include
PRIME DOC	PRIMARY CUSTOMER ONLY	Y

A brief description of the fields is given below:

Field:	Do this:
Code	Specify the correspondence code.
Description	Specify the correspondence description (required).
Print Schedule	Select the correspondence output schedule type from the drop-down list.

Field:	Do this:
Level	Select the correspondence level type from the drop-down list.
Group	Select correspondence group from the drop-down list.
Company	Select the correspondence company from the drop-down list.
Branch	Select the correspondence branch from the drop-down list.
Product	Select the correspondence product from the drop-down list.
Enabled	Check this box to enable the correspondence.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. Click **Setup** → **Setup** → **Administration** → **User** → **Correspondence** → **Loan** → **Correspondence** → **Documents**.
5. In the **Documents** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Document	Select the correspondence document from the drop-down list.
Recipients	Select the recipients for the document from the drop-down list.
Enabled	Check this box to enable the recipient selected.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. Click **Setup** → **Setup** → **Correspondence** → **Loan** → **Correspondence** → **Functions**.
8. In the **Functions** sub page, you can define the functions that should be executed before or after correspondence is generated. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Function	Select the correspondence functions from the drop-down list.
Execute When?	Select when to execute the correspondence function from the drop-down list.

9. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.6.2 Creating Correspondence

1. To create a correspondence add a record in the document definition block. *For example:* SAMPLE_LOAN_APP
2. In the **Document Elements** section, add the elements required in the correspondence.

3. Click on Gen.Data File to generate PDF file of the report.

4. Copy and save the content in the pdf file as an xml file. The saved xml file should have the same name as entered in the Code column of Document Definition section. *For Example: SAMPLE_LOAN_APP.xml.*
5. Open MS Word.

Note

Oracle Financial Services Software assumes that BIP Desktop Tool is installed and the user is familiar with the BIP Report Tool.

6. In BI Publisher Tab in MS Word, click on Sample XML and import the saved xml file. *For Example: SAMPLE_LOAN_APP.xml.*

7. Create the template by inserting required elements tag.

The screenshot shows a Microsoft Word document titled 'sample_loan_app (Compatibility Mode) - Microsoft Word'. The document is a loan application form template. At the top, it says 'APPLICATION FOR PURCHASE OF ASSET' and 'ORACLE Financial Services Lending and Leasing'. Below that, it says 'BANK LOAN APPLICATION FOR PURCHASE OF ASSET'. The form contains the following fields and their corresponding placeholder tags:

Requested Loan Amount	:	APP_REQ_ADV_AMT_100
Dealer	:	APP_PRO_NAME
Approx Value of Asset	:	APP_APPROX_CASH_PRC_111
Description of Asset	:	ASE_APP_DESC_100
Name of Applicant	:	PRIM_APL_NAME
Date of Birth	:	PRIM_APL_BIRTH_DT
SSN	:	PRIM_APL_SSN
Name & Address of Employer	:	APE_NAME
		APE_ADDRESS1
		APE_ADDRESS2
		APE_ADDRESS3
Employer Phone	:	APE_PHONE
Monthly Salary (Gross)	:	APE_ACTUAL_MTHLY_AMT
Number of dependants	:	APL_NO_OF_DEPENDENTS
Residence Address	:	APA_ADDRESS1
		APA_ADDRESS2
		APA_ADDRESS3
Address Phone	:	APA_PHONE
E-mail	:	APL_EMAIL_ADDRESS1

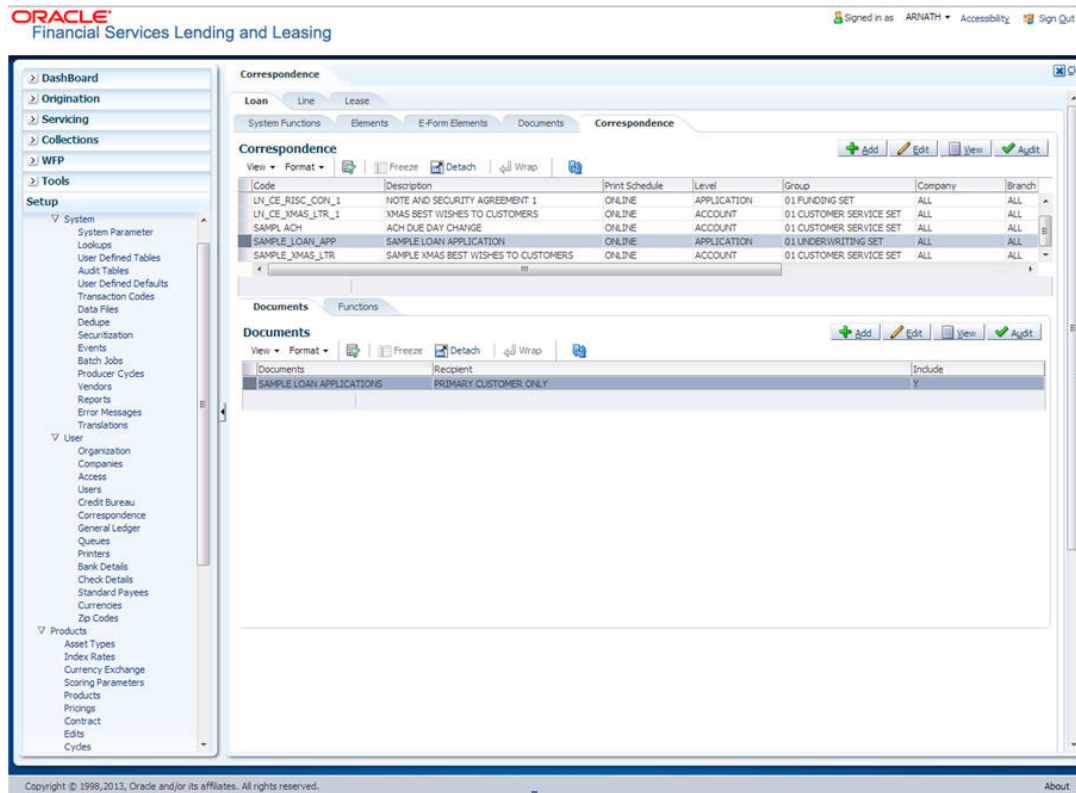

8. The template created in MS Word should be saved with **.rtf** extension. *For Example:* SAMPLE_LOAN_APP.rtf

Note

The **.xml** and **.rtf** file should be saved with the same name as entered in the 'Code' column of Document Definition section.

9. Upload the rtf template in the BIP and create the data model with SQL query as "select CDO_XML_DOCUMENT from correspondence_docs where cdo_id = :docId".
10. After the data model creation, launch the correspondence screen and click Correspondence tab.

11. You can setup a correspondence with the created doc.

3.6.3 Generating Correspondence

1. To generate a correspondence open the application for which the correspondence should be generated.
2. Click **Correspondence** tab. In the **Correspondence** section, click on **Add**.

3. Select the created **Correspondence**. Click **Save and Add** to save and add a new record. Click to **Save and Return** save and return to main screen. Click **Return** to return to main screen without modifications..

3.7 Queues

When processing an account, various users might work on the accounts to complete different tasks.

The account processing workflow facilitates the movement of the account from one person to another with queues. Queues create a work section of accounts waiting for a particular and common task to be performed. The system's powerful queuing module automates this otherwise manual process.

In the Queues setup page, you can setup and manage workflow and work assignments on a daily basis to ensure that the appropriate queues are available for users at all times.

Any time an account's status is changed, the system checks whether the account is in the right queue.

The system will sort queues based on an account's status and condition. A condition is the state of an account at a particular time, such as a delinquent, which determines the action a user needs to take.

Queues in the system are distinguished to two types of queues:

1. Origination Queues
2. Customer Service Queues.

Customer service queues

In the Customer Service page, queues create a work list of accounts waiting for a particular and common task to be performed, such as collecting on a delinquency. The system's powerful queuing module automates this otherwise manual process. The Queue Setup form allows you to manage workflow and work assignments and ensure that all accounts are in the queues of the appropriate users at all times.

Customer Service queues distribute and route accounts that require some particular action to be performed to specific users or departments. The system sorts customer service queues based on an account's status and condition.

Accounts become available for queue assignment when an account receives a condition. Conditions can be applied automatically by the system or manually by users. For example, during nightly processing, the system recognizes an account as delinquent and automatically assigns it a condition of DELQ ("Delinquent"). The users can manually change an account's condition using combination of Action and Result field entries on the **Servicing → Servicing → Customer Service → Customer Service → Customer Service → Call Activities**.

These Action and Result field entry combinations are set up on **Setup → Setup → Administration → User → Queues → Call Actions Results**.

The system associates an account with one or more queues based on multiple parameters, including user-defined criteria and the follow-up date. For example, customer service queues might be configured so accounts are parsed to users according to:

- Due date changes
- Deferment requests
- Title and insurance follow-up dates

Collections queues are included in the Customer Service queue. These queues focus on:

- General collections
- Bankruptcy
- Foreclosure
- Repossession
- Deficiency

Customer Service queues can be built online or in a nightly batch job. Within each queue, the order of the accounts can be sorted based on user-defined criteria.

Note

Although, the system allows you to define your own selection criteria in creating queues, the system's performance depends on how the selection criterion is defined. The application highly recommends that you get approval from your database administrator before using any queue selection criteria. Also, avoid using user-defined tables and columns in the selection criteria.

You can use these same methods for creating and closing queues in the case of repossession, foreclosure and deficiency.

The Call Actions Results page allows you to define the contents of the Action and Result fields on the Customer Service window's Add Call Activities section. The system uses this information to allow users to manually change the condition of an account, and thus assign or remove the account to a queue.

Depending on how you set up call action result codes on the Call Actions page, conditions and queues are created or closed. You can also restrict the use of certain call activities based on responsibility.

The lookup type ACC_CONDITION_CD defines which account conditions can be created. The application's queuing engine determines, if queues need to be created based on the information in the Lookups sub page for this lookup type.

The following table displays the possible combinations of condition and queue.

QUEUE	CONDITION		
	Open	Close	NA
Open	YES	NO	NO
Close	NO	YES	YES
NA	YES	NO	NO

1. Condition: **Open**, Queue: **Open**

- In this state, both the account condition and queue are created or opened at the same time.
- The system's transaction-processing engine automatically creates DELQ, TIP, SCHGOFF conditions and queues; therefore, you need not setup any call action result with these conditions.
- CHGOFF is an account status, so no queues are created. To follow-up on charged-off accounts, create DEFICIENCY condition with this option.
- BKRP (Bankruptcy), REPO (Repossession), FORC (Foreclosure) account conditions and queues can be opened with this option. Also, account level indicators (for reporting purpose) are set.

Note

An account is moved to the condition, when a Call activity is posted; however, the Queue is moved only when you click Update queue manually or in the EOD batch.

Accounts are automatically moved based on the system parameter set up.

2. Condition: **Open**, Queue: **NA**

- In this state, only the account condition is created or opened.
- This option should be used only if queuing is not necessary on this account condition.

3. Condition: **NA**, Queue: **Close**

- In this state, the queue associated to the account condition is closed.
- This option should only be used if an existing queue on this account condition should be closed. For example, for accounts with bankruptcy condition, delinquency follow-up is not necessary. In such case, DELQ queue can be closed while the condition is still open.
- DELQ, TIP, SCHGOFF queues can be closed by using this option.

4. Condition: **Close**, Queue: **Close**

- In this state, both the account condition and queue are closed.
- The system's transaction-processing engine automatically closes DELQ, TIP, SCHGOFF conditions and queues; therefore, don't setup any call action result with these conditions.
- BKRP (Bankruptcy), REPO (Repossession), FORC (Foreclosure) account conditions and queues can be closed with this option. Also, account level indicators (for reporting purposes) are set.

Note

Condition will be removed from the Summary conditions section.

Navigating to Queues Page

1. On the Oracle Financial Services Lending and Leasing home page, click **Setup → Setup → Queues**.
2. The system displays the Queue Setup screen. You can setup queues related to:
 - Customer Service
 - Call Action Results

3.7.1 Customer Service

The Customer Service section allows you to set up the customer service queues. The page includes a Hard Assigned box. When selected, the system assigns an equal amount of accounts to each individual user working on a that queue. Also, an account that is hard assigned will remain assigned to the individual who opens that account until that person is no longer working that queue

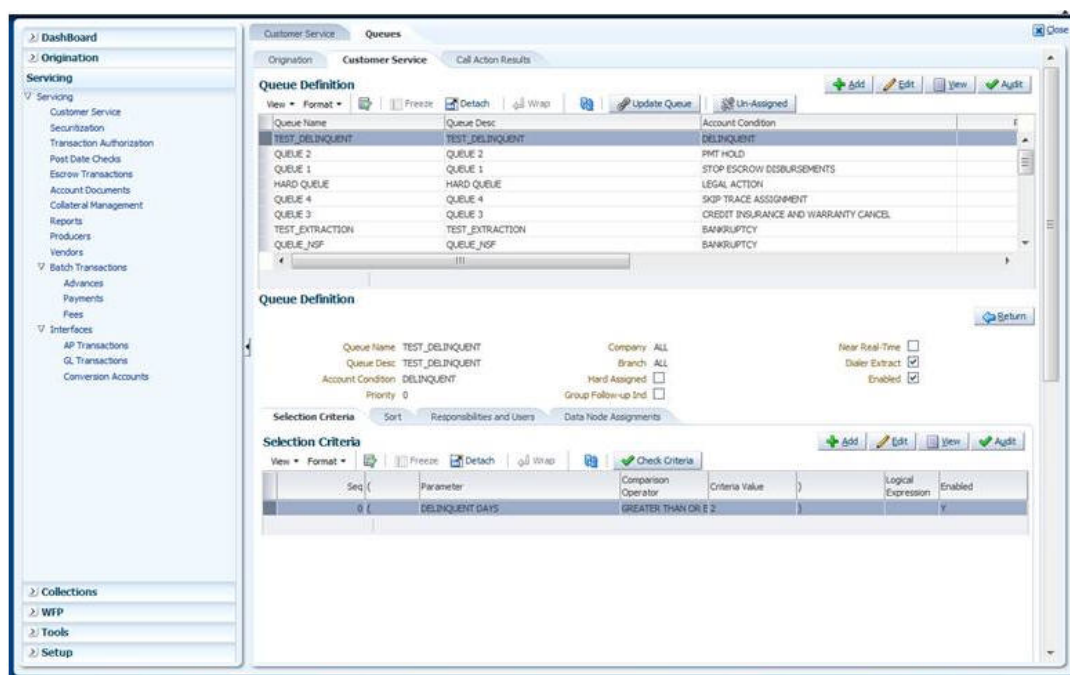

Customer Service command buttons

The Customer Service page contains following three command buttons:

Command button:	Function:
Update Queue	Queues can be updated whenever selection criteria has been updated. They may also be updated manually, if the nightly batch fails.
Un-Assigned	Depends on location of the cursor when you choose this button. Customer Service - "Un-assigns" all accounts in this queue. Responsibilities and Users → Responsibilities - "Un-assigns" all accounts in this queue. Responsibilities and Users → User - "Un-assigns" all accounts assigned to the specific user. Unassigned accounts may now be selected by updating the queue and re-assigned.
Check Criteria	Reviews the selection criteria for errors. The system will not allow you to enable a queue with invalid selection criteria.

To set up the Customer Service queues

- On the Queue Setup page, click **Setup** → **Setup** → **Administration** → **User** → **Queues** → **Customer Service**. Queues are further filtered based on the following criteria:
 - Selection Criteria
 - Sort
 - Responsibilities and Users
 - Data node assignments
- In the **Queue Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Queue Name	Specify queue name.
Queue Desc	Specify queue description.
Account Condition	Select account condition from the drop-down list.
Priority	Specify the priority.
Company	Select the company from the drop-down list.
Branch	Select the branch from the drop-down list.
Hard Assigned	Check this box to assign an equal amount of accounts to each individual user working on a that queue. Also, an account that is hard assigned remains assigned to the individual who opens that account until that person is longer working that queue.
Group Follow-up Ind	Check this box to enable the bank to indicate whether the accounts belonging to the same customer have to be followed-up in groups.
Near Real-Time	Check this box to select the queues for the near real time refresh. You can specify the time interval and frequency to run this queue. When a batch is run, it picks only customer service queues marked as "Real Time" queues for re-assignment.
Dialer Extract	Check this box to indicate if the accounts satisfying the selection criteria should be extracted from the batch process or not. If the user is hard-assigned, then user gets identified by the dialer system as 'Permission to call" user. The extract will also have data pertaining to customer time zone and privacy opt out indicator.
Enabled	Check this box to activate the queue.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. Click the **Setup** → **Setup** → **Administration** → **User** → **Queues** → **Customer Service** → **Selection Criteria**.
5. In the **Selection Criteria** section, you can define the account selection criteria with the following fields. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Seq	Specify sequence numbers.
(Specify left bracket.
Parameter	Select the parameter from the drop-down list.
Comparison Operator	Select comparison operator from the drop-down list.
Criteria Value	Specify criteria value.

Field:	Do this:
)	Specify right bracket.
Logical Expression	Specify logical operator from the drop-down list.
Enabled	Check this box to enable the selection criteria.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. Click the **Setup → Setup → Administration → User → Queues → Customer Service → Sort**.
8. In the **Sort** section, you can define the account selection criteria with the following fields. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Seq	Specify sequence number.
AssAgpCode	Select sort field from the drop-down list.
Order	Select sort order from the drop-down list.

9. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
10. Click **Setup → Setup → Administration → User → Queues → Customer Service → Responsibilities and Users**.
11. In the **Responsibilities** section, you can define the responsibilities that are authorized to work on the queue. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Responsibility	Select the responsibility from the drop-down list.
Enabled	Check this box to enable the responsibility.

12. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
13. In the **Users** section, you can define the users who are authorized to work on the queue. Also, you can hard assign the queues to the user. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Note

The system allows the work queue list to be sorted by user-defined criteria.

A brief description of the fields is given below:

Field:	Do this:
Name	Select user name from the drop-down list.
# Assigned	Specify number of accounts assigned.

Field:	Do this:
Hard Assigned	Check this box to hard assign. (For more information, see the following section in this chapter, Using the Hard Assigned Feature).
Enabled	Check this box to enable.

14. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
15. Click **Setup** → **Setup** → **Administration** → **User** → **Queues** → **Customer Service** → **Node Assignments**. You can enable the administrator to configure the User interface nodes that should be made available for the applications that are being processed in that particular origination queue.
16. In the **Node Assignments** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below::

Field:	Do this:
Node	Specify the node.
Enabled	Check this box to enable the record.

17. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
18. Click **Load Queue Nodes** on the Node Assignments sub page to display the respective UI nodes in the origination module.

Group Follow-up

The system enables lending institution to conduct “one time only” follow-up activity on the Customer Service window, if the customer has multiple accounts in various conditions or in various queues. This avoids unnecessary confusions that arise when more than one user is performing collection tasks on multiple accounts belonging to the same customer.

You can follow-up on multiple accounts in the same condition at the same time using the group follow-up functionality. The system locks the accounts in the low priority queues and displays the same in the high priority queues. You can perform the follow-up activity on all the accounts when the account in the high priority queue becomes due for follow-up.

For example,

Suppose a customer holds three accounts, one that's 30 days delinquent and in the 0_30_DAYS_DEL queue, one that's 60 days delinquent and in the 30_60_DAYS_DEL queue and one that's 90 days delinquent and in the 90+_DAYS_DEL.

- a) If each of the queues Group Followup Ind is unchecked on the Customer Service page, then no group follow-up will be performed.
- b) If each of the queues Group Followup Ind is checked on the Customer Service page, while updating the follow-up date for the low priority days queue, then the system will use the 90 days follow-up date
- c) If the Group Followup Ind is checked on Customer Service page for the 0_30_DAYS_DEL and 30_60_DAYS_DEL queues and note the 90+_DAYS_DEL queue, and the customer has

accounts in each of the queue, then the system will use the follow-up date of 60 days for the low priority account.

Using the Hard Assigned feature

The system's "Hard Assigned" queues feature allows companies to evenly distribute accounts between users. The following example explains how it works:

Let's say there are 40 unassigned accounts in a queue. Three users are assigned to the queue, Hard Assigned is checked for two.

When you select Update Queue on the Customer Service page (or Oracle Financial Services Lending and Leasing processes the CUSTOMER SERVICE QUEUE PROCESSING nightly batch) each of the two Hard Assigned users receives 20 accounts, while the one that isn't marked as Hard Assigned receives zero.

If users already have accounts assigned to them, the system attempts to balance the workload when assigning new accounts. For example, let's say there are three users in a queue. The first has 15 accounts, the second has ten and the third has five. If there are ten new accounts, the system would give the third user the first 5 accounts, thus bringing that user's total to ten. The system splits the next five between the second and third, bringing their totals to 13 and 12, respectively.

Note

The system randomly assigns these accounts.

To set up a user as Hard Assigned feature

1. Click **Setup** → **Setup** → **Administration** → **User** → **Queues** → **Customer Service** → **Responsibilities and Users**.
2. In the **Responsibilities** section, select the level responsibility of the users you want to hard assign in the queue.
3. In the **Users** section, check the **Hard Assigned** check box for each user you want to hard assign.
4. On **Setup** → **Setup** → **Administration** → **User** → **Queues** → **Customer Service**, click **Update Queue** to distribute the applications in the queue to the hard assigned users.
The system displays an Information section with the message as "Queue creation submitted in background".
5. Choose **OK** beneath the **Error Message** section box containing the words NO ERROR.
The system distributes and hard assigns the accounts in the queue to the selected users in the Users section.
6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

To remove a user

1. In the **Responsibilities** section, select the responsibility of the user you want to remove.
2. In the **Users** section, select the user you want to work with.
 - If you don't want that user to be hard assigned any longer, uncheck the **Hard Assigned** check box.
 - If you don't want that user to be assigned to that queue any longer, uncheck the **Enabled** check box.
3. The system updates the number of accounts assigned to a user only after:
 - Running the nightly batch job

- Clicking the **Update Queue** button.
4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.7.2 Call Action Results tab

1. Click **Setup** → **Setup** → **Administration** → **User** → **Queues** → **Call Action Results**. The screen contains two sections:
 - Call Actions
 - Call Results
2. In the **Call Actions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Call Actions

Action Code	Description	Call Type	Enabled
AT	ATTORNEY/GENERAL TELEPHONED	INCOMING CALL	Y
CBB	TELEPHONED COBUYER BUSINESS	OUTGOING CALL	Y
CC	CUSTOMER CALLED	INCOMING CALL	Y
CR	CHARGE-OFF REQUEST SUBMITTED	EXCLUDE FROM REPORTS	Y
DC	DEALER CALLED	INCOMING CALL	Y

Call Results

Result Code	Description	Report Type	Right Person Contact	Followup Advance Unit	Value	Enabled
CB	CALL BACK	OTHERS	N	DAY	3 Y	Y
HU	HUNG UP	OTHERS	N	DAY	3 Y	Y
HP	NO PROMISE	OTHERS	N	DAY	3 Y	Y
PH	PAYMENT IN HAND (STORE)	PROMISE TO PAY	N	DAY	3 Y	Y
PP	PROMISE TO PAY	PROMISE TO PAY	N	DAY	3 Y	Y
PS	PAYMENT SENT BY MAIL	PROMISE TO PAY	N	DAY	3 Y	Y
RC	RETURN CALL	OTHERS	N	DAY	3 Y	Y
SC	SERVICE COMPLAINT	OTHERS	N	DAY	3 Y	Y

Conditions

Condition	Queue	Enabled
No data to display.		

A brief description of the fields is given below:

Field:	Do this:
Action Code	Specify the action type code.
Description	Specify the description for the call action type.
Call Type	Select the call type from the drop-down list.
Enabled	Check this box to enable the call action.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Call Results** section, you can define call action result codes and corresponding descriptions. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.
5. A brief description of the fields is given below:

A brief description of the fields is given below:

Field:	Do this:
Result Code	Specify the result type code for the specified call action type.
Description	Specify the description for the result type.
Report Type	Select the report type for the result type, from the drop-down list.
Right Person Contact	Check this box to indicate that result type is a right person contact.
Follow-up Advance Unit	Select the unit for advancing the follow-up date/time from the drop-down list.
Value	Specify the value for the follow-up advance unit.
Enabled	Check this box to enable the result.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Queues are further filtered based on the following criteria:

- Conditions
- Responsibilities

The Conditions section determines whether the selected action/result will cause the listed conditions to be opened or closed. It also determines whether the queue will be opened or closed.

7. In the **Conditions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Condition	Select the account condition to be open/close for the action from the drop-down list.
Condition	Select 'Open' to open the listed condition, 'Close' to open the listed condition, or 'NA', if the condition is not applicable.
Queue	Select 'Open' to open the listed Queue, 'Close' to open the Queue, or 'NA', if the Queue is not applicable.
Enabled	Check this box to enable the account condition.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

9. In the **Responsibilities** section, define the responsibilities that are authorized to use the call action result combination. Perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Responsibility	Select the responsibility that can perform the action result from the drop-down list.
Allowed	Select 'Yes' if access is allowed.
Enabled	Check this box to enable the responsibility.

10. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.8 Printers

The Printers page allows you to set up an unlimited number of network printers and fax devices to be used with the system server. The system uses the information on this page while selecting a printer, when the printing process involves a batch job or uses a job scheduler. Examples include printing reports and correspondence.

The printers and fax devices can be set up at each organization, division, or department to promote efficient printing of documents, and reports. The system uses this information during product setup and on the Letters page in the **Batch Printer** field.

Special printer names

The following printer names are predefined and have specific functions within the system:

UNDEFINED	Indicates that the document to be printed is to be previewed in your browser instead of actually printing the document.
ARCHIVE	Instead of sending an item to the printer, the system generates a PDF document and saves it in the archive directory on your server.
EMAIL	ForLoanorigination correspondences that can be faxed, the system e-mails the document as a PDF attachment to the consumer for directLoans or to the producer in the case of in-directLoans.
FAX	ForLoansorigination correspondences that can be faxed, the system generates a PDF document and will send to the fax server defined in System Parameters.

Additionally, you may set up composite entries in the Printer Name field to perform two or more functions at the same time. This can be done by defining a printer name with the following format:

PRINTER NAME = <PRINTER_NAME1> + <PRINTER_NAME2>

For example, if a printer named JET4050 was previously defined, as were the special printer names listed above, then the following additional printers could be defined:

JET4050+ARCHIVE	Prints the document with the jet4050 printer and archives the document.
FAX+ARCHIVE	Faxes and archives the document.
EMAIL+ARCHIVE+JET4050	E-mails, archives, and prints the document with the jet4050 printer.

To set up the Printers

1. Click **Setup** → **Setup** → **Administration** → **User** → **Printers**. The system displays the Printers screen
2. In the **Printers** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

Printer Definition

Printer Name: ARCHIVE

* Description: ARCHIVE

* Organization: DMC

* Division: ALL

* Department: ALL

* Default: ☒

* Enabled: ☒

Buttons: Save And Return, Return

A brief description of the fields is given below:

Field:	Do this:
Printer Name	Specify the printer name. The name of the printer as defined by the server. For a UNIX server, the name might be JET4050, while to access the same printer from a Windows server the name would be: \\servername\jet4050.
Description	Specify the description for the printer.
Organization	Select the organization to which the printer belongs, from the drop-down list.
Division	Select the division to which the printer belongs, from the drop-down list. The division will be displayed based on the organization selected.

Field:	Do this:
Department	<p>Select the department to which the printer belongs, from the drop-down list. The department will be displayed based on the division selected.</p> <p>IMPORTANT: When you select a printer to use, the system searches for a best match using the following attributes:</p> <ul style="list-style-type: none"> 1 Organization 2 Division 3 Department <p>Hence, Oracle recommends creating a version of each edit, where ALL is the value in these fields.</p> <p>It is also recommended that, you define a default printer for an Organization, Division and Department.</p>
Default	Check this box to set the printer as a default printer.
Enabled	<p>Check this box to enable the printer and that the printer is active.</p> <p>Note: Never disable the UNDEFINED printer.</p>

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.9 Currencies

The Currencies link allows you to set up currency details.

Navigating to currencies

- Click **Setup** → **Setup** → **Administration** → **User** → **Currencies**. The system displays the Currencies screen. In this page, you can set up:
 - Currency Definition
 - Currency Pair Definition

3.9.1 Currency Definition

The Currency Definition page allows you to set up currency details.

To set up the currency definition information

- Click **Setup** → **Setup** → **Administration** → **User** → **Currencies** → **Currency**. The system opens the Currency Definition tab by default.

2. In the **Currency** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot displays the Oracle Financial Services Lending and Leasing application. The left sidebar contains a navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The main area is titled 'Currencies' and 'Currency Pair'. It features a table of existing currency pairs and a form to define a new one.

Currency	Currency Name	Country	Enabled
EUR	EURO	IRELAND	Y
JPY	JAPANESE YEN	JAPAN	Y
OMR	RIAL	SAUDI ARABIA	Y
USD	US DOLLAR	UNITED STATES	Y
INR	INDIAN RUPEE	INDIA	Y

Below the table, there is a form to define a new currency pair:

- * Currency: EUR (dropdown)
- Currency Name: EURO
- * Country: IRELAND (dropdown)
- * Enabled: ☒

Buttons at the bottom right include 'Save And Return' and 'Return'.

A brief description of the fields is given below:

Field:	Do this:
Currency	Select the currency you want to define, from the drop-down list.
Currency Name	The system displays the currency name based on the currency selected.
Country	Select the country for which the currency is defined, from the drop-down list.
Enabled	Check this box to enable the currency entry.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.9.2 **Currency Pair link**

The Currency Pair Definition link allows you to set up currency pair details.

To set up the currency pair definition information:

1. Click **Setup** → **Setup** → **Administration** → **User** → **Currencies** → **Currency Pair**. The system displays the Currency Pair Definition screen

2. In the **Currency Pair Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	View this:
Currency Code	Select the currency code from the drop-down list.
Currency Pair Code	Select the currency pair code from the drop-down list.
Through Currency	Check this box to set the selected currency as a through currency.
Through Currency Code	Select the through currency code from the drop-down list.
Enabled	Check this box to enable the currency pair entry.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

3.10 Zip Codes

The Zip Codes page allows you to set up zip code details.

To set up the zip codes information

1. Click **Setup** → **Setup** → **Administration** → **User** → **ZipCodes**. The system displays the Zip Codes screen

2. In the **Zip Codes** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below::

Field:	View this:
Country	Select the country from the drop-down list.
State	Select the state from the drop-down list.
Zip Code	Specify the zip code (required).
City	Specify the city.
County	Specify the county.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4. Product

Under the Setup master tab's drop-down link bar, the product Setup link opens screens that enable you to configure the basic business guidelines necessary to support one or more products in the system. This includes defining the types of collateral your company supports, creating lending instruments, and determining what is included in credit bureau reporting. Setting up the Products screens requires a thorough understanding of the current rules of your business and must be completed before you can use Oracle Financial Services Lending and Leasing. The Products drop-down link opens screens to record data that is common to all products supported by the system and contains the following links

This chapter explains how to set up the screens opened from the Setup Master tab, and leases.

Navigating to Products

In the **Setup** → **Setup** → **Products** link enables you to setup the options related to following closed ended products your company offers:

- Assets
- Scoring Parameters
- Contract
- Checklists
- Statement Messages
- Letters
- Subvention

This chapter explains how to setup the screens associated with each one.

4.1 Asset Types

In Assets types you can setup the asset types that can serve as an application or account's collateral.

The information on the Assets screen is used by the system to automatically display the appropriate collateral screen (Vehicle, Home, or Other) on the Application Entry window.

The system recognizes the following four types of collateral:

Collateral Type	Description
Home collateral	Homes, manufactured housing, or any real estate collateral.
Vehicle collateral	All vehicle types, such as cars, trucks, and motorcycles.
Household goods and other collateral	All other collateral types not defined as home, vehicle, or unsecured; for example, household items such as water heaters, televisions, and vacuums.
Unsecured collateral	All unsecured lending instruments. (This collateral type makes the collateral tabs on the system forms unavailable.)

The Asset Sub Type section allows you to further categorize an asset; for example, the asset type VEHICLE might be categorized as CAR, TRUCK, or VAN.

The Attributes/Addons and Makes and Models sub screens continue to further detail the asset both in description and value. For example, a VEHICLE asset might include addons such as LEATHER SEATS and CRUISE CONTROL.

Note

Neither asset types nor asset sub types can be deleted. As they may have been used in the past, the display and processing of that data is still dependent on the existing setup.

To set up the Asset Types

1. Click **Setup** → **Setup** → **Products** → **Asset Types**.
2. In the **Asset Type** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot displays the Oracle Financial Services Lending and Leasing application interface. The left sidebar shows the navigation menu with 'Setup' expanded. The main window is titled 'Asset Types' and contains the following sections:

- Asset Type Table:** A table listing existing asset types with columns: Asset Type, Description, Collateral Type, Company, Branch, and Enabled. Rows include APARTMENT, GOODS, HOME, NON GEAR TWO WHEELER, and STOCK.
- Asset Type Form:** A form to create or edit an asset type. Fields include Asset Type (dropdown), Description (text), Collateral Type (dropdown), Company (dropdown), Branch (dropdown), and Enabled (checkbox).
- Asset Sub Type Table:** A table listing asset sub types with columns: Asset Sub Type, Description, Asset Property Type, and Enabled. Rows include DOUBLE BEDROOM, SINGLE BEDROOM, and THREE BEDROOM.
- Attributes / Addons:** A section for defining attributes and addons for the asset type.
- Makes and Models:** A section for defining makes and models for the asset type.

A brief description of the fields is given below:

Field:	Do this:
Asset Type	Specify the asset type.
Description	Specify the description for the asset. (This is the asset type which will appear throughout the system).
Collateral Type	Select the collateral type (the general category that the asset type falls within) from the drop-down list. Note: There is no need to define an asset for UNSECURED COLLATERAL, as by definition there is no asset on such account.
Company	Select the portfolio company to which the asset type belongs, from the drop-down list. These are the companies within your organization that can make Loans using this asset type. This may be ALL or a specific company.

Field:	Do this:
Branch	<p>Select the portfolio branch to which the asset type belongs, from the drop-down list. This is the branch within the selected company that can make Loans using this asset type. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL.</p> <p>IMPORTANT: By selecting which asset type to use, the system searches for a best match using the following attributes:</p> <p>1 Company</p> <p>2 Branch</p> <p>Hence, the system recommends creating one version of each asset type where ALL is the value in these fields.</p>
Enabled	Check this box to enable the asset type and indicate that the asset type is currently in use.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Asset Sub Type** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Asset Sub Type	Specify the asset sub type.
Description	Specify the description for the asset subtype
Asset Property Type	Select the type of property from the drop-down list.
Enabled	Check this box to enable the asset sub type.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. Click **Setup** → **Setup** → **Products** → **Assets** → **Attributes/Addons**.
7. In the **Attributes/Addons** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Attribute/Addon	Displays the asset attribute or addon name for the selected asset).
Description	Select the description for the asset attribute/addon from the drop-down list.
Default	Specify the default text to be copied or displayed when the asset attributes and addons fields are completed on an application for this asset.
Value	Specify the default monetary value to be copied or displayed when the asset attributes and addons fields are completed on an application for this asset.

Field:	Do this:
Enabled	Check this box to enable the asset attribute/Add-on and indicate that it is available for this type of asset.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
9. Click the **Setup** → **Setup** → **Products** → **Assets** → **Makes and Models**.
10. In the **Makes and Models** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Make	Specify asset make.
Model	Specify asset model.
Style	Specify asset style type.
Model Year	Specify asset model year.
Enabled	Check this box to enable the asset make and model and indicate that it is included on fields for this asset type.

11. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4.2 Scoring Parameters

With the Scoring Parameters, you can define the scoring parameters of a company's credit scorecard and behavioral scoring.

Pricing scores apply to applications and are based on information recorded during origination, behavioral scoring applies to accounts and is based on account history attributes and performed on a monthly basis.

Behavioral scoring

Behavioral scoring examines the repayment trends during the life of the account and provides a current analysis of the customer. This logical and systematic method identifies which accounts are more likely to perform favorably versus accounts where poorer performance is probable. This is useful when determining which other Lines of credit/loan products a customer may qualify for.

This information appears on the Customer Service form in the Account Details screen's Activities section.

To set up the Scoring Parameters

1. Click **Setup** → **Setup** → **Products** → **Scoring Parameters**.

- In the **Parameters** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

ORACLE® Financial Services Lending and Leasing

Signed in as DEMOSALES Accessibility Sign Out

Parameters

Parameter	Description	Data Type	Scoring Type	Enabled
BEHAVIORAL_SCORE	BEHAVIORAL SCORE	NUMBER	BEHAVIORAL SCORING	Y
FICO_SCORE	FICO SCORE	NUMBER	CREDIT SCORING	Y
ORG_SCORE1	ORG_SCORE1	NUMBER	CREDIT SCORING	Y
ORG_SCORE2	ORG_SCORE2	NUMBER	CREDIT SCORING	Y
TEST_SCORE1	TEST_SCORE1	NUMBER	BEHAVIORAL SCORING	Y
TEST_SCORE2	TEST_SCORE2	NUMBER	BEHAVIORAL SCORING	Y

Parameters

Parameter: BEHAVIORAL_SCORE

* Description: BEHAVIORAL SCORE

* Data Type: NUMBER

* Scoring Type: BEHAVIORAL SCORING

* Enabled: ☒

Formula Definition

Seq	Variable	Constant Value	Mathematical Operator	Enabled
1	ACC_DLY_DAYS			Y

A brief description of the fields is given below:

Field:	Do this:
Parameter	Specify the name of the scoring parameter. The system recommends entering a name that in some way reflects how the parameter is used; for example, use FICO_SCORE instead of PARAMETER_1..
Description	Specify a description of the parameter. Again, Specify a name that reflects how the parameter is used; for example, use FICO SCORE and WEIGHTED FICO SCORE instead of FICO SCORE NUMBER 1 and FICO SCORE NUMBER 2.
Data Type	Select the data type of the scoring parameter being defined from the drop-down list. This determines how the system handles the values. (While DATE and CHARACTER are available data types, generally only NUMBER should be used when defining a scoring parameter.
Scoring Type	Select the scoring type from the drop-down list: CREDIT SCORING or BEHAVIORAL SCORING.
Enabled	Check this box to enable and indicate that the scoring parameter is available.

- Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

The **Formula Definition** section allows you to define a mathematical expression of the scoring parameter you want to define. The expression may consist of one or more sequenced entries. All arithmetic rules apply to the formula definition. If errors exist in the formula definition, the system displays an error message in this section when you choose Show Expression.

4. In the **Formula Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Seq	Specify the sequence number (the order in which the formula definition variable will be assembled and evaluated).
(Specify a left bracket, if you need to group part of your formula definition.
Variable	Select the variable from a validated field based on the user-defined table SCR_CRED_SUMMARY: SCORING PARAMETERS, from the drop-down list.
Constant Value	Specify the constant value (optional).
Mathematical Operator	Select the math operator to be used on the adjacent formula definition rows, from the drop-down list.
)	Specify a right bracket, if you are grouping part of your formula definition.
Enabled	Check this box to enable the formula and indicate that it is included when building a definition for the scoring parameter.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. In the **Parameters** section, click **Show Expression**.

The mathematical expression appears in the Formula Expression section (in sequential order) in the Expression field.

- 7.

4.3 Contract

The Contract screen allows you to define the instruments used within your system. A instrument is a contract used by a financial organization with specific rules tied to it. When processing an application, an instrument associated with the application informs the system of the type of contract being used for the approved loan. This ensures that all parameters tied to the instrument are setup for the account as it is booked - without requiring you to do it.

Instruments can be setup at different levels:

- Company
- Branch
- Product
- Application state
- Currency

The following groups of parameters are setup at the instrument level (Each has its own section on the Contract screen):

- Accrual
- Rebate
- Scheduled dues

- Billing
- Delinquency
- Extension
- Advance details
- Rate cap and adjustments
- Payment caps
- Other

Items defined in the contract are “locked in” when you choose Select Instrument on the Funding form’s Contract link.

The Contract screen’s Instrument and Description fields allow you to enter the financial instrument’s name and description, for example; INS-LOAN: VEHICLE.

To set up the Contract

1. On the Oracle Financial Services Lending and Leasing home screen, click **Click Setup → Setup → Administration → User → Products → Contract → Loan**
2. On the Contract Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Contract Definition section	
Instrument	Specify the code identifying the instrument.
Description	Specify the description of the instrument being defined.

Field:	Do this:
Start Dt	Specify the start date for the instrument. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date for the instrument. You can even select the date from the adjoining Calendar icon
Enabled	<p>If you check this box, the system will consider this contract definition when selecting a instrument for an application.</p> <p>Note: Once the field is enabled load balances button in balances sub tab will be disabled</p>
Selection Criteria section	
Company	Select the company for the instrument from the drop-down list. This may be ALL or a specific company.
Branch	Select the branch within the company for the instrument from the drop-down list. This may be ALL or a specific branch. This must be ALL, if you have selected 'ALL' in the Company field.
Billing Cycle	Select the billing cycle selected from the drop-down list.
Product	Select the product for the instrument from the drop-down list. This may be ALL or a specific product.
State	Select the state in which the instrument is used from the drop-down list. This may be ALL or a specific state.
Currency	<p>Select the currency for the instrument from the drop-down list.</p> <p>IMPORTANT: By selecting which type to use, the system searches for a best match using the following attributes:</p> <ol style="list-style-type: none"> 1. Billing Cycle 2. Start Date 3. Company 4. Branch 5. Product 6. State <p>Hence, Oracle Financial Services Software recommends creating one version of each type, where ALL is the value in these fields.</p>
Pricing	Select the pricing in which the instrument is used from the drop-down list. This may be ALL or a specific pricing.
Accrual section	
Accrual Method	Select the accrual base method used to calculate interest accrual for this instrument from the drop-down list.
Base Method	Select the base method accrual calculation method used to calculate interest accrual for this instrument from the drop-down list.

Field:	Do this:
Start Dt Basis	<p>Select to define the start date from when the interest accrual is to be calculated for this instrument from the drop-down list.</p> <p>Note:</p> <p>If you select the Effective Date, then the interest is calculated from the Contract date.</p> <p>If you select the Payment Date, then the interest is calculated based on (first payment date minus one billing cycle).</p>
Start Days	Specify the number of days for which the interest accrual for loans is to be calculated.
Time Counting Method	Select the time counting method used to calculate interest accrual for this instrument from the drop-down list.
Installment Method	<p>Select the payment installment method from the drop-down list.</p> <p>Note: the system supports an amortized repayment schedule with the final payment potentially differing from the regular payment amount in the other billing cycles. You may choose:</p> <p>Whether the equal installments for each billing cycle includes any minute final payment differences (EQUAL PAYMENTS)</p> <p>-or-</p> <p>If the final payment amount may be slightly different (FINAL PAYMENT DIFFERS).</p>
Int Amortization Freq	Select the interest amortization frequency from the drop-down list.
Rebate section	
Pre Compute	Check this box to indicate that this is a precomputed loan.
Rebate Method	Select the rebate calculation method from the drop-down list.
Rebate Term Method	Select the rebate term method from the drop-down list.
Rebate Min Fin Chg Mthd	Select the rebate minimum finance charge calculation method from the drop-down list.
Min Finance Charge	Specify the minimum finance charge value.
Acquisition Charge Amt	Specify the acquisition charge amount.
Scheduled Dues section	
Due Day Min	Specify the minimum value allowed for the due day for this instrument.

Field:	Do this:
Due Day Max	Specify the maximum value allowed for the due day for this instrument. Note: If billing cycle is selected as weekly, then Due Day Max field value cannot be greater than 7.
Max Due Day Change / Year	Specify the maximum number of due day changes allowed within a given year for this instrument.
Max Due Day Change / Life	Specify the maximum number of due day changes allowed over the life of a product funded with this instrument.
Max Due Day Change Days	Specify the maximum number of days a due date can be moved.
Pmt Tolerance Amt*	Specify the payment tolerance amount. This is the threshold amount that must be achieved before a due amount is considered PAID or DELINQUENT. If (Payment Received + Pmt Tolerance: \$Value) >= Standard Monthly Payment, the Due Date will be considered as satisfied in terms of delinquency. The amount unpaid is still owed.
Pmt Tolerance%*	Specify the payment tolerance percentage. This is the threshold percentage that must be achieved before a due amount is considered PAID or DELINQUENT. If Payment Received >= (Standard Monthly Payment * Pmt Tolerance% / 100), the due date will be considered satisfied in terms of delinquency. The amount unpaid is still owed. The system uses the lesser of these two values.
Billing section	
Prebill Days	Specify the prebill days. This is the number of days, before the first payment due, that accounts funded with this instrument will be billed for the first payment. Thereafter, the accounts will be billed on the same day every month. If an account has a first payment date of 10/25/2003 and Pre Bill Days is 21, then the account will bill on 10/04/2003, and then bill on the 4th of every month.
Billing Type	Select the billing type for accounts funded using this instrument from the drop-down list.
Billing Method	Select the billing method for accounts funded using this instrument from the drop-down list.
Balloon Method	Select the balloon payment method for accounts funded using this instrument from the drop-down list.
Delinquency section	
Late Charge Grace Days	Specify the number of grace days allowed for the payment of a due date before a late charge is assessed on the account.

Field:	Do this:
Stop Accrual Days	<p>Specify the number of days a contract can be in delinquent state, after which the interest accrual must stop for an account.</p> <p>A Batch Job is run daily to select accounts in delinquent status for a pre-defined number of days and post 'No Accrual transaction' for such accounts on current date. When the account recovers from Delinquency, the system will then post a 'Start Accrual Transaction' on the date the account is recovered from delinquency.</p>
Delq Grace Days	Specify the number of grace days allowed for the payment of a due date before an account is considered delinquent. This affects DELQ Queues, the system reporting, and the generation of collection letters.
Delq Category Method	<p>Select the delinquency category method to determine how the system populates delinquency counters on the Customer Service form.</p> <p>Note: This value does not affect credit bureau reporting.</p>
Accrual Post Maturity	<p>Check this box to indicate that this is the post maturity default rate.</p> <p>Extensions allow you to extend the maturity of the contract by one or more terms by allowing the customer to skip one or more payments. The skipped terms are added to the end of the contract.</p>
Extension section	
Max Extn Period / Year	Specify the maximum number of terms that the contract may be extended, within a given rolling calendar year.
Max Extn Period / Life	Specify the maximum number of terms that the contract may be extended, within the life of the loan.
Max # Extn / Year	Specify the maximum number of extensions that may be granted within a given rolling calendar year.
Max # of Extn / Life	Specify the maximum number of extensions that may be granted within the life of the loan.
Minimum # Payments	Specify the minimum number of payments that must be made before extension.
Extension Gap in Months	Specify the gap between previous extension provided in the account and current one as specific number of months.
Advance Details section	
Multi Disbursements Allowed	Check this box, if this contract allows disbursement of funds to customers through multiple advances or draws up to the approved amount within a specified "draw period." If you select the Multiple Disbursements Permitted box, complete the Advance Details section on the Contract section. (For more information, see the Stages Funding section in this chapter.)
Min Initial Advance	Specify the minimum initial advance amount allowed. This is the smallest possible initial advance that can be disbursed to the borrower after funding.

Field:	Do this:
Max Initial Advance	Specify the maximum initial advance amount allowed. This is the largest possible initial advance that can be disbursed to the borrower after funding.
Late Charge Allowed	Check this box to allow disbursement period late charge.
Min Advance	Specify the minimum advance amount. This is the smallest advance amount that a borrower may subsequently request after the initial advance.
Max Advance	Specify the maximum advance amount. This is the largest advance amount that a borrower may subsequently request after the initial advance.
Billing Allowed	Check this box to allow stage funding with draw period billing.
Draw Period Billing Method	Select the method for billing during the draw period from the drop-down list.
Reschedule Ind	Select this check box to indicate that the rescheduling is allowed at the draw period.
Rate Cap & Adjustments section	
Max Rate Increase / Year	Specify the maximum rate increase allowed in a year.
Max Rate Increase / Life	Specify the maximum rate increase allowed in the life of the loan.
Max Rate Decrease / Year	Specify the maximum rate decrease allowed in a year.
Max Rate Decrease / Life	Specify the maximum rate decrease allowed during the life of the loan.
Max # Adjust / Year	Specify the maximum number of rate changes allowed in a year.
Max # Adjust / Life	Specify the maximum number of rate changes allowed during the life of the loan.
Min Int Rate (Floor)	Specify the minimum rate.
Max Int Rate (Ceiling)	Specify the maximum rate.
Payment Caps section	
Max Pmt Inc / Year	Specify the maximum payment increase allowed in a year. Note: This field is applicable only for loans.

Field:	Do this:
Max Pmt Inc / Life	Specify the maximum payment increase allowed in the life of the loan. Note: This field is applicable only for loans.
Other section	
1st Pmt Deduction Allowed	Check this box to indicate that the first payment for fixed rate loans using this instrument may be deducted from the producer's proceeds.
1st Pmt Refund Allowed	Check this box to indicate that refunding first payment deductions to the producer is allowed.
1st Pmt Deduction Days	Specify the first payment deduction days. If the first payment for fixed rate loans using this instrument is less than this number of days from funding, the first payment will be deducted from the producer's proceeds if 1st Pmt Deduction.
1st Pmt Refund Days	Specify the first payment refund days. If the first payment for fixed rate loans using this instrument is received within this number of days from the first payment date, the first payment deduction will be refunded to the producer if 1st Pmt Refund.
Refund Allowed	Check this box to indicate that refunding of customer over payments are allowed.
Refund Tolerance Amt	Specify the refund tolerance amount. If the amount owed to the customer is greater than the refund tolerance, the over payment amount will be refunded if Refund Allowed box is selected.
Anniversary Period	Specify the anniversary term that define the anniversary period. This is based on billing cycle, so normally for MONTHLY the value is 12 and for WEEKLY the value is 52.
WriteOff Tolerance Amt	Specify the write off tolerance amount. If the remaining outstanding receivables for accounts funded using this instrument is less or equal to the write off tolerance amount, the remaining balance on the account will be waived.
Pre Pmt Penalty	Check this box, if there is a prepayment penalty charged for accounts funded using this instrument.
% of Term for Penalty	Specify percentage of term for prepayment penalty. If the (remaining terms / total terms) expressed as a percentage exceeds this amount, a prepayment penalty will be assessed if the Pre-Pmt Penalty box was selected.
Recourse Allowed	Check this box if recourse is allowed. This indicates whether the unpaid balance may be collected from the producer if the consumer fails to perform on the loan.
Max Recourse%	Specify the maximum percentage of the outstanding receivables that may be collected from the producer if the Recourse Allowed box was selected.

Field:	Do this:
Pay Off Fee Allowed	Check this box to allow for a payoff quote fee to be assessed to the account attached to this contract. Note: This will require you to set up a payoff fee at the contract (Fees sub screen) or state (Fee screen) level. For more information, see the following Contract screen (Loan)'s Fees sub screen or Fee screen (Loan) sections in this chapter.
Escrow Allowed	Check this box, if this contract can do escrow of tax and insurances. (For more information, see the Escrow Setup Form chapter.)
Repmnt Currency	Select the designated repayment currency for this contract from the drop-down list.
PDC Security Check	Check this box to indicate that post dated checks are the method of repayment for this contract.
Default Pmt Spread	Select the default payment spread to be used when receiving payments for this account if one is not explicitly chosen, from the drop-down list.
Calendar Method	Select the required calendar method for this contract from the drop-down list. The calendar method "Hijri" should be selected, if the product category is selected as Standard in the Products screen. For "Islamic" product category, the calendar method can be either Gregorian or Hijri.
ACH Fee Ind	Check this box to indicate that direct debit fee is included. Note: The ACH Fee/Direct Debit Fee balance will be displayed in Balances sub tab only when this checkbox is selected.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Extension of Terms

The system facilitates extension of terms, provided the following conditions are satisfied:

- Specified number or more payments made in the account
- Gap between the previous and current extension provided in the account must be a specific number of months that could be specified

If the above conditions are not satisfied, then the system displays an appropriate error message.

A new transaction Force Extension will be available. This transaction will be posted when you want the system to bypass the extension validations defined at the contract level.

When a backdated transaction with TXN Date exists before the transaction date of extension, all the transactions are reversed and posted again. If extension transaction is posted again, then the validation rules are not validated again.

Staged Funding

Staged funding for closed-end loans allows you to disburse funds to customers through multiple advances or draws up to the approved amount within a specified "draw period."

To create a multiple disbursement contract for a transaction

1. In the Contract Definition section, click **Add** and complete the fields following the instructions above, making sure to complete the following steps:
 - In the Advance Details section, select the Multiple Disbursement Permitted check box. When you select a contract instrument that permits staged funding (multiple disbursements) on the Funding window, the system copies the information for that instrument from the Setup Module window's Contract screen to the Funding window's Contract screen.

Note

You cannot clear the Multi Disbursement Allowed box in the Advance section on the Contract screen.

-
- Complete the fields in the Advance Details section to define the limits for initial and subsequent advances for staged funding.

Note

This information appears in the Advance section of the Funding window's Contract link.

-
2. If you choose, set the following APPLICATION CONTRACT EDITS as an ERROR or WARNING on the Setup Module window's Edits screen.

Note

For more information, see the Edits link (Edits screen) section in this chapter.

-
1. REQUIRED: ADV DRAW END DATE
 2. XVL: ADV DRAW END DT MUST BE AFTER CONTRACT DT
 3. XVL: ADV DRAW END DT MUST BE LESS THAN FIRST PMT DT - PREBILL DAYS

These edits appear on the Funding window's Verification screen.

Repayment scheduling for staged funding

When funding a loan, the system computes repayment schedules from the contract date, irrespective of whether funds have been disbursed or not. The system uses the approved amount (amount financed) for computing repayment schedules on the contract date.

As the might have been disbursed through multiple draws, or the draws have been less than the approved amount, or the amount may have been repaid in some amount before the draw end date, you may need to change the payment amount. In such cases, you can manually change the payment in the system by posting the monetary transaction CHANGE PAYMENT AMOUNT on the Customer Service window's Maintenance link.

Disbursements for staged funding

The approved amount for staged funding can be disbursed with the Funding window or at a later time using the Advances window. If the first disbursement is requested during funding, you may enter it on the Itemization sub screen of the Funding window's Contract screen.

If the entire approved amount is not disbursed during initial funding, it can be disbursed using the Advances window's Advance Entry screen.

If the initial amount on the Advance Entry screen is not within the minimum or maximum limits (as entered in the Advance Details section on the Setup Module window's Contract screen), the system displays any of the following error or warning messages in the Advances section's Error Reason field:

- ADVANCE AMOUNT IS LESS THAN THE INITIAL ADVANCE AMOUNT MINIMUM
- or-
- ADVANCE AMOUNT IS MORE THAN THE INITIAL ADVANCE AMOUNT MAXIMUM

The Advance Entry screen also allows you to enter subsequent funding / disbursements. If subsequent advances are not within the predetermined minimum or maximum amounts, the system displays any of the following warning or error messages in the Advances section's Error Reason field:

- ADVANCE AMOUNT IS LESS THAN THE ALLOWED SUBSEQUENT ADVANCE AMOUNT
- or-
- ADVANCE AMOUNT IS MORE THAN THE ALLOWED SUBSEQUENT ADVANCE AMOUNT

Additional messages in the Error Field regarding Staged Funding

If you attempt to post an advance after the draw end date, then the system displays the message in the Advances section's Error Reason field as, "ADVANCE DT IS AFTER DRAW PERIOD END DATE".

If you attempt to post an advance above the approved amounts, including tolerance, the system displays the message in the Advances section's Error Reason field as "ADVANCE AMOUNT IS MORE THAN THE TOTAL APPROVED AMOUNT INCLUDING TOLERANCE".

Since this is not a revolving loan, if any repayment is made against the approved amount principal balance, the system will not adjust the disbursed amount allowing for subsequent additional staged funding or advances.

Note

There is no change to the payoff quote functionality in the system. The system uses the actual amount of the advance(s) and any interest accrued since the date of the last payment or credit in the PAYOFF QUOTE VALID UPTO DATE value when the payoff quote is requested before the draw end date.

4.3.1 Balances

The Balances sub screen lists the balances that will be established when an account is booked and funded.

CAUTION: Please contact your Implementation Manager for changes to this section.

To set up the Balances

1. Click **Setup** → **Setup** → **Administration** → **User** → **Products** → **Contract** → **Loan** → **Balances**.
2. On the Balances sub screen, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Balance Type	Displays the balance type.
Chargeoff Method	Select the charge off method to determine how the outstanding amount of this balance type will be handled from the drop-down list, if the account becomes uncollectable and the product is charged off.
Writeoff Method	Select the write off method to determine how the outstanding amount of this balance type will be handled from the drop-down list, if the account is within the write off tolerance of being PAID.
Reschedule Method	Select the reschedule method to determine how the outstanding amount of this balance type will be handled from the drop-down list, if the account is rescheduled.
Sort	Specify the sort order of how account balances will appear on the Customer Service form's Balance screen.
Billed	Check this box to indicate that outstanding amounts for this balance type are considered a part of the billed amount. This also determines whether payments applied to this balance type are considered when satisfying outstanding amounts due.
Accrued	Check this box to indicate that outstanding amounts for this balance type will be included when interest is accrued against the account.
Non Performing Rollover	Check this box to indicate that "non-performing" is used as an intermediary status on your general ledger prior to charge off and want to create balances for non-performing accounts for this balance type. Note: (The Non-Performing Rollover box applies only to Balance Types of ADVANCE/PRINCIPAL and INTEREST. For all other Balance Types, this box would be cleared).
Non Performing Balance Type	Select the balance type you want to rollover from drop-down list, if you select the Non-Performing Rollover box (Advance/ Principal).
Enabled	Check this box to indicate that this balance type will be created when the account is booked and funded

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

The system loads the currently defined balances for accounts.

If your organization maintains additional balances, contact your Implementation Manager for information regarding those balances.

4.3.2 Amortized Balances

With the Amortize Balances sub screen, you can select one or more balances to be amortized over the life of the loan. You can also define the amortization method.

To set up the Amortization Balances

1. Click **Setup** → **Setup** → **Administration** → **User** → **Products** → **Contract** → **Loan** → **Amortization Balances**.
2. In the Amortization Balances section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Amortize Balance Type	Select the amortize transaction type from the drop-down list.
Amortization Method	Select the amortization method used to calculate the net amortization amount from the drop-down list.
Amortize Balance Type	Select the amortization fee method.
Sort	Specify the sort sequence to define the order of the amortize balances.
Enabled	Check this box to enable the amortize balance to be created when the account is booked and funded.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4.3.3 Itemizations

On the Itemizations sub screen, you can define the itemized components for each type of contract, indicate if it is required, and determine whether it has a positive or negative bearing on the contract itemization math. You can establish the following groups of itemization transactions:

Advance	Total amount of the product that is not a part of financed fees; in other words, the total amount the customer requested to be advanced.
Financed Fees	Fees rolled into the principal balance of the product. Financed fees are also considered to be a part of the finance charge.
Pre-Paid Fees	Fees that are paid by the consumer prior to the funding of the loan. These fees are not rolled into the balance of the product but are considered as part of the finance charge and are included in the calculation of the APR.
Producer	Fees that are paid to or by the producer of the loan; for example, a fee that is being charged to the producer. These transactions will affect proceeds.
Escrow	Allows you to connect the actual escrow itemization with the escrow type and the funding transaction.

To set up the Itemizations

1. Click **Setup** → **Setup** → **Administration** → **User** → **Products** → **Contract** → **Loan** → **Itemizations**.
2. On the Itemization sub screen select the option button to indicate the type of itemization you are working with: Advance, Financed Fees, Pre-Paid Fees, Producer, or Escrow.

3. On the Itemization sub screen, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Itemization	Select the itemization from the drop-down list.
Disbursement Type	Select the disbursement type from the drop-down list.
Transaction	Select the funding transaction type from the drop-down list.
Itemization Type	<p>Select the itemization type from the drop-down list.</p> <p>Notes:</p> <ol style="list-style-type: none"> 1. On selecting the "Prefunding Txns" as itemization type, it indicates that this particular itemization expects a payment from the customer prior to funding. 2. The itemization type "Prefunding Txns" is available only for loans.
Sort	Specify the sort order to define the order of the itemization transactions.
Sign	<p>If the itemized transaction increases the group balance, click +ve.</p> <p>-or-</p> <p>If the itemized transaction decreases the group balance, click -ve.</p>
Enabled	Check this box to enable the itemization and indicate that this itemization transaction will be created when the account is booked and funded.
Amortize Balance	Select the amortize balance affected by this itemization transaction from the drop-down list. Note: Advance itemizations do not affect amortize balances.
Refund Calculation Method	Select the refund calculation method from the drop-down list
Taxable	Check this box, if the itemization type is taxable.
Seller Pmt	Check this box to enable seller payment
Escrow	Select the escrow from the drop-down list.
Itemization Formula	Select the itemization formula description from the drop-down list.
Refund Calculation Method	Check this box to enable Refund calculation Method.
Escrow Required	If this is an escrow account, check this box to signal that an escrow is required during the application process (though at that time the user can choose Opt Out to decline.)
Discount. Rate	Specify the discount rate for the itemization.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4.3.4 Fees

Any fees that are defined in the contract are set up on the Fees sub screen. The system currently supports the following contract fees:

- Late charges
- Non sufficient funds
- Extensions
- Prepayment penalties
- Delay Fee
- ACH Fee

The Fees sub screen allows you to define those fees whose value and method of calculation are set at the time of the loan. As these amounts cannot be changed after the product is booked and funded, you should only set up fees here that will not change over the life of the loan. Individual contract fee types may be defined multiple times in order to create graduated fees.

Note

Certain fees, like late fees, can be set up at contract, as well as state level. In such cases, the contract fee, if present, is used first.

To set up the Fees

1. Click **Setup** → **Setup** → **Administration** → **User** → **Products** → **Contract** → **Loan** → **Fees**.
2. In the Fees section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Type	Select the fee type from the drop-down list.
Txn Amt From	Specify the lowest transaction amount or balance amount against which this contract fee definition may be applied.
Method	Select the method of calculating the fee to be assessed from the drop-down list.
Frequency	Select the frequency of calculating the fee to be assessed from the drop-down list.
Min Amt	Specify the minimum fee amount to be assessed.
Max Amt	Specify the maximum fee amount to be assessed. If you selected FLAT in the Method field, then this field is not used and is normally populated as \$0.00.
Percent	Specify the fee percentage of the outstanding transaction amount to be assessed as a fee. This amount will be adjusted to fall within the Min Amount and the Max Amount.

Field:	Do this:
Enabled	Check this box to create the selected contract fee when the account is booked and funded.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

•

4.3.5 **Behavioral Score Models**

1. Click **Setup** → **Setup** → **Administration** → **User** → **Products** → **Scoring Models** → **Loan** → **Behavioral Score Models**.

In the Score Models section, perform any of the [Basic Operations](#) mentioned in Navigation chapter. A brief description of the fields is given below:

The screenshot displays the 'Score Models' section in the Oracle Financial Services Lending and Leasing application. On the left is a navigation pane with categories like DashBoard, Origination, Servicing, Collections, WFP, and Tools. The main area is titled 'Score Models' and contains a table of existing models. Below the table, there are sections for 'Score Models' details, 'Parameters', and 'Range Definition'.

Model	Description	Start Dt	End Dt	Enabled	Max Score	Company
LOAN_BS	LOAN SCORING MODEL (BEHAVIORAL SCORE)	01/01/1800	12/31/4000	Y	1000	ALL
MODE TEST	MODE TEST	08/21/2013	12/31/4000	Y	1000	ALL
MODEL3	MODEL3	08/21/2013	10/10/2019	N	0	ALL

The 'Score Models' details section for 'LOAN_BS' shows the following fields:

- Description:** LOAN SCORING MODEL (BEHAVIORAL SCORE)
- Start Dt:** 01/01/1800
- End Dt:** 12/31/4000
- Enabled:** ☒
- Max Score:** 1000
- Company:** ALL
- Branch:** ALL
- Product:** ALL
- Currency:** US DOLLAR

The 'Parameters' section shows a table with one parameter:

Parameter	Max Value	Enabled
BEHAVIORAL SCORE	100,000,000.00	Y

The 'Range Definition' section shows a table with one range:

Value From	Value To	Percent / Value	Enabled
0	% Max Value	100	Y

Field:	Do this:
Model	Specify the code for the scoring model.
Description	Specify a description of the scoring model.
Start Dt	Specify the start date for the scoring model. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the end date for the scoring model. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the scoring model.
Selection Criteria section	
Max Score	Specify the maximum score allowed. (This is normally the sum of the Max Value fields within the scoring parameters.).
Company	Select the company for the scoring model, from the drop-down list. This may be ALL or a specific company.
Branch	Select branch within the company for the scoring model, from the drop-down list. (This may be ALL or a specific branch. However, if you have selected 'ALL' in Company field, then you must select 'ALL' for this field).
Product	Select the product for the scoring model, from the drop-down list. This may be ALL or a specific product.
Currency	Select the currency for the scoring model, from the drop-down list. This may be ALL or a specific currency.

2. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
3. Click 'Create Copy' button on the Score Models screen to create copy of the selected record with details.

The Parameters section records the parameters used to determine the score calculated by the scoring model. You can define multiple parameters and adverse action reason associated with each parameter in a scoring model. Each scoring parameter can have maximum values set. The score range is based upon the information in the Range Definition section on the Parameters subtab.

The system calculates a final score by adding the score for each parameter in the scoring model. A parameter weighted value is used to find the four adverse action reasons, if bureau reasons are not used.

Note

- A character parameter range definition should contain the exact value of the parameter.
 - Each scoring parameter should have range definitions defined that encompass all of the values that might result.
-

4. In the Parameters section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Parameter	Select the parameter from the field, from the drop-down list.
Max Value	Specify the maximum value allowed for the selected parameter.
Enabled	Check this box to enable the parameter.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
6. The Range Definition section allows you to translate the calculated value for a scoring parameter into the value to be used, depending on the returned value of the parameter.
7. In the Range Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Value From	Specify the lowest calculated value to apply the specific translation. The ceiling of the range definition is based on the range definition with the next highest Value From or the Max Value of the scoring parameter (whichever is less).

Field:	Do this:
Value From	<p>Select the following options to determine how values for a scoring parameters are translated:</p> <p>% Max Value – If selected, then the calculated values within the range definition receives a value based on a percentage of the Max Value of the scoring parameter.</p> <p>% Param – If selected, then the calculated values within the range definition receives a value based on a percentage of the calculated value of the scoring parameter.</p> <p>Value – If selected, then the calculated values with in the range definition receives a specific value.</p>
Percent / Value	Specify the percent or value to be used in the translation of the calculated value of the scoring parameter.
Enabled	Check this box to consider this range definition while translating values for this scoring parameter.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4.4 Checklists

A checklist is an optional set of steps to follow when completing a task in the system, such as the underwriting and funding processes.

Checklists can be used as guidelines to help ensure that the system users follow your business's standard operating procedures and enter all required data. Some checklists are optional, but others such as those related to application decisions or contract verification, may be required depending on the edit sets defined in your system. The Checklists screen allows you to specify the contents of the checklist.

You can define additional checklists for your organization. You can set up multiple checklists for a single type of checklist. These checklists can be differentiated by:

- Company
- Branch
- Product
- Account state

To set up the checklists

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup → Setup → Administration → User → Products → Checklists → Loan.**

2. In the Checklist Type Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

3. A brief description of the fields is given below:

Field:	Do this:
Checklist Code	Specify the checklist code that identifies checklist being defined.
Description	Specify the description for the checklist.
Checklist Type	Select the checklist type from the drop-down list, to define where the specific checklist will be available in the system.
Company	Select the portfolio company associated with the checklist from the drop-down list. This may be ALL or a specific company.
Branch	Select the portfolio branch associated with the checklist from the drop-down list. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL).
Product	Select the product associated with the checklist from the drop-down list. This may be ALL or a specific product. The available values come from a validated list based on the selected Billing Cycle setup and the Product setup.

Field:	Do this:
State	<p>Select the state associated with the checklist type from the drop-down list. This may be ALL or a specific state.</p> <p>IMPORTANT: By selecting which edits type to use, the system searches for a best match using the following attributes:</p> <ul style="list-style-type: none"> 1 Company 2 Branch 3 Product 4 State <p>Hence, Oracle Financial Services Software recommends creating one version of each checklist type where ALL is the value in these fields.</p>
Currency	Select the currency associated with the checklist from the drop-down list. This may be ALL or a specific currency.
Enabled	Check this box to enable the checklist.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Checklist actions are steps (a set of one or more tasks) related to the checklist you are creating. They are loaded on the Checklist Action Definition section.

5. In the Checklist Action Definition - **Regular** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter

A brief description of the fields is given below:

Field:	Do this:
Action Code	Specify the action code for the checklist.
Description	Specify the description for the action type.
Sort	Specify the sort order to define the placement of the action type on the Checklist sub screen.
Enabled	Check this box to include this action in the checklist.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. In the Checklist Action Definition - **Document** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Action Code	Specify the action code for the checklist.
Description	Specify the description for the action type.
Document Type	Select the document type from the drop-down list.

Field:	Do this:
Document Sub Type	Select the document sub type from the drop-down list.
Document Mandatory	Check this box to indicate that the document is mandatory.
Sort	Specify the sort order to define the placement of the action type on the Checklist sub screen.
Enabled	Check this box to include this action in the checklist.

8. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4.5 Statement Messages

The Messages screen allows you to set up messages that appear on account statements sent to customers. You can set up statement messages for different products. When the system generates a statement for an account, all statement messages matching the selection criteria are included in the statement file for that account.

The system inserts the message in the Text field into the statement file produced during the nightly batch job for the appropriate consumers.

A record of an account's statement history, including the messages included in the statement, appears on the Statement's screen on the Customer Service window.

To set up the Messages

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup → Setup → Administration → User → Products → Statement Messages → Loan.**

2. In the Statement Messages section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot displays the Oracle Financial Services Lending and Leasing application. The left sidebar contains a navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The main area is titled 'Statement Messages' and shows a table with columns: Seq, Code, Start Dt, End Dt, Enabled, Text, Company, Branch, Product, and Currency. Below the table, there is a form for editing a statement message, including fields for Seq, Code, Start Dt, End Dt, Enabled, Text, and Selection Criteria (Company, Branch, Product, Currency).

Seq	Code	Start Dt	End Dt	Enabled	Text	Company	Branch	Product	Currency
1	0001	01/01/1800	12/31/4000	Y	FOR ALL YOUR LENDING NEEDS, PLEASE CONTACT AT 1-800-355-4878	ALL	ALL	TEST	US DOLLAR
1	CODE 2	09/04/2013	12/31/4000	Y	CODE 2	ALL	ALL	TEST HOME	US DOLLAR
1	CODE 1	09/04/2013	12/31/4000	Y	CODE 1	ALL	ALL	TEST HOME	US DOLLAR

A brief description of the fields is given below:

Field:	Do this:
Seq	Specify the sort sequence of how the statement message should be printed.
Code	Specify the message code identifying the statement message.
Start Dt	Specify the first date the statement message is available. You can even select the date from the adjoining Calendar icon.
End Dt	Specify the last date the statement message is available. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the message.
Result section	
Text	Specify the text of the statement message.
Selection Criteria section	
Company	Select the company for the statement message from the drop-down list. This may be ALL or a specific company.
Branch	Select the branch within the company for the statement message from the drop-down list. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL.
Product	Select the product for which this statement message will be used from the drop-down list. This may be ALL or a specific product.

Field:	Do this:
Currency	Select the currency for the statement message from the drop-down list. This may be ALL or a specific currency.
Producer	<p>Select the producer for the statement message from the drop-down list. This may be ALL or a specific producer. The available values come from a validated field based on the Pro Group and Pro Type.</p> <p>IMPORTANT: By selecting which message to use, the system searches for a best match using the following attributes:</p> <ol style="list-style-type: none"> 1. Company 2. Branch 3. Product 4. Producer 5. Currency <p>Hence, Oracle Financial Services Software recommends creating one version of each edit type where ALL is the value in these fields.</p>

4.6 Letters

The Letters screen allows you to define letters that the system automatically generates when the application or the account for a products meets certain conditions, or “trigger events.” Each letter has its own trigger event. For example, you can configure the system to automatically send a welcome letter when an application becomes an account or send a collection letters when an account becomes delinquent.

The system supports the following types of letters:

Type of letter:	Definition:
ACCOUNT STATEMENT	Generated when account is to receive a billing statement (this time is defined in contract setup). Letter is sent to customer.
ADVERSE Action letter	Generated in nightly batch jobs for applications that were declined. This letter is sent to the consumer to indicate the reasons why the application was declined.
CONDITIONAL ADVERSE	Generated in nightly batch jobs for applications that were
ACTION LETTER	declined. This letter is sent to the consumer to indicate the reasons why the application was declined. This letter also indicates steps that the consumer may take to gain approval of the application.
COLLECTION LETTER 1	Generated when an account becomes delinquent. This is the first dunning letter sent to the customer.
COLLECTION LETTER 2	Generated when an account remains in delinquency for an extended period. This is the second dunning letter sent to the customer.
COLLECTION LETTER 3	Generated when an account remains in delinquency for an extended period, even after having received previous notices. This is the final dunning letter sent to the customer.

Type of letter:	Definition:
CONTRACT FUNDING fax/ email	Generated when an application is APPROVED: FUNDED or CONDITIONED: FUNDED. This letter is sent to the producer.
DECISION FAX/ EMAIL	Generated when an application is APPROVED, CONDITIONED, or REJECTED. This letter is sent to the consumer or producer, depending on whether the product is a direct or in-direct loan.
PAID IN FULL LETTER	Generated in nightly batch jobs when the account pays off. This letter is sent to the customer.
PAYOFF QUOTE LETTER	Generated when a payoff quote is created for an account. This letter is sent to the customer.
WELCOME LETTER	Generated when an application is APPROVED: FUNDED. This letter is sent to the consumer. STATEMENT PAST MATURITY Generated when an accounts are matured but unpaid. This letter is sent to the account holders as a reminder to make their payments.

When the system generates letters, it searches the Letters screen for letter definitions that meet the following criteria:

- Definition is enabled.
- Definition is an exact match of the letter code being generated.
- Definition is a match of either the application/account value or ALL for all other criteria.

Exact matches for each field are given a higher weight than matches to ALL.

The returned rows are then given a descending rank based on the weighted values and the hierarchical position of these fields:

1. Company
2. Branch
3. Product
4. State
5. Currency

On the ranked rows, the first row is returned as the best match.

To set up the Letters

1. On the Oracle Financial Services Lending and Leasing home screen, click **Setup → Setup → Administration → User → Products → Letters → Loan.**

2. In the Letter Definition section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Letter Code	Specify the code for the letter.
File Name	Specify the file name of the Oracle report used to generate the letter. The file should be named <File Name>.rep on your server.
Letter Type	Select the type of letter you want to generate from the drop-down list.
Channel	Select the application source (channel) for the letter from the drop-down list. This may be ALL or a specific channel.
Enabled	Check this box to enable this letter definition.
Result section	
Batch Printer	Select the batch printer being used to generate the letter from the drop-down list.
Batch User	Select the user who will submit this letter from the drop-down list. This will normally be set to BATCH.
Selection Criteria section	
Company	Select the portfolio company for which this letter will be used from the drop-down list. This may be ALL or a specific company.
Branch	Select the portfolio branch for which this letter will be used from the drop-down list. This may be ALL or a specific branch. This must be ALL if in the Company field you selected ALL).

Field:	Do this:
Product	Select the product for which this letter will be used from the drop-down list. This may be ALL or a specific product.
State	Select the state for which this letter will be used from the drop-down list. This may be ALL or a specific state.
Currency	Select the currency for which this letter will be used from the drop-down list. This may be ALL or a specific currency.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4.7 Subvention

The Subvention Setup screen's loans Subvention tab allows you to set up Loan subvention plans for producers (groups or individuals). Multiple producers may contribute to one subvention plan or a plan can be set for a specific producer.

Subvention Types

Subvention can be offered in many forms for vehicle loans. The most common format is the rate subvention for vehicle loans. Rate factor subvention involves sharing the finance charge (interest) by the participant (most frequently with the manufacturer). The finance company sets its buy rate (the minimum cost to the company to extend the loans to a customer). If the customer rate is less than this buy rate, then the amount is equivalent to the interest amount for the difference (the buy rate minus the customer rate) is paid by the participant as the subvention amount.

Currently Oracle Financial Services Lending and Leasing supports the following subvention types:

Loan subvention types:

- Rate
- Cash bonus
- Buy down

Subvention plans can be defined for one participant (for example, a manufacturer or a particular dealer) or group of participants (such as a dealer association). One subvention plan could have multiple sub plans and multiple participants could participate to each sub plan.

Example

Subvention plan:

- "Summer Special Event"
Subvention sub-plans for above plan:
 - 1.9% for 36 months
- or -
 - 2.99% for 48 months
- or -
 - 3.99% for 60 months
- or -
 - \$1500.00 cash bonus

Multiple participants may participate in each sub plan. For example, for the 1.9% rate, 1% might be shared by the manufacturer and 0.9% might be shared by the dealer. Similarly, for the \$1,500 cash bonus, \$1,000 might be shared by the manufacturer and \$500 by the dealer. Or, the complete \$1,500 might be covered by the manufacturer.

Collection of subvention amounts can be set for each participant in the subvention plan with the Collection Method.

Oracle Financial Services Lending and Leasing supports following collection methods:

UPFRONT	The entire subvention amount is collected at the booking of the Loan from the producer proceed.
UPFRONT STATEMENT	The entire subvention amount is collected at the time of the subvention statement.
PAY AS U GO	The subvention amount is billed to the producer when the customer pays the Loan payment. The producer is due for the amount at each statement.

Subvention Refund

There are times when a Loan is either paid-off early or gets charged off and the finance company refunds the unearned subvention amount back to the producer. The refund is available only when the subvention amount is collected from the producer proceeds (UPFRONT) or the whole amount is billed in the first statement (UPFRONT STATEMENT).

You can set up the system to allow refunds only for a certain period and not beyond that. The period can be set differently for charge offs and paid offs and can be based on two methods:

1. Days
2. Term

The system provides the following methods for refund amount calculation:

1. Earned
2. Percentage

The earned method is used to refund the unearned portion of the collected subvention amount. The percentage method is used to refund a certain percentage of the subvention amount collected.

4.7.1 Loan Subvention Plans

The Loan Subvention Plans screen allows you to set up subventions for **Loans**.

To set up the Loan Subvention Plans screen.

1. On the Oracle Financial Services Lending and Leasing home screen, Click **Setup → Setup → Products → Subvention → Loan**.
2. The system displays the **Loan Subvention** screen. The details are grouped into three.
 - Plan Definition
 - Sub Plan Definition
 - Plan Details.
3. In the **Plan Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Code	Specify the subvention plan code.
Description	Specify the subvention plan description.
Company	Select the company name from the drop-down list.
Branch	Select the branch name from the drop-down list.
State	Select the state from the drop-down list.
Start Date	Specify the start date for the subvention plan (required). You can select the date even from the adjoining Calendar icon.
End Date	Specify the end date for the subvention plan. You can select the date even from the adjoining Calendar icon.
Enabled	Check this box to activate the record.
Billing Cycle	Select billing cycle from the drop-down list.
Product	Select the product from the drop-down list.
Asset Class	Select the asset class from the drop-down list.
Asset Type	Select the asset type from the drop-down list.
Asset Sub Type	Select asset sub type from the drop-down list.
Asset Make	Select asset make from the drop-down list.
Asset Model	Select the asset model from the drop-down list
Asset Age	Specify the asset age.

4. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
5. In the **Sub Plan Definition** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Code	Specify the subvention sub plan code.
Description	Specify the subvention sub plan description (required).
State	Select the state from the drop-down list.
Pro Group	Select the producer group from the drop-down list.
Pro Type	Select the producer type from the drop-down list.
Producer	Select the producer from the drop-down list.
Enabled	Check this box to activate the record.

Field:	Do this:
AmtFrom	Specify the amount.
Subvention Type	Select the subvention type from the drop-down list.
Grade	Select the grade from the drop-down list.
Term	Specify the term.
Asset Class	Select the asset class from the drop-down list.
Asset Type	Select the asset type from the drop-down list.
Sub Type	Select asset sub type from the drop-down list
AssetMake	Select asset make from the drop-down list.
AssetModel	Select the asset model from the drop-down list
Age	Specify asset age.

6. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
7. In the **Plan Details** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Participant	Select the participant from the drop-down list.
Collection Method	Select the collection method for the subvention plan from the drop-down list.
Transaction	Select the transaction code from the drop-down list.
Rate	Specify the subvention rate.
Enabled	Check this box to activate the record.
<u>Calculation section:</u>	
Method	Select the subvention calculation method from the drop-down list.
Override	Check this box to allow overriding the rate at the time of under-writing / funding.
Max Amt	Specify the maximum subvention amount.
Flat Amt	Specify the flat amount.
Factor	Specify the subvention factor.
Spread Max	Specify the maximum subvention spread value.
<u>Refund section:</u>	

Field:	Do this:
Paid Off Method	Select the method from the drop-down list, if the account is paid-off early.
Paid Off Basis	Select the basis from the drop-down list, if the account is paid-off early.
Paid Off Period (Paid off)	Specify the number of terms in which the subvention can be refunded to the producer, if the account is paid-off early.
Paid Off Percent)	Specify the refund percentage, if the account is paid-off.
Charge Off Calc Method	Select the calculation method from the drop-down list, if the account is charged-off .
<u>Amortization section:</u>	
Balance Type	Select the amortize balance type from the drop-down list.
Method	Select the amortize method from the drop-down list.
Frequency	Select the amortize frequency from the drop-down list.
Cost / Fee	Select the cost / fee from the drop-down list.

Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4.8 Escrow

Oracle Financial Services Lending and Leasing provides tax and insurance escrow for loans. The Escrow screen contains subsection that allow you to set up these features.

This chapter explains the Escrow window and how to set up escrow in the system.

4.8.1 Escrow

The Escrow Definition screen allows you to review or set up escrow definitions for taxes and insurance and note whether or not cushion is allowed.

Navigating to Escrow

- On the Oracle Financial Services Lending and Leasing home screen, click **Setup → Setup → Products → Escrow**. The Escrow details can be setup across three subsections:
 - Escrow
 - Shortage/Cushion Rules
 - Disbursement Rules

4.8.1.1 Escrow

To setup Escrow

- Click **Setup → Setup → Products → Escrow → Escrow**.

2. In the **Escrow Definitions** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot shows the Oracle Financial Services Lending and Leasing interface. The 'Escrow Definition' window is open, displaying a table of existing escrow definitions and a form to create a new one.

Escrow	Description	Escrow Type	Cushion Allowed	Incl 1098	Enabled
EIN51	PROPERTY MORTGAGE INSURANCE (PMI)	INSURANCES	N	N	Y
EIN52	HAZARD INSURANCE	INSURANCES	Y	N	Y
EIN99	NON ESCROWED INSURANCE	INSURANCES	N	N	Y
ETX01	COUNTY TAX	TAXES	Y	N	Y
ETX50	NON ESCROW TAX	TAXES	N	N	Y
TAXESCROW	TAXES ESCROW	TAXES	N	N	Y
TEST	TEST	TAXES	Y	Y	Y

The form below the table allows creating a new escrow definition:

- Escrow: EIN51
- * Description: PROPERTY MORTGAGE INSURANCE (PMI)
- * Escrow Type: INSURANCES
- * Cushion Allowed: ☐
- * Incl 1098: ☐
- * Enabled: ☒

A brief description of the fields is given below:

Field:	Do this:
Escrow	Specify the escrow code. This is protected against update and cannot be changed after initial set up.
Description	Specify the escrow description.
Escrow Type	Select the escrow type, usually INSURANCES or TAXES from the drop-down list.
Cushion Allowed	Check this box if the escrow you are defining allows for cushion. Note: Cushion rules are used to determine how much cushion should be retained.
Incl 1098	Check this box to include in 1098 reporting.
Enabled	Check this box to enable the escrow definition.

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

4.8.1.2 Shortage/Cushion Rules

In Shortage/Cushion Rules, you can review and set up escrow analysis shortage/cushion rules. Shortage/cushion rules determine how much cushion you are allowed on a particular escrow line and if there is a predicted shortage, how to eliminate it by increasing payment.

To setup Shortage/Cushion Rules

1. Click **Setup** → **Setup** → **Products** → **Escrow** → **Shortage/Cushion Rules**.

- In the **Rules** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

The screenshot displays the 'Rules' configuration interface. On the left is a navigation menu with options like Dashboard, Origination, Servicing, Collections, WFP, Tools, and Setup. The main area is titled 'Escrow' and contains tabs for 'Shortage/Cushion Rules' and 'Disbursement Rules'. A table lists rules with columns: Rule, Description, Start Dt, End Dt, Enabled, Shortage Threshold, Shortage Value, Shortage Spread Increase %, and Term. Below this, the 'Rule Details' for Rule ESW001 are shown, including fields for Description, Start Dt, End Dt, Enabled, Shortage Threshold, Shortage Value, Shortage Spread Increase %, Term, Max Term, Surplus Amt, Company, Branch, Product, and State. A 'Rule Details' table at the bottom shows 'Escrow Type' and 'Cushion Type' with values like 'INSURANCES', 'TAXES', 'AMOUNT', and 'MONTHS'.

A brief description of the fields is given below:

Field:	Do this:
Rule	Specify the rule code. This is protected against update and cannot be changed after initial set up.
Description	Specify the rule description.
Start Dt	Specify the start date for this rule. You can even select the date from the adjoining Calendar icon.
End Dt	Specify end date for this rule. You can even select the date from the adjoining Calendar icon.
Enabled	Check this box to enable the rule.
Parameters section	
Shortage Threshold	Select the shortage threshold, either an amount or number of installments, from the drop-down list.
Shortage Value	Specify shortage threshold value.
Shortage Spread Increase%	Specify shortage spread increase percent.
Term	Specify shortage spread term.
Max Term	Specify the maximum amount of shortage spread terms.

Field:	Do this:
Surplus Amt	Specify surplus threshold amount for this rule.
Company	Select the company for this rule from the drop-down list.
Branch	Select the branch for this rule from the drop-down list.
Product	Select the product for this rule from the drop-down list.
State	<p>Select state for this rule (required).</p> <p>IMPORTANT: When you select which escrow rule to use, the system searches for a best match using the following attributes:</p> <ol style="list-style-type: none"> 1. Company 2. Branch 3. Product 4. State <p>Hence, the system recommends creating one version of each rule, where ALL is the value in these fields.</p>

3. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.
4. In the **Rule Details** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.

A brief description of the fields is given below:

Field:	Do this:
Escrow Type	Select escrow type from the drop-down list.
Cushion Type	Select cushion type from the drop-down list.
Cushion Value	Specify cushion value.

5. Perform any of the [Basic Actions](#) mentioned in Navigation chapter.

Note

While considering the cushion rules, preference is provided either for all records and then for Insurances or taxes maintained in a particular shortage or cushion rule.

4.8.1.3 **Disbursement Rules**

The Rules screen allows you to define the disbursement rules for your escrow.

To setup Disbursement Rules

1. Click **Setup** → **Setup** → **Products** → **Escrow** → **Disbursement Rules**.

- In the **Escrow Disbursement Rules** section, perform any of the [Basic Operations](#) mentioned in Navigation chapter.
